Appendix 2: Materials used by Ms. Logan
Overnight Reverse Repurchase Agreement Resolution

December 17, 2013
Proposed Resolution on Overnight Reverse Repurchase Agreements

“The Federal Open Market Committee authorizes an increase in the maximum allotment cap for the series of fixed-rate, overnight reverse repurchase operations approved on September 17, 2013, to $3 billion per counterparty per day from its previous level of $1 billion per counterparty per day. All other aspects of the resolution remain unchanged.”

Memo: Resolution approved September 17, 2013

“The Federal Open Market Committee (FOMC) authorizes the Federal Reserve Bank of New York to conduct a series of fixed-rate, overnight reverse repurchase operations involving U.S. Government securities, and securities that are direct obligations of, or fully guaranteed as to principal and interest by, any agency of the United States, for the purpose of assessing operational readiness. The reverse repurchase operations authorized by this resolution shall be (i) offered at a fixed rate that may vary from zero to five basis points, (ii) offered at up to a capped allotment per counterparty of $1 billion per day and (iii) for an overnight term, or such longer term as is warranted to accommodate weekend, holiday, and similar trading conventions. The System Open Market Account Manager will inform the FOMC in advance of the terms of the planned operations. These operations may be announced when authorized by the Chairman, may begin when authorized by the Chairman on or after September 23, 2013, and shall be authorized through the FOMC meeting that ends on January 29, 2014.”

Summary and Initiatives

• Overall vulnerabilities appear moderate, but signs of building vulnerabilities in some sectors.

• There are a number of possible adverse shocks, for example, from Europe and some EME.

• Ongoing initiatives related to specific vulnerabilities:
  - Supervisory exams for compliance with leveraged lending guidance and monitoring for shift to shadow banking.
  - CCAR 2014 for the 30 largest BHCs, and additional work on interest rate risk, including how deposit holders may react to a rise in interest rates.
  - Evaluating the risk of ETFs and other funds that offer liquidity on demand when the underlying securities are relatively illiquid.
  - Structural vulnerabilities in short-term funding markets.

* The changes in real GDP and inflation are measured Q4/Q4.

Note: In the upper panel, the height of each bar denotes the number of FOMC participants who judge that, under appropriate monetary policy, the first increase in the target federal funds rate from its current range of 0 to 1/4 percent will occur in the specified calendar year. In the middle and lower panels, each circle indicates the value (rounded to the nearest 1/4 percentage point) of an individual participant’s judgment of the appropriate level of the target federal funds rate at the end of the specified calendar year or over the longer run.

C, D, E, F — Regarding ideas: C: educate public, Congress about benefits of Fed policies; don’t sell MBS; reserve against potential losses. D: monitor for risky behavior; take supervisory & regulatory steps, as needed; continue to put in place measures to strengthen financial system; enhance communication about stance of policy (when taper, consider strengthening forward guidance); begin to slow purchases when economic outlook is comparatively strong. E: more communication about exit strategy; develop and test exit tools. F: vigilant monitoring.

OCTOBER FOMC STATEMENT

1. Information received since the Federal Open Market Committee met in September generally suggests that economic activity has continued to expand at a moderate pace. Indicators of labor market conditions have shown some further improvement, but the unemployment rate remains elevated. Available data suggest that household spending and business fixed investment advanced, while the recovery in the housing sector slowed somewhat in recent months. Fiscal policy is restraining economic growth. Apart from fluctuations due to changes in energy prices, inflation has been running below the Committee’s longer-run objective, but longer-term inflation expectations have remained stable.

2. Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. The Committee expects that, with appropriate policy accommodation, economic growth will pick up from its recent pace and the unemployment rate will gradually decline toward levels the Committee judges consistent with its dual mandate. The Committee sees the downside risks to the outlook for the economy and the labor market as having diminished, on net, since last fall. The Committee recognizes that inflation persistently below its 2 percent objective could pose risks to economic performance, but it anticipates that inflation will move back toward its objective over the medium term.

3. Taking into account the extent of federal fiscal retrenchment over the past year, the Committee sees the improvement in economic activity and labor market conditions since it began its asset purchase program as consistent with growing underlying strength in the broader economy. However, the Committee decided to await more evidence that progress will be sustained before adjusting the pace of its purchases. Accordingly, the Committee decided to continue purchasing additional agency mortgage-backed securities at a pace of $40 billion per month and longer-term Treasury securities at a pace of $45 billion per month. The Committee is maintaining its existing policy of reinvesting principal payments from its holdings of agency debt and agency mortgage-backed securities in agency mortgage-backed securities and of rolling over maturing Treasury securities at auction. Taken together, these actions should maintain downward pressure on longer-term interest rates, support mortgage markets, and help to make broader financial conditions more accommodative, which in turn should promote a stronger economic recovery and help to ensure that inflation, over time, is at the rate most consistent with the Committee’s dual mandate.

4. The Committee will closely monitor incoming information on economic and financial developments in coming months and will continue its purchases of Treasury and agency mortgage-backed securities, and employ its other policy tools as appropriate, until the outlook for the labor market has improved substantially in a context of price stability. In judging when to moderate the pace of asset purchases, the Committee will, at its coming meetings, assess whether incoming information continues to support the Committee’s expectation of ongoing improvement in labor market conditions and inflation moving back toward its longer-run objective. Asset purchases are not on a preset course, and the Committee’s decisions about their pace will remain contingent on the Committee’s economic outlook as well as its assessment of the likely efficacy and costs of such purchases.
5. To support continued progress toward maximum employment and price stability, the Committee today reaffirmed its view that a highly accommodative stance of monetary policy will remain appropriate for a considerable time after the asset purchase program ends and the economic recovery strengthens. In particular, the Committee decided to keep the target range for the federal funds rate at 0 to ¼ percent and currently anticipates that this exceptionally low range for the federal funds rate will be appropriate at least as long as the unemployment rate remains above 6½ percent, inflation between one and two years ahead is projected to be no more than a half percentage point above the Committee’s 2 percent longer-run goal, and longer-term inflation expectations continue to be well anchored. In determining how long to maintain a highly accommodative stance of monetary policy, the Committee will also consider other information, including additional measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial developments. When the Committee decides to begin to remove policy accommodation, it will take a balanced approach consistent with its longer-run goals of maximum employment and inflation of 2 percent.
FOMC STATEMENT—DECEMBER 2013 ALTERNATIVE A

1. Information received since the Federal Open Market Committee met in September generally suggests that economic activity has continued to expand at a moderate pace. Indicators of labor market conditions have shown some further improvement, but the unemployment rate remains elevated. Available data suggest that household spending and business fixed investment advanced, while the recovery in the housing sector slowed somewhat in recent months and fiscal policy is restraining economic growth. Apart from fluctuations due to changes in energy prices, inflation has been running below the Committee’s longer-run objective, but even though longer-term inflation expectations have remained stable.

2. Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. The Committee expects that, with appropriate policy accommodation, economic growth will pick up from its recent pace and the unemployment rate will gradually decline toward levels the Committee judges consistent with its dual mandate. The Committee sees the downside risks to the outlook for the economy and the labor market as having diminished, on net, since last fall. The Committee recognizes that inflation persistently below its 2 percent objective could pose risks to economic performance, but it anticipates that inflation will move and it will monitor inflation developments carefully for evidence that inflation is moving back toward its objective over the medium term.

3. Taking into account the extent of federal fiscal retrenchment over the past year since the inception of its current asset purchase program, the Committee sees the improvement in economic activity and labor market conditions since it began its asset purchase program over that period as consistent with growing underlying strength in the broader economy. However, the Committee decided to await more evidence that progress will be sustained before adjusting judges that progress toward its objectives for the labor market and inflation is not yet sufficient to warrant reducing the pace of its purchases. Accordingly, the Committee decided to continue purchasing additional agency mortgage-backed securities at a pace of $40 billion per month and longer-term Treasury securities at a pace of $45 billion per month. The Committee is maintaining its existing policy of reinvesting principal payments from its holdings of agency debt and agency mortgage-backed securities in agency mortgage-backed securities and of rolling over maturing Treasury securities at auction. Taken together, these actions should maintain downward pressure on longer-term interest rates, support mortgage markets, and help to make broader financial conditions more accommodative, which in turn should promote a stronger economic recovery and help to ensure that inflation, over time, is at the rate most consistent with the Committee’s dual mandate.

4. The Committee will closely monitor incoming information on economic and financial developments in coming months and will continue its purchases of Treasury and agency mortgage-backed securities, and employ its other policy tools as appropriate, until the outlook for the labor market has improved substantially in a context of price stability. In judging when to moderate the pace of asset purchases, the Committee
will, at its coming meetings, assess whether incoming information continues to support the Committee’s expectation of ongoing improvement in labor market conditions and inflation moving back toward its longer-run objective. Asset purchases are not on a preset course, and the Committee’s decisions about their pace will remain contingent on the Committee’s economic outlook as well as its assessment of the likely efficacy and costs of such purchases.

5. To support continued progress toward maximum employment and price stability, the Committee today reaffirmed its view that a highly accommodative stance of monetary policy will remain appropriate for a considerable time after the asset purchase program ends and the economic recovery strengthens. Indeed, to provide additional monetary accommodation, the Committee decided now intends to keep the its target range for the federal funds rate at 0 to ¼ percent and currently anticipates that this exceptionally low range for the federal funds rate will be appropriate at least as long as the unemployment rate remains above 6½ [6 | 5½] percent, inflation between one and two years ahead is projected to be no more than a half percentage point above the Committee’s 2 percent longer-run goal, and longer-term inflation expectations continue to be well anchored. In determining how long to maintain a highly accommodative stance of monetary policy, the Committee will also consider other information, including additional measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial developments. If inflation remains well contained when the unemployment threshold is reached, as the Committee expects, the Committee will consider a broad range of indicators of economic and financial conditions in determining how much longer to maintain the 0 to ¼ percent target range for the federal funds rate. Indicators relevant to a comprehensive assessment of labor market conditions include the level and growth of payroll employment, labor force participation, and measures of hiring and separation. The Committee expects to be patient in considering any increase in its target for the federal funds rate so long as inflation remains well behaved.

6. When the Committee eventually decides to begin to remove policy accommodation, it will take a balanced approach consistent with its longer-run goals of maximum employment and inflation of 2 percent. Consistent with its current economic outlook, the Committee anticipates that keeping the target for the federal funds rate below its longer-run normal value for a considerable time will be appropriate to help achieve and maintain maximum employment and price stability.
1. Information received since the Federal Open Market Committee met in September generally suggests that economic activity has continued to expand at a moderate pace. Indicators of labor market conditions have shown some further improvement; but the unemployment rate has declined but remains elevated. Available data suggest that household spending and business fixed investment advanced, while the recovery in the housing sector slowed somewhat in recent months. Fiscal policy is restraining economic growth, although the extent of restraint may be diminishing. Apart from fluctuations due to changes in energy prices, inflation has been running below the Committee’s longer-run objective, but longer-term inflation expectations have remained stable.

2. Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. The Committee expects that, with appropriate policy accommodation, economic growth will pick up from its recent pace and the unemployment rate will gradually decline toward levels the Committee judges consistent with its dual mandate. The Committee sees the downside risks to the outlook for the economy and the labor market as having diminished, on net, risks to the outlook for the economy and the labor market as having become more nearly balanced] since last fall the inception of the asset purchase program. The Committee recognizes that inflation persistently below its 2 percent objective could pose risks to economic performance, but it. The Committee anticipates that inflation will move back toward its objective over the medium term, but it will monitor inflation developments carefully.

3. Taking into account the extent of federal fiscal retrenchment over the past year since the inception of its current asset purchase program, the Committee sees the improvement in economic activity and labor market conditions since it began its asset purchase program over that period as consistent with growing underlying strength in the broader economy. However, the Committee decided to await more evidence that progress will be sustained before adjusting the pace of its purchases. Accordingly, the Committee decided to continue purchasing additional agency mortgage-backed securities at a pace of $40 billion per month and longer-term Treasury securities at a pace of $45 billion per month. In light of the cumulative progress toward maximum employment and the improvement in the outlook for labor market conditions, the Committee decided to modestly reduce the pace of its asset purchases. Beginning in January, the Committee will add to its holdings of agency mortgage-backed securities at a pace of $35 billion per month rather than $40 billion per month, and will add to its holdings of longer-term Treasury securities at a pace of $40 billion per month rather than $45 billion per month. The Committee is maintaining its existing policy of reinvesting principal payments from its holdings of agency debt and agency mortgage-backed securities in agency mortgage-backed securities and of rolling over maturing Treasury securities at auction. Taken together, these actions The Committee’s sizable and still-increasing holdings of longer-term securities should maintain downward pressure on longer-term interest rates, support mortgage markets, and help to make broader financial conditions more accommodative, which in turn should promote a stronger
economic recovery and help to ensure that inflation, over time, is at the rate most consistent with the Committee’s dual mandate.

4. The Committee will closely monitor incoming information on economic and financial developments in coming months and will continue its purchases of Treasury and agency mortgage-backed securities, and employ its other policy tools as appropriate, until the outlook for the labor market has improved substantially in a context of price stability. In judging when to moderate the pace of asset purchases, the Committee will, at its coming meetings, assess whether incoming information continues to broadly support the Committee’s expectation of ongoing improvement in labor market conditions and inflation moving back toward its longer-run objective. If incoming information continues to broadly support the Committee’s expectation of ongoing improvement in labor market conditions and inflation moving back toward its longer-run objective, the Committee will likely reduce the pace of asset purchases in further measured steps at future meetings. However, asset purchases are not on a preset course, and the Committee’s decisions about their pace will remain contingent on the Committee’s economic outlook as well as its assessment of the likely efficacy and costs of such purchases.

5. To support continued progress toward maximum employment and price stability, the Committee today reaffirmed its view that a highly accommodative stance of monetary policy will remain appropriate for a considerable time after the asset purchase program ends and the economic recovery strengthens. In particular, The Committee decided to keep the target range for the federal funds rate at 0 to ¼ percent and currently anticipates that this also reaffirmed its expectation that the current exceptionally low target range for the federal funds rate of 0 to ¼ percent will be appropriate at least as long as the unemployment rate remains above 6½ percent, inflation between one and two years ahead is projected to be no more than a half percentage point above the Committee’s 2 percent longer-run goal, and longer-term inflation expectations continue to be well anchored. In determining how long to maintain a highly accommodative stance of monetary policy, the Committee will also consider other information, including additional measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial developments. The Committee now anticipates, based on its assessment of these factors, that it likely will be appropriate to maintain the current target range for the federal funds rate well past the time that the unemployment rate declines below 6½ percent, especially if projected inflation continues to run below the Committee’s 2 percent longer-run goal. When the Committee decides to begin to remove policy accommodation, it will take a balanced approach consistent with its longer-run goals of maximum employment and inflation of 2 percent.
FOMC STATEMENT—DECEMBER 2013 ALTERNATIVE C

1. Information received since the Federal Open Market Committee met in September October generally suggests indicates that economic activity has continued to expanding at a moderate pace. Indicators of Labor market conditions have shown some further improvement; but the unemployment rate remains, although still elevated, has continued to decrease. Available data suggest that Household spending and business fixed investment advanced, while the recovery in the housing sector slowed somewhat in recent months. Fiscal policy is restraining economic growth, but the extent of restraint appears to be diminishing. Apart from fluctuations due to changes in energy prices, Inflation has been running somewhat below the Committee’s longer-run objective, but longer-term inflation expectations have remained stable.

2. Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. Taking into account the extent of federal fiscal retrenchment, the Committee sees the cumulative improvement in economic activity and labor market conditions since it began its current asset purchase program as indicating growing underlying strength in the broader economy. The Committee expects that, with appropriate policy accommodation, economic growth will pick up from its recent pace and the unemployment rate will gradually continue to decline toward levels the Committee judges consistent with its dual mandate. The Committee sees the downside risks to the outlook for the economy and the labor market as having diminished, on net, since last fall roughly balanced. The Committee recognizes that inflation persistently below its 2 percent objective could pose risks to economic performance, but it anticipates that inflation will move back toward its objective 2 percent over the medium term.

3. Taking into account the extent of federal fiscal retrenchment over the past year, the Committee sees the improvement in economic activity and labor market conditions since it began its asset purchase program as consistent with growing underlying strength in the broader economy. However, the Committee decided to await more evidence that progress will be sustained before adjusting the pace of its purchases. Accordingly, the Committee decided to continue purchasing additional agency mortgage-backed securities at a pace of $40 billion per month and longer-term Treasury securities at a pace of $45 billion per month. In light of the cumulative progress toward maximum employment and the improvement in the outlook for the labor market, the Committee decided to reduce the pace of its asset purchases. Beginning in January, the Committee will add to its holdings of agency mortgage-backed securities at a pace of $30 billion per month rather than $40 billion per month, and will add to its holdings of longer-term Treasury securities at a pace of $30 billion per month rather than $45 billion per month. The Committee is maintaining its existing policy of reinvesting principal payments from its holdings of agency debt and agency mortgage-backed securities in agency mortgage-backed securities and of rolling over maturing Treasury securities at auction. Taken together, these actions The Committee’s sizable and still-increasing holdings of longer-term securities should maintain downward pressure on longer-term interest rates, support mortgage markets, and help to make broader...
financial conditions more accommodative, which in turn should promote a stronger economic recovery and help to ensure that inflation, over time, is at the rate most consistent with the Committee’s dual mandate.

4. The Committee will closely monitor incoming information on economic and financial developments in coming months and will continue its purchases of Treasury and agency mortgage-backed securities, and employ its other policy tools as appropriate, until the outlook for the labor market has improved substantially in a context of price stability. In judging when to moderate the pace of asset purchases, the Committee will, at its coming meetings, assess whether incoming information continues to broadly support the Committee’s expectation of ongoing improvement in labor market conditions and inflation moving back toward its longer-run objective, the Committee will likely reduce the pace of asset purchases in measured steps at future meetings. However, asset purchases are not on a preset course, and the Committee’s decisions about their pace will remain contingent on the Committee’s economic outlook as well as its assessment of the likely efficacy and costs of such purchases.

5. To support continued progress toward maximum employment and price stability, the Committee today reaffirmed its view that a highly accommodative stance of monetary policy will remain appropriate for a considerable time after the asset purchase program ends and the economic recovery strengthens. In particular, the Committee decided to keep the target range for the federal funds rate at 0 to ¼ percent and currently anticipates that this exceptionally low range for the federal funds rate will be appropriate at least as long as the unemployment rate remains above 6½ percent, inflation between one and two years ahead is projected to be no more than a half percentage point above the Committee’s 2 percent longer-run goal, and longer-term inflation expectations continue to be well anchored. In determining how long to maintain a highly accommodative stance of monetary policy, the Committee will also consider other information, including additional measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial developments. When the Committee decides to begin to remove policy accommodation, it will take a balanced approach consistent with its longer-run goals of maximum employment and inflation of 2 percent.

If the Committee judges it appropriate to convert the remainder of its flow-based asset purchase program to a fixed-size program in order to provide certainty about its intentions for bringing the program to a close, it could replace paragraphs 3 and 4 with the following:

3’. In light of the cumulative progress toward maximum employment and the substantial improvement in the outlook for the labor market over the past year, the Committee today is announcing a plan to end its current asset purchase program. From January through June of 2014, the Committee will add [ $180 ] billion to its holdings of agency mortgage-backed securities at a pace of [ $30 ] billion per month, and also will add [ $180 ] billion to its holdings of longer-term Treasury securities at a pace of [ $30 ] billion per month, bringing the total increase in the Committee’s holdings of longer-term securities during 2013 and
2014 to approximately $1.4 trillion. The Committee is maintaining its existing policy of reinvesting principal payments from its holdings of agency debt and agency mortgage-backed securities in agency mortgage-backed securities and of rolling over maturing Treasury securities at auction. Even after the conclusion of the purchase program, the Committee’s sizable holdings of longer-term securities should maintain downward pressure on longer-term interest rates, support mortgage markets, and help to make broader financial conditions more accommodative, which in turn should promote a stronger economic recovery and help to ensure that inflation, over time, is at the rate most consistent with the Committee’s dual mandate.

4’. The Committee will closely monitor incoming information on economic and financial developments. If that information is not broadly consistent with the Committee’s expectation of continued improvement in labor market conditions and inflation moving back toward its longer-run objective, the Committee is prepared to use its policy tools, including additional asset purchases, as appropriate to promote its longer-run goals.
October 2013 Directive

Consistent with its statutory mandate, the Federal Open Market Committee seeks monetary and financial conditions that will foster maximum employment and price stability. In particular, the Committee seeks conditions in reserve markets consistent with federal funds trading in a range from 0 to ¼ percent. The Committee directs the Desk to undertake open market operations as necessary to maintain such conditions. The Desk is directed to continue purchasing longer-term Treasury securities at a pace of about $45 billion per month and to continue purchasing agency mortgage-backed securities at a pace of about $40 billion per month. The Committee also directs the Desk to engage in dollar roll and coupon swap transactions as necessary to facilitate settlement of the Federal Reserve’s agency mortgage-backed securities transactions. The Committee directs the Desk to maintain its policy of rolling over maturing Treasury securities into new issues and its policy of reinvesting principal payments on all agency debt and agency mortgage-backed securities in agency mortgage-backed securities. The System Open Market Account Manager and the Secretary will keep the Committee informed of ongoing developments regarding the System’s balance sheet that could affect the attainment over time of the Committee’s objectives of maximum employment and price stability.
DIRECTIVE FOR DECEMBER 2013 ALTERNATIVE A

Consistent with its statutory mandate, the Federal Open Market Committee seeks monetary and financial conditions that will foster maximum employment and price stability. In particular, the Committee seeks conditions in reserve markets consistent with federal funds trading in a range from 0 to ¼ percent. The Committee directs the Desk to undertake open market operations as necessary to maintain such conditions. The Desk is directed to continue purchasing longer-term Treasury securities at a pace of about $45 billion per month and to continue purchasing agency mortgage-backed securities at a pace of about $40 billion per month. The Committee also directs the Desk to engage in dollar roll and coupon swap transactions as necessary to facilitate settlement of the Federal Reserve’s agency mortgage-backed securities transactions. The Committee directs the Desk to maintain its policy of rolling over maturing Treasury securities into new issues and its policy of reinvesting principal payments on all agency debt and agency mortgage-backed securities in agency mortgage-backed securities. The System Open Market Account Manager and the Secretary will keep the Committee informed of ongoing developments regarding the System’s balance sheet that could affect the attainment over time of the Committee’s objectives of maximum employment and price stability.
**DIRECTIVE FOR DECEMBER 2013 ALTERNATIVE B**

Consistent with its statutory mandate, the Federal Open Market Committee seeks monetary and financial conditions that will foster maximum employment and price stability. In particular, the Committee seeks conditions in reserve markets consistent with federal funds trading in a range from 0 to ¼ percent. The Committee directs the Desk to undertake open market operations as necessary to maintain such conditions. **Beginning in January,** the Desk is directed to **continue purchasing** longer-term Treasury securities at a pace of about $45 **$40** billion per month and to **continue purchasing** agency mortgage-backed securities at a pace of about $40 **$35** billion per month. The Committee also directs the Desk to engage in dollar roll and coupon swap transactions as necessary to facilitate settlement of the Federal Reserve’s agency mortgage-backed securities transactions. The Committee directs the Desk to maintain its policy of rolling over maturing Treasury securities into new issues and its policy of reinvesting principal payments on all agency debt and agency mortgage-backed securities in agency mortgage-backed securities. The System Open Market Account Manager and the Secretary will keep the Committee informed of ongoing developments regarding the System’s balance sheet that could affect the attainment over time of the Committee’s objectives of maximum employment and price stability.
DIRECTIVE FOR DECEMBER 2013 ALTERNATIVE C

Consistent with its statutory mandate, the Federal Open Market Committee seeks monetary and financial conditions that will foster maximum employment and price stability. In particular, the Committee seeks conditions in reserve markets consistent with federal funds trading in a range from 0 to ¼ percent. The Committee directs the Desk to undertake open market operations as necessary to maintain such conditions. **Beginning in January**, the Desk is directed to continue purchasing longer-term Treasury securities at a pace of about $45 billion per month and to continue purchasing agency mortgage-backed securities at a pace of about $40 billion per month. The Committee also directs the Desk to engage in dollar roll and coupon swap transactions as necessary to facilitate settlement of the Federal Reserve’s agency mortgage-backed securities transactions. The Committee directs the Desk to maintain its policy of rolling over maturing Treasury securities into new issues and its policy of reinvesting principal payments on all agency debt and agency mortgage-backed securities in agency mortgage-backed securities. The System Open Market Account Manager and the Secretary will keep the Committee informed of ongoing developments regarding the System’s balance sheet that could affect the attainment over time of the Committee’s objectives of maximum employment and price stability.

Monetary Policy Alternatives

December 18, 2013
**OCTOBER FOMC STATEMENT**

1. Information received since the Federal Open Market Committee met in September generally suggests that economic activity has continued to expand at a moderate pace. Indicators of labor market conditions have shown some further improvement, but the unemployment rate remains elevated. Available data suggest that household spending and business fixed investment advanced, while the recovery in the housing sector slowed somewhat in recent months. Fiscal policy is restraining economic growth. Apart from fluctuations due to changes in energy prices, inflation has been running below the Committee’s longer-run objective, but longer-term inflation expectations have remained stable.

2. Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. The Committee expects that, with appropriate policy accommodation, economic growth will pick up from its recent pace and the unemployment rate will gradually decline toward levels the Committee judges consistent with its dual mandate. The Committee sees the downside risks to the outlook for the economy and the labor market as having diminished, on net, since last fall. The Committee recognizes that inflation persistently below its 2 percent objective could pose risks to economic performance, but it anticipates that inflation will move back toward its objective over the medium term.

3. Taking into account the extent of federal fiscal retrenchment over the past year, the Committee sees the improvement in economic activity and labor market conditions since it began its asset purchase program as consistent with growing underlying strength in the broader economy. However, the Committee decided to await more evidence that progress will be sustained before adjusting the pace of its purchases. Accordingly, the Committee decided to continue purchasing additional agency mortgage-backed securities at a pace of $40 billion per month and longer-term Treasury securities at a pace of $45 billion per month. The Committee is maintaining its existing policy of reinvesting principal payments from its holdings of agency debt and agency mortgage-backed securities in agency mortgage-backed securities and of rolling over maturing Treasury securities at auction. Taken together, these actions should maintain downward pressure on longer-term interest rates, support mortgage markets, and help to make broader financial conditions more accommodative, which in turn should promote a stronger economic recovery and help to ensure that inflation, over time, is at the rate most consistent with the Committee’s dual mandate.

4. The Committee will closely monitor incoming information on economic and financial developments in coming months and will continue its purchases of Treasury and agency mortgage-backed securities, and employ its other policy tools as appropriate, until the outlook for the labor market has improved substantially in a context of price stability. In judging when to moderate the pace of asset purchases, the Committee will, at its coming meetings, assess whether incoming information continues to support the Committee’s expectation of ongoing improvement in labor market conditions and inflation moving back toward its longer-run objective. Asset purchases are not on a preset course, and the Committee’s decisions about their pace will remain contingent on the Committee’s economic outlook as well as its assessment of the likely efficacy and costs of such purchases.
5. To support continued progress toward maximum employment and price stability, the Committee today reaffirmed its view that a highly accommodative stance of monetary policy will remain appropriate for a considerable time after the asset purchase program ends and the economic recovery strengthens. In particular, the Committee decided to keep the target range for the federal funds rate at 0 to ¼ percent and currently anticipates that this exceptionally low range for the federal funds rate will be appropriate at least as long as the unemployment rate remains above 6½ percent, inflation between one and two years ahead is projected to be no more than a half percentage point above the Committee’s 2 percent longer-run goal, and longer-term inflation expectations continue to be well anchored. In determining how long to maintain a highly accommodative stance of monetary policy, the Committee will also consider other information, including additional measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial developments. When the Committee decides to begin to remove policy accommodation, it will take a balanced approach consistent with its longer-run goals of maximum employment and inflation of 2 percent.
FOMC STATEMENT—DECEMBER 2013 ALTERNATIVE A

1. Information received since the Federal Open Market Committee met in September generally suggests that economic activity has continued to expand at a moderate pace. Indicators of labor market conditions have shown some further improvement, but the unemployment rate remains elevated. Available data suggest that Household spending and business fixed investment advanced, while the recovery in the housing sector slowed somewhat in recent months and fiscal policy is restraining economic growth. Apart from fluctuations due to changes in energy prices, Inflation has been running below the Committee’s longer-run objective, but even though longer-term inflation expectations have remained stable.

2. Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. The Committee expects that, with appropriate policy accommodation, economic growth will pick up from its recent pace and the unemployment rate will gradually decline toward levels the Committee judges consistent with its dual mandate. The Committee sees the downside risks to the outlook for the economy and the labor market as having diminished, on net, since last fall. The Committee recognizes that inflation persistently below its 2 percent objective could pose risks to economic performance, but it anticipates that inflation will move and it will monitor inflation developments carefully for evidence that inflation is moving back toward its objective over the medium term.

3. Taking into account the extent of federal fiscal retrenchment over the past year since the inception of its current asset purchase program, the Committee sees the improvement in economic activity and labor market conditions since it began its asset purchase program over that period as consistent with growing underlying strength in the broader economy. However, the Committee decided to await more evidence that progress will be sustained before adjusting judges that progress toward its objectives for the labor market and inflation is not yet sufficient to warrant reducing the pace of its purchases. Accordingly, the Committee decided to continue purchasing additional agency mortgage-backed securities at a pace of $40 billion per month and longer-term Treasury securities at a pace of $45 billion per month. The Committee is maintaining its existing policy of reinvesting principal payments from its holdings of agency debt and agency mortgage-backed securities in agency mortgage-backed securities and of rolling over maturing Treasury securities at auction. Taken together, these actions should maintain downward pressure on longer-term interest rates, support mortgage markets, and help to make broader financial conditions more accommodative, which in turn should promote a stronger economic recovery and help to ensure that inflation, over time, is at the rate most consistent with the Committee’s dual mandate.

4. The Committee will closely monitor incoming information on economic and financial developments in coming months and will continue its purchases of Treasury and agency mortgage-backed securities, and employ its other policy tools as appropriate, until the outlook for the labor market has improved substantially in a context of price stability. In judging when to moderate the pace of asset purchases, the Committee
will, at its coming meetings, assess whether incoming information continues to support the Committee’s expectation of ongoing improvement in labor market conditions and inflation moving back toward its longer-run objective. Asset purchases are not on a preset course, and the Committee’s decisions about their pace will remain contingent on the Committee’s economic outlook as well as its assessment of the likely efficacy and costs of such purchases.

5. To support continued progress toward maximum employment and price stability, the Committee today reaffirmed its view that a highly accommodative stance of monetary policy will remain appropriate for a considerable time after the asset purchase program ends and the economic recovery strengthens. Indeed, to provide additional monetary accommodation, the Committee decided now intends to keep the its target range for the federal funds rate at 0 to ¼ percent and currently anticipates that this exceptionally low range for the federal funds rate will be appropriate at least as long as the unemployment rate remains above $6 \frac{1}{2}$ percent, inflation between one and two years ahead is projected to be no more than a half percentage point above the Committee’s 2 percent longer-run goal, and longer-term inflation expectations continue to be well anchored. In determining how long to maintain a highly accommodative stance of monetary policy, the Committee will also consider other information, including additional measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial developments. If inflation remains well contained when the unemployment threshold is reached, as the Committee expects, the Committee will consider a broad range of indicators of economic and financial conditions in determining how much longer to maintain the 0 to ¼ percent target range for the federal funds rate. Indicators relevant to a comprehensive assessment of labor market conditions include the level and growth of payroll employment, labor force participation, and measures of hiring and separation. The Committee expects to be patient in considering any increase in its target for the federal funds rate so long as inflation remains well behaved.

6. When the Committee eventually decides to begin to remove policy accommodation, it will take a balanced approach consistent with its longer-run goals of maximum employment and inflation of 2 percent. Consistent with its current economic outlook, the Committee anticipates that keeping the target for the federal funds rate below its longer-run normal value for a considerable time will be appropriate to help achieve and maintain maximum employment and price stability.
FOMC Statement—December 2013 Alternative B

1. Information received since the Federal Open Market Committee met in September
   October generally suggests indicates that economic activity has continued to is
   expanding at a moderate pace. Indicators of Labor market conditions have shown
   some further improvement; but the unemployment rate has declined but remains
   elevated. Available data suggest that Household spending and business fixed
   investment advanced, while the recovery in the housing sector slowed somewhat in
   recent months. Fiscal policy is restraining economic growth, although the extent of
   restraint may be diminishing. Apart from fluctuations due to changes in energy
   prices, Inflation has been running below the Committee’s longer-run objective, but
   longer-term inflation expectations have remained stable.

2. Consistent with its statutory mandate, the Committee seeks to foster maximum
   employment and price stability. The Committee expects that, with appropriate policy
   accommodation, economic growth will pick up from its recent pace and the
   unemployment rate will gradually decline toward levels the Committee judges
   consistent with its dual mandate. The Committee sees the [ downside risks to the
   outlook for the economy and the labor market as having diminished, on net, [ risks to
   the outlook for the economy and the labor market as having become more nearly
   balanced ] since last fall the inception of the asset purchase program. The
   Committee recognizes that inflation persistently below its 2 percent objective could
   pose risks to economic performance ] , but it. The Committee anticipates that
   inflation will move back toward its objective over the medium term, but it will
   monitor inflation developments carefully. [ , and it will monitor inflation
   developments carefully for evidence that inflation is moving back toward its
   objective over the medium term. ]

3. Taking into account the extent of federal fiscal retrenchment over the past year since
   the inception of its current asset purchase program, the Committee sees the
   improvement in economic activity and labor market conditions since it began its asset
   purchase program over that period as consistent with growing underlying strength in
   the broader economy. However, the Committee decided to await more evidence that
   progress will be sustained before adjusting the pace of its purchases. Accordingly,
   the Committee decided to continue purchasing additional agency mortgage-backed
   securities at a pace of $40 billion per month and longer-term Treasury securities at a
   pace of $45 billion per month. In light of the cumulative progress toward
   maximum employment and the improvement in the outlook for labor market
   conditions, the Committee decided to modestly reduce the pace of its asset
   purchases. Beginning in January, the Committee will add to its holdings of
   agency mortgage-backed securities at a pace of $35 billion per month rather
   than $40 billion per month, and will add to its holdings of longer-term Treasury
   securities at a pace of $40 billion per month rather than $45 billion per month.
   The Committee is maintaining its existing policy of reinvesting principal payments
   from its holdings of agency debt and agency mortgage-backed securities in agency
   mortgage-backed securities and of rolling over maturing Treasury securities at
   auction. Taken together, these actions The Committee’s sizable and still-
   increasing holdings of longer-term securities should maintain downward pressure

Page 5 of 9
on longer-term interest rates, support mortgage markets, and help to make broader financial conditions more accommodative, which in turn should promote a stronger economic recovery and help to ensure that inflation, over time, is at the rate most consistent with the Committee’s dual mandate.

4. The Committee will closely monitor incoming information on economic and financial developments in coming months and will continue its purchases of Treasury and agency mortgage-backed securities, and employ its other policy tools as appropriate, until the outlook for the labor market has improved substantially in a context of price stability. In judging when to moderate the pace of asset purchases, the Committee will, at its coming meetings, assess whether incoming information continues to broadly support the Committee’s expectation of ongoing improvement in labor market conditions and inflation moving back toward its longer-run objective, the Committee will likely reduce the pace of asset purchases in further measured steps at future meetings. However, asset purchases are not on a preset course, and the Committee’s decisions about their pace will remain contingent on the Committee’s economic outlook for the labor market and inflation as well as its assessment of the likely efficacy and costs of such purchases.

5. To support continued progress toward maximum employment and price stability, the Committee today reaffirmed its view that a highly accommodative stance of monetary policy will remain appropriate for a considerable time after the asset purchase program ends and the economic recovery strengthens. In particular, The Committee decided to keep the target range for the federal funds rate at 0 to ¼ percent and currently anticipates that this also reaffirmed its expectation that the current exceptionally low target range for the federal funds rate of 0 to ¼ percent will be appropriate at least as long as the unemployment rate remains above 6½ percent, inflation between one and two years ahead is projected to be no more than a half percentage point above the Committee’s 2 percent longer-run goal, and longer-term inflation expectations continue to be well anchored. In determining how long to maintain a highly accommodative stance of monetary policy, the Committee will also consider other information, including additional measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial developments. The Committee now anticipates, based on its assessment of these factors, that it likely will be appropriate to maintain the current target range for the federal funds rate well past the time that the unemployment rate declines below 6½ percent, especially if projected inflation continues to run below the Committee’s 2 percent longer-run goal. When the Committee decides to begin to remove policy accommodation, it will take a balanced approach consistent with its longer-run goals of maximum employment and inflation of 2 percent.
FOMC STATEMENT—DECEMBER 2013 ALTERNATIVE C

1. Information received since the Federal Open Market Committee met in September indicates that economic activity has continued to expand at a moderate pace. Indicators of labor market conditions have shown some further improvement; but the unemployment rate remains elevated, although still elevated, has continued to decrease. Available data suggest that household spending and business fixed investment advanced, while the recovery in the housing sector slowed somewhat in recent months. Fiscal policy is restraining economic growth, but the extent of restraint appears to be diminishing. Apart from fluctuations due to changes in energy prices, inflation has been running somewhat below the Committee’s longer-run objective, but longer-term inflation expectations have remained stable.

2. Consistent with its statutory mandate, the Committee seeks to foster maximum employment and price stability. Taking into account the extent of federal fiscal retrenchment, the Committee sees the cumulative improvement in economic activity and labor market conditions since it began its current asset purchase program as indicating growing underlying strength in the broader economy. The Committee expects that, with appropriate policy accommodation, economic growth will pick up from its recent pace and the unemployment rate will gradually continue to decline toward levels the Committee judges consistent with its dual mandate. The Committee sees the downside risks to the outlook for the economy and the labor market as having diminished, on net, since last fall. The Committee recognizes that inflation persistently below its 2 percent objective could pose risks to economic performance, but it anticipates that inflation will move back toward its objective over the medium term.

3. Taking into account the extent of federal fiscal retrenchment over the past year, the Committee sees the improvement in economic activity and labor market conditions since it began its asset purchase program as consistent with growing underlying strength in the broader economy. However, the Committee decided to await more evidence that progress will be sustained before adjusting the pace of its purchases. Accordingly, the Committee decided to continue purchasing additional agency mortgage-backed securities at a pace of $40 billion per month and longer-term Treasury securities at a pace of $45 billion per month. In light of the cumulative progress toward maximum employment and the improvement in the outlook for the labor market, the Committee decided to reduce the pace of its asset purchases. Beginning in January, the Committee will add to its holdings of agency mortgage-backed securities at a pace of $30 billion per month rather than $40 billion per month, and will add to its holdings of longer-term Treasury securities at a pace of $30 billion per month rather than $45 billion per month. The Committee is maintaining its existing policy of reinvesting principal payments from its holdings of agency debt and agency mortgage-backed securities in agency mortgage-backed securities and of rolling over maturing Treasury securities at auction. Taken together, these actions should maintain downward pressure on longer-term interest rates, support mortgage markets, and help to make broader
financial conditions more accommodative, which in turn should promote a stronger economic recovery and help to ensure that inflation, over time, is at the rate most consistent with the Committee’s dual mandate.

4. The Committee will closely monitor incoming information on economic and financial developments in coming months and will continue its purchases of Treasury and agency mortgage-backed securities, and employ its other policy tools as appropriate, until the outlook for the labor market has improved substantially in a context of price stability. In judging when to moderate the pace of asset purchases, the Committee will, at its coming meetings, assess whether incoming information continues to broadly support the Committee’s expectation of ongoing improvement in labor market conditions and inflation moving back toward its longer-run objective. The Committee will likely reduce the pace of asset purchases in measured steps at future meetings. However, asset purchases are not on a preset course, and the Committee’s decisions about their pace will remain contingent on the Committee’s economic outlook as well as its assessment of the likely efficacy and costs of such purchases.

5. To support continued progress toward maximum employment and price stability, the Committee today reaffirmed its view that a highly accommodative stance of monetary policy will remain appropriate for a considerable time after the asset purchase program ends and the economic recovery strengthens. In particular, the Committee decided to keep the target range for the federal funds rate at 0 to ¼ percent and currently anticipates that this exceptionally low range for the federal funds rate will be appropriate at least as long as the unemployment rate remains above 6½ percent, inflation between one and two years ahead is projected to be no more than a half percentage point above the Committee’s 2 percent longer-run goal, and longer-term inflation expectations continue to be well anchored. In determining how long to maintain a highly accommodative stance of monetary policy, the Committee will also consider other information, including additional measures of labor market conditions, indicators of inflation pressures and inflation expectations, and readings on financial developments. When the Committee decides to begin to remove policy accommodation, it will take a balanced approach consistent with its longer-run goals of maximum employment and inflation of 2 percent.

If the Committee judges it appropriate to convert the remainder of its flow-based asset purchase program to a fixed-size program in order to provide certainty about its intentions for bringing the program to a close, it could replace paragraphs 3 and 4 with the following:

3’. In light of the cumulative progress toward maximum employment and the substantial improvement in the outlook for the labor market over the past year, the Committee today is announcing a plan to end its current asset purchase program. From January through June of 2014, the Committee will add [ $180 ] billion to its holdings of agency mortgage-backed securities at a pace of [ $30 ] billion per month, and also will add [ $180 ] billion to its holdings of longer-term Treasury securities at a pace of [ $30 ] billion per month, bringing the total increase in the Committee’s holdings of longer-term securities during 2013 and
2014 to approximately [ $1.4 ] trillion. The Committee is maintaining its existing policy of reinvesting principal payments from its holdings of agency debt and agency mortgage-backed securities in agency mortgage-backed securities and of rolling over maturing Treasury securities at auction. Even after the conclusion of the purchase program, the Committee’s sizable holdings of longer-term securities should maintain downward pressure on longer-term interest rates, support mortgage markets, and help to make broader financial conditions more accommodative, which in turn should promote a stronger economic recovery and help to ensure that inflation, over time, is at the rate most consistent with the Committee’s dual mandate.

4′. The Committee will closely monitor incoming information on economic and financial developments. If that information is not broadly consistent with the Committee’s expectation of continued improvement in labor market conditions and inflation moving back toward its longer-run objective, the Committee is prepared to use its policy tools, including additional asset purchases, as appropriate to promote its longer-run goals.
Appendix 8: Materials used by Mr. Potter
Statement Regarding Purchases of Treasury Securities and Agency Mortgage-Backed Securities

On December 18, 2013, the Federal Open Market Committee (FOMC) directed the Open Market Trading Desk (the Desk) at the Federal Reserve Bank of New York to purchase additional agency mortgage-backed securities (MBS) at a pace of about $35 billion per month and longer-term Treasury securities at a pace of about $40 billion per month, beginning in January 2014. The existing December schedules for agency MBS purchases at a pace of $40 billion per month and Treasury securities purchases at a pace of $45 billion per month remain in effect until that time. The FOMC also directed the Desk to maintain its existing policies of reinvesting principal payments from the Federal Reserve’s holdings of agency debt and agency MBS in agency MBS and of rolling over maturing Treasury securities at auction. The Committee’s sizable and still-increasing holdings of longer-term securities should maintain downward pressure on longer-term interest rates, support mortgage markets, and help to make broader financial conditions more accommodative.

Purchases of agency MBS will continue to be concentrated in newly-issued agency MBS in the To-Be-Announced (TBA) market, and purchases of longer-term Treasury securities will continue to be distributed using the existing set of sectors and approximate weights. These purchase distributions could change if market conditions warrant.

The amount of agency MBS to be purchased each month and the tentative schedule of Treasury purchase operations for the following calendar month will continue to be announced on or around the last business day of each month. Additionally, the planned amount of purchases associated with reinvestments of principal payments on holdings of agency securities that are anticipated to take place over each monthly period will be announced on or around the eighth business day of the month.

Consistent with current practices, the purchases of agency MBS and Treasury securities will be conducted with the Federal Reserve’s eligible counterparties through a competitive bidding process and results will be published on the Federal Reserve Bank of New York’s website. The Desk will continue to publish transaction prices for individual operations at the end of each monthly period. All other purchase details remain the same at this time.

Additional information on the purchases of agency MBS and longer-term Treasury securities can be found in a set of Frequently Asked Questions for each asset class in the following locations:

Treasury securities: http://www.newyorkfed.org/markets/longertermtreas_faq.html
