Purpose

The Federal Reserve prepares this monthly report as part of its efforts to enhance transparency about the range of programs and tools that have been implemented in response to the financial crisis and to ensure appropriate accountability to the Congress and the public. The Federal Reserve's statutory mandate in conducting monetary policy is to foster maximum employment and stable prices. Financial stability is a critical prerequisite for achieving sustainable economic growth and price stability, and the Federal Reserve implemented a number of credit and liquidity programs to support the liquidity of financial institutions and to foster improved conditions in financial markets in response to the extraordinary strains that began to emerge in the summer of 2007.

This report provides detailed information on the policy tools that were implemented to address the financial crisis. In addition, it contains financial reporting for the third quarter of 2010. Figures for the full year of 2010 will be published following the release of the financial statements of the Federal Reserve System.

In fulfillment of Section 129 of the Emergency Economic Stabilization Act of 2008, additional information on the status of certain credit facilities imple-

Note: Financial information in this report has not been audited. Financial data are audited annually and are available at www.federalreserve.gov/monetarypolicy/bst_fedfinancials.htm.

mented in response to the financial crisis is included as Appendix A of this report. Information related to the Federal Reserve's temporary liquidity programs and facilities that have closed or expired is included in Appendix B of this report.

The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act"), which was signed into law on July 21, 2010, included provisions designed to further promote transparency by requiring disclosure of certain information about entities that received loans or otherwise participated in Federal Reserve credit and liquidity programs. As provided by the Dodd-Frank Act, transaction-level details and audit information from December 1, 2007, to July 21, 2010, are now posted on the Federal Reserve Board's public website.¹ Further information on the transparency provisions of the Dodd-Frank Act is included in Appendix C of this report.

For prior editions of this report and other resources, please visit the Board's public website at www.federalreserve.gov/monetarypolicy/clbsreports.htm.

Overview

Recent Developments

The Overview section of this report highlights developments in the operations of the Federal Reserve's credit and liquidity programs and facilities over the last four weeks, and presents data describing changes in the assets, liabilities, and total capital of the Federal Reserve System.

American International Group, Inc. (AIG) Fully Repays Revolving Credit Facility; Federal Reserve Bank of New York's (FRBNY's) Lending Commitment Terminated

- On January 14, 2011, AIG, the U.S. Department of the Treasury, and the FRBNY closed the comprehensive recapitalization plan to restructure the assistance provided by the U.S. government to AIG (the "Recapitalization"). As a result of the closing of the Recapitalization, the revolving credit facility extended to AIG and the preferred interests in AIA Aurora LLC and ALICO Holdings LLC were fully repaid, and the FRBNY's commitment to lend any further funds was terminated. For more information please refer to the AIG background section of this report on page 19.

Federal Reserve Conducts Term Deposit Facility (TDF) Auction

- On February 7, 2011, the Federal Reserve conducted an auction of \$5 billion of 28-day term deposits through the TDF. The awarded deposits settled on February 10, 2011, and will mature on March 10, 2011. Additional information about term deposits, auction results, and future small-value offerings is available through the TDF Resource Center at www.frbservices.org/centralbank/term_deposit_facility.html. The ongoing small-value TDF offerings are a matter of prudent planning and have no implications for the near-term conduct of monetary policy.

FRBNY Continues to Expand List of Counterparties for Reverse Repurchase Transactions (Reverse Repos)

- On January 31, 2011, the FRBNY released an expanded list of counterparties for conducting reverse repos, and on February 1, 2011, announced revised eligibility criteria for inclusion of additional counterparties. To prepare for the potential need to conduct large-scale reverse repos, the FRBNY is developing arrangements with an expanded set of counterparties with which it can conduct these transactions. These counterparties are in addition to the existing set of Primary Government Securities Dealer counterparties ("primary dealers"), with which the Federal Reserve can already conduct reverse repos. Further information on reverse repo counterparties is available online at www.newyorkfed.org/markets/rrp_announcements.html.

FRBNY Adds Two New Primary Dealers

- Effective February 2, 2011, the FRBNY added two new primary dealers. The complete list of primary dealers is available online at www.newyorkfed.org/markets/pridealers_current.html.

Federal Reserve Releases Quarterly Accounting Updates

- The quarterly updates to the fair value of the three Maiden Lane LLCs' net portfolio holdings and the fair value adjustment of the Term Asset-Backed Securities Loan Facility (TALF), as of February 2, 2011, were reported on the February 3, 2011, H.4.1 statistical release based on updated valuations as of December 31, 2010. The updated valuations resulted in a combined net unrealized gain of \$800 million for Maiden Lane LLC, Maiden Lane II LLC, and Maiden Lane III LLC. The updated valuations resulted in a net unrealized gain of \$18 million for TALF. Figures for the full year of

2010 will be published in this report following the release of the audited financial statements of the Federal Reserve System.

Federal Reserve System Selected Assets, Liabilities, and Total Capital

Table 1 of this section outlines selected assets and liabilities and total capital of the Federal Reserve

System and presents the change in these components over the past month and since this time last year.

Figure 1 of this section maps out the levels of selected Federal Reserve assets and liabilities, securities holdings, and credit extended through liquidity facilities since 2007.

* Less than \$500 million.

¹ Face value.² Guaranteed by Fannie Mae, Freddie Mac, and Ginnie Mae. Current face value, which is the remaining principal balance of the underlying mortgages. Does not include unsettled transactions.³ Securities loans under the overnight facility are off-balance-sheet transactions. These loans are shown here as a memo item to indicate the portion of securities held outright that have been lent through this program.⁴ Current face value. Includes commitments associated with outright purchases, dollar rolls, and coupon swaps.⁵ Total of primary, secondary, and seasonal credit.⁶ Dollar value of the foreign currency held under these agreements valued at the exchange rate to be used when the foreign currency is returned to the foreign central bank.⁷ Book value.⁸ As of January 26, 2011, TALF LLC had purchased no assets from the FRBNY.⁹ Excludes credit extended to Maiden Lane II and III LLCs.¹⁰ Fair value, reflecting values as of September 30, 2010. Fair value reflects an estimate of the price that would be received upon selling an asset if the transaction were to be conducted in an orderly market on the measurement date. Fair values are updated quarterly.¹¹ As a result of the closing of the AIG Recapitalization on January 14, 2011, the credit extended to AIG was fully repaid and the Federal Reserve's commitment to lend any further funds was terminated. In addition, the FRBNY has been paid in full for its preferred interests in AIA Aurora LLC and ALICO Holdings LLC. The funds from AIG asset dispositions that FRBNY held as agent were the source of repayment of the credit extended to AIG, as well as a portion of the FRBNY's preferred interests in ALICO Holdings LLC. The remaining FRBNY preferred interests in ALICO Holdings LLC and AIA Aurora LLC, valued at approximately \$20 billion, were purchased by AIG through a draw on the Treasury's Series F preferred stock commitment and then transferred by AIG to the Treasury as consideration for the draw on the available Series F funds.

Figure 1. Credit and liquidity programs and the Federal Reserve's balance sheet

+ indicates most recent data point. Data are shown through 1/26/2011.
 *All Liquidity Facilities includes: Term Auction credit; primary credit; secondary credit; seasonal credit; Primary Dealer Credit Facility; Asset-Backed Commercial Paper Money Market Mutual Fund Liquidity Facility; Term Asset-Backed Securities Loan Facility; Commercial Paper Funding Facility; and central bank liquidity swaps.

System Open Market Account (SOMA)

Domestic SOMA Portfolio

Recent Developments

- The SOMA portfolio increased between December 29, 2010, and January 26, 2011. This development is consistent with the Federal Open Market Committee's (FOMC's) announcement of its intention to expand its holdings of Treasury securities in the SOMA portfolio by \$600 billion by the end of the second quarter of this year.
- The FRBNY published on February 10, 2011, information on prices paid for securities included in the mid-January 2011 and mid-February 2011 outright Treasury operations. The FRBNY also released the new outright Treasury operation schedule and announced plans to purchase approximately \$97 billion in Treasury securities, which represents \$80 billion of the announced \$600 billion purchase program and \$17 billion in purchases associated with principal payments from agency debt and agency mortgage-backed securities (MBS), expected to be received between mid-February and mid-March 2011. Details are available online at www.newyorkfed.org/markets/tot_operation_schedule.html.
- On January 31, 2011, the FRBNY further expanded its list of counterparties for conducting reverse repos, and on February 1, 2011, announced revised eligibility criteria for the inclusion of additional counterparties. To prepare for the potential need to conduct large-scale reverse repos, the FRBNY is developing arrangements with an expanded set of counterparties with which it can conduct these transactions. These counterparties are in addition to the existing set of primary dealer counterparties, with which the Federal Reserve can already conduct reverse repos. Further information on reverse repo counterparties is available online at www.newyorkfed.org/markets/rrp_announcements.html.
- Effective February 2, 2011, the FRBNY also added two new primary dealers, MF Global Inc.

and SG Americas Securities, LLC. The complete list of primary dealers is available online at www.newyorkfed.org/markets/pridealers_current.html.

- As announced on January 10, 2011, the FRBNY began a process to streamline the administration of agency MBS held in the SOMA portfolio by consolidating these securities through a service offered by Fannie Mae and Freddie Mac called CUSIP aggregation. A list of agency MBS holdings, including those aggregated, is available online at www.ny.frb.org/markets/soma/sysopen_accholdings.html.

Background

Open market operations (OMOs)—the purchase and sale of securities in the open market by a central bank—are a key tool used by the Federal Reserve in the implementation of monetary policy. Historically, the Federal Reserve has used OMOs to adjust the supply of reserve balances so as to keep the federal funds rate around the target federal funds rate established by the FOMC. OMOs are conducted by the Trading Desk at the FRBNY, which acts as agent for the FOMC. The range of securities that the Federal Reserve is authorized to purchase and sell is relatively limited. The authority to conduct OMOs is granted under Section 14 of the Federal Reserve Act.

OMOs can be divided into two types: permanent and temporary. Permanent OMOs are outright purchases or sales of securities for the SOMA, the Federal Reserve's portfolio. Permanent OMOs traditionally have been used to accommodate the longer-term factors driving the expansion of the Federal Reserve's balance sheet, principally the trend growth of currency in circulation. More recently, the expansion of SOMA securities holdings has been driven by large-scale asset purchase programs (LSAPs). Temporary OMOs typically are used to address reserve needs that are deemed to be transitory in nature. These operations are either repurchase agreements (repos) or reverse repurchase agreements (reverse repos). Under a repo, the Trading Desk buys a security under an

Table 2. Domestic SOMA securities holdings

Billions of dollars, as of January 26, 2011

¹ Includes inflation compensation.

² Direct obligations of Fannie Mae, Freddie Mac, and the Federal Home Loan Banks.

³ Guaranteed by Fannie Mae, Freddie Mac, and Ginnie Mae. Current face value of the securities, which is the remaining principal balance of the underlying mortgages.

agreement to resell that security in the future; under a reverse repo, the Trading Desk sells a security under an agreement to repurchase that security in the future. A repo is the economic equivalent of a collateralized loan; conversely, a reverse repo is the economic equivalent of collateralized borrowing. In both types of transactions, the difference between the purchase and sale prices reflects the interest on the loan or borrowing. The composition of the SOMA is presented in **table 2**.

Each OMO affects the Federal Reserve's balance sheet; the size and nature of the effect depend on the specifics of the operation. The Federal Reserve publishes its balance sheet each week in the H.4.1 statistical release, "Factors Affecting Reserve Balances of Depository Institutions and Consolidated Statement of Condition of Reserve Banks," available at www.federalreserve.gov/releases/h41. The release separately reports securities held outright, repos, and reverse repos.

In addition, the Federal Reserve has long operated an overnight securities lending facility as a vehicle to address market pressures for specific Treasury securities. Since July 9, 2009, this facility has also lent housing-related government-sponsored enterprise (GSE) debt securities that are particularly sought after. Amounts outstanding under this facility are reported weekly in table 1A of the H.4.1 statistical release.

The FRBNY's traditional counterparties for OMOs are the primary dealers with which the FRBNY trades U.S. government and select other securities. In early 2010, the FRBNY revised its policy regarding

the administration of its relationships with primary dealers in order to provide greater transparency about the significant business standards expected of primary dealers and to offer clearer guidance on the process to become a primary dealer. The revised policy offers a more structured presentation of the business standards expected of a primary dealer; a more formal application process for prospective primary dealers; an increase in the minimum net capital requirement, from \$50 million to \$150 million; a seasoning requirement of one year of relevant operations before a prospective dealer may submit an application; and a clear notice of actions the FRBNY may take against a noncompliant primary dealer. Since late 2009, the FRBNY has taken steps to expand the types of counterparties for some OMOs to include entities other than primary dealers. Details on the counterparty expansion effort are presented below.

LSAPs

In November 2008, the Federal Reserve announced that it would buy direct obligations of Fannie Mae, Freddie Mac, and the Federal Home Loan Banks, and MBS guaranteed by Fannie Mae, Freddie Mac, and Ginnie Mae. The goal of these debt purchases was to reduce the cost and increase the availability of credit for the purchase of houses. In March 2009, the FOMC authorized purchases of up to \$1.25 trillion of agency MBS and up to \$200 billion of agency direct obligations. Subsequently, in November 2009, the FOMC announced that agency debt purchases would be about \$175 billion. This amount, while somewhat less than the previously announced maximum of \$200 billion, was consistent with the path of purchases and reflected the limited availability of agency debt.

The Federal Reserve also determined that supporting the MBS "dollar roll" market promoted the goals of the MBS purchase program. Dollar roll transactions consist of a purchase or sale of "to be announced" (TBA) MBS combined with an agreement to sell or purchase TBA MBS on a specified future date. Because of principal and interest payments and occasional delays in the settlement of transactions, the Federal Reserve also holds some cash and short-term investments associated with the MBS purchase program. On June 28, 2010, the Federal Reserve began entering into coupon swaps, which are trades with a single counterparty in which the Federal Reserve agrees to simultaneously sell TBA MBS in one coupon and to buy an equal face value of TBA MBS in a different coupon. MBS dollar roll transactions and

coupon swaps are recorded on settlement date and may generate realized gains and losses.

In March 2009, the FOMC announced that it would also purchase up to \$300 billion of longer-term Treasury securities to help improve conditions in private credit markets. The Federal Reserve purchased a range of securities across the maturity spectrum, including Treasury Inflation-Protected Securities (TIPS). The bulk of purchases were in intermediate maturities. In August 2009, the FOMC announced that it would gradually slow the pace of these transactions in order to promote a smooth transition in markets as purchases of these Treasury securities were completed. As anticipated, the purchases were completed by the end of October 2009.

The FRBNY announced in August 2009 that it would streamline the set of external investment managers for the agency-guaranteed MBS purchase program, reducing the number of investment managers from four to two. As of March 2, 2010, the FRBNY began to use its own staff on select days to transact directly in the secondary market for agency MBS as part of the FOMC's LSAPs, consistent with the announcement of November 2009. These changes were not performance-related: the FRBNY had anticipated that it would adjust its use of external investment managers as it gained more experience with the program.

In September 2009, the Federal Reserve began to purchase on-the-run agency securities—the most recently issued securities—in order to mitigate market dislocations and promote overall market functioning. Prior to this change, purchases were focused on off-the-run agency securities.

On September 23, 2009, the FOMC announced its intention to gradually slow the pace of its purchases of agency-guaranteed MBS and agency debt. In implementing this directive, the Trading Desk of the FRBNY announced that it would scale back the average weekly purchase amounts of agency MBS and reduce the size and frequency of agency debt purchases. As anticipated by the FOMC, these transactions were completed by the end of the first quarter of 2010. As of August 19, 2010, the settlement of all remaining outstanding MBS from these purchases was complete. The Federal Reserve's outright holdings of MBS are reported weekly in tables 1, 3, 8, and 9 of the H.4.1 statistical release. In addition, detailed data on all settled agency MBS holdings are published weekly on the FRBNY website at www.newyorkfed.org/markets/soma/sysopen_accholdings.html.

On August 10, 2010, the FOMC announced that the Federal Reserve would maintain the level of domestic securities holdings in the SOMA portfolio by reinvesting principal payments from agency debt and agency MBS in longer-term Treasury securities. As of August 4, 2010, outright holdings of securities in the SOMA portfolio totaled roughly \$2 trillion.

On November 3, 2010, the FOMC decided to expand its holdings of securities and announced that, in addition to maintaining the existing reinvestment policy, it intends to purchase a further \$600 billion of longer-term Treasury securities by the end of the second quarter of 2011. The statement noted that the FOMC will regularly review the pace of its securities purchases and the overall size of the asset-purchase program in light of incoming information and adjust the program as needed to best foster maximum employment and price stability.

In conjunction with the FOMC's November 3, 2010, announcement, the FRBNY announced its plan to execute the FOMC's existing reinvestment plan along with the additional Treasury purchases through the second quarter of 2011. The FRBNY also announced the distribution of maturities of securities it plans to purchase. In addition, in order to promote transparency in the market, the FRBNY announced that it will publish the prices at which the securities are purchased at the end of each scheduled monthly purchase period. Finally, to provide operational flexibility and to ensure that it is able to purchase the most attractive securities on a relative-value basis, the FRBNY announced that it would temporarily relax the 35 percent per-issue limit on SOMA holdings under which it had been operating. On December 20, 2010, the FRBNY provided additional detail on the increments by which SOMA holdings of individual Treasury securities would be allowed to rise above the 35 percent threshold. Additional information is available at www.newyorkfed.org/markets/lttreas_faq.html. The FRBNY publishes a tentative schedule for Treasury security purchases at www.newyorkfed.org/markets/tot_operation_schedule.html.

Reverse Repos

In December 2009, the FRBNY conducted its first set of small-scale, real-value, triparty reverse repos with primary dealers. Reverse repos are a tool that could be used to support a reduction in monetary accommodation at the appropriate time. Under a reverse repo, the FRBNY Trading Desk sells a security under an agreement to repurchase that security in the future. A reverse repo is the economic equiva-

lent of collateralized borrowing. The FRBNY periodically conducts these transactions to ensure operational readiness at the Federal Reserve, the major clearing banks, and the primary dealers; the transactions had no material impact on the availability of reserves or on market rates.

In August 2010, the FRBNY conducted another series of small-scale, real-value reverse repos with primary dealers using all eligible collateral types, including, for the first time, agency MBS from the SOMA portfolio. Since late 2009, the FRBNY has taken steps to expand the types of counterparties for some OMOs to include entities other than primary dealers. On March 8, 2010, the FRBNY announced the beginning of a program to expand its counterparties for conducting reverse repos. This expansion was intended to enhance the capacity of such operations to drain reserves beyond what could likely be conducted through primary dealers. The additional counterparties are not eligible to participate in transactions conducted by the FRBNY other than reverse repos.

In this context, the FRBNY published the Reverse Repurchase Transaction Eligibility Criteria for Money Funds for the first set of expanded counterparties, domestic money market mutual funds, and, on April 30, 2010, published the Reverse Repurchase Program Form Master Repurchase Agreement for Money Funds, which sets out the legal terms and conditions under which the FRBNY and its money market mutual fund counterparties may undertake reverse repos.

On August 18, 2010, the FRBNY published a list of money market funds eligible to participate as counterparties to reverse repos with the Federal Reserve. Each listed fund submitted an application and meets the criteria published by the FRBNY on March 8, 2010. Inclusion on the list does not constitute a public endorsement by the FRBNY of any listed counterparty and should not substitute for prudent counterparty risk management and due diligence.

On September 23, 2010, the FRBNY published the Reverse Repurchase Transaction Eligibility Criteria for Money Funds II, allowing a second wave of money market mutual funds to apply to participate in reverse repo transactions with the FRBNY. The FRBNY also published an updated version of the Reverse Repurchase Program Form Master Repurchase Agreement for Money Funds, including applicable Annexes. The expanded counterparty list and updated criteria and master agreement are available

on the FRBNY's website at www.newyorkfed.org/markets/rrp_announcements.html.

On October 12, 2010, the FRBNY announced another series of small-scale, real-value, triparty reverse repo transactions using all eligible collateral types. The first set of operations, conducted using only the expanded reverse repo transaction counterparties announced on August 18, 2010, commenced on October 13, 2010. The second set of operations, which was open to all eligible reverse repo counterparties, commenced on October 18 and was completed on October 27, 2010. The results of these operations are available on the FRBNY website at www.newyorkfed.org/markets/omo/dmm/temp.cfm. The outstanding amounts of reverse repos are reported weekly in tables 1, 2, 8, and 9 of the H.4.1 statistical release.

These activities with respect to reverse repos are a matter of prudent advance planning by the Federal Reserve. They do not represent any change in the stance of monetary policy, and no inference should be drawn about the timing of any change in the stance of monetary policy in the future.

Liquidity Arrangements with Foreign Central Banks (FCBs)

Recent Developments

- Amounts outstanding under the dollar liquidity swap arrangements were little changed in January 2011. As presented in **table 3**, the total amount of liquidity provided under these lines was \$0.1 billion as of January 26, 2011.

Background

Because of the global character of bank funding markets, the Federal Reserve has at times coordinated with other central banks to provide liquidity.

Table 3. Amounts outstanding under dollar liquidity swaps
As of January 26, 2011

Central bank	Amount (\$ billions)	Settlement date	Term	Interest rate
Bank of Canada	—	—	—	—
Bank of England	—	—	—	—
Bank of Japan	—	—	—	—
European Central Bank	0.1	1/20/2011	7-day	1.18%
Swiss National Bank	—	—	—	—
Total	0.1	—	—	—

Note: Unaudited. Components may not sum to totals because of rounding.

During the financial crisis, the Federal Reserve entered into agreements to establish temporary reciprocal currency arrangements (central bank liquidity swap lines) with a number of FCBs. Two types of temporary swap lines were established: dollar liquidity lines and foreign currency liquidity lines. These temporary arrangements expired on February 1, 2010. However, in May 2010, temporary dollar liquidity swap lines were re-established with certain FCBs in order to address the re-emergence of strains in global U.S. dollar short-term funding markets. In December 2010, the FOMC authorized an extension of the arrangements through August 1, 2011.

The FRBNY operates the swap lines under the authority granted under Section 14 of the Federal Reserve Act and in compliance with authorizations, policies, and procedures established by the FOMC.

Dollar Liquidity Swaps

On December 12, 2007, the FOMC announced that it had authorized dollar liquidity swap lines with the European Central Bank and the Swiss National Bank to provide liquidity in U.S. dollars to overseas markets. Subsequently, the FOMC authorized dollar liquidity swap lines between the Federal Reserve and each of the following FCBs: the Reserve Bank of Australia, the Banco Central do Brasil, the Bank of Canada, the Bank of Japan, Danmarks Nationalbank, the Bank of England, the European Central Bank, the Bank of Korea, the Banco de Mexico, the Reserve Bank of New Zealand, Norges Bank, the Monetary Authority of Singapore, Sveriges Riksbank, and the Swiss National Bank. These temporary dollar liquidity swap arrangements expired on February 1, 2010. In May 2010, the FOMC re-authorized dollar liquidity swap lines with the Bank of Canada, the Bank of England, the European Central Bank, the Bank of Japan, and the Swiss National Bank through January 2011. Subsequently, these arrangements were extended through August 1, 2011.

Swaps under these lines consist of two transactions. When an FCB draws on its swap line with the FRBNY, the FCB sells a specified amount of its currency to the FRBNY in exchange for dollars at the prevailing market exchange rate. The FRBNY holds the foreign currency in an account at the FCB. The dollars that the FRBNY provides are then deposited in an account that the FCB maintains at the FRBNY. At the same time, the FRBNY and the FCB enter into a binding agreement for a second transaction that obligates the FCB to buy back its currency on a specified future date at the same ex-

change rate. The second transaction unwinds the first at the same exchange rate used in the initial transaction; as a result, the recorded value of the foreign currency amounts is not affected by changes in the market exchange rate. At the conclusion of the second transaction, the FCB compensates the FRBNY at a market-based interest rate.

When the FCB lends the dollars it obtained by drawing on its swap line to institutions in its jurisdiction, the dollars are transferred from the FCB account at the FRBNY to the account of the bank that the borrowing institution uses to clear its dollar transactions. The FCB is obligated to return the dollars to the FRBNY under the terms of the agreement, and the FRBNY is not a counterparty to the loan extended by the FCB. The FCB bears the credit risk associated with the loans it makes to institutions in its jurisdiction.

The foreign currency that the Federal Reserve acquires in these transactions is recorded as an asset on the Federal Reserve's balance sheet. In tables 1, 8, and 9 of the weekly H.4.1 statistical release, the dollar value of amounts that the FCBs have drawn but not yet repaid is reported in the line entitled "Central bank liquidity swaps." Dollar liquidity swaps have maturities ranging from overnight to three months. Table 2 of the H.4.1 statistical release reports the maturity distribution of the outstanding dollar liquidity swaps. Detailed information about drawings on the swap lines by the participating FCBs is presented on the FRBNY's website at www.newyorkfed.org/markets/fxswap.

Foreign-Currency Liquidity Swap Lines

On April 6, 2009, the FOMC announced foreign-currency liquidity swap lines with the Bank of England, the European Central Bank, the Bank of Japan, and the Swiss National Bank. These lines were designed to provide the Federal Reserve with the capacity to offer liquidity to U.S. institutions in foreign currency should a need arise. These lines mirrored the existing dollar liquidity swap lines, which provided FCBs with the capacity to offer U.S. dollar liquidity to financial institutions in their jurisdictions. Foreign-currency swap lines provided the Federal Reserve with the ability to address financial strains by providing foreign currency-denominated liquidity to U.S. institutions in amounts of up to £30 billion (sterling), €80 billion (euro), ¥10 trillion (yen), and CHF 40 billion (Swiss francs). The Federal Reserve did not draw on these swap lines, and they expired on February 1, 2010.

Lending Facilities to Support Overall Market Liquidity

Lending to Depository Institutions

Recent Developments

- Credit provided to depository institutions through the discount window decreased in January 2011, but remains generally around the levels seen prior to 2007. As presented in **table 6**, the lendable value of collateral pledged by depository institutions with discount window loans outstanding on January 26, 2011, was \$1 billion; discount window credit outstanding on that date amounted to \$64 million.

Background

The discount window helps to relieve liquidity strains for individual depository institutions and for the banking system as a whole by providing a source of funding in times of need. Much of the statutory framework that governs lending to depository institu-

tions is contained in Section 10B of the Federal Reserve Act, as amended. The general policies that govern discount window lending are set forth in the Federal Reserve Board's Regulation A.

Depository institutions have, since 2003, had access to three types of discount window credit: primary credit, secondary credit, and seasonal credit. Primary credit is available to depository institutions in generally sound financial condition with few administrative requirements. Secondary credit may be provided to depository institutions that do not qualify for primary credit, subject to review by the lending Reserve Bank. Seasonal credit provides short-term funds to smaller depository institutions that experience regular seasonal swings in loans and deposits.

On August 17, 2007, in order to promote orderly market functioning, the Federal Reserve narrowed the spread between the primary credit rate (generally referred to as the discount rate) and the FOMC's target federal funds rate to 50 basis points and began to allow the provision of primary credit for terms as long as 30 days. On March 16, 2008, the Federal Reserve further narrowed the spread between the primary credit rate and the target federal funds rate to 25 basis points, and increased the maximum maturity of primary credit loans to 90 days.

On November 17, 2009, in response to improved financial conditions, the Federal Reserve announced that the maximum maturity on primary credit loans would be reduced to 28 days effective January 14, 2010. On February 18, 2010, the Federal Reserve increased the spread between the primary credit rate and the top of the target range for the federal funds rate to 50 basis points, effective February 19, 2010. The Federal Reserve also announced that, effective March 18, 2010, the typical maximum maturity of primary credit loans would be shortened to overnight. These changes represented further normalization of the Federal Reserve's lending facilities and did not signal any change in the outlook for the economy or for monetary policy.

Table 4. Discount window credit outstanding to depository institutions

* Less than \$500 million.

On August 6, 2010, the Federal Reserve announced changes to its practices for disclosure of discount window lending information in accordance with the provisions of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the “Dodd-Frank Act”). For discount window loans extended to depository institutions on or after July 21, 2010, the Federal Reserve will publicly disclose certain information about the transaction approximately two years after the loan was extended. The disclosure will include the name and identifying details of the depository institution, the amount borrowed, the interest rate paid, and information identifying the types and amount of collateral pledged. More detail on these changes is reported on the Federal Reserve’s Discount Window website at www.frbdiscountwindow.org.

In extending credit to depository institutions, the Federal Reserve closely monitors the financial condition of borrowers. Monitoring the financial condition of depository institutions is a four-step process designed to minimize the risk of loss to the Federal Reserve posed by weak or failing depository institutions. The first step is monitoring, on an ongoing basis, the safety and soundness of all depository institutions that access or may access the discount window and the payment services provided by the Federal Reserve. The second step is identifying institutions whose condition, characteristics, or affiliation would present higher-than-acceptable risk to the Federal Reserve in the absence of controls on their access to Federal Reserve lending facilities and other Federal Reserve services. The third step is communicating—to staff within the Federal Reserve System and to other supervisory agencies, if and when necessary—relevant information about those institutions identified as posing higher risk. The

The lendable value of collateral pledged by all depository institutions, including those without any outstanding loans, was \$1,297 billion. Lendable value is value after application of appropriate haircuts. Components may not sum to total because of rounding.

* Less than \$500 million.

fourth step is implementing appropriate measures to mitigate the risks posed by such entities.

At the heart of the condition-monitoring process is an internal rating system that provides a framework for identifying institutions that may pose undue risks to the Federal Reserve. The rating system relies mostly on information from each institution’s primary supervisor, including CAMELS ratings, to identify potentially problematic institutions and classify them according to the severity of the risk they pose to the Federal Reserve.¹ Having identified institutions that pose a higher risk, the Federal Reserve then puts in place a standard set of risk controls that become increasingly stringent as the risk posed by an institution grows; individual Reserve Banks may implement additional risk controls to further mitigate risk if they deem it necessary.

Collateral

All extensions of discount window credit by the Federal Reserve must be secured to the satisfaction of the

¹ CAMELS (Capital, Assets, Management, Earnings, Liquidity, and Sensitivity) is a rating system employed by banking regulators to assess the soundness of commercial banks and thrifts. Similar rating systems are used for other types of depository institutions.

lending Reserve Bank by “acceptable collateral.” Assets accepted as collateral are assigned a lendable value deemed appropriate by the Reserve Bank; lendable value is determined as the market price of the asset, less a haircut. When a market price is not available, a haircut may be applied to the outstanding balance or a valuation based on an asset's cash flow. Haircuts reflect credit risk and, for traded assets, the historical volatility of the asset's price and the liquidity of the market in which the asset is traded; the Federal Reserve's haircuts are generally in line with typical market practice. The Federal Reserve applies larger haircuts, and thus assigns lower lendable values, to assets for which no market price is available relative to comparable assets for which a market price is available. A borrower may be required to pledge additional collateral if its financial condition weakens. Collateral is pledged by depository institutions under the terms and conditions specified in the Federal Reserve Banks' standard lending agreement, Operating Circular No. 10, available at www.frbservices.org/files/regulations/pdf/operating_circular_10.pdf.

Discount window loans are generally made with recourse to the borrower beyond the pledged collateral. Nonetheless, collateral plays an important role in mitigating the credit risk associated with these extensions of credit. The Federal Reserve generally accepts as collateral for discount window loans any assets that meet regulatory standards for sound asset qual-

Table 7. Lendable value of securities pledged by depository institutions by rating

ity. This category of assets includes most performing loans and most investment-grade securities, although for some types of securities (including commercial mortgage-backed securities, collateralized debt obligations, collateralized loan obligations, and certain non-dollar-denominated foreign securities) only AAA-rated securities are accepted. An institution may not pledge as collateral any instruments that the institution or its affiliates have issued. To ensure that they can borrow from the Federal Reserve should the need arise, many depository institutions that do not have an outstanding discount window loan nevertheless routinely pledge collateral.

The Federal Reserve periodically reviews its collateral valuation practices. The most recent changes to the lending margins on discount window collateral took effect on October 19, 2009, and reflected the results of a broad-based review, which began before the financial crisis, of methodology and data sources. For more information on collateral margins, refer to the Discount Window and Payments System Risk public website, www.frbdiscountwindow.org.

As presented in **table 8**, depository institutions that borrow from the Federal Reserve generally maintain collateral in excess of their current borrowing levels.

Term Asset-Backed Securities Loan Facility (TALF)

Recent Developments

- As of January 26, 2011, the number of TALF borrowers and loans outstanding had declined from their levels in December 2010. Prepayments by borrowers primarily contributed to the decline in loans outstanding and fully accounted for the de-

cline in TALF borrowers. TALF LLC, a limited liability company (LLC) formed to purchase and manage assets received by the FRBNY from the TALF program, remains in operation, but as of January 26, 2011, TALF LLC had not purchased any assets from the FRBNY.

Background

On November 25, 2008, the Federal Reserve announced the creation of the TALF under the authority of Section 13(3) of the Federal Reserve Act. The TALF is a funding facility under which the FRBNY was authorized to extend up to \$200 billion of credit to holders of eligible asset-backed securities (ABS).² The TALF was intended to assist financial markets in accommodating the credit needs of consumers and businesses of all sizes by facilitating the issuance of ABS collateralized by a variety of consumer and business loans; it was also intended to improve mar-

¹ Book value.

ket conditions for ABS more generally. TALF loans backed by commercial mortgage-backed securities (CMBS) or by ABS backed by government guaranteed loans have maturities of up to five years; all other TALF loans have three-year maturities. Using funds authorized under the Troubled Asset Relief Program (TARP) of the Emergency Economic Stabilization Act of 2008, the Treasury committed to provide \$20 billion in credit protection to the FRBNY in connection with the TALF to support the \$200 billion of authorized lending value under the program. This commitment was reduced to \$4.3 billion in July 2010 to reflect the fact that only \$43 billion of TALF loans were outstanding when the program was closed to new lending.

Eligible collateral for TALF loans included U.S. dollar-denominated ABS backed by student loans, auto loans, credit card loans, equipment loans, floor-plan loans, insurance premium finance loans, loans guaranteed by the Small Business Administration (SBA), residential mortgage servicing advances, or commercial mortgages. At the time a TALF loan was extended, all eligible collateral was required to have a credit rating in the highest investment-grade rating category from two or more eligible nationally recognized statistical rating organizations (NRSROs) and could not have a credit rating below the highest investment-grade rating category from an eligible NRSRO. Certain collateral also had to pass an internal risk assessment by the FRBNY.

Additionally, all or substantially all of the credit exposures underlying eligible ABS were required to be exposures to U.S.-domiciled obligors or with respect to real property located in the United States or its territories. Except for ABS for which the underlying credit exposures are SBA-guaranteed loans, eligible newly issued ABS must have been issued on or after January 1, 2009. Eligible legacy CMBS must have been issued before January 1, 2009, must be senior in payment priority to all other interests in the underlying pool of commercial mortgages, and must meet certain other criteria designed to protect the Federal Reserve and the Treasury from credit risk. Collateral would not be accepted from a particular borrower if the collateral was backed by loans originated or securitized by that borrower or its affiliate except in very limited circumstances.

The loans provided through the TALF were designed to be limited in recourse to the collateral, generally allowing borrowers the option of surrendering the collateral to the FRBNY in full satisfaction of the TALF loan. The FRBNY's loan is secured by the ABS collateral, with the FRBNY lending an amount equal to the market value of the ABS, less a haircut. The haircut is a buffer which protects the FRBNY against a decline in the collateral's value. The Federal Reserve set initial haircuts for each type of eligible collateral to reflect an assessment of the riskiness and maturity of the various types of eligible ABS. Breakdowns of TALF collateral by underlying loan type and credit rating are presented in **tables 10 and 11**, respectively.

Consistent with previous announcements, the Federal Reserve closed the TALF for new loan extensions against newly issued CMBS on June 30, 2010, and for new loans against all other types of collateral on March 31, 2010. TALF loans extended by the

² For additional information on the TALF, refer to www.federalreserve.gov/monetarypolicy/bst_lendingother.htm.

Billions of dollars, as of January 26, 2011

Type of collateral	Value
<i>Asset-backed securities with minimum rating of:¹</i>	
AAA/Aaa	26
Total	26

Note: Unaudited. Data represent the face value of collateral.

¹ Eligible ABS collateral for the TALF was required to have a credit rating in the highest investment-grade rating category from at least two eligible NRSROs and could not have a credit rating below the highest investment-grade rating category from an eligible NRSRO. When pledged collateral is downgraded below the highest investment-grade rating, existing loans against the collateral remain outstanding.

FRBNY during this program will mature over the next several years, with all loans maturing no later than March 30, 2015.

TALF LLC

TALF LLC was formed to purchase and manage any ABS that might be surrendered by a TALF borrower or otherwise claimed by the FRBNY in connection with its enforcement rights to the TALF collateral. In certain limited circumstances, TALF LLC may also purchase TALF program loans from the FRBNY. TALF LLC has committed to purchase, for a fee, all such assets at a price equal to the TALF loan, plus accrued but unpaid interest.

Purchases of these securities are funded first through the fees received by TALF LLC and any interest TALF LLC has earned on its investments. In the event that such funding proves insufficient, the TARP will provide additional subordinated debt funding to TALF LLC to finance up to \$4.3 billion of asset purchases. Subsequently, the FRBNY will finance any additional purchases of securities by providing senior debt funding to TALF LLC. Thus, the TARP funds provide credit protection to the FRBNY. Financial information on TALF LLC is reported weekly in tables 1, 2, 7, 8, and 9 of the H.4.1 statistical release. As of January 26, 2011, TALF LLC had purchased no assets from the FRBNY.

Lending in Support of Specific Institutions

Quarterly Developments

- Cash flows generated from the Maiden Lane LLC, Maiden Lane II LLC, and Maiden Lane III LLC portfolios are used to pay down the FRBNY's loans to those LLCs. For the third quarter of 2010, repayments totaled approximately \$3 billion, as presented in **tables 14, 18, and 21**.

Background

During the financial crisis, the Federal Reserve extended credit to certain specific institutions in order to avert disorderly failures that could result in severe dislocations and strains for the financial system as a whole and harm the U.S. economy. In certain other cases, the Federal Reserve committed to extend credit, if necessary, to support important financial firms.

Bear Stearns and Maiden Lane LLC

In March 2008, the FRBNY and JPMorgan Chase & Co. (JPMC) entered into an arrangement related to financing provided by the FRBNY to facilitate the acquisition of JPMC and The Bear Stearns Companies Inc. (Bear Stearns). In connection with the transaction, the Federal Reserve Board authorized the FRBNY, under Section 13(3) of the Federal Reserve Act, to extend credit to a Delaware limited liability company, Maiden Lane LLC, to partially fund

³ Including amounts payable for securities purchased, collateral posted to Maiden Lane LLC by swap counterparties, and other liabilities and accrued expenses.

second quarter of 2008, the FRBNY extended credit to Maiden Lane LLC. The LLC manages its assets through time to maximize the repayment of credit extended to the LLC and to minimize disruption to the financial markets.

The two-year accumulation period that followed the closing date for Maiden Lane LLC ended on June 26, 2010. Consistent with the terms of the Maiden Lane LLC transaction, the distribution of the proceeds realized on the asset portfolio held by Maiden Lane LLC, after payment of certain fees and expenses, will occur on a monthly basis going forward unless otherwise directed by the Federal Reserve. The monthly distributions will be used to cover the expenses and repay the obligations of the LLC, including the principal and interest on the loan from the FRBNY.

The assets of Maiden Lane LLC are presented weekly in tables 1, 8, and 9 of the H.4.1 statistical release. Additional details on the accounts of Maiden Lane LLC are presented in table 4 of the H.4.1 statistical release. Details of the terms of the loan, as well as information on the holdings of the Maiden Lane LLC, including the CUSIP number, descriptor, and the current principal balance or notional amount outstanding for nearly all of the holdings of Maiden Lane LLC with the exception of residential whole loans, is published on the FRBNY website at www.newyorkfed.org/markets/maidenlane.html.

Information about the assets and liabilities of Maiden Lane LLC is presented as of September 30, 2010, in **tables 14 through 16** and **figure 2**. This information is updated on a quarterly basis.

Table 16. Maiden Lane LLC securities distribution by sector and rating

Note: Unaudited. This table presents the sector and ratings composition of the securities in the Maiden Lane LLC portfolio as a percentage of all securities in the portfolio. It is based on the fair value of the securities. Lowest of all ratings is used for purposes of this table. Rows and columns may not sum to totals because of rounding.

¹ Does not include Maiden Lane LLC's swaps and other derivative contracts and commercial and residential mortgage loans.

² Includes all asset sectors that, individually, represent less than 5 percent of the aggregate fair value of securities in the portfolio.

Figure 2. Maiden Lane LLC securities distribution as of September 30, 2010

AIG

Recent Developments

- On January 14, 2011, AIG, the Treasury, and the FRBNY closed the Recapitalization. As a result, the revolving credit facility extended to AIG and the preferred interests in AIA Aurora LLC and ALICO Holdings LLC were fully repaid, and the FRBNY's commitment to lend any further funds was terminated. This section provides background information on the assistance provided to AIG.

Background

On September 16, 2008, the Federal Reserve, with the full support of the Treasury, announced that it would lend to AIG to prevent a disorderly failure of this systemically important firm, protect the financial system and the broader economy, and provide the company time to restructure its operations in an orderly manner. Initially, the FRBNY extended an \$85 billion line of credit to the company. The terms of the credit facility are disclosed on the Federal Reserve's website at www.federalreserve.gov/monetarypolicy/bst_supportspecific.htm. Loans that were drawn under this facility are presented in table 1 of the weekly H.4.1 statistical release.

On November 10, 2008, the Federal Reserve and the Treasury announced a restructuring of the government's financial support to AIG. As part of this restructuring, two new LLCs, Maiden Lane II LLC and Maiden Lane III LLC, were created, and the line of credit extended to AIG was reduced from \$85 billion to \$60 billion. (On October 8, 2008, the FRBNY was authorized to extend credit under a special securities borrowing facility to certain AIG subsidiaries. This arrangement was discontinued after the estab-

Table 17B. Preferred interests in AIA Aurora LLC and ALICO Holdings LLC

Balance on January 26, 2011	Value
Preferred Interests in AIA Aurora LLC and ALICO Holdings LLC ¹	0
Accrued dividends on preferred interests in AIA Aurora LLC and ALICO Holdings LLC	0

Note: Unaudited. As a result of the closing of the AIG Recapitalization, a portion of the preferred interests in AIA Aurora LLC and ALICO Holdings LLC were redeemed. AIG purchased the remaining preferred interests from the FRBNY, including all accrued dividends, through a draw on the Treasury's Series F preferred stock commitment and transferred the preferred interests purchased from the FRBNY to the Treasury as consideration for the draw on the available Series F funds.

¹ Book value.

lishment of the Maiden Lane II facility.) More detail on these LLCs is reported in the remainder of this section. Additional information is included in tables 5 and 6 of the H.4.1 statistical release.

On March 2, 2009, the Federal Reserve and the Treasury announced further restructuring of the government's assistance to AIG, designed to enhance the company's capital and liquidity in order to facilitate the orderly completion of the company's global divestiture program. Additional information on the March 2009 restructuring is available at www.federalreserve.gov/newsevents/press/other/20090302a.htm.

On April 17, 2009, the FRBNY implemented the March 2, 2009, loan restructuring adjustment. The interest rate on the loan to AIG, the three-month Libor plus 300 basis points, was modified by removing the existing interest rate floor of 3.5 percent on the Libor component. Consistent with generally accepted accounting principles (GAAP), as of July 29, 2009, the reported value of the AIG revolving credit extension was reduced by a \$1.3 billion adjustment to reflect the loan restructuring. This restructuring adjustment was intended to recognize the economic effect of the reduced interest rate and was recovered as the adjustment amortized over the remaining term of the credit extension.

The lending under this facility was secured by a pledge of assets of AIG and its primary nonregulated subsidiaries, including all or a substantial portion of AIG's ownership interest in its regulated U.S. and foreign subsidiaries. Furthermore, AIG's obligations to the FRBNY were guaranteed by certain domestic, nonregulated subsidiaries of AIG with more than \$50 million in assets.

Balance on January 26, 2011	0

Note: Unaudited. Components may not sum to total because of rounding. Does not include Maiden Lane II LLC and Maiden Lane III LLC. Does not include preferred interests in AIA Aurora LLC and ALICO Holdings LLC. As a result of the closing of the AIG recapitalization plan, the revolving credit facility was fully repaid, and the FRBNY's commitment to lend any further funds was terminated.

On June 25, 2009, the FRBNY entered into agreements with AIG to carry out two transactions previously approved and announced on March 2, 2009, as part of the restructuring of the U.S. government's assistance to AIG. These transactions were completed on December 1, 2009. Under these agreements, the FRBNY received preferred interests in two special purpose vehicles (SPVs), AIA Aurora LLC and ALICO Holdings LLC, formed to hold the outstanding common stock of AIG's largest foreign insurance subsidiaries, American International Assurance Company, Ltd (AIA) and American Life Insurance Company (ALICO). In exchange, upon the closing of each transaction and the resulting issuance of preferred interests, the outstanding balance of, and amount available excluding capitalized interest and fees to AIG under, the revolving credit facility was reduced by \$25 billion. Specifically, the maximum principal amount available was reduced from \$60 billion to \$35 billion. By establishing the AIA and ALICO SPVs as separate legal entities, these transactions positioned AIA and ALICO for future initial public offerings (IPOs) or sale.

On March 1, 2010, AIG announced the signing of a definitive agreement for the sale of AIA to Prudential plc (Prudential) for approximately \$35.5 billion, including approximately \$25 billion in cash, \$8.5 billion in face value of equity and equity-linked securities, and \$2.0 billion in face value of preferred stock of Prudential, subject to closing adjustments. AIG stated that the cash portion of the proceeds from the sale would be used to fully redeem the approximately \$16 billion of preferred interests held by the FRBNY in the SPV that holds AIA, and to repay approximately \$9 billion of its borrowing under the revolving credit facility with the FRBNY. The transaction was approved by the boards of directors of both AIG and Prudential, and was expected to close by the end of 2010, subject to approval by Prudential shareholders, regulatory approvals, and customary closing conditions.

On March 8, 2010, AIG announced the signing of a definitive agreement for the sale of ALICO to MetLife, Inc. (MetLife) for approximately \$15.5 billion, including \$6.8 billion in cash and the remainder in equity securities of MetLife, subject to closing adjustments. In connection with this agreement, AIG stated that the cash portion of the proceeds from this sale would be used to redeem an equivalent amount of the approximately \$9 billion of preferred interests held by the FRBNY in ALICO. The transaction was approved by the boards of directors of both AIG

and MetLife, and was expected to close by the end of 2010, subject to the approvals of certain domestic and international regulatory bodies and to customary closing conditions. AIG has stated that it intended to monetize the securities received in the ALICO transaction over time, subject to market conditions, following the lapse of certain minimum holding periods set forth in the definitive agreement entered into with MetLife on March 8, 2010.

In early June 2010, in response to efforts by Prudential to negotiate for a lower purchase price of \$30.4 billion, AIG announced that it would not consider modification to the agreed-upon terms (described above) of the transaction. Subsequently, Prudential announced its intention to not proceed with the transaction. On June 3, 2010, Prudential and AIG confirmed that the parties had agreed to terminate the definitive agreement for the sale of AIA, as provided for in the sale agreement.

AIG announced plans to conduct an IPO of AIA by seeking a listing of AIA on the Hong Kong Stock Exchange in July 2010.

On September 30, 2010, AIG announced an agreement with the Treasury, the FRBNY, and the trustees of the AIG Credit Facility Trust (the "Trust") on a comprehensive recapitalization plan (the "Recapitalization") designed to facilitate repayment of all its obligations to American taxpayers.³ The measures included:

- an accelerated repayment of the outstanding balance (including all accrued interest and fees) on the AIG revolving credit facility and termination of that facility,
- a draw by AIG of up to \$22 billion of undrawn Series F funds available to the company under the TARP to purchase an equal amount of the FRBNY's preferred interests in the AIA and ALICO SPVs,
- the transfer by AIG of the preferred interests purchased from the FRBNY to the Treasury as consideration for the draw on the available Series F funds, and

³ The AIG Credit Facility Trust, which was established for the sole benefit of the U.S. Treasury, held the U.S. government's equity interest in AIG that was received as a condition of the AIG revolving credit agreement. For more information about the Trust, refer to www.newyorkfed.org/newsevents/news/markets/2009/an090116.html and www.newyorkfed.org/newsevents/news/markets/2010/Trust_FAQ_Final.pdf.

- the conversion of the AIG preferred stock currently owned by the Treasury and the Trust into common equity of AIG.

Also on September 30, 2010, AIG announced a definitive agreement to sell its Japan-based life insurance subsidiaries, AIG Star Life Insurance Co., Ltd. and AIG Edison Life Insurance Company, to Prudential Financial, Inc. for a total purchase price of \$4.8 billion, comprising \$4.2 billion in cash and \$0.6 billion in the assumption of third-party debt. The transaction was subject to receipt of regulatory approval and was expected to close in the first quarter of 2011.

On October 29, 2010, AIG completed the IPO of AIA, raising total gross proceeds of \$20.5 billion. On November 1, 2010, AIG completed the sale of ALICO to MetLife for approximately \$16.2 billion, including gross cash proceeds of \$7.2 billion and the remainder in securities of MetLife. AIG stated that it intended to monetize the MetLife securities received in the transaction over time, subject to market conditions and following the lapse of certain lock-up provisions specified in the definitive agreement entered into with MetLife, to provide additional funds to repay the government.

On December 27, 2010, AIG announced that it had obtained a total of \$3 billion in 364-day and 3-year bank credit facilities. AIG also announced that Chartis, a wholly owned subsidiary, had obtained a \$1.3 billion 1-year letter-of-credit facility. The facilities became available upon closing of the Recapitalization.

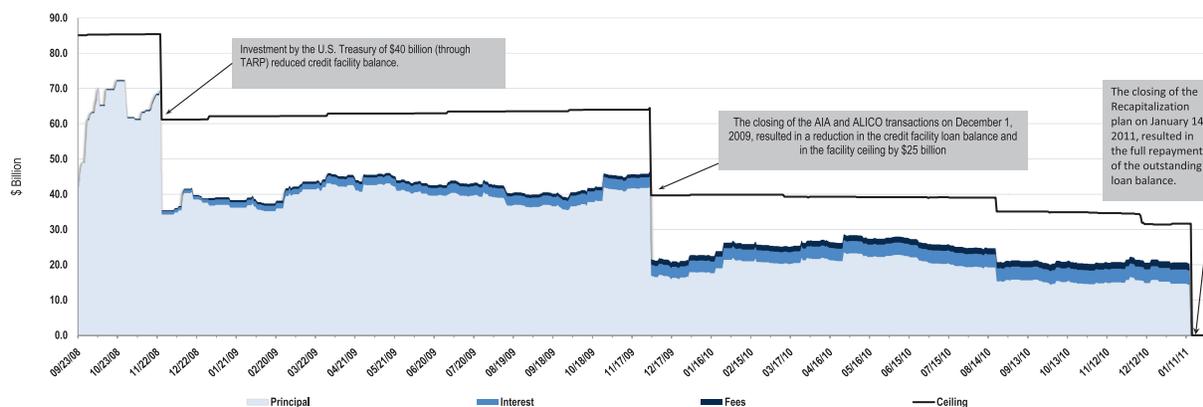

Pending closing of the Recapitalization, the FRBNY held the cash proceeds from certain AIG asset dispositions as agent. The FRBNY began to hold as agent net cash proceeds from the IPO of AIA on October 29, 2010, and the sale of ALICO on November 1, 2010. The funds that were held by the FRBNY as agent from the disposition of AIG assets are included in table 1 of this report and in table 1 of the H.4.1 statistical release. On December 8, 2010, AIG announced a definitive agreement with ALICO Holdings LLC, AIA Aurora LLC, the FRBNY, the Treasury, and the Trust regarding the Recapitalization announced on September 30, 2010. The December 8 definitive agreement superseded the agreement in principle, dated September 30, and included forms of several other agreements governing the Recapitalization.

On January 14, 2011, AIG, the Treasury, and the FRBNY closed the Recapitalization. Upon closing, the cash proceeds from certain asset dispositions, including the IPO of AIA and the sale of ALICO, were used first to repay in full the amount then outstanding under the AIG revolving credit facility, including accrued interest and fees, and then to redeem a portion of the preferred interests in AIA Aurora LLC and ALICO Holdings LLC previously received by the FRBNY in exchange for an equivalent reduction of the amount of debt outstanding on the revolving credit facility. AIG purchased the remaining preferred interests from the FRBNY, including all accrued dividends, through a draw on the Treasury's Series F preferred stock commitment and transferred the preferred interests purchased from the FRBNY to the Treasury as consideration for the draw on the available Series F funds. As a result of the closing of the Recapitalization, the revolving credit facility was fully repaid, and the FRBNY's commitment to lend any further funds was terminated.

Under the AIG revolving credit facility, all net cash proceeds received from the sale by AIG of its subsidiaries or businesses (other than sales in the ordinary course of business) were applied to pay down outstanding borrowings under the facility (and related accrued and unpaid interest), unless otherwise waived by the FRBNY. Additionally, the maximum principal amount of available credit to AIG under the revolving credit facility was reduced by the amount of net cash proceeds applied to pay the principal amount of outstanding borrowings under the facility, unless otherwise waived by the FRBNY. Between March and December 2010, the maximum principal amount available under the AIG revolving credit facility was reduced from \$34.4 billion to approximately \$24.5 billion primarily in connection with AIG's sale of interests in several subsidiaries and other assets. As a result of the closing of the Recapitalization, the revolving credit facility was fully repaid, and the FRBNY's commitment to lend any further funds was terminated.

Figure 3 presents the amount of credit extended to AIG over time through the credit facility, including the principal, interest, and commitment fees, along with the facility ceiling.

Figure 3. AIG revolving credit

Note: The above data illustrate selected components of the amount of credit extended to the American International Group, Inc., including loan principal, all capitalized interest and fees, and the amortized portion of the initial commitment fee. The data exclude commercial paper sold by AIG and its subsidiaries to the Commercial Paper Funding Facility as well as amounts borrowed prior to December 12, 2008, under a securities borrowing arrangement. The facility ceiling represents the limit on the credit agreement plus capitalized interest and fees. From November 7, 2008, until December 1, 2009, the ceiling was \$60 billion (excluding capitalized interest and fees); on December 1, 2009, it was reduced to \$35 billion. On January 14, 2011, AIG, the Treasury, and the FRBNY closed the Recapitalization. As a result of the closing, the revolving credit facility was fully repaid, and the FRBNY's commitment to lend any further funds was terminated.

Maiden Lane II LLC

Pursuant to authority granted by the Federal Reserve Board under Section 13(3) of the Federal Reserve Act, the FRBNY, on December 12, 2008, lent approximately \$19.5 billion to a newly formed Delaware limited liability company, Maiden Lane II LLC, to partially fund the purchase of residential mortgage-backed securities (RMBS) from the securities lending portfolio of several regulated U.S. insurance subsidiaries of AIG. Maiden Lane II LLC acquired the RMBS, which had an aggregate par value

of approximately \$39.3 billion, at the then-current market value of approximately \$20.8 billion, which was substantially below par value.⁴ The full portfolio of RMBS held by Maiden Lane II LLC serves as collateral for the Federal Reserve's loan to Maiden Lane II LLC. AIG's insurance subsidiaries also have

⁴ The aggregate amount of interest and principal proceeds from RMBS received after the announcement date, but prior to the settlement date, net of financing costs, amounted to approximately \$0.3 billion and therefore reduced the amount of funding required at settlement by \$0.3 billion, from \$20.8 billion to \$20.5 billion.

Table 18. Maiden Lane II LLC outstanding principal balance of senior loan and fixed deferred purchase price

Millions of dollars

	FRBNY senior loan	AIG fixed deferred purchase price
Principal balance at closing	19,494	1,000
<i>Most recent quarterly activity</i>		
Principal balance on 6/30/2010 (including accrued and capitalized interest)	14,672	1,053
Accrued and capitalized interest from 6/30/2010 to 9/30/2010	47	9
Repayment during the period from 6/30/2010 to 9/30/2010	(655)	—
Principal balance on 9/30/2010 (including accrued and capitalized interest)	14,064	1,062

Note: Unaudited. As part of the asset purchase agreement, AIG subsidiaries were entitled to receive from Maiden Lane II LLC a fixed deferred purchase price plus interest on the amount. This obligation is subordinated to the senior loan extended by the FRBNY, and it reduced the amount paid by Maiden Lane II LLC for the assets by a corresponding amount.

Table 19. Maiden Lane II LLC summary of RMBS portfolio composition, cash and cash equivalents, and other assets and liabilities

Figure 4. Maiden Lane II LLC securities distribution as of September 30, 2010

a \$1 billion subordinated position in Maiden Lane II LLC that is available to absorb first any losses that may be realized.

The net portfolio holdings of Maiden Lane II LLC are presented in tables 1, 8, and 9 of the weekly H.4.1 statistical release. Additional detail on the accounts of Maiden Lane II LLC is presented in table 5 of the H.4.1 statistical release. Details on the terms of the loan, as well as information on the holdings of the Maiden Lane II LLC, including the CUSIP number, descriptor, and the current principal balance or notional amount outstanding for all the positions in the portfolio, is published on the FRBNY website at www.newyorkfed.org/markets/maidenlane2.html.

Information about the assets and liabilities of Maiden Lane II LLC is presented as of September

30, 2010, in **tables 18 through 20** and **figure 4**. This information is updated on a quarterly basis.

Maiden Lane III LLC

Pursuant to authority granted by the Federal Reserve Board under Section 13(3) of the Federal Reserve Act, the FRBNY in November and December 2008, lent approximately \$24.3 billion to a newly formed Delaware limited liability company, Maiden Lane III LLC, to fund the purchase of certain asset-backed collateralized debt obligations (ABS CDOs) from certain counterparties of AIG Financial Products Corp. (AIGFP) on which AIGFP had written credit default swaps and similar contracts. Maiden Lane III LLC acquired these CDOs, which had an aggregate par value of approximately \$62.1 billion, at the then-current market value of approximately \$29.6 billion,

which was substantially below par value.⁵ The full portfolio of CDOs held by Maiden Lane III LLC serves as collateral for the Federal Reserve's loan to Maiden Lane III LLC. An AIG subsidiary also has a \$5 billion subordinated position in Maiden Lane III LLC that is available to absorb first any losses that may be realized. Assets of the portfolio of the LLC will be managed to maximize cash flows to ensure repayment of obligations of the LLC while minimizing disruptions to financial markets.

The net portfolio holdings of Maiden Lane III LLC are presented in tables 1, 8, and 9 of the weekly H.4.1 statistical release. Additional detail on the accounts of Maiden Lane III LLC is presented in table 6 of the H.4.1 statistical release. Information on the holdings of the Maiden Lane III LLC, including the CUSIP number, descriptor, and the current principal balance or notional amount outstanding for all the positions in the portfolio, is published on the FRBNY website at www.newyorkfed.org/markets/maidenlane3.html.

Information about the assets and liabilities of Maiden Lane III LLC is presented as of September 30, 2010, in **tables 21 through 23** and **figure 5**. This information is updated on a quarterly basis.

⁵ The aggregate amount of interest and principal proceeds from CDOs received after the announcement date, but prior to the settlement dates, net of financing costs, amounted to approximately \$0.3 billion and therefore reduced the amount of funding required at settlement by \$0.3 billion, from \$29.6 billion to \$29.3 billion.

Table 21. Maiden Lane III LLC outstanding principal balance of senior loan and equity contribution

Millions of dollars		
	FRBNY senior loan	AIG equity contribution
Principal balance at closing	24,339	5,000
<i>Most recent quarterly activity</i>		
Principal balance on 6/30/2010 (including accrued and capitalized interest)	16,294	5,278
Accrued and capitalized interest from 6/30/2010 to 9/30/2010	52	44

Note: Unaudited. This table presents the sector, vintage, and rating composition of the securities in the Maiden Lane III LLC portfolio as a percentage of all securities in the portfolio. It is based on the fair value of the securities. Lowest of all ratings is used for purposes of this table. Rows and columns may not sum to totals because of rounding.

¹ The year of issuance with the highest concentration of underlying assets as measured by outstanding principal balance determines the vintage of the CDO.

Federal Reserve Banks' Financial Tables

Quarterly Developments

- The average daily balance of the Federal Reserve SOMA holdings was approximately \$2.1 trillion during the first three quarters of 2010, as presented in **table 25**. Net earnings from the portfolio were approximately \$57.9 billion; most of the earnings were attributable to interest income on Treasury securities and federal agency and GSE MBS.
- Interest earned from Federal Reserve lending programs was approximately \$2.3 billion during the first three quarters of 2010, as presented in **table 26**; interest earned on credit extended to AIG and loans made by the TALF accounted for most of the total.
- Net income reported on the consolidated financial statements of the FRBNY, including changes in valuation, for the Maiden Lane, Maiden Lane II, and Maiden Lane III LLCs, was approximately \$2.4 billion, \$1.5 billion, and \$2.3 billion, respectively, during the first three quarters of 2010. Net income for the Commercial Paper Funding Facility (CPFF) LLC was approximately \$0.2 billion during the first three quarters of 2010, as presented in **table 27**.
- After providing for the payment of dividends and reserving an amount necessary to equate surplus with capital paid in, distributions to the Treasury as interest on Federal Reserve notes totaled \$56.5 billion during the first three quarters 2010, as presented in **table 24**.

Background

The Federal Reserve Banks prepare annual financial statements reflecting balances as of December 31, and income and expenses for the year then ended. The Federal Reserve Bank financial statements also include the accounts and results of operations of several LLCs that have been consolidated with the FRBNY (the “consolidated LLCs”).

The Board of Governors, the Federal Reserve Banks, and the consolidated LLCs are all subject to several levels of audit and review. The Reserve Banks' financial statements and those of the consolidated LLC entities are audited annually by an independent auditing firm retained by the Board of Governors. To ensure auditor independence, the Board requires that the external auditor be independent in all matters relating to the audit. Specifically, the external auditor may not perform services for the Reserve Banks or others that would place it in a position of auditing its own work, making management decisions on behalf of the Reserve Banks, or in any other way impairing its audit independence. In addition, the Reserve Banks, including the consolidated LLCs, are subject to oversight by the Board.

The Board of Governors' financial statements are audited annually by an independent auditing firm retained by the Board's Office of Inspector General (OIG). The audit firm also provides a report on compliance and on internal control over financial reporting in accordance with government auditing standards. The OIG also conducts audits, reviews, and investigations relating to the Board's programs and operations as well as of Board functions delegated to the Reserve Banks.

Audited annual financial statements for the Reserve Banks and Board of Governors are available at www.federalreserve.gov/monetarypolicy/bst_fedfinancials.htm. In this report, the Federal Reserve prepares unaudited quarterly updates to tables included in the Federal Reserve Board's Annual Report, available at www.federalreserve.gov/boarddocs/rptcongress/default.htm. As required by the Dodd-Frank Act, the Federal Reserve posted an audit webpage on December 3, 2010. This page will be updated as reports and other information become available. More information can be found at www.federalreserve.gov/newsevents/reform_audit.htm.

Combined Statement of Income and Comprehensive Income

Table 24 presents unaudited combined Reserve Bank income and expense information for the first three quarters of 2010. Tables 25 through 27 present information for the SOMA portfolio, the Federal Reserve loan programs, and the variable interest entities (VIEs)—the CPFF LLC; Maiden Lane, Maiden Lane II, and Maiden Lane III LLCs; and TALF LLC—for the period from January 1, 2010, to September 30, 2010. These tables are updated quarterly.

SOMA Financial Summary

Table 25 shows the Federal Reserve's average daily balance of assets and liabilities in the SOMA portfolio for the period from January 1, 2010, through September 30, 2010, the related interest income and expense, and the realized and unrealized gains and losses for the year to date. Treasury securities, GSE debt securities, as well as federal agency and GSE MBS making up the SOMA portfolio, are recorded at amortized cost on a settlement-date basis, rather than using a fair value presentation. The amortized cost presentation more appropriately reflects the Reserve Banks' purpose for holding these securities given the Federal Reserve's unique responsibility to conduct monetary policy.

Although the fair value of security holdings can be substantially greater than or less than the recorded value at any point in time, these unrealized gains or losses have no effect on the ability of the Reserve Banks to meet their financial obligations and responsibilities. As of September 30, 2010, the fair value of the Treasury securities held in the SOMA, excluding accrued interest, was \$920.3 billion (amortized cost was \$840.6 billion); the fair value of the GSE debt, excluding accrued interest, was \$166.3 billion (amortized cost was \$160.2 billion); the fair value of the federal agency and GSE MBS, excluding accrued interest, was \$1,128.8 billion (amortized cost was \$1,092.6 billion); and the fair value of investments denominated in foreign currencies was \$26.1 billion (amortized cost was \$25.9 billion). Fair value was determined by reference to quoted prices for identical securities, except for MBS, for which market values are determined using a model-based approach based on observable inputs for similar securities.

The FRBNY conducts purchases and sales of U.S. government securities under authorization and direc-

tion from the FOMC. The FRBNY buys and sells securities at market prices from securities dealers and foreign and international account holders. The FOMC has also authorized the FRBNY to purchase and sell U.S. government securities under agreements to resell or repurchase such securities (commonly referred to as repurchase and reverse repurchase transactions).

The SOMA holds foreign currency deposits and foreign government debt instruments denominated in foreign currencies with foreign central banks and the Bank for International Settlements. Central bank liquidity swaps are the foreign currencies that the Federal Reserve acquires and records as an asset (excluding accrued interest) on the Federal Reserve's balance sheet. On January 5, 2009, the Federal Reserve began purchasing MBS guaranteed by Fannie Mae, Freddie Mac, and Ginnie Mae. Transactions in MBS are recorded on settlement dates, which can extend several months into the future. MBS dollar roll transactions, which consist of a purchase or sale of TBA MBS combined with an agreement to sell or purchase TBA MBS on a specified future date, may generate realized gains and losses. On June 28, 2010, the Federal Reserve began entering into coupon swaps, which are trades with a single counterparty in which the Federal Reserve agrees to simultaneously sell TBA MBS in one coupon and to buy an equal face value of TBA MBS in a different coupon. MBS dollar roll transactions, and coupon swaps are recorded on settlement date and may generate realized gains and losses.

Loan Programs Financial Summary

Table 26 summarizes the average daily loan balances and interest income of the Federal Reserve during the first three quarters of 2010. The most significant loan balance is the TALF, which was established in 2009. As noted earlier in this report, during 2008 the Federal Reserve established several lending facilities under authority of Section 13(3) of the Federal Reserve Act. Many of these lending facilities have since been closed. Credit remains outstanding to AIG and under the TALF; the Reserve Banks record amounts funded under these programs as loans. Interest income from these loan programs was about \$2.3 billion during the first three quarters of 2010. All loans must be fully collateralized to the satisfaction of the lending Reserve Bank, with an appropriate haircut applied to the collateral. At September 30, 2010, no loans were impaired, and an allowance for loan losses was not required.

Table 24. Federal Reserve Banks' Combined Statement of Income and Comprehensive Income

Millions of dollars

	January 1, 2010 – September 30, 2010

Distribution of comprehensive income:	
Dividends paid to member banks	1,182
Transferred to surplus, distributions to U.S. Treasury, and change in accumulated other comprehensive income (loss)	61,529
Memo: Distributions to U.S. Treasury (interest on Federal Reserve notes) ³	55,391

Note: Unaudited.

¹ The fair value option was elected for all TALF loans. Recording all TALF loans at fair value, rather than at the remaining principal amount outstanding, results in consistent accounting treatment among all TALF-related transactions and provides the most appropriate presentation of the TALF program in the financial statements by matching the change in fair value of TALF loans, the related put agreement with the consolidated TALF LLC, and the valuation of the other beneficial interests in TALF LLC.

² Represents the recognition of benefit plan deferred actuarial gains and losses and prior service costs.

³ The Board of Governors requires each Reserve Bank to distribute any remaining net earnings to the U.S. Treasury as interest on Federal Reserve notes, after providing for the payment of dividends and reservation of an amount necessary to equate surplus with capital paid-in. These distributions are made weekly based on estimated net earnings for the preceding week. The amount of each Bank's weekly distribution to the U.S. Treasury is affected by significant losses and increases in capital paid-in at a Reserve Bank, and requires that the Reserve Bank retain net earnings until the surplus is equal to the capital paid-in. The distributions to the U.S. Treasury are reported on an accrual basis; actual payments to the U.S. Treasury during the period from January 1, 2010, through September 30, 2010, were \$56.5 billion.

Note: Unaudited.

* Represents the amount of TALF LLC's income allocated to the Treasury.

** In addition to the TALF LLC net income of \$104 million, the FRBNY reported \$216 million of income on TALF loans during the first three quarters of 2010. Earnings on TALF loans include interest income and fees of \$628 million and unrealized losses of \$412 million.

... Not applicable.

¹ CPFF LLC commercial paper holdings are recorded at book value; other holdings are recorded at fair value. TALF LLC, Maiden Lane, Maiden Lane II, and Maiden Lane III holdings are recorded at fair value.² Includes accrued interest.³ The other beneficial interest holder related to TALF LLC is the Treasury. JPMC is the beneficial interest holder for Maiden Lane LLC. AIG is the beneficial interest holder for Maiden Lane II and Maiden Lane III LLCs.⁴ Interest income is recorded when earned, and it includes amortization of premiums, accretion of discounts, and paydown gains and losses.⁵ Interest expense recorded by each VIE on the loans extended by the FRBNY is eliminated when the VIEs are consolidated in the FRBNY's financial statements and, as a result, the consolidated VIEs' net income (loss) recorded by the FRBNY is increased by this amount.

Consolidated VIEs Financial Summary

Table 27 summarizes the assets and liabilities of various consolidated VIEs previously discussed in this report. It also summarizes the net position of senior and subordinated interest holders and the allocation of the change in net assets to interest holders. The FRBNY is the sole and managing member of TALF LLC and the primary beneficiary of the Maiden Lane LLCs. The FRBNY was the sole beneficiary of CPFF LLC, which was dissolved on August 30, 2010.

Maiden Lane LLC, Maiden Lane II LLC, Maiden Lane III LLC, and TALF LLC holdings are recorded at fair value, which reflects an estimate of the price that would be received upon selling an asset if the transaction were to be conducted in an orderly market on the measurement date. Consistent with GAAP, the assets and liabilities of these LLCs have been consolidated with the assets and liabilities of the FRBNY. As a consequence of the consolidation, the extensions of credit from the FRBNY to the LLCs are eliminated.

“Net portfolio assets available” represents the net assets available to beneficiaries of the consolidated VIEs and for repayment of loans extended by the FRBNY. “Net income (loss) allocated to FRBNY” represents the allocation of the change in net assets and liabilities of the consolidated VIEs available for repayment of the loans extended by the FRBNY and

other beneficiaries of the consolidated VIEs. The differences between the fair value of the net assets available and the face value of the loans (including accrued interest) are indicative of gains or losses that would have been incurred by the beneficiaries if the assets had been fully liquidated at prices equal to the fair value as of September 30, 2010.

Appendix A

Additional Information Provided Pursuant to Section 129 of the Emergency Economic Stabilization Act of 2008

In light of improved functioning of financial markets, on February 1, 2010, the Federal Reserve closed the Term Securities Lending Facility (TSLF), Primary Dealer Credit Facility (PDCF), CPFF, and the Asset-Backed Commercial Paper Money Market Mutual Fund Liquidity Facility (AMLF). As of that date, all loans under the TSLF, PDCF, and AMLF had been repaid in full, with interest, in accordance with the terms of each facility, and each of the facilities resulted in no loss to the Federal Reserve or taxpayers. All remaining commercial paper holdings of the CPFF matured on April 26, 2010, and the CPFF LLC was dissolved on August 30, 2010, following the payment of expenses and the termination or expiration of existing contractual agreements. The CPFF did not result in any loss to the Federal Reserve or taxpayers.

AIG, on September 30, 2010, announced a comprehensive recapitalization plan designed to restructure the assistance provided by the U.S. government to the company. The company completed the Recapitalization on January 14, 2011. At closing of the Recapitalization, AIG repaid in full the amount then outstanding under the revolving credit facility established by the FRBNY, including all accrued interest and fees. The FRBNY also received the full amount, including all accrued dividends, of the preferred interests (SPV Preferred Interests) in AIA Aurora LLC and ALICO Holdings LLC, two SPVs formed as part of the March 2009 restructuring of the U.S. government's assistance. FRBNY received the SPV Preferred Interests as part of the March 2009 restructuring in exchange for an equivalent reduction of the amount of debt then outstanding on the revolving credit facility. AIG redeemed a portion of the FRBNY's SPV Preferred Interests with cash proceeds from asset dispositions, and purchased the

remaining SPV Preferred Interests, valued at approximately \$20 billion, from the FRBNY through a draw on the Treasury's Series F preferred stock commitment and transferred the SPV Preferred Interests purchased from the FRBNY to the Treasury as consideration for the draw on the available Series F funds. At the time of the closing, the collateral backing the remaining SPV Preferred Interests received by the Treasury had an estimated value of more than \$25 billion. The revolving credit facility, and the SPV Preferred Interests held by the FRBNY in connection with the revolving credit facility, did not result in any loss to the Federal Reserve or taxpayers.

For the reasons discussed below, the Board does not anticipate that the Federal Reserve or taxpayers will incur any net loss on the loans provided by the FRBNY under the TALF or to Maiden Lane LLC, Maiden Lane II LLC, or Maiden Lane III LLC (collectively, the "Maiden Lane facilities"). In making these assessments, the Board has considered, among other things, the terms and conditions governing the relevant facility and the type, nature, and value of the current collateral or other security arrangements associated with the facility. As discussed earlier in this report, the Federal Reserve has established various terms and conditions governing the types of collateral that may be pledged in support of a loan under a facility in order to mitigate the risk of loss. In the case of the Maiden Lane facilities, the Board also has considered analyses of the projected returns on the portfolio holdings of the respective SPV (the assets of which serve as collateral for the loan(s) extended to the SPV) conducted by the FRBNY or its advisors in connection with the most recent quarterly revaluation of the assets of each SPV.

TALF

Under the TALF, the FRBNY made loans on a collateralized basis to holders of eligible ABS and CMBS. The potential for the Federal Reserve or taxpayers to incur any net loss on the TALF loans extended by the FRBNY to the holders of ABS and

CMBS is mitigated by the quality of the collateral, the risk assessment performed by the FRBNY on all pledged collateral, and the margin by which the value of the collateral exceeds the amount of the loan (the haircut). Potential losses to the Federal Reserve also are mitigated by the portion of interest on the TALF loans to borrowers transferred to TALF LLC and by the credit protection provided by the Treasury under the TARP (initially \$20 billion and subsequently reduced to \$4.3 billion in light of the \$43 billion in TALF loans outstanding when the TALF closed to new lending on June 30, 2010), both of which are available to TALF LLC to purchase any collateral received by the FRBNY from a borrower in lieu of repaying a TALF loan or foreclosed upon due to a default by the borrower. TALF loans extended by the FRBNY during the program will mature over the next several years, with all loans maturing no later than March 30, 2015.

Loans to Maiden Lane LLC, Maiden Lane II LLC, and Maiden Lane III LLC

The portfolio holdings of each of Maiden Lane LLC (Maiden Lane), Maiden Lane II LLC (ML II), and Maiden Lane III LLC (ML III) are revalued in accordance with GAAP as of the end of each quarter to reflect an estimate of the fair value of the assets on the measurement date. The fair value determined through these revaluations may fluctuate over time. In addition, the fair value of the portfolio holdings that is reported on the weekly H.4.1 statistical release reflects any accrued interest earnings, principal repayments, expense payments and, to the extent any may have occurred since the most recent measurement date, realized gains or losses. The fair values as of January 26, 2011—as shown in table 1 of this report

and reported in the H.4.1 release for that date—are based on quarterly revaluations as of September 30, 2010.

Because the collateral assets for the loans to Maiden Lane, ML II, and ML III are expected to generate cash proceeds and may be sold over time or held to maturity, the current reported fair values of the net portfolio holdings of Maiden Lane, ML II, and ML III do not reflect the amount of aggregate proceeds that the Federal Reserve could receive from the assets of the respective entity over the extended term of the loan to the entity. The extended terms of the loans provide an opportunity to dispose of the assets of each entity in an orderly manner over time and to collect interest on the assets held by the entity prior to their sale, other disposition, or maturity. Each of the loans extended to Maiden Lane, ML II, and ML III is current under the terms of the relevant loan agreement.

In addition, JPMorgan Chase will absorb the first \$1.15 billion of realized losses on the assets of Maiden Lane, should any occur. Similarly, certain U.S. insurance subsidiaries of AIG have a \$1 billion subordinated position in ML II and an AIG affiliate has a \$5 billion subordinated position in ML III, which are available to absorb first any loss that ultimately may be incurred by ML II or ML III, respectively. Moreover, under the terms of the agreements, the FRBNY is entitled to any residual cash flow generated by the collateral assets held by Maiden Lane after the loans made by the FRBNY and JPMorgan Chase are repaid, and five-sixths and two-thirds of any residual cash flow generated by the assets held by ML II and ML III, respectively, after the senior note of the FRBNY and the subordinate positions of AIG affiliates for these facilities are repaid.

Appendix B

Information about Closed and Expired Credit and Liquidity Facilities and Programs

During the financial crisis that emerged during the summer of 2007, the Federal Reserve took a number of important steps aimed at providing liquidity to important financial markets and institutions to support overall financial stability. Financial stability is a critical prerequisite for achieving sustainable economic growth, and all of the Federal Reserve's actions were directed toward achieving the Federal Reserve's statutory monetary policy objectives. Specifically, the Federal Reserve implemented a number of programs designed to support the liquidity of financial institutions and foster improved conditions in financial markets, and also extended credit to certain specific institutions and committed to extend credit to support systemically important financial firms.

As financial conditions have improved, the need for the broad-based facilities has dissipated, and most were closed in 2010. Specifically, on February 1, 2010, the Federal Reserve closed the AMLF, CPFF, the PDCF, and the TSLF. On April 26, 2010, all remaining commercial paper holdings of the CPFF matured, and the CPFF LLC was dissolved on August 30, 2010, following the payment of expenses and the termination or expiration of existing contractual agreements. Also in April 2010, the credit extended through the last Term Auction Facility (TAF) auction in March matured, marking the close of that facility.

The temporary liquidity swap arrangements between the Federal Reserve and other FCBs also expired on February 1, 2010. However, the Federal Reserve re-established temporary liquidity swap arrangements with a group of FCBs in May 2010 and subsequently authorized and extension of these arrangements in December 2010, enabling them to offer U.S. dollar liquidity to financial institutions in their jurisdictions through August 1, 2011. Information related to these arrangements can be found in the body of this report.

The Federal Reserve followed sound risk-management practices in administering all of these programs, incurred no credit losses on programs that have been wound down, and expects to incur no credit losses on the few remaining programs. These facilities were open to participants that met clearly outlined eligibility criteria; participation in them reflected the severe market disruptions during the financial crisis and generally did not reflect participants' financial weakness.

The Federal Reserve is committed to transparency and has previously provided extensive aggregate information on its facilities in this and other weekly reports. Background information about the closed and expired facilities previously included in this appendix, as well as detailed information on individual loans under the TAF and PDCF, including the identities of borrowers and descriptions of pledged collateral; detailed information on the commercial paper purchased by the CPFF, including the identities of issuers and the issuers' parents/sponsors; detailed information on AMLF loans, including the identities of money market mutual funds (MMMFs) that sold asset-backed commercial paper (ABCP) that was used as AMLF collateral; and information about the support provided to Citigroup and Bank of America, is now available on the Federal Reserve's public website. This detailed data can be downloaded in multiple formats at www.federalreserve.gov/newsevents/reform_transaction.htm.

Historical data related to these facilities, previously reported on the H.4.1 statistical release, "Factors Affecting Reserve Balances of Depository Institutions and Condition Statement of Federal Reserve Banks," which includes the weekly publication of the Federal Reserve's balance sheet, is available through the Data Download Program, available at www.federalreserve.gov/datadownload. The Data Download Program provides interactive access to Federal Reserve statistical data in a variety of formats. For prior editions of this report and other resources, please visit the Board's public website at www.federalreserve.gov/monetarypolicy/clbsreports.htm.

Appendix C

Federal Reserve Disclosure Requirements and Other Provisions of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010

On July 21, 2010, the Dodd-Frank Act was signed into law.⁶ The Dodd-Frank Act included changes designed to promote transparency while protecting monetary policy independence and the efficacy of the Federal Reserve's liquidity programs and OMOs. In addition, the Dodd-Frank Act modified the Federal Reserve's authority to provide emergency liquidity to nondepository institutions under Section 13(3) of the Federal Reserve Act in light of other amendments that provide the U.S. government with new authority to resolve failing, systemically important nonbank financial institutions in an orderly manner.

As provided by the Dodd-Frank Act, on December 1, 2010, the Federal Reserve posted to its public website detailed information about entities that received loans or other financial assistance under a Section 13(3) credit facility between December 1, 2007, and July 21, 2010, and about persons or entities that participated in the agency MBS purchase program, used foreign currency liquidity swap lines, or borrowed through the TAF during that time frame. This disclosure includes more than 21,000 individual credit and other transactions conducted to stabilize markets during the financial crisis, restore the flow of credit to American families and businesses, and support

economic recovery and job creation in the aftermath of the crisis. The Federal Reserve's disclosure about these transactions is available at www.federalreserve.gov/newsevents/reform_transaction.htm.

As required by the Dodd-Frank Act, the Federal Reserve also posted an audit webpage, available at www.federalreserve.gov/newsevents/reform_audit.htm. This page will be updated as reports and other information become available.

The Dodd-Frank Act also established a framework for the delayed disclosure of information on entities that, after July 21, 2010, received a loan from the discount window under Section 10B of the Federal Reserve Act or from a Section 13(3) facility, or participated in OMO transactions. Generally, this framework requires the Federal Reserve to publicly disclose certain information about these discount window borrowers and OMO counterparties approximately two years after the relevant loan or transaction; information about borrowers under future Section 13(3) facilities will be disclosed one year after the authorization for the facility is terminated. Information to be disclosed will include the names and identifying details of each borrower or counterparty, the amount borrowed, the interest rate paid, and information identifying the types and amounts of collateral pledged or assets transferred in connection with the borrowing or transaction.

Going forward, any emergency lending programs and facilities authorized by the Federal Reserve under Section 13(3) of the Federal Reserve Act must have broad-based eligibility, and must be approved by the Secretary of the Treasury.

⁶ The full text of the Dodd-Frank Act is available at www.gpo.gov/fdsys/pkg/BILLS-111hr4173enr/pdf/BILLS-111hr4173enr.pdf.
