First Quarter 2014

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

Recent Developments in Household Net Worth and Domestic Nonfinancial Debt

The net worth of households and nonprofits was \$81.8 trillion at end of the first quarter this year, about \$1.5 trillion more than at end of 2013. In the first quarter, the value of directly and indirectly held corporate equities increased \$361 billion and the value of real estate expanded \$751 billion.

Domestic nonfinancial debt outstanding was \$42.6 trillion at the end of the first quarter of 2014, of which household debt was \$13.2 trillion, nonfinancial business debt was \$13.9 trillion, and total government debt was \$15.5 trillion.

Domestic nonfinancial debt growth² was 5 percent at a seasonally adjusted annual rate in the first quarter of 2014, about ¼ percentage point less than in the fourth quarter of 2013.

Household debt edged up at an annual rate of 2 percent in the first quarter (excluding charge-offs of home mortgages). Net originations of home mortgages continued to be weak, while consumer credit continued to grow at the pace of the previous two years.

Nonfinancial business debt rose at an annual rate of 7.3 percent in the first quarter, after a 6.6 percent increase in the fourth quarter. As in recent years, corporate bonds accounted for most of the increase.

State and local government debt declined at an annual rate of 0.7 percent in the first quarter, after declining at a 4.9 percent rate in the fourth quarter.

Federal government debt rose at an annual rate of 7.1 percent in the first quarter, a bit slower than the pace of growth in the fourth quarter.

Release Highlights First Quarter 2014

Topic	Description
Federal funds and security repurchase agreements	Additional detail on federal funds and security repurchase agreements is now available on the instrument tables F.207 and L.207 and the sector tables for U.S.-chartered depository institutions (F.110 and L.110), foreign banking offices in U.S. (F.111 and L.111), credit unions (F.113 and L.113), and security brokers and dealers (F.128 and L.128). On these tables, federal funds and security repurchase agreements, previously reported as net liabilities, are now reported separately as assets and liabilities. In addition to changes in presentation, the data have been revised to reflect methodological improvements as well. In particular, while transactions between depository institutions were previously netted out, this instrument category now includes all federal funds and security repurchase agreement transactions, regardless of counterparty.
Security credit	Data for the security credit instrument category (tables F.224 and L.224) have been revised to reflect methodological improvements. In particular, depository institutions' security credit assets no longer include security repurchase agreement transactions with security brokers and dealers, as these are now included in the instrument category federal funds and security repurchase agreements. The methodology for the security credit of security brokers and dealers and households has also been improved. In addition, security credit of the rest of the world sector, which was discontinued in 1976:Q1, is no longer shown.
Home mortgage loan charge-offs	A memo item for total home mortgage loan charge-offs is now shown on the home mortgage instrument table (table F.218). Charge-offs are now excluded from home mortgage loan flows and are instead accounted for as other changes in volume. Data begin 2007:Q1.
U.S.-chartered depository institutions	As of this publication, separate series for U.S.-chartered commercial banks and savings institutions are no longer available in the online Federal Reserve Data Download Program (DDP).
Nonfinancial corporate business benchmark	Assets of the nonfinancial corporate business sector (tables F.102, L.102, B.102, and R.102) have been revised from 2012:Q1 forward, to reflect new advance data from the Internal Revenue Service (IRS) Statistics of Income (SOI) for 2012.
Nonfinancial noncorporate business benchmark	Data for the noncorporate business sector (tables F.103, L.103, B.103, and R.103) have been revised from 2011:Q1 forward to reflect new 2011 benchmark statistics from the Internal Revenue Service (IRS) Statistics of Income (SOI).

Explanatory Notes

Financial Accounts of the United States

The Financial Accounts of the United States (previously referred to as the Flow of Funds Accounts) are organized into the following sections:

- Matrices summarizing flows and levels across sectors, and tables summarizing credit market borrowing, gross domestic product (GDP), national income, saving, and so on
- Flow of funds, by sector and financial instrument
- Levels of financial assets and liabilities, by sector and financial instrument
- Balance sheets, including nonfinancial assets, and changes in net worth for households and nonprofit organizations, nonfinancial corporate businesses, and nonfinancial noncorporate businesses
- Supplementary tables providing additional detail on selected sectors
- Integrated Macroeconomic Accounts

The Integrated Macroeconomic Accounts (IMA) relate production, income, saving, and capital formation from the national income and product accounts (NIPA) to changes in net worth from the FA on a sector-by-sector basis. The IMA are published jointly by the Federal Reserve Board and the Bureau of Economic Analysis and are based on international guidelines and terminology as defined in the System of National Accounts (SNA1993, revised in 2008).

Federal Reserve Board staff have taken many steps over the past several years to conform the Financial Accounts with the SNA guidelines. Nonetheless, a few important differences remain. In particular, in the Financial Accounts:

- The purchase of consumer durables is treated as investment rather than as consumption.
- Nonfinancial noncorporate business (which are often small businesses) are shown in a separate sector rather than being included in the household sector.
- Most debt securities are recorded at book value rather than market value.

Concepts of Level and Flow in the SNA and the Financial Accounts

The level of an asset or liability (also referred to as the stock or outstanding) measures the value of the asset or

liability in existence at a point in time. In the Financial Accounts, the levels are reported as of the end of each calendar quarter. In the SNA2008, the change in the level from one period to the next is called the “economic flow”, and can be decomposed into three broad elements: *transactions*, which measure the exchange of assets; *revaluations*, which measure changes in market value of untraded assets; and *other changes in volume*, which measure discontinuities or breaks in time series due to disaster losses or a change in source data or definition.

In the Financial Accounts, “flow of funds” refers to the exchange of assets, corresponding to the SNA definition of transactions, that is, “flow tables” in the Financial Accounts are equivalent to “transaction tables” in the SNA terminology. In practice, other volume changes are relatively rare, and revaluations only occur for series carried at market value (such as corporate equities and mutual fund shares), so for many series the change in the level is equal to the flow.

Growth Rates

Growth rates calculated from levels will include revaluations and other changes in volume. To isolate the effect of transactions on growth of a given asset or liability, users should calculate the ratio of the flow in a given period to the level in the preceding period.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Growth rates calculated from changes in unadjusted levels printed in table L.2 may differ from those in table D.1.

Seasonal Adjustment

Seasonal factors are recalculated and updated every year, and these revised factors are first published in the September release of second-quarter data. All series that exhibit significant seasonal patterns are adjusted. The seasonal factors are generated using the X-12-ARIMA seasonal adjustment program from the U.S. Census Bureau, estimated using the most recent 10 years of data. Because the effects of the recent financial crisis resulted in large outliers in some series that would have distorted the estimated seasonal factors, seasonal factors for some series were extrapolated using pre-crisis data. Seasonally adjusted levels shown in table D.3 are derived by carrying forward year-end levels by seasonally adjusted flows.

Data Revisions

Data shown for the most recent quarters are based on preliminary and potentially incomplete information. A summary list of the most recent data available for each sector is provided in a table following these notes. Nonetheless, when source data are revised or estimation methods are improved, all data are subject to revision. There is no specific revision schedule; rather, data are revised on an ongoing basis. In each release of the Financial Accounts, major revisions are highlighted at the beginning of the publication.

Discrepancies

The data in the Financial Accounts come from a large variety of sources and are subject to limitations and uncertainty due to measurement errors, missing information, and incompatibilities among data sources. The size of this uncertainty cannot be quantified, but its existence is acknowledged by the inclusion of “statistical discrepancies” for various sectors and financial instruments.

The discrepancy for a given sector is defined as the difference between the aggregate value of the sector’s sources of funds and the value of its uses of funds. For a financial instrument category, the discrepancy is defined as the difference between the measurement of funds raised through the financial instrument and funds disbursed through that instrument. The relative size of the statistical discrepancy is one indication of the quality of the underlying source data. Note that differences in seasonal adjustment procedures sometimes result in quarterly discrepancies that partially or completely offset each other in the annual data.

The Financial Accounts Guide

Substantially more detail on the construction of the Financial Accounts is available in the Financial Accounts Guide, which provides interactive, online documentation for each data series. The tools and descriptions in the guide are designed to help users understand the structure and content of the Financial Accounts. The guide allows users to search for series, browse tables of data, and identify links among series within these accounts. It also provides descriptions of each of the published tables and information on the source data underlying each series.

The guide is not part of the quarterly release, but it is continually updated and kept consistent with the most recently published data. The guide and the data from the Financial Accounts are available free of charge at the following link:

www.federalreserve.gov/apps/fof/

Each input and calculated series in the Z.1 is identified according to a unique string of patterned numbers and letters. The series structure page of the guide provides a breakdown of what the letters and numbers represent in the series mnemonics. The relationships between different components of a series (for example, levels, seasonally adjusted annual rate flows, unadjusted flows, revaluations, other changes in volume, seasonal factors, and so on) are also described on the series structure page.

Production Schedule

The Financial Accounts are published online and in print 4 times per year, about 10 weeks following the end of each calendar quarter. The publication and the guide are available online here:

www.federalreserve.gov/releases/Z1

This website also provides coded tables and historical annual tables beginning in 1945 that correspond with the tables published in this release. There are also compressed ASCII files of quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, debt (tables D.1, D.2, and D.3), supplementary tables, and the IMA.

In addition, the data are available as customizable datasets through the Federal Reserve Board’s Data Download Program (DDP) here:

General notes: A = assets, L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 23) and equity in noncorporate business (line 30). The matrix shows a discrepancy in column 17 for monetary gold (line 4) because by international accounting convention, monetary gold is a financial asset without a corresponding liability.

Notes. Nonfinancial noncorporate business includes noncorporate farms that are excluded from the nonfinancial noncorporate business sector in the Financial Accounts of the United States. Estimates for 2000 and earlier periods are based on the 1987 Standard Industrial Classification System; later estimates are based on the North American Classification System.

(1) Consists of rental income of tenant-occupied housing and proprietors' income. Quasi-corporations are unincorporated enterprises that function as if they were corporations; they primarily cover their operating costs through sales, and they keep a complete set of financial records.

(2) Government-sponsored enterprises (GSEs) consist of Federal Home Loan Banks, Fannie Mae, Freddie Mac, Federal Agricultural Mortgage Corporation, Farm Credit System, the Financing Corporation, and the Resolution Funding Corporation, and they included the Student Loan Marketing Association until it was fully privatized in the fourth quarter of 2004.

(3) Net equity in reserves of property-casualty insurance companies.

Notes. Nonfinancial corporate business includes corporate farms that are excluded from the nonfinancial corporate business sector in the Financial Accounts of the United States.

Estimates for 2000 and earlier periods are based on the 1987 Standard Industrial Classification System; later estimates are based on the North American Classification System.

(1) Government-sponsored enterprises (GSEs) consist of Federal Home Loan Banks, Fannie Mae, Freddie Mac, Federal Agricultural Mortgage Corporation, Farm Credit System, the Financing Corporation, and the Resolution Funding Corporation, and they included the Student Loan Marketing Association until it was fully privatized in the fourth quarter of 2004.

(2) Net equity in reserves of property-casualty insurance companies.

(3) The statistical discrepancy is the difference between net lending or net borrowing derived in the capital account and the same concept derived in the financial account. The discrepancy reflects differences in source data, timing of recorded flows, and other statistical differences between the capital and financial accounts.

(4) Includes changes in the market value of shares and other equity that are excluded from the related measures for the nonfinancial corporate business sector in the Financial Accounts of the United States.

(5) Excludes nonproduced nonfinancial assets.

Estimates for 2000 and earlier periods are based on the 1987 Standard Industrial Classification System; later estimates are based on the North American Classification System.

(1) Consists of rental income of tenant-occupied housing and proprietors' income. Quasi-corporations are unincorporated enterprises that function as if they were corporations; they primarily cover their operating costs through sales, and they keep a complete set of financial records.

(2) Government-sponsored enterprises (GSEs) consist of Federal Home Loan Banks, Fannie Mae, Freddie Mac, Federal Agricultural Mortgage Corporation, Farm Credit System, the Financing Corporation, and the Resolution Funding Corporation, and they included the Student Loan Marketing Association until it was fully privatized in the fourth quarter of 2004.

(3) The statistical discrepancy is the difference between net lending or net borrowing derived in the capital account and the same concept derived in the financial account. The discrepancy reflects differences in source data, timing of recorded flows, and other statistical differences between the capital and financial accounts.

(4) Excludes land. Includes corporate and noncorporate financial business.

Note. The Federal government accounts exclude Federal employee retirement funds.

(1) Government-sponsored enterprises (GSEs) consist of Federal Home Loan Banks, Fannie Mae, Freddie Mac, Federal Agricultural Mortgage Corporation, Farm Credit System, the Financing Corporation, and the Resolution Funding Corporation, and they included the Student Loan Marketing Association until it was fully privatized in the fourth quarter of 2004.

(2) The statistical discrepancy is the difference between net lending or net borrowing derived in the capital account and the same concept derived in the financial account. The discrepancy reflects differences in source data, timing of recorded flows, and other statistical differences between the capital and financial accounts.

(3) Excludes land and nonproduced nonfinancial assets.

(2) The statistical discrepancy is the difference between net lending or net borrowing derived in the capital account and the same concept derived in the financial account. The discrepancy reflects differences in source data, timing of recorded flows, and other statistical differences between the capital and financial accounts.

(3) Excludes land and nonproduced nonfinancial assets.
