Submitted Date: 05/08/2026

Hello my name is Pete, I’m writing to you because I believe Bitcoin deserves risk-based capital treatment, not a blanket penalty that keeps American banks out of Bitcoin.

I would much prefer to have ₿itcoin services from a regulated bank over any overseas banks or unregulated banks that manifest from this proposal. More oversight from the country I am in gives me more comfort at night knowing a company is following the laws of the land I live in and eases the stress of trying to find something that isn’t either in my country or hopefully trustworthy.

Don’t let this country make a new technology, that can truly help so many people, go off shore and into the hands of another country. I would like the U.S. to be a leader in technology, ESPECIALLY freedom technology. FREEDOM is what we are known for and any citizen should be free to keep their ₿itcoin in their bank if they so choose to.

₿Itcoin will exist and be used whether or not this proposal goes through. It would be better and easier to supervise the activities on chain when it occurs in regulated institutions in our own country.

Please consider my thoughts as this affects many more than myself who are unknowledgeable to this proposals even existence.

To whoever it may concern
Thank you for your time
