## Flow of Funds Summary Statistics

### Fourth Quarter 2010

---

Debt of the domestic nonfinancial sectors is estimated to have expanded at a seasonally adjusted annual rate of about 5 percent in the fourth quarter of 2010, after an increase of 4¼ percent in the previous quarter. Private debt edged up 1¼ percent at an annual rate in the fourth quarter, while government debt increased 12¾ percent.

Household debt declined ½ percent in the fourth quarter; it has contracted each quarter since 2008:Q1. Home mortgage debt fell at an annual rate of 1¼ percent in the fourth quarter, compared to an average decline of more than 2½ percent during the previous four quarters. Consumer credit rose 2 percent at an annual rate, retracing the previous quarter's decline.

Nonfinancial business debt rose 3½ percent in the fourth quarter, on the heels of a 2¼ percent increase in the third quarter. Corporate bonds outstanding posted strong increases in both the third and fourth quarters, more than offsetting declines in commercial

mortgages and commercial paper outstanding.

State and local government debt rose about 8 percent at an annual rate in the fourth quarter, after a 5½ percent increase in the third quarter. Federal government debt increased at an annual rate of 14½ percent in the fourth quarter; for 2010 as a whole, federal government debt grew a bit more than 20 percent.

At the end of the fourth quarter of 2010, the level of domestic nonfinancial debt outstanding was \$36.3 trillion; household debt was \$13.4 trillion, nonfinancial business debt was \$11.1 trillion, and total government debt was \$11.9 trillion.

Household net worth—the difference between the value of assets and liabilities—was an estimated \$56.8 trillion at the end of the fourth quarter, up about \$2.1 trillion from the end of the previous quarter.

## Flow of Funds Accounts, Fourth Quarter 2010

---

This publication presents the Flow of Funds Accounts for 2010:Q4.

**Data revisions and other changes.** The statistics in the attached tables reflect the use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods.

1. A new interactive, web-based guide to the Flow of Funds Accounts is scheduled to be released on March 28, 2011. The tools and descriptions within this guide will help users explore the structure and content of the Z.1 and the Integrated Macroeconomic Accounts. Importantly, it will allow users to search for series, browse tables of data, and identify links among series within these accounts. It will also provide descriptions of each of the published tables and information on the source data underlying each series. Although this guide is separate from the release of the quarterly Z.1 data, it will also be updated quarterly and will be consistent with the most recently published data. The hardcopy *Guide to the Flow of Funds Accounts* published in 2000 will no longer be available for purchase. This new guide's location will be announced at:

[www.federalreserve.gov/feeds/z1.html](http://www.federalreserve.gov/feeds/z1.html)

2. All unpublished series that are necessary to compile the Flow of Funds Accounts are available for the first time through the Data Download Program (DDP) at the following location:

[www.federalreserve.gov/datadownload/Choose.aspx?rel=Z.1](http://www.federalreserve.gov/datadownload/Choose.aspx?rel=Z.1)

3. Corporate farms have been removed from the personal sector (table F.10). In addition, complete detail on the difference between the flow of funds concept of personal saving and the National Income and Product Account concept is now shown on this table.

4. In the nonfarm noncorporate business sector (tables F.103, L.103, B.103, and R.103), data have been revised from 2008:Q1 forward, owing to benchmark statistics available from the IRS/SOI for 2008.

5. The table for the farm sector (table F.104) has been redesigned to better show the split for gross

saving between corporate and noncorporate farms. In addition, the sector now shows a corporate farm discrepancy.

6. In the bank holding companies sector (tables F.112 and L.112), data have been revised from 2006:Q2 forward, owing to the inclusion of bank holding companies with assets less than \$500 million.

7. The property-casualty insurance sector (tables F.116 and L.116) has been modified to show security RPs separately as an asset and a liability. Previously security RPs were shown only as a net amount on the asset side of the balance sheet.

8. The life insurance sector (tables F.117 and L.117) has been modified to show security RPs separately as an asset and a liability. Previously security RPs were shown only as a net amount on the liability side of the balance sheet.

### **Explanatory notes for tables D.1, D.2, and D.3.**

Domestic debt comprises credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, agency- and GSE-backed mortgage pools, the monetary authority, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources. This definition is consistent with the presentation of credit market borrowing and lending on tables F.1 through F.4. Net lending (+) or net borrowing (-) on the individual sector tables and the matrix is defined as net acquisition of financial assets less net increase in liabilities.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Seasonally adjusted levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those in table D.1.

**Relation of Flows to Outstandings.** Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time. Specifically, outstandings in the Flow of Funds Accounts are related to flows in the following way:

Outstanding<sub>t</sub> = Outstanding<sub>t-1</sub> + Flow<sub>t</sub> + Discontinuity<sub>t</sub>  
 where “t” is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in a series can distort estimated rates of growth in assets and liabilities between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated as:

Percentage change<sub>t</sub> = (Flow<sub>t</sub> / Outstanding<sub>t-1</sub>) \* 100

**Preliminary Estimates.** Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter's data were compiled is provided in a table following this introduction. The distinction between “available” data and “missing” data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

**Margins of Uncertainty.** Flow of funds statistics are subject to uncertainties resulting from measurement errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of “discrepancies” for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured

funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components of the accounts sometimes result in discrepancies that cancel in annual data.

**Availability of Data.** Flow of funds statistics are updated about ten weeks following the end of a quarter. This publication — the Z.1 release — is available from the Board's Publications Services. Flow of funds data are also available electronically through the Internet at the following location:

[www.federalreserve.gov/releases/Z1](http://www.federalreserve.gov/releases/Z1)

This Internet site also provides coded tables and historical annual tables beginning in 1945 that correspond to the tables published in this release. There are also compressed ASCII files of quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, debt (tables D.1, D.2, and D.3), and supplementary tables.

In addition, these data, as well as data for the quarterly and annual *Integrated Macroeconomic Accounts for the United States* tables, are available as customizable download datasets through the Data Download Program (DDP) at the following location:

[www.federalreserve.gov/datadownload/Choose.aspx?rel=Z.1](http://www.federalreserve.gov/datadownload/Choose.aspx?rel=Z.1)

A new interactive, web-based guide to the Flow of Funds Accounts is scheduled to be released on March 28, 2011. The tools and descriptions within this guide will help users explore the structure and content of the Z.1 and the Integrated Macroeconomic Accounts. This new guide will be available through the Z.1 release page.

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 25) and equity in noncorporate business (line 32). The matrix shows a discrepancy in column 17 for monetary gold (line 4) because by international accounting convention, monetary gold is a financial asset without a corresponding liability.
