

Prefatory Note

The attached document represents the most complete and accurate version available based on original copies culled from the files of the FOMC Secretariat at the Board of Governors of the Federal Reserve System. This electronic document was created through a comprehensive digitization process which included identifying the best-preserved paper copies, scanning those copies,¹ and then making the scanned versions text-searchable.² Though a stringent quality assurance process was employed, some imperfections may remain.

Please note that this document may contain occasional gaps in the text. These gaps are the result of a redaction process that removed information obtained on a confidential basis. All redacted passages are exempt from disclosure under applicable provisions of the Freedom of Information Act.

¹ In some cases, original copies needed to be photocopied before being scanned into electronic format. All scanned images were deskewed (to remove the effects of printer- and scanner-introduced tilting) and lightly cleaned (to remove dark spots caused by staple holes, hole punches, and other blemishes caused after initial printing).

² A two-step process was used. An advanced optimal character recognition computer program (OCR) first created electronic text from the document image. Where the OCR results were inconclusive, staff checked and corrected the text as necessary. Please note that the numbers and text in charts and tables were not reliably recognized by the OCR process and were not checked or corrected by staff.

SUPPLEMENTAL NOTES

THE DOMESTIC NONFINANCIAL ECONOMY

Consumer Sentiment

According to the preliminary report, the Michigan SRC index of consumer sentiment held at an extremely favorable level in early December. The sub-index of current conditions remained in a very positive range, and the sub-index of expected conditions was about unchanged at its highest value since the current expansion began.

Among questions not included in the overall index, the index of the expected change in unemployment over the coming year rose somewhat, although its level is still well below the average for the first half of 1996. Both the car and home buying conditions indexes remain in generally favorable ranges, although a few more households reported that now is a bad time to buy because prices and interest rates are high.

The mean and median values of expected inflation over the coming year held steady at 4 percent and 3 percent, respectively. The mean value of expected inflation over the next five to ten years moved up 0.1 percentage point to 3.8 percent; the median value was unchanged at 3 percent.

Business Inventories

Retail inventories rose at an annual rate of \$24.7 billion (book value) in October; excluding auto dealers, the retail inventory accumulation in October was \$16.2 billion, about the same as the rate of increase during the third quarter. With a 0.3 percent rise in retail sales, the inventory-sales ratio for the retail trade sector was unchanged at 1.52 months in October. After moving up at midyear to the middle of its range in recent years, the ratio for non-auto retail trade has been little changed.

Inventories expanded at most types of retail establishments in October; lumber and building supply stores were the only category where inventories edged down in that month. For the broad range of stores in general merchandise, apparel, and furniture and appliance (GAF) stores, the buildup in inventories picked up significantly in October after little net change during the preceding two months. Although the inventory-sales ratio for GAF stores edged up in October, after trending up since May, the October level of this ratio was still near the low end of the most recent three-year

range. For most types of retail stores, inventory-sales ratios in October were well below their recent highs observed last autumn.

For all manufacturing and trade excluding motor vehicles, inventory accumulation picked up in October to an annual rate of \$43.1 billion--almost twice the rate of increase during the third quarter. The more rapid accumulation in October was mainly the result of buildups in wholesale inventories, especially inventories of farm products, following sizable drawdowns in the third quarter. With shipments and sales rising 0.3 percent, the inventory-sales ratio for all manufacturing and trade excluding motor vehicles was unchanged at 1.36 months in October, the lowest point in recent years.

1. OMB's July 1996 deficit estimates (assuming the enactment of the President's proposals) are \$126 billion in FY97 and \$94 billion in FY98. CBO's April 1996 baseline deficit estimates are \$171 billion in FY97 and \$194 billion in FY98. Budget receipts, outlays, and surplus/deficit include corresponding Social Security (OASDI) categories. The OASDI surplus is excluded from the on-budget deficit and shown separately as off-budget, as classified under current law. The Postal Service deficit is included in off-budget outlays beginning in FY90.

2. OMB's July 1996 deficit estimates (assuming the enactment of the President's proposals), excluding deposit insurance spending, are \$134 billion in FY97 and \$96 billion in FY98. CBO's April 1996 baseline deficit estimates, excluding deposit insurance, are \$175 billion in FY97 and \$196 billion in FY98.

3. Other means of financing are checks issued less checks paid, accrued items, and changes in other financial assets and liabilities.

4. HEB is the NIPA current and capital account surplus in current dollars, with cyclically sensitive receipts and outlays adjusted to the level of potential output generated by 1.8 percent real growth and an associated unemployment rate of 6 percent. Quarterly figures for change in HEB and FI are not at annual rates. Change in HEB, as a percent of nominal potential GDP, is reversed in sign. FI is the weighted difference of discretionary changes in federal spending and taxes (in chained (1992) dollars), scaled by real federal consumption plus investment. For change in HEB and FI, negative values indicate restraint.

5. Fiscal 1995 data for the unified budget come from OMB, fiscal 1996 and quarterly data come from the Monthly Treasury Statement and may not sum to OMB fiscal year totals.

a--Actual.
b--Preliminary.

THE FINANCIAL ECONOMY

Inflows into Equity Mutual Funds--Update

As noted in Greenbook Part 2 (page III-5), preliminary data indicated that equity mutual funds experienced a small net outflow for the week ending December 4. Such preliminary data exclude reinvested dividends. More complete data for that week suggest that net inflows were slightly positive when reinvested dividends are included. Preliminary information for the week ending December 11 show larger outflows (excluding reinvested dividends).
