CODEBOOK FOR THE 2023 SURVEY OF HOUSEHOLD ECONOMICS AND DECISIONMAKING
The codebook serves as the principal guide to the variables included on the public version of the 2023 Survey of Household Economics and Decisionmaking (SHED) data set. However, not every variable included in the survey is included in the public use data set. For example, the data set does NOT include most variables related to details of geography or free-text responses.
The SHED is sponsored by the Board of Governors of the Federal Reserve System. Data for the 2023 SHED were collected by Ipsos using their online probability based KnowledgePanel.
For a general overview of the 2023 SHED and a detailed discussion of the survey methods, see Alicia Lloro, Ellen Merry, Jeff Larrimore, Zofsha Merchant, Fatimah Shaalan, Anna Tranfaglia, "Economic Well-Being of U.S. Households in 2023, Federal Reserve Board." The variables in the codebook are generally in the order in which they were asked during the survey. For a copy of the survey questionnaire, see the Supplemental Appendixes to the "Report on the Economic Well-Being of U.S. Households in 2023.
Please cite the use of SHED data as: Board of Governors of the Federal Reserve System Survey of Household Economics and Decisionmaking [dataset] (Washington: Board of Governors, 2024), https://doi.org/10.17016/datasets.002
ANALYSIS WEIGHTS
Weights play a critical role in interpreting the survey data and allow the sample population to match the U.S. population based on observable characteristics. The public use dataset contains two sets of weights, and users should consider the appropriate weights for their analysis.
The first set of weights ("weight" and "weight_pop") should be used when analyzing single year cross-sections of data for all respondents. The second set of weights ("panel_weight" and "panel_weight_pop") should be used when analyzing respondents who took both the 2022 and 2023 survey.

The sample weight, "weight," is most commonly used and is the weight used for statistics published in the "Economic Well-Being of U.S. Households in 2023." The population weight, "weight\_pop," can be used for estimating population totals, as it sums to the total U.S. population from March 2023 Current Population Survey (CPS). Either weight will allow for the entire sample to reflect the observable characteristics of the U.S. adult population.

-----

## DEMOGRAPHIC PROFILE VARIABLES

In addition to the questions asked on the SHED, the data set includes demographic profile variables that were collected by Ipsos prior to respondents receiving the SHED. These demographic profile variables are typically labeled with the prefix "pp" in the data file with some exceptions and in the variable descriptions below. In some cases, such as the highest level of education, similar questions were asked in these demographic profile surveys and in the SHED. In these cases, the answers to the SHED questions were used for the "Economic Well-Being of U.S. Households in 2023" if they were available.
