

2019 SHED

-----  
-----  
-----  
-----  
CODEBOOK FOR 2019 SURVEY OF HOUSEHOLD ECONOMICS AND DECISIONMAKING  
-----  
-----  
-----

The codebook serves as the principal guide to the variables included on the public version of the 2019 Survey of Household Economics and Decisionmaking (SHED) data set. However, not every variable included in the survey is included in the public use data set. For example, the data set does NOT include most variables related to details of geography or free-text responses.

The SHED is sponsored by the Board of Governors of the Federal Reserve System. Data for the 2019 SHED were collected by Ipsos using their online probability based KnowledgePanel.

For a general overview of the 2019 SHED and a detailed discussion of the survey methods, see Sara Canilang, Cassandra Duchan, Kimberly Kreiss, Jeff Larrimore, Ellen Merry, Erin Troland, Mike Zabek, "Report on the Economic Well-Being of U.S. Households in 2019 featuring Supplemental Data from April 2020," Federal Reserve Board. The variables in the codebook are generally in the order in which the questions were asked during the survey. For a copy of the survey questionnaire, see the Supplemental Appendixes to the "Report on the Economic Well-Being of U.S. Households in 2019 featuring Supplemental Data from April 2020."

-----  
-----  
ANALYSIS WEIGHTS  
-----  
-----

Weights play a critical role in interpreting the survey data and allow the sample population to match the U.S. population based on observable characteristics. The public use dataset contains two sets of weights, and users should consider the appropriate weights for their analysis.

Weight\_pop is most commonly used and includes the weights used for the "Report on the Economic Well-Being of U.S. Households in 2019 featuring Supplemental Data from April 2020." These weights allow for the entire sample to reflect the observable characteristics of the U.S. adult population. They are rescaled to add up to the total population of the U.S. adults eligible for this survey. Weight\_pop is for analysis of the combined sample comprised of the main sample and the Lower-income oversample. These weights are scaled to add up to the number of completed responses.

-----

2019 SHED

-----  
DEMOGRAPHIC PROFILE VARIABLES  
-----  
-----

In addition to the questions asked on the SHED, the data set includes demographic profile variables that were collected by Ipsos prior to respondents receiving the SHED. These demographic profile variables are typically labeled with the prefix "pp" in the data file with some exceptions and in the variable descriptions below. In some cases, such as the highest level of education, similar questions were asked in these demographic profile surveys and in the SHED. In these cases, the answers to the SHED questions were used for the "Report on the Economic Well-Being of U.S. Households in 2019 featuring Supplemental Data from April 2020" if they were available.
