# Annual Report to the Congress on Retail Fees and Services of Depository Institutions 

Since the passage of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, the Congress has required the Board of Governors of the Federal Reserve System to report annually on discernible changes in the cost and availability of certain retail banking services and on correlations, if any, between these changes and increases in deposit insurance premiums. The act further specifies that these reports be based on annual surveys of samples of insured depository institutions that are representative in terms of size and location.
Provisions of the Riegle-Neal Interstate Banking and Branching Efficiency Act of 1994 and the Economic Growth and Regulatory Paperwork Reduction Act of 1996 expanded the required contents of the report to include separate treatment of the trends in the cost and availability of retail banking services for each state; for each consolidated metropolitan statistical area or primary metropolitan statistical area; for each of several size classes of institution; and for institutions that do and do not engage in multistate activities.

The surveys on which this report is based were conducted using large, randomly selected samples of depository institutions belonging either to the Bank Insurance Fund, whose members are predominantly commercial banks, or the Savings Association Insurance Fund, whose members are predominantly savings and loan associations. The samples were drawn so as to adequately represent different regions of the country and different sizes of institution. The results are population estimates, for the nation as a whole and for each of several subcategories of institution, of the availability of a large number of retail banking services and the fees for such services. The report issued in 2000 was the last to give the survey results (population estimates) for banks separately from those for savings associations. The distinction has been dropped because the fees of banks and savings associations have been found to be quite similar in most cases and because the schedules of the deposit insurance premiums paid by banks and savings associations, which once were substantially different, are now the same. In all, information on nearly fifty measures of fees and service availability are reported for the population of institutions that are either banks or savings associations and for numerous subcategories of these institutions.

## Summary of General Findings

Although results on availability and fees differ by type of service, a few generalizations can be made regarding industrywide changes from 2000 to 2001. (As will be noted below in the detailed findings, the time elapsed between surveys was six months for noninterest checking and NOW account services and twelve months for other services except savings accounts, for which the interval was two years.) First, no general trend in the availability of services is apparent. Of the twenty-four measures that may be considered indicators of service availability, eight changed a statistically significant amount, and these were evenly divided between greater and less service availability. ${ }^{1}$

The study collected two types of data relating to fees: the level (the average amount charged by those institutions that charge the fee) and the incidence (the percentage of institutions charging the fee). In general, fee increases were not found to be as common as they have been in previous years. Over the period between the two surveys, the level of fees at banks and savings associations increased significantly in only three of seventeen cases examined and decreased significantly in one of them. The incidence of fees increased significantly in four cases and decreased significantly in two cases.

This report also compares the fees and availability of services at "multistate" and "single-state" banking organizations; these organizations do not include savings associations. Banks are designated as multistate if they are part of organizations that conduct banking operations in more than one state; all other banks are designated as single-state. In the majority of cases surveyed, the average fees charged by multistate organizations continue to exceed those charged by single-state organizations by statistically significant amounts.

[^0]
## Deposit Insurance Premiums and the Cost and Availability of Retail Banking Services

The 1989 legislation that mandates this report requires that the Board report annually on correlations, if any, between changes in the cost and availability of retail banking services and increases in deposit insurance premiums. Because deposit insurance premiums, levied by the Federal Deposit Insurance Corporation, were zero for most institutions in 2000 and in 2001, any observed increases in fees or reductions in service availability between the 2000 and 2001 surveys cannot be attributed to changes in deposit insurance assessments. ${ }^{2}$

## The Survey and Methodology

The design of the 2001 survey differs somewhat from that of the 2000 survey. ${ }^{3}$ To better estimate any difference in fees and service availability between multistate and single-state banks, a substantially larger number of multistate banks were surveyed in 2001 than in 2000.

Further, some changes were made in the strata employed in the stratified sampling design. To make the results of the two surveys as comparable as possible, results obtained from the 2000 survey were reestimated using the strata employed in the 2001 survey (see appendix A for more details). Hence, values reported last year for 2000 are not identical to the values for 2000 reported this year. For each category of retail banking service examined, the surveys collected data on fees and service availability from approximately 500 banks and savings associations in 2000 and approximately 620 such institutions in 2001. Because statistical random sampling is employed, observations are weighted by selection probabilities to obtain estimates of fees and service availability for the entire population of banks and savings associations.

The surveys were divided by product category and conducted by telephone on different dates to keep the length of the interviews manageable and

[^1]to improve the accuracy of responses. The surveys covered the following services and associated fees:

- Noninterest checking accounts (table 1)
- NOW accounts (table 2)
- Savings accounts (table 3)
- Stop-payment orders (table 4)
- Checks written against insufficient funds (table 4)
- Deposit items returned (table 4)
- Automated teller machines (table 5).

Tables 6 through 10 report the data on these items according to whether the institution is multistate or single-state. Appendixes report the data on the above items according to institution size (appendix B), consolidated metropolitan statistical area (appendix C), and state (appendix D). ${ }^{4}$

## Survey Results

For most of the retail banking services in the survey, service availability is an estimate of the proportion of banks and savings associations that offer the service. In the case of noninterest checking accounts, NOW accounts, and savings accounts, the average minimum balances needed to open these accounts may also be used to address the question of availability.

For most services, fees are reported in terms of (1) the proportion of those depository institutions offering a service that charge for the service and (2) the average fee charged by the institutions that charge for the service. When the mix of fees for the service in question is diverse, as it is with noninterest checking accounts and NOW accounts, fees associated with only the most common mixes are reported.

## Noninterest Checking Accounts

The proportion of banks and savings associations offering various types of noninterest checking account and the fees and minimum balances associated with those types are determined from

[^2]data obtained from surveys conducted in December 2000 and June 2001. About 95 percent of banks and savings associations offered at least one type of noninterest checking account during this period, a proportion that did not change significantly between the dates of the 2000 and 2001 surveys (table 1).

Noninterest checking accounts can differ considerably in terms of the nonchecking services provided with the account, the balance that depositors must maintain to qualify for various fee levels, and the mix of fees charged the account holder. Depository institutions can, and frequently do, offer more than one type of account. So that fees and availability may be compared systematically over time, three narrowly defined types of checking account are reported: (1) single balance, single fee, (2) fee only, and (3) free. Excluded from the list are noninterest checking accounts that entitle the account holder to a mix of services other than those associated with the checking account itself (so-called club accounts and package accounts) and checking accounts with relatively

[^3]complicated balance structures and fee mixes (so-called tiered accounts).

## Single Balance, Single Fee

A single-balance, single-fee account involves no fee if the account holder maintains a minimum balance; otherwise, the account holder incurs a single monthly fee. The proportion of banks and savings associations offering this account declined a significant 8 percentage points, to about 30 percent, in 2001. The only significant change associated with this account was in the average minimum balance required to open the account, which decreased $\$ 43$, to $\$ 116$.

## Fee Only

Fee-only checking is a noninterest account in which the customer incurs a monthly fee regardless of the account balance; a per-check charge may also be assessed, but not necessarily. About 38 percent of banks and savings associations offered this account in 2001, and the proportion did not change significantly from that of 2000.

The average monthly fee associated with the fee-only account declined significantly, from more than $\$ 5$ in 2000 to about $\$ 4.75$ in 2001 , but the proportion of institutions leveling a per-check charge for this account increased significantly, from 40 percent in 2000 to about 60 percent in 2001. The per-check charge (about 34 cents in 2001) and the minimum balance required to open the account (about $\$ 70$ in 2001) did not change significantly from the previous year.

## Free

Free checking is a noninterest checking account that imposes no fees of any kind. The proportion of banks and savings associations offering this account was about 32 percent in 2001 and did not change significantly from the previous year. The minimum balance to open the account increased significantly, from $\$ 60$ in 2000 to about $\$ 85$ in 2001.

## NOW Accounts

NOW (negotiable order of withdrawal) accounts are checking accounts that pay interest and often

## 2. NOW accounts

1. A monthly fee for balances below the minimum, no monthly fee for balances above the minimum, and no other charges.
2. A monthly fee and a check charge for balances below the minimum and no monthly fee or other charges for balances above the minimum

Data are not sufficient to report.
** Significant at the 95 percent confidence level
have fee structures that differ from those of noninterest checking accounts. NOW accounts were surveyed in December 2000 and June 2001. The proportion of banks and savings associations offering NOW accounts in 2001, about 95 percent, showed no significant change from the previous year (table 2). The surveys of NOW accounts covered three fee structures: (1) single fee, (2) single fee, single check charge, and (3) no fee.

## Single Fee

In the single-fee account, the institution charges no fee if the account holder maintains a minimum balance; otherwise, the institution levies one monthly fee with no check charge. About 50 percent of banks and savings associations offered this account in 2001, a proportion not significantly different from that of the previous year. On average, account holders who did not maintain a balance of about $\$ 1,100$ were charged a monthly fee of $\$ 8.15$. The average minimum balance to open the account was about $\$ 560$. No significant
changes were associated with this account between the 2000 and 2001 surveys.

## Single Fee, Single Check Charge

In the single-fee, single-check-charge account, a below-minimum balance triggers check charges as well as a monthly fee. This type of account is relatively rare, with only 15 percent of banks and savings associations offering it in 2001. Failure to maintain a minimum balance, a threshold averaging about $\$ 1,100$ in 2001, resulted in an average monthly fee of about $\$ 7.25$ and an average per-check charge of 22 cents. No significant changes were associated with this account over the period.

## No Fee

The percentage of banks and savings associations offering no-fee NOW accounts increased significantly, from 1.5 percent in 2000 to about 4 percent in 2001. The minimum balance required to open the account was about $\$ 240$ in 2001. The number of surveyed institutions offering no-fee NOW accounts in 2000 was too small to allow valid estimates of the minimum balance to open for that year.

## Savings Accounts

Savings account definitions employed in the 2000 survey were unlike those used previously. The older definitions were restored for the 2001 survey, and therefore results obtained from the 2001 survey are compared with those from 1999 rather than 2000. The 1999 and 2001 surveys of savings accounts were each conducted in June.
Nearly all banks and savings associations offered some form of savings account in 1999 and 2001 (table 3). The surveys covered passbook accounts and statement accounts separately. In passbook accounts, transactions and balances are recorded by the institution in a passbook kept by the account holder, in statement accounts, periodic statements of balances and recent activity are mailed to account holders. Excluded from the survey of savings accounts are money market deposit accounts, which typically require higher minimum deposits to open, offer higher interest rates, and impose some additional restrictions.

## 3. Savings accounts

Dollars except as noted

| Account availability and fee averages | 1999 | 2001 | Change |

| Monthly fee (low balance) | 2.38 | 2.50 | . 12 |
| Minimum balance to avoid fee . | 189.87 | 184.42 | -5.45 |
| Minimum balance to open ...... | 101.54 | 105.37 | 3.83 |
| No-fee statement account |  |  |  |
| Percent offering | 17.0 | 17.1 | . 1 |
| Minimum balance to open | 85.36 | 82.43 | -2.93 |

Note. Savings account definitions used for 1999 and preceding years were changed for 2000 and restored for 2001; thus, comparisons are made for 1999 and 2001. For definitions of passbook and statement accounts, see text. See also general note to table 1 .

1. A monthly fee for balances below the minimum and no fee for balances above the minimum.
** Significant at the 95 percent confidence level.

The surveys covered two fee structures for savings accounts: simple and no-fee.

## Simple Passbook

In a simple passbook account, the institution charges customers no fee if they maintain a minimum balance and one monthly fee otherwise. The proportion of banks and savings associations offering the simple passbook account decreased a significant 11 percentage points, to 19 percent, in 2001. No other significant change was observed for this account.

## No-Fee Passbook

The no-fee passbook account imposes no fees regardless of the account balance. The proportion of banks and savings associations offering this account declined a significant 15 percentage points, to 15 percent, in 2001 . The average minimum balance required to open the no-fee passbook account also decreased significantly, from about $\$ 40$ in 1999 to $\$ 30$ in 2001.

## Simple Statement

The proportion of banks and savings associations offering the simple statement account increased a significant 18 percentage points over the two-year period, to about 67 percent in 2001. Thus, institutions appear to have made a substantial shift over this period away from passbook accounts and toward statement accounts. No other significant change associated with this account was observed.

## No-Fee Statement

About 17 percent of banks and savings associations offered no-fee statement accounts in 2001, and for those institutions offering the account, the average minimum balance required to open the account was about $\$ 82$. These estimates are not significantly different from those for 1999.

## Special Fees

The surveys of the fees that depository institutions charge for special functions were conducted in June of 2000 and 2001. Information was collected on the incidence and level of fees for four special functions: (1) stop-payment orders, (2) NSF (not sufficient funds) checks, (3) overdrafts, and (4) deposit items returned. NSF checks and overdrafts are checks written by the customer

## 4. Special fees

Dollars except as noted

| Percent charging and fee averages | 2000 | 2001 | Change |
| :---: | :---: | :---: | :---: |
| Stop-payment orders |  |  |  |
| Percent charging | 98.9 | 99.2 | . 3 |
| Average fee | 17.46 | 18.08 | . 62 |
| NSF checks ${ }^{1}$ |  |  |  |
| Percent charging | 100.0 | 100.0 | . 0 |
| Average fee | 20.16 | 20.73 | .57* |
| Overdrafts ${ }^{2}$ |  |  |  |

| Deposit items returned |  |  |  |
| Percent charging | 72.0 | 74.1 | 2.1 |
| Average fee | 7.09 | 7.11 | . 02 |

[^4]against insufficient funds; NSF checks are returned unpaid, but overdrafts are honored. Deposit items returned are checks deposited by a bank's customer and returned, for example, for insufficient funds.

Virtually all banks and savings associations charged for stop-payment orders and NSF checks in both 2000 and 2001 (table 4). The incidence of the fee for overdrafts increased a significant 2.5 percentage points, to nearly 100 percent, in 2001. The proportion of institutions charging their customers for deposit items returned was about 75 percent in 2001, not significantly different from the previous year. Average fees for NSF checks rose a significant 57 cents, to about $\$ 20.75$, while fees for overdrafts increased a significant 68 cents, to about $\$ 20.50$. These estimated increases in special fees are smaller than those typically registered in previous reports.

## ATM Services

The availability of services from automated teller machines (ATMs) and the associated fees were surveyed in June of 2000 and 2001. About 91 percent of banks and savings associations offered ATM services in 2001, a proportion not significantly different from that for 2000 (table 5).

ATMs who are "noncustomers"-users who do not maintain an account with the institution that owns the ATM. All other reported fees are charges that the institution levies on its own depositors.

ATM transactions cover deposits, withdrawals, and balance inquiries; the average fee levied on the institution's depositor for each type depends on whether the depositor uses the institution's ATM ("on us" transactions) or another institution's ATM ("on others" transactions). Because deposits and balance inquiries are considerably less common than withdrawals, estimates are reported only for withdrawals.

## Annual Fee

In 2001, about 11 percent of banks and savings associations charged an annual fee for ATM services, with no significant change from the previous year. Among the small minority of institutions that charged an annual fee, the average charge was $\$ 10.35$, not significantly different from that estimated for the previous year.

## Card Fee

The charge for issuing an ATM card has become increasingly rare in recent years. The proportion
of banks and savings associations that charged a fee to issue an ATM card declined significantly from about 6 percent in 2000 to 3.5 percent in 2001. The fee charged by the small minority of institutions that levied the fee was about $\$ 4.50$ in 2001, an amount not significantly different from that levied in the previous year.
"On Us" Withdrawal Fee
In 2001, as in previous years, the proportion of institutions charging their own depositors for withdrawing cash from the institution's machines was quite small, and it declined significantly between 2000 and 2001, from about 6 percent to less than 4 percent. The average fee among those few institutions that levied the fee was about 80 cents in 2001.
"On Others" Withdrawal Fee
In 2001, as in the past, the incidence and level of the fee for withdrawals "on others" was much higher than for withdrawals "on us." The proportion of banks and savings associations charging their depositors for withdrawals using other institutions' ATMs was nearly 80 percent in 2001, up a significant 6 percentage points from 2000. The average fee levied by those institutions that charged the fee was $\$ 1.17$ in 2001, an amount about the same as in 2000 .

## Surcharges

As previously noted, a surcharge is a fee levied by an institution on noncustomers who use the institution's ATMs. The incidence of this fee has risen sharply in the years since 1996, when these reports first started tracking this fee, and the increase was particularly striking last year. The proportion of institutions with ATMs that imposed a surcharge increased a significant 13 percentage points, to nearly 90 percent, in 2001. Thus, the charge is close to becoming universal. The average surcharge estimated for those institutions that levied the fee also increased a significant amount, from $\$ 1.26$ in 2000 to $\$ 1.32$ in 2001.

## Comparisons between Single-State and Multistate Banking Organizations

Banks are designated as multistate if they are part of banking organizations that conduct banking operations in more than one state; all other banks are single-state. As in previous years, many of the fees charged by multistate banks were found to be
significantly higher than those charged by singlestate banks.
Of the fifteen fees for which comparisons are available (tables 6-10), multistate banks charged significantly higher fees in eight cases and in no case charged a significantly lower fee. For example, in the case of special fees (table 9), multistate banks on average charged $\$ 3.25$ more than did single-state banks for stop-payment orders and about $\$ 3$ more for NSF checks and overdrafts. In the case of ATM fees (table 10), multistate banks charged 17 cents more for withdrawals "on others" and levied surcharges that were 14 cents higher.
Other comparisons between multistate and single-state banks are also noteworthy. The proportion of institutions imposing an ATM surcharge or charging for ATM withdrawals "on others" was higher for multistate banks, but the proportion charging for ATM withdrawals "on us" was lower for multistate banks. Also, in a number of cases, multistate banks required significantly lower minimum balances to open an account than did single-state banks.

## Appendix A: Design of the Survey

The data employed in this report were obtained through telephone interviews conducted by Moebs Services, of Lake Bluff, Illinois, under contract with the Board of Governors of the Federal Reserve System. As in all surveys, errors in reporting are possible. To minimize these errors, trained interviewers were employed, and all results were reviewed by one of two supervisors, each with extensive experience in retail banking. A discrepancy or suspected error resulted in a second phone call to the surveyed institution. In addition, one out of every five surveyed institutions was called a second time to verify results.

The statistical design of the survey, developed for Moebs Services by Professor George Easton, of Emory University, consists of a stratified random sample. The same seven regions of the country and three size classes of institution defined strata in both the 2000 and 2001 surveys. In contrast with the 2000 survey, the distinction between single-state and multistate banks was used to define strata in the 2001 survey, and a larger number of multistate banks were sampled in the 2001 survey. As a result, the total number of institutions surveyed was about 620 in 2001, compared with about 500 in 2000 . Also, the distinction between banks and savings associations, used in the 2000 survey to define strata, was dropped in the 2001 survey. To make results more comparable, the 2000 estimates were recalculated using the same strata definitions as those used in the 2001 survey. For this reason, estimates of fees and service availability reported for 2000 are not identical to those reported for 2000 in last year's report.

Note. See general note to table 5 .
. . . Data are not sufficient to report.

[^0]:    1. All tables indicate the statistically significant changes between the two surveys reported. Statistical significance is represented with 90 percent and 95 percent confidence levels. With a 95 percent confidence level, for instance, the probability is less than 5 percent that a change was observed between two samples but did not occur in the population as a whole. The finding of a statistically significant change carries no implication about the size of the change. The discussion in this report covers the statistically significant results, referring to them as such or simply as "significant." Most of the nonsignificant changes shown in the tables are not discussed.
[^1]:    2. FICO (the Financing Corporation) also levies assessments on banks and savings associations; the assessments cover the interest on bonds issued by FICO to finance the resolution of financial institution failures in the 1980s. During the second quarter of 2001, the FICO rate was 1.9 basis points both for banks and for savings associations, a level down slightly from that of the previous year.
    3. Moebs Services, of Lake Bluff, Illinois, conducted all the surveys.
[^2]:    4. Appendix B reports on three size categories: large (institutions with assets of more than $\$ 1$ billion), medium-sized (from $\$ 100$ million to $\$ 1$ billion), and small (less than $\$ 100$ million). Appendixes C and D do not report data for areas in which the survey did not yield a sufficient number of institutions to provide accurate information.
[^3]:    Note. For rows reporting percentages, third column of data is in percentage points.

    1. A monthly fee for balances below the minimum, no monthly fee for balances above the minimum, and no other charges.
    2. A monthly fee, no minimum balance to eliminate the fee, and a charge per check in some cases.
    3. No monthly fee or per-check fee, although a charge may be imposed for check printing.

    * Significant at the 90 percent confidence level.
    ** Significant at the 95 percent confidence level.

[^4]:    Note. See general note to table 1 .

    1. NSF-Not sufficient funds.
    2. Checks written against insufficient funds but honored by the institution.
    *Significant at the 90 percent confidence level.
    **Significant at the 95 percent confidence level.
[^5]:    Note. See notes to table 2.
    Data are insufficient to report or are not comparable
    across surveys.

    * Significant at the 90 percent confidence level.
    **Significant at the 95 percent confidence level.

[^6]:    Note. See general note to table 5
    Data are insufficient to report or are not comparable across surveys.
    ** Significant at the 95 percent confidence level.
