Re: Basel III Capital Proposals

Ladies and Gentlemen:

Thank you for the opportunity to provide comment on the Basel III proposals that were recently issued for public comment by the Federal Reserve Board, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation.

As a life-long community banker, I am worried by some of the components of Basel III as it relates to the long term health and viability of community banks. Community banks should be allowed to continue using the current Basel I framework for computing their capital requirements. Basel III was designed to apply to the largest, internationally active, banks and not community banks. Community banks did not engage in the highly leveraged activities that severely depleted capital levels of the largest banks and created panic in the financial markets.

Community banks operate on a relationship-based business model that is specifically designed to serve customers in their respective communities on a long-term basis. This model contributes to the success of community banks all over the United States through practical, common sense approaches to managing risk. The largest banks operate purely on transaction volume and pay little attention to the customer relationship. This difference in banking models demonstrates the need to place tougher capital standards exclusively on the largest banks to better manage the ability to absorb losses.

An additional component of Basel III which is troubling for community banks is the new risk weighting proposal. The proposed risk weight framework under Basel III is too complicated and will be an onerous regulatory burden that will penalize community banks and jeopardize the housing recovery. Increasing the risk weights for residential balloon loans, interest-only loans, and second liens will penalize community banks who offer these loan products to their customers and deprive customers of many financing options for residential property. Additionally, higher risk weights for balloon loans will further penalize community banks for mitigating interest rate risk in their asset-liability management. Community banks will be forced to originate only 15 or 30 year mortgages with durations that will make their balance sheets more sensitive to changes in long-term interest rates. Many community banks will either exit the residential loan market entirely or only originate those loans that can be sold to a GSE. Second liens will either become more expensive for borrowers or disappear altogether as banks will choose not to allocate additional capital to these balance sheet exposures. Community banks should be allowed to stay with the current Basel I risk weight framework for residential loans. Furthermore, community banks will be forced to make significant software upgrades and incur other operational costs to track mortgage loan-to-value ratios in order to determine the proper risk weight categories for mortgages.

Thank you for your time and consideration of my views.

Sincerely,
