# Financing Patterns of Small Firms: Findings from the 1998 Survey of Small Business Finance 

Created by Congress in 1976, the Office of Advocacy of the U.S. Small Business Administration (SBA) is an independent voice for small business within the federal government. Appointed by the President and confirmed by the U.S. Senate, the Chief Counsel for Advocacy directs the office. The Chief Counsel advances the views, concerns, and interests of small business before Congress, the White House, federal agencies, federal courts, and state policy makers. Economic research, policy analyses, and small business outreach help identify issues of concern. Regional Advocates and an office in Washington, DC, support the Chief Counsel's efforts.

For more information on the Office of Advocacy, visit http://www.sba.gov/advo, or call (202) 205-6533. Receive email notices of new Office of Advocacy information by signing up on Advocacy's Listservs at http://web.sba.gov/list

## Foreword

This report contains detailed tables generated from the 1998 Survey of Small Business Finance. These tables provide a detailed picture of the patterns of financing for small firms and various subcategories. The 1998 survey (and its predecessors, the 1993 and 1987 National Survey of Small Business Finance) is the most comprehensive database on small firms' use of credit and financial services. Only a small number of researchers and policy experts have taken advantage of the database because of its enormous scope.

The purpose of this publication is threefold:

1. To provide tables that describe the financing patterns of small firms-i.e. the types of credit used, the suppliers who provide these credits, as well as the estimates of the dollar amount of total credits outstanding and for individual credit types. Much of this information has not been previously available;
2. To provide a brief description of the financing patterns for all small firms, small minorityowned firms, and small women-owned firms; and
3. To inform and to provide guidance to the researchers and policy makers interested in small business financing about the database.

A better understanding of small businesses' borrowing behavior is a prerequisite for enlightened small business policymaking. The value of the surveys to the research and policy discussion on issues of small business finance cannot be overstated.

The Office of Advocacy strives to promote quality research on small business policy issues by encouraging and cosponsoring data collection efforts by other government agencies and by encouraging researchers and policymakers to engage in quality research. Please share your comments and research interests with us by contacting Dr. Chad Moutray, chief economist and director of economic research.

This report was prepared by Dr. Charles Ou of the Office of Economic Research, Office of the Advocacy, with assistance of Advocacy economist Victoria Williams. Special tabulations from the 1998 SSBF were prepared by Professor George Haynes of Montana State University under SBA contract SBAHQ-01-M-0412. Please direct any comments on this report to Charles Ou at 202-205-6966 (tel.) or charles.ou@sba.gov.

## Executive Summary

How do small businesses finance their operations? The answers are as varied as the United States' small businesses. But for each of the primary categories of small businesses, there are apparent trends. The study consists of 450 tables that make the statistical data underlying these trends available to policymakers and researchers in great detail. The tables are derived from the 1998 Survey of Small Business Finance (SSBF). The tables show the finance patterns for all small businesses and three forms of organization (sole proprietorships, partnerships, $S$ and C corporations) measured in three ways (number of employees, total sales, and industry sector). These businesses' use of financing is examined from numerous points of view:

- the percentage using credit from various suppliers of credit and by kind of credit used,
- the frequency of credit use,
- the value of debt by kind of credit and credit supplier, and
- balance sheets that show the value and percentage of debt and equity for firms in different employment size categories.

The tables present all of this information for all small businesses and for the following subcategories:

- traditional borrowers (any firm that had a traditional loan in 1998),
- firms owned by racial minorities,
- black-owned firms,
- Hispanic-owned firms,
- women-owned firms,
- fast growing businesses (10 percent growth or more between 1997 and 1998),
- young businesses (in business four years or less),
- firms with more than one owner, and
- minority and Hispanic-origin firms.

So, using the database tables, it would be possible to compare, for example, how much blackowned firms borrowed on credit cards compared to all firms, broken out by firm size, and the structure of debt and equity. Or compare how the borrowing patterns of fast-growing firms compare with all firms. Appendix A explains the naming conventions of the complete set of tables.

## Financing Patterns for All Small Firms

Over 80 percent of the small businesses surveyed used some kind of credit and had outstanding debt on their books at the end of 1998. Fifty-five percent of small firms had some kind of traditional loan, while 71 percent obtained credit from non-traditional sources, mainly owners' loans and credit cards.

- The most frequently used kinds of credit were personal and business credit cards, lines of credit, and vehicle loans. Forty-six percent of small firms used personal credit cards, 34 percent used business credit cards, and 28 percent used lines of credit.
- The most frequent suppliers of credit to small firms were banks; 38 percent of small firms had credit outstanding from commercial banks in 1998. Owners' loans were next in popularity ( 14.2 percent of small firms used them), followed by finance companies (13.3 percent).
- Loans from owners are an important source of small business finance. The survey did not collect data on their use by sole proprietors, so the extent of their use is understated. For small corporations, borrowing from themselves and banks were the two most common sources of financing, far exceeding borrowing from any other source. Some 30 percent of small corporations borrowed from owners as compared with 14 percent for all small businesses.
- While the majority of small firms used some financing, most small firms' reliance on credit in business operations is limited in scope: 47 percent of firms had no outstanding debt, and another 25 percent had just one loan outstanding.
- The percentage of small firms using credit normally increases with firm size. The percentage of firms using any credit increased from 70 percent to 99.6 percent as the employment size of the firms increased from 0 to over 100. This rising trend is most evident in small firms' uses of credit from loans supplied by depository institutions (banks, thrifts, etc.). For example, only 22 percent of firms with no employees used credit from depository institutions, while 78 percent of firms with over 100 employees used depository institutions.
- The use of owners' loans and personal credit cards leveled off or diminished as firm size increased.

To conclude, two distinct patterns between firm size and the type of credit used were observed. The positive relationship between firm size and the percentage of credit from depository institutions seems to reflect the availability of credit to larger small firms - credit becomes more available as firm size increases. A flat or inverse relationship between firm size and the use of owners' loans and personal credit cards reflects a different phenomenon. Very small firms tend to use these alternative sources because other sources of financing, which are usually cheaper, may be unavailable.

Estimate of Measurable Debt Outstanding. As of December 1998, small businesses had debts outstanding in the amount of $\$ 700$ billion. Of this total, $\$ 609$ billion was in the six traditional types of credit. An additional $\$ 86.5$ billion represented loans from owners of partnerships and corporations, and about $\$ 4.8$ billion was borrowed with personal and business credit cards.

- The two most important types of credit used by small businesses were lines of credit and mortgage loans. Together, these accounted for 61 percent of total borrowing. Total debt outstanding for mortgage loans amounted to $\$ 214$ billion and for credit lines, $\$ 207$ billion.
- Banks were the most important supplier of credit, accounting for 56 percent or $\$ 361$ billion. Owners' loans were next with 12 percent (or $\$ 87$ billion), followed by finance companies at 11 percent (or $\$ 75$ billion).

Debt-Equity Structure of Small Firms. The survey data show the debt-equity structure for all small firms and for firms with different degrees of credit usage. These balance sheets summarize firms' total assets and borrowing at a given point in time. Analysis of the debt structure for all small firms by asset size and by employment size revealed two different pictures
of smaller firms' debt burden. Small firms with more assets seemed to have more equity than small firms with fewer assets. Most small firms were financing their asset accumulation through equity financing (and retained earnings) rather than through debt financing. When measured by employment size, the relationship between firm size and the uses of equity was not monotonic. A U-shaped curve best described the uses of equity. As firm size increased from the smallest to medium, the equity share of total assets declined. The share increased significantly for the largest sized small firms, those with 100 or more employees.

In conclusion, very small firms seem to rely heavily on costly personal credit cards and owners' loans. On the one hand, this seems to confirm frequently heard complaints regarding the shortage of credit and the inefficient operation of the credit markets where very small firms are concerned. On the other hand, owner loans are a very convenient source of financing and may be preferred for their simplicity.

A low equity-to-debt ratio for smaller firms could imply a weaker financial condition, but it could also indicate that debt financing is plentiful. Nevertheless, such observations are casual at best. An in-depth, multivariate econometric analysis utilizing additional information on factors that affect borrowing and lending conditions in the small business credit markets would need to be performed to give an authoritative explanation of these and other patterns observed in these tables. Many of these variables are compiled in the SSBF, though additional information from other sources might also be needed to investigate these issues.

## Financing Patterns of Small Minority-Owned and Hispanic-Origin Firms

Use of Alternative Financing. Use of external credit sources was lower than the whole for small minority-owned and Hispanic-origin firms: only 77 percent used some type of credit as compared with 83 percent for all small firms. Personal credit cards, business credit cards, and lines of credit were the most frequently used types of credit, with 46 percent, 29 percent, and 20 percent respectively.

- Commercial banks were the most important supplier of credit. Again, usage was less than for all firms: only 27 percent of small minority and Hispanic-owned businesses used commercial banks compared with 38 percent of all small firms. Owners' loans were the second most important source, used by 12.5 percent.
- Divergent patterns in the use of institutional and non-institutional sources of credit were quite notable. Some 16 percent of small minority and Hispanic-owned firms obtained credit from nonfinancial institutions as compared with 12 percent for all small business. While the overall use of non-traditional credit was much smaller for small minority firms ( 55 percent versus 71 percent for all small firms), little difference was observed in the two groups' use of owner's loans and personal credit cards, the two most important non-traditional sources of credit. Lower reliance on traditional sources and institutional suppliers could be the result of barriers that these firms face in obtaining credit from these sources.
- Regarding the frequency of borrowing, minority and Hispanic-origin firms used loans less- 77 percent of minority firms had one or fewer loans outstanding at the end of December 1998 as compared with 72 percent for all small firms. Again, a slightly larger percent of the smallest firms in this group used less credit compared with the same group for all firms.
- The rising trend between firm size and the percentage using credit from depository institutions was more pronounced for minority and Hispanic-origin firms than for all firms-especially, in the use of credit from commercial banks and business credit cards. Use of credit from commercial banks rose from 8.9 percent to 85.5 percent as compared with 17 percent and 78 percent for all small firms. Use of business credit cards rose from 18.8 percent for the smallest firms to 85.5 percent.

Total Debt Outstanding. For the small minority-owned businesses captured in the survey, total outstanding debt amounted to $\$ 59$ billion, including $\$ 51.5$ billion in the six traditional loan categories, $\$ 6.6$ billion in loans from owners of partnerships and corporations, and $\$ 990$ million in credit card debt. This represents 8.4 percent of debt outstanding for all small firms ( $\$ 700$ billion).

- Mortgage loans were the most popular kind of debt for minority firms, accounting for around 40 percent (or $\$ 23.3$ billion); lines of credit, were next, accounting for 22 percent (a value of $\$ 12.9$ billion) Among credit suppliers, banks were most important, supplying $\$ 26.6$ billion, or 45 percent of total credit used. Finance companies ranked second with $\$ 8.8$ billion followed by owners with $\$ 6.6$ billion (11 percent).

Debt-Equity Structure. It is difficult to generalize about the debt-equity structure of smaller and larger small firms because of the small sample size of larger small minority firms. On first look, minority firms seems to have an inverted U shape for the relationship between firm size and the use of equity capital-i.e. the middle sized groups have the highest equity-to-asset ratios. However, a look at the equity ratio for firms with large employment (rather than large assets) shows that it was the net worth position for firms with 20 to 99 employees that created this phenomenon-this group's negative net worth reduced the equity ratio for large firms in the large asset groups. In fact, firms with 100 or more employees had the highest equity ratio.

## Financing Patterns of Small Women-Owned Firms

Use of Alternative Financing. Overall, the financing patterns of women-owned firms bore more similarity to those of small minority firms than to all small firms. Seventy-eight percent of all women-owned firms accessed some type of credit in 1998 as compared with 83 percent for all small firms and 77 percent for small minority firms. Women-owned firms used less of some type of traditional loans as compared with all firms, 46 percent and 55 percent respectively. On the other hand, almost 70 percent used non-traditional sources for their credit needs, a far higher percentage than for minority firms.

- Credit cards were the most often used kind of credit, with 48 percent and 29 percent of firms using personal and business credit cards, respectively. Credit lines ranked third in popularity, used by 18 percent of firms.
- Women-owned businesses relied on financial institutions less than all small businesses. Only 28 percent of women-owned firms used credit from banks as compared with 38 percent for all small firms and 27 percent for small minority firms. In addition, only 9.8 percent of women-owned businesses obtained credit from finance companies as compared with 13 percent for both all small firms and small minority firms. On the other hand, 88 percent of women-owned businesses used non-traditional modes of credit as compared with 86 percent for all small firms and 71.4 percent for minority firms.
- As was the pattern for all small firms and small minority firms, women-owned firms' reliance on credit grew along with firm size, especially in the use of traditional kinds of credit and credit from financial institutions. However, the use of credit by the largest women-owned firms, those with 100 to 499 employees, was much lower than their counterparts in all small firms and minority firms. For example, the use of credit from banks increased from 12 percent for the smallest women-owned firms up to 57 percent for the largest women-owned small firms, as compared with a rise from 17 percent to 77 percent for all small firms. For the smallest women-owned firms, their experience seemed to be comparable to those small minority firms with few exceptions.

Total Debt Outstanding. Women-owned small businesses had $\$ 110.3$ billion in debt outstanding in 1998, including $\$ 99.6$ billion from six traditional types of credit financing, $\$ 9.5$ billion from owners, and $\$ 1.2$ billion in credit card debt This represents 15.8 percent of all small business debt outstanding ( $\$ 700$ billion).

- The most important form of borrowing was mortgage loans, which totaled $\$ 48.4$ billion and accounted for 43 percent of total credit borrowing. Credit lines ranked a distant second, amounting to $\$ 24.1$ billion or 22 percent.
- Banks were the dominant supplier of credit, accounting for 55 percent and totaling $\$ 59.6$ billion. Banks were major suppliers of both mortgage loans and credit lines. Finance companies and owners ranked second and third with $\$ 11.6$ billion (or 10.5 percent) and $\$ 9.5$ billion (or 8.6 percent).

Debt-Equity Structure. Comparison of the debt-equity structure for smaller firms versus large firms for all and women-owned businesses suffered the same problem as the comparison between all and minority firms--a smaller number of larger small women-owned firms with balance sheet data in the survey made it difficult to generalize. Overall, the relationship between the use of equity capital and firm size for women-owned firms is similar to that of all firmseither rising as firm size increases or showing a $U$ shape movement with largest firms having high equity ratio.

## Conclusion

This report presents a statistical report on the financing patterns of small firms using the 1998 Survey of Small Business Finances. It also provides a brief review of the financing patterns of all small firms, small minority-owned firms, and women-owned firms. The study found that financing patterns do differ by firm size and for different groups of small firms. It was found that very small firms relied less on financing by financial institutions and more on sources from nontraditional sources such as owners' loan and the use of personal credit cards. Minority and women-owned firms were also found to have used more of certain sources of financing as compared with all small business in general. Whether these observed differences in the financing patterns can be attributed to the reduced availability of certain types of credit from certain groups of suppliers is, however, difficult to ascertain because of the complexity of the determinants of the demand and the supply of credit to small firms. Further research on these issues utilizing the detailed information collected in the survey along with a more elaborate econometric analysis is certainly warranted.

## 1. Introduction

In an effort to obtain more current information on small business financing in the United States, the Board of Governors of the Federal Reserve System conducted the third national survey on small business finances, The Survey of Small Business Finance (SSBF), in 1998-99. The 1998 survey (and its predecessors, the 1987 and 1993 National Survey of Small Business FinanceNSSBF) is the most comprehensive database on small firms' use of credit and financial services. The SSBF gathered valuable information on the use of various financial services from a sample of some 3,500 nationally representative firms with fewer than 500 employees. The database contains a vast amount of information on small businesses' use of credit and financial services in the United States in 1998. ${ }^{1}$ Only a small number of researchers and policy experts have taken advantage of the database because of its enormous scope. ${ }^{2}$

This statistical report presents 450 tables that provide a broad picture of financing patterns of small firms in 1998. Because the survey examined numerous characteristics of small firms, the database can be used to examine the financing patterns for such subgroups as small minorityowned firms, women-owned firms, fast-growing firms, young firms, and the like.

The purpose of this publication is threefold:

- To provide tables that describe the financing patterns of small firms, such as the type of credit used, the suppliers of this credit, and estimates of the dollar amount of various types of debt outstanding. Many of these are here available for the first time. ${ }^{3}$
- To provide a brief analysis of financing patterns for several types of small firms in terms of their use of credit, the dollar amounts of credit used, and the firms' debt equity structure.
- To inform researchers and policymakers concerned with small business finance of the rich information contained in the database.

A better understanding of small business borrowing behavior is the prerequisite to enlightened small business public policy making. The value of this survey to the research and policy discussion of small business financing issues cannot be overemphasized.

[^0]
## 2. Financing Patterns of Small Firms

Financing patterns for small firms in 1998 were captured in the SSBF. The financing patterns for all small firms, small minority-owned firms, and small women-owned firms are described in the next three sections.

### 2.1 All Small Firms

## 2.1.a Percentage Who Use Credit (Tables 1.1a through 1.3a)

Over 80 percent of small businesses surveyed used some kind of credit and had outstanding debt on their books at the end of 1998. ${ }^{4}$ Fifty-five percent of small firms had used some type of traditional loan, while 71 percent had used nontraditional sources (mainly owners’ loans and credit cards), for their credit needs. ${ }^{5}$ Among the different types of credit used, credit cards (both personal and business), credit lines, and vehicle loans were the most widely used. Some 46 percent of small firms used personal credit cards, 34 percent used business credit cards, 28 percent used credit lines, and 21 percent used vehicle loans (Table 1.1a and Chart 1). Among financial institutions, banks are the most widely used source of credit; 38 percent of small firms had credit outstanding with commercial banks in 1998. Owners' loans were next, used by 14.2 percent of small firms, followed by finance companies, 13.3 percent (Chart 2 and Table 1.2a). The smallest firms have much less access to bank financing than larger firms. Only 17 to 31 percent of the two smallest

[^1]groups (those with zero and 1 to 4 employees) borrowed from commercial banks as compared with 53 percent to 77 percent for larger small firms (Table 1.2a).

Borrowing from owners was one of the most important sources of financing for most small firms. However, the survey does not convey a full picture of small firms' reliance on owners' loans because it considers the use of owners' capital by sole proprietorships as contribution of equity, not debt financing. Hence it excluded sole proprietorships from questions regarding borrowing from an owner. A better picture is obtained by examining the borrowing patterns for small corporations. Some 30 percent of small corporations borrowed from their owner(s) as compared with 14 percent for all small businesses (Table A). In fact, for small corporations, borrowing from themselves, the banks, and the use of credit cards were the three most used financing sources, far exceeding borrowing from any other sources (Table 1.2e). For small corporations with one to four employees, the amount of debt owed to owners accounted for more than a quarter of total debt, more than double the amount of borrowing from any other source except commercial banks (Tables A and 1.5e).

Table A Use of Owners' Loans by S and C Corporations, by Employment Size, 1998

|  | Percent Using Credit |  |  | Percent of Owners' Debts to Total Debts |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | All Small Business | $\begin{gathered} \mathrm{S} \\ \text { Corporation } \end{gathered}$ | C <br> Corporation | All Small Business | $\begin{gathered} \mathrm{S} \\ \text { Corporation } \\ \hline \end{gathered}$ | C <br> Corporation |
| Any Firm | 14.2 | 30.5 | 30.6 | 12.4 | 17.9 | 12.6 |
| Number of Employees |  |  |  |  |  |  |
| 0 | 0.2 | 0.0 | 0.0 | 0.2 | 0 | 0 |
| 1-4 | 12 | 27.7 | 29.5 | 16.2 | 32.1 | 26.4 |
| 5-9 | 19.3 | 29.8 | 26.3 | 13.2 | 21.9 | 19.4 |
| 10-19 | 29.1 | 35.6 | 34.6 | 10.5 | 20.2 | 7.6 |
| 20-99 | 32.9 | 34.1 | 36.8 | 16.2 | 17.0 | 16.9 |
| 100-499 | 27.6 | 40.7 | 25.5 | 6.7 | 7.7 | 5.8 |

Sources: Tables 1.2a, 1.2d, and 1.2e for percent usage; and Tables 1.5a, 1.5d, and 1.5e.
While the majority of small firms used some financing, their reliance on credit in business operations is limited in scope. Some 47 percent of small firms had no outstanding debt (in the form of traditional loans); 25 percent had just one loan outstanding; 13 percent had two loans, and 15 percent had more than two loans on their books (Table B). Moreover, more than half of all firms with four or fewer employees had no outstanding debt in the form of traditional loans. However, as more small firms obtain credit lines (a revolving credit that can be used again and again over a certain time period), the frequency of credit use will become more difficult to interpret.

The percentage of small firms using credit increased with firm size. The percentage of firms using any credit increased from 70 percent to 99.6 percent as employment size rose from 0 to over 100. The rising trend is most apparent in the use of loans from depository institutions (banks, thrifts, and credit unions). For example, only 22 percent of firms with zero employees used credit from the depository institutions, compared with 78 percent of firms with over 100 employees. Since credit lines are mostly provided by depository institutions, the relationship between usage and firm size is even more significant. Only 13 percent of the smallest size firms used them, compared with 75 percent of the largest. For small business credit cards, only 17.5
percent of the smallest firms them as compared with over 60 percent of firms with 100 or more employees. Similar trends were observed for equipment loans and leasing (Chart 3 and Table 1.2a). It seems that general purpose credit lines for working capital may not be readily available to very small firms.

Table B Percent of All Firms with 0, 1, 2, 3, and More Than 3 Loans, 1998

|  | Number of Traditional Loans Used |  |  |  |  |  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: |
| Category | Total | 0 | 1 | 2 | 3 | More than 3 |
| Any Firm | 100 | 47.3 | 24.6 | 12.9 | 5.9 | 9.3 |
| Number of Employees |  |  |  |  |  |  |
| 0 | 100 | 69.4 | 18.6 | 7.5 | 2.3 | 2.3 |
| $1-4$ | 100 | 53.4 | 24.5 | 12.5 | 4.5 | 5.2 |
| $5-9$ | 100 | 32.7 | 32.3 | 17.1 | 7.6 | 10.3 |
| $10-19$ | 100 | 25.9 | 23.4 | 13.9 | 10.9 | 25.8 |
| $20-99$ | 100 | 17.9 | 23.8 | 18.3 | 12.3 | 27.8 |
| $100-499$ | 100 | 8.8 | 24.1 | 8.3 | 16.6 | 42.2 |

Source: Table 1.3a

While credit from depository institutions was used less important for smaller small firms, alternative financing become more significant. ${ }^{6}$ While the smallest firms' use of traditional credit types from depository institutions was low, many of these firms had used owners' loans and personal credit cards. ${ }^{7}$ For example, only 13 percent of firms with no employees had a line of credit, and only 4 percent had used lease financing. While 22 percent had borrowed from depository institutions (21 percent from commercial banks) and 11 percent from a non-depository institution (such as a finance company), 48 percent of this group used personal credit cards for business purposes and some
 30 percent used owners' loans (Tables 1.1a, 1.2a, and A). It seems that a large percent of the smallest firms were

[^2]forced to use personal credit cards because of limited availability of loans and of business credit cards (Tables 1.1a and Chart 3).

To conclude, two distinct relationships between firm size and the percentage using a certain credit type or a credit supplier were observed. The positive relationship between firm size and percentage of use for most of the commonly used credit types and credit sources seems to reflect the availability of the credit supplied to larger small firms, i.e., credit becomes more readily available as firm size increases. A flat or even an inverse relationship between firm size and such non-traditional kinds of credit as owners' loans and personal credit cards reflects a different phenomenon - the need of very small firms to use these alternative sources because of the lack of availability of other kinds of financing, which are usually cheaper (Chart 3).

## 2.1.b Measurable Debt Outstanding (Tables 1.4a and 1.5a)

As of December 1998, the small businesses represented in the SSBF had $\$ 609$ billion worth of debt outstanding using the six traditional types of credit. An additional $\$ 86.5$ billion worth of credit was extended by the owners of partnerships and incorporated businesses to their businesses. Another $\$ 4.8$ billion worth of credit was owed on both personal and business credit cards. ${ }^{8}$ Including owners' debt and credit card balances used for business purposes, total debt outstanding for small firms amounted to $\$ 700$ billion at the end of 1998 (Tables 1.4a and 1.5 a ). As indicated in Chart 4, lines of credit and mortgage loans were the two most important types of credit used by small businesses, accounting for
 61 percent of total borrowing. Mortgage loans and credit lines amounted to $\$ 214$ billion and $\$ 207$ billion respectively (Table 1.4a).

Among credit suppliers, banks were most important. They accounted for 56 percent for $\$ 361$ billion. Owners' loans were next with 12 percent (for $\$ 87$ billion), followed by finance companies at 11 percent (for $\$ 75$ billion) (Table 1.5a and Chart 5). Although many owners of small C and S corporations lend money to their businesses, the share of owners' loans in the total credit used for these corporations is not as large as the frequency of their use-accounting for 13

[^3]percent and 18 percent of all credit used by small C and S corporations, respectively (Table B). One explanation for this phenomenon is that the average size of loans from owners tends to be smaller and more frequent relative to loans from financial institutions.

Chart 5. Share of Outstanding Debt for All Small Firms, by Supplier of Credit, 1998<br>(Total value $=\mathbf{\$ 7 0 0}$ billion)

Source: U.S. Small Business Administration, Office of Advocacy from data provided by the Federal Reserve Board's 1998 SSBF. Table 1.5a

## 2.1.c Debt-Equity Structure (Tables 1.6aa-1.6da)

Tables were created to show small firms' debt-equity structure. These balance sheets summarize firms' total assets and borrowing at a given point in time. They were created for all small firms, for those that used any credit, only traditional credit, and only non-traditional credit. ${ }^{9}$

Tables 1.6aa-1 and 1.6aa-2 provide a picture of the debt structure for all small firms in terms of asset size and employment size. ${ }^{10}$ Two different pictures emerged. Small firms with more assets seemed to have more equity than small firms with fewer assets. Most small firms were financing their asset accumulation through equity financing (and retained earnings) than debt financing. ${ }^{11}$ When comparing firms based on employment size, the relationship between firm size and use of equity is not monotonic. A U-shape relationship seemed to apply in the use of equity-as firm size increased from the smallest to medium size, the equity share of total assets declined. The share increased significantly for the largest-sized small firms (with 100 or more employees). Since there is no detailed information on the type of assets acquired by small firms, it is difficult to investigate the role different funding types play in financing the acquisition of assets.

A low equity-to-debt ratio for smaller firms could imply a weaker financial condition for these firms, but it could also imply that financing, from whatever source, is plentiful. An in-

[^4]depth analysis of the SSBF (as well as other sources) would be necessary to properly evaluate this phenomenon.

## 2.1.d Conclusion

The heavy reliance on high-cost personal credit cards and owners' loans by very small firms seems to confirm anecdotal complaints regarding the shortage of credit and inefficient operation of credit markets for these firms. Nevertheless, these observations are casual at best. A better understanding of the various factors that contribute to the patterns of financing observed in these tables would require a multivariate econometric analysis that would also use additional information on factors that affect the borrowing and lending conditions in the small business credit markets.

### 2.2 Financing Patterns of Small Minority- and Hispanic-Owned Firms

2.2.a Percentage Who Use Credit (Tables 12.1a through 12.3a)

Minority-owned firms discussed in this section include both minority-owned and Hispanic-origin firms as defined in the survey. ${ }^{12}$ Overall, a smaller percentage of small minorityowned firms used external credit (77 percent) than did all small firms ( 83 percent). External credit use was only slightly higher (78 percent) for women-owned firms (Table C.1). Personal credit cards, business credit cards, and lines of credit were the most frequently used kinds of credit, with 46
 percent, 29 percent, and 20 percent, respectively (Table 12.1a and Chart 6).

Commercial banks were the most important supplier of credit to small minority firms; 27 percent used them. This proportion was lower than for all small firms ( 38 percent) and women-owned firms (28 percent) (Table C. 1 and Chart 7). Owners' loans were the second most important supplier, used by
 12.5 percent of small minority
firms. Only 40 percent of small minority firms that used credit used commercial banks, as

[^5]compared with 46 percent for all small credit users (Table C.2). The differences between minority firms and all firms in using institutional versus non-institutional sources are quite notable. ${ }^{13}$ Some 16 percent of small minority firms used any non-financial institution as the credit source as compared with 12 percent for all small business. While the overall use of nontraditional credit was much smaller for small minority firms ( 55 percent) than for all small firms (71 percent), little difference was observed in the use of the two most important non-traditional sources, owners' loans and personal credit cards, for small minority firms, all firms, and womenowned firms (Table C.2). Minority firms' lower reliance on traditional and institutional suppliers could be the result of barriers that these firms face in obtaining credit from these sources.

| One Loan | 24.6 | 18.6 | 24.5 | 23.7 | 22.1 | 24.0 | 23.7 | 16.5 | 24.4 |
| One or None | 71.9 | 88.0 | 77.9 | 76.9 | 89.9 | 81.9 | 79.1 | 90.2 | 83.1 |

Source: Tables 1.3a, 6.3a and 12.3a.

Minority firms tended to have fewer loans than all firms: 77 percent of minority firms had one or no loans outstanding in December 1998 as compared with 72 percent for all small firms. For firms with one to four employees, the difference between minority and all firms was very slight, 80 percent for all small firms versus 82 percent for minority firms (Table D).

As with all small
 firms, as firm size

Source: U.S. Small Business Administration, Office of Advocacy from data provided by the Federal Reserve Board's 1998 SSBF. Tables 1.2a, 12.2a, and 6.2a increased, small minority firms' reliance on credit also increased. In addition, as firm size
increased, reliance on credit from depository institutions-especially, credit from commercial banks and use of business credit cards-rose faster than for all firms. Use of credit from commercial banks rose from 8.9 percent (no employees) to 85.5 percent (100-499 employees) for minority-owned firms versus 17.3 percent and 77.2 percent for all small firms. Use of business credit cards went from 18.8 percent for the smallest minority-owned firms to 85.5 percent for the largest, versus 17.4 percent and 62.5 percent for all firms (Chart 8 and Table E). Finance companies were relatively more important to minority-owned firms, with their use increasing from around 10 percent for firms with less than 4 employees to over a third for those with more than 100 (Table 12.2a).

Table E Percentage of All Small, Minority-Owned, and Women-Owned Firms Using Credit, by Selected Suppliers and Firm Size, 1998

Source: Tables 1.2a, 12.2a, and 6.2a

The smallest minority firms (with zero employees) had the lowest credit usage. Only 8.9 percent of them used credit from banks as compared with 17.3 percent for all small firms of same size (Table F). They also relied more heavily on loans from family and friends and mortgage loans.

Table F Percentage of Very Small Firms* Using Selected Types of Loans and Suppliers: All Small, Minority-Owned, and Women-Owned Firms, 1998

Source: Tables 1.1a, 1.2a, 12.1a, 12.2a, 6.2a, and 6.2b

## 2.2.b Measurable Debt Outstanding (Tables 12.4a and 12.5a)

There were roughly 773,000 small minority-owned businesses captured in the SSBF. Total credit extended in the six traditional loan categories amounted to $\$ 51.5$ billion. Owners of partnerships and corporations extended an additional $\$ 6.6$ billion to their businesses, and credit card debt totaled $\$ 990$ million. In sum, total debt outstanding for all small minority firms amounted to $\$ 59$ billion, or 8.4 percent of debt outstanding for all small firms ( $\$ 700$ billion).

Of this $\$ 59$ billion, mortgage loans accounted for around 40 percent ( $\$ 23.3$ billion), followed by credit lines which accounted for 22 percent ( $\$ 12.9$ billion). See Table 12.4a and Chart 9. Among credit suppliers, banks were most important, supplying $\$ 26.6$ billion, or 45 percent of total credit used. Finance companies ranked second with 8.8 billion, followed by owners with $\$ 6.6$

## Chart 9. Debt of Small Minority- and HispanicOwned Firms, by Sources of Credit, 1997

Source: U.S. Small Business Administration, Office of Advocacy from data provided by the Federal Reserve Board's 1998 NSSBF. Table 12.4a billion, or 11 percent (Table 12.5a and Chart 10).

## 2.2.c Debt-Equity <br> Structure (Tables 12.6aa- <br> 1 and 12.6aa-2)

Because the survey only included a small number of minority firms with balance sheet data in the larger asset-size categories, it is difficult to generalize about the debt-equity structure of smaller versus larger small firms. ${ }^{14}$ At first glance, an inverted U-curve seems to depict the relationship between firm size and the use of equity capital-i.e., the middle sized groups have the

Chart 10. Debt by Small Minority- and Hispanic-Owned Firms, by Suppliers of Financial Services, 1997
$\boldsymbol{( T o t a l}$ Value $=\$ 59.0$ Billion $)$

Source: U.S. Small Business Administration, Office of Advocacy from data provided by the Federal Reserve Board's 1998 NSSBF. Table 12.5a highest equity-to-asset ratios (Tables G and 12.6aa-1). However, a look at the equity ratio for firms with large employment (rather than large assets) shows that this phenomenon was created by the firm size group with 20 to 99 employees. This group's negative net worth reduced the equity ratio for large firms in the large asset groups. In fact, the equity ratio was highest for firms with 100 or more employees (Table 12.6aa-2). Similar difficulties are encountered when comparing the debt ratios of all small firms and minority firms using this univariate analysis. For example, while the ratio of accounts receivable relative to total debt and equity was much higher for minority firms (at 23 percent compared with 15 percent for all small firms), a very high ratio of 38 percent for the 77 firms in the group with 20 to 99 employees seemed to contribute to the large difference. Again, this underscores the need for a comprehensive, multivariate statistical approach to investigate the issues of the financial strength and the availability of credit to small firms and small minority firms in the United States.

Table G Equity as a Percentage of Total Assets for All Small, Minority-Owned, and Women-Owned Firms, 1998

|  | All | Asset Size of Firms |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Less than $\$ 100,000$ | $\begin{gathered} \$ 100,000- \\ \$ 499,000 \end{gathered}$ | $\begin{gathered} \$ 500,000- \\ \$ 999,000 \end{gathered}$ | \$1 Million \$4.9 Million | \$5 Million or More |
| All Small Firms | 39.9 | -14.0 | 34.6 | 33.8 | 42.4 | 46.4 |
| Minority-Owned Firms | 23.3 | -102.7 | 44.8 | 48.7 | 19.7 | 14.0 |
| Women-Owned Firms | 49.2 | -13.4 | 35.3 | 30.7 | 66.7 | 61.1 |

Sources: Tables 1.6aa, 12.6aa, and 6.6aa.

## 2.2.d Conclusion

Minority- and Hispanic-owned firms' reliance on high-cost personal credit cards and owners' loans was heavier than that of all firms. This was especially the case for very small minority firms. This seems to confirm the anecdotal complaints expressed by very small firms regarding the shortage of credit and the inefficient operation of the credit markets for these firms.

[^7]However, these observations are preliminary at best. Access to credit may also vary for minority owned firms because their financial and business characteristics are different from non-minority firms-they are often smaller, younger, and many with poorer credit ratings. A multivariate econometric analysis utilizing additional information on factors that affect the borrowing and lending conditions in the small business credit markets should be performed to provide a better understanding of various factors that contribute to the differences in the patterns of financing observed between minority and non-minority firms.

### 2.3 Financing Patterns of Small Women-Owned Firms

## 2.3.a Percentage Who Use Credit (Tables 6.1a through 6.3a)

Overall, the financing patterns of women-owned firms resembled those of small minority-owned firms more than those of all small firms. As indicated in Table C.1, 78 percent of all women-owned firms accessed some type of credit in 1998 as compared with 83 percent for all small firms and 77 percent for small minority firms. Only 46 percent of women-owned firms used some type of traditional loan, as compared with 55 percent for all small firms. On the other hand, almost 70 percent used nontraditional sources for their credit needs, far greater than the use of this type of credit by minority firms. Use of credit cards ranked at the top, with 48 percent and 29
 percent using personal and business credit cards, respectively. Credit lines were third in popularity, with 18 percent of women-owned firms using them. The use of most other credit types was low, in the lower double digits or single digits (Table 6.1a and Chart 11).

Women-owned businesses relied less on financial institutions for credit than did all small businesses. (These include both depository institutions, such as banks, and non-depository institutions, such as finance companies.) Only 28 percent of women-owned firms used credit from banks as compared with 38 percent for all small firms and 27 percent for small minority firms. In addition, women-owned business obtained 9.8 percent of their credit from finance companies as
 compared with 13 percent for both all small firms and small minority firms (Tables C. 1 and 6.2a). In fact, of the small women-owned businesses that used any credit, 59 percent used
traditional loans as compared with 67 percent for all small firms; 88 percent used non-traditional credit as compared with 86 percent for all small firms and 71 percent for all minority firms (Table C.2). Women-owned firms' higher-than-average dependence on non-traditional credit, especially personal credit cards, suggests that they might face barriers in accessing more traditional types of credit.

As with all small firms and small minority firms, as the firm size grows, so does womenowned firms' reliance on credit. This is especially apparent in the use of traditional credit and credit from financial institutions (Chart 8). It is interesting to observe that the use of credit by the largest women-owned firms, those with 100 to 499 employees, was much lower than their counterparts in all small firms and minority firms. For example, the use of credit from banks increased from 12 percent for the smallest women-owned firms up to 57 percent for the largest small women-owned firms, as compared with a rise from 17 percent to 77 percent for all small firms and from 9 percent to 86 percent for minority firms (Chart 8 and Table 6.4a).

For the smallest women-owned firms, their experience seemed to be comparable to that of small minority firms with a few exceptions. Women-owned firms used financial institutions and traditional sources such as credit lines less than small minority firms, and used nontraditional sources more, especially personal credit cards (Table F).

## 2.3.b Measurable Debt Outstanding (Tables 6.4 and 6.5)

Some 1.3 million women-owned small businesses had $\$ 99.6$ billion in debts outstanding from in the six traditional types of credit financing in 1998. Owners of partnerships and corporations extended an additional $\$ 9.5$ billion to their businesses. Credit card debt totaled only $\$ 1.2$ billion. In sum, business debt totaled $\$ 110.3$ billion for women-owned businesses, representing just 15.8 percent of all small business debt outstanding ( $\$ 700$ billion). Mortgage loans were the most important form of borrowing, totaling $\$ 48.4$ billion or 43 percent of total credit. Credit lines ranked a distant second, used by 22 percent, for $\$ 24.1$ billion (Table 6.4 a and Chart 13).

Banks were the dominant credit supplier, accounting for 55 percent or $\$ 59.6$ billion. Banks were major suppliers of both mortgage loans and credit lines. Finance companies and owners ranked second and third with $\$ 11.6$ billion (for 10.5 percent) and $\$ 9.5$ billion (for 8.6 percent), respectively. (See Table 6.5a and Chart 14). Owners' loans were also very important, especially when we consider that only partnerships and corporations were included in the total. For many groups, borrowing from owners ranked second in importance (see Tables 6.5c6.5 e ).

## 2.3.c Debt-Equity Structure (Tables 6.6a-6.6d)

Comparison of the debt-equity structure for smaller firms versus large firms for womenowned businesses suffered from the same problem as comparisons for other groupsthe SSBF only contained a few larger-size small firms with balance sheet datamaking it difficult to generalize. ${ }^{15}$ Overall, the relationship between the use of equity capital and firm size for women-owned firms is similar to the pattern for all firmseither rising as firm size increases or showing a U-shape movement with the largest firms having the highest equity ratio (Tables G, 6.6aa-1 and 6.6aa-2).

Chart 14. Share of Outstanding Debt for Small Women Owned Firms, by Supplier of Credit, 1998
(Total Value $=\$ 110.3$ billion)

Source: U.S. Small Business Administration, Office of Advocacy from data provided by the Federal Reserve Board's 1998 SSBF. Table 6.5a

## 2.3.d Conclusion

Women-owned businesses' pattern of credit use more closely resembled minority- and Hispanic-owned firms than all firms. However, their reliance on special types of loans and special sources of financing set them apart from minority firms. Women-owned firms relied less on finance companies in the use of traditional loans and their use of non-traditional sources of credit far exceeded minority firms' use of these sources.

### 2.4 Conclusion

Financing patterns differ by firm size and for different groups of small firms. Very small firms relied less on credit from financial institutions and more on such non-traditional sources as owners' loan and personal credit cards. Minority- and women-owned firms used certain sources of financing more than all small business in general. Whether these observed differences stem from a lack of availability of certain types of credit from a certain groups of suppliers is, however, difficult to ascertain because of the complexity of the demand and the supply of credit to small firms. Further research on these issues utilizing a more elaborate econometric analysis is needed to properly address this question.

[^8]
## Appendix A. Description of Table Structure and Format

The statistical tables describe the types of credit used, the suppliers who provide the credit to small firms, as well as estimates of the dollar amount of credit and debt outstanding for small firms in 1998. ${ }^{16}$ Table A-1 shows the variables contained in the tables and the naming conventions. Information on the composition of debts and equity is also provided to give a profile of the relative importance of various types of debt and equity financing.

A set of six basic tables describe the debt financing patterns of a certain group of small firms. ${ }^{17}$ They are:
1.1. Percentage of small firms using different types of credit,
1.2. Percentage of small firms using credit from different suppliers,
1.3. Frequency of credit use (number and percent),
1.4. Value of credit outstanding for small firms by type of credit,
1.5. Value of credit outstanding for small firms by credit supplier, and
1.6. Debt-equity structure of small firms with major credit suppliers identified.

### 1.1 Percentage Using Credit, by Sources of Credit

The first table in the series (1.1) shows the percentage of firms using different types of credit. In addition to the six traditional types of credit-lines of credit, mortgage loans, equipment loans, vehicle loans, leases, and other loans-several non-traditional types were also covered, namely owners' loans, personal and business credit cards. ${ }^{18}$ The survey only gathered information on owners' loans from corporations and partnerships; sole proprietorships were not asked this question. ${ }^{19}$ In the report, "any credit" refers to traditional credit and credit from these three sources. "Traditional credit" refers to the six credit types mentioned above. All tables classify data based on employment size, sales size, and SIC code. ${ }^{20}$

### 1.2 Percentage Using Credit, by Suppliers of Credit

The second table (1.2) shows the percentage of small firms borrowing from different suppliers, namely, commercial banks, thrifts, finance companies, brokerage firms, other businesses, government, and owners. However, only the suppliers of six traditional credit types plus owners were identified in the survey. Suppliers of credit card services were not identified. Again, owners' loans are only for partnerships and corporations.

[^9]
## Table A-1. Naming Conventions for Finance Patterns Tables

## File Name Prefixes

Note: The filenames of the Excel spreadsheets use the numbering conventions described above. The table number is preceded by a prefix which corresponds to the second digit of the table number, as follows:
sba table $=x .1$, credit type and $x .2$, credit supplier;
num table $=x .3$, number of loans;
agg table $=x .4$, aggregate value of debt by source and $x .5$, aggregate value of debt by supplier,
bs table $=x .6$, liability summary (balance sheet).

### 1.3 Number of Firms with $0,1,2,3$ and More Than 3 Types of Loans <br> 1.3a Percent of Firms with $0,1,2,3$ and More Than 3 Types of Loans

The third table (1.3 and 1.3a) shows small firms' reliance on borrowing by showing the number of outstanding debts on the books of the borrower. Most small businesses had none or only one debt on their books as of December 1998. They either had no need for borrowing or could not find additional sources of financing.

### 1.4 Aggregate Value of Debt, by Sources of Credit

The fourth table (1.4) shows the estimated values of debts outstanding on the books of small firms identified by credit types. This table and Table 5 provide a measure of the magnitude of debts outstanding on the books of small firms surveyed as well as the relative importance of different loan types and suppliers in providing financing to the small business sector. ${ }^{21}$

### 1.5 Aggregate Value of Debt, by Suppliers of Financial Services

The fifth table (1.5) estimates the value of debts outstanding on the books of small firms identified by suppliers. This table measures the relative importance of different suppliers in the small firm financing markets.

## 1.6a-1 Liability Summary by Asset Size Categories

## 1.6a-2 Liability Summary by Employment Size Categories

The sixth table (1.6) shows the debt-equity structure of small firms in balance sheet format. ${ }^{22}$ Since total assets of a firm are, by definition, identical to the total debt plus equity, this also shows how the acquisition of various types of assets are financed through credit or owners' equity. Whether an asset was purchased through borrowing or internally generated funds has much to do with the firm's profitability and cash flow position. This is especially true during the periods of slow growth or declining earnings when interest payments cause heavy drains on the company's cash flows. It is, therefore, important to obtain a picture of the debt structure of small firms. Ideally, the estimates of credit borrowing from different sources should not deviate significantly from the estimated values for the item "loans, mortgage" in a firm's balance sheet. However, because of the way the data were collected in the survey, much work was required to reconcile the difference in values collected from the credit use section and the balance sheet section. The discrepancies between these two sections are captured in the item "other borrowing" under the "loans and mortgages" category. ${ }^{23}$ Despite these discrepancies, the balance sheet provides a good indication of the importance of different credit suppliers in financing a firm. The tables provide statements of debt and equity for small firms using different degrees of external borrowing are provided-for firms that used both traditional and nontraditional credit (Tables 1.6aa-1.6ae), firms that used only non-traditional credit (Tables 1.6ca1.6 ce ), and firms that did not use any credit at all (Tables 1.6da-1.6de). Comparison of the balance sheets of these different borrowers should provide a better understanding of the financial conditions of non-borrowers, borrowers from traditional, and borrowers from non-traditional sources.

[^10]It is important to separate incorporated firms from non-corporate businesses such as partnerships and sole proprietorships in order to have a better understanding of the importance of owner's capital in small firm financing. ${ }^{24}$ Consequently, five sub-tables (subscripts "a" through "e") are provided for each group of small firms by company organization, for instance: Table 1.1a for all firms, Table 1.1b for sole proprietorships, Table 1.1c for partnerships, Table 1.1e for S corporations, and Table 1.1e for C corporations.

Finally, detailed tables for subcategories of firms were prepared: minority-owned, black-owned, Hispanic-owned, women-owned, fast growing, young, and with more than one owner. For each subgroup of firms, say, minority-owned firms, there are six sets of tables each with five subtables for different company organization forms.

[^11]
## Appendix B: Titles of an Entire Set of Tables

1. Financing Patterns for All Small Firms: All Sole Proprietorships, All Partnerships, All Subchapter S corporations, and All Regular Corporations.

| 1.1a | Percentage of All Small Firms Using Credit, by Sources of Credit |
| :---: | :---: |
| 1.1 b | Percentage of All Small Firms Organized as Sole Proprietorships Using Credit, by Sources of Credit |
| 1.1c | Percentage of All Small Firms Organized as Partnerships Using Credit, by Sources of Credit |
| 1.1d | Percentage of All Small Firms Organized as Subchapter S Corporations Using Credit, by Sources of Credit |
| 1.1e | Percentage of All Small Firms Organized as Regular Corporations Using Credit, by Sources of Credit |
| 1.2a | Percentage of All Small Firms Using Credit, by Sources of Credit |
| 1.2 b | Percentage of All Small Firms Organized as Sole Proprietorships Using Credit, by Suppliers of Credit |
| 1.2c | Percentage of All Small Firms Organized as Partnerships Using Credit, by Suppliers of Credit |
| 1.2d | Percentage of All Small Firms Organized as Subchapter S Corporations Using Credit, by Suppliers of Credit |
| 1.2e | Percentage of All Small Firms Organized as Regular Corporations Using Credit, by Suppliers of Credit |
| 1.3a | Number/Percent of All Firms with 0, 1, 2, 3 and More Than 3 Types of Loans |
| 1.3 b | Number/Percent of All Firms Organized as Sole Proprietorships with 0, 1, 2, 3 and More Than 3 Types of Loans |
| 1.3c | Number/Percent of All Firms Organized as Partnerships with 0, 1, 2, 3 and More Than 3 Types of Loans |
| 1.3d | Number/Percent of All Firms Organized as Subchapter S Corporations with 0, 1, 2, 3 and More Than 3 Types of Loans |
| 1.3 e | Number/Percent of All Firms Organized as Regular Corporations with 0, 1, 2, 3 and More Than 3 Types of Loans |
| 1.4a | Aggregate Value of All Small Firm Debt, by Sources of Credit |
| 1.4 b | Aggregate Value of All Debt Held by Small Firms Organized as Sole Proprietorships, by Sources of Credit |
| 1.4c | Aggregate Value of All Debt Held by Small Firms Organized as Partnerships, by Sources of Credit |
| 1.4d | Aggregate Value of All Debt Held by Small Firms Organized as Subchapter S Corporations, by Sources of Credit |
| 1.4e | Aggregate Value of All Debt Held by Small Firms Organized as Regular Corporations, by Sources of Credit |
| 1.5a | Aggregate Value of All Debt Held by All Small Firms, by Suppliers of Financial Services |
| 1.5b | Aggregate Value of All Debt Held by Small Firms Organized as Sole Proprietorships, by Suppliers of Financial Services |
| 1.5c | Aggregate Value of All Debt Held by Small Firms Organized as Partnerships, by Suppliers Financial Services |

1.5d Aggregate Value of All Debt Held by Small Firms Organized as Subchapter S Corporations, by Suppliers of Financial Services
1.5e Aggregate Value of All Debt Held by Small Firms Organized as Regular Corporations, by Suppliers of Financial Services
1.6aa-1 Liability Summary for All Firms by Asset Size Categories
1.6aa-2 Liability Summary for All Firms by Employment Size Categories
1.6ab-1 Liability Summary for All Firms Organized as Sole Proprietorships by Asset Size Categories
1.6ab-2 Liability Summary for All Firms Organized as Sole Proprietorships by Employment Size Categories
1.6ac-1 Liability Summary for All Firms Organized as Partnerships by Asset Size Categories
1.6ac-2 Liability Summary for All Firms Organized as Partnerships by Employment Size Categories
1.6ad-1 Liability Summary for All Firms Organized as Subchapter S Corporations by Asset Size Categories
1.6ad-2 Liability Summary for All Firms Organized as Subchapter S Corporations by Employment Size Categories
1.6ae-1 Liability Summary for All Firms Organized as Regular Corporations by Asset Size Categories
1.6ae-2 Liability Summary for All Firms Organized as Regular Corporations by Employment Size Categories
1.6ba-1 Liability Summary for All Small Firms That Are Traditional Borrowers by Asset Size Categories
1.6ba-2 Liability Summary for All Small Firms That Are Traditional Borrowers by Employment Size Categories
1.6bb-1 Liability Summary for All Small Firms That Are Traditional Borrowers Organized as Sole Proprietorships by Asset Size Categories
1.6bb-2 Liability Summary for All Small Firms That Are Traditional Borrowers Organized as Sole Proprietorships by Employment Size Categories
1.6bc-1 Liability Summary for All Small Firms That Are Traditional Borrowers Organized as Partnerships by Asset Size Categories
1.6bc-2 Liability Summary for All Small Firms That Are Traditional Borrowers Organized as Partnerships by Employment Size Categories
1.6bd-1 Liability Summary for All Small Firms That Are Traditional Borrowers Organized as Subchapter S Corporations by Asset Size Categories
1.6bd-2 Liability Summary for All Small Firms That Are Traditional Borrowers Organized as Subchapter S Corporations by Employment Size Categories
1.6be-1 Liability Summary for All Small Firms That Are Traditional Borrowers Organized as Regular Corporations by Asset Size Categories
1.6be-2 Liability Summary for All Small Firms That Are Traditional Borrowers Organized as Regular Corporations by Employment Size Categories

The same set of tables is given for each of the following types of small firms.
2. Financing Patterns for Traditional Borrowers: All Small Firms, All Sole Proprietorships, All Partnerships, All Sub-S corporations, and All Regular Corporations.
3. Financing Patterns for Minority Firms: All Small Firms, All Sole Proprietorships, All Partnerships, All Sub-S corporations, and All Regular Corporations.
4. Financing Patterns for Black-Owned Firms: All Small Firms, All Sole Proprietorships, All Partnerships, All Sub-S corporations, and All Regular Corporations. ${ }^{25}$
5. Financing Patterns for Hispanic-Owned Firms: All Small Firms, All Sole Proprietorships, All Partnerships, All Sub-S corporations, and All Regular Corporations.
6. Financing Patterns for Women-Owned firms: All Small Firms, All Sole Proprietorships, All Partnerships, All Sub-S corporations, and All Regular Corporations.
9. Financing Patterns for All Small Firms with More than 10 Percent Sales Growth from 1997 to 1998 Using Credit: All Sole Proprietorships, All Partnerships, All Sub-S corporations, and All Regular Corporations.
10. Financing Patterns for Firms 4 Years and Younger: All Small Firms, All Sole Proprietorships, All Partnerships, All Sub-S corporations, and All Regular Corporations.
11. Financing Patterns for Firms with More than One Owner: All Small Firms, All Sole Proprietorships, All Partnerships, All Sub-S corporations, and All Regular Corporations.
12. Financing Patterns for Minority and Hispanic-Origin Firms: All Small Firms, All Sole Proprietorships, All Partnerships, All Sub-S corporations, and All Regular Corporations.

[^12]
## Appendix C. Data Tables Referenced in Report

| Financing | Patterns for All Small Firms |
| :---: | :---: |
| 1.1a | Percentage of All Small Firms Using Credit, by Sources of Credit |
| 1.2 a | Percentage of All Small Firms Using Credit, by Suppliers of Credit |
| 1.3a | Number of All Firms with 0, 1, 2, 3 and More Than 3 Types of Loans |
| 1.3 aa | Percent of All Firms with 0, 1, 2, 3 and More Than 3 Types of Loans |
| 1.4a | Aggregate Value of All Small Firm Debt, by Sources of Credit |
| 1.5a | Aggregate Value of All Debt Held by All Small Firms, by Suppliers of Financial Services |
| $1.6 a \mathrm{a}-1$ | Liability Summary for All Firms by Asset Size Categories |
| 1.6aa-2 | Liability Summary for All Firms by Employment Size Categories |
| Financing | Patterns for All Small Minority- and Hispanic-Owned Firms |
| 12.1a | Percentage of All Small Minority- and Hispanic-Owned Firms Using Credit, by Sources of Credit |
| 12.2a | Percentage of All Small Minority- and Hispanic-Owned Firms Using Credit, by Suppliers of Credit |
| 12.3a | Number of All Small Minority- and Hispanic-Owned Firms with 0, 1, 2, 3 and More Than 3 Types of Loans |
| 12.3aa | Percent of All Small Minority- and Hispanic-Owned Firms with 0, 1, 2, 3 and More Than 3 Types of Loans |
| 12.4a | Aggregate Value of All Debt Held by Small Minority- and Hispanic-Owned Firms, by Sources of Credit |
| 12.5a | Aggregate Value of All Debt Held by Small Minority- and Hispanic-Owned Firms, by Suppliers of Financial Services |
| 12.6aa-1 | Liability Summary for All Small Minority- and Hispanic-Owned Firms by Asset Size Categories |
| 12.6aa-2 | Liability Summary for All Small Minority- and Hispanic-Owned Firms by Employment Size Categories |
| Financing | Patterns for All Small Women-Owned Firms |
| 6.1a | Percentage of All Small Women-Owned Firms Using Credit, by Sources of Credit |
| 6.2a | Percentage of All Small Women-Owned Firms Using Credit, by Suppliers of Credit |
| 6.3a | Number of All Small Women-Owned Firms with 0, 1, 2, 3 and More Than 3 Types of Loans |
| 6.3aa | Percent of All Small Women-Owned Firms with 0, 1, 2, 3 and More Than 3 Types of Loans |
| 6.4 a | Aggregate Value of All Debt Held by Small Women-Owned Firms, by Sources of Credit |
| 6.5a | Aggregate Value of All Debt Held by Small Women-Owned Firms, by Suppliers of Financial Services |
| 6.6aa-1 | Liability Summary for All Small Women-Owned Firms by Asset Size Categories |
| 6.6aa-2 | Liability Summary for All Small Women-Owned Firms by Employment Size Categories |

| Population represented |  | 1,286,596 | 329,414 | 609,452 | 202,367 | 85,804 | 53,632 | 5,927 |
| Number of observations |  | 796 | 178 | 332 | 113 | 58 | 88 | 27 |

Note: Other borrowing is total loans reported in the balance sheet less total loans reported in the credit section of the survey.

[^0]:    ${ }^{1}$ The Federal Reserve's sample size was based on Dun \& Bradstreet's database of 5.3 million small businesses after eliminating nontarget businesses. These mostly consist of employer firms with fewer than 500 employees, but also include a portion of nonemployer firms. Note that the Office of Advocacy estimates, using Census data, that there were 21.3 million small businesses in 1998.
    ${ }^{2}$ For a detailed discussion of SSBF, see M. Bitler, A. Robb, and J. Wolken, "Financial Services Used by Small Businesses: Evidence from the 1998 Survey of Small Business Finances," Federal Reserve Bulletin, April 2001, pp. 183-205.The 1987 and the 1993 NSSBF were cosponsored by the Federal Reserve Board and the U.S. Small Business Administration. The Federal Reserve Board conducted the 1998 SSBF. For a bibliographical list of research topics investigated by researchers, visit the Federal Reserve website at www.federalreserve.gov.
    ${ }^{3}$ Although the Federal Reserve published a statistical report on the 1987 NSSBF data, this was not done for the 1993 NSSBF or 1998 SSBF.

[^1]:    ${ }^{4} \mathrm{~A}$ credit extended by a supplier is the debt of the borrower. For example, a credit used by a small business will show up as a debt in the firm's books. Debt and credit are used interchangeably in the discussion.
    ${ }^{5}$ The six kinds of traditional loans are line of credit, mortgage, vehicle, equipment, leasing, and other loans. Loans from owner(s) and credit cards (business and personal) are considered non-traditional sources of finance.

[^2]:    ${ }^{6}$ Use of home equity lines for business purposes in an important source that has yet to be quantified.
    ${ }^{7}$ Use of credit cards involves using two types of services, namely credit use and the record keeping services and floats they provide. In fact, the outstanding balances on small business credit card accounts were very small (Table 1.4a).

[^3]:    ${ }^{8}$ It is likely to be underestimated because it is more difficult to provide estimates of debt outstanding used for business purposes on personal credit cards. However, a preliminary Federal Reserve study concluded that most of the credit cards used by small firms were not for revolving credit purposes, hence the credit balances that show up on their books are relatively small.

[^4]:    ${ }^{9}$ For example, see tables 1.6 aa through 1.6 ca for the debt structure of different types of credit users.
    ${ }^{10}$ In discussing the financial structure of small firms, it is generally more useful to measure firm size in financial terms, such as assets or revenues, than in terms of employment size.
    ${ }^{11}$ The negative net worth observed for the smallest sized firms is likely to be an accounting phenomenon caused by most small sole-proprietorships' underestimation of assets, especially depreciable assets, and the corresponding underestimation of retained earnings.

[^5]:    ${ }^{12}$ In the complete set of tables, the 12 - series covers the category of small minority and Hispanic-owned businesses. Financing patterns for black-owned businesses are contained in Tables 4.1 through 4.6 and for Hispanic-owned businesses, Tables 5.1 through 5.6.

[^6]:    ${ }^{13}$ Institutional lenders include depository institutions (banks, thrifts, etc.) and non-depository institutions (finance companies, brokerage firms, leasing companies, etc).

[^7]:    ${ }^{14}$ For example, for minority firms there were 35 observations for the $\$ 500,000-\$ 999,000$ asset size group, 55 for the $\$ 1$ million to less than $\$ 5$ million group, and 15 for the over $\$ 5$ million group. (Table 12.6aa-1)

[^8]:    ${ }^{15}$ For women-owned firms there were 30 observations in the $\$ 500,000-\$ 999,000$ asset size category, 56 in the $\$ 1$ million to less than $\$ 5$ million category, and 20 in the over $\$ 5$ million category (Table 6.6aa-1).

[^9]:    ${ }^{16}$ A credit extended by a lender is the debt of the borrower. For example, a credit used by a small firm will show up as a debt in the firm's book. Debts and credits are therefore used interchangeably in the discussion.
    ${ }^{17}$ Only limited information on equity financing was collected in the survey.
    ${ }^{18}$ The six traditional credit types refer to credit borrowing from external sources. Non-traditional credit sources refer to the use of credit cards, trade credit, and loans from the owners. These credit sources were asked in separate sections. Use of trade credit, a transaction related credit, is not reported here.
    ${ }^{19}$ Consequently, the percentage of firms using owners' loans for all firms is understated. (See Tables 1.1a and 1.1e for comparison.)
    ${ }^{20}$ In this publication the employment size of a firm is defined differently from Federal Reserve publications. A firm with zero employees is defined as a firm with no "hired employee." In Federal Reserve publications for this survey, an owner working in the business is counted as an employee.

[^10]:    ${ }^{21}$ No range of error is estimated here. The estimates should be treated with caution.
    ${ }^{22}$ Information on the composition of assets was also collected in the survey.
    ${ }^{23}$ The residuals (or statistical errors) are huge. Another residual item in the balance sheet is the item "other." It was created to reconcile the discrepancies between the estimates of total assets and the sum of total liabilities and equity in data collection.

[^11]:    ${ }^{24}$ For sole proprietorships and partnerships, owners' financial contributions are, by definition, equity contributions. No borrowing from the owners was recorded for these firms. Consequently, use of owner financing is not captured by this variable for sole proprietorships and partnership.

[^12]:    ${ }^{25}$ The number of observations for this sub-group of firms may not be large for many cells in several tables.

[^13]:    Note: Owner loans are included for partnerships and corporations only.
