Hi there,

I'm reaching out on behalf of Socure as their link building agency.

The proposed rule on "Permitted Payment Stablecoin Issuer Customer Identification Program" requires stablecoin issuers to maintain effective customer identification programs under the Bank Secrecy Act. Socure's AI-Native Trust Infrastructure for Identity Verification is built specifically to power KYC workflows and synthetic fraud detection, making it a natural fit for organizations navigating these new compliance requirements.

Would you be open to including Socure in this proposal as a resource for stablecoin issuers implementing customer identification programs?

Thanks,

Casey Morgan
