This data dictionary provides descriptions of variables in the **Retail Loan Table**, including possible values for the variables. This document is accompanied by the *Data Dictionary Guide*, which explains the data dictionary framework and the naming convention. For detailed descriptions and sources of the data tables, the users can reference the *User Guide*.

The following details about the Retail Loan Table are also available in the Data Dictionary Guide:

- Retail Loan Table is organized at the *year, county, and bank* level; each row is uniquely identified by a combination of year, county (*state_code_fips + county_code_fips*), and bank (*id_rssd*) fields.
- "A" denotes an aggregate variable, which includes all lenders at the *county level*, e.g., AC_1 is the count of CRA loans (small business or small farm) for all CRA reporter banks at the *county level*.
- All other variables not marked "A" are at the *year, county, and individual bank level*.

The variable order of the data dictionary follows the column order of the table. Users are encouraged to use the electronic version of the data dictionary to easily search for specific variables.
