Subject: Truth in Lending

Do something!!!! The problem for most of America is that no one really watches these guys! They are extraordinarily powerful and quite savvy. Most of their working day is spent figuring out new methods, to glean more money, from unsuspecting card users.

American people need to stop using credit cards but *that* will never happen--so the next best thing is to safeguard what little money we have left--and we can only do that if the Federal Government gets involved! This is one time when the Federal Government should take action--before the credit card companies get to powerful!

Thank you,

Terre Miller.
