## Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the bestpreserved paper copies, scanning those copies, ${ }^{1}$ and then making the scanned versions text-searchable. ${ }^{2}$ Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that this document may contain occasional gaps in the text. These gaps are the result of a redaction process that removed information obtained on a confidential basis. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

Industrial Production and Capacity Utilization
Industrial production fell 1.5 percent in October, following a revised drop of 1.2 percent in September and a decline of 0.2 percent in August. Again in October, most of the overall reduction in output occurred in durable materials, construction supplies, and autos; declines also occurred in production of most other materials and products.

Output of consumer goods declined 0.9 percent in October, following similar decreases in the two preceding months. Auto assemblies were reduced about 11 percent to an annual rate of 5.5 million units. Production of durable goods for the home was cut 1.1 percent further last month. Output of consumer nondurable goods was reduced 0.4 percent, mainly because of reductions in food and fuel production. Output of business equipment, reflecting large declines in manufacturing, power, and farm equipment, was reduced 0.5 percent--about half of the large reduction that occurred in September; this was the third monthly decline in output of business equipment. Production of defense and space equipment edged up 0.2 percent in October, following average monthly increases of 0.5 percent in the preceding six months. Output of construction supplies was reduced an estimated 3.8 percent further, following a sizable decline last month, and was 10 percent below its recent peak last March.

Materials output dropped 2.3 percent in October. Sharp declines occurred in production of durable materials, particularly metals and parts for consumer durable goods and for equipment, and in production of nondurable materials, as output of textiles, paper, and chemicals was curtailed sharply. Energy materials output also was reduced considerably for the third consecutive month.

Capacity utilization in manufacturing, reflecting the large drop in output, also fell sharply--to 76.9 percent from 78.4 percent in September. The October operating rate for producers of motor vehicles and parts, with auto assemblies declining to a 5.5 million unit annual rate and truck production still at a low rate, dropped to 54.8 percent, only a little above its 1975 low. Utilization rates for several industries were close to 70 percent in October--iron and steel, fabricated metal products, and stone, clay, and glass. Industries with utilization rates somewhat above the average for all of manufacturing included paper, rubber and plastics, food, electrical machinery, and nonferrous metals.

The capacity utilization rate for producers of industrial materials dropped 2 percentage points in October to 78.2 percent, as in the two preceding months a larger decline than in the rate for manufacturing. Large declines in October also were widespread among producers of the various industrial materials. Particularly low, besides iron and steel,
were the operating rates for basic chemicals and parts for consumer durable goods.

Retail Sales
Sales by retail stores declined 1.5 percent in
October, according to partial-sample estimates; this drop followed no change in sales in September and a 1.4 percent rise in August. A large falloff occurred in October sales by stores selling automotive products- 8.7 percent, and another sizable decline was reported for stores handing building materials and related items. Sales by stores excluding these two groupings edged up 0.2 percent. Sales at food stores rose 1.2 percent to their August level and those at general merchandise stores rose 0.8 percent (making up only about two fifths of their September decline). In contrast, sales at eating and drinking places fell l.4 percent, and sales at furniture, home furnishings, and equipment stores declined 0.6 percent.

Sales by all retail stores in the third quarter were 2.2 percent above those in the preceding quarter; however, they are estimated to have been about unchanged in real terms. Responding to price rebates and other purchase incentive programs by auto producers and dealers, nominal sales volume by the automotive grouping of stores in the third quarter was 9.8 percent higher than in the second quarter when it declined 5.6 percent. Spending for general merchandise and
for furniture and appliances in the third quarter was 0.1 percent and 0.2 percent, respectively, above that in the second quarter.

Corrigendum:
The following change should be made in the
November 10 Greenbook, Part II:
On page II-24, the sentence beginning "Services, which ..." beginning on line 13 should be replaced with this sentence: "The rate of increase in prices of services [excluding energy and homeownership], which did not slow in the first half of this year--in fact it accelerated, accounted for much of this recent acceleration (in the pace for the remaining half of the CPI]."

[^0]:    ${ }^{1}$ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).
    ${ }^{2}$ A two-step process was used. An advanced optimal character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.
