Brian Doyle**

**Exhibits by Carolyn Shen and Alex Thorp  
November 7, 2018**

**(1) Key Takeaways**

Banks' liquidity management practices have changed markedly since the crisis

At current rates relative to IOER, minimum reserve demand is likely higher than pre-crisis, but much lower than the peak reserve level of \$2.8 trillion

- Estimate from the SFOS suggests minimum reserve demand of around \$800 billion
- Currently no broad-based signs of unmet reserve need; staff will continue to monitor

In environments with a higher opportunity cost of holding reserves, banks would likely reduce reserve holdings to some degree

**(2) Actual and Projected System Reserve Level**

Source: H.4.1 report: 'Other Deposits held by Depository Institutions', staff projections

**(3) SFOS Respondents' Motivation for Minimum Reserve Levels**

	U.S. GSIB	Large Domestic	Small Domestic	FBO
1) Intraday Payment Needs	63%	44%	83%	62%
2) Potential Deposit Outflows	63%	69%	100%	33%
3) Reserve Requirements	50%	38%	83%	43%
4) Internal Liquidity Stress Tests	75%	63%	50%	71%
5) Attractiveness of IOER	25%	6%	0%	24%
6) HQLA Monetization Concerns	38%	31%	17%	48%

Source: 2018 Senior Financial Officer Survey

Note: Figures shown are the percent of respondents that rated the factor important or very important.

**(4) System Reserve Level and SFOS Estimate of Minimum Reserve Demand**

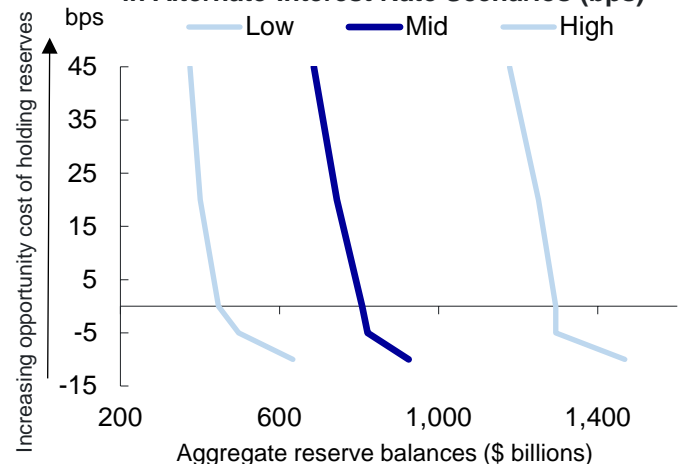

Source: 2018 Senior Financial Officer Survey, staff estimates; H.4.1 report Note: Lowest Comfortable Level of Reserves. The reserve levels below which respondents would take actions to maintain or increase balances.

**(5) Markers of Reserve Need**

Marker	Assessment
Fed funds pressure	<ul style="list-style-type: none"> <li>• About 10% of fed funds volumes above IOER. Reduction in IOER arb activity</li> <li>• Changes in aggregate reserve balances are not correlated with changes in IOER-EFFR spread</li> </ul>
Payments pressure	<ul style="list-style-type: none"> <li>• No material change in timing of payments</li> <li>• Demand for intraday credit is little changed.</li> </ul>
Reserve requirement pressure	<ul style="list-style-type: none"> <li>• Limited number of banks operating with reserve balances close to requirements</li> <li>• Discount window borrowing declined over inter-meeting period</li> </ul>
Other funding pressure	<ul style="list-style-type: none"> <li>• Deposit betas remain low relative to banks' projections for this hiking cycle</li> </ul>

**(6) Estimated Minimum Reserve Level in Alternate Interest Rate Scenarios (bps)**

Source: 2018 Senior Financial Officer Survey, staff estimates

**Exhibit 2: Comparison of operating regimes**

	<b>Limited excess reserves</b>	<b>Abundant excess reserves</b>
<b>Rate control</b>	<ul style="list-style-type: none"> <li>- Setting reserve supply to intersect demand at target rate</li> <li>- Worked well pre-crisis</li> <li>- Sources of reserve demand have changed, creating uncertainty about ability to precisely target a rate</li> </ul>	<ul style="list-style-type: none"> <li>- Arbitrage from administered rates to all market rates</li> <li>- Many years of successful experience controlling rates post-crisis</li> <li>- Has worked well internationally</li> </ul>
<b>Operations</b>	<ul style="list-style-type: none"> <li>- High complexity</li> </ul>	<ul style="list-style-type: none"> <li>- Lower complexity</li> </ul>
<b>Money market activity</b>	<ul style="list-style-type: none"> <li>- May help revive overnight interbank market</li> </ul>	<ul style="list-style-type: none"> <li>- Tends to suppress interbank trading, but wholesale deposit markets remain</li> </ul>
<b>Target rate</b>	<ul style="list-style-type: none"> <li>- Natural to target EFRR</li> <li>- Or could shift to OBFR (broader measure of unsecured rates)</li> </ul>	<ul style="list-style-type: none"> <li>- Choice of target rate less straightforward</li> </ul>
<b>Liquidity</b>	<ul style="list-style-type: none"> <li>- Less aggregate liquidity available to banking system</li> <li>- Banks may rely more on Fed facilities</li> <li>- Potential loss of monetary control when providing extra liquidity away from the ELB</li> </ul>	<ul style="list-style-type: none"> <li>- More aggregate liquidity available to the banking system</li> <li>- No loss of monetary control when additional reserves supplied</li> </ul>
<b>Total reserves</b>	<ul style="list-style-type: none"> <li>- Highly uncertain medium-term point estimate: \$700B</li> <li>- Depends on interest rate sensitivity of demand for reserves, might fall in long term</li> </ul>	<ul style="list-style-type: none"> <li>- Highly uncertain point estimate: \$1T</li> <li>- Depends on interest rate sensitivity, buffer for autonomous factors, distributional frictions</li> </ul>
<b>Interest expense</b>	<ul style="list-style-type: none"> <li>- Lower and less concentrated interest payments on reserves</li> </ul>	<ul style="list-style-type: none"> <li>- Higher and more concentrated interest payments on reserves</li> </ul>
<b>Policy space</b>	<ul style="list-style-type: none"> <li>- Returning to an operating regime similar to that used pre-crisis might increase public trust in the Federal Reserve's ability to unwind unconventional policy tools after a crisis and increase willingness to use such tools if another crisis occurred</li> </ul>	<ul style="list-style-type: none"> <li>- Could back reserves with short-term assets in normal times, then exchange for longer-term assets to provide stimulus when needed</li> </ul>

**Exhibit 3: Target rate options**

- **The policy target rate** communicates and transmits the stance of monetary policy.
- In a regime with *limited excess reserves*, policy implementation focuses on the reserves market. Supply adjustments through OMOs influence the rate at which banks are able to borrow reserves.
  - Options: FFR and OBFR
- In a regime with *abundant excess reserves*, transmission relies on arbitrage between money market rates and the administered rates on Federal Reserve’s liabilities.
  - Options: FFR, OBFR, Treasury repo rate, and General level of short-term rates (GLOSTR)

Rate Options	Limited excess reserves	Abundant excess reserves
<b>Federal Funds Rate (FFR)</b>	<ul style="list-style-type: none"> <li>- Communications continuity</li> <li>- Similar framework to pre-crisis</li> <li>- Some risks facing the federal funds market going forward</li> </ul>	<ul style="list-style-type: none"> <li>- Successful rate control so far, but significant risks going forward</li> <li>- Dependent on the behavior of FHLBs</li> <li>- Potential communication challenges due to idiosyncratic market dynamics</li> </ul>
<b>Overnight Bank Funding Rate (OBFR)</b>	<ul style="list-style-type: none"> <li>- Comprehensive measure of banks’ funding costs</li> <li>- More robust than EFR though still susceptible to volume declines</li> <li>- Communications continuity with current practice</li> </ul>	<ul style="list-style-type: none"> <li>- Comprehensive measure of banks’ funding costs</li> <li>- Supported by widespread investor participation, but still subject to regulatory disincentives</li> <li>- Operational and communications continuity with current practice</li> </ul>
<b>Treasury Repo Rate (SOFR or TGCR)</b>		<ul style="list-style-type: none"> <li>- Robust transaction volume under a range of market conditions</li> <li>- Affects financing costs of a wide range of financial intermediaries</li> <li>- Consistent with the migration of overnight activity to the secured markets</li> <li>- May require operations correlated in time and size with Treasury issuance</li> </ul>
<b>General Level of Short Term Rates (GLOSTR)</b>		<ul style="list-style-type: none"> <li>- Robust to changes in market structure that affect individual rates</li> <li>- Eliminates the need to react to idiosyncratic rate movements</li> <li>- Transition may raise communication challenges</li> </ul>

## Questions for Discussion

1. What do you see as the tradeoffs between remaining in a framework like the current one, with abundant excess reserves, versus moving to a framework with limited excess reserves? How does the level of reserves that would ultimately be necessary in each framework affect your views on the appropriate choice of framework?
2. In your preferred framework for policy implementation, what interest rate(s) would you prefer to target? What do you see as the important tradeoffs in choosing among the range of possible target rates discussed in the staff background memos—the effective federal funds rate (EFFR), the overnight bank funding rate (OBFR), a Treasury repo rate, and the general level of short-term rates (GLOSTR)?

**Appendix 1****(1) Summary of Operational Testing***Summary of Operational Tests in prior period:*

- Domestic Authorization
  - October 11: Treasury bill rollover of \$26 million
  - October 18: Treasury bill sale of \$47 million\*
  - October 24: Securities lending (using the back up lending tool) for \$71 million
  - October 16 to November 7: Outright MBS TBA purchase for a total of \$241 million\*\*
- Foreign Authorization
  - October 11 and 12: U.S. dollar liquidity swap of \$51,000 per counterparty (ECB, SNB\*\*\*, BoC, BoE)
  - October 22 to 24: Japanese yen liquidity swap for JPY51,000
  - November 6 and 7: Sterling liquidity swap for GBP 51,000

*Upcoming Operational Tests:*

- Seven tests scheduled under the Domestic Authorization
  - November 8: Treasury bill maturity of \$53 million
  - November 14 : Outright MBS TBA purchases for up to \$45 million\*\*\*\*
  - November 15: Overnight repo for no more than \$75 million
  - November 19: Overnight reverse repo with MBS collateral for no more than \$175 million
  - November 27 and 29: Outright MBS sales (specified pool) for up to \$200 million, total
  - November 28: Term reverse repo for no more than \$175 million
  - December 4: Term repo for no more than \$75 million
- Two tests scheduled under the Foreign Authorization
  - November 20: Yen-denominated repo with 552 U.S.C. (b)(4) for JPY100 million
  - December 11: Yen-denominated sovereign debt sales to private counterparty for JPY100 million

\* In the September Briefing, the Desk stated that it would sell exactly \$50 million of Treasury bills. However, this figure represented an estimate of the maximum amount to be sold. During the operation the Desk sold a slightly smaller amount, \$47 million.

\*\* The total figure assumes the Desk purchases the maximum of \$27 million for the outright operation scheduled on November 7<sup>th</sup>.

\*\*\* The SNB conducted an end-to-end test of its dollar repo facility with two of its regular private bank counterparties as part of the U.S. dollar liquidity swap test.

\*\*\*\* For monthly Agency MBS reinvestment periods where principal receipts are below the cap, the Desk will conduct up to \$300 million of small value outright purchases. Monthly reinvestment periods run from the 10th business day of the current month to the 9th business day of the following month.

## Appendix 2

### (1) MBS Purchases Summary Since Cap Implementation Through 11/05/18 (\$ M)

	Purchase Period		Actual Paydowns	Cap	Actual Purchases	Net Deviation	Cumulative Deviation
Oct-17	10/16/17	- 11/13/17	24,353	4,000	20,355	2	2
Nov-17 *	11/14/17	- 12/13/17	28,316	4,000	24,327	11	13
Dec-17	12/14/17	- 01/12/18	24,032	4,000	20,038	6	19
Jan-18	01/16/18	- 02/13/18	22,909	8,000	14,921	12	31
Feb-18	02/14/18	- 03/13/18	20,689	8,000	12,684	(5)	26
Mar-18	03/14/18	- 04/12/18	19,294	8,000	11,308	14	40
Apr-18	04/13/18	- 05/11/18	21,233	12,000	9,234	1	41
May-18	05/14/18	- 06/13/18	20,793	12,000	8,807	14	55
Jun-18	06/14/18	- 07/13/18	24,526	12,000	12,534	8	63
Jul-18	07/16/18	- 08/13/18	22,729	16,000	6,725	(4)	59
Aug-18	08/14/18	- 09/14/18	21,602	16,000	5,607	5	64
Sep-18	09/17/18	- 10/12/18	21,759	16,000	5,755	(4)	60
Oct-18 **	10/15/18	- 11/14/18	17,878	20,000	220	0	60

\*Actual paydowns include agency debt maturity. Nov-17: \$2,366 million; Jun-18: \$1,982 million.

\*\*Actual purchases ongoing, reflect data through 11/07/18. Target amount for October purchase period is \$292 million. This is a small value purchase not a reinvestment purchase.

# Forecast Summary

Confidence Intervals for Panels 1, 5, 9, and 10 Based on FRB/US Stochastic Simulations

## 1. Real GDP

## 2. Estimates of Private Nonfarm Payroll Gains

Note: Shaded region denotes 90% confidence interval for pooled estimate. October FRB/ADP value includes data through 10/27.

## 3. Unemployment Rates by Race or Ethnicity

Note: Three-month moving averages. Shaded bars indicate a period of business recession as defined by the NBER.

## 4. Output Gap Estimates

Note: Judgmental estimate is from October TB. Shaded region denotes 70 percent confidence interval around October TB model estimate.

## 5. Unemployment Rate

## 6. Measures of Labor Compensation

\*Three-month moving average. \*\*All employees.

### 7. Measures of Underlying PCE Price Inflation

### 8. Monthly PCE Price Inflation

### 9. PCE Prices Excluding Food and Energy

### 10. Total PCE Prices

### 11. Federal Funds Rate Projections

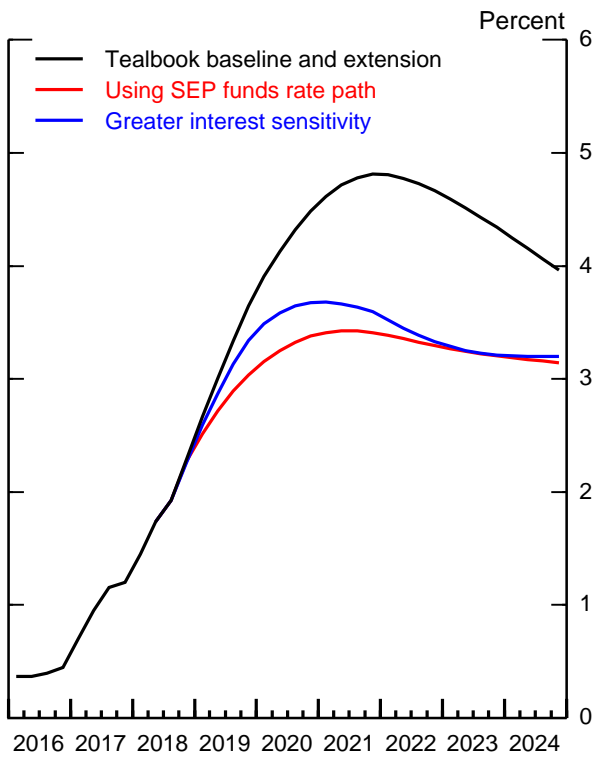

### 12. Possible Explanations for the Different Funds Rate Paths

- Different assumed policy rules.
- Tealbook baseline assumes greater underlying strength ("momentum") in aggregate demand.
- Real activity is more interest sensitive than what the Tealbook baseline assumes.

### 13. Simulated Outcomes Under Different Policy Path or Interest Sensitivity Assumptions

#### A. Federal Funds Rate

#### B. Unemployment Rate

#### C. PCE Prices Excluding Food and Energy

#### D. Real GDP

Exhibits by Mandy Bowers

November 7, 2018

## United States: These Might Rock You

- Interest rates are projected to rise materially.
- The dollar strengthens commensurately.
- U.S. trade policy remains highly uncertain.

## Europe: Lost that lovin' feeling?

- Euro-area data have persistently disappointed.
- Leading to downward revisions in the outlook.

### J.P. Morgan Euro-Area Forecast Revision Index

Weekly, Jan. 4, 2002 = 100

Shows cumulative change in J.P. Morgan Forecast History Index starting at 100 on Jan 4, 2002. Changes in index reflect revisions to forecast of average real GDP growth over the quarters t-1, t, t+1, and t+2.  
Source: Bloomberg.

### Euro-Area GDP

Percent change, annual rate

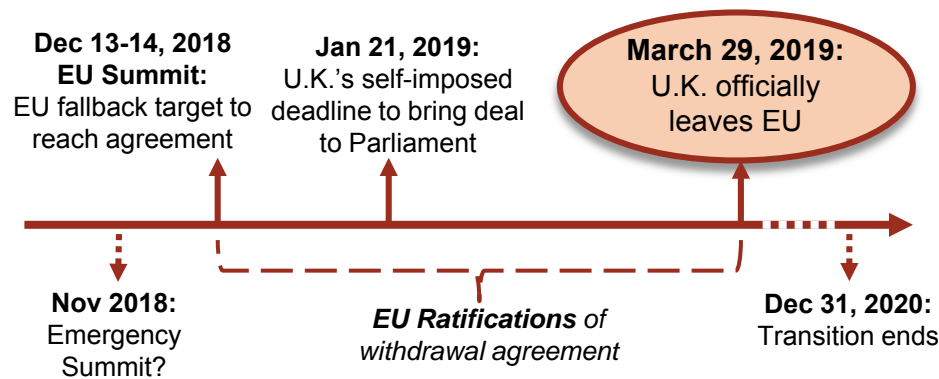

Source: Staff estimates.

# Brexit: Breakin' Up is Hard to Do

- The U.K. and EU still seem far apart, and avoiding a “no deal” Brexit is far from a foregone conclusion.
- Hard and sudden “no deal” Brexit could ....
  - Weigh on UK growth
  - Increase financial stability risks, with potential transmission to the U.S.

## Key Future Dates

## UK Real GDP

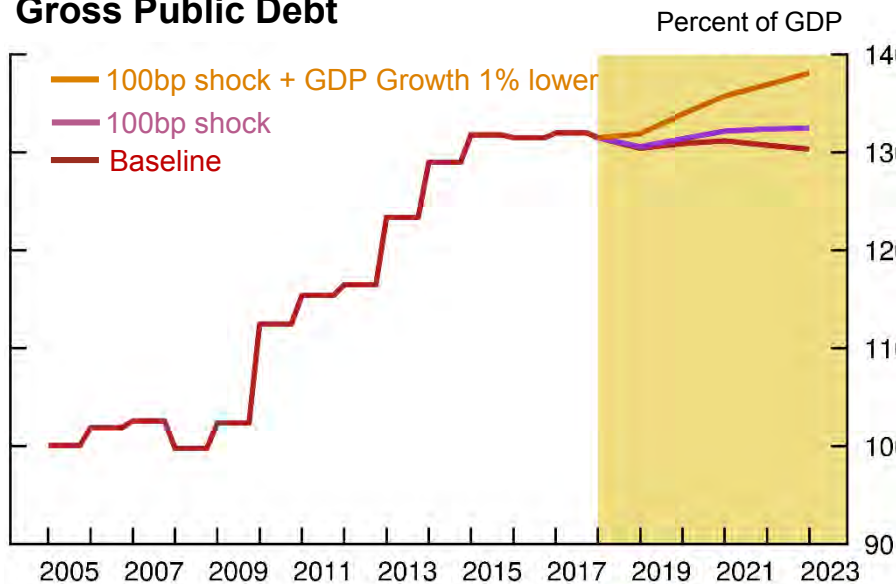

Source: Staff estimates.

## Italy: Mambo Italiano

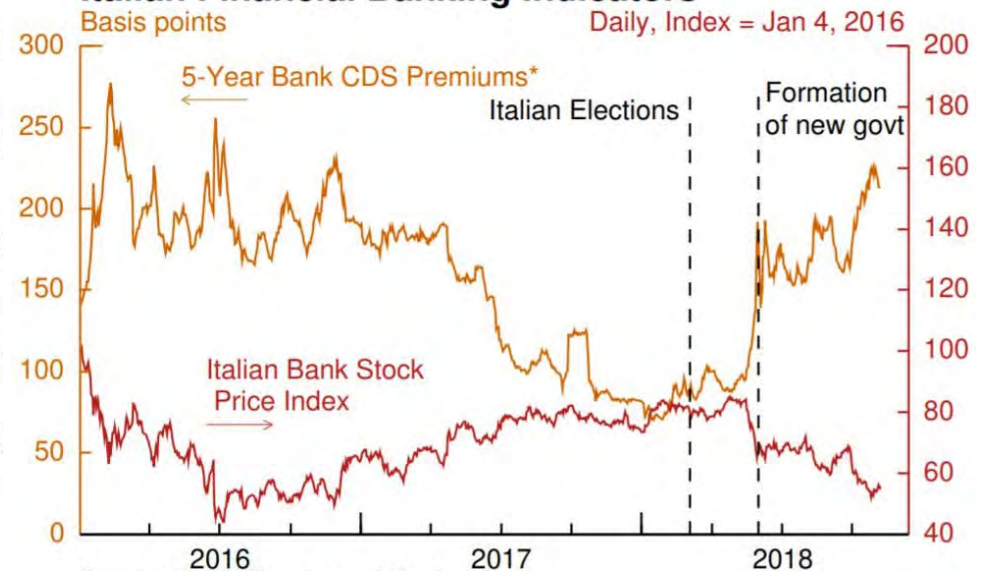

- Incoming government is not adhering to EU fiscal rules.
  - Potentially leading to sanctions.
- Suffers from low growth, high debt, and unprofitable banks.
- Struggles could reverberate across global markets.

### Gross Public Debt

Source: Staff simulation. 100bp shock shows impact when marginal rate receives 100bp shock that remains level over forecast horizon. GDP growth 1 percentage point slower than baseline simulation.

### Italian Financial Banking Indicators

Source: Markit, Bloomberg, staff calculations.

\*Credit Default Swap indexes weighted by bank total assets.

# China: Slow Ride

- Deleveraging has led to a deceleration of growth.
- Trade tensions with the U.S. limited to date.
- Potential effect could be much more.

**Chinese Exports:**  
**\$2.3 Trillion**  
 (18% of GDP)

**Chinese Imports:**  
**\$1.8 Trillion**  
 (15% of GDP)

## China: Don't Bring me Down

- Already, we expect China's growth to slow noticeably.
- Even weaker growth would be expected to slow broader EME performance as well.

### China GDP

Source: Staff estimates.

### Effect of China Growth on Rest of EME Growth\*

\*Coefficient on Chinese growth from 10-year rolling regressions of aggregate EME ex-China growth on Chinese growth and advanced-economy growth.  
Source: staff estimates.

## EME: Won't Get Fooled Again

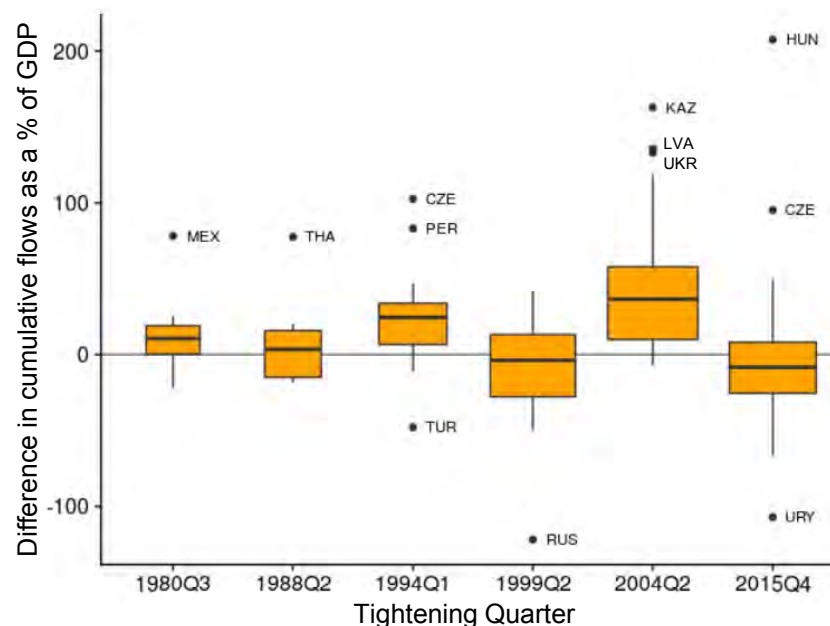

- Common view is that U.S. monetary policy tightening hurts EMEs.
- But not every tightening cycle slows EME growth or leads to capital outflows.

### Average Real GDP Growth around U.S. Tightenings

Start of U.S. Tightening Episode	<i>Emerging Asia</i>		<i>Latin America</i>	
	2 Years Before	2 Years After	2 Years Before	2 Years After
<b>1980Q3</b>	5.8	6.4	6.9	3.0
<b>1988Q2</b>	11.9	7.1	2.1	2.9
<b>1994Q1</b>	8.1	9.1	3.3	1.0
<b>1999Q2</b>	2.5	7.3	4.0	3.0
<b>2004Q2</b>	7.4	7.6	2.7	4.1
<b>2015Q4</b>	5.7	5.7	2.6	1.6

Source: Staff estimates.

### Change in capital inflows to EMEs 2 years before and after initial Fed tightening

Black lines are median value, box edges are 25<sup>th</sup> and 75<sup>th</sup> percentile. Lines are range of values excluding outliers (greater than 1.5\*interquartile range). Difference is cumulative gross inflows two years after tightening minus those 2 years before. Scaled to GDP in quarter of tightening. Source: Haver, IMF BoPS, WDI.

## EME: Take the money and run?

---

- What is the impact on EMEs if our Tealbook baseline is realized?

### Model Description

- 4 regions – U.S., AFE, Emerging Asia (less vulnerable), Latin America (more vulnerable)
- Allow currency depreciation to:
  - Boost inflation expectations.
  - Raise borrowing costs of vulnerable EMEs.

### Calibrate

- Use Blue Chip consensus as starting point to capture market expectations.
- Then add shocks to U.S. aggregate demand to generate TB unemployment forecast → higher U.S. policy rates than markets.

Examine impact on foreign economies

## EME: Good times, Bad times

- Higher path of U.S. interest rates pushes down currencies abroad.
- Foreign long-term rates also rise, especially in Latin America.
- For AFEs and less vulnerable EMEs the boost to trade from the exchange rate outweighs the cost of higher interest rate.
- For vulnerable EMEs, the reverse is true but the drag on GDP is slight.

**A. Real Exchange Rate (USD per LCU)**

**B. Long Term Real Interest Rate**

**C. Gross Domestic Product**

Source: Staff estimates.

# Vulnerabilities: All Along the Watchtower

- EME vulnerability index is rising.
- Matrix points to some notable vulnerabilities and prominent risks.

**EME Vulnerability Index\***

Country	IFSM Assessment October	Prominence of Risks
Canada	Moderate	Low
France	Moderate	Medium
Germany	Low	Medium
Italy	Notable	High
Japan	Moderate	Medium
Switzerland	Moderate	Low
United Kingdom	Moderate	High
Brazil	Notable	High
China	Notable	High
Hong Kong	Moderate	Medium
Mexico	Notable	Medium
South Korea	Low	Medium
Turkey	Elevated	High
<b>Overall</b>	<b>Moderate</b>	

IFSM Assessment Key:

Prominence of Risks Key:

Source: Staff calculations. Based on 6 indicators: CA/GDP, gross govt debt/GDP, avg inflation, increase in bank credit to private sector/GDP, reserves/GDP, total external debt/exports. Score ranges from 1 (all variables for all countries falling in bottom 5<sup>th</sup> percentile of historical experience) to 5 (all variables for all countries falling in top 5<sup>th</sup> percentile). Countries: Brazil, Chile, China, Colombia, India, Indonesia, Korea, Malaysia, Mexico, Philippines, South Africa, Thailand, Turkey.

## Bottom Line: Peaceful (Qu)Easy Feeling

- Baseline of relatively stable foreign growth near potential.
- Does incorporate drag from Britaly and EMEs.
- Leaving it little changed from last year despite sizable U.S. revision.

\*Weighted by bilateral shares in U.S. merchandise exports.  
Source: Staff estimates.

**Monetary Policy Alternatives**

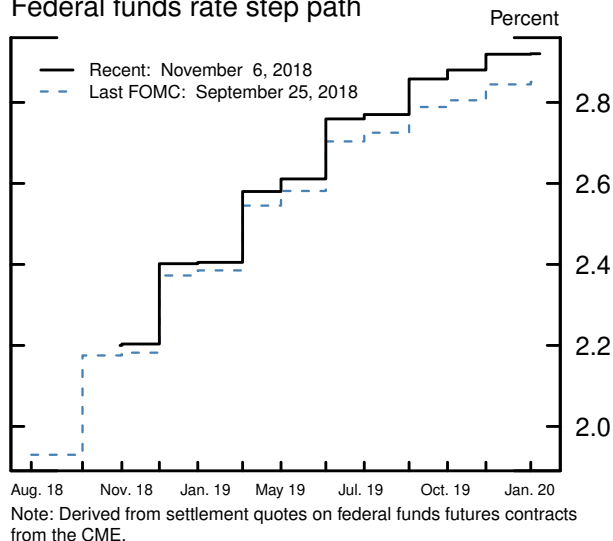

**Trevor Reeve**  
**Exhibits by Gurubala Kotta**  
**November 7-8, 2018**

**Monetary Policy Considerations**

**Alternative B**

- Economy evolving broadly in line with expectations.
- Maintain the target range at this meeting.
- Reiterate "further gradual increases."

**Federal funds rate step path**

**Alternative C**

- Increasingly high levels of resource utilization, buildup of inflation risks.
- Raise the target range.
- "Further gradual increases are likely to continue for some time."

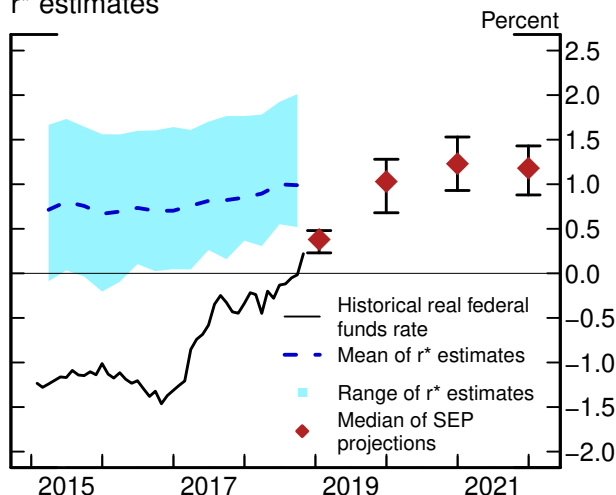

**Subjective probabilities of year-ahead core PCE inflation**

**Alternative A**

- Monetary policy is appropriately neutral.
- Maintain the target range.
- Remove reference to "further gradual increases."

**Real federal funds rate: Projections and  $r^*$  estimates**

Note: 2018:Q3 is based on seven of eight models. See the September 2018 Monetary Policy Strategies section of Tealbook A for details. Whiskers denote central tendency of SEP projections.

**Monetary Policy Considerations**

Expected pace of tightening and statement language: 2004–2007

Note: Monthly averages were used for the expected tightening series. The hatched region between the Dec. 2005 and Jan. 2006 FOMC meeting dates indicates the period in which the postmeeting statement included the word "measured", but in different usage than in the earlier period. The hatched region between the May 2006 and Jun. 2006 FOMC meeting dates indicates the period in which the post-meeting statement said that additional policy firming "may yet be needed", but that its "extent and timing" would be data dependent.  
 Source: Federal Reserve Board, Board staff calculations.

Expected pace of tightening and statement language: 2015 – present

Note: Monthly averages were used for the expected tightening series. Expected tightening data as of November 6 is denoted with "+".  
 Source: Federal Reserve Board, Board staff calculations.

Possible language for future transition

- Alternative A drops reference to future rate increases.
- Other possibilities
  - "The Committee expects that some further gradual increases in the target range..."
  - "The Committee judges that some further gradual increases...may be warranted to..."
  - "In determining the timing and size of any additional increases in the federal funds rate, the Committee will assess..."

## SEPTEMBER 2018 FOMC STATEMENT

1. Information received since the Federal Open Market Committee met in August indicates that the labor market has continued to strengthen and that economic activity has been rising at a strong rate. Job gains have been strong, on average, in recent months, and the unemployment rate has stayed low. Household spending and business fixed investment have grown strongly. On a 12-month basis, both overall inflation and inflation for items other than food and energy remain near 2 percent. Indicators of longer-term inflation expectations are little changed, on balance.
2. Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. The Committee expects that further gradual increases in the target range for the federal funds rate will be consistent with sustained expansion of economic activity, strong labor market conditions, and inflation near the Committee's symmetric 2 percent objective over the medium term. Risks to the economic outlook appear roughly balanced.
3. In view of realized and expected labor market conditions and inflation, the Committee decided to raise the target range for the federal funds rate to 2 to 2-1/4 percent.
4. In determining the timing and size of future adjustments to the target range for the federal funds rate, the Committee will assess realized and expected economic conditions relative to its maximum employment objective and its symmetric 2 percent inflation objective. This assessment will take into account a wide range of information, including measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial and international developments.

**ALTERNATIVE A FOR NOVEMBER 2018**

1. Information received since the Federal Open Market Committee met in ~~August~~ **September** indicates that the labor market has continued to strengthen and that economic activity has been rising at a strong rate. Job gains have been strong, on average, in recent months, and the unemployment rate has ~~stayed low~~ **declined**. Household spending ~~and~~ **has continued to grow strongly, while growth of** business fixed investment ~~have grown strongly~~ **has moderated from its rapid pace earlier in the year**. On a 12-month basis, both overall inflation and inflation for items other than food and energy remain near 2 percent. Indicators of longer-term inflation expectations are little changed, on balance.
2. Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. The Committee expects that ~~further gradual increases in the~~ **current** target range for the federal funds rate will, **for a time**, be consistent with sustained expansion of economic activity, strong labor market conditions, and inflation near the Committee's symmetric 2 percent objective over the medium term. Risks to the economic outlook appear roughly balanced.
3. In view of realized and expected labor market conditions and inflation, the Committee decided to ~~raise~~ **maintain** the target range for the federal funds rate ~~to~~ **at** 2 to 2-1/4 percent.
4. In determining the timing and size of future adjustments to the target range for the federal funds rate, the Committee will assess realized and expected economic conditions relative to its maximum employment objective and its symmetric 2 percent inflation objective. This assessment will take into account a wide range of information, including measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial and international developments.

**ALTERNATIVE B FOR NOVEMBER 2018**

1. Information received since the Federal Open Market Committee met in ~~August~~ **September** indicates that the labor market has continued to strengthen and that economic activity has been rising at a strong rate. Job gains have been strong, on average, in recent months, and the unemployment rate has ~~stayed low~~ **declined**. Household spending ~~and~~ **has continued to grow strongly, while growth of** business fixed investment ~~have grown strongly~~ **has moderated from its rapid pace earlier in the year**. On a 12-month basis, both overall inflation and inflation for items other than food and energy remain near 2 percent. Indicators of longer-term inflation expectations are little changed, on balance.
2. Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. The Committee expects that further gradual increases in the target range for the federal funds rate will be consistent with sustained expansion of economic activity, strong labor market conditions, and inflation near the Committee's symmetric 2 percent objective over the medium term. Risks to the economic outlook appear roughly balanced.
3. In view of realized and expected labor market conditions and inflation, the Committee decided to ~~raise~~ **maintain** the target range for the federal funds rate ~~to~~ **at** 2 to 2-1/4 percent.
4. In determining the timing and size of future adjustments to the target range for the federal funds rate, the Committee will assess realized and expected economic conditions relative to its maximum employment objective and its symmetric 2 percent inflation objective. This assessment will take into account a wide range of information, including measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial and international developments.

Class I FOMC – Restricted Controlled (FR)

---

**ALTERNATIVE C FOR NOVEMBER 2018**

1. Information received since the Federal Open Market Committee met in ~~August~~ **September** indicates that the labor market has continued to ~~strengthen~~ **tighten** and that economic activity has been rising at a strong rate. Job gains have been ~~strong, on average,~~ **robust** in recent months, and the unemployment rate has ~~stayed low~~ **reached multi-decade lows**. Household spending ~~and~~ **has continued to grow strongly, while growth of** business fixed investment ~~have grown strongly~~ **has moderated from its rapid pace earlier in the year**. On a 12-month basis, both overall inflation and inflation for items other than food and energy remain near 2 percent. Indicators of longer-term inflation expectations are little changed, on balance.
2. Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. The Committee expects that further gradual increases in the target range for the federal funds rate will be ~~consistent with sustained expansion of economic activity, strong labor market conditions, and~~ **warranted for some time to keep** inflation near the Committee's symmetric 2 percent objective **and to sustain the economic expansion and maximum employment** over the medium term. Risks to the ~~economic~~ outlook **for economic activity** appear roughly balanced. **The Committee is monitoring inflation developments closely.**
3. In view of realized and expected labor market conditions and inflation, the Committee decided to raise the target range for the federal funds rate to ~~2 to~~ **2-1/4 to 2-1/2** percent. **This decision should help guard against the risk that excessive inflation pressures will emerge amid increasingly high levels of resource utilization.**
4. In determining the timing and size of future adjustments to the target range for the federal funds rate, the Committee will assess realized and expected economic conditions relative to its maximum employment objective and its symmetric 2 percent inflation objective. This assessment will take into account a wide range of information, including measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial and international developments.

## Implementation Note for November 2018 Alternatives A and B

*Release Date: November 8, 2018*

### Decisions Regarding Monetary Policy Implementation

The Federal Reserve has made the following decisions to implement the monetary policy stance announced by the Federal Open Market Committee in its [statement](#) on ~~September 26~~ **November 8**, 2018:

- The Board of Governors of the Federal Reserve System voted [ unanimously ] to ~~raise~~ **maintain** the interest rate paid on required and excess reserve balances ~~to at~~ 2.20 percent, effective ~~September 27~~ **November 9**, 2018.
- As part of its policy decision, the Federal Open Market Committee voted to authorize and direct the Open Market Desk at the Federal Reserve Bank of New York, until instructed otherwise, to execute transactions in the System Open Market Account in accordance with the following domestic policy directive:

“Effective ~~September 27~~ **November 9**, 2018, the Federal Open Market Committee directs the Desk to undertake open market operations as necessary to maintain the federal funds rate in a target range of 2 to 2-1/4 percent, including overnight reverse repurchase operations (and reverse repurchase operations with maturities of more than one day when necessary to accommodate weekend, holiday, or similar trading conventions) at an offering rate of 2.00 percent, in amounts limited only by the value of Treasury securities held outright in the System Open Market Account that are available for such operations and by a per-counterparty limit of \$30 billion per day.

The Committee directs the Desk to continue rolling over at auction ~~the amount of principal payments from the Federal Reserve's holdings of Treasury securities maturing during September that exceeds \$24 billion, and to continue reinvesting in agency mortgage-backed securities the amount of principal payments from the Federal Reserve's holdings of agency debt and agency mortgage-backed securities received during September that exceeds \$16 billion. Effective in October, the Committee directs the Desk to roll over at auction~~ the amount of principal payments from the Federal Reserve's holdings of Treasury securities maturing during each calendar month that exceeds \$30 billion, and to **continue** reinvest~~ing~~ in agency mortgage-backed securities the amount of principal payments from the Federal Reserve's holdings of agency debt and agency mortgage-backed securities received during each calendar month that exceeds \$20 billion. Small deviations from these amounts for operational reasons are acceptable.

---

Class I FOMC – Restricted Controlled (FR)

The Committee also directs the Desk to engage in dollar roll and coupon swap transactions as necessary to facilitate settlement of the Federal Reserve's agency mortgage-backed securities transactions.”

- In a related action, the Board of Governors of the Federal Reserve System voted [ unanimously ] to approve a 1/4 percentage point increase in **the establishment of** the primary credit rate to **at the existing level of** 2.75 percent, effective September 27, 2018. In taking this action, the Board approved requests to establish that rate submitted by the Boards of Directors of the Federal Reserve Banks of ...

## Implementation Note for November 2018 Alternative C

*Release Date: November 8, 2018*

### Decisions Regarding Monetary Policy Implementation

The Federal Reserve has made the following decisions to implement the monetary policy stance announced by the Federal Open Market Committee in its [statement](#) on ~~September 26~~ **November 8**, 2018:

- The Board of Governors of the Federal Reserve System voted [ unanimously ] to raise the interest rate paid on required and excess reserve balances to ~~2.20~~ **2.40** percent, effective ~~September 27~~ **November 9**, 2018. **Setting the interest rate paid on required and excess reserve balances 10 basis points below the top of the target range for the federal funds rate is intended to foster trading in the federal funds market at rates well within the FOMC’s target range.**
- As part of its policy decision, the Federal Open Market Committee voted to authorize and direct the Open Market Desk at the Federal Reserve Bank of New York, until instructed otherwise, to execute transactions in the System Open Market Account in accordance with the following domestic policy directive:

“Effective ~~September 27~~ **November 9**, 2018, the Federal Open Market Committee directs the Desk to undertake open market operations as necessary to maintain the federal funds rate in a target range of ~~2 to~~ **2-1/4 to 2-1/2** percent, including overnight reverse repurchase operations (and reverse repurchase operations with maturities of more than one day when necessary to accommodate weekend, holiday, or similar trading conventions) at an offering rate of ~~2.00~~ **2.25** percent, in amounts limited only by the value of Treasury securities held outright in the System Open Market Account that are available for such operations and by a per-counterparty limit of \$30 billion per day.

The Committee directs the Desk to continue rolling over at auction ~~the amount of principal payments from the Federal Reserve's holdings of Treasury securities maturing during September that exceeds \$24 billion, and to continue reinvesting in agency mortgage-backed securities the amount of principal payments from the Federal Reserve's holdings of agency debt and agency mortgage-backed securities received during September that exceeds \$16 billion.~~ Effective in October, the Committee directs the Desk to roll over at auction the amount of principal payments from the Federal Reserve's holdings of Treasury securities maturing during each calendar month that exceeds \$30 billion, and to **continue** reinvest~~ing~~ in agency mortgage-backed securities the amount of principal payments from the Federal Reserve's holdings of agency debt and agency mortgage-backed securities received during each calendar month that

exceeds \$20 billion. Small deviations from these amounts for operational reasons are acceptable.

The Committee also directs the Desk to engage in dollar roll and coupon swap transactions as necessary to facilitate settlement of the Federal Reserve’s agency mortgage-backed securities transactions.”

- In a related action, the Board of Governors of the Federal Reserve System voted [ unanimously ] to approve a 1/4 percentage point increase in the primary credit rate to ~~2.75~~ **3.00** percent, effective ~~September 27~~ **November 9**, 2018. In taking this action, the Board approved requests to establish that rate submitted by the Boards of Directors of the Federal Reserve Banks of . . .

This information will be updated as appropriate to reflect decisions of the Federal Open Market Committee or the Board of Governors regarding details of the Federal Reserve’s operational tools and approach used to implement monetary policy.

More information regarding open market operations and reinvestments may be found on the Federal Reserve Bank of New York’s [website](#).

**Potential Actions of the Board of Governors of the Federal Reserve System**Potential Board actions associated with FOMC Alternatives A or B

## Interest on required and excess reserve balances

Leave the interest rates paid on required and excess reserve balances unchanged at 2.20 percent.

## Establishment of the primary, secondary, and seasonal credit rates

Approve establishment of the primary credit rate at the existing rate of 2.75 percent and establishment of the rates for secondary and seasonal credit under the existing formulas specified in the staff's November 2, 2018, memo to the Board.

Potential Board actions associated with FOMC Alternative C

## Interest on required and excess reserve balances

Raise the interest rate paid on required and excess reserve balances to 2.40 percent, effective November 9, 2018.

## Establishment of the primary, secondary, and seasonal credit rates

Approve establishment of the primary credit rate by the Federal Reserve Banks of [...] at 3.00 percent, effective November 9, 2018. This action will encompass approval of the establishment of a 3.00 percent primary credit rate by each of the remaining Federal Reserve Banks, effective on the later of November 9, 2018, or the date such Reserve Banks inform the Secretary of the Board of such a request; the Secretary of the Board would be authorized to inform each such Reserve Bank of the approval of the Board of Governors upon such notification by the Reserve Bank. Lastly, this vote will also encompass the establishment of the rates for secondary and seasonal credit under the existing formulas specified in staff's November 2, 2018, memorandum to the Board.
