Comments:

It is important for the banks to prevent overdraft at all. It is possible, however, they find the fees as a great way to make money. At times though, a person who may overdraft, usually does not have enough money to begin with, so that extra \$25 or plus fee will ruin them even more. Then they can't make the minimum payments on their credit cards, or the check they are depositing that will just barely cover their loan payment will now be subtracting the overdraft fee. That person will not be able to make the payment and then will be charged a late fee. And this all becomes a spiraling mess of financial destruction which not only hurts a person monetarily but emotionally. All because of a bank trying to make a little profit. Stop this immediately.
