Appendix 2: Materials used by Mr. Reinhart
Exhibit 1
Financial Market Conditions

Expected One-year Ahead Federal Funds Rate*

*Estimate based on one-year ahead eurodollar futures rates adjusted for term premiums.

Expected Federal Funds Rates*

*Estimates from federal funds and eurodollar futures rates.

Implied Distribution of the Federal Funds Rate About Six Months Ahead*

*Based on the distribution of the three-month eurodollar rate five months ahead (adjusted for a term premium), as implied by options on eurodollar futures contracts.

Real Five-year Corporate Yield*

*Nominal five-year investment and speculative-grade yields weighted by capital expenditure shares less the five-year inflation compensation from TIPS.
Exhibit 2

Alternatives in the Bluebook

A  --Worry that market participants have built in excessively prompt and aggressive tightening
    --The associated firming in financial conditions threatens outcomes in 2005

B  --View near-term futures rates as an accurate characterization of policy expectations
    --Desire to emphasize that policy tightening will be gradual to limit the chance of an overreaction

C  --Interpret the tightening of financial conditions as the initial signs of building pressures on inflation
    or increases in equilibrium real interest rates
    --Want to be seen as preemptive against those potential pressures

The Case for Alternative A

Output Gap

Histogram of Monthly Nonfarm Payroll Changes

Histogram of Monthly Core CPI Changes

Expected Federal Funds Paths in 2002*

Evolution of Blue Chip Forecasts of 2002Q4 Unemployment Rate

*Estimated from federal funds and eurodollar futures, with an allowance for term premia and other adjustments.
Exhibit 3
The Case for Alternative B

- Find the staff forecast plausible and acceptable
- Desire to regain flexibility
- Strengthen the perception that policy can likely be firmed gradually
- View the cost of delaying tightening as small relative to the benefit

Unemployment Rate Distribution*

Core PCE Inflation Distribution*

*Calculated using historical Greenbook forecast errors.

Expected Cumulative First-year Tightening

Inflation Compensation

Five-year
Five- to Ten-years Ahead

2003  2004
Exhibit 4
The Case for Alternative C

- Pricing power seems to have returned
- Policy is quite accommodative
- Not convinced that the financial market turbulence of 1994 will repeat itself

Actual Real Federal Funds Rate and Range of Estimated Equilibrium Real Rates

Core PCE Inflation

Note: The shaded range represents the maximum and the minimum values each quarter of four estimates of the equilibrium real federal funds rate based on a statistical filter and the FRED-US model. Real federal funds rates employ a four-quarter moving average of core PCE inflation as a proxy for inflation expectations, with the staff projection used for 2004Q1 and 2004Q2.

Actual and Expected Federal Funds Rates

Evolution of Blue Chip Forecasts of 1994Q4 Unemployment Rate
