## Flow of Funds Summary Statistics

### Fourth Quarter 2006

Debt of the domestic nonfinancial sectors expanded at a seasonally adjusted annual rate of 8 percent in the fourth quarter of 2006. Debt growth in the fourth quarter was faster than the third-quarter pace, as slower debt growth in the household sector was more than offset by faster growth for nonfinancial businesses and state and local governments. Domestic nonfinancial debt rose 8 percent over 2006 as a whole, about 1-1/2 percentage points slower than in 2005.

Household debt expanded at an annual rate of 6-1/2 percent in the fourth quarter of 2006, about 1 percentage point below the pace in the third quarter. Last quarter, growth of home mortgage debt decreased to a rate of 6-1/2 percent—the slowest quarterly pace since 1998—and consumer credit rose at a rate of 4-1/2 percent. For 2006 as a whole, household debt increased 8-1/2 percent, about 3 percentage points less than in 2005. The deceleration of household debt last year was accounted for by much slower growth of home mortgage debt.

Nonfinancial business debt rose at an annual rate of 11 percent in the fourth quarter of 2006, much faster than in the third quarter. Large increases in the net issuance of open market paper and corporate bonds contributed to the pickup in debt growth last quarter. At the same time, nonfinancial corporations, on net,

retired a large volume of equity shares. The 9 percent expansion of nonfinancial business debt over all of 2006 was nearly 2 percentage points faster than in 2005.

State and local government debt increased at an annual rate of 13-1/2 percent last quarter, and expanded 8-1/4 percent over all of 2006. Federal government debt rose at a pace of 3-1/4 percent in fourth quarter of last year, and increased 4 percent for the year as a whole. In 2006, growth of federal government debt averaged its slowest pace since 2001.

At the end of 2006, the level of domestic nonfinancial debt outstanding was \$28.7 trillion. Household debt amounted to \$12.8 trillion, and nonfinancial business debt was \$9.0 trillion. Combined, state and local governments and the federal government had outstanding debt of \$6.9 trillion.

Household net worth—the difference between the value of assets and liabilities—amounted to \$55.6 trillion at the end of the fourth quarter of 2006. Household net worth rose \$1.4 trillion dollars last quarter, with most of that increase accounted for by gains on direct and indirect holdings of corporate equity.

## Flow of Funds Accounts, Fourth Quarter 2006

---

This publication presents the flow of funds accounts for 2006:Q4.

**Data revisions and other changes.** The statistics in the attached tables reflect the use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods.

1. Assets of the nonfarm nonfinancial corporate business sector (tables F.102 and L.102) were revised from 2004:Q1 onward to reflect final data from the Internal Revenue Service (IRS) *Statistics of Income* (SOI) for 2004.

2. In the nonfarm noncorporate business sector (tables F.103 and L.103), data have been revised from 2004:Q1 onward, owing to benchmark statistics available from the IRS/SOI for 2004.

3. Due to a reclassification of some savings institutions into the commercial banking sector in 2006:Q4, the U.S.-Chartered Commercial Banks sector (table F.110) reports larger than usual positive flows in certain instrument categories last quarter, while the Savings Institutions sector (table F.114) reports some larger than usual negative flows. The asset category most affected by these reclassifications is mortgages; the liability categories most affected are time and savings deposits and other loans and advances.

**Explanatory notes for tables D.1, D.2, and D.3.** Domestic debt comprises credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, agency- and GSE-backed mortgage pools, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous

period from table D.3. Seasonally adjusted levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those in table D.1.

**Relation of Flows to Outstandings.** Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time specifically, outstanding in the flow of funds accounts are related to the flows in the following way:

$\text{Outstanding}_t = \text{Outstanding}_{t-1} + \text{Flow}_t + \text{Discontinuity}_t$   
where "t" is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in a series can distort estimated rates of growth in assets and liabilities between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated as:

$\text{Percentage change}_t = (\text{Flow}_t / \text{Outstanding}_{t-1}) * 100$

**Preliminary Estimates.** Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter's data were compiled is provided in a table following this introduction. The distinction between "available" data and "missing" data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

**Margins of Uncertainty.** Flow of funds statistics are subject to uncertainties resulting from measurement errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of “discrepancies” for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components of the accounts sometimes result in discrepancies that cancel in annual data.

**Availability of Data.** Flow of funds statistics are updated about ten weeks following the end of a quarter. This publication — the Z.1 release — is available from the Board's Publications Services. Flow of funds data are also available electronically through the Internet at the following location:

<http://www.federalreserve.gov/releases/Z1>

The Internet site also provides quarterly data beginning in 1952, organized in compressed files that correspond to the tables published in this release. There are files for quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, and debt (tables D.1, D.2, and D.3).

A *Guide to the Flow of Funds Accounts* is available. The 1,200-page *Guide*, published in two volumes in January 2000, explains in detail how the U.S. financial accounts are prepared and the principles underlying the accounts. The *Guide* can be purchased for \$20.00 from the Board's Publications Services. Publications Services accepts orders accompanied by checks as well as credit card orders.

The Internet site for this release at the location shown above contains a link to an order form for the *Guide* that can be mailed or faxed to Publications Services. In addition, the Internet site includes a link to the *Guide*'s descriptions of the tables in the flow of funds accounts.

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 25) and equity in noncorporate business (line 32). The matrix shows a discrepancy in column 17 for monetary gold and SDRs (line 4) because by international accounting convention, such instruments are financial assets without corresponding liabilities.
