

FEDERAL RESERVE statistical release

G.17 (419) Supplement

For release at 9:15 a.m. (EST)
February 16, 2001

INDUSTRIAL PRODUCTION AND CAPACITY UTILIZATION

Industrial production fell 0.3 percent in January. Manufacturing output edged down 0.1 percent after a 1.1 percent drop in December; the December decline was likely exacerbated by bad weather in certain areas. Excluding motor vehicles and parts, manufacturing output increased 0.3 percent in January after having fallen 0.8 percent in December. Output at utilities dropped back 6.0 percent as temperatures moved closer to seasonal norms after the extreme cold in December. Production in mining moved up 2.1 percent. At 147.0 percent of its 1992 average, industrial production was 2.4 percent higher than in January 2000. The rate of capacity utilization for total industry fell to 80.2 percent in January, a level almost 2 percentage points below its 1967–2000 average.

Market Groups

The index for consumer goods fell 1.1 percent in January, with decreases of about 5 percent in the production both of automotive and of energy products. A drop of 2.8 percent in the production of durable consumer
(over)

INDUSTRIAL PRODUCTION AND CAPACITY UTILIZATION: SUMMARY

goods reflected the weakness in automotive products and a sharp decline in home electronics. The production of nondurable consumer goods other than energy products rose 0.3 percent and thereby reversed a third of the decline posted in December.

The output of business equipment slipped 0.2 percent in January. The index for transit equipment dropped 3.2 percent (mainly because of another sharp decline in motor vehicles), and the production of industrial and other equipment fell 0.5 percent (mainly because of a sharp drop in farm equipment). The output of information processing equipment increased 1.2 percent after having been flat in December; on balance, production in this group of industries has slowed noticeably since last summer.

The production of construction supplies contracted again in January, falling 0.5 percent, and the index is now 2.6 percent below its year-ago level. The output of materials inched up 0.2 percent: The indexes for durable materials and energy materials were up moderately and the index for nondurable materials was unchanged. Among durable materials industries, the output of semiconductors, printed circuit boards, and other electronic components posted a gain in January that was similar to those seen in recent months. However, the consumer parts group was hit by another decline in the production of original equipment parts for motor vehicles. Within nondurable materials, a 1.7 percent gain in the production of paper materials, which had fallen sharply in November and December, was largely offset by further declines in chemicals and textiles.

Industry Groups

Manufacturing output declined 0.1 percent in January, with a 0.3 percent decrease in the production of durable goods and a 0.2 percent increase in nondurable goods. Among durable goods, the losses were concentrated in motor vehicles and parts, lumber, furniture and fixtures, and primary metals. The largest increases in output were in the electrical machinery, instruments, and miscellaneous manufacturing industries. The output of nondurables, which declined, on balance, over the previous six months, posted a modest uptick in January, with small but widespread gains.

The factory operating rate declined further, to 78.9 percent, in January, 2-3/4 percentage points below its September level and the lowest level since early 1992. In recent months, capacity utilization has fallen significantly in the transportation equipment and primary metals industries. The operating rate at utilities fell back to 92.2 percent in January after having been at the abnormally high level of 98.3 percent in December. The operating rate for mining, 88.5 percent, was lifted by higher-than-average readings in the coal mining and oil and gas extraction industries.

New Release Format

This statistical release, the G.17, has been redesigned beginning with this issue. Special aggregates have been added. Although some detailed industry data are no longer listed in the regular release, these series continue to be available on the Federal Reserve Board's public web site (www.federalreserve.gov/releases/g17).

1. The IP proportion data are estimates of the industries' relative contributions to overall IP growth in the following year.

2. Semiconductors include related electronic components.

1. The IP proportion data are estimates of the industries' relative contributions to overall IP growth in the following year.

2. Semiconductors include related electronic components.

3. Millions of units at an annual rate.

Note—Primary processing manufacturing includes textile mill products, paper and products, industrial chemicals, synthetic materials, and fertilizers, petroleum products, rubber and plastics products, lumber and products, primary metals, fabricated metals, stone, clay, and glass products, semiconductors and related electronic components, and motor vehicle parts. Advanced processing manufacturing includes foods, tobacco products, apparel products, printing and publishing, chemical products and other agricultural chemicals, leather and products, furniture and fixtures, industrial machinery and equipment, electrical machinery except semiconductors and related electronic components, transportation equipment except motor vehicle parts, instruments, and miscellaneous manufactures.

1. Series begins in 1977.

2. Semiconductors include related electronic components.

Note—Primary processing manufacturing includes textile mill products, paper and products, industrial chemicals, synthetic materials, and fertilizers, petroleum products, rubber and plastics products, lumber and products, primary metals, fabricated metals, stone, clay, and glass products, semiconductors and related electronic components, and motor vehicle parts. Advanced processing manufacturing includes foods, tobacco products, apparel products, printing and publishing, chemical products and other agricultural chemicals, leather and products, furniture and fixtures, industrial machinery and equipment, electrical machinery except semiconductors and related electronic components, transportation equipment except motor vehicle parts, instruments, and miscellaneous manufactures.

Table 4
INDUSTRIAL CAPACITY: MANUFACTURING, MINING, AND UTILITIES

| Item | SIC | Percent change | | | | | | | | Capacity indexes | | | | | | |

p. Preliminary estimate for current year.

1. Series begins in 1977.

2. Semiconductors include related electronic components.

Table 8
DIFFUSION INDEXES OF INDUSTRIAL PRODUCTION

| Percent | | | | | | | | | | | | |
|-----------------------------|------|------|------|------|------|------|------|------|-------|------|------|------|
| Year | Jan. | Feb. | Mar. | Apr. | May | June | July | Aug. | Sept. | Oct. | Nov. | Dec. |
| One Month Earlier | | | | | | | | | | | | |
| 1998 | 56.2 | 51.4 | 51.1 | 50.9 | 49.6 | 41.7 | 53.6 | 52.5 | 48.6 | 55.1 | 48.2 | 50.0 |
| 1999 | 53.6 | 56.5 | 55.4 | 59.4 | 55.1 | 50.7 | 58.2 | 55.8 | 48.6 | 64.5 | 53.3 | 59.8 |
| 2000 | 58.7 | 50.4 | 56.5 | 51.4 | 51.4 | 56.2 | 54.2 | 43.5 | 54.0 | 43.5 | 42.0 | 33.9 |
| Three Months Earlier | | | | | | | | | | | | |
| 1998 | 63.4 | 56.9 | 61.2 | 56.9 | 59.4 | 46.7 | 50.0 | 49.6 | 54.0 | 55.4 | 48.6 | 50.7 |
| 1999 | 52.9 | 56.9 | 56.5 | 56.5 | 55.8 | 58.0 | 56.2 | 63.4 | 58.0 | 62.0 | 58.3 | 62.7 |
| 2000 | 61.2 | 62.0 | 59.8 | 56.2 | 54.0 | 52.9 | 49.6 | 44.9 | 48.9 | 43.1 | 43.1 | 35.9 |
| Six Months Earlier | | | | | | | | | | | | |
| 1998 | 65.6 | 65.2 | 64.9 | 61.2 | 60.5 | 56.5 | 56.2 | 56.9 | 52.2 | 54.0 | 50.0 | 50.0 |
| 1999 | 59.1 | 53.3 | 56.2 | 54.3 | 58.0 | 59.8 | 60.1 | 60.1 | 61.6 | 67.4 | 62.7 | 62.7 |
| 2000 | 68.1 | 65.9 | 68.1 | 64.1 | 60.0 | 55.4 | 49.6 | 43.8 | 47.5 | 44.9 | 40.9 | 34.1 |

Note—The diffusion indexes are calculated as the percentage of series that increased over the indicated span (one, three, or six months) plus one-half the percentage that were unchanged.

Explanatory Note

The statistical release of **Industrial Production and Capacity Utilization** reports measures of output, capacity, and capacity utilization in manufacturing, mining, and the electric and gas utilities industries. The release also includes monthly indexes on the use of electric power in manufacturing and mining. Files containing data in the release and historical data are available under “Research and Data” at www.federalreserve.gov, the Board’s World Wide Web site. For paid access to these files through the Department of Commerce’s Economic Bulletin Board or World Wide Web site, please call STAT-USA at 1-800-STAT-USA or (202) 452-1986. Diskettes containing historical data and the data published in this release are available from the Board of Governors of the Federal Reserve System, Publications Services, (202) 452-3245.

Industrial Production

Coverage. The industrial production (IP) index measures output in the manufacturing, mining, and electric and gas utilities industries; the reference period for the index is 1992. For the period since 1997, the total IP index has been constructed from 276 individual series based on the 1987 Standard Industrial Classification (SIC). These individual series are classified in two ways: (1) market groups (shown in table 1), such as consumer goods, equipment, intermediate products, and materials; and (2) industry groups (shown in tables 2 and 6), such as two-digit SIC industries and major aggregates of these industries—for example, durable and nondurable manufacturing, mining, and utilities.

Market groups. For purposes of analysis, the individual IP series are grouped into final products, intermediate products, and materials. Final products are assumed to be purchased by consumers, businesses, or government for final use. Intermediate products are expected to become inputs in nonindustrial sectors, such as construction, agriculture, and services. Materials are industrial output requiring further processing within the industrial sector. Total products comprise final and intermediate products; final products are divided into consumer goods and equipment.

Timing. The first estimate of output for a month is published around the 15th of the following month. The estimate is preliminary (denoted by the superscript “p” in tables) and subject to revision in each of the subsequent three months as new source data become available. (Revised estimates are denoted by the superscript “r” in tables.) After the fourth month, indexes are not revised further until the time of an annual revision or a benchmark revision. The last three benchmark revisions were published in 1990, 1985, and 1976.

Source data. In annual or benchmark revisions, the individual IP indexes are constructed from a variety of source data, such as the quinquennial *Censuses of Manufactures and Mineral Industries* and the *Annual Survey of Manufactures*, prepared by the Bureau of the Census; the *Minerals Yearbook*, prepared by the U.S. Geological Survey; and publications of the Department of Energy. On a monthly basis, the individual indexes of industrial production are constructed from two main types of source data: (1) output measured in physical units and (2) data on inputs to the production process, from which output is inferred. Data on physical products, such as tons of steel or barrels of oil, are obtained from private trade associations as well as from government agencies including those listed above; data of this type are used to estimate monthly IP where possible and appropriate. When suitable data on physical product are unavailable, estimates of output are based on either production-worker hours or electric power use by industry. Data on hours worked by production workers are collected in the monthly establishment survey conducted by the Bureau of Labor Statistics. The data on electric power use are described below. The factors used to convert inputs into estimates of production are based on historical relationships between the inputs and the comprehensive data used to benchmark the IP indexes; these factors also may be influenced by technological or cyclical developments. Especially for the first and second estimates for a given month, the available source data are limited and subject to revision.

Weights. In the index, series that measure the output of an individual industry are weighted according to their proportion in the total value-added output of all industries. The industrial production index, which extends back to 1919, is built as a chain-type index since 1977. The components of IP are combined using annual estimates of value added per unit of output; for the data since 1992, the annual unit-value-added estimates are linearly interpolated to get monthly weights. The IP proportions shown in column 1 of tables 1A, 2A, and 6 are estimates of the industries’ relative contributions to overall growth in the following year. For example, a 1 percent increase in durable goods manufacturing in 1997 would account for an increase in total IP of nearly 1/2 percent.

Seasonal adjustment. Individual series are seasonally adjusted by the X–11 ARIMA method, developed at Statistics Canada. For series based on production-worker hours, the current seasonal factors were estimated with data through October 2000; for other series, the factors were estimated with data through at least June 2000. Series are preadjusted for the effects of holidays or the business cycle where appropriate. For the data since 1977, all seasonally adjusted aggregate indexes are calculated by aggregating the seasonally adjusted indexes of the individual series.

Reliability. The average revision to the *level* of the total IP index, without regard to sign, between the first and the fourth estimates was 0.27 percent during the 1987–99 period. The average revision to the *percent change* in total IP, without regard to sign, from the first to the fourth estimates was 0.21 percentage point during the 1987–99

period. In most cases (about 83 percent), the direction of change in output indicated by the first estimate for a given month is the same as that shown by the fourth estimate.

Rounding. The published percent changes are calculated from unrounded indexes, and may not be the same as percent changes calculated from the rounded indexes shown in the release.

Capacity Utilization

Definition. Capacity utilization is calculated for the manufacturing, mining, and electric and gas utilities industries. For a given industry, the utilization rate is equal to an output index divided by a capacity index. Output is measured by seasonally adjusted indexes of industrial production. The capacity indexes attempt to capture the concept of sustainable practical capacity, which is defined as the greatest level of output that a plant can maintain within the framework of a realistic work schedule, taking account of normal downtime, and assuming sufficient availability of inputs to operate the machinery and equipment in place. The 76 individual capacity indexes are based on a variety of data, including capacity data measured in physical units compiled by trade associations, surveys of utilization rates and investment, and estimates of growth of the capital input.

Groups. Estimates of capacity and utilization are available for a variety of groups, including primary and advanced processing industries within manufacturing, durable and nondurable manufacturing, total manufacturing, mining, utilities, and total industry. Component industries of the primary and advanced processing groups within manufacturing are listed in the note on tables 2 and 3 of the release.

Weights. Although each utilization rate is the result of dividing an IP series by a corresponding capacity index, aggregate utilization rates are equivalent to combinations of individual utilization rates aggregated with proportions that reflect current capacity levels of output valued in current-period value added per unit of actual output. The implied proportions of individual industry operating rates in the rate for total industry for the most recent year are shown in the first column of table 3.

Perspective. The historical highs and lows in capacity utilization shown in the tables above are specific to each series and did not all occur in the same month. Industrial plants usually operate at capacity utilization rates that are well below 100 percent: none of the broad aggregates has ever reached 100 percent. For total industry and total manufacturing, utilization rates have exceeded 90 percent only in wartime.

Electric Power

Data on electric power (expressed in kilowatt hours) are collected by the Federal Reserve District Banks from electric utilities and also from manufacturing and mining establishments that generate electric power for their own use (cogenerators). The indexes of power use shown in table 9 are sums of kilowatt hours used by an industry or industry group expressed as a percentage of that industry’s or group’s usage in 1992. The first column of the table shows, for reference, electric power use in billions of kilowatt hours as reported by manufacturing and mining industries in the 1992 censuses of those industries. The supplementary group, “Total, less nuclear nondefense,” is shown separately because the value-added proportion for the nondefense nuclear material series (part of SIC 2819) in total IP is considerably smaller than its share of total electric power use. Excluding this component from total power use facilitates comparisons with total IP.

References

The annual revision published on December 5, 2000 will be described more completely in an upcoming *Federal Reserve Bulletin*.

A description of the aggregation methods for industrial production and capacity utilization is included in an article in the *Federal Reserve Bulletin*, vol. 83 (February 1997), pp. 67–92. *Industrial Production—1986 Edition* contains a more detailed description of the other methods used to compile the industrial production index, plus a history of its development, a glossary of terms, and a bibliography. To obtain *Industrial Production—1986 Edition* (\$9.00 per copy), write to Board of Governors of the Federal Reserve System, Publications Services, Washington, DC 20551. The basic methodology used to estimate capacity and utilization was discussed in an article in the *Federal Reserve Bulletin*, vol. 86 (March 2000), pp. 188–205. The major revisions to the IP indexes and capacity utilization since 1990 have been described in the *Federal Reserve Bulletin* (April 1990, June 1990, June 1993, March 1994, January 1995, January 1996, February 1997, February 1998, January 1999, and March 2000).

Release Schedule for 2001

At 9:15 a.m. on:

January 17, February 16, March 16, April 17, May 14, June 15, July 17, August 15, September 14, October 16, November 16, and December 14
