

Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies,¹ and then making the scanned versions text-searchable.² Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that some material may have been redacted from this document if that material was received on a confidential basis. Redacted material is indicated by occasional gaps in the text or by gray boxes around non-text content. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

¹ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

² A two-step process was used. An advanced optical character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

MONETARY AGGREGATES AND MONEY MARKET CONDITIONS

Prepared for the Federal Open Market Committee

By the staff Board of Governors of the Federal Reserve System

June 13, 1975

MONETARY AGGREGATES AND
MONEY MARKET CONDITIONS

(1) Growth of M_1 accelerated to an 11.3 per cent annual rate in May, and recent data suggest that growth may continue at around that pace in June. For the two months combined, expansion in M_1 thus appears to be exceeding the high end of the Committee's 7-9½ per cent range of tolerance, as the table shows. Likewise, with flows to bank time deposits other than large CD's very strong in recent weeks, growth of M_2 appears to be running significantly above its two-month range of tolerance--at about a 13 per cent annual rate. The rapid disbursement of tax rebates, amounting to about \$8 billion in May and June, is thought to be the key factor contributing to the accelerated monetary growth. In addition, recent Congressional action has cleared the way for disbursement in the second half of June of \$1.7 billion in one-time payments to social security recipients.

Growth in Monetary Aggregates and RPD's
over May-June period

<u>Reserve and monetary aggregates (Growth at SAAR in per cent)</u>	<u>Range Tolerance</u>	<u>Latest Estimates</u>
M_1	7-9½	11.2
M_2	9-11½	13.2
RPD	1½-4	-0.6

Memo:

Federal funds rate (per cent per annum)	4½-5½	<u>Avg. for statement week ending</u>
		May 28 5.14
		June 4 5.24
		June 11 5.15

(2) The bank credit proxy appears to be growing at only about a 5 per cent annual rate in the May-June period. With loan demands weak, banks have continued to run off large CD's and have allocated the bulk of their net deposit growth to investments in Treasury securities.

(3) Shortly after the May FOMC meeting, with the aggregates strengthening, the Desk sought to achieve reserve conditions consistent with a Federal funds rate trading in the upper half of the 5-5½ per cent range that represented prevailing money market conditions. As the aggregates continued to strengthen--growing at rates close to or above the upper limits of the Committee's ranges of tolerance--the Desk sought to achieve an average funds rate of 5½ per cent or a little higher. In the statement week ending June, the funds rate did average about 5½ per cent, but in the statement week just ended, it edged down to 5.15 per cent despite a very large absorption of reserves by the Desk.

(4) Private short-term market interest rates have shown little change on balance during the intermeeting period, although bank prime rates were reduced ½ of a percentage point to 7 per cent at most banks (and to 6½ per cent at one major bank). Treasury bill rates also showed little net change over most of the intermeeting period, but during the past several days have posted net declines of 12-25 basis points from the levels prevailing at the time of the last FOMC meeting. The 3-month bill has traded most recently at around 4.95 per cent. The recent downturn in bill yields reflects market adjustments to the prospective seasonal shrinkage in bill supply over the latter half of June.

(5) In bond markets, yields showed little change during late May, despite the continued heavy volume of corporate financing and the general erosion of confidence in municipal issues stemming from the problems of New York City. Since then, bond yields have dropped considerably, with the decline especially sharp in the corporate bond market. This rally appears to have reflected the more moderate volume of Treasury financing in prospect through July, the growing conviction in market circles that long-term rates may decline for some months ahead, and most recently the respite for New York City arising from creation of the Municipal Assistance Corporation.

(6) The table on the following page shows (in percentage annual rates of change) selected monetary and financing flows over various time periods. Appendix table III compares money supply growth rates computed on a quarterly-average basis with those computed on a last-month-of-quarter basis.

	Calendar Year	Past Twelve Months May '75 over May '74	Past Six Months May '75 over Nov. '74	Past Three Months May '75 over Feb. '75	Past Month May '75 over Apr. '75
Total reserves	8.6	.9	-2.7	-3.9	-14.5
Nonborrowed reserves	10.8	9.0	4.3	-3.0	-13.0
Reserves available to support private nonbank deposits	8.9	2.0	-2.5	-4.3	-10.3
<u>Concepts of Money</u>					
M ₁ (currency plus demand deposits) <u>1/</u>	4.8	4.4	4.4	8.9	11.3
M ₂ (M ₁ plus time deposits at commercial banks other than large CD's)	7.2	7.7	8.4	11.0	13.3
M ₃ (M ₂ plus deposits at thrift institutions)	6.8	8.5	10.8	13.7	14.9
M ₄ (M ₂ plus CD's)	10.7	7.9	7.4	5.9	6.8
M ₅ (M ₃ plus CD's)	9.0	8.6	9.9	10.2	10.5
<u>Bank Credit</u>					
Total member bank deposits (bank credit proxy adj.)	10.2	5.4	4.1	4.5	2.6
Loans and investments of commercial banks <u>2/</u>	9.2	3.7	1.6	4.3	3.8
<u>Short-term Market Paper</u>					
(Monthly average change in billions)					
Large CD's	2.2	.6	--	-2.2	-2.9
Nonbank commercial paper	.4	.2	-.1	-.4	-1.3

1/ Other than interbank and U.S. Government.

2/ Based on month-end figures. Includes loans sold to affiliates and branches.

NOTE: All items are based on averages of daily figures, except for data on total loans and investments of commercial banks, commercial paper, and thrift institutions--which are derived from either end-of-month or last Wednesday-of-month figures. Growth rates for reserve measures in this and subsequent tables are adjusted to remove the effect of discontinuities from breaks in the series when reserve requirements are changed.

Prospective developments

(7) Alternative longer-run growth rates for the monetary aggregates covering the 12-month period from June 1975 to June 1976 are summarized in the table below for Committee consideration. Alternative B encompasses generally the same growth rates that had been adopted by the Committee for the March '75--March '76 period at its April meeting. The M_1 growth range--at 5 to $7\frac{1}{2}$ per cent--is exactly the same, but minor downward adjustments have been made to growth ranges for other monetary and credit aggregates. These adjustments take account of changing relationships among the aggregates based on the up-dated longer-run time period and re-assessment of the economic and financial outlook.

	<u>Alt. A</u>	<u>Alt. B</u>	<u>Alt. C</u>
M_1	6- $8\frac{1}{2}$	5- $7\frac{1}{2}$	4- $6\frac{1}{2}$
M_2	9-11	8-10	7-9
M_3	10-12	9-11	8-10
Bank credit proxy	6-9	$5\frac{1}{2}$ - $8\frac{1}{2}$	$4\frac{1}{2}$ -7

(8) The longer-run path for M_1 in alternative B does imply a somewhat more rapid rate of growth from March '75 to March '76 than contemplated by the mid-point of the $5-7\frac{1}{2}$ per cent range adopted by the Committee at its previous meetings. This is because M_1 growth in the second quarter seems likely to be at about a 9 per cent annual rate, as compared with the around 7 per cent rate earlier contemplated. The growth rate from March '75 to March '76 implicit in the currently proposed alternative B is around 7 per cent (based on mid-points). This is, of course, within the adopted range, though toward the upper end.

(9) Shorter-run alternative operating guides for policy are tabulated below, with an indication of the most likely 6-month monetary growth rates that would be associated with each alternative. More detailed figures on the aggregates are presented in the table on pp. 6a and 6b. And alternative operating guides expressed in terms of nonborrowed reserves, as well as other related reserve measures, are shown in appendix table IV.

	<u>Alt. A</u>	<u>Alt. B</u>	<u>Alt. C</u>
Ranges of tolerance for June-July			
M ₁	8-10	7½-9½	7-9
M ₂	10¾-12¾	10¼-12¼	9¾-11¾
RPD	6¾-8¾	6½-8½	5¾-7¾
Federal funds rate (intermeeting range)	4¾-5¾	5½-6½	6-7
Memorandum item: 6-month growth rates (June '75-Dec. '75)			
M ₁	8½	7½	6½
M ₂	10½	9¾	9

(10) As an operating guide for the intermeeting period under alternative B, the short-run specifications include a rise in the Federal funds rate to a range centered on 6 per cent. Given the substantial 12½ per cent annual rate of increase in nominal GNP projected for the second half of calendar 1975, this alternative assumes that a tightening up on bank reserve and money market conditions over the near-term would

be necessary if growth in the monetary aggregates is to be constrained in an environment of rising incomes and transactions demands. Even if the funds rate rises in the weeks ahead to around 6 per cent, staff projections are that M_1 growth over the second half of this year is likely to be on the order of 7 per cent, annual rate, assuming no further increases in the funds rate until late in the period.

(11) The relationship between alternative short-run operating targets and longer-run objectives for the monetary aggregates is, of course, a relatively loose one. Maintenance over the weeks immediately ahead of prevailing money market conditions (as shown for the short-run specifications of alternative A) would probably not be inconsistent with the longer-run objectives of alternative B, but such an approach would appear to entail the need for a more substantial constraint on monetary growth later on, and hence a larger rise in the Federal funds rate later in the summer. We have, therefore, assumed that maintenance of prevailing money market conditions over the short-run would be more consistent with adoption by the Committee of higher longer-run growth objectives for the monetary aggregates, as shown under alternative A.

(12) Given prevailing money market conditions, M_1 growth over the June-July period is expected to be in an 8-10 per cent annual rate range. Growth is expected to slow from the very rapid pace of May and the first part of June as the effect of Treasury disbursement of tax rebates wears off. However, disbursement of the \$1.7 billion of one-time payments to social security recipients in the second half of June, as noted earlier, will tend to sustain private deposits. Thus, any

significant slowdown in M_1 growth probably will be delayed until July. Tightening of the money market over the intermeeting period, as contemplated under alternative B, would work to lower these growth rates slightly, but most of the effect of higher interest rates on the monetary aggregates would develop later on.

(13) Over the next four weeks credit markets are not expected to be subject to significant, additional demand pressures. In fact, between now and mid-year the Treasury will repay a modest amount of debt, on balance. However, the Treasury will need to raise new cash again in early July, with the bulk of this financing probably taking the form of additions to bill auctions. Longer-term credit demands from corporations and state and local governments may remain quite large, but private short-term credit demands will probably continue quite weak for some while as businesses continue to liquidate inventories and utilize the proceeds of capital market issues to repay short-term debt. Thus, on the basis of demands for credit, interest rates are not likely to be under any significant upward pressure over the weeks ahead, apart from a potential seasonal rebound in bill rates after mid-year.

(14) Although the pace of expansion in time deposit funds (other than large CD's) at banks and thrift institutions should diminish with the ending of tax rebate and special social security benefit payments, inflows of such funds are expected to remain generally large. Thus, expansion of M_2 and M_3 is expected to continue sizable--under alternatives A or B--over the next month or two. The continued availability of such funds will permit banks to reduce outstanding large CD's further during

early summer, given weak loan demand at banks. Thrift institutions will be encouraged to continue expanding mortgage loan commitments, and mortgage interest rates could edge down somewhat further if conditions in money and capital markets remain stable.

(15) A significant rise in the Federal funds rate--for example, to the 6 per cent mid-point of the alternative B range--would, however, alter market expectations and lead to upward adjustments in interest rates. The adjustments would probably be most marked in short-term rates, with the 3-month bill rate rising to perhaps $5\frac{3}{4}$ -6 per cent by mid-July. Adjustments in longer-term rates might be moderated by market expectations of a continued slowing in the rate of inflation, a gradual reduction in the prospective volume of new offerings, and by the relatively substantial upward slope to the yield curve that now exists.

(16) Alternative C contemplates more tightening in money market conditions over the near-term--with the funds rate range centered on $6\frac{1}{2}$ per cent--than under alternative B. Such an approach appears compatible with longer-run growth objectives that include holding growth in M_1 over the next year in the $4-6\frac{1}{2}$ per cent annual rate range, as shown in the table in paragraph (7). Under this alternative, growth in M_1 over the March '75-March '76 period would be at the mid-point of the $5-7\frac{1}{2}$ per cent long-run range earlier adopted by the Committee. But this alternative implies enough further tightening in the money market so that growth in the monetary aggregates would be below the bottom of the $5-7\frac{1}{2}$ per cent range for M_1 in the first half of 1976.

(17) Near-term tightening in the money market of the magnitude suggested for alternative C would almost certainly lead to a fairly sharp reaction in other short-term markets and to an upward adjustment in long-term rates. It could even engender expectations of a rise in the discount rate from its current 6 per cent level. Some adverse impact on savings flows to banks and intermediaries could be expected, but short-term rates--typified perhaps by a 3-month bill rate around $6\frac{1}{2}$ per cent--would not be likely to rise so high as to sharply curtail such inflows.

Proposed directive

(18) Presented below are three alternative formulations for the operational paragraph of the directive, which are intended to correspond to the similarly lettered policy alternatives discussed in the preceding section.

Alternative A

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to ACHIEVE BANK RESERVE AND MONEY MARKET CONDITIONS CONSISTENT WITH SUBSTANTIAL GROWTH IN MONETARY AGGREGATES OVER THE MONTHS AHEAD maintain-about-the-prevailing-money-market-conditions-over-the period-immediately-ahead,-provided-that-monetary-aggregates-generally appear-to-be-growing-within-currently-acceptable-short-run-ranges of-tolerance.

Alternative B

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to ACHIEVE BANK RESERVE AND MONEY MARKET CONDITIONS CONSISTENT WITH MODERATE GROWTH IN MONETARY AGGREGATES OVER THE MONTHS AHEAD maintain-about-the-prevailing-money-market-conditions-over-the period-immediately-ahead,-provided-that-monetary-aggregates generally-appear-to-be-growing-within-currently-acceptable-short-run ranges-of-tolerance.

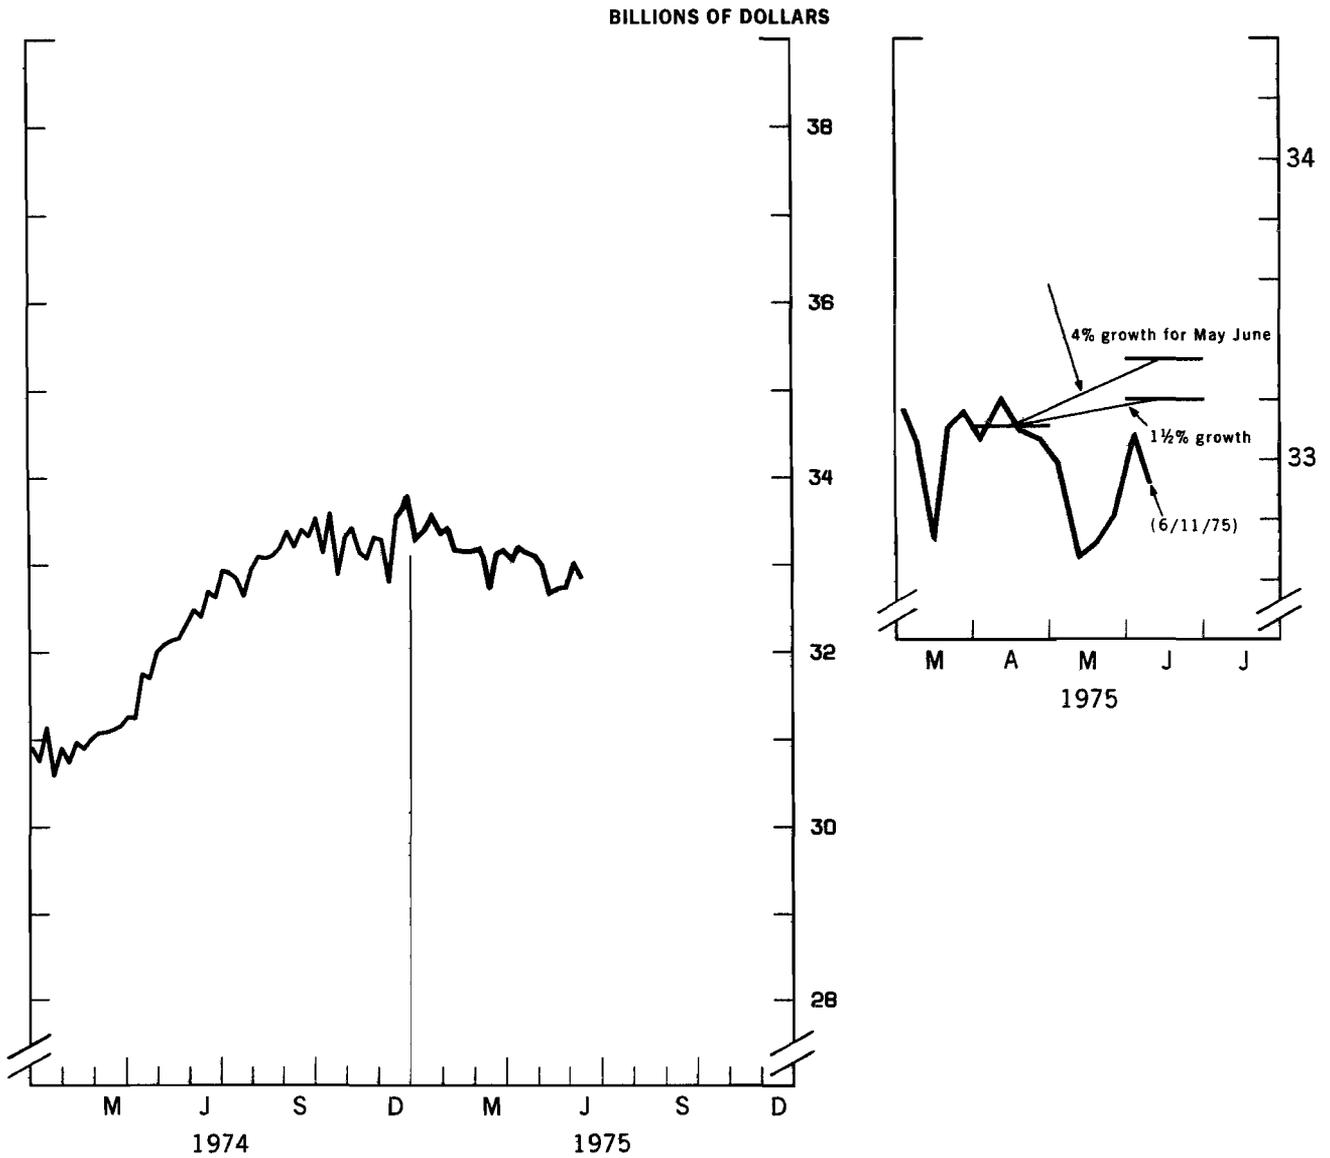

Alternative C

To implement this policy, while taking account of developments in domestic and international financial markets, the Committee seeks to ACHIEVE BANK RESERVE AND MONEY MARKET CONDITIONS CONSISTENT WITH A SLOWING OF GROWTH IN MONETARY AGGREGATES OVER THE MONTHS AHEAD ~~maintain-about-the-prevailing-money-market-conditions-over-the period-immediately-ahead;-provided-that-monetary-aggregates-generally appear-to-be-growing-within-currently-acceptable-short-run-ranges of-tolerance.~~

25											

1/ Represents change in System's portfolio from end-of-period to end-of-period; includes redemptions in regular bill auctions.

2/ Represents change in daily average level for preceding period.

3/ Includes matched sale-purchase transactions as well as RP's.

4/ Sum of changes in vault cash, currency in circulation, Treasury operations, F.R. float, gold and foreign accounts, and other F.R. accounts.

5/ Reserves to support private nonbank deposits. Target change for May and June reflects the target adopted at the May 20, 1975 FOMC meeting.

Target change for previous months reflects the bluebook patterns that are consistent with target ranges that were adopted during the month.

* Special certificate (Direct Treasury borrowing from F.R.) ** Reflects special certificate purchase. p--preliminary.

NOTE: Government security dealer trading positions are on a commitment basis. Trading positions, which exclude Treasury bills financed by repurchase agreements maturing in 16 days or more, are indicators of dealer holdings available for sale over the near-term. Other security dealer positions issues still in syndicate, excluding trading positions. The basic reserve deficit is excess reserves less borrowing at Federal Reserves less net Federal funds purchases. Weekly data are daily averages for statement weeks, except for corporate and municipal issues in syndicate which are Friday figures.

STRICTLY CONFIDENTIAL

** Monthly averages for excess reserves and borrowings are weighted averages of statement week figures.

NOTE: Weekly data for columns 1 to 4 are statement week averages of daily data. Columns 5 and 6 are one-day Wednesday quotes. For columns 7, 8, and 10 the weekly data is the mid-point of the calendar week over which data are averaged. Column 9 is a one-day quote for Thursday following the end of the statement week. Column 11 gives FNMA auction data for the Monday preceding the end of the statement week. The FNMA auction yield is the average yield in bi-weekly auction for short-term forward commitments for Government underwritten mortgages.

* The Treasury has revised its procedure for computing the constant maturity yields. Data have been revised back through December 1974 and result in an average increase of about 8 basis points in the level of the 10-year yield.

p- preliminary.
