***Re: Restrictions on Proprietary Trading and Certain Interests in, and Relationships with, Hedge Funds and Private Equity Funds***

Dear Ladies and Gentlemen:

Thank you for the opportunity to submit comments in response to your Agencies' joint notice of proposed rulemaking implementing the "Volcker Rule," which was passed as part of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Act"). Our comments focus on Question 310, which concerns the appropriate treatment of venture capital funds under the rule.

Although portions of the Volcker Rule address legitimate problems, it is critical that the regulators implement it consistently with its language and its purpose. Specifically, we urge you either to conclude that "private equity funds" do not include venture capital funds, or to conclude that banks may sponsor and invest in venture capital funds as a "permitted activity" under the Act.

Trinity Ventures was founded in 1986 and is investing out of our tenth fund. Our business is exclusively based on long term equity investments in startup companies. We invest in the early stages of company formation and growth. We have invested in hundreds of companies, some of which (e.g. Starbucks) have blossomed into major employers in the economy. Some of our limited partners are banks who fully understand the nature of this business.

Page Two

if the regulatory bodies were to apply the provisions restricting investments in private equity funds so broadly as to include venture capital funds, they could severely damage one of the most vibrant sectors of our economy. Venture capital funds create jobs, foster innovation, and help our nation compete with the rest of the world. We do this by making long-term investments in growing businesses, without the use of substantial leverage or financial engineering. We do not engage in short-term "trading." We do not pose systemic risk to our financial system and do not hinder the safety and soundness of our banking institutions.

To the contrary, investors like Trinity promote the strength and stability of our financial sector by helping create strong, growing companies (and borrowers), a strong economy based upon innovation rather than trading, and sustained job creation; by aggregating capital and allocating it to promising long term investments in innovative new technologies; and by promoting counter-cyclical investment strategies that help mitigate periods of financial and economic instability

We urge you to acknowledge these fundamental attributes and preserve the ability of bank affiliates to provide capital to high growth technology companies by investing in and sponsoring venture funds.

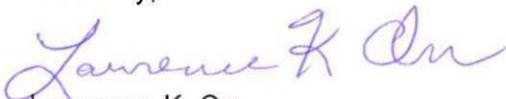

We have seen innovation and venture investing become increasingly global over the last decade. While the United States historically has led this sector, today the flow of early stage capital in the United States has been shrinking. There are real opportunities in countries like China, India, Israel, and Brazil, and those governments are actively working to attract capital and people to create companies within their borders.

It would be perverse if, in the face of this competition for the future of the innovation ecosystem, the United States actually tied its hands behind its back by eliminating the approximately seven percent of all venture capital provided by banks (according to the research firm Prequin).

Startup companies need adequate "smart" capital, and our country needs those companies- to build our economy, to discover new ways to treat diseases and illnesses in an aging population, to create new ways of sharing and using information, and to develop new, clean energy solutions. Venture capital funds are not private equity funds, and they should not be regulated as such.

Thank you for your consideration.

Sincerely,

Lawrence K. Orr

General Partner, Trinity Ventures
