BAGY	Bank Aggregated Year-to-Date Data

Background The National Examination Database (NED) was developed within the National Information Center (NIC) in 1997 to provide all Reserve Banks with a single source for information on financial institutions. This data is used by FRS staff in the Banking Supervision, Discount, Credit Risk Management, and various Industry Studies business areas, as well as state banking, FDIC, and OCC regulators to assess the condition of financial institutions. NED is also used to capture supervisory data on financial institutions once examinations have been performed.

Description The National Examination Database is designed to support bank supervision. Among other things, it includes data gathered during examinations and inspections, such as financial information, ratings, and regulatory compliance actions.

Confidentiality
