Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies, ¹ and then making the scanned versions text-searchable. ² Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that this document may contain occasional gaps in the text. These gaps are the result of a redaction process that removed information obtained on a confidential basis. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

¹ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

² A two-step process was used. An advanced optimal character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

MONETARY AGGREGATES AND MONEY MARKET CONDITIONS

Prepared for the Federal Open Market Committee

By the staff Board of Governors of the Federal Reserve System

MONETARY AGGREGATES AND MONEY MARKET CONDITIONS

Recent Developments

(1) M-1 increased at a 7-1/4 per cent annual rate in January, but it appears to be declining at a 1/2 per cent rate in February. Thus, growth over January and February combined is projected at around a 3-1/2 per cent annual rate, in the lower half of the FOMC's range. M-2 appears to be expanding at a 6-1/2 per cent annual rate over the January-February period, close to the mid-point of its range. Renewed expansion in savings and small denomination time deposits at banks and a continued rise in large denomination time deposits included in M-2 helped to maintain growth in this aggregate in January. At thrift institutions, on the other hand,

Growth in Monetary Aggregates over January-February Period (SAAR in per cent)

	Range	Latest Esti	<u>lmates</u>
M-1	2-1/2 to 7-1/2	3.4	
M-2	5 to 9	6.6	
Memo: Federal funds rate (per cent per annum)		Average for week Jan. 18 25 Feb. 1 8 15 22	6.78 6.72 6.80 6.75 6.76 6.78

Much of the January growth in savings and small denomination time deposits at banks occurred early in the month, and appears to reflect inadequate seasonal adjustment for interest crediting. After early January, such flows were considerably weaker.

deposit inflows slowed further in January and seem to be continuing at a reduced pace in February. Over January and February, nonborrowed reserves are expected to increase at a 17 per cent annual rate, largely reflecting the surge in demand deposits around the turn of the year and a rise in excess reserves possibly associated with difficulties in reserve management due to severe weather.

- (2) With incoming data indicating that the monetary aggregates were growing at rates well within the Committee's ranges, the Account Management has continued to seek a Federal funds rate of around 6% per cent since the January FOMC meeting. Under these circumstances, short-term interest rates generally have changed little on balance since mid-January despite relatively strong short-term credit demands. The Treasury has begun to raise new cash in its weekly auctions of 3- and 6-month bills, and short-term borrowing by businesses continued sizable in recent weeks. Bank loans to businesses accelerated substantially in January and early February, more than offsetting a decline in commercial paper issuance by nonfinancial corporations.
- (4) In long-term credit markets, public bond offerings by corporations over the intermeeting period were modest, and rates on corporate bonds have changed little on balance since mid-January. At the same time, municipal bond yields have fallen somewhat, as demands for tax-exempt securities have continued to be quite strong. Mortgage interest rates in both primary and secondary markets, on the other hand, have edged upward further, reflecting pressures on fund availability resulting from the slowing of deposit inflows to thrift institutions.

- slightly since mid-January. Both the Treasury and Federally-sponsored agencies have been substantial net borrowers over this period. The Federal Home Loan Bank System, for example, raised \$1.4 billion of new cash in conjunction with its February refinancing, to meet a growing demand for advances from member institutions. The Treasury borrowed about \$6 billion of cash through regular issues of 2- and 4-year notes since the last FOMC meeting, and obtained an additional \$2 billion in its regular mid-quarter refunding of \$5 billion of maturing issues. 1/Noncompetitive tenders in the refunding auctions came to \$2½ billion, about \$1 billion above the total in the November refunding. In the weeks following the auctions, the new issues have traded below their average auction prices.
- (6) The table on the following page shows (in terms of percentage annual rates of change) related monetary and financial flows over various time periods.

^{1/} In that refinancing, the Treasury sold \$2\frac{3}{2}\$ billion of 39-month notes at an average yield of 7.59 per cent, \$3 billion of 7-year, 8 per cent notes at an average yield of 7.88 per cent, and \$1\frac{1}{2}\$ billion of reopened 27-year 8\frac{1}{2}\$ per cent bonds at an average yield of 8.23 per cent.

NOTE: All items are based on averages of daily figures, except for data on total loans and investments of commercial banks, commercial paper, and thrift institutions --which are derived from either end-of-month or Wednesday statement date figures. Growth rates for reserve measures in this and subsequent tables are adjusted to remove the effect of discontinuities from breaks in the series when reserve requirements are changed.

Prospective developments

(7) Shown below for Committee consideration are three alternative longer-run growth ranges for the monetary aggregates over the QIV '77-QIV '78 period, along with the ranges currently in place.

	Alt. A	Alt. B	Alt. C	Current
M-1	4 to 7	4 to 6½	4 to 6	4 to 6½
M-2	7 to 9½	$6\frac{1}{2}$ to 9	6 to 8½	$6\frac{1}{2}$ to 9
M-3	$7\frac{1}{2}$ to 10	7 to 9½	6½ to 9	8 to 10½
Bank credit	8 to 11	7½ to 10½	7 to 10	7 to 10

- (8) Alternative B continues the ranges for M-1 and M-2 that were adopted by the Committee in October for the QIII '77-QIII '78 period. Alternatives A and C represent, respectively, somewhat more and somewhat less expansive policy alternatives. Under all three alternatives, the M-3 growth range is projected to be lower than the current range for this aggregate. Since around year end, net inflows of deposits to thrift institutions have persisted at a rate considerably lower than previously anticipated, and, as a result, the staff has reduced its projections of such inflows over the year ahead.
- (9) Each of the alternatives presupposes an upward adjustment in deposit ceiling rates at banks and thrift institutions of 50 basis points on small-denomination time deposits; the adjustments in ceiling rates are assumed to occur in April under alternative C, in May under B, and in June under A. Without such adjustments, the increase in

market rates thought necessary to restrain M-1 growth to the mid-point of the indicated ranges would lead to growth in M-2 and M-3 near the lower ends of the ranges shown. $\frac{1}{}$

ship among growth rates proposed for the QIV '77 to QIV '78 period and the implied growth rates for more extended periods ending in QIV '78.2/ It shows, for instance, that growth in M-1 at around the 5½ per cent mid-point of the proposed alternative B range would lead to a 5.6 per cent annual rate of expansion over the 15-month period starting with QIII '77 and to a 6.3 per cent annual rate of growth over the 18-month period beginning with QII '77--in both cases within the current FOMC range but above the mid-point. The higher growth rates over these longer periods reflect the sizable overshoot in M-1 growth in the third quarter of last year and the more moderate overshoot in the fourth quarter. M-1 growth at around the 5 per cent mid-point of the proposed alternative C range would nearly compensate for the slight fourth quarter overshoot but not for the larger third quarter overshoot.

Appendix III shows projections of the interest-bearing components of M-2 and M-3, as well as for the aggregates themselves, with and without an adjustment in ceiling rates.

^{2/} Implied growth rates for even more extended periods are included in the growth triangles in Appendix IV.

- (12) A Federal funds rate centered on the recently prevailing level of 6-3/4 per cent, as contemplated under alternative B, is likely to be associated with M-1 growth over February-March in a 1 to 6 per cent annual rate range. The February weakness in M-1, following several months of strong growth, is thought by the staff to be transitory. Money growth in March is expected to rebound to a little over a 7 per cent annual rate-mainly because of the increase in transactions demands associated with the projected strengthening of economic activity following the recent weather-induced slowdown. The expected rebound in M-1 also reflects in some degree projections indicating that the volume of tax refunds to individuals will be large relative to other recent years.
- (13) The February-March growth rate of M-1 shown under alternative B implies a first quarter expansion of about 4-3/4 per cent, annual rate, well within the Committee's 4 to 6-1/2 per cent longer-run range. However, the staff anticipates that further increases in market interest rates will be required in order to constrain M-1 growth over the one-year QIV '77 QIV '78 period to the mid-point of that range. Even though the staff has reduced its projection of economic growth this year, nominal GNP is still expected to increase at an 11-1/4 per cent rate over the QIV '77 QIV '78 period, leading to relatively strong money demand. In addition, the restraining impact on money demand from the relatively sharp 1-3/4 percentage point increase in short-term interest rates that took place between the spring and fall of last year will be exhausted relatively soon; since October short-rates have risen only about another

1/4 percentage point. Even assuming some further moderate downward shift in money demand relative to income, the Federal funds rate would probably have to begin rising again in April and reach 8 per cent by fall in order to constrain M-1 growth for the QIV '77-QIV '78 period to the mid-point of the 4 to 6-1/2 per cent alternative B range. 1/

- (14) Growth in M-2 over the February-March period is likely to be in a 4-1/2 to 8-1/2 per cent annual rate range under alternative B. With market yields above the ceiling rates on savings deposits and all maturities of small denomination time deposits at commercial banks, inflows of such deposits are likely to remain modest in February-March. However, growth in large denomination time deposits included in M-2 are expected to continue to offset slow growth of deposits subject to Regulation Q ceiling as banks aggressively seek funds to finance credit demands.
- (15) At thrift institutions the relatively attractive yields available in the market for shorter-term investments have slowed total deposit inflows so far in 1978, although ceiling rates on the longest-term deposits are still somewhat above those on market instruments. With no further increase in short-term interest rates, growth in deposits at thrift institutions can be expected to remain modest in the near-term. Consequently, S&L's are likely to limit their new commitment activity and also--in financing takedowns of their record level of outstanding commitments--to reduce their own liquidity and further increase borrowing

^{1/} See Appendix I. The implied increases in the velocity of M-1 and M-2 over 1978 are shown in Appendix II.

from FHL Banks. Although thrift deposit inflows are expected to rise from their depressed first quarter pace if ceiling rates are raised in the spring (as we are assuming), inflows will probably remain considerably below the strong pace of expansion of 1977.

- (16) With the Federal funds rate remaining near its present 6-3/4 per cent level, as envisioned under alternative B, interest rates generally are likely to fluctuate within a relatively narrow range over the intermeeting period. A little upward rate pressure might develop in short-term credit markets; the Treasury is expected to raise \$10 billion of new money in the bill market prior to the March and April tax dates, and depository institutions are likely to continue liquidating shorterterm Treasury issues to meet loan demands. However, intermediate- and long-term market rates might decline a bit in the weeks immediately ahead. Treasury demands in these maturity ranges are not likely to be unusually large. In addition, the pace of new offerings by corporations and State and local governments is expected to remain moderate, while the institutional demand for bonds is likely to continue to be quite strong. Both primary and secondary mortgage rates will probably continue to be under upward pressure, given the slowing of deposit growth at the thrift institutions.
- (17) Over the longer-run both short- and long-term interest rates are likely to rise. Given the strength that is projected in economic activity, rate pressures may become evident in spring and summer as a result of expanding private credit demands and Federal Reserve efforts

to restrain money growth. Further increases in short- and intermediateterm rates will be accompanied by reduced liquid asset holdings of
depository institutions, by increased commercial bank offerings of
large denomination time deposits, and by stepped up borrowing demands
of Federal housing agencies. The increases in short- and intermediateterm rates will probably be transmitted to some extent to long-term
markets. However, as in 1977, such increases will be limited by the
continued high cash flows of insurance companies and pension funds.

- over the intermeeting period to the mid-point of a 7 to 7-1/2 per cent range, and the February-March annual rate of growth of M-1 and M-2 would likely be in 1/2 to 5-1/2 and 4 to 8 per cent annual rate ranges, respectively. The 3-month Treasury bill rate would probably rise to about 7 per cent by mid-March, with commensurate adjustments in other short rates. Member bank borrowings could be expected to rise sharply once again, increasing pressures for a discount rate increase. At the same time, the rise in short-term interest rates associated with this alternative would tend to strengthen the dollar on international exchange markets.
- (19) The tightening of money market conditions contemplated under alternative C would further slow the net inflow of deposits subject to rate ceilings in the weeks immediately ahead and thus would increase the need for an adjustment in deposit ceiling rates. Lending policies of banks and thrift institutions would become more restrictive. There would be increased pressure on Government support programs in the

mortgage area. The Home Loan Bank System would be expected to turn more and more to the market to raise cash to support advances to savings and loan associations, and mortgage bankers would increase takedowns of existing FNMA commitments while also aggressively seeking new commitments. In such an environment, the increase in short-term rates would probably be rather promptly transmitted to the intermediate- and long-term sectors of the market, where Government security dealers still have a long position of moderate size in Treasury coupon issues.

- (20) The near-term increase in interest rates under alternative C would work toward a reduction in growth of the aggregates over the longer run. However, given the projected strength of money demand, a further increase in interest rates would be required in order to limit M-1 expansion to the mid-point of the 4 to 6 per cent alternative C range over the QIV '77-QIV '78 period. The staff would expect the funds rate under this alternative to average 7-3/4 per cent in the second quarter and to rise to 8-1/4 per cent by fall.
- (21) Alternative A involves a reduction in the Federal funds rate over the intermeeting period to the 6-1/2 per cent mid-point of a 6 to 6-1/2 per cent range. Such an action would be accompanied by a reversal of the early January rise in short-term interest rates. Long-term rates, on the other hand, might not retrace all of their recent increases if, as appears likely at the moment, market participants concluded that the decline in short-term rates was likely to be temporary. Meanwhile, the dollar would probably tend to soften in international exchange markets.

(22) The approach of alternative A appears most consistent with a monetary policy that encourages more rapid growth in the monetary aggregates over the longer-run than under either alternatives B or C. Nevertheless, given the strength projected for economic activity, the near-term decline in the funds rate under A would probably soon have to be reversed to restrain growth in the aggregates to rates consistent with the mid-points of longer-run ranges for alternative A. The funds rate would have to begin rising again in the second quarter and might reach a high for the year of about 7-3/4 per cent by fall.

Directive language

paragraphs of the directive. The first formulation places main emphasis on near-term rates of growth in monetary aggregates. The second formulation, like the directive adopted at the last meeting, places main emphasis on money market conditions; it shows—in strike—through form—the specifications adopted at the last meeting. As suggested below, the particular language needed in the opening lines of the money market formulation would depend on the specific conditions sought; the three alternatives shown—calling, respectively, for somewhat easier, prevailing, and somewhat firmer money market conditions—are intended to be associated with the specifications discussed in the preceding section under alternatives A, B, and C.

"Monetary Aggregates" Formulation

The Committee seeks to encourage near-term rates of growth in M-1 and M-2 on a path believed to be reasonably consistent with the longer-run ranges for monetary aggregates cited in the preceding paragraph. Specifically, at present, it expects the annual growth rates over the February-March period to be within the ranges of _____ to ___ per cent for M-1 and ____ to ___ per cent for M-2. In the judgment of the Committee such growth rates are likely to be associated with a weekly-average Federal funds rate of about ____ per cent. If, giving approximately equal weight to M-1 and M-2, it appears that growth rates over

the 2-month period will deviate significantly from the mid-points of the indicated ranges, the operational objective for the Federal funds rate shall be modified in an orderly fashion within a range for _____ to ____ per cent. In the conduct of day-to-day operations, account shall be taken of emerging financial market conditions, including the unsettled conditions in foreign exchange markets.

If it appears during the period before the next meeting that the operating constraints specified above are proving to be significantly inconsistent, the Manager is promptly to notify the Chairman who will then decide whether the situation calls for supplementary instructions from the Committee.

'Money Market' Formulation

At this time, the Committee seeks to maintain about the prevailing money market conditions (OR TO ACHIEVE SOMEWHAT EASIER OR SOMEWHAT FIRMER MONEY MARKET CONDITIONS) during the period immediately ahead, provided that monetary aggregates appear to be growing at approximately the rates currently expected, which are believed to be on a path reasonably consistent with the longer-run ranges for monetary aggregates cited in the preceding paragraph. Specifically, the Committee seeks to maintain the weekly-average Federal funds rate at about the-current-level _____ per cent, so long as M-1 and M-2 appear to be growing over the January-February FEBRUARY-MARCH period at annual rates within

ranges of 2½-te-7½ _____ TO ____ per cent and 5-te-9 ____ TO ____ per cent, respectively. If giving approximately equal weight to M-1 and M-2, it appears that growth rates over the 2-month period are approaching or moving beyond the limits of the indicated ranges, the operational objective for the weekly-average Federal funds rate shall be modified in an orderly fashion within a range of 6½-te-7 _____ TO ____ per cent. In the conduct of day-to-day operations, account shall be taken of emerging financial market conditions, including the unsettled conditions in foreign exchange markets.

If it appears during the period before the next meeting that the operating constraints specified above are proving to be significantly inconsistent, the Manager is promptly to notify the Chairman who will then decide whether the situation calls for supplementary instructions from the Committee.

NOTE: Government security dealer trading positions are on a commitment basis. Trading positions, which exclude Treasury securities financed by repurchase agreements maturing in 16 days or more, are indicators of dealer holdings available for sale over the near-term. Underwriting syndicate positions consist of issues still in syndicate, excluding trading positions. The basic reserve deficit is excess reserves less borrowing at Federal Reserve less net Federal funds purchases. Weekly data are daily averages for statement weeks, except for corporate and municipal issues in syndicate which are Friday figures.

^{*} Strictly confidential.

^{**} Monthly averages for excess reserves and borrowings are weighted averages of statement week figures.

NOTE: Weekly data for columns 1, 2, 3, 5, and 6 are statement week averages of daily data. Data in column 4 are 1-day Wednesday quotes. For columns 7 through 10, the weekly date is the mid-point of the calendar week over which data are averaged. Columns 11 and 12 are 1-day quotes for Friday and Thursday, respectively, following the end of the statement week. Column 13 is an average of contract interest rates on commitments for conventional first mortgages with 80 per cent loan-to-value ratios made by a sample of insured savings and loan associations on the Friday following the end of the statement week. Column 14 gives FNMA auction data for Monday preceding the end of the statement week. Column 15 is a 1-day quote for Monday preceding the end of the statement week. The FNMA auction yield is the average yield in bi-weekly auction for short-term forward commitments for Government underwritten mortgages. GNMA yields are average net yields to investors on mortgage-backed securities for immediate delivery, assuming prepayment in 12 years on pools of 30-year FHA/VA mortgages carrying the coupon rate 50 basis points below the current FHA/VA ceiling.
