# Release Highlights

## First Quarter 2021

Topic	Description
Equity instruments reported separately from liability instruments on transaction tables	A new line item for “Net increase in liabilities and equity” has been added to the transactions tables for sectors that report both liabilities and equity instruments. Line items for “Net increase in liabilities”, and “Net equity issues” are now shown separately (tables F.100, F.102, F.103, F.104, F.108, F.110, F.111, F.112, F.115, F.116, F.116.g, F.125, F.128, F.129, F.130, F.132, and F.133). The three instrument categories included in “equity” are corporate equities (F.223 and L.223), proprietors’ equity in noncorporate business (F.229 and L.229), and the equity components of foreign direct investment in the U.S. and U.S. direct investment abroad (F.230 and L.230). Equity transactions continue to be included as sources of funds.
U.S. direct investment abroad and foreign direct investment in U.S.	Sector detail on the split between equity and intercompany debt is now shown for U.S. direct investment abroad and foreign direct investment in U.S. (tables F.230 and L.230). The equity component for U.S. direct investment abroad and foreign direct investment in U.S. are no longer included in total liabilities outstanding. Intercompany debt for U.S. direct investment abroad and foreign direct investment in U.S. continue to be included in total liabilities outstanding.
Foreign direct investment in the U.S.: equity and U.S. direct investment abroad: equity	The equity components of foreign direct investment in the U.S. and U.S. direct investment abroad, which are no longer included in total liabilities outstanding on levels tables and balance sheets, are now shown as memo items where appropriate (tables L.100, L.102, L.103, L.104, L.108, L.110, L.111, L.112, L.115, L.116, L.116.g, L.128, L.130, L.132, and L.133). Corporate equities and proprietors’ equity in noncorporate business outstanding, which were not included in liabilities in previous publications, are also shown as memo items on the level tables where available. The market value of total corporate equities outstanding for domestic financial institutions is shown on table L.108; however, estimates are not available for every financial subsector (L.109-L.132). The balance sheets and measures of net worth of nonfinancial corporate business and nonfinancial noncorporate business (tables B.103, B.104, R.103, and R.104) have been adjusted accordingly.
Other loans and advances	Syndicated loans to nonfinancial corporate business from domestic nondepository institutions (Tables F.216 and L.216, lines 46 to 52) have been revised from 2012:Q4 forward to reflect improved methodology for classifying lenders in source data.
Zillow Home Value Index (ZHVI) replaces CoreLogic home price index	The newly implemented ZHVI (series FI075035253) is now used in place of the CoreLogic home price index (series FI075035243) for calculating nonfinancial corporate business, nonfinancial noncorporate business, and nonprofit one-to-four family residential real estate revaluations beginning in 1990:Q1, for household vacant land beginning in 1983:Q4, and for mobile homes beginning in 2005:Q3. Note: household owner-occupied real estate continues to use Zillow AVM based national (series PC075035233).

Topic	Description
Nonfinancial corporate business sector	Nonfinancial corporate business sector data (tables F.103, L.103, B.103, and R.103) has revised from 2019:Q1 forward to reflect new benchmark data from the Internal Revenue Service Statistics of Income for 2019.

# Explanatory Notes

## ***Financial Accounts of the United States***

The Statistical Release Z.1, *Financial Accounts of the United States*, or Financial Accounts, is organized into the following sections:

- Matrices summarizing transactions and levels across sectors and tables on debt growth, net national wealth, gross domestic product (GDP), national income, saving, and so on
- Transactions of financial assets and liabilities, by sector and by financial instrument
- Levels of financial assets and liabilities, by sector and by financial instrument
- Balance sheets, including nonfinancial assets, and changes in net worth for households and nonprofit organizations, nonfinancial corporate businesses, and nonfinancial noncorporate businesses
- Supplementary tables including balance sheets for the household sector, nonprofit organization sector, the household and nonprofit organization sector with additional equity and debt detail, and domestic hedge funds, as well as tables detailing stocks and flows of fixed assets
- Integrated Macroeconomic Accounts (IMA)

The IMA relate production, income, saving, and capital formation from the Bureau of Economic Analysis's (BEA) national income and product accounts (NIPA) to changes in net worth from the Financial Accounts on a sector-by-sector basis. The IMA are published jointly by the Federal Reserve Board and BEA and are based on international guidelines and terminology as defined in the System of National Accounts (SNA2008).

Federal Reserve Board staff have taken many steps over the past several years to conform the Financial Accounts with the SNA2008 guidelines. Nonetheless, a few important differences remain, in particular, the following in the Financial Accounts:

- The purchase of consumer durables is treated as investment rather than as consumption.
- Nonfinancial noncorporate businesses (which are often small businesses) are shown in a separate sector rather than being included in the household sector.
- Some debt securities are recorded at book value rather than market value.

## **Concepts of Levels and Transactions in the SNA and the Financial Accounts**

The level of an asset or liability (also referred to as the "stock" or "outstanding") measures the value of the asset or liability in existence at a point in time. In the Financial Accounts, the levels are reported as of the end of each calendar quarter. In the SNA2008, the change in the level from one period to the next is called the *economic flow*, and can be decomposed into three broad elements: *transactions*, which measure the exchange of assets; *valuations*, which measure holding gains and losses; and *other changes in volume*, which measure discontinuities or breaks in time series due to disaster losses or a change in source data or definition. In practice, other volume changes are relatively rare, and valuations occur mainly for series carried at market value (such as corporate equities, real estate, and some debt securities), so for many series the change in the level is equal to the transactions element.

## **Growth Rates**

Growth rates calculated from levels include valuations and other changes in volume. In order to isolate the effect of transactions on the growth of a given asset or liability, users should calculate the ratio of transactions in a given period to the level in the preceding period.

Growth rates in table D.1 are calculated by dividing transactions at a seasonally adjusted annual rate from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Growth rates calculated from changes in unadjusted levels may differ from those in table D.1.

## **Seasonal Adjustment**

Seasonal factors are recalculated and updated every September with the release of second-quarter data. Series that exhibit significant seasonal patterns are adjusted. The seasonal factors are generated using the X-13-ARIMA seasonal adjustment program from the U.S. Census Bureau, estimated using the most recent 10 years of transaction data. Because the effects of the recent financial crisis resulted in distortions in the estimated seasonal factors for some series, seasonal factors for these series have been extrapolated using pre-crisis data. Seasonally adjusted levels shown in table D.3 are derived by carrying forward year-end levels by seasonally adjusted transactions.

## Data Revisions

Data shown for the most recent quarters are based on preliminary and potentially incomplete information. A summary list of the most recent data available for each sector is provided in a table following these notes. Nonetheless, when source data are revised or estimation methods are improved, all data are subject to revision. There is no specific revision schedule; rather, data are revised on an ongoing basis. In each release of the Financial Accounts, major revisions are highlighted at the beginning of the publication.

## Discrepancies

The data in the Financial Accounts come from a large variety of sources and are subject to limitations and uncertainty due to measurement errors, missing information, and incompatibilities among data sources. The size of this uncertainty cannot be quantified, but its existence is acknowledged by the inclusion of “statistical discrepancies” for various sectors and financial instruments.

The discrepancy for a given sector is defined as the difference between the aggregate value of the sector’s sources of funds and the value of its uses of funds. Sources of funds are gross savings less net capital transfers paid and net increase in liabilities and equity; uses of funds are capital expenditures and the net acquisition of financial assets. If a sector’s sources of funds are greater than its uses of funds, the sector is a net lender of funds in the accounts. In the reverse case, the sector would be a net borrower of funds. Most of the data for deriving gross savings come from the BEA’s NIPA. For a financial instrument category, the discrepancy is defined as the difference between the measurement of funds raised through the financial instrument and funds disbursed through that instrument. The relative size of the statistical discrepancy is one indication of the quality of the underlying source data. Note that differences in seasonal adjustment procedures sometimes result in quarterly discrepancies that partially or completely offset each other in the annual data.

## Financial Accounts Guide

Substantially more detail on the construction of the Financial Accounts is available in the *Financial Accounts Guide*, which provides interactive, online documentation for each data series. The tools and descriptions in the guide are designed to help users understand the structure and content of the Financial Accounts.

Each input and calculated series in the Z.1 is identified according to a unique string of patterned numbers and letters. The series structure page of the guide provides a

breakdown of what the letters and numbers represent in the series mnemonics. Some data submissions to international organizations are also available in the guide. The guide is updated with the quarterly release and is available online:

## Enhanced Financial Accounts and Data Visualization

Additional supplementary information is available online in the Enhanced Financial Accounts, which augment the Financial Accounts with finer detail, additional types of activities, higher-frequency data, and more-disaggregated data. Links to the Enhanced Financial Accounts are available from both the *Financial Accounts Guide* page and the main release page. In addition, interactive online data visualizations are available for selected components of the Financial Accounts and Enhanced Financial Accounts. Links are available also on the same pages.

## Production Schedule

The Financial Accounts are published four times per year, about 10 weeks following the end of each calendar quarter. The publication is available online:

This website also provides CSV files of quarterly data for transactions at a seasonally adjusted annual rate, unadjusted transactions, levels outstanding, balance sheets, debt tables, supplementary tables, and the IMA.

In addition, the data are available as customizable datasets through the Federal Reserve Board’s Data Download Program online:

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and Federal government. Equity included in line 2 is the sum of corporate equities (line 24), equity in noncorporate business (line 30), and foreign direct investment in the U.S. (FDI) equity (line 34) for domestic sectors or U.S. direct investment abroad equity for the rest of the world (line 32). The matrix shows a discrepancy in column 17 for monetary gold (line 4) because by international accounting convention, monetary gold is a financial asset without a corresponding liability.

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and Federal government. Equity included in line 2 is the sum of corporate equities (line 24), equity in noncorporate business (line 20), and foreign direct investment in domestic sectors or U.S. direct investment abroad equity for the rest of the world (line 52). The matrix shows a discrepancy in column 17 for monetary gold (line 4) because by international accounting convention, monetary gold is a financial asset without a corresponding liability.

(1) U.S. net wealth measures the value of tangible assets controlled by the household and nonprofit organizations, noncorporate business, and government sectors of the U.S. economy and the market value of domestic nonfinancial and financial corporations, net of U.S. financial obligations to the rest of the world (sum of lines 2+7+12+13+16+20+24).

(2) Assumed to be equal to proprietors' equity in noncorporate brokers and dealers.

(3) This measure does not equal the net worth of the nonfinancial corporate business and financial business sectors reported in the Integrated Macroeconomic Accounts (tables S.2.a and S.2.q) because of differences in the valuation of assets.

(4) Excludes land and nonproduced nonfinancial assets.

(5) Household net worth is calculated as the difference between total assets and liabilities of the household and nonprofit organizations sector. See table B.101.
