

Micro Report Series Description

Series Mnemonic	XMTE/XMTR (Macro)
Series Name	EDDS Flashwire
Starting Date	January 5, 1983
Ending Date	August 24, 2012
Frequency	Transmitted from Reserve Bank staff to the Board weekly Beginning August 10, 2009 data will be derived at the Board

Reporting Panel

XMTE is made up of aggregate daily average data for each of the twelve districts. All institutions other than Super reporters that report weekly FR 2900 data are included in deriving this micro data flow. The inclusion of any Super respondent data (regardless of entity type) in the XMTE was discontinued in April 2003.

Entity type:

- 1=member banks
- 2=nonmember banks
- 3=Edge and Agreement Corporation
- 4=Branches and agencies of foreign banks
- 5=Savings institutions
- 6=Credit unions
- 7=Total of all above institutions

Items:

- (1) xmtr6982 = 1, or 2 to indicate the first and second week of the reserves maintenance period.
- (2) Deposit items:
 - 2698
 - 2280
 - 2340
 - 6917
 - 0063
 - 0020

The definition of each XMTE item is the same as that of EDDS items.

Setting xmtr6982 = 1 identifies the 7 –Day flow. Setting xmtr6982 = 2 identifies the 14-Day flow.

All XMTE items other than xmtr6982 have the form of xme[1-6]????, where ???? is the 4 digit item code and 1-6 represents the entity type. For example, xme42698 represents the aggregate total of item 2698 for branches and agencies of foreign banks in a particular district.

Entity:

1160602 = District 1

1160611 = District 2

1160620 = District 3
1160639 = District 4
1160648 = District 5
1160657 = District 6
1160666 = District 7
1160675 = District 8
1160684 = District 9
1160693 = District 10
1160705 = District 11
1975749 = District 12

The other way to identify a district is to use the more conventional RSSD9170.

NOTE:

The XMTR mainframe archival file actually contains data for large 'FLASH' items (i.e., Super reporters) in addition to small 'FLASH' items. Small 'FLASH' items are what we called XMTE items. All items listed here are items for which we have intraseries tolerances. Other items that do not have intraseries tolerances also exist in the archival file.

Major Changes to Reporting Panel

None

Data Mode

Aggregate daily average data

Data Availability

By 9:00 p.m. Eastern Time on the Monday following the as-of-date.

Major Series Changes

The Board examined the need for the XMTE data and determined that the transmission of that data was no longer necessary. Beginning August 10, 2009 the Board will derive the XMTE rather than have the Reserve Banks transmit XMTE data.

Confidentiality

Microdata are confidential
