This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the February 2019 supplement.

Section 1045.0

The contents of this new section, “Supervision of Holding Companies with Total Consolidated Assets of $10 Billion or Less,” were previously in this manual’s section 5000.0, “BHC Inspection Program (General).” A standalone section was developed to help clarify the supervisory program for smaller holding companies. The content of the section was revised to modify inspection frequency and scope expectations for holding companies with total consolidated assets between $1 billion and $3 billion. The inspection frequency and scope expectations were modified for this population of holding companies to align with updated statutory requirements as authorized by the Economic Growth, Regulatory Relief, and Consumer Protection Act. References were also updated to reflect that non-commercial and non-insurance savings and loan holding companies (SLHCs) are assigned RFI ratings, effective February 1, 2019. See SR-13-21, “Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less.”

Section 1063.0

This new section, “Holding Company Ratings Applicability and Inspection Frequency,” provides an overview of the inspection scope and frequency expectations for bank holding companies (BHCs) and SLHCs supervised by the Federal Reserve. The section explains the applicability of the two rating systems Federal Reserve examiners use to assess the condition of BHCs and SLHCs. The section also provides a table illustrating the inspection scope and frequency expectations for holding companies with less than $10 billion in assets, which is described in more detail in section 1045.0. See also SR-19-4/CA-19-2, “Large Financial Institution (LFI) Rating System”; and SR-13-21.

Section 1065.0

This new section, “Nondisclosure of Supervisory Ratings and Confidential Supervisory Information,” was previously section 4070.5. The section was moved to section 1065.0 so it would be located closer to the manual’s sections on the assignment of ratings for holding companies. In addition, the section was revised to reference the large financial institution (LFI) rating system as another example of confidential supervisory information. Superfluous historical background information was removed from the section. In addition, outdated references to the Office of Thrift Supervision and their holding company rating system were removed from the section.

Section 1070.1

The content of this new section was previously part of section 5000.0, “BHC Inspection Program (General).” The content of section 1070.1 primarily is based on the guidance in SR-13-13/CA-13-10, “Supervisory Considerations for the Communication of Supervisory Findings.” Section 1070.1 highlights that examiners should convey, if evident, both the root cause of the finding and the potential effect of the finding on the organization. The section also includes a reference to SR-18-5/CA-18-7, “Interagency Statement Clarifying the Role of Supervisory Guidance,” which examiners should also consider when communicating supervisory findings. Lastly, the section describes key factors examiners should consider in determining whether to recommend additional formal or informal investigation or enforcement action for a holding company.

Section 2231.0

Section 2231.0, “Real Estate Appraisals and Evaluations,” has been revised significantly. This section provides a brief summary of the Board’s appraisal regulations and directs readers to the key pieces of guidance that the Board and other banking agencies have issued relating to real...
estate appraisals and evaluations. Previously, the section contained the entire contents of the December 2010 “Interagency Appraisal and Evaluation Guidelines.” The revised manual section includes a brief summary of the December 2010 Interagency Appraisal and Evaluation Guidelines, as well as a hyperlink to the guidelines. (See SR-10-16.)

Section 4060.4

Section 4060.4, “Consolidated Capital (Tier 1 Leverage Measure),” has been removed from the manual. The section was outdated and based on regulations that no longer exist. For more information on the leverage ratio, including leverage ratio components and requirements, see the Board’s Regulation Q (12 CFR part 217). In addition, the instructions to the FR Y-9C, “Consolidated Financial Statements for Holding Companies,” (Schedule HC-R) outline the reporting requirements for the leverage capital ratios.

Section 4070.5

This section, “Nondisclosure of Supervisory Ratings,” has been removed from the manual. See the description above for section 1065.0 for more information on the removal of this section from the manual.

Section 4080.1

This section, “Surveillance Program for Small Holding Companies,” was modified to alter the applicability of the Federal Reserve’s surveillance program for holding companies. The small holding company surveillance program covers holding companies having total consolidated assets of less than $3 billion. Previously, the program covered holding companies having total consolidated assets of less than $1 billion. (See SR-13-21.)

Section 5000.0

Section 5000.0, “BHC Inspection Program (General),” has been revised significantly and is now focused on the coordination of holding company supervisory activities. Much of the relevant content in section 5000.0 was moved to other sections to improve the manual’s organization. More specifically, information related to the supervision of holding companies with total consolidated assets $10 billion or less was removed, revised, and incorporated into section 1045.1 of the manual. The section’s content related to the communication of supervisory findings was removed and incorporated into section 1070.1 of the manual. In addition, outdated content on the inspection frequency and scope of holding companies was removed from this section. Section 1063.0 contains consolidated and updated inspection frequency and scope expectations for holding companies.

Section Table of Contents

The detailed table of contents sections, which listed the subheadings within each major part of the manual (parts 2000, 3000, 4000, and 5000) have been removed. Because the Board no longer offers print versions or subscriptions for the manual, these detailed tables of contents sections are obsolete. Manual readers can use the search function within the online version of the manual to find material. The General Table of Contents (section 1010.0) at the beginning of the manual, which provides a broad overview, has been retained.
This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the September 2017 supplement.

Section 1000.0
This section was renamed from “Foreword” to “About this Manual” and now includes the relevant content from sections 1020.0 and 1030.0. In addition, the section clarifies the role of supervisory guidance. A statute or regulation has the force and effect of law. Unlike a law or regulation, supervisory guidance does not have the force and effect of law. Rather, supervisory guidance outlines the agencies’ supervisory expectations or priorities and articulates the agencies’ general views regarding appropriate practices for a given subject area. See SR letter 18-5/CA letter 18-7, “Interagency Statement Clarifying Role of Supervisory Guidance,” for more information.

Section 1020.0
The relevant content of this section, “Preface,” was moved to section 1000.0 of this manual. As a result, section 1020.0 was removed from the Bank Holding Company Supervision Manual.

Section 1030.0
The relevant content in this section, “Use of the Manual,” has been moved to section 1000.0 of this manual. As a result, section 1030.0 was removed from the Bank Holding Company Supervision Manual.

Section 1060.0
This new section, “Large Financial Institution Rating System,” presents the supervisory rating system adopted in November 2018 for:

- bank holding companies with total consolidated assets of $100 billion or more;
- all non-insurance, non-commercial savings and loan holding companies with total consolidated assets of $100 billion or more; and
- U.S. intermediate holding companies of foreign banking organizations with combined U.S. assets of $50 billion or more established pursuant to the Federal Reserve’s Regulation YY.

The large financial institution (LFI) rating system represents a supervisory evaluation of whether a firm possesses sufficient financial and operational strength and resilience to maintain safe-and-sound operations and comply with laws and regulations, including those related to consumer protection, through a range of conditions. The LFI rating system is composed of the following three components: (1) Capital Planning and Positions; (2) Liquidity Risk Management and Positions; and (3) Governance and Controls.

Section 1062.0
This new section, “RFI Rating System,” primarily clarifies which supervisory rating system applies to holding companies with total consolidated assets less than $100 billion. In 2018, the Board adopted the LFI rating system for bank holding companies and non-insurance and non-commercial savings and loan holding companies (SLHCs) with total consolidated assets of $100 billion or more (see section 1060.0). Also in 2018, the Board adopted the RFI rating system for non-insurance and non-commercial SLHCs with total consolidated assets less than $100 billion. See 83 Fed. Reg. 56,081 (November 7, 2018). This section notes all of the bank holding companies and savings and loan holding companies that are subject to the RFI rating system. The elements of the RFI rating system and the ratings’ definitions have not changed. The majority of the content in this section, was previously in section 4070, “Bank Holding Company Rating System.” See also 69 Fed. Reg. 70,444 (December 6, 2004). However, the RFI rating system guidance was revised to provide
current references to regulations and guidance. The manual references have also been revised. See SR letter 19-4/CA letter 19-3, “Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion,” for more information.

Section 2020.7

This section was renamed from “Intercompany Transactions (Transfer of Low-Quality Loans or Other Assets)” to “Intercompany Transactions (Transfer of Low-Quality Assets).” The section was updated to provide the current definition of low-quality assets, as per the Federal Reserve Board’s Regulation W (12 CFR 223.3(v)). Outdated references were removed from the section.

Section 2090.2

This section, “Control and Ownership (BHC Formations),” was revised to reflect the Board’s August 30, 2018 (effective date) amendment of the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement (12 CFR 225, appendix C) to expand the applicability of the policy statement. The interim final rule raised the asset threshold of the policy statement from $1 billion to $3 billion in total consolidated assets. All firms covered by the policy statement must meet certain qualitative requirements, including those pertaining to non-banking activities, off-balance sheet activities, and publicly registered debt and equity. For the interim final rule, see 83 Fed. Reg. 44,195 (August 30, 2018).

Section 2100.0

This section, “International Banking Activities,” was revised to remove outdated information from year-end 2009 regarding the number of member banks, Edge Act corporations and agreement corporations operating in foreign countries and overseas areas of the United States, and entities representing foreign banking organizations operating in the United States. The section also was revised to note that in 2014, the Federal Reserve Board approved a final rule required by section 165 of the Dodd-Frank Act, which requires enhanced prudential standards for large U.S. bank holding companies. Section 165 directed the Board to strengthen supervision and regulation of foreign banking organizations. The section also includes a reference to the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA), which amended section 165 of the Dodd-Frank Act.

Section 2170.0

This section, “Purchase and Sale of Loans Guaranteed by the U.S. Government,” has been removed from the manual. The contents of the section were based on a Federal Financial Institutions Examination Council (FFIEC) policy statement from 1985 on supervising banking organizations that participate in the purchase and sale of loans guaranteed by the U.S. government. The 1985 FFIEC policy statement was rescinded in 1997. See 62 Fed. Reg. 16,158 (April 4, 1997) for more information.

Section 2178.0

This section, “Support of Bank-Affiliated Investment Funds,” was revised to clarify that a state member bank’s management should notify and consult with the Federal Reserve prior to the bank providing material financial support to its advised funds. The section also was revised to remove a reference to the abolished Office of Thrift Supervision and to update an accounting standards reference. The inspection objectives and inspection procedures were removed from the section. Examination objectives and procedures to review banks providing financial support to advised funds are available in the “Investment-Funds Support” section of the Commercial Bank Examination Manual.

Section 4000.0 and section 4020.5

Section 4000.0, “Financial Factors (Introduction),” and section 4020.5, “Banks (Summary Analysis),” were updated to remove references to section 4070.0, which is no longer a section in the Bank Holding Company Supervision Manual.

Section 4060.8

Section 4060.8 has been significantly revised. The section was renamed from “Consolidated Risk-Based Capital—Direct-Credit Substitutes
Extended to ABCP Programs” to “Overview of Asset-Backed Commercial Paper Programs.” The section was substantially revised because the material did not reflect the current capital rules. The previous capital rules permitted banking organizations with qualifying internal risk-rating systems to use those systems to apply the internal-ratings approach to their un-rated direct-credit substitutes extended to asset-backed commercial paper programs that they sponsored by mapping internal risk ratings to external rating equivalents. The revised capital rules (78 Fed. Reg. 62,018 (October 11, 2013)) replaced references to credit ratings with new measures of creditworthiness.

Section 4069.0

Section 4069.0, “Dodd-Frank Act Company-Run Stress Testing for Banking Organizations with Total Consolidated Assets $10–50 Billion,” has been removed from the Bank Holding Company Supervision Manual. Eighteen months after the Economic Growth, Regulatory Relief, and Consumer Protection Act’s (EGRRCPA) enactment (May 24, 2018), financial companies with total consolidated assets of less than $250 billion that are not bank holding companies (BHCs) will no longer be subject to the company-run stress testing requirements in section 165(i)(2) of the Dodd-Frank Act. In contrast, on EGRRCPA’s date of enactment, BHCs under $100 billion in total consolidated assets were no longer subject to section 165(i)(2). The agencies’ regulations implementing company-run stress testing provide that the agencies may extend any deadline relating to company-run stress testing. In order to avoid unnecessary burden for depository institutions and to maintain consistency between BHCs and depository institutions, the agencies are extending the deadlines for all regulatory requirements related to company-run stress testing for depository institutions with average total consolidated assets of less than $100 billion until November 25, 2019 (at which time both statutory exemptions will be in effect). For more information, see the Inter-agency statement regarding the impact of the Economic Growth, Regulatory Relief, and Consumer Protection Act issued on July 6, 2018.

Section 4070.0

The majority of the content in this section, “Bank Holding Company Rating System,” has moved to section 1062.0, “RFI Rating System.” In addition to moving the contents to section 1062.0, the information was revised to clarify the applicability of the RFI rating system and to provide current references to regulations and guidance. The elements of the RFI rating system and the ratings’ definitions are unchanged. As a result, section 4070.0 was removed from the Bank Holding Company Supervision Manual. See section 1062.0 and SR letter 19-4/CA letter 19-3, “Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion,” for more information.

Section 6000.0

This section, the “Alphabetical Subject Index,” was removed from the Bank Holding Company Supervision Manual. Effective December 31, 2017, the Board no longer offers print versions or subscriptions for the manual, which has rendered the Alphabetical Subject Index obsolete. Manual readers can use the search function within the online version of the manual to find material.
This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the January 2017 supplement.

SUMMARY OF CHANGES

Section 2010.13

Section 2010.13, “Supervision of Subsidiaries (Establishing Accounts for Foreign Governments, Embassies, and Political Figures),” was updated to provide additional guidance, which was conveyed in a 2011 interagency advisory entitled, “Guidance on Accepting Accounts from Foreign Embassies, Consulates and Missions.” This interagency advisory provides information to financial institutions providing account services to foreign missions in a manner that fulfills the needs of those foreign governments while complying with the provisions of the Bank Secrecy Act. It advises that financial institutions are expected to demonstrate the capacity to conduct appropriate risk assessments and implement the requisite controls and oversight systems to effectively manage the risk identified in these relationships with foreign missions. The 2011 advisory also confirms that it is the financial institution’s decision to accept or reject a foreign mission account. See SR letter 11-6, “Guidance on Accepting Accounts from Foreign Embassies, Consulates and Missions.”

Section 4060.9

Section 4060.9, “Consolidated Capital Planning Processes (Payment of Dividends, Stock Redemptions, and Stock Repurchases at Bank Holding Companies),” was updated to clarify that the guidance in the section does not apply to U.S. bank holding companies or intermediate holding companies of foreign banking organizations with $50 billion or more in total consolidated assets. Capital planning guidance for the previously mentioned firms is provided in SR letter 15-18, “Federal Reserve Supervisory Assessment of Capital Planning and Positions for LISCC Firms and Large and Complex Firms” (section 4063.0.1 of this manual) and SR letter 15-19, “Federal Reserve Supervisory Assessment of Capital Planning and Positions for Large and Noncomplex Firms” (section 4065.0.1 of this manual). In addition, inactive guidance references in this section have been updated.

Section 4069.0

This section, “Dodd-Frank Act Company-Run Stress Testing for Banking Organizations with Total Consolidated Assets of $10–50 Billion,” was updated to address changes to the agencies’ rules implementing Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) company-run stress testing disclosure requirements since the issuance of SR letter 14-3, “Supervisory Guidance on Dodd-Frank Act Company-Run Stress Testing for Banking Organizations with Total Consolidated Assets of More Than $10 Billion but Less Than $50 Billion.” For more information on the changes to the Board’s stress testing rules, see 80 Fed. Reg. 75419 (December 2, 2015).

SUMMARY OF CHANGES

Section 2126.5

Section 2126.5, “Procedures for a Banking Entity to Request an Extended Transition Period for Illiquid Funds,” is a new section that provides applicable banking entities with information on the procedures for submitting a request for an extended transition period for a hedge fund or private equity fund that qualifies as an illiquid fund pursuant to section 13 of the Bank Holding Company Act of 1956 (BHC Act), also known as the Volcker rule. Under the statute, a banking entity must apply to the Board for an extended transition period for an illiquid fund regardless of the banking entity’s primary financial regulatory agency. The term “banking entity” is defined by statute to include, with limited exceptions: (i) any insured depository institution (IDI) (as defined in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813)); (ii) any company that controls an IDI (including a bank holding company (BHC), savings and loan holding company (SLHC), and any other company that controls an insured depository institution but that is not a BHC or SLHC, such as the parent company of an industrial loan company); (iii) any company that is treated as a BHC for purposes of section 8(a) of the International Banking Act of 1978 (for example, any foreign bank operating a branch or agency in the United States); and (iv) any affiliate or subsidiary of any of the foregoing (for example, a broker-dealer subsidiary of a BHC). (Refer to SR-16-18.)

Section 3140.0

This section, “Section 4(c)(8) of the BHC Act (Leasing Personal or Real Property),” has been revised to include a brief summary of a June 10, 2016, Board order (FRB Order no. 2016-07) that approved a notice by a foreign bank holding company and its foreign wholly owned subsidiary bank to engage in permissible nonbanking activities under section 4(c)(8) of the BHC Act and section 225.24 of the Board’s Regulation Y. The nonbanking activities include railcar leasing and the provision of certain railcar fleet management services pursuant to sections 225.28(b)(3) and 225.21(a)(2) of Regulation Y. The corresponding table of Laws, Regulations, Interpretations, and Orders has been amended to include the order.

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Banking Supervision and Regulation has issued since the publication of the January 2016 supplement.

SUMMARY OF CHANGES

Section 1050.2

Section 1050.2, “Guidance for the Consolidated Supervision of Regional Bank Holding Companies,” is revised (beginning at subsection 1050.2.5) to include guidance for regional banking organizations based on SR-16-4, “Relying on the Work of the Regulators of Subsidiary Insured Depository Institution(s) of Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $50 Billion.” The letter was issued by the Federal Reserve to explain its expectations for its examiners’ reliance on the work of the regulators of insured depository institution subsidiaries of these holding companies. The letter presents a tailored supervisory approach for regional banking organizations, which are defined as companies with total consolidated assets of between $10 billion and $50 billion.

Section 4066.0

Section 4066.0, “Consolidated (Funding and Liquidity Risk Management),” is amended at subsection 4066.0.2 to include “Appendix B - Interagency Guidance on Funds Transfer Pricing Related to Funding and Contingent Liquidity Risks,” issued March 1, 2016. The guidance was issued to address weaknesses observed in some large financial institutions’ funds transfer pricing practices related to funding risk (including interest rate and liquidity components) and contingent liquidity risk. (Refer to SR-16-03 and to the March 1, 2016, attachment to the interagency guidance, “Illustrative Funds Transfer Pricing Methodologies.”)

Section 4070.1

Section 4070.1, “Rating...Risk Management Processes and Internal Controls of BHCs...” is partially superseded as the result of the issuance of SR-16-11, “Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion.” With the issuance of SR-16-11, SR-95-51 (section 4070.1) is applicable only to bank holding companies and state member banks having $50 billion or more in total assets.

Section 4071.0

Section 4071.0, “Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion,” is a new section that reaffirms the Federal Reserve’s long-standing supervisory approach that emphasizes the importance of prudent risk management. This section’s guidance and SR-16-11, “Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less Than $50 Billion,” outlines core risk categories and risk-management principles. This supervisory guidance reflects updates to, and partially supersedes, SR-95-51, “Rating the Adequacy of Risk Management and Internal Controls at State Member Banks and Bank Holding Companies.” The guidance in SR-16-11 provides clarifications on, and distinguishes supervisory expectations for, the roles and responsibilities of the board of directors and senior management. The risk-management expectations within this guidance are applicable to all supervised institutions with total consolidated assets of less than $50 billion, including bank holding companies, state member banks, savings and loan holding companies, and foreign banking organizations with total combined U.S. assets of less than $50 billion. The guidance also applies to insurance and commercial savings and loan holding companies with total consolidated assets of less than $50 billion.
Substantive changes that are included in SR-16-11 (when compared to SR-95-51) are:

1. Certain major risk categories are modified.
   a. Compliance risk is a separate core risk;
   b. Reputation risk is not considered a core risk;
   c. Risk definitions that are revised:
      i. Operational risk is the risk resulting from inadequate or failed internal processes, people, and systems or from external events.
      ii. Market risk includes commodity prices.
      iii. Legal risk includes legal sanctions.

2. The responsibilities of the board of directors versus senior management are separated across all risk-management components.
   a. Senior management is responsible for risk identification.
   b. Senior management is responsible for the establishment and maintenance of effective information systems.
   c. Both the board of directors and senior management are responsible for an effective system of internal controls.

3. Additional risk-management concepts are included:
   a. Information systems should consist of a consolidated and integrated view of risks.
   b. The board of directors should approve significant policies to establish risk tolerances for the institution’s activities.

Section 5000.0

Section 5000.0, “BHC Inspection Program (General),” is revised at subsection 5000.0.4.3.05 to provide additional guidance on the supervisory approach to be used for holding companies with total consolidated assets of $10 billion or less. The guidance pertains to relying on the work of insured depository institution (IDI) regulators for community banking organizations. Examiners are to rely substantially on the findings of the IDI regulator in evaluating the overall condition of the holding company. Reserve Bank reviews are to evaluate the condition, performance, and prospects of a subsidiary IDI based on the conclusion of the IDI regulator and are not to duplicate the IDI regulator’s work. (Refer to SR-16-4.)

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Banking Supervision and Regulation has issued since the publication of the July 2015 supplement.

SUMMARY OF CHANGES

Section 2060.1

Section 2060.1, “Audit (Management Information Systems),” is revised (beginning at subsection 2060.1.8) to include an Overview and Appendix A—“Interagency Advisory on External Audits of Internationally Active U.S. Financial Institutions.” The federal banking agencies (the agencies) issued the advisory to communicate their support for the principles and expectations that are set forth in Parts 1 and 2, respectively, of the Basle Committee on Banking Supervision (the BCBS) March 2014 guidance on “External audits of banks.”

The agencies acknowledge that the existing standards and practices in the United States are broadly consistent with the BCBS external audit guidance. Because of the legal and regulatory framework in the United States, certain differences exist between the standards and practices followed in the United States and the principles and expectations in the BCBS external audit guidance. These differences are addressed in this advisory, which also describes the agencies’ supervisory expectations for U.S. financial institutions within the scope of the advisory for incorporating the principles and expectations in the BCBS external audit guidance into their practices. The advisory also outlines examiner responsibilities related to these supervisory expectations.

The BCBS external audit guidance is intended for “internationally active banks,” which, the agencies defined in the advisory (Refer to SR-16-2 and its attachment.)

Section 2093.0

Section 2093.0, “Control and Ownership (Shareholder Protection Arrangements)” is a new section that discusses Federal Reserve supervisory concerns and issues regarding the establishment of arrangements by some bank and savings and loan holding companies (collectively, “holding companies”) to protect the financial investments made by shareholders (collectively, “shareholder protection arrangements”). There has been an increase in interest by some holding companies to benefit certain shareholders, enhance short-term investor returns, and/or provide a distinct disincentive for investors to acquire or increase ownership in a holding company’s common stock and other capital instruments. Such shareholder protection arrangements raise concerns because they could have negative implications on a holding company’s capital or financial position, limit a holding company’s financial flexibility and capital raising capacity, or otherwise impair a holding company’s ability to raise additional capital in the future. These arrangements impede the ability of a holding company to serve as a source of strength to its insured depository institutions subsidiaries and are considered unsafe and unsound. A holding company, regardless of its asset size, should be aware that the Federal Reserve may object to a shareholder protection arrangement based on the facts and circumstances and the features of the particular arrangement. Examples of shareholder protection arrangements that have raised supervisory issues are discussed. (Refer to SR-15-15.)

Section 4061.0

Section 4061.0, “Consolidated Capital (Capital Planning),” is revised for amendments to Regulation Y, 12 C.F.R. 225.8 “Capital Planning.” The rule was amended to limit the ability of a bank holding company with $50 billion or more in total consolidated assets to make capital distributions under the rule if the bank holding company’s net capital issuances are less than the amount indicated in its capital plan. The tier 1 common capital ratio requirement was removed, and certain mandatory capital action assumptions were modified. (Refer to 79 Fed. Reg. 64040 (October 27, 2014) and 80 Fed. Reg. 75424 (December 2, 2015)).
Section 4060.7

Section 4060.7, Consolidated Capital (Assessing Capital Adequacy and Risk at Large Banking Organizations and Others with Complex Risk Profiles) is deleted. The section was derived from SR-99-18, superseded by SR-15-18 and SR-15-19, both issued on December 18, 2015.

Section 4063.0

Section 4063.0, “Federal Reserve Supervisory Assessment of Capital Planning and Positions for LISCC Firms and Large and Complex Firms,” is a new section consisting of Federal Reserve guidance that was issued to explain its expectations for capital planning at Large Institution Supervision Coordinating Committee (LISCC) firms and large and complex bank holding companies and intermediate holding companies of foreign banking organizations. This guidance is consistent with the broad supervisory expectations set forth in SR-12-17/CA-12-14, “Consolidated Supervision Framework for Large Financial Institutions.” This guidance applies to U.S. bank holding companies and intermediate holding companies of foreign banking organizations that have total consolidated assets of at least $50 billion but less than $250 billion, have consolidated total on-balance sheet foreign exposure of less than $10 billion, and are not otherwise subject to the Federal Reserve’s LISIC framework (referred to as a “Large and Noncomplex Firm”). Refer to SR-15-19 and its attachment.

Section 4080.0

Section 4080.0, “Federal Reserve System Bank Holding Company Surveillance Program,” is revised to discuss the Federal Reserve’s revision of its safety-and-soundness surveillance program (the Surveillance Program) for top-tier bank holding companies and savings and loan holding companies (HCs). The revised program includes a new early warning model for HCs, the “Holding Company Statistical Assessment of Bank Risk” or “HC-SABR” model. It deploys risk identification algorithms (“Outlier Metrics”) and other surveillance products to process financial and economic data and generate forward-looking, actionable intelligence on HCs that will provide examiners and other supervisory staff with early signals by which to monitor risk-taking. Results are used to assess exposures, outlooks, and possible compliance shortcomings, with the goal of calibrating supervisory resources to risk. The Surveillance Program’s objectives, structure, and maintenance are discussed along with additional information on the metrics, procedures, and write-up requirements used to monitor HCs. The program also distributes surveillance results across the Federal Reserve’s supervision function. (Refer to SR-15-16 and its attachment.)

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Banking Supervision and Regulation has issued since the publication of the January 2015 supplement.

SUMMARY OF CHANGES

Section 2010.2

Section 2010.2, “Supervision of Subsidiaries (Loan Administration and Lending Standards),” is revised (subsection 2010.2.4.1.9) to remove a footnote reference to SR letter 02-16, “Interagency Questions and Answers on Capital Treatment of Recourse, Direct Credit Substitutes and Residual Interests in Asset Securitizations,” which is superseded by SR letter 15-6, “Interagency Frequently Asked Questions (FAQs) on the Regulatory Capital Rule.”

Section 2090.2

Section 2090.2, “Control and Ownership (BHC Formations),” has been revised to include the Board’s April 9, 2015, approval of its Small Bank Holding Company and Savings and Loan Holding Company Policy Statement (effective May 15, 2015). This policy statement expands the applicability of the former policy statement to include savings and loan holding companies (SLHCs). The policy applies to those bank holding companies (BHCs) and certain SLHCs that have consolidated assets of less than $1 billion. Previously, the policy only applied to BHCs having consolidated assets of less than $500 million.

Section 2128.03

Section 2128.03, “Credit-Supported and Asset-Backed Commercial Paper (Risk Management and Internal Controls) is revised (subsection 2128.03.3.3) to delete a footnote reference to SR letter 05-13 and its attachment, “Interagency Guidance on the Eligibility of Asset-Backed Commercial Paper Program Liquidity Facilities and the Resulting Risk-Based Capital Treatment,” which is superseded by SR letter 15-6 “Interagency Frequently Asked Questions on the Regulatory Capital Rule.”

Section 2500.0

This section, “Supervision of Savings and Loan Holding Companies” was revised to include a reference to SR letter 14-9, “Incorporation of Federal Reserve Policies into the Savings and Loan Holding Company Supervision Program,” which provides a listing of supervisory guidance documents (SR letters) that were issued prior to July 21, 2011. The Federal Reserve has determined that these SR letters are applicable to savings and loan holding companies.

Section 3070.3

This section, “Section 4(c)(8) of the BHC Act (Non-Traditional Mortgages–Associated Risks),” is revised to delete a footnote reference to SR letter 02-16, “Interagency Questions and Answers on Capital Treatment of Recourse, Direct Credit Substitutes, and Residual Interests in Asset Securitizations,” and its attachment, which is superseded by SR letter 15-6 “Interagency Frequently Asked Questions on the Regulatory Capital Rule.” Refer to subsection 3070.3.2.5. “Secondary Market Activity.”

Section 3111.0

This section, “Section 4(c)(8) of the BHC Act (Acquisition of Savings Associations)” includes (subsection 3111.0.3) reference corrections to listed Board orders that authorized the acquisition of savings associations.

SUMMARY OF CHANGES

**Sections 1050.0, 1050.1, 1050.2, 3900.0, and 4070.0**

These sections have been revised to refer to SR-12-17/CA-12/14, “Consolidated Supervision Framework for Large Financial Institutions,” which superseded SR-99-15, “Risk-Focused Supervision of Large Complex Banking Organizations.”

**Section 2010.2**

Section 2010.2, “Supervision of Subsidiaries (Loan Administration and Lending Standards),” is revised to include a new subsection 2010.2.6, “Guidance on Private Student Loans with Graduated Payment Terms of Origination.” The guidance provides principles that financial institutions should consider in their policies and procedures for originating these loans. Financial institutions should prudently underwrite their private student loans in a manner consistent with safe and sound lending practices. Financial institutions should also comply with all applicable federal and state consumer laws and regulations, including providing disclosures that clearly communicate the timing and the amount of payments to facilitate borrower understanding of loan terms and features. Refer to SR-15-2/CA-15-1.

**Section 2124.0**

This section was revised to include a footnote reference to SR-14-4, “Examiner Loan Sampling Requirements for State Member Bank and Credit Extending Nonbank Subsidiaries of Banking Organizations with $10–$50 Billion in Total Consolidated Assets.” The guidance in SR-14-4 clarifies the expectations for the assessment of material retail credit portfolios for these institutions. The guidance in SR-14-4 superseded SR-94-13, “Loan Review Requirements for On-Site Examinations,” but only for these banking organizations. (For the SR-14-4 guidance, refer to subsection 2010.2.11, appendix I.)

**Section 2124.01**

This section, “Risk-Focused Supervision for Large Complex Banking Organizations,” was revised to (1) include 10 additional risk-focused SR letters to the listing in appendix A and (2) remove two inactive letters from this list.

**Section 3110.0**

This section, “Section 4 (c)(8) of the BHC Act (Industrial Banking)” was revised to amplify the beginning discussion and to include statutory and regulatory citations and a current Board order reference within section 3110.0.4.

**Section 3111.0**

This section, “Section 4(c)(8) of the BHC Act (Acquisition of Savings Associations)” was revised to include a Dodd-Frank Act provision pertaining to a bank holding company’s application to acquire an insured depository institution when it is located in a home state other than the home state of the bank holding company. See subsection 3111.0.2.5. In addition, subsection 3111.0.3 lists additional Board orders that have authorized the acquisition of savings associations.

**Section 4069.0**

This new section, “Dodd-Frank Act Company Run Stress Testing for Banking Organizations with Total Consolidated Assets of $10–50 Billion,” provides guidance on the supervisory expectations for the Dodd-Frank Wall Street Reform and Consumer Protection Act stress test practices for these companies and offers additional details about methodologies that should be employed. Refer to SR-14-3 and the 2014 interagency “Supervisory Guidance on Implementing Dodd-Frank Act Company-Run Stress Tests for Banking Organizations with Total Consolidated Assets of More Than $10 Billion but Less than $50 Billion” (see 79 Fed. Reg. 14153, March 13, 2014).

</table>
This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Banking Supervision and Regulation has issued since the publication of the January 2014 supplement.

SUMMARY OF CHANGES

Section 2010.2

The section, “Supervision of Subsidiaries (Loan Administration and Lending Standards),” is revised to include Appendix I — “Examiner Loan Sampling Requirements For Credit-Extending Nonbank Subsidiaries of BHCs with $10-50 Billion in Total Consolidated Assets.” The subsection sets forth the loan sampling expectations that apply to the Federal Reserve’s inspection of credit-extending nonbank subsidiaries of bank holding companies (BHCs). Examiners will also have the flexibility, depending upon the structure and size of a nonbank subsidiary, to utilize the guidance so that it’s applicable to a smaller BHC with credit-extending nonbank subsidiaries having total assets below $10 billion. Refer to SR-14-4 and its attachment.

Section 2020.1

This section, “Intercompany Transactions (Transactions Between Member Banks and Their Affiliates — Sections 23A and 23B of the Federal Reserve Act)” is revised to discuss statutory amendments to these sections of the Federal Reserve Act resulting from the Dodd-Frank Act. One amendment involved the definition of an “affiliate,” with regard to an investment fund when an insured depository institution (IDI) or one of its affiliates is an investment adviser. Also, the definition of “covered transactions” was revised to include the credit exposure resulting for derivative and securities lending and borrowing transactions between the IDI and its affiliates. In addition, the Dodd-Frank Act removed the quantitative 10 percent exemption limit between financial subsidiaries of an IDI. The retained earnings of a financial subsidiary are to be included as part of the IDI’s investment. The amendments were effective on July 21, 2012. (See sections 608(a)(1)(A), 608(a)(1)(B), and 609(a) of the Dodd-Frank Act.) A few additional or revised inspection objectives and procedures are included.

Section 2070.0

This revised section, “Taxes (Consolidated Tax Filing)” includes a June 13, 2014, Interagency Addendum to the 1998 “Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure” (Addendum). The federal banking agencies (Agencies) announced the Addendum’s issuance to ensure that insured depository institutions (IDIs) in a consolidated group maintain an appropriate relationship regarding the payment of taxes and treatment of tax refunds. The Addendum is to ensure that tax allocation agreements expressly acknowledge an agency relationship between a holding company2 and its IDI subsidiary to protect the IDI’s ownership rights in tax refunds. State member banks and holding companies should implement the guidance as soon as reasonably possible, which the Agencies expect would not be later than October 31, 2014. The Addendum clarifies and supplements but does not replace the 1998 Interagency Policy Statement. (Refer to SR-14-6 and its attachment.)

Section 2124.05

This section, “Consolidated Supervision Framework for Large Financial Institutions” is revised to include Appendix B — “Managing Foreign Exchange Settlement Risks for Physically Settled Securities.” (See SR-13-24 and its February 2013 attachment.) This guidance sets forth seven principles or “guidelines” for managing foreign exchange transaction settlement risks. The Federal Reserve supports these principles as part of its continuing effort to promote the global financial system’s ability to withstand severe market disruptions. Institutions covered by SR-13-24 should apply the seven guidelines to their foreign exchange activities with the stated clarifications regarding application of the guidance in the United States.

---

2. For the purpose of this guidance, the term, “holding company” refers to a bank holding company or a savings and loan holding company.
Section 3070.0

This revised section, “Section 4(c)(8) of the BHC Act (Mortgage Banking),” includes a brief discussion of the December 13, 2013, “Inter-agency Statement on Supervisory Approach for Qualified and Non-Qualified Mortgage Loans” that was issued to clarify the safety-and-soundness expectations and Community Reinvestment Act (CRA) considerations for regulated institutions engaged in residential mortgage lending. The section references the Consumer Financial Protection Bureau’s (CFPB) Ability-to-Repay and Qualified Mortgage Standards Rule that was issued on January 10, 2013 (effective on January 10, 2014). Institutions may issue qualified mortgages or non-qualified mortgages, based on their business strategies and risk appetites. Refer to SR-13-20 and its attachment.

Section 4080.1

This section, “Surveillance Program for Small Holding Companies,” is modified to reflect changes to the small holding company surveillance program. The surveillance program for holding companies under $1 billion in total consolidated assets includes both BHCs and SLHCs. (Refer to SR-13-21.)

Section 5000.0

This section, “BHC Inspection Program (General)” is revised to include supervisory guidance on the periodic on- and off-site inspections that assess the safety and soundness of supervised BHCs and SLHCs (referred to as holding companies). The guidance updates the minimum inspection frequency and scope requirements for supervised holding companies with total consolidated assets of $10 billion or less to

- conform inspection frequency and scope requirements for SLHCs with total consolidated assets of $10 billion or less to those applicable to BHCs of the same size;
- clarify the scoping requirements for targeted inspections conducted at BHCs and SLHCs with total consolidated assets between $1 billion and $10 billion; and
- modify the requirement for targeted inspections for “3,” “4,” and “5”-rated BHCs with total consolidated assets between $1 billion and $10 billion.

Except for the addition of SLHCs, the inspection scope and frequency expectations for holding companies with less than $1 billion in total consolidated assets have not changed. These frequency and scope requirements vary depending on whether a holding company has been designated “complex,” with more complicated holding companies subject to more frequent and in-depth review. If needed for supervisory purposes, Reserve Banks may inspect a holding company with greater frequency and scope than described in this guidance. (Refer to SR-13-21 and its attachment.)

</table>
This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Banking Supervision and Regulation has issued since the publication of the July 2013 supplement.

**SUMMARY OF CHANGES**

**Section 2010.2**

The section, “Supervision of Subsidiaries (Loan Administration and Lending Standards),” is revised to supplement the March 23, 2013, “Interagency Guidance on Leveraged Lending” with inspection objectives, inspection procedures, and an internal control questionnaire for leveraged lending. The section provides guidance about the risk-management expectations for leveraged loans as well as examiner guidance for the review of such loans. Refer to SR-13-3 and its attachment.

**Section 2020.1**

This section, “Intercompany Transactions (Transactions Between Member Banks and Their Affiliates—Sections 23A and 23B of the Federal Reserve Act)” is revised to indicate that violations of sections 23A and 23B of the Federal Reserve Act or Regulation W should be brought to management’s attention. They may be discussed in the inspection report as “Other Matters” and referred to the bank’s primary supervisor. In this regard, there are some revised inspection objectives and inspection procedures.

**Section 2060.05**

This section consists of the 2003 interagency guidance, “Policy Statement on the Internal Audit Function and its Outsourcing.” The section includes new and revised inspection objectives and inspection procedures for both the 2003 guidance and the January 23, 2013, Federal Reserve policy statement that supplements the 2003 interagency guidance. Refer to SR-03-5 and SR 13-1/CA 13-1 and section 2060.07.

**Section 2124.05**

This section, “Consolidated Supervision Framework for Large Financial Institutions,” includes an appendix, the December 20, 2013, guidance of SR-13-23, “Risk Transfer Considerations When Assessing Capital Adequacy—Supplemental Guidance on Consolidated Supervision Framework for Large Financial Institutions” (Refer to SR-12-17/CA-12-14). The additional guidance centers on how certain risk transfer transactions affect assessments of capital adequacy at large financial institutions. It provides clarification on supervisory expectations when assessing a firm’s capital adequacy in certain circumstances when the risk-based capital framework may not fully capture the residual risks of a transaction.

**Section 2124.3**

This new section, “Managing Outsourcing Risk” consists of the December 5, 2013, Federal Reserve “Guidance on Managing Outsourcing Risk” that was issued to assist financial institutions in understanding and managing the risks associated with outsourcing a bank activity to a service provider to perform that activity. The guidance addresses the characteristics, governance, and operational effectiveness of a financial institution’s service provider risk-management program for outsourced activities beyond traditional core bank processing and information technology services. The guidance applies to all service provider relationships regardless of the type of activity that is outsourced. See SR-13-19/CA-13-21 and its attachment.

**Section 5010.15**

This section, “Procedures for Inspection Report Preparation—Violations” is revised to provide clarifying instructions on the reporting of violations or apparent violations in the inspection report. The “Violations” section or page should include all BHC and nonbank subsidiary viola-

---

1. For purposes of this guidance, “financial institutions” refers to state member banks, bank and savings and loan holding companies (including their nonbank subsidiaries), and U.S. operations of foreign banking organizations.
tions of the Federal Reserve Act (the act), Regulation Y, and other applicable statutes and regulations. Section 23A and 23B violations of the act should only be included if they have been cited by the primary regulator of the subsidiary banks. If the bank’s primary regulator has not cited a violation of Section 23A and 23B of the act, apparent violations should be noted in the “Other Matters” section or page of the inspection report.

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Banking Supervision and Regulation has issued since the publication of the January 2013 supplement.

SUMMARY OF CHANGES

Section 2010.2
The “Supervision of Subsidiaries (Loan Administration and Lending Standards)” section is revised to include the 2013 leveraged lending guidance, which replaced the 2001 Interagency Guidance on Leveraged Financing. This guidance describes expectations for the sound risk management of leveraged lending activities, including why institutions need to develop

- Transactions structured to reflect a sound business premise, an appropriate capital structure, and reasonable cash flow and balance sheet leverage;
- A definition of leveraged lending that facilitates consistent application across all business lines;
- Well-defined underwriting standards that, among other things, define acceptable leverage levels and describe amortization expectations for senior and subordinate debt;
- A credit limit and concentration framework consistent with the institution’s risk appetite;
- Sound management information systems that enable management to identify, aggregate, and monitor leveraged exposures and comply with policy across all business lines;
- Strong pipeline management policies and procedures that, among other things, provide for real-time information on exposures and limits, and exceptions to the timing of expected distributions and approved hold levels; and
- Guidelines for conducting periodic portfolio and pipeline stress tests to quantify the potential impact of economic and market conditions on the institution’s asset quality, earnings, liquidity, and capital.

This guidance should be consistent with the size and risk profile of an institution’s leveraged activities relative to its assets, earnings, liquidity, and capital. Institutions that originate or sponsor leveraged transactions should consider the entire guidance. See SR-13-3 and its attachment.

Section 2060.07
This new section, “Supplemental Policy Statement on the Internal Audit Function and its Outsourcing,” consists of the January 23, 2013, Federal Reserve policy statement that supplements the 2003 interagency guidance, which is in section 2060.05 of this manual. (See SR-13-1/CA-13-1.)

Section 2500.0
This section on “Supervision of Savings and Loan Holding Companies” was revised to clarify the manner in which Federal Reserve examiners communicate supervisory findings to banking organizations and institutions supervised by the Federal Reserve. It discusses the examiner’s use of the standardized terms, “Matters Requiring Immediate Attention” and “Matters Requiring Attention.” (Refer to SR-13-13/CA-13-10 and its attachment.)

Section 5000.0
This section, “BHC Inspection Program—General,” is updated to discuss the Federal Reserve’s adoption of a flexible, letter-format report in lieu of the standard, longer-form report. The report communicates the findings of on-site safety-and-soundness inspections of community banking organizations1 that result in composite supervisory ratings of “4” or “5.” Examiners may use the letter-format report provided that all mandatory and any applicable optional information is included in the report. (See SR-13-10.)

The section also clarifies the manner in which Federal Reserve examiners communicate supervisory findings to banking organizations and institutions supervised by the Federal Reserve. The guidance discusses the Federal Reserve’s use of standard language for examination/inspection findings with regard to “Matters Requiring Immediate Attention (MRAs)” and “Matters Requiring Attention (MRAs),” reaffirming their definitions, includ-

1. “Community banking organizations include state member banks, bank holding companies, and savings and loan holding companies with assets of $10 billion or less.
ing their use by safety-and-soundness and consumer compliance examiners when communicating supervisory findings to banking organizations. The use of the term, “Observations” is discontinued. (Refer to SR-13-13/CA-13-10 and its attachment.)

The section, in addition, is revised to further clarify the 60-calendar-days’ completion standard for examination and inspection reports for community banking organizations, clarifying the “close date” for examinations or inspections. (See SR-13-14.)

Section 5010.1

The “Procedures for Inspection Report Preparation (General Instructions...)” section has been revised to include a new subsection that applies to community holding companies rated composite “4” or “5,” for which the Federal Reserve has adopted a flexible, letter-format report in lieu of the standard, longer-form report. (Refer to SR-13-10.)

Section 5010.4

This section, “Procedures for Inspection Report Preparation (Core Page 1-Examiner’s Comments; Matters Requiring Special Board Attention),” was amended to incorporate a reference to the guidance found in SR-13-13/CA-13-10, “Communication of Supervisory Findings,” which clarified the Federal Reserve’s use of standardized terminology and definitions for MRIAs and MRA’s.

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Banking Supervision and Regulation has issued since the publication of the July 2012 supplement.

SUMMARY OF CHANGES

Section 2010.0

The “Supervision of Subsidiaries” section includes a revision of the Federal Deposit Insurance Act (FDIA) to require bank holding companies (BHCs) and savings and loan holding companies to act as a source of strength to their depository institution subsidiaries. See section 38A of the FDIA and section 616(d) of the Dodd-Frank Act.

Section 2050.0

This section on “Extensions of Credit to BHC Officials” was revised for amendments to the Federal Reserve Act (FRA) regarding insider lending. The definition of “extension of credit” was revised to include an insured depository institution (IDI)’s credit exposure to a person arising from a derivatives transaction, repurchase agreement, reverse repurchase agreement, securities lending transaction, or securities borrowing transaction. See the FRA, section 22(h)(9)(D)(i), as amended by the Dodd-Frank Act, section 614(a).

The FDIA was amended to prohibit the purchase or sale of assets between an IDI and an executive officer, director, or principal shareholder of the IDI and any related interest of such person unless the transaction is on market terms. In addition, if the asset purchase or sale represents more than 10 percent of the IDI’s capital stock and surplus, the transaction must be approved by the majority of the board of directors of the IDI who do not have an interest in the transaction. See the Dodd-Frank Act, section 615(1).

Section 2110.0

This section is updated for the various types of formal supervisory actions—corrective actions (i.e., cease and desist orders (including placing limits on the activities or functions of an IDI or institution-affiliated party)), written agreements, suspensions (also removals and prohibitions), nonbank activity terminations, violations of orders and written agreements, civil-money penalties (revised penalty amounts), etc.

The cease-and-desist order discussion has been expanded to include what an order may require from a BHC or person, and it provides a discussion of the nature of affirmative actions by a BHC or person that may need to be taken to restore a BHC to a safe and sound condition. The prohibition and removal discussion has been expanded to detail what entities or individuals that the Board may take action against. It also discusses the prohibition against any individual that has been convicted of a crime involving dishonesty, breach of trust, or money laundering from serving, participating in, or owning or controlling a BHC, bank or nonbank subsidiary, or any affiliate thereof without the prior approval of the Federal Deposit Insurance Corporation (FDIC), or in certain cases, the Board of Governors of the Federal Reserve System. The discussion on indemnifications and payments includes a detailed discussion of the provisions of section 18(k) of the FDIA and the FDIC’s regulation on indemnification agreements and payments. The definition of a prohibited indemnification payment is included.

Section 2124.05

Effective January 2013, this new section provides the “Consolidated Supervision Framework for Large Financial Institutions,” which supersedes the guidance found in inactive SR-99-15, “Risk-Focused Supervision of Large Complex Banking Organizations” (former manual section 2124.04). On December 17, 2012, the Federal Reserve set forth a new framework for the consolidated supervision of large financial institutions. The framework strengthens traditional microprudential supervision and regulation to enhance the safety and soundness of individual firms. In addition, it incorporates macroprudential considerations to reduce poten-
tial threats to the stability of the financial system and to provide insights into financial market trends. The consolidated supervision framework has two primary objectives:

- **Enhancing resiliency of a firm to lower the probability of its failure or inability to serve as a financial intermediary.**

  Each firm is expected to ensure that the consolidated organization (or the combined U.S. operations in the case of foreign banking organizations) and its core business lines can survive under a broad range of internal or external stresses. This requires financial resilience by providing sufficient capital and liquidity, and operational resilience to maintain effective corporate governance, risk management, and recovery planning.

- **Reducing the impact on the financial system and the broader economy in the event of a firm’s failure or material weakness.**

  Each firm is expected to ensure the sustainability of its critical operations and banking offices\(^1\) under a broad range of internal or external stresses. This requires, among other things, effective resolution planning that addresses the complexity and the interconnectivity of the firm’s operations.

  The framework is being implemented in a multi-stage approach. (See SR-12-17 / CA-12-14)

---

**Section 2126.1**

This section, “Investment Securities and End-User Derivatives Activities,” was amended to state that depository institutions can no longer rely solely on reports from external credit reporting agencies when making a determination as to the quality and permissibility of an investment in accordance with the Office of the Controller’s (OCC’s) Rule (12 C.F.R. 1).

---

**Section 2126.2**

This is a new section on “Investing in Securities Without Reliance on Ratings of Nationally Recognized Statistical Rating Organizations” (NRSROs). State member banks were advised on November 15, 2012, that, effective January 1, 2013, they may no longer rely solely on credit ratings issued by NRSROs (i.e., external credit ratings) to determine whether a particular security is an “investment security” that is permissible for investment. Under the regulations of the OCC’s rule (12 C.F.R. 1), securities may qualify for investment by national banks only if they are determined by the bank to be “investment grade” and not predominantly speculative in nature.\(^2\) (See SR-12-15 and its attachment, “OCC Guidance on Due Diligence Requirements in Determining Whether Securities are Eligible for Investment.”) Institutions may perform due diligence by maintaining and updating internal credit-rating reports and assessments, which can be supplemented by reports from external credit-rating services.

---

1. “Banking offices” are defined as U.S. depository institution subsidiaries, as well as the U.S. branches and agencies of foreign banking organizations.

2. Under the FRA (12 USC 335) and the Federal Reserve’s Regulation H (12 C.F.R. 208.21), state member banks are subject to the same limitations and conditions with respect to the purchasing, selling, underwriting, and holding of investment securities and stock as national banks under the National Banking Act (12 U.S.C. 24 (Seventh)). When investing in securities, state member banks must comply with the provisions of the National Banking Act and the OCC regulations in 12 C.F.R. 1. In addition to this federal requirement, a state member bank may purchase, sell, underwrite, or hold securities and stock only to the extent permitted under applicable state law.

About this Manual

PURPOSE AND THE ROLE OF GUIDANCE

The Bank Holding Company Supervision Manual is prepared by Federal Reserve supervision personnel to provide guidance to examiners as they conduct inspections of bank holding companies (BHCs) and their nonbank subsidiaries as well as savings and loan holding companies (SLHCs). The manual is a compilation of formalized procedures and Board supervisory policies that examiners and supervision personnel should follow for the supervision of these organizations. It also discusses the relevant statutes, regulations, interpretations, and orders that pertain to holding company supervision. The manual enhances the staff’s ability to implement the Board’s inspection, supervisory, and monitoring activities, which is integral to the Federal Reserve’s supervision program for organizations operating under a holding company structure. This manual is periodically updated on the Board’s public website to reflect the latest supervisory policy and procedures and to address changes in industry risk-management practices.

The Federal Reserve and the other banking and regulatory agencies issue various types of supervisory guidance, including interagency statements, advisories, bulletins, policy statements, questions and answers, and frequently asked questions, to their respective supervised institutions. A statute or regulation has the force and effect of law. Unlike a law or regulation, supervisory guidance does not have the force and effect of law, and the agencies do not take enforcement actions based on supervisory guidance. Rather, supervisory guidance outlines the agencies’ supervisory expectations or priorities and articulates the agencies’ general views regarding appropriate practices for a given subject area. Supervisory guidance often provides examples of practices that the agencies generally consider consistent with safety-and-soundness standards or other applicable laws and regulations, including those designed to protect consumers. See SR letter 18-5/CA letter 18-7, “Interagency Statement Clarifying Role of Supervisory Guidance.”

This manual is designed to provide guidance to examination and supervision personnel. It should not be considered a legal reference document. Questions concerning the applicability of and compliance with federal laws and regulations should be referred to appropriate legal counsel.

USE OF THE MANUAL

The Bank Holding Company Supervision Manual is presented in “sections” which have been grouped together into “parts” that have in common a central theme pertaining to holding company supervision. For example, Part I provides an overview of the supervisory process of holding companies. Part II is composed of sections that discuss topics of special interest for supervisory review. Part III is composed of sections that discuss the various exemptive provisions to the nonbank prohibitions of the BHC Act. Part IV presents sections on the preparation of a financial analysis.

The content of the sections within parts II–IV are grouped into four broad categories: (1) Main Section Content (2) Inspection Objectives, (3) Inspection Procedures, and (4) Laws, Regulations, Interpretations, and Orders. Not all of the categories are presented in each section. This manual uses a numbering system for organizing and referencing content. Content in subsections with headings having “tenths” or one decimal point generally provide higher-level or foundational information. Content under subheadings with several decimal points convey more detailed information.

Where a particular topic is exclusively financially related and does not involve legal considerations, the subsection on “Laws, Regulations,” may be omitted. These procedures were designed for a full-scope, comprehensive inspection. It is recognized that in some instances the procedures may not apply in their entirety to all holding companies. Examiners should exercise supervisory judgment in completing procedures depending upon the characteristics of the organization under inspection.

2. Government agencies issue regulations that generally have the force and effect of law. Such regulations generally take effect only after the agency proposes the regulation to the public and responds to comments on the proposal in a final rulemaking document.
TYPES OF HOLDING COMPANIES

Bank Holding Companies (Including Financial Holding Companies)

Banks are often owned or controlled by another company, called a bank holding company (BHC). The Federal Reserve has supervisory and regulatory authority for all BHCs, regardless of whether subsidiary banks of the holding company are national banks, state member banks, or state nonmember banks. It also has supervisory authority over any nonbank subsidiary of a BHC that is not functionally regulated by another federal or state supervisor, such as a leasing subsidiary.

The Gramm-Leach-Bliley Act of 1999 permits BHCs that meet certain criteria to become financial holding companies (FHCs), which are also under Federal Reserve’s supervisory and regulatory authority. FHCs engage in an expanded list of activities including securities underwriting and dealing, merchant banking, insurance underwriting, and the sale of insurance. When an FHC engages in these activities, the Federal Reserve coordinates its supervisory efforts with those of the subsidiary’s functional regulator—for example, the U.S. Securities and Exchange Commission in the case of a broker-dealer, and state insurance regulators in the case of an insurance company.

Savings and Loan Holding Companies

Savings and loan holding companies (SLHCs) directly or indirectly control a savings association. Federal savings associations (those with federal charters) are supervised by the Office of the Comptroller of the Currency, while state-chartered savings associations are generally supervised by the Federal Deposit Insurance Corporation and their chartering state. Besides owning federal and/or state savings associations, an SLHC that meets capital and management requirements and elects to be treated as a financial holding company may also engage in activities as if it were a financial holding company that controls a bank.

Historically, SLHCs were regulated by other agencies: at first, the Federal Home Loan Bank Board, and more recently, by the Office of Thrift Supervision (OTS). In 2010, the Dodd-Frank Wall Street Reform and Consumer Protection Act eliminated the OTS and transferred supervisory and regulatory responsibilities for SLHCs to the Federal Reserve. As a result, the Federal Reserve now supervises and regulates all SLHCs regardless of the charters of the subsidiary savings associations. The Federal Reserve coordinates its supervisory efforts with the appropriate functional regulator(s) for a SLHC.

WHAT’S NEW IN THIS REVISED SECTION

Effective July 2012, this section has been revised to discuss the current authority for the Federal Reserve (FR) to conduct BHC inspections (examinations) under section 5(c) of the Bank Holding Company Act of 1956 (12 U.S.C. 1844(c)) and also 12 U.S.C. 5361(a)–(c). The section also is revised to include provisions of the Dodd-Frank Wall Street Reform and Consumer Protection Act (section 604(c)(2)), which removed the enforcement provisions of section 10A of the Bank Holding Company Act that limited the FR’s rulemaking and enforcement authority. Previously, the FR was only able to take enforcement actions against a functionally regulated subsidiary when its actions posed a threat to the safety and soundness of a depository institution affiliate.

1040.0.1 BHC INSPECTIONS

The Gramm-Leach-Bliley Act (GLB Act) amended section 5(c) of the Bank Holding Company Act (BHC Act) pertaining to BHC reports and examinations (or inspections, in the case of BHCs). The GLB Act provides specific supervisory guidance to the Board of Governors (Board) of the Federal Reserve System (and the Federal Reserve Banks via delegated authority) with respect to the breadth of BHC inspections. It also emphasized the focus and scope of BHC inspections and the inspections of BHC subsidiaries. An inspection is to be conducted to—

1. inform the board of the nature of the operations and financial condition of each BHC and its subsidiaries, including—
   a. the financial and operational risks within the holding company system that may pose a threat to the safety and soundness of any depository institution (DI) subsidiary of such bank holding company, and
   b. the systems for monitoring and controlling such financial and operational risks; and
2. monitor compliance by any entity with the provisions of the BHC Act or any other federal law that the Board has specific jurisdiction to enforce against the entity, and to monitor compliance with any provisions of federal law governing transactions and relationships between any DI subsidiary of a BHC and its affiliates.

1040.0.1.1 Authority for Bank Holding Company Inspections

Section 5 of the BHC Act of 1956 authorizes the Board to require reports and to conduct inspections of bank holding companies and their affiliates. Subject to the limitations discussed below, Section 5 authorizes the Board to examine each bank holding company and nonbank subsidiary thereof. Within those limitations, the Federal Reserve System’s supervisory staff (includes BHC inspection and examination staff) may review all books and records of a banking organization that is subject to Federal Reserve (FR) supervision.

1040.0.2 FOCUS AND SCOPE OF BHC INSPECTIONS

The focus and scope of an inspection is to be limited, to the fullest extent possible, to the BHC and any subsidiary of the BHC that could have a materially adverse effect on the safety and soundness of any DI subsidiary of the holding company due to (1) the size, condition, or activities of the subsidiary, or (2) the nature or size of the transactions between the subsidiary and any DI subsidiary of the BHC.

The Board is to use, to the fullest extent possible, the bank examination reports of DIs prepared by the appropriate federal or state DI supervisory authority. The Board also is to use, to the fullest extent possible, the examination reports for non-DIs prepared by the following:

1. the Securities and Exchange Commission (SEC) for any registered broker or dealer
2. the SEC or any state for any investment adviser registered under the Investment Company Act of 1940
3. any state insurance regulatory authority for any licensed insurance company
4. any federal or state authority for any other subsidiary that the Board finds to be comprehensively supervised

2. Supervisory staff includes individuals that are on and/or off site.
1040.0.3 EXAMINATIONS OF FUNCTIONALLY REGULATED SUBSIDIARIES

In general, the Board may examine (inspect) any BHC and each subsidiary to inform the Board of:

- the nature of the operations and financial condition of the company and such subsidiary;
- the financial, operational, and other risks of the company or such subsidiary that may pose a threat to the safety and soundness of such company or subsidiary or to the financial stability of the United States;
- the systems for monitoring and controlling such risks; and
- compliance by the company or such subsidiary with the requirements of 12 U.S.C. 5361(b) and other provisions of the BHC Act and certain other federal statutes.

1040.0.3.1 Use of Examination Reports and Information

The Board is required, to the fullest extent possible, to rely on reports of examination of any subsidiary depository institution or functionally regulated subsidiary made by the primary financial regulatory agency for that subsidiary, and on information described for reports under 12 U.S.C. 5361(a)(2). (See 12 U.S.C. 5361(b)(2).)

1040.0.3.2 Coordination with Other Regulators

The Board is to:

- provide reasonable notice to, and to consult with, the primary financial regulatory agency for any subsidiary before requiring a report or commencing an examination of such subsidiary under this section; and
- avoid duplication of examination activities, reporting requirements, and requests for information, to the fullest extent possible.

(See 12 U.S.C. 5361(c).)

1040.0.4 SUPERVISION OF A NONBANK FINANCIAL COMPANY

The FR, as the appropriate federal supervisory banking agency, must, to the fullest extent possible, rely on:

1. reports and other supervisory information that the BHC, or any subsidiary thereof, has been required to provide to other federal and state regulatory agencies;
2. externally audited financial statements of the BHC or subsidiary;
3. information that is otherwise available from federal and state regulatory agencies; and
4. information that is required to be reported publicly. (See 12 U.S.C. 1844(c)(1) or section 5(c) of the BHC Act.)
Supervision of Holding Companies with Total Consolidated Assets of $10 Billion or Less

Section 1045.0

1045.0.1 OVERVIEW AND RELIANCE ON THE INSURED DEPOSITORY INSTITUTION REGULATOR

The Federal Reserve’s approach to the supervision of holding companies with total consolidated assets of $10 billion or less is primarily described in SR-13-21, “Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less.” Reserve Banks, in the vast majority of cases, conduct abbreviated off-site reviews of small, noncomplex holding companies with total consolidated assets of up to $3 billion upon receipt of examination reports from the insured depository institution (IDI) regulator of the lead subsidiary IDI.

These Reserve Bank reviews assess activities conducted outside of the subsidiary IDI and rely substantially on the findings of the IDI regulator to evaluate the overall condition of the institution. For larger holding companies in the community banking organization (CBO) supervision portfolio, Reserve Banks conduct point-in-time on- or off-site reviews that are coordinated with, or closely follow, onsite examinations of the lead subsidiary IDI by its IDI regulator. The Reserve Bank reviews of larger CBO holding companies are targeted toward assessing parent company and nonbank activities and their potential effect on the safety and soundness of the subsidiary IDI.

The Reserve Bank evaluates the condition, performance, and prospects of the subsidiary IDI based on the conclusions of the IDI regulator and makes best efforts not to duplicate the work of other prudential regulators. Refer to SR-16-4.

The Federal Reserve relies on periodic on- and off-site inspections to assess the safety and soundness of supervised bank holding companies (BHCs) and savings and loan holding companies (SLHCs) (collectively referred to as “holding companies”). The guidance in SR-13-21 outlines the minimum inspection frequency and scope requirements for supervised holding companies with total consolidated assets of $10 billion or less to

- conform inspection frequency and scope requirements for SLHCs with total consolidated assets of $10 billion or less to those applicable to BHCs of the same size;
- clarify the scoping requirements for targeted inspections conducted at holding companies with total consolidated assets between $3 billion and $10 billion; and
- modify the requirement for targeted inspections for “3,” “4,” and “5”-rated holding companies with total consolidated assets between $3 billion and $10 billion.

These frequency and scope requirements vary depending on whether a holding company has been designated as “complex,” with more complex holding companies subject to more frequent and in-depth review. If needed for supervisory purposes, Reserve Banks may inspect a holding company with greater frequency and scope.

1045.0.2 DEFINITION OF COMPLEX HOLDING COMPANIES

The determination of whether a holding company is “complex” should be made at least annually by the responsible Reserve Bank. Utilizing surveillance screens and other information obtained through supervisory or applications processes, Reserve Banks should update the complexity designation of a company as its activities or condition changes. The determination of a holding company’s complexity should take into account a number of factors. These factors include the

- size and structure of the company;
- the extent of intercompany transactions between IDI subsidiaries and the holding company or uninsured subsidiaries of the holding company;
- the risk, scale, and complexity of activities of any nondepository subsidiaries;\(^1\) and
- the degree of leverage at the holding company, including the extent of its debt outstanding to the public.

Companies should also be designated “complex” if material risk-management processes for the holding company and its affiliates are consolidated at the parent company.

\(^1\) For SLHCs, consideration should be given to whether the holding company is a grandfathered unitary SLHC, and if so, the type and extent of the activities in which the company engages.

---

1 BHC Supervision Manual February 2020 Page 1
1045.0.3 SUPERVISION AND SURVEILLANCE APPROACH

The frequency and scope of on- and off-site inspections should be adjusted based on the results of examinations of a company’s depository institution subsidiaries and off-site quarterly surveillance. Whether the inspection is conducted on- or off-site will depend on the level and nature of the risks involved, the holding company’s ability to manage those risks, and the Reserve Bank’s ability to acquire the necessary information to analyze the activity off-site. If information obtained off-site is not sufficient for the Reserve Bank to determine the condition or assess the activity of the company to assign a rating, the Reserve Bank should conduct an on-site inspection (full-scope or targeted, as appropriate).

To facilitate prompt follow-up on changes in a company’s performance and condition, the Federal Reserve maintains distinct surveillance programs for small holding companies (less than $3 billion in total consolidated assets) and all other holding companies. Surveillance screens for holding companies with $3 billion or more in total consolidated assets focus on identifying those companies reporting financial results that seem to be inconsistent with their current supervisory ratings, as well as activities conducted outside of depository institution subsidiaries.

For small holding companies, quarterly surveillance screens focus on the identification of potential parent company and nondepository subsidiary issues that may adversely affect affiliated depository institutions. In particular, these screens address parent company cash flow, intercompany transactions, parent company leverage, and consolidated capital ratios, when applicable. Screens also assist in maintaining up-to-date complexity designations and are updated periodically to reflect industry trends and conditions as well as changes in regulatory reporting requirements.

1045.0.4 FREQUENCY AND SCOPE OF INSPECTIONS OF HOLDING COMPANIES WITH TOTAL CONSOLIDATED ASSETS BETWEEN $3–10 BILLION

Complex holding companies in satisfactory condition are inspected at least once per calendar year, while noncomplex holding companies may be inspected every other year. The Reserve Banks should attempt to conduct inspections of holding companies between $3 billion and $10 billion in total consolidated assets shortly after the examination of the lead depository subsidiary is completed. Holding companies between $3 billion and $10 billion in total consolidated assets are assigned a complete RFI rating (component ratings, subcomponent ratings, and a composite rating) regardless of their complexity.

Depending on their condition and complexity, holding companies in this category will receive full-scope inspections or targeted inspections. At a minimum, a full-scope inspection should include sufficient procedures to reach an informed judgment regarding the assigned ratings for the factors addressed by the RFI rating system, evaluating the organization’s methods of managing and controlling its risk exposures, and ascertaining whether management and directors fully understand and are actively monitoring the organization’s exposure to those risks.

A targeted inspection is designed to focus intensively on one or more specific areas, activities, or problems relating to a holding company. Targeted inspections of holding companies with total consolidated assets between $3 billion and $10 billion should focus primarily on parent company leverage, parent company cash flow, nondepository subsidiaries, consolidated capital (when applicable), and intercompany transactions. Targeted inspections may also cover other applicable areas, such as deficient risk-management practices at the holding company.

In addition, because compliance with laws and regulations is a statutory factor that must be considered as part of any supervisory review of an application or notice by the holding company, it is important that Reserve Bank staff ensure that compliance with relevant laws and regulations, including any commitments provided by a holding company in connection with an application or notice, is evaluated and addressed in written inspection reports.

1045.0.4.1 Complex Holding Companies

- If a complex holding company is rated composite “1” or “2,” a full-scope, on-site inspection is required annually.
- The following apply for a complex holding company rated composite “3,” “4,” or “5.”

— A full-scope, on-site inspection is required annually.
— If the primary supervisor has conducted an interim examination or changed the rating at the lead depository institution, Reserve Bank staff should conduct an additional targeted inspection and update the rating if necessary. The targeted inspection may be conducted off-site and should start within 60 days of receiving the examination report for the lead depository institution.

• Interim inspections between regular full-scope, on-site inspections are not required. However, additional follow-up, including interim inspections, may be necessary in response to off-site surveillance program results.

1045.0.4.2 Noncomplex Holding Companies

• If a noncomplex holding company is rated composite “1” or “2,” an off-site targeted inspection is required every two years.
• The following apply for a noncomplex holding company rated composite “3,” “4,” or “5.”
  — A full-scope, off-site inspection is required annually.
  — If the primary supervisor has conducted an interim examination or changed the rating at the lead depository institution, Reserve Bank staff should conduct an additional targeted inspection and update the rating if necessary. This targeted inspection may be conducted off-site and should start within 60 days of receiving the examination report for the lead depository institution.

• Interim inspections between regular full-scope inspections are not required. However, additional follow-up, including interim inspections, may be necessary in response to off-site surveillance program results.

1045.0.5 FREQUENCY AND SCOPE OF REVIEW OF HOLDING COMPANIES WITH LESS THAN $3 BILLION IN TOTAL CONSOLIDATED ASSETS

The supervisory cycle for holding companies with less than $3 billion in total consolidated assets generally is determined by the examination frequency of the lead depository institution. Complex companies in this size category are assigned a complete RFI rating; others are assigned only a risk-management rating and a composite rating. All ratings assigned should be promptly entered into the National Examination Database (NED) and communicated to the company, Board staff, and appropriate state and federal regulatory authorities as soon as possible, but generally no later than 90 days after receipt of the lead depository institution examination report.

Although an off-site review of small holding companies will be appropriate in many cases, in some instances it may be necessary to conduct an on-site review for complex holding companies, as discussed below. In those cases when an on-site review is required, the findings of that review and the assigned ratings should be communicated to the company no later than 120 days after receipt of the lead depository institution examination report. Documentation for the ratings and off-site or on-site reviews will generally consist of the examination reports for the depository institution subsidiaries, a copy of the transmittal letter communicating the ratings to the company, information related to relevant System surveillance results, and memoranda supporting any on-site review conducted. A meeting between Reserve Bank staff and the company’s board of directors to communicate findings is not required, but should be conducted when warranted by supervisory concerns.

1045.0.5.1 Complex Holding Companies

• An off-site review should be conducted upon receipt of the lead depository institution examination report or an updated rating from the primary supervisor using surveillance results and relevant supervisory and financial information. If the information obtained off-site is not sufficient for the Reserve Bank to determine the overall condition of the company and to assign a complete RFI rating, the Reserve Bank should conduct an on-site review of the company.
• Any on-site review should be targeted at those areas where additional information or analysis is needed to assign a complete supervisory rating.
1045.0.5.2 Noncomplex Holding Companies

- If all subsidiary depository institutions have a management component rating and a composite supervisory rating of “1” or “2” and no material holding company issues are otherwise indicated, the Reserve Bank should assign only a composite rating and risk management rating to the holding company based on the ratings of the lead depository institution.

- If one or more subsidiary depository institutions have a management component rating or a composite supervisory rating of “3,” “4,” or “5” or a material holding company issue is otherwise indicated, an off-site review is required upon receipt of the lead depository institution examination report or an updated rating from the primary supervisor using surveillance results and relevant supervisory and financial information. If the information obtained off-site is not sufficient for the Reserve Bank to determine the overall condition of the company and to assign a risk-management rating and a composite rating, Reserve Bank staff should contact the holding company to obtain more information.

- Any off-site review should be targeted, as appropriate, at those areas where additional information or analysis is needed to develop the risk-management and composite ratings.

1045.0.6 COMPLETION STANDARD FOR EXAMINATION AND INSPECTION REPORTS

Safety-and-soundness examination and inspection reports for CBOs issued by the Federal Reserve should be completed and sent to the supervised institution within 60 calendar days following the “close date” of the examination. These standards apply to formal examination and inspection reports for institutions supervised by the Federal Reserve with $10 billion or less in total consolidated assets including state member banks, BHCs, SLHCs, Edge Act and agreement corporations, U.S. branches and agencies of foreign banks, and foreign subsidiaries and branches of U.S. banks. For institutions rated composite “3,” “4,” or “5,” Reserve Banks are encouraged to adopt an internal target of 45 calendar days from the close date for sending the reports.

The “close date” of an on-site examination and inspection is defined as the last date that the examination team is physically on-site at the institution. For examinations and inspections for which all or a portion of the work is performed off-site, the “close date” is defined as the earlier of the following dates: (1) the date when the analysis (including loan file review) is completed and ready for the examiner-in-charge’s review or (2) the date when the preliminary exit meeting is held with management, which can be conducted either on-site or off-site by conference call.

Further, to ensure that findings are communicated to a supervised institution in a timely manner, Reserve Banks should ensure that the duration between the start of an examination/inspection to the completion and delivery of an examination/inspection report does not exceed 90 days. In cases when reports are subject to statutory requirements for other state or federal agency review, such as by the Consumer Financial Protection Bureau (CFPB), Reserve Banks may exceed these guidelines at the discretion of senior management. However, deviations from these guidelines are expected to be rare. At the discretion of senior Reserve Bank management, additional exemptions from this 90-day guideline may be considered for examinations that are conducted simultaneously on multiple affiliated banks or examinations of larger complex CBOs that require additional time on-site to review specialized or complex business lines.

Findings and conclusions delivered to a supervised institution at the close date and exit meetings for examinations and inspections must be consistently documented in workpapers. At a

3. This completion standard gives recognition to the continuous monitoring and roll-up supervisory process for larger organizations having consolidated assets in excess of $10 billion.

4. Most BHCs and SLHCs with total consolidated assets of

$3 billion or less are subject to a separate program that has different requirements for the issuance of reports of inspection.

5. The start date is the date that Reserve Bank examiners and supervisory staff commence the examination and inspection work, excluding pre-examination visitations and preparation.

6. See sections 1022, 1024, and 1025 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. For more information on the coordination of supervisory activities with the CFPB, see also the “Memorandum of Understanding on Supervisory Coordination” and the June 4, 2012, joint press release.

7. In some cases, Reserve Bank examiners or supervisory staff may conduct a pre-exit meeting with the institution’s management at the close date of the examination or inspection. Representatives from the on-site examination or inspection team may also hold a final exit meeting with the institu-
minimum, documentation should include

1. a list of attendees at the meetings;
2. a description of significant examination and inspection findings discussed, including preliminary ratings; and
3. a summary of the bank management’s views on the findings and, if applicable, the views of the board of directors.

To the extent conclusions in the final report differ from those discussed at the close date and exit meetings, Reserve Bank examiners and supervisory staff should communicate the reasons for the differences to the supervised institution and document these discussions in their workpapers. See SR-13-14, “Timing Standards for the Completion of Safety-and-Soundness Examination and Inspection Reports for Community Banking Organizations,” for more information.
WHAT’S NEW IN THIS REVISED SECTION

Effective January 2015, this section was revised to delete a reference to SR-99-15, which was superseded by SR-12-17/CA-12-14, “Consolidated Supervision Framework for Large Financial Institutions.”

The continuing growth in the size and complexity of many banking organizations exposes these firms to a wide array of potential risks, while at the same time making it more challenging for a single supervisor to have a complete view of firmwide risks and controls. In response to these trends, and to better fulfill both its responsibilities as consolidated supervisor and its other central bank objectives, the Federal Reserve continues to refine and enhance its programs for the consolidated supervision of bank holding companies (BHCs) and the combined U.S. operations of foreign banking organizations (FBOs).

The Federal Reserve has set forth its consolidated supervision program for bank holding companies and the combined U.S. Operations of Foreign Banking Organizations in SR-08-9/CA-08-12 and its attachments. (See sections 1050.1 for the consolidated supervision of large complex banking organizations and see 1050.2 for the consolidated supervision of regional banking organizations.) The primary objectives of this supervisory guidance are to specify principal areas of focus for consolidated supervision activities and thereby provide for consistent Federal Reserve supervisory practices and assessments across organizations with similar activities and risks. Consistent with these objectives, the SR letter and its attached guidance detail specific expectations for Federal Reserve staff for understanding and assessing primary governance functions and risk controls, material business lines, nonbank operations, financial condition, and other key activities and risks at banking organizations; address unique aspects of supervising the combined U.S. operations of FBOs; and highlight the supervisory attention that should be paid to risk-management systems and internal controls used by BHCs and FBOs that provide core clearing and settlement services (core clearing and settlement organizations) or that have a significant presence in critical or key financial markets. 1 The guidance also reiterates the importance of coordination with, and reliance on, the work of other relevant primary supervisors and functional regulators.

The Federal Reserve’s enhanced approach to consolidated supervision emphasizes several elements that should help make the financial system more resilient. These include focus on corporate governance, capital adequacy, funding and liquidity management, and the supervision of material nonbank subsidiaries,2 as well as other aspects of the Federal Reserve’s consolidated supervision activities designed to further the objectives of fostering financial stability and deterring or managing financial crises. In addition, the Federal Reserve continues to work, both independently and in conjunction with other domestic and foreign bank supervisors and functional regulators, on a number of other initiatives to strengthen supervisory approaches and reinforce expectations for sound practices in response to recent lessons learned.

1050.0.1 SUPERVISION AND REGULATION FRAMEWORK FOR COMPANIES THAT CONTROL A BANK AND THE SUBSIDIARIES OF SUCH COMPANIES

The Bank Holding Company Act (BHC Act), originally enacted in 1956, provides a federal framework for the supervision and regulation of all domestic and foreign companies that control a bank and the subsidiaries of such companies. Among the principal purposes of the BHC Act is to protect the safety and soundness of corporately controlled banks. Financial trouble in one part of an organization can spread rapidly to other parts of the organization; moreover, large BHCs increasingly operate and manage their businesses on an integrated basis across corporate boundaries. Risks that cross legal entities or that are managed on a consolidated basis cannot be monitored properly through supervision directed at any one of the legal entity subsidiaries within the overall organization.

The BHC Act provides for all BHCs, including financial holding companies formed under

1. See Attachment C to SR-08-9/CA-08-12 or this section’s appendix for the definitions of “core clearing and settlement organizations,” “critical financial markets,” and “key financial markets.”
2. The term “nonbank subsidiaries” as used in SR-08-9/CA-08-12 and its attachments does not include savings associations.
the Gramm-Leach-Bliley Act (GLBA), to be supervised on a consolidated basis by the Federal Reserve. Consolidated supervision of a BHC encompasses the parent company and its subsidiaries, and allows the Federal Reserve to understand the organization’s structure, activities, resources, and risks, as well as to address financial, managerial, operational, or other deficiencies before they pose a danger to the BHC’s subsidiary depository institutions.

To carry out these responsibilities, the BHC Act grants the Federal Reserve broad authority to inspect and obtain reports from a BHC and its subsidiaries concerning, among other things, the company’s financial condition, systems for monitoring and controlling financial and operational risks, and compliance with the BHC Act and other federal law (including consumer protection laws) that the Board has specific jurisdiction to enforce. In addition, federal law authorizes the Federal Reserve to take action against a BHC or nonbank subsidiary to prevent these entities from engaging in unsafe or unsound practices or to address violations of law that occur in connection with their own business operations even if those operations are not directly connected to the BHC’s subsidiary depository institutions. Using its authority, the Federal Reserve also has established consolidated capital standards for BHCs, helping to ensure that a BHC maintains adequate capital to support its groupwide activities, does not become excessively leveraged, and is able to serve as a source of strength for its depository institution subsidiaries.

The Federal Reserve’s consolidated supervision program has served as the benchmark for many of the current and evolving international standards for the consolidated supervision of financial groups. Key concepts that have been part of the Federal Reserve’s approach to consolidated supervision for many years are reflected in the Basel Committee on Banking Supervision’s Minimum Standards for Internationally Active Banks (1992), capital accords (1988 and 2006), and Core Principles for Effective Banking Supervision (1997 and 2006), and are now used by the International Monetary Fund and the World Bank in connection with their assessments of countries’ bank supervisory regimes.

In addition to its role as consolidated supervisor of BHCs, the Federal Reserve also is responsible for the overall supervision of the U.S. operations of foreign banks that have a banking presence in the United States. This role was established by the International Banking Act of 1978, which introduced a policy of national treatment3 promoting competitive equality between FBOs operating in the United States and domestic banking organizations. The Foreign Bank Supervision Enhancement Act of 1991 established uniform federal standards for entry, expansion, and supervision of FBOs in the United States and increased the Federal Reserve’s supervisory responsibility and authority over the U.S. operations of FBOs. This act also introduced the requirement that the Federal Reserve approve the establishment of all U.S. banking offices of foreign banks and, in that regard, take into account whether the foreign bank is subject to comprehensive, consolidated supervision by its home-country supervisor.

The Federal Reserve’s consolidated supervision activities closely complement other central bank responsibilities, including the objectives of fostering financial stability and deterring or managing financial crises. The information, expertise, and powers that the Federal Reserve derives from its supervisory authority enhance its ability to help prevent financial crises and to manage such crises (in consultation and conjunction with the Treasury Department and other U.S. and foreign authorities) should they occur. Similarly, the supervisory responsibilities of the Federal Reserve benefit from its responsibilities for financial stability. For example, knowledge gained about financial market developments through interactions with primary dealers in government securities and capital market expertise derived from nonsupervisory activities improve the Federal Reserve’s ability to understand and evaluate the activities of banking organizations and otherwise enhance its contributions to supervisory and regulatory policy initiatives.

Effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and relevant primary supervisors and functional regulators.4 These relation-

3. “National treatment” refers to a policy that generally gives foreign banks operating in the United States the same powers as U.S. banking organizations and subjects them to the same restrictions and obligations.
4. The term “primary supervisor” as used in this document refers to the primary federal banking or thrift supervisor (for example, the Office of the Comptroller of the Currency for a nationally chartered bank) of a depository institution subsidiary of a BHC, or of a U.S. banking office of an FBO. For state-chartered depository institutions or banking offices, this term also includes the relevant bank supervisory authority of the institution’s chartering/licensing state. Where a BHC has multiple depository institution subsidiaries or an FBO has multiple U.S. banking offices, there may also be multiple primary banking supervisors, depending on how the subsidiaries are chartered/licensed. The term “functional regulator”
ships respect the individual statutory authorities and responsibilities of the respective supervisors and regulators and provide for appropriate information flows and coordination so that individual responsibilities can be carried out effectively, while limiting the potential for duplication or undue burden. Information sharing among domestic and foreign supervisors, consistent with applicable law and the jurisdiction of each supervisor, is essential to ensure that a banking organization’s global activities are supervised on a consolidated basis.

These concepts underlie the provisions of the GLBA governing the interaction between the Federal Reserve, as consolidated supervisor, and the other primary supervisors or functional regulators that may be involved in supervising one or more subsidiaries of a BHC. Under these provisions, the Federal Reserve, in conducting its consolidated supervisory responsibilities, relies to the fullest extent possible on (1) the reports that a BHC or subsidiary has provided to another federal or state supervisor or to an appropriate self-regulatory organization, (2) information that is otherwise required to be reported publicly, and (3) externally audited financial statements. In addition, the Federal Reserve relies to the fullest extent possible on the reports of examination of a depository institution made by its appropriate federal or state bank supervisor, of a broker–dealer or investment adviser made by or on behalf of the SEC or relevant state regulatory authority, or of a licensed insurance company made by or on behalf of its appropriate state regulatory authority. In developing its overall assessment of a BHC or the combined U.S. operations of an FBO, the Federal Reserve also relies to the fullest extent possible on the information gathered and assessments developed by these other supervisors and regulators.

Similarly, the Federal Reserve seeks to assist relevant primary supervisors and functional regulators in performing their supervisory responsibilities with respect to regulated subsidiaries by sharing pertinent information that relates to these regulated subsidiaries consistent with each agency’s supervisory responsibilities and applicable law. Examples include shared information relating to the financial condition, risk-management policies, and operations of a banking organization that may have a material impact on regulated subsidiaries, as well as information concerning transactions or relationships between regulated subsidiaries and their affiliates.

1050.0.2 KEY OBJECTIVES FOR, AND APPROACHES TO, CONSOLIDATED SUPERVISION

The Federal Reserve uses a systematic approach to develop an assessment of a BHC on a consolidated basis and of the combined U.S. operations of an FBO. These assessments are reflected in the RFI (Risk-Management, Financial Condition, and Impact) rating assigned to a BHC and the combined U.S. operations rating assigned to an FBO with multiple U.S. operations. The Federal Reserve utilizes three principal processes to understand, supervise, and assess BHCs and FBOs: continuous monitoring activities, discovery reviews, and testing.

6. The RFI rating system for BHCs is discussed in SR-04-18, “Bank Holding Company Rating System” and section 4070.0. RFI ratings are assigned at least annually for BHCs with $1 billion or more in consolidated assets, and are communicated via a comprehensive summary supervisory report that supports the BHC’s assigned ratings and encompasses the results of the entire supervisory cycle.

7. SR-00-14, “Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations,” discusses the U.S. combined operations rating for an FBO and other aspects of the FBO Supervision Program. The Federal Reserve’s rating and assessment, as well as a summary of condition analysis describing the strengths and weaknesses of the FBO’s combined U.S. operations, are provided to the head office of each FBO. This information is also shared with the FBO’s home-country supervisor so that it may assess the impact of U.S. operations on the parent banking organization in its role as consolidated supervisor of the banking organization’s global operations.

8. “Continuous monitoring activities” are nonexamination/inspection supervisory activities primarily designed to develop and maintain an understanding of the organization, its risk profile, and associated policies and practices. These activities also provide information that is used to assess inherent risks and internal control processes. Such activities include meetings with banking organization management; analysis of management information systems (MIS) and other internal and external information; review of internal and external audit findings; and other efforts to coordinate with, and utilize the work of, other relevant supervisors and functional regulators (including analysis of reports filed with, or prepared by, these supervisors or regulators, or appropriate self-regulatory organizations, as well as related surveillance results).

9. A “discovery review” is an examination/inspection activity designed to improve the understanding of a particular business activity or control process—for example, to address a knowledge gap identified during the risk assessment or other supervisory process.
The Federal Reserve’s supervisory objectives are the same for all BHCs and FBOs. However, the type and amount of information and the scope and extent of Federal Reserve supervisory and examination work that are necessary to understand, supervise, and develop an assessment of an individual BHC or the U.S. operations of an individual FBO vary. Federal Reserve supervisory activities are tailored for each organization based on a variety of factors, including the organization’s legal entity and regulatory structure; the risks posed by the organization’s specific activities and systems; and the potential effect of weaknesses in control functions on the organization, its subsidiary depository institutions, or key financial markets. For example, additional supervisory activities, including transaction testing in appropriate circumstances, may be conducted when there are information gaps relating to material risks or activities, indications of weaknesses in risk-management systems or internal controls, or indications of violations of consumer protection or other laws, or when a consolidated organization or subsidiary depository institution is in less-than-satisfactory condition.

1050.0.2.1 Key Supervisory Objectives

In fulfilling its responsibilities for supervising a BHC on a consolidated basis and the combined U.S. operations of an FBO, the Federal Reserve is guided by the following key supervisory objectives.

1050.0.2.1.1 Understanding the Bank Holding Company on a Consolidated Basis and the Combined U.S. Operations of an FBO

Supervisory Objective: The Federal Reserve develops a comprehensive understanding of each BHC and the combined U.S. operations of each FBO. Key elements in developing this understanding include:

- corporate strategy and significant activities;
- business line, legal entity, and regulatory structure, including interrelationships and dependencies across multiple legal entities;
- corporate governance, risk management, and internal controls for managing risks; and
- for certain organizations, presence in critical or key financial market activities.

1050.0.2.1.2 Assessing the Bank Holding Company on a Consolidated Basis and the Combined U.S. Operations of an FBO

Supervisory Objective: The Federal Reserve supervises each BHC on a consolidated basis and assigns an RFI rating through an evaluation and assessment of the following areas:

- key corporate governance, risk management, and control functions (including, where applicable, such functions as they relate to core clearing and settlement activities and activities where the organization has a significant presence in critical or key financial markets);
- the adequacy of the financial condition of the consolidated organization; and
- the potential negative impact of nonbank entities on subsidiary depository institutions.

The Federal Reserve also supervises and assesses the combined U.S. operations of each FBO and assigns a U.S. combined operations rating based on analysis of these same elements.

1050.0.2.1.3 Interagency Coordination

Supervisory Objective: As noted earlier, effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and relevant domestic and foreign supervisors and functional regulators. To achieve this objective, while limiting the potential for duplication or undue burden, the nature and scope of Federal Reserve work is tailored to the organization’s legal entity and regulatory structure as
well as the risks associated with the organization’s activities. In this regard, the Federal Reserve

- relies to the fullest extent possible on assessments and information developed by other relevant domestic and foreign supervisors and functional regulators;
- focuses supervisory attention on material risks from activities that are not supervised by another supervisor or regulator or that cut across legal entities; and
- participates in the sharing of information among domestic and foreign supervisors and functional regulators, consistent with applicable law, to provide for the comprehensive, consolidated supervision of each banking organization’s global activities.

Since coordination with, and reliance on, the work of other relevant primary supervisors and functional regulators is so central to the Federal Reserve’s conduct of consolidated supervision, direction for achieving these objectives is closely integrated into the attached guidance for understanding and assessing consolidated BHCs and the combined U.S. operations of FBOs.

1050.0.2.2 Risk-Focused Approach to Consolidated Supervision

The Federal Reserve uses a risk-focused approach to supervision of banking organizations in general and to each organization individually. In this regard, the Federal Reserve focuses supervisory activities on identifying the areas of greatest risks to a banking organization and assessing the ability of the organization’s management to identify, measure, monitor, and control these risks. In addition, the Federal Reserve typically is more actively and comprehensively engaged in the supervision of the largest and most complex BHCs and FBOs, as well as those with the most dynamic risk profiles. By paying particular attention to these organizations, the Federal Reserve aims to minimize significant adverse effects on the public (including consumers), the financial markets, and the financial systems in the United States and abroad, as well as on taxpayers, who provide the ultimate resources behind the federal safety net.

The Federal Reserve also focuses special supervisory attention on the risk-management systems and internal controls used by core clearing and settlement organizations or organizations that have a significant presence in key financial markets. In light of the potential for problems in these areas to transmit an adverse impact across the banking and financial system, these activities pose special legal, reputational, and other risks to the banking organization and its depository institution subsidiaries. The Federal Reserve has unique expertise and perspective in these areas based on its broader central bank responsibilities and functions.

Unlike banks, nonbank subsidiaries of a banking organization may not accept FDIC-insured deposits and do not have routine access to the Federal Reserve’s discount window and payment system. As a result, certain laws and supervisory policies that apply to banks (e.g., the prompt-corrective-action framework13) do not apply to nonbank subsidiaries, and the manner in which the Federal Reserve supervises the nonbank subsidiaries of a banking organization reflects these differences. The Federal Reserve’s supervision of nonbank subsidiaries under the BHC Act is primarily directed toward, and focused on, ensuring that the nonbank subsidiary does not present material financial, legal, or reputational risks to affiliated depository institutions or to the BHC’s or FBO’s ability to support these depository institutions. The Federal Reserve also may interact with nonbank entities, such as primary dealers in government securities, in connection with its other central bank functions and responsibilities, including conducting monetary policy, fostering financial stability, and deterring or managing financial crises.

As part of the supervisory process, the Federal Reserve reviews the systems and controls used by BHCs and the U.S. operations of FBOs to monitor and ensure that the organization, including its nonbank subsidiaries, complies with applicable laws and regulations, including those related to consumer protection. The Federal Reserve develops and maintains an understanding and assessment of consumer compliance risk at nonbank subsidiaries of a BHC or FBO primarily through continuous monitoring activities, relying to the fullest extent possible on work performed by the relevant functional regulator, if any. While the Federal Reserve routinely conducts examinations of the compliance function at the BHC, including its systems for monitoring and ensuring compliance with consumer and other applicable laws, the Federal Reserve currently does not routinely conduct examinations for the purpose of determining

13. For more information on the prompt-corrective-action framework for banks, see section 4133.1 of the Federal Reserve’s Commercial Bank Examination Manual, or see 12 C.F.R. 208, Subpart D.

BHC Supervision Manual January 2015 Page 5
compliance with specific consumer laws enforced primarily by other supervisors regarding non-bank subsidiaries of BHCs and FBOs. When consumer compliance-related deficiencies are noted as part of the ongoing supervision of a BHC or FBO, however, consumer compliance examiners may conduct onsite examinations (including transaction testing, if appropriate) of nonbank subsidiaries to resolve significant issues that have the potential for widespread violations or harm to consumers.\textsuperscript{14}

The Federal Reserve also seeks to reinforce market discipline by encouraging public disclosures that balance quantitative and qualitative information with clear discussions about risk-management processes and that reflect evolving disclosure practices for peer organizations.

1050.0.2.3 Supervisory Portfolios

An important aspect of the Federal Reserve’s consolidated supervision programs for BHCs and the combined U.S. operations of FBOs is the assessment and evaluation of practices across groups of organizations with similar characteristics and risk profiles. This “portfolio approach” to consolidated supervision facilitates greater consistency of supervisory practices and assessments across comparable organizations and enhances the Federal Reserve’s ability to identify outlier organizations among established peer groups. The supervisory portfolios that the Federal Reserve currently uses in structuring its supervisory programs for BHCs and the U.S. operations of FBOs are as follows:

**BHC Portfolios:**

- large complex banking organizations (LCBO BHCs)
- regional bank holding companies (regional BHCs)
- community bank holding companies (community BHCs)

**FBO Portfolios:**

- large complex foreign banking organizations (LCBO FBOs)
- multi-office foreign banking organizations

LCBOs are characterized by the scope and complexity of their domestic and international operations; their participation in large volume payment and settlement systems; the extent of their custody operations and fiduciary activities; and the complexity of their regulatory structures, both domestically and in foreign jurisdictions. To be designated as an LCBO, a banking organization must meet specified criteria to be considered a significant participant in at least one key financial market.

Banking organizations that are not designated as LCBOs belong to the portfolios of regional or community BHCs, or multi-office or single-office FBOs. While there is considerable variety among organizations across these portfolios, the simpler regulatory structure of most non-LCBO organizations increases the likelihood that a single primary supervisor has a substantially complete view of, and ability to address, significant areas of firmwide (or combined U.S. operations for FBOs) activities, risks, risk management, and controls.

1050.0.3 SUPERVISORY GUIDANCE

The guidance attached to SR-08-9/CA-08-12 (e.g., sections 1050.1 and 1050.2) describes how Federal Reserve staff will develop an understanding and assessment of a BHC or the U.S. operations of an FBO through continuous monitoring activities, discovery reviews, and testing activities, as well as through interaction with, and reliance to the fullest extent possible on, other relevant primary supervisors and functional regulators. Because the Federal Reserve’s supervisory activities are tailored in the manner described above, separate guidance documents are provided for four different supervisory portfolios to promote appropriate and consistent supervision of organizations that broadly share similar characteristics and risk profiles. The documents’ guidance addresses

- consolidated supervision of LCBO BHCs (Attachment A.1) (See section 1050.1);
- consolidated supervision of regional BHCs (Attachment A.2) (See section 1050.2);
- supervision of the combined U.S. operations of LCBO FBOs (Attachment B.1); and
- supervision of the combined U.S. operations of multi-office FBOs (Attachment B.2).

\textsuperscript{14} See SR-03-22/CA-03-15, “Framework for Assessing Consumer Compliance Risk at Bank Holding Companies,” and section 2124.01.6.1.2.
As a supplement to these four guidance documents, definitions of key terms for consolidated supervision are provided in Attachment C to SR-08-9/CA-08-12 (See appendix, section 1050.0.4).

Consolidated supervision of community BHCs follows the procedures contained in SR-02-1 and section 5000.0.4.3, “Revisions to Bank Holding Company Supervision Procedures for Organizations with Total Consolidated Assets of $5 Billion or Less,” while supervision of single-office FBOs follows the procedures contained in SR-00-14.

1050.0.3.1 Overview of Significant Federal Reserve Supervisory Activities

The Federal Reserve will maintain for each BHC and the combined U.S. operations of each FBO

- an understanding of key elements of the banking organization’s strategy, primary revenue sources, risk drivers, business lines, legal entity structure, governance and internal control framework, and presence in key financial markets; and
- an assessment of (1) the effectiveness of risk-management systems and controls over the primary risks inherent in the organization’s activities, (2) the organization’s financial condition, and (3) the potential negative impact of nonbank operations on affiliated depository institutions.

This understanding and assessment will encompass both prudential and consumer compliance supervision and reflect judgments developed by Federal Reserve staff drawing from all available sources, including the work of other relevant primary supervisors and functional regulators and the organization’s internal control functions. Primary areas of focus will include

1. key corporate governance functions, including internal audit;
2. risk management and internal control functions for primary risks of the consolidated organization (or combined U.S. operations for FBOs), and supporting MIS;
3. where applicable, core clearing and settlement activities and related risk management and internal controls of firms that are large-value payment system operators and market utilities;
4. for LCBOs, activities in critical or key financial markets in which the organization plays a significant role, as well as related risk management and internal controls;
5. where applicable, areas of emerging interest with potential financial market consequences;
6. consolidated financial strength (in the case of FBOs, the financial strength of combined U.S. operations);
7. risk management and financial condition of significant nonbank subsidiaries; and
8. parent company and nonbank funding and liquidity (in the case of FBOs, funding and liquidity of U.S. operations).

By their nature, understanding and assessing some areas—such as the risk management and financial condition of significant nonbank subsidiaries that are not functionally regulated—will typically require more independent Federal Reserve supervisory work. Other areas—such as primary firmwide risk management and control functions—typically will require a greater degree of coordination with other relevant primary supervisors or functional regulators, who will likely have information or assessments upon which the Federal Reserve can draw.

The guidance in the attachments to SR-08-9/CA-08-12 outlines when the Federal Reserve will conduct (i.e., participate in or lead) testing activities in order to determine whether a control process is appropriately designed and achieving its objectives or to otherwise validate management assertions. Testing activities are an important element of the Federal Reserve’s consolidated supervision program for BHCs and the combined U.S. operations of FBOs. They supplement ongoing continuous monitoring activities and periodic discovery reviews necessary to maintain an understanding and assessment for each of these key functions.

The guidance in the SR letter’s attachments also discusses in greater detail control processes for several areas subject to testing on at least a three-year cycle, supplemented by a reassessment on at least an annual basis to identify whether changes in inherent risk or control structures, or potential concerns regarding controls, merit interim targeted testing activities. These areas are

- internal audit infrastructure;
- parent company and nonbank funding and liquidity (in the case of FBOs, funding and liquidity of U.S. operations);
• where applicable, core clearance and settlement activities; and,
• where applicable, activities in critical financial markets in which the organization plays a significant role.\(^{15}\)

There may also be instances when additional supervisory activities are necessary to improve the understanding and/or to assess the adequacy of key corporate governance functions or risk management or internal control functions for primary risks due to significant changes, potential concerns, or the absence of recent testing.

All cycle times set forth in the guidance for testing represent maximum periods between testing activities. Shorter cycle times should be utilized whenever significant changes occur in, or material concern exists regarding, a key governance, risk-management, or internal control function.

In conducting the activities described in the guidance, the Federal Reserve will rely to the fullest extent possible on the information and assessments of relevant primary supervisors and functional regulators, and will work with such supervisors and regulators to align each agency’s assessment of key corporate governance functions, risk-management and internal control functions for primary risks, financial condition, and other areas of consolidated BHC or combined U.S. FBO operations, as applicable. In addition, because of the specific statutory limitations that apply with respect to functionally regulated subsidiaries of a BHC or FBO, the Federal Reserve will continue to adhere to the procedures and limits described in SR-00-13 (see sections 3900.0 and 1040.0) in conducting any examination of, or requesting a specialized report from, a functionally regulated subsidiary of a BHC or FBO.\(^{16}\) Under these provisions, for example, the Federal Reserve may conduct an examination of a functionally regulated subsidiary if, after reviewing relevant reports, it reasonably determines that the examination is necessary to adequately inform the Federal Reserve about the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a direct or indirect threat to the safety and soundness of a depository institution subsidiary.

1050.0.3.2 Application of Supervisory Guidance

As a general matter, the supervisory expectations and processes of the guidance documents that are attached to SR-08-9/CA-08-12 are intended for use in supervising BHCs and the combined U.S. operations of FBOs in circumstances where both the banking organization and its subsidiary depository institutions are in at least satisfactory condition and there are no indications of material weakness in the organization’s risk management or internal controls. Additional Federal Reserve supervisory activities may be necessary or appropriate if the banking organization is facing, or is expected to face, material financial, managerial, operational, legal, or reputational difficulties, or is the subject of an investigation or formal or informal enforcement action.

Section IV of each of the documents attached to SR-08-9/CA-08-12 (see sections 1050.1.4 and section 1050.2.4) provides additional guidance on the steps the Federal Reserve will take to coordinate with other supervisors in certain special situations. This guidance does not limit any authority that the Federal Reserve may have under applicable law and regulations, including the authority to obtain reports or conduct examinations or inspections. Moreover, because this guidance relates to supervisory practices, it does not address or limit the circumstances under which the Federal Reserve may take formal or informal enforcement action against a banking organization or other person.

This supervisory guidance is not intended to comprehensively describe all elements of an effective supervision program for BHCs or U.S. operations of FBOs. Rather, the guidance supplements, and should be used in conjunction with, existing Federal Reserve guidance, including among others the Bank Holding Company Supervision Manual; the Examination Manual for U.S. Branches and Agencies of Foreign Banking Organizations; SR-04-18; SR-03-22/CA-03-15; SR-00-14; and SR-00-13.

\(^{15}\) For these activities, the three-year testing cycle focuses on adherence with expectations of the Interagency Paper on Sound Practices to Strengthen the Resilience of the U.S. Financial System (see SR-03-9), including the geographic diversity and resiliency of data centers and operations, and testing of recovery and resumption arrangements.

\(^{16}\) For these purposes, a “specialized report” means a report that the functionally regulated subsidiary is not required to prepare for another federal or state regulatory authority or an appropriate self-regulatory organization. Consistent with the GLBA, if the Federal Reserve seeks to obtain a specialized report from a functionally regulated subsidiary, the Federal Reserve will first request that the subsidiary’s appropriate regulatory authority or self-regulatory organization obtain the report and make it available to the Federal Reserve.
1050.0.4 APPENDIX—DEFINITIONS
OF KEY TERMS FOR
CONSOLIDATED SUPERVISION

1050.0.4.1 Supervisory Objectives

Assessing: To go beyond developing an understanding by making supervisory judgments regarding the degree of inherent risks or evaluating whether risk-management and internal control practices are functioning as intended, and whether they are adequate relative to the risk taken. It is often necessary for bank supervisors or functional regulators to conduct testing activities as a means to arrive at an assessment.

Understanding: To gain comprehensive insight into the nature of a business activity, its related risks, and the design of risk-management and compensating controls. Understanding also involves comprehending the significance of such activities, risks, and controls for the institution’s safety and soundness. Continuous monitoring or discovery reviews are often utilized to develop an understanding of a banking organization’s operations and the related inherent risk and controls.

1050.0.4.2 Supervisory Activities

Active participation: When the Federal Reserve has input into determining the objectives, final conclusions, and related communications to institution management for an examination led by another relevant primary supervisor or functional regulator.

Continuous monitoring: Non-examination/inspection supervisory activities primarily designed to develop and maintain an understanding of the organization, its risk profile, and associated policies and practices. These activities also provide information that is used to assess inherent risks and internal control processes. Such activities include meetings with banking organization management; analysis of management information systems (MIS) and other internal and external information; review of internal and external audit findings; and other efforts to coordinate with, and utilize the work of, other relevant supervisors and functional regulators, including analysis of reports filed with, or prepared by, these supervisors or regulators, or appropriate self-regulatory organizations, as well as related surveillance results.

Discovery review: An examination/inspection supervisory activity designed to improve the understanding of a particular business activity or control process—for example, to address a knowledge gap identified during the risk assessment or other supervisory process. If questions regarding the adequacy of practices or sufficiency of information are raised during this review, it will likely be necessary to conduct further and more in-depth examination activity (e.g., testing).

Examination/inspection: Examination activities are applicable to the supervision of banks and other depository institutions, as well as U.S. banking offices of FBOs, and inspection activities are applicable to the supervision of BHCs and nonbank subsidiaries and affiliates. Examination and inspection activities are generally described as examinations throughout this guidance.

Testing: An examination/inspection supervisory activity designed to go beyond a discovery review, as it will result in an assessment of whether a control process is appropriately designed and achieving its objectives, or validation of a management assertion about an organization’s operations. Such activities may include the review and validation of internal MIS, such as business records related to an internal control process; audit findings and processes; or a sample of transactions that have been entered into by a banking organization.

1050.0.4.3 Foreign Banking Organization Supervision

Booked in: Recorded on the books and records of the legal entity in question. For supervisory purposes, the U.S. operations of FBOs include activities that are booked in or traded through U.S. operations.

Comprehensive, consolidated supervision: An FBO is supervised or regulated in such a manner that its home-country supervisor receives sufficient information on the worldwide operations of the FBO (including the relationship of the bank to any affiliate) to assess the FBO’s overall financial condition and compliance with law and regulation. The Foreign Bank Supervision Enhancement Act of 1991 introduced the requirement that the Federal Reserve approve...
the establishment of all U.S. banking offices of FBOs, and in that connection, take into account whether the FBO is subject to comprehensive, consolidated supervision by its home-country supervisor.

Multi-office foreign banking organizations: All FBOs except for (1) those that are designated as being part of the portfolio of LCBOs and (2) FBOs whose U.S. operations consist solely of a single U.S. banking office.

National treatment: As established by the International Banking Act of 1978 (IBA), a policy that requires nondiscrimination between domestic and foreign firms or treatment of foreign entities that is no less favorable than that accorded to domestic enterprises in like circumstances. This policy generally gives foreign banks operating in the United States the same powers as U.S. banking organizations and subjects them to the same restrictions and obligations.

Net due to/from positions: Net due to and from positions refer to the flow of funds between a U.S. branch or agency and its parent FBO (including other affiliated depository institutions). For example, a U.S. branch is in a net due from position with its parent FBO if the parent owes funds to the branch once all transactions between the branch and the parent are netted.

Qualifying foreign banking organizations (QFBOs): FBOs that are entitled to certain exemptions from the nonbanking activities restrictions of the Bank Holding Company Act, including for certain limited commercial and industrial activities in the United States. The Federal Reserve does not examine or supervise these commercial/industrial activities. The Federal Reserve monitors the extensions of credit by U.S. banking offices of foreign banks to U.S. companies held directly under this authority to ensure that such loans are made on market terms.

Traded through: Transacted or arranged by the personnel of the institution in question (in an agent role), but booked at a different related legal entity. For supervisory purposes, the U.S. operations of FBOs include activities that are booked in or traded through U.S. operations.

U.S. banking offices: U.S. depository institution subsidiaries of FBOs and branches/agencies of FBOs.

U.S. nonbank affiliates of U.S. banking offices: U.S. BHC parent companies and their nonbank subsidiaries, as well as other U.S. nonbank affiliates and representative offices held directly by the FBO.

1050.0.4.4 Other Terms

Banking Organization National Desktop (BOND): A Federal Reserve information technology platform providing secure interagency access to documents, supervisory and financial data, and other information utilized in the consolidated supervision of individual BHCs and FBOs, and in developing comparative analyses of institutions with similar business lines and risk characteristics.

College of supervisors: A multilateral group of supervisors that discusses issues related to specific internationally active banking organizations. The Federal Reserve participates in colleges of supervisors as both a home-country supervisor of internationally active U.S. BHCs and as a host-country supervisor of the U.S. operations of FBOs.

Consolidated supervision (also known as “umbrella” or “groupwide” supervision): Supervision of a BHC on a groupwide basis, including its nonbanking subsidiaries, providing important protection to its subsidiary banks and to the federal safety net beyond that afforded by supervision of a bank individually. Consolidated supervision allows the Federal Reserve to understand the financial and managerial strength and risks within the consolidated organization as a whole, providing the ability to address significant management, operational, capital, or other deficiencies within the overall organization before they pose a threat to subsidiary banks.

Core clearing and settlement organizations: As defined in the “Interagency Paper on Sound Practices to Strengthen the Resilience of the U.S. Financial System” (SR-03-9), two groups of organizations that provide clearing and settlement services for critical financial markets or act as large-value payment system operators, and present the potential for systemic risk should they be unable to perform. The first group consists of market utilities (government-sponsored services or industry-owned organizations), whose
primary purpose is to clear and settle transactions for critical markets or transfer large-value wholesale payments. The second group consists of those private-sector firms that provide clearing and settlement services that are integral to a critical market (i.e., their aggregate market share is significant enough to present the potential for systemic risk in the event of their sudden failure to carry out those activities because there are no viable immediate substitutes).

Critical financial markets: As defined in the “Interagency Paper on Sound Practices to Strengthen the Resilience of the U.S. Financial System,” the markets for federal funds, foreign exchange, and commercial paper; U.S. government and agency securities; and corporate debt and equity securities.

Domestic BHC: A BHC incorporated in the United States that is not controlled by an FBO.

Double leverage: Situations in which debt is issued by the parent company and the proceeds are invested in subsidiaries as equity.

Financial instability: When external events or market behavior in the financial system are substantial enough to significantly distort or impair national or global financial markets or to create significant risks for real aggregate economic performance. Banking organizations with a considerable presence in activities that are potentially vulnerable to such externalities—or that are capable of contributing to financial instability if not adequately managed—require supervisors to develop an understanding of these activities and their risk profile.

Functional regulator: With respect to domestic authorities, the appropriate federal (examples include the U.S. Securities and Exchange Commission and the U.S. Commodity Futures Trading Commission) or state regulator for a functionally regulated nondepository subsidiary or affiliate of a BHC or FBO.

Key corporate governance functions: Primary firmwide governance mechanisms relied upon by the board of directors and senior management. This includes the board and its committees, senior management and its executive committees, internal audit, and other functions (e.g., corporate finance and treasury functions), whose effectiveness is essential to sustaining the consolidated organization as well as a firm’s business resiliency and crisis management capabilities.

Key financial markets: Includes critical financial markets as well as (1) broader U.S. capital market activity, including underwriting, securitization, derivatives, and trading; (2) retail financial services; and (3) international financial markets.

Key models and processes: Those where evaluation of the model/process will influence the Federal Reserve’s assessment of the activity or control area that is supported by the model/process.

Large complex banking organizations (LCBOs): LCBOs are characterized by the scope and complexity of their domestic and international operations; their participation in large volume payment and settlement systems; the extent of their custody operations and fiduciary activities; and the complexity of their regulatory structure, both domestically and in foreign jurisdictions. To be designated as an LCBO, a banking organization must meet specified criteria to be considered a significant participant in at least one key financial market.

Material portfolios or business lines: Portfolio risk areas (such as retail or wholesale credit risk) or individual business lines (such as mortgage lending or leveraged lending) that are primary drivers of risk or revenue for the BHC, or that otherwise materially contribute to understanding inherent risk or assessing related controls for a broader corporate function (such as consolidated credit-risk management). When identifying these areas during the development of the institutional overview and risk assessment, as well as during other supervisory processes, consideration is given to all associated risk elements, including legal and compliance risks.

Net debit cap: The maximum dollar amount of uncollateralized daylight overdrafts that an institution may incur in its Federal Reserve account.

Nonmaterial business lines: Business lines that are not primary drivers of risk or revenue for the BHC, and are not principal contributing factors to either understanding risk inherent in a broader corporate function or to assessing related controls.

Nontraditional BHCs: BHCs in which most or all of the organization’s significant nondepository subsidiaries are regulated by a functional...
regulator, and subsidiary depository institution(s) are small in relation to nondepository subsidiaries.

*Other relevant primary supervisors:* Primary bank or thrift supervisors of BHC subsidiaries, including host-country supervisors (or home-country supervisors for FBOs), whose understanding and assessments are key to effective firmwide consolidated supervision.

*Primary firmwide risk management and control functions:* Mechanisms relied upon by the board of directors and senior management for identifying, measuring, monitoring, and controlling primary risks to the consolidated organization. This includes risk management and control functions for primary credit, legal and compliance, liquidity, market, operational, and reputational risks for the consolidated organization.

*Primary supervisor:* The primary federal banking or thrift supervisor (for example, the Office of the Comptroller of the Currency for a nationally chartered bank) of a depository institution subsidiary of a BHC, or of a U.S. banking office of an FBO. For state-chartered depository institutions or banking offices, this term also includes the relevant bank supervisory authority of the institution’s chartering/licensing state. Where a BHC has multiple depository institution subsidiaries, or an FBO has multiple U.S. banking offices, there may also be multiple primary banking supervisors, depending on how the subsidiaries are chartered/licensed. For U.S. operations of FBOs, the U.S. supervisor of a U.S. banking office is referred to as a domestic primary supervisor.

*Regional bank holding companies:* BHCs with $10 billion or more in consolidated assets (including nontraditional BHCs) that are not designated as LCBOs.

*Regulatory structure:* The various legal entities within the organization that are subject to oversight by different domestic and foreign primary supervisors or functional regulators.

*Significant nonbank activities and risks:* Where the parent company or nonbank subsidiaries engage in risk-taking activities or hold exposures that are material to the risk management or financial condition of the consolidated organization or a depository institution affiliate.

*Specialized report from a functionally regulated subsidiary:* As discussed in the GLBA, a report that the functionally regulated subsidiary is not required to prepare by another federal or state regulatory authority or an appropriate self-regulatory organization.

*Systemic risk:* The risk that the failure of one participant to meet its required obligations in a transfer system or financial market will cause other participants to be unable to meet their obligations when due, causing significant liquidity or credit problems or threatening the stability of national or global financial markets.
WHAT’S NEW IN THIS REVISED SECTION

Effective January 2015, this section is revised for the adoption of a new consolidated supervision framework for large banking organizations. Refer to SR-12-17/CA-12-14, “Consolidated Supervision Framework for Large Financial Institutions.” SR-99-15 was superseded by SR-12-17/CA-12-14.

1050.1.1 ACTIVITIES OF THE FEDERAL RESERVE AND OTHER SUPERVISORS AND REGULATORS, AND FUNCTIONAL REGULATION

In 1999, the Federal Reserve established its supervisory program for large complex banking organizations (LCBOs).1 LCBOs are characterized by the scope and complexity of their domestic and international operations; their participation in large volume payment and settlement systems; the extent of their custody operations and fiduciary activities; and the complexity of their regulatory structure, both domestically and in foreign jurisdictions. To be designated as an LCBO, a banking organization must meet specified criteria to be considered a significant participant in at least one key financial market.2

As outlined in the following sections, a range of continuous monitoring activities is utilized, along with discovery reviews and testing activities (examination/inspection activities),3 to develop and maintain an understanding and assessment of each domestic bank holding company (BHC) that is an LCBO.4 These organizations are collectively referred to as large complex BHCS.

1. With the implementation of the “Consolidated Supervision Framework for Large Financial Institutions” (refer to SR-12-17/CA-12-14), SR-99-15, “Risk-Focused Supervision of Large Complex Banking Organizations,” was superseded. (Refer to section 2124.05 of this manual).
2. See section 1050.0.4, Appendix, for the definitions of terms commonly used in this section and sections 1050.1 and 1050.2.
3. The term “examination” is generally used throughout this guidance to refer to both commercial bank examination and BHC inspection activities.
4. The term “domestic BHC” refers to a BHC incorporated in the United States that is not controlled by a foreign banking organization (FBO). Attachment B.1 to SR-08-9/CA-08-12 addresses—in the context of supervising the combined U.S. operations of FBOs—how the Federal Reserve will develop and maintain an understanding and assessment of a BHC that is, or is controlled by, an FBO that is itself an LCBO.

1050.1.1.1 Federal Reserve Activities and Those Activities of Other Supervisors and Regulators

The nature and scope of independent Federal Reserve supervisory work required to develop and maintain an understanding and assessment of a large complex BHC depends largely on the extent to which other relevant primary supervisors or functional regulators have information or assessments upon which the Federal Reserve can draw. By their nature, understanding and assessing some areas—such as the risk management and financial condition of significant nonbank subsidiaries that are not functionally regulated—will require more independent Federal Reserve supervisory work. Other areas—such as primary firmwide risk management and control functions—will require a greater degree of coordination with other relevant primary supervisors or functional regulators, who will likely have information or assessments upon which the Federal Reserve can draw.

The following sections provide further detail on how the Federal Reserve will develop, working in coordination with other relevant primary supervisors and functional regulators, an understanding and assessment of a large complex BHC. In conducting the activities described throughout this document, the Federal Reserve will, to the fullest extent possible

- rely on the information and assessments of relevant primary supervisors and functional regulators, including the information and assessments reflected in the reports of examination of such supervisors and regulators;
- focus its supervisory activities on the bank holding company, as well as on those of its nonbank subsidiaries that could have a direct or indirect materially adverse effect on the safety and soundness of a depository institution subsidiary of the BHC due to the size, condition, or activities of the nonbank subsidiary, or the nature or size of its transactions with the depository institution; and
- use publicly reported information (including externally audited financial statements), as well as reports that a large complex BHC or a subsidiary prepares for other primary supervisors, functional regulators, or self-regulatory organizations.

BHC Supervision Manual January 2015 Page 1
1050.1.2—Functionally Regulated Subsidiaries

As discussed below, in certain situations, the Federal Reserve may find it necessary to conduct an examination of a functionally regulated nonbank subsidiary in order to fulfill the Federal Reserve’s responsibilities as supervisor of the consolidated organization. In any such case, the Federal Reserve will continue to adhere to the procedural and other requirements governing examinations of, or requests for a specialized report from, a functionally regulated subsidiary as discussed in SR-00-13 and sections 1040.0 and 3900.0. Under these provisions, for example, the Federal Reserve may conduct an examination of a functionally regulated subsidiary if, after reviewing relevant reports, it reasonably determines that the examination is necessary to adequately inform the Federal Reserve about the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a direct or indirect threat to the safety and soundness of a depository institution subsidiary.5

1050.1.2 UNDERSTANDING THE ORGANIZATION

For each large complex BHC, the Federal Reserve will develop an understanding of the legal, operating, and corporate governance structure of the organization and its primary strategies, business lines, and risk-management and internal control functions.6 This understanding will inform the development of a risk assessment and supervisory plan for the BHC. Typically, the information necessary to gain this understanding may be obtained from the organization’s management, public reports, regulatory reports, surveillance screens, third-party sources (e.g., credit rating agency and market analyst reports), and other relevant primary supervisors or functional regulators. Key elements that should be identified and understood include the following:

- **Corporate strategy.** Primary business strategies; institutional risk tolerance; key changes in strategic direction or risk profile; significant new business activities, areas of growth and emerging areas with potential to become primary drivers of risk or revenue; and plans for expansion through mergers or acquisitions.
- **Significant activities.** Key revenue and risk drivers; primary business lines; product mix; budget and internal capital allocations; market share for revenue and customers served; key external trends, including competitive pressures; and areas that are vulnerable to volatility in revenue, earnings, capital, or liquidity.
- **Structure.** Business line and legal entity structure; domestic and foreign regulatory responsibilities for legal entities and business lines; key interrelationships and dependencies between depository institution subsidiaries and nonbank affiliates; material business lines operated across multiple legal entities for accounting or risk-management purposes; and the activities and risk profiles of Edge and agreement corporation subsidiaries.
- **Corporate governance, risk management, and internal controls for primary risks.** Board of directors (board) and executive-level committees; senior management and management committees; key risk-management and internal control functions, and associated management information systems (MIS), relied upon by the board, senior management, and senior risk managers and committees; and consistency of public disclosures with how the board and senior management assess and manage risks.

5. The Federal Reserve also may examine a functionally regulated subsidiary of a large complex BHC if, after reviewing relevant reports and other information, it has reasonable cause to believe that the subsidiary is engaged in an activity that poses a material risk to an affiliated depository institution, or that the subsidiary is not in compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the subsidiary (and the Federal Reserve cannot determine compliance by examining the BHC or its affiliated depository institutions).

Similarly, before requiring a specialized report from a functionally regulated subsidiary, the Federal Reserve first will request that the subsidiary’s appropriate functional regulator obtain the report and make it available to the Federal Reserve. In the event that the report is not obtained or made available as requested, the Federal Reserve may, consistent with the Bank Holding Company Act, obtain the report directly from the functionally regulated subsidiary if the report is necessary to allow the Federal Reserve to adequately assess (1) a material risk to the BHC or any of its depository institution subsidiaries, (2) the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a threat to the safety and soundness of a depository institution subsidiary, or (3) compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the BHC or a subsidiary.

6. This understanding is formally documented during development of the institutional overview, which coincides with creation of the annual risk assessment. SR-97-24, “Risk-Focused Framework for Supervision of Large Complex Institutions” (see section 2124.01), describes processes for developing an institutional overview, risk assessment, and supervisory plan. Each of these products is kept current to reflect significant changes in an organization’s risks or activities.
• Presence in critical or key financial markets.\(^7\) Core clearing and settlement activities; business lines with a significant presence in critical or key national or global financial markets; and related risk-management and disclosure practices.

To ensure the quality and consistency of consolidated supervision across the large complex BHC portfolio, it also is necessary to understand how these key elements compare with industry trends and with evolving practices of well-managed organizations with similar characteristics.

1050.1.3 ASSESSING THE LARGE COMPLEX BHC ON A CONSOLIDATED BASIS

The Federal Reserve uses a systematic approach to develop an assessment of a BHC on a consolidated basis. This assessment is reflected in the RFI (Risk Management, Financial Condition, and Impact) rating assigned to a BHC.\(^8\)

1050.1.3.1 Risk Management

1050.1.3.1.1 Key Corporate Governance Functions

Objectives: One of the primary areas of focus for consolidated supervision of large complex BHCs is the adequacy of governance provided by the board and senior management. The culture, expectations, and incentives established by the highest levels of corporate leadership set the tone for the entire organization and are essential determinants of whether a banking organization is capable of maintaining fully effective risk-management and internal control processes.

The board and its committees should have an ongoing understanding of key inherent risks, associated trends, primary control functions, and senior management capabilities. Primary expectations for the board and its committees include

1. selecting competent senior managers, ensuring that they have the proper incentives to operate the organization in a safe and sound manner, and regularly evaluating senior managers’ performance;
2. establishing, communicating, and monitoring (for example, by reviewing comprehensive MIS reports produced by senior management) institutional risk tolerances and a corporate culture that emphasizes the importance of compliance with the law and ethical business practices;
3. approving significant strategies and policies;
4. demonstrating leadership, expertise, and effectiveness;
5. ensuring the organization has an effective and independent internal audit function;
6. ensuring the organization has appropriate policies governing the segregation of duties and avoiding conflicts of interest; and
7. ensuring that public disclosures
   • are consistent with how the board and senior management assess and manage the risks of the organization,
   • balance quantitative and qualitative information with clear discussions about risk-management processes, and
   • reflect evolving disclosure practices for peer organizations.

A large complex BHC’s senior management and its committees should be able to clearly communicate risk tolerances and measures, control risks, hire and retain competent staff, and respond to changes in the organization’s risk profile and the external environment. Members of senior management are expected to have qualifications and experience commensurate with the size and complexity of the organization. Primary expectations for senior management include

1. establishing effective oversight and an appropriate risk culture;
2. appropriately delegating authority and overseeing the establishment and implementation of effective policies for the proper segregation of duties and for the avoidance of management of conflicts of interest;
3. establishing and implementing an effective risk-management framework capable of identifying and controlling both current and emerging risks, and effective independent control functions that ensure risk taking is consistent with the organization’s established risk appetite;
4. establishing and implementing incentives for

---

\(^7\) See sections 1050.1.3.1.6 and 1050.1.3.1.7 for definitions of “critical financial markets” and “key financial markets.”

\(^8\) The RFI rating system for BHCs is discussed in SR-04-18, “Bank Holding Company Rating System” (see section 4070.0). RFI ratings are assigned for BHCs that are complex or that have $1 billion or more in consolidated assets, and are communicated via a comprehensive summary supervisory report that supports the BHC’s assigned ratings and encompasses the results of the entire supervisory cycle.
personnel that are consistent with institutional risk tolerances, compliance with the law, and ethical business practices;

5. promoting a continuous dialogue between and across business areas and risk-management functions to help align the organization’s established risk appetite and risk controls;

6. ensuring that the board and its committees are provided with timely, accurate, and comprehensive MIS reports that are adaptive to changing circumstances regarding risks and controls; and

7. ensuring timely resolution of audit, compliance, and regulatory issues.

An effective internal audit function plays an essential role by providing an independent and objective evaluation of all key governance, risk-management, and internal control processes. As the complexity of financial products and supporting technology has grown, in combination with greater reliance on third-party service providers, the importance of internal audit’s role in identifying risks and testing internal controls has increased.

In addition, the extent to which supervisors can rely on or utilize the work of internal audit is an essential determinant of the risk-focused supervisory program that is tailored to the activities and risks of each large complex BHC.

Supervisory Activities: For each large complex BHC, the Federal Reserve will understand and assess the adequacy of oversight provided by the board and senior management, as well as the adequacy of internal audit and associated MIS. The Federal Reserve also will understand and assess other key corporate governance functions (e.g., corporate finance and treasury functions), whose effectiveness is essential to sustaining consolidated holding company operations, as well as the organization’s business resiliency and crisis management capabilities.

• Board, senior management, and other key corporate governance functions. Continuous monitoring activities—which draw from all available sources, including internal control functions, the work of other relevant primary supervisors and functional regulators, regulatory reports, and related surveillance results—will be used to understand and assess the effectiveness of board and senior management resources and oversight.

The results of continuous monitoring activities, as documented in the institutional overview, risk assessment, and other supervisory products, may identify certain corporate governance functions that will require more intensive supervisory focus due to (1) significant changes in corporate strategy, activities, organizational structure, oversight mechanisms, or key personnel; (2) potential concerns regarding the adequacy of a specific governance function; or (3) the absence of sufficiently recent examination activities for a key function by the Federal Reserve or another primary supervisor or functional regulator.

• Internal audit. Continuous monitoring and examination activities will be used to understand and assess key elements of internal audit governance for the organization on a consolidated basis, including (1) the adequacy and independence of the audit committee; (2) the independence, professional competence, and quality of the internal audit function; (3) the quality and scope of the audit methodology, audit plan, and risk-assessment process; and (4) the adequacy of audit programs and workpaper standards. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding the adequacy of key elements of internal audit. In addition to this periodic audit infrastructure review, testing activities for specific control functions or business lines should include an assessment of internal audit’s recent work in these areas to the extent possible as a means of validating internal audit’s findings.

• Additional supervisory activities. If continuous monitoring activities identify a key corporate governance function or element of internal audit requiring more intensive supervisory focus due to significant changes, potential concerns, or the absence of sufficiently recent examination activities, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) in developing discovery reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve will participate as actively as appropriate in those activities.9

9. Active participation by the Federal Reserve in an examination led by another primary supervisor or functional regula-
If the area of concern is not within the oversight of another primary supervisor or functional regulator, or if the supervisor or regulator does not conduct or coordinate the examination activities in a reasonable period.

This includes having input into determining the examination objectives, final conclusions, and related communications to the organization’s management. In the event that a material aspect of the Federal Reserve’s input is not reflected in the examination’s objectives, conclusions, or related communications with the organization, the Federal Reserve will review the situation to determine whether additional steps are appropriate to address any remaining concerns.
of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant primary supervisors and functional regulators to the extent possible.

- Additional required audit testing activities. In all instances, the Federal Reserve will conduct testing activities as part of its audit infrastructure review (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators or participating as actively as appropriate in activities led by other relevant supervisors or regulators) on at least a three-year cycle to ensure that the internal audit program is appropriately designed and achieving its objectives.

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.2 Risk Management and Internal Control Functions for Primary Risks to the Consolidated Organization

Objectives: Underlying the risk-focused approach to consolidated supervision of large complex BHCs is the premise that it is each organization’s responsibility to develop an appropriate control structure for identifying, measuring, monitoring, and controlling key risks as measured against supervisory standards and expectations, applicable laws and regulations, and evolving practices of well-managed organizations.

The Federal Reserve will understand and assess risk-management and control functions for primary risks to the consolidated organization (primary firmwide risk-management and control functions), and associated MIS, for each large complex BHC. This will include risk-management and control functions for primary credit, legal and compliance, liquidity, market, operational, and reputational risks for the consolidated organization. The Federal Reserve also will understand and assess other risk-management and control functions that, based on the specific characteristics and activities of the individual BHC, relate to primary risks to the organization as a whole.

For example, for large complex BHCs with particularly dynamic corporate strategies, the Federal Reserve will understand and assess the adequacy of the control mechanisms relevant to such strategies, including strategic planning, merger integration, new business approval, and processes for ensuring that risk management and controls keep pace with areas of growing inherent risk. Furthermore, large complex BHCs operating across a range of financial intermediary activities are more likely to face potential conflicts of interest due to their greater likelihood of acting as agents for both issuers and investors. For these holding companies, it is necessary to assess the adequacy of processes for identifying and avoiding or managing conflicts of interest.

In all instances, the adequacy of each primary firmwide risk management or control mechanism depends on the appropriateness of the following:

1. control infrastructure and governance, including degree of oversight by the board and senior management;
2. development, maintenance, and communication of appropriate policies, procedures, and internal controls;
3. risk identification and measurement systems and processes, and associated MIS, that are adaptive to changing circumstances and capable of providing timely, accurate, and comprehensive information to senior management and the board;
4. monitoring and testing the effectiveness of controls;
5. processes for identifying, reporting, and escalating issues and emerging risks;
6. ability to implement corrective actions in a timely manner;
7. appropriate authority and independence of staff to carry out responsibilities; and
8. integration of risk-management and control objectives within management goals and the organization’s compensation structure.

Most large complex BHCs have evolved toward comprehensive, consolidated risk management to measure and assess the range of their exposures and the way these exposures interrelate. Nonetheless, a variety of control structures are in place across this portfolio, and in some instances there is not a firmwide mechanism in place to oversee and manage a key control function across the organization’s business lines and
legal entities.

In all instances, the Federal Reserve will focus on individual control structures in place for primary business lines or legal entities as needed to reach an understanding and assessment of the consolidated organization. When applicable, the Federal Reserve also will assess whether a decentralized approach to a key control function is sufficient by evaluating the effectiveness of such an approach in controlling primary risks to the consolidated organization.11

Supervisory Activities: The Federal Reserve will use continuous monitoring activities to understand and assess each primary firmwide risk-management or control function. This process begins with the overarching design and architecture of each primary firmwide risk-management or control function, and drills down, as appropriate, through analysis of risk management and controls for material portfolio areas and business lines (described in section 1050.1.3.1.3 below). Activities will verify the sufficiency of fundamental aspects of internal controls in relation to the holding company’s current risk profile and in comparison with supervisory expectations and evolving sound practices and assess the capability of these primary functions (whether centralized or decentralized) to remain effective in the face of growth, changing strategic direction, significant market developments, and other internal or external factors.

The results of continuous monitoring activities, as documented in the institutional overview, risk assessment, and other supervisory products, may identify certain primary firmwide risk-management or control functions that require more intensive supervisory focus due to (1) significant changes in inherent risk, control processes, or key personnel; (2) potential concerns regarding the adequacy of controls; or (3) the absence of sufficiently recent examination activities for a primary firmwide risk-management or control function by the Federal Reserve or another relevant primary supervisor or functional regulator.

In these instances, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to develop discovery reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve will participate as actively as appropriate in those activities.

If the primary firmwide risk-management or control function is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant supervisors and regulators to the extent possible. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.3 Risk Management of Material Portfolios and Business Lines

Objectives: For each large complex BHC, there are selected portfolio risk areas (such as retail or wholesale credit risk) or individual business lines (such as mortgage lending or leveraged lending) that are primary drivers of risk or revenue, or that otherwise materially contribute to understanding inherent risk or assessing controls for a broader corporate function (such as consolidated credit-risk management).

During the development of the institutional overview and risk assessment, as well as during other supervisory processes, the Federal Reserve will analyze external factors and internal trends in the BHC’s strategic initiatives—as evidenced by budget and internal capital allocations and other factors—to identify significant activities and areas vulnerable to volatility in revenue, earnings, capital, or liquidity that represent material risks of the organization. This determination of material portfolios and business lines considers all associated risk elements, including legal and compliance risks. For example, when evalu-
ating whether retail activities such as mortgage or credit card lending are material to a banking organization, the extent of inherent consumer compliance and reputational risks, as well as credit and market risks, should be considered.

**Supervisory Activities:** Because an understanding of material risks and activities is needed to assess the primary firmwide risk-management and control functions (as discussed in preceding section 1050.1.3.1.2), the Federal Reserve will maintain an understanding of inherent risk and assess the adequacy of risk-management and internal controls for material portfolios and business lines. To form this understanding and assessment, the Federal Reserve will rely primarily on continuous monitoring activities, supplemented as appropriate by examination activities.

To the fullest extent possible, the Federal Reserve will draw its understanding and assessment of these risks and risk-management practices from the information and assessments of a primary supervisor or functional regulator where the BHC’s legal and operating structure provides the supervisor or regulator a sufficient view of these areas. In these instances, the Federal Reserve will undertake continuous monitoring and participate in activities led by primary supervisors and functional regulators as necessary to maintain an understanding and assessment of related firmwide risk-management and control functions.

Many activities of large complex BHCs span legal entities that are subject to oversight by multiple supervisors or regulators or that are outside the oversight of other supervisors or regulators. If this is the case, or if the primary supervisor or functional regulator does not conduct or coordinate the necessary continuous monitoring or examination activities in a reasonable period of time, the Federal Reserve will initiate and lead these activities in coordination with other relevant primary supervisors and functional regulators to the extent possible. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.1.1.2.

**1050.1.3.1.4 Risk Management of Nonmaterial Business Lines**

**Objectives:** For nonmaterial business lines identified during the development of the institutional overview and risk assessment, as well as during other supervisory processes, the Federal Reserve’s focus will be on identifying and understanding those business lines that are increasing in importance and have the potential to become material.

**Supervisory Activities:** When a primary supervisor or functional regulator has a sufficient view of nonmaterial business lines, the Federal Reserve will, to the fullest extent possible, use information developed by that supervisor or regulator to monitor areas of increasing importance with the potential to become material. The Federal Reserve also will maintain an ability to access internal MIS for these businesses to facilitate a more in-depth analysis of a business line, if appropriate, to understand its growing importance to the organization.

For nonmaterial business lines that are not subject to oversight by a single primary supervisor or functional regulator, the Federal Reserve will engage in continuous monitoring activities to identify meaningful trends in risks and risk-management practices, initiate discovery reviews (in coordination with relevant primary supervisors or functional regulators as appropriate and in accordance with section 1050.1.1.2 above if relevant) to increase understanding of selected business lines that have the potential to become material, and maintain an understanding of associated MIS to facilitate more in-depth analysis of a business line, if appropriate, to understand its growing importance to the organization.

**1050.1.3.1.5 Core Clearing and Settlement Activities (Where Applicable)**

**Objectives:** The Federal Reserve will understand and assess the adequacy of risk-management and internal controls—including credit risk-management practices—related to core clearing and settlement organizations. 12 In light

---

12. Core clearing and settlement organizations, as defined in the *Interagency Paper on Sound Practices to Strengthen the Resilience of the U.S. Financial System* (interagency sound practices paper, see SR-03-9), consist of two groups of organizations that provide clearing and settlement services for critical financial markets or act as large-value payment system operators, and that present the potential for systemic risk should they be unable to perform. These organizations are (1) market utilities (government-sponsored services or industry-owned organizations) whose primary purpose is to clear and settle transactions for critical markets (see section 1050.1.3.1.6) or transfer large-value wholesale payments, and (2) private-sector firms that provide clearing and settlement services that are integral to a critical market (i.e., their aggregate market share is significant enough to present the potential for systemic risk in the event of their sudden failure to carry out...
of the potential for problems in these areas to transmit an adverse impact across the banking and financial system, and given the Federal Reserve’s unique expertise and perspective with respect to these activities, the Federal Reserve focuses special supervisory attention on the risk-management and internal control practices and the public disclosures made by an organization with respect to these activities.

Supervisory Activities: Continuous monitoring and examination activities will be used to maintain an understanding of inherent risk and assess risk-management and internal controls, including related credit risk-management practices. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there is (1) a significant change in inherent risk for core clearing and settlement activities stemming from changing strategies or activities; (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; or (3) any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to design testing activities focused on understanding and assessing areas of change and/or concern, as well as ensure that risk-management and control functions are appropriately designed and achieving their intended objectives. In situations where another primary supervisor or functional regulator leads the discovery review or testing activities, the Federal Reserve will participate as actively as appropriate in those activities.

If the area of change and/or concern is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the examination activities in coordination with other relevant primary supervisors and functional regulators to the extent possible.

In all instances, the Federal Reserve will conduct testing activities (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators, or participating as actively as appropriate in activities led by other relevant supervisors or regulators) on at least a three-year cycle to ensure that these control mechanisms are appropriately designed and achieving their objectives. In addition to assessing the adequacy of risk-management and internal controls, testing activities will focus on assessing the contribution of the organization to the resilience or fragility of the clearance and settlement system as a whole, and on the organization’s adherence to the expectations of the interagency sound practices paper. Key expectations include geographic diversity and resiliency of data centers and operations, testing of recovery and resumption arrangements, and identification of downstream implications of failure of a major counterparty or clearing organization.

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.6 Significant Presence in Critical Financial Markets (Where Applicable)

Objectives: The Federal Reserve will understand and assess the adequacy of risk-management and controls for LCBO business lines with a significant presence in critical financial markets.

“Critical financial markets” are defined in the interagency sound practices paper as the markets for federal funds, foreign exchange, and commercial paper; U.S. government and agency securities; and corporate debt and equity securities. A business line may have a significant presence in a critical financial market even though the business line accounts for a relatively small portion of the organization’s total consolidated assets or revenues. These business lines are subject to special supervisory focus by the Federal Reserve in light of their potential to transmit a collective adverse impact across multiple firms and financial markets and the resulting significant reputational and other risks they pose to the organization.

Supervisory Activities: Continuous monitoring and examination activities will be used to understand inherent risk and assess risk-management and internal controls for business lines with a significant presence in a critical financial market. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there is (1) a significant
change in inherent risk stemming from changing strategies or activities; (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; or (3) any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified in these business lines, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to design testing activities focused on understanding and assessing areas of change and/or concern, as well as ensure that risk-management and control functions are appropriately designed and achieving their intended objectives. In situations where another primary supervisor or functional regulator leads the testing activities, the Federal Reserve will participate as actively as appropriate in those activities.

If the area of change and/or concern is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the testing activities and will coordinate these activities with other relevant primary supervisors and functional regulators to the extent possible.

In all instances, the Federal Reserve will conduct testing activities (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators, or participating as actively as appropriate in activities led by other relevant supervisors or regulators) on at least a three-year cycle. These activities will focus on the organization’s adherence to the expectations set forth in the interagency sound practices paper, including geographic diversity and resiliency of data centers and operations, and testing of recovery and resumption arrangements.

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.7 Risk Management of Activities in Key Financial Markets

Objectives: To be designated as an LCBO by the Federal Reserve, a banking organization must meet specified criteria as a significant participant in at least one key financial market. For each key financial market activity where the large complex BHC is a significant participant, the Federal Reserve will maintain an understanding of inherent risk, assess the adequacy of related risk-management and internal controls (including the sufficiency of business continuity planning), and understand the organization’s potential impact on the overall functioning of the market.

Supervisory Activities: Continuous monitoring and examination activities will be used to understand inherent risk for key financial market activities and assess related risk-management and internal controls.

To the fullest extent possible, the Federal Reserve will draw its understanding and assessment of these risks and risk-management practices from the information and assessments of a primary supervisor or functional regulator where the BHC’s legal and operating structure provides the supervisor or regulator a sufficient view of these areas. In these instances, the Federal Reserve will undertake continuous monitoring and participate in activities led by primary supervisors and functional regulators as necessary to maintain an understanding and assessment of risk-management and control functions for key financial market activities.

For activities that span legal entities subject to oversight by multiple supervisors or regulators, or that are outside the oversight of other supervisors or regulators, the Federal Reserve will develop and conduct—in coordination with other relevant primary supervisors and functional regulators to the extent possible and in accordance with the provisions described above in section 1050.1.1.2 if relevant—testing and discovery review activities as necessary to complement continuous monitoring work.

1050.1.3.1.8 Issues and Developments in Areas of Emerging Interest with Potential Financial Market Consequences

Objectives: The Federal Reserve will use information obtained in the course of supervising LCBOs, as well as information and analysis...
obtained through relationships with other domestic and foreign supervisors and regulators or other sources, to

1. identify potential vulnerabilities across the portfolio of LCBOs and their nonbank peers—such as the operational infrastructure that underpins the credit derivatives market—that have the potential to affect banking organizations generally, financial stability, systemic risk, or domestic or global financial markets;

2. identify areas of supervisory focus—such as counterparty credit risk-management practices—to further the Federal Reserve’s understanding of markets, their linkages with banking organizations, and potential implications for financial stability;

3. understand the activities of nonbank counterparties of LCBOs and the implications of such activities on the risks, risk management, and internal controls of banking organizations; and

4. enhance the Federal Reserve’s ability to act effectively during periods of financial stress by combining timely and reliable information on conditions in the banking system and capital markets that is obtained through its supervisory activities with information obtained through the Federal Reserve’s monetary policy and payments activities.

Supervisory Activities: During each supervisory planning cycle, and more frequently as required, continuous monitoring opportunities will be identified that utilize information gained through LCBO supervision to further the Federal Reserve’s understanding of risks and activities that could adversely affect LCBOs or the stability of domestic or global financial markets. Activities will include meetings with chief risk officers, chief financial officers, and other LCBO senior management, as well as collaboration with other domestic and foreign supervisors and regulators and foreign central banks.

These activities also will be used to review areas of specific supervisory interest; answer ad hoc information requests related to areas of emerging interest or concern; help in understanding the contribution of the entity to the resilience or fragility of key markets as a whole; and provide insights into interdependencies across firms, markets, and the real economy. During periods of financial stress, this information will be combined with knowledge obtained from other Federal Reserve functions, such as monetary policy and payments activities, to help mitigate the likelihood or consequences of a financial crisis and to help develop sound policy responses to market developments. Periodic examination activities also may be used to review a specific activity or risk-management practice across a group of peer organizations to obtain a more complete understanding of industry practice.14

These activities will be designed and conducted in coordination with other relevant primary supervisors and functional regulators to the fullest extent possible and in accordance with the provisions described above in section 1050.1.1.2, where relevant. Coordination opportunities, however, may be limited in special circumstances, such as when addressing urgent matters with potentially adverse financial market consequences, due to the inherent time constraints when information must be gathered quickly.

1050.1.3.2 Financial Condition

Objectives: The Federal Reserve’s evaluation of a large complex BHC’s consolidated financial condition focuses on the ability of the organization’s resources to support the level of risk associated with its activities. Assessments are developed for each “CAEL” subcomponent—Capital Adequacy (C), Asset Quality (A), Earnings (E), and Liquidity (L).15

In developing this evaluation, the Federal Reserve’s primary focus is on developing an understanding and assessment of

1. the sufficiency of the BHC’s consolidated capital to support the level of risk associated with the organization’s activities and provide a sufficient cushion to absorb unanticipated losses;

2. the capability of liquidity levels and funds-management practices to allow reliable access to sufficient funds to meet present and future liquidity needs; and

3. other aspects of financial strength that need to be assessed on a consolidated basis across the organization’s various legal entities, or that relate to the financial soundness of the parent company and significant nonbank sub-

14. In order to minimize burden while obtaining information necessary to understand market developments, these activities will focus on those organizations that are most active in the area of interest or concern.

15. See SR-04-18 and section 4070.0.2.3.1 for more information about the CAEL subcomponents.
Guidance for the Consolidated Supervision of Domestic BHCs That Are LCBOs

In assessing consolidated regulatory capital, the Federal Reserve looks to ensure that the BHC demonstrates the effectiveness of its framework for complying with relevant capital adequacy guidelines and meeting supervisory expectations, and focuses on analyzing key models and processes that influence this assessment. This assessment utilizes results from examinations led by the Federal Reserve or other primary supervisors or functional regulators, as well as information gained from the BHC’s internal control functions and from market-based assessments.

Capital planning activities for large complex BHCs should be forward looking and provide for a sufficient range of stress scenarios commensurate with the organization’s activities. Many LCBOs require more rigorous and structured internal processes for assessing capital adequacy beyond regulatory capital measures, as these measures often do not adequately capture the full spectrum of risk-taking activities for these organizations. For these organizations, the Federal Reserve focuses on whether internal processes for assessing capital adequacy ensure that all risks are properly identified, reliably quantified (where possible) across the entire organization, and supported by adequate capital.

When assessing the adequacy of a BHC’s liquidity levels and funds management practices, areas of focus include:

1. the extent to which the treasury function is aligned with risk-management processes, and whether incentives are in place for business lines to compile and provide information on expected liquidity needs and contingency funding plans so that the treasury function is able to develop a firmwide perspective and incorporate business-line information into assessments of actual and contingent liquidity risk;
2. whether funds management practices provide sufficient funding flexibility to respond to unanticipated, evolving, and potentially correlated market conditions for the organization and/or across financial markets; and
3. the sufficiency of liquidity planning tools, such as stress testing, scenario analysis, and contingency planning efforts, including (1) whether liquidity buffers—comprised of unencumbered liquid assets as well as access to stable funding sources—adequately reflect the possibility and duration of severe liquidity shocks; (2) the reasonableness of assumptions about the stability of secured funding in circumstances in which the liquidity of markets for the underlying collateral becomes impaired; and (3) whether these efforts adequately reflect the potential for the organization to be called on in stressed environments to provide contingent liquidity support to off-balance-sheet entities or bring additional assets on the balance sheet (even if not legally or contractually obligated to do so).

Beyond capital adequacy and liquidity, the nature of independent Federal Reserve supervisory work required to evaluate a large complex BHC’s consolidated financial condition depends largely on the extent to which other relevant primary supervisors or functional regulators have information or assessments upon which the Federal Reserve can draw. For example, more independent Federal Reserve work typically will be required to assess consolidated asset quality or earnings for large complex BHCs with significant nonbank activities that are not functionally regulated. However, where all material holding company assets are concentrated in a single depository institution subsidiary, a minimal level of incremental Federal Reserve efforts typically will be required to assess consolidated asset quality and earnings.

Supervisory Activities: The Federal Reserve will primarily utilize continuous monitoring activities to assess a large complex BHC’s financial strength. Such activities will include periodic meetings with BHC management (such as the chief financial officer); review of regulatory reports, surveillance screens, and internal MIS; and analysis of market indicators, including external debt ratings, subordinated debt spreads, and credit default swap spreads. Testing and discovery activities will be used as necessary to assist in the understanding and assessment of areas of concern.
Testing and discovery activities also will be used to understand and assess the sufficiency of the BHC’s consolidated capital and liquidity positions to support the level of risk associated with its activities, including (1) regulatory capital calculation methodologies and internal assessments of capital adequacy and (2) funds management and liquidity planning tools and practices. The Federal Reserve will work with other relevant primary supervisors and functional regulators to participate as actively as appropriate in or, if necessary, to coordinate activities designed to analyze key capital and liquidity models or processes of a depository institution or functionally regulated subsidiary that are of such significance that they will influence the Federal Reserve’s assessment of these areas. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.3 Impact

1050.1.3.3.1 Risk Management and Financial Condition of Significant Nonbank Subsidiaries

Objectives: Most large complex BHCs engage in activities and manage control functions on a firmwide basis, spanning depository institution and nonbank legal entities. These BHCs often have considerable intra-group exposures and servicing arrangements across affiliates, presenting increased potential risks for depository institution subsidiaries and a higher likelihood of aggregate risk concentrations across the organization’s legal entities. Common interactions between a large complex BHC’s depository institution subsidiaries and their nonbank affiliates (including the parent company) include assets originating in, or being marketed by, a nonbank affiliate that are booked in the depository institution; a depository institution providing funding for nonbank affiliates; and risk-management or internal control functions being shared between depository and nonbank operations.

Due to these interrelationships, financial, legal, compliance, or reputational troubles in one part of a BHC can spread rapidly to other parts of the organization. Even absent these interactions, the parent or nonbank subsidiaries of an organization may present financial, legal, compliance, or reputational risk to the consolidated entity, and thus directly or indirectly to its depository institution subsidiaries. As the federal banking agency charged with supervising the organization on a consolidated basis, the Federal Reserve is responsible for understanding and assessing the risks that the parent bank holding company and its nonbank subsidiaries may pose to the BHC itself or its depository institution subsidiaries.

The primary objectives of Federal Reserve supervision of the nonbank subsidiaries of a bank holding company are to

1. identify significant nonbank activities and risks—where the parent company or nonbank subsidiaries engage in risk-taking activities or hold exposures that are material to the risk management or financial condition of the consolidated organization or a depository institution subsidiary—by developing an understanding of the size and nature of primary activities and key trends, and the extent to which business lines, risks, or control functions are shared with or may impact a depository institution affiliate;
2. evaluate the financial condition and the adequacy of risk-management practices of the parent and significant nonbank subsidiaries, including the ability of nonbank subsidiaries to repay advances provided by the parent, using benchmarks and analysis appropriate for those businesses;
3. evaluate the degree to which nonbank entity risks may present a threat to the safety and soundness of subsidiary depository institutions, including through transmission of legal, compliance, or reputational risks;
4. identify and assess any intercompany relationships, dependencies, or exposures—or aggregate firmwide concentrations—with the potential to threaten the condition of a depository institution affiliate; and
5. evaluate the effectiveness of the policies, procedures, and systems that the holding company and its nonbank subsidiaries use to ensure compliance with applicable laws and

---

19. Assessments of the adequacy of regulatory capital for large complex BHCs that have received Federal Reserve supervisory approval to use internal estimates of risk in their regulatory capital calculations should include, among other things, regular verification that these organizations continue to meet on an ongoing basis all applicable requirements associated with internal estimates. See, for example, the capital adequacy guidelines for market risk at BHCs (Regulation Y: 12 C.F.R. 225, Appendix E) and the new advanced capital adequacy framework for BHCs (Regulation Y: 12 C.F.R. 225, Appendix G).

BHC Supervision Manual January 2016
Page 12
4. identify and assess key interrelationships and  

Supervisory Activities: For all significant non-
bank subsidiaries and activities of the parent  
BHC, the Federal Reserve will use continuous  
monitoring activities and discovery reviews to  

1. maintain an understanding of the holding  
company’s business line and legal entity  
structure, including key interrelationships and  
dependencies between depository institution  
subsidiaries and nonbank affiliates, utilizing  
regulatory structure reports, internal MIS,  
and other information sources;  
2. understand and assess the exposure to, and  
tolerance for, legal, compliance, and reputa-
tional risks, as well as the extent to which  
potential conflicts of interest are identified  
and avoided or managed;  
3. understand the scope of intercompany trans-
actions and aggregate concentrations, and  
assess the adequacy of risk-management pro-
cesses, accounting policies, and operating  
procedures to measure and manage related  
risk;  
4. identify and assess key interrelationships and  
dependencies between subsidiary depository  
institutions and nonbank affiliates, such as  
the extent to which a depository institution  
subsidiary is reliant on services provided by  
the parent company or other nonbank affili-
ates and the reasonableness of associated  
management fees;  
5. identify those nonbank subsidiaries whose  
activities present material financial, legal,  
compliance, or reputational risk to the con-
solidated entity and/or a depository institu-
tion subsidiary;  
6. identify significant businesses operated  
across multiple legal entities for account-
ing, risk management, or other purposes, as  
well as activities that functionally operate as  
separate business units for legal or other  
reasons;  
7. identify intercompany transactions subject to  
Regulation W—utilizing information submit-
ted on quarterly regulatory reporting form  
FR Y-8 (“The Bank Holding Company Report  
of Insured Depository Institutions’ Section  
23A Transactions with Affiliates”), internal  
MIS, and other information sources—and  
determine (in conjunction with the primary  
supervisor) whether compliance issues are  

Periodic testing may be used to supplement  
continuous monitoring and discovery reviews to  
(1) ensure that key risk-management and  
internal control practices conform to internal  
policies and/or are designed to ensure compli-
ance with the law and (2) understand and assess  
operations presenting a moderate or greater  
likelihood of significant negative impact to a  
subsidiary depository institution or the consoli-
dated organization. Areas of potential negative  
impact include financial or operational risks that  
pose a potential threat to the safety and sound-
ness of a depository institution subsidiary, or to  
the holding company’s ability to serve as a  
source of financial and managerial strength to  
its depository institution subsidiaries. Testing  
will focus on controls for identifying, moni-
tering, and controlling such risks. In all cases  
involving a functionally regulated subsidiary,  
the Federal Reserve will conduct its activities in  
accordance with the provisions described above  
in section 1050.1.1.2.

1050.1.3.3.2 Parent Company and  
Nonbank Funding and Liquidity  

Objectives: One of the Federal Reserve’s pri-
mary responsibilities as consolidated supervisor  
is to help ensure that the parent company and its  
nonbank subsidiaries do not have an adverse  
impact on the organization’s depository institu-
tion subsidiaries. To meet this objective, the  
Federal Reserve will assess the extent to which  
funding and liquidity policies and practices of  
the parent company or nonbank subsidiaries  
may undermine the BHC’s ability to act as a  
source of strength to the organization’s deposi-
tory institution subsidiaries.  
Areas of focus will include an assessment of  

1. the ability of the parent company and non-
bank subsidiaries to maintain sufficient liquid-
ity, cash flow, and capital strength to service  
their debt obligations and cover fixed charges;  
2. the likelihood that parent company or non-
bank funding strategies could undermine pub-

20. The Federal Reserve’s supervisory objectives and  
activities related to the effectiveness of consumer compliance  
policies, procedures, and systems at nonbank subsidiaries of a  
BHC currently are under review, and additional or modified  
guidance on this topic may be issued in the future.
lic confidence in the liquidity or stability of subsidiary depository institutions;
3. policies and practices that are aimed at ensuring the stability of parent company funding and liquidity, as evidenced by the utilization of long-term or permanent financing to support capital investments in subsidiaries and other long-term assets, and the degree of dependence on short-term funding mechanisms such as commercial paper;
4. the extent of “double leverage” and the organization’s capital-management policies, including the distribution and transferability of capital across jurisdictions and legal entities;
5. the parent company’s ability to provide financial and managerial support to its depository institution subsidiaries during periods of financial stress or adversity, including the sufficiency of related stress testing, scenario analysis, and contingency planning efforts; and
6. intraday liquidity management policies and practices, and compliance with the “Federal Reserve Policy on Payments System Risk,” including expectations for depository institutions with a self-assessed net debit cap (the maximum dollar amount of uncollateralized daylight overdrafts that the institution may incur in its Federal Reserve account).

The Federal Reserve also will remain apprised of the funding profile and market access of material depository institution subsidiaries, as in most instances these entities represent the consolidated BHC’s primary and most active vehicles for external funding and liquidity management. The primary supervisor retains responsibility for assessing liquidity risk-management practices with respect to the depository institution subsidiary.

Supervisory Activities: The Federal Reserve will use continuous monitoring activities—including monitoring market conditions and indicators where available—and discovery reviews to understand and assess parent company and nonbank subsidiary funding and liquidity policies and practices, as well as any potential negative impact these policies and practices might have on a subsidiary depository institution or the consolidated organization. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there is (1) a significant change in inherent funding or liquidity risk stemming from changing strategies or activities; (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; or (3) any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified, the Federal Reserve will design and conduct testing activities focused on understanding and assessing the areas of change and/or concern in order to ensure that funding and liquidity risk-management and control functions are appropriately designed and achieving their intended objectives.

In all instances the Federal Reserve will undertake testing activities on at least a three-year cycle, assessing the individual elements of risk management for parent company and nonbank funding and liquidity: board and senior management oversight; policies, procedures, and limits; risk-monitoring and management information systems; and related internal controls.

For large complex BHCs with a depository institution that has a self-assessed net debit cap, the Federal Reserve will conduct an annual review of the self-assessment file to ensure that the institution has appropriately applied the payment system risk guidelines. The Federal Reserve will either lead this review and coordinate its activities with other relevant primary supervisors or participate as actively as appropriate in the related work of such supervisors. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.4 INTERAGENCY COORDINATION

1050.1.4.1 Coordination and Information Sharing Among Domestic Primary Bank Supervisors and Functional Regulators

Objective: Effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and other relevant domestic primary bank supervisors and functional regulators. To achieve this objective, the Federal Reserve has worked over the years to enhance

---

21. “Double leverage” refers to situations in which debt is issued by the parent company and the proceeds are invested in subsidiaries as equity.
22. This policy statement is available on the Board’s public website at www.federalreserve.gov/paymentsystems/psr.
23. Section 1050.1.4.2 discusses cross-border cooperation and information sharing among foreign supervisors.
interagency coordination through the development and use of information-sharing protocols and mechanisms. These protocols and mechanisms respect the individual statutory authorities and responsibilities of the respective supervisors and regulators, provide for appropriate information flows and coordination to limit unnecessary duplication or burden, comply with restrictions governing access to information, and ensure that the confidentiality of information is maintained. For example, the Federal Reserve and the U.S. Securities and Exchange Commission entered into a memorandum of understanding (MOU) in July 2008 that, among other things, provides for the parties to share specific types of information concerning entities under the parties’ respective supervision as well as information on other areas of mutual regulatory or supervisory interest.

As discussed in section 1050.1.3, in understanding and assessing the activities and risks of the organization as a whole, the Federal Reserve will rely to the fullest extent possible on the examination and other supervisory work conducted by the domestic primary bank supervisors and functional regulators of a BHC’s subsidiaries. In addition, the Federal Reserve will seek to coordinate its supervisory activities with relevant supervisors and regulators and will work to align each agency’s assessment of key corporate governance functions, risk-management and internal control functions for primary risks, financial condition, and other areas of the consolidated BHC’s operations as applicable.

**Supervisory Activities.** The Federal Reserve will continue to work with the relevant primary supervisors and functional regulators of a large complex BHC’s subsidiaries to ensure that the necessary information flows and coordination mechanisms exist to permit the effective supervision of the BHC on a consolidated basis. The Federal Reserve will continue to share information, including confidential supervisory information, obtained or developed through its consolidated supervisory activities with other relevant primary supervisors or functional regulators when appropriate and permitted by applicable laws and regulations.²⁴

The Federal Reserve also will continue to use a variety of formal and informal channels to facilitate interagency information sharing and coordination consistent with the principles outlined above, including

- supervisory protocols, agreements, and MOUs with primary supervisors and functional regulators that allow the coordination of supervisory activities and that permit the ongoing exchange of information, including confidential information on a confidential basis;
- bilateral exchanges of letters to facilitate information sharing on a situation-specific basis;
- periodic and as-needed contacts with primary supervisors and functional regulators to discuss and coordinate matters of common interest, including the planning and conduct of examinations and continuous monitoring activities;
- the use of information technology platforms, such as the Banking Organization National Desktop (BOND),²⁵ to provide secure automated access to examination/inspection reports and other supervisory information prepared by the Federal Reserve and other relevant supervisors and regulators; and
- participation in a variety of interagency forums that facilitate the discussion of broad industry issues and supervisory strategies, including the Federal Financial Institutions Examination Council, the President’s Working Group on Financial Markets, and the Federal Reserve-sponsored cross-sector meetings of financial supervisors and regulators.

### 1050.1.4.1.1 Coordination of Examination Activities at a Supervised BHC Subsidiary

As discussed in section 1050.1.3, the Federal Reserve will seek to work cooperatively with the relevant primary supervisor or functional regulator to address information gaps or indications of weakness or risk identified in a supervised BHC subsidiary that are material to the Federal Reserve’s understanding or assessment of the consolidated organization’s risks, activi-

---

²⁴. Among the federal laws that may limit the sharing of information among supervisors are the Right to Financial Privacy Act (12 U.S.C. 3401 et seq.) and the Trade Secrets Act (18 U.S.C. 1905). The Federal Reserve has established procedures to authorize the sharing of confidential supervisory information, and Federal Reserve staff must ensure that appropriate approvals are obtained prior to releasing such information. See Subpart C of the Board’s Rules Regarding the Availability of Information (12 C.F.R. 261.20 et seq.).

²⁵. BOND is a Federal Reserve information technology platform providing secure interagency access to documents, supervisory and financial data, and other information utilized in the consolidated supervision of individual BHCs and FBOs, and in developing comparative analyses of organizations with similar business lines and risk characteristics.
ties, or key corporate governance, risk-management, or control functions. Prior to conducting discovery reviews or testing activities at a depository institution (other than where the Federal Reserve is the primary federal supervisor) or functionally regulated subsidiary of a BHC, the Federal Reserve will

- review available information sources as part of its continuous monitoring activities, including examination reports and the BHC’s internal MIS, to determine whether such information addresses the Federal Reserve’s information needs or supervisory concerns; and
- if needed, seek to gain a better understanding of the primary supervisor’s or functional regulator’s basis for its supervisory activities and assessment of the subsidiary. This may include a request to review related examination work.

If, following these activities, the Federal Reserve’s information needs or supervisory concerns remain, the Federal Reserve will work cooperatively with the relevant primary supervisor or functional regulator in the manner discussed in section 1050.1.3 above. 26

1050.1.4.2 Cooperation and Information Sharing With Host-Country Foreign Supervisors

Objectives: Many large complex BHCs have considerable international banking and other operations that are licensed and supervised by foreign host-country authorities. As home-country supervisor for domestic BHCs, the Federal Reserve is responsible for the comprehensive, consolidated supervision of these global organizations, while each host country is responsible for supervision of the legal entities (including foreign subsidiaries of U.S. BHCs) in its jurisdiction.

Information sharing among domestic and foreign supervisors, consistent with applicable laws, is essential to ensure that a large complex BHC’s global activities are supervised on a consolidated basis. Cross-border information sharing is often facilitated by an MOU that establishes a framework for bilateral relationships and includes provisions for cooperation during the licensing process, in the supervision of ongoing activities, and in the handling of problem institutions. The Federal Reserve has established bilateral and multilateral information-sharing MOUs and other arrangements with numerous host-country foreign supervisors. The Federal Reserve also monitors changes in foreign bank regulatory and supervisory systems and seeks to understand how these systems affect supervised banking organizations. In addition to its longstanding cooperative relationships with home- and host-country foreign supervisors, the Federal Reserve expects to increasingly lead and participate in “colleges of supervisors” and other multilateral groups of supervisors that discuss issues related to specific internationally active banking organizations.

The Federal Reserve also is a member of the Basel Committee on Banking Supervision, which is a forum for supervisors from member countries to discuss important supervisory issues, foster consistent supervision of organizations with similar business and risk profiles, promote the sharing of leading supervisory practices, and formulate guidance to enhance and refine banking supervision globally.

The Federal Reserve’s processes for understanding and assessing firmwide legal and compliance risk management, as described earlier, encompass both domestic and international operations. Most areas of supervisory focus for management of legal and compliance risks are applicable to both domestic and international entities, and include proper oversight of licensed operations, compliance with supervisory and regulatory requirements, and the sufficiency of associated MIS.

There are, however, areas of focus for the Federal Reserve that are unique to a holding company’s international operations. For example, some host-country law and regulatory structures and supervisory approaches are fundamentally different from those in the United States. As a result, the banking organization often must devote additional resources to maintain expertise in local regulatory requirements. In some instances, privacy concerns have led to limits on the information a BHC’s foreign office may share with its parent company, thereby limiting the parent company’s ability to exercise consolidated risk management on a global basis. Additionally, while considerable progress has been made to strengthen supervisory cross-border cooperation and information sharing, the Federal Reserve and other U.S. supervisors have,

---

26. As outlined in section 1050.1.3, certain Federal Reserve examination activities are to be conducted on a minimum three-year cycle to verify, through testing, the sufficiency of key control processes. These activities are to be conducted regardless of whether or not there is an information gap or indication of weakness or risk.
at times, faced challenges in accessing information on a bank’s or BHC’s foreign operations or in carrying out examinations of cross-border or foreign activities. These circumstances are to be taken into account when developing a supervisory strategy for a large complex BHC with cross-border or foreign operations.

Supervisory Activities: Continuous monitoring will be used to understand and assess each large complex BHC’s international strategy, trends, operations, and legal entity structure, as well as related governance, risk-management, and internal controls. For a large complex BHC with significant international operations or risks, an assessment of cross-border and foreign operations will be incorporated into the evaluation of key corporate governance functions and primary firmwide risk-management and internal control functions, including legal and regulatory risk management.

Continuous monitoring activities will include review of materials prepared by host-country supervisors, including examination reports and assessments, and ongoing communication with relevant foreign and domestic supervisors regarding trends and assessments of cross-border and foreign operations. These continuous monitoring activities may be supplemented, as appropriate, by examination activities to understand and assess the large complex BHC’s international strategy, trends, operations, and legal entity structure, as well as related governance, risk-management, and internal controls.

When assessing the sufficiency of a large complex BHC’s management of its international operations, consideration is given to the extent that foreign laws restrict the transmission of information to the BHC’s head office. Impediments to sharing information imposed by a host country may constrain the BHC’s ability to effectively oversee its international operations and globally manage its risks, and the materiality of such impediments should be a determinant of whether the organization should be conducting operations in that host country.

In addition, any limits placed on the Federal Reserve’s ability to access information on host-country operations, or to engage in onsite activities at the organization’s operations in the host country, should be considered when assessing whether the organization’s activities in that jurisdiction are appropriate.

1050.1.4.3 Indications of Weakness or Risk Related to Subsidiary Depository Institutions

Objectives: For areas beyond those specifically addressed in section 1050.1.3, there may be circumstances where the Federal Reserve has indications of material weakness or risk in a depository institution subsidiary of a BHC that is supervised by another primary supervisor, and it is not clear that the weakness or risk is adequately reflected in the assessment or supervisory activities of that supervisor. Because a primary objective of consolidated supervision is to protect the BHC’s depository institution subsidiaries, the Federal Reserve will follow up with the appropriate primary supervisor in these circumstances to help ensure that, to the extent that a material weakness or risk exists, it is addressed appropriately.

Supervisory Activities: The Federal Reserve will take the following steps if it has indications of material weakness or risk in a depository institution subsidiary (other than where the Federal Reserve is the primary federal supervisor) in an area beyond those specifically addressed in section 1050.1.3, and it is not clear that the weakness or risk is adequately reflected in the assessment or supervisory activities of the depository institution’s primary supervisor.

- The Federal Reserve will first review available information sources, discuss the areas of concern with the primary supervisor, and seek to review the supervisor’s related work.
- If concerns remain following these activities, the Federal Reserve will request that the primary supervisor conduct a discovery review or testing activity at the depository institution to address the area of concern.
- In the event the primary supervisor does not undertake activities to address the concern in a reasonable period of time, the Federal Reserve will design and lead an examination of the depository institution to address the matter in consultation with the primary supervisor. A senior Federal Reserve official will communicate this decision in writing to a senior official of the primary supervisor.
1050.1.4.4 Condition or Management of BHC Subsidiary is Less-than-Satisfactory

**Objectives:** As noted above, a primary responsibility of the Federal Reserve as consolidated BHC supervisor is to ensure that a holding company’s activities, policies, and practices do not undermine its ability to serve as a source of financial and managerial strength to its depository institution subsidiaries. In situations where the condition or management of a supervised or functionally regulated BHC subsidiary is determined to be less-than-satisfactory, the Federal Reserve’s focus as consolidated supervisor is on complementing the efforts of the primary supervisor or functional regulator. In doing so, the Federal Reserve will seek to ensure that the parent company provides appropriate support to the subsidiary and does not take actions that may further weaken the parent company’s depository institution subsidiaries or its ability to act as a source of strength for such subsidiaries.

Beyond the specific activities noted below, these circumstances also may require the Federal Reserve to enhance the activities addressed in section 1050.1.3 for understanding and assessing key corporate governance functions or primary firmwide risk-management and internal controls. In addition, the Federal Reserve will adjust its supervisory activities as necessary when the consolidated BHC is in weakened condition or when there are questions regarding the capabilities of the holding company’s management.

**Supervisory Activities:**

- **Depository institution subsidiary.** In instances when a depository institution subsidiary’s condition or management is rated less than satisfactory, or when the depository institution subsidiary otherwise faces financial stress or material risks, the Federal Reserve’s primary supervisory objectives as consolidated supervisor are to ensure that the parent company (1) provides appropriate support to the depository institution and (2) does not take action that could harm the depository institution. The Federal Reserve will work closely with the primary supervisor to understand whether the BHC or a nonbank affiliate has contributed to the depository institution’s weakened condition, to understand the impact of the depository institution on the BHC’s condition, and to determine if the holding company is providing appropriate support to the depository institution. The Federal Reserve will coordinate its activities with those of the primary supervisor to the extent appropriate.

- **Nonbank subsidiary.** When any nonbank subsidiary faces financial stress or material risks, the Federal Reserve will seek to ensure that its condition and activities do not jeopardize the safety and soundness of the BHC or its depository institution subsidiaries, as discussed above in sections 1050.1.3.3.1, “Risk Management and Financial Condition of Significant Nonbank Subsidiaries” and 1050.1.3.3.2, “Parent Company and Nonbank Funding and Liquidity.” The Federal Reserve also will take appropriate steps to ensure that any actions taken by the parent company to assist a nonbank subsidiary do not impair the BHC’s continuing ability to serve as a source of strength to its depository institution subsidiaries. The Federal Reserve will coordinate its activities with those of any relevant functional regulator to the extent appropriate.

1050.1.4.5 Edge and Agreement Corporations

**Objectives:** Many large complex BHCs control an Edge or agreement corporation subsidiary. The Federal Reserve serves as the primary supervisor of each Edge and agreement corporation subsidiary in addition to its role as consolidated BHC supervisor.27 When the Edge or agreement corporation is held by a U.S. bank, the primary supervisor often relies on information provided by the Federal Reserve in developing its own understanding and assessment of the parent bank.

During each calendar year, the Federal Reserve performs an examination of each Edge and agreement corporation, assesses the Bank Secrecy Act/Anti-Money Laundering (BSA/AML) compliance program, and assigns a CAMEO rating. In addition, the Federal Reserve periodically conducts assessments of Edge and agreement corporations to determine whether a consumer compliance examination is warranted, in which case a compliance examination is warranted.

---

27. The Federal Reserve is solely responsible for approving, and supervising the activities of, U.S. Edge and agreement corporations. As discussed in SR-90-21, “Rating System For International Examinations,” one of the Federal Reserve’s supervisory responsibilities is the assignment of a CAMEO rating (Capital, Asset Quality, Management, Earnings, and Operations and Internal Controls) to each Edge and agreement corporation.
examination is conducted and a consumer compliance rating is assigned.

The Federal Reserve will coordinate the conduct of its activities as Edge and agreement corporation supervisor with its activities as consolidated supervisor. To this end, the extent and scope of Federal Reserve supervisory work related to an Edge or agreement corporation will be tailored to the entity’s activities, risk profile, and other attributes. A number of specific elements will be considered when developing a supervisory approach, including:

1. structure and attributes, including whether the Edge or agreement corporation is a banking or investment organization;
2. the size, nature, and location of its primary activities, as well as key financial and other trends;
3. the business lines and risks, and associated trends, of the Edge or agreement corporation’s primary activities on a standalone basis, as well as their significance to the risk profile of the parent bank (if applicable) and BHC;
4. the extent to which risk-management and internal control functions are unique to the Edge or agreement corporation, or are shared with a parent bank, another affiliate, or the consolidated BHC;
5. any potential Regulation K limitations or other U.S. compliance issues, and the adequacy of processes to ensure ongoing compliance; and
6. the adequacy of processes for ensuring compliance with all applicable laws and regulations imposed by host-country supervisors for the Edge or agreement corporation’s international operations.

Supervisory Activities: The Federal Reserve will maintain an understanding and perform an annual examination of each Edge and agreement corporation. While the examination scope will be risk focused to reflect the organization’s scale, activities, and risk profile, in all cases the Federal Reserve will assess the adequacy of processes to ensure compliance with BSA/AML requirements and other applicable U.S. laws and regulations, and with applicable foreign laws and regulations.

In developing its supervisory strategy, the Federal Reserve will identify those elements that are unique to the Edge or agreement corporation and those that are shared with the parent bank or BHC and will coordinate fulfillment of the Federal Reserve’s responsibilities as Edge and agreement corporation supervisor with execution of its consolidated supervision role. This strategy will reflect the extent to which reliance can be placed on (1) the Federal Reserve’s understanding and assessments of key corporate governance, risk-management, and control functions, as well as material portfolios and business lines, of the consolidated BHC; (2) assessments developed by the primary supervisor (when applicable) for business lines, risk management, control functions, or financial factors that are common to the Edge or agreement corporation and its parent bank; and (3) findings developed by host-country supervisors for activities under their jurisdiction.

In addition, where the primary supervisor of an Edge or agreement corporation’s parent bank relies on the Federal Reserve’s understanding and assessment in order to develop its CAMELS rating, the Federal Reserve will work to fulfill that supervisor’s information needs.

---

WHAT’S NEW IN THIS REVISED SECTION

Effective July 2016, this section is revised to include SR-16-4, “Relying on the Work of the Regulators of the Subsidiary Insured Depository Institutions of Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $50 Billion.” This guidance provides an explanation of the Federal Reserve’s expectations for its examiners’ reliance on the work of the regulators of insured depository institution subsidiaries (IDI regulators) in the supervision of bank holding companies (BHCs) and savings and loan holding companies (SLHCs). SR-16-4 presents a tailored supervisory approach for regional banking organizations (RBOs), which are defined as companies with total consolidated assets between $10 billion and $50 billion.

1050.2.1 ACTIVITIES OF THE FEDERAL RESERVE AND OTHER SUPERVISORS AND REGULATORS, AND FUNCTIONAL REGULATION

The objectives of the Federal Reserve’s consolidated supervision program for the portfolio of regional bank holding companies (“regional BHCs,” defined as non-LCBO BHCs with $10 billion or more in total consolidated assets, including nontraditional organizations) are the same as those applicable to other portfolios. The manner in which the Federal Reserve achieves these objectives, however, is tailored to the characteristics and risk profiles of regional bank holding companies.

As outlined in the following sections, a range of continuous monitoring activities is utilized, along with discovery reviews and testing activities (examination activities), to develop and maintain an understanding and assessment of each regional BHC. For organizations within this portfolio, continuous monitoring activities typically take the form of meetings with BHC management, analysis of internal management information system (MIS) reports and regulatory reports, review of surveillance screens, and discussions and coordination with other relevant primary supervisors and functional regulators and review of their work. The scale and frequency of monitoring activities will differ by organization. For many regional BHCs that are in sound condition, monitoring activities typically are performed on a periodic or quarterly basis, supplemented by more frequent or intensive activities as necessary, and, in most instances, Federal Reserve staff do not maintain a day-to-day onsite presence at the organization.

1050.2.1.1 Federal Reserve Activities and Those Activities of Other Supervisors and Regulators

The nature and scope of independent Federal Reserve supervisory work required to develop and maintain an understanding and assessment of a regional BHC depend largely on the extent to which other relevant primary supervisors or functional regulators have information or assessments upon which the Federal Reserve can draw. Many regional BHCs conduct the majority of their business operations through a single bank subsidiary, increasing the likelihood that a single primary supervisor has a complete view of, and ability to address, major aspects of the organization’s business activities and related risks, risk management, and controls. In these instances, the Federal Reserve typically will be able to use the information and assessments developed by this primary supervisor to develop its understanding and assessment of significant aspects of the consolidated organization. Similarly, for regional BHCs with limited nonbank activities, the Federal Reserve typically will need to conduct less work to understand and assess the risk-management systems and financial condition of nonbank subsidiaries than the level of monitoring and examination work required for organizations with more-extensive or complex nonbank activities.

By their nature, understanding and assessing some areas—such as the risk management and financial condition of significant nonbank activities—
subsidiaries that are not functionally regulated—typically will require more independent Federal Reserve supervisory work. Other areas—such as primary firmwide risk-management and control functions—typically will require a greater degree of coordination with other relevant primary supervisors or functional regulators, who will likely have information or assessments upon which the Federal Reserve can draw.

The following sections provide further detail on how the Federal Reserve will develop, working in coordination with other relevant primary supervisors and functional regulators, an understanding and assessment of a regional BHC. In conducting the activities described throughout this document, the Federal Reserve will, to the fullest extent possible

- rely on the information and assessments of relevant primary supervisors and functional regulators, including the information and assessments reflected in the reports of examination of such supervisors and regulators;
- focus its supervisory activities on the bank holding company, as well as on those of its nonbank subsidiaries that could have a direct or indirect materially adverse effect on the safety and soundness of a depository institution subsidiary of the BHC due to the size, condition, or activities of the nonbank subsidiary, or the nature or size of its transactions with the depository institution; and
- use publicly reported information (including externally audited financial statements) as well as reports that a large complex BHC or a subsidiary prepares for other primary supervisors, functional regulators, or self-regulatory organizations.

1050.2.1.2 Functionally Regulated Subsidiaries

As discussed below, in certain situations, the Federal Reserve may find it necessary to conduct an examination of a functionally regulated nonbank subsidiary in order to fulfill the Federal Reserve’s responsibilities as supervisor of the consolidated organization. In any such case, the Federal Reserve will continue to adhere to the procedural and other requirements governing examinations of, or requests for a specialized report from, a functionally regulated subsidiary as discussed in SR-00-13 and sections 1040.0 and 3900.0. Under these provisions, for example, the Federal Reserve may conduct an examination of a functionally regulated subsidiary if, after reviewing relevant reports, it reasonably determines that the examination is necessary to adequately inform the Federal Reserve about the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a direct or indirect threat to the safety and soundness of a depository institution subsidiary.4

1050.2.2 UNDERSTANDING THE ORGANIZATION

For each regional BHC, the Federal Reserve will develop an understanding of the legal, operating, and corporate governance structure of the organization and its primary strategies, business lines, and risk-management and internal control functions. This understanding will inform the development of a risk-assessment and supervisory plan for the BHC. The extent of information necessary to gain this understanding is tailored to the scope and complexity of the regional BHC’s operations, and typically may be obtained from the organization’s management, public reports,

---

4. The Federal Reserve also may examine a functionally regulated subsidiary of a regional BHC if, after reviewing relevant reports and other information, it has reasonable cause to believe that the subsidiary is engaged in an activity that poses a material risk to an affiliated depository institution, or that the subsidiary is not in compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the subsidiary (and the Federal Reserve cannot determine compliance by examining the BHC or its affiliated depository institutions).

Similarly, before requiring a specialized report from a functionally regulated subsidiary, the Federal Reserve first will request that the subsidiary’s appropriate functional regulator obtain the report and make it available to the Federal Reserve. In the event that the report is not obtained or made available as requested, the Federal Reserve may, consistent with the Bank Holding Company Act, obtain the report directly from the functionally regulated subsidiary if the report is necessary to allow the Federal Reserve to adequately assess (1) a material risk to the BHC or any of its depository institution subsidiaries, (2) the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a threat to the safety and soundness of a depository institution subsidiary, or (3) compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the BHC or a subsidiary.

5. This understanding is formally documented during development of the institutional overview, which coincides with creation of the annual risk assessment. SR-97-24, “Risk-Focused Framework for Supervision of Large Complex Institutions,” (see section 2124.01) describes processes for developing an institutional overview, risk assessment, and supervisory plan. Each of these products is kept current to reflect significant changes in an organization’s risks or activities.
regulatory reports, surveillance screens, third-party sources (e.g., credit-rating agency and market analyst reports), and other relevant primary supervisors or functional regulators.

Key elements that should be identified and understood include the following:

• **Corporate strategy.** Primary business strategies; institutional risk tolerance; key changes in strategic direction or risk profile; significant new business activities; areas of growth and emerging areas with potential to become primary drivers of risk or revenue; and plans for expansion through mergers or acquisitions.

• **Significant activities.** Key revenue and risk drivers; primary business lines; product mix; budget and internal capital allocations (as applicable); market share for revenue and customers served; key external trends, including competitive pressures; and areas that are vulnerable to volatility in revenue, earnings, capital, or liquidity.

• **Structure.** Business line and legal entity structure; domestic and foreign regulatory responsibilities for legal entities and business lines; key interrelationships and dependencies between depository institution subsidiaries and nonbank affiliates; material business lines operated across multiple legal entities for accounting or risk-management purposes; and the activities and risk profile of Edge and agreement corporation subsidiaries.

• **Corporate governance, risk management, and internal controls for primary risks.** Board of directors (board) and executive-level committees; senior management and management committees; key risk-management and internal control functions and associated MIS relied upon by the board, senior management, and senior risk managers and committees; and consistency of public disclosures with how the board and senior management assess and manage risks.

To ensure the quality and consistency of consolidated supervision across the regional BHC portfolio, it also is necessary to understand how these key elements compare with industry trends and with evolving practices of well-managed organizations with similar characteristics.

### 1050.2.3 ASSESSING THE REGIONAL BHC ON A CONSOLIDATED BASIS

The Federal Reserve uses a systematic approach to develop an assessment of a BHC on a consolidated basis. This assessment is reflected in the RFI (Risk Management, Financial Condition, and Impact) rating assigned to a BHC.6

#### 1050.2.3.1 Risk Management

**1050.2.3.1.1 Key Corporate Governance Functions**

Objectives: One of the primary areas of focus for consolidated supervision of regional BHCs is the adequacy of governance provided by the board and senior management. The culture, expectations, and incentives established by the highest levels of corporate leadership set the tone for the entire organization and are essential determinants of whether a banking organization is capable of maintaining fully effective risk-management and internal control processes.

The board and its committees should have an ongoing understanding of key inherent risks, associated trends, primary control functions, and senior management capabilities. Primary expectations for the board and its committees include

1. selecting competent senior managers, ensuring that they have the proper incentives to operate the organization in a safe and sound manner, and regularly evaluating senior managers' performance;
2. establishing, communicating, and monitoring (for example, by reviewing comprehensive MIS reports produced by senior management) institutional risk tolerances and a corporate culture that emphasizes the importance of compliance with the law and ethical business practices;
3. approving significant strategies and policies;
4. demonstrating leadership, expertise, and effectiveness;
5. ensuring the organization has an effective and independent internal audit function;
6. ensuring the organization has appropriate policies governing the segregation of duties and avoiding conflicts of interest; and
7. for publicly held organizations, ensuring that public disclosures
   • are consistent with how the board and

---

6. The RFI rating system for BHCs is discussed in SR-04-18 and section 4070.0. RFI ratings are assigned at least annually for BHCs that are complex or that have $1 billion or more in consolidated assets, and are communicated via a comprehensive summary supervisory report that supports the BHC’s assigned ratings and encompasses the results of the entire supervisory cycle.
senior management assess and manage the risks of the organization,
• balance quantitative and qualitative information with clear discussions about risk-management processes, and
• reflect evolving disclosure practices for peer organizations.

A regional BHC’s senior management and its committees should be able to clearly communicate risk tolerances and measures, control risks, hire and retain competent staff, and respond to changes in the organization’s risk profile and the external environment. Members of senior management are expected to have qualifications and experience commensurate with the size and complexity of the organization. Primary expectations for senior management include

1. establishing effective oversight and an appropriate risk culture;
2. appropriately delegating authority and overseeing the establishment and implementation of effective policies for the proper segregation of duties and for the avoidance or management of conflicts of interest;
3. establishing and implementing an effective risk-management framework capable of identifying and controlling both current and emerging risks, and effective independent control functions that ensure risk taking is consistent with the organization’s established risk appetite;
4. establishing and implementing incentives for personnel that are consistent with institutional risk tolerances, compliance with the law, and ethical business practices;
5. promoting a continuous dialogue between and across business areas and risk-management functions to help align the organization’s established risk appetite and risk controls;
6. ensuring that the board and its committees are provided with timely, accurate, and comprehensive MIS reports that are adaptive to changing circumstances regarding risks and controls; and
7. ensuring timely resolution of audit, compliance, and regulatory issues.

An effective internal audit function plays an essential role by providing an independent and objective evaluation of all key governance, risk-management, and internal control processes. As the complexity of financial products and supporting technology has grown, in combination with greater reliance on third-party service providers, the importance of internal audit’s role in identifying risks and testing internal controls has increased.

In addition, the extent to which supervisors can rely on or utilize the work of internal audit is an essential determinant of the risk-focused supervisory program that is tailored to the activities and risks of individual regional BHCs.

Supervisory Activities: For each regional BHC, the Federal Reserve will understand and assess the adequacy of oversight provided by the board and senior management, as well as the adequacy of internal audit and associated MIS. The Federal Reserve also will understand and assess other key corporate governance functions (e.g., corporate finance and treasury functions), whose effectiveness is essential to sustaining consolidated holding company operations, as well as the organization’s business resiliency and crisis management capabilities.7

• Board, senior management, and other key corporate governance functions. Continuous monitoring activities—which draw from all available sources on an as-needed basis, including internal control functions, the work of other relevant primary supervisors and functional regulators, regulatory reports, and related surveillance results—will be used to understand and assess the effectiveness of board and senior management resources and oversight.8

The results of continuous monitoring activities, as documented in supervisory products that reflect the Federal Reserve’s overview and risk assessment of the organization, may identify certain corporate governance functions that will require more intensive supervision focus due to (1) significant changes in corporate strategy, activities, organizational structure, oversight mechanisms, or key personnel; (2) potential concerns regarding the adequacy of a specific governance function; or (3) the absence of sufficiently recent exami-

7. As discussed further in section 1050.2.4.6, because of the special structure of nontraditional BHCs and the relatively small size of their depository institution subsidiaries, much of the information necessary to develop the assessments of the risk-management (as described in this section 1050.2.3.1) and financial condition elements (as described in section 1050.2.3.2) typically may be obtained or drawn from the work of the relevant functional regulator.
8. As noted in section 1050.2.1 above, the scale and frequency of monitoring activities will differ by organization. For many regional BHCs in sound condition, these activities are typically performed on a periodic or quarterly basis and supplemented as necessary.
nation activities for a key function by the Federal Reserve or another primary supervisor or functional regulator.

- **Internal audit.** Continuous monitoring activities will be used to understand and assess key elements of internal audit governance for the organization on a consolidated basis, including:
  1. the adequacy (and, where applicable, independence) of the audit committee;
  2. the independence, professional competence, and the quality of the internal audit function;
  3. the quality and scope of the audit methodology, audit plan, and risk-assessment process; and
  4. the adequacy of audit programs and

9. As outlined in section 2060.05, “The Sarbanes-Oxley Act of 2002,” section 301 of the Sarbanes-Oxley Act requires that each public company (including banks and bank holding companies that are public companies) have an audit committee composed entirely of independent directors. (See 15 U.S.C. 78j-1.)
workpaper standards. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding the adequacy of key elements of internal audit. In addition to this periodic audit infrastructure review, testing activities for specific control functions or business lines should include an assessment of internal audit’s recent work in these areas to the extent possible as a means of validating internal audit’s findings.

• Additional supervisory activities. If continuous monitoring activities identify a key corporate governance function or element of internal audit requiring more intensive supervisory focus due to significant changes, potential concerns, or the absence of sufficiently recent examination activities, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) in developing discovery reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve may conduct portions of the examination, or otherwise participate as necessary (e.g., in determining the examination objectives and scope), to ensure that the review provides sufficient information on the specific area of concern to form a comprehensive and timely understanding and assessment.

If the area of concern is not within the oversight of another primary supervisor or functional regulator, or if the supervisor or regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant primary supervisors and functional regulators to the extent possible.

• Additional required audit testing activities. In all instances, the Federal Reserve will conduct testing activities as part of its audit infrastructure review (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators, or participating in activities led by other relevant supervisors or regulators) on at least a three-year cycle to ensure that the internal audit program is appropriately designed and achieving its objectives.10

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.2.1.2.

1050.2.3.1.2 Risk-Management and Internal Control Functions for Primary Risks to the Consolidated Organization

Objectives: Underlying the risk-focused approach to consolidated supervision of regional BHCs is the premise that it is each organization’s responsibility to develop an appropriate control structure for identifying, measuring, monitoring, and controlling key risks as measured against supervisory standards and expectations, applicable laws and regulations, and evolving practices of well-managed organizations.

The Federal Reserve will understand and assess risk-management and control functions for primary risks to the consolidated organization (primary firmwide risk-management and control functions), and associated MIS, for each regional BHC. This will include risk-management and control functions for primary credit, legal and compliance,11 liquidity, market, operational, and reputational risks for the consolidated organization. The Federal Reserve also will understand and assess other risk-management and control functions that, based on the specific characteristics and activities of the individual BHC, relate to primary risks to the organization as a whole.

For example, for regional BHCs with particularly dynamic corporate strategies, the Federal Reserve will understand and assess the adequacy of the control mechanisms relevant to such strategies, including strategic planning, merger integration, new business approval, and processes for ensuring that risk management and controls keep pace with areas of growing inherent risk.

In all instances, the adequacy of each primary firmwide risk-management or control mechanism depends on the appropriateness of the following:

11. Federal Reserve processes for understanding and assessing legal and compliance risk management encompass consumer compliance risk inherent in the organization’s business activities.

BHC Supervision Manual January 2009 Page 5
1. control infrastructure and governance, including degree of oversight by the board and senior management;
2. development, maintenance, and communication of appropriate policies, procedures, and internal controls;
3. risk identification and measurement systems and processes, and associated MIS, that are adaptive to changing circumstances and capable of providing timely, accurate, and comprehensive information to senior management and the board;
4. monitoring and testing the effectiveness of controls;
5. processes for identifying, reporting, and escalating issues and emerging risks;
6. ability to implement corrective actions in a timely manner;
7. appropriate authority and independence of staff to carry out responsibilities; and
8. integration of risk-management and control objectives within management goals and the organization’s compensation structure.

Organizations in the regional BHC portfolio use a variety of control structures to monitor, manage, and control firmwide risks. A number of larger organizations have implemented firmwide risk-management functions to measure and assess the range of their exposures across business lines and legal entities and the way these exposures interrelate. However, many organizations within the portfolio effectively control risks using a decentralized approach that relies on individual control structures for the organization’s primary business lines or legal entities. In all instances, the Federal Reserve will assess whether the approach to a key control function used by a particular organization is effective in controlling primary risks to the consolidated organization.12

Supervisory Activities: The Federal Reserve will use continuous monitoring activities to understand and assess each primary firmwide risk-management and control function. This process begins with the overarching design and architecture of each primary firmwide risk-management or control function, and drills down, as appropriate, through analysis of risk management and controls for material portfolio areas and business lines (described in section 1050.2.3.1.3 below). Activities will verify the sufficiency of fundamental aspects of internal controls in relation to the holding company’s current risk profile and in comparison with supervisory expectations and evolving sound practices, and assess the capability of these primary functions (whether centralized or decentralized) to remain effective in the face of growth, changing strategic direction, significant market developments, and other internal or external factors.

The results of continuous monitoring activities, as documented in supervisory products that reflect the Federal Reserve’s overview and risk assessment of the organization, may identify certain primary firmwide risk-management or control functions that require more intensive supervisory focus due to (1) significant changes in inherent risk, control processes, or key personnel; (2) potential concerns regarding the adequacy of controls; or (3) the absence of sufficiently recent examination activities for a primary firmwide risk-management or control function by the Federal Reserve or another relevant primary supervisor or functional regulator.

In these instances, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to develop discovery reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve may conduct portions of the examination, or otherwise participate as necessary (e.g., in determining the examination objectives and scope), to ensure that the review provides sufficient information on the specific area of concern to form a comprehensive and timely understanding and assessment.

If the primary firmwide risk-management or control function is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the implementation of the organization’s firmwide compliance risk-management program and that plays a key role in controlling compliance risks that transcend business lines, legal entities, and jurisdictions of operation.

---

12. As outlined in SR-08-8/CA-08-11, “Compliance Risk-Management Programs and Oversight at Large Banking Organizations with Complex Compliance Profiles,” (see section 2124.07), while the Federal Reserve does not prescribe a particular organizational structure for primary firmwide risk-management and control functions, establishment of a firmwide function that is dedicated to managing and overseeing compliance risk, and that promotes a strong compliance culture, is particularly important for large banking organizations with complex compliance profiles, due to the unique challenges associated with compliance risk management for these organizations. In addition to the oversight provided by the board and various executive and management committees, a key component of firmwide compliance oversight for these organizations is a corporate compliance function that has day-to-day responsibility for overseeing and supporting the...
examination activities in a reasonable period of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant supervisors and regulators to the extent possible. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.2.1.2.

1050.2.3.1.3 Risk Management of Material Portfolios and Business Lines

Objectives: For each regional BHC, there are selected portfolio risk areas (such as retail or wholesale credit risk) or individual business lines (such as residential mortgage or commercial real estate lending) that are primary drivers of risk or revenue, or that otherwise materially contribute to either understanding inherent risk within the consolidated organization or assessing controls for a broader corporate function (such as consolidated credit risk management).

During the development of supervisory products that reflect the Federal Reserve’s overview and risk assessment of the organization, the Federal Reserve will analyze external factors and internal trends in the BHC’s strategic initiatives—as evidenced by budget and (where applicable) internal capital allocations and other factors—to identify significant activities and areas vulnerable to volatility in revenue, earnings, capital, or liquidity that represent material risks or activities of the organization. This determination of material portfolios and business lines considers all associated risk elements, including legal and compliance risks. For example, when evaluating whether retail activities such as mortgage or automobile lending are material to a banking organization, the extent of inherent consumer compliance and reputational risks, as well as interest rate and credit risks, should be considered.

Supervisory Activities: Because an understanding of material risks and activities is needed to assess the primary firmwide risk-management and control functions (as discussed in preceding section 1050.2.3.1.2), the Federal Reserve will maintain an understanding of inherent risk and assess the adequacy of risk-management and internal controls for material portfolios and business lines. To form this understanding and assessment, the Federal Reserve will rely primarily on continuous monitoring activities, supplemented, as appropriate, by examination activities.

To the fullest extent possible, the Federal Reserve will draw its understanding and assessment of these risks and risk-management practices from the information and assessment of the primary supervisor or functional regulator where the BHC’s legal and operating structure provides the supervisor or regulator a sufficient view of these areas. In these instances, the Federal Reserve will undertake continuous monitoring and participate in activities led by primary supervisors and functional regulators, as necessary, to maintain an understanding and assessment of related firmwide risk-management and control functions.

A regional BHC’s activities may span legal entities that are subject to oversight by multiple supervisors or regulators or that are outside the oversight of other supervisors or regulators. If this is the case, or if the primary supervisor or functional regulator does not conduct or coordinate the necessary continuous monitoring or examination activities in a reasonable period of time, the Federal Reserve will initiate and lead these activities in coordination with other relevant primary supervisors and functional regulators to the extent possible. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.2.1.2.

1050.2.3.1.4 Risk Management of Nonmaterial Business Lines

Objectives: For nonmaterial business lines identified during the development of supervisory products that reflect the Federal Reserve’s overview and risk assessment of the organization, the Federal Reserve’s focus will be on identifying and understanding those business lines that are increasing in importance and have the potential to become material.

Supervisory Activities: When a primary supervisor or functional regulator has a sufficient view of nonmaterial business lines, the Federal Reserve will, to the fullest extent possible, use information developed by that supervisor or regulator to monitor areas of increasing importance with the potential to become material. The Federal Reserve also will maintain an ability to access internal MIS for these businesses to facilitate a more in-depth analysis of a business line, if appropriate.
ate, to understand its growing importance to the organization.

For nonmaterial business lines that are not subject to oversight by a single primary supervisor or functional regulator, the Federal Reserve will engage in continuous monitoring activities to identify meaningful trends in risks and risk-management practices, and will maintain an understanding of associated MIS to facilitate more in-depth analysis of a business line, if appropriate, to understand its growing importance to the organization.

1050.2.3.2 Financial Condition

Objectives: The Federal Reserve’s evaluation of a regional BHC’s consolidated financial condition focuses on the ability of the organization’s resources to support the level of risk associated with its activities. Assessments are developed for each “CAEL” subcomponent: Capital Adequacy (C), Asset Quality (A), Earnings (E), and Liquidity (L). 13

In developing this evaluation, the Federal Reserve’s primary focus is on developing an understanding and assessment of:

1. the sufficiency of the BHC’s consolidated capital to support the level of risk associated with the organization’s activities and provide a sufficient cushion to absorb unanticipated losses;

2. the capability of liquidity levels and funds-management practices to allow reliable access to sufficient funds to meet present and future liquidity needs; and

3. other aspects of financial strength that need to be assessed on a consolidated basis across the organization’s various legal entities, or that relate to the financial soundness of the parent company and significant nonbank subsidiaries, as discussed in section 1050.2.3.3 below.

In assessing consolidated regulatory capital, the Federal Reserve looks to ensure that the BHC demonstrates the effectiveness of its framework for complying with relevant capital adequacy guidelines and meeting supervisory expectations, and focuses on analyzing key models and processes 14 that influence this assessment. This assessment utilizes results from examinations led by the Federal Reserve or other primary supervisors or functional regulators, as well as information gained from the BHC’s internal control functions and from market-based assessments, where available.

When assessing the adequacy of a BHC’s liquidity levels and funds-management practices, areas of focus include 15

1. the extent to which the treasury function is aligned with risk-management processes, and whether incentives are in place for business lines to compile and provide information on expected liquidity needs and contingency funding plans so that the treasury function is able to develop a firmwide perspective and incorporate business line information into assessments of actual and contingent liquidity risk;

2. whether funds-management practices provide sufficient funding flexibility to respond to unanticipated, evolving, and potentially correlated market conditions for the organization and/or across financial markets; and

3. the sufficiency of liquidity planning tools, such as stress testing, scenario analysis, and contingency planning efforts, including (1) whether liquidity buffers—comprised of unencumbered liquid assets as well as access to stable funding sources—adequately reflect the possibility and duration of severe liquidity shocks; (2) the reasonableness of assumptions about the stability of secured funding in circumstances in which the liquidity of markets for the underlying collateral becomes impaired; and (3) whether these efforts adequately reflect the potential for the organization to be called on in stressed environments to provide contingent liquidity support to off-balance-sheet entities or bring additional assets on the balance sheet (even if not legally or contractually obligated to do so).

Beyond capital adequacy and liquidity, the nature of independent Federal Reserve supervisory work required to evaluate a regional BHC’s consolidated financial condition depends largely on the extent to which other relevant primary

---

13. See SR-04-18 and section 4070.0 for more information about the CAEL subcomponents.

14. “Key models and processes” are those where evaluation of the model/process will influence the Federal Reserve’s assessment of the activity or control area that is supported by the model/process.

15. Assessing liquidity levels and funding practices for a consolidated BHC also incorporates elements presented in section 1050.2.3.3.2 below on “Parent Company and Nonbank Funding and Liquidity.”
supervisors or functional regulators have information or assessments upon which the Federal Reserve can draw. For example, more independent Federal Reserve work typically will be required to assess consolidated asset quality or earnings for regional BHCs with significant nonbank activities that are not functionally regulated. However, where all material holding company assets are concentrated in a single depository institution subsidiary, a minimal level of incremental Federal Reserve efforts typically will be required to assess consolidated asset quality and earnings.

**Supervisory Activities:** The Federal Reserve will primarily utilize continuous monitoring activities to assess a regional BHC’s financial strength. Such activities will include periodic meetings with BHC management (such as the chief financial officer); review of regulatory reports, surveillance screens, and internal MIS; and analysis of market indicators (where available), including external debt ratings, subordinated debt spreads, and credit default swap spreads. Testing and discovery activities will be used as necessary to assist in the understanding and assessment of areas of concern.

Testing and discovery activities also will be used to understand and assess the sufficiency of the BHC’s consolidated capital and liquidity positions to support the level of risk associated with its activities, including (1) regulatory capital calculation methodologies and, where applicable, internal assessments of capital adequacy and (2) funds-management and liquidity planning tools and practices. The Federal Reserve will work with other relevant primary supervisors and functional regulators to participate in or, if necessary, to coordinate activities designed to analyze key capital and liquidity models or processes of a depository institution or functionally regulated subsidiary that are of such significance that they will influence the Federal Reserve’s assessment of these areas. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.2.1.2.

**1050.2.3.3 Impact**

1050.2.3.3.1 Risk Management and Financial Condition of Significant Nonbank Subsidiaries

**Objectives:** Many regional BHCs engage in activities and manage control functions on a firmwide basis, spanning depository institution and nonbank legal entities. In some instances, these BHCs have intra-group exposures and servicing arrangements across affiliates, presenting increased potential risks for depository institution subsidiaries and a higher likelihood of aggregate risk concentrations across the organization’s legal entities. Common interactions between a regional BHC’s depository institution subsidiaries and their nonbank affiliates (including the parent company) include assets originating in, or being marketed by, a nonbank affiliate that are booked in the depository institution; a depository institution providing funding for nonbank affiliates; and risk-management or internal control functions being shared between depository and nonbank operations.

Due to these interrelationships, financial, legal, compliance, or reputational troubles in one part of a BHC can spread rapidly to other parts of the organization. Even absent these interactions, the parent or nonbank subsidiaries of an organization may present financial, legal, compliance, or reputational risk to the consolidated entity, and thus directly or indirectly to its depository institution subsidiaries. As the federal banking agency charged with supervising the organization on a consolidated basis, the Federal Reserve is responsible for understanding and assessing the risks that the parent bank holding company and its nonbank subsidiaries may pose to the BHC itself or its depository institution subsidiaries.

The primary objectives of Federal Reserve supervision of the nonbank subsidiaries of a bank holding company are to

---

16. Assessments of the adequacy of regulatory capital for BHCs that have received Federal Reserve supervisory approval to use internal estimates of risk in their regulatory capital calculations should include, among other things, regular verification that these organizations continue to meet on an ongoing basis all applicable requirements associated with internal estimates. See, for example, the capital adequacy guidelines for market risk at BHCs (Regulation Y: 12 C.F.R. 225, Appendix E) and the new advanced capital adequacy framework for BHCs (Regulation Y: 12 C.F.R. 225, Appendix G).

17. Capital planning activities for all BHCs should be forward-looking and provide for sufficient range of stress scenarios commensurate with the organization’s activities. For those regional BHCs that utilize more-rigorous and structured internal processes for assessing capital adequacy beyond regulatory capital measures, the Federal Reserve focuses on whether such internal processes ensure that all risks are properly identified, reliably quantified (where possible) across the entire organization, and supported by adequate capital.
Consolidated Supervision of Regional BHCs

1. identify significant nonbank activities and risks—where the parent company or nonbank subsidiaries engage in risk-taking activities or hold exposures that are material to the risk management or financial condition of the consolidated organization or a depository institution subsidiary—by developing an understanding of the size and nature of primary activities and key trends, and the extent to which business lines, risks, or control functions are shared with or may impact a depository institution affiliate;

2. evaluate the financial condition and the adequacy of risk-management practices of the parent and significant nonbank subsidiaries, including the ability of nonbank subsidiaries to repay advances provided by the parent, using benchmarks and analysis appropriate for those businesses;

3. evaluate the degree to which nonbank entity risks may present a threat to the safety and soundness of subsidiary depository institutions, including through transmission of legal, compliance, or reputational risks;

4. identify and assess any intercompany relationships, dependencies, or exposures—or aggregate firmwide concentrations—with the potential to threaten the condition of a depository institution affiliate; and

5. evaluate the effectiveness of the policies, procedures, and systems that the holding company and its nonbank subsidiaries use to ensure compliance with applicable laws and regulations, including consumer protection laws.\(^{18}\)

Supervisory Activities: For all significant nonbank subsidiaries and activities of the parent BHC, the Federal Reserve will use continuous monitoring activities and discovery reviews to

1. maintain an understanding of the holding company’s business line and legal entity structure, including key interrelationships and dependencies between depository institution subsidiaries and nonbank affiliates, utilizing regulatory structure reports, internal MIS, and other information sources;

2. understand and assess the exposure to, and tolerance for, legal, compliance, and reputational risks, as well as the extent to which potential conflicts of interest are identified and avoided or managed;

3. understand the scope of intercompany transactions and aggregate concentrations, and assess the adequacy of risk-management processes, accounting policies, and operating procedures to measure and manage related risks;

4. identify and assess key interrelationships and dependencies between subsidiary depository institutions and nonbank affiliates, such as the extent to which a depository institution subsidiary is reliant on services provided by the parent company or other nonbank affiliates and the reasonableness of associated management fees;

5. identify those nonbank subsidiaries whose activities present material financial, legal, compliance, or reputational risk to the consolidated entity and/or a depository institution subsidiary;

6. identify significant businesses operated across multiple legal entities for accounting, risk management, or other purposes, as well as activities that functionally operate as separate business units for legal or other reasons;

7. identify intercompany transactions subject to Regulation W—utilizing information submitted on quarterly regulatory reporting form FR Y-8 ("The Bank Holding Company Report of Insured Depository Institutions’ Section 23A Transactions with Affiliates"), internal MIS, and other information sources—and determine (in conjunction with the primary supervisor) whether compliance issues are present; and

8. understand and assess the sufficiency, reliability, and timeliness of associated MIS relied upon by the board, senior management, and senior risk managers and committees to monitor key activities and risks.

Periodic testing may be used to supplement continuous monitoring and discovery reviews to (1) ensure that key risk-management and internal control practices conform to internal policies and/or are designed to ensure compliance with the law and (2) understand and assess operations presenting a moderate or greater likelihood of significant negative impact to a subsidiary depository institution or the consolidated organization. Areas of potential negative impact include financial or operational risks that pose a potential threat to the safety and soundness of a depository institution subsidiary, or to the holding company’s ability to serve as a source of financial and managerial strength to its deposi-

---

\(^{18}\) The Federal Reserve’s supervisory objectives and activities related to the effectiveness of consumer compliance policies, procedures, and systems at nonbank subsidiaries of a BHC currently are under review, and additional or modified guidance on this topic may be issued in the future.
tory institution subsidiaries. Testing will focus on controls for identifying, monitoring, and controlling such risks. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.2.1.2.

1050.2.3.3.2 Parent Company and Nonbank Funding and Liquidity

Objectives: One of the Federal Reserve’s primary responsibilities as consolidated supervisor is to help ensure that the parent company and its nonbank subsidiaries do not have an adverse impact on the organization’s depository institution subsidiaries. To meet this objective, the Federal Reserve will assess the extent to which funding and liquidity policies and practices of the parent company or nonbank subsidiaries may undermine the BHC’s ability to act as a source of strength for its depository institution subsidiaries.

Areas of focus will include an assessment of

1. the ability of the parent company and nonbank subsidiaries to maintain sufficient liquidity, cash flow, and capital strength to service their debt obligations and cover fixed charges;
2. the likelihood that parent company or nonbank funding strategies could undermine public confidence in the liquidity or stability of subsidiary depository institutions;
3. policies and practices that are aimed at ensuring the stability of parent company funding and liquidity, as evidenced by the utilization of long-term or permanent financing to support capital investments in subsidiaries and other long-term assets, and the degree of dependence on short-term funding mechanisms such as commercial paper;
4. the extent of “double leverage” and the organization’s capital management policies, including the distribution and transferability of capital across jurisdictions and legal entities; and
5. the parent company’s ability to provide financial and managerial support to its depository institution subsidiaries during periods of financial stress or adversity, including the sufficiency of related stress testing, scenario analysis, and contingency planning efforts.

The Federal Reserve also will remain apprised of the funding profile—including intraday liquidity management policies and practices, and compliance with the “Federal Reserve Policy on Payments System Risk”—and market access of material depository institution subsidiaries, as in most instances these entities represent the consolidated BHC’s primary and most active vehicles for external funding and liquidity management. The primary supervisor retains responsibility for assessing liquidity risk-management practices with respect to the depository institution subsidiary.

Supervisory Activities: The Federal Reserve will use continuous monitoring activities—including monitoring market conditions and indicators where available—and discovery reviews to understand and assess parent company and nonbank subsidiary funding and liquidity policies and practices, as well as any potential negative impact these policies and practices might have on a subsidiary depository institution or the consolidated organization. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there is (1) a significant change in inherent funding or liquidity risk stemming from changing strategies or activities; (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; or (3) any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified, the Federal Reserve will design and conduct testing activities focused on understanding and assessing the areas of change and/or concern in order to ensure that funding and liquidity risk-management and control functions are appropriately designed and achieving their intended objectives.

For regional BHCs where parent company or nonbank subsidiary third-party debt obligations are deemed to be material in relation to equity or may otherwise have a potentially negative impact on the BHC’s ability to serve as a source of strength for its depository institution subsidiaries, the Federal Reserve will undertake testing activities on at least a three-year cycle, assessing the individual elements of risk management for parent company and nonbank funding and

19. “Double leverage” refers to situations in which debt is issued by the parent company and the proceeds are invested in subsidiaries as equity.

20. This policy statement is available on the Board’s public website at www.federalreserve.gov/paymentsystems/psr.
liquidity: board and senior management oversight; policies, procedures, and limits; risk monitoring and management information systems; and related internal controls. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.2.1.2.

**1050.2.4 INTERAGENCY COORDINATION**

**1050.2.4.1 Coordination and Information Sharing Among Domestic Primary Bank Supervisors and Functional Regulators**

*Objectives:* Effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and other relevant domestic primary bank supervisors and functional regulators. To achieve this objective, the Federal Reserve has worked over the years to enhance interagency coordination through the development and use of information-sharing protocols and mechanisms. These protocols and mechanisms respect the individual statutory authorities and responsibilities of the respective supervisors and regulators, provide for appropriate information flows and coordination to limit unnecessary duplication or burden, comply with restrictions governing access to information, and ensure that the confidentiality of information is maintained.

As discussed in section 1050.2.3, in understanding and assessing the activities and risks of the organization as a whole, the Federal Reserve will rely to the fullest extent possible on the examination and other supervisory work conducted by the domestic primary bank supervisors and functional regulators of a BHC’s subsidiaries. In addition, the Federal Reserve will seek to coordinate its supervisory activities with relevant supervisors and regulators, and will work to align each agency’s assessment of key corporate governance functions, risk-management and internal control functions for primary risks, financial condition, and other areas of the consolidated BHC’s operations as applicable.

*Supervisory Activities:* The Federal Reserve will continue to work with the relevant primary supervisors and functional regulators of a regional BHC’s subsidiaries to ensure that the necessary information flows and coordination mechanisms exist to permit the effective supervision of the BHC on a consolidated basis. The Federal Reserve will continue to share information, including confidential supervisory information, obtained or developed through its consolidated supervisory activities with other relevant primary supervisors or functional regulators when appropriate and permitted by applicable laws and regulations.22

The Federal Reserve also will continue to use a variety of formal and informal channels to facilitate interagency information sharing and coordination consistent with the principles outlined above, including

- supervisory protocols, agreements, and memoranda of understanding (MOUs) with primary supervisors and functional regulators that allow the coordination of supervisory activities and that permit the ongoing exchange of information, including confidential information on a confidential basis;
- bilateral exchanges of letters to facilitate information sharing on a situation-specific basis;
- periodic and as-needed contacts with primary supervisors and functional regulators to discuss and coordinate matters of common interest, including the planning and conduct of examinations and continuous monitoring activities;
- the use of information technology platforms, such as the Banking Organization National Desktop (BOND),23 to provide secure automated access to examination/inspection reports and other supervisory information prepared by the Federal Reserve and other relevant supervisors and regulators; and
- participation in a variety of interagency forums that facilitate the discussion of broad industry issues and supervisory strategies, including the Federal Financial Institutions Examination Council, the President’s Working Group on Financial Markets, and the Federal Reserve-

---

21. Section 1050.2.4.2 discusses cooperation and information sharing among foreign supervisors.

22. Among the federal laws that may limit the sharing of information among supervisors are the Right to Financial Privacy Act (12 U.S.C. 3401 et seq.) and the Trade Secrets Act (18 U.S.C. 1905). The Federal Reserve has established procedures to authorize the sharing of confidential supervisory information, and Federal Reserve staff must ensure that appropriate approvals are obtained prior to releasing such information. See Subpart C of the Board’s Rules Regarding the Availability of Information (12 C.F.R. 261.20 et seq.).

23. BOND is a Federal Reserve information technology platform providing secure interagency access to documents, supervisory and financial data, and other information utilized in the consolidated supervision of individual BHCs and FBOs, and in developing comparative analyses of organizations with similar business lines and risk characteristics.
sponsored cross-sector meetings of financial supervisors and regulators.

1050.2.4.1.1 Coordination of Examination Activities at a Supervised BHC Subsidiary

As discussed in section III, the Federal Reserve will seek to work cooperatively with the relevant primary supervisor or functional regulator to address information gaps or indications of weakness or risk identified in a supervised BHC subsidiary that are material to the Federal Reserve’s understanding or assessment of the consolidated organization’s risks, activities, or key corporate governance, risk-management, or control functions. Prior to conducting discovery reviews or testing activities at a depository institution (other than where the Federal Reserve is the primary federal supervisor) or functionally regulated subsidiary of a BHC, the Federal Reserve will

- review available information sources as part of its continuous monitoring activities, including examination reports and the BHC’s internal MIS, to determine whether such information addresses the Federal Reserve’s information needs or supervisory concerns; and
- if needed, seek to gain a better understanding of the primary supervisor’s or functional regulator’s basis for its supervisory activities and assessment of the subsidiary. This may include a request to review related examination work.

If, following these activities, the Federal Reserve’s information needs or supervisory concerns remain, the Federal Reserve will work cooperatively with the relevant primary supervisor or functional regulator in the manner discussed in section 1050.2.3.24

1050.2.4.2 Cooperation and Information Sharing With Host-Country Foreign Supervisors

Objectives: A number of regional BHCs have international banking and other operations that are licensed and supervised by foreign host-country authorities. As home-country supervisor for domestic BHCs, the Federal Reserve is responsible for the comprehensive, consolidated supervision of these organizations, while each host country is responsible for supervision of the legal entities (including foreign subsidiaries of U.S. BHCs) in its jurisdiction.

Information sharing among domestic and foreign supervisors, consistent with applicable laws, is essential to ensure that a regional BHC’s global activities are supervised on a consolidated basis. Cross-border information sharing is often facilitated by an MOU that establishes a framework for bilateral relationships and includes provisions for cooperation during the licensing process, in the supervision of ongoing activities, and in the handling of problem institutions. The Federal Reserve has established bilateral and multilateral information-sharing MOUs and other arrangements with numerous host-country foreign supervisors. The Federal Reserve also monitors changes in foreign bank regulatory and supervisory systems and seeks to understand how these systems affect supervised banking organizations. In addition to its longstanding cooperative relationships with home- and host-country foreign supervisors, the Federal Reserve expects to increasingly lead and participate in “colleges of supervisors” and other multilateral groups of supervisors that discuss issues related to specific, internationally active banking organizations.

The Federal Reserve also is a member of the Basel Committee on Banking Supervision, which is a forum for supervisors from member countries to discuss important supervisory issues, foster consistent supervision of organizations with similar business and risk profiles, promote the sharing of leading supervisory practices, and formulate guidance to enhance and refine banking supervision globally.

The Federal Reserve’s processes for understanding and assessing firmwide legal and compliance risk management, as described earlier, encompass both domestic and international operations. Most areas of supervisory focus for management of legal and compliance risks are applicable to both domestic and international entities, and include proper oversight of licensed operations, compliance with supervisory and regulatory requirements, and the sufficiency of associated MIS.

There are, however, areas of focus for the Federal Reserve that are unique to a holding company’s international operations. For exam-
ple, some host-country legal and regulatory structures and supervisory approaches are fundamentally different from those in the United States. As a result, the banking organization often must devote additional resources to maintain expertise in local regulatory requirements. In some instances, privacy concerns have led to limits on the information a BHC’s foreign office may share with its parent company, thereby limiting the parent company’s ability to exercise consolidated risk management on a global basis.

Additionally, while considerable progress has been made to strengthen supervisory cross-border cooperation and information sharing, the Federal Reserve and other U.S. supervisors have at times faced challenges in accessing information on a bank’s or BHC’s foreign operations or in carrying out examinations of cross-border or foreign activities. These circumstances are to be taken into account when developing a supervisory strategy for a regional BHC with cross-border or foreign operations.

_Supervisory Activities:_ For regional BHCs with international operations, continuous monitoring will be used to understand and assess each BHC’s international strategy, trends, operations, and legal entity structure, as well as related governance, risk-management, and internal controls. For a regional BHC with significant international operations or risks, an assessment of cross-border and foreign operations will be incorporated into the evaluation of key corporate governance functions and primary firmwide risk-management and internal control functions, including legal and regulatory risk management.

Continuous monitoring activities will include review of materials prepared by host-country supervisors, including examination reports and assessments, and ongoing communication with relevant foreign and domestic supervisors regarding trends and assessments of cross-border and foreign operations.

When assessing the sufficiency of a regional BHC’s management of its international operations, consideration is given to the extent that foreign laws restrict the transmission of information to the BHC’s head office. Impediments to sharing information imposed by a host country may constrain the BHC’s ability to effectively oversee its international operations and globally manage its risks, and the materiality of such impediments should be a determinant of whether the organization should be conducting operations in that host country.

In addition, any limits placed on the Federal Reserve’s ability to access information on host-country operations, or to engage in onsite activities at the organization’s operations in the host country, should be considered when assessing whether the organization’s activities in that jurisdiction are appropriate.

1050.2.4.3 Indications of Weakness or Risk Related to Subsidiary Depository Institutions

_Objectives:_ For areas beyond those specifically addressed in section 1050.2.3, there may be circumstances where the Federal Reserve has indications of material weakness or risk in a depository institution subsidiary of a BHC that is supervised by another primary supervisor, and it is not clear that the weakness or risk is adequately reflected in the assessment or supervisory activities of that supervisor. Because a primary objective of consolidated supervision is to protect the BHC’s depository institution subsidiaries, the Federal Reserve will follow up with the appropriate primary supervisor in these circumstances to help ensure that, to the extent that a material weakness or risk exists, it is addressed appropriately.

_Supervisory Activities:_ The Federal Reserve will take the following steps if it has indications of material weakness or risk in a depository institution subsidiary (other than where the Federal Reserve is the primary federal supervisor) in an area beyond those specifically addressed in section 1050.2.3, and it is not clear that the weakness or risk is adequately reflected in the assessment or supervisory activities of the depository institution’s primary supervisor.

- The Federal Reserve will first review available information sources, discuss the areas of concern with the primary supervisor, and seek to review the supervisor’s related work.
- If concerns remain following these activities, the Federal Reserve will request that the primary supervisor conduct a discovery review or testing activity at the depository institution to address the area of concern.
- In the event the primary supervisor does not undertake activities to address the concern in a reasonable period of time, the Federal Reserve will design and lead an examination of the depository institution to address the matter in consultation with the primary supervisor. A

_BHC Supervision Manual_ January 2009

Page 14
1050.2.4.4 Condition or Management of BHC Subsidiary is Less than Satisfactory

Objectives: As noted above, a primary responsibility of the Federal Reserve as consolidated BHC supervisor is to ensure that a holding company’s activities, policies, and practices do not undermine its ability to serve as a source of financial and managerial strength to its depository institution subsidiaries. In situations where the condition or management of a supervised or functionally regulated BHC subsidiary is determined to be less than satisfactory, the Federal Reserve’s focus as consolidated supervisor is on complementing the efforts of the primary supervisor or functional regulator. In doing so, the Federal Reserve will seek to ensure that the parent company provides appropriate support to the subsidiary and does not take actions that may further weaken the parent company’s depository institution subsidiaries or its ability to act as a source of strength for such subsidiaries.

Beyond the specific activities noted below, these circumstances also may require the Federal Reserve to enhance the activities addressed in section 1050.2.3 for understanding and assessing key corporate governance functions, or primary firmwide risk-management and internal controls. In addition, the Federal Reserve will adjust its supervisory activities as necessary when the consolidated BHC is in weakened condition or when there are questions regarding the capabilities of the holding company’s management.

Supervisory Activities:

• Depository institution subsidiary. In instances when a depository institution subsidiary’s condition or management is rated less than satisfactory, or when the depository institution subsidiary otherwise faces financial stress or material risks, the Federal Reserve’s primary supervisory objectives as consolidated supervisor are to ensure that the parent company (1) provides appropriate support to the depository institution and (2) does not take action that could harm the depository institution. The Federal Reserve will work closely with the primary supervisor to understand whether the BHC or a nonbank affiliate has contributed to the depository institution’s weakened condition, to understand the impact of the depository institution on the BHC’s condition, and to determine if the holding company is providing appropriate support to the depository institution. The Federal Reserve will coordinate its activities with those of the primary supervisor to the extent appropriate.

• Nonbank subsidiary. When any nonbank subsidiary faces financial stress or material risks, the Federal Reserve will seek to ensure that its condition and activities do not jeopardize the safety and soundness of the BHC or its depository institution subsidiaries, as discussed above in sections 1050.2.3.1, “Risk Management and Financial Condition of Significant Nonbank Subsidiaries” and 1050.2.3.2, “Parent Company and Nonbank Funding and Liquidity.” The Federal Reserve also will take appropriate steps to ensure that any actions taken by the parent company to assist a nonbank subsidiary do not impair the BHC’s continuing ability to serve as a source of strength to its depository institution subsidiaries. The Federal Reserve will coordinate its activities with those of any relevant functional regulator to the extent appropriate.

1050.2.4.5 Edge and Agreement Corporations

Objectives: Some regional BHCs control an Edge or agreement corporation subsidiary. The Federal Reserve serves as the primary supervisor of each Edge and agreement corporation subsidiary in addition to its role as consolidated BHC supervisor. When the Edge or agreement corporation is held by a U.S. bank, the primary supervisor often relies on information provided by the Federal Reserve in developing its own understanding and assessment of the parent bank.

During each calendar year, the Federal Reserve performs an examination of each Edge and agreement corporation, assesses the Bank Secrecy Act/Anti-Money-Laundering (BSA/AML) compliance program, and assigns a CAMEO rating. In addition, the Federal Reserve periodically conducts assessments of Edge and agreement

---

25. The Federal Reserve is solely responsible for approving, and supervising the activities of, U.S. Edge and agreement corporations. As discussed in SR-90-21, “Rating System For International Examinations,” one of the Federal Reserve’s supervisory responsibilities is the assignment of a CAMEO rating (Capital, Asset Quality, Management, Earnings, and Operations and Internal Controls) to each Edge and agreement corporation.
corporations to determine whether a consumer compliance examination is warranted, in which case a compliance examination is conducted and a consumer compliance rating is assigned.

The Federal Reserve will coordinate the conduct of its activities as Edge and agreement corporation supervisor with its activities as consolidated supervisor. To this end, the extent and scope of Federal Reserve supervisory work related to an Edge or agreement corporation will be tailored to the entity’s activities, risk profile, and other attributes. A number of specific elements will be considered when developing a supervisory approach, including

1. structure and attributes, including whether the Edge or agreement corporation is a banking or investment organization;
2. the size, nature, and location of its primary activities, as well as key financial and other trends;
3. the business lines and risks, and associated trends, of the Edge or agreement corporation’s primary activities on a standalone basis, as well as their significance to the risk profile of the parent bank (if applicable) and BHC;
4. the extent to which risk-management and internal control functions are unique to the Edge or agreement corporation, or are shared with a parent bank, another affiliate, or the consolidated BHC;
5. any potential Regulation K limitations or other U.S. compliance issues, and the adequacy of processes to ensure ongoing compliance; and
6. the adequacy of processes for ensuring compliance with all applicable laws and regulations imposed by host-country supervisors for the Edge or agreement corporation’s international operations.

Supervisory Activities: The Federal Reserve will maintain an understanding and perform an annual examination for each Edge and agreement corporation. While the examination scope will be risk focused to reflect the organization’s scale, activities, and risk profile, in all cases the Federal Reserve will assess the adequacy of processes to ensure compliance with BSA/AML requirements and other applicable U.S. laws and regulations, and with applicable foreign laws and regulations.

In developing its supervisory strategy, the Federal Reserve will identify those elements that are unique to the Edge or agreement corporation and those that are shared with the parent bank or BHC, and will coordinate fulfillment of the Federal Reserve’s responsibilities as Edge and agreement corporation supervisor with execution of its consolidated supervision role. This strategy will reflect the extent to which reliance can be placed on (1) the Federal Reserve’s understanding and assessments of key corporate governance, risk-management, and control functions, as well as material portfolios and business lines, of the consolidated BHC; (2) assessments developed by the primary supervisor (when applicable) for business lines, risk management, control functions, or financial factors that are common to the Edge or agreement corporation and its parent bank; and (3) findings developed by host-country supervisors for activities under their jurisdiction.

In addition, where the primary supervisor of an Edge or agreement corporation’s parent bank relies on the Federal Reserve’s understanding and assessment in order to develop its CAMELS rating, the Federal Reserve will work to fulfill that supervisor’s information needs.

1050.2.4.6 Nontraditional Bank Holding Companies

Objectives: A small number of regional BHCs are considered to be nontraditional bank holding companies because most or all of their significant nondepository subsidiaries are regulated by a functional regulator, and subsidiary depository institutions are small in relation to the nondepository entities. As with all BHCs, the level of analysis conducted and resources needed to supervise and assess nontraditional BHCs should be commensurate with the level of risk posed by the organization’s depository institution subsidiaries to the federal safety net and the level of risk posed by the parent or its nonbank subsidiaries to the BHC’s subsidiary depository institutions.

Due to the unique structure of nontraditional BHCs, it is likely that a single functional regulator will have a complete view of, and ability to address, significant aspects of the organization’s

firmwide activities, risks, risk management, and controls. Therefore, assessments and information developed by the primary functional regulator typically will be the main tool utilized by the Federal Reserve in developing and assigning the “R” and “F” components of the consolidated RFI rating. More independent Federal Reserve work typically will be required to understand and assess the impact of the nondepository entities on the subsidiary depository institutions in order to assign the “I” rating.

**Supervisory Activities:** The Federal Reserve will primarily utilize continuous monitoring activities to maintain its assessments of risk management and financial condition for nontraditional BHCs, relying on the assessments and information developed by the primary functional regulator to the fullest extent possible.

In addition to continuous monitoring, discovery reviews and periodic testing will be used to maintain an understanding and assessment of the potential negative impact of nonbank entities on subsidiary depository institutions as discussed above in sections 1050.2.3.3.1 and 1050.2.3.3.2 on, respectively, “Risk Management and Financial Condition of Significant Nonbank Subsidiaries” and “Parent Company and Nonbank Funding and Liquidity.” In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.2.1.2.

**1050.2.5 Relying on the Work of Regulators of Subsidiary Insured Depository Institutions**

The principle of relying on the work of the Insured Depository Institution (IDI) regulators is a well-established tenet of Federal Reserve supervisory policy and is required by statute. BHC and SLHC supervision focuses on the Federal Reserve’s assessment of the consolidated organization based on a review of parent and nonbank activities, together with an assessment of the organization’s IDI subsidiaries. When assigning Federal Reserve supervisory ratings to BHCs and SLHCs where the Federal Reserve is not the IDI regulator, the Federal Reserve will rely to the fullest extent possible on the assessment of the IDI as reflected in the examination work performed by the IDI regulator(s).

The Federal Reserve tailors its supervision of holding companies based on the size of the organization, complexity, and the degree of systemic risk that the organization poses to the U.S. financial system and the economy, including the deposit insurance fund. Within this framework of tailored supervision, the Federal Reserve focuses on the goals of both macroprudential and microprudential supervision for systematically important institutions, and microprudential supervisory goals for BHCs and SLHCs with total consolidated assets of less than $50 billion.

The BHC Act and the HOLA authorize the Federal Reserve to conduct examinations of BHCs and SLHCs, and certain subsidiaries of such holding companies, to obtain information needed to assess the safety and soundness of supervised financial institutions. At the same time, the Dodd-Frank Act requires the Federal Reserve, to the fullest extent possible, to rely on the reports and supervisory information from other regulatory agencies to avoid duplication of examination activities, reporting requirements, and requests for information. Supervisory overlap at the level of the IDI can be avoided through reliance on the examination work performed by the IDI regulators, as each agency follows similar rules and supervisory guidance when assessing the financial and managerial condition of an insured depository institution.

Consistent with this mandate to rely on the work of the IDI regulators, the IDI regulators and the Federal Reserve have the mutual responsibility to foster the timely sharing of information, including their risk-focused supervisory

---

27. Refer to sections 5(c)(1)-(2) of the Bank Holding Company Act of 1956 (BHC Act) and sections 100(b)(2) and (b)(4) of the Home Owners’ Loan Act (HOLA), as amended by section 604 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act). 12 U.S.C. 1844(c)(1)-(2); 12 U.S.C. 1467a(b)(2), (b)(4).

28. While recognizing that a large number of smaller BHCs and SLHCs simultaneously experiencing financial distress could have a harmful effect on a local economy’s availability of credit or on certain sectors or regions of the U.S. economy, institutions that are not systemically important do not have the size or degree of interconnectedness to the financial system to individually pose macroprudential risk.

29. 12 U.S.C. 1844(c)(2); 12 U.S.C. 1467a(b)(4)(A). This information pertains to the nature of the operations and financial condition of the holding company and its subsidiaries; the financial, operational, and other risks within the holding company system that may pose a threat to the safety and soundness of the holding company or of any depository institution subsidiary of the holding company, or the stability of the financial system of the United States; the systems of the holding company for monitoring and controlling any such risks; and the holding company’s and subsidiaries’ compliance with federal law, other than in the case of an insured depository institution or functionally regulated subsidiary.
1050.2.5.1 Relying on the Work of IDI Regulators for RBOs

The Federal Reserve supervises RBOs using a program of continuous oversight which is characterized by a series of targeted examinations during the annual supervisory cycle, a roll-up examination at the end of the cycle, and continuous monitoring between examination events during the cycle.

1. Taking into account a holding company’s complexity, risk profile, and condition, the Federal Reserve will rely to the fullest extent possible on the work of the IDI regulators to supplement its own supervisory work regarding the consolidated holding company and its nonbank subsidiaries.

2. Federal Reserve staff will promote the sharing of information with the IDI regulators throughout the supervisory cycle, which will foster collaborative interagency relationships. Federal Reserve staff and the IDI regulators generally may participate on each other’s inspections and examinations to support and complement each other’s work as necessary. Through ongoing dialogue and exchange of supervisory documents and information, Federal Reserve staff are expected to:

   • understand the IDI regulators’ risk assessment and supervisory plan for each IDI, to include this information into the Federal Reserve’s evaluation of consolidated holding company risk, and to support development of the Federal Reserve’s supervisory plan for the holding company;
   
   • understand the IDI regulators’ examination work, including the scope, basis for, and support of conclusions reached, and the goal of any supervisory action;
   
   • communicate to the IDI regulators the Federal Reserve’s supervisory goals and approach with respect to the holding company and any subsidiaries not subject to the supervision of IDI regulators; and
   
   • use all information made available from the IDI regulators to reach conclusions regarding the consolidated holding company’s overall condition and to assign appropriate Federal Reserve supervisory ratings.

3. Federal Reserve staff should verify that the Federal Reserve’s supervisory ratings of the consolidated holding company are adequately supported by information that is timely and complete, including the information received from the IDI regulators.

4. Federal Reserve staff will scale their supervisory approach, including the review of and reliance on the IDI regulators’ work, according to the complexity, risk, and condition of the consolidated organization, and to the timeliness of information available from the IDI regulators. For noncomplex holding companies with satisfactory supervisory ratings, Federal Reserve consolidated ratings should rely heavily on the IDI regulators’ work for IDI subsidiaries exhibiting the following characteristics:

   • CAMELS Composite 1 or 2;
   
   • low or moderate risk profiles;
   
   • stable financial condition;

30. For the purpose of this guidance, “IDI regulator” is defined as the prudential bank regulator(s) other than the Federal Reserve, which includes the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the state banking supervisory authorities.

31. “[A]ll bank holding companies...with total consolidated assets of less than $50 billion” includes by definition any U.S. bank holding company with total consolidated assets of less than $50 billion that is owned or controlled by a foreign banking organization.

32. The Federal Reserve distinguishes between complex and noncomplex holding companies by evaluating a number of factors, including: the size and structure of the company; the extent of intercompany transactions between IDI subsidiaries and the holding company or its non-depository subsidiaries; the risk, scale, and complexity of activities of any non-depository subsidiaries; and the degree of leverage at the holding company, including the extent of debt outstanding to the public. Companies are also designated “complex” if material risk management processes for the holding company and its affiliates are consolidated at the parent company.
• satisfactory management practices and an associated satisfactory management component rating; and
• IDI regulator examination reports issued within the past year.

In these situations, the Federal Reserve expects to limit its supervisory work to verify that the holding company can serve as a source of strength to, and the non-bank subsidiaries do not pose a threat to, the safety and soundness of the IDI(s). Thus, Federal Reserve staff will likely need to perform only limited analysis outside of the required annual on-site holding company inspection of the parent and nonbank subsidiaries. In addition, this analysis will be supplemented by the Federal Reserve’s continuous monitoring process.

In other situations, the Federal Reserve will scale its supervisory approach, including performing more detailed monitoring of a consolidated holding company’s internal management information systems, internal audit, and loan review reports, depending on the company’s complexity, risk, condition of the consolidated organization, and timeliness of information available from the IDI regulator. For example, a holding company with the following characteristics is a candidate for closer Federal Reserve supervision to ensure the conclusions reached by the IDI regulators remain a valid basis for assigning the supervisory ratings to the consolidated holding company:
• the IDI examination reports are not current;\(^\text{33}\)
• the composite rating for the holding company or any of its IDI subsidiaries is less than satisfactory; or
• the holding company has deteriorating financial or risk trends that are not reflected in the most current IDI regulators’ examination reports.

5. If Federal Reserve staff do not have an adequate basis for relying on the IDI regulators’ supervisory findings, the Federal Reserve will work to resolve information gaps with the IDI regulators.\(^\text{34}\)

---

33. For the purpose of this guidance, RBO IDI examination reports that are not current are defined as reports older than one year, measured from the mailing date of a IDI regulator’s report to the start date of the Federal Reserve supervisory evaluation.

34. In rare and limited circumstances, where unresolved information gaps exist or reliance upon information obtained from the IDI regulators does not sufficiently support the Federal Reserve’s supervision of a consolidated holding company, the Federal Reserve would consider invoking its expanded examination authority under section 5(c)(2) of the BHC Act and section 10(b)(4) of the HOLA, as amended by section 604 of the Dodd-Frank Act, to examine IDIs for which the Federal Reserve is not the primary regulator. 12 U.S.C. 1844(c)(2); 12 U.S.C. 1467a(b)(4).
Large Financial Institution Rating System

1060.0.1 OVERVIEW AND APPLICABILITY

Each large financial institution (LFI) is expected to ensure that the consolidated organization (or the combined U.S. operations in the case of foreign banking organizations), including its critical operations and banking offices, remain safe and sound and in compliance with laws and regulations, including those related to consumer protection. On November 21, 2018, the Board adopted a specific rating system for LFIs in order to align with the Federal Reserve’s supervisory programs and practices for these firms. The LFI rating system provides a supervisory evaluation of whether a covered firm possesses sufficient financial and operational strength and resilience to maintain safe-and-sound operations through a range of conditions, including stressful ones.

The LFI rating system applies to:

• bank holding companies with total consolidated assets of $100 billion or more;
• all non-insurance, non-commercial savings and loan holding companies with total consolidated assets of $100 billion or more;¹ and
• U.S. intermediate holding companies of foreign banking organizations with combined U.S. assets of $50 billion or more established pursuant to the Federal Reserve’s Regulation YY.²

The Federal Reserve will assign initial LFI ratings to firms in the LISCC portfolio in early 2019. For all other firms subject to the LFI rating system, the Federal Reserve will assign initial LFI ratings in early 2020.

Federal Reserve supervision staff will continue to use the RFI rating system in assessing bank holding companies with less than $100 billion in consolidated assets. For noncomplex holding companies with less than $3 billion in assets, Reserve Bank supervisory staff will assign only a composite RFI rating and risk-management rating to the firm following an inspection.

The LFI rating system is designed to:

• Fully align with the Federal Reserve’s current supervisory programs and practices, which are based upon the LFI supervision framework’s core objectives of reducing the probability of LFIs failing or experiencing material distress and reducing the risk to U.S. financial stability;
• Enhance the clarity and consistency of supervisory assessments and communications of supervisory findings and implications; and
• Provide transparency related to the supervisory consequences of a given rating.

1. See SR letter 12-17(CA letter 12-14), “Consolidated Supervisory Framework for Large Financial Institutions.” Hereinafter, when “safe and sound” or “safety and soundness” is used in this framework, related expectations apply to the consolidated organization and the firm’s critical operations and banking offices. “Critical operations” are a firm’s operations, including associated services, functions and support, the failure or discontinuance of which, in the view of the firm or the Federal Reserve, would pose a threat to the financial stability of the United States. “Banking offices” are defined as U.S. depository institution subsidiaries, as well as the U.S. branches and agencies of foreign banking organizations.

3. “Financial strength and resilience” is defined as maintaining effective capital and liquidity governance and planning processes, and sufficiency of related positions, to provide for the continuity of the consolidated organization (including its critical operations and banking offices) through a range of conditions.

4. Savings and loan holding companies (SLHCs) are considered to be engaged in significant commercial activities if they derive 50 percent or more of their total consolidated assets or total revenues from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act of 1956, as amended (12 USC 1843(k)). SLHCs are considered to be engaged in significant insurance underwriting activities if they are either insurance companies or hold 25 percent or more of their total consolidated assets in subsidiaries that are insurance companies. SLHCs that meet these criteria are excluded from the definition of “covered savings and loan holding company” in section 217.2 of the Board’s Regulation Q. See 12 CFR 217.2

5. Total consolidated assets will be calculated based on the average of the firm’s total consolidated assets in the four most recent quarters as reported on the firm’s quarterly financial reports filed with the Federal Reserve. A firm will continue to be rated under the LFI rating system until it has less than $95 billion in total consolidated assets, based on the average total consolidated assets as reported on the firm’s four most recent quarterly financial reports filed with the Federal Reserve. The Federal Reserve may determine to apply the RFI rating system or another applicable rating system in certain limited circumstances.
The LFI rating system is comprised of three components:

— Capital Planning and Positions: an evaluation of (1) the effectiveness of a firm’s governance and planning processes used to determine the amount of capital necessary to cover risks and exposures, and to support activities through a range of conditions and events; and (2) the sufficiency of a firm’s capital positions to comply with applicable regulatory requirements and to support the firm’s ability to continue to serve as a financial intermediary through a range of conditions.

— Liquidity Risk Management and Positions: an evaluation of (1) the effectiveness of a firm’s governance and risk-management processes used to determine the amount of liquidity necessary to cover risks and exposures, and to support activities through a range of conditions; and (2) the sufficiency of a firm’s liquidity positions to comply with applicable regulatory requirements and to support the firm’s ongoing obligations through a range of conditions.

— Governance and Controls: an evaluation of the effectiveness of a firm’s (1) board of directors, (2) management of business lines and independent risk management and controls, (3) recovery planning (only for domestic firms that are subject to the Board’s Large Institution Supervision Coordinating Committee (LISCC) Framework). This rating assesses a firm’s effectiveness in aligning strategic business objectives with the firm’s risk appetite and risk-management capabilities; maintaining effective and independent risk-management and control functions, including internal audit; promoting compliance with laws and regulations, including those related to consumer protection; and otherwise planning for the ongoing resiliency of the firm.9

1060.0.2 ASSIGNMENT OF THE LFI COMPONENT RATINGs

Each LFI component rating is assigned along a four-level scale:

• Broadly Meets Expectations: A firm’s practices and capabilities broadly meet supervisory expectations, and the firm possesses sufficient financial and operational strength and resilience to maintain safe-and-sound operations through a range of conditions. The firm may be subject to identified supervisory issues requiring corrective action. These issues are unlikely to present a threat to the firm’s ability to maintain safe-and-sound operations through a range of conditions.

• Conditionally Meets Expectations: Certain, material financial or operational weaknesses in a firm’s practices or capabilities may place the firm’s prospects for remaining safe and sound through a range of conditions at risk if not resolved in a timely manner during the normal course of business.

The Federal Reserve does not intend for a firm to be assigned a “Conditionally Meets Expectations” rating for a prolonged period, and will work with the firm to develop an appropriate timeframe to fully resolve the issues leading to the rating assignment and merit upgrade to a “Broadly Meets Expectations” rating.

A firm is assigned a “Conditionally Meets Expectations” rating as opposed to a “Deficient” rating when it has the ability to resolve these issues through measures that do not require a material change to the firm’s business model or financial profile, or its governance, risk management or internal control structures or practices. Failure to resolve the issues in a timely manner would most likely result in the firm’s downgrade to a “Deficient” rating, since the inability to resolve the issues would indicate that the firm does not

6. References to “board” or “board of directors” in this framework includes the equivalent to a board of directors, as appropriate, as well as committees of the board of directors or the equivalent thereof, as appropriate.

At this time, recovery planning expectations only apply to domestic bank holding companies subject to the Federal Reserve’s LISCC supervisory framework. Should the Federal Reserve expand the scope of recovery planning expectations to encompass additional firms, this rating will reflect such expectations for the broader set of firms.

7. The evaluation of the effectiveness of management of business lines would include management of critical operations.

8. There are eight domestic firms in the LISCC portfolio: (1) Bank of America Corporation; (2) Bank of New York Mellon Corporation; (3) Citigroup, Inc.; (4) Goldman Sachs Group, Inc.; (5) J.P. Morgan Chase & Co.; (6) Morgan Stanley; (7) State Street Corporation; and (8) Wells Fargo & Company. In this guidance, these eight firms may collectively be referred to as “domestic LISCC firms.”

9. “Risk appetite” is defined as the aggregate level and types of risk the board and senior management are willing to assume to achieve the firm’s strategic business objectives, consistent with applicable capital, liquidity, and other requirements and constraints.
possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

It is recognized that completion and validation of remediation activities for select supervisory issues—such as those involving information technology modifications—may require an extended time horizon. In all instances, appropriate and effective risk-mitigation techniques must be utilized in the interim to maintain safe-and-sound operations under a range of conditions until remediation activities are completed, validated, and fully operational.

- **Deficient-1**: Financial or operational deficiencies in a firm’s practices or capabilities put the firm’s prospects for remaining safe and sound through a range of conditions at significant risk. The firm is unable to remediate these deficiencies in the normal course of business, and remediation would typically require the firm to make a material change to its business model or financial profile, or its practices or capabilities.

  A firm’s failure to resolve the issues in a timely manner that gave rise to a “Conditionally Meets Expectations” rating would most likely result in its downgrade to a “Deficient” rating.

  A firm with a “Deficient-1” rating is required to take timely corrective action to correct financial or operational deficiencies and to restore and maintain its safety and soundness and compliance with laws and regulations, including those related to consumer protection. There is a strong presumption that a firm with a “Deficient-1” rating will be subject to an informal or formal enforcement action, and this rating assignment could be a barrier for a firm seeking Federal Reserve approval to engage in new or expansionary activities.

- **Deficient-2**: Financial or operational deficiencies in a firm’s practices or capabilities present a threat to the firm’s safety and soundness, or have already put the firm in an unsafe and unsound condition.

  A firm with a “Deficient-2” rating is required to immediately implement comprehensive corrective measures, and demonstrate the sufficiency of contingency planning in the event of further deterioration. There is a strong presumption that a firm with a “Deficient-2” rating will be subject to a formal enforcement action, and the Federal Reserve would be unlikely to approve any proposal from a firm with this rating to engage in new or expansionary activities.

The Federal Reserve will take into account a number of individual elements of a firm’s practices, capabilities, and performance when making each component rating assignment. The weighting of an individual element in assigning a component rating will depend on its impact on the firm’s safety, soundness, and resilience as provided for in the LFI rating system definitions. For example, for purposes of the Governance and Controls rating, a limited number of significant deficiencies—or even just one significant deficiency—noted for management of a single material business line could be viewed as sufficiently important to warrant a “Deficient-1” for the Governance and Controls component rating, even if the firm meets supervisory expectations under the Governance and Controls component in all other respects.

Under the LFI rating system, a firm must be rated “Broadly Meets Expectations” or “Conditionally Meets Expectations” for each of the three component ratings (Capital, Liquidity, Governance and Controls) to be considered “well managed” in accordance with various statutes and regulations. A “well managed” firm has sufficient financial and operational strength and resilience to maintain safe-and-sound operations through a range of conditions, including stressful ones.

1060.0.3 LFI RATING COMPONENTS

The LFI rating system is comprised of three component ratings: (1) capital planning and positions, (2) liquidity risk management and positions, and (3) governance and controls.11

---

10. 12 USC 1841 et. seq. and 12 USC 1461 et seq. See, e.g., 12 CFR 225.4(b)(6), 225.14, 225.22(a), 225.23, 225.85, and 225.86; 12 CFR 211.9(b), 211.10(a)(14), and 211.34; and 12 CFR 223.41.

11. There may be instances where deficiencies or supervisory issues may be relevant to the Federal Reserve’s assessment of more than one component area. As such, the LFI rating will reflect these deficiencies or issues within multiple rating components when necessary to provide a comprehensive supervisory assessment.
The Capital Planning and Positions component rating evaluates (1) the effectiveness of a firm’s governance and planning processes used to determine the amount of capital necessary to cover risks and exposures, and to support activities through a range of conditions; and (2) the sufficiency of a firm’s capital positions to comply with applicable regulatory requirements and to support the firm’s ability to continue to serve as a financial intermediary through a range of conditions.

In developing this rating, the Federal Reserve evaluates:

- **Capital Planning:** The extent to which a firm maintains sound capital planning practices through effective governance and oversight; effective risk management and controls; maintenance of updated capital policies and contingency plans for addressing potential shortfalls; and incorporation of appropriately stressful conditions into capital planning and projections of capital positions; and

- **Capital Positions:** The extent to which a firm’s capital is sufficient to comply with regulatory requirements, and to support its ability to meet its obligations to depositors, creditors, and other counterparties and continue to serve as a financial intermediary through a range of conditions.

### 1060.0.3.1.1 Definitions for the Capital Planning and Positions Component Rating

**Broadly Meets Expectations**

A firm’s capital planning and positions broadly meet supervisory expectations and support maintenance of safe-and-sound operations. Specifically:

- The firm is capable of producing sound assessments of capital adequacy through a range of conditions; and
- The firm’s current and projected capital positions comply with regulatory requirements, and support its ability to absorb current and potential losses, to meet obligations, and to continue to serve as a financial intermediary through a range of conditions.

A firm rated “Broadly Meets Expectations” may be subject to identified supervisory issues requiring corrective action. However, these issues are unlikely to present a threat to the firm’s ability to maintain safe-and-sound operations through a range of potentially stressful conditions.

A firm that does not meet the capital planning and position expectations associated with a “Broadly Meets Expectations” rating will be rated “Conditionally Meets Expectations,” “Deficient-1,” or “Deficient-2,” and subject to potential consequences as outlined below.

**Conditionally Meets Expectations**

Certain material financial or operational weaknesses in a firm’s capital planning or positions may place the firm’s prospects for remaining safe and sound through a range of conditions at risk if not resolved in a timely manner during the normal course of business.

Specifically, if left unresolved, these weaknesses:

- May threaten the firm’s ability to produce sound assessments of capital adequacy through a range of conditions; and/or
- May result in the firm’s projected capital positions being insufficient to absorb potential losses, comply with regulatory requirements, and support the firm’s ability to meet current and prospective obligations and to continue to serve as a financial intermediary through a range of conditions.

The Federal Reserve does not intend for a firm to be rated “Conditionally Meets Expectations” for a prolonged period. The firm has the ability to resolve these issues through measures that do not require a material change to the firm’s business model or financial profile, or its governance, risk management, or internal control structures or practices. The Federal Reserve will work with the firm to develop an appropriate timeframe during which the firm would be required to resolve each supervisory issue leading to the “Conditionally Meets Expectations” rating.

The Federal Reserve will closely monitor the firm’s remediation and mitigation activities; in most instances, the firm will either:

1. Resolve the issues in a timely manner and, if no new material supervisory issues arise,
be upgraded to a “Broadly Meets Expectations” rating because the firm’s capital planning practices and related positions would broadly meet supervisory expectations; or

2. Fail to resolve the issues in a timely manner and be downgraded to a “Deficient-1” rating, because the inability to resolve the issues would indicate that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

It is possible that a firm may be close to completing resolution of the supervisory issues leading to the “Conditionally Meets Expectations” rating, but new issues are identified that, taken alone, would be consistent with a “Conditionally Meets Expectations” rating. In this event, the firm may continue to be rated “Conditionally Meets Expectations,” provided the new issues do not reflect a pattern of deeper or prolonged capital planning or position weaknesses consistent with a “Deficient” rating.

A “Conditionally Meets Expectations” rating may be assigned to a firm that meets the above definition regardless of its prior rating. A firm previously rated “Deficient-1” may be upgraded to “Conditionally Meets Expectations” if the firm’s remediation and mitigation activities are sufficiently advanced so that the firm’s prospects for remaining safe and sound are no longer at significant risk, even if the firm has outstanding supervisory issues or is subject to an active enforcement action.

**Deficient-1**

Financial or operational deficiencies in a firm’s capital planning or positions put the firm’s prospects for remaining safe and sound through a range of conditions at significant risk. The firm is unable to remediate these deficiencies in the normal course of business, and remediation would typically require a material change to the firm’s business model or financial profile, or its capital planning practices.

Specifically, although the firm’s current condition is not considered to be materially threatened:

- Deficiencies in the firm’s capital planning processes are not effectively mitigated. These deficiencies limit the firm’s ability to effectively assess capital adequacy through a range of conditions; and/or
- The firm’s projected capital positions may be insufficient to absorb potential losses and to support its ability to meet current and prospective obligations and serve as a financial intermediary through a range of conditions.

Supervisory issues that place the firm’s safety and soundness at significant risk, and where resolution is likely to require steps that clearly go beyond the normal course of business—such as issues requiring a material change to the firm’s business model or financial profile, or its governance, risk management or internal control structures or practices—would generally warrant assignment of a “Deficient-1” rating.

A “Deficient-1” rating may be assigned to a firm regardless of its prior rating. A firm previously rated “Broadly Meets Expectations” may be downgraded to “Deficient-1” when supervisory issues are identified that place the firm’s prospects for maintaining safe and sound operations through a range of potentially stressful conditions at significant risk. A firm previously rated “Conditionally Meets Expectations” may be downgraded to “Deficient-1” when the firm’s inability to resolve supervisory issues in a timely manner indicates that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

To address these financial or operational deficiencies, the firm is required to take timely corrective action to restore and maintain its capital planning and positions consistent with supervisory expectations. There is a strong presumption that a firm rated “Deficient-1” will be subject to an informal or formal enforcement action by the Federal Reserve.

A firm rated “Deficient-1” for any rating component would not be considered “well managed,” which would subject the firm to various consequences. A “Deficient-1” rating could be a barrier for a firm seeking Federal Reserve approval of a proposal to engage in new or expansionary activities, unless the firm can demonstrate that (1) it is making meaningful, sustained progress in resolving identified deficiencies and issues; (2) the proposed new or expansionary activities would not present a risk of exacerbating current deficiencies or issues or lead to new concerns; and (3) the proposed activities would not distract the firm from remediating current deficiencies or issues.
Financial or operational deficiencies in a firm’s capital planning or positions present a threat to the firm’s safety and soundness, or have already put the firm in an unsafe and unsound condition.

Specifically, as a result of these deficiencies:

- The firm’s capital planning processes are insufficient to effectively assess the firm’s capital adequacy through a range of conditions; and/or
- The firm’s current or projected capital positions are insufficient to absorb current or potential losses, and to support the firm’s ability to meet current and prospective obligations and serve as a financial intermediary through a range of conditions.

To address these deficiencies, the firm is required to immediately (1) implement comprehensive corrective measures sufficient to restore and maintain appropriate capital planning capabilities and adequate capital positions; and (2) demonstrate the sufficiency, credibility and readiness of contingency planning in the event of further deterioration of the firm’s financial or operational strength or resiliency. There is a strong presumption that a firm rated “Deficient-2” will be subject to a formal enforcement action by the Federal Reserve.

A firm rated “Deficient-2” for any rating component would not be considered “well managed,” which would subject the firm to various consequences. The Federal Reserve would be unlikely to approve any proposal from a firm rated “Deficient-2” to engage in new or expansionary activities.

1060.0.3.2 Liquidity Risk Management and Positions Component Rating

The Liquidity Risk Management and Positions component rating evaluates (1) the effectiveness of a firm’s governance and risk-management processes used to determine the amount of liquidity necessary to cover risks and exposures, and to support activities through a range of conditions; and (2) the sufficiency of a firm’s liquidity positions to comply with applicable regulatory requirements and to support the firm’s ongoing obligations through a range of conditions.

In developing this rating, the Federal Reserve evaluates:

- **Liquidity Risk Management:** The extent to which a firm maintains sound liquidity-risk management practices through effective governance and oversight; effective risk management and controls; maintenance of updated liquidity policies and contingency plans for addressing potential shortfalls; and incorporation of appropriately stressful conditions into liquidity planning and projections of liquidity positions; and
- **Liquidity Positions:** The extent to which a firm’s liquidity is sufficient to comply with regulatory requirements, and to support its ability to meet current and prospective obligations to depositors, creditors and other counterparties through a range of conditions.

1060.0.3.2.1 Definitions for the Liquidity Risk Management and Positions Component Rating

**Broadly Meets Expectations**

A firm’s liquidity risk management and positions broadly meet supervisory expectations and support maintenance of safe-and-sound operations. Specifically:

- The firm is capable of producing sound assessments of liquidity adequacy through a range of conditions; and
- The firm’s current and projected liquidity positions comply with regulatory requirements, and support its ability to meet current and prospective obligations and to continue to serve as a financial intermediary through a range of conditions.

A firm rated “Broadly Meets Expectations” may be subject to identified supervisory issues requiring corrective action. However, these issues are unlikely to present a threat to the firm’s ability to maintain safe-and-sound operations through a range of potentially stressful conditions.

A firm that does not meet the liquidity risk management and position expectations associated with a “Broadly Meets Expectations” rating will be rated “Conditionally Meets Expectations,” “Deficient-1,” or “Deficient-2,” and subject to potential consequences as outlined below.

**Conditionally Meets Expectations**
Certain material financial or operational weaknesses in a firm’s liquidity risk management or positions may place the firm’s prospects for remaining safe and sound through a range of conditions at risk if not resolved in a timely manner during the normal course of business.

Specifically, if left unresolved, these weaknesses:

• May threaten the firm’s ability to produce sound assessments of liquidity adequacy through a range of conditions; and/or
• May result in the firm’s projected liquidity positions being insufficient to comply with regulatory requirements, and support its ability to meet current and prospective obligations and to continue to serve as a financial intermediary through a range of conditions.

The Federal Reserve does not intend for a firm to be rated “Conditionally Meets Expectations” for a prolonged period. The firm has the ability to resolve these issues through measures that do not require a material change to the firm’s business model or financial profile, or its governance, risk management or internal control structures or practices. The Federal Reserve will work with the firm to develop an appropriate timeframe during which the firm would be required to resolve each supervisory issue leading to the “Conditionally Meets Expectations” rating.

The Federal Reserve will closely monitor the firm’s remediation and mitigation activities; in most instances, the firm will either:

1. Resolve the issues in a timely manner and, if no new material supervisory issues arise, and be upgraded to a “Broadly Meets Expectations” rating because the firm’s liquidity risk-management practices and related positions would broadly meet supervisory expectations; or
2. Fail to resolve the issues in a timely manner and be downgraded to a “Deficient-1” rating, because the firm’s inability to resolve those issues would indicate that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

It is possible that a firm may be close to completing resolution of the supervisory issues leading to the “Conditionally Meets Expectations” rating, but new issues are identified that, taken alone, would be consistent with a “Conditionally Meets Expectations” rating. In this event, the firm may continue to be rated “Conditionally Meets Expectations,” provided the new issues do not reflect a pattern of deeper or prolonged liquidity-risk management and positions weaknesses consistent with a “Deficient” rating.

A “Conditionally Meets Expectations” rating may be assigned to a firm that meets the above definition regardless of its prior rating. A firm previously rated “Deficient-1” may be upgraded to “Conditionally Meets Expectations” if the firm’s remediation and mitigation activities are sufficiently advanced so that the firm’s prospects for remaining safe and sound are no longer at significant risk, even if the firm has outstanding supervisory issues or is subject to an active enforcement action.

Deficient-1

Financial or operational deficiencies in a firm’s liquidity risk management or positions put the firm’s prospects for remaining safe and sound through a range of conditions at significant risk. The firm is unable to remediate these deficiencies in the normal course of business, and remediation would typically require a material change to the firm’s business model or financial profile, or its liquidity risk-management practices.

Specifically, although the firm’s current condition is not considered to be materially threatened:

• Deficiencies in the firm’s liquidity risk-management processes are not effectively mitigated. These deficiencies limit the firm’s ability to effectively assess liquidity adequacy through a range of conditions; and/or
• The firm’s projected liquidity positions may be insufficient to support its ability to meet prospective obligations and serve as a financial intermediary through a range of conditions.

Supervisory issues that place the firm’s safety and soundness at significant risk, and where resolution is likely to require steps that clearly go beyond the normal course of business—such as issues requiring a material change to the firm’s business model or financial profile, or its governance, risk management or internal control structures or practices—would generally warrant assignment of a “Deficient-1” rating.
A “Deficient-1” rating may be assigned to a firm regardless of its prior rating. A firm previously rated “Broadly Meets Expectations” may be downgraded to “Deficient-1” when supervisory issues are identified that place the firm’s prospects for maintaining safe-and-sound operations through a range of potentially stressful conditions at significant risk. A firm previously rated “Conditionally Meets Expectations” may be downgraded to “Deficient-1” when the firm’s inability to resolve supervisory issues in a timely manner indicates that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

To address these financial or operational deficiencies, the firm is required to take timely corrective action to restore and maintain its liquidity risk management and positions consistent with supervisory expectations. There is a strong presumption that a firm rated “Deficient-1” will be subject to an informal or formal enforcement action by the Federal Reserve.

A firm rated “Deficient-1” for any rating component would not be considered “well managed,” which would subject the firm to various consequences. A “Deficient-1” rating could be a barrier for a firm seeking Federal Reserve approval of a proposal to engage in new or expansionary activities, unless the firm can demonstrate that (1) it is making meaningful, sustained progress in resolving identified deficiencies and issues; (2) the proposed new or expansionary activities would not present a risk of exacerbating current deficiencies or issues or lead to new concerns; and (3) the proposed activities would not distract the firm from remediating current deficiencies or issues.

Deficient-2

Financial or operational deficiencies in a firm’s liquidity risk management or positions present a threat to the firm’s safety and soundness, or have already put the firm in an unsafe and unsound condition.

Specifically, as a result of these deficiencies:

• The firm’s liquidity risk-management processes are insufficient to effectively assess the firm’s liquidity adequacy through a range of conditions; and/or
• The firm’s current or projected liquidity positions are insufficient to support the firm’s ability to meet current and prospective obligations and serve as a financial intermediary through a range of conditions.

To address these deficiencies, the firm is required to immediately (1) implement comprehensive corrective measures sufficient to restore and maintain appropriate liquidity risk management capabilities and adequate liquidity positions; and (2) demonstrate the sufficiency, credibility and readiness of contingency planning in the event of further deterioration of the firm’s financial or operational strength or resiliency. There is a strong presumption that a firm rated “Deficient-2” will be subject to a formal enforcement action by the Federal Reserve.

A firm rated “Deficient-2” for any rating component would not be considered “well managed,” which would subject the firm to various consequences. The Federal Reserve would be unlikely to approve any proposal from a firm rated “Deficient-2” to engage in new or expansionary activities.

1060.0.3.3 Governance and Controls Component Rating

The Governance and Controls component rating evaluates the effectiveness of a firm’s (1) board of directors, (2) management of business lines and independent risk management and controls, and (3) recovery planning (for domestic LISCC firms only). This rating assesses a firm’s effectiveness in aligning strategic business objectives with the firm’s risk appetite and risk management capabilities; maintaining effective and independent risk management and control functions, including internal audit; promoting compliance with laws and regulations, including those related to consumer protection; and otherwise providing for the ongoing resiliency of the firm.

In developing this rating, the Federal Reserve evaluates:

• Effectiveness of the Board of Directors: The extent to which the board exhibits attributes that are consistent with those of effective boards in carrying out its core roles and responsibilities, including: (1) setting a clear, aligned, and consistent direction regarding the firm’s strategy and risk appetite; (2) directing senior management regarding the board’s information; (3) overseeing and holding senior management accountable; (4) supporting the independence and stature of independent risk
management and internal audit; and (5) maintaining a capable board composition and governance structure.

- **Management of Business Lines and Independent Risk Management and Controls**

  The extent to which:
  
  — Senior management effectively and prudently manages the day-to-day operations of the firm and provides for ongoing resiliency; implements the firm’s strategy and risk appetite; maintains an effective risk-management framework and system of internal controls; and promotes prudent risk-taking behaviors and business practices, including compliance with laws and regulations, including those related to consumer protection.
  
  — Business line management executes business line activities consistent with the firm’s strategy and risk appetite; identifies and manages risks; and ensures an effective system of internal controls for its operations.
  
  — Independent risk management effectively evaluates whether the firm’s risk appetite appropriately captures material risks and is consistent with the firm’s risk management capacity; establishes and monitors risk limits that are consistent with the firm’s risk appetite; identifies and measures the firm’s risks; and aggregates, assesses and reports on the firm’s risk profile and positions. Additionally, the firm demonstrates that its internal controls are appropriate and tested for effectiveness. Finally, internal audit effectively and independently assesses the firm’s risk-management framework and internal control systems, and reports findings to senior management and the firm’s audit committee.

- **Recovery Planning (domestic LISCC firms only):** The extent to which recovery planning processes effectively identify options that provide a reasonable chance of a firm being able to remedy financial weakness and restore market confidence without extraordinary official sector support.

**1060.0.3.3.1 Definitions for the Governance and Controls Component Rating**

**Broadly Meets Expectations**

A firm’s governance and controls broadly meet supervisory expectations and support maintenance of safe-and-sound operations.

Specifically, the firm’s practices and capabilities are sufficient to align strategic business objectives with its risk appetite and risk-management capabilities,12 maintain effective and independent risk management and control functions, including internal audit; promote compliance with laws and regulations (including those related to consumer protection); and otherwise provide for the firm’s ongoing financial and operational resiliency through a range of conditions.

A firm rated “Broadly Meets Expectations” may be subject to identified supervisory issues requiring corrective action. However, these issues are unlikely to present a threat to the firm’s ability to maintain safe-and-sound operations through a range of potentially stressful conditions.

A firm that does not meet supervisory expectations associated with a “Broadly Meets Expectations” rating will be rated “Conditionally Meets Expectations,” “Deficient-1,” or “Deficient-2,” and subject to potential consequences, as outlined below.

**Conditionally Meets Expectations**

Certain material financial or operational weaknesses in a firm’s governance and controls practices may place the firm’s prospects for remaining safe and sound through a range of conditions at risk if not resolved in a timely manner during the normal course of business.

Specifically, if left unresolved, these weaknesses may threaten the firm’s ability to align strategic business objectives with the firm’s risk appetite and risk-management capabilities; maintain effective and independent risk management and control functions, including internal audit; promote compliance with laws and regulations (including those related to consumer protection); or otherwise provide for the firm’s ongoing resiliency through a range of conditions.

The Federal Reserve does not intend for a firm to be rated “Conditionally Meets Expectations” for a prolonged period. The firm has the ability to resolve these issues through measures that do not require a material change to the firm’s business model or financial profile, or its governance, risk management or internal control.

---

12. References to risk-management capabilities includes risk management of business lines and independent risk management and control functions, including internal audit.
control structures or practices. The Federal Reserve will work with the firm to develop an appropriate timeframe during which the firm would be required to resolve each supervisory issue leading to the “Conditionally Meets Expectations” rating.

The Federal Reserve will closely monitor the firm’s remediation and mitigation activities; in most instances, the firm will either:

1. Resolve the issues in a timely manner and, if no new material supervisory issues arise, be upgraded to a “Broadly Meets Expectations” rating because the firm’s governance and controls would broadly meet supervisory expectations; or
2. Fail to resolve the issues in a timely manner and be downgraded to a “Deficient-1” rating, because the firm’s inability to resolve those issues would indicate that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

It is possible that a firm may be close to completing resolution of the supervisory issues leading to the “Conditionally Meets Expectations” rating, but new issues are identified that, taken alone, would be consistent with a “Conditionally Meets Expectations” rating. In this event, the firm may continue to be rated “Conditionally Meets Expectations,” provided the new issues do not reflect a pattern of deeper or prolonged governance and controls weaknesses consistent with a “Deficient” rating.

A “Conditionally Meets Expectations” rating may be assigned to a firm that meets the above definition regardless of its prior rating. A firm previously rated “Deficient” may be upgraded to “Deficient-1” when supervisory issues are identified that place the firm’s prospects for maintaining safe-and-sound operations through a range of potentially stressful conditions at significant risk. A firm previously rated “Conditionally Meets Expectations” may be downgraded to “Deficient-1” when the firm’s inability to resolve supervisory issues in a timely manner indicates that the firm does not possess sufficient financial or operational capabilities to maintain its safety and soundness through a range of conditions.

To address these financial or operational deficiencies, the firm is required to take timely corrective action to restore and maintain its governance and controls consistent with supervisory expectations. There is a strong presumption that a firm rated “Deficient-1” will be subject to an informal or formal enforcement action by the Federal Reserve.

A firm rated “Deficient-1” for any rating component would not be considered “well managed,” which would subject the firm to various consequences. A “Deficient-1” rating could be a barrier for a firm seeking Federal Reserve approval of a proposal to engage in new or expansionary activities, unless the firm can demonstrate that (1) it is making meaningful, sustained progress in resolving identified deficiencies and issues; (2) the proposed new or expansionary activities would not present a risk of exacerbating current deficiencies or issues or lead to new concerns; and (3) the proposed activities would not distract the firm from remediating current deficiencies or issues.
Deficient-2

Financial or operational deficiencies in governance or controls present a threat to the firm’s safety and soundness, or have already put the firm in an unsafe and unsound condition. Specifically, as a result of these deficiencies, the firm is unable to align strategic business objectives with its risk appetite and risk-management capabilities; maintain effective and independent risk management and control functions, including internal audit; promote compliance with laws and regulations (including those related to consumer protection); or otherwise provide for the firm’s ongoing resiliency.

To address these deficiencies, the firm is required to immediately (1) implement comprehensive corrective measures sufficient to restore and maintain appropriate governance and control capabilities; and (2) demonstrate the sufficiency, credibility, and readiness of contingency planning in the event of further deterioration of the firm’s financial or operational strength or resiliency. There is a strong presumption that a firm rated “Deficient-2” will be subject to a formal enforcement action by the Federal Reserve.

A firm rated “Deficient-2” for any rating component would not be considered “well managed,” which would subject the firm to various consequences. The Federal Reserve would be unlikely to approve any proposal from a firm rated “Deficient-2” to engage in new or expansionary activities.

1060.0.4 COMMUNICATION OF RATINGS

In accordance with the Federal Reserve’s regulations governing confidential supervisory information, ratings assigned under the LFI rating system will be communicated by the Federal Reserve to the firm, but individual ratings are not disclosed publicly. The Federal Reserve will assign LFI ratings and communicate ratings to large firms on an annual basis and more frequently as warranted. Under the LFI rating system, the Federal Reserve will continue to rely to the fullest extent possible on the information and assessments developed by other relevant supervisors and functional regulators.
1062.0.1 RFI RATING SYSTEM

INTRODUCTION

Since 2004, the Federal Reserve has used the “RFI/C(D)” rating system (referred to as the “RFI rating system”) to communicate its supervisory assessment of bank holding companies (BHCs) regardless of their asset size, complexity, or systemic importance. In 2018, the Board adopted the RFI rating system for non-insurance and non-commercial savings and loan holding companies (SLHCs) with less than $100 billion in total consolidated assets. At the same time, the Board also adopted a rating system for BHCs and non-insurance and non-commercial savings and loan holding companies with total consolidated assets of $100 billion or more (referred to as the “LFI rating system”). As a result, the Federal Reserve has two frameworks for rating holding companies.

1062.0.2 RFI RATING SYSTEM

APPLICABILITY

The RFI rating system generally applies to BHCs and non-insurance and non-commercial savings and loan holding companies with less than $100 billion in total consolidated assets. Examination staff assign and communicate ratings to BHCs and non-insurance and non-commercial savings and loan holding companies with total consolidated assets between $10 billion and $100 billion on at least an annual basis, and more frequently as warranted. However, U.S. intermediate holding companies of foreign banking organizations (FBOs) established under the Board’s Regulation YY that have $50 billion or more in total consolidated assets would be subject to the LFI rating system.

The Dodd-Frank Wall Street Reform and Consumer Protection Act transferred to the Federal Reserve the supervisory functions of the Office of Thrift Supervision related to SLHCs and their nondepository subsidiaries beginning on July 21, 2011. At that time, the Federal Reserve decided to issue “indicative RFI ratings” to SLHCs until such time that a rating system was formally adopted for these companies.

In November 2018, the Federal Reserve adopted a final rule to apply the RFI rating system on a fully implemented basis to SLHCs with less than $100 billion in total consolidated assets, excluding SLHCs engaged in significant insurance or commercial activities. Therefore, starting on February 1, 2019, the Federal Reserve will assign an RFI rating to non-insurance and non-commercial SLHCs with less than $100 billion in total consolidated assets. Non-insurance and non-commercial SLHCs face similar risks and engage largely in the same activities as BHCs. As such, it is appropriate for the RFI rating system to apply to non-insurance and non-commercial SLHCs to ensure that they are subject to standards and supervisory programs that are consistent with those that apply to BHCs. Inspection frequency and scope guidance for non-insurance and non-commercial SLHCs with $10 billion or less in total consolidated assets are described in SR letter 13-21, “Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less.” Further, in November 2018, the Federal Reserve adopted the LFI rating system for non-insurance or non-commercial SLHCs with total consolidated assets of $100 billion or more.

The Federal Reserve will continue to assign an indicative RFI rating to SLHCs engaged in significant insurance or commercial activities, regardless of asset size. The Federal Reserve is in the process of reviewing whether a modified version of the RFI rating system, LFI rating system, or some other supervisory rating system is appropriate for these firms on a permanent basis.

---

1. 69 Fed. Reg. 70,444 (December 6, 2004).
2. SLHCs that are excluded from the definition of “covered holding company” in section 217.2 of the Board’s Regulation Q receive indicative supervisory ratings. Section 271.2 excludes the following SLHCs: (1) SLHCs that derive 50 percent or more of their total consolidated assets or total revenues from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act of 1956, as amended (12 USC 1843(k)) (commercial SLHCs), and (2) SLHCs that are insurance companies or hold 25 percent or more of their total consolidated assets in subsidiaries that are insurance companies (insurance SLHCs).
1062.0.4 RFI RATING SYSTEM

The RFI rating system provides an assessment of certain risk management and financial condition factors that are common to holding companies, as well as an assessment of the potential impact of the parent holding company and its nondepository subsidiaries (collectively, nondepository entities) on the holding company’s subsidiary depository institutions. Under this system, the Federal Reserve endeavors to ensure that applicable BHCs, including financial holding companies, and non-insurance and non-commercial SLHCs are evaluated in a comprehensive and uniform manner, and that supervisory attention is appropriately focused on the holding companies that exhibit financial and operational weaknesses or adverse trends. The RFI rating system serves as a useful vehicle for identifying problem or deteriorating holding companies, as well as for categorizing holding companies with deficiencies in particular areas. Further, the RFI rating system assists the Federal Reserve in following safety-and-soundness trends and in assessing the aggregate strength and soundness of the financial industry.

Each holding company subject to the RFI rating system is assigned a composite rating (C) based on an overall evaluation and rating of its managerial and financial condition and an assessment of future potential risk to its subsidiary depository institution(s). The main components of the rating system represent: Risk Management (R); Financial Condition (F); and Impact (I) of the nondepository entities on the subsidiary depository institutions. While the Federal Reserve expects holding companies to act as a source of strength to their subsidiary depository institutions, the Impact rating focuses on downside risk—that is, on the likelihood of significant negative impact by the nondepository entities on the subsidiary depository institutions.

5. The information in this manual section largely conveys the information in the original 2004 RFI rating system document conveyed in 69 Fed. Reg. 70,444 (December 6, 2004). However, the information was revised to clarify the applicability of the rating system and to provide current references to regulations and guidance. The elements of the RFI rating system and the ratings’ definitions are unchanged. See SR letter 19-4, “Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion.”

6. A simplified version of the rating system that includes only the R and C components will be applied to noncomplex holding companies with assets as of or below $3 billion. See SR-13-21 for more information.

1062.0.5 DESCRIPTION OF THE RFI RATING SYSTEM ELEMENTS

1062.0.5.1 The Composite (C) Rating

C is the overall composite assessment of the holding company as reflected by consolidated risk management, consolidated financial strength, and the potential impact of the nondepository entities on the subsidiary depository institutions. The composite rating encompasses both a forward-looking and static assessment of the consolidated organization, as well as an assessment of the relationship between the depository and nondepository entities. The C rating is not derived as a simple numeric average of the R, F, and I components; rather, it reflects examiner judgment with respect to the relative importance of each component.
of each component to the safe-and-sound operation of the holding company.

1062.0.5.2 The Risk Management (R) Component

R represents an evaluation of the ability of the holding company’s board of directors and senior management, as appropriate for their respective positions, to identify, measure, monitor, and control risk. The R rating underscores the importance of the control environment, taking into consideration the complexity of the organization and the risk inherent in its activities.

The R rating is supported by four subcomponents that are each assigned a separate rating. The four subcomponents are as follows: (1) Board and Senior Management Oversight; (2) Policies, Procedures and Limits; (3) Risk Monitoring and Management Information Systems; and (4) Internal Controls. The subcomponents are evaluated in the context of the risks undertaken by and inherent in an organization and the overall level of complexity of the holding company’s operations. They provide the Federal Reserve System with a consistent framework for evaluating risk management and the control environment. Moreover, the subcomponents provide a clear structure and basis for discussion of the R rating with holding company management, reflect the principles in supervisory guidance that are familiar to examiners, and parallel the existing risk assessment process.8

1062.0.5.2.1 Risk Management Subcomponents

Board and Senior Management Oversight

This subcomponent evaluates the adequacy and effectiveness of board and senior management’s understanding and management of risk inherent in the holding company’s activities, as well as the general capabilities of management.9 It also includes consideration of management’s ability to identify, understand, and control the risks undertaken by the institution, to hire competent staff, and to respond to changes in the institution’s risk profile or innovations in the banking sector.

Policies, Procedures, and Limits

This subcomponent evaluates the adequacy of a holding company’s policies, procedures, and limits given the risks inherent in the activities of the consolidated organization and its stated goals and objectives. This analysis will include consideration of the adequacy of the institution’s accounting and risk disclosure policies and procedures.

Risk Monitoring and Management Information Systems

This subcomponent assesses the adequacy of a holding company’s risk measurement and monitoring, and the adequacy of its management reports and information systems. This analysis will include a review of the assumptions, data, and procedures used to measure risk and the consistency of these tools with the level of complexity of the organization’s activities.

Internal Controls

This subcomponent evaluates the adequacy of a holding company’s internal controls and internal audit procedures, including the accuracy of financial reporting and disclosure and the strength and influence, within the organization, of the internal audit team. This analysis will also include a review of the independence of control areas from management and the consistency of the scope coverage of the internal audit team with the complexity of the organization.

1062.0.5.3 The Financial Condition (F) Component

F represents an evaluation of the consolidated organization’s financial strength. The F rating focuses on the ability of the holding company’s resources to support the level of risk associated with its activities. The F rating is supported by four subcomponents: capital (C), asset quality (A), earnings (E), and liquidity (L). The CAEL subcomponents can be evaluated along individual business lines, product lines, or on a

9. The board of directors is considered separate from management.
legal entity basis, depending on what is most appropriate given the structure of the organization. The assessment of the CAEL components should utilize benchmarks and metrics appropriate to the business activity being evaluated.

Examination staff should continue to review relevant market indicators, such as external debt ratings, credit spreads, debt and equity prices, and qualitative rating agency assessments as a source of information complementary to examination findings.

1062.0.5.3.1 Financial Condition Subcomponents (CAEL)

Capital Adequacy
C reflects the adequacy of an organization’s consolidated capital position, from a regulatory capital perspective and an economic capital perspective, as appropriate to the holding company. The evaluation of capital adequacy should consider the risk inherent in an organization’s activities and the ability of capital to absorb unanticipated losses, to provide a base for growth, and to support the level and composition of the parent company and subsidiaries’ debt.

Asset Quality
A reflects the quality of an organization’s consolidated assets. The evaluation should include, as appropriate, both on-balance sheet and off-balance sheet exposures, and the level of criticized and nonperforming assets. Forward-looking indicators of asset quality, such as the adequacy of underwriting standards, the level of concentration risk, the adequacy of credit administration policies and procedures, and the adequacy of management information systems for credit risk may also inform the Federal Reserve’s view of asset quality.

Earnings
E reflects the quality of consolidated earnings. The evaluation considers the level, trend, and sources of earnings, as well as the ability of earnings to augment capital as necessary, to provide ongoing support for a holding company’s activities.

Liquidity
L reflects the consolidated organization’s ability to attract and maintain the sources of funds necessary to support its operations and meet its obligations. The funding conditions for each of the material legal entities in the holding company structure should be evaluated to determine if any weaknesses exist that could affect the funding profile of the consolidated organization.

1062.0.5.4 The Impact (I) Component

Like the other components and subcomponents, the I component is rated on a five-point numerical scale. However, the descriptive definitions of the numerical ratings for I are different than those of the other components and subcomponents. The I ratings are defined as follows:

1—low likelihood of significant negative impact;
2—limited likelihood of significant negative impact;
3—moderate likelihood of significant negative impact;
4—considerable likelihood of significant negative impact; and
5—high likelihood of significant negative impact.

The I component is an assessment of the potential impact of the nondepository entities on the subsidiary depository institution(s). The I assessment will evaluate both the risk-management practices and financial condition of the nondepository entities—an analysis that will borrow heavily from the analysis conducted for the R and F components. Nondepository entities will be evaluated using benchmarks and analysis appropriate for those businesses. In addition, for functionally regulated nondepository subsidiaries, examination staff will continue to rely, to the extent possible, on the work of those functional regulators to assess the risk management practices and financial condition of those entities. In rating the I component, examination

---

10. The regulatory minimum capital ratios for covered holding companies subject to the Board’s Regulation Q (12 CFR part 217) are (1) a common equity tier 1 capital ratio of 4.5 percent; (2) a tier 1 capital ratio of 6 percent; (3) a total capital ratio of 8 percent; (4) a leverage ratio of 4 percent, and (5) for advanced approaches Board-regulated institutions, a supplementary leverage ratio of 3 percent.

---
staff is required to evaluate the degree to which current or potential issues within the nondepository entities present a threat to the safety and soundness of the subsidiary depository institution(s).

The I component focuses on the aggregate impact of the nondepository entities on the subsidiary depository institution(s). In this regard, the I rating does not include individual subcomponent ratings for the parent company and nondepository subsidiaries. An I rating is always assigned for each holding company; however, nonmaterial nondepository subsidiaries may be excluded from the I analysis at examiner discretion.\footnote{In general, nondepository subsidiaries should be included in the I analysis whenever their assets exceed 5 percent of the holding company’s consolidated capital or $10 million, whichever is lower.}

Any risk-management and financial issues at the nondepository entities that potentially impact the safety and soundness of the subsidiary depository institution(s) should be identified in the written comments under the I rating. This approach is consistent with the Federal Reserve’s objective not to extend bank-like supervision to nondepository entities.

The analysis of the parent company for the purpose of assigning an I rating should emphasize weaknesses that could directly impact the risk-management or financial condition of the subsidiary depository institution(s). Similarly, the analysis of the nondepository subsidiaries for the purpose of assigning an I rating should emphasize weaknesses that could negatively impact the parent company’s relationship with its subsidiary depository institution(s) and weaknesses that could have a direct impact on the risk-management practices or financial condition of the subsidiary depository institution(s). The analysis under the I component should consider existing as well as potential issues and risks that may impact the subsidiary depository institution(s) now or in the future. Particular attention should be paid to the following risk-management and financial factors in assigning the I rating:

\begin{enumerate}
\item \textbf{Strategic Considerations:} The potential risks posed to the subsidiary depository institution(s) by the nondepository entities’ strategic plans for growth in existing activities and expansion into new products and services;
\item \textbf{Operational Considerations:} The spillover impact on the subsidiary depository institution(s) from actual losses, a poor control environment, or an operational loss history in the nondepository entities;
\item \textbf{Legal and Reputational Considerations:} The spillover effect on the subsidiary depository institution(s) of complaints and litigation that name one or more of the nondepository entities as defendants, or violations of laws or regulations, especially pertaining to intercompany transactions where the subsidiary depository institution(s) is involved; and
\item \textbf{Concentration Considerations:} The potential risks posed to the subsidiary depository institution(s) by concentrations within the nondepository entities in business lines, geographic areas, industries, customers, or other factors.
\end{enumerate}

\subsection{1062.0.5.4.2 Financial Factors}

\begin{enumerate}
\item \textbf{Capital Distribution:} The distribution and transferability of capital across the legal entities;
\item \textbf{Intra-Group Exposures:} The extent to which intra-group exposures, including servicing agreements, have the potential to undermine the condition of subsidiary depository institution(s); and
\item \textbf{Parent Company Cash Flow and Leverage:} The extent to which the parent company is dependent on dividend payments, from both the nondepository subsidiaries and the subsidiary depository institution(s), to service debt and cover fixed charges. Also, the effect that these upstreamed cash flows have had, or can be expected to have, on the financial condition of the holding company’s nondepository subsidiaries and subsidiary depository institution(s).
\end{enumerate}

\subsection{1062.0.5.5 The Depository Institution(s) (D) Component}

The (D) component will generally reflect the composite CAMELS rating assigned by the subsidiary depository institution’s primary supervisor. In a multi-depository institution holding company, the (D) rating will reflect a weighted average of the CAMELS composite ratings of the individual subsidiary depository institutions, weighted by both asset size and the relative importance of each depository institution within the holding company structure. In this regard, the CAMELS composite rating for a subsidiary...
depository institution that dominates the corporate culture may figure more prominently in the assignment of the (D) rating than would be dictated by asset size, particularly when problems exist within that depository institution.

The (D) component conveys important supervisory information, reflecting the primary supervisor’s assessment of the legal entity. The (D) component stands outside of the composite rating although significant risk-management and financial condition considerations at the depository institution level are incorporated in the consolidated R and F ratings, which are then factored into the C rating.

In the process of analyzing the financial condition and risk-management programs of the consolidated organization, a major difference of opinion regarding the safety and soundness of the subsidiary depository institution(s) emerges between the Federal Reserve and the depository institution’s primary regulator, then the (D) rating should reflect the Federal Reserve’s evaluation.

To highlight the presence of one or more problem depository institution(s) in a multi-depository institution holding company whose depository institution component, based on weighted averages, might not otherwise reveal their presence (i.e., depository institution ratings of 1, 2, or 3), a problem modifier, “P” would be attached to the depository institution rating (e.g., 1P, 2P, or 3P). Thus, 2P would indicate that, while on balance the depository subsidiaries are rated satisfactory, there exists a problem depository institution (composite 4 or 5) among the subsidiary depository institutions. The problem identifier is unnecessary when the depository institution component is rated 4 or 5.

1062.0.6 IMPLEMENTATION OF THE RFI RATING SYSTEM BY HOLDING COMPANY TYPE

Since 2004, the Federal Reserve has used the RFI rating system to communicate its supervisory assessment of BHCs regardless of their asset size, complexity, or systemic importance. In 2018, the Board adopted the RFI rating system for non-insurance and non-commercial SLHCs with less than $100 billion in total consolidated assets. The scope and frequency of inspections of holding companies under the RFI rating system will vary based upon whether a holding company has been determined to be “complex” or “noncomplex.”

In addition, the resources dedicated to the inspection of each holding company will continue to be determined by the risk posed by the subsidiary depository institution(s) to the federal safety net and the risk posed by the holding company to the subsidiary depository institution(s).

1062.0.6.1 Noncomplex Holding Companies with Assets of $3 Billion or Less (Shell Holding Companies) Rating: R and C

Examination staff will assign only an R and C rating for all noncomplex holding companies with assets under $3 billion. The R rating is the M rating from the subsidiary depository institution’s CAMELS rating. The C rating is the subsidiary depository institution’s composite CAMELS rating.

1062.0.6.2 Noncomplex Holding Companies with Assets Greater than $3 Billion

1062.0.6.2.1 One-Depository Institution Holding Company Rating: RFI/C(D)

For all noncomplex, one-depository institution holding companies with assets of greater than $3 billion, examination staff will assign all component and subcomponent ratings; however, examination staff should rely heavily on information and analysis contained in the primary regulator’s report of examination for the subsidiary depository institution to assign the R and F ratings. If examination staff have reviewed the primary regulator’s examination report and are

---

12. The determination of whether a holding company is “complex” versus “noncomplex” is made at least annually on a case-by-case basis taking into account and weighing a number of considerations, such as: the size and structure of the holding company; the extent of intercompany transactions between depository institution subsidiaries and the holding company or nondepository subsidiaries of the holding company; the nature and scale of any nondepository activities, including whether the activities are subject to review by another regulator and the extent to which the holding company is conducting Gramm-Leach-Bliley authorized activities (e.g., insurance, securities, merchant banking); whether risk-management processes for the holding company are consolidated; and whether the holding company has material debt outstanding to the public. Size is a less important determinant of complexity than many of the factors noted above.

13. The federal safety net includes the federal deposit insurance fund, the payments system, and the Federal Reserve’s discount window.

comfortable with the analysis and conclusions contained in that report, then the holding company ratings should be supported with concise language that indicates that the conclusions are based on the analysis of the primary regulator. No additional analysis will be required.

Please note, however, in cases where the analysis and conclusions of the primary regulator are insufficient to assign the ratings, the primary regulator should be contacted to ascertain whether additional analysis and support may be available. Further, if discussions with the primary regulator do not provide sufficient information to assign the ratings, discussions with holding company management may be warranted to obtain adequate information to assign the ratings. In most cases, additional information or support obtained through these steps will be sufficient to permit the assignment of the R and F ratings. To the extent that additional analysis is deemed necessary, the level of analysis and resources spent on this assessment should be in line with the level of risk the subsidiary depository institution poses to the federal safety net. In addition, any activities that involve information gathering with respect to the subsidiary depository institution should be coordinated with and, if possible, conducted by, the primary regulator of that institution.

Examination staff are required to make an independent assessment in order to assign the I rating, which provides an evaluation of the impact of the holding company on the subsidiary depository institution. Analysis for the I rating in non-complex one-depository institution holding companies should place particular emphasis on issues related to parent company cash flow and compliance with sections 23A and 23B of the Federal Reserve Act.

1062.0.6.2.2 Multi-Depository Institution Holding Company Rating: RFI/C(D)

For all noncomplex holding companies with assets of greater than $3 billion and more than one subsidiary depository institution, examination staff will assign all component and subcomponent ratings of the RFI rating system. Examiners should rely, to the extent possible, on the work conducted by the primary regulators of the subsidiary depository institutions to assign the R and F ratings. However, any risk management or other important functions conducted by the nondepository entities of the holding company, or conducted across legal entity lines, should be subject to review by Federal Reserve examination staff. These reviews should be conducted in coordination with the primary regulator(s). The assessment for the I rating requires an independent assessment by Federal Reserve examination staff.

1062.0.6.3 Complex Holding Companies Rating: RFI/C(D)

For complex holding companies, examination staff will assign all component and subcomponent ratings of the RFI rating system. The ratings analysis should be based on the primary and functional regulators’ assessment of the subsidiary entities, as well as on the examiners’ assessment of the consolidated organization as determined through off-site review and the holding company inspection process, as appropriate. The resources needed for the inspection and the level of support needed for developing a full rating will depend on the complexity of the organization, including structure and activities, and should be commensurate with the level of risk posed by the subsidiary depository institution(s) to the federal safety net and the level of risk posed by the holding company to the subsidiary depository institution(s).

1062.0.6.4 Nontraditional Holding Companies Rating: RFI/C(D)

Examination staff are required to assign the full-rating system for nontraditional holding companies. Nontraditional holding companies include holding companies in which most or all nondepository entities are regulated by a functional regulator and in which the subsidiary depository institution(s) are small in relation to the nondepository entities. The rating system is not intended to introduce significant additional work in the rating process for these organizations. As discussed above, the level of analysis conducted and resources needed to inspect the holding company and to assign the consolidated R and F ratings should be commensurate with the level of risk posed by the subsidiary depository insti-
the composite rating bears a close relationship to the component ratings assigned.

1062.0.7.1 Composite Rating

Rating 1 (Strong). Holding companies in this group are sound in almost every respect; any negative findings are basically of a minor nature and can be handled in a routine manner. Risk management practices and financial condition provide resistance to external economic and financial disturbances. Cash flow is more than adequate to service debt and other fixed obligations, and the nondepository entities pose little risk to the subsidiary depository institution(s).

Rating 2 (Satisfactory). Holding companies in this group are fundamentally sound but may have modest weaknesses in risk-management practices or financial condition. The weaknesses could develop into conditions of greater concern but are believed correctable in the normal course of business. As such, the supervisory response is limited. Cash flow is adequate to service obligations, and the nondepository entities are unlikely to have a significant negative impact on the subsidiary depository institution(s).

Rating 3 (Fair). Holding companies in this group exhibit a combination of weaknesses in risk-management practices and financial condition that range from fair to moderately severe. These companies are less resistant to the onset of adverse business conditions and would likely deteriorate if concerted action is not effective in correcting the areas of weakness. Consequently, these companies are vulnerable and require more than normal supervisory attention and financial surveillance. However, the risk management and financial capacity of the company, including the potential negative impact of the nondepository entities on the subsidiary depository institution(s), pose only a remote threat to its continued viability.

Rating 4 (Marginal). Holding companies in this group have an immoderate volume of risk management and financial weaknesses, which may pose a heightened risk of significant negative impact on the subsidiary depository institution(s). The holding company’s cash flow needs may be being met only by upstreaming imprudent dividends and/or fees from its subsidiaries. Unless prompt action is taken to correct these conditions, the organization’s future viability could be impaired. These companies require close supervisory attention and substantially increased financial surveillance.

Rating 5 (Unsatisfactory). The critical volume and character of the risk management and financial weaknesses of holding companies in...
this category, and concerns about the nondepository entities negatively impacting the subsidiary depository institution(s), could lead to insolvency without urgent aid from shareholders or other sources. The imminent inability to prevent liquidity and/or capital depletion places the holding company’s continued viability in serious doubt. These companies require immediate corrective action and constant supervisory attention.

1062.0.7.2 Risk-Management Component

Rating 1 (Strong). A rating of 1 indicates that management effectively identifies and controls all major types of risk posed by the holding company’s activities. Management is fully prepared to address risks emanating from new products and changing market conditions. The board and management are forward-looking and active participants in managing risk. Management ensures that appropriate policies and limits exist and are understood, reviewed, and approved by the board. Policies and limits are supported by risk-monitoring procedures, reports, and management information systems that provide management and the board with the information and analysis that is necessary to make timely and appropriate decisions in response to changing conditions. Risk-management practices and the organization’s infrastructure are flexible and highly responsive to changing industry practices and current regulatory guidance. Staff has sufficient experience, expertise and depth to manage the risks assumed by the institution.

Internal controls and audit procedures are sufficiently comprehensive and appropriate to the size and activities of the institution. There are few noted exceptions to the institution’s established policies and procedures, and none are material. Management effectively and accurately monitors the condition of the institution consistent with the standards of safety and soundness, and in accordance with internal and supervisory policies and practices. Risk-management processes are fully effective in identifying, monitoring, and controlling the risks to the institution.

Rating 2 (Satisfactory). A rating of 2 indicates that the institution’s management of risk is largely effective, but lacking in some modest degree. Management demonstrates a responsiveness and ability to cope successfully with existing and foreseeable risks that may arise in carrying out the institution’s business plan. While the institution may have some minor risk-management weaknesses, these problems have been recognized and are in the process of being resolved. Overall, board and senior management oversight, policies and limits, risk monitoring procedures, reports, and management information systems are considered satisfactory and effective in maintaining a safe and sound institution. Risks are controlled in a manner that does not require more than normal supervisory attention.

The holding company’s risk-management practices and infrastructure are satisfactory and generally are adjusted appropriately in response to changing industry practices and current regulatory guidance. Staff experience, expertise and depth are generally appropriate to manage the risks assumed by the institution.

Internal controls may display modest weaknesses or deficiencies, but they are correctable in the normal course of business. The examiner may have recommendations for improvement, but the weaknesses noted should not have a significant effect on the safety and soundness of the institution.

Rating 3 (Fair). A rating of 3 signifies that risk-management practices are lacking in some important ways and, therefore, are a cause for more than normal supervisory attention. One or more of the four elements of sound risk management (active board and senior management oversight; adequate policies, procedures, and limits; adequate risk-management monitoring and management information systems; comprehensive internal controls) is considered less than acceptable, and has precluded the institution from fully addressing one or more significant risks to its operations. Certain risk-management practices are in need of improvement to ensure that management and the board are able to identify, monitor, and control all significant risks to the institution. Also, the risk-management structure may need to be improved in areas of significant business activity, or staff expertise may not be commensurate with the scope and complexity of business activities. In addition, management’s response to changing industry practices and regulatory guidance may need to improve.

The internal control system may be lacking in some important aspects, particularly as indicated by continued control exceptions or by a failure to adhere to written policies and procedures. The risk-management weaknesses could have adverse effects on the safety and soundness of the institution. Risks are controlled to some degree, but lack appropriate depth to manage the risks assumed by the institution.

ness of the institution if corrective action is not taken by management.

Rating 4 (Marginal). A rating of 4 represents deficient risk-management practices that fail to identify, monitor, and control significant risk exposures in many material respects. Generally, such a situation reflects a lack of adequate guidance and supervision by management and the board. One or more of the four elements of sound risk management is deficient and requires immediate and concerted corrective action by the board and management.

The institution may have serious identified weaknesses, such as an inadequate separation of duties, that require substantial improvement in internal control or accounting procedures, or improved adherence to supervisory standards or requirements. The risk-management deficiencies warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

Rating 5 (Unsatisfactory). A rating of 5 indicates a critical absence of effective risk-management practices with respect to the identification, monitoring, or control over significant risk exposures. One or more of the four elements of sound risk management is considered wholly deficient, and management and the board have not demonstrated the capability to address these deficiencies.

Internal controls are critically weak and, as such, could seriously jeopardize the continued viability of the institution. If not already evident, there is an immediate concern as to the reliability of accounting records and regulatory reports and the potential for losses if corrective measures are not taken immediately. Deficiencies in the institution’s risk-management procedures and internal controls require immediate and close supervisory attention.

1062.0.7.2.1 Risk Management Subcomponents

Board and Senior Management Oversight

Rating 1 (Strong). An assessment of “Strong” signifies that the board and senior management are forward-looking, fully understand the types of risk inherent in the holding company’s activities, and actively participate in managing those risks. The board has approved overall business strategies and significant policies, and ensures that senior management is fully capable of managing the activities that the holding company conducts. Consistent with the standards of safety and soundness, oversight of risk-management practices is strong and the organization’s overall business strategy is effective.

Senior management ensures that risk-management practices are rapidly adjusted in accordance with enhancements to industry practices and regulatory guidance, and exposure limits are adjusted as necessary to reflect the institution’s changing risk profile. Policies, limits, and tracking reports are appropriate, understood, and regularly reviewed.

Management provides effective supervision of the day-to-day activities of all officers and employees, including the supervision of the senior officers and the heads of business lines. It hires staff that possess experience and expertise consistent with the scope and complexity of the organization’s business activities. There is a sufficient depth of staff to ensure sound operations. Management ensures compliance with laws and regulations and that employees have the integrity, ethical values, and competence consistent with a prudent management philosophy and operating style.

Management responds appropriately to changes in the marketplace. It identifies all risks associated with new activities or products before they are launched, and ensures that the appropriate infrastructure and internal controls are established.

Rating 2 (Satisfactory). An assessment of “Satisfactory” indicates that board and senior management have an adequate understanding of the organization’s risk profile and provide largely effective oversight of risk-management practices. In this regard, the board has approved all major business strategies and significant policies, and ensures that senior management is capable of managing the activities that the holding company conducts. Oversight of risk-management practices is satisfactory and the organization’s overall business strategy is generally sound.

Senior management generally adjusts risk-management practices appropriately in accordance with enhancements to industry practices and regulatory guidance, and adjusts exposure limits as necessary to reflect the institution’s changing risk profile, although these practices may be lacking in some modest degree. Policies, limits, and tracking reports are generally appropriate, understood, and regularly reviewed, and the new product approval process adequately identifies the associated risks and nec-
Senior management’s day-to-day supervision of management and staff at all levels is generally effective. The level of staffing, and its experience, expertise, and depth, is sufficient to operate the business lines in a safe and sound manner. Minor weaknesses may exist in the staffing, infrastructure, and risk-management processes for individual business lines or products, but these weaknesses have been identified by management, are correctable in the normal course of business, and are in the process of being addressed. Weaknesses noted should not have a significant effect on the safety and soundness of the institution.

**Rating 3 (Fair).** An assessment of “Fair” signifies that board and senior management oversight is lacking in some important way and, therefore, is a cause for more than normal supervisory attention. The weaknesses may involve a broad range of activities or be material to a major business line or activity. Weaknesses in one or more aspect of board and senior management oversight have precluded the institution from fully addressing one or more significant risks to the institution. The deficiencies may include a lack of knowledge with respect to the organization’s risk profile, insufficient oversight of risk-management practices, ineffective policies or limits, inadequate or under-utilized management reporting, an inability to respond to industry enhancements and changes in regulatory guidance, or failure to execute appropriate business strategies. Staffing may not be adequate or staff may not possess the experience and expertise needed for the scope and complexity of the organization’s business activities. The day-to-day supervision of officer and staff activities, including the management of senior officers or heads of business lines, may be considerably lacking. These conditions warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

**Rating 5 (Unsatisfactory).** An assessment of “Unsatisfactory” indicates a critical absence of effective board and senior management oversight practices. Problems may include a severe lack of knowledge with respect to the organization’s risk profile, insufficient oversight of risk-management practices, wholly ineffective policies or limits, critically inadequate or under-utilized management reporting, a complete inability to respond to industry enhancements and changes in regulatory guidance, or failure to execute appropriate business strategies. Staffing may be inadequate, inexpert, and/or inadequately supervised. The deficiencies require immediate and close supervisory attention, as management and the board have not demonstrated the capability to address them. Weaknesses could seriously jeopardize the continued viability of the institution.

**Policies, Procedures, and Limits**

**Rating 1 (Strong).** An assessment of “Strong” indicates that the policies, procedures, and limits provide for effective identification, measurement, monitoring, and control of the risks posed by all significant activities, including lending, investing, trading, trust, and fiduciary activities. Policies, procedures, and limits are consistent with the institution’s goals and objectives and its overall financial strength. The policies clearly delineate accountability and lines of authority across the institution’s activities. The policies also provide for the review of new activities to ensure that the infrastructure necessary to identify, monitor, and control the associated risks is in place.

---

*RFI Rating System*
in place before the activities are initiated.

**Rating 2 (Satisfactory).** An assessment of “Satisfactory” indicates that the policies, procedures, and limits cover all major business areas, are thorough and substantially up-to-date, and provide a clear delineation of accountability and lines of authority across the institution’s activities. Policies, procedures, and limits are generally consistent with the institution’s goals and objectives and its overall financial strength. Also, the policies provide for adequate due diligence before engaging in new activities or products. Any deficiencies or gaps that have been identified are minor in nature and in the process of being addressed. Weaknesses should not have a significant effect on the safety and soundness of the institution.

**Rating 3 (Fair).** An assessment of “Fair” signifies that deficiencies exist in policies, procedures, and limits that require more than normal supervisory attention. The deficiencies may involve a broad range of activities or be material to a major business line or activity. The deficiencies may include policies, procedures, or limits (or the lack thereof) that do not adequately identify, measure, monitor, or control the risks posed by significant activities; are not consistent with the experience of staff, the organization’s strategic goals and objectives, or the financial strength of the institution; or do not clearly delineate accountability or lines of authority. Also, the policies may not provide for adequate due diligence before engaging in new activities or products. Weaknesses noted could have adverse effects on the safety and soundness of the institution unless corrective action is taken by management.

**Rating 4 (Marginal).** An assessment of “Marginal” indicates deficient policies, procedures, and limits that do not address a number of significant risks to the institution. Multiple practices are in need of immediate improvement, which may include policies, procedures, or limits (or the lack thereof) that ineffectively identify, measure, monitor, or control the risks posed by significant activities; are not commensurate with the experience of staff, the institution’s strategic goals and objectives, or the financial strength of the institution; or do not delineate accountability or lines of authority. Moreover, policies may be considerably lacking with regards to providing for effective due diligence before engaging in new activities or products. These conditions warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

**Rating 5 (Unsatisfactory).** An assessment of “Unsatisfactory” indicates a critical absence of effective policies, procedures, and limits. Policies, procedures, or limits (or the lack thereof) are largely or entirely ineffective with regard to identifying, measuring, monitoring, or controlling the risks posed by significant activities; are completely inconsistent with the experience of staff, the organization’s strategic goals and objectives, or the financial strength of the institution; or do not delineate accountability or lines of authority. Also, policies may be completely lacking with regard to providing for effective due diligence before engaging in new activities or products. Critical weaknesses could seriously jeopardize the continued viability of the institution and require immediate and close supervisory attention.

### Risk Monitoring and MIS

**Rating 1 (Strong).** An assessment of “Strong” indicates that risk-monitoring practices and MIS reports address all material risks. The key assumptions, data sources, and procedures used in measuring and monitoring risk are appropriate, thoroughly documented, and frequently tested for reliability. Reports and other forms of communication are consistent with activities, are structured to monitor exposures and compliance with established limits, goals, or objectives, and compare actual versus expected performance when appropriate. Management and board reports are accurate and timely and contain sufficient information to identify adverse trends and to thoroughly evaluate the level of risk faced by the institution.

**Rating 2 (Satisfactory).** An assessment of “Satisfactory” indicates that risk-monitoring practices and MIS reports cover major risks and business areas, although they may be lacking in some modest degree. In general, the reports contain valid assumptions that are periodically tested for accuracy and reliability and are adequately documented and distributed to the appropriate decisionmakers. Reports and other forms of communication generally are consistent with activities; are structured to monitor exposures and compliance with established limits, goals, or objectives; and compare actual versus expected performance when appropriate. Management and board reports are generally accurate and timely, and broadly identify adverse trends and the level of risk faced by the institution. Any weaknesses or deficiencies that
have been identified are in the process of being addressed.

**Rating 3 (Fair).** An assessment of “Fair” signifies that weaknesses exist in the institution’s risk-monitoring practices or MIS reports that require more than normal supervisory attention. The weaknesses may involve a broad range of activities or be material to a major business line or activity. They may contribute to ineffective risk identification or monitoring through inappropriate assumptions, incorrect data, poor documentation, or the lack of timely testing. In addition, MIS reports may not be distributed to the appropriate decisionmakers, adequately monitor significant risks, or properly identify adverse trends and the level of risk faced by the institution. Weaknesses noted could have adverse effects on the safety and soundness of the institution if corrective action is not taken by management.

**Rating 4 (Marginal).** An assessment of “Marginal” represents deficient risk-monitoring practices or MIS reports that, unless properly addressed, could seriously affect the safety and soundness of the institution. A number of significant risks to the institution are not adequately monitored or reported. Ineffective risk identification may result from notably inappropriate assumptions, incorrect data, poor documentation, or the lack of timely testing. In addition, MIS reports may not be distributed to the appropriate decisionmakers, may inadequately monitor significant risks, or fail to identify adverse trends and the level of risk faced by the institution. The risk monitoring and MIS deficiencies warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

**Rating 5 (Unsatisfactory).** An assessment of “Unsatisfactory” signifies that weaknesses exist in the system’s internal controls that require more than normal supervisory attention. The weaknesses may involve a broad range of activities or be material to a major business line or activity. The weaknesses may involve a broad range of activities or be material to a major business line or activity.

Internal Controls

**Rating 1 (Strong).** An assessment of “Strong” indicates that the system of internal controls is robust for the type and level of risks posed by the nature and scope of the organization’s activities. The organizational structure establishes clear lines of authority and responsibility for monitoring adherence to policies, procedures, and limits, and wherever applicable, exceptions are noted and promptly investigated. Reporting lines provide clear independence of the control areas from the business lines and separation of duties throughout the organization. Robust procedures exist for ensuring compliance with applicable laws and regulations, including consumer laws and regulations. Financial, operational, and regulatory reports are reliable, accurate, and timely. Internal audit or other control review practices provide for independence and objectivity. Internal controls and information systems are thoroughly tested and reviewed; the coverage, procedures, findings, and responses to audits and review tests are well documented; identified material weaknesses are given thorough and timely high-level attention; and management’s actions to address material weaknesses are objectively reviewed and verified. The board or its audit committee regularly reviews the effectiveness of internal audits and other control review activities.

**Rating 2 (Satisfactory).** An assessment of “Satisfactory” indicates that the system of internal controls adequately covers major risks and business areas, with some modest weaknesses. In general, the control functions are independent from the business lines, and there is appropriate separation of duties. The control system supports accuracy in record-keeping practices and reporting systems, is adequately documented, and verifies compliance with laws and regulations, including consumer laws and regulations. Internal controls and information systems are adequately tested and reviewed, and the coverage, procedures, findings, and responses to audits and review tests are documented. Identified material weaknesses are given appropriate attention and management’s actions to address material weaknesses are objectively reviewed and verified. The board or its audit committee reviews the effectiveness of internal audits and other control review activities. Any weaknesses or deficiencies that have been identified are modest in nature and in the process of being addressed.

**Rating 3 (Fair).** An assessment of “Fair” signifies that weaknesses exist in the system of internal controls that require more than normal supervisory attention. The weaknesses may involve a broad range of activities or be material to a major business line or activity.
necesses may include insufficient oversight of internal controls and audit by the board or its audit committee; unclear or conflicting lines of authority and responsibility; a lack of independence between control areas and business activities; or ineffective separation of duties. The internal control system may produce inadequate or untimely risk coverage and verification, including monitoring compliance with both safety and soundness and consumer laws and regulations; inaccurate records or financial, operational, or regulatory reporting; a lack of documentation for work performed; or a lack of timeliness in management review and correction of identified weaknesses. Weaknesses noted could have adverse effects on the safety and soundness of the institution if corrective action is not taken by management.

Rating 4 (Marginal). An assessment of “Marginal” represents a deficient internal control system that does not adequately address a number of significant risks to the institution. The deficiencies may include neglect of internal controls and audit by the board or its audit committee; conflicting lines of authority and responsibility; a lack of independence between control areas and business activities; or no separation of duties in critical areas. The internal control system may produce inadequate, untimely, or nonexistent risk coverage and verification in certain areas, including monitoring compliance with both safety and soundness and consumer laws and regulations; inaccurate records or financial, operational, or regulatory reporting; a lack of documentation for work performed; or infrequent management review and correction of identified weaknesses. The internal control deficiencies warrant a high degree of supervisory attention because, unless properly addressed, they could seriously jeopardize the continued viability of the institution.

Rating 5 (Unsatisfactory). An assessment of “Unsatisfactory” indicates a critical absence of an internal control system. There may be no oversight by the board or its audit committee; conflicting lines of authority and responsibility; no distinction between control areas and business activities; or no separation of duties. The internal control system may produce totally inadequate or untimely risk coverage and verification, including monitoring compliance with both safety and soundness and consumer laws and regulations; completely inaccurate records or regulatory reporting; a severe lack of documentation for work performed; or no management review and correction of identified weaknesses. Such deficiencies require immediate and close supervisory attention, as they could seriously jeopardize the continued viability of the institution.

1062.0.7.3 Financial Condition Component

Rating 1 (Strong). A rating of 1 indicates that the consolidated holding company is financially sound in almost every respect; any negative findings are basically of a minor nature and can be handled in a routine manner. The capital adequacy, asset quality, earnings, and liquidity of the consolidated holding company are more than adequate to protect the company from reasonably foreseeable external economic and financial disturbances. The company generates more than sufficient cash flow to service its debt and fixed obligations with no harm to subsidiaries of the organization.

Rating 2 (Satisfactory). A rating of 2 indicates that the consolidated holding company is fundamentally financially sound, but may have modest weaknesses correctable in the normal course of business. The capital adequacy, asset quality, earnings and liquidity of the consolidated holding company are adequate to protect the company from external economic and financial disturbances. The company also generates sufficient cash flow to service its obligations; however, areas of weakness could develop into areas of greater concern. To the extent minor adjustments are handled in the normal course of business, the supervisory response is limited.

Rating 3 (Fair). A rating of 3 indicates that the consolidated holding company exhibits a combination of weaknesses ranging from fair to moderately severe. The company has less than adequate financial strength stemming from one or more of the following: modest capital deficiencies, substandard asset quality, weak earnings, or liquidity problems. As a result, the holding company and its subsidiaries are less resistant to adverse business conditions. The financial condition of the holding company will likely deteriorate if concerted action is not taken to correct areas of weakness. The company’s cash flow is sufficient to meet immediate obligations, but may not remain adequate if action is not taken to correct weaknesses. Consequently, the holding company is vulnerable and requires more than normal supervision. Overall financial strength and capacity are still such as to pose only a remote threat to the viability of the company.
Rating 4 (Marginal). A rating of 4 indicates that the consolidated holding company has either inadequate capital, an immoderate volume of problem assets, very weak earnings, serious liquidity issues, or a combination of factors that are less than satisfactory. An additional weakness may be that the holding company’s cash flow needs are met only by upstreaming imprudent dividends and/or fees from subsidiaries. Unless prompt action is taken to correct these conditions, they could impair future viability. Holding companies in this category require close supervisory attention and increased financial surveillance.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the volume and character of financial weaknesses of the holding company are so critical as to require urgent aid from shareholders or other sources to prevent insolvency. The imminent inability of such a company to service its fixed obligations and/or prevent capital depletion due to severe operating losses places its viability in serious doubt. Such companies require immediate corrective action and constant supervisory attention.

1062.0.7.3.1 The Financial Condition Subcomponents

The financial condition subcomponents can be evaluated along business lines, product lines, or legal entity lines—depending on which type of review is most appropriate for the holding company structure.

Capital Adequacy

Rating 1 (Strong). A rating of 1 indicates that the consolidated holding company maintains more than adequate capital to support the volume and risk characteristics of all parent and subsidiary business lines and products; provide a sufficient cushion to absorb unanticipated losses arising from the parent and subsidiary activities; and support the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 2 has more than adequate capital to support the volume and risk characteristics of all parent and subsidiary business lines and products; the unanticipated losses arising from the parent and subsidiary activities; or the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 2 may not maintain a sufficient capital position to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries.

Rating 3 (Fair). A rating of 3 indicates that the consolidated holding company may not maintain sufficient capital to ensure support for the volume and risk characteristics of all parent and subsidiary business lines and products; the unanticipated losses arising from the parent and subsidiary activities; or the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 3 may not maintain a sufficient capital position to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries. The capital position of the consolidated holding company could quickly become inadequate in the event of asset deterioration or other negative factors and therefore requires more than normal supervisory attention.

Rating 4 (Marginal). A rating of 4 indicates that the consolidated holding company is significantly below the amount needed to ensure support for the volume and risk characteristics of all parent and subsidiary business lines and products; the unanticipated losses arising from the parent and subsidiary activities; and the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 4 does not maintain a sufficient capital position to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries. If left unchecked, the consolidated capital position of the company might evolve into weaknesses or conditions that could threaten the viability of the institution. The capital position of the consolidated holding company requires immediate supervisory attention.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the level of capital of the consolidated holding company is critically deficient and in need of immediate corrective action. The consolidated capital position threatens the viability of the institution and requires constant supervisory attention.
Asset Quality

Rating 1 (Strong). A rating of 1 indicates that the holding company maintains strong asset quality across all parts of the organization, with a very low level of criticized and nonperforming assets. Credit risk across the organization is commensurate with management’s abilities and modest in relation to credit risk-management practices.

Rating 2 (Satisfactory). A rating of 2 indicates that the holding company maintains satisfactory asset quality across all parts of the organization, with a manageable level of criticized and nonperforming assets. Any identified weaknesses in asset quality are correctable in the normal course of business. Credit risk across the organization is commensurate with management’s abilities and generally modest in relation to credit risk-management practices.

Rating 3 (Fair). A rating of 3 indicates that the asset quality across all or a material part of the consolidated holding company is less than satisfactory. The holding company may be facing a decrease in the overall quality of assets currently maintained on and off balance sheet. The holding company may also be experiencing an increase in credit-risk exposure that has not been met with an appropriate improvement in risk-management practices. Holding companies assigned a rating of 3 require more than normal supervisory attention.

Rating 4 (Marginal). A rating of 4 indicates that the holding company’s asset quality is deficient. The level of problem assets and/or unmitigated credit risk subjects the holding company to potential losses that, if left unchecked, may threaten its viability. Holding companies assigned a rating of 4 require immediate supervisory attention.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the holding company’s asset quality is critically deficient and presents an imminent threat to the institution’s viability. Holding companies assigned a rating of 5 require immediate remedial action and constant supervisory attention.

Earnings

Rating 1 (Strong). A rating of 1 indicates that the quantity and quality of the holding company’s consolidated earnings over time are more than sufficient to make full provision for the absorption of losses and/or accretion of capital when due consideration is given to asset quality and holding company growth. Generally, holding companies with a 1 rating have earnings well above peer-group averages.

Rating 2 (Satisfactory). A rating of 2 indicates that the quantity and quality of the holding company’s consolidated earnings over time are generally adequate to make provision for the absorption of losses and/or accretion of capital when due consideration is given to asset quality and holding company growth. Generally, holding companies with a 2 rating have earnings that are in line with or slightly above peer-group averages.

Rating 3 (Fair). A rating of 3 indicates that the holding company’s consolidated earnings are not fully adequate to make provisions for the absorption of losses and the accretion of capital in relation to company growth. The consolidated earnings of companies rated 3 may be further clouded by static or inconsistent earnings trends, chronically insufficient earnings, or less than satisfactory asset quality. Holding companies with a 3 rating generally have earnings below peer-group averages. Such holding companies require more than normal supervisory attention.

Rating 4 (Marginal). A rating of 4 indicates that the holding company’s consolidated earnings, while generally positive, are clearly not sufficient to make full provision for losses and the necessary accretion of capital. Holding companies with earnings rated 4 may be characterized by erratic fluctuations in net income, poor earnings (and the likelihood of the development of a further downward trend), intermittent losses, chronically depressed earnings, or a substantial drop from the previous year. The earnings of such companies are generally substantially below peer-group averages. Such holding companies require immediate supervisory attention.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the holding company is experiencing losses or a level of earnings that is worse than that described for the 4 rating. Such losses, if not reversed, represent a distinct threat to the holding company’s solvency through erosion of capital. Such holding companies require immediate and constant supervisory attention.

Liquidity

Rating 1 (Strong). A rating of 1 indicates that the holding company maintains strong liquidity levels and well-developed funds-management practices. The parent company and subsidiaries
have reliable access to sufficient sources of funds on favorable terms to meet present and anticipated liquidity needs.

**Rating 2 (Satisfactory).** A rating of 2 indicates that the holding company maintains satisfactory liquidity levels and funds-management practices. The parent company and subsidiaries have access to sufficient sources of funds on acceptable terms to meet present and anticipated liquidity needs. Modest weaknesses in funds-management practices may be evident, but those weaknesses are correctable in the normal course of business.

**Rating 3 (Fair).** A rating of 3 indicates that the holding company’s liquidity levels or funds-management practices are in need of improvement. Holding companies rated 3 may lack ready access to funds on reasonable terms or may evidence significant weaknesses in funds-management practices at the parent company or subsidiary levels. However, these deficiencies are considered correctable in the normal course of business. Such holding companies require more than normal supervisory attention.

**Rating 4 (Marginal).** A rating of 4 indicates that the holding company’s liquidity levels or funds-management practices are deficient. Institutions rated 4 may not have or be able to obtain a sufficient volume of funds on reasonable terms to meet liquidity needs at the parent company or subsidiary levels and require immediate supervisory attention.

**Rating 5 (Unsatisfactory).** A rating of 5 indicates that the holding company’s liquidity levels or funds-management practices are critically deficient and may threaten the continued viability of the institution. Institutions rated 5 require constant supervisory attention and immediate external financial assistance to meet maturing obligations or other liquidity needs.

### 1062.0.7.4 Impact Component

The I component rating reflects the aggregate potential impact of the nondepository entities on the subsidiary depository institution(s). It is rated on a five-point numerical scale. Ratings will be assigned in ascending order of supervisory concern as follows:

1—low likelihood of significant negative impact;
2—limited likelihood of significant negative impact;
3—moderate likelihood of significant negative impact;
4—considerable likelihood of significant negative impact; and
5—high likelihood of significant negative impact.

**Rating 1 (Low Likelihood of Significant Negative Impact).** A rating of 1 indicates that the nondepository entities of the holding company are highly unlikely to have a significant negative impact on the subsidiary depository institution(s) due to the sound financial condition of the nondepository entities, the strong risk-management practices within the nondepository entities, or the corporate structure of the holding company. The holding company maintains an appropriate capital allocation across the organization commensurate with associated risks. Intra-group exposures, including servicing agreements, are very unlikely to undermine the financial condition of the subsidiary depository institution(s). Parent company cash flow is sufficient and not dependent on excessive dividend payments from subsidiaries. The potential risks posed to the subsidiary depository institution(s) by strategic plans, the control environment, risk concentrations, or legal or reputational issues within or facing the nondepository entities are minor in nature and can be addressed in the normal course of business.

**Rating 2 (Limited Likelihood of Significant Negative Impact).** A rating of 2 indicates a limited likelihood that the nondepository entities of the holding company will have a significant negative impact on the subsidiary depository institution(s) due to the adequate financial condition of the nondepository entities, the satisfactory risk-management practices within the parent nondepository entities, or the corporate structure of the holding company. The holding company maintains adequate capital allocation across the organization commensurate with associated risks. Intra-group exposures, including servicing agreements, are unlikely to undermine the financial condition of the subsidiary depository institution(s). Parent company cash flow is satisfactory and generally does not require excessive dividend payments from subsidiaries. The potential risks posed to the subsidiary depository institution(s) by strategic plans, the control environment, risk concentrations, or legal or reputational issues within the nondepository entities are modest and can be addressed in the normal course of business.

**Rating 3 (Moderate Likelihood of Significant Negative Impact).** A rating of 3 indicates a moderate likelihood that the aggregate impact of
the nondepository entities of the holding company on the subsidiary depository institution(s) will have a significant negative impact on the subsidiary depository institution(s) due to weaknesses in the financial condition and/or risk management practices of the nondepository entities. The holding company may have only marginally sufficient allocation of capital across the organization to support risks. Intra-group exposures, including servicing agreements, may have the potential to undermine the financial condition of the subsidiary depository institution(s). Parent company cash flow may at times require excessive dividend payments from subsidiaries. Strategic growth plans, weaknesses in the control environment, risk concentrations or legal or reputational issues within the nondepository entities may pose significant risks to the subsidiary depository institution(s). A holding company assigned a 3 impact rating requires more than normal supervisory attention, as there could be adverse effects on the safety and soundness of the subsidiary depository institution(s) if corrective action is not taken by management.

**Rating 4 (Considerable Likelihood of Significant Negative Impact).** A rating of 4 indicates that there is a considerable likelihood that the nondepository entities of the holding company will have a significant negative impact on the subsidiary depository institution(s) due to weaknesses in the financial condition and/or risk management practices of the nondepository entities. A 4-rated holding company may have insufficient capital within the nondepository entities to support their risks and activities. Intra-group exposures, including servicing agreements, may also have the immediate potential to undermine the financial condition of the subsidiary depository institution(s). Parent company cash flow may be dependent on excessive dividend payments from subsidiaries. Strategic growth plans, weaknesses in the control environment, risk concentrations or legal or reputational issues within the nondepository entities may pose critical risks to the subsidiary depository institution(s). A holding company assigned a 4 impact rating requires immediate and close supervisory attention, as the nondepository entities seriously jeopardize the continued viability of the subsidiary depository institution(s).

1062.0.7.5 (D) Depository Institutions Component

The (D) component identifies the overall condition of the subsidiary depository institution(s) of the holding company. For holding companies with only one subsidiary depository institution, the (D) component rating generally will mirror the CAMELS composite rating for that depository institution. To arrive at a (D) component rating for holding companies with multiple subsidiary depository institutions, the CAMELS composite ratings for each of the depository institutions should be weighted, giving consideration to asset size and the relative importance of each depository institution within the overall structure of the organization. In general, it is expected that the resulting (D) component rating will reflect the lead depository institution’s CAMELS composite rating.

If in the process of analyzing the financial condition and risk-management programs of the consolidated organization, a major difference of opinion regarding the safety and soundness of the subsidiary depository institution(s) emerges between the Federal Reserve and the depository institution’s primary regulator, then the (D) rating should reflect the Federal Reserve’s evaluation.
The purpose of this section is to provide an overview of the inspection scope and frequency expectations for bank holding companies (BHCs) and savings and loan holding companies (SLHCs) supervised by the Federal Reserve. The Federal Reserve utilizes two rating systems to assess these and other holding companies.

BHCs and non-insurance, non-commercial SLHCs with total consolidated assets of $100 billion or more generally are subject to the large financial institution (LFI) rating system. (See section 1060.0 of this manual.) U.S. intermediate holding companies of foreign banking organizations with combined U.S. assets of $50 billion or more established pursuant to the Federal Reserve’s Regulation YY are also subject to the LFI rating system.

BHCs and non-insurance and non-commercial SLHCs with less than $100 billion in total consolidated assets generally are subject to the RFI rating system. (See section 1062.0 of this manual.) However, noncomplex holding companies with less than $3 billion in total consolidated assets only receive the risk-management rating and composite rating from the RFI rating system.

BHCs exempt from the prohibitions of section 4 of the Bank Holding Company Act of 1956, as amended, as a result of any of the following exemptions, will not be subject to any required periodic inspection:

1. section 4(a)(2)—permanent grandfather rights
2. section 4(c)(i)—labor, agricultural, or horticultural organization
3. section 4(c)(ii)—85 percent family-owned
4. section 4(c)(12)—irrevocable declaration to cease to be a BHC
5. section 4(d)—hardship exemption

However, the Reserve Bank should continue to monitor the financial condition of such holding companies and should conduct inspections whenever there is any indication of a potential problem in a subsidiary bank.

1. The Modified RFI rating includes a composite rating and risk-management rating to the holding company. See SR letter 13-21, “Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less.”
2. Savings and loan holding companies (SLHCs) are considered to be “insurance savings and loan holding companies” if they are either insurance companies or hold 25 percent or more of their total consolidated assets in subsidiaries that are insurance companies.
3. SLHCs are considered to be “commercial savings and loan holding companies” if they derive 50 percent or more of their total consolidated assets or total revenues from activities that are not financial in nature under section 4(k) of the Bank Holding Company Act of 1956, as amended (12 USC 1843(k)).
4. U.S. intermediate holding companies of foreign banking organizations established under the Board’s Regulation YY that have $50 billion or more in total consolidated assets would be subject to the LFI rating system.

<td></td>
</tr>
</tbody>
</table>

1. Full-scope inspection covers all areas of interest to the Federal Reserve in depth; targeted inspections will focus intensely on one or two activities.
2. Complexity factors include the size and structure of the company; the extent of intercompany transactions between insured depository institution subsidiaries and the holding company or uninsured subsidiaries of the holding company; the risk, scale and complexity of activities of any nondepository subsidiaries; and the degree of leverage at the holding company, including the extent of its debt outstanding to the public. Other factors are also noted in the text of SR-13-21.
Nondisclosure of Supervisory Ratings and Confidential Supervisory Information  Section 1065.0

1065.0.1 LIMITED DISCLOSURE OF CONFIDENTIAL COMPOSITE AND COMPONENT RATINGS IN INSPECTIONS AND EXAMINATIONS

The Federal Reserve provides senior management and directors of supervised financial institutions the numeric and alphabetic component ratings assigned under various supervisory rating systems.1 (See SR-96-26, “Provision of Individual Components of Supervisory Rating Systems to Management and Boards of Directors.”) This disclosure includes the ratings assigned to management under the holding company rating systems.2

Depending upon the size and complexity of the organization, the disclosure of the rating and its components is made to the holding company in writing through formal examination or inspection reports, reports summarizing the results of targeted reviews, a roll-up of those reviews into a comprehensive report, any other supervisory communication, or some combination thereof. In conjunction with disclosing the ratings and their components to a holding company, examiners or supervisory officials should clearly explain what the ratings mean to the board of directors and management. During the exit meeting, the examiner should discuss key overall inspection findings, including preliminary composite and component numeric ratings.

In disclosing the assigned ratings, the examiner-in-charge should remind the board of directors and management that the ratings are part of the findings of the inspection or supervisory activity and are privileged and confidential under applicable law.3 When examiners change a firm’s ratings, examiners need to inform the firm’s board of directors and management about the rating change. Examiners should not disclose ratings to the holding company’s directors and management until preliminary approval has been received from the appropriate senior Reserve Bank supervisory officials.

1065.0.2 CONFIDENTIALITY OF THE SUPERVISORY RATING AND OTHER NONPUBLIC SUPERVISORY INFORMATION

The holding company inspection report and other supervisory communications constitute or contain the Board’s confidential supervisory information (CSI), which is nonpublic information belonging to the Board.4 The Board’s Rules Regarding Availability of Information specifically provide that, except in very limited circumstances, supervised financial institutions may not disclose CSI outside of the financial institution, including inspection or examination findings, nor make any representations concerning an examination or inspection report or the report’s findings, without the prior written permission of the Board.5 Any person who discloses or uses CSI except as expressly permitted by the appropriate federal banking agency or as provided by the agency’s regulations may be subject to the criminal penalties provided in 18 USC 641.

The legal prohibition on the release of CSI applies to all financial institutions examined by the agencies, including bank and savings and loan holding companies, Edge corporations, and the U.S. branches or agencies of foreign banking organizations that receive confidential supervisory ratings, including the LFI rating, RFI/C(D) rating, ROCA rating, and CAMEO rating.6 As

---

1. The supervisory ratings are disclosed for the following rating systems:
   - CAMELS (state member banks)
   - RFI/C(D) and Large Financial Institution (LFI) rating system (bank holding companies, and savings and loan holding companies)
   - CAMEO (Edge and agreement corporations and overseas subsidiaries of U.S. banks)
   - ROCA (U.S. branches and agencies of foreign banking organizations)
   - Uniform Interagency Trust Rating System (UITRS)
   - The interagency Uniform Rating System for Information Technology (URSIT)

3. The inspection report should also include appropriate language stating that the findings of the inspection are privileged and confidential under applicable law.

---

4. See, e.g., 12 CFR 261.2(c)(1), 261.20(g), and 261.22(c).
5. 12 CFR part 261, subpart C. The regulation authorizes supervised financial institutions to disclose CSI to their directors, officers, and employees and to the directors, officers, and employees of their parent holding companies. 12 CFR 261.20(b)(1). In addition, institutions may also disclose CSI to their outside counsel and auditors on the premises of the institution. 12 CFR 261.20(b)(2).
6. RFI/C(D), LFI, ROCA, and CAMEO ratings are assigned by the Federal Reserve Board as a result of an examination or inspection. For noncomplex holding companies with assets of $3 billion or less, only risk-management and composite ratings are assigned. ROCA ratings are assigned to the U.S. branches, agencies, and commercial lending companies of foreign banking organizations. The ROCA rating components are risk management, operational controls, compliance,
with the CAMELS rating, examiners communicate these ratings to the regulated institutions in reports or other supervisory communications, which are the property of the Board.

Financial institutions that receive requests for confidential supervisory ratings should refer all requesters to the following publicly available information in lieu of disclosing any CSI, including the CAMELS rating:

- for banks and savings associations, an institution’s quarterly reports of condition (Call Reports) (see 12 USC 1817)
- for holding companies or foreign banks with U.S. operations, an institution’s quarterly and annual FR Y or H-(b)11 reports (see 12 USC 1844, 3106, 3108, 601–604a, and 611–631)
- for national banks, the annual disclosure statement (see 12 CFR 18.3)
- for banks, an institution’s Uniform Bank Performance Report (UBPR), which is available to all interested parties at www.ffiec.gov and is designed for summary and in-depth analysis of banks;
- an institution’s publicly available filings, if any, filed with the appropriate federal banking agency (15 USC 78(I)(i)) or with the U.S. Securities and Exchange Commission
- any reports or ratings on the institution compiled by private companies that track the performance of financial institutions
- any reports or ratings issued by private rating services on public debt issued by an institution
- any publicly available cease-and-desist order or enforcement proceeding against an institution
- any reports or other sources of information on institution performance or internal matters created by the institution that do not contain information prohibited from release by law or regulation
- any reports or other sources of information on institution performance or internal matters created by the institution that do not contain information prohibited from release by law or regulation

1. restrict the banking organization from providing information to Federal Reserve supervisory staff;
2. require or permit, without the prior approval of the Federal Reserve, the banking organization to disclose to a counterparty that any information will be or was provided to Federal Reserve supervisory staff; or
3. require or permit, without the prior approval of the Federal Reserve, the banking organization to inform a counterparty of a current or upcoming Federal Reserve inspection or any nonpublic Federal Reserve supervisory initiative or action.

Banking organizations that have entered into agreements containing such confidentiality provisions are subject to legal risk. (See SR-07-19, “Confidentiality Provisions in Third-Party Agreements,” and SR-97-17, “Access to Books and Records of Financial Institutions During Examinations and Inspections.”)

---

8. See 12 CFR 261.2(c)(1)(i).
1070.1.1 INTRODUCTION

This section on the communication of supervisory findings is based on the guidance in SR-13-13/CA-13-10, “Supervisory Considerations for the Communication of Supervisory Findings,” which applies to all Federal Reserve-supervised banking organizations. In a supervisory finding, examiners should convey, if evident, both the root cause of the finding and the potential effect of the finding on the organization. Examiners should also consider the guidance in SR-18-5/CA-18-7, “Interagency Statement Clarifying the Role of Supervisory Guidance,” for more information on communication of supervisory findings, including the appropriate identification of unsafe or unsound practices or other deficiencies in risk management, including compliance risk management, or other areas that do not constitute violations of law or regulation.

1070.1.2 COMMUNICATION OF SUPERVISORY FINDINGS

Communication of supervisory findings to the organization’s board of directors is an important part of the supervision of a banking organization. While the board itself may not directly undertake the work to remediate supervisory findings as senior management is responsible for the organization’s day-to-day operations, it is nevertheless important that the board be made aware of significant supervisory issues and ultimately be accountable for the safety and soundness and assurance of compliance with applicable laws and regulations of the organization.

Depending upon the size and complexity of the organization, supervisory findings are communicated in writing through formal examination or inspection reports, reports summarizing the results of targeted reviews, a roll-up of those reviews into a comprehensive report, any other supervisory communication, or some combination thereof. These written communications (referred to collectively as “reports” in this section) are generally directed to the board of directors, or an executive-level committee of the board as appropriate. In turn, the board of directors (or executive-level committee of the board) typically will direct the organization’s management to take corrective action and will provide management with appropriate oversight, including approvals of proposed management actions as necessary.

To be effective, the communication of supervisory findings must be (1) written in clear and concise language, (2) prioritized based upon degree of importance, and (3) focused on any significant matters that require attention. Reserve Banks must formally communicate matters requiring immediate attention (MRIAs) and matters requiring attention (MRAs) resulting from any supervisory activity to the organization in these written reports. In order to promote an understanding of these terms, examiners should include definitions of MRIAs and MRAs in all supervisory documents communicating supervisory findings. When included in a safety-and-soundness examination or inspection report, MRIAs and MRAs should be listed in the “Matters Requiring Attention” section. In the case of findings from consumer compliance examinations, MRIAs and MRAs should be reflected in the “Executive Summary and Examination Ratings” section of the consumer affairs report of examination. Only outstanding MRIAs and MRAs are required to be discussed in the report; however, examiners have discretion to discuss closed MRIAs and MRAs in the report if such discussion would be meaningful.

For large banking organizations, an annual roll-up report summarizes the significant findings, based on outstanding MRIAs or MRAs, included in the reports of targeted reviews or other supervisory activities conducted during the supervisory cycle. These findings may be grouped by major supervisory issues, rating components, risks, or themes. This information should enable the banking organization’s board of directors and any executive-level committee of the board to understand the substance and status of outstanding MRIAs or MRAs and focus their attention on the most critical and time-sensitive issues.

Communications to banking organizations concerning safety-and-soundness or consumer compliance MRIAs or MRAs must specify a time-

1. An executive-level committee of the board (such as, the audit committee or risk committee) typically meets regularly, keeps minutes of those meetings, and is accountable to and routinely reports to the board of directors.

2. In a safety-and-soundness report, these definitions could be included on the “Scope” page, in an appendix, or as a footnote on the “Matters Requiring Attention” section. In a consumer compliance report, these definitions could be included on the “Executive Summary and Examination Ratings” section.
frame within which the banking organization must complete the corrective actions. In certain circumstances, examiners may require the banking organization to submit an action plan that identifies remedial actions to be completed within specified timeframes. Action plans with intermediate- and long-term timeframes that span more than one supervisory or examination cycle with regard to safety-and-soundness matters, or a 12-month period with regard to consumer compliance issues, should include interim progress targets. Both safety-and-soundness and consumer protection or compliance considerations will remain a priority in determining whether the organization’s timeframes to correct the matter are reasonable.

1070.1.2.1 Matters Requiring Immediate Attention

MRIAs arising from an examination, inspection, or any other supervisory activity are matters of significant importance and urgency that the Federal Reserve requires banking organizations to address immediately and include (1) matters that have the potential to pose significant risk to the safety and soundness of the banking organization; (2) matters that represent significant non-compliance with applicable laws or regulations; (3) repeat criticisms that have escalated in importance due to insufficient attention or inaction by the banking organization; and (4) in the case of consumer compliance examinations, matters that have the potential to cause significant consumer harm. An MRIA will remain an open issue until resolution and examiners confirm the banking organization’s corrective actions.

Required language. Federal Reserve examiners are expected to use the following standardized language to communicate MRIAs to the board of directors (or executive-level committee of the board):

“The board of directors (or executive-level committee of the board), or banking organization is required to immediately...”

Timeframe. The expected timeframe for a banking organization to address MRIAs is generally short, and may be “immediate,” in the case of heightened safety-and-soundness or consumer compliance risk. For MRIAs that are necessary to preserve or restore the viability of a banking organization, the timeframe should take into account any potential losses to the Federal Deposit Insurance Corporation’s Deposit Insurance Fund, including the possibility that a delay in action will increase the potential for loss or the cost of resolution.

Organization response. Following its review of MRIAs discussed in the report, the banking organization’s board of directors is required to respond to the Reserve Bank in writing regarding corrective action taken or planned along with a commitment to corresponding timeframes.

Supervisory follow-up. The Reserve Bank must follow up on MRIAs to assess progress and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe specified for the action being required, and should be appropriate for the severity of the matter requiring the corrective action. The means of follow-up may vary depending upon the nature and severity of the matter requiring the action. Follow-up may take the form of a subsequent examination, a targeted review, or any other supervisory activity deemed suitable for evaluating the issue at hand.

In some cases, when follow-up indicates the organization’s corrective action has not been satisfactory, the initiation of additional formal or informal investigation or enforcement action may be necessary. In such cases, examiners should consult with enforcement staff. In all instances, examiners are expected to exercise judgment as to the supervisory activities best suited for evaluating a particular issue. Once follow-up is completed, examiners are expected to clearly and fully document the rationale for their decision to close any issue. Examiners are also expected to communicate in writing the results of their work and findings to the banking organization.

1070.1.2.2 Matters Requiring Attention

MRAs constitute matters that are important and that the Federal Reserve is expecting a banking organization to address over a reasonable period of time but when the timing need not be “immediate.” While issues giving rise to MRAs must be addressed to ensure the banking organization...
Communication of Supervisory Findings

1070.1

operates in a safe and sound and compliant manner, the threat to safety and soundness is less immediate than with issues giving rise to MRIAs. Likewise, consumer compliance concerns that require less immediate resolution should be communicated as an MRA. An MRA typically will remain an open issue until resolution and confirmation by examiners that the banking organization has taken corrective action. If a banking organization does not adequately address an MRA in a timely manner, examiners may elevate an MRA to an MRIA. Similarly, a change in circumstances, environment, or strategy can also lead to an MRA becoming an MRIA. The key distinction between MRIAs and MRAs is the nature and severity of matters requiring corrective action as well as the immediacy with which the banking organization must begin and complete corrective actions.

Required language. Federal Reserve examiners are expected to use the following standardized language to communicate MRAs to the board of directors (or executive-level committee of the board):

“The board of directors (or executive-level committee of the board), or banking organization is required to...

Timeframe. Communications to banking organizations about MRAs must specify a timeframe within which the corrective action is expected to be completed. The timeframe, at least initially, may require estimation because the banking organization may first need to complete preliminary planning to establish the timeframe for initiating and completing the corrective action. The timeframes for MRAs are likely to become more precise over time as planning evolves and circumstances make the completion of the MRAs more urgent. Timeframes that span more than one examination cycle for safety-and-soundness issues or that exceed 12 months for consumer compliance issues should include appropriate interim progress reports.

Organization response. Following its review of the report, the banking organization’s board of directors is required to provide a written response to the Reserve Bank regarding its plan, progress, and resolution of the MRA.

Supervisory follow-up. The Reserve Bank must follow-up on MRAs to assess progress and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe during which actions are to be completed. For intermediate- or long-term corrective actions for MRAs, Reserve Bank follow-up may consist of assessing the organization’s progress to address the MRAs, whether satisfactory or unsatisfactory, and noting whether the initial estimated timeframe continues to be reasonable or warrants adjustment.

The means of supervisory follow-up may vary based upon the nature and severity of the matter for which corrective action is expected. Follow-up may take the form of a subsequent examination, targeted review, continuous monitoring, reliance on validation work conducted by internal audit function, reliance on the results of examinations conducted by other supervisors, or any other supervisory activity deemed suitable for evaluating the issue at hand.

In some cases, when follow-up indicates the organization’s corrective action has not been satisfactory, the initiation of additional formal or informal investigation or enforcement action may be necessary. In all instances, examiners are expected to exercise judgment regarding the supervisory activities best suited for evaluating a particular issue. Once follow-up is complete, examiners are expected to clearly and fully document the rationale for their decision to close any issue. Examiners also are expected to communicate in writing the results of their work and findings to the organization.

1070.1.2.3 Supervisory Considerations

The volume of MRIAs and MRAs should be one of the many considerations in assigning a supervisory rating to a banking organization. The presence of a large number of MRIAs or MRAs may indicate that additional formal or informal investigation may be necessary or that the initiation of a formal or informal enforcement action may be warranted.

Irrespective of the number of MRIAs or MRAs, in some cases, additional formal or informal investigation may be necessary or the initiation of a formal or informal enforcement

4. Examiners may choose to rely on the work of internal audit when internal audit’s overall function and related processes are effective, as discussed in SR-13-1/CA-13-1, “Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing.” (See this manual’s section entitled “Internal Control and Audit Function, Oversight, and Outsourcing.”) When relying on internal audit to follow up on MRAs, examiners are expected to review the relevant workpapers and, when necessary, meet with internal audit staff who documented the resolution of the issue.

BHC Supervision Manual February 2020 Page 3
action may be warranted based on the severity of the issues, the repeat nature of issues, lack of responsiveness of management, violations of law, insider abuse, fraud, or other material deficiency. In any of these cases, examiners should consult with the Board’s enforcement staff.

1070.1.3 FACTORS IN ESCALATING ISSUES INTO ENFORCEMENT ACTIONS

The volume of open MRIAs and MRAs and the materiality of the issues therein to the safety and soundness of the banking organization are important overarching considerations in determining whether examiners need to consult with the Board’s enforcement staff in escalating issues into enforcement actions. In addition to the guidance presented in SR-13-13/CA-13-10, examiners should consider the following key factors in determining whether to recommend additional formal or informal investigation or enforcement action:

- the organization’s supervisory ratings and financial condition;
- whether the issues involve unsafe or unsound practices, violations of laws, noncompliance with regulations, insider abuse, fraud, or other material deficiencies;
- the severity or repetitive or intentional nature of the issues;
- management’s willingness and ability to correct the issues;
- management’s history of instituting timely remedial or corrective actions;
- whether management already initiated corrective action or established procedures to prevent future deficiencies;
- whether criminal or other regulatory authorities are taking a formal enforcement or prosecutorial action against the same institution;
- the organization’s history of violations of laws, noncompliance with regulations and unsafe and unsound unsatisfactory practices; and
- any other circumstances that warrant use of an enforcement action.

This manual’s section, “Formal Corrective Actions,” provides more information on formal supervisory actions, which regulators issue to correct practices that the regulators believe to be unlawful, unsafe, or unsound. See also the Commercial Bank Examination Manual’s section entitled, “Formal and Informal Supervisory Actions,” for more information.

---

5. Issues are considered closed if the banking organization implements and examiners verify and validate the effectiveness of the corrective action, or if the organization’s practices are no longer a concern because of a change in the organization’s circumstances.

7. See 12 USC 1818(b)(1).
Introduction To Topics For Supervisory Review

Section 2000.0

Discussed within these subsections are topics associated with regard to the overall bank holding company organization. Included is general information, inspection objectives and procedures, and in some instances references to laws, interpretations, and Board orders. The primary topics addressed are the supervision of subsidiaries, grandfather rights, commitments, extensions of credit to BHC officials, management information systems, taxes, funding, control and ownership, reporting by foreign and domestic banking organizations, formal corrective actions, sharing of criminal referral information, investment transactions, recognition and control of risk, purchase and sale of U.S. Government guaranteed loans, and venture capital.
Supervision of Subsidiaries

Section 2010.0

WHAT’S NEW IN THIS REVISED SECTION

This section is revised to include a revision of the Federal Deposit Insurance Act (FDIA) that requires a BHC or SLHC to serve as a “source of strength” to its depository institution subsidiaries. See section 38A of the FDIA and section 616(d) of the Dodd-Frank Act.

The relative merit of the degree of supervision is dependent upon a number of factors, and must be analyzed in light of efficiency and operating performance. The degree and nature of control over subsidiary organizations in a holding company system usually falls between two extremes: a tightly controlled, centralized network similar to a branch system, or a loosely controlled, decentralized system with each subsidiary operating autonomously. A bank holding company might originate as a “shell” corporation organized by investors interested in purchasing a bank, or by a bank interested in reorganizing into a holding company structure in order to expand through acquisition of nonbank concerns or other banks. The management and directorate of such a holding company are often the same as that of the bank. As the holding company expands through acquisitions, the parent may continue to exercise control through the staff of the lead bank, or may form a separate staff to overview the operations of all subsidiaries. The relative merit of the degree of supervision is dependent upon a number of factors, and must be analyzed in light of efficiency and operating performance.

The level at which policies are established and supervised, the frequency of contact between the parent and subsidiaries, and the extent to which officers and directors of the parent serve also as officers and directors of the subsidiary organizations are indicative of the level of control exercised by the parent. A centralized bank holding company is characterized by the placement of directors and officers of the parent company (or those of the lead bank) in each of its subsidiaries, with frequent group meetings held between the officers of the lead bank or holding company and those of the subsidiary organizations. While this is an efficient method of operation, this type of organization builds in the potential for conflicts of interest for those individuals who serve in dual capacities. Corporate policies should recognize this potential and provide guidance for resolution. The overriding principle should be that no member of the bank holding company organization should be disadvantaged by a transaction with another affiliate. Management of the investment portfolio, budgets, tax planning, personnel, correspondent relationships, loans and loan participations, and liability management are usually controlled by the parent or lead bank in a centralized system.

A decentralized system is one in which the banks act independently of the parent company, with infrequent contacts with affiliates, placement of parent or lead bank directors and officers in less than a majority of the banks within the system and infrequent reporting by subsidiaries concerning investments and operating performance. The bank holding company might act only in a minor advisory capacity. In such a decentralized system each subsidiary operates as a relatively autonomous unit, with authority and responsibility for certain actions delegated by the parent to the board and/or chief executive officer of each subsidiary. It is the responsibility of the directors and management of the parent company to establish and supervise the policies of subsidiaries, either directly or through delegation of authority. The importance of written policies in a delegated, decentralized organization cannot be overemphasized, and the selection of qualified officers to carry out policies is equally important. If written policies have not been developed by the holding company, the examiner should recommend that major policies be written and communicated to subsidiaries. Policies should ensure that subsidiaries are not managed for cross purposes and should avoid concentrations of risks on a consolidated basis.

2010.0.1 POLICY STATEMENT ON THE RESPONSIBILITY OF BANK HOLDING COMPANIES TO ACT AS SOURCES OF STRENGTH TO THEIR SUBSIDIARY BANKS

The Board is concerned about situations where a bank has been threatened with failure notwithstanding the availability of resources to its parent bank holding company. In order to assure that the Board’s policy that bank holding companies serve as sources of financial strength to subsidiary banks is understood by bank holding companies, the Board has issued a
general policy statement reaffirming and articulating these principles, and confirming that the policy applies to failing bank situations. This long-standing policy has been recognized by the Supreme Court in its decision in Board of Governors v. First Lincolnwood Corp., 439 U.S. 234 (1978), and has been incorporated explicitly in the Board’s Regulation Y, 12 C.F.R. 225.4(a)(1).

A fundamental and long-standing principle underlying the Federal Reserve’s supervision and regulation of bank holding companies is that bank holding companies should serve as sources of financial and managerial strength to their subsidiary banks. The Federal Deposit Insurance Act (FDIA) requires that a bank holding company or savings and loan holding company act as a source of strength to its depository institution(s). The term “source of strength” means the ability of a company that directly or indirectly owns or controls an insured depository institution to provide financial assistance to such insured depository institution in the event of financial stress to the insured depository institution. (See the FDIA, section 38A(a)–(c).) It is the policy of the Board that in serving as a source of strength to its subsidiary banks, a bank holding company should stand ready to use available resources to provide adequate capital funds to its subsidiary banks during periods of financial stress or adversity and should maintain the financial flexibility and capital-raising capacity to obtain additional resources for assisting its subsidiary banks in a manner consistent with the provisions of this policy statement.

Since the enactment of the Bank Holding Company Act in 1956, the Board has formally stated on numerous occasions that a bank holding company should act as a source of financial and managerial strength to its subsidiary banks. As the Supreme Court recognized, in the 1978 First Lincolnwood decision, Congress has expressly endorsed the Board’s long-standing view that holding companies must serve as a “source of strength to subsidiary financial institutions.” In addition to frequent pronouncements over the years and the 1978 Supreme Court decision, this principle has been incorporated explicitly in Regulation Y since 1983. In particular, Section 225.4(a)(1) of Regulation Y provides that:

“The important public policy interest in the support provided by a bank holding company to its subsidiary banks is based upon the fact that in acquiring a commercial bank, a bank holding company derives certain benefits at the corporate level that result, in part, from the ownership of an institution that can issue federally-insured deposits and has access to Federal Reserve credit. The existence of the federal “safety net” reflects important governmental concerns regarding the critical fiduciary responsibilities of depository institutions as custodians of depositors’ funds and their strategic role within our economy as operators of the payments system and impartial providers of credit. Thus, in seeking the advantages flowing from the ownership of a commercial bank, bank holding companies have an obligation to serve as a source of strength and support to their subsidiary banks.

An important determinant of a bank’s financial strength is the adequacy of its capital base. Capital provides a buffer for individual banking organizations to absorb losses in times of financial strain, promotes the safety of depositors’ funds, helps to maintain confidence in the banking system, and supports the reasonable expansion of banking organizations as an essential element of a strong and growing economy. A strong capital cushion also limits the exposure of the federal deposit insurance fund to losses experienced by banking institutions. For these reasons, the Board has long considered adequate capital to be critical to the soundness of individual banking organizations and to the safety and stability of the banking and financial system.

Accordingly, it is the Board’s policy that a bank holding company should not withhold financial support from a subsidiary bank in a weakened or failing condition when the holding company is in a position to provide the support. A bank holding company’s failure to assist a troubled or failing subsidiary bank under these circumstances would generally be viewed as an unsafe and unsound banking practice or a violation of Regulation Y or both.

Where necessary, the Board is prepared to take supervisory action to require such assistance. Finally, the Board recognizes that there may be unusual and limited circumstances where flexible application of the principles set forth in this policy statement might be neces-
sary, and the Board may from time to time identify situations that may justify exceptions to the policy.

This statement is not meant to establish new principles of supervision and regulation; rather, as already noted, it builds on public policy considerations as reflected in banking laws and regulations and long-standing Federal Reserve supervisory policies and practices. A bank holding company’s failure to meet its obligation to serve as a source of strength to its subsidiary bank(s), including an unwillingness to provide appropriate assistance to a troubled or failing bank, will generally be considered an unsafe and unsound banking practice or a violation of Regulation Y, or both, particularly if appropriate resources are on hand or are available to the bank holding company on a reasonable basis. Consequently, such a failure will generally result in the issuance of a cease and desist order or other enforcement action as authorized under banking law and as deemed appropriate under the circumstances.

2010.0.2 BOARD ORDER REQUESTING A WAIVER FROM THE BOARD’S SOURCE OF STRENGTH POLICY

On December 23, 1991, the Board approved an application of a BHC to eventually acquire 100 percent of the outstanding stock of another BHC under a 5 year option. Initially, the BHC would acquire approximately 26 percent of the acquiree’s total capital by purchasing a 15-year subordinated capital note agreement. It would then have the option to acquire all of the remaining stock within 5 years. The acquiring BHC requested that the Board waive any requirement of the Board that it serve as a source of financial strength to the subsidiary bank (the Board’s “Source of Strength” policy) of the BHC acquired until such time that the option is exercised to acquire the actual ownership of all the shares. The Board considered the request and determined that it would not be appropriate to waive the responsibility to serve as a source of financial strength to the bank in this case. The Board noted that the option agreement and the capital note agreement together provide a mechanism for the acquiring BHC to exert control over the future ownership of the acquired BHC and many of the most important management decisions. Refer to 1992 FRB 159 and the F.R.R.S. at 4-271.3.

2010.0.3 INSPECTION OBJECTIVES

1. To determine whether the board of directors of the parent company is cognizant of and performing its duties and responsibilities.
2. To determine the adequacy of written policies and compliance with such policies by the parent and its subsidiaries.
3. To determine whether the board is properly informed as to the financial conditions, trends and policies of its subsidiaries.
4. To determine the level of supervision over subsidiaries and whether the supervision as structured has a beneficial or detrimental effect upon the subsidiaries.

2010.0.4 INSPECTION PROCEDURES

1. Determine if the holding company maintains its own staff, or whether the holding company management and directorate are the same as those of a subsidiary.
2. Determine whether the board of directors of the parent company reviews the audit reports, regulatory examination reports, and board minutes of its subsidiaries.
3. Determine the extent to which subsidiaries rely upon the parent for investment and lending guidance.
4. Determine which specific functions and decisions are performed only at the parent company level.
5. Determine the extent to which representatives of the parent company serve as officers and/or directors of subsidiaries.
6. Review minutes of the board and executive committees of the parent to determine whether the parent company reviews loan delinquency reports, comparative balance sheets and comparative income statements of the subsidiaries.
7. Review the extent of influence and control over both bank and nonbank subsidiaries.
8. Determine the degree of influence by the parent company over:
   a. Appointment of officers;
   b. Salary administration;
   c. Budget and tax planning;
   d. Capital expenditures;
   e. Dividend policy;
   f. Investment portfolio management;
   g. Loan portfolio management;
   h. Asset/liability and interest rate/risk management.
9. Determine the degree to which management of the subsidiary companies interfaces with management of the parent company to discuss policies.
Supervision of Subsidiaries
(Funding Policies)

Section 2010.1

The responsibility for the performance of the organization rests with the board of directors of the parent company. Parent company management should have policies in place to prevent funding practices that put at risk the welfare of the subsidiary banks or the consolidated organization.

The parent’s supervision and control of subsidiary funding activities and the funding between itself and its subsidiaries should be thus evaluated. The parent should be expected to maintain policies for itself and its subsidiaries that provide guidance and controls for funding practices. The presence and wording of funding policies and the degree to which the policies are followed by the subsidiaries, and the effectiveness of the policies in reducing risk to the entire organization should also be assessed.

The importance of the parent’s involvement in funding decisions and the need for monitoring and control at the parent level needs to be emphasized. As a minimum, the parent’s funding policies should address the following areas:

1. Capitalization—The holding company’s policy on capital levels should address capital for the bank subsidiaries, the nonbank subsidiaries, and the consolidated organization. The policy for bank and consolidated capital should be consistent with the Board’s Capital Adequacy Guidelines and should address the asset quality of the entity in question. The policy for nonbank capital should include maintaining the capital level at industry standards and should also address the asset quality of the subsidiary, the holding company’s capital for each entity should address what measures would be taken in the event capital falls below a targeted level.

2. Interest rate sensitivity policies should be designed to reduce the organization’s vulnerability to interest rate movements. Policies concerning the asset/liability rate sensitivity match should not be limited to the subsidiary lead bank. The rate charged on parent company debt and the rate received by the parent on its advances to subsidiaries should also be addressed to monitor the parent’s ability to service its debt in the face of changing interest rates. The policy should specify what degree of mismatching is considered acceptable. The interest rate sensitivity matching of the organization should be monitored on a frequent basis through the timely preparation of a matching schedule.

Maturity matching policies should be designed to provide adequate liquidity to the organization. These policies should not be limited to the subsidiary lead bank, since a parent company serving as a funding vehicle for nonbank subsidiaries can have substantial exposure through its advances to these subsidiaries. The holding company’s policies should include some measure of the liquidity of the assets in the nonbank subsidiary (determined partially by the quality of these assets), for comparison against the parent’s source of funding. The policies should quantify the maximum degree of exposure in the organization that is considered acceptable to management. The reporting in this area should clearly indicate the current exposure and thus the potential for liquidity problems.

The holding company’s policies addressing interest rate futures and forwards should be consistent with the Board’s policy in this area. Involvement in this activity should be geared towards hedging against interest rate movements rather than speculating that interest rates will either increase or decrease. The policy

BHC Supervision Manual  December 1992  Page 1
should specify what use of futures and forwards is considered appropriate.

3. **Funding of Nonbank Subsidiaries**—The parent company should have policies addressing how nonbank subsidiaries fund their activities. If the subsidiaries obtain their own funding, market discipline may be a factor in controlling the activities of the subsidiaries. However, the parent cannot rely solely on market discipline due to the risks from interdependence. The parent company is still responsible under the centralized accountability approach to approve and supervise the subsidiaries’ funding policies.

If the subsidiaries obtain funds from the parent, the risk from interdependence is increased. The subsidiary is less able to stand alone since it is reliant on the parent for funding. If the parent capitalizes the nonbank subsidiary through borrowed funds, bank capital is put at risk due to the increased exposure of the organization. If the borrowing results in **double-leverage**, the risk is increased since less “hard” capital is available for support. The parent’s policy on advances to nonbank subsidiaries should address this additional risk by specifying the level of borrowings that is considered acceptable relative to nonbank capital and consolidated capital. The terms of the borrowings should also be specified, and should be consistent with the company’s asset/liability management policies. The policy should include contingency measures to be used in the event of liquidity problems.

### 2010.1.1 INSPECTION OBJECTIVES

1. To determine if the parent’s funding policies adequately address funding risks to the organization.
2. To determine if the implementation of the parent’s policies is effective in controlling funding risks to the organization.
3. To determine if the parent is adequately informed of actual funding practices and decisions.

### 2010.1.2 INSPECTION PROCEDURES

1. Review the funding policies at the parent and the subsidiary levels.
2. Determine how effectively the policies are implemented throughout the organization.
3. Discuss with management the funding practices of each subsidiary and any interorganizational funding.
Supervision of Subsidiaries
(Loan Administration and Lending Standards)  Section 2010.2

WHAT’S NEW IN THIS REVISED SECTION

Effective January 2016, section 2010.2.5 is revised to reference SR-15-17, “Interagency Statement on Prudent Risk Management for Commercial Real Estate Lending” and its attachment. Refer to the Board’s December 18, 2015, press release.

2010.2.05 LOAN ADMINISTRATION

The examiner should make a qualitative assessment of the parent’s supervision and control of subsidiary lending activities. The System’s ability to evaluate the effectiveness of a company’s supervision and control of subsidiary lending activities can be strengthened not only by evaluating the parent’s role in light of efficiency and operating performance, but also by evaluating the quality of control and supervision.

In order to assess quality, there must be a standard measure against which a company’s policies can be evaluated. Establishing the minimum areas that a company’s loan-administration policies should address will create a standard that will aid in evaluating the quality of the company’s control and its supervision of that activity.

Current inspection procedures include the testing of subsidiaries’ compliance with a parent company’s policies. This section summarizes the parent’s responsibilities with regard to supervising subsidiary lending. It defines the internal and external factors that should be considered in the formulation of loan policies and a strategic plan. It also outlines the minimum elements that the lending policies should include.

Internal and external factors that a banking organization should consider when formulating its loan policies and strategic plan are—

1. the size and financial condition of the credit-extending subsidiaries,
2. the expertise and size of the lending staff,
3. the need to avoid undue concentrations of risk,
4. compliance with all respective laws and regulations, and
5. market conditions.

Following are the components that generally form the basis for a sound loan policy:

1. Geographic limits. The trade area should be clearly defined and loan officers should be fully aware of specific geographic limitations for lending purposes. Such a policy avoids approval of loans to customers outside the trade area in opposition to primary objectives. The primary trade area should be distinguished from any secondary trade area so that emphasis for each trade area may be properly placed.

2. Distribution of loans by category. Limitations based on aggregate percentages of total loans in commercial, real estate, consumer, and other categories are common. Such policies are beneficial; however, they should contain provisions for deviations that are approved by the directorate or a committee. This allows credit to be distributed in relation to the market conditions of the trade area. During times of heavy loan demand in one category, an inflexible loan-distribution policy would cause that category to be slighted in favor of another. Deviations from loan distributions by category may be beneficial but are appropriate only until the risk of further increasing the loan concentration outweighs the benefits to be derived from expanding the portfolio to satisfy credit demand. See component 11, “Concentrations of credit,” below.

3. Types of loans. The lending policy should state the types of loans that will be made and the maximum amount for each type of loan. The policy should also set forth guidelines to follow in making specific loans. Decisions about the types of loans to be granted should be based on the expertise of the lending officers, the deposit structure, and anticipated creditworthy demands of the trade area. Sophisticated credits or loans secured by collateral that require more than normal supervision should be avoided unless or until there are the necessary personnel to properly administer them. Information systems and internal controls should be in place to identify, monitor, and control the types of credit that have resulted in abnormal loss. The amount of real estate and other types of term loans should be considered in rela-
4. Maximum maturities. The loan policy should call for underwriting standards that ensure realistic repayment plans. Loan maturities should be set by taking into consideration the anticipated source of repayment, the purpose of the loan, the type of property, and the useful life of the collateral. For term loans, the lending policy should state the maximum time within which loans may be amortized. Specific procedures should be developed for situations requiring balloon payments and/or modification of the original terms of the loan. If a clean-up period¹

5. Loan pricing. Rates on various loan types must be sufficient to cover the cost of funds loaned and the servicing of the loan, including overhead and possible losses, while providing an acceptable margin of profit over the long run. These costs must be known and taken into consideration before rates are established. Periodic reviews should be conducted to determine whether adjustments are necessary to reflect changes in costs or competitive factors. Specific guidelines for other factors, such as compensating balances and commitment fees, are also germane to loan pricing.

6. Loan amount to appraised value. The policy should outline where the responsibility for appraisals rests and should define formal, standard appraisal procedures, including procedures for possible reappraisals in case of renewal or extension. Acceptable types of appraisals and limits on the dollar amount and the type of property that personnel are authorized to appraise should be outlined. Circumstances requiring appraisals by qualified independent appraisers should be described. The maximum ratio of the loan amount to appraised value,² the method of valuation, and differences for various types of property should be detailed. The policy should contain a schedule listing the downpayment requirements for financing consumer goods and business equipment.

7. Loan amount to market value of pledged securities. In addition to the legal restrictions imposed by Federal Reserve Regulation U, the lending policy should set forth margin requirements for all types of securities acceptable as collateral. Margin requirements should be related to the marketability of the security (for example, closely held, over-the-counter, actively traded). The policy should assign responsibility and set a frequency for the periodic pricing of the collateral.

8. Financial information. Extension of credit on a safe and sound basis depends on complete and accurate information regarding the borrower’s credit standing. One possible exception is when the loan is predicated on readily marketable collateral, the disposition of which was originally designated as the source of repayment for the advance. Current and complete financial information is necessary, including secondary sources of repayment, not only at the inception of the loan, but also throughout the term of the advance. The lending policy should define the financial-statement requirements for businesses and individuals at various borrowing levels and should include requirements for audited, unaudited, fiscal, interim, operating, cash-flow, and other statements.³ It should include external credit checks required at various intervals. The requirements for financial information should be defined in such a way that any credit-data exception would be a clear violation of the lending policy.

9. Limits and guidelines for loan participations. Section 2020.2 provides significant information regarding intercompany loan participations between holding company affiliates. The lending policy should place limits on the amount of loans purchased from any one source and also place an

¹ A “clean-up period” is when a borrower is asked to repay the entire balance of a credit line and to refrain from further borrowing for a specified period of time.

² This is often referred to as the loan-to-value ratio.

³ On March 30, 1993, federal bank regulators set forth an expanded interagency policy to encourage small-business lending. Under the policy, banks and thrifts that are well or adequately capitalized and that are rated CAMELS 1 or 2 may make small-business and agricultural loans, the aggregate value of which cannot exceed 20 percent of their total capital. To qualify for the exemption, each loan may not exceed the lesser of $900,000 or 3 percent of the institution’s total capital. Further, the loans selected for this exemption by the institution may not be delinquent as of the selection date and may not be made to an insider. The loans must be separately listed or have an accounting segregation from other loans in the portfolio. They “will be evaluated solely on the basis of performance and will be exempt from examiner criticism of documentation.” The institution’s records must include an evaluation of its ability to collect the loan in determining the adequacy of its allowance for loan and lease losses. If a loan becomes more than 60 days past due, it may be reviewed and classified by an examiner based on its credit quality, not the level of loan documentation.
aggregate limit on such loans. The policy should set forth credit standards for any loan purchased as well as require that complete documentation be maintained by the purchasing entities. The policy should define the extent of contingent liability, holdback and reserve requirements, and the manner in which the loan will be handled and serviced.

10. Loans to insiders. Lending policies should address loans to insiders. Such policies should incorporate applicable regulatory
limitations (for example, Federal Reserve Regulation O) and should also address situations in which it would be prudent to exercise certain restrictions even though not explicitly required to do so by regulation (for example, loans by nonbank subsidiaries to insiders).

11. Concentrations of credit. Credit concentrations may be defined as loans collateralized by a common security; loans to one borrower or related group of borrowers; loans dependent upon a particular agricultural commodity; aggregate loans to major employers, their employees, and their major suppliers; loans within industry groups; out-of-territory loans; aggregate amount of paper purchased from any one source; or those loans that often have been included in other homogeneous risk groupings. Credit concentrations, by their nature, are dependent on common key factors, and when weaknesses develop, they have an adverse impact on each individual loan making up the concentration.

In identifying asset concentrations, commercial real estate loans and residential real estate loans can be viewed separately when their performance is not subject to similar economic or financial risks. In the same vein, commercial real estate development loans need not necessarily be grouped with residential real estate development loans, especially when the residential developer has firm, reliable purchase contracts for the sale of the homes upon completion. Even within the commercial development and construction sector, distinctions for concentration purposes may be made, when appropriate, between those loans that have firm take-out commitments and those that do not. Groups or classes of real estate loans should, of course, be combined and viewed as concentrations when they do share significant common characteristics and are similarly affected by adverse economic, financial, or business developments.

Banking organizations should establish and adhere to policies that control “concentration risk.” The lending policy should address the risk involved in various concentrations and indicate those that should be avoided or limited. However, before concentrations can be limited or reviewed, accounting systems must be in place to allow for the retrieval of information necessary to determine and monitor concentrations. The lending policy should provide for frequent monitoring and reporting of all concentrations.

Banking organizations with asset concentrations are expected to put in place effective internal policies, systems, and controls to monitor and manage this risk. Concentrations that involve excessive or undue risks require close scrutiny and should be reduced over a reasonable period of time. When there is a need to reduce asset concentrations, banking organizations are normally expected to develop a plan that is realistic, prudent, and achievable in view of the particular circumstances and market conditions. In situations where concentration levels have built up over an extended period, it may take time—in some cases several years—to achieve a more balanced and diversified portfolio. What is critical is that adequate systems and controls are in place for reducing undue or excessive concentrations in accordance with a prudent plan, along with strong credit policies and loan-administration standards to control the risks associated with new loans, and adequate capital to protect the institution while its portfolio is being restructured.

Institutions that have in place effective internal controls to manage and reduce concentrations over a reasonable period of time need not automatically refuse credit to sound borrowers simply because of the borrower’s industry or geographic location. This principle applies to prudent loan renewals and rollovers, as well as to new extensions of credit that are underwritten in a sound manner.

The purpose of a lending organization’s policies should be to improve the overall quality of its portfolio. The replacement of unsound loans with sound loans can enhance the quality of a portfolio, even when concentration levels are not reduced.

12. Refinancing or renewal of loans. Refinancings or renewals should be structured in a manner that is consistent with sound banking, supervisory, and accounting practices, and in a manner that protects the banking organization and improves its prospects for collecting or recovering on the asset.

13. Loan origination and loan approvals. The policy should establish loan-origination and loan-approval procedures, both generally and by size and type of loan. The loan limitations for all lending officers should be
set accordingly. Lending limits should also be set for group authority, allowing a combination of officers or a committee to approve larger loans. Reporting procedures and the frequency of committee meetings should also be defined. The loan policy should further establish identification, review, and approval procedures for exception loans, including real estate and other loans with loan-to-value percentages in excess of supervisory limits.4

14. **Loan-administration procedures for loans secured by real estate.** The loan policy should establish loan-administration procedures covering documentation, disbursement, collateral administration and inspection, escrow administration, collection, loan payoffs, and loan review. Documentation procedures would specify, among other things, the types and frequency of financial statements and the requirements for verifying information provided by the borrower. They would also cover the type and frequency of collateral evaluations (appraisals and other estimates of value). In addition, loan-administration policies should address procedures for servicing and participation agreements and other loan-administration procedures such as those for claims processing (for example, seeking recovery on defaulted loans that are partially or fully guaranteed by a government entity or insurance program).

15. **Collection and foreclosure and the reporting and disclosure of delinquent obligations and charge-offs.** The lending policy should define delinquent obligations, provide guidelines on when loans are to be placed on nonaccrual or to be restructured, dictate appropriate procedures for reporting to senior management and to the directorate past-due credits, and provide appropriate guidance on the extent of disclosure of such credits. The policy should establish and require a follow-up collection procedure that is systematic and progressively stronger and should set forth guidelines (where applicable) for close surveillance by a loan work-out division. It should also address extensions and other forms of forbearance, the acceptance of deeds in lieu of foreclosure, and the timing of foreclosure. The policy must be consistent with supervisory instructions in the financial statements of condition and income for financial institutions and BHCs (bank call report and the FR Y-9C and the other FR Y-series reports). Guidelines should be established to ensure that all accounts are presented to and reviewed by management for charge-off after a stated period of delinquency. See section 2065.1 for disclosure, accounting, and reporting issues related to nonaccrual loans and restructured debt.

16. **Reserve for loan losses and provisions for loan losses.** The policy should set forth the parameters that management considers in determining an appropriate level of loan-loss reserves as well as provisions necessary to attain this level. Because an analysis of the allowance for loan and lease losses (ALLL) requires an assessment of the relative credit risks in the portfolio, many banking organizations, for analytical purposes, attribute portions of the ALLL to loans and other assets classified “substandard” by management or a supervisory agency. Management may do this because it believes, based on past history or other factors, that there may be unidentified losses associated with loans classified substandard in the aggregate.

Furthermore, management may use this as an analytical approach in estimating the total amount necessary for the ALLL and in comparing the ALLL to various categories of loans over time. As a general rule, an individual loan classified substandard may remain in an accrual status as long as the regulatory reporting requirements for accrual treatment are met, even when an attribution of the ALLL has been made.

17. **Other.** The policy should address the handling of exceptions to the policy as well as provide for adherence to the policy via internal audits, centralized loan review, and/or “director’s examinations.” The policy should be reviewed annually to determine if it continues to be compatible with the BHC’s objectives as well as market conditions.

4. For subsidiaries that are insured depository institutions, real estate loans that are in excess of supervisory loan-to-value limits are to be identified in the subsidiaries’ records. The aggregate amount of these loans is to be reported quarterly to the depository institution’s board of directors.
real estate lending, along with the FDIC, OCC, and OTS, as mandated by section 304 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA). The Board’s Regulation H (12 C.F.R. 208, Membership of State Banking Institutions in the Federal Reserve System) was amended to implement the uniform real estate lending standards for state member banks. Although the Board did not directly apply the regulation to bank holding companies and their nonbank subsidiaries, those entities are expected to conduct and to supervise real estate lending activities prudently, consistent with safe and sound lending standards.

The agencies’ regulations require that each insured depository institution adopt and maintain comprehensive written real estate lending policies appropriate to the institution and the nature and scope of its lending activities. Lending policies must be reviewed and approved by the institution’s board of directors at least annually. The policies are to include standards for loan diversification and prudent underwriting as well as loan-administration procedures and documentation, approval, and reporting requirements. Depository institutions’ policies are to reflect consideration of the appendix to the banking agencies’ regulations, “Interagency Guidelines for Real Estate Lending Policies.” The guidelines are designed to help an institution formulate and maintain real estate lending policy that is appropriate to its size and the nature and scope of its operations, as required by the regulations. These guidelines are generally comparable to the inspection guidance provided in this section.

2010.2.2 LENDING STANDARDS FOR COMMERCIAL LOANS

The lending decision is properly that of the senior management and boards of directors of banking institutions, and not of their supervisory agencies. However, in fulfilling their roles, directors and senior managers have the obligation to monitor lending practices and to ensure that their policies are enforced and that lending practices generally remain within the overall ability of the institution to manage. The following subsections describe certain sound practices regarding lending standards and credit-approval processes for commercial loans.5

Sound lending practices address formal credit policies, formal credit-staff approval of transactions, loan-approval documentation, the use of forward-looking tools in the approval process, and management and lender information systems. In addition to evaluating adherence to these sound practices during inspections, supervisory personnel and examiners may wish to discuss these standards with loan portfolio managers at institutions where a full credit review is being performed. Senior management should be made aware of the potential for deterioration in the loan portfolio if lending discipline is not maintained, whether from inadequate assessment or communication of lending risks, incomplete adherence to prudent lending standards that reflect the risk appetite of the board of directors, or both.

Examiners should evaluate whether adequate internal oversight exists and whether institution management has timely and accurate information. As always, examiners should also discuss matters of concern with the institution and include them in their reports of inspection, even if cited practices and problem loans have not yet reached harmful or criticized levels. Such cautionary remarks help to alert institution management to potential or emerging sources of concern and may help to deter future problems. Any practices that extend beyond prudent bounds should be promptly corrected. See SR-98-18.

2010.2.2.1 Sound Practices in Loan Standards and Approval

Certain sound practices in lending can help to maintain strong credit discipline and ensure that an institution’s decision to take risk in lending is well informed, balanced, and prudent. Several of these sound practices are listed and described below.

2010.2.2.1.1 Formal Credit Policies

The Federal Reserve and other supervisory authorities have long stressed the importance of formal written credit policies in a sound credit-risk-management process. Such policies can provide crucial discipline to an institution’s lending process, especially when the institution’s standards are under assault due to intense competition for loans. They can serve to communicate formally an institution’s appetite for

5. This guidance is derived, in part, from the June 1998 Federal Reserve supervisory staff report, “The Significance of Recent Changes in Bank Lending Standards: Evidence from the Loan Quality Assessment Project.”
credit risk in a manner that will support sound lending decisions, while focusing appropriate attention on loans being considered that diverge from approved standards.

In developing and refining loan policies, some institutions specify “guidance minimums” for financial performance ratios that apply to certain types of loans or borrowers (for example, commercial real estate). Such guidance makes explicit that loans not meeting certain financial tests (based on current performance, projected future performance, or both) should in general not be made, or alternatively should only be made under clearly specified situations. Institutions using this approach most effectively tend to avoid specifying standards for broad ranges of lending situations and instead focus on those areas of lending most vulnerable to excessive optimism, or where the institution expects loan volume to grow most significantly.

Formal policies can also provide lending discipline by clearly stating the type of covenants to be imposed for specific loan types. When designed and enforced properly, financial covenants can help significantly to reduce credit losses by communicating clear thresholds for financial performance and potentially triggering corrective or protective action at an early stage. Often, however, loan-approval documents do not describe the key financial covenants even when discussions with institutional staff disclose that such covenants are present. The staff and/or management of many institutions acknowledge that they have a “common practice” of imposing certain types of covenants on various types of loans. They indicate that such a practice is well known to lenders and others at the institution (but not articulated in their written loan policies), so that describing the actual covenants in the loan-approval document would be redundant. However, management and other approving authorities within an institution then receive no formal positive indication that “common practice” controls have been imposed and no indication of the level of financial performance that the covenants require of the borrower. As such, management and other approving authorities may be inadequately informed as to the risks and controls associated with the loan under consideration. In contrast, loan policies can create a clear expectation that (1) all key covenants should be described in loan-approval documents, (2) certain covenant types should be applied to all loans meeting certain criteria, and (3) explicit approval of any exception to these policies is necessary if such covenant requirements are to be waived.

Internal processes and requirements for underwriting decisions should be consistent with the nature, size, and complexity of the banking organization’s (BO) activities. Departures from underwriting policies and standards, however, can have serious consequences for BOs of all sizes. Internal controls and credit reviews should be established and maintained to ensure compliance with those policies and procedures. When there are continued favorable economic and financial conditions, compliance monitoring of the BO’s lending policies and procedures needs to be diligent to make certain that there is no undue reliance on optimistic outlooks for borrowers. Undue reliance on continued favorable economic conditions can be demonstrated by the following characteristics:

1. dependence on very rapid growth in a borrower’s revenue as the “most likely” case
2. heavy reliance on favorable collateral appraisals and valuations that may not be sustainable over the longer term
3. greater willingness to make loans without scheduled amortization prior to the loan’s final maturity
4. willingness to readily waive violations of key covenants, to release collateral or guarantee requirements, or even to restructure loan agreements, without corresponding concessions on the part of the borrower, on the assumption that a favorable environment will allow the borrower to recover quickly

Among the adverse effects of undue reliance on a continued favorable economy is the possibility that problem loans will not be identified properly or in a timely manner. Timely identification of problem loans is critical for providing a full awareness of the BO’s risk position, informing management and directors of that position, taking steps to mitigate risk, and providing a proper assessment of the adequacy of the allowance for credit losses and capital. Similarly, an overreliance on continued ready access to financial markets on favorable terms can originate from the following situations:

---

1. explicit reliance on future public market debt or equity offerings, or on other sources of refinancing, as the ultimate source of principal repayment, which presumes that market liquidity and the market’s appetite for such instruments will be favorable at the time that the facility is to be repaid.

2. ambiguous or poorly supported analysis of the sources of repayment of the loan’s principal, together with implicit reliance for repayment on some realization of the implied market valuation of the borrower (for example, through refinancing, asset sales, or some form of equity infusion), which also assumes that markets will be receptive to such transactions at the time that the facility is to be repaid.

3. measuring a borrower’s leverage (for example, debt-to-equity) based solely on the market capitalization of the firm without regard to “book” equity, thereby implicitly assuming that currently unrealized appreciation in the value of the firm can be readily realized if needed.

4. more generally, extending loans with a risk profile that more closely resembles the profile of an equity investment, under circumstances that leave additional credit or default as the borrower’s only resort if favorable expectations are not met.

Banking organizations that become lax in adhering to established loan-underwriting policies and procedures, as a result of overreliance on favorable economic and financial market conditions, may have significant credit concentrations that are at great risk to possible economic and financial market downturns. See SR-99-23.

Independent credit staff can also support sound lending practice by maintaining complete and centralized credit files that contain all key documents relevant to each loan, including complete loan-approval packages. Such files ensure that decisions are well documented and avoid

7. For example, loan officers might be compensated for bringing loan business into the institution. Independent credit professionals, however, would be another person who would not be compensated for bringing any loan business into the institution. That person would, however, serve as a quality control monitor that would have the independent authority to reject a loan(s) and to ensure that the institution’s risk appetite and credit standards are not exceeded.
2010.2.2.1.3 Loan-Approval Documents

Institutions can help ensure a careful loan-approval decision by requiring thorough and standardized loan-approval documents. Thoroughness can be enhanced by requiring formal analysis of the borrower’s financial condition, key characteristics and trends in the borrower’s industry, information on collateral and its valuation, as well as financial analysis of the entities providing support or guarantees and formal forward-looking analyses appropriate to the size and type of loan being considered. Incorporating such elements into standardized formats and requiring that analysis and supporting commentary be complete and in adequate depth allows approving authorities access to all relevant information on the risk profile of the borrower. Loan-approval documents should also include all material details on the proposed loan agreement itself, including key financial covenants. Standardization of formats, and to some extent content, can be useful in ensuring that all relevant information is provided to management and other approving authorities in a manner that is understandable. Standard formats also draw attention to cases in which certain key information is not presented.

One area of particular interest in this regard is analysis and commentary on participations in syndicated loans. While it may be tempting to rely on the analysis and documentation provided by the agent institution to the transaction, it has been long-standing Federal Reserve policy that participating institutions should conduct their own analysis of the borrower and the transactions, particularly if the risk appetite or portfolio characteristics of the agent differs from that of the participating institution.

2010.2.2.1.4 Use of Forward-Looking Tools in the Approval Process

During continued periods of favorable economic conditions, institutions should guard against complacency and, in particular, the temptation to base expectations of a borrower’s future financial performance almost exclusively on that borrower’s recent performance. In making lending decisions, and in evaluating their loan portfolio, institutions should give sufficient consideration to the potential for negative events or developments that might limit the ability of borrowers to fulfill their loan obligations. Unforeseen changes in interest rates, sales revenue, and operating expenses can have material and adverse effects on the ability of many borrowers to meet their obligations. In prior decades, inadequate attention to these possibilities during the underwriting process contributed significantly to asset-quality problems in the system. Also, sudden turmoil within various countries can result in quick changes in currency valuations and economic conditions.

Examiners should evaluate the frequency and adequacy with which institutions conduct forward-looking analysis of borrower financial performance when considering an institution’s credit-risk-management process. Formal use of forward-looking financial analysis in the loan-approval process, and financial projections in particular, can be important in guarding against such complacency, especially when financial institutions are competing intensely to attract borrowers. Such projections, if they include less favorable scenarios for the key determinants of the borrower’s financial performance, can help to contain undue optimism and ensure that management and other approving authorities within the organization are formally presented with a robust analysis of the risks associated with each credit. They also provide credit staff and other risk-management personnel with information that is important for ensuring adherence to the institution’s lending standards and overall appetite for loan risk.

The formal presentation of financial projections and/or other forms of forward-looking analyses of the borrower is important in making explicit the conditions required for a loan to perform and in communicating the vulnerabilities of the transaction to those responsible for approving loans. Analyses also provide a useful benchmark against which institutions can assess the borrower’s future performance. Although it may be tempting to avoid analyzing detailed projections for smaller borrowers, such as middle-market firms, these customers may collectively represent a significant portion of the institution’s loan portfolio. As such, applying formal forward-looking analysis even on a basic level assists the institution in identifying and managing the overall risk of its lending activities.

Detailed analysis of industry performance and trends can be a useful supplement to such analyses. Such projections have the most value in maintaining credit discipline when, rather than
only describing the single “most likely” scenario for future events, they characterize the kind of negative events that might impair the performance of the loan in the future.

2010.2.2.1.5 Stress Testing of the Borrower’s Financial Capacity

The analysis of alternative scenarios, or “stress testing,” should generally focus on the key determinants of performance for the borrower and the loan, such as the level of interest rates, the rate of sales or revenue growth, or the rate at which expense reductions can be realized. Meaningful stress testing of the prospective borrower’s ability to meet its obligations is a vital part of a sound credit decision. Failure to recognize the potential for adverse events—whether specific to the borrower or its industry (for example, a change in the regulatory climate or the emergence of new competitors) or, alternatively, to the economy as a whole (for example, a recession)—can prove costly to a banking organization.

Mechanical reliance on threshold financial ratios (and the “cushion” they imply) alone is generally not sufficient, particularly for complex loans and loans to leveraged borrowers or others that must perform exceptionally well to meet their financial obligations successfully. Scenario analysis specific to the borrower, its industry, and its business plan is critical to identify the key risks of a loan. Such an analysis should have a significant influence on the decision to extend credit and, if credit is extended, on the decisions as to the appropriate loan size, repayment terms, collateral or guarantee requirements, financial covenants, and other elements of the loan’s structure.

When properly conducted, meaningful stress testing can include assessing the effect the following situations or events will have on the borrower:

1. unexpected reductions in revenue growth or reversals, including shocks to revenue of the type and magnitude that would normally be experienced during a recession
2. unfavorable movements in market interest rates, especially for firms with high debt burdens
3. unplanned increases in capital expenditures due to technological obsolescence or competitive factors
4. deterioration in the value of collateral, guarantees, or other potential sources of principal repayment
5. adverse developments in key product or input markets
6. reversals in, or the borrower’s reduced access to, public debt and equity markets

Proper stress testing typically incorporates an evaluation of the borrower’s alternatives for meeting its financial obligations under each scenario, including asset sales, access to alternative funding or refinancing, or ability to raise new equity. In particular, the evaluation should focus not only on the borrower’s ability to meet near-term interest obligations, but also on its ability to repay the principal of the obligation. See SR-99-23.

2010.2.2.1.6 Management and Lender Information

Management information systems that support the loan-approval process should clearly indicate the composition of the institution’s current portfolio or exposure to allow for consideration of whether a proposed new loan—regardless of its own merits—might affect this composition sufficiently to be inconsistent with the institution’s risk appetite. In particular, institutions active in commercial real estate lending should know the nature and magnitude of aggregate exposure within relevant subclasses, such as by the type of property being financed (that is, office, residential, or retail).

In addition to portfolio information, institutions should be encouraged to acquire or develop information systems that provide ready access for lenders and credit analysts to information sources that can support and enhance the financial analysis of proposed loans. Depending on the nature of an institution’s borrowers, appropriate information sources may include industry financial data, economic data and forecasts, and other analytical tools such as bankruptcy scoring and default-probability models.

2010.2.3 LEVERAGED LENDING

Leveraged lending has been a financing vehicle for transactions involving mergers and acquisitions, business recapitalizations, and business expansions. It is an important type of financing

---

8. For the purpose of this guidance, references to leveraged finance, or leveraged transactions encompass the entire debt
for national and global economies, and the U.S. financial industry plays an integral role in making credit available and syndicating that credit to investors. Leveraged transactions are characterized by a degree of financial leverage that may significantly exceed industry norms as measured by ratios such as debt-to-assets, debt-to-equity, cash flow-to-total debt, or other ratios and standards that are unique to a particular industry. Leveraged borrowers, however, can have a diminished ability to respond to changing economic conditions or unexpected events, creating significant implications for an institution’s overall credit-risk exposure and challenges for bank risk-management systems.

Leveraged lending activities can be conducted in a safe-and-sound fashion if pursued with a risk-management structure that provides for the appropriate underwriting, pricing, monitoring, and controls. Comprehensive credit analysis processes, frequent monitoring, and detailed portfolio reports are needed to better understand and manage the inherent risk in leveraged portfolios. Sound valuation methodologies must be used in addition to ongoing stress testing and monitoring.

Financial institutions should ensure they do not unnecessarily heighten risks by originating and then distributing poorly underwritten loans. For example, a poorly underwritten leveraged loan that is pooled with other loans or is participated with other institutions may generate risks for the financial system. The leveraged lending guidance that follows is designed to assist financial institutions in providing leveraged lending to creditworthy borrowers in a safe-and-sound manner.

On March 21, 2013, the Federal Reserve Board, along with the Office of the Comptroller of the Currency (OCC) and the Federal Deposit Insurance Corporation (FDIC), issued “Interagency Guidance on Leveraged Lending.” The statement provides guidance about risk rating leveraged-financed loans. See SR-13-3 and its attachment.

### 2010.2.3.1 Interagency Guidance on Leveraged Lending

The vast majority of community banks should not be affected by this guidance, as they have limited involvement in leveraged lending. Community and smaller institutions that are involved in leveraged lending activities should discuss with their primary regulator the implementation of cost-effective controls appropriate for the complexity of their exposures and activities.

### 2010.2.3.1.1 Risk-Management Framework

Given the high-risk profile of leveraged transactions, financial institutions engaged in leveraged lending should adopt a risk-management framework that has an intensive and frequent review and monitoring process. The framework should have as its foundation written risk objectives, risk-acceptance criteria, and risk controls. A lack of robust risk-management processes and controls at a financial institution with significant leveraged lending activities could contribute to supervisory findings that the financial institution is engaged in unsafe and unsound banking practices. This guidance outlines the agencies’ minimum expectations on the following topics:

- Leveraged Lending Definition
- General Policy Expectations
- Participations Purchased
- Underwriting Standards
- Valuation Standards
- Pipeline Management
- Reporting and Analytics
- Risk Rating Leveraged Loans
- Credit Analysis
- Problem-Credit Management
- Deal Sponsors
- Credit Review

9a. This guidance augments previously issued supervisory statements on sound credit-risk management. Refer to SR-98-18, “Lending Standards for Commercial Loans.”

9b. The agencies do not intend that a financial institution that originates a small number of less complex, leveraged loans should have policies and procedures commensurate with a larger, more complex leveraged loan origination business. However, any financial institution that participates in leveraged lending transactions should follow applicable supervisory guidance provided in “Participations Purchased” of this section.
2010.2.3.1.2 Leveraged Lending
Definition

The policies of financial institutions should include criteria to define leveraged lending that are appropriate to the institution. For example, numerous definitions of leveraged lending exist throughout the financial services industry and commonly contain some combination of the following:

- proceeds used for buyouts, acquisitions, or capital distributions
- transactions where the borrower’s Total Debt divided by EBITDA (earnings before interest, taxes, depreciation, and amortization) or Senior Debt divided by EBITDA exceed 4.0 * EBITDA or 3.0 * EBITDA, respectively, or other defined levels appropriate to the industry or sector
- a borrower recognized in the debt markets as a highly leveraged firm, which is characterized by a high debt-to-net-worth ratio
- transactions when the borrower’s post-financing leverage, as measured by its leverage ratios (for example, debt-to-assets, debt-to-net-worth, debt-to-cash flow, or other similar standards common to particular industries or sectors), significantly exceeds industry norms or historical levels

A financial institution engaging in leveraged lending should define it within the institution’s policies and procedures in a manner sufficiently detailed to ensure consistent application across all business lines. A financial institution’s definition should describe clearly the purposes and financial characteristics common to these transactions, and should cover risk to the institution from both direct exposure and indirect exposure via limited-recourse financing secured by leveraged loans, or financing extended to financial intermediaries (such as conduits and special purpose entities (SPEs)) that hold leveraged loans.

2010.2.3.1.3 General Policy Expectations

A financial institution’s credit policies and procedures for leveraged lending should address the following:

- Identification of the financial institution’s risk appetite, including clearly defined amounts of leveraged lending that the institution is willing to underwrite (for example, pipeline limits) and is willing to retain (for example, transaction and aggregate hold levels). The institution’s designated risk appetite should be supported by an analysis of the potential effect on earnings, capital, liquidity, and other risks that result from these positions, and should be approved by its board of directors.
- A limit framework that includes limits or guidelines for single obligors and transactions, aggregate hold portfolio, aggregate pipeline exposure, and industry and geographic concentrations. The limit framework should identify the related management-approval authorities and exception-tracking provisions. In addition to notional pipeline limits, the agencies expect that financial institutions with significant leveraged transactions will implement underwriting-limit frameworks that assess stress losses, flex terms, economic capital usage, and earnings at risk or that otherwise provide a more nuanced view of potential risk.
- Procedures for ensuring the risks of leveraged lending activities are appropriately reflected in an institution’s allowance for loan and lease losses (ALLL) and capital adequacy analyses.
- Credit and underwriting approval authorities, including the procedures for approving and documenting changes to approved transaction structures and terms.
- Guidelines for appropriate oversight by senior management, including adequate and timely reporting to the board of directors.
- Expected risk-adjusted returns for leveraged

9c. This guidance is not meant to include asset-based loans unless such loans are part of the entire debt structure of a leveraged obligor. Asset-based lending is a distinct segment of the loan market that is tightly controlled or fully monitored, secured by specific assets, and usually governed by a borrowing formula (or “borrowing base”).
9d. Cash should not be netted against debt for purposes of this calculation.
9e. The designation of a financing as “leveraged lending” is typically made at loan origination, modification, extension, or refinancing. “Fallen angels” or borrowers that have exhibited a significant deterioration in financial performance after loan inception and subsequently become highly leveraged would not be included within the scope of this guidance, unless the credit is modified, extended, or refinanced.

9f. Flex terms allow the arranger to change interest-rate spreads during the syndication process to adjust pricing to current liquidity levels.
transactions.

- Minimum underwriting standards (see the “Underwriting Standards” section below).
- Effective underwriting practices for primary loan origination and secondary loan acquisition.

2010.2.3.1.4 Participations Purchased

Financial institutions purchasing participations and assignments in leveraged lending transactions should make a thorough, independent evaluation of the transaction and the risks involved before committing any funds. They should apply the same standards of prudence, credit assessment and approval criteria, and in-house limits that would be employed if the purchasing organization were originating the loan. At a minimum, policies should include requirements for

- obtaining and independently analyzing full credit information both before the participation is purchased and on a timely basis thereafter;
- obtaining from the lead lender copies of all executed and proposed loan documents, legal opinions, title insurance policies, Uniform Commercial Code (UCC) searches, and other relevant documents;
- carefully monitoring the borrower’s performance throughout the life of the loan; and
- establishing appropriate risk-management guidelines as described in this document.

2010.2.3.1.5 Underwriting Standards

A financial institution’s underwriting standards should be clear, written, and measurable, and should accurately reflect the institution’s risk appetite for leveraged lending transactions. A financial institution should have clear underwriting limits regarding leveraged transactions, including the size that the institution will arrange both individually and in the aggregate for distribution. The originating institution should be mindful of reputational risks associated with poorly underwritten transactions, as these risks may find their way into a wide variety of investment instruments and exacerbate systemic risks within the general economy. At a minimum, an institution’s underwriting standards should consider the following:

- Whether the business premise for each transaction is sound and the borrower’s capital structure is sustainable regardless of whether the transaction is underwritten for the institution’s own portfolio or with the intent to distribute. The entirety of a borrower’s capital structure should reflect the application of sound financial analysis and underwriting principles.
- A borrower’s capacity to repay and the ability to de-lever to a sustainable level over a reasonable period. As a general guide, institutions also should consider whether base-case cash-flow projections show the ability to fully amortize senior secured debt or repay a significant portion of total debt over the medium term. Also, projections should include one or more realistic downside scenarios that reflect key risks identified in the transaction.
- Expectations for the depth and breadth of due diligence on leveraged transactions. This should include standards for evaluating various types of collateral, with a clear definition of credit-risk-management’s role in such due diligence.
- Standards for evaluating expected risk-adjusted returns. The standards should include identification of expected distribution strategies, including alternative strategies for funding and disposing of positions during market disruptions, and the potential for losses during such periods.
- The degree of reliance on enterprise value and other intangible assets for loan repayment, along with acceptable valuation methodologies, and guidelines for the frequency of periodic reviews of those values.
- Expectations for the degree of support pro-

---

9h. In general, the base-case cash-flow projection is the borrower or deal sponsor’s expected estimate of financial performance using the assumptions that are deemed most likely to occur. The financial results for the base case should be better than those for the conservative case but worse than those for the aggressive or upside case. A financial institution may adjust the base-case financial projections, if necessary. The most realistic financial projections should be used when measuring a borrower’s capacity to repay and de-lever.
vided by the sponsor (if any), taking into consideration the sponsor’s financial capacity, the extent of its capital contribution at inception, and other motivating factors. Institutions looking to rely on sponsor support as a secondary source of repayment for the loan should be able to provide documentation, including, but not limited to, financial or liquidity statements, showing recently documented evidence of the sponsor’s willingness and ability to support the credit extension.

- Whether credit-agreement terms allow for the material dilution, sale, or exchange of collateral or cash-flow-producing assets without lender approval.
- Credit-agreement covenant protections, including financial performance (such as debt-to-cash flow, interest coverage, or fixed-charge coverage), reporting requirements, and compliance monitoring. Generally, a leverage level after planned asset sales (that is, the amount of debt that must be serviced from operating cash flow) in excess of 6* Total Debt/EBITDA raises concerns for most industries.
- Collateral requirements in credit agreements that specify acceptable collateral and risk-appropriate measures and controls, including acceptable collateral types, loan-to-value guidelines, and appropriate collateral-valuation methodologies. Standards for asset-based loans that are part of the entire debt structure also should outline expectations for the use of collateral controls (for example, inspections, independent valuations, and payment lockbox), other types of collateral and account maintenance agreements, and periodic reporting requirements.
- Whether loan agreements provide for distribution of ongoing financial and other relevant credit information to all participants and investors.

Nothing in the preceding standards should be considered to discourage providing financing to borrowers engaged in workout negotiations, or as part of a pre-packaged financing under the bankruptcy code. Neither are they meant to discourage well-structured, standalone asset-based credit facilities to borrowers with strong lender monitoring and controls, for which a financial institution should consider separate underwriting and risk-rating guidance.

2010.2.3.1.6 Valuation Standards

Institutions often rely on enterprise value and other intangibles when (1) evaluating the feasibility of a loan request; (2) determining the debt reduction potential of planned asset sales; (3) assessing a borrower’s ability to access the capital markets; and (4) estimating the strength of a secondary source of repayment. Institutions may also view enterprise value as a useful benchmark for assessing a sponsor’s economic incentive to provide financial support. Given the specialized knowledge needed for the development of a credible enterprise valuation and the importance of enterprise valuations in the underwriting and ongoing risk-assessment processes, enterprise valuations should be performed by qualified persons independent of an institution’s origination function.

There are several methods used for valuing businesses. The most common valuation methods are assets, income, and market. Asset valuation methods consider an enterprise’s underlying assets in terms of its net going-concern or liquidation value. Income valuation methods consider an enterprise’s ongoing cash flows or earnings and apply appropriate capitalization or discounting techniques. Market valuation methods derive value multiples from comparable company data or sales transactions. However, final value estimates should be based on the method or methods that give supportable and credible results. In many cases, the income method is generally considered the most reliable.

There are two common approaches employed when using the income method. The “capitalized cash flow” method determines the value of a company as the present value of all future cash flows the business can generate in perpetuity. An appropriate cash flow is determined and then divided by a risk-adjusted capitalization rate, most commonly the weighted average cost of capital. This method is most appropriate when cash flows are predictable and stable. The “discounted cash flow” method is a multiple-period valuation model that converts a future series of cash flows into current value by discounting those cash flows at a rate of return (referred to as the “discount rate”) that reflects the risk inherent therein. This method is most appropriate when future cash flows are cyclical or variable over time. Both income methods involve numerous assumptions, and therefore, supporting documentation should fully explain the
evaluator’s reasoning and conclusions.

When a borrower is experiencing a financial downturn or facing adverse market conditions, a lender should reflect those adverse conditions in its assumptions for key variables such as cash flow, earnings, and sales multiples when assessing enterprise value as a potential source of repayment. Changes in the value of a borrower’s assets should be tested under a range of stress scenarios, including business conditions more adverse than the base-case scenario. Stress tests of enterprise values and their underlying assumptions should be conducted and documented at origination of the transaction and periodically thereafter, incorporating the actual performance of the borrower and any adjustments to projections. The institution should perform its own discounted cash-flow analysis to validate the enterprise value implied by proxy measures such as multiples of cash flow, earnings, or sales.

Enterprise value estimates derived from even the most rigorous procedures are imprecise and ultimately may not be realized. Therefore, institutions relying on enterprise value or illiquid and hard-to-value collateral should have policies that provide for appropriate loan-to-value ratios, discount rates, and collateral margins. Based on the nature of an institution’s leveraged lending activities, the institution should establish limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value. Regardless of the methodology used, the assumptions underlying enterprise value estimates should be clearly documented, well supported, and understood by the institution’s appropriate decisionmakers and risk oversight units. Further, an institution’s valuation methods should be appropriate for the borrower’s industry and condition.

2010.2.3.1.7 Pipeline Management

Market disruptions can substantially impede the ability of an underwriter to consummate syndications or otherwise sell down exposures, which may result in material losses. Accordingly, financial institutions should have strong risk management and controls over transactions in the pipeline, including amounts to be held and those to be distributed. A financial institution should be able to differentiate transactions according to tenor, investor class (for example, pro-rata and institutional), structure, and key borrower characteristics (for example, industry). In addition, an institution should develop and maintain the following:

- A clearly articulated and documented appetite for underwriting risk that considers the potential effects on earnings, capital, liquidity, and other risks that result from pipeline exposures.
- Written policies and procedures for defining and managing distribution failures and “hung” deals, which are identified by an inability to sell down the exposure within a reasonable period (generally 90 days from transaction closing). The financial institution’s board of directors and management should establish clear expectations for the disposition of pipeline transactions that are not sold according to their original distribution plan. Such transactions that are subsequently reclassified as hold-to-maturity should also be reported to management and the board of directors.
- Guidelines for conducting periodic stress tests on pipeline exposures to quantify the potential impact of changing economic and market conditions on the institution’s asset quality, earnings, liquidity, and capital.
- Controls to monitor performance of the pipeline against original expectations, and regular reports of variances to management, including the amount and timing of syndication and distribution variances and reporting of recourse sales to achieve distribution.
- Reports that include individual and aggregate transaction information that accurately risk rates credits and portrays risk and concentrations in the pipeline.
- Limits on aggregate pipeline commitments.
- Limits on the amount of loans that an institution is willing to retain on its own books (that is, borrower, counterparty, and aggregate hold levels), and limits on the underwriting risk that will be undertaken for amounts intended for distribution.
- Policies and procedures that identify acceptable accounting methodologies and controls in both functional as well as dysfunctional markets, and that direct prompt recognition of losses in accordance with generally accepted accounting principles.
- Policies and procedures addressing the use of hedging to reduce pipeline and hold exposures, which should address acceptable types of hedges and the terms considered necessary for providing a net credit exposure after hedging.
- Plans and provisions addressing contingent liquidity and compliance with the Board’s
Regulation W (12 CFR part 223) when market illiquidity or credit conditions change, interrupting normal distribution channels.

2010.2.3.1.8 Reporting and Analytics

The agencies expect financial institutions to diligently monitor higher-risk credits, including leveraged loans. A financial institution’s management should receive comprehensive reports about the characteristics and trends in such exposures at least quarterly, and summaries should be provided to the institution’s board of directors. Policies and procedures should identify the fields to be populated and captured by a financial institution’s Management Information Systems, which should yield accurate and timely reporting to management and the board of directors that may include the following:

- Individual and portfolio exposures within and across all business lines and legal vehicles, including the pipeline.
- Risk-rating distribution and migration analysis, including maintenance of a list of those borrowers who have been removed from the leveraged portfolio due to improvements in their financial characteristics and overall risk profile.
- Industry mix and maturity profile.
- Metrics derived from probabilities of default and loss given default.
- Portfolio performance measures, including noncompliance with covenants, restructurings, delinquencies, non-performing amounts, and charge-offs.
- Amount of impaired assets and the nature of impairment (that is, permanent, or temporary), and the amount of the ALLL attributable to leveraged lending.
- The aggregate level of policy exceptions and the performance of that portfolio.
- Exposures by collateral type, including unsecured transactions and those where enterprise value will be the source of repayment for leveraged loans. Reporting should also consider the implications of defaults that trigger pari passu (in a fair way) treatment for all lenders and, thus, dilute the secondary support from the sale of collateral.
- Secondary-market-pricing data and trading volume, when available.
- Exposures and performance by deal sponsors. Deals introduced by sponsors may, in some cases, be considered exposure to related borrowers. An institution should identify, aggregate, and monitor potential related exposures.
- Gross and net exposures, hedge counterparty concentrations, and policy exceptions.
- Actual versus projected distribution of the syndicated pipeline, with regular reports of excess levels over the hold targets for the syndication inventory. Pipeline definitions should clearly identify the type of exposure. This includes committed exposures that have not been accepted by the borrower, commitments accepted but not closed, and funded and unfunded commitments that have closed but have not been distributed.
- Total and segmented leveraged lending exposures, including subordinated debt and equity holdings, alongside established limits. Reports should provide a detailed and comprehensive view of global exposures, including situations when an institution has indirect exposure to an obligor or is holding a previously sold position as collateral or as a reference asset in a derivative.
- Borrower and counterparty leveraged lending reporting should consider exposures booked in other business units throughout the institution, including indirect exposures such as default swaps and total return swaps, naming the distributed paper as a covered or referenced asset or collateral exposure through repo transactions. Additionally, the institution should consider positions held in available-for-sale or traded portfolios or through structured investment vehicles owned or sponsored by the originating institution or its subsidiaries or affiliates.

2010.2.3.1.9 Risk Rating Leveraged Loans

Previously, the agencies issued guidance on rating credit exposures and credit-rating systems, which applies to all credit transactions, including those in the leveraged lending category. The risk rating of leveraged loans involves the use of realistic repayment assumptions to determine a borrower’s ability to de-lever to a sustainable level within a reasonable period. For example, supervisors commonly assume that the ability to fully amortize senior secured debt or

---

the ability to repay at least 50 percent of total debt over a five- to seven-year period provides evidence of adequate repayment capacity. If the projected capacity to pay down debt from cash flow is nominal with refinancing the only viable option, the credit will usually be adversely rated even if it has been recently underwritten. In cases when leveraged loan transactions have no reasonable or realistic prospects to de-lever, a substandard rating is likely. Furthermore, when assessing debt service capacity, extensions and restructures should be scrutinized to ensure that the institution is not merely masking repayment capacity problems by extending or restructuring the loan.

If the primary source of repayment becomes inadequate, the agencies believe that it would generally be inappropriate for an institution to consider enterprise value as a secondary source of repayment unless that value is well supported. Evidence of well-supported value may include binding purchase and sale agreements with qualified third parties or thorough asset valuations that fully consider the effect of the borrower’s distressed circumstances and potential changes in business and market conditions. For such borrowers, when a portion of the loan may not be protected by pledged assets or a well-supported enterprise value, examiners generally will rate that portion doubtful or loss and place the loan on nonaccrual status.

2010.2.3.1.10 Credit Analysis

Effective underwriting and management of leveraged lending risk is highly dependent on the quality of analysis employed during the approval process as well as ongoing monitoring. A financial institution’s policies should address the need for a comprehensive assessment of financial, business, industry, and management risks including, whether

- cash-flow analyses rely on overly optimistic or unsubstantiated projections of sales, margins, and merger and acquisition synergies;
- liquidity analyses include performance metrics appropriate for the borrower’s industry, predictability of the borrower’s cash flow, measurement of the borrower’s operating cash needs, and ability to meet debt maturities;
- projections exhibit an adequate margin for unanticipated merger-related integration costs;
- projections are stress tested for one or more downside scenarios, including a covenant breach;
- transactions are reviewed at least quarterly to determine variance from plan, the related risk implications, and the accuracy of risk ratings and accrual status. From inception, the credit file should contain a chronological rationale for and analysis of all substantive changes to the borrower’s operating plan and variance from expected financial performance;
- enterprise and collateral valuations are independently derived or validated outside of the origination function, are timely, and consider potential value erosion;
- collateral liquidation and asset sale estimates are based on current market conditions and trends;
- potential collateral shortfalls are identified and factored into risk rating and accrual decisions;
- contingency plans anticipate changing conditions in debt or equity markets when exposures rely on refinancing or the issuance of new equity; and
- the borrower is adequately protected from interest rate and foreign exchange risk.

2010.2.3.1.11 Problem-Credit Management

A financial institution should formulate individual action plans when working with borrowers experiencing diminished operating cash flows, depreciated collateral values, or other significant plan variances. Weak initial underwriting of transactions, coupled with poor structure and limited covenants, may make problem-credit discussions and eventual restructurings more difficult for an institution as well as result in less favorable outcomes.

A financial institution should formulate credit policies that define expectations for the management of adversely rated and other high-risk borrowers whose performance departs significantly from planned cash flows, asset sales, collateral values, or other important targets. These policies should stress the need for workout plans that contain quantifiable objectives and measurable time frames. Actions may include working with the borrower for an orderly resolution while preserving the institution’s interests, sale of the credit in the secondary market, or liquidation of collateral. Problem credits should be reviewed regularly for risk rating accuracy, accrual status, recognition of impairment through specific allocations, and charge-offs.
2010.2.3.1.12 Deal Sponsors

A financial institution that relies on sponsor support as a secondary source of repayment should develop guidelines for evaluating the qualifications of financial sponsors and should implement processes to regularly monitor a sponsor’s financial condition. Deal sponsors may provide valuable support to borrowers such as strategic planning, management, and other tangible and intangible benefits. Sponsors may also provide sources of financial support for borrowers that fail to achieve projections. Generally, a financial institution rates a borrower based on an analysis of the borrower’s standalone financial condition. However, a financial institution may consider support from a sponsor in assigning internal risk ratings when the institution can document the sponsor’s history of demonstrated support as well as the economic incentive, capacity, and stated intent to continue to support the transaction. However, even with documented capacity and a history of support, the sponsor’s potential contributions may not mitigate supervisory concerns absent a documented commitment of continued support. An evaluation of a sponsor’s financial support should include the following:

- the sponsor’s historical performance in supporting its investments, financially and otherwise
- the sponsor’s economic incentive to support, including the nature and amount of capital contributed at inception
- documentation of degree of support (for example, a guarantee, comfort letter, or verbal assurance)
- consideration of the sponsor’s contractual investment limitations
- to the extent feasible, a periodic review of the sponsor’s financial statements and trends, and an analysis of its liquidity, including the ability to fund multiple deals
- consideration of the sponsor’s dividend and capital contribution practices
- the likelihood of the sponsor supporting a particular borrower compared to other deals in the sponsor’s portfolio
- guidelines for evaluating the qualifications of a sponsor and a process to regularly monitor the sponsor’s performance

2010.2.3.1.13 Credit Review

A financial institution should have a strong and independent credit-review function that demonstrates the ability to identify portfolio risks and documented authority to escalate inappropriate risks and other findings to its senior management. Due to the elevated risks inherent in leveraged lending, and depending on the relative size of a financial institution’s leveraged lending business, the institution’s credit-review function should assess the performance of the leveraged portfolio more frequently and in greater depth than other segments in the loan portfolio. Such assessments should be performed by individuals with the expertise and experience for these types of loans and the borrower’s industry. Portfolio reviews should generally be conducted at least annually. For many financial institutions, the risk characteristics of leveraged portfolios, such as high reliance on enterprise value, concentrations, adverse risk rating trends, or portfolio performance, may dictate reviews that are more frequent.

A financial institution should staff its internal credit-review function appropriately and ensure that the function has sufficient resources to ensure timely, independent, and accurate assessments of leveraged lending transactions. Reviews should evaluate the level of risk, risk rating integrity, valuation methodologies, and the quality of risk management. Internal credit reviews should include the review of the institution’s leveraged lending practices, policies, and procedures to ensure that they are consistent with regulatory guidance.

2010.2.3.1.14 Stress Testing

A financial institution should develop and implement guidelines for conducting periodic portfolio stress tests on loans originated to hold as well as loans originated to distribute, and sensitivity analyses to quantify the potential impact of changing economic and market conditions on its asset quality, earnings, liquidity, and capital. The sophistication of stress testing

---

practices and sensitivity analyses should be consistent with the size, complexity, and risk characteristics of the institution’s leveraged loan portfolio. To the extent a financial institution is required to conduct enterprise-wide stress tests, the leveraged portfolio should be included in any such tests.

2010.2.3.1.15 Conflicts of Interest

A financial institution should develop appropriate policies and procedures to address and to prevent potential conflicts of interest when it has equity and lending positions. For example, an institution may be reluctant to use an aggressive collection strategy with a problem borrower because of the potential impact on the value of an institution’s equity interest. A financial institution may encounter pressure to provide financial or other privileged client information that could benefit an affiliated equity investor. Such conflicts also may occur when the underwriting financial institution serves as financial advisor to the seller and simultaneously offers financing to multiple buyers (that is, stapled financing). Similarly, there may be conflicting interests among the different lines of business within a financial institution or between the financial institution and its affiliates. When these situations occur, potential conflicts of interest arise between the financial institution and its customers. Policies and procedures should clearly define potential conflicts of interest, identify appropriate risk-management controls and procedures, enable employees to report potential conflicts of interest to management for action without fear of retribution, and ensure compliance with applicable laws. Further, management should have an established training program for employees on appropriate practices to follow to avoid conflicts of interest and provide for reporting, tracking, and resolution of any conflicts of interest that occur.

2010.2.3.1.16 Reputational Risk

Leveraged lending transactions are often syndicated through the financial and institutional markets. A financial institution’s apparent failure to meet its legal responsibilities in underwriting and distributing transactions can damage its market reputation and impair its ability to compete. Similarly, a financial institution that distributes transactions, which over time have significantly higher default or loss rates and performance issues, may also see its reputation damaged.

2010.2.3.1.17 Compliance

The legal and regulatory issues raised by leveraged transactions are numerous and complex. To ensure potential conflicts are avoided and laws and regulations are adhered to, an institution’s independent compliance function should periodically review the institution’s leveraged lending activity. This guidance is consistent with the principles of safety and soundness and other agency guidance related to commercial lending. In particular, because leveraged transactions often involve a variety of types of debt and bank products, a financial institution should ensure that its policies incorporate safeguards to prevent violations of anti-tying regulations. Section 106(b) of the Bank Holding Company Act Amendments of 1970 prohib k Section 106(b) of the Bank Holding Company Act Amendments of 1970 prohib k 9 prohibits certain forms of product tying by financial institutions and their affiliates. The intent behind Section 106(b) is to prevent financial institutions from using their market power over certain products to obtain an unfair competitive advantage in other products.

In addition, equity interests and certain debt instruments used in leveraged transactions may constitute “securities” for the purposes of federal securities laws. When securities are involved, an institution should ensure compliance with applicable securities laws, including disclosure and other regulatory requirements. An institution should also establish policies and procedures to appropriately manage the internal dissemination of material, nonpublic information about transactions in which it plays a role.

2010.2.4 CREDIT-RISK MANAGEMENT GUIDANCE FOR HOME EQUITY LENDING

On May 16, 2005, the federal bank and thrift regulatory agencies collectively issued the following interagency guidance. The guidance is intended to promote sound credit-risk management practices at banking organizations

---

10. The agencies are the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Cur-
have home equity lending programs, including open-end home equity lines of credit (HELOCs) and closed-end home equity loans (HELs). Banking organizations’ credit-risk management practices for home equity lending need to keep pace with the rapid growth in home equity lending and should emphasize compliance with sound underwriting standards and practices.

The risk factors listed below, combined with an inherent vulnerability to rising interest rates, suggest that banking organizations need to fully recognize the risk embedded in their home equity portfolios. Following are the specific product, risk-management, and underwriting risk factors and trends that deserve scrutiny:

1. interest-only features that require no amortization of principal for a protracted period
2. limited or no documentation of a borrower’s assets, employment, and income (known as “low do” or “no doc” lending)
3. higher loan-to-value (LTV) and debt-to-income (DTI) ratios
4. lower credit-risk scores for underwriting home equity loans;
5. greater use of automated valuation models (AVMs) and other collateral-evaluation tools for the development of appraisals and evaluations
6. an increase in the number of transactions generated through a loan broker or other third party

Home equity lending can be conducted in a safe and sound manner if pursued with the appropriate risk-management structure, including adequate allowances for loan and lease losses and appropriate capital levels. Sound practices call for fully articulated policies that address marketing, underwriting standards, collateral-valuation management, individual-account and portfolio management, and servicing.

Banking organizations should ensure that risk-management practices keep pace with the growth and changing risk profile of home equity portfolios. Management should actively assess a portfolio’s vulnerability to changes in consumers’ ability to pay and the potential for declines in home values. Active portfolio management is especially important for banking organizations that project or have already experienced significant growth or concentrations, particularly in higher-risk products such as high-LTV, “low doc” or “no doc,” interest-only, or third-party-generated loans. (See SR-05-11.)

2010.2.4.1 Credit-Risk Management Systems

2010.2.4.1.1 Product Development and Marketing

In the development of any new product offering, product change, or marketing initiative, management should have a review and approval process that is sufficiently broad to ensure compliance with the banking organization’s internal policies and applicable laws and regulations11 and to evaluate the credit, interest-rate, operational, compliance, reputation, and legal risks. In particular, risk-management personnel should be involved in product development, including an evaluation of the targeted population and the product(s) being offered. For example, material changes in the targeted market, origination source, or pricing could have a significant impact on credit quality and should receive senior management approval.

When HELOCs or HELs are marketed or closed by a third party, banking organizations should have standards that provide assurance that the third party also complies with applicable laws and regulations, including those on marketing materials, loan documentation, and closing procedures. (For further details on agent relationships, see section 2010.2.4.1.3, “Third-Party Originations.”) Finally, management should have appropriate monitoring tools and management information systems (MIS) to measure the performance of various marketing initiatives, including offers to increase a line, extend the interest-only period, or adjust the interest rate or term.

---

11. Applicable laws include the Federal Trade Commission Act; the Equal Credit Opportunity Act (ECOA); the Truth in Lending Act (TILA), including the Home Ownership and Equity Protection Act (HOEPA); the Fair Housing Act; the Real Estate Settlement Procedures Act (RESPA); and the Home Mortgage Disclosure Act (HMDA), as well as applicable state consumer protection laws.
2010.2.4.1.2 Origination and Underwriting

All relevant risk factors should be considered when establishing product offerings and underwriting guidelines. Generally, these factors should include a borrower’s income and debt levels, credit score (if obtained), and credit history, as well as the loan size, collateral value (including valuation methodology), lien position, and property type and location.

Consistent with the Federal Reserve’s regulations on real estate lending standards, prudently underwritten home equity loans should include an evaluation of a borrower’s capacity to adequately service the debt. Given the home equity products’ long-term nature and the large credit amount typically extended to a consumer, an evaluation of repayment capacity should consider a borrower’s income and debt levels and not just a credit score. Credit scores are based upon a borrower’s historical financial performance. While past performance is a good indicator of future performance, a significant change in a borrower’s income or debt levels can adversely alter the borrower’s ability to pay. How much verification these underwriting factors require will depend upon the individual loan’s credit risk.

HELOCs generally do not have interest-rate caps that limit rate increases. Rising interest rates could subject a borrower to significant payment increases, particularly in a low-interest-rate environment. Therefore, underwriting standards for interest-only and variable-rate HELOCs should include an assessment of the borrower’s ability to amortize the fully drawn line over the loan term and to absorb potential increases in interest rates.

12. On December 23, 1992, the Federal Reserve announced the adoption of uniform rules on real estate lending standards and issued the Interagency Guidelines for Real Estate Lending Policies. See subsection 2010.2.1. See also 12 C.F.R., section 208.51 and appendix C.
13. The Interagency Guidelines Establishing Standards for Safety and Soundness also call for documenting the source of repayment and assessing the ability of the borrower to repay the debt in a timely manner. See 12 C.F.R. 208, appendix D-1.
14. While there may be periodic rate increases, the lender must state in the consumer credit contract the maximum interest rate that may be imposed during the term of the obligation. See 12 C.F.R. 226.30(b).
2010.2.4.1.3 Third-Party Originations

Banking organizations often use third parties, such as mortgage brokers or correspondents, to originate loans. When doing so, they should have strong control systems to ensure the quality of originations and compliance with all applicable laws and regulations, and to help prevent fraud.

Brokers are firms or individuals, acting on behalf of either the banking organization or the borrower, who match the borrower’s needs with institutions’ mortgage-origination programs. Brokers take applications from consumers. Although they sometimes process the application and underwrite the loan to qualify the application for a particular lender, they generally do not use their own funds to close loans. Whether brokers are allowed to process and perform any underwriting will depend on the relationship between the banking organization and the broker. For control purposes, the banking organization should retain appropriate oversight of all critical loan-processing activities, such as verification of income and employment and independence in the appraisal and evaluation function.

Correspondents are financial companies that usually close and fund loans in their own name and subsequently sell them to a lender. Banking organizations commonly obtain loans through correspondents and, in some cases, delegate the underwriting function to the correspondent. In delegated underwriting relationships, a banking organization grants approval to a correspondent financial company to process, underwrite, and close loans according to an underwriting plan (the guidelines).17 In addition, the banking organization should take steps to ensure that it could not determine the transaction was a loan covered by HOEPA. Also, the nature of its relationship with brokers or correspondents may have implications for liability under ECOA, and for reporting responsibilities under HMDA.16

In these relationships, the delegating banking organization should have systems and controls to provide assurance that the correspondent is appropriately managed, is financially sound, and provides mortgages that meet the banking organization’s prescribed underwriting guidelines and that comply with applicable consumer protection laws and regulations. A quality-control unit or function in the delegating banking organization should closely monitor the quality of loans that the correspondent underwrites. Monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities.

Both brokers and correspondents are compensated based upon mortgage-origination volume and, accordingly, have an incentive to produce and close as many loans as possible. Therefore, banking organizations should perform comprehensive due diligence on third-party originators prior to entering a relationship. In addition, once a relationship is established, the banking organization should have adequate audit procedures and controls to verify that the third parties are not being paid to generate incomplete or fraudulent mortgage applications or are not otherwise receiving referral or unearned income or fees contrary to RESPA prohibitions.15 Monitoring the quality of loans by origination source, and uncovering such problems as early payment defaults and incomplete packages, enables management to know if third-party originators are producing quality loans. If ongoing credit or documentation problems are discovered, the banking organization should take appropriate action against the third party, which could include terminating its relationship with the third party.

2010.2.4.1.4 Collateral-Valuation Management

Competition, cost pressures, and advancements in technology have prompted banking organizations to streamline their appraisal and evaluation processes. These changes, coupled with banking organizations underwriting to higher LTVs, have heightened the importance of strong collateral-valuation management policies, procedures, and processes.

Banking organizations should have appropriate collateral-valuation policies and procedures that ensure compliance with the Federal Reserve’s appraisal regulations16 and the Interagency Appraisal and Evaluation Guidelines (the guidelines).17 In addition, the banking organization should—

1. Establish criteria for determining the appropriate valuation methodology for a particular transaction, based on the risk in the transaction and loan portfolio (For example, higher-

15. In addition, a banking organization that purchases loans subject to TILA’s rules for HELs with high rates or high closing costs (loans covered by HOEPA) can incur assignee liability unless the banking organization can reasonably show that it could not determine the transaction was a loan covered by HOEPA. Also, the nature of its relationship with brokers and correspondents may have implications for liability under ECOA, and for reporting responsibilities under HMDA. 16. 12 C.F.R. 208, subpart E, and 12 C.F.R. 225, subpart G. 17. See SR-94-55, dated October 27, 1994. These revised guidelines include the June 1994 amendments. See also section 2231.0.15, appendix A.
risk transactions or nonhomogeneous property types should be supported by more-thorough valuations. The banking organization should also set criteria for determining the extent to which an inspection of the collateral is necessary.

2. ensure that an expected or estimated value of the property is not communicated to an appraiser or individual performing an evaluation

3. implement policies and controls to preclude “value shopping” (Use of several valuation tools may return different values for the same property. These differences can result in systematic overvaluation of properties if the valuation choice becomes driven by the highest property value. If several different valuation tools or AVMs are used for the same property, the banking organization should adhere to a policy for selecting the most reliable method, rather than the highest value.)

4. require sufficient documentation to support the collateral valuation in the appraisal or evaluation

2010.2.4.1.5 AVMs

When AVMs are used to support evaluations or appraisals, the banking organization should validate the models on a periodic basis to mitigate the potential valuation uncertainty in the model. As part of the validation process, the banking organization should document the validation’s analysis, assumptions, and conclusions. The validation process includes back-testing a representative sample of the valuations against market data on actual sales (where sufficient information is available). The validation process should cover properties representative of the geographic area and property type for which the tool is used.

Many AVM vendors, when providing a value, will also provide a “confidence score,” which usually relates to the accuracy of the value provided. Confidence scores, however, come in many different formats and are calculated based on differing scoring systems. Banking organizations that use AVMs should have an understanding of how the model works as well as what the confidence scores mean. Confidence levels should be established by the banking organization that are appropriate for the risk in a given transaction or group of transactions.

When tax-assessment valuations are used as a basis for the collateral valuation, the banking organization should be able to demonstrate and document the correlation between the assessment value of the taxing authority and the property’s market value as part of the validation process.

2010.2.4.1.6 Account Management

Since HELOCs often have long-term, interest-only payment features, banking organizations should have risk-management techniques that identify higher-risk accounts and adverse changes in account risk profiles, thereby enabling management to implement timely preventive action (e.g., freezing or reducing lines). Further, a banking organization should have risk-management procedures to evaluate and approve additional credit on an existing line or extending the interest-only period. Account-management practices should be appropriate for the size of the portfolio and the risks associated with the types of home equity lending.

Effective account-management practices for large portfolios or portfolios with high-risk characteristics include—

1. periodically refreshing credit-risk scores on all customers;
2. using behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts;
3. periodically assessing utilization rates;
4. periodically assessing payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the line to keep payments current;
5. monitoring home values by geographic area; and
6. obtaining updated information on the collateral’s value when significant market factors indicate a potential decline in home values, or when the borrower’s payment performance deteriorates and greater reliance is placed on the collateral.

The frequency of these actions should be commensurate with the risk in the portfolio. Banking organizations should conduct annual credit reviews of HELOC accounts to determine whether the line of credit should be continued, based on the borrower’s current financial condition.18

18. Under the Federal Reserve’s risk-based capital guidelines, an unused HELOC commitment with an original matu-
When appropriate, banking organizations should refuse to extend additional credit or reduce the credit limit of a HELOC, bearing in mind that under Regulation Z such steps can be taken only in limited circumstances. These include, for example, when the value of the collateral declines significantly below the appraised value for purposes of the HELOC, default of a material obligation under the loan agreement, or deterioration in the borrower’s financial circumstances. In order to freeze or reduce credit lines due to deterioration in a borrower’s financial circumstances, two conditions must be met: (1) there must be a “material” change in the borrower’s financial circumstances and (2) as a result of this change, the banking organization must have a reasonable belief that the borrower will be unable to fulfill the plan’s payment obligations.

Account-management practices that do not adequately control authorizations and provide for timely repayment of over-limit amounts may significantly increase a portfolio’s credit risk. Authorizations of over-limit home equity lines of credit should be restricted and subject to appropriate policies and controls. A banking organization’s practices should require over-limit borrowers to repay in a timely manner the amount that exceeds established credit limits. Management information systems should be sufficient to enable management to identify, measure, monitor, and control the unique risks associated with over-limit accounts.

2010.2.4.1.7 Portfolio Management

Banking organizations should implement an effective portfolio credit-risk management process for their home equity portfolios that includes the following.

2010.2.4.1.7.1 Policies

The Federal Reserve’s real estate lending standards regulations require that a banking organization’s real estate lending policies be consistent with safe and sound banking practices and that the banking organization’s board of directors review and approve these policies at least annually. Before implementing any changes to policies or underwriting standards, management should assess the potential effect on the banking organization’s overall risk profile, which would include the effect on concentrations, profitability, and delinquency and loss rates. The accuracy of these estimates should be tested by comparing them with actual experience.

2010.2.4.1.7.2 Portfolio Objectives and Risk Diversification

Effective portfolio management should clearly communicate portfolio objectives, such as growth targets, utilization, rate-of-return hurdles, and default and loss expectations. For banking organizations with significant concentrations of HELs or HELOCs, limits should be established and monitored for key portfolio segments, such as geographic area, loan type, and higher-risk products. When appropriate, consideration should be given to the use of risk mitigants, such as private mortgage insurance, pool insurance, or securitization. As the portfolio approaches concentration limits, the banking organization should analyze the situation sufficiently to enable the banking organization’s board of directors and senior management to make a well-informed decision to either raise concentration limits or pursue a different course of action.

Effective portfolio management requires an understanding of the various risk characteristics of the home equity portfolio. To gain this understanding, a banking organization should analyze the portfolio by segment, using criteria such as product type, credit-risk score, DTI, LTV, property type, geographic area, collateral-valuation method, lien position, size of credit relative to prior liens, and documentation type (such as “no doc” or “low doc”).

2010.2.4.1.7.3 Management Information Systems

By maintaining adequate credit MIS, a banking organization can segment loan portfolios and accurately assess key risk characteristics. The MIS should also provide management with sufficient information to identify, monitor, measure, and control home equity concentrations.

BHC Supervision Manual

July 2005

Page 19
Banking organizations should periodically assess the adequacy of their MIS in light of growth and changes in their appetite for risk. For banking organizations with significant concentrations of HELs or HELOCs, MIS should include, at a minimum, reports and analysis of the following:

1. production and portfolio trends by product, loan structure, originator channel, credit score, LTV, DTI, lien position, documentation type, market, and property type
2. delinquency and loss-distribution trends by product and originator channel with some accompanying analysis of significant underwriting characteristics (such as credit score, LTV, DTI)
3. vintage tracking
4. the performance of third-party originators (brokers and correspondents)
5. market trends by geographic area and property type to identify areas of rapidly appreciating or depreciating housing values

2010.2.4.1.7.4 Policy and Underwriting-Exception Systems

Banking organizations should have a process for identifying, approving, tracking, and analyzing underwriting exceptions. Reporting systems that capture and track information on exceptions, both by transaction and by relevant portfolio segments, facilitate the management of a portfolio’s credit risk. The aggregate data is useful to management in assessing portfolio risk profiles and monitoring the level of adherence to policy and underwriting standards by various origination channels. Analysis of the information may also be helpful in identifying correlations between certain types of exceptions and delinquencies and losses.

2010.2.4.1.7.5 High-LTV Monitoring

To clarify the real estate lending standards regulations and interagency guidelines, the agencies issued Guidance on High Loan-To-Value (HLTV) Residential Real Estate Lending (the HLTV guidance) in October 1999. The HLTV guidance clarified the Interagency Real Estate Lending Guidelines and the supervisory loan-to-value limits for loans on one- to four-family residential properties. Banking organizations are expected to ensure compliance with the supervisory loan-to-value limits of the Interagency Real Estate Lending Guidelines. The HLTV guidance outlines controls that the banking organizations should have in place when engaging in HLTV lending. Banking organizations should accurately track the volume of HLTV loans, including HLTV home equity and residential mortgages, and report the aggregate of such loans to the banking organization’s board of directors. Specifically, banking organizations are reminded that:

1. Loans in excess of the supervisory LTV limits should be identified in the banking organization’s records. The aggregate of high-LTV one-to-four-family residential loans should not exceed 100 percent of the banking organization’s total capital. Within that limit, high-LTV loans for properties other than one- to four-family residential properties should not exceed 30 percent of capital.
2. In calculating the LTV and determining compliance with the supervisory LTVs, the banking organization should consider all senior liens. All loans secured by the property and held by the banking organization are reported as an exception if the combined LTV of a loan and all senior liens on an owner-occupied one- to four-family residential property equals or exceeds 90 percent and if there is no additional credit enhancement in the form of either mortgage insurance or readily marketable collateral.
3. For the LTV calculation, the loan amount is the legally binding commitment (that is, the entire amount that the banking organization is legally committed to lend over the life of the loan).
4. All real-estate secured loans in excess of supervisory LTV limits should be aggregated and included in a quarterly report for the banking organization’s board of directors.

Certain insurance products help banking organizations mitigate the credit risks of HLTV

---

20. For purposes of the Interagency Real Estate Lending Standards Guidelines, high-LTV one- to four-family residential property loans include (1) a loan for raw land zoned for one- to four-family residential use with an LTV ratio greater than 65 percent; (2) a residential land development loan or improved lot loan with an LTV greater than 75 percent; (3) a residential construction loan with an LTV ratio greater than 85 percent; (4) a loan on non-owner occupied one- to four-family residential property with an LTV greater than 85 percent; and (5) a permanent mortgage or home equity loan on an owner-occupied residential property with an LTV equal to or exceeding 90 percent without mortgage insurance, readily marketable collateral, or other acceptable collateral.
residential loans. Insurance policies that cover a “pool” of loans can be an efficient and effective credit-risk management tool. But if a policy has a coverage limit, the coverage may be exhausted before all loans in the pool mature or pay off. The Federal Reserve considers pool insurance to be a sufficient credit enhancement to remove the HLTV designation in the following circumstances: (1) the policy is issued by an acceptable mortgage insurance company, (2) it reduces the LTV for each loan to less than 90 percent, and (3) it is effective over the life of each loan in the pool.

2010.2.4.1.7.6 Stress Testing for Portfolios

Banking organizations with home equity concentrations as well as higher-risk portfolios are encouraged to perform sensitivity analyses on key portfolio segments. This type of analysis identifies possible events that could increase risk within a portfolio segment or for the portfolio as a whole. Banking organizations should consider stress tests that incorporate interest-rate increases and declines in home values. Since these events often occur simultaneously, the agencies recommend testing for these events together. Banking organizations should also periodically analyze markets in key geographic areas, including identified “soft” markets. Management should consider developing contingency strategies for scenarios and outcomes that extend credit risk beyond internally established risk tolerances. These contingency plans might include increased monitoring, tightening underwriting, limiting growth, and selling loans or portfolio segments.

2010.2.4.1.8 Operations, Servicing, and Collections

Effective procedures and controls should be maintained for such support functions as perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes. Credit-risk management should oversee these support functions to ensure that operational risks are properly controlled.

2010.2.4.1.8.1 Lien Recording

Banking organizations should take appropriate measures to safeguard their lien position. They should verify the amount and priority of any senior liens prior to closing the loan. This information is necessary to determine the loan’s LTV ratio and to assess the credit support of the collateral. Senior liens include first mortgages, outstanding liens for unpaid taxes, outstanding mechanic’s liens, and recorded judgments on the borrower.

2010.2.4.1.8.2 Problem-Loan Workouts and Loss-Mitigation Strategies

Banking organizations should have established policies and procedures for problem loan workouts and loss-mitigation strategies. Policies should be in accordance with the requirements of the FFIEC’s Uniform Retail Credit Classification and Account Management Policy, issued June 2000 (see SR-00-8 and section 2241.0) and should, at a minimum, address the following:

1. circumstances and qualifying requirements for various workout programs including extensions, re-ages, modifications, and re-writes (Qualifying criteria should include an analysis of a borrower’s financial capacity to service the debt under the new terms.)
2. circumstances and qualifying criteria for loss-mitigating strategies, including foreclosure
3. appropriate MIS to track and monitor the effectiveness of workout programs, including tracking the performance of all categories of workout loans (For large portfolios, vintage delinquency and loss tracking also should be included.)

While banking organizations are encouraged to work with borrowers on a case-by-case basis, a banking organization should not use workout strategies to defer losses. Banking organizations should ensure that credits in workout programs are evaluated separately for the allowance for loan and lease losses (ALLL), because such credits tend to have higher loss rates than other portfolio segments.

2010.2.4.1.9 Secondary-Market Activities

More banking organizations are issuing HELOC mortgage-backed securities (that is, securitizing HELOCs). Although such secondary-market activities can enhance credit availability and a banking organization’s profitability, they also pose certain risk-management challenges. A
banking organization’s risk-management systems should address the risks of HELOC securitizations.21

2010.2.4.1.10 Portfolio Classifications, Allowance for Loan and Lease Losses, and Capital

The FFIEC’s Uniform Retail Credit Classification and Account Management Policy governs the classification of consumer loans and establishes general classification thresholds that are based on delinquency. Banking organizations and the Federal Reserve’s examiners have the discretion to classify entire retail portfolios, or segments thereof, when underwriting weaknesses or delinquencies are pervasive and present an excessive level of credit risk. Portfolios of high-LTV loans to borrowers who exhibit inadequate capacity to repay the debt within a reasonable time may be subject to classification.

Banking organizations should establish appropriate ALLL and hold capital commensurate with the riskiness of their portfolios. In determining the ALLL adequacy, a banking organization should consider how the interest-only and draw features of HELOCs during the lines’ revolving period could affect the loss curves for its HELOC portfolio. Those banking organizations engaging in programmatic subprime home equity lending or banking organizations that have higher-risk products are expected to recognize the elevated risk of the activity when assessing capital and ALLL adequacy.22

2010.2.5 OVERSIGHT OF CONCENTRATIONS IN COMMERCIAL REAL ESTATE LENDING AND SOUND RISK-MANAGEMENT LENDING

As part of a bank holding company inspection, the examiner should make an assessment of the parent company’s supervision and control over its subsidiary lending activities, which includes an overall assessment of the banking organization’s credit-risk concentrations, including the risk concentrations in commercial real estate lending. (See also section 2010.2.) Banking organizations, including bank holding companies, are responsible for establishing the necessary and appropriate management oversight of their bank and nonbank subsidiaries by administering, monitoring, and assuring adherence to the organization’s lending policies and practices for controlling “concentration risk.” Banking organizations should therefore have adequate management information systems (including the appropriate accounting and internal control systems) in place to accomplish their supervisory oversight and to control such credit concentrations.

The following guidance, Concentrations in Commercial Real Estate (CRE) Lending, Sound Risk-Management Practices (the guidance) was issued on December 6, 2006 (effective on December 12, 2006).23 The guidance was developed to reinforce sound risk-management practices for institutions (includes banking organizations) with high and increasing concentrations of commercial real estate loans on their balance sheets. An institution’s strong risk-management practices and its maintenance of appropriate levels of capital are important elements of a sound CRE lending program, particularly when an institution has a concentration in CRE or a CRE lending strategy leading to a concentration. However, institutions needing to improve their risk-management processes may have been provided the opportunity for some flexibility on the time frame for complying with the guidance. This time frame will be commensurate with the level and nature of CRE concentration risk, the quality of the institution’s existing risk-management practices, and its levels of capital. (See 71 Fed. Reg. 74,580 [December 12, 2006], the Federal Reserve Board’s press release dated

---

21. See the risk management and capital adequacy of exposures arising from secondary-market credit activities discussed in SR-97-21 (see also section 2129.05).
22. See the January 2001 Interagency Expanded Guidance for Subprime Lending Programs (section 2128.08) for supervisory expectations regarding risk-management processes, the allowance for loan and lease losses, and capital adequacy for banking organizations engaging in subprime-lending programs.
23. The guidance was jointly adopted by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation after the bank supervisory agencies’ careful consideration of the comments received following the initial issuance of the January 10, 2006, proposed guidance on concentrations in commercial real estate lending. The final guidance is applicable to state member banks and broadly applicable to bank holding companies and their nonbank subsidiaries. For the purposes of this section the references to banks, institutions, and banking organizations is confined to those entities for which the Board of Governors of the Federal Reserve System has supervisory authority.

2010.2.5.1 Scope of the CRE Concentration Guidance

The guidance focuses on those CRE loans for which the cash flow from the real estate is the primary source of repayment rather than loans to a borrower for which real estate collateral is taken as a secondary source of repayment or through an abundance of caution. For the purposes of this guidance, CRE loans include those loans with risk profiles sensitive to the condition of the general CRE market (for example, market demand, changes in capitalization rates, vacancy rates, or rents). CRE loans are land development and construction loans (including one-to four-family residential and commercial construction loans) and other land loans. CRE loans also include loans secured by multifamily property, and nonfarm nonresidential property where the primary source of repayment is derived from rental income associated with the property (that is, loans for which 50 percent or more of the source of repayment comes from third-party, nonaffiliated, rental income) or the proceeds of the sale, refinancing, or permanent financing of the property. Loans to real estate investment trusts and unsecured loans to developers also should be considered CRE loans for purposes of this guidance if their performance is closely linked to performance of the CRE markets. The scope of the guidance does not include loans secured by nonfarm nonresidential properties where the primary source of repayment is the cash flow from the ongoing operations and activities conducted by the party, or affiliate of the party, who owns the property. Rather than defining a CRE concentration, the guidance’s “Supervisory Oversight” section describes the criteria that the Federal Reserve will use as high-level indicators to identify banks potentially exposed to CRE concentration risk.

2010.2.5.2 CRE Concentration Assessments

Banks that are actively involved in CRE lending should perform ongoing risk assessments to identify CRE concentrations. The risk assessment should identify potential concentrations by stratifying the CRE portfolio into segments that have common risk characteristics or sensitivities to economic, financial, or business developments. A bank’s CRE portfolio stratification should be reasonable and supportable. The CRE portfolio should not be divided into multiple segments simply to avoid the appearance of concentration risk.

The Federal Reserve recognizes that risk characteristics vary among CRE loans secured by different property types. A manageable level of CRE concentration risk will vary by bank depending on the portfolio risk characteristics, the quality of risk-management processes, and capital levels. Therefore, the guidance does not establish a CRE concentration limit that applies to all banks. Rather, banks are encouraged to identify and monitor credit concentrations and to establish internal concentration limits, and all concentrations should be reported to senior management and the board of directors on a periodic basis. Depending on the results of the risk assessment, the bank may need to enhance its risk-management systems.

2010.2.5.3 CRE Risk Management

The sophistication of a bank’s CRE risk-management processes should be appropriate to the size of the portfolio, as well as the level and nature of concentrations and the associated risk to the bank. Banks should address the following key elements in establishing a risk-management framework that effectively identifies, monitors, and controls CRE concentration risk:

1. board and management oversight
2. portfolio management
3. management information systems
4. market analysis
5. credit underwriting standards
6. portfolio stress testing and sensitivity analysis
7. credit-risk review function

2010.2.5.3.1 Board and Management Oversight of CRE Concentration Risk

A bank’s board of directors has ultimate responsibility for the level of risk assumed by the bank. If the bank has significant CRE concentration risk, its strategic plan should address the rationale for its CRE levels in relation to its overall growth objectives, financial targets, and capital plan. In addition, the Federal Reserve’s real estate lending regulations require that each
bank adopt and maintain a written policy that establishes appropriate limits and standards for all extensions of credit that are secured by liens on or interests in real estate, including CRE loans. Therefore, the board of directors or a designated committee thereof should—

1. establish policy guidelines and approve an overall CRE lending strategy regarding the level and nature of CRE exposures acceptable to the bank, including any specific commitments to particular borrowers or property types, such as multifamily housing;
2. ensure that management implements procedures and controls to effectively adhere to and monitor compliance with the bank’s lending policies and strategies;
3. review information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including reports that describe changes in CRE market conditions in which the bank lends; and
4. periodically review and approve CRE risk exposure limits and appropriate sublimits (for example, by nature of concentration) to conform to any changes in the bank’s strategies and to respond to changes in market conditions.

2010.2.5.3.2 CRE Portfolio Management

Banks with CRE concentrations should manage not only the risk of individual loans but also portfolio risk. Even when individual CRE loans are prudently underwritten, concentrations of loans that are similarly affected by cyclical changes in the CRE market can expose a bank to an unacceptable level of risk if not properly managed. Management regularly should evaluate the degree of correlation between related real estate sectors and establish internal lending guidelines and concentration limits that control the bank’s overall risk exposure.

Management should develop appropriate strategies for managing CRE concentration levels, including a contingency plan to reduce or mitigate concentrations in the event of adverse CRE market conditions. Loan participations, whole loan sales, and securitizations are a few examples of strategies for actively managing concentration levels without curtailing new originations. If the contingency plan includes selling or securitizing CRE loans, management should assess periodically the marketability of the portfolio. This should include an evaluation of the bank’s ability to access the secondary market and a comparison of its underwriting standards with those that exist in the secondary market.

2010.2.5.3.3 CRE Management Information Systems

A strong management information system (MIS) is key to effective portfolio management. The sophistication of the MIS will necessarily vary with the size and complexity of the CRE portfolio and level and nature of concentration risk. The MIS should provide management with sufficient information to identify, measure, monitor, and manage CRE concentration risk. This includes meaningful information on CRE portfolio characteristics that is relevant to the bank’s lending strategy, underwriting standards, and risk tolerances. A bank should periodically assess the adequacy of the MIS in light of growth in CRE loans and changes in the CRE portfolio’s size, risk profile, and complexity.

Banks are encouraged to stratify the CRE portfolio by property type, geographic market, tenant concentrations, tenant industries, developer concentrations, and risk rating. Other useful stratifications may include loan structure (for example, fixed-rate or adjustable), loan purpose (for example, construction, short-term, or permanent), loan-to-value (LTV) limits, debt service coverage, policy exceptions on newly underwritten credit facilities, and affiliated loans (for example, loans to tenants). A bank should also be able to identify and aggregate exposures to a borrower, including its credit exposure relating to derivatives.

Management reporting should be timely and in a format that clearly indicates changes in the portfolio’s risk profile, including risk-rating migrations. In addition, management reporting should include a well-defined process through which management reviews and evaluates concentration and risk-management reports, as well as special ad hoc analyses in response to potential market events that could affect the CRE loan portfolio.

2010.2.5.3.4 Market Analysis

Market analysis should provide the bank’s management and board of directors with information to assess whether its CRE lending strategy and policies continue to be appropriate in light of changes in CRE market conditions. A bank should perform periodic market analyses for the
various property types and geographic markets represented in its portfolio.

Market analysis is particularly important as a bank considers decisions about entering new markets, pursuing new lending activities, or expanding in existing markets. Market information also may be useful for developing sensitivity analysis or stress tests to assess portfolio risk.

Sources of market information may include published research data, real estate appraisers and agents, information maintained by the property taxing authority, local contractors, builders, investors, and community development groups. The sophistication of a bank’s analysis will vary by its market share and exposure, as well as the availability of market data. While a bank operating in nonmetropolitan markets may have access to fewer sources of detailed market data than a bank operating in large, metropolitan markets, a bank should be able to demonstrate that it has an understanding of the economic and business factors influencing its lending markets.

2010.2.5.3.5 Credit Underwriting Standards

A bank’s lending policies should reflect the level of risk that is acceptable to its board of directors and should provide clear and measurable underwriting standards that enable the bank’s lending staff to evaluate all relevant credit factors. When a bank has a CRE concentration, the establishment of sound lending policies becomes even more critical. In establishing its policies, a bank should consider both internal and external factors, such as its market position, historical experience, present and prospective trade area, probable future loan and funding trends, staff capabilities, and technology resources. Consistent with the Federal Reserve’s real estate lending guidelines, CRE lending policies should address the following underwriting standards:

1. maximum loan amount by type of property
2. loan terms
3. pricing structures
4. collateral valuation
5. LTV limits by property type
6. requirements for feasibility studies and sensitivity analysis or stress testing
7. minimum requirements for initial investment
8. minimum standards for borrower net worth, property cash flow, and debt service coverage for the property

A bank’s lending policies should permit exceptions to underwriting standards only on a limited basis. When a bank does permit an exception, it should document how the transaction does not conform to the bank’s policy or underwriting standards, obtain appropriate management approvals, and provide reports to the board of directors or designated committee detailing the number, nature, justifications, and trends for exceptions. Exceptions to both the bank’s internal lending standards and the Federal Reserve’s supervisory LTV limits should be monitored and reported on a regular basis. Further, banks would analyze trends in exceptions to ensure that risk remains within the bank’s established risk tolerance limits.

Credit analysis should reflect both the borrower’s overall creditworthiness and project-specific considerations as appropriate. In addition, for development and construction loans, the bank should have policies and procedures governing loan disbursements to ensure that the bank’s minimum borrower equity requirements are maintained throughout the development and construction periods. Prudent controls should include an inspection process, documentation on construction progress, tracking pre-sold units, pre-leasing activity, and exception monitoring and reporting.

2010.2.5.3.6 CRE Portfolio Stress Testing and Sensitivity Analysis

A bank with CRE concentrations should perform portfolio-level stress tests or sensitivity analysis to quantify the impact of changing economic conditions on asset quality, earnings, and capital. Further, a bank should consider the sensitivity of portfolio segments with common risk characteristics to potential market conditions. The sophistication of stress testing practices and sensitivity analysis should be consistent with the size, complexity, and risk characteristics of the CRE loan portfolio. For example, well-
margined and seasoned performing loans on multifamily housing normally would require significantly less robust stress testing than most acquisition, development, and construction loans.

Portfolio stress testing and sensitivity analysis may not necessarily require the use of a sophisticated portfolio model. Depending on the risk characteristics of the CRE portfolio, stress testing may be as simple as analyzing the potential effect of stressed loss rates on the CRE portfolio, capital, and earnings. The analysis should focus on the more vulnerable segments of a bank’s CRE portfolio, taking into consideration the prevailing market environment and the bank’s business strategy.

2010.2.5.3.7 Credit-Risk Review Function

A strong credit-risk review function is critical for a bank’s self-assessment of emerging risks. An effective, accurate, and timely risk-rating system provides a foundation for the bank’s credit-risk review function to assess credit quality and, ultimately, to identify problem loans. Risk ratings should be risk sensitive, objective, and appropriate for the types of CRE loans underwritten by the bank. Further, risk ratings should be reviewed regularly for appropriateness.

2010.2.5.4 Supervisory Oversight Of CRE Concentration Risk

As part of its ongoing supervisory monitoring processes, the Federal Reserve will use certain criteria to identify banks that are potentially exposed to significant CRE concentration risk. A bank that has experienced rapid growth in CRE lending, has notable exposure to a specific type of CRE, or is approaching or exceeds the following supervisory criteria may be identified for further supervisory analysis of the level and nature of its CRE concentration risk:

1. total reported loans for construction, land development, and other land represent 100 percent or more of the bank’s total capital or
2. total commercial real estate loans as defined in this guidance represent 300 percent or more of the bank’s total capital, and the outstanding balance of the bank’s commercial real estate loan portfolio has increased by 50 percent or more during the prior 36 months.

The Federal Reserve will use the criteria as a preliminary step to identify banks that may have CRE concentration risk. Because regulatory reports capture a broad range of CRE loans with varying risk characteristics, the supervisory monitoring criteria do not constitute limits on a bank’s lending activity but rather serve as high-level indicators to identify banks potentially exposed to CRE concentration risk. Nor do the criteria constitute a “safe harbor” for banks if other risk indicators are present, regardless of their measurements under (1) and (2).

2010.2.5.4.1 Evaluation of CRE Concentrations

The effectiveness of a bank’s risk-management practices will be a key component of the supervisory evaluation of the bank’s CRE concentrations. Examiners will engage in a dialogue with the bank’s management to assess CRE exposure levels and risk-management practices. Banks that have experienced recent, significant growth in CRE lending will receive closer supervisory review than those that have demonstrated a successful track record of managing the risks in CRE concentrations.

In evaluating CRE concentrations, the Federal Reserve will consider the bank’s own analysis of its CRE portfolio, including consideration of factors such as—

1. portfolio diversification across property types
2. geographic dispersion of CRE loans
3. underwriting standards
4. level of pre-sold units or other types of take-out commitments on construction loans
5. portfolio liquidity (ability to sell or securitize exposures on the secondary market)

While consideration of these factors should not change the method of identifying a credit concentration, these factors may mitigate the risk posed by the concentration.

26. For commercial banks as reported in the Call Report FFIEC 031 and 041, schedule RC-C, item 1a.
27. For purposes of this guidance, the term total capital means the total risk-based capital as reported for commercial banks in the Call Report FFIEC 031 and 041 schedule RC-R—Regulatory Capital, line 21.
28. For commercial banks as reported in the Call Report FFIEC 031 and 041, schedule RC-C, item 1a.
2010.2.5.4.2 Assessment of Capital Adequacy for CRE Concentration Risk

The Federal Reserve’s existing capital adequacy guidelines note that a bank should hold capital commensurate with the level and nature of the risks to which it is exposed. Accordingly, banks with CRE concentrations are reminded that their capital levels should be commensurate with the risk profile of their CRE portfolios. In assessing the adequacy of a bank’s capital, the Federal Reserve will consider the level and nature of inherent risk in the CRE portfolio as well as management expertise, historical performance, underwriting standards, risk-management practices, market conditions, and any loan loss reserves allocated for CRE concentration risk. A bank with inadequate capital to serve as a buffer against unexpected losses from a CRE concentration should develop a plan for reducing its CRE concentrations or for maintaining capital appropriate to the level and nature of its CRE concentration risk.

2010.2.6 GUIDANCE ON PRIVATE STUDENT LOANS WITH GRADUATED REPAYMENT TERMS AT ORIGINATION

On January 29, 2015, interagency guidance was issued to provide financial institutions with principles applicable to private student loans that have graduated repayment terms. Financial institutions that originate private student loans may offer borrowers graduated repayment terms in addition to fixed amortizing terms at the time of loan origination. Graduated repayment terms are structured to provide for lower initial monthly payments that gradually increase. Refer to SR-15-2/CA-15-1 and its attachment.

Although most student loan agreements include a grace period to help with the post-education transition, the agencies and SLC recognize that students leaving higher education programs may prefer more flexibility to transition into the labor market because of a number of factors, such as competitive job markets, traditionally low entry-level salaries, and higher student debt loads. Graduated repayment terms may align borrowers’ income levels with loan repayment requirements, provide flexibility to repay the debt sooner if borrowers’ incomes increase more quickly than projected, and may help long-term probability of full repayment.

Financial institutions that originate private student loans with graduated repayment terms should prudently underwrite the loans in a manner consistent with safe and sound lending practices. Financial institutions should provide disclosures that clearly communicate the timing and the amount of payments to facilitate a borrower’s understanding of the loan’s terms and features.

2010.2.6.1 Principles for Private Student Loans with Graduated Repayment Terms at Origination

Financial institutions should consider the following principles in their policies and procedures for underwriting private student loans with graduated repayment terms at origination:

- **Ensure orderly repayment.** Private student loans should have defined repayment periods and promote orderly repayment over the life of the loans. Graduated repayment terms should ensure timely loan repayment and be appropriately calibrated according to reasonable industry and market standards based on the amount of debt outstanding. Graduated repayment terms should avoid negative amortization or balloon payments.
- **Avoid payment shock.** Graduated repayment terms should result in monthly payments that a borrower can meet in a sustained manner over the life of the loan. Graduated increases in a borrower’s monthly payment should begin early in the repayment period and phase in the amortization of the principal.

---

28a. The agencies consist of the Board of Governors of the Federal Reserve System, the Consumer Financial Protection Bureau, the Federal Deposit Insurance Corporation, the National Credit Union Administration, and the Office of the Comptroller of the Currency.

28b. In implementing this guidance, the agencies will examine financial institutions consistent with their respective authorities.

28c. A grace period is the allotted amount of time during which borrowers are not expected to make payments on student loans after initially leaving higher education programs or dropping below half-time enrollment status.

28d. In addition to offering graduated repayment terms at origination, financial institutions may also offer graduated repayment terms as well as other types of workout options to borrowers experiencing financial difficulties, as addressed in “Banking Agencies Encourage Financial Institutions to Work With Student Loan Borrowers Experiencing Financial Difficulties,” issued July 25, 2013.

28e. Payment shock occurs when a borrower experiences a significant increase in the amount of the monthly payment after a reset date.

*BHC Supervision Manual* January 2015 Page 27
balance to limit payment shock to the borrower.

- **Align payment terms with a borrower’s income.** Graduated repayment terms should be based on reasonable assumptions about the ability to repay of the borrower and cosigner, if any. Lender underwriting should include an assessment of a borrower’s (and, if applicable, a cosigner’s) ability to repay the highest amortizing payment over the term of the loan. Graduated repayment terms should not be structured in a way that could mask delinquencies or defer losses.

- **Provide borrowers with clear disclosures.** Financial institutions that offer private student loans with graduated repayment terms should provide borrowers with disclosures in compliance with all applicable laws and regulations. For example, the Truth in Lending Act, as implemented by Regulation Z, includes specific private student loan disclosure content requirements. Ensuring that disclosures clearly communicate the timing and the amount of payments facilitates borrowers’ understanding of their loans’ terms and features.

- **Comply with all applicable federal and state consumer laws and regulations and reporting standards.** Private student loans with graduated repayment terms must comply with all applicable consumer protection laws. These include, but are not limited to, the Electronic Fund Transfer Act, the Equal Credit Opportunity Act, federal and state prohibitions against unfair, deceptive, or abusive acts or practices (such as section 5 of the Federal Trade Commission Act and sections 1031 and 1036 of the Dodd-Frank Wall Street Reform and Consumer Protection Act), the Truth in Lending Act, and the regulations issued pursuant to those laws.

- **Contact borrowers before reset dates.** Before originating private student loans with graduated repayment terms, financial institutions should develop processes for contacting borrowers before the start of the repayment period and before each payment reset date. These contacts can help establish student debt as a priority in borrowers’ payment hierarchies and aid borrowers in responding effectively to payment increases and other potential repayment challenges.

### 2010.2.7 LOAN PARTICIPATIONS, THE AGREEMENTS AND PARTICIPANTS

This subsection provides supervisory and accounting guidance for examiners to use in their inspection (or examination) and review of a bank holding company’s (BHC’s) or bank’s use, purchase, or sale of loan participation agreements. BHCs should manage and control aggregate credit and other risk exposures on a consolidated basis while recognizing legal distinctions and possible obstacles to asset movements within the parent company or its subsidiaries. Additional guidance, research, and information on loan participations and loan participation agreements will be developed and considered for future issuance and implementation.

A loan participation is an agreement that transfers a stated ownership interest in a loan to one or more other BHCs or subsidiaries, or other entities. The transfer represents an ownership interest in an individual financial asset. The lead BHC (or lead subsidiary) retains a partial interest in the loan, holds all loan documentation in its own name, services the loan, and deals directly with the customer for the benefit of all participants. The lead BHC or lead subsidiary should ensure that comprehensive participation agreements with originating institutions are in place for each loan facility before they consider purchasing any participating interest.

Many BHCs and their subsidiaries purchase loans or participate in loans originated by others. In some cases, such transactions are conducted with BHC affiliates, groups of BHCs or chain banks, or other subsidiaries. Alternatively, a purchasing BHC or subsidiary may also wish to supplement its loan portfolio when loan demand is weak. In still other cases, a BHC or subsidiary may purchase or participate in a loan to accommodate another unrelated bank with which it has established an ongoing business relationship.

Purchasing or selling loans, if done properly, can have a legitimate role in a BHC’s or bank’s overall asset and liability management and can contribute to the efficient functioning of the

28g. Reporting standards include, but are not limited to, quarterly Consolidated Reports of Condition and Income.
28h. Payment hierarchy refers to the prioritization of a borrower’s payment obligations.

---

29. As determined by the Board, it is permissible for a BHC or its subsidiary to make, acquire, broker, or service loans or other extensions of credit (12 CFR 225.28(b)(1) and (2)).
financial system. In addition, these activities help a BHC or bank diversify its risks and improve its liquidity.

2010.2.7.1 Board Policies on Loan Participations

BHCs and their subsidiaries should have sufficient board-approved policies in place that govern their loan participation activities. At a minimum, the policy should include (1) the requirements for entering into a loan participation agreement, (2) limits for the aggregate amount of loans purchased from and sold to an outside source, (3) limits of all loans purchased and sold, (4) limits for the aggregate amount of loans to particular industries, (5) comprehensive participation agreements with originating BHCs or banks, (6) complete analysis and documentation of the credit quality of obligations purchased, (7) an analysis of the value and lien status of the collateral, (8) appraisal guidelines, (9) the maintenance of full independent credit information on the borrower throughout the term of the loan, (10) guidelines for the timely transfer of all financial and nonfinancial credit information to participant BHCs or banks, and (11) collection procedures.

2010.2.7.2 Loan Participation Agreement

A loan participation agreement may enable a smaller lead BHC or lead subsidiary, acting as transferee, to originate a large loan in excess of its legal lending limit. Participants having an ownership interest are able to offset low local loan demand or invest in large loans without the burden of servicing the loan or incurring origination costs. A loan participation agreement may also allow the originating BHC or subsidiary to facilitate and grant a larger loan without causing it to have a concentration of credit (i.e., enabling risk diversification) or an impairment of its liquidity position. The participation agreement should contain provisions that require the originator to transfer, in a timely manner, all financial and nonfinancial credit information to the participant banks upon the loan’s origination and throughout the term of the loan. The agreement should specify the allocation of payments, losses, and expenses. It should also state that a participant has the right to perform its own independent review of the transaction. The agreement should contain no language indicating that the lead BHC or lead subsidiary is a “lender” or that a participating BHC or subsidi-

2010.2.7.3 Accounting for Loan Participations

A loan participation agreement usually is structured to allow the participation transaction to receive sale treatment of a portion of the loan by the originating BHC or its subsidiary even though the participation agreement may restrict the purchaser when reselling its interest in the loan, subject to certain conditions. Sale treatment is achieved by structuring the loan participation agreement so that interests sold to a purchaser meet the definition of a “participating interest” and the transaction satisfies all conditions for transfer of control over the interests. In general, FAS 166 (paragraph 8B) briefly defines a participating interest as a portion of a financial asset that

1. conveys proportionate ownership rights with equal priority to each participating interest holder.
2. involves no recourse (other than standard representations and warranties) to, or subordination by, any participating interest holder.
3. does not entitle any participating interest holder to receive cash before any other participating interest holder.

A transfer of a participating interest in an entire financial asset in which the transferee surrenders control over those interests is to be accounted for as a sale if and only if all the following conditions are met:

30. Three sale recognition conditions denote the transferee’s surrender of control under Financial Accounting Standards (FAS) 166, “Accounting for Transfers of Financial Assets” (an amendment of FAS 140). Those conditions must be met in order for the originator (transferor) to account for the transfer of the financial assets to the participating transferee as a sale. When a loan participation is accounted for as a sale, the seller (transferor) removes the participated interest in the loan from its financial statements. FAS 166 applies to both the transferor (seller) of the participated assets and the transferee (purchaser). (See the complete text of FAS 166 (paragraphs 8B and 9) that defines a “participating interest” and the conditions for sale recognition). See also the reporting instructions for the “Consolidated Financial Statements for Bank Holding Companies” (FR Y-9C), and the FFIEC “Consolidated Reports of Condition and Income” (FFIEC 031) (bank Call Report).
1. The transferred financial assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership.\(^{31}\)

2. Each purchaser has the right to pledge or exchange the interests it received, and no condition both constrains the purchaser from taking advantage of its right to pledge or exchange and provides more than a trivial benefit to the transferor.

3. The transferor does not maintain effective control over the interests.\(^{32}\)

---

31. Transferred financial assets are isolated in bankruptcy or other receivership only if the transferred financial assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor or any of its consolidated affiliates included in the financial statements being presented.

32. Examples of a transferor’s effective control over the transferred financial assets include (a) an agreement that both entitles and obligates the transferor to repurchase or redeem the financial asset (or its third-party beneficial interests) before its maturity, (b) an agreement that provides the transferor with both the unilateral ability to cause the holder to return specific financial assets and a more-than-trivial benefit attributable to that ability, other than through a cleanup call, or (c) an agreement that permits the transferee to require the transferor to repurchase the transferred financial assets at a price that is so favorable to the transferee that it is probable that the transferee will require the transferor to repurchase them.
2010.2.7.4 Structuring the Loan Participation Agreement

The written participation agreement should consider contingent events such as a defaulting borrower, the lead BHC or lead subsidiary becoming insolvent, or a party to the participant arrangement that is not performing as expected. The agreement should clearly state the limitations the originator or participants impose on each other and any rights that the parties retain. The participation agreement should clearly include:

- the obligation of the lead BHC or lead subsidiary to furnish timely credit information and to notify the parties of significant changes in the borrower’s status;
- a requirement that the lead BHC or lead subsidiary consult with the participants prior to any proposed change to the loan, guarantee, or security agreements, or taking any action when the borrower defaults;
- the lead BHC’s or lead subsidiary’s and participants’ specific rights if the borrower defaults;
- the resolution procedures to be followed when the lead BHC or lead subsidiary or participants:
  — do not agree on the procedures to be taken when the borrower defaults and/or;
  — have potential conflicts when the borrower defaults on more than one loan
- provisions for terminating the agency relationship between the lead BHC or lead subsidiary and the participants upon events such as insolvency, breach of duty, negligence, or misappropriation by one of the parties to the agreement.

Some participation agreements may allocate payments using a method other than a pro rata sharing based on each participant’s ownership interest. The first principal payment could be applied based on the participant’s ownership interest while the remaining payments would be applied according to the lead BHC’s or lead subsidiary’s ownership interest. In this situation, the participation agreement should specify that if a borrower defaults, the participants would share subsequent payments and collections in proportion to their ownership interest at the time of default.33

A participation agreement may provide that the originating lender allow a participating BHC or subsidiary to resell, but the originator reserves the right to call at any time from whoever holds the ownership interest. The originator can then enforce the call option by cutting off or restricting the flow of interest at the call date.34 In this situation, the originating lender has retained effective control over the participation; such a call option precludes sale accounting treatment by the transferor. The transaction, therefore, should be accounted for as a secured borrowing.

2010.2.7.5 Independent Credit Analysis

A BHC or subsidiary that acquires a loan participation should regularly perform a rigorous credit analysis on its loan participation as if it had originated the loan. Due to the indirect relationship that a participant has with a borrower, it may be difficult for the participant to receive timely credit information to allow it to conduct a comprehensive credit analysis of the transaction. However, the participant should not rely solely on the originator’s credit analysis. It should gather all available relevant credit information, including the details on the collateral’s value (for example, values determined by an independent appraisal or an evaluation), lien status, loan agreements, and the loan’s other participation agreements that existed prior to making its commitment to acquire the loan participation. A participant also should reach an agreement with the loan originator (transferor) that it will provide ongoing, complete, and timely credit information about the borrower. It is important for the participants to maintain current and complete records on their loan participations. The absence of such information may indicate that the originator did not perform the necessary due diligence prior to making its decision to acquire the loan participation. During the life of the loan participation, the originator should monitor the loan’s servicing and repayment status.

2010.2.7.6 Sales of Loan Participations in the Secondary Market

If a BHC or a subsidiary has a concentration in loan participations, it may be possible for it to

---

33. This is not a participating interest—no sale.

34. The cash flows from a loan participation agreement, except servicing fees, should be divided in proportion to the third parties’ participating interests.
sell its participating interests in the secondary market to reduce its dependence on an asset group. If the BHC or a subsidiary is not large enough to participate in the secondary market, an alternative might be to sell loans without recourse to another subsidiary or correspondent bank that also desires to diversify its loan portfolio.

2010.2.7.7 Sale of Loan Participations With or Without the Right of Recourse

The parties to a participation agreement (those having a participating ownership interest) generally may have no recourse to the transferor or to each other even though the transferor (e.g., the originating lender) continues to service the loan. No participant’s interest should be subordinate to another. Some loan participation agreements, however, may give the seller a contractual right to repurchase the participated loan interest for purposes of working out or modifying the sale. When the seller has the right to repurchase the participation, it may provide the seller with a call option on a specific loan participation asset. If the seller’s right to repurchase precludes the seller from recognizing the transaction as a sale, the transaction should be accounted for as a secured borrowing.

2010.2.7.8 Sales of 100 Percent Participations

Some loan participation agreements may be structured so that the transferor sells the entire underlying loan amount (100 percent) to the agreement’s participants. If participation agreements are not structured properly they can pose unnecessary and increased risks (for example, legal, compliance, or reputational risks) to the originator and the participants. The originator would have no ownership in the loan. Such agreements should therefore clearly state that the loan participants are participating in the loan and that they are not investing in a business enterprise. The policies of a BHC or subsidiary engaged in such loan participation agreements should focus on safety and soundness concerns that include

- the program’s objectives
- the plan of distribution
- the credit requirements that pertain to the borrower—the originator should structure 100 percent loan participation programs only for borrowers who meet its credit requirements
- the program participant’s accessibility to the borrower’s financial information (as authorized by the borrower)—the originator should allow potential loan participants to obtain and review appropriate credit and other information that would enable them to make an informed credit decision.

2010.2.7.9 Participation Transactions Between Affiliates

BHCs or their subsidiaries should not relax their credit standards when participation agreements involve their affiliates. Such agreements must be structured to comply with sections 23A and 23B of the Federal Reserve Act (FRA) and the Board’s Regulation W. The Federal Reserve has determined that in certain very limited circumstances the purchase or sale of a participation agreement may be exempt from these provisions.

2010.2.7.9.1 Transfer of Low-Quality Assets

In general, a bank cannot purchase a low-quality asset, including a loan participation from an affiliate. Section 23A of the FRA provides a limited exception to the general rule prohibiting the purchase of low-quality assets if the bank performs an independent credit evaluation and commits to the purchase of the asset before the affiliate acquires the asset. Section 223.15 of the Board’s Regulation W provides an exception from the prohibition on the purchase of a low-quality asset by a member bank from an affiliate for certain loan renewals. The rule allows a member bank that purchased a loan participation from an affiliate to renew its participation in the loan, or provide additional funding under the existing participation, even if the underlying loan had become a low-quality asset, so long as certain criteria were met. These renewals or additional credit extensions may enable both the affiliate and the participating member bank to avoid or minimize potential losses. The exception is available only if (1) the underlying loan was not a low-quality asset at the time the member bank purchased its participation and (2) the proposed transaction would

not increase the member bank’s proportional share of the credit facility. The member bank must also obtain the prior approval of its entire board of directors (or its delegates) and it must give a 20-day post-consummation notice to its appropriate federal banking agency. A member bank is permitted to increase its proportionate share in a restructured loan by 5 percent (or by a higher percentage with the prior approval of the bank’s appropriate federal banking agency). The scope of the exemption includes renewals of participations in loans originated by any affiliate of the member bank (not just affiliated depository institutions).

2010.2.7.10 Concentrations of Credit Involving Loan Participations

BHCs or their subsidiaries should avoid purchasing loans that generate unacceptable credit concentrations. Such concentrations may arise solely from the BHC’s or subsidiary’s purchases, or they may arise when loans or purchased participations are aggregated with loans originated and retained by the purchaser. The extent of contingent liabilities, holdbacks, reserve requirements, and the manner in which loans will be handled and serviced should be clearly defined. In addition, loans purchased from another source should be evaluated in the same manner as originated loans. Guidelines should be established for the type and frequency of credit and other information the BHC or its subsidiary needs to obtain from the originator to keep itself continually updated on the status of the credit. Guidelines should also be established for supplying complete and regularly updated credit information to the purchasers of loans originated and sold by the BHC or its subsidiary.

2010.2.7.11 Loan Participations and Environmental Liability

Environmental risk represents the adverse consequences that result from generating or handling hazardous substances or from being associated with the aftermath of contamination. BHCs or their subsidiaries may be indirectly liable via their lending activities for the costs resulting from cleaning up hazardous substance contamination. BHCs and their subsidiaries need to be careful that their actions making, administering, and collecting loans—including assessing and controlling environmental liability—cannot be construed as taking an active role in the management or day-to-day operations of a borrower’s business. Such actions could lead to potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). BHCs or their subsidiaries that originate loans to borrowers through loan participation agreements could be transferring environmental risk and liability to the holders of participations, thus making them susceptible to such losses. The originator should establish and follow policies and procedures designed to control environmental risks. See the Commercial Bank Examination Manual, section 2140.1 (the “Environmental Liability” subsection) for a more detailed discussion on ways banks can protect themselves as lenders, and their loan participation agreement holders, from environmental liability.

2010.2.7.12 Red Flag Warning Signals

The following conditions may indicate that there are significant problems with the management of the BHC’s or a subsidiary’s loan participation portfolio:

1. the absence of formal loan participation policies.
2. the absence of any formal participation agreement.
3. the absence of credit evaluations and independent credit analysis.
4. the absence of complete loan documentation.
5. a higher volume of loan participations when compared to the volume of other loans in the loan portfolio.
6. missing loan participation agreements and documentation which should denote the rights and responsibilities of all participants.
7. the existence of numerous disputes or disagreements among the participants regarding the receipt of payment(s) in accordance with the participation agreements, documentation requirements, or any other significant aspects of the entity’s loan participation transactions.
8. the originator is making loan payments to loan participation acquirers without receiving reimbursement by the original borrower.

2010.2.8 INSPECTION OBJECTIVES

Loan Administration

1. To determine if the parent’s loan policies are
adequate in relation to the responsibilities it has for the supervision of its credit-extending subsidiaries and whether those policies are consistent with safe and sound lending practices.

2. To determine if internal and external factors (for example, the size and financial condition of the credit-extending subsidiary, the size and expertise of its staff, avoidance of or control over credit concentrations, market conditions, and statutory and regulatory compliance) are considered in formulating and monitoring the organization’s loan policies and strategic plan.

3. To determine if the loan policy is being monitored and complied with.

4. To establish whether the loan policy ensures sound assessments of the value of real estate and other collateral.

**Lending Standards for Commercial Loans**

1. To focus on and evaluate the strength of the credit-risk management process.

2. To determine whether the bank holding company has formal credit policies that (1) provide clear guidance on its appetite for credit risk and (2) support sound lending decisions.

3. To determine whether experienced credit professionals who are independent of line lending functions provide adequate internal control in the loan-approval process.

4. To evaluate whether loan-approval documents provide internal approving authorities and management with sufficient information on the risks of loans being considered, and that the information is in a clear and understandable format.

5. To evaluate whether forward-looking analysis tools are being adequately and appropriately used as part of the loan-approval process.

6. To determine whether credit-risk management information systems provide adequate information to management and lenders.

7. To incorporate the examiner’s evaluation of the bank holding company’s adherence to sound practices into the overall assessment of credit-risk management.

8. To be alert to indications of insufficiently rigorous risk assessment at banking organizations, particularly inadequate stress testing and excessive reliance on strong economic conditions and robust financial markets to support a borrower’s capacity to service its debts.

9. To be attentive in reviewing a banking organization’s assessment and monitoring of credit risk to ensure that undue reliance on favorable conditions does not lead to delayed recognition of emerging weaknesses in some loans.

10. To ascertain whether the banking organization has relied, to a significant and undue extent, on favorable assumptions about borrowers or the economy and financial markets. If so, to carefully consider downgrading, under the applicable supervisory rating framework, a banking organization’s risk-management, management, and/or asset-quality ratings and, if deemed sufficiently significant to the banking organization, its capital adequacy rating.

11. To determine if the banking organization’s loan-review activities or other internal control and risk-management processes have been weakened by staff turnover, failure to commit sufficient resources, inadequate training, and reduced scope or by less-thorough internal loan reviews. To incorporate such findings into the determination of supervisory ratings.

**Leveraged Lending**

1. **Risk-Management Framework, Definition, and Policy Expectations.** To determine
   a. whether the institution has established a sound definition of leveraged lending that is appropriate for the types of leveraged loans that are underwritten and if it can be applied across all business lines;
   b. whether it has adjusted (if necessary) its risk appetite and limit structure (including pipeline limits and overall portfolio limits) to conform with the institution’s definition of leveraged lending and whether it has the necessary reporting in place to assess conformance with limits.
   c. if there are appropriate policies and procedures limits in place and if the institution maintains sound leveraged lending standards both for transactions that it intends to hold as well as transactions that are underwritten to distribute.
   d. if the institution’s risk-management structure has strong and effective processes and controls and if they are appropriate based on its leveraged lending activity.
2. **Participations Purchased.** To ensure that the institution applies the same standards of prudence and credit assessment techniques and in-house limits that would apply as if it had originated the loan(s).

3. **Underwriting Standards.** To assess the effectiveness of the institution’s underwriting policy standards for leveraged lending to determine whether they
   a. are clear, written, and measurable;
   b. contain underwriting limits that reflect the institution’s definition and risk appetite for leveraged lending;
   c. are applied equally to loans that are originated to be held and to loans that are originated to distribute; and
   d. fully reflect the underwriting standards listed in the guidance, including:
      i. sound business premise and sustainable capital structure for each transaction
      ii. capacity to repay and ability to de-lever to a sustainable level over a reasonable period
      iii. appropriate depth and breadth of due diligence
      iv. standards for valuating expected risk-adjusted returns
      v. appropriate credit agreement covenant protections
      vi. acceptable collateral agreements.

4. **Valuation Standards.** To determine:
   a. whether enterprise valuation methodologies are appropriate to the borrower’s industry and condition;
   b. whether the assumptions are clearly documented, well supported, and understood by the institution’s appropriate decision makers and risk-oversight units
   c. whether enterprise valuations are performed by qualified persons independent of an institution’s origination function
   d. whether an institution has policies and provides for appropriate loan to value ratios, discount rates and collateral margins for loans dependent on enterprise value or illiquid and hard-to-value collateral.

5. **Pipeline Management.** To find out if there are strong risk-management standards and controls over transactions in and to the pipeline and if those standards are applied uniformly to transactions held in the portfolio and those that are distributed.

6. **Reporting and Analytics.**
   a. To determine if individual and portfolio exposures within and across all business lines and legal vehicles are captured and reported in the appropriate amount of detail to senior management and the board.
   b. To determine if the necessary risk information (as outlined in the guidance) about leveraged lending exposures (portfolio holds and pipeline exposures) are captured in reports that are distributed timely and that adequate information is distributed to senior management and the institution’s board of directors at least quarterly.

7. **Risk Rating.** To verify that leveraged loans are risk rated based on the borrower’s ability to repay and de-lever to a sustainable level.

8. **Credit Analysis.**
   a. To test transactions to determine if underwriting practices are effective and comprehensive.
   b. To determine if individual leveraged lending exposures contain a comprehensive assessment of financial, business, industry, and management risks based on the elements of the guidance.

9. **Problem Credit Management.**
   a. To ascertain whether the institution formulates individual action plans and expectations
   b. To evaluate workout plans to confirm that they contain quantifiable objectives and measurable time frames
   c. To determine if problem credits are regularly reviewed for risk-rating accuracy, accrual status, impairment status, and charge off.

10. **Deal Sponsors**
    a. To determine if the institution has guidelines for evaluating deal sponsors that are based on the sponsor’s ability and willingness to support the transaction where sponsors are viewed as a source of repayment.

11. **Credit Review**
    a. To ensure that the institution regularly conducts an independent credit review of the leveraged lending portfolio more frequently and in greater depth than other segments of the portfolio generally at least annually. For firms making significant changes to policies, underwriting standards, procedures etc., ensure that a credit review is scheduled to test compliance with changes.
    b. To ensure that credit review personnel...
have the expertise and experience to evaluate leveraged loans.

12. **Stress Testing.**
   a. To determine if the institution is conducting periodic loan- and portfolio stress tests on leveraged loan portfolios or if the portfolio has been incorporated into enterprise-wide stress testing practices.
   b. To verify the effectiveness of the institution’s periodic portfolio stress tests (in accordance with stress testing guidance) in identifying what effect economic and market events could have on the institution’s financial condition and leveraged lending transactions.

13. **Conflict of Interest.** To determine
   a. if policies identify and if there are procedures to address transactions in which the institution holds both an equity and lending positions;
   b. the adequacy and effectiveness of controls and training programs that aim to curb any potential conflicts of interests that result from leveraged lending.

14. **Reputational Risk.**
   a. To determine if the institution has suffered reputational damage by failing to meet its legal responsibilities in underwriting and syndicating leveraged loan transactions into the wider financial market.

**Credit-Risk Management for Home Equity Lending**

1. To determine if the banking organization has an appropriate review and approval process for new product offerings, product changes, and marketing initiatives.
2. To ascertain whether the banking organization has appropriate control procedures for third parties that generate loans on its behalf and if the control procedures comply with the laws and regulations that are applicable to the organization.
3. To determine if the banking organization has given full recognition to the risks embedded in its home equity lending.
4. To determine whether the banking organization’s risk-management practices have kept pace with the growth and changing risk profile of its home equity portfolios and whether underwriting standards have eased.
5. To determine whether the loan policy—

a. ensures prudent underwriting standards for home equity lending, including standards to ensure that a thorough evaluation of a borrower’s capacity to service the debt is conducted (that is, the banking organization is not relying solely on the borrower’s credit score);

b. provides risk-management safeguards for potential declines in home values;

c. ensures that the standards for interest-only and variable-rate home equity lines of credit (HELOCs) include an assessment of a borrower’s ability to (1) amortize the fully drawn line of credit over the loan term and (2) absorb potential increases in interest rates; and

d. provides appropriate collateral-valuation policies and procedures and provides for the use and validation of automated valuation models.

**Loan Participations, the Agreements and Participants**

1. To ascertain if the BHC engages in the purchase or sale of loans via loan participation agreements.
2. To determine if the BHC’s lending policy
   a. places limits on the amount of loan participations originated, purchased, or sold based on any one source or in the aggregate;
   b. has set credit standards for the BHC’s borrowers requesting loans as well as third parties acquiring loan participations from the bank as originator;
   c. requires the same credit standards for loan participations as it does for other loans;
   d. sets the amount of contingent liability, holdback (retained ownership), and the manner in which the loan should be serviced; or
   e. requires complete loan documentation for loan participations.
3. To assess the impact of any concentrations of credit to a borrower, or in the aggregate, that arise from loans involved in loan participation agreements.
4. To determine if there are any informal repurchase agreements that exist between loan participation acquirers that are designed to circumvent the originating BHC’s or its subsidiary’s legal lending limits, disguise delinquencies, and avoid adverse classifications.
5. To determine whether the BHC’s financial condition is compromised by assessing the impact of the BHC’s loan participations with
its affiliates.
6. To ascertain whether loan participation transactions with affiliates are in compliance with sections 23A and 23B of the Federal Reserve Act and the Board’s Regulation W.
7. To determine if there are disputes between the BHC or its subsidiaries as originator of loan participations and its participants.
8. To determine if any loan participations have been adversely classified by examiners, including examiners from other supervisory agencies (includes loan participations held by the other institutions).

2010.2.9 INSPECTION PROCEDURES

Loan Administration

1. Obtain an organizational chart and determine the various levels of responsibility and job functions of individuals involved with the lending function.
2. Obtain and review the BHC’s loan policy; determine if the policy contains the appropriate components, as summarized in this section. Determine how the policy is communicated to subsidiaries. Also determine whether the loan policy reflects the December 1992 uniform interagency real estate lending standards and guidelines as they apply to subsidiary depository institutions.
3. Obtain a copy of the most recent management reports concerning the quality of loans and other aspects of the loan portfolio (delinquency list, concentrations, yield analysis, loan-distribution lists, watch loan reports, charge-off reports, participation listings, internal and external audit reports, etc.). Determine the scope and sufficiency of the work performed by any committees related to the lending function. Determine if the information provided to the directorate and senior management is sufficient for them to make judgments about the quality of the portfolio and to determine appropriate corrective action.
4. Determine if an internal process has been established for the review and approval of loans that do not conform to internal lending policy. Establish whether such loans are supported by written documentation that clearly states all the relevant credit factors that culminated in the underwriting decision. Determine if exception loans of a significant size are reported to the board of directors of the subsidiary or to the holding company.
5. Review internal and external audit reports and bank examination reports for critical comments concerning loan-policy exceptions and administration. Determine whether action was taken in response to any identified exceptions. Determine who is responsible for follow-up and what the time frames are; seek rationale if no action was taken or if the action taken was half-hearted.
6. Review the organization’s financial statements, the bank Call Reports, and the BHC FR Y-series reports submitted to the Federal Reserve. Determine whether reporting is accurate and disclosure is sufficient to indicate the organization’s financial position and the nature of its loan portfolios, including nonaccrual loans.
7. When reviewing lending policies, ascertain whether—
a. the loan policies facilitate extensions of credit to sound borrowers and facilitate the workout of problem loans, and
b. the loan policies control and reduce concentration risk by placing emphasis on effective internal policies, systems, and controls to monitor the risk.
8. Through interviews with, or review of reports submitted by, the internal auditor, lending officers, loan-review personnel, and senior management, (1) evaluate the effectiveness of the BHC’s self-monitoring of adherence to loan policy, (2) determine how changes to the loan policy occur, (3) determine how loans made in contradiction to the loan policy are explained, and (4) determine the various circumstances involving levels of approval and what specific consideration occurs at these levels.
9. Presuming the inspection is concurrent with a bank’s primary regulator, coordinate, on a random basis, the selection of loans subject to classification. Determine whether they conform to loan policy.
10. Review management’s policies and procedures for their determination of an appropriate level of loan-loss reserves.
11. On the “Policies and Supervision” or an equivalent page of the inspection report, evaluate the BHC’s oversight regarding effective lending policy and procedures.

Lending Standards for Commercial Loans

1. Review formal credit policies for clear articulation of current lending standards,
including—
a. a description of the characteristics of acceptable loans and (if applicable) "guidance" minimum financial ratios,
b. standards for the types of covenants to be imposed for specific loan types, and
c. the treatment and reporting of policy exceptions, both for individual loans and the entire portfolio.

2. Evaluate the role played by independent credit staff in loan approvals and, in particular, whether these credit professionals are adequately experienced, are independent of line lending functions, and have authority to reject loans either because of specific exceptions to policy or because the loan does not meet the institution’s credit-risk appetite.

3. Review written policies and determine operating practice in preparing loan-approval documents to evaluate whether sufficient information is provided on the characteristics and risks of loans being considered, and whether such information is provided clearly and can be easily understood.

4. Based on written policies and review of operating practice, evaluate whether loans being considered are evaluated not only on the basis of the borrower’s current performance but on the basis of forward-looking analysis of the borrower.
   a. Determine whether financial projections or other forward-looking tools are an integral part of the preapproval analysis and loan-approval documents.
   b. Determine the extent to which alternative or “downside” scenarios are identified, considered, and analyzed in the loan-approval process.

5. Review credit-risk management information systems and reports to determine whether they provide adequate information to management and lenders about—
   a. the composition of the institution’s current portfolio or exposure, to allow for consideration of whether proposed loans might affect this composition sufficiently to be inconsistent with the institution’s risk appetite, and
   b. data sources, analytical tools, and other information to support credit analysis.

6. When appropriate, coordinate or conduct sufficient loan reviews and transaction testing in the lending function to accurately determine the quality of loan portfolios and other credit exposures. If deficiencies in lending practices or credit discipline are indicated as a result of the preexamination risk assessment, the inspection, or bank or other examinations, arrange for the commitment of sufficient supervisory resources to conduct in-depth reviews, including transaction testing, that are adequate to ensure that the Federal Reserve achieves a full understanding of the nature, scope, and implications of the deficiencies.

7. When reviewing loans, lending policies, and lending practices—
   a. observe and analyze loan-pricing policies and practices to determine whether the institution may be unduly weighting the short-term benefit of retaining or attracting new customers through price concessions, while not giving sufficient consideration to potential longer-term consequences;
   b. be alert for indications of insufficiently rigorous risk assessment, in particular (1) excessive reliance on strong economic conditions and robust financial markets to support the capacity of borrowers to service their debts and (2) inadequate stress testing;
   c. be attentive in reviewing an institution’s assessment and monitoring of credit risk to ensure that undue reliance on favorable conditions does not lead that institution to delay recognition of emerging weaknesses in some loans or to lessen staff resources assigned to internal loan review;36 and
   d. give careful consideration to downgrading, under the applicable supervisory rating framework, a banking organization’s risk-management, management, and/or asset-quality ratings and its capital adequacy rating (if sufficiently significant) when there is significant and undue reliance on favorable assumptions about borrowers or the economy and financial markets, or when that reliance has slowed the recognition of loan problems.

8. Discuss matters of concern with the senior management and the board of directors of the bank holding company and report those areas of concern on core page 1, “Examiner’s Comments and Matters Requiring Special Board Attention.”

---

36. Examiners should recognize that an increase in classified or special-mention loans is not per se an indication of lax lending standards. Examiners should review and consider the nature of these increases and the surrounding circumstances in reaching their conclusions about the asset quality and risk management of an institution.
Leveraged Lending

Overview

Complete or update the Leveraged Lending Internal Control Questionnaire if selected for implementation.

1. Based on an evaluation of internal controls, determine the scope of the inspection. The scope should include exposures related through common ownership, guarantors, or sponsors. Also include direct and indirect leveraged lending exposure found in financial intermediaries formed to house or distribute leveraged loans (for example CLOs, SPEs, conduits etc.).

2. Inspection procedures should include both a policy review and transaction testing approach to determine the effectiveness of the institution’s leveraged lending control process.

If the institution is found to lack robust risk-management processes and controls around leveraged lending that reinforces the institution’s risk profile, a supervisory finding of unsafe and unsound banking practices should be considered.

3. Applicability/Risk Management Framework
   a. At the start of the inspection, ascertain whether the institution has adopted an appropriate risk-management framework for leveraged lending that includes robust policies, procedures, and risk limits that have been approved by the board of directors.
   b. Implementation of this guidance should be consistent with the size and risk profile of the institution.
   c. All aspects of the guidance should be applied to institutions that originate and distribute leveraged loans.
   d. The section on Participations Purchased should be applied to banking organizations that have limited involvement in leveraged lending; community banks overall may not be materially affected by the guidance.

4. Definition of Leveraged Lending
   a. Determine if the institution has a written policy for leveraged lending and if that policy contains criteria for defining leveraged lending that are appropriate for the institution and consistent with the guidance standards.
   b. Determine if the institution’s definition includes related exposures and direct and indirect exposures.

5. General Policy Expectations
   a. Review the policy for the key risk elements referred to in the guidance (See the section on General Policy Expectations in the guidance and in the Internal Control Questionnaire). Determine if the policy includes the following elements:
      • Risk Appetite that clearly defines the amount of leveraged lending the institution is willing to underwrite and is willing to retain.
      • Limit Framework for aggregate portfolio held on balance sheet, single obligors and transactions, aggregate pipeline exposure, industry and geographic concentrations. For institutions with significant underwriting exposure, determine if limits have been established for stress losses, flex terms, economic capital, or earnings at risk associated with leveraged loans.
      • Allowance for loan and lease losses (ALLL) and capital adequacy analysis that reflect the risk of leveraged lending activities.
      • Credit approval and underwriting authorities.
      • Guidelines for senior management oversight and timely reporting to senior management and the board of directors.
      • Expected risk adjusted returns.
      • Minimum underwriting standards.
      • Underwriting practices for origination and secondary loan acquisition.

6. Participations Purchased
   a. Ascertain if the institution participating or purchasing into a leveraged loan has a clear understanding of the credit and the risks involved and also has a clear understanding of its rights and responsibilities under the participation agreement.
   b. Determine if the institution has conducted its own independent underwriting of participations and has applied the same standards of prudence, credit assessment techniques, and in-house limits as if the institution had originated the loan(s).
   c. Verify that the institution has received copies of all participation documents and any other documents relevant to the credit transaction(s).
7. Underwriting Standards
   a. Determine if the institution employs similar and consistent underwriting standards for leveraged loans it plans to hold or it plans to distribute.
      • Confirm that the institution’s underwriting standards are clear, written, measurable, and reflect the institution’s policy-based risk appetite for leveraged lending.
      • Evaluate the underwriting policies and standards and determine if they contain the elements found in guidance (Refer to the section on Underwriting Standards in the guidance and in the Internal Control Questionnaire).

8. Valuation Standards
   a. Confirm that the institution has policies and procedures in place for estimating enterprise value or for valuing other illiquid collateral. If enterprise value is relied on as a secondary source of repayment, determine the following:
      • If one or a combination of the three methods referred to in the guidance is used (asset, income, or market valuation).
      • If the underlying assumptions and the resulting values are well documented, supportable, and credible (Refer to the Valuations Standards section of the guidance and the Internal Control Questionnaire).
      • If enterprise value was calculated by qualified persons independent of the origination function.
      • If stress tests of key enterprise value variables and assumptions (such as cash flow earnings and sales multiples) are conducted.
      • That firms have policies that provide for appropriate loan-to-value ratios, discount rates and collateral margins.
      • If the institution has established limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value.

9. Pipeline Management
   a. Determine if the institution has strong risk management and controls that are extended to deals in the pipeline, whether those deals are intended for hold, or if they are intended for distribution.
      • Determine if the institution has policies and procedures for handling distribution failures.
      • Determine if there are procedures for stress testing pipeline deals.
      • Ascertain if management reports show that transactions can be differentiated based on their key characteristics, tenor, and investor class (pro-rata and institutional), structure, and key borrower characteristics (for example, industry).
      • Determine if there are clearly articulated rationales for the effectiveness of hedging methods and if there is appropriate measurement and monitoring.
      • Confirm that the institution has developed and maintained the pipeline procedures referred to in the guidance (see the section on Pipeline Management in the guidance and in the Internal Control Questionnaire).

10. Reporting and Analytics
    a. Ascertain if the institution’s risk-management framework includes an intensive and frequent review and monitoring process.
    b. Establish whether management receives comprehensive reports about the characteristics and trends of the institution’s leveraged-lending portfolio at least quarterly and if summaries are provided to the board of directors.
    c. Find out if internal reports provide a detailed and comprehensive view of global exposures, including situations when an institution has an indirect exposure to an obligor or is holding a previously sold position as collateral or as a reference asset in a derivative. Borrower and counterparty leveraged lending reporting should aggregate total exposure and consider exposures booked across business lines or legal entities.
    d. Verify that internal policies identify the data fields to be populated and captured by the institution’s MIS and whether the reports are accurate, timely, and if the information is provided to management and the board of directors.
    e. Confirm that MIS reporting on the leveraged lending portfolio contains the applicable measures listed in the guidance. (Refer to the section on Reporting and Analytics in the guidance and in the Internal Control Questionnaire.)

11. Credit Analysis
    a. Conduct transaction testing on individual leveraged lending credits to determine if
the credit analysis contains a comprehensive assessment of financial, business, and industry and management risks.

b. Evaluate individual credits to determine if they fit the institution’s definition of a leveraged loan.

c. Determine if individual credits were analyzed in conjunction with the parameters in the guidance. (Refer to the section on Credit Analysis in the guidance and in the Internal Control Questionnaire).

d. Verify that there are guidelines for evaluating deal sponsors and their willingness and ability to support the credit.

e. Confirm that sponsors are used as a secondary and not a primary source of repayment.

f. Assess the credit agreement to determine if it contains language for:
   • Material dilution, sale, or exchange of collateral or cash flow producing assets without lender approval.
   • Financial performance covenants; covenant-lite, and payment-in-kind (PIK) toggle loan structures.
   • Reporting requirements and compliance monitoring.
   • The distribution of reporting and other credit information to participants and investors.
   • Acceptable collateral types, loan to value guidelines and appropriate collateral valuation methodologies.

12. Internal Risk Rating

a. Determine if individual loans are risk rated based on the borrower’s demonstrated ability to repay the loan and de-lever over a reasonable period of time.
   • Confirm that the institution has evidence of adequate repayment capacity, for example borrowers demonstrate the ability to fully amortize senior debt or repay at least 50 percent of total debt over a 5–7 year period. Ensure that extensions or other restructuring are not masking an inability to repay.
   • Consider adversely rating credits that do not show the capacity to pay down debt from cash flow or if refinancing is the only option for repayment.
   • Consider a substandard rating if there are no reasonable or realistic prospects for repayment or de-leveraging.

13. Deal Sponsors

a. If a deal sponsor is relied on as a secondary source of repayment, determine if management has developed guidelines for evaluating the sponsor’s creditworthiness.

b. Evaluate the sponsor based on the criteria listed in the guidance (See the section on Deal Sponsors in the guidance and in the Internal Control Questionnaire).

14. Credit Review/Problem Credit Management

a. Assess credit review staff’s expertise relative to leveraged lending.

b. Verify that the institution conducts frequent internal credit review of leveraged-lending portfolio that is done independently of the origination function. Portfolio reviews should generally be conducted no less than annually.

c. Evaluate the institution’s procedures for dealing with problem credits including if work out plans contain quantifiable objectives and measurable time frames.

15. Stress Testing

a. Determine if the institution has developed stress tests for leveraged loans or if the loans are included in the existing stress testing protocol.

16. Conflicts of Interest/Reputational Risk/Compliance

a. Confirm that the institution is meeting its legal responsibilities by underwriting and distributing transactions that do not result in undue reputational risk.

b. Determine if potential conflicts of interest exist if the institution has both equity and lending positions in a particular transaction. Confirm that policies and procedures are in place to handle conflicts of interest.

c. Ascertain whether the institution’s compliance function periodically reviews the institution’s leveraged-lending activity.

d. Ascertain whether the institution’s policies incorporate safeguards to prevent violations of anti-tying regulations.

e. When securities are involved, determine how the institution ensures compliance with applicable securities laws, including disclosure and other regulatory requirements.

f. Ascertain what plans and provisions have been developed to ensure compliance with the Board’s Regulation W (12 CFR part 223).
Credit-Risk Management for Home Equity Lending

1. Review the credit policies for home equity lending to determine if the underwriting standards address all relevant risk factors (that is, an analysis of a borrower’s income and debt levels, credit score, and credit history versus the loan’s size, the collateral value (including valuation methodology), the lien position, and the property type and location.

2. Determine whether the banking organization’s underwriting standards include—
   a. a properly documented evaluation of the borrower’s financial capacity to adequately service the debt and
   b. an adequately documented evaluation of the borrower’s ability to (1) amortize the fully drawn line of credit over the loan term and (2) absorb potential increases in interest rates for interest-only and variable-rate HELOCs.

3. Assess the reasonableness and adequacy of the analyses and methodologies underlying the banking organization’s evaluation of borrowers.

4. If the organization uses third parties to originate home equity loans, find out—
   a. if the organization delegates the underwriting function to a broker or correspondent;
   b. if the banking organization’s internal controls for delegated underwriting are adequate;
   c. whether the banking organization retains appropriate oversight of all critical loan-processing activities, such as verification of income and employment and the independence of the appraisal and evaluation function;
   d. if there are adequate systems and controls to ensure that a third-party originator is appropriately managed, is financially sound, provides mortgages that meet the banking organization’s prescribed underwriting guidelines, and adheres to applicable consumer protection laws and regulations;
   e. if the banking organization has a quality-control unit or function that closely monitors (monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities) the quality of loans that the third party underwrites; and
   f. whether the banking organization has adequate audit procedures and controls to verify that third parties are not being paid to generate incomplete or fraudulent mortgage applications or are not otherwise receiving referral or unearned income or fees contrary to RESPA prohibitions.

5. Evaluate the adequacy of the banking organization’s collateral-valuation policies and procedures. Ascertain whether the organization—
   a. establishes criteria for determining the appropriate valuation methodology for a particular transaction (based on the risk in the transaction and loan portfolio);
   b. sets criteria for determining when a physical inspection of the collateral is necessary;
   c. ensures that an expected or estimated value of the property is not communicated to an appraiser or individual performing an evaluation;
   d. implements policies and controls to preclude “value shopping”;
   e. requires sufficient documentation to support the collateral valuation in the appraisal or evaluation.

6. If the banking organization uses automated valuation models (AVMs) to support evaluations or appraisals, find out if the organization—
   a. periodically validates the models, to mitigate the potential valuation uncertainty in the model;
   b. adequately documents the validation’s analysis, assumptions, and conclusions;
   c. back-tests a representative sample of evaluations and appraisals supporting loans outstanding; and
   d. evaluates the reasonableness and adequacy of its procedures for validating AVMs.

7. If tax-assessment valuations are used as a basis for collateral valuation, ascertain whether the banking organization is able to demonstrate and document the correlation between the assessment value of the taxing authority and the property’s market value, as part of the validation process.

8. Review the risk- and account-management procedures. Verify that the procedures are appropriate for the size of the banking organization’s loan portfolio, as well as for the risks associated with the types of home equity lending conducted by the
9. If the banking organization has large home equity loan portfolios or portfolios with high-risk characteristics, determine if the organization—
   a. periodically refreshes credit-risk scores on all customers;
   b. uses behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts;
   c. periodically assesses utilization rates;
   d. periodically assesses payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the credit line to keep payments current;
   e. monitors home values by geographic area; and
   f. obtains updated information on the collateral’s value when significant market factors indicate a potential decline in home values, or when the borrower’s payment performance deteriorates and greater reliance is placed on the collateral.
   Determine that the frequency of these actions is commensurate with the risk in the portfolio.

10. Verify that annual credit reviews of home equity line of credit (HELOC) accounts are conducted. Verify if the reviews of HELOC accounts determine whether the line of credit should be continued, based on the borrower’s current financial condition.

11. Determine that authorizations of over-limit home equity lines of credit are restricted and subject to appropriate policies and controls.
   a. Verify that the banking organization requires over-limit borrowers to repay, in a timely manner, the amount that exceeds established credit limits.
   b. Evaluate the sufficiency of management information systems (MIS) that enable management to identify, measure, monitor, and control the risks associated with over-limit accounts.

12. Verify that the organization’s real estate lending policies are consistent with safe and sound banking practices and that its board of directors reviews and approves the policies at least annually.

13. Determine whether the MIS—
   a. allows for the segmentation of the loan portfolios;
   b. accurately assesses key risk characteristics; and
   c. provides management with sufficient information to identify, monitor, measure, and control home equity concentrations.

14. Determine whether management periodically assesses the adequacy of its MIS, in light of growth and changes in the banking organization’s risk appetite.

15. If the banking organization has significant concentrations of home equity loans (HELs) or HELOCs, determine if the MIS includes, at a minimum, reports and analysis of the following:
   a. production and portfolio trends by product, loan structure, originator channel, credit score, loan to value (LTV), debt to income (DTI), lien position, documentation type, market, and property type
   b. the delinquency and loss-distribution trends by product and originator channel, with some accompanying analysis of significant underwriting characteristics (such as credit score, LTV, or DTI)
   c. vintage tracking
   d. the performance of third-party originators (brokers and correspondents)
   e. market trends by geographic area and property type, to identify areas of rapidly appreciating or depreciating housing values

16. Determine whether the banking organization accurately tracks the volume of high-LTV (HLTV) loans, including HLTV home equity and residential mortgages, and if the organization reports the aggregate of these loans to its board of directors.

17. Determine whether loans in excess of the supervisory LTV limits are identified as high-LTV loans in the banking organization’s records. Determine whether the organization reports, on a quarterly basis, the dollar value of such loans to its board of directors.

18. Find out whether the organization has purchased insurance products to help mitigate the credit risks of its HLTV residential loans. If a policy has a coverage limit, determine whether the coverage may be exhausted before all loans in the pool mature or pay off.

19. Determine whether the organization’s credit-risk management function oversees the support function(s). Evaluate the effectiveness of controls and procedures over
staff persons responsible who are responsible for perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes.

20. Determine whether policies and procedures have been established for home equity problem-loan workouts and loss-mitigation strategies.

**Loan Participations, the Agreements and Participants**

These inspection procedures are designed to ensure that originated loans that were transferred via loan participation agreements or certificates to state member banks, bank holding companies, nonbank affiliates, or other third parties were carefully evaluated. The procedures instruct examiners to determine if the asset transfers were carried out to avoid or circumvent classification and to determine the effect of the transfers on the BHC’s financial condition or that of its subsidiaries. In addition, the procedures are designed to ensure that the primary regulator of another financial institution involved in the asset transfer of any low-quality assets is notified.

1. Review the board of directors’ or their designated committees’ policies and procedures governing how loan participation agreements and activities are created, transacted, and administered. Refer to section 2010.2.7 for the minimum items that should be included in board-approved policies on loan participation activities.

2. Determine if managerial reports provide sufficient information relative to the size and risk profile of the loan participation portfolio and evaluate the accuracy and timeliness of reports produced for the board and senior management.

3. For loan participations held (either in whole or in part) with another lending institution, review, if applicable,
   • the participation certificates and agreements, on a test basis, to determine if the contractual terms are being adhered to;
   • loan documentation to determine if it meets the BHC’s (or its subsidiary’s) underwriting procedures (that is, the documentation for loan participations should meet the same standards as the documentation for other loans the respective entity originates);
   • the transfer of loans immediately before the date of the inspection to determine if the loan was either nonperforming or classified and if the transfer was made to avoid possible criticism during the current inspection; and
   • losses to determine if they are shared on a pro rata or other basis according to the terms of the participation agreement.

4. Check participation certificates or agreements and records to determine whether the parties share in the risks and contractual payments on a pro rata or other basis.

5. Determine if loans are purchased on a recourse basis and that loans are sold on a nonrecourse basis.

6. Ascertain that the BHC (or its subsidiaries) do not buy back or pay interest on defaulted loans in contradiction of the underlying participation agreement.

7. Compare the volume of outstanding originated or purchased loans that were issued in the form of loan participations with the total outstanding loan portfolio.

8. Determine if the BHC (or its subsidiaries) has sufficient expertise to properly evaluate the volume of loans originated or purchased and sold as loan participations.

9. Based on the terms of the loan participation agreements, review the originator’s distribution of the borrower’s payments received to those entities or persons owning interests in the loan participations. Ascertain if the agreement’s recourse provisions may require accounting for the transactions as a secured borrowing rather than as a sale.

10. Determine if loans are sold primarily to accommodate credit overline needs of customers or to generate fee income.

11. Determine if loans are purchased or sold to affiliates or other companies; if so, determine whether the purchasing companies request and are given sufficient information to properly evaluate the credit. (Section 23A of the Federal Reserve Act and the Board’s Regulation W prohibit transfers of low-quality assets between affiliates.) See sections 2020.0, 2020.1, 2020.2.

12. Investigate any situations in which assets were transferred before the date of inspection:
   a. Determine if any were transferred to avoid possible criticism during the inspection.
   b. Determine whether any of the loan participations transferred were nonperform-
ing at the time of transfer, classified during the previous examination, or transferred for any other reason that may cause the loans to be considered of questionable quality.

13. Review the BHC’s policies and procedures to determine whether loan participations purchased are required to be given an independent, complete, and adequate credit evaluation. Review asset participations sold to affiliates to determine if the asset purchases were supported by an arm’s-length and independent credit evaluation.

14. Determine that any assets purchased by the BHC (or its subsidiaries) were properly recorded at fair market value at the time of purchase.

15. Determine that transactions involving transfers of low-quality assets to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and the holding company affiliate.

16. If poor-quality assets were transferred by the BHC to another financial institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank’s appropriate staff will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable,

- names of originating and receiving institutions;
- type of assets involved;
- date (or dates) of transfer;
- total number and dollar amount of assets transferred;
- status of the assets when transferred (e.g., nonperforming, classified, etc.); and
- any other information that would be helpful to the other regulator. Ascertain whether the bank manages not only the risk from individual participation loans but also portfolio risk.

17. Find out if management develops appropriate strategies for managing concentration levels, including the development of a contingency plan to reduce or mitigate concentrations during adverse market conditions (such a plan may include strategies involving not only loan participations, but also whole loan sales). Find out if the BHC’s (or its subsidiaries’) contingency plan includes selling loans as loan participations.

18. Ascertain if management periodically assesses the marketability of its loan participation portfolio and evaluates the BHC’s (or its subsidiaries’) ability to access the secondary market.

19. Verify whether the BHC (or its subsidiaries) compare its underwriting standards for loan participations with those that exist in the secondary market.

2010.2.10 INTERNAL CONTROL QUESTIONNAIRE

Applicability/Risk-Management Framework

1. Has the institution adopted a risk-management framework around leveraged lending that includes:
   a. A leveraged lending policy that is based on risk objectives, risk acceptance criteria, and risk controls?
   b. Structuring transactions that reflect a sound business premise, have an appropriate capital structure, reasonable cash flow, and balance sheet leverage?
   c. A definition of leveraged lending that can be applied across all business lines?
   d. Well-defined underwriting standards that define acceptable leverage levels and amortization expectations?
   e. A limit framework?
   f. Sound MIS?
   g. Pipeline management procedures, hold limits, and expected timing for distributions?
   h. Guidelines for stress testing?

2. Is the institution able to identify leveraged exposures to related borrowers or guarantors?

3. Is the institution able to identify leveraged loans that are managed in non-lending portfolios (for example collateralized loan obligations (CLOs), special purpose entities (SPEs), or other indirect exposures)?

4. Is the institution originating leveraged loans; participating in leveraged loans, or both?

Definition of Leveraged Lending

1. Has the institution developed an appropriate written definition for leveraged lending and incorporated it into the leveraged lend-
ing policy?
2. Is the policy definition consistent with the amounts and types of leveraged loans that the institution is engaged in?

General Policy Expectations

1. Has the institution’s leveraged lending policy been approved by the board of directors?
2. Does the leveraged lending policy contain the following elements:
   a. A clear statement of the amounts of leveraged lending that it is willing to underwrite and the amount(s) it is willing to hold in its own portfolio?
   b. A limit framework that establishes limits or guidelines around the following as applicable:
      1) Single obligors and transactions?
      2) Aggregate hold portfolio?
      3) Total pipeline exposure?
      4) Industry and geographic concentration?
      5) Notional pipeline limits?
      6) Stress losses, flex terms, economic capital usage, and earnings at risk?
      7) Other parameters particular to the portfolio?
     8) The required management approval authorities and exception tracking provisions?
   c. Procedures for insuring that leveraged lending risks are appropriately reflected in the institution’s level of allowance for loan and lease losses (ALLL) and capital adequacy analysis?
   d. Credit and underwriting approval authorities, including the procedures for approving and documenting changes to approved transaction structures and terms?
   e. Guidelines for appropriate oversight by senior management, including adequate and timely reporting to the board of directors?
   f. Expected risk-adjusted returns for leveraged transactions?
   g. Minimum underwriting standards and underwriting practices for primary loan origination and secondary loan acquisition?

Participations Purchased

1. Has the institution, with respect to participations purchased, done its own independent underwriting of its portion of the transaction and has it adequately identified its risks?
2. Has the institution received copies of all documentation relevant to the transaction?
3. Is there evidence that the institution has reviewed the participation agreement and has a clear understanding of its rights and responsibilities under the agreement?

Underwriting Standards

1. Is the institution using similar underwriting standards for leveraged loans it plans to hold as well as for leveraged loans it plans to distribute?
2. Are the institution’s underwriting standards clear, written, and measurable?
3. Do underwriting standards require:
   • A sound business premise for each transaction and that the borrower’s capital structure is sustainable?
   • A determination and documentation of the borrower’s capacity to repay and ability to de-lever to a sustainable level over a reasonable period?
   • Standards for evaluating various types of collateral?
   • Standards for evaluating risk-adjusted returns?
   • The acceptable degree of reliance on enterprise value and other intangible assets for loan repayment?
   • Expectations for the degree of support expected to be provided by sponsors?
   • A prohibition on material dilution, sale, or exchange of collateral or cash flow producing assets without lender approval?
   • A credit agreement that contains financial covenants, reporting covenants, and compliance monitoring? Does the loan contain covenant-lite and PIK toggle loan structures? If so, does the borrower have the ability to repay the loan under the contractual terms?
   • Guidelines for acceptable collateral types, loan-to-value guidelines, and acceptable collateral valuation methodologies?
   • Loan agreements that provide for the distribution of financial information to participants and investors?
Valuation Standards

1. Does the institution have policies for valuing illiquid, intangible, or hard to value collateral that include appropriate LTV ratios, discount rates, and collateral margins?

2. Is the institution relying on enterprise value to confirm a secondary source of repayment?
   a. Has the institution documented its valuation approach to calculating enterprise value?
   b. Has the valuation been performed by qualified persons independent of the origination function?
   c. Has one or a combination of three methods been used for determining enterprise value, asset valuation, income valuation, or market valuation?
   d. If the income method is used, is it based on capitalized cash flow or discounted cash flow?
   e. Has the institution confirmed proxy measures such as multiples of cash flow earnings or sales by performing its own discounted cash flow analysis?
   f. Are stress tests of key variables and assumptions used in determining enterprise value (such as cash flow earnings and sales multiples) conducted at origination and periodically thereafter?
   g. Does the institution have established limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value?

Pipeline Management

1. Do strong risk-management controls cover all transactions in the pipeline, including amounts planned for hold and those marked for distribution?

2. Does the institution have the capability to differentiate transactions based on their key characteristics, tenor, and investor class (pro-rata and institutional), structure, and key borrower characteristics (for example, industry)?

3. Does the institution have the following controls for pipeline exposure:
   • A documented appetite for underwriting pipeline risk that considers the potential effects on earnings, capital, and liquidity?
   • Written policies and procedures for “hung deals” or deals that are not sold down within a reasonable or 90-day period?
   • Have transactions reclassified as hold-to-maturity been reported to management and the board of directors?
   • Guidelines for conducting periodic stress tests of pipeline exposures?
   • Controls to monitor expected vs. actual performance?
   • Reports that show individual and aggregate transaction information, risk ratings and concentrations?
   • Limits on hold levels per borrower, counterparty, and aggregate hold levels?
   • Limits on the amounts intended for distribution?
   • Policies and procedures for acceptable accounting methods, including prompt recognition of losses?
   • Policies and procedures around acceptable hedging practices if applicable?
   • Plans to address contingent liabilities and compliance with Sections 23A and 23B of the Federal Reserve Act and Regulation W?

Reporting and Analytics

1. Does management receive quarterly comprehensive reports about the characteristics and trends of the institution’s leveraged lending portfolio? Are summaries provided to the board of directors?

2. Do internal policies identify the data fields to be populated and captured by the institution’s MIS? Are the reports accurate and timely?

3. As dictated by the size and complexity of the leveraged lending portfolio, does MIS reporting on the leveraged lending portfolio include the following:
   a. Individual and portfolio exposures within and across all business lines and legal vehicles including the pipeline?
   b. Risk-rating distribution and migration analysis?
   c. A list of borrowers who have been removed from the leveraged-lending portfolio due to improvements in their financial characteristics and risk profile? Is the removal from the profile concurrent with a refinance, restructure or some other modification in the loan agreement?
d. Industry mix and maturity profile?

e. Metrics derived from probability of default and loss-given default?

f. Portfolio performance measures including covenant breaches, restructurings, delinquencies, nonperforming asset amounts, and charge offs?

g. Amount and nature of impaired assets and the amount of ALLL attributable to leveraged lending?

h. The level of policy exceptions in the portfolio?

i. Exposures by collateral type, including unsecured transactions when enterprise values will be the only source of repayment?

j. Defaults that trigger pari-passu treatment for all lenders?

k. Secondary market pricing data and trading volume (when available)?

l. An aggregation of exposures by and performance of deal sponsors?

m. An indication of gross and net exposures, hedge and counterparty concentrations; and indication of policy exceptions?

n. Actual vs. projected distribution levels of the pipeline with reports of excess levels of exposure over hold targets?

o. Types of exposure in the pipeline: committed exposures not accepted by the borrower; exposures committed and accepted but not closed; funded and unfunded commitments closed but not distributed?

p. Total and segmented exposures: subordinated debt and equity holdings (compared to limits); global exposures; indirect exposure (to an obligor or if the institution is holding a previously sold position as collateral or as a reference asset in a derivative)?

q. Exposures booked in other business units throughout the institution that are related to a leveraged loan or borrower? (For example, default swaps or total return swaps naming the distributed paper as a covered or referenced asset or as collateral exposure through repo transactions).

r. Positions held in leveraged loans in available for sale or traded portfolios or held in structured-investment vehicles owned or operated by the originating institution or its subsidiaries or affiliates?

Internal Risk Rating

1. Does the institution have evidence of adequate repayment capacity? For example, do borrowers demonstrate the ability to fully amortize senior debt or repay at least 50 percent of total debt over a five to seven-year period?

2. Are there extensions or other restructuring that are masking an inability to repay?

3. Has the primary source of repayment become inadequate? Is enterprise value being relied on as a secondary source of repayment? Is enterprise value well supported with binding purchase and sale agreements with qualified third parties? Does enterprise value consider the borrower’s distressed circumstances?

Credit Analysis

1. Does transaction testing of individual leveraged lending credits contain the following elements and show that:

a. Cash flow analysis—The analysis does not rely on overly optimistic or unsubstantiated projections of sales, margins, or merger and acquisition synergies?

b. Liquidity analysis—There are measures to determine operating cash needs and cash needed to meet debt maturities? Analyze liquidity based on industry performance metrics?

c. Projections—There is adequate margin for unanticipated merger-related integration costs?

d. Stress tests—Projections are stress tested for one or more downside scenarios, including a covenant breach?

e. Variances from plan—Transactions are reviewed at least quarterly to determine variance from plan; does the credit file contain a chronological rationale for and analysis of all changes to the operating plan and variances from the expected financial performance?

f. Enterprise Value—Were enterprise values independently derived and validated outside of the origination function? Were values calculated timely and did they consider value erosion?

g. Collateral shortfalls—Have shortfalls been identified and factored into the risk rating?

h. Collateral liquidation and asset sales—Are any liquidations and sales based on current market conditions and trends?
i. **Contingency plans**—Are there contingency analyses to anticipate changing conditions in debt or equity markets? Do the exposures rely on refinancing or the issuance of new equity?

j. **Interest Rate Risk and Foreign Exchange Risk**—Have these risks been addressed in the analysis? Are mitigants in place?

**Problem Credit Management**

1. Has the institution formulated and established procedures for dealing with problem credits?
2. Do work out plans contain quantifiable objectives and measurable time frames?
3. Are problem credits regularly reviewed for risk-rating accuracy, accrual status, recognition of impairment through specific allocations and charge-offs.

**Deal Sponsors**

1. Has the institution developed guidelines for evaluating the willingness and ability of sponsors to support the credit exposure and a process to regularly monitor sponsor performance?
2. Determine if the credit analysis has considered:
   a. If the sponsor is relied on as a secondary source of repayment and not a primary source of repayment?
   b. If the sponsor has a historical pattern of supporting investments, financially or otherwise?
   c. If the degree of support has been documented via a guarantee, comfort level, or verbal assurance?
   d. If there has been a periodic review of the sponsor’s financial statements, an analysis of liquidity, and an analysis of the sponsor’s ability to support multiple deals?
   e. If consideration has been given to the sponsor’s dividend and capital contribution practices and the likelihood that the sponsor will support the borrower as compared to other deals in the sponsor’s portfolio?

**Credit Review**

1. Does the institution conduct an internal credit review of the leveraged-lending portfolio regularly, but at least once per year?
2. Does the institution ensure that credit review personnel have the knowledge and ability to identify risks in the leveraged lending portfolio?

**Stress Testing**

1. Has the institution developed and implemented guidelines for conducting periodic portfolio stress tests on loans originated to hold and on loans originated to distribute?
2. Has the institution conducted periodic loan and leveraged lending portfolio level stress tests?
3. If applicable, has the leveraged-lending portfolio been included in enterprise wide stress tests?
4. Does stress testing of leveraged credits include sensitivity analyses to quantify the potential impact of changing economic and market conditions on the institution’s asset quality, earnings, liquidity, and capital?

**Reputational Risk**

1. Does the institution have procedures, safeguards, actions, training, and staff reminders about the potential reputational risk associated with poorly underwritten originated leveraged loans?
2. Has there been any failure or apparent failure by the institution to meet its legal responsibilities in underwriting and distributing transactions that could damage its reputation or its ability to compete?

**Conflicts of Interest**

1. Has the institution developed appropriate policies and procedures to address and to prevent potential conflicts of interest when it has both equity and lending positions?
2. Do policies and procedures:
   a. Clearly define potential conflicts of interest?
   b. Identify appropriate risk-management controls and procedures?
   c. Enable employees to report potential conflicts of interest to managements without fear of retribution?
   d. Ensure compliance with applicable laws?
3. Has management:
   a. Established a training program for employees on appropriate practices to follow to avoid conflicts of interest?
   b. Provided for reporting, tracking, and resolution of any conflicts?

Compliance

1. Does the institution maintain an independent compliance review function to periodically review its leveraged-lending activity?
2. Do the institution’s policies include safeguards to prevent violations of anti-tying regulations?
3. How does the institution ensure compliance with applicable securities laws, including disclosure and other regulatory requirements when equity interests and certain debt instruments have been used in leveraged transactions that may constitute “securities” under federal securities laws?
4. Have plans and provisions been developed to ensure compliance with sections 23A and 23B of the Federal Reserve Act and Regulation W?

2010.2.11 APPENDIX I - EXAMINER LOAN-SAMPLING REQUIREMENTS FOR CREDIT-EXTENDING NONBANK SUBSIDIARIES OF BHCS WITH $10-50 BILLION IN TOTAL CONSOLIDATED ASSETS

This guidance sets forth loan sampling expectations for the Federal Reserve’s examination of state member bank (SMB) and the inspection of credit-extending nonbank subsidiaries of bank holding companies (BHCs) with $10-50 billion in total consolidated assets. Examiners will have the flexibility, depending upon the structure and size of subsidiary SMBs or credit-extending nonbank subsidiaries of BHCs, to utilize the guidance applicable to smaller organizations when the subsidiary’s total assets are below $10 billion. This guidance clarifies expectations for the assessment of material retail credit portfolios for these institutions. The guidance that follows has been solely adapted to BHC credit-extending nonbank subsidiaries.

A thorough review of a BHC’s credit-extending nonbank subsidiary’s loan and lease portfolio remains a fundamental element of the Federal Reserve’s inspection program for these organizations. Such credit reviews are a primary means for examiners to (1) evaluate the effectiveness of a BHC’s credit-extending nonbank internal loan review program and internal grading systems for determining the reliability of internal reporting of classified credits, (2) assess compliance with applicable guidance and regulations, and (3) determine the efficacy of credit-risk management and credit administration processes. Further, examiners use the findings from their credit review to identify the overall thematic credit-risk management issues, to assess asset quality, to assist in the assessment of the adequacy of the allowance for loan and lease losses (ALLL), and to inform their analysis of capital adequacy.

2010.2.11.1 Loan Sampling Methodology

Reserve Banks will establish the annual loan-sampling objective during the supervisory planning process. The annual sampling objective should provide coverage of material exposures, including those in the retail segments. Reserve Banks should plan on conducting at least two loan quality reviews during the annual supervisory cycle of the BHC’s credit-extending nonbank subsidiaries with $10−50 billion in total consolidated assets.

Each review should focus on one or more material commercial loan segment exposures using the comparable FR Y-9C Report loan type from Schedule HC-C. Loan segments that generate substantial revenues are generally likely to entail higher risk. To the extent that examiners can determine that a loan category contributes 25 percent or more to annual revenues, examiners should sample these segments. Examiners

37. A loan portfolio or portfolio segment is considered material when the portfolio or segment exceeds 25 percent of total risk-based capital (tier 1 capital plus the allowance for loan and lease losses) or contributes 25 percent or more to annual revenues.

38. Commercial loan segments include commercial and industrial (C&I) loans, 1-4 family construction, other construction loans, multifamily loans, farm loans, non-farm non-residential owner occupied, and non-farm non-residential other loans. Retail loan segments include first lien mortgages, closed-end junior liens, home equity lines of credit (HELOCs), credit cards, automobile loans, and other consumer loans.

39. The 25 percent threshold should be based on internal MIS and may not be applicable or available in all instances. For the purposes of this guidance, annual revenue equals net interest income plus non interest income.
should also sample other loan segments that they or the bank’s internal loan review have identified as exhibiting high-risk characteristics. Such risk characteristics include liberal underwriting, high levels of policy exceptions, high-delinquency trends, rapid growth, new lending products, concentrations and concentrations to industry, or significant levels of classified credits. In addition to these risk-focused samples, a sample of loans to insiders must be reviewed. Annual loan sampling coverage by examiners should take into consideration the severity of the asset quality component rating, the effectiveness of the internal loan review program, the results of internal loan portfolio stress testing, and current asset quality financial trends.

During the inspection scoping phase, Reserve Bank staff should analyze the results of recent loan review reports or audits prepared for an institution’s internal use and the Reserve Bank’s most current assessment of credit-risk management to help establish the size and composition of loans to be selected for review. A nonbank subsidiary’s internal loan review program should achieve substantial coverage beyond the examiners’ annual judgmental sample of material loan portfolios. Examiners should review the findings and recommendations of the nonbank subsidiary’s internal loan review program to help identify areas of risk. In selecting loans from each segment of the loan portfolio to review, examiners should include a selection of the largest loans, problem loans (past due 90 days or more, nonaccrual, restructured, or internally classified loans), and newly originated loans. Examiners should ensure the sample selection includes robust coverage of classified credits. At a minimum, loans selected for review from commercial loan segments should represent 10 percent of the committed dollar amount of credit exposure within the loan segment.

Sample sizes should be increased beyond the 10 percent minimum, based on examiner judgment, for segments when the inspection scoping process or the internal loan review program has identified

1. deficiencies with credit-risk management and administration practices,
2. unusually high loan growth,
3. credit quality or collateral values that have been adversely affected since the prior review by volatile local or national economic conditions, or
4. unreliable internal credit-risk grading.

Conversely, sample sizes should be based on the 10 percent minimum if

1. previous inspections concluded that internal loan review and credit-risk identification is effective,
2. internal loan review has reviewed a loan segment within the last 12 months and noted no material weaknesses, and
3. the inspection scoping process reveals no significant credit-risk management issues.

In general, the lower range of 10 percent sampling of each segment or the entire commercial portfolio would be acceptable when all aspects of credit risk indicate low and stable risk.

Examiners should determine classification amounts for retail credits using the Uniform Retail Classification Guidance (SR letter 00-8, “Revised Uniform Retail Credit Classification and Account Management Policy”). Annually, examiners should focus on one or more material retail loan segment exposures as divided by the comparable FR Y-9C Report loan type. Examiners should determine the appropriate sample of retail loans from material segments based on risk to be tested for compliance with internal credit administration policies and underwriting standards. While there is no minimum coverage expectation for retail portfolios or segments, the goal of sampling is to assist examiners in making an informed assessment of all aspects of retail credit-risk management. If applicable, examiners should evaluate and test secondary market origination and servicing practices and quality assurance programs. Examiners should also sample other retail loan segments, as needed, from segments the examiners or internal loan review identify as exhibiting high-risk characteristics such as liberal underwriting, high-delinquency trends, rapid growth, new lending products, or significant levels of classified credits.

2010.2.11.2 Documentation of Loan Sampling Analysis and Methodology

Examiners should discuss their analysis and objectives for achieving loan sampling coverage with Board staff during the annual supervisory planning process. Upon reaching a consensus with Board staff, the analysis and methodology
should be retained in workpapers and documented in the supervisory plan. Further, examiners should document their loan sample selection methods in scoping memoranda and in the confidential section of the report of inspection. The required workpaper documentation of the commercial loan coverage calculation should be based on total loan commitments and should generally exclude loans reviewed outside of the Reserve Bank’s supervisory plan when a detailed analysis of the loans by an examiner and an assessment of credit-risk management were not performed. Review of syndicated loans and participations, such as those from the Shared National Credits (SNCs) annual review, should only be included in the coverage ratio if Reserve Bank staff reviewed the credit-risk management aspects of the credit (for example, adherence to underwriting policies) and these findings are included in the examiner’s assessment of overall credit-risk management practices. Examiners should continue to follow the SNC grading guidance.41

2010.2.11.3 Follow-Up Expectations for Inspections with Adverse Findings

Examiners should generally consider a credit-extending nonbank subsidiary’s internal risk-rating system to be less reliable when examiner downgrades or internal loan review downgrades equal 10 percent of the total number of loans reviewed, or 5 percent of the total dollar amount of loans and commitments reviewed. When a credit-extending nonbank subsidiary’s risk-rating system is determined to be unreliable, examiners may need to expand sampling to better evaluate the effect of rating differences on the entity’s ALLL and capital. In such situations, examiners should direct the BHC and its credit-extending nonbank subsidiary to take corrective action to validate its internal ratings and to evaluate whether the ALLL or capital should be increased. The Reserve Bank will follow-up with the BHC and its nonbank subsidiary to assess progress on corrective action and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe during which actions are to be completed.41 All follow-up actions on adverse findings should be discussed with Board staff.

---

41. Refer to SR-77-377, “Shared National Credit Program.”

42. A credit-risk grading difference is considered a downgrade when (a) a risk rating is changed by the examiner from an internal Pass rating to a classified category or (b) a risk rating is changed by the examiner within the classified categories.

43. Refer to SR-13-13/CA -13-10, “Supervisory Considerations for the Communications of Supervisory Findings.”
The System’s ability to evaluate the effectiveness of a company’s supervision and control of subsidiary investment activities can be strengthened not only by evaluating the parent’s role in light of efficiency and operating performance, but also by evaluating the quality of control and supervision. In order to assess quality there must be a standard or measuring block against which a company’s policies can be evaluated. By establishing the minimum areas that a company’s policies should address with respect to subsidiary investments, a standard is created which can evaluate the quality of company’s control and supervision of that activity. The examiner needs to make a qualitative assessment of the parent’s supervision and control of subsidiary investment activities.

2010.3.1 INSPECTION OBJECTIVES

1. Determine if the parent’s investment policy is adequate for the organization.
2. Determine if the investment policy is being complied with.

2010.3.2 INSPECTION PROCEDURES

1. Determine whether the management has developed a flow chart on investment authorization procedures sufficiently detailed to assure that the execution of transactions precludes the ability to circumvent policy directives.
2. Determine whether all investment policies appear to be adequately tailored to fit the business needs of each subsidiary. Review the methods and/or process through which prior approval of new activities and investments in new instruments is granted.
3. Determine whether the boards of directors and the management of subsidiaries appear to be sufficiently involved in their respective roles to assure that the performance of fiduciary responsibilities of each appears adequate.
4. Assess the adequacy of the level of management expertise in relation to its involvement in various investment activities.
5. Evaluate the reasonableness of investment activity initiated to achieve corporate objectives in light of its potential impact on the risk exposure of subsidiaries.
6. Assess the adequacy of investment policy directives in regard to the required maintenance of adequate recordkeeping systems at subsidiaries.
7. Evaluate policy directives regarding the appropriateness of accounting practices in regard to transactions involving investment participations, swaps, other transfers of investments as well as specialized investment activities.
8. Evaluate whether investment policies adequately provide for the maintenance of a stable income stream at bank subsidiaries as well as the parent company level.
9. Determine whether investment policy directives adequately address statutory limitations, particularly those involving intercompany transactions.
10. Evaluate the effectiveness of the bank holding company’s audit function in assuring that investment policies and directives are adhered to at each corporate level.
This section emphasizes the importance of integrating subsidiaries into a consolidated plan, the essential elements of the planning process, and the ultimate accountability of the board of directors of the holding company. As a minimum, the parent’s consolidated plan should include the following ten elements:

1. All plans should address a long-range goal or focus, intermediate term objectives, and short-term budgets. A long-range focus is particularly important during a changing environment and during expansions of the organization. Long-range plans generally are broad with a service or customer orientation and market share emphasis. These plans provide the entire organization with a consistent direction and facilitate changes in the organization arising from environmental changes. Intermediate goals generally are narrower in scope. Short-term budgets are generally developed at the subsidiary level; however, they are subject to review and revision by the parent in an effort to maintain consistency throughout the organization.

2. The planning process should be formalized. A long-range focus, intermediate term objectives, and budgets should be written and adopted by the parent’s board of directors to insure centralized accountability.

3. Plans should be consistent and interrelated over the differing time periods. For example, budgets should be consistent with long-range goals—the implementation of a short-term, high return orientation may be inconsistent with a long-term goal of increasing market share, or short-term compensation plans may be dysfunctional in the long run.

4. A consolidated plan should increase the consistency of goals among differing subsidiaries and the parent. The long-range goals, intermediate term objectives, and short term goals and objectives should be periodically reviewed, preferably, annually, by the BHC’s board of directors. A consolidated plan should reduce unnecessary internal competition.

5. A consolidated plan should facilitate the allocation of resources throughout the organization. This is particularly important when the parent is providing most, or all, of the short-term funds and long-term capital. As the parent has an awareness of all subsidiaries, it can better allocate funds and personnel to areas where they will be utilized most effectively.

6. Plans should be formulated with an awareness to possible weaknesses and recognition to areas likely to be influenced by environmental change. For these areas, flexibility should exist for contingency plans.

7. Methods should be determined, in the plan, to monitor and evaluate compliance with the plan.

8. The consolidated plan should have a measurable aspect to determine whether budgets, objectives, and goals are being met. If they are not met, determination as to the controllability of variances should be ascertained.

9. Plans and goals must continually be evaluated to determine whether accomplishing the goal results in the desired and expected outcome. For example, the desired outcome may be to increase net income by granting loans with higher interest rates and above normal risk. The granting of such loans may result in a need to increase the provision for loan losses, thus causing a decrease in earnings.

10. Plans should be flexible enough to remain effective in a volatile environment. If plans are too rigid, they may become dysfunctional if the environment changes and actually constrain an organization’s ability to react. On the other hand, flexible goals and plans should enhance an organization’s ability to compete by providing the entire organization with a fluid consistent direction.

2010.4.1 INSPECTION OBJECTIVES

1. To determine if the board of directors at the parent company is cognizant of and performing its duties and responsibilities.

2. To determine if the level of supervision over subsidiaries is both adequate and beneficial.

3. To evaluate the consolidated plan for consistency, controls, and effectiveness.

4. To ascertain if the board of directors of the parent company is making judgments and decisions based on adequate information flowing from the management and financial reporting systems of the organization.

2010.4.2 INSPECTION PROCEDURES

1. Evaluate the participation by the board of directors of the parent company in giving overall direction to the organization.

2. Obtain and evaluate descriptions of all im-
important management and financial policies, procedures, and practices.

3. Determine if contradictions or “conflicts” between expressed and unexpressed strategies and between long-term and short-term goals exist. Also determine that goals are consistent with concern over safety and soundness.

4. Determine whether the planning process is sufficiently flexible and if contingency plans exist.

5. Spell out the lines of authority associated with the planning process.

6. Determine the degree of control exercised by the parent company over the entire organization.

7. Test compliance with policies at all levels.
2010.5.1 BACKGROUND
INFORMATION ON ENVIRONMENTAL LIABILITY

Banking organizations are increasingly becoming exposed to liability associated with the clean-up of hazardous substance contamination pursuant to, the Comprehensive Environmental Response, Compensation and Liability Act (“CERCLA”), the federal superfund statute. It was enacted in response to the growing problem of improper handling and disposal of hazardous substances. CERCLA authorizes the Environmental Protection Agency (“EPA”) to clean-up hazardous waste sites and to recover costs associated with the clean-up from entities specified in the statute. The superfund statute is the primary federal law dealing with hazardous substance contamination. However, there are numerous other federal statutes, as well as state statutes, that establish environmental liability that could place banking organizations at risk. For example, underground storage tanks are also covered by separate federal legislation.1

While the superfund statute was enacted a decade ago, it has been only since the mid-1980s that court actions have resulted in some banking organizations being held liable for the clean-up of hazardous substance contamination. In this connection, recent court decisions have had a wide array of interpretations as to whether banking organizations are owners or operators of contaminated facilities, and thereby liable under the superfund statute for clean-up costs. This has led to uncertainty on the part of banking organizations as to how to best protect themselves from environmental liability.

The relevant provisions of CERCLA, the so-called “superfund” statute, as it pertains to banking organizations, indicate which persons or entities are subject to liability for clean-up costs of hazardous substance contamination. These include “...the owner and operator of a vessel or a facility, (or) any person who at the time of disposal of any hazardous substance owned or operated any facility at which such hazardous substances were disposed of...” 2 A person or entity that transports or arranges to transport hazardous substances can also be held liable for cleaning-up contamination under the superfund statute.

The liability imposed by the superfund statute is strict liability which means the government does not have to prove that the owners or operators had knowledge of or caused the hazardous substance contamination. Moreover, liability is joint and several, which allows the government to seek recovery of the entire cost of the clean-up from any individual party that is liable for those clean-up costs under CERCLA. In this connection, CERCLA does not limit the bringing of such actions to the EPA, but permits such actions to be brought by third parties.

CERCLA provides a secured creditor exemption in the definition of “owner and operator” by stating that these terms do not include “...a person, who, without participating in the management of a vessel or facility, holds indicia of ownership primarily to protect his security interest in the vessel or facility.” 3 However, this exception has not provided banking organizations with an effective “safe harbor” because recent court decisions have worked to limit the application of this exemption. Specifically, courts have held that actions by lenders to protect their security interests may result in the banking organization “participating in the management” of a vessel or facility, thereby voiding the exemption. Additionally, once the title to a foreclosed property passes to the banking organization, courts have held that the exemption no longer applies and that the banking organization is liable under the superfund statute as an “owner” of the property. Under some circumstances, CERCLA may exempt landowners who acquire property without the knowledge of pre-existing conditions (the so-called “innocent landowner defense”). However, the courts have applied a stringent standard to qualify for this defense. Because little guidance is provided by the statute as to what constitutes the appropriate timing and degree of “due diligence” to successfully employ this defense, banking organizations should exercise caution before relying on it.

2010.5.2 OVERVIEW OF ENVIRONMENTAL HAZARDS

Environmental risk can be characterized as adverse consequences resulting from having gen-

---

2. CERCLA, Section 107(a).
3. CERCLA, Section 101(20)(A).
erated or handled hazardous substances, or otherwise having been associated with the aftermath of subsequent contamination. The following discussion highlights some common environmental hazards, but by no means covers all environmental hazards.

Hazardous substance contamination is most often associated with industrial or manufacturing processes that involve chemicals or solvents in the manufacturing process or as waste products. For years, these types of hazardous substances were disposed of in landfills, or just dumped on industrial sites. Hazardous substances are also found in many other lines of business. The following examples demonstrate the diverse sources of potential hazardous substance contamination which should be of concern to banking organizations:

- Farmers and ranchers (use of fuel, fertilizers, herbicides, insecticides, and feedlot runoff).
- Dry cleaners (various cleaning solvents).
- Service station and convenience store operators (underground storage tanks).
- Fertilizer and chemical dealers and applicators (storage and transportation of chemicals).
- Lawn care businesses (application of lawn chemicals).
- Trucking firms (local and long haul transporters of hazardous substances such as fuel or chemicals).

The real estate industry has taken the brunt of the adverse affects of hazardous waste contamination. In addition to having land contaminated with toxic substances, construction methods for major construction projects, such as commercial buildings, have utilized materials that have been subsequently determined to be hazardous, resulting in significant declines in their value. For example, asbestos was commonly used in commercial construction from the 1950’s to the late 1970’s. Asbestos has since been found to be a health hazard and now must meet certain federal and, in many instances, state requirements for costly removal or abatement (enclosing or otherwise sealing off).

Another common source of hazardous substance contamination is underground storage tanks. Leaks in these tanks not only contaminate the surrounding ground, but often flow into ground water and travel far away from the original contamination site. As contamination spreads to other sites, cleanup costs escalate.

2010.5.3 IMPACT ON BANKING ORGANIZATIONS

Banking organizations may encounter losses arising from environmental liability in several ways. The greatest risk to banking organizations, resulting from the superfund statute and other environmental liability statutes, is the possibility of being held solely liable for costly environmental clean-ups such as hazardous substance contamination. If a banking organization is found to be a responsible party under CERCLA, the banking organization may find itself responsible for cleaning-up a contaminated site at a cost that far exceeds any outstanding loan balance. This risk of loss results from an interpretation of the superfund statute as providing for joint and several liability. Any responsible party, including the banking organization, could be forced to pay the full cost of any clean-up. Of course, the banking organization may attempt to recover such costs from the borrower, or the owner if different than the borrower, provided that the borrower or owner continues in existence and is solvent. Banking organizations may be held liable for the clean-up of hazardous substance contamination in situations where the banking organization:

- Takes title to property pursuant to foreclosure;
- Involves the banking organization’s personnel or contractors engaged by the bank in day-to-day management of the facility;
- Takes actions designed to make the contaminated property salable, possibly resulting in further contamination;
- Acts in a fiduciary capacity, including management involvement in the day-to-day operations of industrial or commercial concerns, and purchasing or selling contaminated property;
- Owns existing, or acquires (by merger or acquisition), subsidiaries involved in activities that might result in a finding of environmental liability;
- Owns existing, or acquires for future expansion, premises that have been previously contaminated by hazardous substances. For example, site contamination at a branch office where a service station having underground storage tanks once operated. Also, premises or other real estate owned could be contaminated by asbestos requiring costly clean-up or abatement.

A more common situation encountered by banking organizations has been where real prop-
property collateral is found to be contaminated by hazardous substances. The value of contaminated real property collateral can decline dramatically, depending on the degree of contamination. As the projected clean-up costs increase, the borrower may not be able to provide the necessary funds to remove contaminated materials. In making its determination whether to foreclose, the banking organization must estimate the potential clean-up costs. In many cases this estimated cost has been found to be well in excess of the outstanding loan balance, and the banking organization has elected to abandon its security interest in the property and write off the loan. This situation occurs regardless of the fact that the superfund statute provides a secured creditor exemption. Some courts have not extended this exemption to situations where banking organizations have taken title to a property pursuant to foreclosure. These rulings have been based on a strict reading of the statute that provides the exemption to “security interests” only.

Risk of credit losses can also arise where the credit quality of individual borrowers (operators, generators, or transporters of hazardous substances) deteriorates markedly as a result of being required to clean up hazardous substance contamination. Banking organizations must be aware that significant clean-up costs borne by the borrower could threaten the borrower’s solvency and jeopardize the banking organization’s ultimate collection of outstanding loans to that borrower, regardless of the fact that no real property collateral is involved. Therefore, ultimate collection of loans to fund operations, or to acquire manufacturing or transportation equipment can be jeopardized by the borrower’s generating or handling of hazardous substances in an improper manner. Further, some bankruptcy courts have required clean-up of hazardous substance contamination prior to distribution of a debtor’s estate to secured creditors.

Borrowers may have existing subsidiaries or may be involved in merger and acquisition activity that may place the borrower at risk for the activities of others that result in environmental liability. Some courts have held that for the purposes of determining liability under the superfund statute, the corporate veil may not protect parent companies that participate in the day-to-day operations of their subsidiaries from environmental liability and court imposed clean-up costs. Additionally, borrowers can be held liable for contamination which occurred prior to their owning or using real estate.

2010.5.4 PROTECTION AGAINST ENVIRONMENTAL LIABILITY

Banking organizations have numerous ways to identify and minimize their exposure to environmental liability. Because environmental liability is relatively recent, procedures used to safeguard against such liability are evolving. The following discussion briefly describes methods currently being employed by banking organizations and others to minimize potential environmental liability.

Banking organizations should have in place adequate safeguards and controls to limit their exposure to potential environmental liability. Loan policies and procedures should address methods for identifying potential environmental problems relating to credit requests as well as existing loans. The loan policy should describe an appropriate degree of due diligence investigation required for credit requests. Borrowers in high-risk industries or localities should be held to a more stringent due diligence investigation than borrowers in low-risk industries or localities. In addition to establishing procedures for granting credit, procedures should be developed and applied to portfolio analysis, credit monitoring, loan workout situations, and—prior to taking title to real property—foreclosures. Banking organizations may avoid or mitigate potential environmental liability by having sound policies and procedures designed to identify, assess and control environmental liability.

At the same time, banking organizations must be careful that any lending policies and procedures, but especially those undertaken to assess and control environmental liability, cannot be construed as taking an active role in participating in the management or day-to-day operations of the borrower’s business. Activities which could be considered active participation in the management of the borrower’s business, and therefore subject the bank to potential liability, include, but are not limited to:

- having bank employees as members of the borrower’s board of directors or actively participating in board decisions;
- assisting in day-to-day management and operating decisions; and
- actively determining management changes.

These considerations are especially important when the banking organization is actively involved in loan workouts or debt restructuring.
The first step in identifying and minimizing environmental risk is for banking organizations to perform environmental reviews. Such reviews may be performed by loan officers or others, and typically identify past practices and uses of the facility and property, evaluate regulatory compliance, if applicable, and identify potential future problems. This is accomplished by interviewing persons familiar with present and past uses of the facility and property, reviewing relevant records and documents, and visiting and inspecting the site.

Where the environmental review reveals possible hazardous substance contamination, an environmental assessment or audit may be required. Environmental assessments are made by personnel trained in identifying potential environmental hazards and provide a more thorough review and inspection of the facility and property. Environmental audits differ markedly from environmental assessments in that independent environmental engineers are employed to investigate, in greater detail, those factors listed previously, and actually test for hazardous substance contamination. Such testing might require collecting and analyzing air samples, surface soil samples, subsurface soil samples, or drilling wells to sample ground water.

Other measures used by some banking organizations to assist in identifying and minimizing environmental liability include: obtaining indemnities from borrowers for any clean-up costs incurred by the banking organization, and including affirmative covenants in loan agreements (and attendant default provisions) requiring the borrower to comply with all applicable environmental regulations. Although these measures may provide some aid in identifying and minimizing potential environmental liability, they are not a substitute for environmental reviews, assessments and audits, because their effectiveness is dependent upon the financial strength of the borrower.

2010.5.6 INSPECTION OBJECTIVES

1. To determine whether adequate safeguards and controls have been established to limit exposure to potential environmental liability.

2. To determine whether the banking organization has identified specific credits and any lending and other banking and nonbanking activities that expose the organization to environmental liability.

2010.5.7 INSPECTION PROCEDURES

1. Review loan policies and procedures and establish whether these and other adequate safeguards and controls have been established to avoid or mitigate potential environmental liability. In performing this task, ascertain whether:
   a. an environmental policy statement has been adopted;
   b. training programs are being conducted so that lending personnel are aware of environmental liability issues and are able to identify borrowers with potential problems;
   c. guidelines and procedures have been established for dealing with new borrowers and real property offered as collateral.
   d. the lending policies and procedures and other safeguards, including those to assess and control environmental liability, may not be construed as actively participating in the management of day-to-day operations of borrowers' businesses.

2010.5.5 CONCLUSION

Potential environmental liability can touch on a great number of loans to borrowers in many industries or localities. Moreover, nonlending activities as well as corporate affiliations can lead to environmental liability depending upon the nature of the these activities and the degree of participation that the parent exercises in the operations of its subsidiaries. Such liability can result in losses arising from hazardous substance contamination because banking organizations are held directly liable for costly court ordered clean-ups. Additionally, the banking organization’s ability to collect the loans it makes may be hampered by significant declines in collateral value, or the inability of a borrower to meet debt payments after paying for costly clean-ups of hazardous substance contamination.

Banking organizations must understand the nature of environmental liability arising from hazardous substance contamination. Additionally, they should take prudential steps to identify and minimize their potential environmental liability. Indeed, the common thread to environmental liability is the existence of hazardous substances, not types of borrowers, lines of business, or real property.
2. When reviewing individual credits determine whether the loan policy has been complied with in regard to a borrower’s activities or industry that is associated with hazardous substances or environmental liability.

3. Ascertain whether appropriate periodic analysis of potential environmental liability is conducted.

   Such analysis should be more rigorous as the risk of hazardous substance contamination increases. The following are examples of types of analyses and procedures that should be progressively considered as the risk of environmental liability increases:

   - Environmental review—screening of the borrower’s activities by lending personnel or real estate appraisers for potential environmental problems (using questionnaires, interviews, or observations).
     
     Review procedures might include a survey of past ownership and uses of the property, a property inspection, a review of adjacent or contiguous parcels of property, a review of company records for past use or disposal of hazardous materials, and a review of any relevant Environmental Protection Agency records.

   - Environmental assessment—structured analysis by a qualified individual that identifies the borrower’s past practices, regulatory compliance, and potential future problems. This analysis would include reviewing relevant documents, visiting and inspecting the site, and, in some cases, performing limited tests.

   - Environmental audit—a professional environmental engineer performs a similar structured analysis as previously indicated for “environmental assessments,” however, more comprehensive testing might involve collecting and analyzing air samples, surface soil samples, subsurface soil samples, or drilling wells to sample ground water.

4. Determine whether existing loans are reviewed internally to identify credits having potential environmental problems.

5. Review recordkeeping procedures and determine whether there is documentation as to the due diligence efforts taken at the time of making loans or acquiring real property.

6. Review loan agreements to determine if warranties, representations, and indemnifications have been included in loan agreements designed to protect the banking organization from losses stemming from hazardous substance contamination. (Although such provisions provide some protection for the lender, these agreements are not binding against the government or third parties. Such contractual protections are only as secure as the borrower’s financial strength.)

7. For situations involving potential environmental liability arising from a banking organization’s nonlending activities, verify that similar policies and procedures are in place.\(^5\)

---

\(^5\) A banking organization’s policies and procedures relating to environmental liability should apply to nonlending situations where appropriate. For example, banking organizations engaged in trust activities or contemplating a merger or acquisition should evaluate the possibility of existing or subsequent environmental liability arising from these activities.
Supervision of Subsidiaries (Financial Institution Subsidiary Retail Sales of Nondeposit Investment Products) Section 2010.6

WHAT’S NEW IN THIS REVISED SECTION

Effective July 2009, this section has been revised to delete a cancelled SR letter reference.

2010.6.05 INTERAGENCY STATEMENT OVERVIEW

The Board of Governors of the Federal Reserve System, along with the other federal banking regulators, issued an interagency statement on February 15, 1994, that provides comprehensive guidance on retail sales of nondeposit investment products occurring on or from depository institution premises. The interagency statement unifies pronouncements previously issued by the banking agencies that addressed various aspects of retail sales programs involving mutual funds, annuities, and other nondeposit investment products.

The interagency statement applies to all depository institutions, including state member banks and the U.S. branches and agencies of foreign banks, supervised by the Federal Reserve. The policy statement does not apply directly to bank holding companies. However, the board of directors and management of bank holding companies should consider and administer the provisions of the statement with regard to the holding company’s supervision of its banking and thrift subsidiaries that offer such products to retail customers. Reserve Bank examiners will continue to review nondeposit investment product sales activities during examinations of institutions engaging in such activities on their premises, either directly or through a third party or an affiliate. The review process will consist of, at a minimum, an assessment of whether the interagency statement is being followed, particularly with regard to the nature and sufficiency of an institution’s disclosures, the separation of functions, and the training of personnel involved with the sales of mutual funds and other nondeposit products. (See SR-94-11.)

The interagency policy statement was further clarified by a September 12, 1995, joint interpretation (SR-95-46). Section numbers have been added for reference.

2010.6.1 INTERAGENCY STATEMENT ON RETAIL SALES OF NONDEPOSIT INVESTMENT PRODUCTS

Insured depository institutions have expanded their activities in recommending or selling such products. Many depository institutions are providing these services at the retail level, directly or through various types of arrangements with third parties.

Sales activities for nondeposit investment products should ensure that customers for these products are clearly and fully informed of the nature and risks associated with these products. In particular, where nondeposit investment products are recommended or sold to retail customers, depository institutions should ensure that customers are fully informed that the products—

• are not insured by the FDIC;
• are not deposits or other obligations of the institution and are not guaranteed by the institution; and
• are subject to investment risks, including possible loss of the principal invested.

Moreover, sales activities involving these investment products should be designed to minimize the possibility of customer confusion and to safeguard the institution from liability under the applicable antifraud provisions of the federal securities laws, which, among other things, prohibit materially misleading or inaccurate representations in connection with the sale of securities.

The four federal banking agencies—the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision—issued the statement to provide uniform guidance to depository institutions engaging in these activities.1

1. Each of the four banking agencies has in the past issued guidelines addressing various aspects of the retail sale of nondeposit investment products, which are superseded by this statement. Some of the banking agencies had adopted additional guidelines covering the sale of certain specific types of instruments by depository institutions, i.e., obligations of the institution itself or of an affiliate of the institution.

BHC Supervision Manual July 2009 Page 1
2010.6.1.1 Scope

This statement applies when retail recommendations or sales of nondeposit investment products are made by—

- employees of the depository institution;
- employees of a third party, which may or may not be affiliated with the institution,
- occurring on the premises of the institution (including telephone sales or recommendations by employees or from the institution’s premises and sales or recommendations initiated by mail from its premises); and
- sales resulting from a referral of retail customers by the institution to a third party when the depository institution receives a benefit the referral.

Retail sales include (but are not limited to) sales to individuals by depository institution personnel or third-party personnel conducted in or adjacent to the institution’s lobby area. Sales of government or municipal securities away from the lobby area are not subject to the interagency statement. The statement also applies to sales activities of an affiliated standalone broker–dealer resulting from a referral of retail customers from the depository institution to the broker–dealer.

These guidelines generally do not apply to the sale of nondeposit investment products to nonretail customers, such as sales to fiduciary accounts administered by an institution. The disclosures provided by the interagency statement, however, should be provided to customers of fiduciary accounts where the customer directs investments, such as self-directed IRA accounts. Such disclosures need not be made to customers acting as professional money managers. Fiduciary accounts administered by an affiliated trust company on the depository institution’s premises should be treated as fiduciary accounts of the institution. However, as part of its fiduciary responsibility, an institution should take appropriate steps to avoid potential customer confusion when providing nondeposit investment products to the institution’s fiduciary customers.

2010.6.1.2 Adoption of Policies and Procedures

2010.6.1.2.1 Program Management

A depository institution involved in the activities described above for the sale of nondeposit investment products to its retail customers should adopt a written statement that addresses the risks associated with the sales program and contains a summary of policies and procedures outlining the features of the institution’s program and addressing, at a minimum, the concerns described in this statement. The written statement should address the scope of activities of any third party involved as well as the procedures for monitoring compliance by third parties in accordance with the guidelines below. The scope and level of detail of the statement should appropriately reflect the level of the institution’s involvement in the sale or recommendation of nondeposit investment products. The institution’s statement should be adopted and reviewed periodically by its board of directors. Depository institutions are encouraged to consult with legal counsel with regard to the implementation of a nondeposit investment product sales program.

The institution’s policies and procedures should include the following:

Compliance procedures. The procedures for ensuring compliance with applicable laws and regulations and consistency with the provisions of this statement.

Supervision of personnel involved in sales. A designation by senior managers of specific individuals to exercise supervisory responsibility for each activity outlined in the institution’s policies and procedures.

Types of products sold. The criteria governing the selection and review of each type of product sold or recommended.

Permissible use of customer information. The procedures for the use of information regarding the institution’s customers for any purpose in
connection with the retail sale of nondeposit investment products.

**Designation of employees to sell investment products.** A description of the responsibilities of those personnel authorized to sell nondeposit investment products and of other personnel who may have contact with retail customers concerning the sales program, and a description of any appropriate and inappropriate referral activities and the training requirements and compensation arrangements for each class of personnel.

**2010.6.1.2.2 Arrangements with Third Parties**

If a depository institution directly or indirectly, including through a subsidiary or service corporation, engages in activities as described above under which a third party sells or recommends nondeposit investment products, the institution should, prior to entering into the arrangement, conduct an appropriate review of the third party. The institution should have a written agreement with the third party that is approved by the institution’s board of directors. Compliance with the agreement should be periodically monitored by the institution’s senior management. At a minimum, the written agreement should—

- describe the duties and responsibilities of each party, including a description of permissible activities by the third party on the institution’s premises; terms as to the use of the institution’s space, personnel, and equipment; and compensation arrangements for personnel of the institution and the third party;
- specify that the third party will comply with all applicable laws and regulations, and will act consistently with the provisions of this statement and, in particular, with the provisions relating to customer disclosures;
- authorize the institution to monitor the third party and periodically review and verify that the third party and its sales representatives are complying with its agreement with the institution;
- authorize the institution and the appropriate banking agency to have access to such records of the third party as are necessary or appropriate to evaluate such compliance;
- require the third party to indemnify the institution for potential liability resulting from actions of the third party with regard to the investment product sales program; and
- provide for written employment contracts, satisfactory to the institution, for personnel who are employees of both the institution and the third party.

**2010.6.1.3 General Guidelines**

**2010.6.1.3.1 Disclosures and Advertising**

The banking agencies believe that recommending or selling nondeposit investment products to retail customers should occur in a manner that ensures that the products are clearly differentiated from insured deposits. Conspicuous and easy-to-comprehend disclosures concerning the nature of nondeposit investment products and the risk inherent in investing in these products are one of the most important ways of ensuring that the differences between nondeposit products and insured deposits are understood.

**2010.6.1.3.1.1 Content and Form of Disclosure**

Disclosures with respect to the sale or recommendation of these products should, at a minimum, specify that the product is—

- not insured by the FDIC;
- not a deposit or other obligation of, or guaranteed by, the depository institution; and
- subject to investment risks, including possible loss of the principal amount invested.

The written disclosures described above should be conspicuous and presented in a clear and concise manner. Depository institutions may provide any additional disclosures that further clarify the risks involved with particular nondeposit investment products.

**2010.6.1.3.1.2 Timing of Disclosure**

The minimum disclosures should be provided to the customer—

- orally during any sales presentation;
- orally when investment advice concerning nondeposit investment products is provided;
- orally and in writing prior to or at the time an investment account is opened to purchase these products; and
- in advertisements and other promotional materials, as described below.
A statement, signed by the customer, should be obtained at the time such an account is opened, acknowledging that the customer has received and understands the disclosures. Third-party vendors not affiliated with the depository institution need not make the minimum disclosures on confirmations and account statements that contain the name of the depository institution as long as the name of the depository institution is there only incidentally and with a valid business purpose, and as long as it is clear on the face of the document that the broker-dealer, and not the depository institution, has sold the nondeposit investment products. For investment accounts established prior to the issuance of these guidelines, the institution should consider obtaining such a signed statement at the time of the next transaction.

Confirmations and account statements for such products should contain at least the minimum disclosures if the confirmations or account statements contain the name or the logo of the depository institution or an affiliate. If a customer’s periodic deposit account statement includes account information concerning the customer’s nondeposit investment products, the information concerning these products should be clearly separate from the information concerning the deposit account and should be introduced with the minimum disclosures and the identity of the entity conducting the nondeposit transaction.

2010.6.1.3.1.3 Advertisements and Other Promotional Material

Advertisements and other promotional and sales material, written or otherwise, about nondeposit investment products sold to retail customers should conspicuously include at least the minimum disclosures discussed above and must not suggest or convey any inaccurate or misleading impression about the nature of the product or its lack of FDIC insurance. The minimum disclosures should also be emphasized in telemarketing contacts. A shorter version of the minimum disclosures is permitted in advertisements. The text of an acceptable logo-format disclosure would include the following statements:

- not FDIC-insured
- no bank guarantee
- may lose value

The logo format should be boxed, set in boldface type, and displayed in a conspicuous manner. Radio broadcasts of 30 seconds or less, electronic signs, and signs, such as banners and posters, when used only as location indicators, need not contain the minimum disclosures. Any third-party advertising or promotional material should clearly identify the company selling the nondeposit investment product and should not suggest that the depository institution is the seller. If brochures, signs, or other written material contain information about both FDIC-insured deposits and nondeposit investment products, these materials should clearly segregate information about nondeposit investment products from the information about deposits.

2010.6.1.3.1.4 Additional Disclosures

Where applicable, the depository institution should disclose the existence of an advisory or other material relationship between the institution or an affiliate of the institution and an investment company whose shares are sold by the institution and any material relationship between the institution and an affiliate involved in providing nondeposit investment products. In addition, where applicable, the existence of any fees, penalties, or surrender charges should be disclosed. These additional disclosures should be made prior to or at the time an investment account is opened to purchase these products. If sales activities include any written or oral representations concerning insurance coverage provided by any entity other than the FDIC, e.g., the Securities Investor Protection Corporation (SIPC), a state insurance fund, or a private insurance company, then clear and accurate written or oral explanations of the coverage must also be provided to customers when the representations concerning insurance coverage are made, in order to minimize possible confusion with FDIC insurance. Such representations should not suggest or imply that any alternative insurance coverage is the same as or similar to FDIC insurance.

Because of the possibility of customer confusion, a nondeposit investment product must not have a name that is identical to the name of the depository institution. Recommending or selling a nondeposit investment product with a name similar to that of the depository institution should only occur pursuant to a sales program
designed to minimize the risk of customer confusion. The institution should take appropriate steps to ensure that the issuer of the product has complied with any applicable requirements established by the Securities and Exchange Commission regarding the use of similar names.

2010.6.1.3.2 Setting and Circumstances

Selling or recommending nondeposit investment products on the premises of a depository institution may give the impression that the products are FDIC-insured or are obligations of the depository institution. To minimize customer confusion with deposit products, sales or recommendations of nondeposit investment products on the premises of a depository institution should be conducted in a physical location distinct from the area where retail deposits are taken. Signs or other means should be used to distinguish the investment sales area from the retail deposit-taking area of the institution. However, in the limited situation where physical considerations prevent sales of nondeposit products from being conducted in a distinct area, the institution has a heightened responsibility to ensure appropriate measures are in place to minimize customer confusion.

In no case, however, should tellers and other employees, while located in the routine deposit-taking area, such as the teller window, make general or specific investment recommendations regarding nondeposit investment products, qualify a customer as eligible to purchase such products, or accept orders for such products, even if unsolicited. Tellers and other employees who are not authorized to sell nondeposit investment products may refer customers to individuals who are specifically designated and trained to assist customers interested in the purchase of such products.

2010.6.1.3.3 Qualifications and Training

The depository institution should ensure that its personnel who are authorized to sell nondeposit investment products or to provide investment advice with respect to such products are adequately trained with regard to the specific products being sold or recommended. Training should not be limited to sales methods, but should impart a thorough knowledge of the products involved, of applicable legal restrictions, and of customer-protection requirements. If depository institution personnel sell or recommend securities, the training should be the substantive equivalent of that required for personnel qualified to sell securities as registered representatives.5 Depository institution personnel with supervisory responsibilities should receive training appropriate to that position. Training should also be provided to employees of the depository institution who have direct contact with customers to ensure a basic understanding of the institution’s sales activities and the policy of limiting the involvement of employees who are not authorized to sell investment products to customer referrals. Training should be updated periodically and should occur on an ongoing basis.

Depository institutions should investigate the backgrounds of employees hired for their nondeposit investment products sales programs, including checking for possible disciplinary actions by securities and other regulators if the employees have previous investment industry experience.

2010.6.1.3.4 Suitability and Sales Practices

Depository institution personnel involved in selling nondeposit investment products must adhere to fair and reasonable sales practices and be subject to effective management and compliance reviews with regard to such practices. In this regard, if depository institution personnel recommend nondeposit investment products to customers, they should have reasonable grounds for believing that the specific product recommended is suitable for the particular customer on the basis of information disclosed by the customer. Personnel should make reasonable efforts to obtain information directly from the customer regarding, at a minimum, the customer’s financial and tax status, investment objectives, and other information that may be useful or reasonable in making investment recommendations to that customer. This information should be documented and updated periodically.

5. Savings associations are not exempt from the definitions of “broker” and “dealer” in sections 3(a)(4) and 3(a)(5) of the Securities Exchange Act of 1934; therefore, all securities sales personnel in savings associations must be registered representatives.
2010.6.1.3.5 Compensation

Depository institution employees, including tellers, may receive a one-time nominal fee of a fixed dollar amount for each customer referral for nondeposit investment products. The payment of this referral fee should not depend on whether the referral results in a transaction.

Personnel who are authorized to sell nondeposit investment products may receive incentive compensation, such as commissions, for transactions entered into by customers. However, incentive compensation programs must not be structured in such a way as to result in unsuitable recommendations or sales being made to customers.

Depository institution compliance and audit personnel should not receive incentive compensation directly related to results of the nondeposit investment sales program.

2010.6.1.3.6 Compliance

Depository institutions should develop and implement policies and procedures to ensure that nondeposit investment product sales activities are conducted in compliance with applicable laws and regulations, the institution's internal policies and procedures, and in a manner consistent with this statement. Compliance procedures should identify any potential conflicts of interest and how such conflicts should be addressed. The compliance procedures should also provide for a system to monitor customer complaints and their resolution. Where applicable, compliance procedures also should call for verification that third-party sales are being conducted in a manner consistent with the governing agreement with the depository institution.

The compliance function should be conducted independently of nondeposit investment product sales and management activities. Compliance personnel should determine the scope and frequency of their own review, and findings of compliance reviews should be periodically reported directly to the institution’s board of directors, or to a designated committee of the board. Appropriate procedures for the nondeposit investment product program should also be incorporated into the institution’s audit program.

2010.6.1.4 Supervision by Banking Agencies

The federal banking agencies will continue to review a depository institution’s policies and procedures governing recommendations and sales of nondeposit investment products, as well as management’s implementation and compliance with such policies and all other applicable requirements. The banking agencies will monitor compliance with the institution’s policies and procedures by third parties that participate in the sale of these products. The failure of a depository institution to establish and observe appropriate policies and procedures consistent with this statement in connection with sales activities involving nondeposit investment products will be subject to criticism and appropriate corrective action.

2010.6.2 SUPPLEMENTARY FEDERAL RESERVE SUPERVISORY AND EXAMINATION GUIDANCE PERTAINING TO THE SALE OF UNINSURED NONDEPOSIT INVESTMENT PRODUCTS

The above guidelines contained in the Interagency Statement on Retail Sales of Nondeposit Investment Products apply to retail recommendations or sales of nondeposit investment products made by—

- employees of a banking organization,
- employees of an affiliated or unaffiliated third party occurring on the premises of the banking organization (including telephone sales, investment recommendations by employees, and sales or recommendations initiated by mail from its premises), and
- a referral of retail customers by the institution to a third party when the depository institution receives a benefit for the referral.

The following examination procedures are intended to determine if the bank’s policies and procedures provide for an operating environment that is designed to ensure customer protections in all facets of the sales program. Furthermore, examiners are expected to assess the bank’s ability to conduct such sales activities in a safe and sound manner.

These procedures apply when reviewing the nondeposit investment product retail sales activities conducted by state member banks or the state-licensed U.S. branches or agencies of foreign banks. They also apply to such activities
conducted by a bank holding company nonbank subsidiary on the premises of a bank.\textsuperscript{6}

The Rules of Fair Practice of the Financial Industry Regulatory Authority (FINRA) govern sales of securities by its member broker–dealers. In addition, the federal securities laws prohibit materially misleading or inaccurate representations in connection with the offer or sale of securities\textsuperscript{7} and require that sales of registered securities be accompanied by a prospectus that complies with Securities and Exchange Commission (SEC) disclosure requirements.

In view of the existence of these securities rules and laws that are applicable to broker–dealers subject to supervision by the SEC and the FINRA, examiners should note that the examination procedures contained herein have been tailored to avoid duplication of examination efforts by relying on the most recent examination results or sales-practice review conducted by the FINRA and provided to the third party. To the extent that no such FINRA examinations or reviews have been completed within the last two years, Reserve Banks should consult with Board staff to determine an appropriate examination/inspection scope before proceeding further.

Notwithstanding Reserve System use of FINRA results of sales-practice reviews, examiners should still complete the balance of these examination procedures, particularly those pertaining to the separation of sales of nondeposit investment products from the deposit-taking activities of the bank. Examiners should determine whether the institution has adequate policies and procedures to govern the conduct of the sales activities on a bank’s premises and, in particular, whether sales of nondeposit investment products are distinguished from the deposit-taking activities of the bank through disclosure and physical means that are designed to prevent customer confusion.

Although the interagency statement does not apply to sales of nondeposit investment products to nonretail customers, such as fiduciary customers, examiners should apply these examination procedures when retail customers are directed to the bank’s trust department where they may purchase nondeposit investment products simply by completing a customer agreement.

For additional information on the subject of retail sales of nondeposit investment products, examiners and other interested parties may find it helpful to refer to “Retail Investment Sales—Guidelines for Banks,” February 1994 (industry guidelines), published collectively by six bank trade associations and available from the American Bankers Association, 1120 Connecticut Avenue, N.W., Washington, D.C. 20036.

2010.6.2.1 Program Management

Banking organizations must adopt policies and procedures governing nondeposit investment product retail sales programs. Such policies and procedures should be in place before the commencement of the retail sale of nondeposit investment products on bank premises.

The board of directors of a banking organization is responsible for ensuring that retail sales of nondeposit investment products comply with the interagency statement (see section 2010.6.1) and all applicable state and federal laws and regulations. Therefore, the board or a designated committee of the board should adopt written policies that address the risks and management of such sales programs. Policies and procedures should reflect the size, complexity, and volume of the institution’s activities or, when applicable, address the institution’s arrangements with any third parties selling such products on bank premises. The banking organization’s policies and procedures should be reviewed periodically by the board of directors or its designated committee to ensure that the policies are consistent with the institution’s current practices, applicable laws, regulations, and guidelines.

As discussed in more detail below, an institution’s policies and procedures for nondeposit investment products should, at a minimum, address disclosure and advertising, physical separation of investment sales from deposit-taking activities, compliance and audit, suitability, and other sales practices and related risks associated with such activities. In addition, policies and procedures should address the following areas.

\textsuperscript{6} The interagency statement and the majority of these examination procedures apply to all depository institutions. Many of the procedures, however, may not apply directly to the inspection of bank holding companies. Some procedures may be applicable to bank holding companies from the perspective of inspecting a bank holding company with regard to its responsibility to supervise its depository institution and holding company nonbank subsidiaries. Depository institution examination procedures and bank holding company inspection procedures have been included in this section to keep bank holding company examiners fully informed.

\textsuperscript{7} See, for example, section 10(b) of the Securities Exchange Act (15 U.S.C. 78j(b)) and rule 10b-5 (17 C.F.R. 240.10b-5) thereunder.
2010.6.2.1.1 Types of Products Sold

When evaluating nondeposit investment products, management should consider what products best meet the needs of customers. Policies should outline the criteria and procedures that will be used to select and periodically review nondeposit investment products that are recommended or sold on a depository institution’s premises. Institutions should periodically review products offered to ensure that they meet their customers’ needs.

2010.6.2.1.2 Use of Identical or Similar Names

Because of the possibility of customer confusion, a nondeposit investment product must not have a name that is identical to the name of a bank or its affiliates. However, a bank may sell a nondeposit investment product with a name similar to the bank’s as long as the sales program addresses the even greater risk that customers may regard the product as an insured deposit or other obligation of the bank. Moreover, the bank should review the issuer’s disclosure documents for compliance with SEC requirements, which call for a thorough explanation of the relationship between the bank and the mutual fund.

The Federal Reserve applies a stricter rule under Regulation Y (12 C.F.R. 225.125) when a bank holding company (as opposed to a bank) or nonbank subsidiary acts as an investment adviser to a mutual fund. In such a case, the fund may not have a name that is identical to, similar to, or a variation of the name of the bank holding company or a subsidiary bank.

2010.6.2.1.3 Permissible Use of Customer Information

Banking organizations should adopt policies and procedures regarding the use of confidential customer information for any purpose in connection with the sale of nondeposit investment products. The industry guidelines permit banks to share with third parties only limited customer information, such as name, address, telephone number, and types of products owned. It does not permit the sharing of more confidential information, such as specific or aggregate dollar amounts of investments, net worth, etc., without the customer’s prior acknowledgment and written consent.

2010.6.2.1.4 Arrangements with Third Parties

A majority of all nondeposit investment products sold on bank premises are sold by representatives of third parties. Under such arrangements, the third party has access to the institution’s customers, while the bank is able to make nondeposit investment products available to interested customers without having to commit the resources and personnel necessary to directly sell such products. Third parties include wholly owned subsidiaries of a bank, bank-affiliated broker–dealers, unaffiliated broker–dealers, insurance companies, or other companies in the business of distributing nondeposit investment products on a retail basis.

A banking institution should conduct a comprehensive review of an unaffiliated third party before entering into any arrangement. The review should include an assessment of the third party’s financial status, management experience, reputation, and ability to fulfill its contractual obligations to the bank, including compliance with the interagency statement.

The interagency statement calls for banks to enter into written agreements with any affiliated and unaffiliated third parties that sell nondeposit investment products on a bank’s premises. Such agreements should be approved by a bank’s board of directors or its designated committee. Agreements should outline the duties and responsibilities of each party; describe third-party activities permitted on bank premises; address the sharing or use of confidential customer information for investment sales activities; and define the terms for use of the institution’s office space, equipment, and personnel. If an arrangement includes dual employees, the agreement must provide for written employment contracts that specify the duties of such employees and their compensation arrangements.

In addition, a third-party agreement should specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the interagency statement. The agreement should authorize the bank to monitor the third party’s compliance with its agreement, and authorize the institution and Federal Reserve examination staff to have access to third-party records considered necessary to evaluate such compliance. These records should include examination results, sales-practice reviews, and
related correspondence provided to the third party by securities regulatory authorities. Finally, an agreement should provide for indemnification of the bank by an unaffiliated third party for the conduct of its employees in connection with sales activities.

Notwithstanding the provisions of a third-party agreement, a bank should monitor the conduct of nondeposit investment product sales programs to ensure that sales of nondeposit investment products are distinct from other bank activities and are not conducted in a manner that could confuse customers about the lack of insurance coverage for such investments.

**2010.6.2.1.5 Contingency Planning**

Nondeposit investment products are subject to price fluctuations caused by changes in interest rates, stock market valuations, etc. In the event of a sudden, sharp drop in the market value of nondeposit investment products, banking institutions may experience a heavy volume of customer inquiries, complaints, and redemptions. Management should develop contingency plans to address these situations. A major element of any contingency plan should be the provision of customer access to information pertaining to their investments. Other factors to consider in contingency planning include public relations and the ability of operations staff to handle increased volumes of transactions.

**2010.6.2.2 Disclosures and Advertising**

**2010.6.2.2.1 Content, Form, and Timing of Disclosure**

Nondeposit investment product sales programs should be conducted in a manner that ensures that customers are clearly and fully informed of the nature and risks associated with these products. In addition, nondeposit investment products must be clearly differentiated from insured deposits. The interagency statement identifies the following minimum disclosures that must be made to customers when providing investment advice, making investment recommendations, or effecting nondeposit investment products transactions:

- They are not insured by the Federal Deposit Insurance Corporation (FDIC).
- They are not deposits or other obligations of the depository institution and are not guaranteed by the depository institution.
- They are subject to investment risks, including the possible loss of the principal invested.

Disclosure is the most important way of ensuring that retail customers understand the differences between nondeposit investment products and insured deposits. It is critical that the minimum disclosures be presented clearly and concisely in both oral and written communications. In this regard, the minimum disclosures should be provided—

- orally during any sales presentations (including telemarketing contacts) or when investment advice is given,
- orally and in writing before or at the time an investment account to purchase these products is opened, and
- in all advertisements and other promotional materials (as discussed further below).

The minimum disclosures may be made on a customer-account agreement or on a separate disclosure form. The disclosures must be conspicuous (highlighted through bolding, boxes, or a larger typeface). Disclosures contained directly on a customer-account agreement should be located on the front of the agreement or adjacent to the customer signature block.

Banking organizations are to obtain a written acknowledgment—on the customer-account agreement or on a separate form—from a customer confirming that the customer has received and understands the minimum disclosures. For nondeposit investment product accounts established before the interagency statement, banking organizations should obtain a disclosure acknowledgment from the customer at the time of the customer’s next purchase transaction. If an institution solicits customers by telephone or mail, it should ensure that the customers receive the written disclosures and an acknowledgment to be signed and returned to the institution.

Customer-account statements (including combined statements for linked accounts) and trade confirmations that are provided by the bank or an affiliate should contain the minimum disclosures if they display the name or logo of the bank or its affiliate. Statements that provide account information about insured deposits and nondeposit investment products should clearly segregate the information about nondeposit investment products from the information about deposits to avoid customer confusion.
2010.6.2.2.2 Advertising

The interagency statement provides that advertisements in all media forms that identify specific investment products must conspicuously include the minimum disclosures and must not suggest or convey any inaccurate or misleading impressions about the nature of a nondeposit investment product. Promotional material that contains information about both FDIC-insured products and nondeposit investment products should clearly segregate the information about the two product types. Displays of promotional sales materials related to nondeposit investment products in a bank’s retail areas should be grouped separately from material related to insured bank products.

Examiners should review telemarketing scripts to determine whether bank personnel are making inquiries about customer investment objectives, offering investment advice, or identifying particular investment products or types of products. In such cases, the scripts must contain the minimum disclosures. Bank personnel relying on the scripts must be formally authorized to sell nondeposit investment products by their employers and must have training that is the substantive equivalent of that required for personnel qualified to sell securities as registered representatives (see the discussion on training below).

2010.6.2.2.3 Additional Disclosures

A depository institution should apprise customers of certain material relationships. For example, sales personnel should inform a customer orally and in writing before the sale about any advisory relationship existing between the bank (or an affiliate) and a mutual fund whose shares are being sold by the depository institution. Similarly, sales personnel should disclose fees, penalties, or surrender charges associated with a nondeposit investment product orally and in writing before or at the time the customer purchases the product. The SEC requires written disclosure of this information in the investment product’s prospectus.

If sales activities include any written or oral representations concerning insurance coverage by any entity other than the FDIC (for example, Securities Investor Protection Corporation (SIPC) insurance of broker-dealer accounts, a state insurance fund, or a private insurance company), then clear and accurate explanations of the coverage must also be provided to customers at that time to minimize possible confusion with FDIC insurance. Such disclosures should not suggest that other forms of insurance are the substantive equivalent to FDIC deposit insurance.

2010.6.2.3 Setting and Circumstances

2010.6.2.3.1 Physical Separation from Deposit Activities

Selling or recommending nondeposit investment products on the premises of a banking institution may give the impression that the products are FDIC-insured or are obligations of the bank. To minimize customer confusion with deposit products, nondeposit investment product sales activities should be conducted in a location that is physically distinct from the areas where retail deposits are taken. Bank employees located at teller windows may not provide investment advice, make investment recommendations about investment products, or accept orders (even unsolicited orders) for nondeposit investment products.

Examiners must evaluate the particular circumstances of each bank in order to form an opinion about whether nondeposit investment product sales activities are sufficiently separate from deposit activities. FDIC insurance signs and promotional material related to FDIC-insured deposits should be removed from the investment-product sales area and replaced with signs indicating that the area is for the sale of investment products. Signs referring to specific investments should prominently contain the minimum disclosures. In the limited situation where physical constraints prevent nondeposit investment product sales activities from being conducted in a distinct and separate area, the institution has a heightened responsibility to ensure that appropriate measures are taken to minimize customer confusion.

A bank that enters into a third-party brokerage arrangement with a broker or dealer registered under the Securities Exchange Act of 1934 (the 1934 Act) will not itself be considered to be a broker subject to registration under the 1934 Act if the bank complies with the nine requirements set forth in section 3(a)(4)(B) of the 1934 Act. These requirements include clear identification of the broker or dealer as the person providing the brokerage services; clear physical separation of deposit-taking activities from bro-
broage transactions; prohibition of bank employees’ receiving incentive compensation based on brokerage transactions; limitation of bank employees to clerical or ministerial functions with respect to brokerage transactions; and specific disclosures and other requirements. Failure by a bank to comply with these requirements will not automatically require the bank to register but brings into question the exemption of the bank from the registration requirements of the 1934 Act.

Business cards for designated sales personnel should clearly indicate that they sell nondeposit investment products or, if applicable, are employed by a broker–dealer.

The interagency statement was intended to generally cover sales made to retail customers in a bank’s lobby. However, some banks may have an arrangement whereby retail customers purchase nondeposit investment products at a location generally confined to institutional services (such as the corporate money desk). In such cases, the banking institutions should still ensure that retail customers receive the minimum disclosures to minimize any possible customer confusion about nondeposit investment products and insured deposits.

2010.6.2.3.2 Hybrid Instruments and Accounts

In cases in which a depository institution offers accounts that link traditional bank deposits with nondeposit investment products, such as a cash management account,8 the accounts should be opened at the investment sales area by trained personnel. In light of the hybrid characteristics of these products, the opportunity for customer confusion is amplified, so the depository institution must take special care in the account-opening process to ensure that a customer is accurately informed that—

- funds deposited into a sweep account will only be FDIC-insured until they are swept into a nondeposit investment product account and
- customer-account statements may disclose balances for both insured and nondeposit product accounts.

2010.6.2.4 Designation, Training, and Supervision of Sales Personnel and Personnel Making Referrals

2010.6.2.4.1 Hiring and Training of Sales Personnel

Banking organizations hiring sales personnel for nondeposit investment product programs should investigate the backgrounds of prospective employees. In cases in which candidates for employment have previous investment industry experience, the bank should check whether the individual has been the subject of any disciplinary actions by securities, state, or other regulators.

Unregistered bank sales personnel should receive training that is the substantive equivalent of that provided to personnel qualified to sell securities as registered representatives. Training should cover the areas of product knowledge, trading practices, regulatory requirements and restrictions, and customer-protection issues. In addition, training programs should cover the institution’s policies and procedures regarding sales of nondeposit investment products and should be conducted continually to ensure that staff are kept abreast of new products and compliance issues.

Bank employees whose sales activities are limited to mutual funds or variable annuities should receive training equivalent to that ordinarily needed to pass FINRA’s Series 6 limited representative examination, which typically involves approximately 30 to 60 hours of preparation, including about 20 hours of classroom training. Bank employees who are authorized to sell additional investment products and securities should receive training that is appropriate to pass the NYSE’s Series 7 general securities representative examination, which typically involves 160 to 250 hours of study, including at least 40 hours of classroom training.

The training of third-party or dual employees is the responsibility of the third party. When entering into an agreement with a third party, a banking organization should be satisfied that the third party is able to train third-party and dual employees about compliance with the minimum disclosures and other requirements of the interagency statement. The bank should obtain and review copies of third-party training and compliance materials in order to monitor the third party’s performance regarding its training obligations.

---

8. A hybrid account may incorporate deposit and brokerage services, credit/debit card features, and automated sweep arrangements.
2010.6.2.4.2 Training of Bank Personnel Who Make Referrals

Bank employees, such as tellers and platform personnel, who are not authorized to provide investment advice, make investment recommendations, or sell nondeposit investment products but who may refer customers to authorized nondeposit investment products sales personnel, should receive training regarding the strict limitations on their activities. In general, bank personnel who are not authorized to sell nondeposit investment products are not permitted to discuss general or specific investment products, prequalify prospective customers as to financial status and investment history and objectives, open new accounts, or take orders on a solicited or unsolicited basis. Such personnel may contact customers for the purposes of—

• determining whether the customer wishes to receive investment information;
• inquiring whether the customer wishes to discuss investments with an authorized sales representative; and
• arranging appointments to meet with authorized bank sales personnel or third-party broker-dealer registered sales personnel.

The minimum disclosure guidelines do not apply to referrals made by personnel not authorized to sell nondeposit investment products if the referral does not provide investment advice, identify specific investment products, or make investment recommendations.

2010.6.2.4.3 Supervision of Personnel

Banking institution policies and procedures should designate, by title or name, the individuals responsible for supervising nondeposit investment product sales activities, as well as referral activities initiated by bank employees not authorized to sell these products. Personnel assigned responsibility for management of sales programs for these products should have supervisory experience and training equivalent to that required of a general securities principal as required by the FINRA for broker-dealers. Supervisory personnel should be responsible for the institution’s compliance with policies and procedures on nondeposit investment products, applicable laws and regulations, and the interagency statement. When sales of these products are conducted by a third party, supervisory personnel should be responsible for monitoring compliance with the agreement between the bank and the third party, as well as compliance with the interagency statement, particularly the guideline calling for nondeposit investment product sales to be separate and distinct from the deposit activities of the bank.

2010.6.2.5 Suitability and Sales Practices

2010.6.2.5.1 Suitability of Recommendations

Suitability refers to the matching of customer financial means and investment objectives with a suitable product. If customers are placed into unsuitable investments, the resulting loss of consumer confidence could have detrimental effects on an institution’s reputation. Many first-time investors may not fully understand the risks associated with nondeposit investment products and may assume that the banking institution is responsible for the preservation of the principal of their investment.

Banking institutions that sell nondeposit investment products directly to customers should develop detailed policies and procedures addressing the suitability of investment recommendations and related record-keeping requirements. Sales personnel who recommend nondeposit investment products to customers should have reasonable grounds for believing that the products recommended are suitable for the particular customer on the basis of information provided by the customer. A reasonable effort must be made to obtain, record, and update information concerning the customer’s financial profile (such as tax status, other investments, income), investment objectives, and other information necessary to make recommendations.

In determining whether sales personnel are meeting their suitability responsibilities, examiners should review the practices for conformance with the banking institution’s policies and procedures. The examiner’s review should include a sample of customer files to determine the extent of customer information collected, recorded, and updated (for subsequent purchases), and whether investment recommendations appear unsuitable in light of such information.

Nondeposit investment product sales programs conducted by third-party broker-dealers are subject to FINRA's suitability and other
sales-practice rules. To avoid duplicating FINRA examination efforts, examiners should rely on FINRA’s most recent sales-practice review of the third party, when available. To the extent that no such FINRA review has been completed within the last two years, Reserve Banks should consult with Board staff to determine an appropriate examination scope for suitability compliance before proceeding further.

2010.6.2.5.2 Sales Practices

The banking organization should have policies and procedures that address undesirable practices by sales personnel intended to generate additional commission income through the churning or switching of accounts from one product to another.

2010.6.2.5.3 Customer Complaints

The banking organization should have policies and procedures for handling customer complaints related to nondeposit investment products. The process should provide for the recording and tracking of all complaints and require periodic reviews of complaints by compliance personnel. The merits and circumstances of each complaint (including all documentation relating to the transaction) should be considered when determining the proper form of resolution. Reasonable timeframes should be established for addressing complaints.

2010.6.2.6 Compensation

Incentive compensation programs specifically related to the sale of nondeposit investment products may include sales commissions, limited fees for referring prospective customers to an authorized sales representative, and nonmonetary compensation (prizes, awards, and gifts). Compensation that is paid by unaffiliated third parties (such as mutual fund distributors) to banking organization staff must be approved in writing by bank management; be consistent with the bank’s written internal code of conduct relating to the acceptance of remuneration from third parties; and be consistent with the proscriptions of the Bank Bribery Act (18 U.S.C. 215) and the banking agencies’ implementing guidelines to that act (see 52 Federal Register 39277, October 21, 1987). Compensation policies should establish appropriate limits on the extent of compensation that may be paid to banking organization staff by unaffiliated third parties.

Incentive compensation programs must not be structured in such a way as to result in unsuitable investment recommendations or sales to customers. In addition, if sales personnel sell both deposit and nondeposit products, similar financial incentives should be in place for sales of both types of products. A compensation program that offers significantly higher remuneration for selling a specific product (for example, a proprietary mutual fund) may be inappropriate if it results in unsuitable recommendations to customers. A compensation program that is intended to provide remuneration for a group of bank employees (such as a branch or department) is permissible as long as the program is based on the overall performance of the group in meeting bank objectives regarding a broad variety of bank services and products, and is not based principally on the volume of sales on nondeposit investment products.

Individual bank employees, such as tellers, may receive a one-time nominal fee of a fixed dollar amount for referring customers to authorized sales personnel to discuss nondeposit investment products. However, the payment of the fee should not depend on whether the referral results in a transaction. Nonmonetary compensation to bank employees for referrals should be similarly structured.

Auditors and compliance personnel should not participate in incentive compensation programs directly related to the results of nondeposit investment product sales programs.

2010.6.2.7 Compliance

Institutions must develop and maintain written policies and procedures that effectively monitor and assess compliance with the interagency statement and other applicable laws and regulations and ensure appropriate follow-up to correct identified deficiencies. Compliance programs should be independent of sales activities with respect to scheduling, compensation, and performance evaluations. Compliance personnel should periodically report compliance findings to the institution’s board of directors or a designated committee of the board as part of the board’s ongoing oversight of nondeposit investment product activities. Compliance personnel...
should have appropriate training and experience with nondeposit investment product sales programs, applicable laws and regulations, and the interagency statement.

Banking organizations should institute compliance programs for nondeposit investment products that are similar to those of securities broker–dealers. This includes a review of new accounts and a periodic review of transactions in existing accounts to identify any potential abusive practices, such as unsuitable recommendations or churning or switching practices. Compliance personnel should also oversee the prompt resolution of customer complaints and review complaint logs for questionable sales practices. Compliance personnel should use MIS reports on early redemptions and sales patterns for specific sales representatives and products to identify any potentially abusive practices. In addition, referral activities of bank personnel should be reviewed to ensure that they are conducted in a manner that conforms to the guidelines in the interagency statement.

When nondeposit investment products are sold by third parties on bank premises, the bank’s compliance program should provide for oversight of the third party’s compliance with its agreement with the bank, including conformance to the disclosure and separate facilities guidelines of the interagency statement. The results of such oversight should be reported to the board of directors or to a designated committee of the board. Management should promptly obtain the third party’s commitment to correct identified problems. Proper follow-up by the bank’s compliance personnel should verify the third party’s corrective actions.

2010.6.2.8 Audit

Audit personnel should be responsible for assessing the effectiveness of the depository institution’s compliance function and overall management of the nondeposit investment product sales program. The scope and frequency of audit’s review of nondeposit investment product activities will depend on the complexity and sales volume of a sales program, and whether there are any indications of potential or actual problems. Audits should cover all of the issues discussed in the interagency statement. Internal audit staff should be familiar with nondeposit investment products and receive ongoing training. Audit personnel should report their findings to the board of directors or a designated committee of the board, and proper follow-up should be performed. Audit activities with respect to third parties should include a review of their compliance function and the effectiveness of the bank’s oversight of the third party’s activities.

2010.6.2.9 Joint Interpretations of the Interagency Statement

In response to a banking association’s inquiry, the banking supervisory agencies issued on September 12, 1995, joint interpretations regarding the February 1994 Interagency Statement on Retail Sales of Nondeposit Investment Products by banking and thrift organizations, previously discussed. The agencies also authorized the use of alternative abbreviated minimum disclosures for advertisements. The alternative minimum disclosures need not be made at all in certain types of advertisements. The use of abbreviated disclosures offers an optional alternative to the longer disclosures prescribed by the interagency statement.

2010.6.2.9.1 Disclosure Matters

The agencies agreed that there are limited situations in which the disclosure guidelines need not apply or where a shorter logo format may be used in lieu of the longer written disclosures called for by the interagency statement.

The interagency statement disclosures do not need to be provided in the following situations:

- radio broadcasts of 30 seconds or less
- electronic signs9
- signs, such as banners and posters, when used only as location indicators

Additionally, third-party vendors not affiliated with the depository institution need not make the interagency statement disclosures on nondeposit investment product confirmations and in account statements that may incidentally, with a valid business purpose, contain the name of the depository institution.

The banking agencies have been asked whether shorter, logo-format disclosures may be used in visual media, such as television broadcasts, ATM screens, billboards, signs, and post-

---

9. “Electronic signs” may include billboard-type signs that are electronic, time and temperature signs, and ticker-tape signs. Electronic signs would not include media such as television, online services, or ATMs.
ers, and in written advertisements and promotional materials, such as brochures. The text of an acceptable logo-format disclosure would include the following statements:

- not FDIC-insured
- no bank guarantee
- may lose value

The logo-format disclosures would be boxed, set in boldface type, and displayed in a conspicuous manner. The full disclosures prescribed by the interagency statement should continue to be provided in written acknowledgment forms that are signed by customers. An example of an acceptable logo disclosure is—

<table>
<thead>
<tr>
<th>NOT FDIC-INSURED</th>
<th>May lose value</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>No bank guarantee</td>
</tr>
</tbody>
</table>

2010.6.2.9.2 Joint Interpretations on Retail Sales of Nondeposit Investment Products

The banking agencies’ joint statement also addressed the following:

- Sales from lobby area presumed retail. Retail sales include (but are not limited to) sales to individuals by depository institution personnel or third-party personnel conducted in or adjacent to a depository institution’s lobby area. Sales activities occurring in another location of a depository institution may also be retail sales activities covered by the interagency statement depending on the facts and circumstances.

- Government or municipal securities dealers or desks. Sales of government and municipal securities made in a depository institution’s dealer department that is located away from the lobby area are not subject to the interagency statement. Such departments are already regulated by the banking agencies and are subject to the statutory requirements for registration of government and municipal securities brokers and dealers. Further, such brokers and dealers are subject to sales-practice and other regulations of the Department of the Treasury, the SEC, and designated securities self-regulatory organizations.

- Fiduciary accounts, affiliated trust companies, and custodian accounts. The interagency statement generally does not apply to fiduciary accounts administered by a depository institution. However, for fiduciary accounts in which the customer directs investments, such as self-directed individual retirement accounts, the disclosures prescribed by the interagency statement should be provided. Nevertheless, disclosures need not be made to customers acting as professional money managers. Fiduciary accounts administered by an affiliated trust company on the depository institution’s premises would be treated the same way as the fiduciary accounts of the institution.

With respect to custodian accounts maintained by a depository institution, the interagency statement does not apply to traditional custodial activities, for example, collecting interest and dividend payments for securities held in the accounts or handling the delivery or collection of securities or funds in connection with a transaction.

- Affiliated standalone broker–dealers. The statement applies specifically to sales of nondeposit investment products on the premises of a depository institution, for example, whenever sales occur in the lobby area. The statement also applies to sales activities of an affiliated standalone broker–dealer resulting from a referral of retail customers by the depository institution to the broker–dealer.

2010.6.3 INSPECTION/EXAMINATION OBJECTIVES

1. To determine that the banking organization has taken appropriate measures to ensure that retail customers clearly understand the differences between insured deposits and nondeposit investment products and receive the minimum disclosures both orally during sales presentations (including telemarketing) and in writing.

2. To assess the adequacy of the institution’s policies and procedures, sales practices, and oversight by management and the board of directors to ensure an operating environment that fosters customer protection in all facets of the sales program.

3. To ensure that the sales program is con-
ducted in a safe and sound manner that is in compliance with the interagency statement, Federal Reserve guidelines, regulations, and applicable laws.

4. To assess the effectiveness of the institution’s compliance and audit programs for nondeposit investment product operations.

5. To obtain commitments for corrective action when policies, procedures, practices, or management oversight is deficient or the institution has failed to comply with the interagency statement or applicable laws and regulations.

2010.6.4 INSPECTION/EXAMINATION PROCEDURES

2010.6.4.1 Scope of the Procedures

These procedures are based on the guidelines outlined in the interagency statement. The interagency statement applies to all banking organizations, including state member banks and the U.S. branches and agencies of foreign banks supervised by the Federal Reserve.

These examination procedures are intended to be used when examining a state member bank (or a state-licensed U.S. branch or agency of a foreign bank) that engages directly in the retail sale of nondeposit investment products.

This set of examination procedures is also meant to be used in conjunction with other procedures in this manual when examining a nonbank subsidiary that sells nondeposit investment products on bank premises. See the following sections for related examination procedures:

- Section 3130.1: Section 4(c)(8) of the BHC Act—Investment or Financial Advisers
- Section 3230.0: Section 4(c)(8) of the BHC Act—Securities Brokerage
- Section 3600.27: Providing Administrative and Certain Other Services to Mutual Funds

Program Management and Organization

1. Evaluate the institution’s structure and reporting lines (legal and functional) for its retail nondeposit investment products operations. Determine whether retail sales of nondeposit investment products are being made directly by employees of the depository institution or through an affiliated or unaffiliated third party. Identify the principals responsible for the management of the nondeposit investment products sales program. Review their backgrounds, qualifications, and tenure with the institution.

2. Determine the role of the board of directors of each legal entity involved in the sale of nondeposit investment products in authorizing and controlling nondeposit investment products activities on bank premises. Evaluate the adequacy of MIS reports relied on by the board (or a designated committee) and senior management to manage these activities.

3. Describe the membership and responsibilities of management or board committees for nondeposit investment product retail sales programs. Review the minutes maintained by these committees for information related to the conduct of retail nondeposit investment product sales programs.

4. Review and evaluate the institution’s policies and procedures, objectives, and budget for nondeposit investment products activities. In so doing, consider the following:
   a. who prepared the material
   b. how it fits into the institution’s overall strategic objectives
   c. whether the goals and objectives are realistic
   d. whether actual results are routinely compared to plans and budgets

5. Determine how policies and procedures for nondeposit investment products activities are developed and at what level in the institution they are formally approved. Review the policies and procedures to see that they are consistent with the interagency statement and address the following matters:
   a. disclosure and advertising
   b. physical separation from deposit-taking activities
   c. compliance programs and internal audit
   d. hiring, training, supervision, and compensation practices for sales staff and personnel making referrals
   e. types of products offered, selection criteria
   f. restrictions on a mutual fund’s use of names similar or identical to that of the bank holding company or its subsidiary banks
   g. suitability and sales practices
   h. use of customer information
   i. transactions with affiliated parties
   j. role of third parties, if applicable

6. Determine how management oversees com-
pliance with the policies and procedures in item 5.

7. Review the product selection and development process to ensure that it considers customer needs and investment objectives.

8. Determine if the depository institution is covered by blanket bond insurance applicable to nondeposit investment product retail sales activities.

9. If the institution sells proprietary nondeposit investment products and performs related back-office operations, review—
   a. the work flow and position responsibilities within the sales and operations function, and
   b. available flow charts, job descriptions, and policies and procedures.

After discussions with management, conduct a walk-through, tracing the path of a typical transaction. Evaluate the effectiveness and efficiency of the work flow and the overall operation.

10. Determine whether the institution has established any contingency plans for handling adverse events affecting nondeposit investment product programs, such as a sudden market downturn or period of heavy redemptions.

11. Review the institution’s earnings and evaluate the—
   a. profitability of nondeposit investment products activities, including any investment advisory fees it may receive, and
   b. income and expense from the sales, investment advisory, and proprietary fund management activities related to nondeposit investment products, as a percentage of non-interest income and expense.

Disclosures and Advertising

The interagency statement identifies certain minimum disclosures that must be made to customers. The disclosures must state that nondeposit investment products—

- are not insured by the FDIC;
- are not deposits or other obligations of the institution and are not guaranteed by the institution; and
- are subject to investment risks, including the possible loss of the principal invested.

12. Determine whether the minimum disclosures are being provided orally to customers during sales presentations (including telemarketing contacts) or when giving investment advice on specific investment products.

13. Determine if the customer-account agreement (or a separate disclosure form) presents the minimum disclosures clearly and conspicuously. The disclosures should be prominent (highlighted through bolding, boxes, or a larger typeface) and should be located on the front of the customer-account agreement or adjacent to the customer signature block.

14. Determine whether customers sign an acknowledgment that they have received and understand the minimum disclosures. The acknowledgment can be on the customer-account agreement or it can be on a separate disclosure form. Determine if customers who opened accounts before the interagency statement was issued receive the written minimum disclosures and acknowledge receipt at the time of their next transaction. Review a sample of customer accounts to determine whether customers received the minimum oral and written disclosures.

15. When sales confirmations or account statements provided by the bank or an affiliate bear the name or logo of the bank or an affiliate, determine whether the minimum disclosures are conspicuously displayed on the front of the documents.

16. Review advertisements and promotional material that identify specific nondeposit investment products to determine whether they conspicuously display the minimum disclosures or the abbreviated logo-format disclosures. Any materials that contain information about insured deposits and nondeposit investment products should clearly segregate the information about investment products from the information about deposits.

17. Review telemarketing material used to solicit new business. To the extent that employees identify specific products, seek customer investment objectives, make investment recommendations, or give investment advice, determine whether—
   a. the minimum disclosures are included in the script;
   b. bank employees engaged in telemarketing activities are authorized by the bank to recommend or sell nondeposit investment products, and whether their train-
ing is the substantive equivalent of that
required for securities registered repre-
sentatives; and

c. the material contains any statements that
may be misleading or confusing to cus-
tomers regarding the uninsured nature of
nondeposit investment products.

18. When nondeposit investment products are
sold by employees of an affiliated broker–
dealer, determine if any written or oral rep-
resentations concerning insurance coverage
provided by SIPC, a state insurance fund, or
a private insurance company are clear and
accurate and do not suggest that they are the
substantive equivalent to FDIC insurance
available for certain deposit products.

19. When the bank or its bank holding com-
pany (or affiliate) acts as an investment
adviser to or has some other material rela-
tionship with a mutual fund whose shares
are sold by the bank, determine whether—
a. oral and written disclosure of the rela-
tionship is made before the purchase of
the shares;
b. bank-advised mutual funds do not have
names identical to the bank’s;
c. bank-advised mutual funds with names
similar to the bank’s are sold pursuant to
a sales program designed to minimize
the risk of customer confusion; and
d. mutual funds advised by bank holding
companies do not have names identical
to, similar to, or a variation of the name
of the holding company or its subsidiary
bank.

20. Determine whether disclosure of any sales
charges, fees, penalties, or surrender
charges relating to nondeposit investment
products is made orally and in writing
before the purchase of these products.

_Third-Party Agreements_

21. When sales of nondeposit investment prod-
ucts are conducted by employees or represen-
tatives of a third party, review all con-
tractual agreements between the bank and
the third party to determine whether they
cover the following:

a. duties and responsibilities of each party
b. third-party compliance with all applica-
tible laws and regulations and the inter-
agency statement
c. authorization for the institution to over-
see and verify compliance by the third
party
d. provision for access to relevant records
to the appropriate bank supervisory
authorities
e. written employment contracts for dual
employees
f. indemnification of the institution by the
third party for the conduct of its employ-
ees in connection with nondeposit
investment product sales activities
g. policies regarding the use of confidential
customer information for any purpose in
connection with sales of nondeposit
investment products.

22. Obtain and review the most recent FINRA
examination results for the third party from
the bank or the third-party broker–dealer.
Also obtain and review examination-related
correspondence and any disciplinary mat-
ters between the broker–dealer and the
FINRA or SEC. Review the institution’s
progress in addressing any investment rec-
ommendations or deficiencies noted in the
examination results or other material.

23. Where any retail sales facilities of the insti-
tution are leased to an affiliated third party
that sells nondeposit investment products—
a. assess whether the lease was negotiated
on an arm’s-length basis and on terms
comparable to similar lease agreements
in the local market and
b. review any intercompany relationships
for compliance with sections 23A and
23B of the Federal Reserve Act.

_Settings and Circumstances_

24. Determine whether the sale of nondeposit
investment products is conducted in a
physical location distinct from deposit-
taking activities of the bank. In so doing—
a. verify that nondeposit investment prod-
ucts are not sold from teller windows;
b. determine if signs or other means are
used to distinguish the nondeposit
investment products sales area from the
retail deposit-taking area of the
institution; and

c. determine whether space limitations pre-
clude having a separate investment-
products sales area. If so, note how the
institution clearly distinguishes nonde-
posit investment products from insured
bank products or obligations.
Qualifications and Training

25. Determine whether employees of a depository institution are providing investment advice, making investment recommendations, or selling nondeposit investment products directly to retail customers. If so, determine whether—
a. the depository institution has performed background checks and
b. sales personnel have received training that is the substantive equivalent to that provided to a securities registered representative.

26. Review the training program provided to employees of the depository institution who are authorized to provide investment advice, make investment recommendations, or sell nondeposit investment products. Assess whether the program addresses the following subject matters:
a. general overview of U.S. financial markets
b. detailed information concerning specific product lines being offered for sale
c. generally accepted trading practices for the products available for sale
d. general overview of federal securities laws and regulations (antifraud and disclosure)
e. banking regulations and guidelines applicable to sales activities (such as anti-tying prohibitions, the interagency statement, supervisory letters on sales of specific investment products, etc.)
f. policies and procedures specific to the institution
g. appropriate sales practices, including suitability of investment recommendations and disclosure obligations
h. appropriate use of customer lists and confidential customer information

27. Determine whether the institution has any continuing-education program or periodic seminars on new products or compliance.

28. Determine whether supervisors of bank sales personnel receive special training pertaining to their supervisory responsibilities that is the substantive equivalent of training required for supervisors (General Securities Principals) of registered representatives.

29. Review the training of bank employees who are not authorized to sell nondeposit investment products but who make referrals, such as tellers, customer service representatives, and others. In so doing, determine whether such employees have been provided training in appropriate referral practices, including the limits on their activities.

Suitability and Sales Practices

The following procedures on suitability and sales practices are applicable when conducting an examination of a depository institution whose employees offer investment advice, make investment recommendations, or sell nondeposit investment products. Examinations involving registered broker-dealers should rely on the FINRA’s review of sales practices or its examination to assess the organization’s compliance with suitability requirements.

30. Determine whether depository institution personnel recommend nondeposit investment products to customers. If so, determine whether sales personnel obtain, record, and update the following information:
a. age
b. tax status
c. current investments and overall financial profile, including an estimate of net worth*
d. investment objectives*
e. other personal information deemed necessary to offer reasonable investment advice*

31. Review a representative sample of customer accounts that were opened at several different branch locations. Assess whether customer suitability information is obtained and whether investments appear unsuitable in light of such information.

32. Review customer complaints involving suitability of investment recommendations. Determine whether the bank’s original recommendations appear unsuitable in the context of the information available at the time of sale. Note how suitability complaints are resolved.

Compensation

33. If employees of the depository institution provide investment advice, make investment recommendations, or sell nondeposit

* Not necessary when money market mutual funds are being recommended.
investment products, determine whether—  
a. any incentive compensation plan available to nondeposit investment product sales personnel strongly favors proprietary or other specific products; if so, determine how the institution ensures that customers are not placed into unsuitable investments, and  
b. compliance and audit personnel are excluded from incentive compensation programs directly related to the results of nondeposit investment product sales.

34. Determine whether fees paid to bank employees for referrals to depository institution sales personnel or third-party sales staff are based on a one-time, nominal fee of a fixed dollar amount and are not dependent on a successful sale.

35. Determine if the bank’s compensation policies address remuneration of bank employees by third parties and if these policies are incorporated into the bank’s code of conduct. In so doing, determine whether the bank’s policies were approved by the board of directors and are consistent with the proscriptions of the Bank Bribery Act and the interagency guidelines adopted thereunder.

**Compliance and Audit**

36. Review and assess the depository institution’s compliance program for nondeposit investment product sales activities. In so doing, consider the following:  
a. frequency and scope  
b. workpapers  
c. degree of independence from the sales program  
d. follow-up on material findings  
e. centralization of findings from all compliance areas  
f. role of the board of directors in reviewing findings  

37. Review the criteria used to evaluate bank sales personnel for compliance with the institution’s policies and procedures, specifically those policies relating to disclosure and suitability.

38. Determine whether compliance personnel approve or review new accounts, periodically review transactions in accounts, and review sales and referral activities of bank personnel.

39. Review the customer complaint process and the associated complaint log to determine if complaints are addressed on a timely basis.

40. Review progress in addressing identified compliance problems.

41. Evaluate the experience, training, and qualifications of compliance personnel.

42. Review the scope of audits and determine if the following areas were adequately addressed:  
a. disclosure and advertising  
b. physical separation of nondeposit investment product sales activities  
c. compliance  
d. sales practices and suitability  
e. product selection and development  
f. use of confidential customer information by bank and third-party sales personnel  
g. third-party compliance with its agreement with the institution  
h. personnel training and background checks  
i. operations (clearing, cash receipts and disbursements, accounting, redemptions, etc.), if applicable

43. Obtain all internal and external audit reports regarding the institution’s nondeposit investment product activities performed over the past year (including management’s responses). Review for exceptions, recommendations, and follow-up actions. Ascertain if significant exceptions were presented to the institution’s audit committee or board of directors for their review.

44. For external audits, obtain a copy of the engagement letter and comment on the adequacy of the firm’s audit review.
A banking organization should be able to readily determine for which entity within the bank holding company an individual is employed, and members of a banking organization’s staff must be able to identify which subsidiary of the holding company employs them. The distinction is important because complex banking organizations must take steps to ensure that their officials and employees have both the corporate and legal authority to carry out their duties, and because the organization’s personnel should only be performing activities that are permitted by law to be carried out by the holding company or its particular subsidiaries.

2010.8.1 IDENTIFICATION OF FACILITIES AND STAFF

Generally, unless there are statutory restrictions or the Federal Reserve or other regulators have issued explicit written proscriptions, such as those concerning mutual fund sales on bank premises, there is no fundamental legal prohibition on the entities of a banking organization sharing or using unmarked contiguous facilities and, in some instances, sharing officials and employees. There are, however, concerns about safety and soundness and conflicts of interest. These may arise when a banking organization does not take appropriate actions to define and differentiate the functions and responsibilities of each of its entities and staff.

Good corporate governance requires that a banking organization be able to readily identify the authority and responsibilities of its officials and employees at each of its entities, especially where the entities share facilities or use contiguous offices that are not clearly marked to indicate the identity of the different entities. This is necessary to ensure that—

1. an official or employee who makes a commitment to a counterparty on behalf of the organization has both the corporate and legal authority to do so,
2. the counterparty understands with whom it is dealing, and
3. each entity is in compliance with any legal restrictions under which it operates.

To accomplish the goal of ready identification, a banking organization should maintain well-defined job descriptions for each category of its staff at each entity. When officials and employees of one entity have responsibilities for other entities, particularly in shared facilities, the staff’s responsibilities should be clearly defined and, when appropriate, disclosed or made clear to customers and the public in general. This procedure clarifies for both the public and the regulators for which entity officials or employees are carrying out their duties and responsibilities. Also, this clarifies whether an entity is operating within the scope of its charter, license, or other legal restrictions. Finally, a banking organization should establish and maintain appropriate internal controls designed to ensure the separation of the functions of the legal entities, when required, as well as have an adequate audit program to monitor such activities.

If officials and employees have responsibilities for other offices or affiliates of the banking organization, particularly those that share facilities, these responsibilities should be clearly defined and, when appropriate, disclosed or made clear to customers and the public in general. This procedure clarifies for which entity employees are carrying out their duties. Furthermore, in establishing employee responsibilities, management should ensure that they are within the scope of the entity’s license or charter.

2010.8.2 EXAMINER GUIDANCE ON SHARING FACILITIES AND STAFF

Examiners should continue to be fully aware of the issues and potential problems involved in the sharing of staff and the sharing or use of unmarked contiguous facilities by the different entities of a banking organization with varied activities. At a minimum, examiners should check to see that a banking organization maintains clear records indicating the duties and responsibilities of the officials and employees at each of its entities. They should also take steps to check whether, in situations when an official or employee may perform duties for more than one entity in a shared facility, the banking organization has adequate policies and controls in place to ensure that its staff have the corporate and legal capacity to commit the organization to its counterparties and that the duties are carried out in conformance with the statutory restrictions applicable to each of the entities. See SR-95-34 (SUP).

BHC Supervision Manual December 2000 Page 1
Supervision of Subsidiaries  
(Required Absences from Sensitive Positions)  
Section 2010.9

One of the many basic tenets of internal control is that a banking organization (bank holding company, state member bank, and foreign banking organization) needs to ensure that its employees in sensitive positions are absent from their duties for a minimum of two consecutive weeks. Such a requirement enhances the viability of a sound internal control environment because most frauds or embezzlements require the continuous presence of the wrongdoer.

In brief, this section contains a statement emphasizing the need for banking organizations to conduct an assessment of significant risk areas before developing a policy on required absences from sensitive positions. After making this assessment, the organization should require that employees in sensitive key positions, such as trading and wire transfer, not be allowed to transact or otherwise carry out, either physically or through electronic access, their assigned duties for a minimum of two consecutive weeks per year. The prescribed period of absence should, under all circumstances, be sufficient to allow all pending transactions to clear and to provide for an independent monitoring of the transactions that the absent employee is responsible for initiating or processing. This practice could be implemented through a requirement that affected employees take vacation or leave, the rotation of assignments in lieu of required vacation, or a combination of both so the prescribed level of absence is attained. Some banking organizations, particularly smaller ones, might consider compensating controls such as continuous rotation of assignments in lieu of required absences to avoid placing an undue burden on the banking organization or its employees.

For the policy to be effective, individuals having electronic access to systems and records from remote locations must be denied this access during their absence. Similarly, indirect access can be controlled by not allowing others to take and carry out instructions from the absent employee. Of primary importance is the requirement that an individual’s daily work be processed by another employee during his or her absence; this process is essential to bring to the forefront any unusual activity of the absent employee.

Exceptions to the required-absence policy may be necessary from time to time. However, management should exercise the appropriate discretion and properly document any waivers that are granted. Internal auditing should be made aware of individuals who receive waivers and the circumstances necessitating the exceptions.

If a banking organization’s internal control procedures do not now include the above practices, they should be promptly amended. After
the procedures have been enhanced, they should be disseminated to all employees, and the documentation regarding their receipt and acknowledgment maintained. Additionally, adherence to the procedures should be included in the appropriate audit schedules, and the auditors should be cognizant of potential electronic access or other circumventing opportunities.

The development and implementation of procedures on required absences from sensitive positions is just one element of an adequate control environment. Each banking organization should take all measures to establish appropriate policies, limits, and verification procedures for an effective overall risk-management system.

2010.9.2 INSPECTION OBJECTIVES

1. To determine whether a critical assessment has been performed of a banking organization’s significant areas and sensitive positions.

2. To ascertain that sound internal controls exist, including policies and procedures that provide assurances that employees in sensitive positions are absent from their duties for a minimum of two consecutive weeks per year.

3. To ascertain whether the banking organization has taken all measures to establish appropriate policies, limits, and verification procedures for an effective overall risk-management system.

4. To establish that the appropriate audit schedules and the audits include a review of minimum absence policies and procedures, including potential electronic access or other circumventing actions by employees.

2010.9.3 INSPECTION PROCEDURES

1. Determine that a profile of high-risk areas and activities is performed on a regular periodic basis.

2. Ascertain if employees assigned to sensitive positions are required to be absent for a minimum of two weeks per year while—
   a. pending sensitive transactions are monitored while they clear, and
   b. daily work is monitored and processed by another employee during the regularly assigned employee’s absence.

3. Determine if required internal control procedures for minimum absences (for example, rotation of assignments, vacation or leave, or a combination of both) are being used in sensitive operations such as trading, trust, wire transfer, reconciliation, or other sensitive back-office responsibilities.

4. Ascertain if appropriate policies, limits, and verification procedures have been established and maintained for an effective overall risk-management system.

5. Determine whether the banking organization—
   a. prohibits others from taking and carrying out instructions from the absent employees, and
   b. prevents remote electronic access to systems and records involving sensitive transactions during the regularly assigned employee’s required minimum two-week absence.

6. Ascertain that the banking organization documents waivers from the two-week minimum absence policies and procedures involving sensitive positions.

7. Determine that the appropriate audit schedules and the audits include a review of such procedures, including potential electronic access or other circumventing actions by employees.
Supervision of Subsidiaries (Internal Loan Review)  

Section 2010.10

Internal loan review is an activity which provides management with information about the quality of loans and effectiveness of a banking organization’s lending policies and procedures. The objectives of loan-review procedures are to identify, in a timely manner, existing or emerging credit-quality problems and to determine whether internal lending policies are being adhered to.

The size and complexity of a bank holding company will dictate the need for and structure of internal loan review. One-bank holding companies with no significant credit-extending nonbank subsidiaries will normally establish internal loan-review procedures within the subsidiary bank. In these cases, there is no need to evaluate the loan-review procedures during the inspection.

For larger multibank companies or those with significant credit-extending nonbank subsidiaries, internal loan review is usually centralized at the parent company level. In some cases, a centralized loan-review function could operate in the lead bank and cover all affiliates within the organization. However, since parent company directors and senior management are ultimately accountable for the organization’s asset quality, an evaluation of the internal loan-review function should be conducted as part of the inspection process no matter where the operations are technically located within the corporate structure. Since a subsidiary bank’s primary regulator will normally want to evaluate the loan-review process as it relates to the respective bank, a coordination of efforts would be appropriate. This should be handled on an ad hoc basis, as deemed necessary by the holding company’s examiner-in-charge, to avoid unnecessary duplication of efforts without compromising the independence of the appraisal process.

Internal loan-review procedures may take various forms, from senior officers’ review of junior-officer loans to the formation of an independent department staffed by loan-review analysts. An effective system will identify deteriorations in credits, loans that do not comply with written loan policies, and loans with technical exceptions.

The loan-review program should be delegated to a qualified and adequate staff. The review should be systematic in scope and frequency. All related extensions of credit should be identified and analyzed together. A minimum credit size should be established that allows for an efficient review while providing adequate coverage. The process should also tie problem loans or technical exceptions to the particular loan officer to allow senior management to evaluate individual performance. Loans should be reviewed shortly after origination to determine their initial quality, technical exceptions, and compliance with written loan policies. Reasonable frequency guidelines should be set for normal reviews, with problem credits receiving special and more frequent analysis. An effective loan-review procedure will incorporate an early warning system of “red flags,” such as overdrafts, adverse published reports, and deteriorating financial statements. Loan officers should also be encouraged to inform the organization’s internal loan-review unit of developing loan problems, and they should be discouraged from withholding problem loans or adverse information from the review process.

The loan-review process should be independent of the loan-approval function, with written findings reported to a board or senior management committee that is not directly involved in lending. Follow-up and monitoring of problem credits should be instituted. The loan officer should be responsible for reporting on any corrective actions taken. The maintenance of adequate internal controls within the lending process, in particular for loan review or credit audit, is critical for maintaining proper incentives for banking organization staff to be rigorous and disciplined in their credit-analysis and lending decisions. A banking organization’s credit analyses, loan terms and structures, credit decisions, and internal rating assignments have historically been reviewed in detail by experienced and independent loan-review staff. Such loan reviews have provided both motivation for better credit discipline within an institution and greater comfort for examiners—and management—that internal policies are being followed and that the banking organization continues to adhere to sound lending practice.

For larger multibank organizations, loan-review procedures are usually centralized and administered at the parent level, with loan-review staff employed by the parent company. In some cases, a centralized loan-review function may operate in the lead bank, covering all other affiliates in the organization. The parent company directors and senior management are ultimately accountable for supervision of the entire organization’s asset quality. Therefore, it
should be the System’s responsibility to evaluate top management’s loan-review policies and procedures as they relate to the subsidiaries, both bank and nonbank, no matter where the function is technically established within the corporate structure. The holding company examiner-in-charge should attempt to coordinate efforts and cooperate with the respective banks’ primary supervisors to avoid unnecessary duplication, without compromising the independence of the appraisal process.

During favorable economic and financial markets, relatively low levels of problem loans and credit losses may increase pressure within banking organizations to reduce the resources committed to loan-review functions. These reductions may include a reduction in staff, more limited portfolio coverage, and less thorough reviews of individual loans. Undoubtedly, some useful efficiencies may be gained by reducing loan-review resources, but some banking organizations may reduce the scope and depth of loan-review activities beyond levels that are prudent over the longer horizon. If reduced too far, the integrity of the lending process and the discipline of identifying unrealistic assumptions and discerning problem loans in a timely fashion may deteriorate. This may be especially true when a large proportion of lenders may not have had direct lending experience during a credit cycle when there was an economic and financial market downturn. See SR-99-23.

If supervisors and examiners find that there are weaknesses in the internal loan-review function and in activities or other internal control and risk-management processes (for example, staff turnover, failure to commit sufficient resources, inadequate adherence to established internal controls, or inadequate training), such findings should be discussed with the senior management of the parent bank holding company or other management at a corporate-wide level and, if determined to be a major concern, presented as comments on the “Examiner’s Comments and Matters Requiring Special Board Attention” core page. Findings that could adversely affect affiliated insured depository institutions should be conveyed to the primary federal or state supervisor of the insured institution. Those findings should also be considered when assigning supervisory ratings.

Shell one-bank holding companies will not have or need a loan-review program emanating from the parent company level. Loan review will normally function within the subsidiary bank and be supervised by bank directors and management.

2010.10.1 INSPECTION OBJECTIVES

1. Review the operations of the bank holding company to determine whether there is an internal loan-review program. If not, one should be implemented.
2. Determine whether the loan-review program is independent from the loan-approval function.
3. Determine if the loan-review staff is sufficiently qualified and whether its size is adequate.
4. Determine whether the scope and frequency of the loan-review procedure is adequate to ensure that problems are being identified.
5. Determine that findings from the loan-review process are being properly reported and receive adequate follow-up attention.

2010.10.2 INSPECTION PROCEDURES

1. Review the holding company’s operations to determine what types of internal loan-review procedures are being performed and whether an internal loan-review program exists.
2. If no internal loan-review program exists, determine whether the size, complexity, and financial condition of the organization warrants implementation of a formal loan-review process.
3. Review the organizational structure of the loan-review function to ensure its independence from the loan-approval processes.
4. Review the reporting process for internal loan-review findings to determine whether a director committee or independent senior management committee is being appropriately advised of the findings. Determine whether adequate follow-up procedures are in place.
5. Through loan reviews, transaction testing, and discussions with loan-review management, evaluate the quality, effectiveness and adequacy of the internal loan-review staff and internal controls in relation to the organization’s size and complexity.
6. Review the operation of the loan-review process to identify the method for selecting loans and the manner in which they are analyzed and graded. Determine whether these procedures are adequate.
7. Determine if loan-review activities or other internal control and risk-management processes have been weakened by turnover of internal loan-review staff; a failure to commit sufficient resources; inadequate internal controls; inadequate training; or the absence of other adequate systems, resources, or controls. If such significant findings are found, discuss those concerns with senior management and report those findings on the core page 1, “Examiner’s Comments and Matters Requiring Special Board Attention.”

8. Determine what type of “early warning” system is in place and whether it is adequate.

9. Determine how the scope and frequency of the review procedure is established and whether this provides adequate coverage.
Supervision of Subsidiaries (Private-Banking Functions and Activities)

WHAT’S NEW IN THIS REVISED SECTION

Effective July 2012, this section has been revised to reference the Financial Crimes Enforcement Network’s regulations and those of the Office of Foreign Assets Control, issued by the U.S. Department of the Treasury (31 C.F.R. 1020).

2010.11.1 OVERVIEW OF PRIVATE BANKING AND ITS ASSOCIATED ACTIVITIES

The role of bank regulators in supervising private-banking activities is (1) to evaluate management’s ability to measure and control the risks associated with such activities and (2) to determine if the proper internal control and audit infrastructures are in place to support effective compliance with relevant laws and regulations. In this regard, the supervisors may determine that certain risks have not been identified or adequately managed by the institution, a potentially unsafe and unsound banking practice.

Private-banking functions may be performed in a specific department of a commercial bank or nonbank subsidiary of a commercial bank, a bank holding company (including a financial holding company), an Edge corporation or its foreign subsidiaries, a branch or agency of a foreign banking organization, or within multiple areas of an institution. Private banking may be the sole business of an institution. Regardless of how an institution is organized or where it is located, the results of the private-banking review should be reflected in the entity’s overall supervisory assessment.

This section provides examiners with guidance for reviewing private-banking activities at all types and sizes of banking organizations, including financial institutions. It is intended to supplement, not replace, existing guidance on the inspection or examination of private-banking activities and to broaden the examiner’s review of general risk-management policies and practices governing private-banking activities. In addition to providing an overview of private banking, the general types of customers, and the various products and services typically provided, the “Functional Review” subsection describes the critical functions that constitute a private-banking operation and identifies certain safe and sound banking practices. These critical functions are supervision and organization, risk management, fiduciary standards, operational controls, management information systems, audit, and compliance. Included in the risk-management portion is a discussion of the basic “customer-due-diligence” (CDD) principle that is the foundation for the safe and sound operation of a private-banking business. See the CDD rules at 31 C.F.R. 1020. The “Preparation for Inspection” subsection assists in defining the inspection scope and provides a list of core requests to be made in the first-day letter. Additional inspection and examination guidance can be found in this manual, the Federal Financial Institutions Examination Council’s (FFIEC) Bank Secrecy Act/Anti–Money Laundering (BSA/AML) Examination Manual, the Federal Reserve System’s Trading and Capital-Markets Activities Manual, and in the FFIEC’s Information Technology Examination Handbook.

In reviewing specific functional and product-inspection procedures (as found in the private-banking activities module that is part of the framework for risk-focused supervision of large complex institutions), all aspects of the private-banking review should be coordinated with the rest of the inspection to eliminate unnecessary duplication of effort. Furthermore, this section has introduced the review of trust activities and fiduciary services, critical components of most private-banking operations, as part of the overall private-banking review. Although the product nature of these activities differs from that of products generated by other banking activities, such as lending and deposit taking, the functional components of private banking (supervision and organization, risk management, operational controls and management information systems, audit, compliance, and financial condition/business profile) should be reviewed across product lines.

Private banking offers the personal and discrete delivery of a wide variety of financial services and products to an affluent market, primarily to high net worth individuals and their...
corporate interests. A private-banking operation typically offers its customers an all-inclusive money-management relationship, including investment portfolio management, financial-planning advice, offshore facilities, custodial services, funds transfer, lending services, overdraft privileges, hold mail, letter-of-credit financing, and bill-paying services. As the affluent market grows, both in the United States and globally, competition to serve it is becoming more intense. Consequently, the private-banking marketplace includes banks, nonbanks, and other types of banking organizations and financial institutions. Private-banking products, services, technologies, and distribution channels are still evolving. A range of private-banking products and services may be offered to customers throughout an institution’s global network of affiliated entities—including branches, subsidiaries, and representative offices—in many different regions of the world, including offshore secrecy jurisdictions.

Typically, private-banking customers are high net worth individuals or institutional investors who have minimum investible assets of $1 million or more. Institutions often differentiate domestic from international private banking, and they may further segregate the international function on the basis of the geographic location of their international client base. International private-banking clients may be wealthy individuals who live in politically unstable nations and are seeking a safe haven for their capital. Therefore, obtaining detailed background information and documentation about the international client may be more difficult than it is for the domestic customer. Private-banking accounts may, for example, be opened in the name of an individual, a commercial business, a law firm, an investment adviser, a trust, a personal investment company (PIC), or an offshore mutual fund.

In 2001, the USA Patriot Act (the Patriot Act) established new and enhanced measures to prevent, detect, and prosecute money laundering and terrorist financing. In general, these measures were enacted through amendments to the Bank Secrecy Act (BSA). The measures directly affecting banking organizations are implemented primarily through regulations issued by the U.S. Department of the Treasury (31 C.F.R. 1020). Section 326 of the Patriot Act (see the BSA at 31 U.S.C. 5318(i)) requires financial institutions (such as banks, savings associations, trust companies, and credit unions) to have customer identification programs (CIPs), that is, programs to collect and maintain certain records and documentation on customers. Institutions are to develop and use identity verification procedures to ensure the identity of their customers. Bank holding companies, as a matter of safety and soundness, should take appropriate measures to ensure that their financial institution subsidiaries are in compliance with the customer identification program (CIP) rule.

The CIP rule (see 31 C.F.R. 1020.220 and 12 C.F.R. 326.8(b)) applies only to a bank, not to a bank holding company solely because it owns a bank. Also, a nonbank subsidiary of a bank holding company is not subject to the CIP rule for banks solely as a result of being affiliated with a bank in a holding company structure. Even though this rule is not applicable to bank holding companies and their nonbank subsidiaries (or to savings and loan holding companies and their non–savings association subsidiaries), bank holding companies should, as a matter of safety and soundness, take appropriate measures throughout the organization to ensure that each of their entities is in compliance with any applicable CIP rule. New accounts must receive appropriate due diligence, and a holding company should generally protect the consolidated organization from any risks associated with money laundering and financial crime. The bank holding company may still be subject to other CIP rules if it has ownership in a functionally regulated entity, for example, a securities broker-dealer. (See 31 C.F.R. 1023.220 and 1026.220)

The CIPs are to include measures to—
1. require that certain information be obtained at account opening (for individuals, the information would generally include their name, address, tax identification number, and date of birth);
2. verify the identity of new account holders within a reasonable time period;
3. ensure that a banking organization has a reasonable belief that it knows each customer’s identity;
4. maintain records of the information used to verify a person’s identity; and

2. For banking organizations, the regulation implementing the requirements of section 326 of the Patriot Act was jointly issued by the U.S. Department of the Treasury, through the Financial Crimes Enforcement Network (FinCEN), and the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the National Credit Union Administration.
5. Compare the names of new customers against government lists of known or suspected terrorists or terrorist organizations.

A customer identification program is an important component of a financial institution’s overall anti-money-laundering and BSA compliance program. The FFIEC BSA/AML Examination Manual provides the interagency BSA examination procedures that should be used to evaluate banking organizations’ compliance with the regulation. The scope of the examination or inspection can be tailored to the reliability of the banking organization’s compliance-management system and to the level of risk that the organization assumes. Relevant interagency guidance (in a frequently-asked-question format) has been issued to address the customer identification program rules. (See SR-05-9.)

Private-banking accounts are usually generated on a referral basis. Every client of a private-banking operation is assigned a salesperson or marketer, commonly known as a relationship manager (RM), as the primary point of contact with the institution. The RM is generally charged with understanding and anticipating the needs of his or her wealthy clients, and then recommending services and products for them. The number of accounts an RM handles varies, depending on the portfolio size or net worth of the particular accounts. RMs strive to provide a high level of support, service, and investment opportunities to their clients and tend to maintain strong, long-term client relationships. Frequently, RMs take accounts with them to other private-banking institutions if they change employment. Historically, initial and ongoing due diligence of private-banking clients is not always well documented in the institution’s files because of RM turnover and confidentiality concerns.

Clients may choose to delegate a great deal of authority and discretion over their financial affairs to RMs. Given the close relationship between clients and their account officers, an integral part of the inspection process is assessing the adequacy of managerial oversight of the nature and volume of transactions conducted within the private-banking department or with other departments of the financial institution, as well as determining the adequacy and integrity of the RM’s procedures. Policy guidelines and management supervision should provide parameters for evaluating the appropriateness of all products, especially those involving market risk. Moreover, because of the discretion given to RMs, management should develop effective procedures to review the activity of client accounts in order to protect the client from any unauthorized activity. In addition, ongoing monitoring of account activity should be conducted to detect activity that is inconsistent with the client profile (for example, frequent or sizable unexplained transfers flowing through the account).

Finally, as clients develop a return-on-assets (ROA) outlook to enhance their returns, the use of leveraging and arbitrage is becoming more evident in the private-banking business. Examiners should be alert to the totality of the client relationship product by product, in light of increasing client awareness and use of derivatives, emerging-market products, foreign exchange, and margin accounts.

2010.11.1.1 Products and Services
2010.11.1.1.1 Personal Investment Companies, Offshore Trusts, and Token-Name Accounts

Private-banking services almost always involve a high level of confidentiality for clients and their account information. Consequently, it is not unusual for private bankers to help their clients achieve their financial-planning, estate-planning, and confidentiality goals through offshore vehicles such as personal investment companies (PICs), trusts, or more exotic arrangements, such as hedge fund partnerships. While these vehicles may be used for legitimate reasons, without careful scrutiny, they may camouflage illegal activities. Private bankers should be committed to using sound judgment and enforcing prudent banking practices, especially when they are assisting clients in establishing offshore vehicles or token-name accounts.

Through their global network of affiliated entities, private banks often form PICs for their clients. These “shell” companies, which are incorporated in offshore secrecy jurisdictions such as the Cayman Islands, Channel Islands, Bahamas, British Virgin Islands, and Netherlands Antilles, are formed to hold the customer’s assets as well as offer confidentiality by opening accounts in the PIC’s name. The “beneficial owners” of the shell corporations are typically foreign nationals. The banking institution should know and be able to document that it knows the beneficial owners of such corporations and that it has performed the appropriate due diligence to support these efforts. Emphasis should be placed on verifying the source or

BHC Supervision Manual
July 2012
Page 3
origin of the customer’s wealth. Similarly, offshore trusts established in these jurisdictions should identify grantors of the trusts and sources of the grantors’ wealth. Anonymous relationships or relationships in which the RM does not know and document the beneficial owner should not be permitted.

PICs are typically passive personal investment vehicles. However, foreign nationals have established PICs as operating accounts for business entities they control in their home countries. Accordingly, financial institutions should use extra care when dealing with beneficial owners of PICs and associated trusts; these vehicles can be used to conceal illegal activities.

2010.11.1.1.2 Deposit-Taking Activities of Subsidiary Institutions

A client’s private-banking relationship frequently begins with a deposit account and then expands into other products. In fact, many institutions require private-banking customers to establish a deposit account before maintaining any other accounts. Deposit accounts serve as conduits for a client’s money flows. To distinguish private-banking accounts from retail accounts, institutions usually require significantly higher minimum account balances and assess higher fees. The private-banking function or institution should have account-opening procedures and documentation requirements that must be fulfilled before a deposit account can be opened. (These standards are described in detail in the “Functional Review” subsection.)

Most private banks offer a broad spectrum of deposit products, including multicurrency deposit accounts that are used by clients who engage in foreign-exchange, securities, and derivatives transactions. The client’s transaction activity, such as wire transfers, check writing, and cash deposits and withdrawals, is conducted through deposit accounts (including current accounts). It is very important that the transaction activity into and out of these deposit accounts (including internal transfers between affiliated deposit accounts) be closely monitored for suspicious transactions that are inconsistent with the client’s profile of usual transactions.

Suspicious transactions could warrant the filing of a Suspicious Activity Report (SAR). A bank holding company or any nonbank subsidiary thereof, or a foreign bank that is subject to the Bank Holding Company Act (or any non-bank subsidiary of such a foreign bank operating in the United States), is required to file a SAR in accordance with the provision of section 208.62 of the Federal Reserve Board’s Regulation H (12 C.F.R. 208.62) when suspicious transactions or activities are initially discovered and warrant or require reporting. See the reporting requirements discussed in subsection 2010.11.2.1.1 and the expanded examination procedures for private banking in the FFIEC’s BSA/AML Examination Manual.

2010.11.1.1.3 Investment Management

In private banking, investment management usually consists of two types of accounts: (1) discretionary accounts in which portfolio managers make the investment decisions on the basis of recommendations from the bank’s investment research resources and (2) nondiscretionary (investment advisory) accounts in which clients make their own investment decisions when conducting trades. For nondiscretionary clients, the banks typically offer investment recommendations subject to the client’s written approval. Discretionary accounts consist of a mixture of instruments bearing varying degrees of market, credit, and liquidity risk that should be appropriate to the client’s investment objectives and risk appetite. Both account types are governed under separate agreements between the client and the institution.

Unlike depository accounts, securities and other instruments held in the client’s investment accounts are not reflected on the balance sheet of the institution because they belong to the client. These managed assets are usually accounted for on a separate ledger that is segregated according to the customer who owns the assets.

2010.11.1.1.4 Credit

Private-banking clients may request extensions of credit on either a secured or an unsecured basis. Loans backed by cash collateral or managed assets held by the private-banking function are quite common, especially in international private banking. Private-banking clients may pledge a wide range of their assets, including cash, mortgages, marketable securities, land, or buildings, to securitize their loans. Management should demonstrate an understanding of the purpose of the credit, the source of repayment, the loan tenor, and the collateral used in the financing. When lending to individuals with high net...
worths, whether on a secured or an unsecured basis, the creditworthiness determination is bolstered by a thorough and well-structured customer-due-diligence process. If that process is not thorough, collateral derived from illicit activities may be subject to government forfeiture.

Borrowing mechanisms are sometimes established to afford nonresident-alien customers the ability to keep financial assets in the United States and to use such assets (via collateralized borrowing arrangements) to provide operating capital for businesses they own and operate in their home countries. Such arrangements enable these customers to keep the existence of these financial assets secret from their home-country authorities and others, while they continue to use the funds (via collateralized borrowings) to fund their businesses at home.

Private bankers need to maintain in the United States adequate CDD information on such nonresident-alien customers and their primary business interests. A well-documented CDD file may include information on the customer from "who's who" and similar services, Internet research, foreign tax returns and financial statements, checks conducted by the Office of Foreign Assets Control (OFAC), and written and appropriately documented Call Reports prepared by the RM.

While these lending mechanisms may be used for legitimate reasons, management needs to determine whether the arrangements are being used primarily to obfuscate the beneficial ownership of collateral assets, making it difficult for the customer’s home-country government to identify who owns the assets. If so, management needs to further determine whether the practice varies from both the appropriate standards of international cooperation for transparency issues and with prudent banking practices, and if so, whether the institution is exposed to elevated legal risk.

2010.11.1.5 Payable-Through Accounts

Another product that may be available in private-banking operations is payable-through accounts (PTAs). PTAs are transaction deposit accounts through which U.S. banking entities ("payable-through banks") extend check-writing privileges to the customers of a foreign bank. The foreign bank ("master account holder") opens a master checking account with the U.S. bank and uses this account to provide its customers with access to the U.S. banking system. The master account is divided into "subaccounts," each in the name of one of the foreign bank’s customers. The foreign bank extends signature authority on its master account to its own customers, who may not be known to the U.S. bank. Consequently, the U.S. bank may have customers who have not been subject to the same account-opening requirements imposed on its U.S. account holders. These subaccount customers are able to write checks and make deposits at the U.S. banking entity. The number of subaccounts permitted under this arrangement may be virtually unlimited.

U.S. banking entities engage in PTAs primarily because they attract dollar deposits from the domestic market of their foreign correspondents without changing the primary bank-customer relationship; PTAs also provide substantial fee income. Generally, PTAs at U.S. banking entities have the following characteristics: they are carried on the U.S. banking entity’s books as a correspondent bank account, their transaction volume is high, checks passing through the account contain wording similar to “payable through XYZ bank,” and the signatures appearing on checks are not those of authorized officers of the foreign bank. See the expanded examination procedures for PTAs in the FFIEC’s BSA/AML Examination Manual.

2010.11.1.6 Personal Trust and Estates

In trust and estate accounts, an institution offers management services for a client’s assets. When dealing with trusts under will, or “testamentary trusts,” the institution may receive an estate appointment (executor) and a trustee appointment if the will provided for the trust from the probate. These accounts are fully funded at origination with no opportunity for an outside party to add to the account, and all activities are subject to review by the probate or surrogates’ court. On the other hand, with living trusts, or “grantor trusts,” the customer (grantor) may continually add to and, in some instances, has control over the corpus of the account. Trusts and estates require experienced attorneys, money managers, and generally well-rounded professionals to set up and maintain the accounts. In certain cases, bankers may need to manage a customer’s closely held business or sole proprietorship. In the case of offshore trust facilities, recent changes in U.S. law have imposed additional obligations on those banks...
that function as trustees or corporate management for offshore trusts and PICs.

A critical element in offering personal trust and estate services is the fiduciary responsibility of the institutions to their customers. This responsibility requires that institutions always act in the best interest of the clients pursuant to the trust documentation, perhaps even to the detriment of the bank. In these accounts, the bank is the fiduciary and the trust officer serves as a representative of the institution. Fiduciaries are held to higher standards of conduct than other bankers. Proper administration of trusts and estates includes strict controls over assets, prudent investment and management of assets, and meticulous recordkeeping. See the expanded procedures for trust and asset management services in the FFIEC’s BSA/AML Examination Manual.

2010.11.1.7 Custody Services

Custodial services offered to private-banking customers include securities safekeeping, receipt and disbursement of dividends and interest, recordkeeping, and accounting. Custody relationships can be established in many ways, including by referrals from other departments in the bank or from outside investment advisers. The customer or a designated financial adviser retains full control of the investment management of the property subject to the custodianship. Sales and purchases of assets are made by instruction from the customer, and cash disbursements are prearranged or as instructed. Custody accounts involve no investment supervision and no discretion. However, the custodian may be responsible for certain losses if it fails to act properly according to the custody agreement. Therefore, procedures for proper administration should be established and reviewed.

An escrow account is a form of custody account in which the institution agrees to hold cash or securities as a middleman, or a third party. The customer, for example, an attorney or a travel agency, gives the institution funds to hold until the ultimate receiver of the funds “performs” in accordance with the written escrow agreement, at which time the institution releases the funds to the designated party.

2010.11.1.8 Funds Transfer

Funds transfer, another service offered by private-banking functions, may involve the transfer of funds between third parties as part of bill-paying and investment services on the basis of customer instructions. The adequacy of controls over funds-transfer instructions that are initiated electronically or telephonically is extremely important. Funds-transfer requests are quickly processed and, as required by law, funds-transfer personnel may have limited knowledge of the customers or the purpose of the transactions. Therefore, strong controls and adequate supervision over this area are critical. See section 4063.1 and 4125.1 of the Commercial Bank Examination Manual.

2010.11.1.9 Hold Mail, No Mail, and Electronic-Mail Only

Hold-mail, no-mail, or electronic-mail-only accounts are often provided to private-banking customers who elect to have bank statements and other documents maintained at the institution or e-mailed to them, rather than mailed to their residence. Agreements for hold-mail accounts should be in place, and the agreements should indicate that it was the customer’s choice to have the statements retained at the bank and that the customer will pick up his or her mail at least annually. Variations of hold-mail services include delivery of mail to a prearranged location (such as another branch of the bank) by special courier or the bank’s pouch system.

2010.11.1.10 Bill-Paying Services

Bill-paying services are often provided to private-banking customers for a fee. If this service is provided, an agreement between the bank and the customer should exist. Typically, a customer may request that the bank debit a deposit account for credit card bills, utilities, rent, mortgage payments, or other monthly consumer charges. In addition, the increased use of the Internet has given rise to the electronic-mail-only account, whereby customers elect to have statements, notices, etc., sent to them only by e-mail.

2010.11.2 FUNCTIONAL REVIEW

When discussing the functional aspects of a private-banking operation, functional refers to
managerial processes and procedures, such as reporting lines, quality of supervision (including involvement of the board of directors), information flows, policies and procedures, risk-management policies and methodologies, segregation of duties, management information systems, operational controls (including BSA/AML monitoring), and audit coverage. The examiner should be able to draw sound conclusions about the quality and culture of management and stated private-banking policies after reviewing the functional areas described below. Specifically, the institution’s risk-identification process and risk appetite should be carefully defined and assessed. Additionally, the effectiveness of the overall control environment maintained by management should be evaluated by an internal or external audit. The effectiveness of the following functional areas is critical to any private-banking operation, regardless of its size or product offerings.

2010.11.2.1 Supervision and Organization

As part of the examiner’s appraisal of an organization, the quality of supervision of private-banking activities is evaluated. The appraisal of management covers the full range of functions and activities related to the operation of the private bank. The discharge of responsibilities by bank directors should be effected through an organizational plan that accommodates the volume and business services handled, local business practices and the bank’s competition, and the growth and development of the institution’s private-banking business. Organizational planning is the joint responsibility of senior bank and private-bank management, should be integrated with the long-range plan for the institution, and should be consistent with any enterprise-wide risk-management program.

Both the directors and management have important roles in formulating policies and establishing programs for private-banking products, operations, internal controls, and audits. However, management alone must implement policies and programs within the organizational framework instituted by the board of directors.

2010.11.2.2 Risk Management

Sound risk-management processes and strong internal controls are critical to safe and sound banking generally and to private-banking activities in particular. Management’s role in ensuring the integrity of these processes has become increasingly important as new products and technologies are introduced. Similarly, the client-selection, documentation, approval, and account-monitoring processes should adhere to sound and well-identified practices.

The quality of risk-management practices and internal controls is given significant weight in the evaluation of management and the overall condition of private-banking operations. A bank’s failure to establish and maintain a risk-management framework that effectively identifies, measures, monitors, and controls the risks associated with products and services should be considered unsafe and unsound conduct. Furthermore, well-defined management practices should indicate the types of clients that the institution will and will not accept and should establish multiple and segregated levels of authorization for accepting new clients. Institutions that follow sound practices will be better positioned to design and deliver products and services that match their clients’ legitimate needs, while reducing the likelihood that unsuitable clients might enter their client account base.

Deficiencies noted in this area are weighted in context of the relative risk they pose to the institution and are appropriately reflected in the appraisal of management.

The private-banking function is exposed to a number of risks, including reputational, fiduciary, legal, credit, operational, and market. A brief description of some of the different types of risks follows:

1. **Reputational risk** is the potential that negative publicity regarding an institution’s business practices and clients, whether true or not, could cause a decline in the customer base, costly litigation, or revenue reductions.
2. **Fiduciary risk** refers to the risk of loss due to the institution’s failure to exercise loyalty; safeguard assets; and, for trusts, to use assets productively and according to the appropriate standard of care. This risk generally exists in an institution to the extent that it exercises discretion in managing assets on behalf of a customer.
3. **Legal risk** arises from the potential of unenforceable contracts, client lawsuits, or adverse judgments to disrupt or otherwise negatively affect the operations or condition of a banking organization. One key dimension of legal risk is supervisory action that could result in costly fines or other punitive
measures being levied against an institution for compliance breakdowns.

4. **Credit risk** arises from the potential that a borrower or counterparty will fail to perform on an obligation.

5. **Operational risk** arises from the potential that inadequate information systems, operational problems, breaches in internal controls, fraud, or unforeseen catastrophes will result in unexpected losses.

Although effective management of all of the above risks is critical for an institution, certain aspects of reputational, legal, and fiduciary risks are often unique to a private-banking function. In this regard, the following customer-due-diligence policies and practices are essential in the management of reputational and legal risks in the private-banking functions. (In addition, sound fiduciary practices and conflicts-of-interest issues that a private-banking operation may face in acting as fiduciary are described in the subsection on fiduciary standards.)

2010.11.2.2.1 **Customer-Due-Diligence Policy and Procedures**

Sound customer-due-diligence (CDD) policies and procedures are essential to minimize the risks inherent in private banking. The policies and procedures should clearly describe the target client base in terms such as “minimum investable net worth” and “types of products sought,” as well as specifically indicate the type of clientele the institution will or will not accept. Policies and procedures should be designed to ensure that effective due diligence is performed on all potential clients, that client files are bolstered with additional CDD information on an ongoing basis, and that activity in client accounts is monitored for transactions that are inconsistent with the client profile and may constitute unlawful activities, such as money laundering. The client’s identity, background, and the nature of his or her transactions should be documented and approved by the back office before opening an account or accepting client monies. Certain high-risk clients like foreign politicians or money exchange houses should have additional documentation to mitigate their higher risk. See 31 C.F.R. 1020, subpart F, for due diligence rules.

Money laundering is associated with a broad range of illicit activities: the ultimate intention is to disguise the money’s true source—from the initial placement of illegally derived cash proceeds to the layers of financial transactions that disguise the audit trail—and make the funds appear legitimate. Under U.S. money-laundering statutes, a bank employee can be held personally liable if he or she is deemed to engage in “willful blindness.” This condition occurs when the employee fails to make reasonable inquiries to satisfy suspicions about client account activities.

Since the key element of an effective CDD policy is a comprehensive knowledge of the client, the bank’s policies and procedures should clearly reflect the controls needed to ensure the policy is fully implemented. CDD policies should clearly delineate the accountability and authority for opening accounts and for determining if effective CDD practices have been performed on each client. In addition, policies should delineate documentation standards and accountability for gathering client information from referrals among departments or areas within the institution as well as from accounts brought to the institution by new RMs.

In carrying out prudent CDD practices on potential private-banking customers, management should document efforts to obtain and corroborate critical background information. Private-banking employees abroad often have local contacts who can assist in corroborating information received from the customer. The information listed below should be corroborated by a reliable, independent source, when possible:

1. The customer’s current address and telephone number for his or her primary residence, which should be corroborated at regular intervals, can be verified through a variety of methods, such as—
   a. visiting the residence, office, factory, or farm (with the RM recording the results of the visit or conversations in a memorandum);
   b. checking the information against the telephone directory; the client’s residence, as indicated on his or her national ID card; a mortgage or bank statement or utility or property tax bill; or the electoral or tax rolls;
   c. obtaining a reference from the client’s government or known employer or from another bank;
   d. checking with a credit bureau or professional corroboration organization; or
   e. any other method verified by the RM.
2. Sufficient business information about the
customer should be gathered so that the RM understands the profile of the customer’s commercial transactions. This information should include a description of the nature of the customer’s business operations or means of generating income, primary trade or business areas, and major clients and their geographic locations, as well as the primary business address and telephone number. These items can be obtained through a combination of any of the following sources:

a. a visit to the office, factory, or farm
b. a reliable third party who has a business relationship with the customer
c. financial statements
d. Dun and Bradstreet reports
e. newspaper or magazine articles
f. Lexis/Nexis reports on the customer or customer’s business
g. “Who’s Who” reports from the home country
h. private investigations

3. Although it is often not possible to get proof of a client’s wealth, an RM can use his or her good judgment to derive a reasonable estimate of the individual’s net worth.

4. As part of the ongoing CDD process, the RM should document in memos or “call reports” the substance of discussions that take place during frequent visits with the client. Additional information about a client’s wealth, business, or other interests provides insight into potential marketing opportunities for the RM and the bank, and updates and strengthens the CDD profile.

As a rule, most private banks make it a policy not to accept walk-in clients. If an exception is made, procedures for the necessary documentation and approvals supporting the exception should be in place. Similarly, other exceptions to policy and procedures should readily identify the specific exception and the required due-diligence and approval process for overriding existing procedures.

In most instances, all CDD information and documentation should be maintained and available for examination and inspection at the location where the account is located or where the financial services are rendered. If the bank maintains centralized customer files in locations other than where the account is located or the financial services are rendered, complete customer information, identification, and documentation must be made available at the location where the account is located or where the financial services are rendered within 48 hours of a Federal Reserve examiner’s request. Off-site storage of CDD information will be allowed only if the bank has adopted, as part of its customer-due-diligence program, specific procedures designed to ensure that (1) the accounts are subject to ongoing Office of Foreign Assets Control screening that is equivalent to the screening afforded other accounts, (2) the accounts are subject to the same degree of review for suspicious activity, and (3) the bank demonstrates that the appropriate review of the information and documentation is being performed by personnel at the offshore location.

CDD procedures should be no different when the institution deals with a financial adviser or other type of intermediary acting on behalf of a client. To perform its CDD responsibilities when dealing with a financial adviser, the institution should identify the beneficial owner of the account (usually the intermediary’s client, but in rare cases, it is the intermediary itself) and perform its CDD analysis with respect to that beneficial owner. The imposition of an intermediary between the institution and counterparty should not lessen the institution’s CDD responsibilities.

The purpose of all private-banking relationships should also be readily identified. Incoming customer funds may be used for various purposes, such as establishing deposit accounts, funding investments, or establishing trusts. The bank’s CDD procedures should allow for the collection of sufficient information to develop a transaction or client profile for each customer, which will be used in analyzing client transactions. Internal systems should be developed for monitoring and identifying transactions that may be inconsistent with the transaction or client profile for a customer and which may thus constitute suspicious activity.

2010.11.2.2.1.1 Suspicious Activity Reports

The proper and timely filing of Suspicious Activity Reports (SARs) is an important component of a bank’s CDD program. Since 1996, the federal financial institution supervisory agencies and the Department of the Treasury’s Financial Crimes Enforcement Network (FinCEN) have required banking organizations to report known or suspected violations of law as well as suspicious transactions on a SAR. See the Board’s SAR regulation (Regulation H, section 208.62 [12 C.F.R. 208.62] and Regulation Y, section
225.4(f) [12 C.F.R. 225.4(f)].

Law enforcement agencies use the information reported on the form to initiate investigations, and Federal Reserve staff use the SAR information in their examination and oversight of supervised institutions.

A member bank and a BHC are required to file a SAR with the appropriate federal law enforcement agencies and the Department of the Treasury. A SAR must be prepared in accordance with the form’s instructions. The completed SAR is to be sent to FinCEN when an institution detects—

1. insider abuse involving any amount;
2. violations aggregating $5,000 or more in which a suspect can be identified;
3. violations aggregating $25,000 or more regardless of a potential suspect; or
4. transactions aggregating $5,000 or more that involve potential money laundering or violations of the Bank Secrecy Act.

When a SAR is filed, the management of a member bank must promptly notify its board of directors or a committee thereof.

A SAR must be filed within 30 calendar days after the date of initial detection of the facts that may constitute a basis for filing a SAR. If no suspect was identified on the date of detection of the incident requiring the filing, a member bank may delay filing a SAR for an additional 30 calendar days in order to identify the suspect. Reporting may not be delayed more than 60 calendar days after the date of initial detection of a reportable transaction. In situations involving violations requiring immediate attention, such as when a reportable violation is ongoing, the financial institution is required to immediately notify an appropriate law enforcement authority and the Board by telephone, in addition to its timely filing of a SAR.

A banking organization’s internal systems for capturing suspicious activities should provide essential information about the nature and volume of activities passing through customer accounts. Any information suggesting that suspicious activity has occurred should be pursued, and, if an explanation is not forthcoming, the matter should be reported to banking organization’s management. Examiners should ensure that the institution’s approach to SARs is proactive and that well-established procedures cover the SAR process. Accountability should exist within the organization for the analysis and follow-up of internally identified suspicious activity; this analysis should conclude with a decision on the appropriateness of filing a SAR. See the core procedures concerning suspicious-activity-reporting requirements in the FFIEC BSA/AML Examination Manual.

2010.11.2.2 Credit-Underwriting Standards

The underwriting standards for private-banking loans to high net worth individuals should be consistent with prudent lending standards. The same credit policies and procedures that are applicable to any other type of lending arrangement should extend to these loans. At a minimum, sound policies and procedures should address the following: all approved credit products and services offered by the institution, lending limits, acceptable forms of collateral, geographic and other limitations, conditions under which credit is granted, repayment terms, maximum tenor, loan authority, collections and charge-offs, and prohibition against capitalization of interest.

An extension of credit based solely on collateral, even if the collateral is cash, does not ensure repayment. While the collateral enhances the bank’s position, it should not substitute for regular credit analyses and prudent lending practices. If collateral is derived from illegal activities, it is subject to forfeiture through the seizure of assets by a government agency. The bank should perform its due diligence by adequately and reasonably ascertaining and documenting that the funds of its private-banking customers were derived from legitimate means. Banks should also verify that the use of the loan proceeds is for legitimate purposes.

In addition, bank policies should explicitly describe the terms under which “margin loans,” loans collateralized by securities, are made and should ensure that they conform to applicable regulations. Management should review and approve daily MIS reports. The risk of market deterioration in the value of the underlying collateral may subject the lender to loss if the collateral must be liquidated to repay the loan. In the event of a “margin call,” any shortage should be paid for promptly by the customer.
from other sources pursuant to the terms of the margin agreement.

In addition, policies should address the acceptance of collateral held at another location, such as an affiliated entity, but pledged to the private-banking function. Under these circumstances, management of the private-banking function should, at a minimum, receive frequent reports detailing the collateral type and current valuation. In addition, management of the private-banking function should be informed of any changes or substitutions in collateral.

2010.11.2.3 Fiduciary Standards

Fiduciary risk is managed through the maintenance of an effective and accountable committee structure; retention of technically proficient staff; and development of effective policies, procedures, and controls. In managing its fiduciary risk, the bank must ensure that it carries out the following fiduciary duties:

1. *Duty of loyalty.* Trustees are obligated to make all decisions based exclusively on the best interests of trust customers. Except as permitted by law, trustees cannot place themselves in a position in which their interests might conflict with those of the trust beneficiaries.

2. *Avoidance of conflicts of interest.* Conflicts of interest arise in any transaction in which the fiduciary simultaneously represents the interests of multiple parties (including its own interests) that may be adverse to one another. Institutions should have detailed policies and procedures regarding potential conflicts of interest. All potential conflicts identified should be brought to the attention of management and the trust committee, with appropriate action taken. Conflicts of interest may arise throughout an institution. Care should be taken by fiduciary business lines, in particular, to manage conflicts of interest between fiduciary business lines and other business lines (including other fiduciary business lines). Consequently, management throughout the institution should receive training in these matters. For more information on the supervision of fiduciary activities, see section 3120.0 in this manual and section 4200.0 in the *Commercial Bank Examination Manual.*

3. *Duty to prudently manage discretionary trust and agency assets.* Since 1994, the majority of states have adopted laws concerning the prudent investor rule (PIR) with respect to the investment of funds in a fiduciary capacity. PIR is a standard of review that imposes an obligation to prudently manage the portfolio as a whole, focusing on the process of portfolio management, rather than on the outcome of individual investment decisions. Although this rule only governs trusts, the standard is traditionally applied to all accounts for which the institution is managing funds.

2010.11.2.4 Operational Controls

To minimize any operational risks associated with private-banking activities, management is responsible for establishing an effective internal control infrastructure and reliable management information systems. Critical operational controls over any private-banking activity include the establishment of written policies and procedures, segregation of duties, and comprehensive management reporting. Throughout this section, specific guidelines and inspection procedures for assessing internal controls over different private-banking activities are provided. Listed below are some of those guidelines that cover specific private-banking services.

2010.11.2.4.1 Segregation of Duties

Banking organizations should have guidelines on the segregation of employees’ duties in order to prevent the unauthorized waiver of documentation requirements, poorly documented referrals, and overlooked suspicious activities. Independent oversight by the back office helps to ensure compliance with account-opening procedures and CDD documentation. Control-conscious institutions may use independent units, such as compliance, risk management, or senior management, to fill this function in lieu of the back office. The audit and compliance functions of the private-banking entity should be similarly independent so that they can operate autonomously from line management.

2010.11.2.4.2 Inactive and Dormant Accounts

Management should be aware that banking laws in most states prohibit banks from offering services that allow deposit accounts to be inactive.
for prolonged periods of time (generally, 12 or more months with no externally generated account-balance activity). These regulations are based on the presumption that inactive and dormant accounts may be subject to manipulation and abuse by insiders. Policies and procedures should delineate when inactivity occurs and when inactive accounts should be converted to dormant status. Effective controls over dormant accounts should include a specified time between the last customer-originated activity and its classification as dormant, the segregation of signature cards for dormant accounts, dual control of records, and the blocking of the account so that entries cannot be posted to the account without review by more than one member of senior management.

2010.11.2.4.3 Pass-Through Accounts and Omnibus Accounts

Pass-through accounts (PTAs) extend checking-account privileges to the customers of a foreign bank; several risks are involved in providing these accounts. In particular, if the U.S. banking entity does not exercise the same due diligence and customer vetting for PTAs as it does for domestic account relationships, the use of PTAs may facilitate unsafe and unsound banking practices or illegal activities, including money laundering. Additionally, if accounts at U.S. banking entities are used for illegal purposes, the entities could be exposed to reputational risk and risk of financial loss as a result of asset seizures and forfeitures brought by law enforcement authorities. It is recommended that U.S. banking entities terminate a payable-through arrangement with a foreign bank in situations in which (1) adequate information about the ultimate users of PTAs cannot be obtained, (2) the foreign bank cannot be relied on to identify and monitor the transactions of its own customers, or (3) the U.S. banking entity is unable to ensure that its payable-through accounts are not being used for money laundering or other illicit purposes.

Omnibus, or general clearing, accounts may also exist in the private-banking system. They may be used to accommodate client funds before an account opening to expedite a new relationship, or they may fund products such as mutual funds in which client deposit accounts may not be required. However, these accounts could circumvent an audit trail of client transactions. Examiners should carefully review a bank’s use of such accounts and the adequacy of its controls on their appropriate use. Generally, client monies should flow through client deposit accounts, which should function as the sole conduit and paper trail for client transactions.

2010.11.2.4.4 Hold-Mail, No-Mail, and E-Mail-Only Controls

Controls over hold-mail, no-mail, and e-mail-only accounts are critical because the clients have relinquished their ability to detect unauthorized transactions in their accounts in a timely manner. Accounts with high volume or significant losses warrant further inquiry. Hold-mail, no-mail, and e-mail-only account operations should ensure that client accounts are subject to dual control and are reviewed by an independent party.

2010.11.2.4.5 Funds Transfer—Tracking Transaction Flows

One way that institutions can improve their customer knowledge is by tracking the transaction flows into and out of customer accounts and payable-through subaccounts. Tracking should include funds-transfer activities. Policies and procedures to detect unusual or suspicious activities should identify the types of activities that would prompt staff to investigate the customer’s activities and should provide guidance on the appropriate action required for suspicious activity. The following is a checklist to guide bank personnel in identifying some potential abuses:

1. indications of frequent overrides of established approval authority or other internal controls
2. intentional circumvention of approval authority by splitting transactions
3. wire transfers to and from known secrecy jurisdictions
4. frequent or large wire transfers for persons who have no account relationship with the bank, or funds being transferred into and out of an omnibus or general clearing account instead of the client’s deposit account
5. wire transfers involving cash amounts in excess of $10,000
6. inadequate control of password access
7. customer complaints or frequent error conditions
2010.11.2.4.6 Custody—Detection of “Free Riding”

Custody departments should monitor account activity to detect instances of “free-riding,” the practice of offering the purchase of securities without sufficient capital and then using the proceeds of the sale of the same securities to cover the initial purchase. Free-riding poses significant risk to the institution and typically occurs without the bank’s prior knowledge. Free-riding also violates margin rules (Regulations T, U, and X) governing the extension of credit in connection with securities transactions. (See SR-93-13 and section 2187.0.)

2010.11.2.5 Management Information Systems

Management information systems (MIS) should accumulate, interpret, and communicate information on (1) the private-banking assets under management, (2) profitability, (3) business and transaction activities, and (4) inherent risks. The form and content of MIS for private-banking activities will be a function of the size and complexity of the private-banking organization. Accurate, informative, and timely reports that perform the following functions may be prepared and reviewed by RMs and senior management:

1. aggregate the assets under management according to customer, product or service, geographic area, and business unit
2. attribute revenue according to customer and product type
3. identify customer accounts that are related to or affiliated with one another through common ownership or common control
4. identify and aggregate customer accounts by source of referral
5. identify beneficial ownership of trust, PIC, and similar accounts

To monitor and report transaction activity and to detect suspicious transactions, management reports may be developed to—

1. monitor a specific transaction criterion, such as a minimum dollar amount or volume or activity level;
2. monitor a certain type of transaction, such as one with a particular pattern;
3. monitor individual customer accounts for variations from established transaction and activity profiles based on what is usual or expected for that customer; and
4. monitor specific transactions for BSA and SAR compliance.

In addition, reports prepared for private-banking customers should be accurate, timely, and informative. Regular reports and statements prepared for private-banking customers should adequately and accurately describe the application of their funds and should detail all transactions and activity that pertain to the customers’ accounts.

Furthermore, MIS and technology play a role in building new and more direct channels of information between the institution and its private-banking customers. Active and sophisticated customers are increasing their demand for data relevant to their investment needs, which is fostering the creation of online information services. Online information can satisfy customers’ desire for convenience, real-time access to information, and a seamless delivery of information.

2010.11.2.6 Audit

An effective audit function is vital to ensuring the strength of a private bank’s internal controls. As a matter of practice, internal and external auditors should be independently verifying and confirming that the framework of internal controls is being maintained and operated in a manner that adequately addresses the risks associated with the activities of the organization. Critical elements of an effective internal audit function are the strong qualifications and expertise of the internal audit staff and a sound risk-assessment process for determining the scope and frequency of specific audits. The audit process should be risk-focused and should ultimately determine the risk rating of business lines and client CDD procedures. Compliance with CDD policies and procedures and the detailed testing of files for CDD documentation are also key elements of the audit function. Finally, examiners should review and evaluate management’s responsiveness to criticisms by the audit function.

2010.11.2.7 Compliance

The responsibility for ensuring effective compliance with relevant laws and regulations may
vary among different forms of institutions, depending on their size, complexity, and availability of resources. Some institutions may have a distinct compliance department with the centralized role of ensuring compliance institution-wide, including private-banking activities. This arrangement is strongly preferable to a situation in which an institution delegates compliance to specific functions, which may result in the management of private-banking operations being responsible for its own internal review. Compliance has a critical role in monitoring private-banking activities; the function should be independent of line management. In addition to ensuring compliance with various laws and regulations such as the Bank Secrecy Act and those promulgated by the Office of Foreign Assets Control, compliance may perform its own internal investigations and due diligence on employees, customers, and third parties with whom the bank has contracted in a consulting or referral capacity and whose behavior, activities, and transactions appear to be unusual or suspicious. Institutions may also find it beneficial for compliance to review and authorize account-opening documentation and CDD adequacy for new accounts. The role of compliance is a control function, but it should not be a substitute for regular and frequent internal audit coverage of the private-banking function. Following is a description of certain regulations that may be monitored by the compliance function.

2010.11.2.7.1 Office of Foreign Assets Control

The Office of Foreign Assets Control (OFAC) of the U.S. Department of the Treasury administers and enforces economic and trade sanctions based on U.S. foreign policy and national security goals. Sanctions are imposed against targeted foreign countries, terrorists, international narcotics traffickers, and those engaged in activities related to the proliferation of weapons of mass destruction. See 31 C.F.R. subtitle B, chapter V, part 501. OFAC acts under presidential wartime and national emergency powers, as well as under authority granted by specific legislation, to impose controls on transactions and freeze foreign assets under U.S. jurisdiction. Many of the sanctions are based on United Nations and other international mandates, are multilateral in scope, and involve close cooperation with allied governments. Under the International Emergency Economic Powers Act, the President can impose sanctions, such as trade embargoes, the freezing of assets, and import surcharges, on certain foreign countries and the “specially designated nationals” of those countries.

A “specially designated national” is a person or entity who acts on behalf of one of the countries under economic sanction by the United States. Dealing with such nationals is prohibited. Moreover, their assets or accounts in the United States are frozen. In certain cases, the Treasury Department can issue a license to a designated national. This license can then be presented by the customer to the institution, allowing the institution to debit his or her account. The license can be either general or specific.

OFAC screening may be difficult when transactions are conducted through PICs, token names, numbered accounts, or other vehicles that shield true identities. Management must ensure that accounts maintained in a name other than that of the beneficial owner are subject to the same level of filtering for OFAC specially designated nationals and blocked foreign countries as other accounts. That is, the OFAC screening process must include the account’s beneficial ownership as well as the official account name.

Any violation of regulations implementing designated national sanctions subjects the violator to criminal prosecution, including prison sentences and fines to corporations and individuals, per incident. Any funds frozen because of OFAC orders should be placed in a blocked account. Release of those funds cannot occur without a license from the Treasury Department.

2010.11.2.7.2 Bank Secrecy Act

Guidelines for compliance with the Bank Secrecy Act (BSA) can be found in the FFIEC BSA/AML Examination Manual. See also the question-and-answer format interpretations (SR-05-9) of the U.S. Department of the Treasury’s regulation (31 C.F.R. 1010) for banking organizations, which is based on section 326 of the Patriot Act. In addition, the procedures for conducting BSA examinations of foreign offices of U.S. banks are detailed in the FFIEC BSA/AML Examination Manual. The SAR filing requirements for nonbank subsidiaries of bank holding companies and state member banks are also set forth in SR-10-8.
2010.11.3 PREPARATION FOR INSPECTION

The following subsections provide examiners with guidance on preparing for the on-site inspection of private-banking operations, including determination of the inspection scope and drafting of the first-day-letter questionnaire that is provided to the institution.

2010.11.3.1 Pre-Inspection Review

To prepare the examiners for their assignments and to determine the appropriate staffing and scope of the inspection, the following guidelines should be followed during the pre-inspection planning process:

1. Review the prior report of inspection and workpapers for the inspection scope, structure and type of private-banking activities conducted; and findings, conclusions, and recommendations of the prior inspection. The prior inspection report and inspection plan should also provide insight to key contacts at the institution and to the time frame of the prior private-banking review.

2. Obtain relevant correspondence sent since the prior inspection, such as management’s response to the report of inspection, any applications submitted to the Federal Reserve, and any supervisory action.

4. Review internal and external audit reports and any internal risk assessments performed by the institution on its private-banking activities. Such reports should include an assessment of the internal controls and risk profile of the private-banking function.

5. Contact the institution’s management to ascertain what changes have occurred since the last inspection or are planned in the near future. For example, examiners should determine if there have been changes to the strategic plan; senior management; or the level and type of private-banking activities, products, and services offered. If there is no mention of private banking in the prior inspection report, management should be asked at this time if they have commenced or plan to commence any private-banking activities.

6. Follow these inspection procedures and also consider the core examination procedures in the FFIEC BSA/AML Examination Manual in order to establish the base scope for the inspection of private-banking activities. Review and follow the expanded procedures for private banking and any other expanded procedures that are deemed necessary.

2010.11.3.2 Inspection Staffing and Scope

Once the inspection scope has been established and before beginning the new inspection, the examiner-in-charge and key administrators of the inspection team should meet to discuss the private-banking inspection scope, the assignments of the functional areas of private banking, and the supplemental reviews of specific private-banking products and services. If the bank’s business lines and services overlap and if its customer base and personnel are shared throughout the organization, examiners may be forced to go beyond a rudimentary review of private-banking operations. They will probably need to focus on the policies, practices, and risks within the different divisions of a particular institution and throughout the institution’s global network of affiliated entities.

2010.11.3.3 Reflection of Organizational Structure

The review of private-banking activities should be conducted on the basis of the bank holding company’s organizational structure. These structures may vary considerably depending on the size and sophistication of the institution, its country of origin and the other geographic markets in which it competes, and the objectives and strategies of its management and board of directors. To the extent possible, examiners should understand the level of consolidated private-banking activities an institution conducts in the United States and abroad. This broad view is needed to maintain the “big picture” impact of private banking for a particular institution.

For bank holding company inspections, examiners must consider the provisions of the Gramm-Leach Bliley Act, which amended section 5(c) of the Bank Holding Company Act, that concern examinations and inspections. In particular, examiners must adhere to those statutory provisions that pertain to the inspections of bank holding company nobank subsidiaries that
are supervised by functional regulators. See section 1040.0.

2010.11.3.4 Risk-Focused Approach

Examiners reviewing the private-banking operations should implement the risk-focused inspection approach. The exam scope and degree of testing of private-banking practices should reflect the degree of risk assumed, prior exam findings on the implementation of policies and procedures, the effectiveness of controls, and an assessment of the adequacy of the internal audit and compliance functions. If initial inquiries into the institution’s internal audit and other assessment practices raise doubts about the internal system’s effectiveness, expanded analysis and review are required—and examiners should perform more transaction testing. Examiners will usually need to follow the core examination procedures in the FFIEC BSA/AML Examination Manual, as well as the expanded procedures for private banking. Other expanded procedures should be followed if circumstances dictate.

2010.11.3.5 First-Day Letter

As part of the inspection preparation, examiners should customize the first-day-letter questionnaire to reflect the structure and type of private-banking activities of the institution and the scope of the exam. The following is a list of requests regarding private banking that examiners should consider including in the first-day letter. Responses to these items should be reviewed in conjunction with responses to the BSA, fiduciary, audit, and internal control inquiries:

1. organizational chart for the private bank on both a functional and legal-entity basis
2. business or strategic plan
3. income and expense statements for the prior fiscal year and current year to date, with projections for the remainder of the current and the next fiscal year, and income by product division and marketing region
4. balance-sheet and total assets under management (list the most active and profitable accounts by type, customer domicile, and responsible account officer)
5. most recent audits for private-banking activities
6. copies of audit committee minutes
7. copy of the CDD and SAR policies and procedures
8. list of all new business initiatives introduced last year and this year, relevant new-product-approval documentation that addresses the evaluation of the unique characteristics and risk associated with the new activity or product, and an assessment of the risk-management oversight and control infrastructures in place to manage the risks
9. list of all accounts in which an intermediary is acting on behalf of clients of the private bank, for example, as financial advisers or money managers
10. explanation of the methodology for following up on outstanding account documentation and a sample report
11. description of the method for aggregating client holdings and activities across business units throughout the organization
12. explanation of how related accounts, such as common control and family link, are identified
13. name of a contact person for information on compensation, training, and recruiting programs for relationship managers
14. list of all personal investment company accounts
15. list of reports that senior management receives regularly on private-banking activities
16. description and sample of the management information reports that monitor account activity
17. description of how senior management monitors compliance with global policies for worldwide operations, particularly for offices operating in secrecy jurisdictions
18. appropriate additional items from the core and expanded procedures for private banking, as set forth in the FFIEC BSA/AML Examination Manual, as well as any other items from the expanded procedures that are needed to gauge the adequacy of the BSA/AML program for private-banking activities.

2010.11.4 INSPECTION OBJECTIVES

1. To determine if the policies, practices, procedures, and internal controls regarding private-banking activities are adequate for the risks involved.
2. To determine if the institution’s officers and
employees are operating in conformance with established guidelines for conducting private-banking activities.

3. To assess the financial condition and income-generation results of the private-banking activities.

4. To determine the scope and adequacy of the audit function for private-banking activities.

5. To determine compliance with applicable laws and regulations for private banking.

6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient, or when violations of laws or regulations are found.

2010.11.5 INSPECTION PROCEDURES

The examiner-in-charge should supplement the following procedures, as appropriate, with the examination procedures for private banking, as set forth in the FFIEC BSA/AML Examination Manual.

2010.11.5.1 Private-Banking Pre-Inspection Procedures

1. As the examiner-in-charge, conduct a meeting with the lead members of the private-banking inspection team and discuss—
   a. the private-banking inspection scope (The inspection may need to extend beyond a rudimentary review of private-banking operations if the institution’s business lines and services overlap and if its customer base and personnel are shared throughout the organization. Examiners will probably need to focus on the policies, practices, and risks within the different divisions of each particular institution and throughout each institution’s global network of affiliated entities.);
   b. examiner assignments of the functional areas of private banking; and
   c. the supplemental reviews of specific private-banking products and services.

2. Review the prior report of inspection and the previous inspection workpapers; description of the inspection scope; structure and type of private-banking activities conducted; and findings, conclusions, and recommendations of the prior inspection. The prior inspection report and inspection plan should also provide information and insight on key contacts at the institution and on the time frame of the prior private-banking review.

3. Review relevant correspondence exchanged since the prior inspection, such as management’s response to the report of inspection, any applications submitted to the Federal Reserve, and any supervisory actions.

4. Research press releases and published news stories about the institution and its private-banking activities.

5. Review internal and external audit reports and any internal risk assessments performed by the institution’s internal or external auditors on its private-banking activities. Review information on any assessments of the internal controls and risk profile of the private-banking function.

6. Contact management at the institution to ascertain what changes in private-banking services have occurred since the last inspection or if there are any planned in the near future.
   a. Determine if the previous inspection or examination report(s) mention private banking; if not, ask management if they have commenced or plan to commence any private-banking activities within any part of the bank holding company organization.
   b. Determine if there have been any changes to the strategic plan; senior management; or the level and type of private-banking activities, products, and services offered.
   c. During the entire inspection of private-banking activities, be alert to the totality of the client relationship, product by product, in light of increasing client awareness and use of derivatives, emerging-market products, foreign exchange, and margined accounts.

2010.11.5.2 Full-Inspection Phase

1. After reviewing the private-banking functional areas, draw sound conclusions about the quality and culture of management and stated private-banking policies.

2. Evaluate the adequacy of risk-management policies and practices governing private-banking activities.

3. Assess the organization of the private-banking function and evaluate the quality of management’s supervision of private-banking activities. An appraisal of management covers the—
   a. full range of functions (i.e., supervision and organization, risk management, fidu-
ciary standards, operational controls, management information systems, audit, and compliance) and activities related to the operation of the private-banking activities; and
b. discharge of responsibilities by the institution’s directors through a long-range organizational plan that accommodates the volume and business services handled, local business practices and the institution’s competition, and the growth and development of the institution’s private-banking business.

4. Determine if management has effective procedures for conducting ongoing reviews of client-account activity to detect, and protect the client from, any unauthorized activity and any account activity that is inconsistent with the client’s profile (for example, frequent or sizeable unexplained transfers flowing through the account).

5. Determine if the bank holding company has initiated and maintained controls and procedures that require each subsidiary private-banking institution to have account-opening procedures and documentation requirements that must be satisfied before an account can be opened.

6. Determine if the bank holding company requires its subsidiary institutions to maintain and adhere to well-structured CCD procedures.

7. Determine if the bank holding company has proper controls and procedures to ensure each institution’s proper administration of trust and estates, including strict controls over assets, prudent investment and management of assets, and meticulous record-keeping.

8. Ascertain whether the bank holding company adequately supervises the custody services of its subsidiaries. The bank holding company should ensure that each institution has established and currently maintains procedures for the proper administration of custody services, including the regular review of the services on a preset schedule.

9. Determine whether subsidiary institutions are required to and actually maintain strong controls and supervision over funds transfers.

10. Ascertain if institution management and staff are required to perform due diligence, that is, to verify and document that the funds of its private-banking customers were derived through legitimate means, and when extending credit, to verify that the use of loan proceeds was legitimate.

11. Review the institution’s use of deposit accounts.
   a. Assess the adequacy of the institution’s controls and whether they are appropriately used.
   b. Determine if client monies flow through client deposit accounts and whether the accounts function as the sole conduit and paper trail for client transactions.

12. Determine and ensure that each institution’s approach to Suspicious Activity Reports (SARs) is proactive and that the bank holding company and each institution have well-established procedures covering the SAR process. Establish whether there is accountability within the organization for the analysis and follow-up of internally identified suspicious activity (this analysis includes a sound decision on whether the bank holding company or an institution needs to file, or is required by regulation to file, a SAR).
Banking organizations, including trust institutions, are increasingly encountering various direct or indirect financial incentives to place trust assets with particular mutual funds. Such incentives include the payment of fees to banking organizations for using nonaffiliated fund families as well as other incentives for using those mutual funds that are managed by the institution or an affiliate. The payment of such fees, referred to variously as shareholder, subaccounting, or administrative service fees, may be structured as payments to reimburse the institution for performing standard recordkeeping and accounting functions for the institution’s fiduciary accounts. Those functions may consist of maintaining shareholder subaccounts and records, transmitting mutual fund communications as necessary, and arranging mutual fund transactions. These fees are typically based on a percentage or basis point amount of the dollar value of assets invested, or on transaction volume. Another form of compensation may consist of a lump-sum payment based on assets transferred into a mutual fund.

In all cases, decisions to place fiduciary assets in particular investments must be consistent with the underlying trust documents and must be undertaken in the best interests of the trust beneficiary. The primary supervisory concern is that an institution may fail to act in the best interest of beneficiaries if it stands to benefit independently from a particular investment. As a result, an institution may expose itself to an increased risk of legal action by account beneficiaries, as well as to potential violations of law or regulation.

In recent years, nearly every state legislature has modified its laws explicitly to allow fiduciaries to accept fees from mutual funds under certain conditions. As for the permissibility of other financial incentives, guidance under applicable law may be less clear. Conditions involving fee payments under state law often include compliance with standards of prudence, quality, and appropriateness for the account, and a determination of the “reasonableness” of the fees received by the institution. The Office of the Comptroller of the Currency (OCC) has also adopted these general standards for national banks. The Employee Retirement Income Security Act of 1974 (ERISA), however, generally prohibits fee arrangements between fiduciaries and third parties, such as mutual fund providers, with limited exceptions. ERISA requirements supersede state laws and guidelines put forth by the bank regulatory agencies.

Similar conflict-of-interest concerns are raised by the investment of fiduciary-account assets in mutual funds for which the institution or an affiliate acts as investment adviser (referred to as “proprietary” funds). In this case, the institution receives a financial benefit from management fees generated by the mutual fund investments. This activity can be expected to become more prevalent as banking organizations more actively offer proprietary mutual funds.

2010.12.1 DUE-DILIGENCE REVIEW NEEDED BEFORE ENTERING INTO FEE ARRANGEMENTS

Although many state laws now explicitly authorize certain fee arrangements in conjunction with the investment of trust assets in mutual funds, institutions nonetheless face heightened legal and compliance risks from activities in which a conflict of interest exists, particularly if proper fiduciary standards are not observed and documented. Even when the institution does not exercise investment discretion, disclosure or other requirements may apply. Therefore, institutions should ensure that they perform and document an appropriate level of due diligence before entering into any fee arrangements similar to those described earlier or placing fiduciary assets in proprietary mutual funds. The following measures should be included in this process:

1. Reasoned legal opinion. The institution should obtain a reasoned opinion of counsel that addresses the conflict of interest inherent in the receipt of fees or other forms of comp-
 Fees Involving Investments of Fiduciary Assets in Mutual Funds and Potential Conflicts of Interest  

1. To determine that the institution has performed ongoing due-diligence reviews when it is receiving fees or other compensation for investing fiduciary assets in mutual funds or investing such assets in proprietary mutual funds.

2. To determine that the institution maintains full ongoing documentation of investment decisions and performance, and obtains legal opinions regarding its compliance with applicable laws and fiduciary standards, as well as potential conflicts of interest that may arise from its receiving fees or other compensation for investing fiduciary assets in mutual funds, including proprietary funds.

2010.12.3 INSPECTION PROCEDURES

1. Determine if a written legal opinion is on file that focuses on conflicts of interest that may arise from the receipt of fees and other compensation from mutual fund providers for investing fiduciary assets, and from the investment of these assets in proprietary mutual funds. Ascertain whether the legal opinion addresses the investment’s permissibility, including its resulting compensation and any disclosure requirements under applicable state or federal laws, the trust instrument, or a court order.

2. Verify that the institution’s board of directors has approved written policies and procedures governing the acceptance of fees and other compensation from mutual fund providers for placing investments with their firms and for the use of proprietary funds. Ascertain that the policies and procedures, at a minimum—
   a. determine what group or individual has decision-making authority;
   b. analyze and document supporting investment decisions;
   c. require compliance with applicable laws, regulations, and sound fiduciary principles, including disclosure requirements or reasonableness standards for fees; and
   d. address staff training and methods for monitoring compliance with policies and procedures by internal and external audit staff.

3. When fees and other compensation are being received in connection with fiduciary-account investments (those in which the institution has authorized discretionary investment authority) or when such assets are involved in proprietary mutual funds, ascertain whether there is full documentation of the institution’s analysis supporting its
investment decisions on a regular, ongoing basis. Ascertain that the documentation includes—

a. historical performance comparisons with other mutual funds, engagement fees and expense ratios, and ratings by recognized mutual fund rating agencies;

b. an assessment that the investments are, and continue to be, appropriate for the individual account and in the best interests of its account beneficiaries; and
c. evidence of continued compliance with the provisions of the “prudent investor” or “prudent man rules.”
Supervision of Subsidiaries (Establishing Accounts for Foreign Governments, Embassies, and Political Figures) Section 2010.13

On June 15, 2004, an interagency advisory concerning the embassy banking business and related banking matters was issued by the federal banking and thrift agencies1 in coordination with the U.S. Department of the Treasury’s Financial Crimes Enforcement Network. The purpose of the advisory is to provide general guidance to financial institutions regarding the treatment of accounts for foreign governments, foreign embassies, and senior foreign political figures.

The joint interagency statement advises financial institutions2 that the decision to accept or reject an embassy or foreign government account is theirs alone to make. Financial institutions should be aware, however, that there are varying degrees of risk associated with such accounts, depending on the customer and the nature of the services provided. Financial institutions should take appropriate steps to manage such risks, consistent with sound practices and applicable anti-money-laundering laws and regulations. The advisory also encourages financial institutions to direct questions about embassy banking to their primary federal bank regulators. See SR letter 04-10, “Banking Accounts for Foreign Governments, Embassies, and Political Figures.”

On March 24, 2011, another interagency advisory was issued to supplement the 2004 interagency advisory. The 2011 advisory provides information to financial institutions providing account services to foreign embassies, consulates, and missions (“foreign missions”) in a manner that fulfills the needs of those foreign governments while complying with the provisions of the Bank Secrecy Act (BSA). It advises that financial institutions are expected to demonstrate the capacity to conduct appropriate risk assessments and implement the requisite controls and oversight systems to effectively manage the risk identified in these relationships with foreign missions. The 2011 advisory also confirms that it is the financial institution’s decision to accept or reject a foreign mission account. See SR letter 11-6, “Guidance on Accepting Accounts from Foreign Embassies, Consulates

---

1. The Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, the Office of Thrift Supervision, and the National Credit Union Administration (the agencies).
2. The advisory is primarily directed to financial institutions located in the United States. The boards of directors of bank holding companies, however, should consider whether the advisory should be applied to their other U.S. subsidiaries’ financial and other services.

2010.13.1 INTERAGENCY ADVISORY ON ACCEPTING ACCOUNTS FOR FOREIGN GOVERNMENTS, EMBASSIES, AND POLITICAL FIGURES

The 2004 and 2011 interagency advisories answer questions on whether financial institutions should do business with foreign embassies and whether institutions should establish account services for foreign governments, foreign embassies, and senior foreign political figures. As it would with any new account, an institution should evaluate whether or not to accept a new account for a foreign government, embassy, or political figure. That decision should be made by the institution’s management, under standards and guidelines established by the board of directors, and should be based on the institution’s own business objectives, its assessment of the risks associated with particular accounts or lines of business, and its capacity to manage those risks. The agencies will not, in the absence of extraordinary circumstances, direct or encourage any institution to open, close, or refuse a particular account or relationship.

Providing financial services to foreign governments and embassies and to senior foreign political figures can, depending on the nature of the customer and the services provided, involve varying degrees of risk. Such services can range from account relationships that enable an embassy to handle the payment of operational expenses—for example, payroll, rent, and utilities—to ancillary services or accounts provided to embassy staff or foreign-government officials. Each of these relationships potentially poses different levels of risk. Institutions are expected to assess the risks involved in any such relationships and to take steps to ensure both that such risks are appropriately managed and that the institution can do so in full compliance with its obligations under the BSA, as amended by the USA PATRIOT Act, and the regulations promulgated thereunder.
When an institution elects to establish financial relationships with foreign governments, embassies, or senior foreign political figures, the agencies, consistent with their usual practice of risk-based supervision, will make their own assessment of the risks involved in such business. As is the case with all accounts, the institution should expect appropriate scrutiny by examiners that is commensurate with the level of risk presented by the account relationship. As in any case where higher risks are presented, the institution should expect an increased level of review by examiners to ensure that the institution has in place controls and compliance oversight systems that are adequate to monitor and manage such risks, as well as personnel trained in the management of such risks and in the requirements of applicable laws and regulations.

Institutions that have or are considering taking on relationships with foreign governments, embassies, or political figures should ensure that such customers are aware of the requirements of U.S. laws and regulations to which the institution is subject. Institutions should, to the maximum extent feasible, seek to structure such relationships in order to conform them to conventional U.S. domestic banking relationships so as to reduce the risks that might be presented by such relationships.

2010.13.2 RISK MITIGATION AND SUPERVISORY EXPECTATIONS FOR FOREIGN MISSIONS

A financial institution should manage the risks associated with transactions involving embassy, foreign consulate, and foreign mission accounts, and implement effective due diligence, monitoring, and reporting systems as part of its BSA/Anti-Money Laundering compliance program. The financial institution has the flexibility to manage its risk in a number of ways. A financial institution may reduce risk by ensuring customers are aware of the requirements of U.S. banking laws and regulations and monitoring those accounts for compliance. When establishing a customer relationship, a financial institution should assess the risks posed such as the volume of activity, number of accounts, and country risk.

A financial institution may also mitigate risk by entering into a written agreement with the foreign mission that clearly defines the terms of use for the account(s) setting forth available services, acceptable transactions, and access limitations. Similarly, the financial institution could offer limited purpose accounts, such as those used to facilitate operational expense payments (e.g., payroll, rent and utilities, routine maintenance), which are generally considered lower risk and allow the foreign mission to carry out its customary functions in the United States. Account monitoring to ensure compliance with account limitations and the terms of any service agreements is essential to mitigate risks associated with these accounts.

A financial institution may also provide ancillary services or accounts to foreign mission personnel and their families. As with foreign mission accounts, written agreements, which clearly define the terms of use for these types of services or accounts, may assist in mitigating the varying degrees of risk.

As with any type of accountholder, the agencies expect financial institutions to demonstrate the capacity to conduct appropriate risk assessments and implement the requisite controls and oversight systems to effectively manage varying degrees of risks in financial relationships with foreign missions. The agencies, consistent with their usual practice of risk-based supervision, will evaluate the risks associated with the account relationship and mitigating controls implemented. The agencies will not direct or require any financial institution to close or refuse a particular account or relationship, except in extraordinary circumstances (for example, when violations of law are identified that warrant an administrative enforcement action).
WHAT'S IN THIS SECTION

This section was revised as of January 2008 to incorporate references to the Federal Reserve Board’s Regulation W, primarily with regard to the bank holding company (BHC) inspection process. The section includes also a discussion of the mandatory reporting of certain intercompany transactions on the FR Y-8, The Bank Holding Company Report of Insured Depository Institutions’ Section 23A Transactions with Affiliates, and its instructions. The mandatory report is to be submitted quarterly to the Federal Reserve by (1) all top-tier BHCs, including financial holding companies, and (2) all foreign banking organizations that directly own a U.S. subsidiary bank. The examiner’s inspection responsibilities are discussed.

2020.0.1 ANALYSIS OF INTERCOMPANY TRANSACTIONS

The analysis of intercompany transactions between a parent company, its nonbank subsidiaries, and its bank subsidiaries is primarily intended to assess the nature of the relationships between these entities and the effect of the relationships on the subsidiary insured depository institutions (IDIs). IDIs include any state bank, national bank, trust company, or banking association and any institution that takes deposits that are insured by the Federal Deposit Insurance Corporation, including savings associations. Both the legal and financial ramifications of such transactions are areas of concern. Certain intercompany transactions are subject to the provisions of section 23A or 23B (or both) of the Federal Reserve Act and the Federal Reserve Board’s Regulation W. Section 23A of the Federal Reserve Act is one of the most important statutes on limiting exposures to individual institutions and protecting the federal safety net. Several types of intercompany transactions and the primary regulatory concerns of each are presented below.

Dividends paid by subsidiaries to the parent. Dividends are a highly visible cash outflow by subsidiaries. If the dividend payout ratio exceeds the level at which the growth of retained earnings can keep pace with the growth of assets, the subsidiary’s capital ratios will deteriorate. These dividends may also have a negative effect on the subsidiary’s liquidity position.

Transactions with affiliates. Transactions between subsidiary IDI affiliates is another area of potential abuse of subsidiary banks. Regulatory concern centers on the quantitative limits and collateral restrictions on certain transactions by subsidiary banks with their affiliates. These restrictions are designed to protect subsidiary IDIs from losses resulting from transactions with affiliates.

Fees paid by subsidiaries. Management or service fees are another cash outflow of bank subsidiaries. These fees may be paid to the parent, the nonbank subsidiaries, or, in some cases, to the other bank subsidiaries. Regulatory concern focuses on whether such fees are reasonable in relation to the services rendered and on the financial impact of the fees on the bank subsidiaries.

Tax allocation. How a bank holding company organization determines to allocate taxes among its component companies involves questions of both the magnitude and timing of the cash-flow effects. Unreasonable or untimely tax payments or refunds to the bank can have an adverse effect on the financial condition of the banking subsidiaries.

Purchases or swaps of assets. Asset purchases or swaps between a bank and its affiliates can create the potential for abuse of subsidiary banks. Regulatory concern focuses on the fairness of such asset transactions and their financial impact and timing. Fairness and financial considerations include the quality and collectibility and fair values of such assets and their liquidity effects. IDIs generally are prohibited from purchasing low-quality assets from affiliates. Asset exchanges may be a mechanism to avoid regulations designed to protect subsidiary banks from becoming overburdened with non-earning assets. Improper timing or certain structurings of asset transactions also can cause them to be regarded as extensions of credit to affiliates. As such, these types of transactions could potentially violate applicable regulations and statutes.
Compensating balances. A subsidiary bank may be required to maintain excess balances at a correspondent bank that lends to other parts of the holding company organization, possibly to the detriment of the bank. The subsidiary bank may be foregoing earnings on such excess funds, which may adversely affect its financial condition.

Other expense allocations. In general, a subsidiary bank should be adequately compensated for its services or for the use of its facilities and personnel by other parts of the holding company organization. Furthermore, a subsidiary bank should not pay for expenses for which it does not receive a benefit.

2020.0.2 ROLE OF THE EXAMINER

To properly assess intercompany transactions and relationships between affiliates, the examiner must make a thorough analysis of most intercompany transactions and must have a knowledge of applicable laws, regulations, and rulings. In particular, the examiner should be familiar with sections 23A and 23B of the Federal Reserve Act and the Board’s Regulation W. The examiner should also be familiar with the FR Y-8, The Bank Holding Company Report of Insured Depository Institutions’ Section 23A Transactions with Affiliates, and its instructions. The mandatory report is to be submitted to the Federal Reserve by (1) all top-tier bank holding companies (BHCs), including financial holding companies, and (2) all foreign banking organizations that directly own a U.S. subsidiary bank. The completed quarterly reports are used by the Federal Reserve System to monitor bank exposures to affiliates and to ensure banks’ compliance with section 23A of the Federal Reserve Act. With regard to the BHC’s inspection, the examiner should review and verify, since the previous inspection, the BHC’s accuracy and comprehensiveness in its reporting based on the FR Y-8 report form and instructions.

If a subsidiary IDI of a holding company is not a state member bank, the bank’s primary regulator should determine the bank’s compliance with pertinent banking laws. In reviewing the subsidiary bank’s examination report, any violations of laws and regulations applicable to intercompany transactions should be noted. If the violation resulted from the actions of an affiliate, the affiliate’s role should be identified and be subject to criticism in the inspection report.

Violations of banking laws discovered during the inspection should be brought to management’s attention and referred to the bank’s primary supervisor. However, any action or criticism levied directly on the bank should come from the bank’s primary supervisor.
2020.1.01 WHAT'S NEW IN THIS REVISED SECTION

This section has been revised to discuss statutory amendments of sections 23A and 23B of the Federal Reserve Act resulting from the Dodd-Frank Act. One amendment involved the definition of an “affiliate,” with regard to an investment fund when an insured depository institution (IDI) or one of its affiliates is an investment adviser. Also, the definition of “covered transactions” was revised to include the credit exposure resulting for derivative and securities lending and borrowing transactions between the IDI and its affiliates. In addition, the Dodd-Frank Act removed the quantitative 10 percent exemption limit between financial subsidiaries. The retained earnings of a financial subsidiary are to be included as part of the IDI’s investment. The amendments were effective July 21, 2012. (See sections 608(a)(1)(A), 608(a)(1)(B), and 609(a) of the Dodd-Frank Act.)

Revised inspection objectives and inspection procedures also are included.

2020.1.05 SECTIONS 23A AND 23B OF THE FEDERAL RESERVE ACT, AND REGULATION W

Section 23A of the Federal Reserve Act (FRA) restricts the ability of insured depository institutions (IDIs) to engage in certain covered transactions with an affiliate. Transactions that are subject to section 23A also are subject to the provisions of section 23B of the FRA. In addition to these statutory provisions, the Board issued Regulation W (the rule), which implements sections 23A and 23B of the FRA. The rule provides several exemptions and combines the statutory restrictions on transactions between a member bank and its affiliates with numerous previously issued Board interpretations.

During a bank holding company inspection, transactions between an IDI and an affiliate (for example, a bank holding company parent or other nonbank subsidiary) are reviewed for compliance with sections 23A and 23B and Regulation W, as well as other banking regulations and statutes. Any violations of sections 23A and 23B of the FRA or Regulation W involving a transaction between an IDI and its affiliate that are disclosed or found during an inspection should be brought to management’s attention, may be discussed in the inspection report as “Other Matters,” and referred to the bank’s primary supervisor. However, any action or criticism levied directly on the bank should come from the bank’s primary supervisor. See also SR-03-2.

2020.1.1 SECTION 23A OF THE FEDERAL RESERVE ACT

Section 23A of the FRA (12 U.S.C. 371c) is the primary statute governing transactions between an IDI and its affiliates. Section 23A (1) designates the types of companies that are affiliates of an IDI; (2) specifies the types of transactions covered by the statute; (3) sets the quantitative limitations on an IDI’s covered transactions with any single affiliate, and with all affiliates combined; (4) sets forth collateral requirements for certain transactions with affiliates; and (5) requires all covered transactions to be conducted on terms consistent with safe and sound banking practices.

2020.1.1.1 Definition of an Affiliate

In general, companies that control or are under common control with an IDI are defined by section 23A as “affiliates” of the bank. The definition includes a bank subsidiary of a bank and any company that a bank, or its subsidiaries or affiliates, sponsors and advises on a contractual basis. Affiliates, for example, may...
include banks, financial holding companies, savings and loan holding companies, and their subsidiaries. Banks, savings associations, and nonbanking companies that are under common individual control or a group of individuals with the bank also are affiliates for the purposes of section 23A. Any investment fund with respect to which a member bank or affiliate thereof is an investment adviser. See section 608(a)(1)(A) of the Dodd-Frank Act. In addition, any transaction by an IDI with any person is deemed to be a transaction with an affiliate to the extent that the proceeds of the transaction are transferred to, or used for the benefit of, the affiliate. With respect to any IDI within a holding company, its affiliates include, among others, its parent, the parent’s subsidiaries, and other companies directly or indirectly controlled by the bank’s or holding company’s shareholders. Specifically, Regulation W defines an affiliate as—

1. any company that controls the IDI and any other company that is controlled by the company that controls the IDI;
2. any bank subsidiary of the IDI;
3. any company—
   — that is controlled directly or indirectly, by a trust or otherwise, by or for the benefit of shareholders who beneficially or otherwise control, directly or indirectly, the member bank or any company that controls the IDI; or
   — in which a majority of its directors or trustees constitute a majority of the persons holding any such office with the IDI or any company that controls the IDI;
4. any company (including a real estate investment trust) that is sponsored and advised on a contractual basis by the IDI or any subsidiary or affiliate of the IDI;
5. any investment company, with respect to which an IDI or any affiliate thereof is an investment adviser as defined in section 2(a)(20) of the Investment Company Act of 1940;
6. any investment fund for which the IDI or any affiliate of the IDI serves as an investment adviser, if the IDI and its affiliates own or control, in the aggregate, more than 5 percent of any class of voting securities or of the equity capital of the fund;
7. a depository institution that is a subsidiary of the IDI;
8. a financial subsidiary of the member bank;
9. any company in which a holding company of the IDI owns or controls, directly or indirectly, or acting through one or more other persons, 15 percent or more of the equity capital pursuant to the merchant banking authority in section 4(k)(4)(H) or (I) of the Bank Holding Company Act (12 U.S.C. 1843(k)(4)(H) or (I));
10. any partnership for which the IDI or any affiliate of the IDI serves as a general partner or for which the IDI or any affiliate of the IDI causes any director, officer, or employee of the member bank or affiliate to serve as a general partner;
11. any subsidiary of an affiliate described in paragraphs (a)(1) through (10) of section 223.2 of Regulation W; and
12. any company that the Board, or the appropriate federal banking agency for the IDI, determines by regulation or order to have a relationship with the IDI or any subsidiary or affiliate of the member bank, such that covered transactions by the member bank or its subsidiary with that company may be affected by the relationship, to the detriment of the IDI or its subsidiary.

The following generally are not considered to be affiliates of an IDI:

1. a nonbank subsidiary of the IDI (other than a financial subsidiary), unless the Board determines not to exclude such a subsidiary;
2. a company engaged solely in holding the IDI’s premises;
3. a company engaged solely in conducting a safe deposit business;
4. a company engaged solely in holding obligations of the United States or its agencies or obligations fully guaranteed by the United States or its agencies as to principal and interest; and
5. a company in which control arises from the exercise of rights arising out of a bona fide debt previously contracted (for the period of time specified by section 23A).

5. See 12 C.F.R. 223.2.
6. By statute, “control” is defined as the power to (1) vote 25 percent or more of the voting shares of a company, excluding situations in which the stock is controlled in a fiduciary capacity; (2) elect a majority of the directors of a company; or (3) exercise a controlling influence over a company. Control is discussed in more detail at 2020.1.3.1.
2020.1.1.2 Definition of Affiliates by Type of Entity

2020.1.1.2.1 Investment Funds Advised by the Member Bank or an Affiliate of the Member Bank

Regulation W includes as an affiliate any company that is sponsored and advised on a contractual basis by the IDI or any of its affiliates as well as any investment company for which the IDI or its affiliate serves as an investment adviser, as defined in the Investment Company Act of 1940 (the 1940 Act). In Regulation W, the Board used its statutory authority to define as an affiliate any investment fund—even if not an investment company for purposes of the 1940 Act—for which the IDI or an affiliate of the IDI serves as an investment adviser, if the IDI or an affiliate of the IDI owns or controls more than 5 percent of any class of voting securities or similar interests of the fund.

Many investment funds that are advised by an IDI (or an affiliate of an IDI) are affiliates of the IDI under section 23A because the funds either are investment companies under the 1940 Act or are sponsored by the IDI (or an affiliate of the IDI). The IDI or its affiliate, in some instances, however, may advise but not sponsor an investment fund that is not an investment company under the 1940 Act.7 The advisory relationship of an IDI or affiliate with an investment fund presents the same potential for conflicts of interest regardless of whether the fund is an investment company under the 1940 Act.8 The Dodd-Frank Act treats any investment fund as an affiliate if the IDI or an affiliate of the IDI serves as an investment adviser to the fund.

2020.1.1.2.2 Financial Subsidiaries

In 1999, the Gramm-Leach-Bliley Act (the GLB Act) authorized banks to own “financial subsidiaries” that engage in activities not permissible for the parent bank to conduct directly, such as underwriting and dealing in bank-ineligible securities. The GLB Act amended section 23A to define a financial subsidiary of a bank as an affiliate of the bank and thus subjected covered transactions between the bank and a financial subsidiary to the limitations of sections 23A and 23B.

Section 23A defines a financial subsidiary as a subsidiary of any bank (state or national) that is engaged in an activity that is not permissible for national banks to engage in directly (other than a subsidiary that federal law specifically authorizes national banks to own or control). Specifically, a “financial subsidiary” is defined as “any company that is a subsidiary of a bank that would be a financial subsidiary of a national bank under section 5136A of the Revised Statutes of the United States.”9 (See 12 U.S.C. 371c(e)(1).) Section 5136A, in turn, defines a financial subsidiary as any company that is controlled by one or more member banks, other than (1) a subsidiary that engages solely in activities that national banks are permitted to engage in directly (and subject to the terms and conditions that apply to national banks) or (2) a subsidiary that national banks are specifically authorized to control by the express terms of a federal statute (other than section 5136A of the Revised Statutes), such as an Edge Act corporation or a small business investment company (SBIC).10 (See 12 U.S.C. 24a(g)(3).) Section 5136A also prohibits a financial subsidiary of a national bank from engaging in insurance underwriting, real estate investment and development, or merchant banking activities.11 (See 12 U.S.C. 24a(a)(2).)

The Dodd-Frank Act amended section 23A as it relates to financial subsidiaries of a bank. First, the 10 percent quantitative limit of section 23A between a bank and any individual affiliate applies to covered transactions between a bank and a financial subsidiary of the bank. In addition, for purposes of section 23A, the amount of a bank’s investment in its financial subsidiary includes the retained earnings of the financial subsidiary. See section 609(a) of the Dodd-Frank Act.

Section 23A generally applies only to transactions between (1) a bank and an affiliate of the bank and (2) a bank and a third party in which some benefit of the transactions accrues to an

---

8. An investment fund typically escapes from the definition of investment company under the 1940 Act because it (1) sells interests only to a limited number of investors or only to sophisticated investors or (2) invests primarily in financial instruments that are not securities. An IDI may face greater risk from the conflicts of interest arising from its relationships with an investment fund that is not registered than an investment company under the 1940 Act because the 1940 Act restricts transactions between a registered investment company and entities affiliated with the company’s investment adviser. (See 15 U.S.C. 80a-17).
affiliate of the bank. The statute generally does not apply to transactions between two affiliates. Section 23A establishes two special anti-evasion provisions, however, that govern transactions between a financial subsidiary of a bank and another affiliate of the bank. First, the FRA provides that any purchase of, or investment in, the securities of a bank’s financial subsidiary by an affiliate of the bank will be deemed to be a purchase of, or investment in, such securities by the bank itself. Second, the GLB Act authorizes the Board to deem a loan or other extension of credit made by a bank’s affiliate to any financial subsidiary of the bank to be an extension of credit by the bank to the financial subsidiary, if the Board determines that such action is necessary or appropriate to prevent evasion.

2020.1.1.2.2.1 Regulation W Provisions for Financial Subsidiaries

Regulation W (1) defines a financial subsidiary of a bank, (2) exempts certain companies from the definition, and (3) sets forth special valuation and other rules for financial subsidiaries. (See sections 223.2(a)(8), 223.3(p), and 223.32 of the rule.) Regulation W also includes several special rules that apply to transactions with financial subsidiaries.

Applicability of the 10 percent quantitative limit to transactions with a financial subsidiary. The 10 percent quantitative limit in section 23A applies with respect to covered transactions between a member bank and any individual financial subsidiary of the bank.

Valuation of investments in securities issued by a financial subsidiary. Because financial subsidiaries of a member bank are considered affiliates of the bank for purposes of section 23A, a member bank’s purchases of, and investments in, the securities of its financial subsidiary are covered transactions under the statute. The Dodd-Frank Act provides that a member bank’s investment in its own financial subsidiary, for purposes of section 23A, shall include the retained earnings of the financial subsidiary.

In light of this statutory provision, section 223.32(b) of the rule contains a special valuation provision for investments by a member bank in the securities of its own financial subsidiary. Such investments must be valued at the greater of (1) the price paid by the member bank for the securities or (2) the carrying value of the securities on the financial statements of the member bank (determined in accordance with generally accepted accounting principles (GAAP) but without reflecting the bank’s pro rata share of any earnings retained, or losses incurred by, the financial subsidiary after the bank’s acquisition of the securities).

This valuation rule differs from the general valuation rule for investments in securities issued by an affiliate in that the financial subsidiary rule permits, consistent with the GLB Act, that the carrying value of the investment be computed without consideration of the retained earnings or losses of the financial subsidiary since the time of the member bank’s investment. As a result of this rule, the covered transaction amount for a member bank’s investment in securities issued by its financial subsidiary generally would not increase after the investment was made except if the member bank made an additional capital contribution to the subsidiary or purchased additional securities of the subsidiary.

The following examples were designed to assist banks in valuing investments in securities issued by a financial subsidiary of the bank. Each example involves a securities underwriter that becomes a financial subsidiary of the bank after the transactions described below.

1. Initial valuation.
   a. Direct acquisition by a bank. A bank pays $500 to acquire 100 percent of the shares of a securities underwriter. The initial carrying value of the shares on the member bank’s parent-only GAAP financial statements is $500. The member bank initially

---
12. A member bank’s aggregate amount of covered transactions with any individual financial subsidiary of the bank may not exceed 10 percent of the bank’s capital and surplus.
13. See section 609(a) of the Dodd-Frank Act. The Dodd-Frank Act eliminated the 10 percent quantitative limit exemption for certain covered transactions with financial subsidiaries and individual affiliates.
14. See section 609(a) of the Dodd-Frank Act.
15. The rule’s special valuation formula for investments by a member bank in its own financial subsidiary does not apply to investments by a member bank in a financial subsidiary of an affiliated depository institution. Such investments must be valued using the general valuation formula set forth in section 223.23 for investments in securities issued by an affiliate and, further, may trigger the anti-evasion rule contained in section 223.32(c)(1) of the rule.
16. The rule also makes clear that if a financial subsidiary is consolidated with its parent bank under GAAP, the subsidiary under the carrying value of the bank’s investment in the financial subsidiary shall be determined based on parent-only financial statements of the bank.
must value the investment at $500.

b. Contribution of a financial subsidiary to a member bank. The parent holding company of a bank acquires 100 percent of the shares of a securities underwriter in a transaction valued at $500 and immediately contributes the shares to the member bank. The bank gives no consideration in exchange for the shares. The bank initially must value the investment at the carrying value of the shares on the bank’s parent-only GAAP financial statements. Under GAAP, the bank’s initial carrying value of the shares would be $500.

2. Carrying value not adjusted for earnings and losses of the financial subsidiary. A bank and its parent holding company engage in a transaction whereby the member bank acquires 100 percent of the shares of a securities underwriter in a transaction valued at $500. The bank initially values the investment at $500. In the following year, the securities underwriter earns $25 in profit, which is added to its retained earnings. The bank’s investment of the shares of the underwriter is not adjusted for purposes of section 23A and Regulation W, and the bank’s investment continues to be valued at $500. If, however, the member bank contributes $100 of additional capital to the securities underwriter, the bank must value the aggregate investment at $600.

Anti-evasion rules as they pertain to financial subsidiaries. Section 23A generally applies only to transactions between a bank and an affiliate of the bank and transactions between a member bank and a third party when some benefit of the transaction accrues to an affiliate of the bank. The statute generally does not apply to transactions between two affiliates. The GLB Act establishes two special anti-evasion rules, however, that govern transactions between a financial subsidiary of a member bank and another affiliate of the bank. First, the GLB Act provides that any purchase of, or investment in, securities issued by a member bank’s financial subsidiary by an affiliate of the bank will be deemed to be a purchase of, or investment in, such securities by the bank itself. Second, the GLB Act authorizes the Board to deem an extension of credit made by a member bank’s affiliate to any financial subsidiary of the bank to be an extension of credit by the bank to the financial subsidiary, if the Board determines that such action is necessary or appropriate to prevent evasions of the FRA or the GLB Act. Section 223.32(c) of the rule incorporates both of these provisions.

The Board exercised its authority under the second anti-evasion rule by stating that an extension of credit to a financial subsidiary of a bank by an affiliate of the bank would be treated as an extension of credit by the bank itself to the financial subsidiary if the extension of credit is treated as regulatory capital of the financial subsidiary. An example of the kind of credit extension covered by this provision would be a subordinated loan to a financial subsidiary that is a securities broker-dealer in which the loan is treated as capital of the subsidiary under the SEC’s net capital rules. Treating such an extension of credit as a covered transaction is appropriate because the extension of credit by the affiliate has a similar effect on the subsidiary’s regulatory capital as an equity investment by the affiliate, which is treated as a covered transaction by the terms of the GLB Act (as described above). The rule generally does not prevent a BHC or other affiliate of a member bank from providing financial support to a financial subsidiary of the bank in the form of a senior or secured loan.

2020.1.1.2.3 Partnerships

IDIs fund legitimate commercial transactions through partnerships. Partnerships for which an IDI or an affiliate(s) serves as a general partner are affiliates. Regulation W also defines an affiliate of an IDI as any partnership, if the IDI or an affiliate of the IDI causes any director, officer, or employee of the IDI or affiliate to serve as a general partner of the partnership (unless the partnership is an operating subsidiary of the bank.) Also, if a company, such as a bank holding company, controls more than 25 percent of the equity through a partnership, that company is an affiliate under Regulation W.

2020.1.1.2.4 Subsidiaries of Affiliates

Regulation W deems a subsidiary of an affiliate as an affiliate of the IDI.

17. GLB Act section 121(b)(1), or 12 U.S.C. 371c(e)(3).
2020.1.1.2.5 Companies Designated by the Appropriate Federal Banking Agency

Under section 223.2(a)(12), the Board or the appropriate federal banking agency for the relevant IDI (under authority delegated by the Board) can determine that any company that has a relationship with an IDI or an affiliate of the IDI, such that covered transactions by the IDI with that company may be affected by the relationship to the detriment of the IDI, is an affiliate of the IDI. The Board and the federal banking agencies can thus protect IDIs in their transactions with associated companies. An IDI may petition the Board to review any such affiliate determination made by the institution’s appropriate federal banking agency under the general procedures established by the Board for review of actions taken under delegated authority.18

2020.1.1.2.6 Merchant Banking

The GLB Act also amended the Bank Holding Company Act (BHC Act) to permit BHCs and foreign banks that qualify as financial holding companies (FHCs) to engage in merchant banking and insurance company investment activities.19 If an FHC owns or controls more than 25 percent of a class of voting shares of a company under the merchant banking or insurance company investment authority, the company is an affiliate of any member bank controlled by the FHC by operation of the statutory definition contained in section 23A. The GLB Act also added paragraph (b)(11) to section 23A, which creates a rebuttable presumption that a company (“portfolio companies”) is an affiliate of a member bank, for purposes of section 23A, if the bank is affiliated with an FHC and the FHC owns or controls 15 percent or more of the equity capital of the other company pursuant to the FHC’s merchant banking or insurance company investment authority.20

* * *

18. See 12 C.F.R. 265.3.
19. GLB Act, section 103(a); 12 U.S.C. 1843(k)(4)(H) and (I).
20. GLB Act, section 121(b)(2). As noted above, this rebuttable presumption applies only if the affiliated FHC owns or controls 15 percent or more of the company’s equity capital under the merchant banking or insurance company investment authorities. The Board noted, however, that under existing Board precedents, a BHC may not own any shares of a company in reliance on section 4(c)(6) or 4(c)(7) of the BHC Act where the holding company owns or controls, in the aggregate under a combination of authorities, more than 5 percent of any class of voting securities of the company.
21. See 12 C.F.R. 225.176(b)(2) and (3).
22. For purposes of these safe harbors, the rule provides that the term “holding company” includes any subsidiary of the holding company, including any subsidiary bank of the holding company. Accordingly, if a director of a subsidiary bank or nonbank subsidiary of an FHC also serves as a director of a portfolio company, the first safe harbor, for example, would be unavailable.
of the three regulatory safe harbors or by obtaining an ad hoc rebuttal of the presumption from the Board).

An FHC generally is considered to own or control only those shares or other ownership interests that are owned or controlled by itself or by a subsidiary of the holding company. The rule clarifies that, for purposes of applying the presumption of affiliation described above, an FHC that has an investment in a private equity fund (as defined in the Board’s merchant banking rule) will not be considered indirectly to own the equity capital of a company in which the fund has invested unless the FHC controls the private equity fund (as described in the Board’s merchant banking rule).

2020.1.1.2.7 Companies that are not Affiliates

Under the terms of section 23A, subsidiaries of an IDI generally are not treated as affiliates of the member bank.23 The statute contains two specific exceptions to this general rule: financial subsidiaries of an IDI and IDI subsidiaries of an IDI are treated as affiliates of the parent IDI. The statute provides that the Board may determine that other subsidiaries of an IDI should be treated as affiliates in appropriate circumstances.24

Under section 223.2(b)(1)(iii) of the rule, certain joint venture subsidiary companies of an IDI are treated as affiliates. A subsidiary of an IDI is treated as an affiliate if one or more affiliates of the IDI, or one or more controlling shareholders of the IDI, directly control the joint venture. For example, if an IDI controls 30 percent of company A and an affiliate controls 70 percent of Company A, then Company A is an affiliate. This provision also covers situations in which a controlling natural-person shareholder or group of controlling natural-person shareholders of the IDI (who, as natural persons, are not themselves section 23A affiliates of the IDI) exercise direct control over the joint venture company. The rule’s treatment of certain IDI-affiliate joint ventures as affiliates does not apply to joint ventures between an IDI and any affiliated IDIs. For example, if two affiliated IDIs each own 50 percent of the voting common stock of a company, the company would continue to qualify as a subsidiary and not an affiliate of each IDI (despite the fact that an affiliate of each IDI owned more than 25 percent of a class of voting securities of the company). The Board has retained its authority to treat such joint ventures as affiliates under section 23A on a case-by-case basis.

2020.1.1.2.8 Employee Benefit Plans

Regulation W clarifies, under section 223.2(b)(1)(iv), that an employee stock option plan (ESOP), of an IDI or an affiliate of the IDI cannot itself avoid classification as an affiliate of the member bank by also qualifying as a subsidiary of the member bank. Many, but not all, ESOPs, trusts, or similar entities that exist to benefit shareholders, members, officers, directors, or employees of an IDI or its affiliates are treated as affiliates of the IDI for purposes of sections 23A and 23B. The ESOP’s share ownership or the interlocking management between the ESOP and its associated IDI (or BHC), in many cases, exceeds the statutory thresholds for determining that a company is an affiliate. For example, if an ESOP controls more than 25 percent of the voting shares of the member bank or bank holding company, the ESOP is an affiliate.

The relationship between an IDI and its (or its) affiliate’s ESOP generally warrants coverage by sections 23A and 23B. IDIs have made unsecured loans to their ESOPs or their affiliates’ ESOP or have guaranteed loans to such ESOPs that were made by a third party. These ESOPs, however, generally have no means to repay the loans other than with funds provided by the IDI. In addition, even if the ESOP’s ownership control does not warrant treatment as an affiliate, the issuance of holding company shares to an ESOP that is funded by a loan from the holding company’s subsidiary IDI could be used as a vehicle by the IDI to provide funds to its parent holding company when the IDI is unable to pay dividends or is otherwise restricted in providing funds to its holding company. The attribution rule (12 C.F.R. 223.16) subjects such transactions to the restrictions of sections 23A and 23B.

---

23. See 12 U.S.C. 371c(b)(1)(A) and (b)(2)(A). Section 23A defines a subsidiary of a specified company as a company that is controlled by the specified company. Under the statute, a company controls another company if the first company owns or controls 25 percent or more of a class of voting securities of the other company, controls the election of a majority of the directors of the other company, or exercises a controlling influence over the policies of the other company (12 U.S.C. 371c(b)(3) and (4)).

2020.1.2 QUANTITATIVE LIMITS

Section 23A(a)(1)(A) states that an IDI may engage in a covered transaction with an affiliate only if in the case of any affiliate:

1. the IDI limits the aggregate amount of covered transactions to that particular affiliate to not more than 10 percent of the IDI’s capital stock and surplus and
2. the IDI limits the aggregate amount of all covered transactions with all of its affiliates to 20 percent of the IDI’s capital stock and surplus.

The rule’s interpretation of the 10 percent limit is consistent with the statutory language. An IDI that has crossed the 10 percent threshold with one affiliate may still conduct additional covered transactions with other affiliates, if transactions with all affiliates would not exceed 20 percent of the IDI’s capital stock and surplus. An IDI is prohibited from engaging in a new covered transaction with that affiliate if the IDI’s transactions with all its affiliates exceeded the 20 percent threshold. The rule generally does not require an IDI to unwind existing covered transactions if the member bank exceeds the 10 percent or 20 percent limit because its capital declined or a preexisting covered transaction increased in value.

The Board strongly encourages IDIs with covered transactions in excess of the 10 percent threshold with any affiliate to reduce those transactions before expanding the scope or extent of the member bank’s relationships with other affiliates.

2020.1.3 CAPITAL STOCK AND SURPLUS

Under section 23A, the quantitative limits on covered transactions are based on the “capital stock and surplus” of the IDI. An IDI’s capital stock and surplus for purposes of section 23A of the FRA is—

1. the sum of tier 1 and tier 2 capital included in an institution’s risk-based capital under the capital guidelines of the appropriate federal banking agency, based on the institution’s most recent consolidated FFIEC Reports of Condition and Income (Call Report) filed under 12 U.S.C. 1817(a)(3);
2. the balance of an institution’s allowance for loan and lease losses not included in its tier 2 capital for purposes of the calculation of risk-based capital by the appropriate federal banking agency (based on the institution’s most recent consolidated Call Report of Condition and Income that is filed under 12 U.S.C. 1817(a)(3)); and
3. the amount of any investment in a financial subsidiary that counts as a covered transaction that is required to be deducted from the IDI’s regulatory capital.

Examiners can determine the amount of the quantitative limits.

2020.1.3.1 Determination of Control

The definition of “control” is similar to the definition used in the BHC Act. Under the rule, a company or shareholder shall be deemed to have control over another company if—

• such company or shareholder, directly or indirectly, or acting through one or more other persons, owns, controls, or has power to vote 25 percent or more of any class of voting securities of the other company;
• such company or shareholder controls in any manner the election of a majority of the directors or trustees (or general partners or individuals exercising similar functions), of the other company; or
• the Board determines, after notice and opportunity for hearing, that such company or shareholder, directly or indirectly, exercises a controlling influence over the management or policies of the other company.

In addition, three additional presumptions of control are provided under the rule. First, a company will be deemed to control securities, assets, or other ownership interests controlled by any subsidiary of the company. Second, a company that controls instruments (including options and warrants) that are convertible or exercisable, at the option of the holder or owner,
into securities, will be deemed to control the securities. Third, a rebuttable presumption provides that a company or shareholder that owns or controls 25 percent or more of the equity capital of another company controls the other company, unless the company or shareholder demonstrates otherwise to the Board based on the facts and circumstances of the particular case. Such a presumption of control is particularly appropriate in the section 23A context because a BHC may have incentives to divert the resources of a subsidiary IDI to any company in which the holding company has a substantial financial interest, regardless of whether the holding company owns any voting securities of the company.

Section 23A and the rule provide that no company shall be deemed to own or control another company by virtue of its ownership or control of shares in a fiduciary capacity except (1) when a company that is controlled, directly or indirectly, by a trust for the benefit of shareholders who beneficially or otherwise control, directly or indirectly, a member bank, or (2) if the company owning or controlling such shares is a business trust.

### 2020.1.4 COVERED TRANSACTIONS

The restrictions of section 23A do not apply to every transaction between an IDI and its affiliates; section 23A only applies to seven “covered transactions” between an IDI and its affiliates.

A covered transaction under section 23A of the FRA means—

1. a loan or extension of credit by an IDI to an affiliate;
2. a purchase of, or an investment in, the securities issued by an affiliate of an IDI including a purchase of assets subject to an agreement to repurchase;
3. an IDI’s purchase of assets from an affiliate, except for purchases of real and personal property as may be specifically exempted by the Board by order or regulation;
4. the acceptance by an IDI of securities or other debt obligations issued by an affiliate as collateral security for a loan or extension of credit by the member bank to any person or company;
5. the issuance by an IDI of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate.
6. a transaction with an affiliate that involves the borrowing or lending of securities, to the extent that the transaction causes an IDI or a subsidiary to have credit exposure to the affiliate; or
7. a derivative transaction, as defined in 12 U.S.C. 84(b), with an affiliate, to the extent that the transaction causes an IDI or a subsidiary to have credit exposure to the affiliate.

If a transaction between an IDI and an affiliate is not within one of the above categories, it is not a covered transaction for the purposes of section 23A and is not subject to its limitations. All covered transactions must be made on terms and conditions that are consistent with safe and sound banking practices.

Among the transactions that generally are not subject to section 23A are dividends paid by an IDI to its holding company, sales of assets by an IDI to an affiliate for cash, an affiliate’s purchase of securities issued by an IDI, and many service contracts between an IDI and an affiliate. Certain classes of transactions between a member bank and an affiliate are discussed below as to whether they are covered transactions for purposes of section 23A. (See section 223.3(h).)

### 2020.1.4.1 Attribution Rule

The “attribution rule,” found in section 223.16, prevents an IDI from evading its restrictions of

---

30. See 12 C.F.R. 225.31(d)(1)(i). The rule refers more generically to convertible “instruments.” It clarifies that the convertibility presumption applies regardless of whether the right to convert resides in a financial instrument that technically qualifies as a “security” under section 23A or the federal securities laws.

31. See, for example, 12 C.F.R. 225.143 (Board Policy Statement on Equity Investments in Banks and Bank Holding Companies).

33. The investment by an IDI or its affiliate in a financial subsidiary of the bank excludes the retained earnings of the financial subsidiary.

34. The acceptance of an affiliate’s securities for a loan when proceeds are transferred to, or used for the benefit of, an affiliate is prohibited. (See section 223.3(h)(2).)

35. Board staff has taken the position that safety and soundness requires that the transaction be conducted on market terms.

36. A transaction when an IDI receives assets from an affiliate and the IDI pays a dividend or returns capital to an affiliate may result in a purchase of assets for the purposes of section 23A. Although these transactions are not subject to section 23A, they may be subject to section 23B or other laws.
section 23A by using intermediaries, and it limits the exposure that an IDI has to customers of affiliates of the IDI. Section 223.16 provides that any covered transaction by an IDI or its subsidiary with any person is deemed to be a transaction with an affiliate of the IDI if any of the proceeds of the transaction are used for the benefit of, or are transferred to, the affiliate. For example, an IDI’s loan to a customer for the purpose of purchasing securities from the inventory of a broker-dealer affiliate of the member bank would be a covered transaction under section 23A.

2020.1.4.2 Credit Transactions with an Affiliate

2020.1.4.2.1 Extension of Credit to an Affiliate or Other Credit Transaction with an Affiliate

Section 23A includes a “loan or extension of credit” to an affiliate as a covered transaction, but does not define these terms. Section 223.3(o) of the rule defines “extension of credit” to an affiliate to mean the making or renewal of a loan to an affiliate, the granting of a line of credit to an affiliate, or the extending of credit to an affiliate in any manner whatsoever, including on an intraday basis. Transactions that are defined as extensions of credit include but are not limited to the following:

1. an advance to an affiliate by means of an overdraft, cash item, or otherwise;
2. a sale of federal funds to an affiliate;
3. a lease that is the functional equivalent of an extension of credit to an affiliate;
4. an acquisition by purchase, discount, exchange, or otherwise of a note or other obligation, including commercial paper or other debt securities, of an affiliate;
5. any increase in the amount of, extension of the maturity of, or adjustment to the interest-rate term or other material term of, an extension of credit to an affiliate;
6. any other similar transaction as a result of which an affiliate becomes obligated to pay money (or its equivalent) to an IDI.\(^{39}\)

An IDI’s purchase of a debt security issued by an affiliate is an extension of credit by the IDI to the affiliate for purposes of section 23A under the rule. An IDI that buys debt securities issued by an affiliate has made an extension of credit to an affiliate under section 23A and must collateralize the transaction in accordance with the collateral requirements of section 23A. An exemption from the collateral requirements is provided for situations in which an IDI purchases an affiliate’s debt securities from a third party in a bona fide secondary-market transaction.

2020.1.4.2.2 Valuation of Credit Transactions with an Affiliate

A credit transaction between an IDI and an affiliate initially must be valued at the amount of funds provided by the IDI to, or on behalf of, the affiliate plus any additional amount that the IDI could be required to provide to, or on behalf of, the affiliate. The section 23A value of a credit transaction between an IDI and an affiliate is the greater of (1) the principal amount of the credit transaction; (2) the amount owed by the affiliate to the member bank under the credit transaction; or (3) the sum of (a) the amount provided to, or on behalf of, the affiliate in the transaction and (b) any additional amount that the member bank could be required to provide to, or on behalf of, the affiliate under the terms of the member transaction. (See 223.21)

The first prong of the rule’s valuation formula for credit transactions (“the principal amount of the credit transaction”) would likely determine the valuation of a transaction in which an IDI purchased a zero-coupon note issued by an affiliate. An IDI should value such an extension of credit at the principal, or face amount of the note (that is, at the amount that the affiliate ultimately must pay to the IDI) rather than at the amount of funds initially advanced by the IDI. For example, assume an IDI purchased from an

37. The Board would consider a full-payout, net lease permissible for a national bank under 12 U.S.C. 24 (seventh) and 12 C.F.R. 23 to be the functional equivalent of an extension of credit.
38. A floating-rate loan does not become a new covered transaction whenever there is a change in the relevant index (for example, LIBOR or the member bank’s prime rate) from
39. The definition of extension of credit would cover, among other things, situations in which an affiliate fails to pay on a timely basis for services rendered to the affiliate by the IDI or the affiliate fails to pay a tax refund to the IDI.
affiliate for $50 a 10-year zero-coupon note issued by the affiliate with a face amount of $100. The rule’s valuation formula requires the IDI to value this transaction at $100.

The second prong of the rule’s valuation formula for credit transactions (“the amount owed by the affiliate”) likely would determine the valuation of a transaction in which an affiliate fails to pay an IDI when due a fee for services rendered by the IDI to the affiliate. This prong of the valuation formula does not include (within section 23A’s quantitative limits) items such as accrued interest not yet due on an IDI’s loan to an affiliate.

IDIs will be able to determine the section 23A value for most credit transactions under the third prong of the rule’s valuation formula. Under this prong, for example, a $100 term loan is a $100 covered transaction, a $300 revolving credit facility is a $300 covered transaction (regardless of how much of the facility the affiliate has drawn down), and a guarantee backstopping a $500 debt issuance of the affiliate is a $500 covered transaction.

Under section 23A and the rule, a member bank has made an extension of credit to an affiliate if the IDI purchases from a third party a loan previously made to an affiliate of the IDI. A different valuation formula is provided for these indirect credit transactions: The IDI must value the transaction at the price paid by the IDI for the loan plus any additional amount that the IDI could be required to provide to, or on behalf of, the affiliate under the terms of the credit agreement.

For example, if an IDI pays a third party $90 for a $100 term loan that the third party previously made to an affiliate of the IDI (because, for example, the loan was at a fixed rate and has declined in value because of a rise in the general level of interest rates), the covered-transaction amount is $90 rather than $100. The lower covered-transaction amount reflects the fact that the IDI’s maximum loss on the transaction is $90 rather than the original principal amount of the loan. For another example, if an IDI pays a third party $70 for a $100 line of credit to an affiliate, of which $70 had been drawn down by the affiliate, the covered-transaction amount would be $100 (the $70 purchase price paid by the IDI for the credit plus the remaining $30 that the IDI could be required to lend under the credit line).

In another example, an IDI makes a term loan to an affiliate that has a principal amount of $100. The affiliate pays $2 in up-front fees to the member bank, and the affiliate receives net loan proceeds of $98. The IDI must initially value the covered transaction at $100.

Although the rule considers an IDI’s purchase of, or investment in, a debt security issued by an affiliate as an extension of credit to an affiliate, these transactions are not valued like other extensions of credit. See section 223.23 for the valuation rules for purchases of, and investments in, the debt securities of an affiliate.

2020.1.4.2.3 Timing of a Credit Transaction with an Affiliate

An IDI has entered into a credit transaction with an affiliate at the time during the day that the IDI becomes legally obligated to make the extension of credit to, or issue the guarantee, acceptance, or letter of credit on behalf of, the affiliate. A covered transaction occurs at the moment that the IDI executes a legally valid, binding, and enforceable credit agreement or guarantee and does not occur only when an IDI funds a credit facility or makes payment on a guarantee. Consistent with section 23A, the rule only requires an IDI to compute compliance with its quantitative limits when the IDI is about to engage in a new covered transaction. The rule does not require an IDI to compute compliance with the rule’s quantitative limits on a continuous basis. See section 223.21(b)(1) of the rule.

The burden of the timing rule is mitigated significantly by the exemption for intraday extensions of credit found in section 223.42(l). The intraday credit exemption generally applies only to extensions of credit that an IDI expects to be repaid, sold, or terminated by the end of its U.S. business day. The IDI must have policies and procedures to manage and minimize the credit exposure. Any such extension of credit that is outstanding at the end of the IDI’s business day must be treated as an extension of credit and must meet the regulatory quantitative and collateral requirements.

2020.1.4.2.4 Leases

Lease transactions that constitute the functional equivalent of a loan or an extension of credit may be subject to section 23A. Such lease arrangements, in effect, are equivalent to a loan by the IDI and are essentially financing arrangements. Some of the characteristics that would normally cause a lease to be construed as a loan equivalent include the lessee’s having
responsibility for the servicing, maintenance, insurance, licensing, or risk of loss or damage, and the lessee’s having the option to purchase the equipment.

2020.1.4.2.5 Extensions of Credit Secured by Affiliate Securities—General Valuation Rule (Section 223.24(a) and (b))

Section 23A defines as a covered transaction an IDI’s acceptance of securities issued by an affiliate as collateral for a loan or extension of credit to any person or company.\(^{40}\) This type of covered transaction has two classes: one in which the only collateral for the loan is solely affiliate securities and another in which the loan is secured by a combination of affiliate securities and other collateral.\(^{40a}\)

Under the rule, if the credit extension is secured exclusively by affiliate securities, then the transaction is valued at the full amount of the extension of credit. This approach reflects the difficulty of measuring the actual value of typically untraded and illiquid affiliate securities and conservatively assumes that the value of the securities is equal to the full value of the loan that the securities collateralize. An exception is provided to the general rule when the affiliate securities held as collateral have a ready market (as defined by section 223.42 of the rule). In that case, the transaction may be valued at the fair market value of the affiliate securities. The exception grants relief in those circumstances when the value of the affiliate securities is independently verifiable by reference to transactions occurring in a liquid market.\(^{41}\)

Covered transactions of the second class, in which the credit extension is secured by affiliate securities and other collateral, are valued at the lesser of (1) the total value of the extension of credit minus the fair market value of the other collateral or (2) the fair market value of the affiliate securities (if the securities have a ready market). The rule’s ready-market requirement applies regardless of the amount of affiliate collateral.\(^{42}\)

2020.1.4.2.6 Extensions of Credit Secured by Affiliate Securities—Mutual Fund Shares

Section 23A(b)(7)(D) of the FRA defines as a covered transaction a member bank’s acceptance of securities issued by an affiliate as collateral for a loan or extension of credit to any person or company.

Section 223.24(c) of the rule provides an exemption for extensions of credit by a member bank that are secured by shares of an affiliated mutual fund. To qualify for the exemption, the transaction must meet several conditions. First, to ensure that the affiliate collateral is liquid and trades at a fair price, the affiliated mutual fund must be an open-end investment company that is registered with the SEC under the 1940 Act. Second, to ensure that the IDI can easily establish and monitor the value of the affiliate collateral, the affiliated mutual fund’s shares serving as collateral for the extension of credit must have a publicly available market price. Third, to reduce the IDI’s incentives to use these extensions of credit as a mechanism to support the affiliated mutual fund, the IDI and its affiliates must not own more than 5 percent of the fund’s shares (excluding certain shares held in a fiduciary capacity). Finally, the proceeds of the extension of credit must not be used to purchase the affiliated mutual fund’s shares serving as collateral or otherwise used to benefit an affiliate. In such circumstances, the IDI’s extension of credit would be covered by section 23A’s attribution rule. For example, an IDI proposes to lend $100 to a nonaffiliate secured exclusively by eligible affiliated mutual fund securities. The IDI knows that the nonaffiliate intends to use all the loan proceeds to purchase the eligible affiliated mutual fund securities that would serve as collateral for the loan. Under the attribution rule in section 223.16, the IDI must treat the loan to the nonaffiliate as a loan to an affiliate, and

---

\(^{40}\) See 12 U.S.C. 371(c)(b)(7)(D). This covered transaction only arises when the member bank’s loan is to a nonaffiliate.

Under section 23A, the securities issued by an affiliate are not acceptable collateral for a loan or extension of credit to any affiliate. (See 12 U.S.C. 371(c)(4)\(a\)) The proceeds of a loan that is secured by an affiliate’s securities are transferred to an affiliate by the unaffiliated borrower (for example, to purchase assets or securities from the inventory of an affiliate), the loan should be treated as a loan to the affiliate and the affiliate’s securities cannot be used to meet the collateral requirements of sections 23A. The loan must then be secured with other collateral in an amount and of a type that meets the requirements of section 23A for loans by an IDI to an affiliate.\(^{40a}\)

The securities issued by an affiliate cannot be used as collateral for a loan to any affiliate (12 U.S.C. 371(c)(4)).\(^{41}\) In either case, the transaction must comply with section 23B; that is, the IDI must obtain the same amount of affiliate securities as collateral on the credit extension that the IDI would obtain if the collateral were not affiliate securities.

\(^{42}\) Under the rule, an IDI may use the higher of the two valuation options for these transactions if, for example, the IDI does not have the procedures and systems in place to verify the fair market value of affiliate securities.
because securities issued by an affiliate are ineligible collateral under section 223.14, the loan would not be in compliance with section 223.14.

2020.1.4.3 Asset Purchases

2020.1.4.3.1 Purchase of Assets under Regulation W

Regulation W provides that a purchase of assets by an IDI from an affiliate initially must be valued at the total amount of consideration given by the IDI in exchange for the asset. (See section 223.22.) This consideration can take any form and includes an assumption of liabilities by the IDI. An assumption of liabilities can include a mortgage, other debt obligations, or the cost associated with the transfer of employees, such as pension obligations, bonuses, or accrued vacation.

Asset purchases are a covered transaction for an IDI for as long as the IDI holds the asset. The value of the covered transaction after the purchase may be reduced to reflect amortization or depreciation of the asset, to the extent that such reductions are consistent with GAAP and are reflected on the IDI’s financial statements.

Certain asset purchases by an IDI from an affiliate are not valued in accordance with the general asset-purchase valuation formula. First, if the IDI buys from one affiliate a loan made to a second affiliate, the IDI must value the transaction as a credit transaction with the second affiliate under section 223.21. Second, if the IDI buys from one affiliate a security issued by a second affiliate, the IDI must value the transaction as an investment in securities issued by the second affiliate under section 223.23. Third, if the IDI acquires the shares of an affiliate that becomes an operating subsidiary of the IDI after the acquisition, the IDI must value the transaction under section 223.31.

A special valuation rule applies to an IDI’s purchase of a line of credit or loan commitment from an affiliate. An IDI initially must value such asset purchases at the purchase price paid by the IDI for the asset plus any additional amounts that the IDI is obligated to provide under the credit facility.43 This special valuation rule ensures that there are limits on the amount of risk a company can shift to an affiliated IDI.

Section 23A(d)(6) provides an exemption for purchasing assets having a readily identifiable and publically available market quotation. Section 224.42(e) of the rule codified this exemption. Section 223.42(f) expands the statutory (d)(6) exemption to allow an IDI to purchase securities from an affiliate based on price quotes obtained from certain electronic screens so long as, among other things, (1) the selling affiliate is a broker-dealer registered with the SEC, (2) the securities are traded in a ready market and eligible for purchase by state IDIs, (3) the securities are not purchased within 30 days of an underwriting (if an affiliate of the IDI is an underwriter of the securities), and (4) the securities are not issued by an affiliate. See section 2020.1.10.2 for a further discussion of this exemption.

In contrast with credit transactions, an asset purchase from a nonaffiliate that later becomes an affiliate generally does not become a covered transaction for the purchasing IDI. However, if an IDI purchases assets from a nonaffiliate in contemplation that the nonaffiliate will become an affiliate of the IDI, the asset purchase becomes a covered transaction at the time the nonaffiliate becomes an affiliate. In addition, the IDI must ensure that the aggregate amount of the IDI’s covered transactions (including any such asset purchase from the nonaffiliate) would not exceed the quantitative limits of section 23A at the time the nonaffiliate becomes an affiliate.

The following examples are provided to assist IDIs in valuing purchases of assets from an affiliate. An IDI’s receipt of an encumbered asset from an affiliate ceases to be a covered transaction when, for example, the IDI sells the asset.

- **Cash purchase of assets.** An IDI purchases a pool of loans from an affiliate for $10 million. The IDI initially must value the covered transaction at $10 million. Going forward, if the borrowers repay $6 million of the principal amount of the loans, the IDI may value the covered transaction at $4 million.

- **Purchase of assets through an assumption of liabilities.** An affiliate of an IDI contributes real property with a fair market value of $200,000 to the IDI. The IDI pays the affiliate no cash for the property, but assumes a $50,000 mortgage on the property. The IDI...

---

43. A member bank would not be required to include unfunded, but committed, amounts in the value of the covered transaction if (1) the credit facility being transferred from the affiliate to the bank is unconditionally cancelable (without cause) at any time by the IDI and (2) the IDI makes a separate credit decision before each drawing under the facility (see 12 C.F.R. 223.22).
Transactions Between Member Banks and Their Affiliates—Sections 23A and 23B

2020.1.4.3.2 IDI’s Purchase of Securities Issued by an Affiliate

Section 23A includes as a covered transaction an IDI’s purchase of, or investment in, securities issued by an affiliate. Section 223.23 of the rule requires an IDI to value a purchase of, or investment in, securities issued by an affiliate (other than a financial subsidiary of the IDI) at the greater of the IDI’s purchase price or carrying value of the securities. An IDI that paid no consideration in exchange for affiliate securities has to value the covered transaction at no less than the IDI’s carrying value of the securities. In addition, if the IDI’s carrying value of the affiliate securities increased or decreased after the IDI’s initial investment (due to profits or losses at the affiliate), the amount of the IDI’s covered transaction would increase or decrease to reflect the IDI’s changing financial exposure to the affiliate. However, the amount of the IDI’s covered transaction cannot decline below the amount paid by the IDI for the securities.

Several important considerations support the general carrying-value approach of this valuation rule. First, the approach would require an IDI to reflect its investment in securities issued by an affiliate at carrying value throughout the life of the investment, even if the IDI paid no consideration for the securities. Second, the approach is supported by the terms of the statute, which defines both a “purchase of” and an “investment in” securities issued by an affiliate as a covered transaction. The statute’s “investment in” language indicates that Congress was concerned with an IDI’s continuing exposure to an affiliate through an ongoing investment in the affiliate’s securities.

Third, GLB Act amendments to section 23A supported the approach. The GLB Act defined a financial subsidiary of an IDI as an affiliate of the IDI, but specifically provides that the section 23A value of an IDI’s investment in securities issued by a financial subsidiary did not include retained earnings of the subsidiary. The negative implication from this provision is that the section 23A value of an IDI’s investment in other affiliates includes the affiliates’ retained earnings, which would be reflected in the IDI’s carrying value of the investment under the rule.

Finally, the carrying-value approach is consistent with the purposes of section 23A—mitigating the financial exposure of IDIs to their affiliates and promoting safety and soundness. The valuation rule requires an IDI to revalue upwards the amount of an investment in affiliate securities only when the IDI’s exposure to the affiliate increases (as reflected on the IDI’s financial statements) and the IDI’s capital increases to reflect the higher value of the investment. In these circumstances, the valuation rule merely reflects the IDI’s greater financial exposure to the affiliate and enhances safety and soundness by reducing the IDI’s ability to engage in additional transactions with an affiliate as the IDI’s exposure to that affiliate increases.

The valuation rule also provides that the covered-transaction amount of an IDI’s investment in affiliate securities can be no less than the purchase price paid by the IDI for the securities, even if the carrying value of the securities declines below the purchase price. This aspect of the valuation rule uses the IDI’s purchase price for the securities as a floor for valuing the covered transaction. First, it ensures that the amount of the covered transaction never falls below the amount of funds actually transferred by the IDI to the affiliate in connection with the investment. In addition, the purchase-price floor limits the ability of an IDI to provide additional funding to an affiliate as the affiliate approaches insolvency. If investments in securities issued by an affiliate were valued strictly at carrying value, then the IDI could lend more funds to the affiliate as the affiliate’s financial condition worsened. As the affiliate declined, the IDI’s carrying value of the affiliate’s securities would decline, the section 23A value of the IDI’s investment likely would decline, and, consequently, the IDI would be able to provide additional funding to the affiliate under section 23A. This type of increasing support for an affiliate in distress is what section 23A was intended to restrict.

The following examples are designed to assist IDIs in valuing purchases of, and investments in, securities issued by an affiliate:

- **Purchase of the debt securities of an affiliate.** The parent holding company of an IDI owns...
100 percent of the shares of a mortgage company. The IDI purchases debt securities issued by the mortgage company for $600. The initial carrying value of the securities is $600. The IDI initially must value the investment at $600.

- **Purchase of the shares of an affiliate.** The parent holding company of an IDI owns 51 percent of the shares of a mortgage company. The IDI purchases an additional 30 percent of the shares of the mortgage company from a third party for $100. The initial carrying value of the shares is $100. The IDI initially must value the investment at $100. Going forward, if the IDI’s carrying value of the shares declines to $40, the IDI must continue to value the investment at $100.

- **Contribution of the shares of an affiliate.** The parent holding company of an IDI owns 100 percent of the shares of a mortgage company and contributes 30 percent of the shares to the IDI. The IDI gives no consideration in exchange for the shares. If the initial carrying value of the shares is $300, then the IDI initially must value the investment at $300. Going forward, if the IDI’s carrying value of the shares increases to $500, the IDI must value the investment at $500.

2020.1.4.5 Issuance of a Letter of Credit or Guarantee

2020.1.4.5.1 Confirmation of a Letter of Credit Issued by an Affiliate

Section 23A includes as a covered transaction the issuance by an IDI of a letter of credit on behalf of an affiliate, including the confirmation of a letter of credit issued by an affiliate as a covered transaction. (See section 223.3(h)(5).) When an IDI confirms a letter of credit, it assumes the risk of the underlying transaction to the same extent as if it had issued the letter of credit. Accordingly, a confirmation of a letter of credit issued by an affiliate is treated in the same fashion as an issuance of a letter of credit on behalf of an affiliate.

2020.1.4.5.2 Credit Enhancements Supporting a Securities Underwriting

The definition of guarantee in section 23A does not include an IDI’s issuance of a guarantee in support of securities issued by a third party and underwritten by a securities affiliate of the IDI. Such a credit enhancement would not be issued “on behalf of” the affiliate. Although the guarantee does provide some benefit to the affiliate (by facilitating the underwriting), this benefit is indirect. The proceeds of the guarantee would not be transferred to the affiliate for purposes of the attribution rule of section 23A. Section 23B would apply to the transaction and, where an affiliate was issuer as well as underwriter, the transaction would be covered by section 23A because the credit enhancement would be on behalf of the affiliate.

2020.1.4.5.3 Cross-Guarantee Agreements and Cross-Affiliate Netting Arrangements

A cross-guarantee agreement among an IDI, an affiliate, and a nonaffiliate in which the nonaffiliate may use the IDI’s assets to satisfy the obligations of a defaulting affiliate is a guarantee for purposes of section 23A. The cross-guarantee arrangements among IDIs and their affiliates are subject to the quantitative limits and collateral requirements of section 23A. (See section 223.3(h)(5).)

As for cross-affiliate netting arrangements (CANAs), such arrangements involve an IDI, one or more affiliates of the IDI, and one or more nonaffiliates of the IDI, where a nonaffiliate is permitted to deduct obligations of an affiliate of the IDI to the nonaffiliate when settling the nonaffiliate’s obligations to the IDI. These arrangements also would include agreements in which an IDI is required or permitted to add the obligations of an affiliate of the IDI to a nonaffiliate when determining the IDI’s obligations to the nonaffiliate. These types of CANAs expose an IDI to the credit risk of its affiliates because the IDI may become liable for the obligations of its affiliates. Because the exposure of an IDI to an affiliate in such an arrangement resembles closely the exposure of an IDI when it issues a guarantee on behalf of an affiliate, the rule explicitly includes such arrangements in the definition of covered transaction. Accordingly, the quantitative limits of section 23A would prohibit an IDI from entering into such a CANA to the extent that the

---

44. See UCC 5-107(2).
netting arrangement does not cap the potential exposure of the IDI to the participating affiliate (or affiliates).

2020.1.4.5.4 Keepwell Agreements

In a keepwell agreement between an IDI and an affiliate, the IDI typically commits to maintain the capital levels or solvency of the affiliate. The credit risk incurred by the IDI in entering into such a keepwell agreement is similar to the credit risk incurred by an affiliate in connection with issuing a guarantee on behalf of an affiliate. As a consequence, keepwell agreements generally should be treated as guarantees for purposes of section 23A and, if unlimited in amount, would be prohibited by the quantitative limits of section 23A.

2020.1.4.5.5 Prohibition on the Purchase of Low-Quality Assets

Section 23A generally prohibits the purchase by an IDI of a low-quality asset from an affiliate.47 In addition, an IDI and its subsidiaries cannot purchase or accept as collateral a low-quality asset from an affiliate. Section 23A defines a low-quality asset to include (1) an asset classified as "substandard," "doubtful," or "loss," or treated as "other loans specially mentioned," in the most recent report of examination or inspection by a federal or state supervisory agency (a "classified asset"), (2) an asset in nonaccrual status, (3) an asset on which payments are more than 30 days past due in the payment of principal or interest, or (4) an asset whose terms have been renegotiated or compromised due to the deteriorating financial condition of the obligor. Any asset meeting one of the above four criteria, including securities and real property, is a low-quality asset.

Regulation W expands the definition of low-quality assets in several respects. (See 12 C.F.R. 223.3(v).) First an asset may be identified by examiners as a low-quality asset if they represent credits to countries that are not complying with their external debt-service obligations but are taking positive steps to restore debt service through economic adjustment measures, generally as part of an International Monetary Fund Program. Although such assets may not be considered classified assets, examiners are to consider these assets in their assessment of an IDI’s asset quality and capital adequacy.

Second, the rule considers a financial institution’s use of its own internal asset-classification systems. The rule includes within the definition of low-quality asset not only assets classified during the last examination but also assets classified or treated as special mention under the institution’s internal classification system (or assets that received an internal rating that is substantially equivalent to classified or special mention in such an internal system).

The purchase by an IDI from an affiliate of assets that have been internally classified raises potentially significant safety-and-soundness concerns. The Board expects companies with internal rating systems to use the systems consistently over time and over similar classes of assets and will view as an evasion of section 23A any company’s deferral or alteration of an asset’s rating to facilitate sale of the asset to an affiliated institution.

Finally, the rule defines low-quality asset to include foreclosed property designated “other real estate owned” (OREO), until it is reviewed by an examiner and receives a favorable classification. It further defines as a low-quality asset any asset (not just real estate) that is acquired in satisfaction of a debt previously contracted (not just through foreclosure) if the asset has not yet been reviewed in an examination or inspection. Under the rule, if a particular asset is good collateral taken from a bad borrower, the asset should cease to be a low-quality asset upon examination.

Section 23A provides a limited exception to the general rule prohibiting purchase of low-quality assets if the IDI performs an independent credit evaluation and commits to the purchase of the asset before the affiliate acquires the asset.48 Section 223.15 of the rule also provides an exception from the prohibition on the purchase by an IDI of a low-quality asset from an affiliate for certain loan renewals. The rule allows an IDI that purchased a loan participation from an affiliate to renew its participation in the loan, or provide additional funding under the existing participation, even if the underlying loan had become a low-quality asset, so long as certain criteria were met. These renewals or additional credit extensions may enable both the affiliate and the participating IDI to avoid or minimize potential losses. The exception is

---

47. 12 U.S.C. 371c(a)(3). Section 23A does not prohibit an affiliate from donating a low-quality asset to a member bank, so long as the bank provides no consideration for the asset and no liabilities are associated with the asset.

available only if (1) the underlying loan was not a low-quality asset at the time the IDI purchased its participation and (2) the proposed transaction would not increase the IDI’s proportional share of the credit facility. The IDI must also obtain the prior approval of its entire board of directors (or its delegates) and it must give a 20 days’ post-consummation notice to its appropriate federal banking agency. An IDI is permitted to increase its proportionate share in a restructured loan by 5 percent (or by a higher percentage with the prior approval of the IDI’s appropriate federal banking agency). The scope of the exemption includes renewals of participations in loans originated by any affiliate of the IDI (not just affiliated IDIs).

2020.1.5 COLLATERAL FOR CERTAIN TRANSACTIONS WITH AFFILIATES

Section 23A requires a member bank’s use of collateral for certain transactions between an IDI and its affiliates. Each loan or extension of credit to an affiliate, or guarantee, acceptance, or letter of credit issued on behalf of an affiliate by an IDI or its subsidiary, and any credit exposure of an IDI or a subsidiary to an affiliate resulting from a securities borrowing or lending transaction, or a derivative transaction, shall be secured at all times by collateral (“credit exposure”) at the amounts required by the statute. The required collateral varies, depending on the type of collateral used to secure the transaction. The specific collateral requirements are—

1. 100 percent of the amount of such loan or extension of credit, guarantee, acceptance, letter of credit or credit exposure, if the collateral is composed of—
   a. obligations of the United States or its agencies;
   b. obligations fully guaranteed by the United States or its agencies as to principal and interest;
   c. notes, drafts, bills of exchange, or bank-
      er’s acceptances that are eligible for redis-
      count or purchase by a Federal Reserve
      Bank; or
   d. a segregated, earmarked deposit account
      with the member bank that is for the sole
      purpose of securing credit transactions
      between the member bank and its affili-
      ates and is identified as such.

2. 110 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of obligations of any state or political subdi-

3. 120 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of other debt instruments, including receiv-

4. 130 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of stock, leases, or other real or personal property.

For example, an IDI makes a $1,000 loan to an affiliate. The affiliate posts as collateral for the loan $500 in U.S. Treasury securities, $480 in corporate debt securities, and $130 in real estate. The loan satisfies the collateral require-
ments of section 23A because $500 of the loan is 100 percent secured by obligations of the United States, $400 of the loan is 120 percent secured by debt instruments, and $100 of the loan is 130 percent secured by real estate. The statute prohibits an IDI from counting a low-
quality asset toward section 23A’s collateral requirements for credit transactions with affili-
ates.

An IDI must maintain a perfected security interest at all times in the collateral that secures the credit transaction. Each loan or extension of credit to an affiliate or guarantee, acceptance, credit exposure or letter of credit issued on behalf of an affiliate (herein referred to as credit transactions) by an IDI or its subsidiary must be secured at the time of the transaction by collateral.

2020.1.5.1 Collateral Requirements in Regulation W

The collateral requirements for credit transactions are found in section 23A (c) of the statute. Section 23A (c)(1) requires that an IDI meet the collateral requirements of the statute at all times. A low-quality asset cannot be used to satisfy the

---

49. The IDI must perfect the security interest in the collat-
eral (Fitzpatrick v. FDIC, 765 F.2d 569 (6th Cir. 1985). A purchase of assets from an affiliate does not require collateral.
51. “Credit extended” means the loan or extension of credit, guarantee, acceptance, or letter of credit.
52. 12 U.S.C. 37l(c)(1).
53. Regulation A includes a representative list of accept-
able government obligations (12 C.F.R. 201.108).
statute’s or regulation’s collateral requirements, but can be taken as additional collateral.

2020.1.5.1.1 Deposit Account Collateral

Under section 23A, an IDI may satisfy the collateral requirements of the statute by securing a credit transaction with an affiliate with a “segregated, earmarked deposit account” maintained with the IDI in an amount equal to 100 percent of the credit extended. \(^{55}\) IDIs may secure covered transactions with omnibus deposit accounts so long as the IDI takes steps to ensure that the omnibus deposit accounts fully secure the relevant covered transactions. Such steps might include substantial overcollateralization or the use of subaccounts or other recordkeeping devices to match deposits with covered transactions. To obtain full credit for any deposit accounts taken as section 23A collateral, IDIs must ensure that they have a perfected, first-priority security interest in the accounts. (See section 223.14(b)(1)(i)(D).)

2020.1.5.1.2 Ineligible Collateral

The purpose of section 23A’s collateral requirements is to ensure that IDIs that engage in credit transactions with affiliates have legal recourse, in the event of affiliate default, to tangible assets with a value at least equal to the amount of the credit extended.

The statute recognizes that certain types of assets are not appropriate to serve as collateral for credit transactions with an affiliate. In particular, the statute provides that low-quality assets and securities issued by an affiliate are not eligible collateral for such covered transactions. Under section 223.14(c) of the rule, intangible assets also are not deemed acceptable to meet the collateral requirements imposed by section 23A. \(^{56}\) Intangible assets, including servicing assets, are particularly hard to value, and an IDI may have significant difficulty in collecting and selling such assets in a reasonable period of time.

Section 23A(c) requires that credit transactions with an affiliate be “secured” by collateral. A credit transaction between an IDI and an affiliate supported only by a guarantee or letter of credit from a third party does not meet the statutory requirement that the credit transaction be secured by collateral. Guarantees and letters of credit often are subject to material adverse change clauses and other covenants that allow the issuer of the guarantee or letter of credit to deny coverage. Letters of credit and guarantees are not balance-sheet assets under GAAP and, accordingly, would not constitute “real or personal property” under section 23A. There is a particularly significant risk that an IDI may have difficulty collecting on a guarantee or letter of credit provided by a nonaffiliate on behalf of an affiliate of the IDI. Accordingly, guarantees and letters of credit are not acceptable section 23A collateral.

As noted above, section 23A prohibits an IDI from accepting securities issued by an affiliate as collateral for an extension of credit to any affiliate. The rule clarifies that securities issued by the IDI itself also are not eligible collateral to secure a credit transaction with an affiliate. Equity securities issued by a lending IDI, and debt securities issued by a lending IDI that count as regulatory capital of the IDI, are not eligible collateral under section 23A. If an IDI was forced to foreclose on a credit transaction with an affiliate secured by such securities, the IDI may be unwilling to liquidate the collateral promptly to recover on the credit transaction because the sale might depress the price of the IDI’s outstanding securities or result in a change in control of the IDI. In addition, to the extent that an IDI is unable or unwilling to sell such securities acquired through foreclosure, the transaction would likely result in a reduction in the IDI’s capital, thereby offsetting any potential benefit provided by the collateral.

2020.1.5.1.3 Perfection and Priority

Under section 223.14(d) of the rule, an IDI’s security interest in any collateral required by section 23A must be perfected in accordance with applicable law to ensure that an IDI has good access to the assets serving as collateral for its credit transactions with affiliates. This requirement ensures that the IDI has the legal right to realize on the collateral in the case of default, including a default resulting from the affiliate’s insolvency or liquidation. An IDI also is required to either obtain a first-priority security interest in the required collateral or deduct from the amount of collateral obtained by the IDI the lesser of (1) the amount of any security

\(^{56}\) The rule does not confine the definition of intangible assets by reference to GAAP.
interests in the collateral that are senior to that obtained by the IDI or (2) the amount of any credits secured by the collateral that are senior to that of the IDI. For example, if an IDI lends $100 to an affiliate and takes as collateral a second lien on a parcel of real estate worth $200, the arrangement would only satisfy the collateral requirements of section 23A if the affiliate owed the holder of the first lien $70 or less (a credit transaction secured by real estate must be secured at 130 percent of the amount of the transaction).

The rule includes the following example of how to compute the section 23A collateral value of a junior lien: An IDI makes a $2,000 loan to an affiliate. The affiliate grants the IDI a second-priority security interest in a piece of real estate valued at $3,000. Another institution that previously lent $1,000 to the affiliate has a first-priority security interest in the entire parcel of real estate. This transaction is not in compliance with the collateral requirements of this section. Because of the existence of the prior third-party lien on the real estate, the effective value of the real estate collateral for the IDI for purposes of this section is only $2,000—$600 less than the amount of real estate collateral required by this section for the transaction ($2,000 × 130 percent = $2,600).

2020.1.5.1.4 Unused Portion of an Extension of Credit

Section 23A requires that the “amount” of an extension of credit be secured by the statutorily prescribed levels of collateral. Under the statute, an IDI provides a line of credit to an affiliate, it must secure the full amount of the line of credit throughout the life of the credit. Section 223.14(f)(3) of the rule, however, provides an exemption to the collateral requirements of section 23A for the unused portion of an extension of credit to an affiliate so long as the IDI does not have any legal obligation to advance additional funds under the credit facility until the affiliate has posted the amount of collateral required by the statute with respect to the entire used portion of the extension of credit. In such credit arrangements, securing the unused portion of the credit line is unnecessary from a safety-and-soundness perspective because the affiliate cannot require the IDI to advance additional funds without posting the additional collateral required by section 23A. If an IDI voluntarily advances additional funds under such a credit arrangement without obtaining the additional collateral required under section 23A to secure the entire used amount (despite its lack of a legal obligation to make such an advance), the Board views this action as a violation of the collateral requirements of the statute. The entire amount of the line counts against the IDI’s quantitative limit, even if the line of credit does not need to be secured.

2020.1.5.1.5 Purchasing Affiliate Debt Securities in the Secondary Market

An IDI’s investment in the debt securities issued by an affiliate is an extension of credit by the IDI to the affiliate and thus is subject to section 23A’s collateral requirements. Section 223.14(f)(3) of the rule provides an exemption that permits IDIs in certain circumstances to purchase debt securities issued by an affiliate without satisfying the collateral requirements of section 23A. The exemption is available where an IDI purchases an affiliate’s debt securities from a third party in a bona fide secondary-market transaction. When an IDI buys an affiliate’s debt securities in a bona fide secondary-market transaction, the risk that the purchase is designed to shore up an ailing affiliate is reduced. Any purchase of affiliate debt securities that qualifies for this exemption would still remain subject to the quantitative limits of section 23A and the market-terms requirement of section 23B. In analyzing an IDI’s good faith under this exemption transaction, examiners should look at (1) the time elapsed between the original issuance of the affiliate’s debt securities and the IDI’s purchase, (2) the existence of any relevant agreements or relationships between the IDI and the third-party seller of the affiliate’s debt securities, (3) any history of IDI financing of the affiliate, and (4) any other relevant information.

2020.1.5.1.6 Credit Transactions with Nonaffiliates that Become Affiliates

IDIs sometimes lend money to, or issue guarantees on behalf of, unaffiliated companies that later become affiliates of the IDI. Section 223.21(b)(2) provides transition rules that...
exempt credit transactions from the collateral requirements in situations in which the IDI entered into the transactions with the nonaffiliate at least one year before the nonaffiliate became an affiliate of the IDI. For example, an IDI with capital stock and surplus of $1,000 and no outstanding covered transactions makes a $120 unsecured loan to a nonaffiliate. The IDI does not make the loan in contemplation of the nonaffiliate becoming an affiliate. Nine months later, the bank holding company purchases all the stock of the nonaffiliate, thereby making the nonaffiliate an affiliate of the IDI. The IDI is not in violation of the quantitative limits of the rule’s section 223.11 or 223.12 at the time of the stock acquisition. The IDI is, however, prohibited from engaging in any additional covered transactions with the new affiliate at least until such time as the value of the loan transaction falls below 10 percent of the IDI’s capital stock and surplus, and the transaction counts toward the 20 percent limit for transactions with all affiliates. In addition, the IDI must bring the loan into compliance with the collateral requirements of section 223.14 promptly after the stock acquisition. The IDI is not in violation of the quantitative limits of the rule’s section 223.11 or 223.12 at the time of the completion of the credit transaction and of the affiliation.

2020.1.6 LIMITATIONS ON COLLATERAL

IDIs may accept as collateral for covered transactions receivables, leases, or other real or personal property. The following are limitations and collateral restrictions:

1. Any collateral that is subsequently retired or amortized must be replaced by additional eligible collateral. This is done to keep the percentage of the collateral value relative to the amount of the outstanding loan or extension of credit, guarantee, acceptance, or letter of credit equal to the minimum percentage that was required at the inception of the transaction.

2. A low-quality asset is not acceptable as collateral for a loan or extension of credit to, or for a guarantee, acceptance, or letter of credit issued on behalf of, an affiliate, or credit exposure to an affiliate resulting from a securities borrowing or lending transaction, or derivative transaction.

3. Securities or other debt obligations issued by an affiliate of an IDI shall not be acceptable as collateral for a loan or extension of credit to, or for a guarantee, acceptance, or letter of credit issued on behalf of, or credit exposure from a securities borrowing or lending transaction, or derivative transaction to, that affiliate or any other affiliate of the IDI.

The above collateral requirements are not applicable to an acceptance that is already fully secured either by attached documents or by other property that is involved in the transaction and has an ascertainable market value.

2020.1.7 DERIVATIVE TRANSACTIONS WITH AFFILIATES

2020.1.7.1 Derivative Transactions between Insured Depository Institutions and Their Affiliates

Derivative transactions between an IDI and its affiliates generally arise from the risk-management needs of the institution or the affiliate. Transactions arising from the institution’s needs typically occur when an institution enters into a swap or other derivative contract with a customer but chooses not to hedge directly the market risk generated by the derivative contract, or when the institution is unable to hedge the risk directly because it is not authorized to hold the hedging asset. To manage the market risk, the institution may have an affiliate acquire the hedging asset. The institution would then do a bridging derivative transaction between itself and the affiliate maintaining the hedge.

Other derivative transactions between an IDI and its affiliate are affiliate-driven. To accomplish its asset-liability-management goals, an institution’s affiliate may enter into an interest-rate or foreign-exchange derivative with the institution. For example, an institution’s holding company may hold a substantial amount of floating-rate assets but issue fixed-rate debt securities to obtain cheaper funding. The holding company may then enter into a fixed-to-floating interest-rate swap with its subsidiary member bank to reduce the holding company’s interest-rate risk.
transactions with counterparties that reference the obliga-
tions of an affiliate of the institution and that are
the functional equivalent of a guarantee by the
institution on behalf of an affiliate should be
treated as a guarantee by the institution on
behalf of an affiliate for the purposes of
section 23A. (The novation of a derivative between
an IDI and its affiliate is treated as a purchase
under the statute.)

2020.1.7.1.2 Section 23B and
Regulation W Regarding Derivative
Transactions

Derivative transactions between an IDI and an
affiliate also are subject to section 23B of the
FRA under the express terms of the statute.59

Regulation W clarifies further that the transac-
tions are subject to the market-terms require-
ment of section 23B of the FRA (see sec-
tion 223.51). The rule requires IDIs to comply
strictly with section 23B in their derivative
transactions with affiliates. Section 23B requires
an institution to treat an affiliate no better than a
similarly situated nonaffiliate. To comply with
section 23B of the FRA, each institution should
have in place credit limits on its derivatives
exposure to affiliates that are at least as strict as
the credit limits the institution imposes on unaf-
affiliated companies that are engaged in similar
businesses and are substantially equivalent in
size and credit quality. Similarly, each institu-
tion should monitor derivatives exposure to
affiliates at least as rigorously as it monitors
derivatives exposure to comparable unaffiliated
companies. In addition, each institution should
price and require collateral in its derivative
transactions with affiliates in a way that is at
least as favorable to the institution as the way in
which it would price or require collateral in a
derivative transaction with comparable unaffili-
ated counterparties.

Section 23B generally does not allow an IDI
to use with an affiliate the terms and conditions
it uses with its most creditworthy unaffiliated
customer unless the institution can demonstrate
that the affiliate is of comparable creditworthi-
ness as its most creditworthy unaffiliated cus-
tomer. Instead, section 23B requires that an
affiliate be treated comparably (with respect to
terms, conditions, and credit limits) to the
majority of third-party customers engaged in the
same business, and having comparable credit
quality and size as the affiliate. Because an IDI
generally has the strongest credit rating within a
holding company, the Board generally would
not expect an affiliate to obtain better terms and
conditions from an IDI than the institution
receives from its major unaffiliated counterpar-
ties. In addition, market terms for derivatives
among major financial institutions generally
include daily marks to market and two-way
collateralization above a relatively small expo-
sure threshold.

59. In addition to applying to covered transactions, as
defined in section 23A of the FRA, the market-terms require-
2020.1.7.1.3 Covering Derivatives That Are the Functional Equivalent of a Guarantee

Although most derivatives are not treated as covered transactions, section 223.33 of the rule provides that credit derivatives between an IDI and a nonaffiliate in which the IDI protects the nonaffiliate from a default on, or a decline in the value of, an obligation of an affiliate of the IDI are covered transactions under section 23A. Such derivative transactions are viewed as guarantees by a member bank on behalf of an affiliate (and, hence, are covered transactions) under section 23A.

The rule provides that these credit derivatives are covered transactions under section 23A and gives several examples. An IDI is not allowed to reduce its covered transaction amount for these derivatives to reflect hedging positions established by the IDI with third parties. A credit derivative is treated as a covered transaction only to the extent that the derivative provides credit protection with respect to obligations of an affiliate of the IDI.

2020.1.8 INTRADAY EXTENSIONS OF CREDIT

An extension of credit under section 23A of the FRA includes the credit exposure arising from intraday extensions of credit by IDIs to their affiliates. IDIs regularly provide transaction accounts to their affiliates in conjunction with providing payment and securities clearing services. As in the case of unaffiliated commercial customers, these accounts are occasionally subject to overdrafts during the day that are repaid in the ordinary course of business.

Intraday extensions of credit by an IDI to an affiliate are subject to the market-terms requirement of section 23B under the rule. The rule also requires that, under section 23A, institutions establish and maintain policies and procedures that are reasonably designed to manage the credit exposure arising from an institution’s intraday extensions of credit to affiliates. The policies and procedures must, at a minimum, provide for monitoring and controlling the institution’s intraday credit exposure to each affiliate, and to all affiliates in the aggregate, and ensure that the institution’s intraday credit extensions to affiliates comply with section 23B.

Section 223.42(l) of the rule provides that intraday credit extensions by an IDI to an affiliate are section 23A covered transactions but exempts all such intraday credit extensions from the quantitative and collateral requirements of section 23A if the IDI (1) maintains policies and procedures for the management of intraday credit exposure and (2) has no reason to believe that any affiliate receiving intraday credit would have difficulty repaying the credit in accordance with its terms. The policies and procedures are to be established and maintained for—

1. monitoring and controlling the credit exposure arising at any one time from the IDI’s intraday extensions of credit to each affiliate and all affiliates in the aggregate and
2. ensuring that any intraday extensions of credit by the IDI to an affiliate comply with the market-terms requirement of section 223.51 of the rule.

2020.1.8.1 Standard under Which the Agencies May Grant Additional Exemptions

The Dodd-Frank Act amended section 23A to authorize the appropriate federal banking agency to exempt transactions or relationships by order if the exemption would be in the public interest and consistent with the purposes of section 23A. The exemption determination requires the concurrence of the Board. The FDIC has a 60-day period to determine whether the requested exemption presents an unacceptable risk to the insurance fund. The request should describe in detail the transaction or relationship, and why it meets the public interest standard of the statute. The Board has approved a number of exemptions, most of which involve corporate reorganizations. These exemptions are available on the Board’s website, www.federalreserve.gov/boarddocs/legalint/FederalReserveAct.

---

60. In most instances, the covered-transaction amount for such a credit derivative would be the notional principal amount of the derivative.
Section 23A exempts seven transactions or relationships from its quantitative limits and collateral requirements. Regulation W, subpart E, clarifies these exemptions and exempts a number of additional types of transactions. The Board reserves the right to revoke or modify any additional exemption granted by the Board in Regulation W, if the Board finds that the exemption is resulting in unsafe or unsound banking practices. The Board also reserves the right to terminate the eligibility of a particular IDI to use any such exemption if the IDI’s use of the exemption is resulting in unsafe or unsound banking practices.

2020.1.9.1 Covered Transactions Exempt from the Quantitative Limits and Collateral Requirements

Under the rule’s section 223.41, the quantitative limits (sections 223.11 and 223.12) and the collateral requirements (section 223.14) do not apply to the following transactions. The transactions are, however, subject to the safety-and-soundness requirement (section 223.13) and the prohibition on the purchase of a low-quality asset (section 223.15).

2020.1.9.1.1 Parent Institution/Subsidiary Institution Transactions

Transactions with an IDI are exempt from the quantitative limits and collateral requirements (section 223.14) if the member bank controls 80 percent or more of the voting securities of the IDI or the depository institution controls 80 percent or more of the voting securities of the IDI.

2020.1.9.1.2 Sister-Bank Exemption (section 223.41(b))

Regulation W exempts transactions with an IDI if the same company controls 80 percent or more of the voting securities of the member bank and the IDI. In addition, the statute provides that covered transactions between sister banks must be consistent with safe and sound banking practices.

The sister-bank exemption generally applies only to transactions between IDIs. The rule’s definition of affiliate excludes uninsured depository institution subsidiaries of a member bank. Covered transactions between a member bank and a parent uninsured depository institution or a commonly controlled uninsured depository institution, under the rule, generally would be subject to section 23A, whereas covered transactions between a member bank and a subsidiary uninsured depository institution would not be subject to section 23A.

The sister-bank exemption, by its terms, only exempts transactions by a member bank with a sister-bank affiliate; hence, the sister-bank exemption cannot exempt a member bank’s extension of credit or other covered transaction to an affiliate that is not a sister bank (even if the extension of credit was purchased from a sister bank). For example, an IDI purchases from Sister-Bank Affiliate A a loan to Affiliate B in a purchase that qualifies for the sister-bank exemption in section 23A. The IDI’s asset purchase from Sister-Bank Affiliate A would be an exempt covered transaction under section 223.41(b), but the member bank also would have acquired an extension of credit to Affiliate B, which would be a covered transaction between the IDI and Affiliate B under section 223.3(h)(1) that does not qualify for the sister-bank exemption.

2020.1.9.1.3 Purchase of Loans on a Nonrecourse Basis from an Affiliated IDI

Banks that are commonly controlled (i.e., at least 25 percent common ownership) can...
purchase loans on a nonrecourse basis. This allows chain banks and banks in companies that are not owned 80 percent by the same company to achieve the same efficiency as sister banks. The exemption only applies to the purchase of loans; other covered transactions, such as extensions of credit, are not exempt.

2020.1.9.1.4 Internal Corporate Reorganizations

Section 223.41(d) of the rule provides an exemption for asset purchases by an IDI from an affiliate that is part of a one-time internal corporate reorganization of a holding company. The exemption includes purchases of assets in connection with a transfer of securities issued by an affiliate to an IDI, as described in section 223.31(a).

Under this exemption, an IDI would be permitted to purchase assets (other than low-quality assets) from an affiliate (including in connection with an affiliate share transfer that section 223.31 of the rule treats as a purchase of assets) that are exempt from the quantitative limits of section 23A if the following conditions are met:

First, the purchase must be part of an internal corporate reorganization of a holding company that involves the transfer of all or substantially all of the shares or assets of an affiliate or of a division or department of an affiliate. The asset purchase must not be part of a series of periodic, ordinary-course asset transfers from an affiliate to an IDI. Second, the IDI’s holding company must provide the Board with contemporaneous notice of the transaction and must commit to the Board to make the IDI whole, for a period of two years, for any transferred assets that become low-quality assets. Third, a majority of the IDI’s directors must review and approve the transaction before consummation. Fourth, the section 23A value of the covered transaction must be less than 10 percent of the IDI’s capital stock and surplus (or up to 25 percent of the IDI’s capital stock and surplus with the prior approval of the appropriate federal banking agency) for the IDI. Fifth, the holding company and all its subsidiary depository institutions must be well capitalized and well managed and must remain well capitalized upon consummation of the transaction.

2020.1.9.2 Other Covered Transactions Exempt from the Quantitative Limits, Collateral Requirements, and Low-Quality-Asset Prohibition

The quantitative limits (sections 223.11 and 223.12), the collateral requirements (section 223.14), and the prohibition on the purchase of a low-quality asset (section 223.15) do not apply to the following exempted transactions (see section 223.42) and certain conditions. The transactions are, however, subject to the safety-and-soundness requirement (section 223.13). Detailed conditions or restrictions pertaining to these exemptions are discussed after this list:

1. Making correspondent banking deposits in an affiliated depository institution (as defined in section 3 of the FDI Act (12 U.S.C. 1813) or in an affiliated foreign bank that represents an ongoing, working balance maintained in the ordinary course of correspondent business
2. Giving immediate credit to an affiliate for uncollected items received in the ordinary course of business
3. Transactions secured by cash or U.S. government securities
4. Purchasing securities of a servicing affiliate, as defined by section 4(c)(1) of the BHC Act

66. See 1998 Fed. Reg. Bull. 985 and 1013-14. 67. The IDI must provide the Board, as well as the appropriate federal agency, a notice that describes the primary business activities of the affiliate whose shares or assets are being transferred to the IDI and must indicate the anticipated date of the reorganization.

The holding company can meet these criteria by either repurchasing the assets at book value plus any write-down that has been taken or by making a quarterly cash contribution to the bank equal to the book value plus any write-downs that have been taken by the bank. The purchase or payment must be made within 30 days of each quarter end. In addition, if a cash payment is made, the IDI will hold an amount of risk-based capital equal to the book value of any transferred assets that become low-quality so long as the IDI retains ownership or control of the transferred asset. For example, under this dollar-for-dollar capital requirement, the risk-based capital charge for each transferred low-quality loan asset would be 100 percent (equivalent to a 1250 percent risk weight), rather than the 8 percent requirement (equivalent to a 100 percent risk weight) that would apply to a similar defaulted loan asset that is not a part of the transferred asset pool. See the Board’s letter dated December 21, 2007, to Andres L. Navarette (Capital One Financial Corp.). Once the capital pool has been allocated to specific assets as described above, the capital cannot be applied to other low-quality assets if the initial low-quality asset returns to performing status. The IDI can only apply the allocated capital pool to new assets if the initial assets are fully paid or sold.
5. Purchasing certain liquid assets
6. Purchasing certain marketable securities
7. Purchasing certain municipal securities
8. Purchasing from an affiliate an extension of credit subject to a repurchase agreement that was originated by an IDI and sold to the affiliate subject to a repurchase agreement or with recourse
9. Asset purchases from an affiliate by a newly formed IDI, if the appropriate federal banking agency for the IDI has approved the asset purchase in writing in connection with the review of the formation of the IDI
10. Transactions approved under the Bank Merger Act that involve affiliated IDIs or an IDI and the U.S. branches and agencies of a foreign bank
11. Purchasing, on a nonrecourse basis, an extension of credit from an affiliate under certain conditions
12. Intraday extensions of credit
13. Riskless-principal transactions

2020.1.9.2.1 Correspondent Banking

Section 23A exempts from its quantitative limits and collateral requirements a deposit by an IDI in an affiliated IDI or affiliated foreign bank that is made in the ordinary course of correspondent business, subject to any restrictions that the Board may impose. Section 223.42(a) of the rule further provides that such deposits must represent ongoing, working balances maintained by the IDI in the ordinary course of conducting the correspondent business. Although not specified by section 23A or the Home Owners’ Loan Act (HOLA), the rule also provides that correspondent deposits in an affiliated insured savings association are exempt if they otherwise meet the requirements of the exemption.

2020.1.9.2.2 Secured Credit Transactions

Section 23A and section 223.42(c) of the rule exempt any credit transaction by an IDI with an affiliate that is “fully secured” by obligations of the United States or its agencies, or obligations that are fully guaranteed by the United States or its agencies, as to principal and interest.

---

70. Unlike the sister-bank exemption, the exemption for correspondent banking deposits applies to deposits placed by a member bank in an uninsured depository institution or foreign bank.
71. 12 U.S.C. 371c(d)(4). A partial list of such obligations can be found in the rule’s section 201.108 (12 C.F.R. 201.108).
2020.1.10.2 Purchases of Assets with Readily Identifiable Market Quotes

Section 23A(d)(6) exempts the purchase of assets by an IDI from an affiliate if the assets have a “readily identifiable and publicly available market quotation” and are purchased at their current market quotation. The rule (section 223.42(e)) limits the availability of this exemption (the (d)(6) exemption) to purchases of assets with market prices that are recorded in widely disseminated publications that are readily available to the general public, such as newspapers with a national circulation. Because as a general matter only exchange-traded assets are recorded in such publications, this test has ensured that the qualifying assets are traded actively enough to have a true “market quotation” and that examiners can verify that the assets are purchased at their current market quotation. The rule applies if the asset is purchased at or below the asset’s current market quotation.73

The (d)(6) exemption may apply to a purchase of assets that are not traded on an exchange. In particular, purchases of foreign exchange, gold, and silver, and purchases of over-the-counter (OTC) securities and derivative contracts whose prices are recorded in widely disseminated publications, may qualify for the (d)(6) exemption.

If an IDI purchases from one affiliate, the securities issued by another affiliate, the IDI has engaged in two types of covered transactions: (1) the purchase of securities from an affiliate and (2) the investment in securities issued by an affiliate. Under the rule, although the (d)(6) exemption may exempt the one-time asset purchase from the first affiliate, it would not exempt the ongoing investment in securities being issued by a second affiliate.

2020.1.10.3 Purchasing Certain Marketable Securities

Regulation W provided an additional exemption from section 23A for certain purchases of securities by a member bank from an affiliate. The rule expanded the statutory (d)(6) exemption to allow a member bank to purchase securities from an affiliate based on price quotes obtained from certain electronic services so long as, among other things, the selling affiliate is a broker-dealer registered with the SEC, the securities have a ready market and are eligible for purchase by state member banks, the securities are not purchased within 30 days of an underwriting (if an affiliate of the bank is an underwriter of the securities), and the securities are not issued by an affiliate.

2020.1.10.3.1 Broker-Dealer Requirement and Securities Purchases from Foreign Broker-Dealers

Under the Regulation W exemption, the selling affiliate must be a broker-dealer securities affiliate that is registered with the Securities and Exchange Commission (SEC). Broker-dealers that are registered with the SEC are subject to supervision and examination by the SEC and are required by SEC regulations to keep and maintain detailed records concerning each securities transaction conducted by the broker-dealer. In addition, SEC-registered broker-dealers have experience in determining whether a security has a “ready market” under SEC regulations. The rule does not expand the exemption to include securities purchases from foreign broker-dealers. The rule explicitly provides, however, that an IDI may request that the Board exempt securities purchases from a particular foreign broker-dealer, and the Board would consider these requests on a case-by-case basis in light of all the facts and circumstances.

2020.1.10.3.2 Securities Eligible for Purchase by a State Member Bank

The exemption requires that the IDI’s purchase of securities be eligible for purchase by a state member bank. For example, the Board determined that a member bank may purchase equity securities from an affiliate, if the purchase is made to hedge the member bank’s permissible customer-driven equity derivative transaction. The purchase must be treated as a purchase of a security on the Call Report.

73. The rule provides that a U.S. government obligation is an eligible (d)(6) asset only if the obligation’s price is quoted routinely in a widely disseminated publication that is readily available to the general public. Although all U.S. government obligations have low credit risk, not all U.S. government obligations trade in liquid markets at a publicly available market quotation.
2020.1.10.3.3 No Purchases Within 30 Days of an Underwriting

The exemption generally prohibits an IDI from using the exemption to purchase securities during an underwriting, or within 30 days of an underwriting, if an affiliate of the IDI is an underwriter of the securities. This provision applies unless the security is purchased as part of an issue of obligations of, or obligations fully guaranteed as to principal and interest by, the United States or its agencies. The rule includes the 30-day requirement because of the uncertain and volatile market values of securities during and shortly after an underwriting period and because of the conflicts of interest that may arise during and after an underwriting period, especially if an affiliate has difficulty selling its allotment.

2020.1.10.3.4 No Securities Issued by an Affiliate

If an IDI purchases from one affiliate securities issued by another affiliate, it would not exempt the investment in securities issued by the second affiliate, even though the exemption may exempt the asset purchase from the first affiliate. The transaction would be treated as a purchase of, or an investment in, securities issued by an affiliate.

2020.1.10.3.5 Price-Verification Methods

The exemption applies only in situations in which the IDI is able to obtain price quotes on the purchased securities from an unaffiliated electronic, real-time pricing service. The Board reaffirmed its position that it would not be appropriate to use independent dealer quotations or economic models to establish a market price for a security under the (d)(6) exemption. A security that is not quoted routinely in a widely disseminated news source or a third-party electronic financial network may not trade in a sufficiently liquid market to justify allowing an IDI to purchase unlimited amounts of the security from an affiliate.

2020.1.10.3.6 Record Retention

The rule expressly includes a two-year record-retention and supporting information requirement that is sufficient to enable the appropriate federal banking agencies to ensure that the IDI is in compliance with the terms of the exemption.

2020.1.10.4 Purchasing Municipal Securities

Section 223.42(g) of the rule exempts an IDI’s purchase of municipal securities from an affiliate if the purchase meets certain requirements. First, the IDI must purchase the municipal securities from a broker-dealer affiliate that is registered with the SEC. Second, the municipal securities must be eligible for purchase by a state member bank, and the IDI must report the transaction as a securities purchase in its Call Report. Third, the municipal securities should either be rated by a nationally recognized statistical rating organization (NRSRO) or be part of an issue of securities that does not exceed $25 million in size. Finally, the price for the securities purchased must be (1) quoted routinely on an unaffiliated electronic service that provides indicative data from real-time financial networks; (2) verified by reference to two or more actual independent dealer quotes on the securities to be purchased or securities that are comparable to the securities to be purchased; or (3) in the case of securities purchased during the underwriting period, verified by reference to the price indicated in the syndicate manager’s written summary of the underwriting. Under any of the three pricing options, the IDI must purchase the municipal securities at or below the quoted or verified price.

2020.1.10.5 Purchase of Loans on a Nonrecourse Basis

Section 223.41(c) of the rule exempts the purchase of loans on a nonrecourse basis from an

74. Municipal securities are defined by reference to section 3(a)(29) of the Securities Exchange Act. That Act defines municipal securities as direct obligations of, or obligations guaranteed as to principal or interest by, a state or agency, instrumentality, or political subdivision thereof, and certain tax-exempt industrial development bonds. (See 17 U.S.C. 78c(a)(29).)

75. Under the Municipal Securities Rulemaking Board’s Rule G-11, the syndicate manager for a municipal bond underwriting is required to send a written summary to all members of the syndicate. The summary discloses the aggregate par values and prices of bonds sold from the syndicate account.

BHC Supervision Manual July 2014 Page 27
affiliated depository institution. Under sections 23A(d)(6), a member bank may purchase loans on a nonrecourse basis from an affiliated “bank” exempt from the quantitative limitations of section 23A, even if the transactions does not qualify for the sister-bank exemption.\(^{76}\) The rule clarifies that the scope of the exemption parallels that of the sister-bank exemption by stating that this exemption applies only to a member bank’s purchase of a loan from an affiliated IDI.

2020.1.10.6 Purchases of Assets by Newly Formed Institutions

Section 223.42(i) of the rule exempts a purchase of assets by a newly formed IDI from an affiliate if the appropriate federal banking agency for the IDI has approved the purchase. This exemption allows companies to charter a new IDI and to transfer assets to the IDI free of the quantitative limits and low-quality-asset prohibition of section 23A.

2020.1.10.7 Transactions Approved under the Bank Merger Act

The Bank Merger Act exemption applies to transactions between an IDI and a certain IDI affiliate. Section 223.42(j) exempts transactions between IDIs that are approved pursuant to the Bank Merger Act. The rule also makes the Bank Merger Act exemption available for merger and other related transactions between an IDI and a U.S. branch or agency of an affiliated foreign bank, if the transaction has been approved by the responsible federal banking agency pursuant to the Bank Merger Act. There is no regulatory exemption for merger transactions between an IDI and its nonbank affiliate. Any IDI merging or consolidating with a nonbank affiliate may be able to take advantage of the regulatory exemption for internal-reorganization transactions contained in section 223.41(d) of the rule.

2020.1.11 PURCHASES OF EXTENSIONS OF CREDIT—THE PURCHASE EXEMPTION

Regulation W codified, with changes, the exemption that was previously found at section 250.250 (12 C.F.R. 250.250). In general,

1. The purchase of an extension of credit on a nonrecourse basis from an affiliate is exempt from section 23A’s quantitative limits provided that—
   a. the extension of credit is originated by the affiliate;
   b. the IDI makes an independent evaluation of the creditworthiness of the borrower before the affiliate makes or commits to make the extension of credit;
   c. the IDI commits to purchase the extensions of credit before the affiliate makes or commits to the extensions of credit; and
   d. the IDI does not make a blanket advance commitment to purchase extensions of credit from the affiliate. (See section 223.42(k) of the rule.)

2. The rule also includes a 50 percent limit on the amount of loans an IDI may purchase from an affiliate under the purchase exemption. When an IDI purchases more than half of the extensions of credit originated by an affiliate, the purchases represent the principal ongoing funding mechanism for the affiliate. The IDI’s status as the predominant source of financing for the affiliate calls into question the availability of alternative funding sources for the affiliate, places significant pressure on the IDI to continue to support the affiliate through asset purchases, and reduces the IDI’s ability to make independent credit decisions with respect to the asset purchases.

3. “Substantial, ongoing funding” test. The rule allows the appropriate federal banking agency for an IDI to reduce the 50 percent threshold prospectively, on a case-by-case basis, in those situations in which the agency believes that the IDI’s asset purchases from an affiliate under the exemption may cause harm to the IDI.

4. Independent credit review by the IDI. To qualify for the purchase exemption under section 223.42(k), an IDI must independently review the creditworthiness of the borrower before committing to purchase each loan. Under established Federal Reserve guidance, an IDI is required to have clearly defined policies and procedures to ensure that it performs its own due diligence in analyzing the

---

\(^{76}\) See 12 U.S.C. 371c(d)(6).
credit and other risks inherent in a proposed transaction. This function is not delegable to any third party, including affiliates of the IDI. Also, an IDI cannot rely on the standards of a government-sponsored enterprise. Accordingly, to qualify for this exemption, the IDI, independently and using its own credit policies and procedures, must itself review and approve each extension of credit before giving a purchase commitment to its affiliate.

5. Purchase of loans from an affiliate must be without recourse. In connection with an IDI’s purchase of loans from an affiliate, the affiliate cannot retain recourse on the loans. The rule (section 223.42(k)) specifies that the exemption does not apply in situations where the affiliate retains recourse on the loans purchased by the IDI. The rule also specifies that the purchase exemption only applies in situations where the IDI purchases loans from an affiliate that were originated by the affiliate. The exemption cannot be used by an IDI to purchase loans from an affiliate that the affiliate purchased from another lender. The exemption is designed to facilitate an IDI’s using its affiliate as an origination agent, not to permit an IDI to take loans off an affiliate’s books that the affiliate purchased from a third party.

2020.1.12 OTHER BOARD-APPROVED EXEMPTIONS FROM SECTION 23A

Section 23A gives the Board the authority to grant exemptions from the statute’s restrictions if such exemptions are “in the public interest and consistent with the purposes of this section” (12 U.S.C. 371c(f)(2)). Regulation W includes several exemptions that are available to qualifying IDIs.

2020.1.12.1 Exemptions and Interpretation from the Attribution Rule of Section 23A

The attribution rule of section 23A provides that “a transaction by a member institution with any person shall be deemed a transaction with an affiliate to the extent that the proceeds of the transaction are used for the benefit of, or transferred to, that affiliate” (12 U.S.C. 371c(a)(2)). One respective interpretation and three exemptions are discussed below.

2020.1.12.2 Interpretation—Loans to a Nonaffiliate that Purchases Securities or Other Assets Through a Depository Institution Affiliate Agent or Broker

In Regulation W, the Board issued an interpretation (12 C.F.R. 223.26(b)) regarding an IDI’s loan to a nonaffiliate that purchases assets through an institution’s affiliate that is acting as agent. This interpretation confirms that section 23A of the FRA does not apply to extensions of credit an IDI grants to customers that use the loan proceeds to purchase a security or other asset through an affiliate of the depository institution, so long as (1) the affiliate is acting exclusively as an agent or broker in the transaction and (2) the affiliate retains no portion of the loan proceeds as a fee or commission for its services.

Under this interpretation, the Board concluded that when the affiliated agent or broker retains a portion of the loan proceeds as a fee or commission, the portion of the loan not retained by the affiliate as a fee or commission would still be outside the coverage of section 23A. However, the portion of the loan retained by the affiliate as a fee or commission would be subject to section 23A because it represents proceeds of a loan by a depository institution to a third party that are transferred to, and used for the benefit of, an affiliate of the institution. The Board, however, granted an exemption from section 23A for that portion of a loan to a third party that an affiliate retains as a market-rate brokerage or agency fee. (See 12 C.F.R. 223.16(c)(2).)

The interpretation would not apply if the securities or other assets purchased by the third-party borrower through the affiliate of the depository institution were issued or underwritten by, or sold from the inventory of, another affiliate of the depository institution. In that case, the proceeds of the loan from the depository institution would be transferred to, and used for the benefit of, the affiliate that issued, underwrote, or sold the assets on a principal basis to the third party.

The above-mentioned transactions are subject to the market-terms requirement of section 23B, which applies to “any transaction in which an affiliate acts as an agent or broker or receives a

77. See, for example, SR-97-21.
fee for its services to the institution or any other
person” (12 U.S.C. 371c-1(a)(2)(D)). A market-
rate brokerage commission or agency fee refers
to a fee or commission that is no greater than
that prevailing at the same time for comparable
agency transactions the affiliate enters into with
persons who are neither affiliates nor borrowers
from an affiliated depository institution. (See
Regulation W at 12 C.F.R. 223.16(b).)

2020.1.12.3 Exemption—Loans to a
Nonaffiliate that Purchases Securities
from a Depository Institution Securities
Affiliate that Acts as a Riskless Principal

The Board has granted an exemption in Regula-
tion W from section 23A of the FRA for exten-
sions of credit by an IDI to customers who use
the loan proceeds to purchase a security that is
issued by a third party through a broker-dealer
affiliate of the institution that acts as riskless
principal. The exemption for riskless-principal
transactions would not apply if the broker-dealer
affiliate sold to the third-party borrower securi-
ties that were issued or underwritten by, or sold
out of the inventory of, an affiliate of the deposi-
tory institution. Riskless-principal trades,
although the functional equivalent of securities
brokerage transactions, involve the purchase of
a security by the depository institution’s broker-
dealer affiliate. Accordingly, the broker-dealer
retains the loan proceeds at least for some
moment in time.

There is negligible risk that loans that a
depository institution makes to borrowers to
engage in riskless-principal trades through a
broker-dealer affiliate of the depository institu-
tion would be used to fund the broker-dealer.
For this reason, the Board adopted an exemption
from section 23A to cover riskless-principal
securities transactions engaged in by depository
institution borrowers through broker-dealer
affiliates of the depository institution. This
exemption is applicable even if the broker-
dealer retains a portion of the loan proceeds as a
market-rate markup for executing the riskless-
principal securities trade. (See Regulation W at
12 C.F.R. 223.16(c)(1) and (2).)

2020.1.12.4 Exemption—Depository
Institution Loan to a Nonaffiliate Pursuant
to a Preexisting Line of Credit and the
Proceeds Are Used to Purchase Securities
from the Institution’s Broker-Dealer
Affiliate

The Board approved an exemption in Regula-
tion W from section 23A for loans by an IDI to
a nonaffiliate pursuant to a preexisting line of
credit, in which the loan proceeds are used to
purchase securities from a broker-dealer affili-
ate. In more detail, the Board exempted exten-
sions of credit by an IDI to its customers that
use the credit to purchase securities from a reg-
istered broker-dealer affiliate of the institution,
so long as the extension of credit is made purs-
uant to, and consistent with any conditions
imposed in, a preexisting line of credit. This
line of credit should not have been established
in expectation of a securities purchase from or
through an affiliate of the institution. The pre-
existing requirement is an important safeguard
to ensure that the depository institution did not
extend credit for the purpose of inducing a bor-
rrower to purchase securities from or issued by
an affiliate. The preexisting line of exemption
may not be used in circumstances in which the
line has merely been preapproved. (See Regu-
lation W at 12 C.F.R. 223.16(c)(3).)

2020.1.12.5 Exemption—Credit Card
Transactions

Regulation W also provides an exemption from
section 23A’s attribution rule for general-
purpose credit card transactions that meet
certain criteria. (See section 223.16(c)(4).) The
rule defines a general-purpose credit card as a
credit card issued by a member institution that
is widely accepted by merchants that are not
affiliates of the institution (such as a Visa card
or Mastercard) if less than 25 percent of the
aggregate amount of purchases with the card are
purchases from an affiliate of the institution. Ex-
tensions of credit to unaffiliated borrowers
pursuant to special-purpose credit cards (that is,
credit cards that may only be used or are
substantially used to buy goods from an affili-
ate of the member institution) are subject to the
rule.

The credit card exemption includes several
different methods that are provided for a mem-
ber institution to demonstrate that its credit card
meets the 25 percent test. First, if a member
institution has no commercial affiliates (other
than those permitted for an FHC under section 4
of the BHC Act), the institution would be deemed to satisfy the 25 percent test if the institution has no reason to believe that it would fail the test. (A member institution could use this method of complying with the 25 percent test even if, for example, the institution’s FHC controls, under section 4(a)(2), 4(c)(2), or 4(k)(4)(H) of the BHC Act, several companies engaged in nonfinancial activities.) Such a member institution would not be obligated to establish systems to verify strict, ongoing compliance with the 25 percent test. *Most BHCs and FHCs should meet this test.* If an IDI has commercial affiliates (beyond those permitted for an FHC under section 4 of the BHC Act), the institution would be deemed to satisfy the 25 percent test if—

1. the institution establishes systems to verify compliance with the 25 percent test on an ongoing basis and periodically validates its compliance with the test or
2. the institution presents information to the Board demonstrating that its card would comply with the 25 percent test. (One way that a member institution could demonstrate that its card would comply with the 25 percent test would be to show that the total sales of the institution’s affiliates are less than 25 percent of the total purchases by cardholders.)

Second, for those member institutions that fall out of compliance with the 25 percent test, there is a three-month grace period to return to compliance before extensions of credit under the card become covered transactions. Third, member institutions that are required to validate their ongoing compliance with the 25 percent test have a fixed method, time frames, and examples for computing compliance.

**Example of calculating compliance with the 25 percent test.** A member institution seeks to qualify a credit card as a general-purpose credit card under section 223.16, paragraph (c)(4)(ii)(A), of the rule. The member institution assesses its compliance under paragraph (c)(4)(iii) of this section on the 15th day of every month (for the preceding 12 calendar months). The credit card qualifies as a general-purpose credit card for at least three consecutive months. On June 15, 2008, however, the member institution determines that, for the 12-calendar-month period from June 1, 2007, through May 31, 2008, 27 percent of the total value of products and services purchased with the card by all cardholders were purchases of products and services from an affiliate of the member institution. Unless the credit card returns to compliance with the 25 percent limit by the 12-calendar-month period ending August 31, 2008, the card will cease to qualify as a general-purpose credit card as of September 1, 2008. Any outstanding extensions of credit under the credit card that were used to purchase products or services from an affiliate of the member institution would become covered transactions at such time.

2020.1.13 AN IDI’S ACQUISITION OF AN AFFILIATE THAT BECOMES AN OPERATING SUBSIDIARY

Section 223.31 (a)-(c) of the rule provides guidance to an IDI that acquires an affiliate. The first situation is when an IDI directly purchases or otherwise acquires the affiliate’s assets and assumes the affiliate’s liabilities. In this case, the transaction is treated as a purchase of assets, and the covered-transaction amount is equal to the amount of any consideration paid by the IDI for the affiliate’s assets (if any) plus the amount of any liabilities assumed by the IDI in the transaction.

Regulation W provides that the acquisition by an IDI of a company that was an affiliate of the IDI before the acquisition is treated as a purchase of assets from an affiliate if (1) as a result of the transaction, the company becomes an operating subsidiary of the IDI and (2) the company has liabilities, or the IDI gives cash or any other consideration in exchange for the securities. The rule also provides that these transactions must be valued initially at the sum of (1) the total amount of consideration given by the IDI in exchange for the securities and (2) the total liabilities of the company whose securities have been acquired by the IDI. In effect, the rule requires IDIs to treat such share donations and purchases in the same manner as if the IDI had purchased the assets of the transferred company at a purchase price equal to the liabilities of the transferred company (plus any separate consideration paid by the IDI for the shares). See 12 C.F.R. 223.31.

Similarly, when an affiliate donates a controlling block of an affiliate’s shares to an IDI, a covered transaction occurs if the affiliate has liabilities that the IDI assumes. For example, the parent holding company of an IDI contributes between 25 percent and 100 percent of the voting shares of a mortgage company to the IDI.
The parent holding company retains no shares of the mortgage company. The IDI gives no consideration in exchange for the transferred shares. The mortgage company has total assets of $300,000 and total liabilities of $100,000. The mortgage company’s assets do not include any loans to an affiliate of the IDI or any other asset that would represent a separate covered transaction for the IDI upon consummation of the share transfer. As a result of the transaction, the mortgage company becomes an operating subsidiary of the IDI. The transaction is treated as a purchase of the assets of the mortgage company by the IDI from an affiliate under paragraph (a) of section 223.31. The IDI initially must value the transaction at $100,000, the total amount of the liabilities of the mortgage company. Going forward, if the member bank pays off the liabilities, the member bank must continue to value the covered transaction at $100,000. However, if the member bank sells $15,000 of the transferred assets of the mortgage company or if $15,000 of the transferred assets amortize, the IDI may value the covered transaction at $85,000.

A similar situation is when an IDI acquires an affiliate by merger. Because a merger with an affiliate generally results in the IDI’s acquiring all the assets of the affiliate and assuming all the liabilities of the affiliate, this transaction is effectively equivalent to the purchase and assumption transaction described in the previous paragraph. Accordingly, the merger transaction also is treated as a purchase of assets, and the covered-transaction amount is equal to the amount of any consideration paid by the IDI for the affiliate’s assets (if any) plus the amount of any liabilities assumed by the IDI in the transaction.78

The assets and liabilities of an operating subsidiary of an IDI are treated in the rule as assets and liabilities of the IDI itself for purposes of section 23A.79 The rule only imposes asset-purchase treatment on affiliate share transfers when the company whose shares are being transferred to the IDI was an affiliate of the IDI before the transfer. If the transferred company was not an affiliate before the transfer, it would not be appropriate to treat the share transfer as a purchase of assets from an affiliate. Similarly, the rule only requires asset-purchase treatment for affiliate share transfers when the transferred company becomes a subsidiary and not an affiliate of the IDI through the transfer.

If an IDI purchases, or receives a donation, of a partial interest in an entity that remains an affiliate, that transaction is treated as a purchase of, or investment in securities issued by an affiliate. This type of transaction is valued according to its purchase price or carrying value. (See 12 C.F.R. 223.23.)

2020.1.14 STEP-TRANSACTION EXEMPTION (SECTION 223.31(d) AND (e))

Under section 223.31(d) of the rule, an exemption is provided for certain step transactions that are treated as asset purchases under section 223.31(a) when an affiliate owned the transferred company for a limited period of time. Regulation W provides an exemption when a company acquires the stock of an unaffiliated company and, immediately after consummation of the acquisition, transfers the shares of the acquired company to the holding company’s subsidiary IDI. For example, a bank holding company acquires 100 percent of the shares of an unaffiliated leasing company. At that time, the subsidiary IDI of the holding company notifies its appropriate federal banking agency and the Board of its intent to acquire the leasing company from its holding company. On the day after consummation of the acquisition, the holding company transfers all of the shares of the leasing company to the IDI. No material change in the business or financial condition of the leasing company occurs between the time of the holding company’s acquisition and the IDI’s acquisition. The leasing company has liabilities. The leasing company becomes an operating subsidiary of the IDI at the time of the transfer. This transfer by the holding company to the IDI, although deemed an asset purchase by the IDI from an affiliate under paragraph (a) of section 223.31, would qualify for the exemption in paragraph (d) of section 223.31.

The rule exempts these “step” transactions under certain conditions. First, the IDI must acquire the target company immediately after the company became an affiliate (by being
acquired by the bank’s holding company, for example). The IDI must acquire the entire ownership position in the target company that its holding company acquired. Also, there must be no material change in the business or financial condition of the target company during the time between when the company becomes an affiliate of the IDI and when the IDI is in receipt of the company. Finally, the entire transaction must comply with the market-terms requirement of section 23B, and the IDI must notify its appropriate federal banking agency and the Board, at or before the time that the target company becomes an affiliate of the IDI, of its intent ultimately to acquire the target company.

Regulation W requires that the IDI consummate the step transaction immediately to ensure the quality and fairness of the transaction. To the extent that the IDI acquires the target company some time after the company becomes an affiliate, the transaction looks less like a single transaction in which the IDI acquires the target company and more like two separate transactions, the latter of which involves the IDI acquiring assets from an affiliate.

The Board recognized, however, that banking organizations may need a reasonable amount of time to address legal, tax, and business issues relating to an acquisition. Regulation W thus permits IDIs to avail themselves of the step-transaction exemption if the IDI acquires the target company within three months after the target company becomes an affiliate so long as the appropriate federal banking agency for the IDI has approved the longer time period.

The 100 percent ownership requirement (that the IDI must acquire the entire ownership position in the target company that its holding company acquired) prevents a holding company from keeping the good assets of the target company and transferring the bad assets to the holding company’s subsidiary IDI. If a banking organization cannot meet the terms of the step-transaction exemption, the organization may be able to satisfy the conditions of the rule’s internal-corporate-reorganization exemption or may be able to obtain a case-by-case exemption from the Board.

By its terms, sections 23A and 23B of the FRA do not apply to the U.S. branches, agencies, or commercial lending offices of foreign banks. The Board, however, used the authority granted to it by the Gramm-Leach-Bliley Act to impose restrictions on transactions between the branches, agencies, and lending offices and any affiliate of the foreign bank that operates in the United States in order to ensure that such transactions meet certain prudential standards and provided competitive equality with U.S. banking organizations. The Board accomplished these goals by imposing the definition of affiliates within sections 23A and 23B on transactions between the branches, agencies, and lending offices and those affiliates if the company is also directly engaged in the United States in certain activities. These activities are significant because a U.S. bank cannot engage in these activities directly or through an operating subsidiary and the 23A and 23B limitations help ensure competitive equality between U.S. banks and foreign banks. These activities are as follows:

1. Insurance underwriting pursuant to section 4(k)(4)(B) of the Bank Holding Company Act (12 U.S.C. 1843(k)(4)(B));
2. Securities underwriting, dealing, or market making pursuant to section 4(k)(4)(E) of the Bank Holding Company Act (12 USC 1843(k)(4)(E));
3. Merchant banking activities pursuant to section 4(k)(4)(H) of the Bank Holding Company Act (12 USC 1843(k)(4)(H)) (but only to the extent that the proceeds of the transaction are used for the purpose of funding the affiliate’s merchant banking activities);
4. Insurance company investment activities pursuant to section 4(k)(4)(I) of the Bank Holding Company Act (12 USC 1843(k)(4)(I)); or

---

BHC Supervision Manual July 2014 Page 33
• Any other activity designated by the Board.
2. a portfolio company (as defined in the merchant banking subpart of Regulation Y (12 CFR 225.177(c)) controlled by the foreign bank or an affiliate of the foreign bank or a company that would be an affiliate of the branch, agency, or commercial lending company of the foreign bank under paragraph (a)(9) of section 223.2 if such branch, agency, or commercial lending company were a member bank; or
3. a subsidiary of an affiliate as described in paragraph (b)(1) or (2) of section 223.61.

Regulation W also provides that for purposes of subpart G, the “capital stock and surplus” of a U.S. branch, agency, or commercial lending company of a foreign bank will be determined by reference to the capital of the foreign bank as calculated under its home-country capital standards.

2020.1.15 SECTION 23B OF THE FEDERAL RESERVE ACT

Section 23B of the FRA became law on August 10, 1987, as part of the Competitive Equality Banking Act of 1987. This section also regulates transactions with affiliates. Section 23B applies to any covered transaction with an affiliate, but excludes banks from the term “affiliate” as that term is defined in section 23A.

Regulation W, subpart F, sets forth the principal restrictions of section 23B. These include (1) a requirement that most transactions between an IDI and its affiliates be on terms and circumstances that are substantially the same as those prevailing at the time for comparable transactions with nonaffiliates; (2) a restriction on an IDI’s purchase, as fiduciary, of assets from an affiliate unless certain criteria are met; (3) a restriction on an IDI’s purchase, during the existence of an underwriting syndicate, of any security if a principal underwriter of the security is an affiliate; and (4) a prohibition on publishing an advertisement or entering into an agreement stating that an IDI will be responsible for the obligations of its affiliates. For the most part, subpart F restates the operative provisions of section 23B.

The following transactions with affiliates are covered by section 23B:

1. Any covered transaction with an affiliate.
2. The sale of securities or other assets to an affiliate, including assets subject to an agreement to repurchase.
3. The payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise.
4. Any transaction in which an affiliate acts as an agent or broker or receives a fee for its services to the institution or to any other person.
5. Any transaction or series of transactions with a nonaffiliate if an affiliate
   • has a financial interest in the third party or
   • is a participant in the transaction or series of transactions.

Any transaction by an IDI or its subsidiary with any person is deemed to be a transaction with an affiliate of the institution if any of the proceeds of the transaction are used for the benefit of, or transferred to, the affiliate. An IDI and its subsidiaries may engage in transactions covered by section 23B of the FRA, but only on terms and under certain circumstances, including credit standards, that are substantially the same or at least as favorable to the institution as those prevailing at the time for comparable transactions with or involving nonaffiliated companies.

If comparable transactions do not exist, the transaction must be on terms and under circumstances, including credit standards, that in good faith would be offered to or applied to nonfinancial companies.

Section 23B restricts the following transactions with affiliates:

1. An IDI or its subsidiary cannot purchase as fiduciary any securities or other assets from any affiliate unless the purchase is permitted (1) under the instrument creating the fiduciary relationship, (2) by court order, or (3) by law of the jurisdiction creating the fiduciary relationship.
2. An IDI or its subsidiary, whether acting as principal or fiduciary, cannot knowingly purchase or acquire, during the existence of any underwriting or selling syndicate, any security if a principal underwriter of that security is an affiliate of the institution. This limitation applies unless the purchase or acquisition of the security has been approved before it is initially offered for sale to the public by a majority of the directors of the institution. The purchase should be based on a determination that it is a sound investment for the institution, irrespective of the fact that an
affiliate is a principal underwriter of the securities.

2020.1.15.1 Transactions Exempt from Section 23B of the Federal Reserve Act

The market-terms requirement of section 23B applies to, among other transactions, any “covered transaction” between an IDI and an affiliate. Section 23B(d)(3) makes clear that the term “covered transaction” in section 23B has the same meaning as the term “covered transaction” in section 23A, but does not include any transaction that is exempt under section 23A(d). For example, transactions between sister banks and IDIs that are part of a chain banking organization are exempt from section 23B; also exempt are transactions that are fully secured by a deposit account or U.S. government obligations, and purchases of assets from an affiliate at a readily identifiable and publicly available market quotation. Consistent with the statute, Regulation W’s section 223.52(a)(1) exempts from section 23B any transaction that is exempt under section 23A(d).

The rule also excludes from section 23B any covered transaction that is exempt from section 23A under section 223.42(j) or (j) (that is, asset purchases by a newly formed IDI and transactions approved under the Bank Merger Act). The Board excluded from section 23B this additional set of transactions because, in each case, the appropriate federal banking agency for the IDI involved in the transaction should ensure that the terms of the transaction are not unfavorable to the IDI.

2020.1.15.2 Purchases of Securities for Which an Affiliate Is the Principal Underwriter

The GLB Act amended section 23B to permit an IDI to purchase securities during an underwriting conducted by an affiliate if the following two conditions are met. First, a majority of the directors of the IDI (with no distinction drawn between inside and outside directors) must approve the securities purchase before the securities are initially offered to the public. Second, such approval must be based on a determination that the purchase would be a sound investment for the IDI regardless of the fact that an affiliate of the IDI is a principal underwriter of the securities. The rule clarifies, however, that an IDI also satisfies this director-approval requirement if a majority of the IDI’s directors approve appropriate standards for the IDI’s acquisition of securities otherwise prohibited by section 23B(b)(1)(B), and each such acquisition meets the standards adopted by the directors. In addition, a majority of the IDI’s directors must periodically review such acquisitions to ensure that they meet the standards and must periodically review the standards to ensure they meet the “sound investment” criterion of section 23B(b)(2). The appropriate period of time between reviews would vary depending on the scope and nature of the IDI’s program, but such reviews should be conducted by the directors at least annually. Before the passage of the GLB Act, Board staff informally allowed IDIs, based on the legislative history of section 23B, to meet the director-approval requirement in this fashion, and there is no indication that Congress in the GLB Act intended to alter the procedures that a member bank could use to obtain the requisite director approval. The rule codifies staff’s pre-existing approach to the director-approval requirement.

2020.1.15.3 Definition of Affiliate under Section 23B

Section 23B states that the term “affiliate” under section 23B has the meaning given to such terms in section 23A, except that the term “affiliate” under section 23B does not include a “bank,” as defined in section 23A. In the case of

---

81. Although transactions between banks are exempt from section 23B, the safety-and-soundness provisions of section 23A(a)(4) apply and generally require that transactions be conducted on terms similar to those terms and standards outlined in section 23B.
83. Regulation W will again be subsequently referred to as the “rule” or by its specified section-numbered discussion of section 23B provisions.
of the sister-bank exemption, the rule’s section 223.2(c) clarifies that the only companies that qualify for the “bank” exception to section 23B’s definition of affiliate are IDIs.

2020.1.15.4 Advertising and Guarantee Restriction

In section 23B(c), the “advertising restriction” prohibits an IDI from publishing any advertisement or entering into any agreement stating or suggesting that the IDI shall in any way be responsible for the obligations of its affiliates. Regulation W clarifies this restriction to permit such guarantees and similar transactions if the transaction satisfies the quantitative and collateral restrictions of section 23A. The rule also clarifies that section 23B(c) does not prohibit an IDI from making reference to such a guarantee, acceptance, or letter of credit in a prospectus or other disclosure document, for example, if otherwise required by law.

2020.1.16 INSPECTION OBJECTIVES

1. To analyze and assess the financial impact of transactions (including loans and purchases of assets) between the IDIs and their subsidiaries and all affiliates.
2. To ascertain if all:
   a. credit transactions are properly secured; and
   b. covered transactions are consistent with the quantitative limits of section 23A.
3. To ascertain whether the IDIs are calculating credit exposure resulting from derivatives and securities borrowing and lending transactions. Also, to ascertain that any credit exposure is secured.
4. To determine if an IDI has engaged in a transaction with a third party when the proceeds are used for the benefit of, or transferred to, an affiliate.
5. To determine if an IDI has procedures for allowing intraday credit.
6. To determine whether covered transactions between a subsidiary IDI (and its subsidiaries), its holding company, and other affiliates are conducted consistent with the quantitative and collateral requirements of sections 23A and 23B of the FRA and Regulation W.
7. To determine if transactions between a subsidiary IDI and its affiliates in the holding company are on terms and conditions and under circumstances, including credit standards, are consistent with safe and sound banking practices and whether the terms and conditions of the transactions are the same as those that would be offered or applied to nonaffiliated companies.
8. To determine whether a subsidiary IDI or its subsidiary
   a. has purchased low-quality assets or
   b. has purchased, as fiduciary, any securities or other assets from an affiliate in the holding company.
9. To determine whether a subsidiary IDI, or any subsidiary of the IDI, has published any advertisement or has entered into any agreement that states or suggests that it will, in any way, be responsible for the obligations of affiliates.
10. To determine if securities were purchased or acquired by the subsidiary IDI or its subsidiaries from an underwriting or selling syndicate affiliated with the IDI and, if so, if the majority of outside directors of the IDI approved the purchase or acquisition of securities before they were offered for sale to the public.
11. To confirm that the subsidiary IDI or its subsidiary has not purchased as fiduciary any securities or other assets from a non-bank affiliate in the holding company unless the purchase was permitted in accordance with the instrument creating the fiduciary relationship, by court order, or by the law governing the fiduciary relationship.
12. To ascertain if any subsidiary IDI (or its subsidiary) had knowingly purchased or acquired any security from an affiliate in which the principal underwriter of that security was a nonbank affiliate within the holding company organization.
13. To determine if the subsidiary IDI and its subsidiaries have conducted transactions with their parent holding company or any other company affiliated in the holding company organization that are not in compliance with the restrictions in sections 23A and 23B of the FRA or Regulation W.

2020.1.17 INSPECTION PROCEDURES

1. During the pre-inspection, perform the following activities:
   a. Review examination reports of sub-
sidiary IDIs for comments on loans to affiliates, intercompany transactions, other transactions with affiliates, and violations of the restrictions of sections 23A or 23B of the FRA, or Regulation W.

2. In the officer’s questionnaire, request a list of subsidiary IDIs and their subsidiaries’ transactions with affiliates since the previous inspection, including the amounts, types, and any collateral, consisting of—
   a. loans or extensions of credit to an affiliate, and purchases of extensions of credit from an affiliate;
   b. a purchase or sale of an investment in securities issued by, or sold to, the affiliate, or purchase or sale of other assets, including assets subject to an agreement to repurchase;
   c. the acceptance of securities or other debt instrument issued by the affiliate as collateral security for a loan or extension of credit;
   d. the issuance of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit on behalf of an affiliate;
   e. a transaction with an affiliate that involves the borrowing or lending of securities, to the extent that the transaction causes an IDI or a subsidiary to have credit exposure to the affiliate;
   f. a derivative transaction, as defined in 12 U.S.C. 84(b), with an affiliate, to the extent that the transaction causes an IDI or a subsidiary to have credit exposure to the affiliate.
   g. the payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise;
   h. transactions in which an affiliate acts as agent or broker or receives a fee for its services to the bank or to any other person;
   i. any transaction or series of transactions with a third party if—
      (1) the affiliate has a financial interest in the third party or
      (2) the affiliate is a participant in such transactions; and
   j. Any transaction by a subsidiary bank or its subsidiary with any person, if the proceeds of that transaction are used for the benefit of, or transferred to, the affiliate.

3. During the BHC’s inspection, perform the following activities:
   a. Review the bank holding company’s policies and procedures regarding intercompany transactions of subsidiary banks.
   b. Determine if the substantive transactions of the holding company organization comply with the restrictions on transactions with affiliates in sections 23A and 23B of the FRA and Regulation W.
   c. Verify that covered transactions count against Regulation W’s limits and are collateralized when required.
      (1) Ensure that covered transactions are properly valued and adequately collateralized;
      (2) Review collateral documentation to ensure that a lien is adequately perfected and prioritized.
      (3) Review all related documentation, terms, conditions, and circumstances for each transaction, including any resolutions for securities purchased (or established standards for securities purchased from affiliates).
      (4) Determine the purpose and use of the transaction’s proceeds.
   d. Review all outstanding guarantees, endorsements, or pledge agreements by the bank to support the affiliates’ borrowings.
   e. Review, on a test-sample basis, advertisements and written agreements to ascertain whether the bank or any subsidiary or affiliate of the bank has stated or suggested that it shall be responsible for the obligations of any affiliates in the holding company organization.
   f. If the BHC engages in derivative transactions with affiliates, review the BHC’s policies and procedures to determine if credit limits, collateral restrictions, and other limitations (each affiliate and all affiliates combined) have been imposed on interaffiliate derivative transaction (IDI) exposures to affiliates.
      (1) Determine if the limits are similar to those imposed on nonaffiliated counterparties.
   g. Review the listed transactions of the BHC or its subsidiary with the affiliates that the IDI claims are exempt under
12 C.F.R. 223.42(k) provided in response to the officer’s questionnaire (item 2).

Determine if

(1) extensions of credit, and purchases of extensions of credit, are supported by independent credit evaluations and if advance loan commitments are provided before the affiliates make loans;

(2) no blank advance purchase commitments exist to purchase loans; and

(3) the purchases meet the quantitative restrictions of the exemption.

4. Give additional attention to the following problems involving the BHC and its subsidiaries:

a. The subsidiary IDI would not have made the loan or would not have made the loan with such favorable terms and conditions, or engaged in any other covered transaction, except for the parent holding company’s insistence due to the affiliate relationship.

b. The IDI’s condition is weakened due to the extension of credit or the nature of the transaction with the affiliate.

c. The affiliate has not provided adequate qualifying collateral to support the loan or extension of credit provided by the subsidiary IDI.

d. The IDI does not have a perfected security interest in the collateral.

e. The loan, extension of credit, or transaction with an affiliate is not in compliance with the limits and restrictions in sections 23A or 23B of the FRA or Regulation W.

f. Purchases of low-quality assets by a subsidiary bank or its subsidiaries from an affiliate, unless previously exempted by the Board’s Regulation W, Board order, or unless the IDI subsidiary or subsidiary affiliate, pursuant to an independent credit evaluation, had committed itself to purchase the low-quality assets before the time such asset was acquired by the affiliate.

g. During the existence of any underwriting or selling syndicate, a subsidiary IDI or its subsidiary has purchased or acquired a security from an IDI affiliate or bank holding company affiliate, including an affiliated broker-dealer, and the principal underwriter of that security is an affiliate of the IDI.

h. The purchase or acquisition of securities (1) was not approved by a majority of the outside board of directors before the IDI’s securities were offered for sale to the public and (2) was not, in the absence of comparable transactions, on terms and under circumstances, including credit standards, that in good faith would have been offered to, or would have applied to, nonaffiliated companies.

i. The existence of advertisements or agreements that state or suggest that the IDI, its subsidiaries, or affiliate will be responsible for the obligations of its affiliates.

5. Review any checking accounts and IDI statements to check for overdrafts the parent company or any of its nonbank subsidiaries may have with a subsidiary IDI.

6. Review the accounts payable to the subsidiary IDI and other accounts payable accounts for servicers, contractors, lessors, and other affiliates to determine if they arose as the equivalent of an extension of credit, purchase of securities or other assets, or as a liability to third parties. Ascertain whether those transactions were listed in response to the officer’s questionnaire and whether the transactions were in accordance with the restrictions in sections 23A and 23B of the FRA and Regulation W.

7. Review the accounts receivable from the subsidiary IDI and other accounts receivable of other affiliates for sales of securities or other assets and for the payment of money or the furnishing of services. Ascertain whether those transactions were reported in response to an officer’s questionnaire and whether they are in accordance with section 23A and 23B of the FRA’s and Regulation W’s restrictions placed on transactions with affiliates.

8. Ascertain if the IDI’s credit limits, collateral requirements, and monitoring of its exposures to affiliates are at least as strict as those it imposes on unaffiliated companies.

9. Determine if the IDI has policies and procedures to monitor and control its intraday credit exposure to each affiliate and to all affiliates in the aggregate.

10. Determine if the IDI’s intraday extensions of credit to affiliates are on comparable market terms and if they comply with section 23B of the FRA.

11. Review all other transactions that the holding company organization has engaged in with its affiliated IDIs and their substidi-
aries, including lease arrangements, to
determine whether they are subject to the
restrictions in sections 23A and 23B and
Regulation W, and, if so, whether they are
in compliance.
12. Discuss the findings with appropriate senior
management and, if the findings are signifi-
cant, the board of directors.
13. Determine management’s corrective actions
regarding any comments raised by the
bank’s primary regulator in an examination
report.
   a. If violations are disclosed in a subsidiary
      bank’s examination report or during an
      inspection of the holding company, the
      examiner may criticize management on
      the “Examiner’s Comments and Matters
      Requiring Special Board Attention” page
      or section of the inspection report for
      causing the bank to be in violation or for
      engaging in unsafe and unsound prac-
tices.
   b. If loans to or transactions with affiliates
      within the holding company organiza-
tion appear to adversely affect a subsidi-
ary bank, request management’s assess-
ment of such effects and its rationale for
the transactions. Use of the “Examiner’s
Comments and Matters Requiring Spe-
cial Board Attention” report page or sec-
tion may be appropriate.

What's New In This Revised Section

Effective July 2010, this section was revised to include a cross reference to section 2010.2.7 of this manual, which discusses loan participations. References in the table of laws, regulations, interpretations, and orders have also been updated.

It is common practice for a bank to sell to or place with other banks loans that the bank itself has made to its customers. A loan participation is a share or part of a loan which entitles the holder to a pro rata share of the income determined by the extent of the holder's contribution to the original loan and a preference ordering for repayment. Such loans may be sold outright without liability to the selling bank in case of default by the borrower, or they may be sold with terms granting the purchasing bank recourse to the selling bank should the loans become uncollectible. Sales to or placement of loans with other banks are for the accommodation of either the selling or purchasing bank and are arranged for purposes of increasing the rate of return when loan rates differ between banks, achieving diversification of loans by type, and altering liquidity positions. It is also common practice for banks to sell or place with other banks those portions of individual loans that would be in excess of the bank's legal lending limit (overlines) if the total loan were retained. Participations of this type should be placed without recourse as a matter of prudent banking practice; otherwise, the purpose of compliance with the legal lending limitations would be defeated in the event of default. See section 2010.2.7 of this manual for supervisory and accounting guidance regarding a BHC's or bank's use, purchase, or sale of loan participation agreements.

Banks also sell or place loans or participations with their parent holding companies or nonbank affiliates. A BHC's purchase of loan participations from its subsidiary bank(s) generally constitutes the making of a loan or extension of credit within the meaning of section 225.28(b)(1) of Regulation Y, and as such, a BHC needs prior approval to purchase loan participations from its subsidiary bank(s).

A bank may participate in or purchase a loan originated by its parent holding company or one of its nonbank subsidiaries. A subsidiary bank's purchase, or participation of a loan, note, or other asset from an affiliate is considered a purchase of an asset from an affiliate within the meaning of section 23A of the Federal Reserve Act and thus is a "covered transaction" that is subject to the quantitative limitations and the prohibition against purchasing of low-quality assets. Subsidiary banks must make independent judgments as to the quality of such participations before their purchase to avoid compromising the asset quality of such banks for the benefit of other holding company entities. All loans and participations must be purchased on market terms.

A bank's purchase of a loan or loan participation, on a non recourse basis from an affiliate, may not be a covered transaction under section 23A that is subject to the quantitative limitations (12 C.F.R. 223.11-223.12), collateral requirements (12 C.F.R. 223.14), and low-quality asset prohibition (12 C.F.R. 223.15) if

1. the extension of credit was originated by the affiliate;
2. the member bank makes an independent evaluation of the creditworthiness of the borrower before the affiliate makes or commits to make the extension of credit;
3. the member bank commits to purchase the extension of credit before the affiliate makes or commits to make the extension of credit;
4. the member bank does not make a blanket advance commitment to purchase extensions of credit from the affiliate; and
5. the dollar amount of the extension of credit, when aggregated with the dollar amount of all other extensions of credit purchased from the affiliate during the preceding 12 calendar months by the member bank and its depository institution affiliates, does not represent more than 50 percent (or such lower percent as is imposed by the bank's appropriate Federal banking agency) of the dollar amount of extensions of credit originated by the affiliate during the preceding 12 calendar months. (See 12 C.F.R. 223.42(k).)

In some cases, a bank may renew a loan or a participation that it purchased from another affiliated bank even when the original participation has become a low-quality asset. In some instances, a bank's renewal of a low-quality asset, such as a troubled agricultural loan, or an extension of limited amounts of additional credit to such a borrower may enable both the originat-
ing and participating banks to avoid or minimize potential losses. It would be inconsistent with the purposes of section 23A to bar a participating bank from using sound banking judgment to take the steps that it may deem necessary to protect itself from harm in such a situation, so long as the loan was not a low-quality asset at the time of the original participation and the participating bank does not assume more than its original proportionate share of the credit.

The following factors thus characterize the situation where it would be reasonable to interpret section 23A as not applying to the renewal of an otherwise low-quality asset:

1. the original extension of credit was not a low-quality asset at the time the affiliated bank purchased its participation,
2. the renewal and/or the extension of additional credit has been approved by the board of directors of the participating bank as necessary to protect the bank’s investment by enhancing the ultimate collection of the original indebtedness, and
3. the participating bank’s share of the renewal and/or additional loan will not exceed its proportionate share of the original investment by more than 5 percent. In addition, it is expected that, consistent with safe and sound banking practices, the originating bank would make its best efforts to obtain adequate collateral for the loan(s) to further protect the banks from loss. (See 12 C.F.R. 223.15.)

Loans and loan participations by the various members of the holding company family to individual borrowers or to the same or related interests may represent concentrations of credit which are large in relation to the holding company’s consolidated capital position. These concentrations of credit should be assessed for potentially harmful exposure to the holding company’s financial condition.

2020.2.1 INSPECTION OBJECTIVES

1. To determine the BHC’s loan participation policy.
2. To assess the impact of a subsidiary bank’s participation in loans with affiliates and to ensure that the bank’s financial condition is not compromised and that the bank is not providing the funding needs of the affiliates, except within the parameters of sections 23A and 23B of the Federal Reserve Act.
3. To assess the impact of any concentrations of credit on the holding company’s overall financial position.

2020.2.2 INSPECTION PROCEDURES

1. During the preinspection process, review each subsidiary bank’s examination report for comments on participations with affiliates.
2. In the officer’s questionnaire to the holding company, request the BHC’s policy on loan participation. Request a list of any loan participations the holding company or the nonbank subsidiaries have with the subsidiary bank(s).
3. During the inspection, review the policy statements and each participation the holding company or the nonbank subsidiaries have with the subsidiary bank(s). The following characteristics should be analyzed:
   a. any repetitive transaction patterns which may indicate policy;
   b. the adequacy of credit information on file;
   c. the extent to which the terms of the participation including interest rates are handled in an arm’s-length manner;
   d. the degree that the bank is accommodating the funding needs of the nonbank subsidiaries or its parent;
   e. the impact of these transactions on the subsidiary bank;
   f. eligibility for exclusion from section 23A restrictions and, if applicable, compliance with such restrictions.
4. Review participations among the bank holding company, nonbank subsidiaries, and the subsidiary banks to determine potentially adverse concentrations of credit.
5. Discuss with management—
   a. written and verbal policies regarding participations both within the holding company and with nonaffiliated third parties and
   b. any adverse findings on intercompany participations.
6. Comment on policy on the appropriate page of the inspection report (see section 5010.6). If any adverse comments on participations with affiliates are contained in a bank subsidiary’s examination report, comment on their current status and the BHC’s efforts to remedy the problem.

Intercompany Transactions
(Sale and Transfer of Assets)  Section 2020.3

Sales and transfers of assets between subsidiary banks and other entities in a bank holding company organization pose the potential of risk to the subsidiary banks. Asset purchases are covered by Section 23A and Section 23B of the Federal Reserve Act. The limitations state that all covered transactions, including asset purchases, by a bank with a single affiliate, may not exceed 10 percent of a bank’s capital and surplus, and transactions with all affiliates may not exceed 20 percent of the bank’s capital and surplus. In addition, all transactions must be conducted on market terms.

A bank’s purchase of a loan or loan participation from a bank holding company or its subsidiary may not be a covered transaction under Section 23A if:
1. the bank makes an independent credit evaluation on each loan prior to the affiliate making the loan;
2. the bank agrees to purchase the loan prior to the affiliate making the loan; and
3. the bank’s purchase of the affiliate’s loans is not the primary source of funding for the affiliate.

Sale and transfer of assets can also occur through swaps and spinoffs. Examples of such transactions which may have an adverse effect on a bank include the transfer of a profitable activity or subsidiary from the bank to the holding company, or the transfer of an unprofitable activity or subsidiary from the holding company to the bank. In addition, the transfer of a bank holding company subsidiary to a bank, whereby the bank assumes the liabilities of the affiliate raises supervisory concerns and may violate Sections 23A and 23B of the Federal Reserve Act.

Another example is the transfer of a subsidiary bank’s deferred taxes, together with an equivalent amount of cash or earning assets, to the parent. In such a transaction, a subsidiary bank’s liquidity position is weakened. All such transfers of deferred taxes must be reversed and the bank’s asset and liability accounts restored to their level prior to the transfer. For a detailed discussion on transfers of a bank’s deferred tax liability, see Manual section 2070.0.

A bank holding company may transfer a liquidating asset from a subsidiary bank to a section 4(c)(1)(D) liquidating subsidiary of the holding company. Also, pursuant to section 4(c)(3) of the Act, a BHC may transfer from a subsidiary bank an asset to be disposed of pursuant to the request of the bank’s primary regulator. For more information on the transfer of such assets and the time parameters involved, refer to Manual section 3030.0.

The purchase of low-quality assets is prohibited by Section 23A of the Federal Reserve Act. Refer to section 2020.1.1.5 for a listing of transactions that are exempt from the limitations of Section 23A of the Federal Reserve Act.

2020.3.1 INSPECTION OBJECTIVES

1. To review intercompany sale and transfer of assets to assess the impact on the subsidiary bank.
2. To initiate corrective action to reverse the transaction, if necessary.

2020.3.2 INSPECTION PROCEDURES

1. During the preinspection process, review all notes to financial statements, the FR Y-8 report, and the examination reports of subsidiary banks to ascertain whether any purchase or transfer of assets has occurred between the subsidiary banks and the parent holding company or nonbank subsidiaries.
2. In the officer’s questionnaire, request information on any transfer or sale of assets between the subsidiary bank and the parent holding company or the nonbank subsidiaries.
3. During the inspection, review all facts regarding any sale or transfer of assets transactions and assess their impact on the subsidiary bank. Examiners should determine:
   a. Whether the transaction required and received the approval of the bank’s primary regulator; and
   b. The quality of the assets transferred or sold, and whether the sale of the assets was at a price significantly higher than would have been realized in an arm’s-length transaction.
4. Discuss findings with management including:
   a. Apparent prejudicial transactions and violations of regulations; and
   b. Any unsound practices.
A compensating balance is a deposit maintained by a firm at a bank to compensate the bank for loans and lines of credit granted to the firm. Often, a commercial bank, when extending credit, requires an average deposit balance equal to a fixed percentage of the outstanding loan balance. Compensating balance requirements vary from informal understandings to formal contracts. Deposits maintained as compensating balances may be demand or time, active or dormant. Frequently, a lending bank will allow compensating balances to be supplied by a depositor other than the borrower itself. If compensating balances are maintained by a BHC’s subsidiary bank on behalf of its parent, the practice is considered a diversion of bank income (i.e., the bank loses the opportunity to earn income on the balances that could be invested elsewhere). In general, this practice is inappropriate unless the bank is being compensated at an appropriate rate of interest. If the bank is not being appropriately reimbursed, the practice should be criticized and action taken to insure that the bank is compensated for the use of its funds.

BHCs borrow directly from nonaffiliated banks, using the proceeds for both bank and nonbank operations and investments. Also, bank holding companies seek credit lines from banks to back their borrowings in commercial paper markets and for other liquidity purposes. Nonbank subsidiaries of bank holding companies borrow from banks to fund activities such as mortgage banking, leasing and sales finance. In some cases, when a bank holding company or its nonbank subsidiaries borrow, the subsidiary bank’s deposit at the lending institution may be accepted as a compensating balance for the borrowings of other members of the bank holding company organization. Such transactions raise questions under Section 23B of the Federal Reserve Act regarding the bank’s compensation for such services.

Often the distinction between correspondent balances and compensating balances is not clear. Occasionally, the rate of the required compensating balance is written into the loan agreement; however, informal understandings usually appear to determine the amount of compensating balance maintained. At times, a balance may be identified in the bank’s books as a compensating balance. A compensating balance may also be identified as an amount above a correspondent balance historically maintained by the bank. Compensating balances may also appear as a dormant account or may be the aggregate amount of a number of deposits of various subsidiary banks.

The interest rate on the loan to the holding company organization may also be helpful in determining the existence of compensating balances. Loans below the lending bank’s normal rate may indicate that the lending bank is receiving compensation in another form.

At times, excess correspondent balances are maintained to encourage participation relationships and for other goodwill reasons. Therefore, the existence of excess balances may not always indicate that there is a compensating balance agreement.

Although a bank holding company may compensate its subsidiary banks for the use of the funds, the compensation may not equal the opportunity cost associated with providing the compensating balance. As a result, subsidiary banks which maintain compensating balances for holding company members may forego profit opportunities, and this practice may have a negative impact on the bank’s earnings and capital adequacy. The amount of such compensation should be equal to a fair market rate.

If the lending bank has the right of offset to compensating balances maintained by the subsidiary bank in case of default by parent or nonbank subsidiaries, the subsidiary bank’s funds are jeopardized. Such potential loss of funds should be commented on by the examiner.

2020.4.1 INSPECTION OBJECTIVES

1. To identify compensating balances maintained by a subsidiary bank for the parent holding company or any nonbank affiliate.
2. To determine whether the subsidiary bank is adequately reimbursed for the maintenance of any compensating balances.

2020.4.2 INSPECTION PROCEDURES

1. During the preinspection process:
   a. Review the subsidiary bank examination reports or contact management to determine whether the non-affiliated banks, lending to the holding company organization, are correspondents of the subsidiary banks. Where applicable, request detailed loan information which could
provide information on the compensating balances’ terms required by the lending bank.

b. Review the notes to the financial statements and other available material, such as 10–K reports filed with the SEC, which may describe compensating balance agreements. FR Y–8 reports should be reviewed for questions applicable to compensating balances.

2. Review interbank loan agreements to determine whether compensating balances are formally required. Assess the terms of the loan to determine whether the loan appears to be at fair market rates for this type of credit request.

3. Request and review the account balance and monthly account statement provided by the lending bank to identify the amount of compensating balances. The statement should be available within the holding company or bank.

4. Request from management information regarding compensating balances maintained by subsidiary banks for the benefit of other affiliates.

5. Review the subsidiary bank’s historical level of correspondent balances to assess trends. Compare levels of balances prior to any loan origination or interest rate changes.

6. Review intercompany accounts to determine the amount of compensation paid to the subsidiary bank for maintaining compensating balances. Assess adequacy of compensation. Assess impact of practice on the bank’s financial condition.

7. Discuss with management the reasons for any apparent excess balances, and whether compensating balances are formally or informally required.
WHAT’S NEW IN THIS REVISED SECTION

Effective July 2012, this section was revised to update the references within the table of Laws, Regulations, Interpretations, and Orders.

Dividends are a means by which a corporation distributes earnings or assets to its shareholders. Although the word “dividends” usually applies to funds paid out of net profits or surplus and is usually thought of in such a context, dividends can also be made “in kind,” which means in property or commodities. This section does not discuss “stock dividends” which represent transfers from retained earnings to paid-in capital rather than distributions of earnings. Dividends from the subsidiaries, both bank and non-bank, to the parent company are the means by which a cash return is realized on the investment in subsidiaries, thus enabling the parent to pay dividends to its shareholders and to meet its debt service requirements and other obligations.

Dividends paid by any corporation are generally limited by certain State laws. Banks, however, are subject to further legal restrictions on dividends by their chartering authority and other regulators. Aside from the statutory limitations, the primary consideration in this area is the subsidiary’s level of capital and its ability to meet future capital needs through earnings retention.

Although there are no specific regulations restricting dividend payments by bank holding companies other than State corporate laws, supervisory concern focuses on the holding company’s capital position, its ability to meet its financial obligations as they come due, and its capacity to act as a source of financial strength to its subsidiaries. Some one-bank holding companies may be restricted in the amount of dividends they may pay as a result of certain limitations placed on future dividend distributions at the time of the holding company’s formation. (see Manual section 2090.2)

When analyzing the dividend practices of the subsidiaries and the parent company the following must be considered: the present level of capital in relation to total assets, risk assets, and classified assets; growth rates and additional plans for expansion; past earnings performance and projections; and the ability to service debt.

Aside from reasonable and timely fees for services rendered, the most appropriate way for funds to be paid by the bank to the parent is through dividends. This principle applies, in general, to bank payments of funds to service holding company debt, even when the debt was initially incurred to raise equity capital for the subsidiary bank. It is not considered an appropriate banking practice for the subsidiary bank to pay management fees for the purpose of servicing holding company debt. Funds for servicing holding company debt should, as a general rule, be upstreamed in the form of dividends.

2020.5.1 POLICY STATEMENT ON CASH DIVIDEND PAYMENTS

On November 14, 1985 the Board approved a policy statement on the payment of cash dividends by state member banks and bank holding companies that are experiencing financial difficulties. The policy statement addresses the following practices of supervisory concern by institutions that are experiencing earnings weaknesses, other serious problems, or that have inadequate capital:

- The payment of dividends not covered by earnings,
- The payment of dividends from borrowed funds,
- The payment of dividends from unusual or nonrecurring gains, such as the sale of property or other assets.

It is the Federal Reserve’s view that an organization experiencing earnings weaknesses or other financial pressures should not maintain a level of cash dividends that exceeds its net income, that is inconsistent with the organization’s capital position, or that can only be funded in ways that may weaken the organization’s financial health. In some instances, it may be appropriate to eliminate cash dividends altogether. The policy statement is as follows:

2020.5.1.1 Policy Statement on the Payment of Cash Dividends by State Member Banks and Bank Holding Companies

The Board of Governors of the Federal Reserve System considers adequate capital to be critical to the health of individual banking organiz-
lications and to the safety and stability of the banking system. A major determinant of a bank’s or bank holding company’s capital adequacy is the strength of its earnings and the extent to which its earnings are retained and added to capital or paid out to shareholders in the form of cash dividends.

Normally, during profitable periods, dividends represent an appropriate return of a portion of a banking organization’s net earnings to its shareholders. However, the payment of cash dividends that are not fully covered by earnings, in effect, represents the return of a portion of an organization’s capital at a time when circumstances may indicate instead the need to strengthen capital and concentrate financial resources on resolving the organization’s problems.

As a matter of prudent banking, therefore, the Board believes that a bank or bank holding company generally should not maintain its existing rate of cash dividends on common stock unless 1) the organization’s net income available to common shareholders over the past year has been sufficient to fully fund the dividends and 2) the prospective rate of earnings retention appears consistent with the organization’s capital needs, asset quality, and overall financial condition. Any banking organization whose cash dividends are inconsistent with either of these criteria should give serious consideration to cutting or eliminating its dividends. Such an action will help to conserve the organization’s capital base and assist it in weathering a period of adversity. Once earnings have begun to improve, capital can be strengthened by keeping dividends at a level that allows for an increase in the rate of earnings retention until an adequate capital position has been restored.

The Board also believes it is inappropriate for a banking organization that is experiencing serious financial problems or that has inadequate capital to borrow in order to pay dividends since this can result in increased leverage at the very time the organization needs to reduce its debt or increase its capital. Similarly, the payment of dividends based solely or largely upon gains resulting from unusual or nonrecurring events, such as the sale of the organization’s building or the disposition of other assets, may not be prudent or warranted, especially if the funds derived from such transactions could be better employed to strengthen the organization’s financial resources.

A fundamental principle underlying the Federal Reserve’s supervision and regulation of bank holding companies is that bank holding companies should serve as a source of managerial and financial strength to their subsidiary banks. The Board believes, therefore, that a bank holding company should not maintain a level of cash dividends to its shareholders that places undue pressure on the capital of bank subsidiaries, or that can be funded only through additional borrowings or other arrangements that may undermine the bank holding company’s ability to serve as a source of strength. Thus, for example, if a major subsidiary bank is unable to pay dividends to its parent company—as a consequence of statutory limitations, intervention by the primary supervisor, or noncompliance with regulatory capital requirements—the bank holding company should give serious consideration to reducing or eliminating its dividends in order to conserve its capital base and provide capital assistance to the subsidiary bank.

This statement of principles is not meant to establish new or rigid regulatory standards; rather, it reiterates what for most banks, and businesses in general, constitutes prudent financial practice. Boards of directors should continually review dividend policies in light of their organizations’ financial condition and compliance with regulatory capital requirements, and should ensure that such policies are consistent with the principles outlined above. Federal Reserve examiners will be guided by these principles in evaluating dividend policies and in formulating corrective action programs for banking organizations that are experiencing earnings weaknesses, asset quality problems, or that are otherwise subject to unusual financial pressures.

2020.5.2 INSPECTION OBJECTIVES

1. To assure compliance with statutes and the Board’s November 1985, Policy Statement.
2. To determine reasonableness of dividend payout at both the subsidiary and holding company levels.

Depending on the type of charter and membership in the Federal Reserve, all insured commercial banks are subject to certain legal restrictions on dividends. In the case of nonbank subsidiaries and holding companies, there are no specific federal statutes, other than the policy statements discussed, which apply to dividend payments. State corporate laws would apply. One objective of the inspection process is to
check for compliance with these laws and to follow-up on any violations.

In some cases dividends which comply with the regulations still may not be in the best interest of the bank. It is the examiner’s responsibility to assess the reasonableness of dividend payments in relation to each subsidiary’s capital needs. Evaluation of the holding company’s dividend policy and payment requires a review at both the parent company and the consolidated levels. On a consolidated basis the holding company’s capital level in relation to the quantity and quality of total assets, earnings history and potential, and growth rates are important in the assessment of a reasonable dividend payout. At the parent level, the method of funding dividends should be reviewed. For example, a well capitalized corporation with strong earnings might pay dividends which could be considered unreasonable if the organization were in a strained liquidity position.

2020.5.3 INSPECTION PROCEDURES

1. Review dividend payments by subsidiaries and the parent company. Check for compliance with appropriate statutes and the Board’s November 14, 1985 policy statement on the Payment of Cash Dividends. Discuss violations with management and comment on the “ Examiner’s Comments and Matters Requiring Special Attention” page.

This step will often require a review of net earnings and changes in the capital accounts in the past years, as legal restrictions on dividends often apply to cumulative income for several years rather than just the year the dividend is actually paid. For this reason detailed working papers are important, as these can help to avoid duplications of effort at future inspections. In some situations the regulations provide that dividends may be paid in excess of current year’s earnings. If prior approval from the bank’s primary regulator is necessary, verify that it has been obtained. Any violations of dividend statutes should be discussed with management and cited in the “Examiner’s Comments and Matters Requiring Special Attention” page of the inspection report.

2. Analyze dividend payouts of subsidiaries and the parent in terms of capital adequacy, earnings and earnings potential.

Discuss excessive dividend payouts at any level with management and comment on the “Examiner’s Comments and Matters Requiring Special Attention” page of the inspection report. In assessing the reasonableness of dividend payments by subsidiaries and the holding company, the organization’s capital adequacy and future capital needs must be judged with the following in mind: the volume of total assets; asset quality (the percentage of weighted classified assets to gross capital could be used as an indicator of quality); asset mix and liquidity; asset growth rates and projections; and plans for expansion and development of new areas. The subsidiary’s or the holding company’s ability to augment capital through earnings is also important. If a bank, nonbank or holding company has a consistently strong earnings record and its capital position is healthy, a higher dividend payout may be acceptable than would be otherwise. In analyzing the strength of earnings both quantity and quality must be considered. The actual quality of earnings and earnings potential are related to operating income rather than extraordinary items, significant capital or securities gains, or substantial increases resulting from tax considerations.

3. Review the funding of dividends paid by the holding company. Analyze the parent’s cash flow and income statements in accordance with section 4010.0 of this manual. Discuss any inappropriate funding with management and comment on, based on their severity, either on the “Cash Flow Statement (Parent),” or the “Analysis of Financial Factors” and the “Examiner’s Comments and Matters Requiring Special Attention” pages.

An analysis of the parent company’s cash flow statement supplemented by the income statement will identify the source of cash for dividend payments. The parent company has cash inflow from various sources including: dividends from subsidiaries, income from activities conducted for its own account, interest income on advances to subsidiaries, management and service fees, borrowings, and tax savings resulting from filing a consolidated tax return. Dividends should be internally funded from dividends paid by the subsidiaries, the parent company’s earnings from activities for its own account or from interest income on advances to subsidiaries. Should the analysis of the cash flow statement indicate that dividends paid by the parent exceed cash inflow from these sources, further attention to the area is required to determine the actual underlying source of dividend funding. As discussed in the section on management and service fees, these are properly assessed at market value or cost of services rendered. They are not to be charged
simply to divert income from subsidiaries in order to pay dividends. Borrowing to fund dividends is fundamentally an unsound practice.

When dividends paid by the holding company are funded by the bank subsidiary, it is possible to control indirectly the holding company’s dividend payout level when it is determined to be detrimental to the bank subsidiary. It is important to remember that the primary responsibility of bank regulators is the promotion of safe and sound banking operations. Other than the mentioned policy statement there are no specific federal laws restricting dividends paid by bank holding companies; however, the System’s cease and desist authority over bank holding companies does afford the ability to curb excessive dividend payouts.

Whenever the examiner determines that dividend payments at the subsidiary level or parent level are not reasonable, are not in the best interest of the organization, or are not funded in a proper manner, discussion with management and a close look at its philosophy are essential. Remarks on the matter should appear on the “Examiner’s Comments and Matters Requiring Special Attention” page of the report.

¹. 12 U.S.C., unless specifically stated otherwise.
². 12 C.F.R., unless specifically stated otherwise.
A bank holding company is permitted to own nonbank subsidiaries that furnish services to or perform services for its other subsidiaries pursuant to section 4(a)(2)(A), 4(c)(1)(C), or 4(c)(8) of the BHC Act. Many bank holding companies charge fees for providing to their subsidiaries services such as management advice, personnel services, data processing, marketing, supply administration, investment advice, bookkeeping, and trust services. The fees for these services that are assessed against subsidiary banks take many forms and are an area of potential abuse. In addition to direct fees paid to an affiliate, the compensation for providing these services might take the form of salaries or directors’ fees paid to the bank holding company’s management. A holding company should not, directly or indirectly through other subsidiaries, burden its bank subsidiaries with excessive fees or charge for services unrelated to value received in order to fund its debt service, dividend payments, or support of other subsidiaries.

Examiners should review the fees charged by a holding company’s bank and nonbank subsidiaries to any banking subsidiary and judge the reasonableness of those fees by examining the reasonableness of the services provided and the basis for allocating fees. Fees charged nonbank subsidiaries and independent third parties should not be more favorable than fees charged banking subsidiaries. They should be reasonable and justifiable and be based on the fair market value of services provided or, when there is no market established for a particular service, on actual cost plus a reasonable profit. The market value of similar services is the preferred basis of fee assessment. When fees are based on cost plus a reasonable profit, there is less incentive for the efficient and effective use of resources, because a profit margin is built in regardless of the costs involved. In many situations, however, the cost method is the only method possible.

Any method of pricing services provided to bank subsidiaries that is based on anything other than value received is inappropriate. The fee mechanism should not be used to divert income from any bank subsidiary to meet the parent’s financial needs if those needs are unrelated to the provision of services to that subsidiary. In addition, banks are prohibited from paying management fees if it would cause the institution to become undercapitalized (see title I, section 131 of the FDIC Improvement Act of 1991 or section 38 of the FDIC Act).

Any fee for services to a banking subsidiary should be supported by evidence that the parent or other affiliate provided the service. Services provided by bank holding companies should serve the needs of the subsidiary bank; charges for services that appear to duplicate existing subsidiary-bank functions should be supported by a detailed explanation of the net benefit derived by the subsidiary bank and by an analysis of the reasonableness of the fee.

When it is impractical to allocate expenses on a direct-charge basis, bank holding companies frequently allocate overhead expenses to subsidiaries. Although this practice can be considered acceptable with regard to nonbanking subsidiaries, allocating all bank holding company expenses to bank subsidiaries is not permitted. The parent company should bear a portion of the costs connected with, for example, the holding company’s investor/shareholder relations, regulatory reporting requirements, acquisitions, formations, applications, board of directors, and strategic planning. Bank holding companies are, however, expected to support their subsidiary banks, and expenses incurred to serve the needs of the subsidiary banks, such as expenses incurred in raising capital for subsidiary banks, can appropriately be allocated to those subsidiary banks that benefit from the services provided, in proportion to the benefit received from the service.

All fees for services rendered should be supported by written agreements that describe the service, the fees to be charged, and the method of allocating the fees among the subsidiaries. The absence of such contracts between the subsidiaries of the holding company is considered inappropriate and an unsafe and unsound banking practice. Supervisory action should be taken, in a manner consistent with the financial condition of the holding company and the subsidiary bank, to eliminate the improper practices. The practices should be criticized in the inspection report and actions taken to see that the situation is satisfactorily resolved. If the practices are having a serious impact on the bank, or if they might reasonably be expected to have a severe impact given the bank’s financial condition, formal administrative action should be considered in order to require the holding company to terminate the practices and make restitution to the subsidiary bank.
A bank’s prepayment of service fees to the parent company and payment of expenses incurred primarily in conjunction with holding company activities unconnected with the bank also are cause for supervisory concern. In general, prepayment for services is inappropriate unless the bank holding company can demonstrate that prepayment is standard industry practice for nonbanking companies acquiring the same service. Prepayment of sums for services that are not to be provided in the immediate future (for example, prepayment of an entire year’s fees for services to be rendered throughout the year) can have an adverse impact on the bank and is therefore inappropriate. These practices should be addressed by requiring timely and reasonable payments for services and reimbursement to the banks for what are essentially holding company expenses. If bank expenses are incurred substantially in support of a holding company activity, the bank should be reimbursed for that portion of its cash outlay that benefits the holding company. Reimbursement is necessary to ensure that bank resources are not diverted to a holding company affiliate with little or no benefit to the bank.

Aside from reasonable and timely fees for services rendered, the most appropriate way, from a supervisory standpoint, for funds to be paid to the parent company is through dividends. This principle applies, in general, to bank payment of funds to service holding company debt, even when the debt was initially incurred to raise equity capital for the subsidiary bank. It is an inappropriate banking practice for the subsidiary bank to pay management fees for the purpose of servicing holding company debt. Funds for servicing holding company debt should, as a general rule, be upstreamed in the form of dividends.

2020.6.1 TRANSACTIONS SUBJECT TO FEDERAL RESERVE ACT SECTION 23B

Section 23B of the FRA applies to any covered transaction with an “affiliate,” as that term is defined in section 23A of the FRA. Section 23B also applies to a number of transactions that are not covered by section 23A, for example, transactions that involve the payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise, or transactions in which an affiliate acts as an agent or a broker or receives a fee for its services. Although transactions between sister banks and banks that are part of a chain banking organization are exempt from section 23B, section 23A requires that covered transactions between a bank and an affiliate be conducted at arm’s length. See section 2020.1.2 for other transactions that are covered by section 23B and the requirements that pertain to all such transactions. For examples of transactions that could violate section 23B, see section 3700.10, dealing with an application to provide armored car services through a bank holding company’s nonbank subsidiary.

2020.6.2 INSPECTION OBJECTIVES

1. To determine whether the holding company and its subsidiaries charge fees to bank subsidiaries based on value received and fair market value.
2. To determine whether the subsidiaries are actually receiving these services.
3. To determine that the timing of fee payments is appropriate.
4. To determine whether there is an agreement between the entities relating to specific services and fees charged.
5. To determine if any fees result in an unsafe or unsound condition in any subsidiary bank.

Once the management policy underlying the fee structure is clearly understood, it is important for the examiner to determine that practice is consistent with policy. For example, if management indicates that fees charged are based on the fair market value of services received but the fee structure is actually geared to the bank subsidiary’s asset size, an inconsistency exists. Assuming either that all of the bank subsidiaries have access to the same or similar markets for the services being provided by the bank holding company or that cost is used consistently to determine pricing, the established pricing structure should be used for all subsidiaries. Deviations from established policy intended to channel a greater proportion of income from financially sound banks to financially weak ones should be noted.

When it has been established that the fee structure is reasonable and is consistently followed, a final question remains. Are the bank subsidiaries actually receiving the services for which they are charged? This may be difficult to ascertain in many cases, but serious efforts must be made.

It is important that the basic business principles of an arm’s-length transaction be applied to
all transactions between banks and their affiliates. This approach provides protection for all the interests involved. In addition, payment should be made within a reasonable time of the rendering of the services. It is inequitable for the bank subsidiary to pay fees far in advance in order to suit the parent’s cash needs. A clearly understood agreement between the holding company and its bank subsidiaries detailing the duties and responsibilities of each party and the method to be used for fee assessment is also important to the servicing arrangement.

2020.6.3 INSPECTION PROCEDURES

1. Review and analyze the policy regarding management and other services provided to bank subsidiaries and the method of assessing fees.
2. Determine the basis for valuation.
3. Review the actual pricing structure as it is applied.
4. Verify the following:
   a. Fees are charged in accordance with pricing structure.
   b. Pricing structure is consistently applied for all bank subsidiaries.
   c. Bank subsidiaries are actually receiving services for which they are assessed. Determine whether fee payments have caused the institution to become undercapitalized.
   d. Payments are made in a timely manner.
5. Review examination reports on bank subsidiaries for comments on fee assessment.
6. Analyze the parent company’s cash flow and income statements for intercompany fees.
7. Review recordkeeping.

A review of management’s written or stated policy regarding services provided subsidiaries and fee assessment is a logical starting point for the analysis of this area. The policy should be discussed with the holding company’s officers to ensure that the examiner has a clear understanding of the purpose and basic underlying philosophy. Any policy that calls for fee assessment based on standards other than fair market value or the cost of providing the services requires discussion with management and comment on page 1 of the report.

The determination of fair market value or cost of providing services is the responsibility of the holding company. The examiner should review the market or cost information used to justify the pricing of services and be satisfied that the data presented actually supports the fee structure. Request a copy of the pricing schedule as it is applied, and determine that it is actually based on the valuation of the services received and consistent with stated policy. Any variations from the basic structure among the bank subsidiaries would also require support from the market or cost data furnished.

Once the holding company’s policy, valuation data, and pricing structure are analyzed, they should be verified. Check the service at the bank-subsidiary level. The verification process can be modified as deemed appropriate by the examiner.

Note the timing of payment for services. Fees for services should be billed and paid as they are received, just as they would be with an unaffiliated servicer. Prepayments are inappropriate in most cases.

Written service agreements should be in effect specifically detailing the types and extent of services being rendered and the method of pricing. Any significant exceptions found during the verification process merit follow-up and comments in the report.

Thus far, these inspection procedures for management and service fees have emphasized a review of management’s stated intent and the actual fees charged on the individual bank-subsidiary level and have been somewhat oriented toward micro-level analysis. An overall view of the parent company’s cash flow and income statements can also provide certain indicators of appropriateness of fees. The parent company should be servicing its debt and paying dividends from sources other than management fees and service fees collected from bank subsidiaries. If the ratio of management and service fees to parent-company salaries and other expenses significantly exceeds 100 percent, the holding company could be charging fees that are unrelated to the value of the service. This situation would call for further investigation.

1. 12 U.S.C., unless specifically stated otherwise.                      |
2. 12 C.F.R., unless specifically stated otherwise.                      |
The transfer of low-quality assets to an insured depository institution can be reason for supervisory concern. Such transfers may be made to avoid detection and classification during regulatory examinations, and may be accomplished through participations, purchases/sales, and asset swaps with other affiliated or nonaffiliated entities. The donation of an asset with liabilities also is treated as a purchase of assets. An insured depository institution may not purchase a low-quality asset from an affiliate unless, pursuant to an independent credit evaluation, the member bank had committed itself to purchase the asset before the time the asset was acquired by the affiliate. Examiners should be alert to situations where an institution’s intention appears to be the concealment of low-quality assets for the purpose of avoiding examination scrutiny and possible classification.

During holding company inspections, examiners should identify situations where low-quality assets have been transferred between the holding company and its subsidiaries and a subsidiary-insured depository institution. Low-quality assets are defined in the Federal Reserve Board’s Regulation W (12 CFR 223.3(v)). In general, low-quality assets include assets that are classified or specially mentioned, or if subject to review would most likely be classified or specially mentioned, including assets classified based on the institution’s internal rating system. Low-quality assets also include past due loans, nonaccrual loans, loans on which the terms have been renegotiated because of a borrower’s poor financial condition, and any other asset acquired through foreclosure, repossession, or otherwise in satisfaction of a debt previously contracted, if the asset has not yet been reviewed in an examination or inspection. Other assets of questionable quality would include noninvestment grade securities and other real estate owned (OREO). The transfer of assets to avoid supervisory review is a highly improper and unsound banking practice and may be a violation of section 23A of the Federal Reserve Act and the Federal Reserve Board’s Regulation W that should be addressed through formal supervisory enforcement action, if necessary.

Any situations involving the transfer of low-quality assets to an insured depository institution should be brought to the attention of Reserve Bank supervisory personnel who, in turn, should notify the local office of the primary federal supervisor(s) of the other depository institution(s) involved in the transaction. For example, Reserve Banks should notify the primary federal supervisor of any depository institution to whom a state member bank or holding company is transferring or has transferred low-quality assets. Reserve Banks also should notify the primary regulator of any depository institution from which a state member bank or holding company is acquiring or has acquired low-quality loans. This procedure applies to transfers involving savings and loan associations and savings banks, as well as commercial banking organizations.

Legitimate transfers of assets should be properly recorded on the books of the acquiring institution at fair market value. If the transfer was with the parent holding company or a nonbank affiliate, determine that the transaction also should be properly recorded on the books of the affiliate.

2020.7.1 INSPECTION OBJECTIVES

1. To ensure that loan transfers involving state member banks, bank holding companies, savings and loan holding companies, and nonbank affiliates are carefully evaluated to determine if they were carried out to avoid classification, and to determine the effect of the transfer on the condition of the institution and to ascertain whether the transfer was consistent with the requirements of section 23A. Under section 23A of the Federal Reserve Act, an asset purchase is a “covered transaction.” All “covered transactions” by a bank with a single affiliate and with all affiliates combined may not exceed 10 percent and 20 percent, respectively, of a bank’s capital and surplus.

2. To ensure that the primary supervisor of the other financial institution involved in the transfer of low-quality assets is notified.

2020.7.2 INSPECTION PROCEDURES

1. Determine whether assets were transferred prior to the date of examination to avoid possible criticism during the examination.

2. Determine whether any of the loans transferred were nonperforming at the time of transfer, classified at the previous examination, or for any other reason were considered to be low-quality assets.

3. Review the institution’s policies and pro-
cedures to determine whether assets or participations purchased are given an independent, complete and adequate credit evaluation. If a bank is a holding company subsidiary or a member of a chain banking organization, review asset purchases or participations from affiliates or other known members of the organization to determine if the asset purchases are given an arms-length and independent credit evaluation by the purchasing bank.

4. Determine whether any purchases of assets from an affiliate comply with section 23A, which generally prohibits purchases of low-quality assets from an affiliate and limits asset purchases and all other “covered transactions” by a bank from a single affiliate and all affiliates combined to 10 percent and 20 percent, respectively, of a bank’s capital and surplus.

5. Determine whether any assets purchased are properly reflected at fair market value (while fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such assets and an appropriate risk premium). Determine that appropriate write-offs are taken on any assets sold at less than book value.

6. Determine whether transactions involving transfers of low-quality assets to the parent holding company or a nonbank affiliate are properly reflected at fair value on the books of both the bank and the holding company affiliate.

7. If low-quality assets were transferred to or from another financial institution for which the Federal Reserve is not the primary supervisor, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal supervisor of the other institution involved in the transfer. The memorandum should include the following information, as applicable:

- Name of originating and receiving institutions.
- Type of assets involved and type of transfer (i.e., participation, purchase/sale, swap).
- Date(s) of transfer.
- Total number and dollar amount of assets transferred.
- Status of the assets when transferred (e.g., nonperforming, classified)
- Any other information that would be helpful to the other supervisor.
Intercompany Transactions  
(Split-Dollar Life Insurance)  

Section 2020.9

Split-dollar life insurance is a type of life insurance in which the purchaser of the policy pays at least part of the insurance premiums and is entitled to only a portion of the cash surrender value, or death benefit, or both. See SR-93-37 and its attachments for further discussion of the Federal Reserve’s position on such arrangements between bank holding companies and their subsidiary banks.

2020.9.1 SPLIT-DOLLAR LIFE INSURANCE POLICY ARRANGEMENTS

Certain split-dollar life insurance policy arrangements involving banks and their parent bank holding companies raise legal and safety-and-soundness concerns. These arrangements fall into two general categories: (1) those in which the subsidiary bank owns the policy, pays all or substantially all of the premiums and is reimbursed for the premium payments (if at all) at some time in the future (endorsement plans) and (2) those in which the parent holding company owns the policy, and pays the premium, but uses the insurance policy as collateral for loans from its subsidiary bank (collateral assignment plans).

2020.9.1.1 Split-Dollar Life Insurance Endorsement Plan

Under an endorsement plan, the subsidiary bank purchases a policy in which its parent bank holding company or an officer, director, or principal shareholder thereof is the primary beneficiary, rather than the bank or one of its officers or directors. In this instance, the subsidiary bank receives only a limited portion of the death benefit—usually an amount equal to its premium payments plus interest. The primary beneficiary—the holding company or one of its officers, directors, or principal shareholders—receives a majority of the insurance proceeds but pays little or nothing for the benefit. Many of the policies in this category are single-premium universal life policies, whereby the subsidiary bank pays one large lump sum premium payment for the policy. Generally, a subsidiary bank involved in an endorsement plan records the cash surrender value of the policy as an asset on its books; the bank holding company does not record anything at the parent-only level.

A variation of the endorsement plan is an arrangement in which the bank pays an annual premium towards the policy and the parent holding company reimburses the bank for a nominal amount of the annual premium payments. These amounts are substantially lower than the premium payments made by the subsidiary bank and therefore do not accurately reflect the economic benefit derived by the holding company as primary beneficiary of the insurance policy.

2020.9.1.2 Split-Dollar Life Insurance Collateral Assignment Plan

Under a collateral assignment plan, the parent bank holding company owns the policy and pays the entire premium. The subsidiary bank makes annual loans to the bank holding company in an amount equal to the annual increase in the cash surrender value of the policy (or, in some cases, in amounts equal to premiums paid) with the policy itself serving as collateral for the loan. The loans are repayable at either the termination of employment or the death of the insured employee, and will be paid using the death benefits available from the policy.

2020.9.2 COMPLIANCE WITH APPLICABLE LAWS

2020.9.2.1 Compliance with Sections 23A and 23B of the FRA

Both of the aforementioned types of split-dollar life insurance policy arrangements may be inappropriate if they are inconsistent with sections 23A or 23B of the Federal Reserve Act (FRA). Section 23A places quantitative restrictions and other requirements on certain transactions, including loans, between banks and their affiliates. The statute also requires that loans between banks and their affiliates be secured with collateral having a specified market value that depends on the type of collateral used to secure the loan. Under an endorsement plan, where the subsidiary bank pays all or substantially all of the insurance premiums, an unsecured extension of credit from the subsidiary bank to its parent holding company generally results because the subsidiary bank has paid the bank holding company’s portion of the premium, and the bank...
will not be reimbursed fully for its payment until sometime in the future.

Under a collateral assignment plan, if the insurance policy held by the parent bank holding company serves as collateral to secure a loan from its subsidiary bank, the loan may be a violation of section 23A unless it meets the quantitative requirements of section 23A and the cash surrender value of the insurance policy used as security is equal to 130 percent of the amount of the loan. Thus, a bank loan to the parent bank holding company that equals the cash surrender value of the insurance policy that is serving as collateral would not be adequately secured under section 23A, unless additional collateral was provided.

Both categories of split-dollar life insurance policy arrangements may also lead to violations of section 23B of the Federal Reserve Act, which requires that certain transactions involving a bank and its affiliates be on terms and under circumstances substantially the same or at least as favorable to the bank as those prevailing at the time for comparable transactions with or involving nonaffiliated companies. Because the bank holding company is the beneficiary of the life insurance policy, it is a participant in a transaction between a bank and a third party; therefore, the split-dollar life insurance transaction must meet the standards of section 23B. In order to conform to the statutory restrictions of section 23B, the return to the bank from ownership of the policy should be commensurate with the size and nature of its financial commitment. In most split-dollar insurance arrangements, the bank makes an investment in the policy not for the purpose of insuring itself against risk but for the purpose of obtaining insurance for its holding company. The only return that the bank will get from its participation in ownership of the policy is the return of its initial investment and possibly some interest. However, the insurance company deducts the cost of maintaining the insurance coverage from interest that would otherwise be credited to the equity in the policy. These costs include policy loads, surrender charges, and mortality costs. The holding company should fully reimburse the bank for all of these charges. Examiners should carefully evaluate these arrangements because, in many cases, the reimbursement the bank receives from the holding company is based on an implied value of the insurance coverage received by the holding company that is less than the assessments made to the policy equity.

In the process of evaluating split-dollar insurance arrangements, examiners should keep in mind the fact that the advances made by a bank to purchase the insurance are the equivalent of a loan to the holding company. Therefore, to comply with section 23B, the terms of the loan, such as its duration and interest rate, must be on market terms.

2020.9.2.2 Investment Authority Under the National Bank Act

Participation by bank holding companies and their state-chartered and national bank subsidiaries in split-dollar life insurance policy arrangements may also raise concerns whether the policies are permissible bank investments under section 24(7) of the National Bank Act. The Office of the Comptroller of the Currency’s interpretation of this provision of the National Bank Act (OCC Banking Circular 249, May 9, 1991). In addition, under section 24 to the Federal Deposit Insurance Act, a state-chartered bank generally may not, without the FDIC’s permission, engage in any activity that is impermissible for a national bank.

2020.9.3 SAFETY-AND-SOUNDNESS CONCERNS

The purchase of a split-dollar life insurance policy may also constitute an unsafe and unsound banking practice involving the diversion of bank income or assets. If a subsidiary bank pays the entire insurance premium but is not the beneficiary, it provides an economic benefit to its parent holding company or other beneficiary for which it is not being adequately reimbursed or compensated. In this instance, the bank loses the opportunity to use its assets productively. Generally, the bank pays the premium in return for the insurance company’s policy or payout, and the bank is not compensated for the entire premium.

1. The Federal Deposit Insurance Corporation has taken the same position in a published interpretive letter, FDIC 92-40, dated June 18, 1992.

2. National banks may not purchase life insurance as an investment. See OCC Banking Circular 249, for the tests under which life insurance may be purchased and held for noninvestment purposes.

3. SR-92-97 (FIS) and SR-92-98 (FIS), dated December 16 and 21, 1992, respectively, describe the provisions of section 24 of the Federal Deposit Insurance Act.
paid a higher than market price for whatever limited benefit it may receive. This is also the case when the primary beneficiary of the policy is an officer, director, or principal shareholder of the parent holding company. Such an arrangement is not consistent with safe and sound banking practices because the subsidiary bank is conferring an economic benefit on an insider of the parent bank holding company without receiving adequate compensation.

2020.9.4 EXAMINER REVIEW OF SPLIT-DOLLAR LIFE INSURANCE

Examiners should be fully aware of the problems inherent in split-dollar life insurance policy arrangements between bank holding companies and their subsidiary banks. During the course of all bank examinations and bank holding company inspections, examiners should review corporate life insurance policy arrangements for compliance with applicable banking laws and safety-and-soundness standards. If a split-dollar life insurance policy arrangement exists in either a bank holding company or a state member bank, it should be reviewed and modified if it does not comply fully with the law and principles of safe and sound banking. If a bank holding company or a state member bank fails to take appropriate action to bring its split-dollar life insurance policy arrangements into compliance, then the Reserve Bank should consider appropriate follow-up supervisory action against the banking organization or its institution-affiliated parties, or both.

2020.9.5 INSPECTION OBJECTIVES

1. To determine if split-dollar life insurance arrangements between the parent holding company and its subsidiary banks are consistent with the provisions of sections 23A and 23B of the FRA.

2. To ascertain whether participation by bank holding companies and their national bank or state-chartered bank subsidiaries is consistent with section 24(7) of the National Bank Act and section 24 of the Federal Deposit Insurance Act.

3. To verify the cash surrender values of split-dollar life insurance policies and to establish whether those values have been impaired by loans to, liens by, or assignments to, third parties or by unauthorized borrowings or cancellations.

2020.9.6 INSPECTION PROCEDURES

1. Review corporate life insurance policy arrangements between the parent company and its subsidiary banks.

   a. Determine if there are split-dollar life insurance arrangements between any subsidiary bank and the parent company or officers or directors of the parent company.

   b. If any such insurance arrangement exists, establish if the plan is either an endorsement plan or a collateral assignment plan.

   c. Review arrangements involving a split-dollar life insurance policy purchased by the parent company.

      (1) Review external documentation evidencing the cash surrender value. If no documentation exists, ask the audit committee and its internal auditors—

         (a) to obtain external documentation verifying its value and

         (b) to verify that there are no outstanding loans, liens, or assignments against the insurance policies.

      (2) Establish whether the parent company’s board of directors has established policies and implemented procedures for transactions between the insurance carrier and the parent company to prevent unauthorized borrowing or cancellation of any insurance policy that has a cash surrender value.

      (3) Determine whether the corporate life insurance policy arrangements are consistent with applicable safety-and-soundness standards.

     (4) Verify that the recorded value of the respective asset is equal to the unimpaired cash surrender value of the asset.

2. If an endorsement plan arrangement is purchased by a subsidiary bank, establish whether the bank holding company is the beneficiary. If the parent company is the beneficiary, such an arrangement may result in an unsecured exten-
sion of credit when the subsidiary bank pays all or substantially all of the insurance premiums but is not reimbursed until some time in the future. Ascertain if the investment return to the bank from ownership of the policy is commensurate with the size and nature of its financial commitment.

3. If a collateral assignment plan (when the insurance policy held by the parent company serves as collateral to secure a loan from a subsidiary bank), ascertain whether the cash surrender value of the insurance policy is equal to 130 percent of the amount of the loan.

4. For both types of split-dollar life insurance:

   a. Determine if the investment return from ownership of the policy is commensurate with the size and nature of the financial commitment, including all costs incurred for maintaining the insurance coverage.

   b. Determine if the terms (duration and market interest rate) of the advances made to purchase the insurance are on market terms.

   c. If the bank holding company is the beneficiary of a bank insurance policy and a bank is a participant in the purchase of the insurance from a third party, determine if the transaction was on terms and under circumstances that were substantially the same as or at least as favorable to the bank as those then prevailing for comparable transactions with or involving nonaffiliated companies.

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
The history of bank holding company legislation reflects a principle that banking and commerce should be separated in order to prevent abuses in the distribution of credit. The 1956 Act generally required companies to divest their nonbank activities and shares within two years. In the 1970 Amendments, the same requirement applied to companies formed in the future. However, one-bank holding companies in existence at the time of these amendments were given a “grace period” to comply with divestiture requirements of the legislation. Those companies whose bank and nonbank interests had been combined on or before June 30, 1968, were permitted to continue the existing combination for an indefinite period (indefinite or permanent grandfather privileges). But those BHCs which existed at the time of the 1970 Amendments, but whose bank was acquired or whose nonbank activity was initiated after June 30, 1968, were permitted to continue their nonbank activities for only 10 years until December 31, 1980. An exception to the divestiture deadline existed with respect to certain real estate holdings.

Although indefinitely grandfathered companies may continue to engage in nonbanking activities, these grandfather privileges are subject to review by the Federal Reserve Board at the time when a company’s banking assets exceed $60 million.1

2030.0.1 INDEFINITE GRANDFATHER PRIVILEGES

Under the provisions of section 4(a)(2) of the Act, as amended in 1970, relating to grandfather privileges for certain nonbanking activities of bank holding companies, the Reserve Banks have been delegated the authority to determine that termination of grandfathered activities of a particular bank holding company is not warranted; provided, the Reserve Bank is satisfied that all of the following conditions are met:

1. The company or its successor is “a company covered in 1970;”

2. The nonbanking activities for which indefinite grandfather privileges are being sought do not present any significant unsettled policy issues; and

3. The bank holding company was lawfully engaged in such activities as of June 30, 1968 and has been engaged in such activities continuously thereafter.

A company covered in 1970 is defined in section 2(b) of the Act as “a company which becomes a bank holding company as a result of the enactment of the Bank Holding Company Act Amendments of 1970 and which would have been a bank holding company on June 30, 1968, if those amendments had been enacted on that date.” The Board has also determined that the company must have owned at least 25 percent of the voting shares of the same subsidiary bank on June 30, 1968, and December 31, 1970, in order to qualify as a company covered in 1970. If a company was not actively engaged in a nonbank activity prior to June 30, 1968, either directly, or indirectly through a subsidiary, it may still qualify for indefinite grandfather privileges if the company had entered into a binding contract prior to June 30, 1968. The binding contract must be a written document which specifies that the company (or its subsidiary) or persons representing the company will purchase another company which is already engaged in the activity.

Within two years after the subsidiary bank of an indefinitely grandfathered company attains banking assets in excess of $60 million, the status of the company’s grandfather privileges is subject to review to determine whether the rights should remain in effect or be terminated. The Board or Reserve Bank may also review any company’s grandfather privileges and terminate them if it determines that such action is necessary to prevent (1) undue concentration of resources, (2) decreased or unfair competition, (3) conflicts of interests, or (4) unsound banking practices. Moreover, when a company applies for approval of an acquisition, it may expect the Board or Reserve Bank to review the legitimacy of its grandfather privileges.

2030.0.2 ACTIVITIES AND SECURITIES OF NEW BANK HOLDING COMPANIES

A company that becomes a bank holding company may, for a period of two years, engage in

---

1. Effective October 20, 1981, the Board amended its Rules Regarding Delegation of Authority to delegate to the Reserve Banks authority to make these determinations regarding indefinite grandfather privileges.
nonbanking activities and control voting securities or assets of a nonbank subsidiary, if the bank holding company engaged in such activities or controlled such voting securities or assets on the date it became a bank holding company. The Board can grant requests for up to three one-year extensions of the two-year period. This is in accordance with a December 1983 revision to Regulation Y (12 C.F.R. 225.22(e)). The regulatory provision implements Section 4(a)(2) of the BHC Act.

2030.0.3 LIMITATIONS ON EXPANSION OF GRANDFATHER RIGHTS FOR INSURANCE AGENCY NONBANKING ACTIVITIES OF BANK HOLDING COMPANIES

Refer to Manual section 3170.0.3.4.1.

2030.0.4 SUCCESSOR RIGHTS

When a bank holding company transfers its bank shares to another company in a manner that produces no substantial change in the control of the bank, the transferee qualifies under section 2(e) of the Act as a “successor.” The “successor” provision prevents a bank holding company from transferring its bank to some other organization. A successor is considered a bank holding company from the date the transferor became a bank holding company. Thus, it may hold the same grandfather privileges as its predecessor. By the same token, it becomes subject to any conditions or restrictions, such as divestiture requirements, imposed by the System upon its predecessor. For example, an irrevocable declaration filed by the predecessor would be binding upon the successor.

2030.0.5 EXPANSION OF GRANDFATHER ACTIVITIES

Grandfather privileges apply to activities, not to companies. As a general rule, these activities are permitted to be expanded through internal growth; however, there are a few exceptions. See Appendix 1 in this section.

In Appendix 1 it is important to distinguish between a purchase in the ordinary course of business and a purchase, in whole or in part, of a going concern. Each of the following conditions must be satisfied in order for the transaction to be in the “ordinary course of business,” which is permissible: (1) less than a substantial amount of the assets of the company to be acquired must be involved; (2) the operations of the purchased company must not be terminated or substantially discontinued; (3) the assets acquired must not be significant in relation to the size of the same line of nonbank activity already in the holding company (an acquisition is deemed significant if the book value of the acquired nonbank assets exceeds 50 percent of the book value of the nonbank assets of the holding company or nonbank subsidiary comprising the same line of activity); (4) if the transaction involves the acquisition of assets for resale, the sale must be a nominal business activity of the acquiring company; and (5) the major purpose of the transaction must not be to hire essentially all of the seller’s principal employees who are expert, skilled and experienced in the business of the company being acquired. If any of these five conditions is not satisfied, the transaction may be considered to be an acquisition of a going concern, which is not permissible without prior approval. Refer to 12 C.F.R. 225.132.

2030.0.6 DIVESTITURES (also see Manual section 2090.6)

The act specifies the time in which a company must divest of any impermissible activity. Any company becoming a bank holding company subsequent to the 1970 Amendments has two years in which to divest its impermissible activity. The Act allowed a temporarily grandfathered company ten years from December 31, 1970, to divest of its impermissible activities, except certain real estate holdings discussed earlier; and allows indefinitely grandfathered companies ten years from the date on which grandfather privileges are terminated by the Board or Reserve Bank, should they be terminated for good cause.

As mentioned earlier, reviews of a company’s grandfather privileges may be precipitated by such circumstances as: (1) a subsidiary bank of an indefinitely grandfathered company attaining assets in excess of $60 million (reviewed within two years); (2) a company seeking approval to engage in another activity or acquire another
bank; (3) a company which violates the Act; or (4) a company operating in a manner which results in an undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices.

When a company has filed an application requiring the Board’s or Reserve Bank’s approval, the Board or Reserve Bank may approve the application subject to the condition that the company divest of certain grandfathered shares or assets within a specified time period. The specified time period generally will be shorter than the aforementioned time periods stipulated in the Act.

The plan of divestiture should have provided for the removal of any control relationship between the company and its divested activities. These control requirements, as outlined in section 2(g) of the Act, include one or more of the following: (1) no interlocking directorates; (2) ownership of less than 25 percent of the voting shares by the BHC and related parties; (3) no interlocking management positions in policymaking functions; (4) no indebtedness between the transferor and the transferee; (5) no agreement or understanding which restricts the voting privileges of shares. Further discussion of these and other control requirements and issues is found in Manual sections 2090.1 and 2090.6.

2030.0.7 INSPECTION OBJECTIVES

1. To determine when the company acquired its subsidiary bank.
2. To determine when the company commenced its nonbanking activities and whether these activities were conducted continuously thereafter.
3. To determine if the banking assets of a bank controlled by a holding company with indefinite grandfather privileges have reached $60 million.
4. To determine if a change of ownership or control of the company has taken place, and whether the transferee qualifies as a "successor.”
5. To determine if expansions of grandfathered activities occurred in accordance with the Act.

2030.0.8 INSPECTION PROCEDURES

1. If necessary, examine the subsidiary bank’s stock certificate book to determine when the company acquired 25 percent or more of the bank.
2. Review the minute books and historical financial records of the company and its subsidiaries for evidence of the date of commencement of any nonbank activity and its continuation thereafter. In particular, the financial records should reflect the activity’s impact as either an asset and/or an income item. From these records, also determine whether there has been expansion of the activity and whether such expansion complies with the Act.
3. If necessary, review the latest quarterly Call Report of Condition for the subsidiary bank to determine whether total assets exceeded $60 million. If appropriate, advise management that its grandfather status is subject to review.
4. If necessary, examine the stock certificate records and minutes of the bank or BHC to determine if the bank’s shares have been transferred from one bank holding company to another in such a manner that the transferee qualifies as a successor.
5. Upon review of the aforementioned records, discuss the status of the company’s grandfather privileges with the Reserve Bank’s management, if necessary.
6. If divestment is required, encourage its execution as soon as possible during the divestment period. Request a divestment plan which specifies the manner by which divestment will be accomplished, the specific steps necessary to effect the divestment, and the time schedule for taking such steps. Advise management that failure to divest within the prescribed time period will be viewed as a violation of the Act.

### 2030.0.10 APPENDIX 1—EXPANSION OF GRANDFATHERED ACTIVITIES

#### FOR COMPANIES WITH AN INDEFINITELY GRANDFAZHERED NONBANK ACTIVITY

1. Opening of additional offices of existing subsidiary X  
2. Acquisition of assets in the “ordinary course of business” as defined X
3. Acquisition of a going concern:
   a. Additional shares of the grandfathered nonbanking subsidiary X
   b. Additional shares of a nonbanking company which is regarded as an investment (generally companies in which the holding company has an interest of between 5 and 25 percent) X
   c. Initial acquisition of shares of any other company engaging in the activity X
Commitments to the Board arise most often through the application process. Many commitments are included within the text of accompanying Board orders or letters transmitted to the applicants. Commitments can also arise through the supervisory process. Commitments should be specific and furnished in written form.

The most common type involves a commitment to inject capital (either equity or debt capital) into the company or subsidiary to be acquired or possibly into other subsidiaries of the bank holding company. The required injections may be for a specific dollar amount or for an unspecified amount necessary to achieve a predetermined capital relationship. Determining compliance with such commitments is generally not difficult since an agreed upon quantifiable result must be achieved.

Types of commitments made to the Board in the past include: divestiture of nonpermissible stock holdings or activities; introduction of new services; and reduction or elimination of dividends or management fees from subsidiaries.

Several of the above forms of commitments are rather difficult to monitor due to their inexact nature. The examiner should determine in such cases whether good faith compliance efforts have been made. Where an order approving an application imposes specific conditions, however, compliance is of the utmost importance since a conditional order is based on the theory that such conditions were necessary to eliminate or outweigh adverse factors. Willful noncompliance in these cases might necessitate the use of cease-and-desist powers to prevent evasion of the purposes of the Act. Pursuant to the Board’s request, each Reserve Bank reports semi-annually on the status of all outstanding commitments made by holding companies in its District.

2040.0.1 INSPECTION OBJECTIVES

1. To determine that the bank holding company is taking the necessary steps to fulfill any outstanding commitments as scheduled.
2. To determine whether additional commitments or conditions should be imposed to achieve complete compliance.
3. To determine whether a request for an extension of time to fulfill any outstanding commitment is warranted.

2040.0.2 INSPECTION PROCEDURES

1. Review semi-annual commitment reports to the Board for commitments fulfilled since the last inspection. Determine whether such commitments were completed as required.
2. Review with management any actions taken to comply with outstanding commitments or plans to effect fulfillment.
3. If warranted, initiate action to consider an extension for compliance on outstanding commitments.
WHAT’S NEW IN THIS REVISED SECTION

This section was updated to discuss amendments to the Federal Reserve Act regarding insider lending. The definition of “extension of credit” was revised to include an insured depository institution’s (IDI) credit exposure to a person arising from a derivative transaction, repurchase agreement, reverse repurchase agreement, securities lending transaction, or securities borrowing transaction. See the Federal Reserve Act, section 22(h)(9)(D)(i), as amended by the Dodd-Frank Act, section 614(a).

The Federal Deposit Insurance Act was amended to prohibit the purchase or sale of assets between an IDI and an executive officer, director, or principal shareholder of the IDI, and any related interest of such person, unless the transaction is on market terms. In addition, if the asset purchase or sale represents more than 10 percent of the IDI’s capital stock and surplus, the transaction must be approved in advance by a majority of the members of the board of directors of the IDI who do not have an interest in the transaction. See section 615(1) of the Dodd-Frank Act.

2050.0.1 BHC OFFICIAL AND RELATED INTEREST TRANSACTIONS BETWEEN THE PARENT COMPANY OR ITS NONBANK SUBSIDIARIES

Business transactions between a parent bank holding company or its nonbank subsidiary and a BHC official or a BHC official’s related interests require close supervisory review. “Bank holding company official” is defined as any director, executive officer, or principal shareholder of the parent company or any of its subsidiaries, excluding the subsidiary bank’s nonbank subsidiaries.

Most of these transactions are soundly structured and have a legitimate business purpose that result in equitable treatment for all parties. However, examiners should pay close attention to all extensions of credit by a BHC or its nonbank subsidiary to a BHC official or related interest to ensure that the terms of the credit, particularly interest-rate and collateral terms, are not preferential and that the credit does not involve more than a normal risk of repayment.

An extension of credit by a BHC or nonbank subsidiary may be considered abusive or self-serv ing if its terms are unfavorable to the lender, or if the credit would not have been extended on the same terms absent the official relationship; that is, it would be improbable that each party to the credit would have entered into the credit transaction under the same terms if the relationship did not exist. When a transaction appears questionable, a complete inquiry into the facts and circumstances should be undertaken so that a legal determination can be obtained.

In addition to the above supervisory considerations, the Sarbanes-Oxley Act of 2002 (Pub. L. No. 107-204) (the act) imposed certain insider lending restrictions on public companies, including BHCs that are public companies. A BHC generally is considered a public company for these purposes if it has a class of securities registered under section 12 of the Securities Exchange Act of 1934 (the 1934 act) or is required to file reports with the Securities and Exchange Commission (SEC) under section 15 of the 1934 act. The Sarbanes-Oxley Act prohibits a publicly owned BHC (public BHC) and its subsidiaries from extending credit, or arranging for another entity to extend credit, in the form of a personal loan to any director or executive officer of the public BHC. This prohibition does not apply to any extension of credit made before July 30, 2002, so long as the loan is not renewed or materially modified after that date.

The Sarbanes-Oxley Act includes two exceptions to this loan prohibition. First and most importantly, the prohibition does not apply to any loan made by an insured depository institution that is subject to the insider lending restrictions of section 22(h) of the Federal Reserve Act, as implemented by the Board’s Regulation O. Thus, loans by the insured depository institution subsidiaries of a public BHC to a director or executive officer of the BHC likely are exempt from the prohibition, although they would be subject to Regulation O as discussed below. The second exception permits the directors and executive officers of a public BHC to obtain home improvement and manufactured home loans, consumer loans, and loans under open-end credit plans or charge cards from the public BHC or its subsidiaries, so long as the

---

2. The act does not restrict lending by a subsidiary of a public BHC to the subsidiary’s own directors and executive officers, so long as these persons are not also directors or executive officers of the public BHC.

BHC Supervision Manual January 2013
credit (1) is extended in the ordinary course of the company’s consumer credit business, (2) is a kind of credit generally made available to the public, and (3) is made on market terms or on terms that are no more favorable than those offered to the general public.

2050.0.2 TRANSACTIONS INVOLVING OTHER PROPERTY OR SERVICES

Other transactions involving BHC officials, their related interests, and the BHC and nonbank subsidiary that should be reviewed by the examiner include the—

1. purchase of assets or services from the BHC or nonbank subsidiary, particularly if at a discount or on preferential terms;
2. sale of assets or services to the BHC or nonbank subsidiary, particularly if at a premium;
3. lease of property to or from the BHC or nonbank subsidiary; and
4. use of BHC or nonbank subsidiary property or personnel by a BHC official or related interest.

As with loans and other extensions of credit to BHC officials on preferential terms, abusive or self-serving insider transactions involving other property or services deprive the BHC or nonbank subsidiary of higher returns or gains that may have been achieved had the same transaction been at a fair market price. A fair market price would be that price charged or received from an unaffiliated party.

The Dodd-Frank Act amended the Federal Deposit Insurance Act (FDIA) to impose a prohibition on asset purchases and between an IDI and an executive officer, director, or principal shareholder of the IDI, and any related interest of such person, unless the transaction is on market terms. In addition, if the asset purchase or sale represents more than 10 percent of the IDI’s capital stock and surplus, the transaction must be approved in advance by a majority of the members of the board of directors of the IDI who do not have an interest in the transaction. See section 18(z) of the FDIA, as amended by the Dodd-Frank Act, section 615(a).

A fair market price is often difficult to determine because the assets or services involved may be unique to a given situation and individuals. In general, the fair market price of even unique assets or services can be approximated by the cost of the assets or services to the party selling or furnishing them, if appropriate. The value of services or properties provided by a BHC or nonbank subsidiary should be established and justified either by policy or on a case-by-case basis, and appropriate documentation should be available to the examiner.

Services provided by a BHC official or a related interest to a BHC or nonbank subsidiary, while not unusual, may be most difficult to value. In part because of the problem of valuation, this type of transaction is among the most susceptible to abuse. The cost of providing services is frequently derived by placing value on the time of the individuals providing the services. When services are provided by a BHC official who normally places a very high billing value on time provided, the benefits to the BHC must be assessed in order to form a basis for determining a fair price. The BHC official may be a highly regarded professional whose time and services have great value to the organization. However, when the BHC requires routine clerical services, officials should not charge the BHC a professional-level rate for such services. Under these or similar circumstances, the BHC would be considered imprudent in paying such rates and could be subject to critical comment.

2050.0.3 REGULATION O

For ease of reference, certain Regulation O definitions and limitations, as revised by the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), are presented here, some in abbreviated form. A thorough review of the entire regulation (found at FRRS 3–960), and the Board’s press releases pertaining to Regulation O, is necessary for a complete understanding of the regulation. (Note that section 108 of the Financial Institutions Regulatory Act of 1978 amended section 18(j) of the Federal Deposit Insurance Act to make section 22(h) of the Federal Reserve Act applicable to nonmember insured banks.)

Purpose of Regulation O. Regulation O governs any extension of credit by a member bank and its subsidiaries (based on amendments contained in FDICIA, Regulation O also applies to nonmember insured depository institutions) to an executive officer, director, or principal shareholder of (1) the member bank, (2) a bank holding company of which the member bank is
a subsidiary, and (3) any other subsidiary of that bank holding company. It also applies to any extension of credit by a member bank to (1) a company controlled by such a person and (2) a political or campaign committee that benefits or is controlled by such a person.

Supervision of BHCs and their nonbank subsidiaries. Regulation O deals exclusively with extensions of credit by banks and their subsidiaries, not extensions of credit by BHCs and their nonbank subsidiaries. However, because the regulations curtail or eliminate abusive transactions, they can be used as a guide or model in providing standards for the supervisory review of extensions of credit by BHCs and nonbank subsidiaries. Although a direct extension of credit by a BHC could not be determined to be a violation of Regulation O, if the credit fails to meet the requirements that Regulation O establishes for banks, it may be possible to conclude that the BHC is engaging in either an unsafe or unsound practice that exposes the entire banking organization to undue risk and exposure to loss. Regulation O limits credit extensions by a bank to officials of that bank and their related interests; therefore, examiners should be especially alert to credit extensions from BHCs and nonbank subsidiaries. If credit extensions appear to circumvent the intent of Regulation O, they should be identified and discussed with management and noted in the inspection report for follow-up review and possible formal corrective action by regulatory authorities.

2050.0.3.1 FDICIA and BHC Inspection Guidance for Regulation O

On April 22, 1992, the Board adopted amendments to Regulation O, effective May 18, 1992, to implement the changes required by section 306 of FDICIA. Section 306 amended section 22(h) of the Federal Reserve Act and replaced the language of section 22(h) with the provisions of the Board’s Regulation O. Section 306 also made several substantive modifications to section 22(h) that required revisions to Regulation O. These changes are outlined in the Board’s press release and Federal Register notice of May 28, 1992 (57 Fed. Reg. 22,417).

The following are some of the more significant changes that were made effective May 18, 1992:

1. Aggregate lending limit (section 215.4(d)). The aggregate limit on the total amount that a bank can lend to its insiders and their related interests as a class was changed. In general, this amount is equal to the bank’s unimpaired capital and unimpaired surplus. The Board also decided as a one-year interim measure to permit banks with deposits under $100 million to adopt a higher limit, not to exceed 200 percent of the bank’s unimpaired capital and unimpaired surplus. (This interim period was extended twice by the Board, extending the higher limit through February 18, 1994, when the higher limit became permanent. The board of directors must provide an annual resolution authorizing the use of this higher limit. Other conditions also apply.)

2. Lending limits for directors and related interests (section 215.4(c)). Loans to directors (and their related interests) are subject to the same lending limit that is applicable to executive officers and principal shareholders (and their related interests).

3. Credit standards (section 215.4(a)). When lending to an insider2b a bank must follow credit underwriting procedures that are as stringent as those applicable to comparable transactions by the bank with persons outside the bank.

4. Definition of “principal shareholder” (section 215.2(m)(1)). The definition of principal shareholder was tightened for banks located in small communities. The previously existing 10 percent limitation was made applicable to all banks, regardless of the size of the communities in which they were located.3

5. Definition of “member bank” (section 215.2(j)). The term member bank was redefined to include any subsidiary of the member bank. This revision clarified that an extension of credit from a subsidiary of a member bank is subject

---

2b. The term insider refers to an executive officer, director, or principal shareholder, and includes any related interest of such a person.

3. The Board amended the definition of principal shareholder of a member bank, effective December 17, 1992, so that it does not include a company of which a member bank is a subsidiary. This amendment excluded from Regulation O loans to a company that owns, controls, or exercises a controlling influence over a member bank, as those relationships are defined in section 2(d) of the Bank Holding Company Act, as well as the related interests of such a parent bank holding company. The definition of principal shareholder for purposes of reporting obligations under section 215.11 of Regulation O was not changed as a result of the Housing and Community Development Act of 1992 because those portions of Regulation O implement provisions of law in addition to section 22(b) of the Federal Reserve Act.
to the same insider restrictions as an extension of credit from a member bank itself.

6. Coverage of all companies that own banks (section 215.2(b)). All companies that own banks became subject to Regulation O, regardless of whether they are technically bank holding companies.

7. Prohibition on knowingly receiving unauthorized extensions of credit (section 215.6). Insiders are prohibited from knowingly receiving (or permitting their related interests to receive) any extension of credit not authorized by section 22(h) of the Federal Reserve Act.

8. Reporting requirement for certain credit (section 215.12). Executive officers and directors of member banks that do not have publicly traded stock are required to report annually to their institutions the outstanding amount of any credit secured by shares of the insider’s institution.

In a February 18, 1994, press release, the Federal Reserve Board announced its approval of a final rule that further amended several provisions of Regulation O, effective on that date. Some of the provisions carried out or further refined provisions of FDICIA. The amendments were designed to increase the ability of banks to make extensions of credit that pose minimal risk of loss, to eliminate recordkeeping requirements that impose a paperwork burden, and to remove certain transactions from the regulation’s coverage consistent with bank safety and soundness. The amendments were expected to increase the availability of credit, particularly in communities served by small banks. The following is a discussion of some of the rule’s primary provisions.

1. Aggregate lending limit—exception for small, adequately capitalized banks (section 215.4(d)). This revision of Regulation O made permanent an interim rule increasing the aggregate lending limit for small, adequately capitalized banks from 100 percent of the bank’s unimpaired capital surplus to 200 percent, provided the bank satisfies three conditional criteria.

2. Exceptions to the general limits on lending (section 215.4(d)(3)). The Board adopted certain exceptions to the general restrictions on lending to insiders. The exceptions apply to loans fully secured by—

   a. obligations of the United States or other obligations fully guaranteed as to principal and interest by the United States;

   b. commitments or guarantees of a depart-
revised the tangible-economic-benefit rule to clarify that it does not reach certain transactions that may benefit an insider. The Board explicitly provided that the rule does not apply to an arm's-length extension of credit by a bank to a third party where the proceeds of the credit are used to finance the bona fide acquisition of property, goods, or services from an insider or an insider’s related interest.

2050.0.3.2 Definitions in Regulation O (abbreviated listing)

Note: Regulation O definitions, prohibitions, exceptions, and exemptions are particularly detailed and complex. Therefore, inspection staff should consult with Reserve Bank or Board supervisory or legal staff before discussing with management or presenting in an inspection report any BHC inspection findings that rely upon Regulation O.

(a) “Affiliate” means any company of which a member bank is a subsidiary or any other subsidiary of that company.

(b) “Company” means any corporation, partnership, trust (business or otherwise), association, joint venture, pool syndicate, sole proprietorship, unincorporated organization, or any other form of business entity. The term, however, does not include (1) an insured bank (as defined in 12 U.S.C. 1813) or (2) a corporation the majority of the shares of which are owned by the United States or by any state.

(c)(1) “Control of a company or bank” means that a person directly or indirectly, or acting through or in concert with one or more persons (i) owns, controls, or has the power to vote 25 percent or more of any class of voting securities of the company or bank; (ii) controls in any manner the election of a majority of the directors of the company or bank; or (iii) has the power to exercise a controlling influence over the management or policies of the company or bank. (Note: If a company does not have voting securities (that is, a partnership), review the degree of interest in the company to determine control.)

(2) A person is presumed to have control, including the power to exercise a controlling influence over the management or policies, of a company or bank if (i) the person is an executive officer or director of the company or bank and directly or indirectly owns, controls, or has the power to vote more than 10 percent of any class of voting securities of the company or bank or (ii) the person directly or indirectly owns, controls, or has the power to vote more than 10 percent of any class of voting securities of the company or bank, and no other person owns, controls, or has the power to vote a greater percentage of that class of voting securities.

(3) An individual is not considered to have control, including the power to exercise a controlling influence over the management or policies, of a company or bank solely by virtue of the individual’s position as an officer or director of the company or bank.

(d) “Director” of a company or bank means any director of the company or bank, whether or not receiving compensation. An advisory director is not considered a director if the advisory director (1) is not elected by the shareholders of the bank or company, (2) is not authorized to vote on matters before the board of directors, and (3) provides solely general policy advice to the board of directors.

(e)(1) “Executive officer” of a company or bank means a person who participates or has authority to participate (other than in the capacity of a director) in major policymaking functions of the company or bank, whether or not the officer has an official title; the title designates the officer an assistant; or the officer is serving without salary or other compensation.

3a. Extensions of credit to a director of an affiliate of a bank are not subject to the general prohibitions (section 215.4), the prohibitions on knowingly receiving unauthorized extensions of credit (section 215.6), and the alternative record-keeping procedures (section 215.8) if—

(1) the director of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, and the director does not actually participate in those functions;

(2) the affiliate does not control the bank; and

(3) as determined annually, the assets of the affiliate do not constitute more than 10 percent of the consolidated assets of the company that controls the bank and is not controlled by any other company, and the director of the affiliate is not otherwise subject to sections 215.4, 215.6, and 215.8 of Regulation O.

If the director of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, a resolution of the board of directors or a corporate bylaw may (1) include the director (by name or by title) in a list of persons excluded from participation in such functions or (2) not include the director in a list of persons authorized (by name or by title) to participate in such functions.

4. The term “executive officer” is not intended to include persons who may have official titles and may exercise a certain measure of discretion in the performance of their duties, including discretion in the making of loans, but who do not participate in determining major policies of the bank or company and whose decisions are limited by policy standards fixed by the senior management of the bank or company. For
The chairman of the board, the president, every vice president, the cashier, the secretary, and the treasurer of a company or bank are considered executive officers, unless the officer is excluded, by resolution of the board of directors or by the bylaws of the bank or company, from participation (other than in the capacity of a director) in major policymaking functions of the bank or company, and the officer does not actually participate therein.

(2) Extensions of credit to an executive officer of an affiliate of a member bank (other than a company that controls the bank) are not subject to sections 215.4, 215.6, and 215.8 of Regulation O if—

(i) the executive officer of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, and the executive officer does not actually participate in those functions;

(ii) the affiliate does not control the bank; and

(iii) as determined annually, the assets of the affiliate do not constitute more than 10 percent of the consolidated assets of the company that controls the bank and is not controlled by any other company, and the executive officer of the affiliate is not otherwise subject to sections 215.4, 215.6, and 215.8 of Regulation O.

If the executive officer of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, a resolution of the board of directors or a corporate bylaw may (i) include the executive officer (by name or by title) in a list of persons excluded from participation in such functions or (ii) not include the executive officer in a list of persons authorized (by name or by title) to participate in such functions.

(f) “Immediate family” means the spouse of an individual, the individual’s minor children, and any of the individual’s children (including adults) residing in the individual’s home.

(g) “Insider” means an executive officer, director, principal shareholder, and any related interest of such person.

(h) The “lending limit” for a member bank is an amount equal to the limit on loans to a single borrower established by section 5200 of the Revised Statutes, 12 U.S.C. 84. This amount is 15 percent of the bank’s unimpaired capital and unimpaired surplus in the case of loans that are not fully secured, and an additional 10 percent of the bank’s unimpaired capital and unimpaired surplus in the case of loans that are fully secured by readily marketable collateral having a market value, as determined by reliable and continuously available price quotations, at least equal to the amount of the loan. The lending limit also includes any higher amounts that are permitted by section 5200 of the Revised Statutes for the types of obligations listed therein as exceptions to the limit.

A member bank’s unimpaired capital and unimpaired surplus equals the (1) member bank’s tier 1 and tier 2 capital included in the bank’s risk-based capital, under the capital guidelines of the appropriate federal banking agency, and (2) balance of the member bank’s allowance for loan and lease losses that was not included in the bank’s tier 2 capital. This computation is based on the bank’s risk-based capital under the capital guidelines of the appropriate federal banking agency, based on the bank’s most recent consolidated report of condition filed under 12 U.S.C. 1817(a)(3).

(i) “Member bank” means any banking institution that is a member of the Federal Reserve System, including any subsidiary of a member bank. The term does not include any foreign bank that maintains a branch in the United States, whether or not the branch is insured (within the meaning of 12 U.S.C. 1813(s)) and regardless of the operation of 12 U.S.C. 1813(h) and 12 U.S.C. 1828(j)(3)(B).

(j) “Person” means an individual or a company.

(k) “Principal shareholder” means an individual or a company of which a person controls or has the power to control directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has the power to vote more than 10 percent of any class of voting securities.
of a member bank or company. Shares owned or controlled by a member of an individual’s immediate family are considered to be held by the individual. A principal shareholder of a member bank includes (1) a principal shareholder of a company of which the member bank is a subsidiary and (2) a principal shareholder of any other subsidiary of that company, exclusive of nonbank subsidiaries of member banks.

(l) “Related interest” means (1) a company that is controlled by a person or (2) a political or campaign committee that is controlled by a person or the funds or services of which will benefit a person.

(m) “Subsidiary” has the meaning given in section 2(d) of the BHC Act, but does not include a subsidiary of a member bank.

2050.0.3.2.1 Extension of Credit

For the purposes of Regulation O, an “extension of credit” is

(a) a making or renewal of any loan, a granting of a line of credit, or an extending of credit in any manner whatsoever and includes:

(1) a purchase under repurchase agreement of securities, other assets, or obligations;

(2) an advance by means of an overdraft, cash item, or otherwise;

(3) issuance of a standby letter of credit (or other similar arrangement regardless of name or description) or an ineligible acceptance;

(4) an acquisition by discount, purchase, exchange, or otherwise of any note, draft, bill of exchange, or other evidence of indebtedness upon which an insider may be liable as maker, drawer, endorser, guarantor, or surety;

(5) an increase of an existing indebtedness, but not if the additional funds are advanced by the bank for its own protection for (i) accrued interest or (ii) taxes, insurance, or other expenses incidental to the existing indebtedness;

(6) an advance of unearned salary or other unearned compensation for a period in excess of 30 days; and

(7) any other similar transaction as a result of which a person becomes obligated to pay money (or its equivalent) to a bank, whether the obligation arises directly or indirectly, or because of an endorsement on an obligation or otherwise, or by any means whatsoever.

The Dodd-Frank Act added to the definition of an “extension of credit” an insured depository institution’s (IDI) credit exposure to a person arising from a derivative transaction, repurchase agreement, reverse repurchase agreement, securities lending transaction, or securities borrowing transaction.

An extension of credit does not include—

(1) an advance against accrued salary or other accrued compensation, or an advance for the payment of authorized travel or other expenses incurred or to be incurred on behalf of the bank;

(2) a receipt by a bank of a check deposited in or delivered to the bank in the usual course of business unless it results in the carrying of a cash item for or the granting of an overdraft (other than an inadvertent overdraft in a limited amount that is promptly repaid under terms that are not more favorable than those offered to the general public).

(3) an acquisition of a note, draft, bill of exchange, or other evidence of indebtedness through (i) a merger or consolidation of banks or a similar transaction by which a bank acquires assets and assumes liabilities of another bank or similar organization or (ii) foreclosure on collateral or similar proceeding for the protection of the bank, provided that such indebtedness is not held for a period of more than three years from the date of the acquisition, subject to

2050.0
extension by the appropriate federal banking agency for good cause;

(4)(i) an endorsement or guarantee for the protection of a bank of any loan or other asset previously acquired by the bank in good faith or
(ii) any indebtedness to a bank for the purpose of protecting the bank against loss or of giving financial assistance to it;

(5) indebtedness of $15,000 or less arising by reason of any general arrangement by which a bank (i) acquires charge or time credit accounts or (ii) makes payments to or on behalf of participants in a bank credit card plan, check credit plan, or similar open-end credit plan, provided—

(A) the indebtedness does not involve prior individual clearance or approval by the bank other than for the purposes of determining authority to participate in the arrangement and compliance with any dollar limit under the arrangement, and

(B) the indebtedness is incurred under terms that are not more favorable than those offered to the general public;

(6) indebtedness of $5,000 or less arising by reason of an interest-bearing overdraft credit plan (see Regulation O, section 215.4(e)); or

(7) a discount of promissory notes, bills of exchange, conditional sales contracts, or similar paper, without recourse.

Non-interest-bearing deposits to the credit of a bank are not considered loans, advances, or extensions of credit to the bank of deposit. Also, the giving of immediate credit to a bank upon collected items received in the ordinary course of business is not considered to be a loan, advance, or extension of credit to the depositing bank.

An extension of credit by a member bank (for the purposes of section 215.4 of Regulation O) is considered to have been made at the time the bank enters into a binding commitment to make the extension of credit. A participation without recourse is considered to be an extension of credit by the participating bank, not by the originating bank.

**Tangible-economic-benefit rule.** In general, an extension of credit is considered made to an insider to the extent that the proceeds are transferred to the insider or are used for the tangible economic benefit of the insider. An extension of credit is not considered made to an insider if—

(1) the credit is extended on terms that would satisfy the standard set forth in section 215.4(a) of Regulation O for extensions of credit to insiders and

(2) the proceeds of the extension of credit are used in a bona fide transaction to acquire property, goods, or services from the insider.

**2050.0.3.2.2 Insider Use of a Bank-Owned Credit Card**

Board staff issued a May 22, 2006, legal opinion in response to an FDIC request for clarification on the application of the Board’s Regulation O (12 CFR 215) to credit cards that are issued to bank insiders for the bank’s business purposes.7 The FDIC asked whether, and under what circumstances, an insider’s use of a bank-owned credit card would be deemed an extension of credit by the bank to the insider for purposes of Regulation O.

The FDIC indicated that insiders of a bank often use a bank-owned credit card to purchase goods and services for the bank’s business purposes. A bank-owned credit card is a credit card that is issued by a third-party financial institution to a bank to enable the bank (through its employees) to finance the purchase of goods and services for the bank’s business. Board staff commented that it was understood that (1) a bank that provides a bank-owned credit card to its employees typically forbids or discourages use of the card by employees for their personal purposes and that an employee who uses the card for personal purposes is obligated to promptly reimburse the bank and (2) a bank is liable to the card-issuing institution for all extensions of credit made under the card (whether for the bank’s business purposes or for an employee’s personal purposes).8

Although section 215.3(a) of Regulation O broadly defines an extension of credit to include “a making or renewal of a loan, a granting of a line of credit, or an extending of credit in any manner whatsoever,” the rule also provides several important exceptions to the definition that are relevant to the FDIC’s inquiry. Section 215.3(b)(1) of Regulation O excludes from the

---

7. The provisions of Regulation O apply to a bank holding company of which a member bank is a subsidiary, and any other subsidiary of that bank holding company. (See 2050.0.3.)

8. In the responding letter, Board legal staff notes that it was understood that some banks directly issue credit cards to their employees to enable the employees to finance the purchase of goods and services for the bank’s business (bank-issued credit cards). Also, the letter states that the principles set forth with regard to bank-owned credit cards also would apply to bank-issued credit cards.
Extensions of Credit to BHC Officials

2050.0

definition of extension of credit any advance by a bank to an insider for the payment of authorized or other expenses incurred or to be incurred on behalf of the bank. Also, section 215.3(b)(5) of Regulation O excludes from the definition of extension of credit indebtedness of up to $15,000 incurred by an insider with a bank under an ordinary credit card.

Considering the provisions of Regulation O and the purposes of the insider lending restrictions in the Federal Reserve Act, Board legal staff opined that a bank does not make an extension of credit to an insider for purposes of Regulation O at the time of issuance of a bank-owned credit card to the insider (regardless of whether the line of credit associated with the card is greater than $15,000). The opinion states also that a bank does not extend credit to an insider for the purposes of Regulation O when the insider uses the card to purchase goods or services for the bank’s business purposes. However, when an insider uses the card to purchase goods or services for the insider’s personal purposes, the bank may be making an extension of credit to the insider. The opinion states that an extension of credit would occur for the purposes of Regulation O if—and to the extent that—the amount of outstanding personal charges made to the card, when aggregated with all other indebtedness of the insider that qualifies for the credit card exception in section 215.3(b)(5) of Regulation O, exceeds $15,000.

The FDIC also asked whether incidental personal expenses charged by an insider to a bank-owned credit card are per se violations of the market-terms requirement in section 215.4(a) of Regulation O because non-insiders do not have access to this form of credit from the bank. In response, Board staff stated that section 215.4(a) requires extensions of credit by a bank to its insiders to (1) be on substantially the same terms (including interest rates and collateral) as, and subject to credit underwriting standards that are not less stringent than, those prevailing at the time for comparable transactions with non-insiders and (2) not involve more than the normal risk of repayment or other features unfavorable to the bank.

The opinion states that a bank may be able to satisfy the market-terms requirement, however, if the bank approves an insider for use of a bank-owned credit card only (1) if the insider meets the bank’s normal credit underwriting standards and (2) the card does not have preferential terms in connection with uses of the card for personal purposes. Nonetheless, use of a bank-owned credit card by an insider for personal purposes may violate the market-terms requirement of Regulation O if the card carries a lower interest rate or permits a longer repayment period than comparable consumer credit offered by the bank.

The Board staff’s legal opinion applies only to the specific issues and circumstances described in the letter and does not address any other issues or circumstances.

2050.0.3.3 General Prohibitions and Limitations of Regulation O

(a) Terms and creditworthiness. No member bank may extend credit to any insider of the bank or insider of its affiliates unless the extension of credit (1) is made on substantially the same terms (including interest rates and collateral) as, and following credit-underwriting procedures that are not less stringent than, those prevailing at the time for comparable transactions by the bank with other persons that are not covered by Regulation O and who are not employed by the bank and (2) does not involve more than the normal risk of repayment or present other unfavorable features.

Nothing stated above (as to “terms and creditworthiness”) should prohibit any extension of credit made in accordance with a benefit or compensation program that—

1. is widely available to employees of the member bank, and in the case of extensions of credit to an insider of its affiliates, is widely available to employees of the affiliates at which that person is an insider and

2. does not give preference to any insider of the member bank over other employees of the member bank and, in the case of extensions of credit to an insider of its affiliates, does not give preference to any insider of its affiliates over other employees of the affiliates of which that person is an insider.

(b) Prior approval. A member bank may not extend credit (including granting a line of credit) to any insider of the bank or insider of its affiliates in an amount that, when aggregated with the amount of all other extensions of credit to that person and to all related interests of that person, exceeds the higher of $25,000 or 5 percent of the member bank’s unimpaired capital and unimpaired surplus, but in no event can it exceed $500,000. This provision applies unless (1) the extension of credit or line of credit has been approved in advance by a majority of the
entire board of directors of that bank and (2) the interested party has abstained from participating directly or indirectly in the voting.

The board of directors’ approval is not required for an extension of credit that is made pursuant to a line of credit that was approved by the board of directors within 14 months of the date of the extension of credit. Participation in the discussion, or any attempt to influence the voting, by the board of directors regarding an extension of credit constitutes indirect participation in the voting by the board of directors on an extension of credit.

(c) Individual lending limit. A member bank may not extend credit to any insider of the bank or insider of its affiliates in an amount that, when aggregated with the amount of all other extensions of credit by the member bank to that person and to all related interests of that person, exceeds the lending limit described above in section 2050.0.3.2 (paragraph h). This prohibition does not apply to an extension of credit by a member bank to a company of which the member bank is a subsidiary or to any other subsidiary of that company.

(d) Aggregate lending limit.

(1) General limit. A member bank may not extend credit to any insider of the bank or insider of its affiliates unless the extension of credit is in an amount that, when aggregated with all outstanding extensions of credit to all such insiders, would exceed the bank’s unimpaired capital and unimpaired surplus as defined in section 215.2(i) of Regulation O (see section 2050.0.3.2, paragraph h). (2) A member bank with deposits of less than $100,000,000 may, by an annual resolution of its board of directors, increase the general limit (specified above) to a level that does not exceed two times the bank’s unimpaired capital and unimpaired surplus as of the date of the resolution. In addition, the bank must meet or exceed, on a fully phased-in basis, all applicable capital requirements established by the appropriate federal banking agency. The bank would also have had to receive a satisfactory composite rating in its most recent bank examination report.

If a member bank has adopted a resolution authorizing a higher limit and subsequently fails to meet the above-listed requirements, the member bank cannot extend any additional credit (including a renewal of any existing extension of credit) to any insider of the bank or its affiliates unless the extension or renewal is consistent with the general limit.

(3) Exceptions to the general limit. Effective May 3, 1993, the general limit, described in manual section 2050.0.3.3 (paragraph d) and specified in section 215.4(d)(1) of the Board’s Regulation O does not apply to—

(i) extensions of credit secured by a perfected security interest in bonds, notes, certificats of indebtedness, or Treasury bills of the United States or in other such obligations fully guaranteed as to principal and interest by the United States;

(ii) extensions of credit to or secured by unconditional takeout commitments or guarantees of any department, agency, bureau, board, commission, or establishment of the United States or any corporation wholly owned directly or indirectly by the United States;

(iii) extensions of credit secured by a perfected security interest in a segregated deposit account in the lending bank; or

(iv) extensions of credit arising from the discount of negotiable installment consumer paper that is acquired from an insider and carries a full or partial recourse endorsement or guarantee by the insider,9 provided that—

(A) the financial condition of each maker of such consumer paper is reasonably documented in the bank’s files or known to its officers;

(B) an officer of the bank designated for that purpose by the board of directors of the bank certifies in writing that the bank is relying primarily upon the responsibility of each maker for the payment of the obligation and not upon any endorsement or guarantee by the insider; and

(C) the maker of the instrument is not an insider.

(e) Overdrafts. A member bank may not pay an overdraft of an executive officer or director of the bank10 on an account at the bank, unless

9. The exceptions to the aggregate lending limit pertaining to extensions of credit secured in the manner described above (i through iii) apply only to the amounts of such extensions of credit that are secured in such manner.
10. This prohibition does not apply to the payment by a
the payment of funds is made in accordance with (1) a written, preauthorized, interest-bearing extension of credit plan that specifies a method of repayment or (2) a written, preauthorized transfer of funds from another account of the account holder at the bank.

The prohibition above does not apply to payment of inadvertent overdrafts on an account in an aggregate amount of $1,000 or less, provided (1) the account is not overdrawn for more than five business days and (2) the member bank charges the executive officer or director the same fee charged any other customer of the bank in similar circumstances.\footnote{Prohibition on knowingly receiving unauthorized extensions of credit. Insiders are prohibited from knowingly receiving (or permitting their related interests to receive) any extensions of credit not authorized by section 22(h) of the Federal Reserve Act and by Regulation O.}

2050.0.3.4 Additional Restrictions on Loans to Executive Officers of Member Banks

The following restrictions on extensions of credit by a member bank to any of its executive officers are in addition to any restrictions on extensions of credit by a member bank to insiders of itself or its affiliates. The restrictions listed below apply only to the executive officers of the member bank and not to the executive officers of its affiliates.

A member bank may not extend credit to any of its executive officers, and no executive officer of a member bank can borrow from or otherwise become indebted to the bank, except in the amounts, for the purposes, and upon the conditions specified in items 3 and 4 below.

A member bank is authorized to extend credit to any executive officer of the bank—

(1) in any amount to finance the education of the executive officer’s children;

(2) in any amount to finance or refinance the purchase, construction, maintenance, or improvement of a residence of the executive officer, provided—

(i) the extension of credit is secured by a first lien on the residence and the residence is owned (or expected to be owned after the extension of credit) by the executive officer; and

(ii) in the case of refinancing, that only the amount used to repay the original extension of credit, together with the closing costs of the refinancing, and any additional amount thereof used for any of the purposes enumerated in item 2 above, are included within this category of credit;

(3) in any amount, if the extension of credit is secured in a manner described in the first three exceptions to the general limit of the aggregate lending limit (see section 2050.0.3.3, paragraph d, subparagraphs i to iii); and

(4) for any other purpose (not specified in items 1 through 3 above), if the aggregate amount of loans to that executive officer does not exceed, at any one time, the higher of 2.5 percent of the bank’s unimpaired capital and unimpaired surplus or $25,000, but in no event more than $100,000.

Any extension of credit by a member bank to any of its executive officers must be—

(1) promptly reported to the member bank’s board of directors,

(2) in compliance with the general prohibitions of sections 215.4 of Regulation O (manual section 2050.0.3.3),

(3) preceded by the submission of a current detailed financial statement of the executive officer, and

(4) made subject to the condition in writing that the extension of credit will, at the option of the member bank, become due and payable at any time that the officer is indebted to any other bank or banks in an aggregate amount greater than the amount specified for a category of credit that may be made available by a member bank to any of its executive officers.

No member bank may extend credit in an aggregate amount greater than the amount permitted for general-purpose loans to an executive officer (section 215.5(c)(4) of Regulation O) to a partnership in which one or more of the bank’s executive officers are partners and, either individually or together, hold a majority interest. The total amount of credit extended by a member bank to such partnership is considered to be extended to each executive officer of the member bank who is a member of the partnership.

11. The requirement that the member bank charge the executive officer or director the same fee charged any other customer of the bank in similar circumstances does not prohibit the member bank from charging a fee provided for in a benefit or compensation program that satisfies the requirements detailed in section 2050.0.3.3, item (a).
2050.0.3.5 Grandfathering Provisions

(a) Under FDICIA, FDICIA provided that the amendments to Regulation O would not affect extensions of credit entered into on or before the effective date of the regulation. Therefore, extensions of credit, including lines of credit, made on or before May 18, 1992, are not required to comply with either the individual-borrower limit made applicable to directors and their related interests, or with the aggregate limit on all loans to insiders. All extensions of credit, loan renewals, and loan rollovers made after May 18, 1992, must comply with all of the provisions of Regulation O. In other words, banks cannot make new loans or renew outstanding extensions of credit in amounts that, when aggregated with all other outstanding loans to insiders, would exceed either of the new limits.

(b) Extensions of credit outstanding on March 10, 1979. Any extension of credit that was outstanding on March 10, 1979, and that would have, if made on or after March 10, 1979, violated the individual lending limit, had to be reduced in amount by March 10, 1980, to be in compliance with the aggregate lending limit of Regulation O. Any renewal or extension of such a credit extension on or after March 10, 1979, must have been made only on terms that would have brought it into compliance with the aggregate lending limit by March 10, 1980. However, any extension of credit made before March 10, 1979, that bears a specific maturity date of March 10, 1980, or later, had to be repaid in accordance with the repayment schedule in existence on or before March 10, 1979.

2050.0.3.6 Reports by Executive Officers

Each executive officer of a member bank who becomes indebted to any other bank or banks in an aggregate amount greater than the amount specified for a category of credit in section 215.5(c) of Regulation O (manual section 2050.0.3.4) must make a written report to the board of directors of the officer’s bank within 10 days of the date the indebtedness reaches such a level. The report must state the lender’s name, the date and amount of each extension of credit, any security for it, and the purposes for which the proceeds have been or are to be used. Report on credit secured by BHC stock. In addition to the report required above, each executive officer or director of a member bank the shares of which are not publicly traded must report annually to the bank’s board of directors the outstanding amount of any credit that was extended to the executive officer or director that is secured by shares of the member bank. (See also Regulation Y section 225.4(f) for the identical restriction on executive officers and directors of a bank holding company with loans secured by shares of the bank holding company.)

2050.0.3.7 Report on Credit to Executive Officers

Each member bank must include with (but not as part of) each report of condition (and copy thereof) filed pursuant to 12 U.S.C. 1817(a)(3) a report of all extensions of credit made by the member bank to its executive officers since the date of the bank’s previous report of condition.

2050.0.3.8 Disclosure of Credit from Member Banks to Executive Officers and Principal Shareholders

(a) Definitions. For the purposes of this section, the following definitions apply:

(1) “Principal shareholder of a member bank” means a person (individual or a company), other than an insured bank, or branch or representative office of a foreign bank as defined in 12 U.S.C. 3101(7) that, directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has power to vote more than 10 percent of any class of voting securities of the member bank or company. The term includes an individual or company that controls a principal shareholder (for example, a person that controls a bank holding company). Shares of a bank (including a foreign bank), bank holding company, or other company owned or controlled by a member of an individual’s immediate family are considered to be held or controlled by the individual for the purposes of determining principal shareholder status.13

12. A foreign bank means any company organized under the laws of a foreign country, a territory of the United States, Puerto Rico, Guam, American Samoa, or the Virgin Islands that engages in the business of banking, or any subsidiary or affiliate, organized under such laws, of any such company. This includes foreign commercial banks, foreign merchant banks, and other foreign institutions that engage in banking activities usual in connection with the business of banking in the countries where such foreign institutions are organized or operating.

13. See footnote 3.
(2) “Related interest” means (i) any company controlled by a person; or (ii) any political or campaign committee the funds or services of which will benefit a person or that is controlled by a person. A related interest does not include a bank or a foreign bank (as defined in 12 U.S.C. 3101(7)).

(b) Public disclosure. Upon receipt of a written request from the public, a member bank shall make available the names of each of its executive officers (with the exception of any executive officer of a bank holding company of which the member bank is a subsidiary or of any other subsidiary of that bank holding company unless the executive officer is also an executive officer of the member bank) and each of its principal shareholders to whom, or to whose related interests, the member bank had outstanding at the end of the latest previous quarter of the year, an extension of credit that, when aggregated with all other outstanding extensions of credit at that time from the member bank to such person and to all related interests of such person, equaled or exceeded 5 percent of the member bank’s capital and unimpaired surplus or $500,000, whichever amount is less. No disclosure under this paragraph is required if the aggregate amount of all extensions of credit outstanding at that time from the member bank to the executive officer or principal shareholder of the member bank and to all related interests of such a person does not exceed $25,000.

A member bank is not required to disclose the specific amounts of individual extensions of credit.

(c) Maintaining records. Each member bank is required to maintain records of all requests for the information described above and the disposition of the requests. These records may be disposed of two years after the date of the request.

2050.0.3.10 Records of Member Banks (and BHCs)

To help inspection and examination personnel identify BHC officials, Regulation O requires each member bank to maintain records necessary to monitor compliance with this regulation. BHCs and nonbank subsidiaries should be given access to the records identifying “bank officials.” Each state member bank is required to (1) identify, through an annual survey, all insiders of the bank itself; and (2) maintain records of all extensions of credit to insiders of the bank itself, including the amount and terms of each such extension of credit.

2050.0.3.10.1 Recordkeeping for Insiders of the Member Bank’s Affiliates

A member bank is required to maintain records of extensions of credit to insiders of the member bank’s affiliates by—

(1) a “survey” method, which identifies, through an annual survey, each of the insiders of the member bank’s affiliates. Under the survey method, the member bank must maintain records of the amount and terms of each extension of credit by the member bank to such insiders or

(2) a “borrower inquiry” method, which requires, as part of each extension of credit, the borrower to indicate whether the borrower is an insider of an affiliate of the member bank. Under this method, the member bank must maintain records that identify the amount and terms of each extension of credit by the member bank to borrowers so identifying themselves.

Alternative recordkeeping method for insiders of affiliates. A member bank may use a recordkeeping method other than those identified above if the appropriate federal banking agency determines that the bank’s method is at least as effective.

2050.0.3.10.2 Special Rule for Noncommercial Lenders

A member bank that is prohibited by law or by an express resolution of the bank’s board of directors from making an extension of credit to any company, or other entity that is covered by Regulation O as a company, is not required to maintain any records of the related interests of the insiders of the bank or its affiliates. The bank is also not required to inquire of borrowers
whether they are related interests of the insiders of the bank or its affiliates.

2050.0.3.11 Section 23A Ramifications
Loans to a holding company parent and its affiliates are governed by section 23A of the Federal Reserve Act and are not subject to Regulation O.

2050.0.4 REMEDIAL ACTION
Self-serving and abusive transactions deprive a BHC of opportunities and benefits that may otherwise have been available and may strip a BHC of its ability to serve as a source of financial and managerial strength to its subsidiary banks. Even if not extended on preferential terms, self-serving loans and other extensions of credit to insiders may be an imprudent business practice and may reduce the lender’s liquidity or otherwise overextend the BHC. In such situations, formal or informal remedial measures by the Federal Reserve may be necessary. Formal enforcement action is provided for in the 1974 amendments to the Financial Institutions Supervisory Act of 1966 (12 U.S.C. 1818), which grant the Board authority to issue cease-and-desist orders in appropriate situations. For complete details on formal corrective actions, see section 2110.0.

2050.0.5 INSPECTION OBJECTIVES
1. To determine if any transactions between BHC officials, their related interests, and the BHC or its nonbank subsidiaries are based on preferential treatment.
2. To determine if any transactions between BHC officials, their related interests, and the BHC or its nonbank subsidiaries result in any undue loss exposure to the BHC or its subsidiaries.
3. To determine if any BHC or nonbank extension of credit to a BHC official or related interest is in the spirit of Regulation O’s requirements or whether it is an attempt to circumvent Regulation O’s prohibition on various bank extensions of credit to similar parties.
4. To determine that BHC officials are aware of Regulation O’s limitations and prohibitions and have established internal policies and procedures for the bank subsidiaries to ensure compliance by the banks.
5. To determine that the BHC has arranged to make available, upon request, a listing or some other form of information sufficient to identify all “BHC officials” and to make certain that such information is available to the bank subsidiaries in particular.

2050.0.6 INSPECTION PROCEDURES
1. Review the balance sheets and other records of the parent-only and nonbank subsidiaries to determine if there are any loans or other extensions of credit to BHC officials.
2. Review the income statements and supporting records of the parent-only and nonbank subsidiaries to determine if any interest income, other income, or expense is associated with a transaction with a BHC official or a related interest.
3. Ask management to identify all such transactions and to provide supporting documentation.
4. Review management’s familiarity with Regulation O’s limitations and the steps they have taken to establish policies for the internal administration of their subsidiary banks’ extensions of credit to BHC officials.
5. Review any information prepared by management that presents a listing of all BHC officials and their related interests.
6. Review any corporate resolutions declaring an individual not to be an “executive officer” for purposes of Regulation O and, if necessary, confirm the individual’s nonparticipation in the formulation of corporate policy.
7. As the provision of Regulation O apply to the BHC and its subsidiaries, determine if the BHC provides employees or other insiders with extensions of credit, including BHC-owned or BHC-issued credit cards. Find out if any of the credit cards are used to conduct the BHC’s business.
   a. Verify that the BHC has a written policy that forbids or discourages an employee or other insider from using a BHC-owned or BHC-issued credit card for the insider’s personal purposes and that the policy obligates the insider to promptly make reimbursement to the BHC.
   b. Determine the BHC’s compliance with Regulation O regarding its extensions of credit (including BHC-owned or BHC-issued credit card loans) to insiders.
Verify that the BHC monitors the amount of personal charges outstanding on its BHC-owned or BHC-issued credit cards that are held by insiders so that the outstanding charges, when aggregated with all of an insider’s other indebtedness owed to the BHC, do not exceed $15,000.

c. Verify the BHC’s compliance with the market-terms requirement of Regulation O. Determine if—
   • the BHC requires employees and other insiders who have extensions of credit, or use BHC-owned or BHC-issued credit cards for personal purposes, to meet the BHC’s normal credit underwriting standards and
   • the BHC has verified that the insiders’ extensions of credit (or BHC-owned or BHC-issued credit cards) do not have more preferential terms (for example, a lower interest rate or a longer repayment period) than the consumer credit cards offered by the BHC.

Management Information Systems
(General) Section 2060.0

Management Information Systems refers to the policies and operating procedures, including systems of internal control, that the board of directors of a bank holding company initiates to monitor and ensure control of its operations and activities, while maintaining and improving the financial strength and objectives of the overall organization. These policies should focus on the overall organizational structure with respect to identifying, monitoring, and managing risks. Subsequent sections of the manual focus on the essential elements of various management information systems. Included are inspection objectives and procedures to be used by Federal Reserve Bank examiners when conducting inspections of bank holding companies.

WHAT'S NEW IN THIS REVISED SECTION

2060.05.01 AN EFFECTIVE SYSTEM OF INTERNAL CONTROLS

Effective internal control is a foundation for the safe and sound operation of a financial institution (institution).

The board of directors and senior management of an institution are responsible for ensuring that the system of internal control operates effectively. Their responsibility cannot be delegated to others within the institution or to outside parties. An important element in assessing the effectiveness of the internal control system is an internal audit function. When properly structured and conducted, internal audit provides directors and senior management with vital information about weaknesses in the system of internal control so that management can take prompt, remedial action. The federal banking agencies (agencies) longstanding inspection policies call for examiners to review an institution’s internal audit function and recommend improvements, if needed. In addition, pursuant to section 39 of the Federal Deposit Insurance Act (FDI Act) (12 U.S.C. 1831p-1), the agencies have adopted Interagency Guidelines Establishing Standards for Safety and Soundness that apply to insured depository institutions. Under these guidelines and policies, each institution should have an internal audit function that is appropriate to its size and the nature and scope of its activities.

In addressing various quality and resource issues, many institutions have been engaging independent public accounting firms and other outside professionals (outsourcing vendors) in recent years to perform work that traditionally has been done by internal auditors. These arrangements are often called “internal audit outsourcing,” “internal audit assistance,” “audit co-sourcing,” and “extended audit services” (hereafter, collectively referred to as outsourcing). Typical outsourcing arrangements are more fully illustrated in part II below.

Outsourcing may be beneficial to an institution if it is properly structured, carefully conducted, and prudently managed. However, the agencies have concerns that the structure, scope, and management of some internal audit outsourcing arrangements do not contribute to the institution’s safety and soundness. Furthermore, the agencies want to ensure that these arrangements with outsourcing vendors do not leave directors and senior management with the erroneous impression that they have been relieved of their responsibility for maintaining an effective system of internal control and for overseeing the internal audit function.

The Sarbanes-Oxley Act of 2002 (the act) became law on July 30, 2002. The act addresses weaknesses in corporate governance and the

---

1. In summary, internal control is a process designed to provide reasonable assurance that the institution will achieve the following internal control objectives: efficient and effective operations, including safeguarding of assets; reliable financial reporting; and compliance with applicable laws and regulations. Internal control consists of five components that are a part of the management process: control environment, risk assessment, control activities, information and communication, and monitoring activities. The effective functioning of these components, which is brought about by an institution’s board of directors, management, and other personnel, is essential to achieving the internal control objectives. This description of internal control is consistent with the Committee of Sponsoring Organizations of the Treadway Commission (COSO) report Internal Control—Integrated Framework. In addition, under the COSO framework, financial reporting is defined in terms of published financial statements, which, for purposes of this policy statement, encompass both financial statements prepared in accordance with generally accepted accounting principles and regulatory reports (such as the Reports of Condition and Income). Institutions are encouraged to evaluate their internal control against the COSO framework.

2. The term “institution” includes depository institutions insured by the Federal Deposit Insurance Corporation (FDIC), U.S. financial holding companies and bank holding companies supervised by the Federal Reserve System, thrift holding companies supervised by the Office of Thrift Supervision (OTS), and the U.S. operations of foreign banking organizations.

3. The Board of Governors of the Federal Reserve System (FRS), Federal Deposit Insurance Corporation (FDIC), Office of the Comptroller of the Currency (OCC), and Office of Thrift Supervision (OTS).

4. For national banks, appendix A to part 30; for state member banks, appendix D-I to part 208; for insured state nonmember banks and insured state-licensed branches of foreign banks, appendix A to part 364; for savings associations, appendix A to part 570.

accounting and auditing professions, and includes provisions addressing audits, financial reporting and disclosure, conflicts of interest, and corporate governance at publicly owned companies. The act, among other things, requires public companies to have an audit committee composed entirely of independent directors. Public banking organizations that are listed on the New York Stock Exchange (NYSE) and Nasdaq must also comply with those exchanges’ listing requirements, which include audit committee requirements.

The act also established a Public Company Accounting Oversight Board (PCAOB) that has the authority to set and enforce auditing, attestation, quality control, and ethics (including independence) standards for auditors of public companies, subject to SEC review. (See SR-02-20.) Accounting firms that conduct audits of public companies (i.e., registered accounting firms) must register with the PCAOB and be subject to its supervision. The PCAOB is also empowered to inspect the auditing operations of public accounting firms that audit public companies, as well as impose disciplinary and remedial sanctions for violations of its rules, securities laws, and professional auditing and accounting standards.

[Sections 2060.05.02–2060.05.04 are reserved.]

2060.05.05 APPLICATION OF THE SARBANES-OXLEY ACT TO NONPUBLIC BANKING ORGANIZATIONS

In May 2003, the Federal Reserve, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision announced that they did not expect to take actions to apply the corporate-governance and other requirements of the Sarbanes-Oxley Act generally to nonpublic banking organizations that are not otherwise subject to them.5a (See SR-03-08.) The agencies, however, encouraged nonpublic banking organizations to periodically review their policies and procedures relating to corporate-governance and auditing matters. This review should ensure that such policies and procedures are consistent with applicable law, regulations, and supervisory guidance and remain appropriate in light of the organization’s size, operations, and resources. Furthermore, the agencies stated that a banking organization’s policies and procedures for corporate governance, internal controls, and auditing will be assessed during the supervisory process, and the agencies may take appropriate supervisory action if there are deficiencies or weaknesses in these areas that are inconsistent with sound corporate-governance practices or safety-and-soundness considerations.

2060.05.06 INTERAGENCY POLICY STATEMENT ON THE INTERNAL AUDIT FUNCTION AND ITS OUTSOURCING

The Federal Reserve and other federal banking agencies6 adopted on March 17, 2003, an interagency policy statement addressing the internal audit function and its outsourcing (See SR 03-5). The policy statement revises and replaces the former 1997 policy statement and incorporates recent developments in internal auditing. In addition, the revised policy incorporates guidance on the independence of accountants who provide institutions with both internal and external audit services in light of the Sarbanes-Oxley Act of 2002 and associated SEC rules. (See also sections 2124.0.2.4, 2060.1, 3230.0.10.2.5, 5010.7, and 5030.0 [page 7] pertaining to internal and external audits.)

The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit services to the company. The policy statement discusses the applicability of this prohibition to institutions that are public companies, insured depository institutions with assets of $500 million or more that are subject to the annual audit and reporting requirements of section 36 of the Federal Deposit Insurance Act, and also nonpublic institutions that are not subject to section 36.

5a. As discussed below, some aspects of the auditor-independence rules established by the Sarbanes-Oxley Act apply to all federally insured depository institutions with $500 million or more in total assets. See part 363 of the FDIC’s regulations.

6. The FDIC, OCC, and OTS.
2060.05.1 INTERNAL AUDIT FUNCTION (PART I)

2060.05.1.1 Director and Senior Management Responsibilities for Internal Audit

The board of directors and senior management are responsible for having an effective system of internal control and an effective internal audit function in place at their institution. They are also responsible for ensuring that the importance of internal control is understood and respected throughout the institution. This overall responsibility cannot be delegated to anyone else. They may, however, delegate the design, implementation, and monitoring of specific internal controls to lower-level management and the testing and assessment of internal controls to others. Accordingly, directors and senior management should have reasonable assurance that the system of internal control prevents or detects significant inaccurate, incomplete, or unauthorized transactions; deficiencies in the safeguarding of assets; unreliable financial reporting (which includes regulatory reporting); and deviations from laws, regulations, and the institution’s policies.

Some institutions have chosen to rely on so-called management self-assessments or control self-assessments, wherein business-line managers and their staff evaluate the performance of internal controls within their purview. Such reviews help to underscore management’s responsibility for internal control, but they are not impartial. Directors and members of senior management who rely too much on these reviews may not learn of control weaknesses until they have become costly problems, particularly if directors are not intimately familiar with the institution’s operations. Therefore, institutions generally should also have their internal controls tested and evaluated by units without business-line responsibilities, such as internal audit groups.

Directors should be confident that the internal audit function addresses the risks and meets the demands posed by the institution’s current and planned activities. To accomplish this objective, directors should consider whether their institution’s internal audit activities are conducted in accordance with professional standards, such as the Institute of Internal Auditors’ (IIA) Standards for the Professional Practice of Internal Auditing. These standards address independence, professional proficiency, scope of work, performance of audit work, management of internal audit, and quality-assurance reviews. Furthermore, directors and senior management should ensure that the following matters are reflected in their institution’s internal audit function.

2060.05.1.1.1 Internal Audit Placement and Structure Within the Organization

Careful thought should be given to the placement of the audit function in the institution’s management structure. The internal audit function should be positioned so that the board has confidence that the internal audit function will perform its duties with impartiality and not be unduly influenced by managers of day-to-day operations. The audit committee, using objective criteria it has established, should oversee the internal audit function and evaluate its performance.

---

7. As noted above, under section 36 of the FDI Act, as implemented by part 363 of the FDIC’s regulations (12 C.F.R. 363), FDIC-insured depository institutions with total assets of $500 million or more must submit an annual management report signed by the chief executive officer (CEO) and chief accounting or chief financial officer. This report must contain the following: (1) a statement of management’s responsibilities for preparing the institution’s annual financial statements, for establishing and maintaining an adequate internal control structure and procedures for financial reporting, and for complying with designated laws and regulations relating to safety and soundness, including management’s assessment of the institution’s compliance with those laws and regulations; and (2) for an institution with total assets of $1 billion or more at the beginning of the institution’s most recent fiscal year, the report should include an assessment by management of the effectiveness of such internal control structure and procedures as of the end of such fiscal year. (See 12 C.F.R. 363.2(b) and 70 Fed. Reg. 71,232, November 28, 2005.)

8. Depository institutions subject to section 36 of the FDI Act and part 363 of the FDIC’s regulations must maintain an independent audit committee (i.e., consisting of directors who are not members of management). For institutions with between $500 million and $1 billion in assets, only a majority, rather than all, of the members of the audit committee—who must be outside directors—must be independent of management. For insured institutions having total assets of more than $3 billion, the audit committee must (1) have members with banking or related financial management expertise, (2) have access to outside legal counsel, and (3) not include any large customers of the institution. The audit committee also may be required to satisfy other audit committee membership criteria (see 12 U.S.C. 831m(g)(1)(c) and section 363.5(b)(12 C.F.R. 363.5(b)). Consistent with the 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations, the agencies also encourage the board of directors of each depository institution that is not otherwise required to do so to establish an audit committee consisting entirely of outside directors. Where the term “audit committee” is used in this policy statement, the board of directors may fulfill the audit committee responsibilities if the institution is not subject to an audit committee requirement.

BHC Supervision Manual July 2008 Page 3
formance. The audit committee should assign responsibility for the internal audit function to a member of management (that is, the manager of internal audit or internal audit manager) who understands the function and has no responsibility for operating the system of internal control. The ideal organizational arrangement is for this manager to report directly and solely to the audit committee regarding both audit issues and administrative matters (e.g., resources, budget, appraisals, and compensation). Institutions are encouraged to consider the IIA’s Practice Advisory 2060-2: Relationship with the Audit Committee, which provides more guidance on the roles and relationships between the audit committee and the internal audit manager. Many institutions place the manager of internal audit under a dual reporting arrangement: functionally accountable to the audit committee on issues discovered by the internal audit function, while reporting to another senior manager on administrative matters. Under a dual reporting relationship, the board should consider the potential for diminished objectivity on the part of the internal audit manager with respect to audits concerning the executive to whom he or she reports. For example, a manager of internal audit who reports to the chief financial officer (CFO) for performance appraisal, salary, and approval of department budgets may approach audits of the accounting and treasury operations controlled by the CFO with less objectivity than if the manager were to report to the chief executive officer. Thus, the chief financial officer, controller, or other similar officer should ideally be excluded from overseeing the internal audit activities even in a dual role. The objectivity and organizational stature of the internal audit function are best served under such a dual arrangement if the internal audit manager reports administratively to the CEO.

Some institutions seek to coordinate the internal audit function with several risk-monitoring functions (for example, loan review, market-risk assessment, and legal compliance departments) by establishing an administrative arrangement under one senior executive. Coordination of these other monitoring activities with the internal audit function can facilitate the reporting of material risk and control issues to the audit committee, increase the overall effectiveness of these monitoring functions, better use available resources, and enhance the institution’s ability to comprehensively manage risk. Such an administrative reporting relationship should be designed so as to not interfere with or hinder the manager of internal audit’s functional reporting to and ability to directly communicate with the institution’s audit committee. In addition, the audit committee should ensure that efforts to coordinate these monitoring functions do not result in the manager of internal audit conducting control activities nor diminish his or her independence with respect to the other risk-monitoring functions. Furthermore, the internal audit manager should have the ability to independently audit these other monitoring functions.

In structuring the reporting hierarchy, the board should weigh the risk of diminished independence against the benefit of reduced administrative burden in adopting a dual reporting organizational structure. The audit committee should document its consideration of this risk and mitigating controls. The IIA’s Practice Advisory III-02: Chief Audit Executive Reporting Lines provides additional guidance regarding functional and administrative reporting lines.

2060.05.1.1.2 Internal Audit Management, Staffing, and Audit Quality In managing the internal audit function, the manager of internal audit is responsible for control risk assessments, audit plans, audit programs, and audit reports.

1. A control risk assessment (or risk-assessment methodology) documents the internal auditor’s understanding of the institution’s significant business activities and their associated risks. These assessments typically analyze the risks inherent in a given business line, the mitigating control processes, and the resulting residual risk exposure of the institution. They should be updated regularly to reflect changes to the system of internal control or work processes and to incorporate new lines of business.

2. An internal audit plan is based on the control risk assessment and typically includes a summary of key internal controls within each significant business activity, the timing and frequency of planned internal audit work, and a resource budget.

3. An internal audit program describes the objectives of the audit work and lists the
procedures that will be performed during each internal audit review.

4. An audit report generally presents the purpose, scope, and results of the audit, including findings, conclusions, and recommendations. Workpapers that document the work performed and support the audit report should be maintained.

Ideally, the internal audit function’s only role should be to independently and objectively evaluate and report on the effectiveness of an institution’s risk-management, control, and governance processes. Internal auditors increasingly have taken a consulting role within institutions on new products and services and on mergers, acquisitions, and other corporate reorganizations. This role typically includes helping design controls and participating in the implementation of changes to the institution’s control activities. The audit committee, in its oversight of the internal audit staff, should ensure that the function’s consulting activities do not interfere or conflict with the objectivity it should have with respect to monitoring the institution’s system of internal control. In order to maintain its independence, the internal audit function should not assume a business-line management role over control activities, such as approving or implementing operating policies or procedures, including those it has helped design in connection with its consulting activities. The agencies encourage internal auditors to follow the IIA’s standards, including guidance related to the internal audit function acting in an advisory capacity.

The internal audit function should be competently supervised and staffed by people with sufficient expertise and resources to identify the risks inherent in the institution’s operations and assess whether internal controls are effective. The manager of internal audit should oversee the staff assigned to perform the internal audit work and should establish policies and procedures to guide the audit staff. The form and content of these policies and procedures should be consistent with the size and complexity of the department and the institution. Many policies and procedures may be communicated informally in small internal audit departments, while larger departments would normally require more formal and comprehensive written guidance.

2060.05.1.1.3 Internal Audit Frequency and Scope

The frequency and extent of internal audit review and testing should be consistent with the nature, complexity, and risk of the institution’s on- and off-balance-sheet activities. At least annually, the audit committee should review and approve internal audit’s control risk assessment and the scope of the audit plan, including how much the manager relies on the work of an outsourcing vendor. It should also periodically review internal audit’s adherence to the audit plan. The audit committee should consider requests for expansion of basic internal audit work when significant issues arise or when significant changes occur in the institution’s environment, structure, activities, risk exposures, or systems.¹⁰

2060.05.1.1.4 Communication of Internal Audit Findings to the Directors, Audit Committee, and Management

To properly carry out their responsibility for internal control, directors and senior management should foster forthright communications and critical inspection of issues to better understand the importance and severity of internal control weaknesses identified by the internal auditor and operating management’s solutions.

¹⁰ Major changes in an institution’s environment and conditions may compel changes to the internal control system and also warrant additional internal audit work. These include (1) new management; (2) areas or activities experiencing rapid growth or rapid decline; (3) new lines of business, products, or technologies or disposals thereof; (4) corporate restructurings, mergers, and acquisitions; and (5) expansion or acquisition of foreign operations (including the impact of changes in the related economic and regulatory environments).

BHC Supervision Manual  July 2008  Page 4.1
to these weaknesses. Internal auditors should report internal control deficiencies to the appropriate level of management as soon as they are identified. Significant matters should be promptly reported directly to the board of directors (or its audit committee) and senior management. In periodic meetings with management and the manager of internal audit, the audit committee should assess whether management is expeditiously resolving internal control weaknesses and other exceptions. Moreover, the audit committee should give the manager of internal audit the opportunity to discuss his or her findings without management being present.

Furthermore, each audit committee should establish and maintain procedures for employees of their institution to submit confidentially and anonymously concerns to the committee about questionable accounting, internal accounting control, or auditing matters. In addition, the audit committee should set up procedures for the timely investigation of complaints received and the retention for a reasonable time period of documentation concerning the complaint and its subsequent resolution.

2060.05.1.1.5 Contingency Planning

As with any other function, the institution should have a contingency plan to mitigate any significant discontinuity in audit coverage, particularly for high-risk areas. Lack of contingency planning for continuing internal audit coverage may increase the institution’s level of operational risk.

2060.05.1.2 U.S. Operations of Foreign Banking Organizations

The internal audit function of a foreign banking organization (FBO) should cover its U.S. operations in its risk assessments, audit plans, and audit programs. Its U.S.-domiciled audit function, head-office internal audit staff, or some combination thereof normally performs the internal audit of the U.S. operations. Internal audit findings (including internal control deficiencies) should be reported to the senior management of the U.S. operations of the FBO and the audit department of the head office. Significant adverse findings also should be reported to the head office’s senior management and the board of directors or its audit committee.

2060.05.1.3 Internal Audit Systems and the Audit Function for Small Financial Institutions

An effective system of internal control and an independent internal audit function form the foundation for safe and sound operations, regardless of an institution’s size. Each institution should have an internal audit function that is appropriate to its size and the nature and scope of its activities. The procedures assigned to this function should include adequate testing and review of internal controls and information systems.

It is the responsibility of the audit committee and management to carefully consider the extent of auditing that will effectively monitor the internal control system after taking into account the internal audit function’s costs and benefits. For institutions that are large or have complex operations, the benefits derived from a full-time manager of internal audit or an auditing staff likely outweigh the cost. For small institutions with few employees and less complex operations, however, these costs may outweigh the benefits. Nevertheless, a small institution without an internal auditor can ensure that it maintains an objective internal audit function by implementing a comprehensive set of independent reviews of significant internal controls. The key characteristic of such reviews is that the person(s) directing and/or performing the review of internal controls is not also responsible for managing or operating those controls. A person who is competent in evaluating a system of internal control should design the review procedures and arrange for their implementation. The person responsible for reviewing the system of internal control should report findings directly to the audit committee. The audit committee should evaluate the findings and ensure that senior management has or will take appropriate action to correct the control deficiencies.

2060.05.2 INTERNAL AUDIT OUTSOURCING ARRANGEMENTS (PART II)

2060.05.2.1 Examples of Internal Audit Outsourcing Arrangements

An outsourcing arrangement is a contract between an institution and an outsourcing vendor to provide internal audit services. Outsourc-
Auditing arrangements take many forms and are used by institutions of all sizes. Some institutions consider entering into these arrangements to enhance the quality of their control environment by obtaining the services of a vendor with the knowledge and skills to critically assess, and recommend improvements to, their internal control systems. The internal audit services under contract can be limited to helping internal audit staff in an assignment for which they lack expertise. Such an arrangement is typically under the control of the institution’s manager of internal audit, and the outsourcing vendor reports to him or her. Institutions often use outsourcing vendors for audits of areas requiring more technical expertise, such as electronic data processing and capital-markets activities. Such uses are often referred to as “internal audit assistance” or “audit co-sourcing.”

Some outsourcing arrangements may require an outsourcing vendor to perform virtually all the procedures or tests of the system of internal control. Under such an arrangement, a designated manager of internal audit oversees the activities of the outsourcing vendor and typically is supported by internal audit staff. The outsourcing vendor may assist the audit staff in determining risks to be reviewed and may recommend testing procedures, but the internal audit manager is responsible for approving the audit scope, plan, and procedures to be performed. Furthermore, the internal audit manager is responsible for the results of the outsourced audit work, including findings, conclusions, and recommendations. The outsourcing vendor may report these results jointly with the internal audit manager to the audit committee.

### 2060.05.2.2 Additional Inspection and Examination Considerations for Internal Audit Outsourcing Arrangements

Even when outsourcing vendors provide internal audit services, the board of directors and senior management of an institution are responsible for ensuring that both the system of internal control and the internal audit function operate effectively. In any outsourced internal audit arrangement, the institution’s board of directors and senior management must maintain ownership of the internal audit function and provide active oversight of outsourced activities. When negotiating the outsourcing arrangement with an outsourcing vendor, an institution should carefully consider its current and anticipated business risks in setting each party’s internal audit responsibilities. The outsourcing arrangement should not increase the risk that a breakdown of internal control will go undetected.

To clearly distinguish its duties from those of the outsourcing vendor, the institution should have a written contract, often taking the form of an engagement letter. Contracts between the institution and the vendor typically include provisions that—

1. define the expectations and responsibilities under the contract for both parties;
2. set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor;
3. set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work;
4. establish the process for changing the terms of the service contract, especially for expansion of audit work if significant issues are found, and stipulations for default and termination of the contract;
5. state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related workpapers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the workpapers prepared by the outsourcing vendor;
6. specify the locations of internal audit reports and the related workpapers;
7. specify the period of time (for example, seven years) that vendors must maintain the workpapers;13
8. state that outsourced internal audit services provided by the vendor are subject to regulatory review and that examiners will be granted full and timely access to the internal audit reports and related workpapers prepared by the outsourcing vendor;

---

12. The engagement letter provisions described are comparable to those outlined by the American Institute of Certified Public Accountants (AICPA) for financial statement audits (see AICPA Professional Standards, AU section 310). These provisions are consistent with the provisions customarily included in contracts for other outsourcing arrangements, such as those involving data processing and information technology. Therefore, the federal banking agencies consider these provisions to be usual and customary business practices.

13. If the workpapers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the bank and examiners to access the electronic workpapers for a specified time period.
9. prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence; and

10. state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of management or an employee and, if applicable, will comply with AICPA, SEC, PCAOB, or regulatory independence guidance.

2060.05.2.2.1 Management of the Outsourced Internal Audit Function

Directors and senior management should ensure that the outsourced internal audit function is competently managed. For example, larger institutions should employ sufficient competent staff members in the internal audit department to assist the manager of internal audit in overseeing the outsourcing vendor. Small institutions that do not employ a full-time audit manager should appoint a competent employee who ideally has no managerial responsibility for the areas being audited to oversee the outsourcing vendor’s performance under the contract. This person should report directly to the audit committee for purposes of communicating internal audit issues.

2060.05.2.2.2 Communication of Outsourced Internal Audit Findings to Directors and Senior Management

Communication between the internal audit function and the audit committee and senior management should not diminish because the institution engages an outsourcing vendor. All work by the outsourcing vendor should be well documented and all findings of control weaknesses should be promptly reported to the institution’s manager of internal audit. Decisions not to report the outsourcing vendor’s findings to directors and senior management should be the mutual decision of the internal audit manager and the outsourcing vendor. In deciding what issues should be brought to the board’s attention, the concept of “materiality,” as the term is used in financial statement audits, is generally not a good indicator of which control weakness to report. For example, when evaluating an institution’s compliance with laws and regulations, any exception may be important.

2060.05.2.2.3 Competence of Outsourced Internal Audit Vendor

Before entering an outsourcing arrangement, the institution should perform due diligence to satisfy itself that the outsourcing vendor has sufficient staff qualified to perform the contracted work. The staff’s qualifications may be demonstrated, for example, through prior experience with financial institutions. Because the outsourcing arrangement is a personal-services contract, the institution’s internal audit manager should have confidence in the competence of the staff assigned by the outsourcing vendor and receive timely notice of key staffing changes. Throughout the outsourcing arrangement, management should ensure that the outsourcing vendor maintains sufficient expertise to effectively perform its contractual obligations.

2060.05.2.2.4 Contingency Planning to Avoid Discontinuity of Internal Audit Coverage

When an institution enters into an outsourcing arrangement (or significantly changes the mix of internal and external resources used by internal audit), it may increase its operational risk. Because the arrangement may be terminated suddenly, the institution should have a contingency plan to mitigate any significant discontinuity in audit coverage, particularly for high-risk areas.

2060.05.3 INDEPENDENCE OF THE INDEPENDENT PUBLIC ACCOUNTANT (PART III)

The following discussion applies only when a financial institution is considering using a public accountant to provide both external audit and internal audit services to the institution.

When one accounting firm performs both the external audit and the outsourced internal audit function, the firm risks compromising its independence. These concerns arise because, rather than having two separate functions, this outsourcing arrangement places the independent public accounting firm in the position of appearing to audit, or actually auditing, its own work. For example, in auditing an institution’s financial statements, the accounting firm will consider the extent to which it may rely on the
internal control system, including the internal audit function, in designing audit procedures.

2060.05.3.1 Applicability of the SEC’s Auditor Independence Requirements

2060.05.3.1.1 Institutions That Are Public Companies

To strengthen auditor independence, Congress passed the Sarbanes-Oxley Act of 2002 (the act). Title II of the act applies to any public company—that is, any company that has a class of securities registered with the SEC or the appropriate federal banking agency under section 12 of the Securities Exchange Act of 1934 or that is required to file reports with the SEC under section 15(d) of that act. The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit outsourcing services to the company. In addition, if a public company’s external auditor will be providing auditing services and permissible non-audit services, such as tax services, the company’s audit committee must preapprove each of these services.

According to the SEC’s final rules (effective May 6, 2003) implementing the act’s nonaudit service prohibitions and audit committee preapproval requirements, an accountant is not independent if, at any point during the audit and professional engagement period, the accountant provides internal audit outsourcing or other prohibited nonaudit services to the public company audit client. The SEC’s final rules generally become effective May 6, 2003, although a one-year transition period is provided if the accountant is performing prohibited nonaudit services and actual audit services for a public company pursuant to a contract in existence on May 6, 2003. The services provided during this transition period, however, must not have impaired the auditor’s independence under the preexisting independence requirements of the SEC, the PCAOB, and the AICPA. Although the SEC’s pre-Sarbanes-Oxley independence requirements (issued November 2000 (effective August 2002)) did not prohibit the outsourcing of internal audit services to a public company’s independent public accountant, they did place conditions and limitations on internal audit outsourcing.

2060.05.3.1.2 Depository Institutions Subject to the Annual Audit and Reporting Requirements of Section 36 of the FDI Act

Under section 36, as implemented by part 363 of the FDIC’s regulations, each FDIC-insured depository institution with total assets of $500 million or more is required to have an annual audit performed by an independent public accountant. The part 363 guidelines address the qualifications of an independent public accountant engaged by such an institution by stating that “[t]he independent public accountant should also be in compliance with the AICPA’s Code of Professional Conduct and meet the independence requirements and interpretations of the SEC and its staff.”

Thus, the guidelines provide for each FDIC-insured depository institution with $500 million or more in total assets, whether or not it is a public company, and its external auditor to comply with the SEC’s auditor independence requirements that are in effect during the period covered by the audit. These requirements include the nonaudit-service prohibitions and audit committee preapproval requirements implemented by the SEC’s January 2003 auditor independence rules, once the rules come into effect.

---

15. In addition to prohibiting internal audit outsourcing, the Sarbanes-Oxley Act (15 U.S.C. 78j-1) also identifies other nonaudit services that an external auditor is prohibited from providing to a public company whose financial statements it audits. The legislative history of the act indicates that three broad principles should be considered when determining whether an auditor should be prohibited from providing a nonaudit service to an audit client. These principles are that an auditor should not (1) audit his or her own work, (2) perform management functions for the client, or (3) serve in an advocacy role for the client. To do so would impair the auditor’s independence. Based on these three broad principles, the other nonaudit services . . . referred to in this section . . . that an auditor is prohibited from providing to a public company audit client include bookkeeping or other services related to the client’s accounting records or financial statements; financial information systems design and implementation; appraisal or valuation services, fairness opinions, or contribution-in-kind reports; actuarial services; management functions or human resources; broker or dealer, investment adviser, or investment banking services; legal services and expert services unrelated to the audit; and any other service determined to be impermissible by the PCAOB.
16. 12 C.F.R. 363.3(a). (See FDIC Financial Institutions Letter, FIL-17-2003 (Corporate Governance, Audits, and Reporting Requirements), Attachment II, March 5, 2003.)
17. Appendix A to part 363, Guidelines and Interpretations, paragraph 14, Independence.
18. If a depository institution subject to section 36 and part 363 satisfies the annual independent audit requirement by relying on the independent audit of its parent holding com-
2060.05.3.1.3 Institutions Not Subject to Section 36 of the FDI Act That Are Neither Public Companies Nor Subsidiaries of Public Companies

The agencies have long encouraged each institution not subject to section 36 of the FDI Act that is neither a public company nor a subsidiary of a public company to have its financial statements audited by an independent public accountant. The agencies also encourage each such institution to follow the internal audit outsourcing prohibition in the Sarbanes-Oxley Act, as discussed above for institutions that are public companies. As previously mentioned, some institutions seek to enhance the quality of their control environment by obtaining the services of an outsourcing vendor who can critically assess their internal control system and recommend improvements. The agencies believe that a small nonpublic institution with less complex operations and limited staff can, in certain circumstances, use the same accounting firm to perform both an external audit and some or all of the institution’s internal audit activities. These circumstances include, but are not limited to, situations where—

1. splitting the audit activities poses significant costs or burden,
2. persons with the appropriate specialized knowledge and skills are difficult to locate and obtain,
3. the institution is closely held and investors are not solely reliant on the audited financial statements to understand the financial position and performance of the institution, and
4. the outsourced internal audit services are limited in either scope or frequency.

In circumstances such as these, the agencies view an internal audit outsourcing arrangement between a small nonpublic institution and its external auditor as not being inconsistent with their safety-and-soundness objectives for the institution.

When a small nonpublic institution decides to hire the same firm to perform internal and external audit work, the audit committee and the external auditor should pay particular attention to preserving the independence of both the internal and external audit functions. Furthermore, the audit committee should document both that it has preapproved the internal audit outsourcing to its external auditor and has considered the independence issues associated with this arrangement. In this regard, the audit committee should consider the independence standards described in parts I and II of the policy statement, the AICPA guidance discussed below, and the broad principles that the auditor should not perform management functions or serve in an advocacy role for the client.

Accordingly, the agencies will not consider an auditor who performs internal audit outsourcing services for a small nonpublic audit client to be independent unless the institution and its auditor have adequately addressed the associated independence issues. In addition, the institution’s board of directors and management must retain ownership of and accountability for the internal audit function and provide active oversight of the outsourced internal audit relationship.

A small nonpublic institution may be required by another law or regulation, an order, or another supervisory action to have its financial statements audited by an independent public accountant. In this situation, if warranted for safety-and-soundness reasons, the institution’s primary federal regulator may require that the institution and its independent public accountant comply with the auditor independence requirements of the Act.

2060.05.3.1.4 AICPA Guidance

As noted above, the independent public accountant for a depository institution subject to section 36 of the FDI Act also should be in compliance with the AICPA’s Code of Professional Conduct. This code includes professional ethics standards, rules, and interpretations that are

21. If a small nonpublic institution is considering having its external auditor perform other nonaudit services, its audit committee may wish to discuss the implications of the performance of these services on the auditor’s independence.
binding on all certified public accountants (CPAs) who are members of the AICPA in order for the member to remain in good standing. Therefore, this code applies to each member CPA who provides audit services to an institution, regardless of whether the institution is subject to section 36 or is a public company.

The AICPA has issued guidance indicating that a member CPA would be deemed not independent of his or her client when the CPA acts or appears to act in a capacity equivalent to a member of the client’s management or as a client employee. The AICPA’s guidance includes illustrations of activities that would be considered to compromise a CPA’s independence. Among these are activities that involve the CPA authorizing, executing, or consummating transactions or otherwise exercising authority on behalf of the client. For additional details, refer to Interpretation 101-3, Performance of Other Services, and Interpretation 101-13, Extended Audit Services, in the AICPA’s Code of Professional Conduct.

2060.05.4 INSPECTION GUIDANCE
(PART IV)

2060.05.4.1 Review of the Internal Audit Function and Outsourcing Arrangements

Examiners should have full and timely access to an institution’s internal audit resources, including personnel, workpapers, risk assessments, work plans, programs, reports, and budgets. A delay may require examiners to widen the scope of their inspection work and may subject the institution to follow-up supervisory actions.

Examiners should assess the quality and scope of an institution’s internal audit function, regardless of whether it is performed by the institution’s employees or by an outsourcing vendor. Specifically, examiners should consider whether—

1. the internal audit function’s control risk assessment, audit plans, and audit programs are appropriate for the institution’s activities;
2. the internal audit activities have been adjusted for significant changes in the institution’s environment, structure, activities, risk exposures, or systems;
3. the internal audit activities are consistent with the long-range goals and strategic direction of the institution and are responsive to its internal control needs;
4. the audit committee promotes the internal audit manager’s impartiality and independence by having him or her directly report audit findings to it;
5. the internal audit manager is placed in the management structure in such a way that the independence of the function is not impaired;
6. the institution has promptly responded to significant identified internal control weaknesses;
7. the internal audit function is adequately managed to ensure that audit plans are met, programs are carried out, and results of audits are promptly communicated to senior management and members of the audit committee and board of directors;
8. workpapers adequately document the internal audit work performed and support the audit reports;
9. management and the board of directors use reasonable standards, such as the IIA’s Standards for the Professional Practice of Internal Auditing, when assessing the performance of internal audit; and
10. the audit function provides high-quality advice and counsel to management and the board of directors on current developments in risk management, internal control, and regulatory compliance.

The examiner should assess the competence of the institution’s internal audit staff and management by considering the education, professional background, and experience of the principal internal auditors. In addition, when reviewing outsourcing arrangements, examiners should determine whether—

1. the arrangement maintains or improves the quality of the internal audit function and the institution’s internal control;
2. key employees of the institution and the outsourcing vendor clearly understand the lines of communication and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed;
3. the scope of the outsourced work is revised appropriately when the institution’s environment, structure, activities, risk exposures, or systems change significantly;
4. the directors have ensured that the outsourced internal audit activities are effectively managed by the institution;
5. the arrangement with the outsourcing vendor satisfies the independence standards...
described in this policy statement and thereby preserves the independence of the internal audit function, whether or not the vendor is also the institution’s independent public accountant; and

6. the institution has performed sufficient due diligence to satisfy itself of the vendor’s competence before entering into the outsourcing arrangement and has adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement.

2060.05.4.2 Inspection Concerns About the Adequacy of the Internal Audit Function

If the examiner concludes that the institution’s internal audit function, whether or not it is outsourced, does not sufficiently meet the institution’s internal audit needs; does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, if applicable; or is otherwise inadequate, he or she should determine whether the scope of the inspection should be adjusted. The examiner should also discuss his or her concerns with the internal audit manager or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner’s concerns, he or she should bring these matters to the attention of senior management and the board of directors or audit committee. If these discussions do not resolve the examiner’s concerns, he or she should discuss them with appropriate agency staff in order to determine the appropriate actions the agency should take to ensure that the institution corrects the deficiencies. These actions may include formal and informal enforcement actions.

The institution’s management and composite ratings should reflect the examiner’s conclusions regarding the institution’s internal audit function. The report of inspection should contain comments concerning the adequacy of this function, significant issues or concerns, and recommended corrective actions.

2060.05.4.3 Concerns About the Independence of the Outsourcing Vendor

An examiner’s initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, may raise questions about the institution’s and its vendor’s adherence to the independence standards described in parts I and II of the policy statement, whether or not the vendor is an accounting firm, and in part III if the vendor provides both external and internal audit services to the institution. In such cases, the examiner first should ask the institution and the outsourcing vendor how the audit committee determined that the vendor was independent. If the vendor is an accounting firm, the audit committee should be asked to demonstrate how it assessed that the arrangement has not compromised applicable SEC, PCAOB, AICPA, or other regulatory standards concerning auditor independence. If the examiner’s concerns are not adequately addressed, the examiner should discuss the matter with appropriate agency staff prior to taking any further action.

If the agency staff concurs that the independence of the external auditor or other vendor appears to be compromised, the examiner will discuss his or her findings and the actions the agency may take with the institution’s senior management, board of directors (or audit committee), and the external auditor or other vendor. In addition, the agency may refer the external auditor to the state board of accountancy, the AICPA, the SEC, the PCAOB, or other authorities for possible violations of applicable independence standards. Moreover, the agency may conclude that the institution’s external auditing program is inadequate and that it does not comply with auditing and reporting requirements, including sections 36 and 39 of the FDI Act and related guidance and regulations, if applicable.

2060.05.5 INSPECTION OBJECTIVES

1. To determine with reasonable assurance whether the institution has an adequate system of internal controls that ensures efficient and effective operations, including the safeguarding of assets, reliable financial reporting, and compliance with applicable laws and regulations.

2. To determine if the internal audit function and the internal audit outsourcing arrangements of the banking organizations are adequately and competently managed by the board of directors and senior management.

23. The term “institution” is used to maintain consistency with the interagency policy statement, but these inspection objectives and procedures apply to financial holding companies, bank holding companies, and their bank and nonbank subsidiaries.
3. To ascertain that the banking organization’s internal audit function monitors, reviews, and ensures the continued existence and maintenance of sound and adequate internal controls over the management process: the control environment, risk assessment, control activities, information and communication, and monitoring activities.

4. To make an overall determination as to whether an institution’s internal audit function and its processes are effective or ineffective based on the 2003 interagency policy statement and the FR supplemental policy guidance.

5. To determine whether the internal audit function reports vital information about weaknesses in the system of internal control to the board of directors (or its audit committee) and senior management and that expeditious remedial action is taken to resolve the internal control weaknesses as well as any other exceptions.

6. To determine if
   a. the audit committee has established and maintains procedures for employees of the institution to confidentially and anonymously submit concerns to the committee about questionable accounting, internal control, or auditing matters; and
   b. the audit committee has procedures for the timely investigation of complaints received and the retention, for a reasonable time period, of documentation concerning the complaint and its subsequent resolution.

7. To determine the adequacy of the internal audit function (including its use of outsourced internal audit vendors) as to organizational structure, prudent management, staff having sufficient expertise, audit quality, and the ability of auditors to directly and freely communicate internal audit findings to the board of directors, its audit committee, and senior management.

9. To determine whether the internal audit function and its processes can be relied upon for the current supervisory review period.

10. For high risk areas, to make a determination as to whether additional inspection work is needed even when the internal audit may be deemed effective and its work reliable.

2060.05.6 INSPECTION PROCEDURES

Examiners should obtain assurances from the audit committee and senior management that they will have full and timely access to an institution’s internal audit resources, including personnel, work papers, risk assessments, work plans, programs, reports, and budgets. Examiners should consider widening the scope of their inspection work when such assurances are not provided or if there are any significant delays in gaining access to the internal audit resources. Such a delay may subject the institution to follow-up supervisory action.

This inspection program should include a review of audit function and audit outsourcing, which would include a review of the holding company’s internal and external audits and the audit procedures they encompass. The audit guidelines are general and all sections or questions may not be applicable to every entity within the consolidated organization.

Before reviewing any specific audit procedures, the examiner should first determine the independence and competence of the auditors. If the examiner believes the auditors to be both competent and independent, he or she should then determine the effectiveness and adequacy of their work, and whether the auditors made an assessment as to whether the institution’s internal audit function incorporated the enhanced practices outlined in the FR’s “Supplemental Policy Statement on Internal Audit Function and Its Outsourcing” (Supplemental Guidance).

Based on a review of the audit function and on the auditor’s work, the examiner must then determine the scope of the inspection. The program and related supporting documentation should be completed in an organized manner and should be retained as part of the inspection work papers.

Upon completion of the review of the internal audit program, the examiner should be able to formulate a conclusion on the effectiveness of audit processes and coverage. Conclusions about any weaknesses in the internal or external audit work performed for the FR supervised bank or savings and loan holding company.
should be summarized and included in the inspection report. Matters Requiring Immediate Attention (MRA) or Matters Requiring Attention (MRA) to be included in the inspection report should be discussed with the audit committee and board of directors, the Chief Audit Executive, (CAE) and senior bank management.

2060.05.6.1 Internal Audit Function

The following inspection procedures should encompass a review of the structure of the internal audit organization and function:

1. **Organizational structure of the audit department.** Review the internal audit’s charter and its organization chart for direct and indirect reporting lines of the CAE, and the minutes of the board’s audit or examining committee to determine how effectively the CAE and board of directors are discharging their responsibility. If the CAE reports to someone other than the chief executive officer (CEO), determine if the audit committee has documented its rationale for the reporting structure, including any mitigating controls for situations that could adversely impact the objectivity of the CAE. Determine if the audit committee has quarterly, but at least annually, evaluated whether (1) the CAE is impartial and not unduly influenced by the administrative reporting line and (2) any conflicts of interest for the CAE and other audit staff are accompanied by appropriate restrictions to mitigate those conflicts.

2. **Independence of the audit function.** Interview the CAE and observe the operation of the audit department to determine its functional responsibilities.

3. **CAE’s qualifications.** Review biographical data and interview the CAE to determine his or her ability to manage the institution’s internal audit function and his or her responsibility within the institution (i.e., bank holding or savings and loan holding company).

4. **Audit staff qualifications.** Review the biographical data and interview the management staff of the audit department to determine their qualifications commensurate with their delegated responsibilities compared to the institution’s strategy and operations. Review the educational background, professional certifications and relevant banking and audit experience of staff to assess overall staff qualifications and to identify any knowledge gaps.

5. **Skills gap assessments.** Review how often they are performed, and how gaps in coverage are addressed (e.g. targeted staff hires; training; business- line rotation programs, and co-sourcing/ outsourcing arrangements).

6. **Training.** Ensure there is a process in place to determine and monitor the annual training, typically 40 hours minimum, for each staff member based on their needs.

7. **Content and use of the audit frequency and scope schedule.** Review the methodology utilized to determine the audit universe and frequency of coverage per auditable entity.

8. **Audit department participation in systems design projects.** Determine through interviews and documentation reviews, internal audit’s role in assessing systems change control processes.

9. **Internal audit charter.** Review the internal audit charter to determine its current adequacy. Determine whether the CAE periodically reviews the current adequacy of the charter and makes recommendations to the audit committee for improving internal audit function and whether outsourcing to external experts may be needed.

10. **Audit manual.** Review the audit manual to ensure that it includes all applicable audit processes, practices, and procedures, and applicable references to Institute of Internal Auditor (IIA) standards.

11. **Maintenance of audit records.** Review a sample of the audit reports and associated work papers to determine compliance with prescribed procedures and proper documentation, including appropriate distribution to senior managers.

12. **Audit department’s formal reporting procedures.** Review CAE presentations and MIS reporting to the audit or examining committee to ensure the committee is providing effective oversight of the internal audit function.

13. **Issue Tracking Follow-up Processes.** Review processes utilized to validate closure of internal audit findings. Review a sample of closed issues to ensure that internal audit maintains sufficient documentation to validate issue closure.

14. **Use and effectiveness of audit computer programs.** Interview the CAE and/or the appropriate staff members regarding the use of the computer and access to the files for...
audit purposes. Obtain a walkthrough of automated auditing systems and methodologies.

2060.05.6.2 Other Internal Audit Function Inspection Procedures

1. Broaden the scope of the inspection if the institution’s internal audit function, whether or not it is outsourced, does not meet its internal audit needs, does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, or is otherwise inadequate.

2. Discuss supervisory concerns and outstanding internal-external audit report comments with the CAE or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner’s comments and concerns, bring these matters to the attention of senior management and the board of directors or audit committee.

3. If material weaknesses in the internal audit function or the internal control system exist, discuss them with appropriate Federal Reserve Bank supervisory staff to determine the appropriate actions that should be taken to ensure that the institution corrects the deficiencies (including formal and informal enforcement actions).

4. Incorporate conclusions about the institution’s internal audit function into its management and composite supervisory ratings.

5. Include in the inspection report comments concerning the adequacy of the internal audit function, significant issues or concerns, and recommended corrective actions.

2065.05.6.3 Additional Aspects of the Examiner’s Review of an Outsourcing Arrangement

1. Review the internal audit outsourcing arrangement and determine if the institution has a written contract or an engagement letter with the vendor.

2. Determine whether the written contract or engagement letter includes provisions that—
   a. define the expectations and responsibilities under the contract for both parties;
   b. set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor;
   c. set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work;
   d. establish the process for changing the terms of the service contract, especially for expansion of audit work if significant issues are found, and establish stipulations for default and termination of the contract;
   e. state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related work papers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the work papers prepared by the outsourcing vendor;
   f. specify the locations of internal audit reports and the related work papers;
   g. specify the period of time (for example, seven years) that vendors must maintain the work papers;
   h. state that outsourced internal audit services provided by the vendor are subject to regulatory review and that examiners will be granted full and timely access to the internal audit reports and related work papers prepared by the outsourcing vendor;
   i. prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence; and
   j. state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of management or an employee and, if applicable, will comply with AICPA, SEC, PCAOB, or regulatory independence guidance.

3. Determine whether—
   a. the outsourcing arrangement maintains or improves the quality of the internal audit function and the institution’s internal control;
   b. key employees of the institution and the

24 If the work papers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the banking organization and examiners to access the electronic work papers for a specified time period.
outsourcing vendor clearly understand the lines of communication and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed;

c. the scope of work is revised appropriately when the institution’s environment, structure, activities, risk exposures, or systems change significantly;

d. the directors have ensured that the outsourced internal audit function is effectively managed by the institution;

e. the arrangement with the outsourcing vendor satisfies the independence standards described in the Policy Statement on the Internal Audit Function and Its Outsourcing and thereby preserves the independence of the internal audit function, whether or not the vendor is also the institution’s independent public accountant;

f. the institution has performed sufficient due diligence to satisfy itself of the vendor’s competence before entering into the outsourcing arrangement and whether there are adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement; and

g. the institution has a contingency plan to ensure continuity in audit coverage, especially for high-risk areas.

4. Adjust the scope of the inspection if the outsourcing arrangement has diminished the quality of the institution’s internal audit. If the quality of the internal audit is diminished, inform senior management and the board of directors and consider it in the institution’s management and composite ratings.

2060.05.6.4 Assessment of Auditor Independence

1. The initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, may raise questions about the institution’s and its vendor’s adherence to the independence standards discussed in parts I, II, and III of the “Interagency Policy Statement on the Internal Audit Function and Its Outsourcing” (2003 Policy Statement) and the Federal Reserve’s 2013 Supplemental Guidance. If the vendor provides both external and internal audit services to the institution—

a. question the bank or savings and loan holding company’s CAE and audit committee how they determined that the vendor was independent; and

b. if the vendor is an accounting firm, ask the CAE or audit committee how they assessed that the arrangement had not compromised applicable SEC, PCAOB, AICPA, or other regulatory standards concerning auditor independence.

2. If the answers to the above raise supervisory concern, or are not adequately addressed, discuss the matter with appropriate Reserve Bank management and supervisory staff.

3. If the Reserve Bank management and supervisory staff concurs that the independence of the external auditor or other vendor appears to be compromised, discuss the inspection findings and what appropriate supervisory actions the Federal Reserve may take with the bank holding or savings and loan holding company’s senior management, board of directors (or audit committee), and the external auditor or other vendor.

2060.05.6.5 Supplemental Procedures to Evaluate the Effectiveness of the Internal Audit Function

1. Determine whether the internal audit function and its processes are effective or ineffective and whether internal audit’s work can be potentially relied upon as part of the supervisory review process. An institution’s internal audit function generally would be considered effective if the institution’s internal audit function structure and practices are consistent with the 2003 interagency policy statement and the Federal Reserve’s 2013 supplemental guidance (supplemental guidance).

2. To determine if the institution has incorporated the Federal Reserve’s Supplemental Guidance, evaluate whether the factors and requirements underpinning the following characteristics and processes are in place:

Attributes
- Independence
- Competent internal audit staff
- Objectivity and ethics

Governance
- Role of board of directors
- Role of audit committee
• Role of Chief Audit Executive (CAE)
Audit Processes
• Audit methodology—Review the internal audit’s risk-assessment methodology that drives its risk-assessment process and determine if it represents the audit universe. Determine if the methodology included a documented analysis of cross-institutional risk and thematic control issues and the processes and procedures for evaluating the effectiveness of risk-management, control, and governance processes. Evaluate internal audit’s plan for continuous monitoring and in determining and evaluating risk. Assess internal audit’s process for incorporating other risk identification techniques (i.e., risk and control self-assessment) that the institution’s management utilizes.

• Audit universe—Determine if internal audit has effective processes to identify all auditable entities within the audit universe. Review the documentation of the audit universe and verify whether it has been reviewed periodically (e.g., during the annual audit planning process) and when significant organizational changes have occurred.

• Risk assessment—Review internal audit’s documentation of its understanding of the institution’s significant business activities and their associated risks. Verify that internal audit includes, at least annually, a review of critical risk-management functions as well as changes in the system of internal controls, infrastructure, work processes, new or changed business lines, or laws and regulations. Review the disposition of the results of the overall risk assessment summary and determine if internal audit gave consideration to key performance or risk indicators and the most significant risks facing the institution, including how the risks are addressed within the internal audit plan.

• Audit plan—Verify that internal audit develops and periodically revises its comprehensive audit plan. Determine if it verifies that the plan includes audit coverage for all identified, auditable entities within the audit universe appropriate for the size and complexity of the institution’s activities.

• Continuous monitoring—Supplement inspection procedures with continuous monitoring and an assessment of key elements of internal audit, including:
  — the adequacy and independence of the audit committee;
  — the independence, professional competence, and quality of the internal audit function;
  — the quality and scope of the audit methodology, audit plan, and risk assessment; and
  — the adequacy of audit programs and work paper standards.
  1) Review these key elements at least annually to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding their adequacy.
  2) Make a determination on whether the work of internal audit can be relied upon when internal audit’s overall function and related processes are effective and when recent work was performed by internal audit in an area where examiners are performing inspection procedures.
  3) Evaluate and determine whether additional inspection work is needed in high risk areas even where internal audit has been deemed effective and its work reliable.

Audit Performance and Monitoring
• Scope—Adjust the scope of the inspection if the bank holding or savings and loan holding company’s internal audit function does not sufficiently meet the institution’s internal audit needs (whether or not the audit function is outsourced), or is otherwise ineffective.

• Work papers—Determine whether the internal audit work papers adequately document the work program, the work performed and work paper standards, including documentation of any observations and analysis made, the conclusions, and audit results.

• Audit reports:
  1) Ascertain whether internal audit has effective audit reporting processes that communicate audit report issues throughout the institution.
and they are addressed in a timely manner.

2) Review the inspection period’s audit reports and verify that they contain an executive summary describing the auditable area, its conclusions, rationale, key issues, and management’s documented action plans to address audit findings.

• Audit issues tracking
  1) Verify that internal audit has effective processes in place to track, monitor, and follow up on open audit issues.
  2) Determine if the institution conducts independent quality assurance reviews of internal audit work performed.
  3) Verify that the CAE implements appropriate improvements in internal audit processes or staff training through the quality assurance and improvement programs.
  4) Determine whether the institution conducts an internal quality assessment at least annually and if the CAE reports the results and status of internal assessments to senior management and the audit committee at least annually.
  5) Discuss supervisory concerns and outstanding internal-external audit report comments with the CAE or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner’s comments and concerns, bring these matters to the attention of senior management and the board of directors or the audit committee.

• Retrospective review processes
  1) Determine if management has conducted a post-mortem and “lessons learned” analysis when adverse events (fraud or a significant loss) have occurred.
  2) Find out if internal audit function verified that a review took place and that appropriate action was taken to remediate identified issues.
  3) Ascertain if internal audit function evaluated management’s analysis of the reasons for the event and if the adverse event was the result of a control break down or failure, and whether management identified measures to be put in place to prevent a similar event from occurring in the future.

Quality Assurance
— Internal Quality Assurance. Ensure that the internal audit function process is documented in the audit manual. Review samples of work, overall results and status of any action plans.
— External Quality Assurance. Determine whether an independent assessment had been performed within the five-year requirement. Review results and action plan status to remediate issues.
  1) Assess the quality and scope of the internal audit work, regardless of whether it is performed by the institution’s employees or by an outsourcing vendor. Consider whether—
    a. the internal audit function’s risk assessment, plans, and programs are appropriate for the institution’s activities;
    b. the internal audit function is adequately managed to ensure that audit plans are accomplished, programs are carried out, and results of audits are promptly communicated to the managers and directors;
    c. the internal audit plan and program have been adjusted for significant changes in the institution’s environment, structure, activities, risk exposures, or systems;
    d. the activities of internal audit are consistent with the long-range goals of the institution and are responsive to its internal control needs; and
    e. the audit function provides high-quality advice and counsel to management and the board of directors on current developments in risk management, internal control, and regulatory compliance.

3. If there are deficiencies in any internal audit characteristics, use your judgment to:
   • evaluate the significance of the deficiencies and their relevance to the institution’s safety and soundness or compli-
ance with laws and regulations, and
determine whether these deficiencies
would preclude overall audit processes
from being deemed effective.

While the internal audit function’s overall
processes could be deemed effective, some
elements of the internal audit function may
require enhancements or improvements,
such as documentation with respect to spe-
cific audit processes (for example, risk
assessments or work papers).

4. If examiners find the key elements of the
internal audit function to be insufficient, the
overall effectiveness of the internal audit
function should come into question. Such
findings may be include:
• Lack of an appropriate risk-assessment
  process
• Lack of sufficient and competent
  resources
• Lack of audit coverage in key areas
• Inappropriate classification of audit find-
  ings
• Insufficient root cause analyses
• Numerous work paper deficiencies
• A large number of unresolved control-
related issues

5. Internal audit processes may be considered
ineffective if there are significant, unre-
solved supervisory matters requiring imme-
diate attention (MRIAs) and/or matters
requiring attention (MRAs) pertaining to
internal audit, or if other supervisory con-
cerns exist relating to the effectiveness of
the internal audit function.

2060.05.6.6 Continuous Monitoring
between Inspections of Internal Audit

1. Supplement the inspection procedures
through continuous monitoring. Include an
assessment of key elements of internal audit
during the period following the institution’s
most recent inspection. The assessment of
key elements of internal audit should include:
• The adequacy and independence of the
  audit committee;
• The independence, professional compe-
tence, and quality of the internal audit
  function;
• The quality and scope of the audit meth-

2060.05.6.7 Evaluating the Ability to
Rely on Internal Audit

1. Consider relying on internal audit at a
supervised institution based on whether:
a. an internal audit was deemed effective at
the most recent supervisory inspection of
internal audit;
b. internal audit’s overall function and
related processes are considered effec-
tive and when recent work was per-
formed by internal audit in a area where
examiners are performing inspection
procedures and the examiners can evalu-
ation whether they may rely on the work
of internal audit;
c. an evaluation was performed of the sig-
nificance and degree of risk of particular
activities, business lines or other areas or
business and if a determination was
made as to the existence of appropriate
internal controls over such risks; and

d. the extent of continuous monitoring
activities that did not identify any sig-
nificant deficiencies or discover any
adverse changes in audit processes or the
quality of internal audit’s work.

2. Leverage off an internal audit function’s
assessment of how emerging risks and high-
risk areas are mitigated within the institu-
tion, including whether appropriate internal
controls are in place over such risks;

3. For emerging risks and high-risk areas,
determine if additional inspection work is
needed, even when internal audit has been
deemed effective and its work considered
reliable.

4. Document the results of the supervisory
review, supporting the basis for a conclu-
sion as to whether the examiners can rely
upon internal audit and whether there are
any specific auditable areas (that is, func-
tion or business line) or elements of internal
audit (e.g. open audit issues) on which the
examiners cannot rely.
2060.05.6.8 Considerations for Consolidated Supervision

1. Tailor the nature and scope of the Federal Reserve’s supervisory and inspection work to the organization’s legal entity and regulatory structure and also the risks associated with the organization’s activities. Promote effective consolidated supervision by fostering strong, cooperative relationships among the Federal Reserve, relevant domestic and foreign supervisors, and functional regulators. Achieve this objective while limiting the potential for duplication of effort or undue burden on the institution under review.

2. Focus on the scope and depth of the other supervisor’s or regulator’s internal audit review. Determine the Federal Reserve’s ability to rely on the work of the relevant supervisor or functional regulator:
   - Rely to the fullest extent possible on assessments and information developed by other relevant domestic and foreign supervisors and functional regulators;
   - Focus Federal Reserve supervisory attention on material risks from activities that are not supervised by another supervisor or regulator, or that cut across legal entities; and
   - Participate in the exchange of information among domestic and foreign supervisors and functional regulators, consistent with applicable laws and information-sharing arrangements, providing for the comprehensive, consolidated supervision of each banking organization’s global activities.

3. The Federal Reserve’s conduct of consolidated supervision is central to and dependent on the coordination with, and reliance on, the work of other relevant primary supervisors and functional regulators. The Federal Reserve’s direction for achieving these objectives is closely integrated into the supervisory framework for consolidated bank holding companies and the combined U.S. operations of foreign banking organizations.

4. When the Federal Reserve is not the primary supervisor or functional regulator of all entities consolidated under the holding company, the Federal Reserve will evaluate whether, and the degree to which, the major subsidiaries of the holding company implemented the supplemental guidance.
Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing

The Federal Reserve issued this January 23, 2013, policy statement to supplement the guidance in the 2003 “Interagency Policy Statement on the Internal Audit Function and Its Outsourcing” (referred to as the 2003 Policy Statement). Federal Reserve staff has identified areas for improving regulated institutions’ internal audit functions. This supplemental policy statement addresses the characteristics, governance, and operational effectiveness of an institution’s internal audit function. Further, this statement reflects certain changes in banking regulations that have occurred since the issuance of the 2003 Policy Statement. The Federal Reserve is providing this supplemental guidance to enhance regulated institutions’ internal audit practices and to encourage them to adopt professional audit standards and other authoritative guidance, including those issued by the Institute of Internal Auditors (IIA).

This supplemental statement applies to supervised institutions with greater than $10 billion in total consolidated assets, including state member banks, domestic bank and savings and loan holding companies, and U.S. operations of foreign banking organizations. This supplemental guidance is also consistent with the objectives of the Federal Reserve’s consolidated supervision framework for large financial institutions with total consolidated assets of $50 billion or more, which promotes an independent internal audit function as an essential element for enhancing the resiliency of supervised institutions.

Assessment of the effectiveness of the internal audit function. The degree to which an institution implements the internal audit practices outlined in this policy statement will be considered in the Federal Reserve’s supervisory assessment of the effectiveness of an institution’s internal audit function as well as its safety and soundness and compliance with consumer laws and regulations. Moreover, the overall effectiveness of an institution’s internal audit function will influence the ability of the Federal Reserve to rely upon the work of an institution’s internal audit function.

This supplemental policy statement builds upon the 2003 Policy Statement, which remains in effect, and follows the same organizational structure, with a new section entitled “Enhanced Internal Audit Practices” and updates to Parts I-IV of the 2003 Policy Statement. Refer to SR-13-1/CA13-1 and its attachment. To avoid historical references and duplication some introductory paragraphs and other small phrases are omitted from the policy statement here, as indicated by a line of asterisks.

2060.07.1 SUPPLEMENTAL POLICY GUIDANCE

2060.07.1.1 Enhanced Internal Audit Practices

An institution’s internal audit function should incorporate the following enhanced practices into their overall processes:

2060.07.1.1.1 Risk Analysis

Internal audit should analyze the effectiveness of all critical risk-management functions both with respect to individual risk dimensions (for example, credit risk), and an institution’s overall risk-management function. The analysis should focus on the nature and extent of monitoring compliance with established policies and processes and applicable laws and regulations within the institution as well as whether monitoring processes are appropriate for the institution’s business activities and the associated risks.

2060.07.1.1.2 Thematic Control Issues

Internal audit should identify thematic macro control issues as part of its risk-assessment pro-
cesses and determine the overall impact of such issues on the institution’s risk profile. Additional audit coverage would be expected in business activities that present the highest risk to the institution. Internal audit coverage should reflect the identification of thematic macro control issues across the firm in all auditable areas. Internal audit should communicate thematic macro control issues to senior management and the audit committee.

In addition, internal audit should identify patterns of thematic macro control issues, determine whether additional audit coverage is required, communicate such control deficiencies to senior management and the audit committee, and ensure management establishes effective remediation mechanisms.

2060.07.1.3 Challenging Management and Policy

Internal audit should challenge management to adopt appropriate policies and procedures and effective controls. If policies, procedures, and internal controls are ineffective or insufficient in a particular line of business or activity, internal audit should report specific deficiencies to senior management and the audit committee with recommended remediation. Such recommendations may include restricting business activity in affected lines of business until effective policies, procedures, and controls are designed and implemented. Internal audit should monitor management’s corrective action and conduct a follow-up review to confirm that the recommendations of both internal audit and the audit committee have been addressed.

2060.07.1.4 Infrastructure

When an institution designs and implements infrastructure enhancements, internal audit should review significant changes and notify management of potential internal control issues. In particular, internal audit should ensure that existing, effective internal controls (for example, software applications and management information system reporting) are not rendered ineffective as a result of infrastructure changes unless those controls are compensated for by other improvements to internal controls.

2060.07.1.5 Risk Tolerance

Internal audit should understand risks faced by the institution and confirm that the board of directors and senior management are actively involved in setting and monitoring compliance with the institution’s risk tolerance limits. Internal audit should evaluate the reasonableness of established limits and perform sufficient testing to ensure that management is operating within these limits and other restrictions.

2060.07.1.6 Governance and Strategic Objectives

Internal audit should evaluate governance at all management levels within the institution, including at the senior management level, and within all significant business lines. Internal audit should also evaluate the adequacy and effectiveness of controls to respond to risks within the organization’s governance, operations, and information systems in achieving the organization’s strategic objectives. Any concerns should be communicated by internal audit to the board of directors and senior management.

2060.07.2 Internal Audit Function (Part I of the 2003 Policy Statement)

The primary objectives of the internal audit function are to examine, evaluate, and perform an independent assessment of the institution’s internal control system, and report findings back to senior management and the institution’s audit committee. An effective internal audit function within a financial institution is a vital means for an institution’s board of directors to maintain the quality of the internal control environment and risk-management systems.

The guidance set forth in this section supplements the existing guidance in the 2003 Policy Statement by strongly encouraging internal auditors to adhere to professional standards, such as the IIA guidance. Furthermore, this section clarifies certain aspects of the IIA guidance and provides practices intended to increase the safety and soundness of institutions.

2060.07.2.1 Attributes of Internal Audit Independence. Internal audit is an independent function that supports the organization’s business objectives and evaluates the effectiveness
of risk management, control, and governance processes. The 2003 Policy Statement addressed the structure of an internal audit function, noting that it should be positioned so that an institution’s board of directors has confidence that the internal audit function can be impartial and not unduly influenced by managers of day-to-day operations. Thus, the member of management responsible for the internal audit function (hereafter referred to as the chief audit executive or CAE) should have no responsibility for operating the system of internal control and should report functionally to the audit committee. A reporting arrangement may be used in which the CAE is functionally accountable and reports directly to the audit committee on internal audit matters (that is, the audit plan, audit findings, and the CAE’s job performance and compensation) and reports administratively to another senior member of management who is not responsible for operational activities reviewed by internal audit. When there is an administrative reporting of the CAE to another member of senior management, the objectivity of internal audit is served best when the CAE reports administratively to the chief executive officer (CEO).

If the CAE reports administratively to someone other than the CEO, the audit committee should document its rationale for this reporting structure, including mitigating controls available for situations that could adversely impact the objectivity of the CAE. In such instances, the audit committee should periodically (at least annually) evaluate whether the CAE is impartial and not unduly influenced by the administrative reporting line arrangement. Further, conflicts of interest for the CAE and all other audit staff should be monitored at least annually with appropriate restrictions placed on auditing areas where conflicts may occur.

For foreign banking organizations (FBOs), the internal audit function for the U.S. operations of an FBO should have appropriate independent oversight for the total assets of U.S. operations. When there is a resident U.S. audit function, the CAE of the U.S. audit function should report directly to senior officials of the internal audit department at the head office such as the global CAE. If the FBO has separate U.S. subsidiaries, oversight may be provided by a U.S. based audit committee that meets U.S. public company standards for independence or by the foreign parent company’s internal audit function.

Professional competence and staffing. Internal audit staff should have the requisite collective skill levels to audit all areas of the institution. Therefore, auditors should have a wide range of business knowledge, demonstrated through years of audit and industry-specific experience, educational background, professional certifications, training programs, committee participation, professional associations, and job rotational assignments. Internal audit should assign staff to audit assignments based on areas of expertise and, when feasible, rotate staff within the audit function.

Internal audit management should perform knowledge-gap assessments at least annually to evaluate whether current staff members have the knowledge and skills commensurate with the institution’s strategy and operations. Management feedback surveys and internal or external quality assurance findings are useful tools to identify and assess knowledge gaps. Any identified knowledge gaps should be filled and may be addressed through targeted staff hires, training, business line rotation programs, and outsourcing arrangements. The internal audit function should have an effective staff training program to advance professional development and should have a process to evaluate and monitor the quality and appropriateness of training provided to each auditor. Internal auditors generally receive a minimum of forty hours of training in a given year.

Objectivity and ethics. Internal auditors should be objective, which means performing assignments free from bias and interference. A major characteristic of objectivity is that the CAE and all internal audit professional staff avoid any conflicts of interest. For their first year in the internal audit function, internally recruited internal auditors should not audit activities for which they were previously responsible. Moreover, compensation schemes should not provide incentives for internal auditors to act contrary to the attributes and objectives of the internal audit

---

5. More recently, this title is used to refer to the person in charge of the internal audit function. An institution may not have a person at the management level of CAE and instead may have an internal audit manager.

6. This is defined as the combined total assets of U.S. operations, net of all intercompany assets and claims on U.S.-domiciled affiliates.

7. IIA standards define conflict of interest as a situation in which an internal auditor, who is in a position of trust, has a competing professional or personal interest. Such competing interests can make it difficult for the individual to fulfill his or her duties impartially.

BHC Supervision Manual July 2013 Page 3
While an internal auditor may recommend internal control standards or review management’s procedures before implementation, objectivity requires that the internal auditor not be responsible for the design, installation, procedures development, or operations of the institution’s internal control systems.

An institution’s internal audit function should have a code of ethics that emphasizes the principles of objectivity, competence, confidentiality, and integrity, consistent with professional internal audit guidance such as the code of ethics established by the IIA.

**Internal audit charter.** Each institution should have an internal audit charter that describes the purpose, authority, and responsibility of the internal audit function. An audit charter should include the following critical components:

- The objectives and scope of the internal audit function;
- The internal audit function’s management reporting position within the organization, as well as its authority and responsibilities;
- The responsibility and accountability of the CAE; and
- The internal audit function’s responsibility to evaluate the effectiveness of the institution’s risk management, internal controls, and governance processes.

The charter should be approved by the audit committee of the institution’s board of directors. The charter should provide the internal audit function with the authorization to access the institution’s records, personnel, and physical properties relevant to the performance of internal audit procedures, including the authority to examine any activities or entities. Periodically, the CAE should evaluate whether the charter continues to be adequate, requesting the approval of the audit committee for any revisions. The charter should define the criteria for when and how the internal audit function may outsource some of its work to external experts.

---

8. IIA standards have additional examples of “conflict of interest” for consideration.

**Board of directors and senior management responsibilities.** The board of directors and senior management are responsible for ensuring that the institution has an effective system of internal controls. As indicated in the 2003 Policy Statement, this responsibility cannot be delegated to others within the institution or to external parties. Further, the board of directors and senior management are responsible for ensuring that internal controls are operating effectively.

**Audit committee responsibilities.** An institution’s audit committee is responsible for establishing an appropriate internal audit function and ensuring that it operates adequately and effectively. The audit committee should be confident that the internal audit function addresses the risks and meets the demands posed by the institution’s current and planned activities. Moreover, the audit committee is expected to retain oversight responsibility for any aspects of the internal audit function that are outsourced to a third party.

The audit committee should provide oversight to the internal audit function. Audit committee meetings should be on a frequency that facilitates this oversight and generally should be held four times a year at a minimum, with additional meetings held by audit committees of larger financial institutions. Annually, the audit committee should review and approve internal audit’s charter, budget and staffing levels, and the audit plan and overall risk-assessment methodology. The committee approves the CAE’s hiring, annual performance evaluation, and compensation.

The audit committee and its chairperson should have ongoing interaction with the CAE separate from formally scheduled meetings to remain current on any internal audit department, organizational, or industry concerns. In addition, the audit committee should have executive sessions with the CAE without members of senior management present as needed.

The audit committee should receive appropriate levels of management information to fulfill its oversight responsibilities. At a minimum, the audit committee should receive the following data with respect to internal audit:

- Audit results with a focus on areas rated less than satisfactory;
- Audit plan completion status and compliance with report issuance timeframes;
• Audit plan changes, including the rationale for significant changes;
• Audit issue information, including aging, past-due status, root-cause analysis, and thematic trends;
• Information on higher-risk issues indicating the potential impact, root cause, and remediation status;
• Results of internal and external quality assurance reviews;
• Information on significant industry and institution trends in risks and controls;
• Reporting of significant changes in audit staffing levels;
• Significant changes in internal audit processes, including a periodic review of key internal audit policies and procedures;
• Budgeted audit hours versus actual audit hours;
• Information on major projects; and
• Opinion on the adequacy of risk-management processes, including effectiveness of management’s self-assessment and remediation of identified issues (at least annually).

Role of the Chief Audit Executive. In addition to communicating and reporting to the audit committee on audit-related matters, the CAE is responsible for developing and maintaining a quality assurance and improvement program that covers all aspects of internal audit activity, and for continuously monitoring the effectiveness of the audit function. The CAE and/or senior staff should effectively manage and monitor all aspects of audit work on an ongoing basis, including any audit work that is outsourced.9

2060.07.1.2.3 The Adequacy of the Internal Audit Function’s Processes

Internal audit should have an understanding of the institution’s strategy and operating processes as well as the potential impact of current market and macroeconomic conditions on the financial institution. Internal audit’s risk-assessment methodology is an integral part of the evaluation of overall policies, procedures, and controls at the institution and the development of a plan to test those processes.

Audit methodology. Internal audit should ensure that it has a well-developed risk-assessment methodology that drives its risk-assessment process. The methodology should include an analysis of cross-institutional risk and thematic control issues and address its processes and procedures for evaluating the effectiveness of risk management, control, and governance processes. The methodology should also address the role of continuous monitoring in determining and evaluating risk, as well as internal audit’s process for incorporating other risk identification techniques that the institution’s management utilizes such as a risk and control self-assessment (RCSA). The components of an effective methodology should support the internal audit function’s assessment of the control environment, beginning with an evaluation of the audit universe.

Audit universe. Internal audit should have effective processes to identify all auditable entities within the audit universe. The number of auditable entities will depend upon whether entities are captured at individual department levels or at other aggregated organizational levels. Internal audit should use its knowledge of the institution to determine whether it has identified all auditable entities and may use the general ledger, cost centers, new product approval processes, organization charts, department listings, knowledge of the institution’s products and services, major operating and application systems, significant laws and regulations, or other data. The audit universe should be documented and reviewed periodically as significant organizational changes occur or at least during the annual audit planning process.

Internal audit risk assessment. A risk assessment should document the internal audit staff’s understanding of the institution’s significant business activities and the associated risks. These assessments typically analyze the risks inherent in a given business line or process, the mitigating control processes, and the resulting residual risk exposure to the institution.

A comprehensive risk assessment should effectively analyze the key risks (and the critical risk-management functions) within the institution and prioritize audit entities within the audit universe. The risk-assessment process should be well documented and dynamic, reflecting changes to the system of internal controls, infrastructure, work processes, and new or changed

---

9. The ongoing review of audit work should include risk assessments of audit entities and elements, scope documents, audit programs, detailed audit procedures and steps (including sampling methodologies), audit work papers, audit findings, and monitoring of the timely and effective resolution of audit issues.
business lines or laws and regulations. The risk assessments should also consider thematic control issues, risk tolerance, and governance within the institution. Risk assessments should be revised in light of changing market conditions or laws and regulations and updated during the year as changes are identified in the business activities of the institution or observed in the markets in which the institution operates, but no less than annually. When the risk assessment indicates a change in risk, the audit plan should be reviewed to determine whether the planned audit coverage should be increased or decreased to address the revised assessment of risk.

Risk assessments should be formally documented and supported with written analysis of the risks. There should be risk assessments for critical risk-management functions within the institution. Risk assessments may be quantitative or qualitative and may include factors such as the date of the last audit, prior audit results, the impact and likelihood of an event occurring, and the status of external vendor relationships. A management RCSA, if performed, may be considered by the internal audit function in developing its independent risk assessment. The internal audit risk assessment should also include a specific rationale for the overall audit-able entity risk score. The overall disposition of the risk assessment should be summarized with consideration given to key performance or risk indicators and prior audit results. A high-level summary or discussion of the risk-assessment results should be provided to the audit committee and include the most significant risks facing the institution as well as how these risks have been addressed in the internal audit plan.

Internal audit plan. Internal audit should develop and periodically revise its comprehensive audit plan and ensure that audit coverage for all identified, audible entities within the audit universe is appropriate for the size and complexity of the institution’s activities. This should be accomplished either through a multiyear plan approach, with the plan revised annually, or through an approach that utilizes a framework to evaluate risks annually focusing on the most significant risks. In the latter approach, there should be a mechanism in place to identify when a significant risk will not be audited in the specified timeframe and a requirement to notify the audit committee and seek its approval of any exception to the framework. Generally, common practice for institutions with defined audit cycles is to follow either a three- or four-year audit cycle; high-risk areas should be audited at least every twelve to eighteen months.

The internal audit plan should consider the risk assessment and internal audit’s approach to audit coverage should be appropriate based on the risk assessment. An effective plan covers individual business areas and risk disciplines as well as cross-functional and cross-institutional areas.

The audit planning process should be dynamic, allowing for change when necessary. The process should include a process for modifying the internal audit plan to incorporate significant changes that are identified either through continuous monitoring or during an audit. Any significant changes should be clearly documented and included in quarterly communications to the audit committee. Critical data to be reported to the audit committee should include deferred or cancelled audits rated high-risk and other significant additions or deletions. Significant changes to audit budgets and timeliness for the completion of audits should be reported to the audit committee with documented rationale.

**Internal audit continuous monitoring.** Internal audit is encouraged to utilize formal continuous monitoring practices as part of the function’s risk-assessment processes to support adjustments to the audit plan or universe as they occur. Continuous monitoring can be conducted by an assigned group or individual internal auditors. An effective continuous monitoring process should include written standards to ensure consistent application of processes throughout the organization.

Continuous monitoring results should be documented through a combination of metrics, management reporting, periodic audit summaries, and updated risk assessments to substantiate that the process is operating as designed. Critical issues identified through the monitoring process should be communicated to the audit committee. Computer-assisted auditing techniques are useful tools to highlight issues that warrant further consideration within a continuous monitoring process.

---

10. For example, risks include credit, market, operational, liquidity, compliance, IT, fraud, political, legal, regulatory, strategic, and reputational.

11. Regardless of the institution’s practice, particular care should be taken to ensure that higher-risk elements are reviewed with an appropriate frequency, and not obscured due to their inclusion in a lower risk-rated audit entity.
2060.07.1.2.4 Internal Audit Performance and Monitoring Processes

Performance. Detailed guidance related to the performance of an internal audit should be documented in the audit manual12 and work programs to ensure that audit execution is consistent across the audit function. Internal audit policies and procedures should be designed to ensure that audits are executed in a high-quality manner, their results are appropriately communicated, and issues are monitored and appropriately resolved. In performing internal audit work, an institution should consider the following.

- **Internal audit scope:** During the audit planning process, internal audit should analyze the auditable entity’s specific risks, mitigating controls, and level of residual risk. The information gathered during the audit planning phase should be used to determine the scope and specific audit steps that should be performed to test the adequacy of the design and operating effectiveness of control processes.

- **Internal audit work papers:** Work papers document the work performed, observations and analyses made, and support for the conclusions and audit results. The work papers should contain sufficient information regarding any scope or audit program modifications and waiver of issues not included in the final report. Work papers also should document the specific sampling methodology, including minimum sample sizes, and the rationale for such methodology. The work papers should contain information that reflects all phases of the audit process including planning, fieldwork, reporting, and issues tracking and follow-up. On an ongoing basis, a comprehensive supervisory review should be performed on all audit work, including any outsourced internal audit procedures.13

- **Audit report:** Internal audit should have effective processes to ensure that issues are communicated throughout the institution and audit issues are addressed in a timely manner. The audit report should include an executive summary that describes the auditable area, audit’s conclusions, the rationale for those conclusions, and key issues. Most audit reports also include management’s action plans to address audit findings. To ensure that identified issues are addressed in a timely manner, reports should be issued to affected business areas, senior management, and the audit committee within an appropriate timeframe after the completion of field work. Compliance with issuance timeframes should be monitored and reported periodically to the audit committee. At a minimum, internal audit should ensure that management considers the level and significance of the risk when assigning resources to address and remediate issues. Management should appropriately document the action plans either within the audit report or separately.

- **Internal audit issues tracking:** Internal audit should have effective processes in place to track and monitor open audit issues and to follow-up on such issues. The timely remediation of open audit issues is an essential component of an organization’s risk reduction efforts. Internal audit and the responsible management should discuss and agree to an appropriate resolution date, based on the level of work necessary to complete remediation processes. When an issue owner indicates that work to close an issue is completed, the internal audit function should perform validation work prior to closing the issue. The level of validation necessary may vary based on the issue’s risk level. For higher-risk issues, internal audit should perform and document substantive testing to validate that the issue has been resolved. Issues should be tested over an appropriate period of time to ensure the sustainability of the remediation.

Retrospective review processes. When an adverse event occurs at an institution (for example, fraud or a significant loss), management should conduct a post-mortem and “lessons learned” analysis. In these situations, internal audit should ensure that such a review takes place and appropriate action is taken to remediate identified issues. The internal audit function should evaluate management’s analysis of the reasons for the event and whether the adverse event was the result of a control breakdown or failure, and identify the measures that should be put in place to prevent a similar event from occurring in the future. In certain situations, the

---

12. To facilitate effective, efficient, and consistent practice within the internal audit department, an institution should develop an audit manual that includes comprehensive policies and procedures and is made available to all internal audit staff. The manual should be updated as needed.

13. An experienced audit manager should perform this review.

BHC Supervision Manual July 2013 Page 7
internal audit function should conduct its own post-mortem and a “lessons learned” analysis outlining the remediation procedures necessary to detect, correct, and/or prevent future internal control breakdowns (including improvements in internal audit processes).

Quality assurance and improvement program. A well-designed, comprehensive quality assurance program should ensure that internal audit activities conform to the IIA’s professional standards and the institution’s internal audit policies and procedures. The program should include both internal and external quality assessments.

The internal audit function should develop and document its internal assessment program to promote and assess the quality and consistency of audit work across all audit groups with respect to policies, procedures, audit performance, and work papers. The quality assurance review should be performed by someone independent of the audit work being reviewed. Conclusions reached and recommendations for appropriate improvement in internal audit process or staff training should be implemented by the CAE through the quality assurance and improvement program. Action plan progress should be monitored and subsequently closed after a period of sustainability. Each institution should conduct an internal quality assessment annually and the CAE should report the results and status of internal assessments to senior management and the audit committee at least annually.

The IIA recommends that an external quality assessment of internal audit be performed by a qualified independent party at least once every five years. The review should address compliance with the IIA’s definition of internal auditing, code of ethics, and standards, as well as with the internal audit function’s charter, policies and procedures, and any applicable legislative and regulatory requirements. The CAE should communicate the results, planned actions, and status of remediation efforts to senior management and the audit committee.

2060.07.1.3 Internal Audit Outsourcing Arrangements (Part II of the 2003 Policy Statement)

As stated in the 2003 Policy Statement, an institution’s board of directors and senior management are charged with the overall responsibility for maintaining an effective system of internal controls. Responsibility for maintaining an effective system of internal controls cannot be delegated to a third party. An institution that chooses to outsource audit work should ensure that the audit committee maintains ownership of the internal audit function. The institution’s audit committee and CAE should provide active and effective oversight of outsourced activities. Institutions should carefully consider the oversight responsibilities that are consequential to these types of arrangements in determining appropriate staffing levels.

To distinguish its duties from those of the outsourcing vendor, the institution should have a written contract, which may take the form of an engagement letter or similar services agreement. Contracts between the institution and the vendor should include a provision stating that work papers and any related non-public confidential information and personal information must be handled by the vendor in accordance with applicable laws and regulations. An institution should periodically confirm that the vendor continues to comply with the agreed-upon confidentiality requirements, especially for long-term contracts. The audit committee should approve all significant aspects of outsourcing arrangements and should receive information on audit deficiencies in a manner consistent with that provided by the in-house audit department.

2060.07.1.3.1 Vendor Competence

An institution should have appropriate policies and procedures governing the selection and oversight of internal audit vendors, including whether to continue with an existing outsourced arrangement. The audit committee and the CAE are responsible for the selection and retention of internal audit vendors and should be aware of factors that may impact vendors’ competence and ability to deliver high-quality audit services.

2060.07.1.3.2 Contingency Planning

An institution’s contingency plan should take into consideration the extent to which the institution relies upon outsourcing arrangements. When an institution relies significantly on the resources of an internal audit service provider, the institution should have contingency procedures for managing temporary or permanent disruptions in the service in order to ensure that the internal audit function can meet its intended objectives.
2060.07.1.3.3 Quality of Audit Work

The quality of audit work performed by the vendor should be consistent with the institution’s standards of work expected to be performed by an in-house internal audit department. Further, information supplied by the vendor should provide the board of directors, its audit committee, and senior management with an accurate report on the control environment, including any changes necessary to enhance controls.

The following discussion supplements the discussion in Part III of the 2003 Policy Statement and addresses additional requirements regarding auditor independence for depository institutions subject to section 36 of the FDI Act (as amended in 2009).

2060.07.1.4.1 Depository Institutions Subject to the Annual Audit and Reporting Requirements of Section 36 of the FDI Act

The July 2009 amendments to section 36 of the FDI Act (applicable to insured depository institutions with total assets of $500 million or more) require an institution’s external auditor to follow the more restrictive of the independence rules issued by the AICPA, SEC, and PCAOB. In March 2003, the SEC prohibited a registered public accounting firm that is responsible for furnishing an opinion on the consolidated or separate financial statements of an audit client from providing internal audit services to that same client. Therefore, by following the more restrictive independence rules, a depository institution’s external auditor is precluded from performing internal audit services, either on a co-sourced or an outsourced basis, even if the institution is not a public company.

2060.07.1.5 Examination Guidance (Part IV of the 2003 Policy Statement)

The following discussion supplements the existing guidance in Part IV of the 2003 Policy Statement on examination guidance and discusses the overall effectiveness of an institution’s internal audit function and the examiner’s reliance on internal audit.

2060.07.1.5.1 Determining the Overall Effectiveness of Internal Audit

An effective internal audit function is a vehicle to advance an institution’s safety and soundness and compliance with consumer laws and regulations and is therefore considered as part of the supervisory review process. Federal Reserve examiners will make an overall determination as to whether the internal audit function and its processes are effective or ineffective and whether examiners can potentially rely upon internal audit’s work as part of the supervisory review process. If internal audit’s overall processes are deemed effective, examiners may be able to rely on the work performed by internal audit depending on the nature and risk of the functions subject to examination.

The supervisory assessment of internal audit and its effectiveness will consider an institution’s application of the 2003 Policy Statement and this supplemental guidance. An institution’s internal audit function generally would be considered effective if the institution’s internal audit function structure and practices are consistent with the 2003 Policy Statement and this guidance.

Conversely, an institution’s internal audit function that does not follow the enhanced practices and supplemental guidance outlined in this policy letter generally will be considered ineffective. In such a case, examiners will not rely on the institution’s internal audit function.

Examiners will inform the CAE as to whether the function is deemed to be effective or ineffective. Internal audit’s overall processes could be deemed effective even though some aspects of the internal audit function may require enhancements or improvements such as additional documentation with respect to specific audit processes (for example, risk assessments or work papers). In these situations, the required enhancements or improvements generally should not be a critical part of the overall internal audit function, or the function should be deemed to be ineffective.

2060.07.1.5.2 Relying on the Work Performed by Internal Audit

Examiners may rely on internal audit at supervised institutions if internal audit was deemed effective at the most recent examination of internal audit. In examining an institution’s internal audit function, examiners will supplement their examination procedures through continuous monitoring and an assessment of key elements of internal audit, including (1) the adequacy and independence of the audit committee; (2) the independence, professional competence, and quality of the internal audit function; (3) the quality and scope of the audit methodology, audit plan, and risk assessment; and (4) the adequacy of audit programs and work paper standards. On at least an annual basis, examiners should review these key elements to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding their adequacy.

Examiners may choose to rely on the work of internal audit when internal audit’s overall function and related processes are effective and when recent work was performed by internal audit in an area where examiners are performing examination procedures. For example, if an internal audit department performs internal audit work in an area where examiners might also review controls, examiners may evaluate whether they can rely on the work of internal audit (and either eliminate or reduce the testing scheduled as part of the regulatory examination processes). In high-risk areas, examiners will consider whether additional examination work is needed even where internal audit has been deemed effective and its work reliable.

* * * * * * * * *

(End of the January 23, 2013, Supplemental Policy Statement)
Audit
(Management Information Systems)

WHAT’S NEW IN THIS REVISED SECTION

Effective January 2016, this section has been revised to incorporate the January 15, 2016 “Interagency Advisory on External Audits of Internationally Active U.S. Financial Institutions.” The federal banking agencies issued the interagency advisory to communicate their support for the principles and expectations set forth in parts 1 and 2 of the Basel Committee on Banking Supervision’s March 2014 guidance on “External audits of banks.” “Internationally Active Banks” is defined in the advisory. Refer to subsection 2060.1.8 and SR-16-2 and its attachment.

2060.1.1 INTERNAL AND EXTERNAL AUDIT PROGRAMS AND ACTIVITIES

Audit is an independent appraisal activity that serves as a managerial control within an organization. The primary responsibility for the maintenance of sound systems of internal controls and an adequate internal audit program rests with the directorate of the bank holding company. Included among the objectives of a comprehensive audit program are the detection of irregularities; the determination of compliance with applicable laws and regulations; and the appraisal of the soundness and adequacy of accounting, operating, and administrative controls designed to ensure prompt and accurate recording of transactions and proper safeguarding of assets. At a minimum, an audit program should ensure that adequate systems of checks and balances are in effect to deter fraud and detect control deficiencies.

The size and complexity of a bank holding company operation are major determinants in the scope and extent of the audit program that is developed. In the smaller, less sophisticated organizations, such as holding company shells for small banks, it may not be feasible to employ an auditor or implement an audit program. In some cases, such as those in which banking assets represent virtually all of the parent company’s assets and a comprehensive, effective audit program is being implemented in the various subsidiaries, neither an internal nor an external audit program may be necessary at the parent company level.

The development and implementation of an internal audit program should be delegated to a qualified staff large enough to meet the functional requirements of the job under the guidance and leadership of the auditor. When evaluating the effectiveness of an internal audit program, the examiner may want to consider the size of audit staffs of banking organizations of a similar size and complexity. To ensure freedom of access to corporate records and complete independence and objectivity in administering the audit program, the auditor should report directly to the directorate or a committee thereof. Administratively, the internal auditor is usually responsible to an officer at a major policymaking level.

To supplement the internal audit activities, external accountants-auditors may be engaged to certify or audit the financial statements or specified activities of the bank holding company and its subsidiaries. Each top-tier bank holding company with total consolidated assets of $500 million or more must engage independent public accountants to perform audits and report on its annual financial statements in accordance with generally accepted accounting principles. The scope of the audit engagement must be sufficient to permit such accountant to determine and report whether the financial statements are presented fairly and in accordance with generally accepted accounting principles. Bank holding companies do not have to submit audited financial statements as part of the requirements for the FR Y-6 annual report. The Federal Reserve may request audited consolidated financial statements from any bank holding company with total consolidated assets of less than $500 million if deemed warranted for supervisory purposes.

The internal and external auditors should work together in establishing the scope and frequency of audits to be performed. In addition to performing some of the basic functions of the internal auditor, the external auditor should review the internal auditing program to assess its scope and adequacy. When a bank holding company is perhaps too small to employ an internal audit staff, but when the complexities and activities of the organization suggest the need for an audit, the holding company should consider hiring an external auditor. Independence and objectivity are mandatory in any audit program, and these are difficult to maintain if the audit function is a part-time responsibility. When external auditors are employed to perform the internal audit function, they should be
permitted to establish the scope of their audits and schedule surprise audits. They also should be given responsibility for suggesting systems and organizational duty assignments for maximum control consistent with the size of the organization.

2060.1.2 EXTERNAL AUDITORS AND THE RELEASE OF REQUIRED INFORMATION

The enactment of the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) on August 9, 1989, requires that FDIC-insured depository institutions that are being audited provide their independent auditors with information concerning their financial condition and any supervisory actions being taken against them. Specifically, section 36(h)(1) of the Federal Deposit Insurance Act (12 U.S.C. 1831m(h)(1)) (the FDI Act) requires an insured depository institution that has engaged the services of an independent auditor to perform an audit within the past two years to provide the auditor with—

1. a copy of the most recent report of condition made by the institution (pursuant to the FDI Act or any other provision of law) and a copy of the most recent report of examination received by the institution;
2. a copy of any supervisory memorandum of understanding with such institution and any written agreement between a federal or state banking agency and the depository institution that is in effect during the period covered by the audit; and
3. a report of any action initiated or taken by a federal banking agency during the period covered by the audit under subsection (a), (b), (c), (e), (g), (i), (s), or (t) of section 8 of the FDI Act or of any similar action taken by a state banking agency under state law, or any other civil money penalty assessed under any other provision of law with respect to the depository institution or any affiliated party.

External auditors who are serving as agents of a bank holding company may, with the approval of the organization, review examination or inspection reports and supervisory correspondence received and communicate with examiners. Examiners should remind external auditors of their responsibility to maintain the confidentiality of the reports and other supervisory communications reviewed as part of their engagement. See also the Board’s rules on the release of confidential supervisory information (12 C.F.R. 261, subpart C).

2060.1.3 EXTERNAL AUDITOR INQUIRIES

In some situations, examiners may not be able to fully respond to external auditors’ inquiries on certain matters relating to examinations still in progress. The examiners’ findings may be incomplete or may be under review by higher supervisory authorities within the Federal Reserve System. In addition, as a general practice, examiners will normally only discuss with external auditors issues and inspection findings that have been presented to the bank holding company’s management. These situations relate primarily to the timing of the auditors’ inquiries in relation to the stage of inspection work and, thus, should not automatically preclude an auditor from expressing an opinion on the organization’s financial statements.

2060.1.4 UNSAFE AND UNSOUND USE OF LIMITATION-OF-LIABILITY PROVISIONS IN EXTERNAL AUDIT ENGAGEMENT LETTERS

On February 9, 2006, the Federal Reserve and the other financial institution regulatory agencies (the agencies)1 issued an interagency advisory (the advisory) to address safety-and-soundness concerns that may arise when financial institutions enter into external audit contracts (typically referred to as engagement letters) that limit the auditors’ liability for audit services.2 The advisory informs financial institutions3 boards of directors, audit committees, management, and external auditors of the safety-and-soundness implications that may arise when the financial institution enters into engagement letters that contain provisions to limit the auditors’ liability.

The advisory does not apply to previously

---

1. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA).
2. The advisory is effective for audit engagement letters issued on or after February 9, 2006.
3. As used in this advisory, the term financial institutions includes bank holding companies, banks, savings associations, and savings and loan holding companies.
executed engagement letters. However, any financial institution subject to a multiyear audit engagement letter containing unsafe and unsound limitation-of-liability provisions should seek an amendment to its engagement letter to be consistent with the advisory for periods ending in 2007 or later. (See SR-06-4.)

Limits on external auditors’ liability may weaken the external auditors’ objectivity, impartiality, and performance and, thus, reduce the agencies’ ability to rely on audits. Therefore, certain limitation-of-liability provisions (described in the advisory and its appendix A; see section 2060.1.4.7) are unsafe and unsound. In addition, such provisions may not be consistent with the auditor-independence standards of the U.S. Securities and Exchange Commission (SEC), the Public Company Accounting Oversight Board (PCAOB), and the American Institute of Certified Public Accountants (AICPA).

2060.1.4.1 Scope of the Advisory on Engagement Letters

The advisory applies to engagement letters between financial institutions and external auditors with respect to financial-statement audits, audits of internal control over financial reporting, and attestations on management’s assessment of internal control over financial reporting (collectively, audit or audits).

The advisory does not apply to—

1. nonaudit services that may be performed by financial institutions’ external auditors,
2. audits of financial institutions’ 401(k) plans, pension plans, and other similar audits,
3. services performed by accountants who are not engaged to perform financial institutions’ audits (e.g., outsourced internal audits or loan reviews), and
4. other service providers (e.g., software consultants or legal advisers).

While the agencies have observed several types of limitation-of-liability provisions in external audit engagement letters, this advisory applies to any agreement that a financial institution enters into with its external auditor that limits the external auditor’s liability with respect to audits in an unsafe and unsound manner.

2060.1.4.2 External Audits and Their Engagement Letters

A properly conducted audit provides an independent and objective view of the reliability of a financial institution’s financial statements. The external auditor’s objective in an audit is to form an opinion on the financial statements taken as a whole. When planning and performing the audit, the external auditor considers the financial institution’s internal control over financial reporting. Generally, the external auditor communicates any identified deficiencies in internal control to management, which enables management to take appropriate corrective action. In addition, certain financial institutions are required to file audited financial statements and internal control audit or attestation reports with one or more of the agencies. The agencies encourage financial institutions not subject to mandatory audit requirements to voluntarily obtain audits of their financial statements. The FFIEC’s September 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations’ notes, “[a]n institution’s internal and external audit programs are critical to its safety and soundness.”

The policy also states that an effective external auditing program “can improve the safety and soundness of an institution substantially and lessen the risk the institution poses to the insurance funds administered by the FDIC.”

Typically, a written engagement letter is used to establish an understanding between the external auditor and the financial institution regarding the services to be performed in connection with the financial institution’s audit. The engagement letter commonly describes the objective of the audit, the reports to be prepared, the responsibilities of management and the external auditor, and other significant arrangements (for example, fees and billing). Boards of directors, audit committees, and management are encouraged to closely review all of the provisions in the audit engagement letter before agreeing to sign. As with all agreements that affect a financial institution’s legal rights, the financial institution’s legal counsel should carefully review audit engagement letters to help ensure that those charged with engaging the external auditor make a fully informed decision.

The advisory describes the types of objectionable limitation-of-liability provisions and provides examples. Financial institutions’ boards

5. In the majority of external audit engagement letters reviewed, the agencies did not observe provisions that limited an external auditor’s liability. However, for those reviewed external audit engagement letters that did have external audi-
of directors, audit committees, and management should also be aware that certain insurance policies (such as error and omission policies and directors’ and officers’ liability policies) might not cover losses arising from claims.

2060.1.4.3 Limitation-of-Liability Provisions

The provisions of an external audit engagement letter that the agencies deem to be unsafe and unsound can be generally categorized as follows: a provision within an agreement between a client financial institution and its external auditor that effectively—

1. indemnifies the external auditor against claims made by third parties;
2. holds harmless or releases the external auditor from liability for claims or potential claims that might be asserted by the client financial institution, other than claims for punitive damages; or
3. limits the remedies available to the client financial institution, other than punitive damages.

Collectively, these categories of provisions are referred to in this advisory as limitation-of-liability provisions.

Provisions that waive the right of financial institutions to seek punitive damages from their external auditor are not treated as unsafe and unsound under the advisory. Nevertheless, agreements by clients to indemnify their auditors against any third-party damage awards, including punitive damages, are deemed unsafe and unsound under the advisory. To enhance transparency and market discipline, public financial institutions that agree to waive claims for punitive damages against their external auditors may want to disclose annually the nature of these arrangements in their proxy statements or other public reports.

Many financial institutions are required to have their financial statements audited, while others voluntarily choose to undergo such audits. For example, federally insured banks with $500 million or more in total assets are required to have annual independent audits. Furthermore, financial institutions that are public companies must have annual independent audits. Certain savings associations (for example, those with a CAMELS rating of 3, 4, or 5) and savings and loan holding companies are also required by OTS’s regulations to have annual independent audits. The agencies rely on the results of audits as part of their assessment of a financial institution’s safety and soundness.

For audits to be effective, the external auditors must be independent in both fact and appearance, and they must perform all necessary procedures to comply with auditing and attestation standards established by either the AICPA or, if applicable, the PCAOB. When financial institutions execute agreements that limit the external auditors’ liability, the external auditors’ objectivity, impartiality, and performance may be weakened or compromised, and the usefulness of the audits for safety-and-soundness purposes may be diminished.

By their very nature, limitation-of-liability provisions can remove or greatly weaken external auditors’ objective and unbiased consideration of problems encountered in audit engagements and may diminish auditors’ adherence to the standards of objectivity and impartiality required in the performance of audits. The existence of such provisions in external audit engagement letters may lead to the use of less extensive or less thorough procedures than would otherwise be followed, thereby reducing the reliability of audits. Accordingly, financial institutions should not enter into external audit arrangements that include unsafe and unsound limitation-of-liability provisions identified in the advisory, regardless of (1) the size of the financial institution, (2) whether the financial institution is public or not, or (3) whether the external audit is required or voluntary.

2060.1.4.4 Auditor Independence

Currently, auditor-independence standard-setters include the SEC, PCAOB, and AICPA. Depending on the audit client, an external auditor is subject to the independence standards issued by one or more of these standard-setters. For all

---

6. For banks and savings associations, see section 36 of the FDI Act (12 U.S.C. 1831m) and part 363 of the FDIC’s regulations (12 C.F.R. 363).
7. Public companies are companies subject to the reporting requirements of the Securities Exchange Act of 1934.
8. See OTS regulation at 12 C.F.R. 563.4.
nonpublic financial institutions that are not required to have annual independent audits, the FDIC’s rules, pursuant to part 363 (or section 562.4 of the OTS’s regulations) require only that an external auditor meet the AICPA independence standards. The rules do not require the financial institution’s external auditor to comply with the independence standards of the SEC and the PCAOB.

In contrast, for financial institutions subject to the audit requirements in part 363 of the FDIC’s regulations (or in section 562.4 of the OTS regulations), the external auditor should be in compliance with the AICPA’s Code of Professional Conduct and meet the independence requirements and interpretations of the SEC and its staff. In this regard, in a December 13, 2004, frequently asked question (FAQ) on the application of the SEC’s auditor-independence rules, the SEC staff reiterated its long-standing position that when an accountant and his or her client enter into an agreement that seeks to provide the accountant immunity from liability for his or her own negligent acts, the accountant is not independent. The SEC’s FAQ also stated that including in engagement letters a clause that would release, indemnify, or hold the auditor harmless from any liability and costs resulting from knowing misrepresentations by management would impair the auditor’s independence. The FAQ is consistent with the SEC’s Codification of Financial Reporting Policies, section 602.02.f.i, “Indemnification by Client.” (See section 2060.1.4.8.)

On the basis of the SEC guidance and the agencies’ existing regulations, certain limits on auditors’ liability are already inappropriate in audit engagement letters entered into by—

1. public financial institutions that file reports with the SEC or with the agencies, financial institutions subject to part 363,10 and
2. certain other financial institutions that are required to have annual independent audits.

In addition, certain of these limits on auditors’ liability may violate the AICPA independence standards. Notwithstanding the potential applicability of auditor-independence standards, the limitation-of-liability provisions discussed in the advisory present safety-and-soundness concerns for all financial institution audits.

The agencies observed that a review of the engagement letters of some financial institutions revealed that they had agreed to submit disputes over external audit services to mandatory and binding alternative dispute resolution, binding arbitration, or other binding nonjudicial dispute-resolution processes (collectively, mandatory ADR) or to waive the right to a jury trial. By agreeing in advance to submit disputes to mandatory ADR, financial institutions may waive the right to full discovery, limit appellate review, or limit or waive other rights and protections available in ordinary litigation proceedings.

Mandatory ADR procedures and jury-trial waivers may be efficient and cost-effective tools for resolving disputes in some cases. Accordingly, the agencies believe that mandatory ADR or waiver of jury-trial provisions in external audit engagement letters do not present safety- and-soundness concerns, provided that the engagement letters do not also incorporate limitation-of-liability provisions. Institutions are encouraged to carefully review mandatory ADR and jury-trial provisions in engagement letters, as well as review any agreements regarding rules of procedure, and to fully comprehend the ramifications of any agreement to waive any available remedies. Financial institutions should ensure that any mandatory ADR provisions in audit engagement letters are commercially reasonable and—

1. apply equally to all parties,
2. provide a fair process (for example, neutral decision makers and appropriate hearing procedures), and
3. are not imposed in a coercive manner.

Financial institutions’ boards of directors, audit committees, and management should not enter into any agreement that incorporates limitation-of-liability provisions with respect to audits. In addition, financial institutions should document their business rationale for agreeing to any other provisions that limit their legal rights.

The inclusion of limitation-of-liability provisions in external audit engagement letters and other agreements that are inconsistent with the

---

10. See also the OTS’s regulation (12 C.F.R. 562.4).
advisory will generally be considered an unsafe and unsound practice. Examiners will consider the policies, processes, and personnel surrounding a financial institution’s external auditing program in determining whether (1) the engagement letter covering external auditing activities raises any safety-and-soundness concerns and (2) the external auditor maintains appropriate independence regarding relationships with the financial institution under relevant professional standards. The agencies may take appropriate supervisory action if unsafe and unsound limitation-of-liability provisions are included in external audit engagement letters or other agreements related to audits that are executed (accepted or agreed to by the financial institution).

2060.1.4.7 Examples of Unsafe and Unsound Limitation-of-Liability Provisions

The following information was contained in appendix A of the February 9, 2006, inter-agency advisory.

Presented below are some of the types of limitation-of-liability provisions (with an illustrative example of each type) that the agencies observed in financial institutions’ external audit engagement letters. The inclusion in external audit engagement letters or agreements related to audits of any of the illustrative provisions (which do not represent an all-inclusive list) or any other language that would produce similar effects is considered an unsafe and unsound practice.

1. “Release from Liability for Auditor Negligence” Provision

In this type of provision, the financial institution agrees not to hold the audit firm liable for any damages, except to the extent determined to have resulted from willful misconduct or fraudulent behavior by the audit firm.

Example: In no event shall [the audit firm] be liable to the financial institution, whether a claim be in tort, contract or otherwise, for any consequential, indirect, lost profit, or similar damages relating to [the audit firm’s] services provided under this engagement letter, except to the extent finally determined to have resulted from the willful misconduct or fraudulent behavior of [the audit firm] relating to such services.

2. “No Damages” Provision

In this type of provision, the financial institution agrees that in no event will the external audit firm’s liability include responsibility for any compensatory (incidental or consequential) damages claimed by the financial institution.

Example: In no event will [the audit firm’s] liability under the terms of this agreement include responsibility for any claimed incidental or consequential damages.

3. “Limitation of Period to File Claim” Provision

In this type of provision, the financial institution agrees that no claim will be asserted after a fixed period of time that is shorter than the applicable statute of limitations, effectively agreeing to limit the financial institution’s rights in filing a claim.

Example: It is agreed by the financial institution and [the audit firm] or any successors in interest that no claim arising out of services rendered pursuant to this agreement by, or on behalf of, the financial institution shall be asserted more than two years after the date of the last audit report issued by [the audit firm].

4. “Losses Occurring During Periods Audited” Provision

In this type of provision, the financial institution agrees that the external audit firm’s liability will be limited to any losses occurring during periods covered by the external audit, and will not include any losses occurring in later periods for which the external audit firm is not engaged. This provision may not only preclude the collection of consequential damages for harm in later years, but could preclude any recovery at all. It appears that no claim of liability could be brought against the external audit firm until the external audit report is actually delivered. Under such a clause, any claim for liability thereafter might be precluded because the losses did not occur during the period covered by the external audit. In other words, it might limit the external audit firm’s liability to a period before there
could be any liability. Read more broadly, the external audit firm might be liable for losses that arise in subsequent years only if the firm continues to be engaged to audit the client’s financial statements in those years.

Example: In the event the financial institution is dissatisfied with [the audit firm’s] services, it is understood that [the audit firm’s] liability, if any, arising from this engagement will be limited to any losses occurring during the periods covered by [the audit firm’s] audit, and shall not include any losses occurring in later periods for which it is not engaged as auditors.

5. “No Assignment or Transfer” Provision

In this type of provision, the financial institution agrees that it will not assign or transfer any claim against the external audit firm to another party. This provision could limit the ability of another party to pursue a claim against the external auditor in a sale or merger of the financial institution, in a sale of certain assets or a line of business of the financial institution, or in a supervisory merger or receivership of the financial institution. This provision may also prevent the financial institution from subrogating a claim against its external auditor to the financial institution’s insurer under its directors’ and officers’ liability or other insurance coverage.

Example: The financial institution agrees that it will not, directly or indirectly, agree to assign or transfer any claim against [the audit firm] arising out of this engagement to anyone.

6. “Knowing Misrepresentations by Management” Provision

In this type of provision, the financial institution releases and indemnifies the external audit firm from any claims, liabilities, and costs attributable to any knowing misrepresentation by management.

Example: Because of the importance of oral and written management representations to an effective audit, the financial institution releases and indemnifies [the audit firm] and its personnel from any and all claims, liabilities, costs, and expenses attributable to any knowing misrepresentation by management.

In this type of provision, the financial institution agrees to protect the external auditor from third-party claims arising from the external audit firm’s failure to discover negligent conduct by management. It would also reinforce the defense of contributory negligence in cases in which the financial institution brings an action against its external auditor. In either case, the contractual defense would insulate the external audit firm from claims for damages even if the reason the external auditor failed to discover the negligent conduct was a failure to conduct the external audit in accordance with generally accepted auditing standards or other applicable professional standards.

Example: The financial institution shall indemnify, hold harmless, and defend and its authorized agents, partners, and employees from and against any and all claims, damages, demands, actions, costs, and charges arising out of, or by reason of, the financial institution’s negligent acts or failure to act hereunder.

8. “Damages Not to Exceed Fees Paid” Provision

In this type of provision, the financial institution agrees to limit the external auditor’s liability to the amount of audit fees the financial institution paid the external auditor, regardless of the extent of damages. This may result in a substantial unrecoverable loss or cost to the financial institution.

Example: [The audit firm] shall not be liable for any claim for damages arising out of or in connection with any services provided herein to the financial institution in an amount greater than the amount of fees actually paid to [the audit firm] with respect to the services directly relating to and forming the basis of such claim.\(^\text{11}\)

---

\(^{11}\) The agencies also observed a similar provision that limited damages to a predetermined amount not related to fees paid.
2060.1.4.8 Frequently Asked Questions on the Application of the SEC’s Auditor-Independence Rules

The following information is contained in appendix B of the February 9, 2006, inter-agency advisory. The information is derived from the SEC’s Office of Chief Accountant’s Codification of Financial Reporting Policies.

Question

Inquiry was made as to whether an accountant who certifies financial statements included in a registration statement or annual report filed with the commission under the Securities Act or the Exchange Act would be considered independent if he had entered into an indemnity agreement with the registrant. In the particular illustration cited, the board of directors of the registrant formally approved the filing of a registration statement with the commission and agreed to indemnify and save harmless each and every accountant who certified any part of such statement “from any and all losses, claims, damages or liabilities arising out of such act or acts to which they or any of them may become subject under the Securities Act, as amended, or at ’common law,’ other than for their willful misstatements or omissions.”

Answer

When an accountant and his client, directly or through an affiliate, have entered into an agreement of indemnity which seeks to assure to the accountant immunity from liability for his own negligent acts, whether of omission or commission, the accountant is not independent. Further, including in engagement letters a clause that a registrant would release, indemnify, or hold harmless from any liability and costs resulting from knowing misrepresentations by management would also impair the firm’s independence.

Question

Has there been any change in the commission’s long-standing view (Financial Reporting Policies—Section 600—602.02.f.i., “Indemnification by Client”) that when an accountant enters into an indemnity agreement with the registrant, his or her independence would come into question?

Answer

No. When an accountant and his or her client, directly or through an affiliate, enter into an agreement of indemnity that seeks to provide the accountant immunity from liability for his or her own negligent acts, whether of omission or commission, the accountant is not independent. Further, including in engagement letters a clause that a registrant would release, indemnify, or hold harmless from any liability and costs resulting from knowing misrepresentations by management would also impair the firm’s independence.

2060.1.3 INSPECTION OBJECTIVES

1. To review the operations of the bank holding company to determine if an audit program exits.
2. To determine the independence and competence of those who administer and provide the internal and external audit function.
3. To determine the adequacy of the scope and frequency of the audit program.
4. To determine with reasonable assurance that the bank holding company has adequate internal audit and external audit functions that ensure efficient and effective operations, including the safeguarding of assets, reliable financial reporting, and compliance with applicable laws and regulations.
5. To ascertain if the bank holding company’s internal audit function monitors, reviews, and ensures the continued existence and maintenance of sound and adequate internal controls over the bank holding company’s management process—the control environment,

---

12. The subtitles in this section have been revised for this manual.
risk assessment, control activities, information and communication, and monitoring activities.

6. To review and evaluate internal audit outsourcing arrangements and the actions of the outsourcing vendor under the standards established by the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.

7. To consider the policies, processes, and personnel surrounding the bank holding company’s external auditing program and to determine the existence of any unsafe and unsound practices or conditions, including whether—
   a. any engagement letter or other agreement related to external audit activities (1) provides any assurances of indemnification to the bank’s external auditors that relieves them of liability for their own negligent acts (including any losses, claims, damages, or other liabilities) or (2) raises any other safety-and-soundness concerns; and
   b. the external auditors have not maintained appropriate independence in their relationships with the bank holding company, in accordance with relevant professional standards.

8. To determine, based on the criteria above, if the work performed by internal and external auditors is reliable.

2060.1.6 INSPECTION PROCEDURES

The primary thrust of the inspection should be directed toward the audit activities that relate to the parent company and all subsidiaries. An assessment of the audit function as it pertains to the bank (or banks) is primarily the responsibility of the regulatory agency that examines that particular bank. The examiner should review the latest bank examination reports to note comments and deficiencies cited concerning internal controls and the audit function. In addition to providing an input into the overall assessment of the audit function, review of the bank examination reports may provide a basis for determining areas of investigation during the inspection. Further, if matters cited in the latest bank examination report are deemed to be significant and indications are that corrective action has not been taken, the examiner should mention the facts to senior management of the bank holding company and note the details in the inspection report.

To judge the adequacy of the audit program, including its scope and frequency, the following procedures, with equal emphasis being placed on the parent, bank, and nonbank subsidiaries, are recommended as minimum guidelines for the inspection.

1. Review the parent company and nonbank operations and the audit comments in the bank examination reports to ascertain the adequacy of the existing audit program or the need for developing such a program, if the organization currently lacks one.

2. Review the scope of the audit function to ensure that procedures are in place to cover adequately those areas that may be susceptible to exposure. When reviewing the audit scope, determine whether the auditor was able to perform all the procedures necessary to complete the audit. If not—
   a. establish whether the scope limitations were imposed by the directorship or management and
   b. determine whether the auditor established and documented the reasons why the scope limitations were imposed.

   (1) Was the auditor able to quantify the effects of the scope limitation on the financial statements and the audit results, and, if not pervasive, was a qualified opinion or disclaimer of opinion issued?

   (2) Did the auditor evaluate all possible effects on his ability to express an opinion on the financial statements?

   (3) Were there any external circumstances that imposed limitations on the audit’s scope?

   (4) Were alternative procedures used to accomplish the same audit objectives? If so, did the use of the alternative procedures justify issuance of an unqualified opinion?

3. Review the audit schedule to determine that the audits are satisfactorily spaced and that all functions are audited with adequate frequency.

4. Review audit workpapers and reports on a test-check basis for adequacy of content, satisfactory maintenance, and conformance to audit guidelines outlined by the board of directors.

5. Determine the qualifications and background of the auditor and others participating in the audit function.

6. To establish that the auditor has a direct communication line to the board of directors and freedom of access to all records for
audit purposes, review audit reports and minutes of meetings held by directors or a committee thereof.

7. Determine the entity responsible for maintaining the audit function. If a bank provides audit services to affiliates, indicate the manner in which the bank is reimbursed for the cost of such services.

8. Determine whether audit reports are submitted on a timely basis to—
   a. the directors and senior management and
   b. management in the area being audited.

9. Review responses to exceptions and recommendations noted in audit reports.

10. Check on the relationship between the internal and any external auditors to determine whether their activities are coordinated in a manner that effects comprehensive coverage of the organization and at the same time avoids duplication of effort.

11. Review the letter addressed to management by the external auditor and determine that steps have been taken to correct any deficiencies noted. If no deficiencies were noted in the letter, inquire as to whether such comments were communicated to management by any other means.

12. Ascertaining that the audit program is annually reviewed and approved by the directors.

13. If the BHC has engaged any external audit firms to conduct audits of its financial statements (including their certification), audits of internal control over financial reporting, attestations on management’s assessment of internal control, appraisals of the BHC’s audit function, or any internal audit or audit function or operational review, the examiner should:
   a. Review the engagement letters (including past or pending engagement letters) and any agreements between the board of directors (and the audit committee) and the external auditor, noting any qualifications that are contained therein.
   b. Review any correspondence exchanged between the BHC and the external auditor, including any letters requesting opinions from external auditors. Determine if BHC management influenced any of the opinions.
   c. Ascertain if any of the engagement letters restricted the scope of the audit in any way, including whether the letters limited the degree of reliance to be placed on the work of the internal audit staff.

14. Determine if the audit engagement letters or other agreements include possible unsafe and unsound provisions or practices that—
   a. indemnify the external auditor against all claims made by third parties;
   b. hold harmless, release, or indemnify the external auditor from liability for claims or potential claims that the BHC may assert, thus providing relief from liability for the auditors’ own negligent acts, including any losses, claims, damages, or other liabilities, (other than claims for punitive damages); or
   c. limit the remedies available to the BHC (other than punitive damages).

15. Find out whether the BHC’s board of directors, audit committee, and senior management closely review all of the provisions of audit engagement letters or other agreements for providing external auditing services for the bank before agreeing to sign, thus indicating the BHC’s approval and financial commitment.

16. Verify that the BHC has documented its business rationale for any engagement letter or other agreement provisions with external audit firms that limit or impair the BHC’s legal rights.

17. If new external auditors have been engaged, ascertain the reasons for such change.

18. Determine if the parent company or non-bank subsidiaries have reported any defalcations. If so, determine if adequate controls have been initiated to lessen any further risk and exposure.

19. Determine if the BHC’s external auditors received copies of the subsidiary FDIC-insured institution’s examination and other designated supervisory reports and correspondence required by section 36(b)(1) of the FDI Act.

20. Determine the degree of independence of the external audit firm by reviewing any financial ties between the BHC, audit firm, and any of its partners or employees. Also review any other relationships or potential conflicts of interest that may exist.\(^\text{13}\)

13. The Securities and Exchange Commission (SEC) has also released guidance relating to the independence of auditors for public institutions. According to SEC Rule 101, the independence of an auditor would be impaired if there are financial, employment, or business relationships between auditors and audit clients, or if there are relationships between auditors and audit clients in which the auditors provide certain nonaudit services to their audit clients. Much of the language found in the SEC’s independence rules is incorporated in the...
The independence of the internal auditor should be evaluated by ascertaining whether the following conditions exist: (1) reports are distributed directly to the board or a committee thereof or, less desirably, to an officer not connected with the area being reviewed; (2) there are no relationships within the organization that are incompatible with the internal audit function; and (3) severe restrictions are not placed on the program or its scheduling by management. In order to maintain the degree of objectivity essential to the audit function, the examiner should establish that the internal auditor does not install procedures, originate and approve entries, or otherwise engage in any activity that would be subject to audit review and appraisal.

The examiner should consider meeting with the audit committee and the auditor and, subsequently, with senior bank holding company management to communicate conclusions concerning the adequacy of the scope and frequency of the audit program. During the discussions, the examiner should concentrate on detailing criticisms or deficiencies noted. The auditor and senior bank holding company management should be made fully cognizant of the examiner’s analyses and the comments concerning the audit function that will appear on the relevant pages in the inspection report.

2060.1.7 (reserved for future use)

2060.1.8 OVERVIEW: INTERAGENCY ADVISORY ON EXTERNAL AUDITS OF INTERNATIONALLY ACTIVE U.S. FINANCIAL INSTITUTIONS

The federal banking agencies (the agencies) issued this interagency advisory to communicate the agencies’ support for the principles and expectations set forth in parts 1 and 2, respectively, of the Basel Committee on Banking Supervision’s (the BCBS or the Committee) March 2014 guidance on “External audits of banks” (hereafter, referred to as “the BCBS external audit guidance”).

In supporting these principles and expectations, the agencies acknowledge that the existing standards and practices in the United States are broadly consistent with the BCBS external audit guidance. However, because of the legal and regulatory framework in the United States, certain differences exist between the standards and practices followed in the United States and the principles and expectations in the BCBS external audit guidance. These differences are addressed in this advisory, which also describes the agencies’ supervisory expectations for U.S. financial institutions within the scope of this advisory for incorporating the principles and expectations in the BCBS external audit guidance into their practices. This advisory also outlines examiner responsibilities related to these supervisory expectations.

The BCBS external audit guidance is intended for “internationally active banks” and is relevant for the management, audit committees, external auditors, and prudential supervisors of such financial institutions. The agencies define “internationally active banks” in the advisory. (Refer to SR-16-2 and its attachment.)

2060.1.8.1 Appendix A—Interagency Advisory on External Audits of Internationally Active U.S. Financial Institutions

Scope

The BCBS external audit guidance is intended for “internationally active banks” and is relevant for the management, audit committees, external auditors, and prudential supervisors of such financial institutions. For purposes of this advisory, the agencies are defining “internationally active banks” as:

- Insured depository institutions that meet either of the following two criteria: (1) consolidated total assets of $250 billion or more; or (2) consolidated total on-balance sheet foreign exposure of $10 billion or more (referred to as “core banks”); and
- U.S. depository institution holding companies that meet any of the following three criteria: (1) consolidated total assets (excluding assets held by an insurance underwriting subsidiary) of $250 billion or more; (2) consolidated total on-balance sheet foreign exposure of $10 billion or more; or (3) have a subsidiary depository institution that is a core bank.

Interagency Policy Statement on the Internal Audit Function and Its Outsourcing. (See section 2060.05.)

15. See www.bis.org/publ/bcbs280.pdf.
In the United States, core banks are subject to 12 CFR 363, the Federal Deposit Insurance Corporation’s (FDIC) regulation on Annual Independent Audits and Reporting Requirements. Core banks typically comply with 12 CFR 363 requirements at a holding company level. In addition, these holding companies generally are public companies that are required to file annual, quarterly, and other periodic reports with the U.S. Securities and Exchange Commission (SEC). The Public Company Accounting Oversight Board (PCAOB) regulates the external auditors of these public companies.

Background

In March 2014, the Committee published the BCBS external audit guidance to improve the external audit quality of banks and enhance the effectiveness of prudential supervision, which contributes to financial stability. The BCBS external audit guidance elaborates on Core Principle 27, Financial Reporting and External Audit, of the Committee’s Core Principles for Effective Banking Supervision by providing guidance related to bank audit committees’ responsibilities in overseeing the external audit function. This guidance also discusses prudential supervisors’ relationships with external auditors of banks and audit oversight bodies. Additionally, the BCBS external audit guidance includes information relevant to external audits of financial statements that the Committee believes will enhance the quality of these external audits.

The BCBS external audit guidance has two parts:

- Part 1 provides guidance (principles) on the roles and responsibilities of audit committees relevant to external audits and the engagement of bank supervisors with external auditors and external auditors’ regulators.
- Part 2 of the document (expectations) emphasizes the proper application of existing internationally accepted auditing standards. The BCBS external audit guidance also provides recommendations for procedures that external auditors could perform in the execution of bank audits to enhance audit quality.

**Supervisory Expectations Regarding the Differences Between U.S. Standards and Practices and the BCBS External Audit Guidance**

The BCBS external audit guidance builds upon internationally accepted auditing standards and sets expectations for institutions and their external auditors. In the United States, financial institutions within the scope of this advisory are directly or indirectly subject to the audit requirements of 12 CFR 363 and supervisory guidance related to audits of financial institutions. In order for a core bank to comply with the audited financial statements requirement of 12 CFR 363 at a public holding company level, the audit must be performed in accordance with PCAOB standards. The 12 CFR 363 audit requirements, supervisory guidance, and PCAOB standards, collectively, are generally consistent with the BCBS external audit guidance, except for the differences noted below. This advisory discusses the agencies’ supervisory expectations regarding these differences with reference to the corresponding principles from part 1 and expectations from part 2 of the BCBS external audit guidance.

**Part 1, Principle 2: The audit committee should monitor and assess the independence of the external auditor.**

Paragraph 49 of the BCBS external audit guidance indicates that an institution’s audit committee should have a policy in place that stipulates the criteria for “tendering,” i.e., putting its external audit contract out for bid. This paragraph further states that the policy also should call for

---

16. 12 CFR 363 applies to any insured depository institution with respect to any fiscal year in which its consolidated total assets as of the beginning of such fiscal year are $500 million or more.

17. The Committee’s Core Principles are available at www.bis.org/publ/bcbs230.pdf. In particular, Core Principle 27 states, “The supervisor determines that banks and banking groups maintain adequate and reliable records, prepare financial statements in accordance with accounting policies and practices that are widely accepted internationally and annually publish information that fairly reflects their financial condition and performance and bears an independent external auditor’s opinion. The supervisor also determines that banks and parent companies of banking groups have adequate governance and oversight of the external audit function.”

18. The BCBS external audit guidance acknowledges that the Committee does not have the authority to set professional standards for external auditors.

19. 12 CFR 363.3(f) requires external auditors to comply with the independence standards and interpretations of the American Institute of Certified Public Accountants, the SEC, and the PCAOB.

20. For example, Interagency Policy Statement on Coordination and Communication Between External Auditors and Examiners (July 23, 1992).
the audit committee to periodically consider whether to put the external audit contract out for bid. Consistent with 12 CFR 363, the banking agencies encourage audit committees to establish policies and procedures addressing the retention and remuneration of the external auditor (independent public accountant).21 In addition, the external auditors of insured depository institutions subject to 12 CFR 363 must comply with the SEC’s rules regarding audit partner rotation. Audit committees are encouraged to consider whether their policies should explicitly address the criteria for tendering the audit contract and whether the contract should periodically be put out for bid.

Part 1, Principle 6: The supervisor and the external auditor should have an effective relationship that includes appropriate communication channels for the exchange of information relevant to carrying out their respective statutory responsibilities.

and

Part 1, Principle 7: The supervisor should require the external auditor to report to it directly on matters arising from an audit that are likely to be of material significance to the functions of the supervisor.

Paragraphs 95 and 96 of the BCBS external audit guidance indicate that the auditor may share information about the external audit of an institution that may be of interest to the depository institution’s supervisor (e.g., significant risks of material misstatements, significant or unusual transactions, evidence of management bias, significant deficiencies or material weaknesses in internal control over financial reporting, and actual or suspected breaches of regulations or laws22), either (1) directly with the supervisor when a safe harbor exists or (2) indirectly through the institution to the supervisor when a legal safe harbor does not exist. Paragraph 99 of the BCBS external audit guidance provides that the external auditor should communicate matters arising from the audit that may be of material significance to the supervisor when required by the legal or regulatory framework or by a formal agreement or protocol. According to the BCBS external audit guidance, “[a] matter or group of matters is normally of material significance ... when, due either to its nature or its potential financial impact, it is likely of itself to require investigation by the regulator.”23

There is no generally applicable legal or regulatory requirement in the United States for external auditors of banks and holding companies to report directly to the institution’s primary federal (and, if applicable, state) supervisor matters arising from the audit that may be of material significance, nor is there a legal safe harbor to do so. Insured depository institutions subject to 12 CFR 363 are required to file with appropriate federal and state supervisors copies of reports and other written communications issued by the external auditor to the institution in connection with the external audit services provided to the institution. Consistent with interagency policy statements24 and practices, the agencies continue to encourage open and candid communication between an institution’s external auditor and the institution’s supervisors.

Part 2, Expectation 5: The external auditor of a bank should identify and assess the risks of material misstatement in the bank’s financial statements, taking into consideration the complexities of the bank’s activities and the effectiveness of its internal control environment.

and

Part 2, Expectation 6: The external auditor of a bank should respond appropriately to the significant risks of material misstatement in the bank’s financial statements.

Paragraphs 157 and 168 of the BCBS external audit guidance set forth the Committee’s expectations for external auditors to (1) consider regulatory ratios in the determination of materiality for the audit, and (2) evaluate any identified audit differences, errors, and adjustments and their effect on regulatory capital or regulatory capital ratios. PCAOB standards25 and SEC Staff Accounting Bulletin Topic 1.M, Material-

21. 12 CFR 363.5(a) states, “The duties of the audit committee shall include the appointment, compensation, and oversight of the independent public accountant who performs services required under this part, and reviewing with management the independent public accountant the basis for the reports issued under this part.”

22. See also paragraphs 90-94 of the BCBS external audit guidance.

23. See footnote 9 in the BCBS external audit guidance.

24. See footnote 6 of this advisory.

25. See PCAOB Auditing Standard No. 11, Consideration of Materiality in Planning and Performing an Audit, paragraph 6, and PCAOB Auditing Standard No. 14, Evaluating Audit Results, appendix B, paragraph B2.
ity, indicate external auditors should consider qualitative factors (which include regulatory capital, ratios, and disclosures) in determining materiality and when evaluating the effect of audit differences, errors, and adjustments. Therefore, the agencies expect institutions’ audit committees will ensure that their external auditors consider regulatory capital ratios in planning and performing the audit. In this regard, audit committees are encouraged to inquire as to how the external auditors factored these ratios into their materiality assessments.

Additionally, paragraph 166 of the BCBS external audit guidance recommends that the external auditor provide written feedback about the audit engagement team’s relations with the institution’s internal audit function, including its observations on the adequacy of the work of internal audit, to those charged with governance of the bank. PCAOB Auditing Standard No. 16, Communications with Audit Committees, requires the external auditor, as part of communicating the overall audit strategy, to explain the extent to which the auditor plans to use the work of internal audit in an audit of the financial statements or an audit of internal control over financial reporting. However, PCAOB standards do not require the external auditor to provide written feedback about the audit engagement team’s relations with the institution’s internal audit function, including its observations on the adequacy of the work of internal audit. The agencies encourage audit committees to consider requesting their external auditor to provide written feedback about the audit engagement team’s relations with internal audit, including its observations on the adequacy of the work of internal audit, as it relates to the audit of the financial statements or the audit of internal control over financial reporting.

Furthermore, consistent with the March 2003 Interagency Policy Statement on the Internal Audit Function and Its Outsourcing, an institution’s audit committee should consider whether the institution’s internal audit activities are conducted in accordance with professional standards, such as the Institute of Internal Auditors’ (IIA) International Professional Practices Framework (previously known as the Standards for the Professional Practice of Internal Auditing). Audit committees may look to the IIA’s Framework for guidance for both internal and external assessments of the internal audit function.

Examiner Responsibilities

Examiners should evaluate any actions taken by institutions within the scope of this advisory and their audit committees to ensure such actions are consistent with the objectives of this advisory and the BCBS external audit guidance. Where there are differences between the BCBS external audit guidance and U.S. standards, examiners should encourage institutions’ audit committees to follow the practices identified in this advisory.

Conclusion

External auditors play an important role in contributing to financial stability when they deliver quality audits, which foster market confidence in institutions’ financial statements. Quality audits are also a valuable complement to the supervisory process. The agencies support the principles and expectations set forth in the BCBS external audit guidance because enhanced audit quality is an important factor in ensuring the safety and soundness of U.S. institutions. Institutions and their external auditors are expected to comply with existing laws, regulations, and professional standards, as applicable; including those referenced in this advisory.
An assessment of management’s strategic plans and its success in meeting previously established budgetary goals is one of the factors considered in evaluating a BHC’s management, operations, financial condition, and prospects. Through review of the budget figures, insight can be gained concerning an organization’s future plans and other matters such as capital adequacy, liquidity, sources and applications of funds, level and quality of earnings, and performance of management.

The budget is a coordinated financial plan used to estimate and control all or a few of the activities of the various divisions or subsidiaries in a bank holding company. Based on an assessment of future economic developments and conditions, management formulates a plan of action and indicates anticipated changes in the balance sheet accounts and profitability (predicated on implementation of the plan). The budget is a significant management tool in that it projects expected results and serves as an important check on management decisions and performance by providing a basis for comparison and corrective action on a timely basis. The comparison of actual performance to budget allows management to give careful attention to various possible courses of action and to choose the course which should result in the greatest benefit. Budgeting is also useful in measuring the performance of individuals and the departments they manage. Further, the comparison of budget totals to actual changes in activities such as loans, investments, and deposits assists in decision making and can promote coordination and cooperation among affiliates. The variance indicated by the comparison process may be construed as a measure of management’s performance and planning record and its relationship to the organization’s goals and objectives. It should be noted that some significant variances may be caused by factors beyond management’s control or factors that could not reasonably be anticipated.

1. The strategic planning process focuses on intermediate and long-term strategic goals and is the vehicle used to determine the overall direction and focus of the organization. The budgeting process refers to the tactical decisions required to meet goals and objectives. The budget is a subset of the strategic plan. While smaller bank holding company organizations may not always have formal written budgets, all organizations should have a strategic planning process, which determines overall corporate direction, general resource allocation, and balance-sheet relationships with respect to capital needs, growth, asset mix, and risk.

While various individuals may be responsible for input to the budget process, the chief executive officer typically has the ultimate responsibility for preparation and implementation of the formal budget. The time period covered by a budget typically encompasses one year, although it often covers longer periods in the larger, more sophisticated bank holding companies. The longer the budget period, the greater are the prospects for increased variances from original budget figures. In some cases in which four- or five-year projections are made, bank holding companies may formulate several forecasts based on different sets of assumptions. In such instances, the examiner should work with the “most likely” situation that may evolve based on economic trends, history, and experience of the organization, but should also give serious consideration to the “worst-case” projections.

Many bank holding companies, particularly the smaller organizations, may not have formal written budgets or plans. In small shell companies, while it is not essential to have a formal budget, budgeting procedures should be encouraged where appropriate. Budgeting at the parent level could be appropriately limited to debt servicing and dividend considerations.

2060.2.1 INSPECTION OBJECTIVES

1. To determine the extent of an organization’s financial planning and budget program.
2. To indicate to management of organizations that are without formal planning procedures the advantages of adopting a budget.
3. To understand the institution’s decision-making process as it relates to the budget.
4. To determine the causes of significant variances between the budget and actual performance.
5. To assess the reasonableness of projected figures, including controls over the data throughout the budgeting process.
6. To assess the impact of the budget on the present condition and future prospects of the bank holding company.
7. To determine whether the plan outlined in the budget is supported by the financial and managerial resources of the holding company.

BHC Supervision Manual December 1997 Page 1
2060.2.2 INSPECTION PROCEDURES

1. Familiarity with a bank holding company’s financial condition and results of operations should begin before the start of the inspection with a review of the annual report to shareholders, financial reports submitted to the Federal Reserve System, and other financial documentation contained in the files. The more significant accounts, statistical data, and pertinent ratios should be compared on a period-to-period basis to highlight significant changes and discern trends.

2. The examiner also should become familiar with current and projected economic conditions, both nationally and locally, including general industry conditions.

3. Based on a review of the aforementioned data, the examiner should be in a position to substantiate the reasonableness of budgeted figures without a systematic examination of all of the transactions affecting the figures presented. Further, such an analysis provides a better understanding of the operation and highlights matters of interest and potential problem areas to be investigated during the inspection.

4. Throughout the review process, the examiner must maintain a sense of perspective to avoid spending excessive time on relatively immaterial amounts.

5. The examiner should meet with the officer responsible for the preparation of the budget to determine the scope of the organization’s financial plans. The extent of senior management’s and the board of directors’ involvement in the strategic planning and budgeting process should also be ascertained in this preliminary meeting.

6. Workpapers which document or illustrate the rationale for the budget data should be reviewed and discussed with budget personnel, including the existence and extent of internal controls over the data.

7. The examiner should evaluate plans, projections, and forecasts in light of market-area characteristics and the present condition and history of the organization.

8. The examiner should determine whether the accounting principles of major importance have been applied consistently and, if not, the impact of the alternative accounting treatment on the budget totals.

9. The sources of input for the budget should be reviewed and the frequency and procedures for effecting revision should be ascertained.

10. When there are significant budget variances, the examiner should seek documented explanations. Review any such documentation to determine if management policy or factors beyond management control were responsible for the variances.

11. A final summary discussion should be held with management to discuss goals which the examiner believes may be unattainable and to communicate conclusions concerning the budget. Due consideration should be given to management’s views, whether or not in conformance with the examiner’s conclusions. If management indicates future changes which could have a significant impact on the organization, the matter should be noted in the inspection report. Further, management’s assessment of the effect of contemplated action on the operations and financial condition of the bank holding company should be noted.

12. For those bank holding companies that do not have formal written plans, the examiner should obtain from senior management information on their plans for matters such as growth and expansion, capital injections, debt retirement, and changes in sources of funding. Except for small, shell companies, the examiner should recommend adoption of a budget program and emphasize the need for strategic planning by indicating how management methods may be improved as a result of a logically conceived and properly operated budget. Budgets and planning are especially important in cases in which a bank holding company is losing its share of the market or in which inefficiencies are depressing profitability.
Adequate and accurate records and financial statements are an integral part of a sound bank holding company operation. Records should be maintained to allow preparation of financial statements in accordance with generally accepted accounting principles and to ensure proper accountability for all assets, liabilities, income, and expenses. Generally, an independently certified statement inspires greater confidence than a statement prepared internally. Moreover, an unqualified, independently certified statement may act as a check on management recordkeeping policies and procedures, and provide more assurance that transactions are being properly recorded and that books accurately reflect overall financial condition.

Management may exercise reasonable discretion in selecting and adopting the type of books and records it uses and in formulating accounting systems and bookkeeping procedures. From the examiner’s viewpoint, the test of a bank holding company’s records is one of adequacy, consistency, and accuracy. The financial statements of every bank holding company must accurately reflect financial condition and operating results. This principle is applicable whether a bank holding company is small and has a relatively simple bookkeeping system or whether it is a larger institution with a fully automated system. A recordkeeping system that is capable of generating a wide variety of pertinent internal data and other information facilitates problem solving and decision making and, thus, contributes to the efficiency of a bank holding company’s operations. Further, such a system serves as a convenient tool to provide directors, stockholders, and other interested parties with information on conditions in a bank holding company.

2060.3.1 INSPECTION OBJECTIVES

1. To determine whether financial statements are prepared in accordance with generally accepted accounting principles and are sufficiently detailed to accurately portray the company’s financial condition.

2. To determine that sufficient records are maintained to provide detail on material balance-sheet items, income-statement items, and various contingent liabilities and off-balance-sheet risks that permit the preparation of appropriate financial information.

3. To recommend corrective action when policies and procedures employed have resulted in inadequate or inaccurate records and financial statements.

2060.3.2 INSPECTION PROCEDURES

1. The examiner should review the sections relating to audit and records in the prior inspection report and the latest examination reports of the subsidiary banks to note any comments or deficiencies cited concerning records, including any MIS deficiencies. In addition to providing an input into the overall assessment of the quality of records, the review may provide a basis for determining areas of emphasis and follow-up during the inspection.

2. The examiner should discuss recommendations and criticisms contained in such reports with an appropriate officer to ascertain what changes, if any, have taken place.

3. The examiner should review the external auditing firm’s management letter, giving particular attention to comments concerning recordkeeping. Determine if any corrective actions were recommended by the external auditors and the extent to which the cited items have been corrected.

4. In those situations when it appears that records are deficient or financial statements are inaccurate, a thorough investigation of applicable transactions may be required. The purpose of the investigation is to obtain information needed in outlining improved controls over MIS, accounting methods, and records so that the financial data presented are in accordance with generally accepted accounting principles. Thus, information is provided which will better serve bank holding company management. The investigation should not necessarily involve a review of every transaction, but should involve a check of a sufficient number of transactions to ensure the examiner that the records, as checked, reflect an accurate financial condition. The extent of the review will depend largely on the procedures and controls over MIS and the condition and adequacy of the books and underlying records. During the investigative process, the examiner should be careful to distinguish between documented facts and statements of intent or interpretations set forth by company representatives.
The directorate and management of bank holding companies have a responsibility to contribute to the health and growth of the organization they serve. To carry out this responsibility effectively, they must be kept fully informed of conditions throughout the organization and trends within the banking industry. Reporting is the process of developing and communicating information internally to directors and management and externally to shareholders and regulatory authorities. Management and the board of directors must recognize that as a company develops and grows, its environment, strategic goals, and information needs change. The guidelines and requirements for reports flowing to management and the board of directors should be established and allow for change, recognizing the fact that informational needs can vary, including those at different levels of the organization.

Informational needs will also be dictated by the particular type of management structure in place—centralized, decentralized, legal entity, or business line. The ultimate decision-making responsibility rests with the corporation’s board of directors, and the responsibility for implementing their decisions rests with designated board committees, executive management, or other designated management committees or individuals. As such, examiners should make an assessment of the qualifications of the persons on the board of directors, executive management staff, and the board and executive management committees to ensure that they have the necessary knowledge, experience, and expertise to understand the information presented and to act on it constructively. The assessment should include a review of reporting lines to identify information flows and the various decision-making levels involved or needed.

All reports flowing to executive management, board committees, and the board of directors should be analyzed for clarity, consistency, timeliness, quality, and coverage of crucial areas of the organization. A review of board and committee minutes should reveal if participants had any questions or whether there were any uncertainties as to the meaning of the data presented.

Each bank holding company prepares various reports for submission to its management and directors; an effective internal reporting system facilitates their ability to analyze a situation and to make informed decisions. Although such reports may vary in content from company to company, emphasis is generally placed on the financial data generated. The important consideration is whether each company is providing sufficient data to keep the interested parties informed of the financial condition and performance of all the divisions or entities. The frequency of the reporting and the detail of information provided can be categorized as being on a need-to-know basis. The form of reports ranges from consultations and meetings to submission of printed material for study and review. The scope and size of the operations will have an effect on the frequency and detail of the information submitted. In the larger, more sophisticated companies, frequent meetings and consultations are held to discuss the performance of various entities, the impact of performance on the organization’s goals and objectives, and policies and strategies to be followed. Written reports outlining important matters and summarizing various financial data are typically reviewed and discussed regularly.

The number and variety of reports depends on the size and sophistication of the bank holding company operation. For smaller bank holding companies, the extent of their reports may be limited to annual statements, as more frequent periodic reports may not be necessary under normal conditions. The larger holding companies normally prepare monthly comparative balance sheets and income statements covering similar periods for two consecutive years. Thus, any significant deviation from the prior year’s data can be readily detected. Generally, reports detailing the extent of delinquent and nonaccrual loans are prepared monthly. Facts and figures pertaining to the adequacy of the loan-loss provision are presented periodically. Additional reports containing information on budgets, cash flow, liquidity, and capital adequacy are prepared to assist management in assessing the organization’s overall financial condition and performance. Summaries of internal audit reports and reports of examinations of subsidiary banks are brought to management’s attention. Data relative to other bank holding companies or banks in the same peer groups are reviewed and assembled, when available, so that comparisons with similarly sized organizations are possible. All of the aforementioned information may be prepared for directors, although not necessarily in as much detail as that submitted to management. On occasion, key management personnel of the holding company attend directors’ meetings to expand on the topics being discussed.
Reports to shareholders usually consist of quarterly and annual reports which detail the company’s financial condition and results of operations. Additional information may include the chief executive officer’s overall assessment of the company, future plans, and other financial and analytical data. The financial information is used for public disclosure and enables investors, depositors, and creditors to make informed judgments concerning the financial condition of the bank holding company. Bank holding companies whose securities have been registered pursuant to the Securities and Exchange Act of 1934 are required to prepare various reports containing specific financial information.

2060.4.1 INSPECTION OBJECTIVES

1. To review the organizational structure to determine the various levels of decision-making and reporting lines, including board and executive management committees.
2. To determine whether the bank holding company has written policies and procedures, and internal controls covering the types of reports required to be submitted to management and the directors.
3. To determine that the required reports are adequate to accurately reflect the financial condition and performance within the organization’s divisions and units and whether the reporting systems and reports are adequate to monitor the risks therein.
4. To evaluate whether the reports and reporting systems are adequate to measure and reflect the company’s financial position and performance in all areas, to measure the company’s progress in meeting its financial and business goals, and to monitor inherent risks.
5. To determine that the contents of the reports are complete and submitted on a timely basis.
6. To recommend corrective action when reporting practices, policies, or procedures are deficient.
7. To evaluate management’s procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by reporting systems, and to evaluate the system’s ability to adapt to change caused by regulatory and accounting issues or other market conditions.

2060.4.2 INSPECTION PROCEDURES

1. Review the organizational structure to determine reporting lines and the various levels of decision making, risk assessment, and controls.
2. Ascertain whether any corporate policies address risk management or internal reporting requirements and determine:
   a. the types of reports required to be submitted and
   b. the adequacy of such reporting requirements in light of a company’s particular circumstances.
   
   Comment: In a holding company with a decentralized system of control over subsidiaries, the existence of written policies and procedures is important since each subsidiary operates as a relatively autonomous unit.
3. Obtain a listing of internal reports that are submitted to corporate executive management and the board of directors (including packages for the board of directors and executive committees).
4. Randomly sample, based on a material risk focus, the individual as well as the various types of management reports and determine whether they are adequately prepared in accordance with established policies and procedures and submitted to the appropriate individuals on a timely basis. Determine whether the management reports are sufficient to measure the company’s progress in achieving its financial and business goals and forecasts.
5. Identify and document management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by MIS. Also evaluate the ability of the information system to handle regulatory and accounting issues and to adapt to change.
6. At the conclusion of the review process, the examiner should discuss with management, as appropriate, topics such as—
   a. the lack of established policies and procedures and internal controls,
   b. inadequate reporting requirements, and
   c. noncompliance with reporting requirements and/or the untimely submission of reports.

## 2060.5.1 INTRODUCTION

In establishing an insurance program, a bank holding company should be aware of where it is exposed to loss, the extent to which insurance is available to cover potential losses and the cost of such insurance. These various factors should be weighed to determine how much risk the bank holding company will assume directly. In assessing the extent of risk an organization is willing to assume, it is important to analyze the impact of an uninsured loss not only on the entity where the loss occurs, but also on the affiliates and the parent. Once appropriate coverage has been acquired, procedures should be established for the periodic review of the program to assure the continuing adequacy of the coverage. Particularly for larger BHCs, these procedures should include at least an annual review of the program by the board of directors of the parent organization.

Insurance is a highly specialized field and no attempt is made here to discuss all the various types and forms of insurance coverage that are available to financial institutions. Examiners are not expected to be insurance experts; however, examiners should recognize that a financial organization’s primary defenses against loss include adequate internal controls and procedures and that insurance is intended to complement, not replace, an effective system of internal controls. Thus, an overall appraisal of the control environment becomes a significant consideration in assessing the adequacy of the insurance program. To the extent controls are lacking, the need for additional coverage increases.

## 2060.5.2 BANKER’S BLANKET BOND

The most important and comprehensive insurance coverage available is the bankers’ blanket bond which is usually extended to encompass all the entities in a bank holding company structure. Generally, the scope of the blanket bond contract is intended to cover risks of loss due to criminal acts, such as embezzlement, burglary, robbery, theft, larceny, forgery, etc., but in addition it provides indemnity for loss of property through damage, destruction, misplacement and mysterious, unexplainable disappearance. The most important item of protection under the bond, however, is the blanket fidelity coverage for officers and employees.

## 2060.5.3 TYPES OF BLANKET BONDS

While there are several similar forms of blanket bonds in use, those commonly found are the Financial Institutions Bond Standard Form No. 24, the Bankers Blanket Bond Standard Form No. 2, and Lloyd’s Banks’ and Trust Companies’ Policy HAN Form (C). Under these blanket forms, every employee is usually covered for the total amount of the bond. Typically, new employees and new offices are automatically covered and no notice is required for an increase in the number of employees or in the number of offices established, unless such increases result from a merger or consolidation with another institution. The word "blanket," however, refers to the over-all amount that applies to the several specified risks covered under the bond and is not intended to mean "all risks" coverage. A most important feature of the bankers’ blanket bond is the "discovery rider." The rider, which converts the blanket bond from a "loss sustained basis" to a "discovery basis," provides indemnity against any loss sustained by the insured entity at any time but discovered after the effective date of the bond and prior to the termination or cancellation of the bond, even though lower amounts of insurance and more restrictive coverage may have been carried when the loss was actually sustained.

## 2060.5.4 DETERMINING THE COVERAGE NEEDED

One of the most difficult insurance problems management faces is the determination of the amount of blanket bond coverage that should be maintained. An estimate of the maximum amount of money and securities that may be lost through burglary or robbery can be calculated with reasonable accuracy, but the potential loss resulting from dishonest acts of officers and employees is not easily measured. The Insurance and Protective Committee of the American Bankers Association has conducted several studies of the problems of determining adequate coverage and has concluded that total deposits represent the most appropriate item in bank financial statements upon which to base an estimate of a reasonable or suitable amount of blanket bond coverage.

---

*BHC Supervision Manual*  
December 1992  
Page 1
In a bank holding company structure, the amount of blanket bond coverage is generally determined by the deposits of the largest bank and the amount of suggested coverage in the ABA’s schedule. Such an amount is considered to be a minimum and other factors such as a rapidly expanding operation, excessive cash on hand, or inferior audit and control practices may suggest the need for larger coverage. Since coverages are generally extended to include the nonbank subsidiaries and such subsidiaries usually operate on a smaller scale than their affiliated banks, the question concerning the adequacy of the amount of the blanket bond coverage for a nonbank subsidiary is more easily addressed and is typically a function of the parent’s and the bank’s coverage.

2060.5.5 NOTIFICATION OF LOSS

When submitting a claim, most blanket bonds have provisions which require a report to be submitted within a specified period after a reportable item comes to the attention of management. Occasionally, items are not reported to the bonding company because of uncertainty as to whether the incident constitutes a reportable item. Failure to report in a timely manner could invalidate the claim and jeopardize existing coverages. Thus, it should be emphasized to management that any questionable items should be reported.

2060.5.6 DIRECTORS’ AND OFFICERS’ LIABILITY INSURANCE

Directors’ and Officers’ Liability Insurance (“DOL Insurance”) insures the Directors and Officers against personal liability resulting from claims of alleged negligence, wrongful acts, errors and omissions, etc. This insurance is not included in the blanket bond or other standard fidelity coverage.

2060.5.7 INSPECTION OBJECTIVES

1. To determine the scope and extent of insurance coverages for the various entities in the organization.

2. To determine the adequacy of insurance coverage after giving due consideration to the overall control environment and factors such as the organization’s claim experience and costs associated with various coverages.

3. To ascertain that a comprehensive review of the insurance program is conducted periodically by management and at least annually by the board of directors and entered into the minutes.

4. To determine the entity(ies) responsible for paying the premiums and the manner in which such payments are allocated among the affiliates that receive the coverage benefits.

5. To determine if procedures are in place to assure that claims are filed promptly.

2060.5.8 INSPECTION PROCEDURES

1. The prior year’s inspection report should be reviewed for comments relative to controls and insurance. The examiner should note the types and extent of coverages, comments concerning the control environment and any deficiencies related to the administration of the insurance program and the coverages in force.

2. A similar review encompassing the latest examination reports of all major affiliated banks should be conducted. The review process is intended to provide a basis for determining areas of emphasis and follow-up during the inspection. The examiner need not re-examine the insurance program or the controls in force in the individual banks.

3. The examiner should meet with the officer responsible for maintaining the insurance policies and related documentation and ascertain the location of such policies and documentation. Review any independent review of coverages and any deficiencies that may have been cited by the internal or external auditors.

4. Review the manner and frequency of presentations to the board of directors of the insurance coverage.
Nonaccrual Loans and Restructured Debt  
(Accounting, Reporting, and Disclosure Issues)  
Section 2065.1

Working with borrowers who are experiencing financial difficulties may involve formally restructuring their loans and taking other measures to conform the repayment terms to the borrowers’ ability to repay. Such actions, if done in a way that is consistent with prudent lending principles and supervisory practices, can improve the prospects for collection. Generally accepted accounting principles (GAAP) and regulatory reporting requirements provide a framework for reporting that may alleviate certain concerns that lenders may have about working constructively with borrowers who are having financial difficulties.

Interagency policy statements and guidance, issued on March 1, 1991; March 10, 1993; and June 10, 1993, clarified supervisory policies regarding nonaccrual assets, restructured loans, and collateral valuation (additional clarification guidance may be found in SR-95-38 and in the glossary of the reporting instructions for the bank call report and the FR-Y-9C, the consolidated bank holding company report). When certain criteria1 are met, (1) interest payments on nonaccrual assets can be recognized as income on a cash basis without first recovering any prior partial charge-offs; (2) nonaccrual assets can be restored to accrual status when subject to formal restructurings, according to Financial Accounting Standards Board (FASB) Statement Nos. 15 and 114, “Accounting by Debtors and Creditors for Troubled Debt Restructurings” (FAS 15) and “Accounting by Creditors for Impairment of a Loan” (FAS 114); and (3) restructurings that specify a market rate of interest would not have to be included in restructured loan amounts reported in the years after the year of the restructuring. These supervisory policies apply to federally supervised financial institutions. The board of directors and management of bank holding companies should therefore incorporate these policies into the supervision of their federally supervised financial institution subsidiaries.

2065.1.1 CASH-BASIS INCOME RECOGNITION ON NONACCRUAL ASSETS

Current regulatory reporting requirements do not preclude the cash-basis recognition of interest income on nonaccrual assets (including loans that have been partially charged off), if the remaining book balance of the loan is deemed fully collectible. Interest income recognized on a cash basis should be limited to that which would have been accrued on the recorded balance at the contractual rate. Any cash interest received over this limit should be recorded as recoveries of prior charge-offs until these charge-offs have been fully recovered.

2065.1.2 NONACCRUAL ASSETS SUBJECT TO FAS 15 AND FAS 114 RESTRUCTURINGS

A loan or other debt instrument that has been formally restructured to ensure repayment and performance need not be maintained in nonaccrual status. When the asset is returned to accrual status, payment performance that had been sustained for a reasonable time before the restructuring may be considered. For example, a loan may have been restructured, in part, to reduce the amount of the borrower’s contractual payments. It may be that the amount and frequency of payments under the restructured terms do not exceed those of the payments that the borrower had made over a sustained period, within a reasonable time before the restructuring. In this situation, if the lender is reasonably assured of repayment and performance according to the modified terms, the loan can be immediately restored to accrual status.

Clearly, a period of sustained performance, whether before or after the date of the restructuring, is very important in determining whether there is reasonable assurance of repayment and performance. In certain circumstances, other information may be sufficient to demonstrate an improvement in the borrower’s condition or in economic conditions that may affect the borrower’s ability to repay. Such information may reduce the need to rely on the borrower’s performance to date in assessing repayment prospects. For example, if the borrower has obtained substantial and reliable sales, lease, or rental contracts or if other important developments are expected to significantly increase the borrower’s cash flow and debt-service capacity and strength, then the borrower’s commitment to repay may be sufficient. A preponderance of such evidence may be sufficient to warrant

---

1. A discussion of the criteria is found within the corresponding subsections that follow.
returning a restructured loan to accrual status. The restructured terms must reasonably ensure performance and full repayment.

It is imperative that the reasons for restoring restructured debt to accrual status be documented. A restoration should be supported by a current, well-documented evaluation of the borrower’s financial condition and prospects for repayment. This documentation will be reviewed by examiners.

The formal restructuring of a loan or other debt instrument should be undertaken in ways that will improve the likelihood that the credit will be repaid in full in accordance with reasonably restructured repayment terms.2 Regulatory reporting requirements and GAAP do not require a banking organization that restructures a loan to grant excessive concessions, forgive principal, or take other steps not commensurate with the borrower’s ability to repay in order to use the reporting treatment specified in FAS 15. Furthermore, the restructured terms may include prudent contingent payment provisions that permit an institution to obtain appropriate recovery of concessions granted in the restructuring, if the borrower’s condition substantially improves.

2065.1.3 RESTRUCTURINGS RESULTING IN A MARKET INTEREST RATE

A FAS 114 restructuring that specifies an effective interest rate that is equal to or greater than the rate the lending banking organization is willing to accept at the time of the restructuring, for a new loan with comparable risk (assuming the loan is not impaired by the restructuring agreement), does not have to be reported as a troubled-debt restructuring after the year of restructuring.

2065.1.4 NONACCRUAL TREATMENT OF MULTIPLE LOANS TO ONE BORROWER

As a general principle, whether to place an asset in nonaccrual status should be determined by an assessment of the individual asset’s collectibility. One loan to a borrower being placed in nonaccrual status does not automatically have to result in all other extensions of credit to that borrower being placed in nonaccrual status. When a single borrower has multiple extensions of credit outstanding and one meets the criteria for nonaccrual status, the lender should evaluate the others to determine whether one or more of them should also be placed in nonaccrual status.

2065.1.4.1 Troubled-Debt Restructuring—Returning a Multiple-Note Structure to Accrual Status

On June 10, 1993, interagency guidance was issued to clarify a March 10, 1993, interagency policy statement on credit availability. The guidance addresses a troubled-debt restructuring (TDR) that involves multiple notes (sometimes referred to as A/B note structures). An example of a multiple-note structure is when the first, or A, note would represent the portion of the original-loan principal amount that would be expected to be fully collected along with contractual interest. The second part of the restructured loan, or B note, represents the portion of the original loan that has been charged off.

Such TDRs generally may take any of three forms: (1) In certain TDRs, the B note may be a contingent receivable that is payable only if certain conditions are met (for example, if there is sufficient cash flow from the property). (2) For other TDRs, the B note may be contingency-forgiven (note B is forgiven if note A is paid in full). (3) In other instances, an institution would have granted a concession (for example, a rate reduction) to the troubled borrower but the B note would remain a contractual obligation of the borrower. Because the B note is not reflected as an asset on the institution’s books and is unlikely to be collected, the B note is viewed as a contingent receivable for reporting purposes.

Financial institutions may return the A note to accrual status provided the following conditions are met:

1. The restructuring qualifies as a TDR as defined by FAS 15, and there is economic substance to the restructuring. (Under FAS 15, a restructuring of debt is considered a TDR if “the creditor for economic or legal reasons related to the debtor’s financial difficulties grants a concession to the debtor that it would not otherwise consider.”)

2. A restructured loan may not be restored to accrual status unless there is reasonable assurance of repayment and performance under its modified terms in accordance with a reasonable repayment schedule.
2. The portion of the original loan represented by the B note has been charged off. The charge-off must be supported by a current, well-documented evaluation of the borrower’s financial condition and prospects for repayment under the revised terms. The charge-off must be recorded before or at the time of the restructuring.

3. The institution is reasonably assured of repayment of the A note and of performance in accordance with the modified terms.

4. In general, the borrower must have demonstrated sustained repayment performance (either immediately before or after the restructuring) in accordance with the modified terms for a reasonable period before the date on which the A note is returned to accrual status. Sustained payment performance generally would be for a minimum of six months and involve payments in the form of cash or cash equivalents.

The A note would be initially disclosed as a TDR. However, if the A note yields a market rate of interest and performs in accordance with contractual terms, the interest rate on the A note at the time of the restructuring must be equal to or greater than the rate that the institution is willing to accept for a new receivable with comparable risk. (See SR-93-30.)

2065.1.4.2 Nonaccrual Loans That Have Demonstrated Sustained Contractual Performance

Certain borrowers have resumed paying the full amount of scheduled contractual interest and principal payments on loans that are past due and in nonaccrual status. Although prior arrearages may not have been eliminated by payments from the borrowers, some borrowers have demonstrated sustained performance over a time in accordance with contractual terms. The interagency guidance of June 10, 1993, announced that such loans may henceforth be returned to accrual status, even though the loans have not been brought fully current. They may be returned to accrual status if (1) there is reasonable assurance of repayment of all principal and interest amounts contractually due (including arrearages) within a reasonable period and (2) the borrower has made payments of cash or cash equivalents over a sustained period (generally a minimum of six months) in accordance with the contractual terms. When the federal financial institution regulatory reporting criteria for restoration to accrual status are met, previous charge-offs taken would not have to be fully recovered before such loans are returned to accrual status. Loans that meet this criteria should continue to be disclosed as past due as appropriate (for example, 90 days past due and still accruing) until they have been brought fully current. (See SR-93-30.)

2065.1.5 ACQUISITION OF NONACCRUAL ASSETS

Banking organizations (or the receiver of a failed institution) may sell loans or debt securities maintained in nonaccrual status. Such loans or debt securities that have been acquired from an unaffiliated third party should be reported by the purchaser in accordance with AICPA Practice Bulletin No. 6. When the criteria specified in this bulletin are met, these assets may be placed in nonaccrual status.3

2065.1.6 TREATMENT OF NONACCRUAL LOANS WITH PARTIAL CHARGE-OFFS

Whether partial charge-offs associated with a nonaccrual loan that has not been formally restructured must first be fully recovered before the loan can be restored to accrual status is an issue that has not been explicitly addressed by GAAP and bank regulatory reporting requirements. In accordance with the instructions for the bank call report and the bank holding company reports (FR-Y series), restoration to accrual status is permitted when (1) the loan has been brought fully current with respect to principal and interest and (2) it is expected that the full contractual balance of the loan (including any amounts charged off) plus interest will be fully collectible under the terms of the loan.4

4. The instructions for the call reports and FR-Y reports discuss the criteria for restoration to accrual status in the glossary entries for “nonaccrual status.” This guidance also permits restoration to accrual status for nonaccrual assets that are both well secured and in the process of collection. In addition, this guidance permits restoration to accrual status, when certain criteria are met, of formally restructured debt and acquired nonaccrual assets.
Thus, in determining whether a partially charged-off loan that has been brought fully current can be returned to accrual status, it is important to determine whether the banking organization expects to receive the full amount of principal and interest called for by the terms of the loan.

When a loan has been brought fully current with respect to contractual principal and interest, and when the borrower’s financial condition and economic conditions that could affect the borrower’s ability to repay have improved to the point that repayment of the full amount of contractual principal (including any amounts charged off) and interest is expected, the loan may be restored to accrual status even if the charge-off has not been recovered. However, this treatment would not be appropriate if the charge-off reflects continuing doubt about the collectibility of principal or interest. Because loans or other assets are required to be placed in nonaccrual status when full repayment of principal or interest is not expected, such loans could not be restored to accrual status.

It is imperative that the reasons for the restoration of a partially charged-off loan to accrual status be supported by a current, well-documented evaluation of the borrower’s financial condition and prospects for full repayment of contractual principal (including any amounts charged off) and interest. This documentation will be subject to review by examiners.

A nonaccrual loan or debt instrument may have been formally restructured in accordance with FAS 15 so that it meets the criteria for restoration to accrual status presented in section 2065.1.2 addressing restructured loans. Under GAAP, when a charge-off was taken before the date of the restructuring, it does not have to be recovered before the restructured loan can be restored to accrual status. When a charge-off occurs after the date of the restructuring, the considerations and treatments discussed earlier in this section are applicable.

In accordance with the March 10, 1993, interagency policy statement Credit Availability, loans secured by real estate should be based on the borrower’s ability to pay over time, rather than on a presumption of immediate liquidation. Interagency guidance issued on June 10, 1993, emphasizes that it is not regulatory policy to value collateral that underlies real estate loans on a liquidation basis. (See SR-93-30.)

5. A collateral-dependent real estate loan is a loan for which repayment is expected to be provided solely by the underlying collateral and there are no other available and reliable sources of repayment.

6. The fair value of the assets transferred is the amount that the debtor could reasonably expect to receive for them in a current sale between a willing buyer and a willing seller, other than in a forced or liquidation sale.
The adequacy of a banking organization’s allowance for loan and lease losses (ALLL) (including amounts based on an analysis of the commercial real estate portfolio) must be based on a careful, well-documented, and consistently applied analysis of the loan and lease portfolio. The determination of the adequacy of the ALLL should be based on management’s consideration of all current significant conditions that might affect the ability of borrowers (or guarantors, if any) to fulfill their obligations to the institution. While historical loss experience provides a reasonable starting point, historical losses or even recent trends in losses are not sufficient, without further analysis, to produce a reliable estimate of anticipated loss.

In determining the adequacy of the ALLL, management should consider factors such as changes in the nature and volume of the portfolio; the experience, ability, and depth of lending management and staff; changes in credit standards; collection policies and historical collection experience; concentrations of credit risk; trends in the volume and severity of past-due and classified loans; and trends in the volume of nonaccrual loans, specific problem loans, and commitments. In addition, this analysis should consider the quality of the organization’s systems and management in identifying, monitoring, and addressing asset-quality problems. Furthermore, management should consider external factors such as local and national economic conditions and developments, competition, and legal and regulatory requirements, as well as reasonably foreseeable events that are likely to affect the collectibility of the loan portfolio.

Management should adequately document the factors that were considered, the methodology and process that were used in determining the adequacy of the ALLL, and the range of possible credit losses estimated by this process. The complexity and scope of this analysis must be appropriate to the size and nature of the organization and provide for sufficient flexibility to accommodate changing circumstances.

Examiners will evaluate the methodology and process that management has followed in arriving at an overall estimate of the ALLL to ensure that all of the relevant factors affecting the collectibility of the portfolio have been appropriately considered. In addition, the overall estimate of the ALLL and the range of possible credit losses estimated by management will be reviewed for reasonableness in view of these factors. The examiner’s analysis will also consider the quality of the organization’s systems and management in identifying, monitoring, and addressing asset-quality problems. (See sections 2065.3, 2065.4, and 2128.08.)

The value of the collateral will be considered by examiners in reviewing and classifying a commercial real estate loan. However, for a performing commercial real estate loan, the supervisory policies of the agencies do not require automatic increases to the ALLL solely because the value of the collateral has declined to an amount that is less than the loan balance.

In assessing the ALLL, it is important to recognize that management’s process, methodology, and underlying assumptions require a substantial degree of judgment. Even when an organization maintains sound loan-administration and collection procedures and effective internal systems and controls, the estimation of losses may not be precise due to the wide range of factors that must be considered. Further, the ability to estimate losses on specific loans and categories of loans improves over time as substantive information accumulates regarding the factors affecting repayment prospects. When management has (1) maintained effective systems and controls for identifying, monitoring, and addressing asset-quality problems and (2) analyzed all significant factors affecting the collectibility of the portfolio, examiners should give considerable weight to management’s estimates in assessing the adequacy of the overall ALLL.

Examiners and bank holding company management should consider the impact of the Financial Accounting Standards Board’s (FASB) Statement No. 114, “Accounting by Creditors for Impairment of a Loan” (FAS 114) (as amended by FASB Statement No. 118, “Accounting by Creditors for Impairment of a Loan—Income Recognition and Disclosures”), on the ALLL-estimating process. FAS 114 sets forth guidance for estimating the impairment of

---

1. The estimation process described in this section permits a more accurate estimate of anticipated losses than could be achieved by assessing the loan portfolio solely on an aggregate basis. However, it is only an estimation process and does not imply that any part of the ALLL is segregated for, or allocated to, any particular asset or group of assets. The ALLL is available to absorb overall credit losses originating from the loan and lease portfolio. The balance of the ALLL is management’s estimation of potential credit losses, synonymous with its determination as to the adequacy of the overall ALLL.
a loan for general financial reporting purposes. Under FAS 114, a loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due (principal and interest) according to the contractual terms of the loan agreement.

When a creditor has determined that a loan is impaired, FAS 114 requires that an allowance be established based on the present value of the expected future cash flows of the loan discounted at the loan’s effective interest rate (that is, the contract rate, as adjusted for any net deferred loan fees or costs, premiums, or discounts) or, as a practical expedient, at the loan’s observable market price or at the fair value of the collateral if the loan is collateral dependent. Since the allowances under FAS 114 apply only to a subset of loans, FAS 114 does not address the adequacy of a creditor’s overall ALLL or how the creditor should assess the adequacy of its ALLL. Examiners should not focus unduly on the adequacy of this or any other portion of the ALLL established for a subset of loans. Bank holding companies are required to follow FAS 114 (as amended by FAS 118) when reporting in the FR Y-9C report for the holding company on a consolidated basis.

2065.2 INSPECTION PROCEDURES

1. Determine whether the banking organization has carefully documented and applied an accurate and consistent method of analysis for estimating the overall ALLL. When making such a determination, ascertain whether—
   a. management has considered all significant factors and conditions that might affect the collectibility of the loan, including the borrower’s repayment practices, the value of accessible underlying collateral, and other factors (that is, those factors listed in this section);
   b. management has documented all factors that were considered and the methodology and process that were used to evaluate the adequacy of the allowance; and
   c. the complexity and scope of the analysis are appropriate for the size and nature of the organization.

2. Evaluate the methodology and process that management has followed in arriving at an overall estimate of the ALLL.

3. Determine the reasonableness of management’s consolidated estimate of the ALLL, including the range of possible credit losses. Determine whether management has properly evaluated the overall composition of the loan portfolio at all organizational levels by—
   a. identifying potential problem loans, including loans classified by all bank regulatory agencies;
   b. determining trends with respect to loan volume (growth in particular, rapid growth), levels of delinquencies, nonaccruals, and nonperforming loans;
   c. considering the previous loss and recovery experience including the timeliness of charge-offs;
   d. evaluating the performance of concentrations of credit (related interests, geographic regions, industries, lesser-developed countries (LDCs), highly leveraged loans, and the size of credit exposures (few large loans versus numerous small loans));
   e. determining the amount of loans and problem loans (delinquent, nonaccrual, and nonperforming) by lending officer or committee; and
   f. evaluating the levels and performance of loans involving related parties.

4. For each level of the organization, determine the percentage of past-due loans to the loan portfolio and compare it with prior periods.
The examiner may find it beneficial to compute the ratio for groups of loans by type, size, or risk levels.

5. Compare the loans classified during regulatory examinations or BHC inspections with the previous examinations or inspections and also with those classified by management before the regulatory examinations or inspections. Investigate the current status of previously classified loans.

6. Compute the percentage of the ALLL to average outstanding loans and compare those results with those of the previous inspection. Investigate the reasons for variations between those periods.

7. Assess the quality of the organization’s systems and internal controls in identifying, monitoring, and addressing asset-quality problems.
Maintenance of an Appropriate Allowance for Loan and Lease Losses  
(Accounting, Reporting, and Disclosure Issues)  
Section 2065.3

WHAT’S NEW IN THIS REVISED SECTION

This section has been fully revised to set forth the 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses (ALLL), which was issued on December 13, 2006, by the federal bank and thrift regulatory agencies (the banking agencies) (See SR-06-17.) This guidance updates and replaces the 1993 policy statement. The policy was revised to ensure consistency with generally accepted accounting principles (GAAP) and recent supervisory guidance. The Federal Reserve believes the guidance is broadly applicable to bank holding companies. Accordingly, examiners should apply the policy, as appropriate, during inspections of bank holding companies and their nonbank subsidiaries.

2065.3.0 OVERVIEW OF THE ALLL POLICY STATEMENT

The 2006 policy statement discusses the nature and purpose of the allowance for loan and lease losses (ALLL); the responsibilities of boards of directors, the institution’s management, and the examiners of banking organizations regarding the ALLL; factors to be considered in the estimation of the ALLL; and the objectives and elements of an effective loan review system, including a sound credit grading system. The statement states that it is the responsibility of the board of directors and management of each institution to maintain the ALLL at an appropriate level. Each institution is responsible for developing, maintaining, and documenting a comprehensive, systematic, and consistently applied process for determining the amounts of the ALLL and the provision for loan and lease losses. To fulfill this responsibility, each institution should ensure that controls are in place to consistently determine the ALLL in accordance with GAAP, the institution’s stated policies and procedures, management’s best judgment, and relevant supervisory guidance. The policy statement also discusses the analysis of the loan and lease portfolio, factors to consider in estimating credit losses, and the characteristics of an effective loan-review system.

The policy statement continues the policy that Federal Reserve examiners will generally accept bank management’s estimates in their assessment of the appropriateness of the ALLL when management has (1) maintained effective loan review systems and controls for identifying, monitoring, and addressing asset-quality problems in a timely manner; (2) analyzed all significant environmental factors that affect the collectibility of the portfolio as of the evaluation date in a reasonable manner; (3) established an acceptable ALLL-evaluation process for both individual loans and groups loans that meets the objectives for an appropriate ALLL; and (4) incorporated reasonable and properly supported assumptions, valuations, and judgments into the evaluation process.

The policy also reiterates the points of agreement between the Securities and Exchange Commission and the banking agencies since 1999: (1) the need for management to exercise significant judgment when estimating the ALLL, (2) the concept of a range of losses, and (3) the appropriateness of a properly developed and documented ALLL. Accordingly, the policy emphasizes that an institution should provide reasonable support and documentation of its ALLL estimates, including adjustments to the allowance for qualitative or environmental factors and unallocated portions of the allowance. This emphasis on support and documentation supplements, but does not replace, the guidance in the 2001 Interagency Policy Statement on the Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions (see SR-01-17).

Additionally, institutions are reminded that the allowance is an institution-specific estimate and generally should not be based solely on a “standard percentage” of loans. While peer group or other benchmark averages are an appropriate tool to evaluate the reasonableness of the allowance, it is the institution’s responsibility to analyze the collectibility of the loan portfolio to estimate the allowance. To that end, the policy statement does not reference standardized loss estimates (that is, 15 percent for loans classified as substandard and 50 percent for loans classified as doubtful).

The policy statement also includes guidance on SFAS 114, “Accounting by Creditors for Impairment of a Loan,” which describes the evaluation and measurement of impairment for loans that are impaired on an individual basis, and SFAS 5, “Accounting for Contingencies,” which describes the same for pools of loans grouped according to risk factors. The relationship between the two standards is described as
well as the application of each standard in estimating the ALLL. Lastly, the policy reminds institutions that allowances related to off-balance-sheet financial instruments such as loan commitments or letters of credit should not be reported as part of the ALLL. Any allowance for these types of instruments is recorded as an “other liability.”

This policy statement applies to all depository institutions supervised by the banking agencies, except for U.S. branches and agencies of foreign banks. In addition, the Federal Reserve believes the guidance is broadly applicable to bank holding companies as well. Accordingly, examiners should apply the policy, as appropriate, during inspections of bank holding companies and their nonbank subsidiaries, in addition to the examination of state member banks.

Although the policy statement discusses key concepts and requirements in GAAP and existing supervisory guidance on the ALLL, the banking agencies recognized that institutions may not have had sufficient time to complete any enhancements needed to bring their ALLL processes and documentation into full compliance with the revised guidance for year-end 2006 reporting purposes. Nevertheless, such enhancements were to be completed and effective in the subsequent near term.

The text of the interagency policy statement follows. (See also sections 2065.1, 2065.2, and 2065.4.)

2065.3.1 2006 INTERAGENCY POLICY STATEMENT ON THE ALLOWANCE FOR LOAN AND LEASE LOSSES

This 2006 interagency policy statement revises and replaces the 1993 policy statement on the ALLL. It reiterates key concepts and requirements included in generally accepted accounting principles (GAAP) and existing ALLL supervisory guidance. The principal sources of guidance on accounting for impairment in a loan portfolio under GAAP are Statement of Financial Accounting Standards No. 5, “Accounting for Contingencies” (FAS 5) and Statement of Financial Accounting Standards No. 114, “Accounting by Creditors for Impairment of a Loan” (FAS 114). In addition, the Financial Accounting Standards Board Viewpoints article that is included in Emerging Issues Task Force Topic D-80 (EITF D-80), “Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio,” presents questions and answers that provide specific guidance on the interaction between these two FASB statements and may be helpful in applying them.

In July 1999, the banking agencies and the Securities and Exchange Commission (SEC) issued a Joint Interagency Letter to Financial Institutions. The letter stated that the banking agencies and the SEC agreed on the following important aspects of loan loss allowance practices:

- Arriving at an appropriate allowance involves a high degree of management judgment and results in a range of estimated losses.
- Prudent, conservative—but not excessive—loan loss allowances that fall within an acceptable range of estimated losses are appropriate. In accordance with GAAP, an institution should record its best estimate within the range of credit losses, including when management’s best estimate is at the high end of the range.
- Determining the allowance for loan losses is inevitably imprecise, and an appropriate allowance falls within a range of estimated losses.
- An “unallocated” loan loss allowance is appropriate when it reflects an estimate of probable losses, determined in accordance with GAAP, and is properly supported.
- Allowance estimates should be based on a comprehensive, well-documented, and consistently applied analysis of the loan portfolio.
- The loan loss allowance should take into consideration all available information existing as of the financial statement date, including environmental factors such as industry, geographical, economic, and political factors.

In July 2001, the banking agencies issued the Policy Statement on Allowance for Loan and
Lease Losses Methodologies and Documentation for Banks and Savings Institutions (2001 policy statement). The policy statement is designed to assist institutions in establishing a sound process for determining an appropriate ALLL and documenting that process in accordance with GAAP.3 (See section 2065.4.1.)

In March 2004, the agencies also issued the Update on Accounting for Loan and Lease Losses. This guidance provided reminders of longstanding supervisory guidance as well as a listing of the existing allowance guidance that institutions should continue to apply.

2065.3.1.1 Nature and Purpose of the ALLL

The ALLL represents one of the most significant estimates in an institution’s financial statements and regulatory reports. Because of its significance, each institution has a responsibility for developing, maintaining, and documenting a comprehensive, systematic, and consistently applied process for determining the amounts of the ALLL and the provision for loan and lease losses (PLL). To fulfill this responsibility, each institution should ensure controls are in place to consistently determine the ALLL in accordance with GAAP, the institution’s stated policies and procedures, management’s best judgment, and relevant supervisory guidance. As of the end of each quarter, or more frequently if warranted, each institution must analyze the collectibility of its loans and leases held for investment4 (hereafter referred to as loans) and maintain an ALLL at a level that is appropriate and determined in accordance with GAAP. An appropriate ALLL covers estimated credit losses on individually evaluated loans that are determined to be impaired as well as estimated credit losses inherent in the remainder of the loan and lease portfolio. The ALLL does not apply, however, to loans carried at fair value, loans held for sale,5 off-balance-sheet credit exposures6 (for example, financial instruments such as off-balance-sheet loan commitments, standby letters of credit, and guarantees), or general or unspecified business risks.

For purposes of this policy statement, the term estimated credit losses means an estimate of the current amount of loans that it is probable the institution will be unable to collect given facts and circumstances since the evaluation date. Thus, estimated credit losses represent net charge-offs that are likely to be realized for a loan or group of loans. These estimated credit losses should meet the criteria for accrual of a loss contingency (that is, through a provision to the ALLL) set forth in GAAP.7 When available information confirms that specific loans, or portions thereof, are uncollectible, these amounts should be promptly charged off against the ALLL.

For “purchased impaired loans,”8 GAAP pro-

---

3. See section 2065.4.1 for the 2001 policy statement. The SEC staff issued parallel guidance in July 2001, which is found in Staff Accounting Bulletin No. 10, “Selected Loan Loss Allowance Methodology and Documentation Issues” (SAB 102), which has been codified as Topic 6.L. in the SEC’s Codification of Staff Accounting Bulletins. Both SAB 102 and the codification are available on the SEC’s web site.

4. Consistent with the American Institute of Certified Public Accountants’ (AICPA) Statement of Position 01-6, “Accounting by Certain Entities (Including Entities With Trade Receivables) That Lend to or Finance the Activities of Others,” loans and leases held for investment are those loans and leases that the institution has the intent and ability to hold for the foreseeable future or until maturity or payoff.

5. See “Interagency Guidance on Certain Loans Held for Sale” (March 26, 2001) for the appropriate accounting and reporting treatment for certain loans that are sold directly from the loan portfolio or transferred to a held-for-sale account. Loans held for sale are reported at the lower of cost or fair value. Declines in value occurring after the transfer of a loan to the held-for-sale portfolio are accounted for as adjustments to a valuation allowance for held-for-sale loans and not as adjustments to the ALLL.

6. Credit losses on off-balance-sheet credit exposures should be estimated in accordance with FAS 5. Any allowance for credit losses on off-balance-sheet exposures should be reported on the balance sheet as an “other liability,” and not as part of the ALLL.

7. FAS 5 requires the accrual of a loss contingency when information available prior to the issuance of the financial statements indicates it is probable that an asset has been impaired at the date of the financial statements and the amount of loss can be reasonably estimated. These conditions may be considered in relation to individual loans or in relation to groups of similar types of loans. If the conditions are met, accrual should be made even though the particular loans that are uncollectible may not be identifiable. Under FAS 114, an individual loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due according to the contractual terms of the loan agreement. It is implicit in these conditions that it must be probable that one or more future events will occur confirming the fact of the loss. Thus, under GAAP, the purpose of the ALLL is not to absorb all of the risk in the loan portfolio, but to cover probable credit losses that have already been incurred.

8. A purchased impaired loan is defined as a loan that an institution has purchased, including a loan acquired in a purchase business combination, that has evidence of deterioration of credit quality since its origination and for which it is probable, at the purchase date, that the institution will be unable to collect all contractually required payments. When reviewing the appropriateness of the reported ALLL of an institution with purchased impaired loans, examiners should consider the credit losses factored into the initial investment.
hbits “carrying over” or creating an ALLL in the initial recording of these loans. However, if, upon evaluation subsequent to acquisition, it is probable that the institution will be unable to collect all cash flows expected at acquisition on a purchased impaired loan (an estimate that considers both timing and amount), the loan should be considered impaired for purposes of applying the measurement and other provisions of FAS 5 or, if applicable, FAS 114.

Estimates of credit losses should reflect consideration of all significant factors that affect the collectibility of the portfolio as of the evaluation date. For loans within the scope of FAS 114 that are individually evaluated and determined to be impaired, these estimates should reflect consideration of one of the standard’s three impairment measurement methods as of the evaluation date: (1) the present value of expected future cash flows discounted at the loan’s effective interest rate,10 (2) the loan’s observable market price, or (3) the fair value of the collateral if the loan is collateral dependent.

An institution may choose the appropriate FAS 114 measurement method on a loan-by-loan basis for an individually impaired loan, except for an impaired collateral-dependent loan. The agencies require impairment of a collateral-dependent loan to be measured using the fair value of collateral method. As defined in FAS 114, a loan is collateral dependent if repayment of the loan is expected to be provided solely by the underlying collateral. In general, any portion of the recorded investment in a collateral-dependent loan (including any capitalized accrued interest, net deferred loan fees or costs, and unamortized premium or discount) in excess of the fair value of the collateral that can be identified as uncollectible, and is therefore deemed a confirmed loss, should be promptly charged off against the ALLL.11

All other loans, including individually evaluated loans determined not to be impaired under FAS 114, should be included in a group of loans that is evaluated for impairment under FAS 5.12 While an institution may segment its loan portfolio into groups of loans based on a variety of factors, the loans within each group should have similar risk characteristics. For example, a loan that is fully collateralized with risk-free assets should not be grouped with uncollateralized loans. When estimating credit losses on each group of loans with similar risk characteristics, an institution should consider its historical loss experience on the group, adjusted for changes in trends, conditions, and other relevant factors that affect repayment of the loans as of the evaluation date.

For analytical purposes, an institution should attribute portions of the ALLL to loans that it evaluates and determines to be impaired under FAS 114 and to groups of loans that it evaluates collectively under FAS 5. However, the ALLL is available to cover all charge-offs that arise from the loan portfolio.

2065.3.1.2 Responsibilities of the Board of Directors and Management

2065.3.1.2.1 Appropriate ALLL Level

Each institution’s management is responsible for maintaining the ALLL at an appropriate level and for documenting its analysis according to the standards set forth in the 2001 policy statement. Thus, management should evaluate the ALLL reported on the balance sheet as of the end of each quarter or more frequently if warranted, and charge or credit the PLLL to bring the ALLL to an appropriate level as of each evaluation date. The determination of the amounts of the ALLL and the PLLL should be based on management’s current judgments about the credit quality of the loan portfolio, and

10. The effective “interest rate” on a loan is the rate of return implicit in the loan (that is, the contractual interest rate adjusted for any net deferred loan fees or costs and any premium or discount existing at the origination or acquisition of the loan).

11. For further information, refer to the illustration in appendix B of the 2001 policy statement (see the appendix in section 2065.4.1.8).

12. An individually evaluated loan that is determined not to be impaired under FAS 114 should be evaluated under FAS 5 when specific characteristics of the loan indicate that it is probable there would be estimated credit losses in a group of loans with those characteristics. For further guidance, refer to the frequently asked questions that were distributed with this policy statement.
should consider all known relevant internal and external factors that affect loan collectibility as of the evaluation date. Management’s evaluation is subject to review by examiners. An institution’s failure to analyze the collectibility of the loan portfolio and maintain and support an appropriate ALLL in accordance with GAAP and supervisory guidance is generally an unsafe and unsound practice.

In carrying out its responsibility for maintaining an appropriate ALLL, management is expected to adopt and adhere to written policies and procedures that are appropriate to the size of the institution and the nature, scope, and risk of its lending activities. At a minimum, these policies and procedures should ensure the following:

- The institution’s process for determining an appropriate level for the ALLL is based on a comprehensive, well-documented, and consistently applied analysis of its loan portfolio.\textsuperscript{13}
- The analysis should consider all significant factors that affect the collectibility of the portfolio and should support the credit losses estimated by this process. The institution has an effective loan review system and controls (including an effective loan classification or credit grading system) that identify, monitor, and address asset quality problems in an accurate and timely manner.\textsuperscript{14} To be effective, the institution’s loan review system and controls must be responsive to changes in internal and external factors affecting the level of credit risk in the portfolio.
- The institution has adequate data capture and reporting systems to supply the information necessary to support and document its estimate of an appropriate ALLL.
- The institution evaluates any loss estimation models before they are employed and modifies the models’ assumptions, as needed, to ensure that the resulting loss estimates are consistent with GAAP. To demonstrate this consistency, the institution should document its evaluations and conclusions regarding the appropriateness of estimating credit losses with the models or other estimation tools. The institution should also document and support any adjustments made to the models or to the output of the models in determining the estimated credit losses.
- The institution promptly charges off loans, or portions of loans, that available information confirms to be uncollectible.
- The institution periodically validates the ALLL methodology. This validation process should include procedures for a review, by a party who is independent of the institution’s credit approval and ALLL estimation processes, of the ALLL methodology and its application in order to confirm its effectiveness. A party who is independent of these processes could be the internal audit staff, a risk management unit of the institution, an external auditor (subject to applicable auditor independence standards), or another contracted third party from outside the institution. One party need not perform the entire analysis, as the validation can be divided among various independent parties.

The board of directors is responsible for overseeing management’s significant judgments and estimates pertaining to the determination of an appropriate ALLL. This oversight should include but is not limited to—

- reviewing and approving the institution’s written ALLL policies and procedures at least annually;
- reviewing management’s assessment and justification that the loan review system is sound and appropriate for the size and complexity of the institution;
- reviewing management’s assessment and justification for the amounts estimated and reported each period for the PLLL and the ALLL; and
- requiring management to periodically validate and, when appropriate, revise the ALLL methodology.

\textsuperscript{13} As noted in the 2001 policy statement, an institution with less complex lending activities and products may find it more efficient to combine a number of procedures while continuing to ensure that the institution has a consistent and appropriate ALLL methodology. Thus, much of the supporting documentation required for an institution with more complex products or portfolios may be combined into fewer supporting documents in an institution with less complex products or portfolios.

\textsuperscript{14} Loan review and loan classification or credit grading systems are discussed in attachment 1 of this policy statement. In addition, state member banks and savings associations should refer to the asset quality standards in the Interagency Guidelines Establishing Standards for Safety and Soundness, which were adopted by the Federal Reserve Board (see appendix D-1, 12 C.F.R. 208). For national banks, see appendix A to Part 364; and for savings associations, appendix A to Part 370.
appropriate ALLL (after deducting all loans and portions of loans confirmed loss) should consist only of the following components (as applicable), the amounts of which take into account all relevant facts and circumstances as of the evaluation date:

- For loans within the scope of FAS 114 that are individually evaluated and found to be impaired, the associated ALLL should be based upon one of the three impairment measurement methods specified in FAS 114.
- For all other loans, including individually evaluated loans determined not to be impaired under FAS 114, the associated ALLL should be measured under FAS 5 and should provide for all estimated credit losses that have been incurred on groups of loans with similar risk characteristics.
- For estimated credit losses from transfer risk on cross-border loans, the impact to the ALLL should be evaluated individually for impaired loans under FAS 114 or evaluated on a group basis under FAS 5. See this policy statement’s attachment 2 for further guidance on considerations of transfer risk on cross-border loans.
- For estimated credit losses on accrued interest and fees on loans that have been reported as part of the respective loan balances on the institution’s balance sheet, the associated ALLL should be evaluated under FAS 114 or FAS 5 as appropriate, if not already included in one of the preceding components.

Because deposit accounts that are overdrawn (that is, overdrafts) must be reclassified as loans on the balance sheet, overdrawn accounts should be included in one of the first two components above, as appropriate, and evaluated for estimated credit losses.

Determining the appropriate level for the ALLL is inevitably imprecise and requires a high degree of management judgment. Management’s analysis should reflect a prudent, conservative, but not excessive ALLL that falls within an acceptable range of estimated credit losses. When a range of losses is determined, institutions should maintain appropriate documentation to support the identified range and the rationale used for determining the best estimate from within the range of loan losses.

As discussed more fully in attachment 1 of this policy statement, it is essential that institutions maintain effective loan review systems. An effective loan review system should work to ensure the accuracy of internal credit classification or grading systems and, thus, the quality of the information used to assess the appropriateness of the ALLL. The complexity and scope of an institution’s ALLL evaluation process, loan review system, and other relevant controls should be appropriate for the size of the institution and the nature of its lending activities. The evaluation process should also provide for sufficient flexibility to respond to changes in the factors that affect the collectibility of the portfolio.

Credit losses that arise from the transfer risk associated with an institution’s cross-border lending activities require special consideration. In particular, for banks with cross-border lending exposure, management should determine that the ALLL is appropriate to cover estimated losses from transfer risk associated with this exposure over and above any minimum amount that the Interagency Country Exposure Review Committee requires to be provided in the Allocated Transfer Risk Reserve (or charged off against the ALLL). These estimated losses should meet the criteria for accrual of a loss contingency set forth in GAAP. (See attachment 2 for factors to consider.)

2065.3.1.2.2 Factors to Consider in the Estimation of Credit Losses

Estimated credit losses should reflect consideration of all significant factors that affect the collectibility of the portfolio as of the evaluation date. Normally, an institution should determine the historical loss rate for each group of loans with similar risk characteristics in its portfolio based on its own loss experience for loans in that group. While historical loss experience provides a reasonable starting point for the institution’s analysis, historical losses—or even recent trends in losses—do not by themselves form a sufficient basis to determine the appropriate level for the ALLL. Management also should consider those qualitative or environmental factors that are likely to cause estimated credit losses associated with the institution’s existing portfolio to differ from historical loss experience, including but not limited to—
• changes in lending policies and procedures, including changes in underwriting standards and collection, charge-off, and recovery practices not considered elsewhere in estimating credit losses;
• changes in international, national, regional, and local economic and business conditions and developments that affect the collectibility of the portfolio, including the condition of various market segments;\(^\text{18}\)
• changes in the nature and volume of the portfolio and in the terms of loans;
• changes in the experience, ability, and depth of lending management and other relevant staff;
• changes in the volume and severity of past due loans, the volume of nonaccrual loans, and the volume and severity of adversely classified or graded loans;\(^\text{19}\)
• changes in the quality of the institution’s loan review system;
• changes in the value of underlying collateral for collateral-dependent loans;
• the existence and effect of any concentrations of credit, and changes in the level of such concentrations; and
• the effect of other external factors such as competition and legal and regulatory requirements on the level of estimated credit losses in the institution’s existing portfolio.

In addition, changes in the level of the ALLL should be directionally consistent with changes in the factors, taken as a whole, that evidence credit losses, keeping in mind the characteristics of an institution’s loan portfolio. For example, if declining credit quality trends relevant to the types of loans in an institution’s portfolio are evident, the ALLL level as a percentage of the portfolio should generally increase, barring unusual charge-off activity. Similarly, if improving credit quality trends are evident, the ALLL level as a percentage of the portfolio should generally decrease.

\textbf{2065.3.1.2.3 Measurement of Estimated Credit Losses}

\textit{FAS 5. When measuring estimated credit losses on groups of loans with similar risk characteristics in accordance with FAS 5, a widely used method is based on each group’s historical net charge-off rate adjusted for the effects of the qualitative or environmental factors discussed previously. As the first step in applying this method, management generally bases the historical net charge-off rates on the “annualized” historical gross loan charge-offs, less recoveries, recorded by the institution on loans in each group.}

Methodologies for determining the historical net charge-off rate on a group of loans with similar risk characteristics under FAS 5 can range from the simple average of, or a determination of the range of, an institution’s annual net charge-off experience to more complex techniques, such as migration analysis and models that estimate credit losses.\(^\text{20}\) Generally, institutions should use at least an “annualized” or 12-month average net charge-off rate that will be applied to the groups of loans when estimating credit losses. However, this rate could vary. For example, loans with effective lives longer than 12 months often have workout periods over an extended period of time, which may indicate that the estimated credit losses should be greater than that calculated based solely on the annualized net charge-off rate for such loans. These groups may include certain commercial loans as well as groups of adversely classified loans. Other groups of loans may have effective lives shorter than 12 months, which may indicate that the estimated credit losses should be less than that calculated based on the annualized net charge-off rate.

Regardless of the method used, institutions should maintain supporting documentation for

\(^{20}\) Annual charge-off rates are calculated over a specified time period (for example, three years or five years), which can vary based on a number of factors including the relevance of past periods’ experience to the current period or point in the credit cycle. Also, some institutions remove loans that become adversely classified or graded from a group of nonclassified or nongraded loans with similar risk characteristics in order to evaluate the removed loans individually under FAS 114 (if deemed impaired) or collectively in a group of adversely classified or graded loans with similar risk characteristics under FAS 5. In this situation, the net charge-off experience on the adversely classified or graded loans that have been removed from the group of nonclassified or nongraded loans should be included in the historical loss rates for that group of loans. Even though the net charge-off experience on adversely classified or graded loans is included in the estimation of the historical loss rates that will be applied to the group of nonclassified or nongraded loans, the adversely classified or graded loans themselves are no longer included in that group for purposes of estimating credit losses on the group.

\textit{BHC Supervision Manual} July 2007 Page 7

\(^{18}\) Credit loss and recovery experience may vary significantly depending upon the stage of the business cycle. For example, an overreliance on credit loss experience during a period of economic growth will not result in realistic estimates of credit losses during a period of economic downturn.

\(^{19}\) For banks and savings associations, adversely classified or graded loans are loans rated “substandard” (or its equivalent) or worse under its loan classification system.
the techniques used to develop the historical loss rate for each group of loans. If a range of historical loss rates is developed instead for a group of loans, institutions should maintain documentation to support the identified range and the rationale for determining which rate is the best estimate within the range of loss rates. The rationale should be based on management’s assessment of which rate is most reflective of the estimated credit losses in the current loan portfolio.

After determining the appropriate historical loss rate for each group of loans with similar risk characteristics, management should consider those current qualitative or environmental factors that are likely to cause estimated credit losses as of the evaluation date to differ from the group’s historical loss experience. Institutions typically reflect the overall effect of these factors on a loan group as an adjustment that, as appropriate, increases or decreases the historical loss rate applied to the loan group. Alternatively, the effect of these factors may be reflected through separate stand-alone adjustments within the FAS 5 component of the ALLL. Both methods are consistent with GAAP, provided the adjustments for qualitative or environmental factors are reasonably and consistently determined, are adequately documented, and represent estimated credit losses. For each group of loans, an institution should apply its adjusted historical loss rate, or its historical loss rate and separate stand-alone adjustments, to the recorded investment in the group when determining its estimated credit losses.

Management must exercise significant judgment when evaluating the effect of qualitative factors on the amount of the ALLL because data may not be reasonably available or directly applicable for management to determine the precise impact of a factor on the collectibility of the institution’s loan portfolio as of the evaluation date. Accordingly, institutions should support adjustments to historical loss rates and explain how the adjustments reflect current information, events, circumstances, and conditions in the loss measurements. Management should maintain reasonable documentation to support which factors affected the analysis and the impact of those factors on the loss measurement. Support and documentation includes descriptions of each factor, management’s analysis of how each factor has changed over time, which loan groups’ loss rates have been adjusted, the amount by which loss estimates have been adjusted for changes in conditions, an explanation of how management estimated the impact, and other available data that supports the reasonableness of the adjustments. Examples of underlying supporting evidence could include, but are not limited to, relevant articles from newspapers and other publications that describe economic events affecting a particular geographic area, economic reports and data, and notes from discussions with borrowers.

There may be times when an institution does not have its own historical loss experience upon which to base its estimate of the credit losses in a group of loans with similar risk characteristics. This may occur when an institution offers a new loan product or when it is a newly established (that is, de novo) institution. If an institution has no experience of its own for a loan group, reference to the experience of other enterprises in the same lending business may be appropriate, provided the institution demonstrates that the attributes of the group of loans in its portfolio are similar to those of the loan group in the portfolio providing the loss experience. An institution should only use another enterprise’s experience on a short-term basis until it has developed its own loss experience for a particular group of loans.

FAS 114. When determining the FAS 114 component of the ALLL for an individually impaired loan, an institution should consider estimated costs to sell the loan’s collateral, if any, on a discounted basis, in the measurement of impairment if those costs are expected to reduce the cash flows available to repay or otherwise satisfy the loan. If the institution bases its measure of loan impairment on the present value of expected future cash flows discounted at the loan’s effective interest rate, the estimates of these cash flows should be the institution’s best estimate based on reasonable and support-

---

21. An overall adjustment to a portion of the ALLL that is not attributed to specific segments of the loan portfolio is often labeled “unallocated.” Regardless of what a component of the ALLL is labeled, it is appropriate when it reflects estimated credit losses determined in accordance with GAAP and is properly supported.

22. As noted in FAS 114, some individually impaired loans have risk characteristics that are unique to an individual borrower and the institution will apply the measurement methods on a loan-by-loan basis. However, some impaired loans may have risk characteristics in common with other impaired loans. An institution may aggregate those loans and may use historical statistics, such as average recovery period and average amount recovered, along with a composite effective interest rate as a means of measuring impairment of those loans.
able assumptions and projections. All available evidence should be considered in developing the estimate of expected future cash flows. The weight given to the evidence should be commensurate with the extent to which the evidence can be verified objectively. The likelihood of the possible outcomes should be considered in determining the best estimate of expected future cash flows.

2065.3.1.2.4 Analyzing the Overall Measurement of the ALLL

Institutions also are encouraged to use ratio analysis as a supplemental tool for evaluating the overall reasonableness of the ALLL. Ratio analysis can be useful in identifying divergent trends (compared with an institution’s peer group and its own historical experience) in the relationship of the ALLL to adversely classified or graded loans, past due and nonaccrual loans, total loans, and historical gross and net charge-offs. Based on such analysis, an institution may identify additional issues or factors that previously had not been considered in the ALLL estimation process, which may warrant adjustments to estimated credit losses. Such adjustments should be appropriately supported and documented.

While ratio analysis, when used prudently, can be helpful as a supplemental check on the reasonableness of management’s assumptions and analyses, it is not a sufficient basis for determining the appropriate amount for the ALLL. In particular, because an appropriate ALLL is an institution-specific amount, such comparisons do not obviate the need for a comprehensive analysis of the loan portfolio and the factors affecting its collectibility. Furthermore, it is inappropriate for the board of directors or management to make adjustments to the ALLL when it has been properly computed and supported under the institution’s methodology for the sole purpose of reporting an ALLL that corresponds to the peer group median, a target ratio, or a budgeted amount. Institutions that have high levels of risk in the loan portfolio or are uncertain about the effect of possible future events on the collectibility of the portfolio should address these concerns by maintaining higher equity capital and not by arbitrarily increasing the ALLL in excess of amounts supported under GAAP.24

2065.3.1.2.5 Estimated Credit Losses in Credit-Related Accounts

Typically, institutions evaluate and estimate credit losses for off-balance-sheet credit exposures at the same time that they estimate credit losses for loans. While a similar process should be followed to support loss estimates related to off-balance-sheet exposures, these estimated credit losses are not recorded as part of the ALLL. When the conditions for accrual of a loss under FAS 5 are met, an institution should maintain and report as a separate liability account, an allowance that is appropriate to cover estimated credit losses on off-balance-sheet loan commitments, standby letters of credit, and guarantees. In addition, recourse liability accounts (that arise from recourse obligations on any transfers of loans that are reported as sales in accordance with GAAP) should be reported in regulatory reports as liabilities that are separate and distinct from both the ALLL and the allowance for credit losses on off-balance-sheet credit exposures.

When accrued interest and fees are reported separately on an institution’s balance sheet from the related loan balances (that is, as other assets), the institution should maintain an appropriate valuation allowance, determined in accordance with GAAP, for amounts that are not likely to be collected unless management has placed the underlying loans in nonaccrual status and reversed previously accrued interest and fees.24

2065.3.1.3 Examiner Responsibilities

Examiners should assess the credit quality of an institution’s loan portfolio, the appropriateness of its ALLL methodology and documentation, and the appropriateness of the reported ALLL in not simply default to a peer ratio or a “standard percentage” after determining an appropriate level of ALLL under its methodology. However, there may be circumstances when an institution’s ALLL methodology and credit risk identification systems are not reliable. Absent reliable data of its own, management may seek data that could be used as a short-term proxy for the unavailable information (for example, an industry average loss rate for loans with similar risk characteristics). This is only appropriate as a short-term remedy until the institution creates a viable system for estimating credit losses within its loan portfolio.

24. See instructions for the Call Report or the Consolidated Financial Statement for Bank Holding Companies (such as the FR Y-14C) for further guidance on placing a loan in nonaccrual status.

---

23. It is inappropriate to use a “standard percentage” as the sole determinant for the amount to be reported as the ALLL on the balance sheet. Moreover, an institution should
the institution’s regulatory reports. In their review and classification or grading of the loan portfolio, examiners should consider all significant factors that affect the collectibility of the portfolio, including the value of any collateral. In reviewing the appropriateness of the ALLL, examiners should do the following:

• Consider the effectiveness of board oversight as well as the quality of the institution’s loan review system and management in identifying, monitoring, and addressing asset quality problems. This will include a review of the institution’s loan review function and credit grading system. Typically, this will involve testing a sample of the institution’s loans. The sample size generally varies and will depend on the nature or purpose of the examination.25

• Evaluate the institution’s ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL, including whether management’s assumptions, valuations, and judgments appear reasonable and are properly supported. If a range of credit losses has been estimated by management, evaluate the reasonableness of the range and management’s best estimate within the range. In making these evaluations, examiners should ensure that the institution’s historical loss experience and all significant qualitative or environmental factors that affect the collectibility of the portfolio (including changes in the quality of the institution’s loan review function and the other factors previously discussed) have been appropriately considered and that management has appropriately applied GAAP, including FAS 114 and FAS 5.

• Review management’s use of loss estimation models or other loss estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.

• Review the appropriateness and reasonableness of the overall level of the ALLL. In some instances this may include a quantitative analysis (for example, using the types of ratio analysis previously discussed) as a preliminary check on the reasonableness of the ALLL. This quantitative analysis should demonstrate whether changes in the key ratios from prior periods are reasonable based on the examiner’s knowledge of the collectibility of loans at the institution and its current environment.

• Review the ALLL amount reported in the institution’s regulatory reports and financial statements and ensure these amounts reconcile to its ALLL analyses. There should be no material differences between the consolidated loss estimate, as determined by the ALLL methodology, and the final ALLL balance reported in the financial statements. Inquire about reasons for any material differences between the results of the institution’s ALLL analyses and the institution’s reported ALLL to determine whether the differences can be satisfactorily explained.

• Review the adequacy of the documentation and controls maintained by management to support the appropriateness of the ALLL.

• Review the interest and fee income accounts associated with the lending process to ensure that the institution’s net income is not materially misstated.26

As noted in the “Responsibilities of the Board of Directors and Management” section of this policy statement, when assessing the appropriateness of the ALLL, it is important to recognize that the related process, methodology, and underlying assumptions require a substantial degree of management judgment. Even when an institution maintains sound loan administration and collection procedures and an effective loan review system and controls, its estimate of credit losses is not a single precise amount due to the wide range of qualitative or environmental factors that must be considered.

An institution’s ability to estimate credit losses on specific loans and groups of loans should improve over time as substantive information accumulates regarding the factors affecting repayment prospects. Therefore, examiners should generally accept management’s estimates

---

25. In an examiner’s review of an institution’s loan review system, the examiner’s loan classifications or credit grades may differ from those of the institution’s loan review system. If the examiner’s evaluation of these differences indicates problems with the loan review system, especially when the loan classification or credit grades assigned by the institution are more liberal than those assigned by the examiner, the institution would be expected to make appropriate adjustments to the assignment of its loan classifications or credit grades to the loan portfolio and to its estimated credit losses. Furthermore, the institution would be expected to improve its loan review system. (This policy statement’s attachment 1 discusses effective loan review systems.)

26. As noted previously, accrued interest and fees on loans that have been reported as part of the respective loan balances on the institution’s balance sheet should be evaluated for estimated credit losses. The accrual of the interest and fee income should also be considered. Refer to GAAP and the agencies’ regulatory reporting instructions for further guidance on income recognition.
when assessing the appropriateness of the institution’s reported ALLL, and not seek adjustments to the ALLL, when management has—

- maintained effective loan review systems and controls for identifying, monitoring, and addressing asset quality problems in a timely manner;
- analyzed all significant qualitative or environmental factors that affect the collectibility of the portfolio as of the evaluation date in a reasonable manner;
- established an acceptable ALLL evaluation process for both individual loans and groups of loans that meets the GAAP requirements for an appropriate ALLL; and
- incorporated reasonable and properly supported assumptions, valuations, and judgments into the evaluation process.

If the examiner concludes that the reported ALLL level is not appropriate or determines that the ALLL evaluation process is based on the results of an unreliable loan review system or is otherwise deficient, recommendations for correcting these deficiencies, including any examiner concerns regarding an appropriate level for the ALLL, should be noted in the report of examination. The examiner’s comments should cite any departures from GAAP and any contraventions of this policy statement and the 2001 policy statement, as applicable. Additional supervisory action may also be taken based on the magnitude of the observed shortcomings in the ALLL process, including the materiality of any error in the reported amount of the ALLL.

2065.3.1.4 ALLL Level Reflected in Regulatory Reports

The agencies believe that an ALLL established in accordance with this policy statement and the 2001 policy statement, as applicable, falls within the range of acceptable estimates determined in accordance with GAAP. When the reported amount of an institution’s ALLL is not appropriate, the institution will be required to adjust its ALLL by an amount sufficient to bring the ALLL reported on its Call Report and/or Consolidated Financial Statement for Bank Holding Companies (such as the FR Y-9C) to an appropriate level as of the evaluation date. This adjustment should be reflected in the current period provision or through the restatement of prior period provisions, as appropriate in the circumstances.

2065.3.1.5 Appendix 1—Loan Review Systems

The nature of loan review systems may vary based on an institution’s size, complexity, loan types, and management practices. For example, a loan review system may include components of a traditional loan review function that is independent of the lending function, or it may place some reliance on loan officers. In addition, the use of the term loan review system can refer to various responsibilities assigned to credit administration, loan administration, a problem loan workout group, or other areas of an institution. These responsibilities may range from administering the internal problem loan reporting process to maintaining the integrity of the loan classification or credit grading process (for example, ensuring that timely and appropriate changes are made to the loan classifications or credit grades assigned to loans) and coordinating the gathering of the information necessary to assess the appropriateness of the ALLL. Additionally, some or all of this function may be outsourced to a qualified external loan reviewer. Regardless of the structure of the loan review system in an institution, an effective loan review system should have, at a minimum, the following objectives:

- promptly identify loans with potential credit weaknesses;
- appropriately grade or adversely classify loans, especially those with well-defined credit weaknesses that jeopardize repayment, so that timely action can be taken and credit losses can be minimized;
- identify relevant trends that affect the collectibility of the portfolio and isolate segments of the portfolio that are potential problem areas;

27 The loan review function is not intended to be performed by an institution’s internal audit function. However, as discussed in the banking agencies’ March 2003 Interagency Policy Statement on the Internal Audit Function and Its Out-sourcing, some institutions seek to coordinate the internal audit function with several risk-monitoring functions such as loan review. The policy statement notes that coordination of loan review with the internal audit function can facilitate the reporting of material risk and control issues to the audit committee, increase the overall effectiveness of these monitor-ing functions, better utilize available resources, and enhance the institution’s ability to comprehensively manage risk. However, the internal audit function should maintain the ability to independently audit other risk-monitoring functions, including loan review, without impairing its independence with respect to these other functions.
• assess the adequacy of and adherence to internal credit policies and loan administration procedures and monitor compliance with relevant laws and regulations;
• evaluate the activities of lending personnel including their compliance with lending policies and the quality of their loan approval, monitoring, and risk assessment;
• provide senior management and the board of directors with an objective and timely assessment of the overall quality of the loan portfolio; and
• provide management with accurate and timely credit quality information for financial and regulatory reporting purposes, including the determination of an appropriate ALLL.

2065.3.1.5.1 Loan Classification or Credit Grading Systems

The foundation for any loan review system is accurate and timely loan classification or credit grading, which involves an assessment of credit quality and leads to the identification of problem loans. An effective loan classification or credit grading system provides important information on the collectibility of the portfolio for use in the determination of an appropriate level for the ALLL.

Regardless of the type of loan review system employed, an effective loan classification or credit grading framework generally places primary reliance on the institution’s lending staff to identify emerging loan problems. However, given the importance and subjective nature of loan classification or credit grading, the judgment of an institution’s lending staff regarding the assignment of particular classification or credit grades to loans should be subject to review by (1) peers, superiors, or loan committee(s); (2) an independent, qualified part-time or full-time employee(s); (3) an internal department staffed with credit review specialists; or (4) qualified outside credit review consultants. A loan classification or credit grading review that is independent of the lending function is preferred because it typically provides a more objective assessment of credit quality. Because accurate and timely loan classification or credit grading is a critical component of an effective loan review system, each institution should ensure that its loan review system includes the following attributes:

• a formal loan classification or credit grading system in which loan classifications or credit grades reflect the risk of default and credit losses and for which a written description is maintained, including a discussion of the factors used to assign appropriate classifications or credit grades to loans;28
• an identification or grouping of loans that warrant the special attention of management29 or other designated “watch lists” of loans that management is more closely monitoring;
• documentation supporting the reasons why particular loans merit special attention or received a specific adverse classification or credit grade and management’s adherence to approved workout plans;
• a mechanism for direct, periodic, and timely reporting to senior management and the board of directors on the status of loans identified as meriting special attention or adversely classified or graded and the actions taken by management; and
• appropriate documentation of the institution’s historical loss experience for each of the groups of loans with similar risk characteristics into which it has segmented its loan portfolio.30

2065.3.1.5.2 Elements of Loan-Review Systems

Each institution should have a written policy that is reviewed and approved at least annually by the board of directors to evidence its support of and commitment to maintaining an effective loan review system. The loan review policy should address the following elements that are described in more detail below: the qualifications and independence of loan review personnel; the frequency, scope and depth of reviews;

28. A bank or savings association may have a loan classification or credit grading system that differs from the framework used by the banking agencies. However, each institution that maintains a loan classification or credit grading system that differs from the banking agencies’ framework should maintain documentation that translates its system into the framework used by the banking agencies. This documentation should be sufficient to enable examiners to reconcile the totals for the various loan classifications or credit grades under the institution’s system to the banking agencies’ categories.
29. For banks and savings associations, loans that have potential weaknesses that deserve management’s close attention are designated “special mention” loans.
30. In particular, institutions with large and complex loan portfolios are encouraged to maintain records of their historical loss experience for credits in each of the categories in their loan classification or credit grading framework. For banks, these categories should be (1) those used by or (2) categories that can be translated into those used by, the banking agencies.
the review of findings and follow-up; and work-
paper and report distribution.

**Qualifications of loan review personnel.** Persons
involved in the loan review or credit grading
function should be qualified based on their level
of education, experience, and extent of formal
credit training. They should be knowledgeable
in both sound lending practices and the institu-
tion’s lending guidelines for the types of loans
offered by the institution. In addition, they
should be knowledgeable of relevant laws and
regulations affecting lending activities.

**Independence of loan review personnel.** An
effective loan review system uses both the ini-
tial identification of emerging problem loans by
loan officers and other line staff, and the credit
review of loans by individuals independent of
the credit approval process. An important
requirement for an effective system is to place
responsibility on loan officers and line staff for
continuous portfolio analysis and prompt identi-
fication and reporting of problem loans. Because
of frequent contact with borrowers, loan officers
and line staff can usually identify potential prob-
lems before they become apparent to others.
However, institutions should be careful to avoid
overreliance upon loan officers and line staff for
identification of problem loans. Institutions
should ensure that loans are also reviewed by
individuals who do not have control over the
loans they review and who are not part of, and
are not influenced by anyone associated with,
the loan approval process.

While larger institutions typically establish a
separate department staffed with credit review
specialists, cost and volume considerations may
not justify such a system in smaller institutions.
In some smaller institutions, an independent
committee of outside directors may fill this role.
Whether or not the institution has an indepen-
dent loan review department, the loan review
function should report directly to the board of
directors or a committee thereof (although senior
management may be responsible for
appropriate administrative functions so long as
they do not compromise the independence of
the loan review function).

Some institutions may choose to outsource
the credit review function to an independent
outside party. However, the responsibility for
maintaining a sound loan review process cannot
be delegated to an outside party. Therefore,
institution personnel who are independent of the
lending function should assess control risks,
develop the credit review plan, and ensure
appropriate follow-up of findings. Furthermore,
the institution should be mindful of special
requirements concerning independence should it
consider outsourcing the credit review function
to its external auditor.

**Frequency of reviews.** Loan review personnel
should review significant credits\(^{31}\) at least annu-
ally, upon renewal, or more frequently when
internal or external factors indicate a potential
for deteriorating credit quality in a particular
loan, loan product, or group of loans. Optimally,
the loan review function can be used to provide
useful continual feedback on the effectiveness
of the lending process in order to identify any
emerging problems. A system of ongoing or
periodic portfolio reviews is particularly impor-
tant to the ALLL determination process because
this process is dependent on the accurate and
timely identification of problem loans.

**Scope of reviews.** Reviews by loan review per-
sonnel should cover all loans that are significant
and other loans that meet certain criteria. Man-
gement should document the scope of its
reviews and ensure that the percentage of the
portfolio selected for review provides reason-
able assurance that the results of the review
have identified any credit quality deterioration
and other unfavorable trends in the portfolio and
reflect its quality as a whole. Management
should also consider industry standards for loan
review coverage consistent with the size and
complexity of its loan portfolio and lending
operations to verify that the scope of its reviews
is appropriate. The institution’s board of direc-
tors should approve the scope of loan reviews
on an annual basis or when any significant
interim changes to the scope of reviews are
made. Reviews typically include—

- loans over a predetermined size;
- a sufficient sample of smaller loans;
- past due, nonaccrual, renewed, and restruc-
tured loans;
- loans previously adversely classified or
graded and loans designated as warranting the
special attention of management\(^ {32}\) by the
institution or its examiners;
- insider loans; and
- loans constituting concentrations of credit risk

\(^{31}\) Significant credits in this context may or may not be
loans individually evaluated for impairment under FAS 114.

\(^{32}\) See footnote 29.
and other loans affected by common repayment factors.

**Depth of reviews.** Reviews should analyze a number of important aspects of the loans selected for review, including—

- credit quality, including underwriting and borrower performance;
- sufficiency of credit and collateral documentation;
- proper lien perfection;
- proper approval by the loan officer and loan committee(s);
- adherence to any loan agreement covenants;
- compliance with internal policies and procedures (such as aging, nonaccrual, and classification or grading policies) and laws and regulations; and
- appropriate identification of individually impaired loans, measurement of estimated loan impairment, and timeliness of charge-offs.

Furthermore, these reviews should consider the appropriateness and timeliness of the identification of problem loans by loan officers.

**Review of findings and follow-up.** Loan review personnel should discuss all noted deficiencies and identified weaknesses and any existing or planned corrective actions, including time frames for correction, with appropriate loan officers and department managers. Loan review personnel should then review these findings and corrective actions with members of senior management. All noted deficiencies and identified weaknesses that remain unresolved beyond the scheduled time frames for correction should be promptly reported to senior management and the board of directors.

Credit classification or grading differences between loan officers and loan review personnel should be resolved according to a prearranged process. That process may include formal appeals procedures and arbitration by an independent party or may require default to the assigned classification or grade that indicates lower credit quality. If an outsourced credit review concludes that a borrower is less creditworthy than is perceived by the institution, the lower credit quality classification or grade should prevail unless internal parties identify additional information sufficient to obtain the concurrence of the outside reviewer or arbiter on the higher credit quality classification or grade.

**Workpaper and report distribution.** The loan review function should prepare a list of all loans reviewed (including the date of the review) and documentation (including a summary analysis) that substantiates the grades or classifications assigned to the loans reviewed. A report that summarizes the results of the loan review should be submitted to the board of directors at least quarterly. In addition to reporting current credit quality findings, comparative trends can be presented to the board of directors that identify significant changes in the overall quality of the portfolio. Findings should also address the adequacy of and adherence to internal policies and procedures, as well as compliance with laws and regulations, in order to facilitate timely correction of any noted deficiencies.

### 2065.3.1.6 Appendix 2—International Transfer Risk Considerations

With respect to international transfer risk, an institution with cross-border exposures should support its determination of the appropriateness of its ALLL by performing an analysis of the transfer risk, commensurate with the size and composition of the institution’s exposure to each country. Such analyses should take into consideration the following factors, as appropriate:

- the institution’s loan portfolio mix for each country (for example, types of borrowers, loan maturities, collateral, guarantees, special credit facilities, and other distinguishing factors);
- the institution’s business strategy and its debt-management plans for each country;
- each country’s balance of payments position;
- each country’s level of international reserves;
- each country’s established payment performance record and its future debt-servicing prospects;
- each country’s sociopolitical situation and its effect on the adoption or implementation of economic reforms, in particular those affecting debt servicing capacity;
- each country’s current standing with multilateral and official creditors;
- the status of each country’s relationships with other creditors, including institutions; and

---

33. The board of directors should be informed more frequently than quarterly when material adverse trends are noted.
• the most recent evaluations distributed by the banking agencies’ Interagency Country Exposure Review Committee.
WHAT’S NEW IN THIS REVISED SECTION

Effective July 2012, this section has been revised to delete a reference to SR-04-5, “Interagency Update on Accounting for Loan and Lease Losses,” deemed inactive by SR-12-6. Also, certain accounting references have been updated for the Financial Accounting Standards Board’s (FASB’s) Accounting Standards Codification (ASC) numbering and referencing system.

A supplemental interagency Policy Statement on Allowance for Loan and Lease Losses (ALLL) Methodologies and Documentation for Banks and Savings Institutions was issued by the Federal Financial Institutions Examination Council (FFIEC) on July 2, 2001. The policy statement clarifies the agencies’ expectations for documentation that supports the ALLL methodology. Additionally, the statement emphasizes the need for appropriate ALLL policies and procedures, which should include an effective loan-review system. The guidance also provides examples of appropriate supporting documentation, as well as illustrations on how to implement this guidance. (See SR-01-17.) While this policy statement, by its terms, applies only to depository institutions insured by the Federal Deposit Insurance Corporation (which includes state member banks), the Federal Reserve believes this guidance is broadly applicable to bank holding companies. Accordingly, examiners should apply the policy, as appropriate, in their inspections of bank holding companies and their nonbank subsidiaries. This policy, however, does not apply to federally insured branches and agencies of foreign banks. Federally insured branches and agencies of foreign banks continue to be subject to separate guidance issued by their primary supervisory agency.

The guidance requires that a financial institution’s ALLL methodology be in accordance with generally accepted accounting principles (GAAP) and all outstanding supervisory guidance. An ALLL methodology should be systematic, consistently applied, and auditable. The methodology should be validated periodically and modified to incorporate new events or findings, as needed. The guidance specifies that management, under the direction of the board of directors, should implement appropriate procedures and controls to ensure compliance with the institution’s ALLL policies and procedures. Institution management should (1) segment the portfolio to evaluate credit risks; (2) select loss rates that best reflect the probable loss; and (3) be responsive to changes in the organization, the economy, or the lending environment by changing the methodology, when appropriate. Furthermore, supporting information should be included on summary schedules, whenever feasible. Under this policy, institutions with less-complex loan products or portfolios, such as community banks, may use a more streamlined approach to implement this guidance.

The policy statement is consistent with the Federal Reserve’s long-standing policy to promote strong internal controls over an institution’s ALLL process. In this regard, the policy statement recognizes that determining an appropriate allowance involves a high degree of management judgment and is inevitably imprecise. Accordingly, an institution may determine that the amount of loss falls within a range. In accordance with GAAP, an institution should record its best estimate within the range of credit losses. (See also sections 2065.2 and 2065.3.)

The policy statement is provided below. Some wording has been slightly modified for this manual, as indicated by asterisks or text enclosed in brackets. Some footnotes have also been renumbered.

2065.4.1 2001 POLICY STATEMENT ON ALLL METHODOLOGIES AND DOCUMENTATION

Boards of directors of banks are responsible for ensuring that their institutions have controls in place to consistently determine the allowance for loan and lease losses (ALLL) in accordance with the institutions’ stated policies and procedures, GAAP, and ALLL supervisory guidance. To fulfill this responsibility, boards of directors instruct management to develop and maintain an appropriate, systematic, and consistent methodology. The guidance also provides examples of appropriate supporting documentation, as well as illustrations on how to implement this guidance.

3. [The actual policy statement includes a bibliography] that lists applicable ALLL GAAP guidance, interagency statements, and other reference materials that may assist in understanding and implementing an ALLL in accordance with GAAP. See [the appendix] for additional information on applying GAAP to determine the ALLL.
ently applied process to determine the amounts of the ALLL and provisions for loan losses. Management should create and implement suitable policies and procedures to communicate the ALLL process internally to all applicable personnel. Regardless of who develops and implements these policies, procedures, and underlying controls, the board of directors should assure themselves that the policies specifically address the institution’s unique goals, systems, risk profile, personnel, and other resources before approving them. Additionally, by creating an environment that encourages personnel to follow these policies and procedures, management improves procedural discipline and compliance.

The determination of the amounts of the ALLL and provisions for loan and lease losses should be based on management’s current judgments about the credit quality of the loan portfolio, and should consider all known relevant internal and external factors that affect loan collectibility as of the reporting date. The amounts reported each period for the provision for loan and lease losses and the ALLL should be reviewed and approved by the board of directors. To ensure the methodology remains appropriate for the institution, the board of directors should have the methodology periodically validated and, if appropriate, revised. Further, the audit committee should oversee and monitor the internal controls over the ALLL-determination process.

The [Federal Reserve and other] banking agencies have long-standing examination policies that call for examiners to review an institution’s lending and loan-review functions and recommend improvements, if needed. Additionally, in 1995 and 1996, the banking agencies adopted interagency guidelines establishing standards for safety and soundness, pursuant to section 39 of the Federal Deposit Insurance Act (FDI Act). The interagency asset-quality guidelines and [this guidance will assist] an institution in estimating and establishing a sufficient ALLL supported by adequate documentation, as required under the FDI Act. Additionally, the guidelines require operational and managerial standards that are appropriate for an institution’s size and the nature and scope of its activities.

For financial-reporting purposes, including regulatory reporting, the provision for loan and lease losses and the ALLL must be determined in accordance with GAAP. GAAP requires that allowances be well documented, with clear explanations of the supporting analyses and rationale. This [2001] policy statement describes but does not increase the documentation requirements already existing within GAAP. Failure to maintain, analyze, or support an adequate ALLL in accordance with GAAP and supervisory guidance is generally an unsafe and unsound banking practice.

This guidance [the 2001 policy statement] applies equally to all institutions, regardless of the size. However, institutions with less-complex lending activities and products may find it more efficient to combine a number of procedures (for example, information gathering, documentation, and internal-approval processes) while continuing to ensure the institution has a consistent and appropriate methodology. Thus, much of the supporting documentation required for an institution with more-complex products or portfolios may be combined into fewer supporting documents in an institution with less-complex products or portfolios. For example, simplified documentation can include spreadsheets, checklists, and other summary documents.

Institutions should refer to the guidelines for state member banks, appendix D to part 208***.

8. The documentation guidance within this 2001 policy statement is predominantly based upon the GAAP guidance from FASB’s ASC section 450-20-25; Contingencies - Loss Allowances - Recognition (formerly Statement of Financial Accounting Standards No. 5, “Accounting for Contingencies”); ASC Subtopic 310-10-05, Receivables - Overall (formerly Statement of Financial Accounting Standards No. 114, “Accounting by Creditors for Impairment of a Loan”); Emerging Issues Task Force Topic No. D-80 (EITF Topic D-80 and attachments), “Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio” (which includes the Viewpoints article—an article issued in 1999 by FASB staff providing guidance on certain issues regarding the ALLL, particularly on the application of FAS 5 and FAS 114 and how these statements interrelate); Chapter 9, “Credit Losses,” the American Institute of Certified Public Accountants’ (AICPA’s) Audit and Accounting Guide, Depository and Lending Institutions: Banks and Savings Institutions, Credit Unions, Finance Companies and Mortgage Companies, 2008 update; and the SEC’s Financial Reporting Release No. 28 (FRR 28).

Failure to maintain adequate supporting documentation does not relieve an institution of its obligation to record an appropriate ALLL.
ments that many institutions currently use. Illustrations A and C provide specific examples of how less-complex institutions may determine and document portions of their loan-loss allowance.

2065.4.1.1 Documentation Standards

Appropriate written supporting documentation for the loan-loss provision and allowance facili-
At a minimum, institutions should maintain written supporting documentation for the following decisions, strategies, and processes:

- policies and procedures—
  - over the systems and controls that maintain an appropriate ALLL and
  - over the ALLL methodology
- loan-grading system or process
- summary or consolidation of the ALLL balance
- validation of the ALLL methodology
- periodic adjustments to the ALLL process

2065.4.1.2 Policies and Procedures

Financial institutions utilize a wide range of policies, procedures, and control systems in their ALLL process. Sound policies should be appropriately tailored to the size and complexity of the institution and its loan portfolio.

In order for an institution’s ALLL methodology to be effective, the institution’s written policies and procedures for the systems and controls that maintain an appropriate ALLL should address but not be limited to—

- the roles and responsibilities of the institution’s departments and personnel (including the lending function, credit review, financial reporting, internal audit, senior management, audit committee, board of directors, and others, as applicable) who determine, or review, as applicable, the ALLL to be reported in the financial statements;
- the institution’s accounting policies for loans, [leases, and their loan losses], including the policies for charge-offs and recoveries and for estimating the fair value of collateral, where applicable;
- the description of the institution’s systematic methodology, which should be consistent with the institution’s accounting policies for determining its ALLL; and
- the system of internal controls used to ensure that the ALLL process is maintained in accordance with GAAP and supervisory guidance.

An internal-control system for the ALLL-estimation process should—

- include measures to provide assurance regarding the reliability and integrity of information and compliance with laws, regulations, and internal policies and procedures;
- reasonably assure that the institution’s financial statements (including regulatory reports) are prepared in accordance with GAAP and ALLL supervisory guidance; and
- include a well-defined loan-review process containing—
  - an effective loan-grading system that is consistently applied, identifies differing risk characteristics and loan-quality problems accurately and in a timely manner, and prompts appropriate administrative actions;
  - sufficient internal controls to ensure that all relevant loan-review information is appropriately considered in estimating losses. This includes maintaining appropriate reports, details of reviews performed, and identification of personnel involved; and
  - clear formal communication and coordination between an institution’s credit-administration function, financial-reporting group, management, board of directors, and others who are involved in

---

10. This position is fully described in the SEC’s FR 28, in which the SEC indicates that the books and records of public companies engaged in lending activities should include documentation of the rationale supporting each period’s determination that the ALLL and provision amounts reported were adequate.

11. Further explanation is presented in the “Methodology” section that appears below.

12. In addition to the supporting documentation requirements for financial institutions, as described in interagency asset-quality guidelines, public companies are required to comply with the books and records provisions of the Securities Exchange Act of 1934 (Exchange Act). Under sections 13(b)(2)–(7) of the Exchange Act, registrants must make and keep books, records, and accounts, which, in reasonable detail, accurately and fairly reflect the transactions and dispositions of assets of the registrant. Registrants also must maintain internal accounting controls that are sufficient to provide reasonable assurances that, among other things, transactions are recorded as necessary to permit the preparation of financial statements in conformity with GAAP. See also SEC Staff Accounting Bulletin No. 99, Materiality.
the ALLL-determination or -review process, as applicable (e.g., written policies and procedures, management reports, audit programs, and committee minutes).

2065.4.1.3 Methodology

An ALLL methodology is a system that an institution designs and implements to reasonably estimate loan and lease losses as of the financial statement date. It is critical that ALLL methodologies incorporate management’s current judgments about the credit quality of the loan portfolio through a disciplined and consistently applied process.

An institution’s ALLL methodology is influenced by institution-specific factors, such as an institution’s size, organizational structure, business environment and strategy, management style, loan-portfolio characteristics, loan-administration procedures, and management information systems. However, there are certain common elements an institution should incorporate in its ALLL methodology. A summary of common elements is provided in [the appendix].13

2065.4.1.3.1 Documentation of ALLL Methodology in Written Policies and Procedures

An institution’s written policies and procedures should describe the primary elements of the institution’s ALLL methodology, including portfolio segmentation and impairment measurement. In order for an institution’s ALLL methodology to be effective, the institution’s written policies and procedures should describe the methodology—

• for segmenting the portfolio:
  — the definitions of each loan grade,
  — a reconciliation of the internal loan grades to supervisory loan grades, and
  — the delineation of responsibilities for the loan-grading system.

• for determining and measuring impairment under FAS 114:
  — the methods used to identify loans to be analyzed individually;
  — for individually reviewed loans that are impaired, how the amount of any impairment is determined and measured, including—
    • procedures describing the impairment-measurement techniques available and
    • steps performed to determine which technique is most appropriate in a given situation.
  — the methods used to determine whether and how loans individually evaluated under FAS 114, but not considered to be individually impaired, should be grouped with other loans that share common characteristics for impairment evaluation under FAS 5.
    • for determining and measuring impairment under FAS 5—
      — how loans with similar characteristics are grouped to be evaluated for loan collectibility (such as loan type, past-due status, and risk);
      — how loss rates are determined (e.g., historical loss rates adjusted for environmental factors or migration analysis) and what factors are considered when establishing appropriate time frames over which to evaluate loss experience; and
      — descriptions of qualitative factors (e.g., industry, geographical, economic, and political factors) that may affect loss rates or other loss measurements.

The supporting documents for the ALLL may be integrated in an institution’s credit files, loan-review reports or worksheets, board of directors’ and committee meeting minutes, computer reports, or other appropriate documents and files.

2065.4.1.4 ALLL Under FAS 114

An institution’s ALLL methodology related to FAS 114 loans begins with the use of its normal loan-review procedures to identify whether a loan is impaired as defined by the accounting standard. Institutions should document—

• the method and process for identifying loans to be evaluated under FAS 114 and
• the analysis that resulted in an impairment decision for each loan and the determination of the impairment-measurement method to be

13. Also, refer to paragraph 7.05 of the AICPA Audit Guide.
used (i.e., present value of expected future cash flows, fair value of collateral less costs to sell, or the loan’s observable market price).

Once an institution has determined which of the three available measurement methods to use for an impaired loan under FAS 114, it should maintain supporting documentation as follows:

• When using the present-value-of-expected-future-cash-flows method—
  — the amount and timing of cash flows,
  — the effective interest rate used to discount the cash flows, and
  — the basis for the determination of cash flows, including consideration of current environmental factors and other information reflecting past events and current conditions.
• When using the fair-value-of-collateral method—
  — how fair value was determined, including the use of appraisals, valuation assumptions, and calculations,
  — the supporting rationale for adjustments to appraised values, if any,
  — the determination of costs to sell, if applicable, and
  — appraisal quality, and the expertise and independence of the appraiser.
• When using the observable-market-price-of-a-loan method—
  — the amount, source, and date of the observable market price.

Illustration A describes a practice used by a small financial institution to document its FAS 114 measurement of impairment using a comprehensive worksheet.14 [Examples 1 and 2 provide examples of applying and documenting impairment-measurement methods under FAS 114. Some loans that are evaluated individually for impairment under FAS 114 may be fully collateralized and therefore require no ALLL. Example 3 presents an institution whose loan portfolio includes fully collateralized loans. It describes the documentation maintained by that institution to support its conclusion that no ALLL was needed for those loans.]

Illustration A
Documenting an ALLL Under FAS 114

Comprehensive worksheet for the impairment-measurement process

A small institution utilizes a comprehensive worksheet for each loan being reviewed individually under FAS 114. Each worksheet includes a description of why the loan was selected for individual review, the impairment-measurement technique used, the measurement calculation, a comparison to the current loan balance, and the amount of the ALLL for that loan. The rationale for the impairment-measurement technique used (e.g., present value of expected future cash flows, observable market price of the loan, fair value of the collateral) is also described on the worksheet.

Example 1: ALLL Under FAS 114—Measuring and Documenting Impairment

Facts. Approximately one-third of Institution A’s commercial loan portfolio consists of large-balance, nonhomogeneous loans. Due to their large individual balances, these loans meet the criteria under Institution A’s policies and procedures for individual review for impairment under FAS 114. Upon review of the large-balance loans, Institution A determines that certain of the loans are impaired as defined by FAS 114.

Analysis. For the commercial loans reviewed under FAS 114 that are individually impaired, Institution A should measure and document the impairment on those loans. For those loans that are reviewed individually under FAS 114 and considered individually impaired, Institution A must use one of the methods for measuring impairment that is specified by FAS 114 (that is, the present value of expected future cash flows,
the loan’s observable market price, or the fair value of collateral).

An impairment-measurement method other than the methods allowed by FAS 114 cannot be used. For the loans considered individually impaired under FAS 114, under the circumstances described above, it would not be appropriate for Institution A to choose a measurement method not prescribed by FAS 114. For example, it would not be appropriate to measure loan impairment by applying a loss rate to each loan based on the average historical loss percentage for all of its commercial loans for the past five years.

Institution A should maintain, as sufficient, objective evidence, written documentation to support its measurement of loan impairment under FAS 114. If it uses the present value of expected future cash flows to measure impairment of a loan, it should document (1) the amount and timing of cash flows, (2) the effective interest rate used to discount the cash flows, and (3) the basis for the determination of cash flows, including consideration of current environmental factors and other information reflecting past events and current conditions. If Institution A uses the fair value of collateral to measure impairment, it should document (1) how it determined the fair value, including the use of appraisals, valuation assumptions and calculations; (2) the supporting rationale for adjustments to appraised values, if any, and the determination of costs to sell, if applicable; (3) appraisal quality; and (4) the expertise and independence of the appraiser. Similarly, Institution A should document the amount, source, and date of the observable market price of a loan, if that method of measuring loan impairment is used.

Example 2: ALLL Under FAS 114—Measuring Impairment for a Collateral-Dependent Loan

**Facts.** Institution B has a $10 million loan outstanding to Company X that is secured by real estate, which Institution B individually evaluates under FAS 114 due to the loan’s size. Company X is delinquent in its loan payments under the terms of the loan agreement. Accordingly, Institution B determines that its loan to Company X is impaired, as defined by FAS 114. Because the loan is collateral dependent, Institution B measures impairment of the loan based on the fair value of the collateral. Institution B determines that the most recent valuation of the collateral was performed by an appraiser 18 months ago and, at that time, the estimated value of the collateral (fair value less costs to sell) was $12 million.

Institution B believes that certain of the assumptions that were used to value the collateral 18 months ago do not reflect current market conditions and, therefore, the appraiser’s valuation does not approximate current fair value of the collateral. Several buildings, which are comparable to the real estate collateral, were recently completed in the area, increasing vacancy rates, decreasing lease rates, and attracting several tenants away from the borrower. Accordingly, credit-review personnel at Institution B adjust certain of the valuation assumptions to better reflect the current market conditions as they relate to the loan’s collateral. After adjusting the collateral-valuation assumptions, the credit-review department determines that the current estimated fair value of the collateral, less costs to sell, is $8 million. Given that the recorded investment in the loan is $10 million, Institution B concludes that the loan is impaired by $2 million and records an allowance for loan losses of $2 million.

**Analysis.** Institution B should maintain documentation to support its determination of the allowance for loan losses of $2 million for the loan to Company X. It should document that it measured impairment of the loan to Company X by using the fair value of the loan’s collateral, less costs to sell, which it estimated to be $8 million. This documentation should include (1) the institution’s rationale and basis for the $8 million valuation, including the revised valuation assumptions it used; (2) the valuation calculation; and (3) the determination of costs to sell, if applicable. Because Institution B arrived at the valuation of $8 million by modifying an earlier appraisal, it should document its rationale and basis for the changes it made to the valuation assumptions that resulted in the collateral value declining from $12 million 18 months ago to $8 million in the current period.

---

15. Question 16 in Exhibit D-80A of EITF Topic D-80 and [its] attachments indicates that environmental factors include existing industry, geographical, economic, and political factors.

16. When reviewing collateral-dependent loans, Institution B may often find it more appropriate to obtain an updated appraisal to estimate the effect of current market conditions on the appraised value instead of internally estimating an adjustment.

17. In accordance with the FFIEC’s Federal Register
Example 3: ALLL Under FAS 114—Fully Collateralized Loans

Facts. Institution C has $10 million in loans that are fully collateralized by highly rated debt securities with readily determinable market values. The loan agreement for each of these loans requires the borrower to provide qualifying collateral sufficient to maintain a loan-to-value ratio with sufficient margin to absorb volatility in the securities’ market prices. Institution C’s collateral department has physical control of the debt securities through safekeeping arrangements. In addition, Institution C perfected its security interest in the collateral when the funds were originally distributed. On a quarterly basis, Institution C’s credit-administration function determines the market value of the collateral for each loan using two independent market quotes and compares the collateral value to the loan carrying value. If there are any collateral deficiencies, Institution C notifies the borrower and requests that the borrower immediately remedy the deficiency. Due in part to its efficient operation, Institution C has historically not incurred any material losses on these loans. Institution C believes these loans are fully collateralized and therefore does not maintain any ALLL balance for these loans.

Analysis. To adequately support its determination that no allowance is needed for this group of loans, Institution C must maintain the following documentation:

- The management summary of the ALLL must include documentation indicating that, in accordance with the institution’s ALLL policy, (1) Institution C has verified the collateral protection on these loans, (2) no probable loss has been incurred, and (3) no ALLL is necessary.
- The documentation in Institution C’s loan files must include (1) the two independent market quotes obtained each quarter for each loan’s collateral amount, (2) the documents evidencing the perfection of the security interest in the collateral and other relevant supporting documents, and (3) Institution C’s ALLL policy, including guidance for determining when a loan is considered “fully collateralized,” which would not require an ALLL. Institution C’s policy should require the following factors to be considered and fully documented:
  - volatility of the market value of the collateral
  - recency and reliability of the appraisal or other valuation
  - recency of the institution’s or third party’s inspection of the collateral
  - historical losses on similar loans
  - confidence in the institution’s lien or security position including appropriate—
    • type of security perfection (e.g., physical possession of collateral or secured filing);
    • filing of security perfection (i.e., correct documents and with the appropriate officials);
    • relationship to other liens; and
    • other factors as appropriate for the loan type.

notice, Implementation Issues Arising from FASB No. 114, “Accounting by Creditors for Impairment of a Loan,” published February 10, 1995 (60 Fed. Reg. 7966), impaired, collateral-dependent loans must be reported at the fair value of collateral, less costs to sell, in regulatory reports. This treatment is to be applied to all collateral-dependent loans, regardless of type of collateral.

2065.4.1.5 ALLL Under FAS 5

2065.4.1.5.1 Segmenting the Portfolio

For loans evaluated on a group basis under FAS 5, management should segment the loan portfolio by identifying risk characteristics that are common to groups of loans. Institutions typically decide how to segment their loan portfolios based on many factors, which vary with their business strategies as well as their information system capabilities. Smaller institutions that are involved in less complex activities often segment the portfolio into broad loan categories. This method of segmenting the portfolio is likely to be appropriate in only small institutions offering a narrow range of loan products. Larger institutions typically offer a more diverse and complex mix of loan products. Such institutions may start by segmenting the portfolio into major loan types but typically have more detailed information available that allows them to further segregate the portfolio into product-line segments based on the risk characteristics of each portfolio segment. Regardless of the segmentation method used, an institution should maintain documentation to support its conclusion that the loans in each segment have similar attributes or characteristics.
As economic and other business conditions change, institutions often modify their business strategies, which may result in adjustments to the way in which they segment their loan portfolio for purposes of estimating loan losses. Illustration B presents an example in which an institution refined its segmentation method to more effectively consider risk factors and maintains documentation to support this change.

Illustration B
Documenting Segmenting Practices

Documenting a refinement in a segmentation method

An institution with a significant portfolio of consumer loans performed a review of its ALLL methodology. The institution had determined its ALLL based upon historical loss rates in the overall consumer portfolio. The ALLL methodology was validated by comparing actual loss rates (charge-offs) for the past two years to the estimated loss rates. During this process, the institution decided to evaluate loss rates on an individual-product basis (e.g., auto loans, unsecured loans, or home equity loans). This analysis disclosed significant differences in the loss rates on different products. With this additional information, the methodology was amended in the current period to segment the portfolio by product, resulting in a better estimation of the loan losses associated with the portfolio. To support this change in segmentation practice, the credit-review committee records contain the analysis that was used as a basis for the change and the written report describing the need for the change.

Institutions use a variety of documents to support the segmentation of their portfolios. Some of these documents include—

- loan trial balances by categories and types of loans,
- management reports about the mix of loans in the portfolio,
- delinquency and nonaccrual reports, and
- a summary presentation of the results of an internal or external loan-grading review.

Reports generated to assess the profitability of a loan-product line may be useful in identifying areas in which to further segment the portfolio.

2065.4.1.5.2 Estimating Loss on Groups of Loans

Based on the segmentation of the loan portfolio, an institution should estimate the FAS 5 portion of its ALLL. For those segments that require an ALLL, the institution should estimate the loan and lease losses, on at least a quarterly basis, based upon its ongoing loan-review process and analysis of loan performance. The institution should follow a systematic and consistently applied approach to select the most appropriate loss-measurement methods and support its conclusions and rationale with written documentation. Regardless of the methods used to measure losses, an institution should demonstrate and document that the loss-measurement methods used to estimate the ALLL for each segment are determined in accordance with GAAP as of the financial statement date.

One method of estimating loan losses for groups of loans is through the application of loss rates to the groups’ aggregate loan balances. Such loss rates typically reflect the institution’s historical loan-loss experience for each group of loans, adjusted for relevant environmental factors (e.g., industry, geographical, economic, and political factors) over a defined period of time. If an institution does not have loss experience of its own, it may be appropriate to reference the loss experience of other institutions, provided that the institution demonstrates that the attributes of the loans in its portfolio segment are similar to those of the loans included in the portfolio of the institution providing the loss experience. Institutions should maintain supporting documentation for the technique used to develop their loss rates, including the period of time over which the losses were incurred. If a range of loss is determined, institutions should maintain documentation to support the identified range and the rationale used for determining which estimate is the best estimate within the range of loan losses. An example of

18. An example of a loan segment that does not generally require an ALLL is loans that are fully secured by deposits maintained at the lending institution.

19. Refer to paragraph 8(b) of FAS 5***.

20. Refer to paragraph 23 of FAS 5.
how a small institution performs a comprehensive historical loss analysis is provided as the first item in illustration C. Before employing a loss-estimation model, an institution should evaluate and modify, as needed, the model’s assumptions to ensure that the resulting loss estimate is consistent with GAAP. In order to demonstrate consistency with GAAP, institutions that use loss-estimation models typically document the evaluation, the conclusions regarding the appropriateness of estimating loan losses with a model or other loss-estimation tool, and the support for adjustments to the model or its results.

In developing loss measurements, institutions should consider the impact of current environmental factors and then document which factors were used in the analysis and how those factors affected the loss measurements. Factors that should be considered in developing loss measurements include the following:

- levels of and trends in delinquencies and impaired loans
- levels of and trends in charge-offs and recoveries
- trends in volume and terms of loans
- effects of any changes in risk-selection and underwriting standards, and other changes in lending policies, procedures, and practices
- experience, ability, and depth of lending management and other relevant staff
- national and local economic trends and conditions
- industry conditions
- effects of changes in credit concentrations

For any adjustment of loss measurements for environmental factors, the institution should maintain sufficient, objective evidence to support the amount of the adjustment and to explain why the adjustment is necessary to reflect current information, events, circumstances, and conditions in the loss measurements.

The second item in illustration C provides an example of how an institution adjusts its commercial real estate historical loss rates for changes in local economic conditions. Example 4 provides an example of maintaining supporting documentation for adjustments to portfolio-segment loss rates for an environmental factor related to an economic downturn in the borrower’s primary industry. Example 5 describes one institution’s process for determining and documenting an ALLL for loans that are not individually impaired but have characteristics indicating there are loan losses on a group basis.

Illustration C

Documenting the Setting of Loss Rates

Comprehensive loss analysis in a small institution

A small institution determines its loss rates based on loss rates over a three-year historical period. The analysis is conducted by type of loan and is further segmented by originating branch office. The analysis considers charge-offs and recoveries in determining the loss rate. The institution also considers the loss rates for each loan grade and compares them to historical losses on similarly rated loans in arriving at the historical loss factor. The institution maintains supporting documentation for its loss-factor analysis, including historical losses by type of loan, originating branch office, and loan grade for the three-year period.

Adjustment of loss rates for changes in local economic conditions

An institution develops a factor to adjust loss rates for its assessment of the impact of changes in the local economy. For example, when analyzing the loss rate on commercial real estate loans, the assessment identifies changes in recent commercial building occupancy rates. The institution generally finds the occupancy statistics to be a good indicator of probable losses on these types of loans. The institution maintains documentation that summarizes the relationship between current occupancy rates and its loss experience.

Example 4: ALLL Under FAS 5—Adjusting Loss Rates

Facts. Institution D’s lending area includes a metropolitan area that is financially dependent

21. Refer to paragraph 7.13 in the AICPA Audit Guide.
upon the profitability of a number of manufacturing businesses. These businesses use highly specialized equipment and significant quantities of rare metals in the manufacturing process. Due to increased low-cost foreign competition, several of the parts suppliers servicing these manufacturing firms declared bankruptcy. The foreign suppliers have subsequently increased prices, and the manufacturing firms have suffered from increased equipment maintenance costs and smaller profit margins. Additionally, the cost of the rare metals used in the manufacturing process increased and has now stabilized at double last year’s price. Due to these events, the manufacturing businesses are experiencing financial difficulties and have recently announced downsizing plans.

Although Institution D has yet to confirm an increase in its loss experience as a result of these events, management knows that it lends to a significant number of businesses and individuals whose repayment ability depends upon the long-term viability of the manufacturing businesses. Institution D’s management has identified particular segments of its commercial and consumer customer bases that include borrowers highly dependent upon sales or salary from the manufacturing businesses. Institution D’s management performs an analysis of the affected portfolio segments to adjust its historical loss rates used to determine the ALLL. In this particular case, Institution D has experienced similar business and lending conditions in the past that it can compare to current conditions.

**Analysis.** Institution D should document its support for the loss-rate adjustments that result from considering these manufacturing firms’ financial downturns. It should document its identification of the particular segments of its commercial and consumer loan portfolio for which it is probable that the manufacturing business’ financial downturn has resulted in loan losses. In addition, it should document its analysis that resulted in the adjustments to the loss rates for the affected portfolio segments. As part of its documentation, Institution D should maintain copies of the documents supporting the analysis, including relevant newspaper articles, economic reports, economic data, and notes from discussions with individual borrowers.

Since Institution D has had similar situations in the past, its supporting documentation should also include an analysis of how the current conditions compare to its previous loss experiences in similar circumstances. As part of its effective ALLL methodology, a summary should be created of the amount and rationale for the adjustment factor, which management presents to the audit committee and board for their review and approval prior to the issuance of the financial statements.

### Example 5: ALLL Under FAS 5—Estimating Losses on Loans Individually Reviewed for Impairment but Not Considered Individually Impaired

**Facts.** Institution E has outstanding loans of $2 million to Company Y and $1 million to Company Z, both of which are paying as agreed upon in the loan documents. The institution’s ALLL policy specifies that all loans greater than $750,000 must be individually reviewed for impairment under FAS 114. Company Y’s financial statements reflect a strong net worth, good profits, and ongoing ability to meet debt-service requirements. In contrast, recent information indicates Company Z’s profitability is declining and its cash flow is tight. Accordingly, this loan is rated substandard under the institution’s loan-grading system. Despite its concern, management believes Company Z will resolve its problems and determines that neither loan is individually impaired as defined by FAS 114.

Institution E segments its loan portfolio to estimate loan losses under FAS 5. Two of its loan portfolio segments are Segment 1 and Segment 2. The loan to Company Y has risk characteristics similar to the loans included in Segment 1, and the loan to Company Z has risk characteristics similar to the loans included in Segment 2.

In its determination of the ALLL under FAS 5, Institution E includes its loans to Company Y and Company Z in the groups of loans with similar characteristics (i.e., Segment 1 for Company Y’s loan and Segment 2 for Company Z’s loan). Management’s analyses of Segment 1 and Segment 2 indicate that it is probable that each segment includes some losses, even though the losses cannot be identified to one or more specific loans. Management estimates that the use of its historical loss rates for these two segments, with adjustments for changes in environmental factors, provides a reasonable estimate of the institution’s probable loan losses in these segments.

---

22. These groups of loans do not include any loans that have been individually reviewed for impairment under FAS 114 and determined to be impaired as defined by FAS 114.
Analysis. Institution E should adequately document an ALLL under FAS 5 for these loans that were individually reviewed for impairment but are not considered individually impaired. As part of its effective ALLL methodology, Institution E documents the decision to include its loans to Company Y and Company Z in its determination of its ALLL under FAS 5. It should also document the specific characteristics of the loans that were the basis for grouping these loans with other loans in Segment 1 and Segment 2, respectively. Institution E maintains documentation to support its method of estimating loan losses for Segment 1 and Segment 2, including the average loss rate used, the analysis of historical losses by loan type and by internal risk rating; and support for any adjustments to its historical loss rates. The institution also maintains copies of the economic and other reports that provided source data.

2065.4.1.6 Consolidating the Loss Estimates

To verify that ALLL balances are presented fairly in accordance with GAAP and are audit-able, management should prepare a document that summarizes the amount to be reported in the financial statements for the ALLL. The board of directors should review and approve this summary.

Common elements in such summaries include—

- the estimate of the probable loss or range of loss incurred for each category evaluated (e.g., individually evaluated impaired loans, homogeneous pools, and other groups of loans that are collectively evaluated for impairment);
- the aggregate probable loss estimated using the institution’s methodology;
- a summary of the current ALLL balance;
- the amount, if any, by which the ALLL is to be adjusted; and
- depending on the level of detail that supports the ALLL analysis, detailed subschedules of loss estimates that reconcile to the summary schedule.

Illustration D describes how an institution documents its estimated ALLL by adding comprehensive explanations to its summary schedule.

Generally, an institution’s review and approval process for the ALLL relies upon the data provided in these consolidated summaries. There may be instances in which individuals or committees that review the ALLL methodology and resulting allowance balance identify adjustments that need to be made to the loss estimates to provide a better estimate of loan losses. These changes may be due to information not known at the time of the initial loss estimate (e.g., information that surfaces after determining and adjusting, as necessary, historical loss rates, or a recent decline in the marketability of property after conducting a FAS 114 valuation based upon the fair value of collateral). It is important that these adjustments are consistent with GAAP and are reviewed and approved by appropriate personnel. Additionally, the summary should provide each subsequent reviewer with an understanding of the support behind these adjustments. Therefore, management should document the nature of any adjustments and the underlying rationale for making the changes. This documentation should be provided to those making the final determination of the ALLL amount. Example 6 addresses the documentation of the final amount of the ALLL.

23. Subsequent to adjustments, there should be no material differences between the consolidated loss estimate, as determined by the methodology, and the final ALLL balance reported in the financial statements.
Illustration D

Summarizing Loss Estimates

Descriptive comments added to the consolidated ALLL summary schedule

To simplify the supporting documentation process and to eliminate redundancy, an institution adds detailed supporting information to its summary schedule. For example, this institution’s board of directors receives, within the body of the ALLL summary schedule, a brief description of the institution’s policy for selecting loans for evaluation under FAS 114. Additionally, the institution identifies which FAS 114 impairment-measurement method was used for each individually reviewed impaired loan. Other items on the schedule include a brief description of the loss factors for each segment of the loan portfolio, the basis for adjustments to loss rates, and explanations of changes in ALLL amounts from period to period, including cross-references to more detailed supporting documents.

Example 6: Consolidating the Loss Estimates—Documenting the Reported ALLL

Facts. Institution F determines its ALLL using an established systematic process. At the end of each period, the accounting department prepares a summary schedule that includes the amount of each of the components of the ALLL, as well as the total ALLL amount, for review by senior management, the credit committee, and, ultimately, the board of directors. Members of senior management and the credit committee meet to discuss the ALLL. During these discussions, they identify changes that are required by GAAP to be made to certain of the ALLL estimates. As a result of the adjustments made by senior management, the total amount of the ALLL changes. However, senior management (or its designee) does not update the ALLL summary schedule to reflect the adjustments or reasons for the adjustments. When performing their audit of the financial statements, the independent accountants are provided with the original ALLL summary schedule that was reviewed by senior management and the credit committee, as well as a verbal explanation of the changes made by senior management and the credit committee when they met to discuss the loan-loss allowance.

Analysis. Institution F’s documentation practices supporting the balance of its loan-loss allowance, as reported in its financial statements, are not in compliance with existing documentation guidance. An institution must maintain supporting documentation for the loan-loss allowance amount reported in its financial statements. As illustrated above, there may be instances in which ALLL reviewers identify adjustments that need to be made to the loan-loss estimates. The nature of the adjustments, how they were measured or determined, and the underlying rationale for making the changes to the ALLL balance should be documented. Appropriate documentation of the adjustments should be provided to the board of directors (or its designee) for review of the final ALLL amount to be reported in the financial statements. For institutions subject to external audit, this documentation should also be made available to the independent accountants. If changes frequently occur during management or credit committee reviews of the ALLL, management may find it appropriate to analyze the reasons for the frequent changes and to reassess the methodology the institution uses.

2065.4.1.7 Validating the ALLL Methodology

An institution’s ALLL methodology is considered valid when it accurately estimates the amount of loss contained in the portfolio. Thus, the institution’s methodology should include procedures that adjust loss-estimation methods to reduce differences between estimated losses and actual subsequent charge-offs, as necessary.

To verify that the ALLL methodology is valid and conforms to GAAP and supervisory guidance, an institution’s directors should establish internal-control policies, appropriate for the size of the institution and the type and complexity of its loan products. These policies should include procedures for a review, by a party who is independent of the ALLL-estimation process, of the ALLL methodology and its application in order to confirm its effectiveness.

In practice, financial institutions employ numerous procedures when validating the reasonableness of their ALLL methodology and
determining whether there may be deficiencies in their overall methodology or loan-grading process. Examples are—

• a review of trends in loan volume, delinquencies, restructurings, and concentrations;
• a review of previous charge-off and recovery history, including an evaluation of the timeliness of the entries to record both the charge-offs and the recoveries;
• a review by a party that is independent of the ALLL-estimation process (this often involves the independent party reviewing, on a test basis, source documents and underlying assumptions to determine that the established methodology develops reasonable loss estimates); and
• an evaluation of the appraisal process of the underlying collateral. (This may be accomplished by periodically comparing the appraised value to the actual sales price on selected properties.)

2065.4.1.7.1 Supporting Documentation for the Validation Process

Management usually supports the validation process with the workpapers from the ALLL-review function. Additional documentation often includes the summary findings of the independent reviewer. The institution’s board of directors, or its designee, reviews the findings and acknowledges its review in its meeting minutes. If the methodology is changed based upon the findings of the validation process, documentation that describes and supports the changes should be maintained.

2065.4.1.8 Appendix—Application of GAAP

[This appendix was designated appendix B in the policy statement.] An ALLL recorded pursuant to GAAP is an institution’s best estimate of the probable amount of loans and lease-financing receivables that it will be unable to collect based on current information and events. A creditor should record an ALLL when the criteria for accrual of a loss contingency as set forth in GAAP have been met. Estimating the amount of an ALLL involves a high degree of management judgment and is inevitably imprecise. Accordingly, an institution may determine that the amount of loss falls within a range. An institution should record its best estimate within the range of loan losses.

Under GAAP, Statement of Financial Accounting Standards No. 5, “Accounting for Contingencies” (FAS 5), provides the basic guidance for recognition of a loss contingency, such as the collectibility of loans (receivables), when it is probable that a loss has been incurred and the amount can be reasonably estimated. Statement of Financial Accounting Standards No. 114, “Accounting by Creditors for Impairment of a Loan” (FAS 114) provides more specific guidance about the measurement and disclosure of impairment for certain types of loans. Specifically, FAS 114 applies to loans that are identified for evaluation on an individual basis. Loans are considered impaired when, based on current information and events, it is probable that the creditor will be unable to collect all interest and principal payments due according to the contractual terms of the loan agreement.

For individually impaired loans, FAS 114 provides guidance on the acceptable methods to measure impairment. Specifically, FAS 114 states that when a loan is impaired, a creditor should measure impairment based on the present value of expected future principal and interest cash flows discounted at the loan’s effective interest rate, except that as a practical expedient, a creditor may measure impairment based on a loan’s observable market price or the fair value of collateral, if the loan is collateral dependent. When developing the estimate of expected future cash flows for a loan, an institution should consider all available information reflecting past events and current conditions, including the...
effect of existing environmental factors. The following illustration provides an example of an institution estimating a loan’s impairment when the loan has been partially charged off.

Illustration
Interaction of FAS 114 with an Adversely Classified Loan, Partial Charge-Off, and the Overall ALLL

An institution determined that a collateral-dependent loan, which it identified for evaluation, was impaired. In accordance with FAS 114, the institution established an ALLL for the amount that the recorded investment in the loan exceeded the fair value of the underlying collateral, less costs to sell.

Consistent with relevant regulatory guidance, the institution classified as “Loss,” the portion of the recorded investment deemed to be the confirmed loss and classified the remaining recorded investment as “Substandard.” For this loan, the amount classified “Loss” was less than the impairment amount (as determined under FAS 114). The institution charged off the “Loss” portion of the loan. After the charge-off, the portion of the ALLL related to this “Substandard” loan (1) reflects an appropriate measure of impairment under FAS 114, and (2) is included in the aggregate FAS 114 ALLL for all loans that were identified for evaluation and individually considered impaired. The aggregate FAS 114 ALLL is included in the institution’s overall ALLL.

Large groups of smaller-balance homogeneous loans that are collectively evaluated for impairment are not included in the scope of FAS 114.27 Such groups of loans may include, but are not limited to, credit card, residential mortgage, and consumer installment loans. FAS 5 addresses the accounting for impairment of these loans. Also, FAS 5 provides the accounting guidance for impairment of loans that are not identified for evaluation on an individual basis and loans that are individually evaluated but are not individually considered impaired. Institutions should ensure that they do not layer their loan-loss allowances. Layering is the inappropriate practice of recording in the ALLL more than one amount for the same probable loan loss. Layering can happen when an institution includes a loan in one segment, determines its best estimate of loss for that loan either individually or on a group basis (after taking into account all appropriate environmental factors, conditions, and events), and then includes the loan in another group, which receives an additional ALLL amount.28

While different institutions may use different methods, there are certain common elements that should be included in any loan-loss allowance methodology. Generally, an institution’s methodology should—

• include a detailed analysis of the loan portfolio, performed on a regular basis;
• consider all loans (whether on an individual or group basis);
• identify loans to be evaluated for impairment on an individual basis under FAS 114 and segment the remainder of the portfolio into groups of loans with similar risk characteristics for evaluation and analysis under FAS 5;
• consider all known relevant internal and external factors that may affect loan collectibility;
• be applied consistently but, when appropriate, be modified for new factors affecting collectibility;
• consider the particular risks inherent in different kinds of lending;
• consider current collateral values (less costs to sell), where applicable;
• require that analyses, estimates, reviews, and other ALLL methodology functions be performed by competent and well-trained personnel;
• be based on current and reliable data;
• be well documented, in writing, with clear explanations of the supporting analyses and rationale; and
• include a systematic and logical method to consolidate the loss estimates and ensure the

27. In addition, FAS 114 does not apply to loans measured at fair value or at the lower of cost or fair value, leases, or debt securities.

28. According to the Federal Financial Institutions Examination Council’s Federal Register notice, Implementation Issues Arising from FASB Statement No. 114, “Accounting by Creditors for Impairment of a Loan,” published February 10, 1995, institution-specific issues should be reviewed when estimating loan losses under FAS 114. This analysis should be conducted as part of the evaluation of each individual loan reviewed under FAS 114 to avoid potential ALLL layering.
ALLL balance is recorded in accordance with GAAP.\textsuperscript{29}

A systematic methodology that is properly designed and implemented should result in an institution’s best estimate of the ALLL. Accordingly, institutions should adjust their ALLL balance, either upward or downward, in each period for differences between the results of the systematic determination process and the unadjusted ALLL balance in the general ledger.\textsuperscript{30}

2065.4.2 INSPECTION OBJECTIVES

1. To evaluate internal controls over the loan-loss estimation process by evaluating the ALLL written policy and the process used to create and maintain the policy, loan-grading systems, and other associated internal controls over credit risk.
2. To determine the existence of an ALLL balance and review the summary schedule supporting it.
3. To analyze and review the evaluation for Statement of Financial Accounting Standards No. 114 (FAS 114) (for individually listed loans).
4. To analyze and review the evaluation for Statement of Financial Accounting Standards No. 5 (FAS 5) (for groups of loans).
5. To determine if the BHC has adequately developed a range of loss and a margin for imprecision.
6. To determine that the ALLL reflects estimated credit losses for specifically identified loans (or groups of loans) and any estimated probable credit losses inherent in the remainder of the loan portfolio at the balance-sheet date.
7. To analyze and review the ALLL-documentation support.
8. To determine the adequacy of the BHC’s process to evaluate the ALLL methodology and to adjust the methodology, as needed.

2065.4.3 INSPECTION PROCEDURES

1. Determine if the board of directors has developed and maintained an appropriate, systematic, and consistently applied process to determine the amounts of the ALLL and provision for loan losses, or if it has instructed management to do so. Determine if the ALLL policies specifically address the BHC’s goals, risk profile, personnel, and other resources.
2. Determine if the board of directors has approved the written ALLL policy.
3. Determine if the BHC’s loan-loss estimate, in accordance with its methodology, is consistent with generally accepted accounting principles and supervisory guidance. Additionally, ensure that the BHC’s loan-loss estimate is materially consistent with the reported balance of the BHC’s ALLL account.
4. Determine if the ALLL methodology is periodically validated by an independent party and, if appropriate, revised.
5. Ascertain whether the audit committee is overseeing and monitoring the internal controls over the ALLL-documentation process.
6. Ascertain that the BHC maintains adequate written documentation of its ALLL, including clear explanations of the supporting analyses and rationale. The documentation should consist of—
   • policies and procedures over the systems and controls that maintain an appropriate ALLL and over the ALLL methodology,
   • the loan-grading system or process,
   • a summary or consolidation (including losses) of the ALLL balance,
   • a validation of the ALLL methodology, and
   • periodic adjustments to the ALLL process.
7. Determine if the amount reported for the ALLL for each period and the provisions for loan and leases losses are reviewed and approved by the board of directors.

\textsuperscript{29} Refer to paragraph 7.05 of the AICPA Audit Guide.
\textsuperscript{30} Institutions should refer to the guidance on materiality in SFC Staff Accounting Bulletin No. 99, Materiality.
The federal banking agencies1 issued, in January 2012, “Interagency Supervisory Guidance on Allowance for Loan and Lease Losses Estimation Practices for Loans and Lines of Credit Secured by Junior Liens on 1–4 Family Residential Properties.” The guidance applies to all banking organizations with junior-lien loans. It was issued to address the allowance for loan and lease losses (ALLL) estimation practices for junior-lien loans and lines of credit (collectively, junior liens). (See SR-12-3.)

Domestic banking organizations that are supervised by the Federal Reserve are reminded to consider all credit quality indicators relevant to their junior liens. Generally, this information should include the delinquency status of senior liens associated with the institution’s junior liens and whether the senior lien has been modified. Institutions should ensure that during the ALLL estimation process, sufficient information is gathered to adequately assess the probable loss incurred within junior-lien portfolios.

This 2012 ALLL guidance applies to institutions of all sizes. The guidance states that an institution should use reasonably available tools to determine the payment status of senior liens associated with its junior liens, such as credit reports, third-party services, or, in certain cases, a proxy. It is expected that large, complex institutions would find most tools reasonably available and would use proxies in limited circumstances.

The guidance does not add or modify existing regulatory reporting requirements issued by the agencies or current generally accepted accounting principles (GAAP). This guidance reiterates key concepts included in GAAP and existing supervisory guidance related to the ALLL. (See, for example, SR-06-17 (section 2065.3) and SR-01-17 (section 2065.4) and their attachments.

Institutions also are reminded to follow appropriate risk-management principles in managing junior-lien loans and lines of credit, including the May 2005 “Interagency Credit Risk Management Guidance for Home Equity Lending.” (See SR-05-11 and section 2010.2.4.)

2065.5.1 ALLL ESTIMATION PRACTICES FOR LOANS AND LINES OF CREDIT SECURED BY JUNIOR LIENS ON 1–4 FAMILY RESIDENTIAL PROPERTIES

Amidst continued uncertainty in the economy and the housing market, federally regulated financial institutions are reminded to monitor all credit quality indicators relevant to credit portfolios, including junior liens. While the following guidance specifically addresses junior liens, it contains principles that apply to estimating the ALLL for all types of loans. Institutions also are reminded to follow appropriate risk-management principles in managing junior-lien loans and lines of credit, including those in the May 2005 guidance.

The December 2006 “Interagency Policy Statement on the Allowance for Loan and Lease Losses” (IPS) states: “Estimates of credit losses should reflect consideration of the significant factors that affect the collectibility of the portfolio as of the evaluation date.” (See section 2065.3.)

The “Interagency Credit Risk Management Guidance for Home Equity Lending” states: “Financial institutions should establish an appropriate ALLL and hold capital commensurate with the riskiness of portfolios. In determining the ALLL adequacy, an institution should consider how the interest-only and draw features of home equity lines of credit (HELOCs) during the lines’ revolving periods could affect the loss curves for the HELOC portfolio. Those institutions engaging in programmatic subprime home equity lending or institutions that have higher risk products are expected to recognize the elevated risk of the activity when assessing capital and ALLL adequacy.”

While the 2012 ALLL guidance specifically addresses junior liens, it contains principles that apply to estimating the ALLL for all types of loans.

1. The federal banking agencies are the Board of Governors of the Federal Reserve System (Federal Reserve Board), the Federal Deposit Insurance Corporation (FDIC), the Office of the Comptroller of the Currency (OCC), and the National Credit Union Administration (NCUA).
2065.5.1.1 Responsibilities of Management

2065.5.1.1.1 Consideration of All Significant Factors

Institutions should ensure that during the ALLL estimation process sufficient information is gathered to adequately assess the probable loss incurred within junior-lien portfolios. Generally, this information should include the delinquency status of senior liens associated with the institution’s junior liens and whether the senior-lien loan has been modified. Institutions with significant holdings of junior liens should gather and analyze data on the associated senior-lien loans it owns or services. When an institution does not own or service the associated senior-lien loans, it should use reasonably available tools to determine the payment status of the senior-lien loans. Such tools include obtaining credit reports or data from third-party services to assist in matching an institution’s junior liens with its associated senior liens. Additionally, an institution may, as a proxy, use the relevant performance data on similar senior liens it owns or services. An institution with an insignificant volume of junior-lien loans and lines of credit may use judgment when determining what information about associated senior liens not owned or serviced is reasonably available.

Institutions with significant holdings of junior liens should also periodically refresh other credit quality indicators the organization has deemed relevant about the collectibility of its junior liens, such as borrower credit scores and combined loan-to-value ratios (CLTVs), which include both the senior and junior liens. An institution should refresh relevant credit quality indicators as often as necessary considering economic and housing market conditions that affect the institution’s junior-lien portfolio. As noted in SR-06-17, “changes in the level of the ALLL should be directionally consistent with changes in the factors, taken as a whole, that evidence credit losses.” For example, if declining credit quality trends in the factors relevant to either junior liens or their associated senior-lien loans are evident, the ALLL level as a percentage of the junior-lien portfolio should generally increase, barring unusual charge-off activity. Similarly, if improving credit quality trends are evident, the ALLL level as a percentage of the junior-lien portfolio should generally decrease.

Institutions routinely gather information for credit-risk management purposes, but some may not fully use that information in the allowance estimation process. Institutions should consider all reasonably available and relevant information in the allowance estimation process, including information obtained for credit-risk management purposes. Financial Accounting Standards Board Accounting Standards Codification (ASC) Topic 450 states that losses should be accrued by a charge to income if information available prior to issuance of the financial statements indicates that it is probable that an asset has been impaired. The 2006 IPS states, “...estimates of credit losses should reflect consideration of all significant factors.” (See SR-06-17 and its attachment.) Consequently, it is considered inconsistent with both GAAP and supervisory guidance to fail to gather and consider reasonably available and relevant information that would significantly affect management’s judgment about the collectibility of the portfolio.

2065.5.1.2 Adequate Segmentation

Institutions normally segment their loan portfolio into groups of loans based on risk characteristics as part of the ALLL estimation process. Institutions with significant holdings of junior liens should ensure adequate segmentation within their junior-lien portfolio to appropriately estimate the allowance for high-risk segments within this portfolio. A lack of segmentation can result in an allowance established for the entire junior-lien portfolio that is lower than what the allowance would be if high-risk loans were segregated and grouped together for evaluation in one or more separate segments. The following credit quality indicators may be appropriate for use in identifying high-risk junior-lien portfolio segments:

- delinquency and modification status of an institution’s junior liens
- delinquency and modification status of senior-lien loans associated with an institution’s junior liens

2. “Portfolio” refers to loans collectively evaluated for impairment under ASC Topic 450; this supervisory guidance may also be applicable to junior-lien loans that are subject to measurement for impairment under ASC Subtopic 310-10, Receivables - Overall (formerly Statement of Financial Accounting Standards No. 114, Accounting by Creditors for Impairment of a Loan) and ASC Subtopic 310-30, Loans and Debt Securities Acquired with Deteriorated Credit Quality (formerly AICPA Statement of Position 03-3, Accounting for Certain Loans or Debt Securities Acquired in a Transfer).
In particular, institutions should ensure their ALLL methodology adequately incorporates the elevated borrower default risk associated with payment shocks due to (1) rising interest rates for adjustable rate junior liens, including HELOCs, or (2) HELOCs converting from interest-only to amortizing loans. If the default rate of junior liens that have experienced payment shock is higher than the default rate of junior liens that have not experienced payment shock, an institution should determine whether it has a significant number of junior liens approaching their conversion to amortizing loans or approaching an interest rate adjustment date. If so, to ensure the institution’s estimate of credit losses is not understated, it would be necessary to adjust historical default rates on these junior liens to incorporate the effect of payment shocks that, based on current information and conditions, are likely to occur.

Adequate segmentation of the junior-lien portfolio by risk factors should facilitate an institution’s ability to track default rates and loss severity for high-risk segments and its ability to appropriately incorporate these data into the allowance estimation process.

2065.5.1.1.3 Qualitative or Environmental Factor Adjustments

As noted in SR-06-17, institutions should adjust a loan group’s historical loss rate for the effect of qualitative or environmental factors that are likely to cause estimated credit losses as of the evaluation date to differ from the group’s historical loss experience. Institutions typically reflect the overall effect of these factors on a loan group as an adjustment that, as appropriate, increases or decreases the historical loss rate applied to the loan group. Alternatively, the effect of these factors may be reflected through separate standalone adjustments within the ASC Subtopic 450-20 component of the ALLL.

When an institution uses qualitative or environmental factors to estimate probable losses related to individual high-risk segments within the junior-lien portfolio, any adjustment to the historical loss rate or any separate standalone adjustment should be supported by an analysis that relates the adjustment to the characteristics of and trends in the individual risk segments. In addition, changes in the allowance allocation for junior liens should be directionally consistent with changes in the factors taken as a whole that evidence credit losses on junior liens, keeping in mind the characteristics of the institution’s junior-lien portfolio.

2065.5.1.1.4 Charge-Off and Nonaccrual Policies

Banking institutions should ensure that their charge-off policy on junior liens is in accordance with the June 2000 Uniform Retail Credit Classification and Account Management Policy. (See SR-00-8 and the appendix of section 2241.0.1.) As stated in SR-06-17, “when available information confirms that specific loans, or portions thereof, are uncollectible, these amounts should be promptly charged off against the ALLL.” Institutions also should ensure that income-recognition practices related to junior liens are appropriate. Consistent with GAAP and regulatory guidance, institutions are expected to have revenue recognition practices that do not result in overstating income. Placing a junior lien on nonaccrual, including a current junior lien, when payment of principal or interest in full is not expected is one appropriate method to ensure that income is not overstated. An institution’s income-recognition policy should incorporate management’s consideration of all reasonably available information including, for junior liens, the performance of the associated senior liens as well as trends in other credit quality indicators. The policy should require that consideration of these factors takes place before foreclosure on the senior lien or delinquency of the junior lien. The policy should also explain how management’s consideration of these factors affects income recognition prior to foreclosure on the junior lien.

3. Forecasts of future interest rate increases should not be included in the determination of the ALLL. However, if rates have risen since the last rate adjustment, the effect of the increase on the amount of the payment at the next rate adjustment should be considered.
senior lien or delinquency of the junior lien to ensure income is not overstated.

2065.5.1.5 Responsibilities of Examiners

To the extent an institution has significant holdings of junior liens, examiners should assess the appropriateness of the institution’s ALLL methodology and documentation related to these loans, and the appropriateness of the level of the ALLL established for this portfolio. As noted in SR-06-17, for analytical purposes, an institution should attribute portions of the ALLL to loans that it individually evaluates and determines to be impaired under ASC Subtopic 310-10 and to groups of loans that it evaluates collectively under ASC Subtopic 450-20. However, the ALLL is available to cover all charge-offs that arise from the loan portfolio.

Consistent with SR-06-17, in their review of the junior-lien portfolio, examiners should consider all significant factors that affect the collectability of the portfolio. Examiners should take the following steps when reviewing the appropriateness of an institution’s allowance that is established for junior liens:

1. Evaluate the institution’s ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL for junior liens. This should include whether all significant qualitative or environmental factors that affect the collectability of the portfolio (including those factors previously discussed) have been appropriately considered in accordance with GAAP.
2. Review management’s use of loss-estimation models or other loss estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.
3. Review management’s support for any qualitative or environmental factor adjustments to the allowance related to junior liens. Examiners should ensure that all relevant qualitative or environmental factors were considered and adjustments to historical loss rates for specific risk segments within the junior-lien portfolio are supported by an analysis that relates the adjustments to the characteristics of and trends in the individual risk segments.
4. Review the interest income accounts associated with junior liens to ensure that the institution’s net income is not overstated.

If the examiner concludes that the reported ALLL for junior liens is not appropriate or determines that the ALLL evaluation process is deficient, recommendations for correcting these deficiencies, including any examiner concerns regarding an appropriate level for the ALLL, should be noted in the inspection report. Examiners should cite any departures from GAAP and regulatory guidance, as applicable. Additional supervisory action may also be taken based on the magnitude of the observed shortcomings in the ALLL process.

2065.5.2 INSPECTION OBJECTIVES

The inspection objectives for an institution that has significant holdings of loans secured by junior liens are as follows:

1. To evaluate the appropriateness of the institution’s methodology and documentation of the ALLL related to these loans.
2. To ascertain whether the institution’s policies, practices, procedures, and internal controls regarding the ALLL estimation practices for loans secured by junior liens are sufficient.
3. To determine whether the level of the ALLL is reasonable and adequate for the institution’s volume of such loans outstanding.
4. To evaluate if the institution has fully considered and accounted for all significant qualitative or environmental factors that affect the collectability of such loans.
5. To ascertain whether the portfolio has been properly accounted in accordance with GAAP and whether all applicable supervisory and regulatory guidance, as well as statutory and regulatory requirements, have been adhered to.

2065.5.3 INSPECTION PROCEDURES

1. To the extent an institution has significant holdings of loans secured by junior liens, assess the appropriateness of the institution’s a. ALLL methodology and documentation related to these loans, and b. ALLL level established for this portfolio.
2. During the inspection’s review of the of the junior-lien portfolio, consider all significant qualitative or environmental factors that affect the collectibility of the junior-lien portfolio and whether they have been appropriately considered in accordance with GAAP.
3. Perform the following steps when reviewing the appropriateness of the institution’s ALLL that is established for junior liens:
   a. Evaluate the institution’s ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL for junior liens.
   b. Review management’s use of loss-estimation models or other loss-estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.
   c. Review management’s support for any qualitative or environmental factor adjustments to the ALLL related to junior liens. Ensure that all relevant qualitative or environmental factors were considered and adjustments to historical loss rates for specific risk segments within the junior-lien portfolio are supported by an analysis that relates the adjustment to the characteristics of and trends in the individual risk segments.
   d. Review the interest income accounts associated with junior liens to ensure that the institution’s net income is not overstated.
4. Provide comments in the inspection report when the ALLL for junior liens is not appropriate or if the ALLL evaluation process is deficient. Include recommendations for correcting these deficiencies and any concerns regarding an appropriate level for the ALLL.
5. Cite in the inspection report any departures from GAAP and regulatory guidance, as applicable.
Incentive compensation practices in the financial industry were one of many factors that contributed to the financial crisis that began in mid-2007. Banking organizations too often rewarded employees for increasing the organization’s revenue or short-term profit without adequate recognition of the risks the employees’ activities posed to the organization. These practices exacerbated the risks and losses at a number of banking organizations and resulted in the misalignment of the interests of employees with the long-term well-being and safety and soundness of their organizations. This section provides guidance on sound incentive compensation practices to banking organizations supervised by the Federal Reserve (also the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision (collectively, the “Agencies”)). This guidance is intended to assist banking organizations in designing and implementing incentive compensation arrangements and related policies and procedures that are consistent with safety and soundness. Accordingly, the Federal Reserve expects banking organizations to maintain incentive compensation practices that are consistent with safety and soundness, even when these practices go beyond those needed to align shareholder and employee interests.

To be consistent with safety and soundness, incentive compensation arrangements at a banking organization should:

1. Provide employees incentives that appropriately balance risk and reward;
2. Be compatible with effective controls and risk-management; and
3. Be supported by strong corporate governance, including active and effective oversight by the organization’s board of directors.

These principles, and the types of policies, procedures, and systems that banking organizations should have to help ensure compliance with them, are discussed later in this guidance.

The Federal Reserve expects banking organizations to regularly review their incentive compensation arrangements for all executive and non-executive employees who, either individually or as part of a group, have the ability to expose the organization to material amounts of risk, as well as to regularly review the risk-management, control, and corporate governance processes related to these arrangements. Banking organizations should immediately address any identified deficiencies in these arrangements or processes that are inconsistent with safety and soundness. Banking organizations are responsible for ensuring that their incentive compensation arrangements are consistent with the principles described in this guidance and that they do not encourage employees to expose the organization to imprudent risks that may pose a threat to the safety and soundness of the organization.

1. Examples of risks that may present a threat to the organization’s safety and soundness include credit, market, liquidity, operational, legal, compliance, and reputational risks.
2. As used in this guidance, the term “banking organization” includes national banks, state member banks, state nonmember banks, savings associations, U.S. bank holding companies, savings and loan holding companies, Edge and agreement corporations, and the U.S. operations of foreign banking organizations (FBOs) with a branch, agency, or commercial lending company in the United States. If the Federal Reserve is referenced, the reference is intended to also include the other supervisory Agencies.
3. This guidance (see 75 Fed. Reg. 36395, June 25, 2010, for the entire text) and the principles reflected herein are consistent with the Principles for Sound Compensation Practices issued by the Financial Stability Board (FSB) in April 2009, and with the FSB’s Implementation Standards for those principles, issued in September 2009.
4. In this guidance, the term “incentive compensation” refers to that portion of an employee’s current or potential compensation that is tied to achievement of one or more specific metrics (e.g., a level of sales, revenue, or income). Incentive compensation does not include compensation that is awarded solely for, and the payment of which is solely tied to, continued employment (e.g., salary). In addition, the term does not include compensation arrangements that are determined based solely on the employee’s level of compensation and does not vary based on one or more performance metrics (e.g., a 401(k) plan under which the organization contributes a set percentage of an employee’s salary).
The Federal Reserve recognizes that incentive compensation arrangements often seek to serve several important and worthy objectives. For example, incentive compensation arrangements may be used to help attract skilled staff, induce better organization-wide and employee performance, promote employee retention, provide retirement security to employees, or allow compensation expenses to vary with revenue on an organization-wide basis. Moreover, the analysis and methods for ensuring that incentive compensation arrangements take appropriate account of risk should be tailored to the size, complexity, business strategy, and risk tolerance of each organization. The resources required will depend upon the complexity of the firm and its use of incentive compensation arrangements. For some, the task of designing and implementing compensation arrangements that properly offer incentives for executive and non-executive employees to pursue the organization’s long-term well-being and that do not encourage imprudent risk-taking is a complex task that will require the commitment of adequate resources.

While issues related to designing and implementing incentive compensation arrangements are complex, the Federal Reserve is committed to ensuring that banking organizations move forward in incorporating the principles described in this guidance into their incentive compensation practices.5

As discussed further below, because of the size and complexity of their operations, large complex banking organizations (LCBOs)6 should have and adhere to systematic and formalized policies, procedures, and processes. These are considered important in ensuring that incentive compensation arrangements for all covered employees are identified and reviewed by appropriate levels of management (including the board of directors where appropriate and control units), and that they appropriately balance risks and rewards. In several places, this guidance specifically highlights the types of policies, procedures, and systems that LCBOs should have and maintain, but that generally are not expected of smaller, less complex organizations. LCBOs warrant the most intensive supervisory attention because they are significant users of incentive compensation arrangements and because flawed approaches at these organizations are more likely to have adverse effects on the broader financial system. The Federal Reserve will work with LCBOs as necessary through the supervisory process to ensure that they promptly correct any deficiencies that may be inconsistent with the safety and soundness of the organization.

The policies, procedures, and systems of smaller banking organizations that use incentive compensation arrangements7 are expected to be less extensive, formalized, and detailed than those of LCBOs. Supervisory reviews of incentive compensation arrangements at smaller, less-complex banking organizations will be conducted by the Federal Reserve as part of the evaluation of those organizations’ risk management, internal controls, and corporate governance during the regular, risk-focused examination process. These reviews will be tailored to reflect the scope and complexity of an organization’s activities, as well as the prevalence and scope of its incentive compensation arrangements. Little, if any, additional examination work is expected for smaller banking organizations that do not use, to a significant extent, incentive compensation arrangements.8

For all banking organizations, supervisory findings related to incentive compensation will be communicated to the organization and included in the relevant report of examination or inspection. In addition, these findings will be incorporated, as appropriate, into the organization’s internal controls.

---

5. In December 2009 the Federal Reserve, working with the other Agencies, initiated a special horizontal review of incentive compensation arrangements and related risk-management, control, and corporate governance practices of large banking organizations (LBOs). This initiative was designed to spur and monitor the industry’s progress towards the implementation of safe and sound incentive compensation arrangements, identify emerging best practices, and advance the state of practice more generally in the industry.

6. For supervisory purposes, the Federal Reserve (as well as the other federal bank regulatory agencies) segments the organizations it supervises into different supervisory portfolios based on, among other things, size, complexity, and risk profile. For purposes of this guidance, the LBOs referred to in the guidance are identified in this section as large complex banking organizations to be consistent with the Federal Reserve’s other supervisory policies. LBOs are designated by (1) the OCC as the largest and most complex national banks as defined in the Large Bank Supervision booklet of the Comptroller’s Handbook; (2) the FDIC, large, complex insured depository institutions (IDIs); and (3) the OTS, the largest and most complex savings associations and savings and loan holding companies.

7. This guidance does not apply to banking organizations that do not use incentive compensation.

8. To facilitate these reviews, where appropriate, a smaller banking organization should review its compensation arrangements to determine whether it uses incentive compensation arrangements to a significant extent in its business operations. A smaller banking organization will not be considered a significant user of incentive compensation arrangements simply because the organization has a firm-wide profit-sharing or bonus plan that is based on the bank’s profitability, even if the plan covers all or most of the organization’s employees.
tion’s rating component(s) and subcomponent(s) relating to risk-management, internal controls, and corporate governance under the relevant supervisory rating system, as well as the organization’s overall supervisory rating.

The Federal Reserve (or the organization’s appropriate federal supervisor) may take enforcement action against a banking organization if its incentive compensation arrangements or related risk-management, control, or governance processes pose a risk to the safety and soundness of the organization, particularly when the organization is not taking prompt and effective measures to correct the deficiencies. For example, the appropriate federal supervisor may take an enforcement action if material deficiencies are found to exist in the organization’s incentive compensation arrangements or related risk-management, control, or governance processes, or the organization fails to promptly develop, submit, or adhere to an effective plan designed to ensure that its incentive compensation arrangements do not encourage imprudent risk-taking and are consistent with principles of safety and soundness. As provided under section 8 of the Federal Deposit Insurance Act (12 U.S.C. 1818), an enforcement action may, among other things, require an organization to take affirmative action, such as developing a corrective action plan that is acceptable to the appropriate federal supervisor to rectify safety-and-soundness deficiencies in its incentive compensation arrangements or related processes. Where warranted, the appropriate federal supervisor may require the organization to take additional affirmative action to correct or remedy deficiencies related to the organization’s incentive compensation practices.

Effective and balanced incentive compensation practices are likely to evolve significantly in the coming years, spurred by the efforts of banking organizations, supervisors, and other stakeholders. The Federal Reserve will review and update this guidance as appropriate to incorporate best practices that emerge from these efforts.

2068.0.1 SCOPE OF APPLICATION

The incentive compensation arrangements and related policies and procedures of banking organizations should be consistent with principles of safety and soundness. Incentive compensation arrangements for executive officers as well as for non-executive personnel who have the ability to expose a banking organization to material amounts of risk may, if not properly structured, pose a threat to the organization’s safety and soundness. Accordingly, this guidance applies to incentive compensation arrangements for:

1. Senior executives and others who are responsible for oversight of the organization’s firm-wide activities or material business lines;
2. Individual employees, including non-executive employees, whose activities may expose the organization to material amounts of risk (e.g., traders with large position limits relative to the organization’s overall risk tolerance); and
3. Groups of employees who are subject to the same or similar incentive compensation arrangements and who, in the aggregate, may expose the organization to material amounts of risk, even if no individual employee is likely to expose the organization to material risk (e.g., loan officers who, as a group, originate loans that account for a material amount of the organization’s credit risk).

For ease of reference, these executive and non-executive employees are collectively referred to hereafter as “covered employees” or “employees.” Depending on the facts and circumstances of the individual organization, the types of employees or categories of employees that are outside the scope of this guidance because they do not have the ability to expose the organization to material risks would likely include, for example, tellers, bookkeepers, couriers, or data processing personnel.

In determining whether an employee, or group of employees, may expose a banking organization to material risk, the organization with the FBO’s group-wide policies developed in accordance with the rules of the FBO’s home country supervisor. The policies of the FBO’s U.S. operations should also be consistent with the FBO’s overall corporate and management structure, as well as its framework for risk-management and internal controls. In addition, the policies for the U.S. operations of FBOs should be consistent with this guidance.

10. Senior executives include, at a minimum, “executive officers” within the meaning of the Federal Reserve’s Regulation O (see 12 CFR 215.3(e)(1)) and, for publicly traded companies, “named officers” within the meaning of the Securities and Exchange Commission’s rules on disclosure of executive compensation (see 17 CFR 229.402(a)(3)). Savings associations should also refer to OTS’s rule on loans by saving associations to their executive officers, directors, and principal shareholders. (12 CFR 563.43).

BHC Supervision Manual
July 2010
Page 3
should consider the full range of inherent risks arising from, or generated by, the employee’s activities, even if the organization uses risk-management processes or controls to limit the risks such activities ultimately may pose to the organization. Moreover, risks should be considered to be material for purposes of this guidance if they are material to the organization, or are material to a business line or operating unit that is itself material to the organization.11

For purposes of illustration, assume that a banking organization has a structured-finance unit that is material to the organization. A group of employees within that unit who originate structured-finance transactions that may expose the unit to material risks should be considered “covered employees” for purposes of this guidance even if those transactions must be approved by an independent risk function prior to consummation, or the organization uses other processes or methods to limit the risk that such transactions may present to the organization.

Strong and effective risk-management and internal control functions are critical to the safety and soundness of banking organizations. However, irrespective of the quality of these functions, poorly designed or managed incentive compensation arrangements can themselves be a source of risk to a banking organization. For example, incentive compensation arrangements that provide employees strong incentives to increase the organization’s short-term revenues or profits, without regard to the short- or long-term risk associated with such business, can place substantial strain on the risk-management and internal control functions of even well-managed organizations.

Moreover, poorly balanced incentive compensation arrangements can encourage employees to take affirmative actions to weaken or circumvent the organization’s risk-management or internal control functions, such as by providing inaccurate or incomplete information to these functions, to boost the employee’s personal compensation. Accordingly, sound compensation practices are an integral part of strong risk-management and internal control functions. A key goal of this guidance is to encourage banking organizations to incorporate the risks related to incentive compensation into their broader risk-management framework. Risk-management procedures and risk controls that ordinarily limit risk-taking do not obviate the need for incentive compensation arrangements to properly balance risk-taking incentives.

2068.0.2 PRINCIPLES OF A SOUND INCENTIVE COMPENSATION SYSTEM

2068.0.2.1 Principle 1: Balanced Risk-Taking Incentives

Incentive compensation arrangements should balance risk and financial results in a manner that does not encourage employees to expose their organizations to imprudent risks.

Incentive compensation arrangements typically attempt to encourage actions that result in greater revenue or profit for the organization. However, short-run revenue or profit can often diverge sharply from actual long-run profit because risk outcomes may become clear only over time. Activities that carry higher risk typically yield higher short-term revenue, and an employee who is given incentives to increase short-term revenue or profit, without regard to risk, will naturally be attracted to opportunities to expose the organization to more risk.

An incentive compensation arrangement is balanced when the amounts paid to an employee appropriately take into account the risks (including compliance risks), as well as the financial benefits, from the employee’s activities and the impact of those activities on the organization’s safety and soundness. As an example, under a balanced incentive compensation arrangement, two employees who generate the same amount of short-term revenue or profit for an organization should not receive the same amount of incentive compensation if the risks taken by the employees in generating that revenue or profit differ materially. The employee whose activities create materially larger risks for the organization should receive less than the other employee, all else being equal.

The performance measures used in an incentive compensation arrangement have an important effect on the incentives provided employees and, thus, the potential for the arrangement to encourage imprudent risk-taking. For example, if an employee’s incentive compensation payments are closely tied to short-term revenue or profit of business generated by the employee, without any adjustments for the risks associated with the business generated, the potential for the arrangement to encourage imprudent risk-taking

---

11. Thus, risks may be material to an organization even if they are not large enough to threaten the solvency of the organization.
may be quite strong. Similarly, traders who work with positions that close at year-end could have an incentive to take large risks toward the end of a year if there is no mechanism for factoring how such positions perform over a longer period of time. The same result could ensue if the performance measures themselves lack integrity or can be manipulated inappropriately by the employees receiving incentive compensation.

On the other hand, if an employee’s incentive compensation payments are determined based on performance measures that are only distantly linked to the employee’s activities (e.g., for most employees, organization-wide profit), the potential for the arrangement to encourage the employee to take imprudent risks on behalf of the organization may be weak. For this reason, plans that provide for awards based solely on overall organization-wide performance are unlikely to provide employees, other than senior executives and individuals who have the ability to materially affect the organization’s overall risk profile, with unbalanced risk-taking incentives.

Incentive compensation arrangements should not only be balanced in design, they also should be implemented so that actual payments vary based on risks or risk outcomes. If, for example, employees are paid substantially all of their potential incentive compensation even when risk or risk outcomes are materially worse than expected, employees have less incentive to avoid activities with substantial risk.

• Banking organizations should consider the full range of risks associated with an employee’s activities, as well as the time horizon over which those risks may be realized, in assessing whether incentive compensation arrangements are balanced.

The activities of employees may create a wide range of risks for a banking organization, such as credit, market, liquidity, operational, legal, compliance, and reputational risks, as well as other risks to the viability or operation of the organization. Some of these risks may be realized in the short term, while others may become apparent only over the long term. For example, future revenues that are booked as current income may not materialize, and short-term profit-and-loss measures may not appropriately reflect differences in the risks associated with the revenue derived from different activities (e.g., the higher credit or compliance risk associated with subprime loans versus prime loans). In addition, some risks (or combinations of risky strategies and positions) may have a low probability of being realized, but would have highly adverse effects on the organization if they were to be realized (“bad tail risks”). While shareholders may have less incentive to guard against bad tail risks because of the infrequency of their realization and the existence of the federal safety net, these risks warrant special attention for safety-and-soundness reasons given the threat they pose to the organization’s solvency and the federal safety net.

Banking organizations should consider the full range of current and potential risks associated with the activities of covered employees, including the cost and amount of capital and liquidity needed to support those risks, in developing balanced incentive compensation arrangements. Reliable quantitative measures of risk and risk outcomes (“quantitative measures”), where available, may be particularly useful in developing balanced compensation arrangements and in assessing the extent to which arrangements are properly balanced. However, reliable quantitative measures may not be available for all types of risk or for all activities, and their utility for use in compensation arrangements varies across business lines and employees. The absence of reliable quantitative measures for certain types of risks or outcomes does not mean that banking organizations should ignore such risks or outcomes for purposes of assessing whether an incentive compensation arrangement achieves balance. For example, while reliable quantitative measures may not exist for many bad-tail risks, it is important that such risks be considered given their potential effect on safety and soundness. As in other risk-management areas, banking organizations should rely on informed judgments, supported by available data, to estimate risks and risk outcomes in the absence of reliable quantitative risk measures.

Large complex banking organizations. In designing and modifying incentive compensation arrangements, LCBOs should assess in advance of implementation whether such

\[12.\text{Importantly, the time horizon over which a risk outcome may be realized is not necessarily the same as the stated maturity of an exposure.} \]
arrangements are likely to provide balanced risk-taking incentives. Simulation analysis of incentive compensation arrangements is one way of doing so. Such analysis uses forward-looking projections of incentive compensation awards and payments based on a range of performance levels, risk outcomes, and levels of risks taken. This type of analysis, or other analysis that results in assessments of likely effectiveness, can help an LCBO assess whether incentive compensation arrangements are likely to be reduced appropriately as the risks to the organization from the employee’s activities increase.

- An unbalanced arrangement can be moved toward balance by adding or modifying features that cause the amounts ultimately received by employees to appropriately reflect risk and risk outcomes.

If an incentive compensation arrangement may encourage employees to expose their banking organization to imprudent risks, the organization should modify the arrangement as needed to ensure that it is consistent with safety and soundness. Four methods are often used to make compensation more sensitive to risk. These methods are:

1. Risk Adjustment of Awards: The amount of an incentive compensation award for an employee is adjusted based on measures that take into account the risk the employee’s activities may pose to the organization. Such measures may be quantitative, or the size of a risk adjustment may be set judgmentally, subject to appropriate oversight.

2. Deferral of Payment: The actual payout of an award to an employee is delayed significantly beyond the end of the performance period, and the amounts paid are adjusted for actual losses or other aspects of performance that are realized or become better known only during the deferral period. Deferred payouts may be altered according to risk outcomes either formulaically or judgmentally, subject to appropriate oversight. To be most effective, the deferral period should be sufficiently long to allow for the realization of a substantial portion of the risks from employee activities, and the measures of loss should be clearly explained to employees and closely tied to their activities during the relevant performance period.

3. Longer Performance Periods: The time period covered by the performance measures used in determining an employee’s award is extended (for example, from one year to two or more years). Longer performance periods and deferral of payment are related in that both methods allow awards or payments to be made after some or all risk outcomes are realized or better known.

4. Reduced Sensitivity to Short-Term Performance: The banking organization reduces the rate at which awards increase as an employee achieves higher levels of the relevant performance measure(s). Rather than offsetting risk-taking incentives associated with the use of short-term performance measures, this method reduces the magnitude of such incentives. This method also can include improving the quality and reliability of performance measures in taking into account both short-term and long-term risks, for example improving the reliability and accuracy of estimates of revenues and long-term profits upon which performance measures depend.14

These methods for achieving balance are not exclusive, and additional methods or variations may exist or be developed. Moreover, each method has its own advantages and disadvantages. For example, where reliable risk measures exist, risk adjustment of awards may be more effective than deferral of payment in reducing incentives for imprudent risk-taking. This is because risk adjustment potentially can take account of the full range and time horizon of risks, rather than just those risk outcomes that occur or become more evident during the deferral period. On the other hand, deferral of payment may be more effective than risk adjustment in mitigating incentives to take hard-to-measure risks (such as the risks of new activities

---

13. The deferral-of-payment method is sometimes referred to in the industry as a “clawback.” The term “clawback” also may refer specifically to an arrangement under which an employee must return incentive compensation payments previously received by the employee (and not just deferred) if certain risk outcomes occur. Section 304 of the Sarbanes-Oxley Act of 2002 (15 U.S.C. 7243), which applies to chief executive officers and chief financial officers of public banking organizations, is an example of this more specific type of “clawback” requirement.

14. Performance targets may have a material effect on risk-taking incentives. Such targets may offer employees greater rewards for increments of performance that are above the target or may provide that awards will be granted only if a target is met or exceeded. Employees may be particularly motivated to take imprudent risk in order to reach performance targets that are aggressive, but potentially achievable.
or products, or certain risks such as reputational or operational risk that may be difficult to measure with respect to particular activities, especially if such risks are likely to be realized during the deferral period. Accordingly, in some cases two or more methods may be needed in combination for an incentive compensation arrangement to be balanced.

The greater the potential incentives an arrangement creates for an employee to increase the risks associated with the employee’s activities, the stronger the effect should be of the methods applied to achieve balance. Thus, for example, risk adjustments used to counteract a materially unbalanced compensation arrangement should have a similarly material impact on the incentive compensation paid under the arrangement. Further, improvements in the quality and reliability of performance measures themselves, for example improving the reliability and accuracy of estimates of revenues and profits upon which performance measures depend, can significantly improve the degree of balance in risk-taking incentives.

Where judgment plays a significant role in the design or operation of an incentive compensation arrangement, strong policies and procedures, internal controls, and ex post monitoring of incentive compensation payments relative to actual risk outcomes are particularly important to help ensure that the arrangements as implemented are balanced and do not encourage imprudent risk-taking. For example, if a banking organization relies to a significant degree on the judgment of one or more managers to ensure that the incentive compensation awards to employees are appropriately risk-adjusted, the organization should have policies and procedures that describe how managers are expected to exercise that judgment to achieve balance and that provide for the manager(s) to receive appropriate available information about the employee’s risk-taking activities to make informed judgments.

Large complex banking organizations. Methods and practices for making compensation sensitive to risk are likely to evolve rapidly during the next few years, driven in part by the efforts of supervisors and other stakeholders. LCBOs should actively monitor developments in the field and should incorporate into their incentive compensation systems new or emerging methods or practices that are likely to improve the organization’s long-term financial well-being and safety and soundness.

• The manner in which a banking organization seeks to achieve balanced incentive compen-

sation arrangements should be tailored to account for the differences between employees—including the substantial differences between senior executives and other employees—as well as between banking organizations.

Activities and risks may vary significantly both across banking organizations and across employees within a particular banking organization. For example, activities, risks, and incentive compensation practices may differ materially among banking organizations based on, among other things, the scope or complexity of activities conducted and the business strategies pursued by the organizations. These differences mean that methods for achieving balanced compensation arrangements at one organization may not be effective in restraining incentives to engage in imprudent risk-taking at another organization. Each organization is responsible for ensuring that its incentive compensation arrangements are consistent with the safety and soundness of the organization.

Moreover, the risks associated with the activities of one group of non-executive employees (e.g., loan originators) within a banking organization may differ significantly from those of another group of non-executive employees (e.g., spot foreign exchange traders) within the organization. In addition, reliable quantitative measures of risk and risk outcomes are unlikely to be available for a banking organization as a whole, particularly a large, complex organization. This factor can make it difficult for banking organizations to achieve balanced compensation arrangements for senior executives who have responsibility for managing risks on an organization-wide basis solely through use of the risk-adjustment-of-award method.

Furthermore, the payment of deferred incentive compensation in equity (such as restricted stock of the organization) or equity-based instruments (such as options to acquire the organization’s stock) may be helpful in restraining the risk-taking incentives of senior executives and other covered employees whose activities may have a material effect on the overall financial performance of the organization. However, equity-related deferred compensation may not be as effective in restraining the incentives of lower-level covered employees (particularly at large organizations) to take risks because such employees are unlikely to believe that their
actions will materially affect the organization’s stock price.

Banking organizations should take account of these differences when constructing balanced compensation arrangements. For most banking organizations, the use of a single, formulaic approach to making employee incentive compensation arrangements appropriately risk-sensitive is likely to result in arrangements that are unbalanced at least with respect to some employees.15

Large complex banking organizations. Incentive compensation arrangements for senior executives at LCBOs are likely to be better balanced if they involve deferral of a substantial portion of the executives’ incentive compensation over a multi-year period in a way that reduces the amount received in the event of poor performance, substantial use of multi-year performance periods, or both. Similarly, the compensation arrangements for senior executives at LCBOs are likely to be better balanced if a significant portion of the incentive compensation of these executives is paid in the form of equity-based instruments that vest over multiple years, with the number of instruments ultimately received dependent on the performance of the organization during the deferral period.

The portion of the incentive compensation of other covered employees that is deferred or paid in the form of equity-based instruments should appropriately take into account the level, nature, and duration of the risks that the employees’ activities create for the organization and the extent to which those activities may materially affect the overall performance of the organization and its stock price. Deferral of a substantial portion of an employee’s incentive compensation may not be workable for employees at lower pay scales because of their more limited financial resources. This may require increased reliance on other measures in the incentive compensation arrangements for these employees to achieve balance.

• Banking organizations should carefully consider the potential for “golden parachutes” and the vesting arrangements for deferred compensation to affect the risk-taking behavior of employees while at the organizations.

Arrangements that provide for an employee (typically a senior executive), upon departure from the organization or a change in control of the organization, to receive large additional payments or the accelerated payment of deferred amounts without regard to risk or risk outcomes can provide the employee significant incentives to expose the organization to undue risk. For example, an arrangement that provides an employee with a guaranteed payout upon departure from an organization, regardless of performance, may neutralize the effect of any balancing features included in the arrangement to help prevent imprudent risk-taking.

Banking organizations should carefully review any such existing or proposed arrangements (sometimes called “golden parachutes”) and the potential impact of such arrangements on the organization’s safety and soundness. In appropriate circumstances an organization should consider including balancing features—such as risk adjustment or deferral requirements that extend past the employee’s departure—in the arrangements to mitigate the potential for the arrangements to encourage imprudent risk-taking. In all cases, a banking organization should ensure that the structure and terms of any golden parachute arrangement entered into by the organization do not encourage imprudent risk-taking in light of the other features of the employee’s incentive compensation arrangements.

Large complex banking organizations. Provisions that require a departing employee to forfeit deferred incentive compensation payments may weaken the effectiveness of the deferral arrangement if the departing employee is able to negotiate a “golden handshake” arrangement with the new employer.16 This weakening effect can be particularly significant for senior executives or other skilled employees at LCBOs whose services are in high demand within the market.

Golden handshake arrangements present special issues for LCBOs and supervisors. For example, while a banking organization could adjust its deferral arrangements so that departing employees will continue to receive any accrued deferred compensation after departure

15. For example, spreading payouts of incentive compensation awards over a standard three-year period may not appropriately reflect the differences in the type and time horizon of risk associated with the activities of different groups of employees, and may not be sufficient by itself to balance the compensation arrangements of employees who may expose the organization to substantial longer-term risks.

16. Golden handshakes are arrangements that compensate an employee for some or all of the estimated, non-adjusted value of deferred incentive compensation that would have been forfeited upon departure from the employee’s previous employment.
(subject to any clawback or malus\textsuperscript{17}), these changes could reduce the employee’s incentive to remain at the organization and, thus, weaken an organization’s ability to retain qualified talent, which is an important goal of compensation, and create conflicts of interest. Moreover, actions of the hiring organization (which may or may not be a supervised banking organization) ultimately may defeat these or other risk-balancing aspects of a banking organization’s deferral arrangements. LCBOs should monitor whether golden handshake arrangements are materially weakening the organization’s efforts to constrain the risk-taking incentives of employees. The Federal Reserve will continue to work with banking organizations and others to develop appropriate methods for addressing any effect that such arrangements may have on the safety and soundness of banking organizations.

- **Banking organizations should effectively communicate to employees the ways in which incentive compensation awards and payments will be reduced as risks increase.**

In order for the risk-sensitive provisions of incentive compensation arrangements to affect employee risk-taking behavior, the organization’s employees need to understand that the amount of incentive compensation that they may receive will vary based on the risk associated with their activities. Accordingly, banking organizations should ensure that employees covered by an incentive compensation arrangement are informed about the key ways in which risks are taken into account in determining the amount of incentive compensation paid. Where feasible, an organization’s communications with employees should include examples of how incentive compensation payments may be adjusted to reflect projected or actual risk outcomes. An organization’s communications should be tailored appropriately to reflect the sophistication of the relevant audience(s).

\textsuperscript{17} A malus arrangement permits the employer to prevent vesting of all or part of the amount of a deferred remuneration award. Malus provisions are invoked when risk outcomes are worse than expected or when the information upon which the award was based turns out to have been incorrect. Loss of unvested compensation due to the employee voluntarily leaving the firm is not an example of malus as the term is used in this guidance.

\hspace{1cm} \textbf{2068.0.2.2 Principle 2: Compatibility with Effective Controls and Risk-Management}

A banking organization’s risk-management processes and internal controls should reinforce and support the development and maintenance of balanced incentive compensation arrangements.

In order to increase their own compensation, employees may seek to evade the processes established by a banking organization to achieve balanced compensation arrangements. Similarly, an employee covered by an incentive compensation arrangement may seek to influence, in ways designed to increase the employee’s pay, the risk measures or other information or judgments that are used to make the employee’s pay sensitive to risk.

Such actions may significantly weaken the effectiveness of an organization’s incentive compensation arrangements in restricting imprudent risk-taking. These actions can have a particularly damaging effect on the safety and soundness of the organization if they result in the weakening of risk measures, information, or judgments that the organization uses for other risk-management, internal control, or financial purposes. In such cases, the employee’s actions may weaken not only the balance of the organization’s incentive compensation arrangements, but also the risk-management, internal controls, and other functions that are supposed to act as a separate check on risk-taking. For this reason, traditional risk-management controls alone do not eliminate the need to identify employees who may expose the organization to material risk, nor do they obviate the need for the incentive compensation arrangements for these employees to be balanced. Rather, a banking organization’s risk-management processes and internal controls should reinforce and support the development and maintenance of balanced incentive compensation arrangements.

- **Banking organizations should have appropriate controls to ensure that their processes for achieving balanced compensation arrangements are followed and to maintain the integrity of their risk-management and other functions.**

To help prevent damage from occurring, a banking organization should have strong con-
controls governing its process for designing, implementing, and monitoring incentive compensation arrangements. Banking organizations should create and maintain sufficient documentation to permit an audit of the effectiveness of the organization’s processes for establishing, modifying, and monitoring incentive compensation arrangements. Smaller banking organizations should incorporate reviews of these processes into their overall framework for compliance monitoring (including internal audit).

Large complex banking organizations. LCBOs should have and maintain policies and procedures that (1) identify and describe the role(s) of the personnel, business units, and control units authorized to be involved in the design, implementation, and monitoring of incentive compensation arrangements; (2) identify the source of significant risk-related inputs into these processes and establish appropriate controls governing the development and approval of these inputs to help ensure their integrity; and (3) identify the individual(s) and control unit(s) whose approval is necessary for the establishment of new incentive compensation arrangements or modification of existing arrangements.

An LCBO also should conduct regular internal reviews to ensure that its processes for achieving and maintaining balanced incentive compensation arrangements are consistently followed. Such reviews should be conducted by audit, compliance, or other personnel in a manner consistent with the organization’s overall framework for compliance monitoring. An LCBO’s internal audit department also should separately conduct regular audits of the organization’s compliance with its established policies and controls relating to incentive compensation arrangements. The results should be reported to appropriate levels of management and, where appropriate, the organization’s board of directors.

- Appropriate personnel, including risk-management personnel, should have input into the organization’s processes for designing incentive compensation arrangements and assessing their effectiveness in restraining imprudent risk-taking.

Developing incentive compensation arrangements that provide balanced risk-taking incentives and monitoring arrangements to ensure they achieve balance over time requires an understanding of the risks (including compliance risks) and potential risk outcomes associated with the activities of the relevant employees. Accordingly, banking organizations should have policies and procedures that ensure that risk-management personnel have an appropriate role in the organization’s processes for designing incentive compensation arrangements and for assessing their effectiveness in restraining imprudent risk-taking.18 Ways that risk managers might assist in achieving balanced compensation arrangements include, but are not limited to:

1. reviewing the types of risks associated with the activities of covered employees;
2. approving the risk measures used in risk adjustments and performance measures, as well as measures of risk outcomes used in deferred-payout arrangements; and
3. analyzing risk-taking and risk outcomes relative to incentive compensation payments.

Other functions within an organization, such as its control, human resources, or finance functions, also play an important role in helping ensure that incentive compensation arrangements are balanced. For example, these functions may contribute to the design and review of performance measures used in compensation arrangements or may supply data used as part of these measures.

- Compensation for employees in risk-management and control functions should be sufficient to attract and retain qualified personnel and should avoid conflicts of interest.

The risk-management and control personnel involved in the design, oversight, and operation of incentive compensation arrangements should have appropriate skills and experience needed to effectively fulfill their roles. These skills and experiences should be sufficient to equip the personnel to remain effective in the face of challenges by covered employees seeking to increase their incentive compensation in ways that are inconsistent with sound risk-management or internal controls. The compensation arrangements for employees in risk-management and control functions thus should be sufficient to attract and retain qualified person-

---

18. Involvement of risk-management personnel in the design and monitoring of these arrangements also should help ensure that the organization’s risk-management functions can properly understand and address the full range of risks facing the organization.
sonnel with experience and expertise in these fields that is appropriate in light of the size, activities, and complexity of the organization.

In addition, to help preserve the independence of their perspectives, the incentive compensation received by risk-management and control personnel staff should not be based substantially on the financial performance of the business units that they review. Rather, the performance measures used in the incentive compensation arrangements for these personnel should be based primarily on the achievement of the objectives of their functions (e.g., adherence to internal controls).

- Banking organizations should monitor the performance of their incentive compensation arrangements and should revise the arrangements as needed if payments do not appropriately reflect risk.

Banking organizations should monitor incentive compensation awards and payments, risks taken, and actual risk outcomes to determine whether incentive compensation payments to employees are reduced to reflect adverse risk outcomes or high levels of risk taken. Results should be reported to appropriate levels of management, including the board of directors where warranted and consistent with Principle 3 below. The monitoring methods and processes used by a banking organization should be commensurate with the size and complexity of the organization, as well as its use of incentive compensation. Thus, for example, a small, noncomplex organization that uses incentive compensation only to a limited extent may find that it can appropriately monitor its arrangements through normal management processes.

A banking organization should take the results of such monitoring into account in establishing or modifying incentive compensation arrangements and in overseeing associated controls. If, over time, incentive compensation paid by a banking organization does not appropriately reflect risk outcomes, the organization should review and revise its incentive compensation arrangements and related controls to ensure that the arrangements, as designed and implemented, are balanced and do not provide employees incentives to take imprudent risks.

2068.0.2.3 Principle 3: Strong Corporate Governance

Banking organizations should have strong and effective corporate governance to help ensure sound compensation practices, including active and effective oversight by the board of directors.

Given the key role of senior executives in managing the overall risk-taking activities of an organization, the board of directors of a banking organization should directly approve the incentive compensation arrangements for senior executives. The board also should approve and document any material exceptions or adjustments to the incentive compensation arrangements established for senior executives and should carefully consider and monitor the effects of any approved exceptions or adjustments on the balance of the arrangement, the risk-taking incentives of the senior executive, and the safety and soundness of the organization.

The board of directors of an organization also is ultimately responsible for ensuring that the organization’s incentive compensation arrangements for all covered employees are appropriately balanced and do not jeopardize the safety and soundness of the organization. The involvement of the board of directors in oversight of the organization’s overall incentive compensation program should be scaled appropriately to the scope and prevalence of the organization’s incentive compensation arrangements.

Large complex banking organizations and organizations that are significant users of incentive compensation. The board of directors of an LCBO or other banking organization that uses incentive compensation to a significant extent should actively oversee the development and operation of the organization’s incentive compensation policies, systems, and related control processes. The board of directors of such an organization should review and approve the overall goals and purposes of the organization’s incentive compensation system. In addition, the board should provide clear direction to management to ensure that the goals and policies it establishes are carried out in a manner that

19. As used in this guidance, the term “board of directors” is used to refer to the members of the board of directors who have primary responsibility for overseeing the incentive compensation system. Depending on the manner in which the board is organized, the term may refer to the entire board of directors, a compensation committee of the board, or another committee of the board that has primary responsibility for overseeing the incentive compensation system. In the case of FBOs, the term refers to the relevant oversight body for the firm’s U.S. operations, consistent with the FBO’s overall corporate and management structure.
aches balance and is consistent with safety and soundness.

The board of directors of such an organization also should ensure that steps are taken so that the incentive compensation system—including performance measures and targets—is designed and operated in a manner that will achieve balance.

- The board of directors should monitor the performance, and regularly review the design and function, of incentive compensation arrangements.

To allow for informed reviews, the board should receive data and analysis from management or other sources that are sufficient to allow the board to assess whether the overall design and performance of the organization’s incentive compensation arrangements are consistent with the organization’s safety and soundness. These reviews and reports should be appropriately scoped to reflect the size and complexity of the banking organization’s activities and the prevalence and scope of its incentive compensation arrangements.

The board of directors of a banking organization should closely monitor incentive compensation payments to senior executives and the sensitivity of those payments to risk outcomes. In addition, if the compensation arrangement for a senior executive includes a clawback provision, then the review should include sufficient information to determine if the provision has been triggered and executed as planned.

The board of directors of a banking organization should seek to stay abreast of significant emerging changes in compensation plan mechanisms and incentives in the marketplace as well as developments in academic research and regulatory advice regarding incentive compensation policies. However, the board should recognize that organizations, activities, and practices within the industry are not identical. Incentive compensation arrangements at one organization may not be suitable for use at another organization because of differences in the risks, controls, structure, and management among organizations. The board of directors of each organization is responsible for ensuring that the incentive compensation arrangements for its organization do not encourage employees to take risks that are beyond the organization’s ability to manage effectively, regardless of the practices employed by other organizations.

Large complex banking organizations and organizations that are significant users of incentive compensation. The board of an LCBO or other organization that uses incentive compensation to a significant extent should receive and review, on an annual or more frequent basis, an assessment by management, with appropriate input from risk-management personnel, of the effectiveness of the design and operation of the organization’s incentive compensation system in providing risk-taking incentives that are consistent with the organization’s safety and soundness. These reports should include an evaluation of whether or how incentive compensation practices may increase the potential for imprudent risk-taking.

The board of such an organization also should receive periodic reports that review incentive compensation awards and payments relative to risk outcomes on a backward-looking basis to determine whether the organization’s incentive compensation arrangements may be promoting imprudent risk-taking. Boards of directors of these organizations also should consider periodically obtaining and reviewing simulation analysis of compensation on a forward-looking basis based on a range of performance levels, risk outcomes, and the amount of risks taken.

- The organization, composition, and resources of the board of directors should permit effective oversight of incentive compensation.

The board of directors of a banking organization should have, or have access to, a level of expertise and experience in risk-management and compensation practices in the financial services industry that is appropriate for the nature, scope, and complexity of the organization’s activities. This level of expertise may be present collectively among the members of the board, may come from formal training or from experience in addressing these issues, including as a director, or may be obtained through advice received from outside counsel, consultants, or other experts with expertise in incentive compensation and risk-management. The board of directors of an organization with less complex and extensive incentive compensation arrangements may not find it necessary or appropriate to require special board expertise or to retain and use outside experts in this area.

In selecting and using outside parties, the board of directors should give due attention to potential conflicts of interest arising from other dealings of the parties with the organization or for other reasons. The board also should exercise caution to avoid allowing outside parties to
obtain undue levels of influence. While the retention and use of outside parties may be helpful, the board retains ultimate responsibility for ensuring that the organization’s incentive compensation arrangements are consistent with safety and soundness.

**Large complex banking organizations and organizations that are significant users of incentive compensation.** If a separate compensation committee is not already in place or required by other authorities, the board of directors of an LCBO or other banking organization that uses incentive compensation to a significant extent should consider establishing such a committee—reporting to the full board—that has primary responsibility for overseeing the organization’s incentive compensation systems. A compensation committee should be composed solely or predominantly of non-executive directors. If the board does not have such a compensation committee, the board should take other steps to ensure that non-executive directors of the board are actively involved in the oversight of incentive compensation systems. The compensation committee should work closely with any board-level risk and audit committees where the substance of their actions overlap.

- A banking organization’s disclosure practices should support safe and sound incentive compensation arrangements.

If a banking organization’s incentive compensation arrangements provide employees incentives to take risks that are beyond the tolerance of the organization’s shareholders, these risks are likely to also present a risk to the safety and soundness of the organization. To help promote safety and soundness, a banking organization should provide an appropriate amount of information concerning its incentive compensation arrangements for executive and non-executive employees and related risk-management, control, and governance processes to shareholders to allow them to monitor and, where appropriate, take actions to restrain the potential for such arrangements and processes that encourage employees to take imprudent risks. Such disclosures should include information relevant to employees other than senior executives. The scope and level of the information disclosed by the organization should be tailored to the nature and complexity of the organization and its incentive compensation arrangements.

- Large complex banking organizations should follow a systematic approach to developing a compensation system that has balanced incentive compensation arrangements.

At banking organizations with large numbers of risk-taking employees engaged in diverse activities, an ad hoc approach to developing balanced arrangements is unlikely to be reliable. Thus, an LCBO should use a systematic approach—supported by robust and formalized policies, procedures, and systems—to ensure that those arrangements are appropriately balanced and consistent with safety and soundness. Such an approach should provide for the organization effectively to:

1. Identify employees who are eligible to receive incentive compensation and whose activities may expose the organization to material risks. These employees should include:
   a. senior executives and others who are responsible for oversight of the organization’s firm-wide activities or material business lines;
   b. individual employees, including non-executive employees, whose activities may expose the organization to material amounts of risk; and
   c. groups of employees who are subject to the same or similar incentive compensation arrangements and who, in the aggregate, may expose the organization to material amounts of risk.
2. Identify the types and time horizons of risks to the organization from the activities of these employees;
3. Assess the potential for the performance measures included in the incentive compensation arrangements for these employees to encourage the employees to take imprudent risks;
4. Include balancing elements, such as risk

---

20. See New York Stock Exchange Listed Company Manual Section 303A.05(a); Nasdaq Listing Rule 5605(d); Internal Revenue Code section 162(m) (26 U.S.C. 162(m)).
21. On the other hand, as noted previously, compensation arrangements that are in the interests of the shareholders of a banking organization are not necessarily consistent with safety and soundness.
22. A banking organization also should comply with the incentive compensation disclosure requirements of the federal securities law and other laws as applicable. See, for example, Proxy Disclosure Enhancements, SEC Release Nos. 33-9089, 34-61175, 74 F.R. 68334 (Dec. 23, 2009) (to be codified at 17 C.F.R. 229 and 249).
adjustments or deferral periods, within the incentive compensation arrangements for these employees that are reasonably designed to ensure that the arrangement will be balanced in light of the size, type, and time horizon of the inherent risks of the employees' activities;

5. Communicate to the employees the ways in which their incentive compensation awards or payments will be adjusted to reflect the risks of their activities to the organization; and

6. Monitor incentive compensation awards, payments, risks taken, and risk outcomes for these employees and modify the relevant arrangements if payments made are not appropriately sensitive to risk and risk outcomes.

2068.0.3  CONCLUSION ON SOUND INCENTIVE COMPENSATION

Banking organizations are responsible for ensuring that their incentive compensation arrangements do not encourage imprudent risk-taking behavior and are consistent with the safety and soundness of the organization. The Federal Reserve expects banking organizations to take prompt action to address deficiencies in their incentive compensation arrangements or related risk-management, control, and governance processes.

The Federal Reserve intends to actively monitor the actions taken by banking organizations in this area and will promote further advances in designing and implementing balanced incentive compensation arrangements. Where appropriate, the Federal Reserve will take supervisory or enforcement action to ensure that material deficiencies that pose a threat to the safety and soundness of the organization are promptly addressed. The Federal Reserve also will update this guidance as appropriate to incorporate best practices as they develop over time.
WHAT’S NEW IN THIS REVISED SECTION

Effective July 2014, this section is revised to include a June 13, 2014, interagency Addendum to the 1998 “Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure” (Addendum). The Board of Governors of the Federal Reserve System, Federal Deposit Insurance Corporation, and the Office of the Comptroller of the Currency (Agencies) announced the issuance of the Addendum to ensure that insured depository institutions (IDIs) in a consolidated group maintain an appropriate relationship regarding the payment of taxes and treatment of tax refunds. The purpose of the Addendum is to ensure that tax allocation agreements expressly acknowledge an agency relationship between a holding company and its subsidiary IDI to protect the IDI’s ownership rights in tax refunds. State member banks and holding companies should implement the guidance as soon as reasonably possible, which the Agency expect would not be later than October 31, 2014. This Addendum clarifies and supplements but does not replace the 1998 Interagency Policy Statement. (Refer to SR-14-6.)

A holding company and its depository institution subsidiaries may generally file a consolidated group income tax return. For bank regulatory purposes, however, each depository institution is viewed as, and reports as, a separate legal and accounting entity. Each holding company subsidiary that participates in filing a consolidated tax return should record its tax expenses or tax benefits as though it had filed a tax return as a separate entity. The amount and timing of any intercompany payments or refunds to the subsidiary that result from its being a part of the consolidated return group should be no more favorable than if the subsidiary was a separate taxpayer. A consolidated return permits the parent’s and other subsidiaries’ taxable losses to be offset against other subsidiaries’ taxable income, with the parent most often providing the principal loss. This can be illustrated with the following example:

<table>
<thead>
<tr>
<th>Contribution to consolidated net taxable income (loss):</th>
<th>Parent Only</th>
<th>Bank</th>
<th>Non-bank A</th>
<th>Non-bank B</th>
<th>Consolidated</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>$100</td>
<td>$2,000</td>
<td>$500</td>
<td>$(50)</td>
<td>$2,350</td>
</tr>
<tr>
<td>Assumed tax rate</td>
<td>40%</td>
<td>40%</td>
<td>40%</td>
<td>40%</td>
<td>40%</td>
</tr>
<tr>
<td>Tax payment/(benefit)</td>
<td>$(40)</td>
<td>$800</td>
<td>$200</td>
<td>$(20)</td>
<td>$940</td>
</tr>
</tbody>
</table>

In this example, the parent, as the representative of the consolidated group to the Internal Revenue Service, would collect $800 from the bank subsidiary and $200 from Nonbank Subsidiary A, and pay $20 to Nonbank Subsidiary B. In return, the parent would remit to the tax authorities $940, resulting in a net cash retention of $40 by the parent.

Bank holding companies employ numerous methods to determine the amount of estimated payments to be received from their subsidiaries. Although the tax-accounting methods to be used by bank holding companies are not prescribed by the Federal Reserve System, the method employed must afford subsidiaries equitable treatment compared with filing separate returns. In general terms, tax transactions between any subsidiary and its parent should be conducted as though the subsidiary was dealing directly with state or federal taxing authorities.

The tax structure of holding companies becomes more complicated when deferred taxes are considered in the intercorporate tax settlements. Deferred taxes occur when taxable income, for financial reporting purposes, differs from taxable income as reported to the taxing authorities. This difference is due to timing differences between financial-statement income and tax income for loan-loss provisions and other items, such as foreign tax credits. In addition, differences result from the use of the cash basis of accounting for tax purposes, as opposed to the accrual basis of accounting used in financial statements. The issue becomes more complex because of GAAP-based tax expenses versus actual taxes paid under relevant tax laws (the difference between the two expenses is either a deferred tax liability or asset on the balance sheet). If the sharing agreement is based on the tax expense on the statement of income, more funds may be transferred to the paying agent than are required to settle the actual taxes owed.

1. For the purpose of this guidance, the term, “holding company” refers to a bank holding company or a savings and loan holding company.

2. The issue becomes more complex because of GAAP-based tax expenses versus actual taxes paid under relevant tax laws (the difference between the two expenses is either a deferred tax liability or asset on the balance sheet). If the sharing agreement is based on the tax expense on the statement of income, more funds may be transferred to the paying agent than are required to settle the actual taxes owed.
cial reporting. The different bases are chosen by management.

An example of deferred income taxes follows, using an estimated tax rate of 40 percent.

<table>
<thead>
<tr>
<th>Financial Reporting</th>
<th>Tax Return</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-tax income</td>
<td>$200</td>
</tr>
<tr>
<td>Currently payable</td>
<td>60</td>
</tr>
<tr>
<td>Deferred portion</td>
<td>20</td>
</tr>
<tr>
<td>TOTAL</td>
<td>80</td>
</tr>
<tr>
<td>Net income</td>
<td>$120</td>
</tr>
</tbody>
</table>

The deferred portion represents the tax effect of delaying the recognition of income or taking more of a deduction for tax-return purposes (40% x $50). This is a temporary difference since over the “life” of the holding company, income and deductions should theoretically equalize for both book and tax purposes.

Financial Accounting Standards Board Accounting Standards Codification 740-10 Statement No. 109 (FAS 109), “Accounting for Income Taxes,” provides guidance on many aspects of accounting for income taxes, including the accounting for deferred tax liabilities and assets. FAS 109 describes how a bank holding company should record (1) taxes payable or refundable for the current year and (2) deferred tax liabilities and assets for the future tax consequences of events that have been recognized in the banking organization’s financial statements or tax returns.

Generally, all bank and other holding companies file annual income tax returns. The holding company pays the entire amount of tax (that is, the amount still due after estimated tax payments) on or before the due date for filing, or it can elect to pay by the extension deadline if one is granted. Bank holding companies may receive extensions from taxing authorities to file their returns later. For the federal tax return, a six-month extension may be granted.

Bank holding companies generally pay estimated taxes throughout the year. The most common payment dates will be as follows (assuming calendar period):

- April 15 —first estimate (25%)
- June 15 —second estimate (25%)
- September 15 —third estimate (25%)
- December 15 —fourth estimate (25%)

Bank holding companies have engaged in intercorporate income tax settlements that have the effect of transferring assets and income from a bank subsidiary to the parent company. The Board will apply appropriate supervisory remedies to situations that are considered inequitable or improper. These remedies may include, under certain circumstances, the Board’s cease-and-desist powers.

On occasion, bank holding companies have used deferred tax assets as a vehicle to transfer cash or other earning assets of subsidiaries, principally from the bank, into the parent company. The Board’s opinion is that each deferred tax asset or liability must remain on the books of the subsidiary. If deferred tax assets have been transferred to the parent, regardless of when the transfer may have occurred, immediate arrangements must be made to return the asset to the appropriate subsidiary. Instances of transferring deferred tax assets to the parent are worthy of inclusion in the Examiner’s Comments and Matters Requiring Special Board Attention section or page of the inspection report.

2070.0.1 INTERAGENCY POLICY STATEMENT ON INCOME TAX ALLOCATION IN A HOLDING COMPANY STRUCTURE

In 1998, the federal bank and savings association’s regulatory agencies (the agencies) issued the following policy statement to provide guidance to banking organizations and savings associations regarding the allocation and payment of taxes among a holding company and its subsidiaries. A holding company and its subsidiaries will often file a consolidated group income tax return. However, for bank regulatory purposes, each depository institution of the consolidated group is viewed as, and reports as, a separate legal and accounting entity. Accordingly, each depository institution’s applicable income taxes, reflecting either an expense or benefit, should be recorded as if the institution had filed as a
separate tax-paying entity. The amount and timing of payments or refunds should be no less favorable to a subsidiary than if it was a separate taxpayer. Any practice that is not consistent with this policy statement may be viewed as an unsafe and unsound practice prompting either informal or formal corrective action. See SR-98-38.

2070.0.1.1 Tax-Sharing Agreements

A holding company and its subsidiary institutions are encouraged to enter into a written comprehensive tax-allocation agreement tailored to their specific circumstances. The agreement should be approved by the respective boards of directors. Although each agreement will be different, tax-allocation agreements usually address certain issues common to consolidated groups.

Therefore, such an agreement should—

1. require a subsidiary depository institution to compute its income taxes (both current and deferred) on a separate-entity basis;
2. discuss the amount and timing of the institution’s payments for current tax expense, including estimated tax payments;
3. discuss reimbursements to an institution when it has a loss for tax purposes; and
4. prohibit the payment or other transfer of deferred taxes by the institution to another member of the consolidated group.

2070.0.1.2 Measurement of Current and Deferred Income Taxes

Generally accepted accounting principles, instructions for the preparation of the federally supervised bank Consolidated Reports of Condition and Income, and other guidance issued by the agencies require depository institutions to account for their current and deferred tax liability or benefit.

When the depository-institution members of a consolidated group prepare separate bank regulatory reports, each subsidiary institution should record current and deferred taxes as if it files its tax returns on a separate-entity basis, regardless of the consolidated group’s tax-paying or -refund status. Certain adjustments for statutory tax considerations that arise in a consolidated return, e.g., application of graduated tax rates, may be made to the separate-entity calculation as long as they are made on a consistent and equitable basis among the holding company affiliates.

In addition, when an organization’s consolidated income tax obligation arising from the alternative minimum tax (AMT) exceeds its regular tax on a consolidated basis, the excess should be consistently and equitably allocated among the members of the consolidated group. The allocation method should be based upon the portion of tax preferences, adjustments, and other items generated by each group member which causes the AMT to be applicable at the consolidated level.

2070.0.1.3 Tax Payments to the Parent Company

Tax payments from a subsidiary institution to the parent company should not exceed the amount the institution has properly recorded as its current tax expense on a separate-entity basis. Furthermore, such payments, including estimated tax payments, generally should not be made before the institution would have been obligated to pay the taxing authority had it filed as a separate entity. Payments made in advance may be considered extensions of credit from the subsidiary to the parent and may be subject to affiliate transaction rules, i.e., sections 23A and 23B of the Federal Reserve Act.

A subsidiary institution should not pay its deferred tax liabilities or the deferred portion of its applicable income taxes to the parent. The deferred tax account is not a tax liability required to be paid in the current reporting period. As a result, the payment of deferred income taxes by an institution to its holding company is considered a dividend subject to dividend restrictions, not the extinguishment of a liability. Furthermore, such payments may constitute an unsafe and unsound banking practice.

3. Throughout the policy statement, the terms “separate entity” and “separate taxpayer” are used synonymously. When a depository institution has subsidiaries of its own, the institution’s applicable income taxes on a separate-entity basis include the taxes of the subsidiaries of the institution that are included with the institution in the consolidated group return.

4. These restrictions include the prompt-corrective-action provisions of section 38(d)(1) of the Federal Deposit Insurance Act (12 U.S.C. 1831o(d)(1)) and its implementing regulations: for insured state nonmember banks, 12 CFR 325, subpart B; for national banks, 12 CFR section 6.6; for savings associations, 12 CFR 565; and for state member banks, 12 CFR 208.45.
2070.0.1.4 Tax Refunds from the Parent Company

An institution incurring a loss for tax purposes should record a current income tax benefit and receive a refund from its parent in an amount no less than the amount the institution would have been entitled to receive as a separate entity. The refund should be made to the institution within a reasonable period following the date the institution would have filed its own return, regardless of whether the consolidated group is receiving a refund. If a refund is not made to the institution within this period, the institution's primary federal regulator may consider the receivable as either an extension of credit or a dividend from the subsidiary to the parent. A parent company may reimburse an institution more than the refund amount it is due on a separate-entity basis. Provided the institution will not later be required to repay this excess amount to the parent, the additional funds received should be reported as a capital contribution.

If the institution, as a separate entity, would not be entitled to a current refund because it has no carry-back benefits available on a separate-entity basis, its holding company may still be able to utilize the institution’s tax loss to reduce the consolidated group’s current tax liability. In this situation, the holding company may reimburse the institution for the use of the tax loss. If the reimbursement will be made on a timely basis, the institution should reflect the tax benefit of the loss in the current portion of its applicable income taxes in the period the loss is incurred. Otherwise, the institution should not recognize the tax benefit in the current portion of its applicable income taxes in the loss year. Rather, the tax loss represents a loss carryforward, the benefit of which is recognized as a deferred tax asset, net of any valuation allowance.

Regardless of the treatment of an institution’s tax loss for regulatory reporting and supervisory purposes, a parent company that receives a tax refund from a taxing authority obtains these funds as agent for the consolidated group on behalf of the group members. Accordingly, an organization’s tax-allocation agreement or other corporate policies should not purport to characterize refunds attributable to a subsidiary depository institution that the parent receives from a taxing authority as the property of the parent. 5

5. See 26 CFR 1.1502-77(a).

2070.0.1.5 Income-Tax-Forgiveness Transactions

A parent company may require a subsidiary institution to pay it less than the full amount of the current income tax liability that the institution calculated on a separate-entity basis. Provided the parent will not later require the institution to pay the remainder of the current tax liability, the amount of this unremitting liability should be accounted for as having been paid with a simultaneous capital contribution by the parent to the subsidiary.

In contrast, a parent cannot make a capital contribution to a subsidiary institution by “forgiving” some or all of the subsidiary’s deferred tax liability. Transactions in which a parent “forgives” any portion of a subsidiary institution’s deferred tax liability should not be reflected in the institution’s regulatory reports. These transactions lack economic substance because each member of the consolidated group is jointly and severally liable for the group’s potential future obligation to the taxing authorities. Although the subsidiaries have no direct obligation to remit tax payments to the taxing authorities, these authorities can collect some or all of a group liability from any of the group members if tax payments are not made when due.

2070.0.1.6 Appendix — 2014 Addendum to 1998 Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure

Since the issuance of the 1998 Interagency Policy Statement, courts have reached varying conclusions regarding whether tax allocation agreements create a debtor-creditor relationship between a holding company and its IDI. 5 Some courts have found that the tax refunds in question were the property of the holding company in bankruptcy (rather than property of the subsidiary IDI) and held by the holding company as

---

5. Case law on this issue is mixed. Compare Zucker v. FDIC, as Receiver for BankUnited, 727 F.3d 1100, 1108-09 (11th Cir. Aug. 15, 2013) (“The relationship between the Holding Company and the Bank is not a debtor-creditor relationship. When the Holding Company received the tax refunds it held the funds intact—as if in escrow—for the benefit of the Bank and thus the remaining members of the Consolidated Group.”) with FD.I.C. v. Siegel (In re IndyMac Bancorp, Inc.), 649 F. App’x 2014 WL 1568759, *2 (9th Cir. Apr. 21, 2014) (per curiam) (“The TSA does not create a trust relationship. The absence of language creating a trust relationship is explicitly an indication of a debtor-creditor relationship in California.”).
the IDI’s debtor.\(^7\)

On June 13, 2014, an Addendum to the 1998 Interagency Policy Statement (Addendum) was issued by the Board of Governors of the Federal Reserve System, Federal Deposit Insurance Corporation, and the Office of the Comptroller of the Currency (Agencies). It explains that Consolidated Groups should review their tax allocation agreements to ensure the agreements achieve the objectives of the Interagency Policy Statement. This Addendum also clarifies how certain of the requirements of sections 23A and 23B of the Federal Reserve Act (FRA) apply to tax allocation agreements between IDIs and their affiliates.

In reviewing their tax allocation agreements, Consolidated Groups should ensure the agreements: (1) clearly acknowledge that an agency relationship exists between the holding company and its subsidiary IDIs with respect to tax refunds, and (2) do not contain other language to suggest a contrary intent.\(^8\) In addition, all Consolidated Groups should amend their tax allocation agreements to include the following paragraph or substantially similar language:

The [holding company] is an agent for the [IDI and its subsidiaries] (the “Institution”) with respect to all matters related to consolidated tax returns and refund claims, and nothing in this agreement shall be construed to alter or modify this agency relationship. If the [holding company] receives a tax refund from a taxing authority, these funds are obtained as agent for the Institution. Any tax refund attributable to income earned, taxes paid, and losses incurred by the Institution is the property of and owned by the Institution, and shall be held in trust by the [holding company] for the benefit of the Institution. Nothing in this agreement is intended to be or should be construed to provide the [holding company] with an ownership interest in a tax refund that is attributable to income earned, taxes paid, and losses incurred by the Institution. The [holding company] hereby agrees that this tax sharing agreement does not give it an ownership interest in a tax refund generated by the tax attributes of the Institution.

Going forward, the Agencies generally will deem tax allocation agreements that contain this or similar language to acknowledge that an agency relationship exists for purposes of the Interagency Policy Statement, this Addendum, and sections 23A and 23B of the FRA.

All tax allocation agreements are subject to the requirements of section 23B of the FRA, and tax allocation agreements that do not clearly acknowledge that an agency relationship exists may be subject to additional requirements under section 23A of the FRA.\(^9\) In general, section 23B requires affiliate transactions to be made on terms and under circumstances that are substantially the same, or at least as favorable to the IDI as comparable transactions involving non-affiliated companies or, in the absence of comparable transactions, on terms and circumstances that would in good faith be offered to non-affiliated companies.\(^10\) Tax allocation agreements should require the holding company to forward promptly any payment due the IDI under the tax allocation agreement and specify the timing of such payment. Agreements that allow a holding company to hold and not promptly transmit tax refunds received from the taxing authority and owed to an IDI are inconsistent with the requirements of section 23B and subject to supervisory action. However, an Agency’s determination of whether such provision, or the tax allocation agreement in total, is consistent with section 23B will be based on the facts and circumstances of the particular tax allocation agreement and any associated refund. State member banks and holding companies should implement this 2014 Addendum guidance as soon as reasonably possible, which the Agencies expect would not be later than October 31, 2014. See 79 Fed. Reg. 35230, June 19, 2014, and SR-14-6, July 15, 2014, “Addendum to the Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure.”

2070.0.2 Qualifying Subchapter S Corporations

The Small Business Job Protection Act of 1996 made changes to the Internal Revenue Code (the

---

\(^7\) See e.g., FDIC v. Siegel (In re IndyMac Bancorp, Inc.), 572 F. App’x 656 (9th Cir. Apr. 21, 2014) (per curiam).

\(^8\) This Addendum clarifies and supplements but does not replace the Interagency Policy Statement.

\(^9\) Section 23A requires, among other things, that loans and extensions of credit from a bank to its affiliates be properly collateralized. 12 U.S.C. 371c(c).

\(^10\) 12 U.S.C. 371c-1(a). Transactions subject to section 23B include the payment of money by a bank to an affiliate under contract, lease, or otherwise and transactions in which the affiliate acts as agent of the bank. Id. at § 371c-1(a)(2) & (a)(4).
code). On October 29, 1996, the FFIEC issued a bulletin notifying all federally insured banks and thrifts of the impact of these changes. Thrift organizations may qualify for Subchapter S corporation\textsuperscript{11} status under the code’s revisions and could generally receive pass-through tax treatment for federal income tax purposes if certain criteria are met.

The bulletin states that no formal application is required to be filed with the federal bank and thrift regulatory agencies merely as a result of an election by a bank, thrift, or parent holding company to become a Subchapter S corporation. However, if an institution takes certain steps to meet the criteria to qualify for this tax status, particularly the code’s limitations on the number and types of shareholders, applications or notices to the agencies may be required.

The FFIEC bulletin also states that any distributions made by the Subchapter S banking organization to its shareholders, including distributions intended to cover shareholders’ personal tax liabilities for their shares of the income of the institution, will continue to be regarded as dividends and subject to any limitations under relevant banking law. See SR-96-28.

\textbf{2070.0.3 Inspection Objectives}

1. To determine whether the supervisory and accounting guidance set forth in ASC 740-10 (FASB 109), other tax-accounting standards, and the 1998 interagency policy statement on income tax allocation has been appropriately, equitably, and consistently applied.

2. To verify that the parent’s intercorporate tax policy contains a provision requiring the subsidiaries to receive an appropriate refund from the parent when they incur a loss, and that such a refund would have been receivable from the tax authorities if the subsidiary was filing a separate return.

3. To ascertain that tax payments and tax refunds between financial institution subsidiaries and the parent company have been limited to no more than what the institution might have paid to or received from the tax authorities, if it had filed its tax returns on a timely, separate-entity basis.\textsuperscript{12}

4. To determine that no deferred tax liability, corresponding asset, or the deferred portion of its applicable income taxes has been transferred from a bank subsidiary to the parent company.

5. To verify that there has been proper accountability for tax-forgiveness transactions between the parent company and its financial institution subsidiaries.

6. To substantiate that corporate practices are consistent with corporate policies.

\textbf{2070.0.4 Inspection Procedures}

1. Obtain and discuss with the holding company’s management its intercorporate income tax policies and tax-sharing agreements. Obtain and retain a copy of the intercorporate tax policies and agreements in the workpaper files. Review the written intercorporate tax-settlement policy and ascertain that it includes the following:
   a. a description of the method(s) used in determining the amount of estimated taxes paid by each subsidiary to the parent
   b. an indication of when payments are to be made
   c. a statement that deferred taxes are maintained on the affiliate’s general ledger
   d. procedures for handling tax claims and refunds

   Holding companies of depository institutions should also have written tax-sharing agreements with their subsidiaries that specify intercorporate tax-settlement policies. The Board encourages these holding companies to develop such agreements. For tax-sharing agreements, the following inspection procedures should be followed:
   a. Determine whether each subsidiary is required to compute its income taxes (current and deferred) on a separate-entity basis.
   b. Ascertain if the amount and timing of payments for current tax expense, including estimated tax payments, are discussed.
   c. Determine if reimbursements are discussed when an institution has a loss for tax purposes.
   d. Determine if there is a prohibition on the payment or other transfer of deferred taxes by an institution to another member of the consolidated group.

\textsuperscript{11} Subchapter S corporations are corporations that elect to pass corporate income tax losses, deductions, and credit through to their shareholders for federal income tax purposes.

\textsuperscript{12} The term “separate-entity basis” recognizes that certain adjustments, in particular tax elections in a consolidated return, may, in certain periods, result in higher payments by the depository institution than would have been made if the depository institution was unaffiliated.
2. Review briefly the parent’s intercompany transaction report; general ledger income tax accounts; cash receipts and disbursements; and, if necessary, tax-return workpapers and other pertinent corporate documents.
   a. Ascertain that the taxes collected by the parent company from each depository institution subsidiary do not exceed the amount that would have been paid if a separate return had been filed.
   b. When depository institution subsidiaries are making their tax payments directly to the taxing authorities, determine whether other subsidiaries are paying their proportionate share.

3. Review the separate regulatory reports for depository institution members of the holding company that are included in the filing of a consolidated tax return.
   a. Verify that each subsidiary institution is recording current and deferred taxes as if it was filing its own tax returns on a separate-entity basis.
   b. Ascertain that any adjustments for statutory tax considerations, arising from filing a consolidated return, are also made to the separate-entity calculations consistently and equitably among the holding company affiliates.

4. Determine if any excess amounts (tax benefits), resulting from the filing of a consolidated return, are consistently and equitably allocated among the members of the consolidated group.

5. Review the tax payments that are made from the bank and the nonbank subsidiaries to the parent company.
   a. Determine that payments, including estimated payments that are being requested, do not significantly precede the time that a consolidated or estimated current tax liability would be due and payable by the parent to the tax authorities.
   b. Verify with management that the tax payments to the parent company were not in excess of the amounts recorded by its depository institution subsidiaries as current tax expense on a separate-entity basis.

6. When a subsidiary incurs a loss, review the tax system to determine that bank and nonbank subsidiaries are receiving an appropriate refund from the parent company, that is, an amount that is no less than what would have been received if the tax return had been filed on a separate-entity basis.
   a. Verify that refunds are received no later than the date the institutions would have filed their own returns and that no refund is characterized as the parent company’s property.
   b. If the parent company does not require a subsidiary to pay its full amount of current tax liability, and the parent will not later require the institution to pay the remainder of the current tax liability, ascertain that the amount of the tax liability is recorded as having been paid and that the corresponding credit is recorded as a capital contribution from the parent to the subsidiary.

7. Determine that the deferred tax accounts of each bank subsidiary are maintained on its books and that they are not transferred to the parent organization.

8. Determine if the Internal Revenue Service or other tax authorities have assessed any additional tax payments on the consolidated group, and whether the holding company has provided an additional reserve to cover the assessment.

9. Complete the Other Supervisory Issues page or section of the Report of Bank Holding Company Inspection (FR 1225 or FR 1241).

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
The purpose of this Section is to discuss the types of funding ordinarily found in holding companies and to analyze their respective characteristics. It is not intended that this section include an analysis of the inter-relationships of these factors because that will be addressed in the various subsections of Section 4000 of the Manual.

The three major types of funding are short-term debt, long-term debt and equity. The ideal "hypothetical" holding company balance sheet would reflect sufficient equity to fund total bank and nonbank capital needs.

The complexity of the debt and/or equity financing will depend greatly upon the size and financial status of the holding company as well as the access to certain capital markets. The small holding company will be limited in the type and/or sophistication of financing instruments available for its use, and probably would look to local sources for its debt and equity needs. This would include sale of equity and debt instruments to owners of the holding company. The medium-sized holding company has access to public markets through investment bankers and occasionally may issue its own corporate notes in the commercial paper market. The large holding company has a wide range of choices depending upon its financial condition and the economic climate at the time of any offering. It also has the ability to place debt privately as an alternate to dealing with public markets. In summary, the type of financing needed by a holding company will vary with the size and nature of its banking and nonbanking operations. The following subsections address those issues.
WHAT’S NEW IN THIS REVISED SECTION

Effective July 2010, this section was revised to include a cross reference to section 4066.0 of this manual, which provides the March 17, 2010, interagency policy statement on “Funding and Liquidity Risk Management.”

A key principle underlying the Federal Reserve’s supervision of bank holding companies (BHCs) is that such companies should be operated in a way that promotes the soundness of their subsidiary banks. Holding companies are expected to avoid funding strategies or practices that could undermine public confidence in the liquidity or stability of their banks. Consequently, BHCs should develop and maintain funding programs that are consistent with their lending and investment activities and that provide adequate liquidity to the parent company and its nonbank subsidiaries.

For more information regarding the Federal Reserve’s supervisory expectations on liquidity risk management for BHCs, see section 4066.0, “Consolidated (Funding and Liquidity Risk Management).” This section provides the March 17, 2010, interagency policy statement on “Funding and Liquidity Risk Management.” (see also SR-10-6 and its attachment.)

2080.05.1 FUNDING AND LIQUIDITY

A principal objective of a parent BHC’s funding strategy should be to support capital investments in subsidiaries and long-term assets with capital and long-term sources of funds. Long-term or permanent financing not only reduces funding and liquidity risks, but also provides an organization with investors and lenders that have a long-run commitment to its viability. Long-term financing may take the form of term loans, long-term debt securities, convertible debentures, subordinated debt, and equity.

In general, liquidity can be measured by the ability of an organization to meet its maturing obligations, convert assets into cash with minimal loss, obtain cash from other sources, or roll over or issue new debt obligations. A major determinant of a BHC’s liquidity position is the level of liquid assets available to support maturing liabilities. The use of short-term debt, including commercial paper, to fund long-term assets can result in unsafe and unsound banking conditions, especially if a BHC does not have alternative sources of liquidity or other reliable means to refinance or redeem its obligations. In addition, commercial paper proceeds should not be used to fund corporate dividends or pay current expenses. Funding mismatches can exacerbate an otherwise manageable period of financial stress or, in the extreme, undermine public confidence in an organization’s viability. For this reason, BHCs, in managing their funding positions, should control liquidity risk by maintaining an adequate cushion of liquid assets to cover short-term liabilities. Holding companies should, at all times, have sufficient liquidity and funding flexibility to handle any runoff, whether anticipated or unforeseen, of commercial paper or other short-term obligations—without having an adverse impact on their subsidiary banks.

This objective can best be achieved by limiting the use of short-term debt to fund assets that can be readily converted to cash without undue loss. It should be emphasized, however, that the simple matching of the maturity of short-term debt with the stated or nominal maturity of assets does not, by itself, adequately ensure an organization’s ability to retire its short-term obligations if the condition of the underlying assets precludes their timely sale or liquidation. In this regard, it is particularly important that parent company advances to subsidiaries be considered a reliable source of liquidity only to the extent that they fund assets of high quality that can readily be converted to cash. Consequently, effective procedures to monitor and ensure on an ongoing basis the quality and liquidity of the assets being funded by short-term debt are critical elements of a holding company’s overall funding program.

BHCs should establish and maintain reliable funding and contingency plans to meet ongoing liquidity needs and to address any unexpected funding mismatches that could develop over time. Such plans could include reduced reliance on short-term purchased funds, greater use of longer-term financing, appropriate internal limitations on parent company funding of long-term assets, and reliable alternate sources of liquidity. It is particularly important that BHCs have reliable plans or backup facilities to refinance or redeem their short-term debt obligations in the event assets being funded by these obligations cannot be liquidated in a timely manner when the debt must be repaid. In this connection,
holding companies relying on backup lines of credit for contingency plan purposes should seek to arrange standby facilities that will be reliable during times of financial stress, rather than facilities that contain clauses which may relieve the lender of the obligation to fund the borrower in the event of a deterioration in the borrower’s financial condition.

In developing and carrying out funding programs, BHCs should avoid overreliance or excessive dependence on any single short-term or potentially volatile source of funds, such as commercial paper, or any single maturity range. Prudent internal liquidity policies and practices should include specifying limits for, and monitoring the degree of reliance on, particular maturity ranges and types of short-term funding. Special attention should be given to the use of overnight money since a loss of confidence in the issuing organization could lead to an immediate funding problem. BHCs issuing overnight liabilities should maintain, on an ongoing basis, a cushion of superior quality assets that can be immediately liquidated or converted to cash with minimal loss. The absence of such a cushion or a clear ability to redeem overnight liabilities when they become due should generally be viewed as an unsafe and unsound banking practice.

2080.05.2 ADDITIONAL SUPERVISORY CONSIDERATIONS

BHCs and their nonbank affiliates should maintain sufficient liquidity and capital strength to provide assurance that outstanding debt obligations issued to finance the activities of these entities can be serviced and repaid without adversely affecting the condition of the affiliated bank(s). In this regard, BHCs should maintain strong capital positions to enable them to withstand potential losses that might be incurred in the sale of assets to retire holding company debt obligations. It is particularly important that a BHC not allow its liquidity and funding policies or practices to undermine its ability to act as a source of strength to its affiliated bank(s).

The principles and guidelines outlined above constitute prudent financial practices for BHCs and most businesses in general. Holding company boards of directors should periodically assure themselves that funding plans, policies, and practices are prudent in light of their organizations’ overall financial condition. Such plans and policies should be consistent with the principles outlined above, including the need for appropriate internal limits on the level and type of short-term debt outstanding and the need for realistic and reliable contingency plans to meet any unanticipated runoff of short-term liabilities without adversely affecting affiliated banks.

2080.05.3 EXAMINER’S APPLICATION OF PRINCIPLES IN EVALUATING LIQUIDITY AND IN FORMULATING CORRECTIVE ACTION PROGRAMS

Reserve Bank examiners should be guided by these principles in evaluating liquidity and in formulating corrective action programs for BHCs that are experiencing earnings weaknesses or asset-quality problems, or that are otherwise subject to unusual liquidity pressures. In particular, BHCs with less than satisfactory supervisory ratings—composite (C) and the potential impact (I) of the parent company and nondepository entities—that is, 3 or worse), or any other holding companies subject to potentially serious liquidity or funding pressures, should be asked to prepare a realistic and specific action plan for reducing or redeeming entirely their outstanding short-term obligations without directly or indirectly undermining the condition of their affiliated bank(s). Such contingency plans should be reviewed and evaluated by Reserve Bank supervisory personnel during or subsequent to on-site inspections. Any deficiencies in the plan, if not addressed by management, should be brought to the attention of the organization’s board of directors. If the liquidity or funding position of such a company appears likely to worsen significantly, or if the company’s financial condition worsens to a sufficient degree, the company should be expected to implement, on a timely basis, its plan to curtail or eliminate its reliance on commercial paper or other volatile, short-term sources of funds. Any decisions or steps taken by Reserve Banks in this regard should be discussed and coordinated with Board staff.

Reference should also be made to other manual sections that address funding, cash flow, or liquidity (for example, 2010.1, 2080.0, 2080.1, 2080.2, 2080.4, 2080.5, 2080.6, 4010.0, 4010.1, 4010.2, 5010.27, and 5010.28).

1. It is important to note that there are securities registration requirements under the Securities Act of 1933 related to the issuance of commercial paper. A BHC should have procedures in place to ensure compliance with all applicable securities and SEC requirements. Refer to manual section 2080.1.
Funding (Commercial Paper and Other Short-term Uninsured Debt Obligations and Securities) Section 2080.1

Commercial paper is a generic term that is generally used to describe short-term unsecured promissory notes issued by well-recognized and generally financially sound corporations. The largest commercial paper issuers are finance companies and bank holding companies which use the proceeds as a source of funds in lieu of fixed rate borrowing.

Generally accepted limitations on issuances and uses of commercial paper derive from Section 3(a)(3) of the Securities Act of 1933 (1933 Act). Section 3(a)(3) exempts from the registration requirements of the 1933 Act “any note . . . which arises out of a current transaction or the proceeds of which have been or are to be used for current transactions and which has a maturity at the time of issuance not exceeding nine months, exclusive of days of grace, or any renewal thereof the maturity of which is likewise limited. . . .” The Securities and Exchange Commission (SEC) has rulemaking authority over the issuance of commercial paper.

The five criteria, as set forth in an SEC interpretation (SA Release #33–4412, September 20, 1961), that are deemed necessary to qualify securities for the commercial paper exemption are that the commercial paper must:

• Be of prime quality and negotiable;
• Be of a type not ordinarily purchased by the general public;
• Be issued to facilitate current operational business requirements;
• Be eligible for discounting by a Federal Reserve Bank;
• Have a maturity not exceeding nine months.

2080.1.1 MEETING THE SEC CRITERIA

The above criteria are discussed below.

2080.1.1.1 Nine-Month Maturity Standard

Although roll-over of commercial paper proceeds on maturity is common, the SEC has stated that obligations that are payable on demand or have provisions for automatic roll-over do not satisfy the nine-month maturity standard. However, the SEC staff has issued “no action” letters for commercial paper master note agreements which allow eligible investors to make daily purchases and withdrawals (subject to a minimum amount of $25,000) as long as the note and each investor’s interest therein, does not exceed nine months. Such master note agreements may permit prepayment by the issuer, or upon demand of the investor, at any time.

2080.1.1.2 Prime Quality

Most commercial paper is rated by at least one of five nationally recognized statistical rating organizations. The SEC has not clearly articulated the line at which it will regard a specific rating of commercial paper as being “not prime” and, indeed, there is no requirement that a rating be obtained at all in order to qualify. SEC staff has issued a series of “no-action” letters to individual bank holding companies based on specific facts and circumstances even where it does not appear that a rating was obtained. However, where commercial paper is downgraded to below what is generally regarded as “investment quality” (ratings of less than medium grade—refer to the Commercial Bank Examination Manual, section 203.1), or a rating is withdrawn, BHCs may not be able to issue commercial paper based on the Section 3(a)(3) exemption, in the absence of a marked significant improvement in the issuer’s financial condition.

2080.1.1.3 Current Transactions

There have been considerable interpretative problems arising out of the current transactions concept. The SEC staff has issued a partial laundry list of activities which would not be deemed suitable for investment of commercial paper proceeds, namely:

1. The discharge of existing indebtedness, unless such indebtedness is itself exempt under section 3(a)(3) of the 1933 Act;
2. The purchase or construction of a plant or the purchase of durable machinery or equipment;
3. The funding of commercial real estate development or financing;
4. The purchase of real estate mortgages or other securities;
5. The financing of mobile homes or home improvements; or
6. The purchase or establishment of a business enterprise.

The SEC has opined that commercial paper, which is used as bridge financing by a bank holding company to fund a permanent acquisition within the 270-day maturity period of the paper, will meet the current transactions criterion. The amount of a bank holding company’s commercial paper cannot exceed the aggregate amount of “current transactions” of the bank holding company and its subsidiaries on a consolidated basis. For this purpose, “current transactions” include dividends, interest, taxes and short-term loan repayments. In summary, in most cases, the “current transactions” requirement will not be a significant limitation on issuances of commercial paper by bank holding companies.

In addition to meeting SEC requirements, a bank holding company must meet funding and liquidity criteria prescribed by the Board. For a detailed discussion on acceptable use of commercial paper in connection with a bank holding company overall funding strategies, see Sections 2080.05 and 2080.6.

2080.1.1.4 Sales to Institutional Investors

Commercial paper is generally marketed only to institutional investors (corporations, pension funds, insurance companies, etc.) although sales to individuals are not prohibited. It is clear, however, from the legislative history of the Section 3(a)(3) exemption that commercial paper was not to be marketed for sale to the general public. Currently, SEC staff will not issue a no-action letter if the minimum denomination of the commercial paper to be issued is less than $25,000. One of the underlying premises of the Section 3(a)(3) exemption is that purchasers of commercial paper have sufficient financial sophistication to make informed investment decisions without the benefit of the information provided by a registration statement. It is, therefore, generally recognized today that any individual purchaser of commercial paper should meet the “accredited investor” criteria of commercial paper set forth in SEC Regulation D (17 C.F.R 230.501(a)). To qualify as an “accredited investor”, an individual can meet one of two tests—a net worth test or an income test. To qualify under the net worth test, an individual or an individual and his or her spouse must have a net worth at the time of purchase in excess of $1 million. The alternative test requires $200,000 in income for each of the last two years ($300,000 if the spouse’s income is included) and a reasonable expectation of reaching the same income level in the current year.

For additional information on marketing of commercial paper, see the next subsection.

2080.1.2 MARKETING OF COMMERCIAL PAPER

The sale of bank holding company (or nonbank subsidiary) commercial paper by an affiliated bank to depositors or other investors raises a number of supervisory issues. Of particular concern is the possibility that individuals may purchase holding company paper with the misunderstanding that it is an insured deposit or obligation of the subsidiary bank. The probability of this occurring is increased when a bank subsidiary is actively engaged in the marketing of the paper of its holding company or nonbank affiliate, or when the holding company or nonbank affiliate has a name similar to the name of the commercial bank subsidiary.

It is a long-standing policy of the Federal Reserve (refer to letters SR 90–19 and SR–620) that debt obligations of a bank holding company or a nonbank affiliate should not be issued, marketed or sold in a way that conveys the misimpression or misunderstanding that such instruments are either: 1) federally-insured deposits, or 2) obligations of, or guaranteed by, an insured depository institution. The purchase of such holding company obligations by retail depositors of an affiliated depository institution can, in the event of default, result in losses to individuals who believed that they had acquired federally-insured or guaranteed instruments. In addition to the problems created for these individuals, such a situation could impair public confidence in the affiliated depository institution and lead to unexpected withdrawals or liquidity pressures.

Events surrounding the sale of uninsured debt obligations of holding companies to retail customers of affiliated depository institutions have focused attention on the potential for problems in this area. In view of these concerns, the Federal Reserve emphasizes that this policy applies to the sale of both long- and short-term debt obligations of a bank holding company and any nonbank affiliate, as well as to the sale of uninsured debt securities issued by a state member bank or its subsidiaries. Debt obligations covered by this supervisory policy include commercial paper and all other short-term and long-
term debt securities, such as thrift notes and subordinated debentures.

Bank holding companies and nondepository affiliates that have issued or plan to issue uninsured obligations or debt securities should not market or sell these instruments in any public area of an insured depository institution where retail deposits are accepted, including any lobby area of the depository institution. Bank holding companies and any affiliates that are engaged in issuing debt obligations should establish appropriate policies and controls over the marketing and sale of the instruments. In particular, internal controls should be established to ensure that the promotion, sale, and subsequent customer relationship resulting from the sale of uninsured debt obligations is separated from the retail deposit-taking functions of affiliated depository institutions.

State member banks, including their subsidiaries, may also be engaged in issuing nondeposit debt securities (such as subordinated debt), and it is equally important to ensure that such securities are not marketed or sold in a manner that could give the purchaser the impression that the obligations are federally-insured deposits. Consequently, state member banks and their subsidiaries that have issued or plan to issue nondeposit debt securities should not market or sell these instruments in any public area of the bank where retail deposits are accepted, including any lobby area of the bank. Consistent with long-standing Federal Reserve policy, debt obligations of bank holding companies or their nonbank affiliates, including commercial paper and other short- or long-term debt securities, should prominently indicate that: 1) they are not obligations of an insured depository institution; and 2) they are not insured by the Federal Deposit Insurance Corporation. In cases where purchasers do not take physical possession of the obligation, the purchasers should be provided with a printed advice that conveys this information. Employees engaged in the sale of bank holding company debt obligations should be instructed to relate this information verbally to potential purchasers. In addition, with respect to the sale of holding company debt obligations, the instruments or related documentation should not display the name of the affiliated bank in such a way that could create confusion among potential purchasers about the identity of the obligor. State member banks involved in the sale of uninsured nondeposit debt securities of the bank should establish procedures to ensure that potential purchasers understand that the debt security is not federally-insured or guaranteed.

Federal Reserve examiners are responsible for monitoring compliance with this supervisory policy; and, as part of the examination of state member banks and bank holding companies, are expected to continue to review the polices and internal controls relating to the marketing and sale of debt obligations and securities. Examiners should determine whether the marketing and sale of uninsured nondeposit debt obligations are sufficiently separated and distinguished from retail banking operations, particularly the deposit-taking function of the insured depository affiliate.

In determining whether the activities are sufficiently separated, examiners should take into account: 1) whether the sale of uninsured debt obligations of a holding company affiliate or uninsured nondeposit debt securities of a state member bank is physically separated from the bank’s retail-deposit taking function, including the general lobby area; 2) whether advertisements that promote uninsured debt obligations of the holding company also promote insured deposits of the affiliated depository institution in a way that could lead to confusion; 3) whether similar names or logos between the insured depository institution and the issuing nonbank affiliate are used in a misleading way to promote securities of a nonbank affiliate without clearly identifying the obligor; 4) whether retail deposit-taking employees of the insured depository institution are engaged in the promotion or sale of uninsured debt securities of a nonbank affiliate; 5) whether information on the sale of uninsured debt obligations of a nonbank holding company affiliate is available in the retail banking area; and 6) whether retail deposit statements for bank customers also promote information on the sale of uninsured debt obligations of the bank holding company or a nonbank affiliate.

The Board’s policy is that the manner in which commercial paper is sold should not lead bank customers or investors to construe commercial paper as an insured obligation or an instrument which may be higher in yield but equal in risk to insured bank deposits. All purchasers of commercial paper should clearly understand that such paper is an obligation of the parent company or nonbank subsidiary and not an obligation of the bank and that the quality

---

1. This policy is not intended to preclude the sale of holding company affiliate obligations from a bank’s money market desk, provided that the money market function is separate from any public area where retail deposits are accepted, including any lobby area.
of the investment depends on the risks and operating characteristics associated with the overall holding company and its nonbanking activities.

2080.1.3 THRIFT NOTES AND SIMILAR DEBT INSTRUMENTS

In the event a bank holding company or nonbanking affiliate issues thrift notes or other debt obligations which do not fall within the generally accepted definition of commercial paper, examiners should be guided by the Board’s 1978 position on the issuance of small denomination debt obligations by bank holding companies and their nonbanking affiliates. At that time, the Board was considering thrift notes issued by a nonbanking subsidiary of a bank holding company and concluded that such obligations should prominently indicate in bold type on their face that the obligations are not obligations of a bank and are not FDIC insured. The Board also stated that the obligations should not be sold on the premises of affiliated banks. Where there is substantial reliance on the sale of thrift notes to fund the operations of a bank holding company or nonbanking subsidiary, other than an industrial bank, a violation of the Glass–Steagall Act may be involved. Such cases should be discussed with Reserve Bank counsel.

2080.1.4 OTHER SHORT-TERM INDEBTEDNESS

A company’s access to bank credit is almost universal, and most small to medium-sized companies will reflect this type of debt on their balance sheets. An important point to remember about bank debt is that maturities of the bank notes are usually short-term while the proceeds of the borrowings are often applied to long-term assets, that is, investment in the bank’s capital and/or long-term debt accounts. The note may be subject to renewal on an annual basis, and the creditor may have the opportunity to call the note at renewal if the financial condition of the company has deteriorated. Rates of interest on short-term bank notes are usually pegged to the creditor’s prime rate plus some fraction thereof. The principal is often repaid over a period of years as the notes are rolled over despite their short-term maturity.

2080.1.5 CURRENT PORTION OF LONG-TERM DEBT

This type of debt has many of the short-term characteristics of bank debt, with possibly one additional important feature. Such debt is usually tied to a written agreement between creditor and debtor, and encompasses certain minimum standards of performance to be adhered to by the company. The examiner must review the agreement to determine that the company is operating within the parameters of the covenants laid out in the agreement. Failure to abide by the covenants can trigger default provisions of the agreement and escalate the repayment of the total loan balance outstanding.

2080.1.6 INSPECTION OBJECTIVES

1. To determine the company’s policy and actual practices with respect to the sale of uninsured debt obligations and securities issued by bank holding companies, nonbank affiliates or State member banks. More often than not, an informal policy evolves from practice. It then becomes important to interview senior officers in charge of this function to determine if they are adequately aware of the statutory and regulatory constraints with respect to appropriate usage of commercial paper.

2. To review the company’s funding and liquidity strategy with a view to determining whether it has sufficient liquid assets to support maturing liabilities and whether there are any funding mismatches. (See Manual sections 2080.05, 4010.2.3, 4010.2.7, and 5010.24.1)

3. To determine compliance with the Federal Reserve System’s supervisory policy with regard to the marketing of commercial paper, thrift notes or similar type debt instruments (refer to Board letter S 2427 dated June 27, 1980, and supervisory letters SR 90–19 and SR 620).

4. To identify potential weaknesses in corporate policy and practices.

2080.1.7 INSPECTION PROCEDURES

1. Review the bank holding company’s procedures for authorizing the issuance of commercial paper and other uninsured debt obligations and securities of the holding company and/or its nonbank affiliates.

2. Review the board of directors’ resolution authorizing the issuance of commercial paper and other uninsured debt obligations and securities.
3. Determine whether the company has sought a “no action” letter from the SEC. A “no action” letter indicates the SEC has reviewed the company’s issuance of commercial paper and plans “no action” to require the registration of the commercial paper as “securities.” Some companies rely on the opinion of their own counsel that their paper is not subject to SEC registration requirements. If the company does not have a “no action” letter there should be a legal opinion on file from the holding company’s attorney regarding exemption from registration under section 5 of the 1933 Act.

4. Obtain a copy of the holding company’s written policy on paper usage to compare with resolution and practice.

5. Review to determine the extent to which the commercial paper and other uninsured debt obligations are supported by back-up lines of credit provided by unaffiliated banks. These lines are established to cover any unexpected run-off of paper at maturity. Commitments for lines of credit should be in writing and have expiration dates. Commitment fees substantiate the enforceability of the commitment whereas compensating balances tend to indicate that the lending commitment is less formal. The examiner should determine whether material adverse change clauses exist in back-up line of credit agreements which may affect their reliability. Comment if it appears that those provisions might be utilized.

Compensating balance arrangements should be disclosed. A company may commit to a compensating balance, but if it relies on its bank subsidiary to provide the funds the bank should be compensated for utilization of its funds.

Reciprocal back-up lines may be established. This may eliminate the need for fees or compensating balances and may provide a certain comfort level for company management.

6. Obtain a listing of commercial paper and other uninsured debt obligation holders from management to the extent known. In the case of larger BHCs, there is a choice between issuing paper on a local level or placing it nationally through the auspices of an investment banking firm. In the latter case, there is likely to be no record of who purchases the paper because the paper is usually sold on a bearer basis. Holding companies looking for a wider market, national recognition, and higher ratings place their paper through an investment banking firm. However, it should be recognized that the market for commercial paper placed in this manner is more sophisticated and knowledgeable and therefore more sensitive to adverse developments than a local market. The smaller company can be content to sell its paper on a local level through its corporate headquarters, knowing its customer profile and limiting the amount to any one paperholder, thereby limiting its exposure to refinancing problems caused by large scale redemptions.

7. Review for potential weaknesses in corporate policy and practices. Any amounts in excess of 10 percent in the hands of one paperholder should be discussed with management and noted in the report. A large paperholder could refuse to purchase new paper at maturity (rollover) and place the company in a liquidity squeeze, requiring sell-off of assets or draw down of back-up lines.

Rollovers are prohibited under the 1933 Act. The instrument must have a definite date of maturity with no automatic provision for reinvestment of proceeds. Companies must abide by the 270-day provision and if the paperholder elects to reinvest the funds, a new instrument should be executed.

8. Request a copy of the commercial paper, thrift note or similar type instrument, and any printed advice to the purchasing customer for review. These documents should be checked for compliance with the standards set forth under the captions “Marketing of Commercial Paper” and “Thrift Notes and Similar Debt Instruments” in this section of the Manual.

9. If a bank sells the commercial paper and/or other uninsured debt obligations of its holding company or nonbanking affiliate, review the procedures to separate their sale from the retail operations of the bank.

This segregation should be reviewed as part of all holding company inspections. Examiner judgment must be relied upon, to a large extent, to determine whether the marketing activities of commercial bank subsidiaries for the bank holding company’s commercial paper and other uninsured debt obligations are sufficiently separated and distinguished from retail banking operations, particularly the deposit-taking function. In making this determination, the examiner should consider whether:

a. The sale of uninsured debt obligations of a holding company affiliate or uninsured nondeposit debt securities of a state member bank is physically separated from the bank’s retail-deposit taking function, including the general lobby area;

b. Advertisements that promote uninsured debt obligations of the holding company also
promote insured deposits of the affiliated depository institution in a way that could lead to confusion;

c. Similar names or logos between the insured depository institution and the issuing nonbank affiliate are used in a misleading way to promote securities of a nonbank affiliate without clearly identifying the obligor;

d. Retail deposit-taking employees of the insured depository institution are engaged in the promotion or sale of uninsured debt securities of a nonbank affiliate;

e. Information on the sale of uninsured debt obligations of a nonbank holding company affiliate is available in the retail banking area; and

f. Retail deposit statements for bank customers also promote information on the sale of uninsured debt obligations of the bank holding company or a nonbank affiliate.

In those cases where the bank holding company or nonbanking affiliates issue thrift notes or similar type debt instruments, ascertain that these obligations are not being sold on the premises of affiliated banks.

10. The procedures in Nos. 8 and 9 address the manner in which bank holding companies (or nonbanking subsidiaries) market their commercial paper, thrift notes or similar type debt instruments; consequently, implementation will necessitate review of marketing procedures of all holding companies (or nonbanking subsidiaries), regardless of the type of charter or the identity of the primary supervisor of the subsidiary (affiliate) bank. Exceptions to the policies on the marketing of such paper should be noted on the “Commercial Paper and Lines of Credit” pages and discussed on the “Examiner’s Comments” page of the inspection report. The managements of all bank holding companies must be fully informed of the Federal Reserve’s policy with respect to the marketing of holding company debt obligations, as in SR Letter 90–19, and exceptions should be addressed in the supervisory follow-up process.
Funding (Long-Term Debt)

Section 2080.2

Long-term debt represents an alternative financing method to short-term debt and equity funds. Before choosing this type of funding the bank holding company will need to determine how the advantages and disadvantages of long-term debt apply to its financial position and funding needs. Interest on long-term debt is an expense item and therefore is tax deductible. The company issuing debt effectively pays approximately “half-price” (interest expense net of tax deduction) on debt while the company issuing equity pays the full dividend rate without a tax benefit. Counterbalancing the tax advantage is the fact that long-term debt must be serviced and retired to prevent default and cannot be used as an offset for losses.

The issuance of long-term debt will be relatively advantageous to the holding company whose price/earnings ratio is low and whose stock is selling significantly below book value. In this instance, the cost to the company of equity funding rises proportionately to the drop in the price of the stock since less funds are obtained for an equal number of shares, yet the dividend per share remains the same.

A major factor influencing a bank holding company’s decision to issue long-term debt instead of equity is the dilution impact of new equity. Straight debt will not dilute ownership and is typically retired from cash flow, whereas new equity dilutes earnings per share (more so than the impact of the debt’s interest expense on earnings).

Preferred stock can be retired through a sinking fund and is sometimes convertible to common shares. Convertible stock adds to the dilution effect when the conversion is exercised and prior to conversion, “fully diluted” earnings per share must be reported that assume full conversion. The bank holding company will consider both stockholder and market reaction to any dilution effects of long-term financing. The BHC may view debt financing as the best alternative if it feels that a diluted earnings per share would drive down the market price of its stock and contribute to stockholder discontent.

Inherent in any financing are intangible costs. While it is evident that on the surface debt financing is cheaper than equity financing, it would be hard to quantify the effects of potential missed interest payment or default associated with debt instruments. The bank holding company also will be concerned with its additional “debt capacity” if the present issuance of debt pushes the debt/equity ratio beyond acceptable limits.

Theoretically, “straight debt” is a direct secured or unsecured obligation requiring repayment at maturity and generally taking a senior position in the claim on assets. Principal is sometimes payable in a lump sum, often through the use of a sinking fund, while interest is paid at stated periods throughout the life of the note.

2080.2.1 CONVERTIBLE SUBORDINATED DEBENTURE

A convertible subordinated debenture is an unsecured debt that is subordinate to other debt and convertible to common stock at a certain date or price. The essential provision of this debt is that it may eventually be retired by equity and inherently has the potential for dilution. With this type of financing, the creditor typically has the right to convert the bond into a stated number of shares of common stock at some future time. Usually the conversion price is 10 to 15 percent above the market price of the stock. This encourages the bondholder to keep the bond until the market price meets or surpasses the conversion price. In many convertible debt agreements, the bank holding company issuing debt will have the option to call the issue when the conversion price equals the market price.

The bank holding company will issue a convertible subordinated debenture when its stock price is depressed. The convertibility provision is added as a “sweetener” to the issue and counteracts the negative aspect of its subordinated position. The subordinated nature of this issue will help a bank holding company with prior debt which includes covenants that dictate against additional senior debt.

2080.2.2 CONVERTIBLE PREFERRED DEBENTURE

This debt instrument is similar to straight convertible debt except it is convertible into preferred stock. This alternative is open to the bank holding company which needs to add a “sweetener” to this issue in order to market it, but does not want dilution of “common” ownership.
2080.2.3 NEGATIVE COVENANTS

The lender will be concerned with the borrower’s debt structure when offering financing. If the borrower’s debt/equity ratio is approaching an unacceptable level, the lender will try to assure that the bank holding company does not overextend itself. While the lender may demand the right to approve future equity issues, the lender is likely to be more willing to give such approval than to allow more debt because the equity issue adds to the capital base, and this base is a possible source of funds for the payment of debt.

Closely related to the restriction on further debt is the position of the lender in the liquidation of assets. The holder of a straight debt issue will usually demand to be senior to other debt holders. This characteristic is particularly suited to straight debt because straight debt is more vulnerable to default than convertible debt and doesn’t have other sweeteners such as a conversion right or a right to participate in distributions of earnings. The examiner will want to determine how the covenants affect future debt financing and if the effect is positive or negative.

The lender is likely to seek to insure that neither the structure nor policies of the bank holding company are altered without its approval during the life of the debt. The lender can insure this through other negative covenants attached to the debt. Some common covenants of this type include (1) limitations on capital expenditures and on the sale of assets, (2) restrictions on the BHC’s redemption of its own stock, (3) restrictions on investments in general, (4) restrictions on dividend payment without prior approval, and (5) the imposition of loan to capital ratios, deposit to capital ratios and asset to capital ratios.

2080.2.4 INSPECTION OBJECTIVES

1. To determine the existence of and adherence to policies on long-term debt.
2. To review the use of long-term funds.
3. To determine the existence of debt covenants and compliance by the holding company.

2080.2.5 INSPECTION PROCEDURES

1. Review the parent-only balance sheet and income statement for debt and interest expense captions.
2. Review the consolidated balance sheet and income statement for debt and interest expense captions.
3. Review any written policies and procedures available as part of an overall capital plan. If no plan or policies exist, the examiner should encourage management to develop them, and in large BHCs, to put them in writing.
4. Determine that the bank holding company does not finance long-term assets with short-term debt, as this leaves the holding company vulnerable to rising interest rates and the possibility of a credit crunch. On the other hand, it may be beneficial for the holding company to finance short-term assets with long-term debt. This is particularly true during periods of rising interest rates because the bank holding company can get higher yields on loans financed by lower cost long-term debt, than it can with commercial paper that has to be turned over at generally increasing rates. In any event, the bank holding company will need to insure that it has ample capacity to finance additional long-term assets with long-term debt when the opportunity presents itself.
5. Review any sinking fund provisions usually found with straight debt and straight preferred issues if the issue is not going to be refinanced by further debt or by an equity issue. Since payments to the fund will directly drain cash reserves, it is imperative that the bank holding company have adequate annual cash flow to service both the interest and add to the sinking fund. The larger the debt, the more the lender will look for a sinking fund feature as a means of precluding a default when maturity occurs and refinancing is not available. When a sinking fund exists the examiner will need to analyze the parent’s cash flow statement to see that payments do not produce an adverse cash drain.
The capacity of the holding company to serve as a source of financial strength to its bank subsidiaries is a major consideration of the Federal Reserve Board in supervising a bank holding company. The cornerstone of this financial strength is capital adequacy.

The financial structure of banking organizations allows for the use of substantial leverage. If capital is large in relation to debt, additional borrowing is relatively inexpensive. However, because of added risk to lenders, the cost of borrowing increases as new obligations are assumed. At some point, therefore, equity financing becomes less costly and may become the only alternative available for needed funds.

Basically, a holding company’s financial structure can be viewed in two ways: the “single entity” approach, whereby the holding company is considered an integrated entity and financial strength is assessed on the basis of its consolidated totals, and the “building block” approach, wherein the holding company is seen as a collection of individual components. In the latter view, the company’s financial strength is assessed primarily in terms of the financial structure of each component.

When applying the “building block” approach, the liability and capital structure of each subsidiary is compared to the norm of its particular industry. The use of the “building block” approach has some advantages:

1. Comparative statistics are usually available to measure the performance and strength of the individual subsidiaries.
2. It permits comparison of capitalization between holding companies engaged in differing activities.
3. It identifies the degree of leveraging within a single subsidiary of a bank holding company.

The parent should maintain a favorable balance of debt and equity so that it will be able to assist its subsidiaries when necessary through contributions of its own capital or through additional funds generated from debt or equity financing.

At times, however, sale of additional stock may not be a viable alternative for capital formation, even when a company can show a favorable debt/equity balance. Reluctance to enter into a new stock offering may stem from a desire to avoid further dilution of existing ownership interest or from an unfavorable market price of outstanding stock in relation to book value. In these instances, long-term quasi-capital funds may sometimes be obtained through other sources, such as convertible securities or subordinated debt.

2080.3.1 PREFERRED STOCK

Preferred stock is becoming a more acceptable alternative due to certain advantages. Through contracted covenants, it is senior to common stock because it usually has no voting voice in management as does common stock. Preferred stock usually carries a fixed dividend rate that is either cumulative or noncumulative. Cumulative preferred provides that unpaid dividends in prior years must be paid to preferred shareholders before common dividends can be paid. A noncumulative feature provides that dividends foregone during lean years are lost permanently. From the viewpoint of the bank holding company, a noncumulative preferred issue is more desirable, while investors would desire a cumulative feature.

Perpetual preferred stock does not have a stated maturity date and it may not be redeemed at the option of the holder. Advantages that preferred stock can offer the bank holding company are (1) avoidance of dilution of earnings per common share and (2) absence of voting rights. On the other hand, dividend payments, particularly cumulative dividends, are expensive since they are not a tax-deductible expense as is interest on debt. Cumulative dividends can be particularly draining on cash when they are declared after several years of suspended dividends and payment is then made in a lump sum.

Preferred stock is usually retired by refinancing with debt or through its own conversion feature. If the bank holding company feels that it can afford an equity issue in the future but not at present, it can issue a convertible preferred debenture to postpone the equity issue until a later date. On the other hand, if debt is the desired method of financing but the present debt/equity ratio is not acceptable, the bank holding company will issue preferred and refinance with debt at a more opportune time. However, the Board has expressed concern that in applications to form a BHC, preferred stock not be used as a debt substitute resulting in circumvention of its debt guidelines. On applications with preferred stock which has debt-like characteris-
tics, such stock may be treated as debt in the financial analysis.

3. To review any debt covenants that pertain to a minimum acceptable capital position.

2080.3.2 INSPECTION OBJECTIVES

1. To determine the existence of and adherence to parent company policies on capital adequacy within the subsidiaries and for the consolidated organization.
2. To review the use of proceeds of equity capital financings.

2080.3.3 INSPECTION PROCEDURES

1. Review any existing BHC policies regarding capital adequacy or capital planning.
2. Request any plans regarding proposed capital issues.
Funding
(Retention of Earnings)

Earnings retention provides the most immediate source of capital formation and growth. Earnings retained after dividend payout can often be sufficient to keep pace with asset growth, thereby preserving the balance or relationship between equity capital and total assets. Often referred to as “internal funding,” earnings retention should be carefully reviewed to assure that the BHC’s capital base is keeping pace with asset growth.

Bank earnings retention should be reviewed carefully due to the dividend requirements often imposed on banks by their parent companies. Although a bank’s board of directors must approve the declaration and payment of any bank dividend, often the bank’s board is actually ratifying a decision determined at the parent level. The need for bank retention of earnings is particularly pronounced either during periods of expansion or periods of declining earnings or losses.

Parent company management may be under pressure from shareholders or “the market” to increase dividends or to maintain dividends at historic levels despite reversals in consolidated earnings trends. Examiners should be careful to point out to management that dividend pressures often serve to the detriment of the bank subsidiary(ies) which is often asked to supply the proceeds via a dividend to the parent company. As a regulator of banks (and bank holding companies), the Federal Reserve System is concerned with the preservation and maintenance of a sound banking system and in particular, soundly capitalized banks. Earnings retention contributes to capital growth and should be encouraged. For additional information on earnings retention and dividends see sections 2020.5.1, 4010.1, 4020.1, and 4060.9. See section 4070.1 of the Commercial Bank Examination Manual.

2080.4.1 PAYMENT OF DIVIDENDS BY BANK SUBSIDIARIES

Bank dividends can be determined to be excessive if they exceed the limitations imposed by either section 5199(b) or 5204 (also referred to as sections 56 and 60(b)) of the Revised Statutes and accordingly, should be reviewed with regard to those limitations. The Federal Reserve Board amended Regulation H regarding the payment of dividends by state member banks on December 20, 1990, [12 C.F.R. 208.19(a) and 208.19(b)]. The rule was revised, effective October 1, 1998, and replaced as renumbered section 208.5 (see 12 C.F.R. 208.5), “Dividends and other distributions.” It sets forth the “Limitation on withdrawal of capital by dividend or otherwise,” in subsection 208.5(d). The regulation discusses the elements that are taken into account in determining a state member bank’s dividend paying capacity. Two different calculations are performed to measure the amount of dividends that may be paid, a Net Income Test and an Undivided Profits Test.

2080.4.1.1 Net Income Test

The approval of the Federal Reserve is required for dividends declared by a member bank that in any calendar year exceeds the net income of the current year, combined with retained net income for the two preceding years (the “Net Income Test”).

2080.4.1.2 Undivided Profits Test

A member bank must receive prior approval of the Federal Reserve, and of at least two-thirds of the shareholders of each class of stock outstanding, before paying dividends in amounts greater than undivided profits.
Holding companies have turned to employee pension plans and, to a lesser degree, stock option plans as ways to provide added capital for holding company operations. While there may be a number of reasons for implementing such programs, one of the by-products is the flow of working capital into the holding company. The program usually involves a pre-tax contribution by the holding company to an employee benefit plan (e.g., profit sharing plan) and the resulting purchase by such plan of common or preferred shares of the holding company’s stock. The holding company benefits through the use of the funds for working capital, and the plan provides for retirement benefits for employees as shareholders in the company. Since ESOPs are administered under the Employees Retirement Income Security Act of 1974 (ERISA), the guidelines delineated in SR 85–21 should be followed in determining whether possible ERISA violations exist. Reference should also be made to Manual section 4010.1.1.

2080.5.1 STOCK OPTION PROGRAMS

Employee stock option programs generate a nominal percentage of a holding company’s financing needs to reward key employees for service rendered via the reduced price of the company’s stock. While such programs constitute one method of available funding for a holding company, they generally may not be expected to add any capital amounts beyond nominal levels.

2080.5.2 EMPLOYEE STOCK OWNERSHIP PLANS (ESOPS)

Employee Stock Ownership Plans (ESOP) are an alternative holding company funding tool. An ESOP is a tax-qualified employee benefit plan which is designed to be invested primarily in employer stock. The concept of an ESOP is to encourage the establishment of employee benefit programs which expand the employees’ share in company stock ownership. Participation in an ESOP may also significantly enhance employee motivation. The essential differences between an ESOP and other qualified stock bonus plans are that an ESOP is permitted, in certain circumstances, to incur liabilities in the acquisition of employer securities, and that an employer may receive additional tax credits for amounts contributed to ESOPs. Under limited circumstances, lenders to ESOP’s may also receive benefits that result in reduced borrowing costs to the ESOP. As long as ESOP meets the IRS requirements for a qualified employee plan, it may invest up to 100% of its assets in “qualifying” employer securities. It is exempt from some of the self-dealing limitations applicable to most employee benefit plans, as it is viewed as a means of providing stock ownership interests for employees rather than as strictly a retirement plan. Furthermore, an ESOP may purchase the stock either from the employer company or from shareholders. Therefore, in addition to use as a tool of corporate finance, an ESOP may serve as a ready purchaser for outstanding stock, without a corresponding loss of voting control.

ESOPs are in some ways similar to deferred profit sharing plans. ESOPs are authorized under the same section, namely, section 401 of the Internal Revenue Code. Employer contributions (within limits based on a percentage of eligible payroll) are allowable deductions from the employer’s pre-tax income. Contributions are held in trust, and benefits when paid out upon an employee’s retirement, death, or termination of service, must be paid in company stock. The distinguishing feature of an ESOP lies in the fact that the direct purpose of the plan is to invest employer contributions in the stock of the company.

2080.5.2.1 Accounting Guidelines for Leveraged ESOP Transactions

Newly issued or existing shares of BHC stock are sometimes sold to the ESOP and paid for with money borrowed from a third party; these types of ESOPs are commonly referred to as “leveraged ESOPs.” The borrowings are generally serviced with contributions by the employer, which are a tax deductible expense. The borrowing arrangement by the ESOP often includes a guarantee or commitment by the employer (the BHC or the subsidiary bank) to make future contributions to the ESOP sufficient to meet debt service requirements.

When this occurs, questions arise involving the appropriate accounting for the leveraged ESOP transaction. The Accounting Standards Executive Committee of the American Institute
of CPAs has issued a Statement of Position (SOP) 72–3 which discusses ESOP borrowing situations. Since the Federal Reserve applies generally accepted accounting principles, banks and bank holding companies should follow SOP 76–3. The SOP statement covers cases where the employer either guarantees the ESOP loan or commits to make future ESOP contributions sufficient to service the debt. For such cases, the SOP indicates that the employer should credit a liability account for the amount of the ESOP debt and offset that entry by reducing shareholders’ equity. The liability recorded by the employer should be reduced as the ESOP makes payments on the debt. This liability is recorded because the guarantee or commitment is in substance the employer’s debt. When there is no guarantee, the ESOP is treated like any other shareholder.

In other words, where there is a leveraged ESOP which has purchased BHC stock, and there is a guarantee, commitment, or other arrangement which is in effect a guarantee relative to the debt service of the ESOP, for analytical purposes the amount of ESOP debt will be considered as parent debt and thus parent equity will be reduced accordingly. This will affect debt to equity ratios as well as consolidated capital ratios, where applicable.

2080.5.2.2 Fiduciary Standards under ERISA Pertaining to ESOPs

There are also general fiduciary standards under ERISA pertaining to ESOPs which have been delineated largely through court decisions rather than issuance of regulations. Although exempted from ERISA’s asset diversification requirement, ESOP transactions are still required to meet fiduciary standards of prudence, and must be designed and administered for the “exclusive benefit” of plan employees. (ERISA § 404(a) and 29 CFR 2550.407d–6). Yet, as stated above, ESOPs may have distinct advantages which inure primarily to the sponsoring company, its management and large shareholders. Due to these potential or actual conflicts of interest, it is important that the sponsoring employer and any other fiduciaries of a plan undertake every effort to assure full consideration of the best interests of plan employees.

The safeguarding of the statutory “exclusive” interests of plan employees pursuant to ERISA is within the jurisdiction of the IRS and the Department of Labor. The bank regulatory agencies also have some responsibility in their review and examination activities where employee benefit plans such as ESOPs are involved. In this connection, a Uniform Interagency Referral Agreement mandated by statute, has been in effect since 1980 whereby certain possible violations of the provisions of ERISA are referred to the DOL by the Division of Banking Supervision and Regulation, pursuant to delegated authority. SR §1–697 (SA) contains the procedures for making referrals to the Department of Labor. Attached to the SR letter is an exhibit, ERISA Referral Format, which lists the information necessary when making referrals. Holding company examiners can expedite the ERISA referral process by including that information in their reports.

2080.5.3 STATUS OF ESOP’S UNDER THE BHC ACT

On August 6, 1985, the Board determined (1985 FRB 804) that an ESOP that controls more than 25 percent of the voting shares of a bank or bank holding company is a bank holding company. The Board determined that the underlying trust which held the shares of the bank holding company is a “business trust” as defined in the BHC Act and was thus not excluded from the definition of a “company” under the terms of the Act.

2080.5.4 INSPECTION CONSIDERATIONS

Examiners should review unfunded pension liabilities of the BHC to determine their potential impact on the organization. In addition, examiners should review the soundness of any borrowings used to fund ESOP purchases of BHC stock. ESOP borrowings from an affiliated bank used to purchase BHC shares may result in an apparent increase in BHC capital which in fact turns out to have been funded with subsidiary bank funds, a practice considered suitable for in-depth review by examination staff. Section 401 (of the Internal Revenue Code) plan holdings of BHC stock need to be evaluated under the “content” provisions of the BHC Act, change in Bank Control Act, and Regulation Y. When an ESOP is subject to the Change in Bank Control Act, this fact should be brought to the attention of a BHC’s management. Section 225.41 of Regulation Y specifies transactions—acquisitions—that would require providing the
Board with 60 days prior written notice before acquiring control of a bank holding company (or a state member bank), unless the transaction is exempt under section 225.42 of the Regulation. In addition to the above, a determination should be made as to whether the ESOP is a bank holding company. The examiner may also refer to the Financial Accounting Standards Board’s Statement No. 87, “Employers’ Accounting for Pensions.”
A key principle underlying the Federal Reserve’s supervision of bank holding companies is that such companies should be operated in a way that promotes the soundness of their subsidiary banks. Holding companies are expected to avoid funding strategies or practices that could undermine public confidence in the liquidity or stability of their banks. Consequently, bank holding companies should develop and maintain funding programs that are consistent with their lending and investment activities and that provide adequate liquidity to the parent company and its nonbank subsidiaries.

2080.6.1 FUNDING BY SWEEPING DEPOSIT ACCOUNTS

A principal objective of a bank holding company’s funding strategy should be to maintain an adequate degree of liquidity at the parent company and its subsidiaries. Funding mismatches can exacerbate an otherwise manageable period of financial stress and, in the extreme, undermine public confidence in an organization’s viability. In developing and carrying out funding programs, bank holding companies should give special attention to the use of overnight or extremely short-term liabilities since a loss of confidence in the issuing organization could lead to an immediate funding problem. Accordingly, bank holding companies relying on overnight or extremely short-term funding sources should maintain a level of superior quality assets, namely, assets that can be immediately liquidated or converted to cash with minimal loss, that is at least equal to the amount of those funding sources.

A potential source of funding mismatch arises from the use of what has been commonly referred to as deposit sweeps. This practice is based upon an agreement with a subsidiary bank’s deposit customers (typically corporate accounts) which permits these customers to reinvest amounts in their deposit accounts above a designated level in overnight obligations of the parent bank holding company. These obligations include such instruments as commercial paper, program notes, and master notes.

In view of the extremely short-term maturity of most sweep arrangements, banking organizations should exercise great care when investing the proceeds. Appropriate uses of the proceeds of deposit sweep arrangements are limited to short-term bank obligations, short-term U.S. Government securities, or other highly liquid, readily marketable, investment grade assets that can be disposed of with minimal loss of principal. Use of such proceeds to finance mismatched asset positions, such as those involving leases, loans, or loan participations, can lead to liquidity problems at the parent company and are not considered appropriate. The absence of a clear ability to redeem overnight or extremely short-term liabilities when they become due should generally be viewed as an unsafe and unsound banking activity.

Reserve Bank supervisory and examination personnel are to ensure that bank holding companies and their state member banks are in compliance with this section and related supervisory letters addressing the marketing of uninsured debt instruments, including master notes and other sweep arrangements (refer to Manual sections 2080.05 and 2080.1). Banking organizations not in compliance should take the necessary steps to achieve full compliance within a reasonable period of time. Reserve Banks should provide copies of the supervisory letter SR 90–31 to any bank holding company engaged in sweep arrangements with their subsidiary banks, or to any other organization if necessary to facilitate compliance.

1. Some banking organizations have interpreted language in a 1987 letter signed by the Secretary of the Board as condoning funding practices that may not be consistent with the principles set forth in this supervisory letter and prior Board rulings. The 1987 letter involved a limited set of facts and circumstances that pertained to a particular banking organization; it did not establish or revise Federal Reserve policies on the proper use of the proceeds of short-term funding sources. In any event, banking organizations should no longer rely on the 1987 letter to justify the manner in which they use the proceeds of sweep arrangements. Banking organizations employing sweep arrangements are expected to ensure that these arrangements conform with the policies contained in this section and in the Manual section 2080.05 on bank holding company funding.
WHAT’S NEW IN THIS REVISED SECTION

Effective July 2010, this section has been revised to include a reference to the Board’s September 21, 2008, “Policy Statement on Equity Investments in Banks and Bank Holding Companies.” (See the Board’s September 22, 2008, press release and section 2090.4.4.) The policy statement provides additional guidance on the Board’s position on minority equity investments in banks and bank holding companies that generally do not constitute “control” for purposes of the Bank Holding Company Act. This policy updates the guidance found in the Board’s July 1982 “Policy Statement on Non-voting Equity Investments by Bank Holding Companies.” (See section 2090.4.)

2090.0.05 DEFINITIONS

The control provisions of the Bank Holding Company Act (the act) are found in section 2(a)(1) and (2) (see 12 U.S.C. 1841(a)) under the definition of a bank holding company. A bank holding company is defined as “any company which has control over any bank or over any company that is or becomes a bank holding company by virtue of the Act.”

The term “company” means any corporation, partnership, business trust, association, or similar organization, or any other trust. Any corporation in which the majority of the shares are owned by the United States or by any state is not considered a company.

A “company covered in 1970” means a company that became a bank holding company as a result of the enactment of the Bank Holding Company Act Amendments of 1970 and which would have been a bank holding company on June 30, 1968, if those amendments had been enacted on that date.

2090.0.1 CONCLUSIVE PRESUMPTIONS OF CONTROL

The conclusive presumptions of control are established in section 2(a)(2)(A) and (B) of the act when—

1. a company directly or indirectly or acting through one or more other persons owns, controls, or has power to vote 25 percent or more of any class of voting securities of a bank or company or
2. a company controls in any manner the election of a majority of the directors or trustees of the bank or company.

“Acting through one or more other persons” could include—

1. acting through the executive officer of a company, or a relative or business associate of that officer;
2. financing the purchase of shares of a bank or company when—
   a. the amount of credit approximates the purchase price,
   b. there is no definite maturity on the credit extended,
   c. the credit is obtained at a favorable rate of interest, and
   d. the bank whose shares are held as collateral maintains an excessive balance with the lending company;
3. by a resolution of a company’s board of directors, guaranteeing an individual against any loss in relationship to his ownership in a bank or company when such ownership represents 25 percent or more of any voting class;
4. recognizing earnings from another company; or
5. participating in policy formation or daily operations of another company.

The “power to vote” includes the right to vote, to direct the voting of shares, or to immediately transfer shares to the name of the holder of such rights or the holder’s nominee, pursuant to any proxy, contract, or agreement. However, when stock is held as collateral for a loan under an agreement which enables the lender to transfer the stock into the name of the lender or its nominee without the power to vote, the right to have the shares transferred does not in itself constitute control. To constitute control, the power to vote must be perfected along with the transfer of the stock into the name of the lender or its nominee.

1. Unless the terms of the trust require it to terminate within 25 years or not later than 21 years and 10 months after the death of individuals living on the effective date of the trust.
2090.0.2 DIRECT CONTROL

Direct control exists when a company (as defined in section 2(b) of the act) owns 25 percent or more of any one class of voting securities of a bank (as defined in section 2(c) of the act) or company. “Voting securities” includes potential as well as actual voting authority.

2090.0.3 INDIRECT CONTROL

Indirect ownership or control is defined in section 2(g) of the act in subsections 1 and 2 as follows:

“(1) Shares owned or controlled by any subsidiary of a bank holding company shall be deemed to be indirectly owned or controlled by such bank holding company; and

“(2) Shares held or controlled directly or indirectly by trustees for the benefit of (A) a company, (B) the shareholders or members of a company, or (C) the employees (whether exclusively or not) of a company, shall be deemed to be controlled by such company.”

To assist in the interpretation of the above subsections the following explanations are provided.

1. All shares owned by a subsidiary of a bank holding company are deemed to be controlled by the parent’s ownership interest in the directly owned subsidiary.

2. Shares held in a trust for the benefit of a company are deemed to be controlled by such company regardless of whether the trustee or company votes the shares. A company is deemed to be the beneficial owner of shares which it does not vote if all other shareholders’ rights are retained by such company (that is, dividends, or other rights).

3. Shares owned by a trustee for the benefit of a company’s subsidiary (or the subsidiary’s shareholders, members, or employees) are deemed to be controlled by both the subsidiary and its parent.

4. Shares held in a trust for the benefit of an individual “stockholder, member, or employee” are not deemed to be controlled by a company because such shares are held for the individual regardless of his or her relationship with the company. For a company to have control over the shares held for the benefit of a company’s “stockholders, members, or employees,” the shares must be held as a class.

5. If a trust meets the definition of a company, it is possible for such a trust to be a bank holding company. In addition, it is possible for a bank through the administration of a trust(s)(which does not meet the definition of a company) to become a bank holding company (that is, a bank which has control over various trusts whose shares aggregate to 25 percent or more of a bank or bank holding company could be deemed a bank holding company; a bank which administers a trust that owns 25 percent or more of a bank or bank holding company (and such trust does not meet the definition of a company) could be a bank holding company.

In addition to the above determinants involving conclusive presumptions of control, the Board has determined that whenever the transferability of 25 percent or more of any class of voting securities of a company is restricted, in any manner, upon the transfer of 25 percent or more of any class of voting securities of another company, the holders of the two securities affected by the restriction constitute a company for the purposes of the act. This determination applies unless one of the issuers of such securities is a subsidiary of the other and is so identified in a Board order or in a registration statement or report accepted by the Board under the act.

In any administrative or judicial proceedings regarding conclusive presumptions of control, a company would not be considered to control a bank or company at any given time unless that company, at the time in question, directly or indirectly owned, controlled, or had power to vote 5 percent or more of any class of voting securities of the bank or company.

2090.0.4 REBUTTABLE PRESUMPTIONS OF CONTROL

A rebuttable presumption of control exists when the Board determines, after notice and opportunity for hearings, that a company directly or indirectly exercises a controlling influence over the management or policies of a bank or company (section 2(a)(2)(C) of the act). With regard to the above, there is a presumption that any company which directly or indirectly owns, controls, or has power to vote less than 5 percent of any class of voting securities of a given bank or company does not have control over that bank or company (section 2(a)(3) of the act). This 5 percent presumption does not prohibit the
Board from determining that a company exercises a “controlling influence” when such company owns, controls, or has power to vote less than 5 percent of any class of voting securities of another company or bank. However, in overcoming the presumption, the Board bears the burden of proving that such a controlling influence exists.

2090.0.4.1 Regulation Y Determinants of Control

The Board has established the following rebuttable presumptions of control in section 225.31 of Regulation Y for use in proceedings:

1. Control of voting securities.
   a. Securities convertible into voting securities. A company that owns, controls, or holds securities that are immediately convertible, at the option of the holder or owner, into voting securities of a bank or other company controls the voting securities.
   b. Option or restriction on voting securities. A company that enters into an agreement or understanding under which the rights of a holder of voting securities of a bank or other company are restricted in any manner controls the securities. This presumption does not apply where the agreement—
      (1) is a mutual agreement among shareholders granting to each other a right of first refusal with respect to their shares;
      (2) is incident to a bona fide loan transaction; or
      (3) relates to restrictions on transferability and continues only for the time necessary to obtain approval from the appropriate federal supervisory authority with respect to acquisition by the company of the securities.

2. Control over company.
   a. Management agreement. A company that enters into any agreement or understanding with a bank or other company (other than an investment advisory agreement), such as a management contract, under which the first company or any of its subsidiaries directs or exercises significant influence over the general management or overall operations of the bank or other company controls the bank or other company.
   b. Shares controlled by company and associated individuals. A company that, together with its management officials or principal shareholders (including members of the immediate families of either (as defined in 12 C.F.R. 206.2(k)) owns, controls, or holds with power to vote 25 percent or more of the outstanding shares of any class of voting securities of a bank or other company, if the first company owns, controls, or holds with power to vote more than 5 percent of the outstanding shares of any class of voting securities of the bank or other company.
   c. Common management officials. A company that has one or more management officials in common with a bank or other company controls the bank or other company, if the first company owns, controls, or holds with power to vote more than 5 percent of the outstanding shares of any class of voting securities of the bank or other company, and no other person controls as much as 5 percent of the outstanding shares of any class of voting securities of the bank or other company.
   d. Shares held as fiduciary. The presumptions of control in paragraphs 225.31(d)(2)(ii) and (iii) of Regulation Y do not apply if the securities are held by the company in a fiduciary capacity without sole discretionary authority to exercise the voting rights.

2090.0.4.2 Other Presumptions of Control

In addition to the rebuttable presumptions, there are a number of other circumstances that are indicative of control and may call for further investigation to uncover facts that support a determination of control. Such circumstances include the following:

1. A company owns at least 10 percent of each of two banks or at least 5 percent of each of three or more banks.
2. A company owns 5 percent or more of a bank or bank holding company and has been instrumental in the hiring or firing of one or more persons; establishing policies or places for branches; establishing hours of business; deciding on rates, terms, or acceptance of loans or deposits; following uniform advertising practices or using a common telephone system; or any other respects directing the activities of management or establishing the
3. A company lends to a borrower on more favorable terms than it would have for a borrower of comparable credit standing to enable the borrower to acquire voting shares of a bank or other company.

If the Board proposes to make a determination based on the above indicators of control, the Board bears the burden of providing evidence that such a control situation exists.

2090.0.5 PROCEDURES FOR DETERMINING CONTROL

The question of whether a control situation exists may arise from information coming to the Board’s attention or from a company’s seeking to obtain the Board’s opinion regarding a specific situation. When this question arises, the Board has instructed each Reserve Bank to make every effort to resolve the matter with the company without resorting to the procedures outlined in this section. However, if the Reserve Bank is unsuccessful in resolving the matter, it is referred to the Board staff. If the Board staff feels the matter warrants Board consideration, it will recommend that the Board make a preliminary determination of control based on the available facts and so inform the company. (See section 225.31(a).) Following the preliminary determination of control, the company must, within 30 days (or longer as may be permitted by the Board), submit the information required by section 225.31(b).

If the company contests the Board’s determination, it is entitled to a formal hearing at its request. (See section 225.31(c).) Notwithstanding any other provision of the act, a company is not deemed to be a bank holding company by virtue of its control of—

1. “… shares [held] in a fiduciary capacity, except as provided in paragraphs (2) and (3) of subsection (g)” (section 2(a)(5)(A) of the act);
2. “… shares acquired by it in connection with its underwriting of securities if such shares are held only for such period of time as will permit the sale thereof on a reasonable basis” (section 2(a)(5)(B) of the act);
3. “[a] company formed for the sole purpose of participating in a proxy solicitation if the voting rights of the shares acquired by such company are acquired in the ordinary course of such a solicitation” (section 2(a)(5)(C) of the act);
4. “… shares acquired in securing or collecting a debt previously contracted in good faith, until two years after the date of acquisition” (section 2(a)(5)(D) of the act); (The Board is authorized upon application by a company to extend, from time to time for not more than one year at a time, the two-year period referred to herein for disposing of any shares acquired by a company in the regular course of securing or collecting a debt previously contracted in good faith, if, in the Board’s judgment, such an extension would not be detrimental to the public interest, but no such extension shall in the aggregate exceed three years.)
5. “… any State-chartered bank or trust company which (i) is wholly owned by thrift institutions or savings banks; and (ii) is restricted to accepting—
   (I) deposits from thrift institutions or savings banks;
   (II) deposits arising out of the corporate business of thrift institutions or savings banks that own the bank or trust company; or
   (III) deposits of public moneys.” (section 2(a)(5)(E) of the act); and
6. “… a single... bank, if such... company is a trust company or mutual savings bank located in the same State as the bank and if... (i) such ownership or control existed on the date of enactment of the Bank Holding Company Act Amendments of 1970 and is specifically authorized by applicable State law, and (ii) the trust company or mutual savings bank does not after that date acquire an interest in any company that, together with any other interest it holds in that company, will exceed 5 percentum of any class of the voting shares of that company, except that this limitation shall not be applicable to investments of the trust company or mutual savings bank, direct and indirect, which are otherwise in accordance with the limitations applicable to national banks under section 5136 of the Revised Statutes (12 U.S.C. 24)” (section 2(a)(5)(F) of the act).

2090.0.6 INSPECTION OBJECTIVES

1. To determine whether any change in control of a bank holding company has resulted in a company (as defined by section 2(b) of the
act) becoming a bank holding company in violation of section 3(a)(1) of the act.
2. To ascertain whether an existing bank holding company has acquired either directly or indirectly additional banking assets in violation of section 3(a)(3) of the act.
3. To establish whether a company which has purchased its own stock is in compliance with section 225.4(b) of Regulation Y. (See section 2090.3.)

2090.0.7 INSPECTION PROCEDURES
1. Review the company’s stock records and the company’s investment portfolio.

Control and Ownership
(Qualified Family Partnerships)

2090.05 WHAT’S NEW IN THIS REVISED SECTION

This section has been revised to include a Board staff interpretation, pertaining to a qualified family partnership (QFP), that was issued on May 10, 2010. The interpretation considered whether a proposed assignment of an economic interest in the partnership interests of a partnership that is a QFP under section 2(o)(10) of the Bank Holding Company Act would cause the partnership to lose its status as a QFP.

2090.05.1 QUALIFIED FAMILY PARTNERSHIP EXEMPTION

Under the Bank Holding Company Act (the Act), any “company” (including a partnership) that controls a bank is considered a bank holding company (BHC).\(^1\) Section 2(o) of the Act (as amended by section 2610 of the Economic Growth and Regulatory Paperwork Reduction Act of 1996),\(^2\) however, provides a limited exemption from the definition of company for a “qualified family partnership” (QFP), and accordingly, a partnership that qualifies as a QFP, is not considered a BHC under the Act.\(^3\) A QFP, under the Act, is able to own and control a BHC without the partnership becoming subject to the registration, source of strength, approval, reporting, and other requirements imposed on a BHC.

In order to qualify for the Act’s exemption for a QFP, all the partners of the QFP must be individuals related to each other by blood, marriage, or adoption; or trusts for the primary benefit of those individuals (collectively, “qualified parties”). In addition, the partnership must:

- control any bank (its bank investments) through a single registered BHC that remains subject to all of the provisions of the Act;
- control only one registered BHC;
- not engage in any business activity except indirectly through ownership of other business entities (that is, the partnership must be an investment vehicle for the family and may not be an operating company);
- limit its investments to those permitted for a BHC under section 4(c) of the Act; and
- not be obligated on any debt, either directly or as a guarantor.\(^4\)

Any partnership requesting qualification as a QFP must commit (1) to be subject to Federal Reserve Board examination to ensure compliance with the conditions for eligibility and (2) to be treated as a BHC for purposes of enforcement actions by the Board. In addition, while a QFP is exempt from the prior-approval requirements of section 3 of the Act in connection with a bank acquisition, the partnership continues to be subject to the notice provisions of the Change in Bank Control Act.

As noted above, the primary benefits to becoming a QFP are (1) exemption from the capital requirements applicable to BHCs, (2) exemption from the reporting requirements applicable to a BHC, and (3) the freedom to make permissible nonbanking investments without prior Board approval. Because the QFP must use a single registered BHC to hold all of its bank investments, there continues to be a BHC subject to the requirements of the Act in every case. This structure ensures that the cross-guarantee provisions of the Federal Deposit Insurance Act continue to apply to all banks controlled by a QFP.

2090.05.2 ASSIGNMENT OF ECONOMIC PARTNERSHIP INTEREST THAT IS A QFP

Board staff issued a May 10, 2010, interpretation on whether a proposed assignment of an economic interest in the partnership interests of a partnership that is a QFP under section 2(o)(10) of the Act would cause the partnership to lose its status as a QFP.\(^5\) Board staff noted that the QFP exemption does not distinguish between the legal and beneficial ownership of such partnership interest. An assignment of the economic interests in a QFP interest, especially in the case of a limited partnership interest, would effectively give the assignee a beneficial interest in the QFP. Where the assignee is not a family member, Board staff believes that such

---

\(^1\) 12 U.S.C. 1841(a)(1).
\(^3\) 12 U.S.C. 1841(b).
\(^4\) The QFP also must commit to examination by the Board and to the notice requirements of the Change in Bank Control Act if it acquires an additional bank.
an assignment would undermine the “family relationship” requirement of the Act and would expand the exemption beyond its limited scope. Accordingly, Board staff believes that an assignment of the economic interests in the partnership interest of a QFP to a non-qualified person would be inconsistent with the “relationship” requirement of the statute. The partnership would not be in compliance with the statutory requirements of a QFP and would be required to register as a BHC.
The Change in Bank Control Act of 1978 (the CBC Act), title VI of the Financial Institutions Regulatory and Interest Rate Control Act of 1978, gives the federal bank supervisory agencies the authority to disapprove changes in control of insured depository institutions. The Federal Reserve Board is the responsible federal banking agency for changes in control of bank holding companies and state member banks, and the Federal Deposit Insurance Corporation and the Office of the Comptroller of the Currency are responsible for insured state nonmember and national banks respectively.

The CBC Act requires any person (that is, an individual, a partnership, a corporation, a trust, an association, a joint venture, a pool, a sole proprietorship, or an unincorporated organization) seeking to acquire control of any insured depository institution or bank holding company to provide 60 days' prior written notice to the appropriate federal banking agency. The act specifies that transactions subject to section 3 of the Bank Holding Company Act of 1956 or section 18 of the Federal Deposit Insurance Act are to be regulated by the Board of Governors of the Federal Reserve System who are responsible for insured state nonmember and national banks.

The CBC Act requires any person (that is, an individual, a partnership, a corporation, a trust, an association, a joint venture, a pool, a sole proprietorship, or an unincorporated organization) seeking to acquire control of any insured depository institution or bank holding company to provide 60 days' prior written notice to the appropriate federal banking agency. The act specifically exempts transactions that are subject to section 3 of the Bank Holding Company Act of 1956 or section 18 of the Federal Deposit Insurance Act because those transactions are covered by existing regulatory approval procedures. Accordingly, changes in control due to acquisitions by bank holding companies and changes in control of insured depository institutions resulting from mergers, consolidations, or other similar transactions are not covered by the CBC Act.

The CBC Act requires any person (that is, an individual, a partnership, a corporation, a trust, an association, a joint venture, a pool, a sole proprietorship, or an unincorporated organization) seeking to acquire control of any insured depository institution or bank holding company to provide 60 days' prior written notice to the appropriate federal banking agency. The act specifically exempts transactions that are subject to section 3 of the Bank Holding Company Act of 1956 or section 18 of the Federal Deposit Insurance Act because those transactions are covered by existing regulatory approval procedures. Accordingly, changes in control due to acquisitions by bank holding companies and changes in control of insured depository institutions resulting from mergers, consolidations, or other similar transactions are not covered by the CBC Act.

The CBC Act requires any person (that is, an individual, a partnership, a corporation, a trust, an association, a joint venture, a pool, a sole proprietorship, or an unincorporated organization) seeking to acquire control of any insured depository institution or bank holding company to provide 60 days' prior written notice to the appropriate federal banking agency. The act specifically exempts transactions that are subject to section 3 of the Bank Holding Company Act of 1956 or section 18 of the Federal Deposit Insurance Act because those transactions are covered by existing regulatory approval procedures. Accordingly, changes in control due to acquisitions by bank holding companies and changes in control of insured depository institutions resulting from mergers, consolidations, or other similar transactions are not covered by the CBC Act.

The CBC Act describes the factors that the Federal Reserve and the other federal banking agencies are to consider in determining whether a transaction covered by the CBC Act should be disapproved. These factors include the financial condition, competence, experience, and integrity of the acquiring person (or persons acting in concert); the effect of the transaction on competition; whether the acquiring persons have provided all required information; and whether the proposed transaction would result in an adverse effect on the Bank Insurance Fund or the Savings Association Insurance Fund. The Federal Reserve Board’s objectives in its administration of the CBC Act are to enhance and maintain public confidence in the banking system by preventing identifiable, serious adverse effects resulting from anticompetitive combinations of interests, inadequate financial support, and unsuitable management in the institutions.

The term insured depository institution includes any depository institution holding company and any other company that controls an insured depository institution. The CBC Act is found in 12 U.S.C. 1817(j)(1)–(18).

The Federal Reserve and the other federal banking agencies are to consider in determining whether a transaction covered by the CBC Act should be disapproved. These factors include the financial condition, competence, experience, and integrity of the acquiring person (or persons acting in concert); the effect of the transaction on competition; whether the acquiring persons have provided all required information; and whether the proposed transaction would result in an adverse effect on the Bank Insurance Fund or the Savings Association Insurance Fund. The Federal Reserve Board’s objectives in its administration of the CBC Act are to enhance and maintain public confidence in the banking system by preventing identifiable, serious adverse effects resulting from anticompetitive combinations of interests, inadequate financial support, and unsuitable management in the institutions.

The Board will review each notice to acquire control of a state member bank or bank holding company and will disapprove transactions that are likely to have serious harmful effects. The Board’s intention is to administer the CBC Act in a manner that will minimize delays and government regulation of private-sector transactions.

If the Board disapproves a change-in-control filing, the Board will notify the proposed acquiring party in writing within three days after its decision. The notice of disapproval will include a statement of the basis for disapproval. The CBC Act provides that the acquiring party may request a hearing by the Board in the event of a disapproval and provides a procedure for further review by the courts.

Forms for filing notices of proposed transactions covered by the CBC Act are available from the Federal Reserve Banks. Persons contemplating an acquisition that would result in a change in control of a BHC or state member bank should request the appropriate forms and instructions from the Reserve Bank in whose District the affected institution is located. Forms and instructions may also be accessed from the Federal Reserve Board’s public web site (www.federalreserve.gov). The primary forms to be completed are the Interagency Biographical and Financial Report and the Interagency Notice of Change in Control. Filers are requested to consult with the appropriate Reserve Bank to confirm what specific information should be included in a particular notice. The Reserve Bank can provide specialized publication material that will assist the filers in placing a complete announcement of the proposed acquisition in the appropriate newspaper of general circulation. The Board of Governors also will publish the notices in the Federal Register. (See SR-03-19.)

When a substantially complete notice is received by the Federal Reserve Bank, a letter of acknowledgment will be sent to the acquiring person indicating the date of receipt. After reviewing the submitted information, the Federal Reserve may initiate name checks with certain other U.S. government agencies (including law enforcement) on some or all of the individuals related to the proposal. The information received from those name checks will be used to further the assessment of the relevant statutory factors, including the competence,
experience, integrity, and financial ability of the individual filers.

2090.1.1 COMMITMENTS AND CONDITIONS FOR APPROVAL

Approvals granted by the Federal Reserve under the CBC Act may be subject to commitments or conditions that require the filer to consult with appropriate Federal Reserve staff before acquiring further shares of the subject banking organization. The Board or the Reserve Bank may also impose restrictions on the acquisition of additional shares by any person who already controls an institution. The imposition of such commitments, conditions, or limitations is intended to ensure that statutory factors remain consistent with approval.

2090.1.2 COMPLETION OF THE TRANSACTION

The transaction may be completed 61 days after the date of receipt stated in the acknowledgment letter, unless the acquiring person has been notified by the Board that the acquisition has been disapproved or that the 60-day period has been extended as provided for in subparagraph (j)(1) of the CBC Act. To avoid undue interference with normal business transactions, the Board may issue a notice of its intention not to disapprove a proposal, after consulting with the relevant state banking authorities as the CBC Act requires.

2090.1.3 INFORMATION TO BE INCLUDED IN NOTICES

The CBC Act requires a person proposing to acquire control of a bank holding company or state member bank to file a notice with the Federal Reserve Board that includes biographical and financial information on the filers; details of the proposed acquisition; information on any proposed structural, managerial, or financial changes that would affect the banking organization to be acquired; and other relevant information required by the Board.

A current statement of assets and liabilities, a brief income summary, and a statement of any material changes since the effective date of this financial-statement information is required. The Board reserves the right to require up to five years of financial data from any acquiring person. For complete details on the informational requirements of a change-in-control filing, see the Board’s public web site at www.federalreserve.gov/generalinfo/applications/afl/. In particular, review the System’s Form FR 2081a, Interagency Notice of Change in Control.

2090.1.4 TRANSACTIONS REQUIRING SUBMISSION OF PRIOR NOTICE

The CBC Act defines control as the power, directly or indirectly, to vote 25 percent or more of any class of voting securities or to direct the management or policies of a bank holding company or insured depository institution. Therefore, unless exempted by the CBC Act, any transaction that results in the acquiring party having voting control of 25 percent or more of any class of voting securities or that results in the power to direct the management or policies of such an institution would trigger the notice requirement. However, any person who on March 9, 1979, controlled a bank holding company or state member bank shall not be required to file a notice to maintain or increase control positions in the same institution. In addition, the Board’s regulation on a rebuttable presumption of control allows persons who on March 9, 1979, fell within a presumption to acquire additional shares of an institution without filing notice so long as they will not have voting control of 25 percent or more of the institution (Regulation Y, 12 C.F.R. 225.41). In connection with transactions that would result in greater voting control, such persons may file the required notice or request that the Board make a determination that they already control the institution.

Section 225.41 of Regulation Y sets forth the specific types of transactions that require prior notice under the CBC Act. Prior notice is required by any person (acting directly or indirectly) that seeks to acquire control of a state member bank or bank holding company. A person may include an individual, a group of individuals acting in concert, or certain entities (for example, corporations, partnerships, or trusts) that own shares of banking organizations but that do not qualify as bank holding companies. A person acquires control of a banking organization whenever the person acquires ownership, control, or the power to vote 25 percent or more of any class of voting securities of the institution.
2090.1.4.1 Rebuttable Presumption of Control

Persons who have the power to vote less than 25 percent of an institution’s shares may be required to file notice under the Board’s rebuttable presumption of control, found in section 225.41 of Regulation Y. The Board presumes that an acquisition of voting securities of a state member bank or bank holding company constitutes the acquisition of control under the CBC Act, requiring prior notice to the Board, if, immediately after the transaction, the acquiring person (or persons acting in concert) will own, control, or hold with power to vote 10 percent or more of any class of voting securities of the institution, and if—

1. the institution has registered securities under section 12 of the Securities Exchange Act of 1934 (15 U.S.C. 78l); or
2. no other person will own, control, or hold the power to vote a greater percentage of that class of voting securities immediately after the transaction.

Other transactions resulting in a person’s control of less than 25 percent of a class of voting shares of a bank holding company or state member bank would not result in control for purposes of the CBC Act. In addition, customary one-time proxy solicitations and the receipt of pro rata stock dividends are not subject to the CBC Act’s notice requirements.

In some cases, corporations, partnerships, certain trusts, associations, and similar organizations that are not already bank holding companies may be uncertain whether to proceed under the CBC Act or under the Bank Holding Company Act with respect to a particular acquisition. These organizations should comply with the notice requirements of the CBC Act if they are not required to secure prior Board approval under the Bank Holding Company Act. However, some transactions (described in sections 2(a)(5)(D) and 3(a)(5)(A) and (B) of the Bank Holding Company Act), particularly foreclosures by institutional lenders, fiduciary acquisitions by banks, and increases of majority holdings by bank holding companies, do not require the Board’s prior approval. They are considered subject to section 3 of the Bank Holding Company Act and, therefore, do not require notices under the CBC Act.

2090.1.4.2 Rebuttable Presumption of Concerted Action

The following persons are presumed to be acting in concert and must file a CBC Act notice if their share of ownership reaches the required levels:

1. a company and any controlling shareholder, partner, trustee, or management official of the company, if both the company and the person own voting shares of the state member bank or bank holding company
2. an individual and the individual’s immediate family
3. companies under common control
4. persons that are parties to an agreement, contract, understanding, relationship, or other arrangement, whether written or otherwise, regarding the acquisition, voting, or transfer of control of voting securities of a state member bank or bank holding company, other than through a revocable proxy
5. persons who have made or propose to make a joint filing under sections 13 and 14 of the Securities Exchange Act of 1934 (15 U.S.C. 78m), and the rules promulgated thereunder by the Securities and Exchange Commission
6. any person and any trust for which the person serves as trustee

If there is any doubt whether a proposed transaction requires a notice, the acquiring person should consult the Federal Reserve Bank for guidance. The CBC Act places the burden of providing notice on the prospective acquiring person.

2090.1.5 TRANSACTIONS NOT REQUIRING ANY NOTICE

Section 225.42 of Regulation Y sets forth the transactions that do not require any notice under the CBC Act or that require after-the-fact notice. The following transactions do not require any notice to the Federal Reserve:

---

2. If two or more persons, not acting in concert, each propose to acquire simultaneously equal percentages of 10 percent or more of a class of voting securities of the state member bank or bank holding company, each person must file prior notice to the Board.

---

BHC Supervision Manual

June 2004
Page 3

3. Acting in concert includes knowing participation in a joint activity or parallel action towards a common goal of acquiring control of a state member bank or bank holding company whether or not pursuant to an express agreement.
1. **Existing control relationships.** The acquisition of additional shares if the acquirer is deemed to already have control of the banking organization.

2. **An increase in previously authorized acquisitions.** The acquisition of additional shares of a class of voting securities of a state member bank or bank holding company by any person (or persons acting in concert) who acquired and maintained control of the institution after complying with federal requirements.

3. **Any acquisition subject to approval under the Bank Holding Company Act or the Bank Merger Act.** Any acquisition of voting securities subject to approval under section 3 of the BHC Act or under the Bank Merger Act (section 18(c) of the Federal Deposit Insurance Act).

4. **Transactions exempt under the BHC Act.**

5. **A proxy solicitation.** Receipt of a revocable proxy in connection with a proxy solicitation for the purpose of conducting business at a regular or special meeting of the institution if the proxy terminates within a reasonable time.

6. **Stock dividends.** Receipt of voting securities as a result of a stock dividend (if the proportional interest of the recipient remains substantially the same).

7. **Acquisition of voting securities of a foreign banking organization.** The acquisition of voting securities of a qualifying foreign banking organization.

### 2090.1.6 TRANSACTIONS NOT REQUIRING PRIOR NOTICE

The transactions that require after-the-fact notice include the acquisition of voting securities (1) through inheritance, (2) as a bona fide gift, or (3) in satisfaction of a debt previously contracted in good faith. In these situations, the appropriate Reserve Bank must be notified within 90 days after the acquisition, and the acquirer must provide any relevant information requested by the Reserve Bank.

### 2090.1.7 UNAUTHORIZED OR UNDISCLOSED CHANGES IN BANK CONTROL

In some instances, a person acquires control of a banking organization without submitting the prior or after-the-fact notice required by Regulation Y. These unauthorized or undisclosed changes in bank control may not be known to the person, the state member bank, or the bank holding company but are discovered by Reserve Bank examiners during an inspection or examination of the affected institution. In most cases, such a violation of the CBC Act is addressed by having the person immediately file a notice with the Federal Reserve requesting authority to retain the acquired shares. The filing should include an explanation of the circumstances that resulted in the violation and a description of the actions that have been (or will be) taken by the filers to ensure no further violations of the statute. Although the burden to file a timely change in bank control notice is on the persons who are acquiring control or causing a change in control of a banking organization, an acquired banking organization or a banking organization undergoing a change in control may have better information regarding current ownership positions, including shareholder lists, than the acquiring individuals or individuals who propose a change in control. Therefore, it is important that state member banks and bank holding companies be familiar with the regulations and policies governing changes in bank control and, when possible, share such information with shareholders who have significant ownership positions.

### 2090.1.8 CHANGES OR REPLACEMENT OF AN INSTITUTION’S CHIEF EXECUTIVE OFFICER OR ANY DIRECTOR

Institutions must report promptly any changes or replacement of its chief executive officer or of any director, in accordance with paragraph 12 of the CBC Act. Under section 225.42(a)(7) of Regulation Y, acquisitions of control of foreign bank holding companies are also exempt from the prior-notice requirements of the CBC Act, but this exemption does not extend to the reports and information required under paragraphs 9, 10, and 12 of the act. (See section 2090.1.5.)

---

4. A violation may be addressed through two other means. The affected party may either (1) submit, for the Federal Reserve’s approval, a specific plan for the prompt termination of the control relationship or (2) contest the preliminary determination of a control relationship by filing a response that sets forth the facts and circumstances in support of the party’s position that no control exists or, if appropriate, presenting such views orally to Federal Reserve staff.
2090.1.9 DISAPPROVAL OF CHANGES IN CONTROL

The CBC Act sets forth various factors to be considered in the evaluation of a proposal. The Board is required to review the competitive impact of the transaction; the financial condition of the acquiring person; and the competence, experience, and integrity of that person and the proposed management of the institution. In assessing the financial condition of the acquiring person, the Board will weigh any debt servicing requirements in light of the acquiring person’s overall financial strength and the institution’s earnings performance, asset condition, capital adequacy, and future prospects, as well as the likelihood of an acquiring party making unreasonable demands on the resources of the institution.

2090.1.10 ADDITIONAL REPORTING REQUIREMENTS

Paragraph 12 of the CBC Act requires that whenever a change in control of a bank holding company occurs, each insured depository institution is required to report promptly to the appropriate federal banking agency any changes or replacement of its chief executive officer or of any director occurring in the next 12-month period. A statement of the past and current business and professional affiliations of the new chief executive officer or directors should be included in each institution’s report.

Paragraph 9 of the CBC Act indicates that whenever any insured depository institution makes a loan secured by 25 percent or more of the outstanding voting stock of an insured depository institution (or bank holding company), the president or other chief executive officer of the lending bank shall promptly report such fact to the appropriate federal banking agency of the bank (or bank holding company) whose stock secures the loan. However, no report need be made when the borrower has been the owner of record of the stock for a period of one year or more or when the stock is that of a newly organized bank before its opening. Reports required by this paragraph shall contain information similar to the informational requirements of the Notice of Change in Control.

2090.1.11 STOCK REDEMPTIONS

A stock redemption by a BHC may result in an existing shareholder (or shareholders) owning 25 percent or more of a class of voting securities, which would require the filing of both a change-in-control and treasury stock notification. Furthermore, a stock redemption by a BHC may result in an existing shareholder (or shareholders) owning between 10 percent and 25 percent of the outstanding shares and being the largest shareholder, thereby resulting in a rebuttable presumption of control. For additional information, see section 2090.3 “Treasury Stock Redemptions.”

2090.1.12 CORRECTIVE ACTION

The Federal Reserve has enforcement jurisdiction over those persons who file or should file notices under the CBC Act. Accordingly, violations of the requirement to file a change in bank control notice may result in the Federal Reserve taking enforcement action against the relevant persons in appropriate circumstances, including those involving willful or negligent misconduct. Violations may result in the persons being subject to a variety of sanctions, including the assessment of a civil money penalty.

Violations of the CBC Act are addressed through the same type of investigative and enforcement authority and formal corrective actions that are used in other administrative remedies (12 U.S.C. 1818(b)-(n)). The CBC Act also authorizes the assessment of civil money penalties for any violation of the CBC Act (12 U.S.C. 1817(j)(16)) and allows the Board to seek divestiture of a BHC or bank from any person or company who violates the CBC Act (12 U.S.C. 1817(j)(15)).

2090.1.13 INSPECTION OBJECTIVES

1. To determine that the BHC has complied with the prior-notification requirements of the CBC Act and that changes in ownership between 10 percent and 25 percent have been reviewed for rebuttable presumption considerations.

2. To determine that the BHC has complied with the reporting requirements of paragraph 12 of the CBC Act regarding changes in its board of directors or its chief executive officer that occur within 12 months of a change in control.

3. To determine that the BHC has complied with the reporting requirements of paragraph...
9 of the CBC Act regarding loans made directly by the BHC secured by 25 percent or more of the outstanding voting stock of an insured depository institution (or bank holding company).

2090.1.14 INSPECTION PROCEDURES

1. Review the BHC’s stock certificate register or log to determine if any person (or group of persons acting in concert) has acquired 10 percent or more of any class of voting securities.

2. Review changes in control of between 10 percent and 25 percent of any class of voting securities to determine if the controlling party is the single largest shareholder.

3. When inspecting a BHC that was the subject of a change in control and when a prior notification was filed, review the notification to determine that information submitted on the management of the BHC is still valid. When changes in directors or the chief executive officer occurred within 12 months of the change in control, determine if the BHC has reported such changes in compliance with paragraph 12 of the CBC Act.

4. When inspecting a BHC that has redeemed any of its own shares subsequent to March 9, 1979, thereby lowering the number of shares outstanding, determine whether the holdings of any individual shareholder have increased proportionally to greater than 10 percent, which might trigger the rebuttable presumption of control and may require prior notification of a change in control.

5. Review any loans made directly by the BHC that are secured by 25 percent or more of the outstanding shares of a bank (or bank holding company) and determine if the BHC has complied with the reporting requirements of paragraph 9 of the CBC Act.
2090.2.1 FORMATION OF A BANK HOLDING COMPANY AND CHANGES IN OWNERSHIP

The formation of a bank holding company (BHC) and certain changes in the ownership of banks owned by a BHC come under the provisions of section 3 of the BHC Act. Section 3(a)(1) prohibits the formation of a BHC without prior Board approval. A company may receive approval pursuant to section 3(a)(1) to become either a one-bank holding company or a multibank holding company.

A primary reason for the formation of a one-bank holding company is to obtain income tax benefits. These benefits include offsetting operating/capital losses of one corporation against the profits/capital gains of another.

Once a company becomes a BHC, either by the formation of a one-bank or multibank holding company, section 3(a)(3) of the act prohibits the direct or indirect acquisition of over 5 percent of any additional bank’s or BHC’s shares without prior Board approval. In addition to the above, section 3(a)(3) serves to prevent an existing BHC from increasing, without prior Board approval, its ownership in an existing subsidiary bank unless the BHC already owns 50 percent of the shares of the bank (section 3(a)(5)(B)). A BHC that owns more than 50 percent of a bank’s shares may buy and sell those shares freely without Board approval, provided the ownership remains above 50 percent. If a BHC owns less than 50 percent of a bank’s shares, prior Board approval is required before each additional acquisition of shares until the BHC’s ownership of the bank reaches more than 50 percent.

2090.2.2 HISTORY OF THE POLICY STATEMENT ON THE FORMATION OF SMALL BANK HOLDING COMPANIES

The Board issued the policy statement in 1980 to facilitate the transfer of ownership of small community-based banks in a manner consistent with bank safety and soundness. The Board has generally discouraged the use of debt by BHCs to finance the acquisition of banks or other companies because high levels of debt can impair the ability of the holding company to serve as a source of strength to its subsidiary banks. The Board has recognized, however, that small BHCs have less access to equity financing than larger BHCs and that the transfer of ownership of small banks often requires the use of acquisition debt. Accordingly, the Board adopted the policy statement to permit the formation and expansion of small BHCs with debt levels that are higher than typically permitted for larger BHCs. The policy statement, which is codified in Regulation Y (12 CFR 225, appendix C), contains several conditions and restrictions designed to ensure that small BHCs that operate with the higher levels of debt permitted by the policy statement do not present an undue risk to the safety and soundness of their subsidiary banks.

2090.2.3 SMALL BANK HOLDING COMPANY AND SAVINGS AND LOAN HOLDING COMPANY POLICY STATEMENT

In acting on applications filed under the BHC Act, the Board has adopted and continues to follow the principle that BHCs should serve as a source of strength for their subsidiary banks. When BHCs incur debt and rely on the earnings of their subsidiary banks as the means of repaying such debt, a question arises as to the probable effect on the financial condition of the holding company and its subsidiary bank or banks.

The Board believes that a high level of debt at the parent holding company level impairs the ability of a BHC to provide financial assistance to its subsidiary bank(s), and, in some cases, the servicing requirements on such debt may be a significant drain on the resources of the bank(s). For these reasons, the Board has not favored the use of acquisition debt in the formation of BHCs or in the acquisition of additional banks. Nevertheless, the Board has recognized that the transfer of ownership of small banks often requires the use of acquisition debt. The Board therefore has permitted the formation and expansion of small BHCs with debt levels higher than would

---

1. A domestic corporation may be entitled to a special deduction from gross income for dividends received from a taxable domestic corporation. There is (1) a 70 percent deduction for dividends received from a corporation that is less than 20 percent owned; and (2) an 80 percent deduction for dividends received from a corporation that is 20 to less than 80 percent owned, subject to certain limits.
be permitted for larger BHCs. Approval of these applications has been given on the condition that the small BHCs demonstrate the ability to service the acquisition debt without straining the capital of their subsidiary banks and, further, that such companies restore their ability to serve as a source of strength for their subsidiary banks within a relatively short period of time.

In the interest of continuing its policy of facilitating the transfer of ownership in banks without compromising bank safety and soundness, the Board has, as described below, adopted the following procedures and standards for the formation and expansion of small BHCs subject to this policy statement.

2090.2.3.1 Applicability of Policy Statement

The policy statement applies only to BHCs with pro forma consolidated assets of less than $3 billion that (1) are not engaged in significant non-banking activities either directly or through a nonbank subsidiary; (2) do not conduct significant off-balance-sheet activities (including securitization and asset management or administration) either directly or through a nonbank subsidiary; and (3) do not have a material amount of debt or equity securities outstanding (other than trust preferred securities) that are registered with the Securities and Exchange Commission. The Board may in its discretion exclude any BHC, regardless of asset size, from the policy statement if such action is warranted for supervisory purposes. With the exception of section 4 (Additional Application Requirements for Expedited/Waived Processing), the policy statement applies to savings and loan holding companies as if they were BHCs. While this policy statement primarily applies to the formation of small BHCs, it also applies to existing BHCs that wish to acquire an additional bank or company and to transactions involving changes in control, stock redemptions, or other shareholder transactions.2 The criteria are described below.

2090.2.3.2 Ongoing Requirements

The following guidelines must be followed on an ongoing basis for all organizations operating under this policy statement.

2090.2.3.2.1 Reduction in Parent Company Leverage

Small BHCs are to reduce their parent company debt consistent with the requirement that all debt be retired within 25 years of being incurred. The Board expects that these BHCs reach a debt-to-equity ratio of .30 to 1 or less within 12 years after incurrence of the debt.3 The BHC must also comply with debt-servicing and other requirements imposed by its creditors.

Subordinated debt associated with trust preferred securities generally would be treated as debt for purposes of paragraphs 2.C. (dividend restrictions), 3.A. (minimum down payment), 4.A.i (expedited treatment of certain filings), and 4.B.i (stock redemption filing requirements) of the policy statement. A BHC, however, may exclude from debt an amount of subordinated debt associated with trust preferred securities that is up to 25 percent of the BHC’s equity (as defined below) less goodwill on the parent company’s balance sheet, in determining compliance with the requirements of such paragraphs of the policy statement. In addition, a BHC subject to the policy statement that has not issued subordinated debt associated with a new issuance of trust preferred securities after December 31, 2005, may exclude from debt any subordinated debt associated with trust preferred securities until December 31, 2010. BHCs subject to this policy statement may also exclude from debt until December 31, 2010, any subordinated debt associated with refinanced issuances of trust preferred securities originally issued on or prior to December 31, 2005, provided that the refinancing does not increase the BHC’s outstanding amount of subordinated debt. Subordinated debt associated with trust preferred securities will not be included as debt in determining compliance with any other requirements of this policy statement.

In addition, notwithstanding any other provision of the policy statement and for purposes of compliance with paragraphs 2.C., 3.A., 4.A.i.,

2. The appropriate Reserve Bank should be contacted to determine the manner in which a specific situation may qualify for treatment under this policy statement.

3. The term "debt" as used in the ratio of debt to equity, means any borrowed funds (exclusive of short-term borrowings that arise out of current transactions, the proceeds of which are used for current transactions) and any securities issued by, or obligations of, the holding company that are the functional equivalent of borrowed funds.
2090.2.3.2 Capital Adequacy

Each insured depository subsidiary of a small BHC is expected to be well capitalized. Any institution that is not well capitalized is expected to become well capitalized within a brief period of time.

2090.2.3.3 Dividend Restrictions

A small BHC whose debt to equity ratio is greater than 1.0:1 is not expected to pay corporate dividends until such time as it reduces its debt to equity ratio to 1.0:1 or less and otherwise meets the criteria set forth in sections 225.14(c)(1)(ii), 225.14(c)(2), and 225.14(c)(7) of Regulation Y.4

Small BHCs formed before August 30, 2018 (the effective date of the policy statement), may switch to a plan that adheres to the intent of the policy statement provided they comply with the requirements set forth above.5

2090.2.3.3 Core Requirements for All Applicants

In assessing applications or notices by organizations subject to the policy statement, the Board will continue to take into account a full range of financial and other information about the applicant, and its current and proposed subsidiaries, including the recent trend and stability of earnings, past and prospective growth, asset quality, the ability to meet debt servicing requirements without placing an undue strain on the resources of the bank(s), and the record and competency of management. In addition, the Board will require applicants to meet the following requirements:

2090.2.3.3.1 Minimum Down Payment

The amount of acquisition debt should not exceed 75 percent of the purchase price of the bank(s) or company to be acquired. When the owner(s) of the holding company incurs debt to finance the purchase of the bank(s) or company, such debt will be considered acquisition debt even though it does not represent an obligation of the BHC, unless the owner(s) can demonstrate that such debt can be serviced without reliance on the resources of the bank(s) or BHC.

4. Dividends may be paid by small BHCs with debt to equity at or below 1.0:1 and otherwise meeting the requirements of sections 225.14(c)(1)(ii), 225.14(c)(2), and 225.14(c)(7) if the dividends are reasonable in amount, do not adversely affect the ability of the BHC to service its debt in an orderly manner, and do not adversely affect the ability of the subsidiary banks to be well-capitalized. It is expected that dividends will be eliminated if the holding company is (1) not reducing its debt consistent with the requirement that the debt to equity ratio be reduced to .30:1 within 12 years of consummation of the proposal or (2) not meeting the requirements of its loan agreement(s).

5. For the interim final rule, see 83 Fed. Reg. 44,195 (August 30, 2018).
2090.2.3.3.2 Ability to Reduce Parent Company Leverage

The BHC must clearly be able to reduce its debt-to-equity ratio and comply with its loan agreement(s) as stated within the ongoing requirements for reduction in parent company leverage, discussed under “Minimum Down Payment.” Failure to meet the criteria would normally result in denial of an application.

2090.2.3.4 Additional Application Requirements for Expedited/Waived Processing

2090.2.3.4.1 Expedited Notices under Sections 225.14 and 225.23 of Regulation Y

A small BHC proposal will be eligible for the expedited processing procedures set forth in sections 225.14 and 225.23 of Regulation Y if (1) the BHC is in compliance with the ongoing requirements of this policy statement, (2) the BHC meets the previously discussed core requirements for all applicants noted above, and (3) the following requirements are met:

1. The parent BHC has a pro forma debt-to-equity ratio of 1.0:1 or less.
2. The BHC meets all the criteria for expedited action of sections 225.14 and 225.23 of Regulation Y.

2090.2.3.4.2 Waiver of Stock-Redemption Filing

A small BHC will be eligible for the stock-redemption filing exemption for well-capitalized BHCs that is found in section 225.4(b)(6) if the following requirements are met:

1. The parent BHC has a pro forma debt-to-equity ratio of 1.0:1 or less.
2. The BHC is in compliance with the ongoing requirements of this policy statement and meets the requirements of sections 225.14(c)(1)(ii), 225.14(c)(2), and 225.14(c)(7) of Regulation Y.

2090.2.4 INSPECTION OBJECTIVES

1. To determine compliance with all commitments made in the application/notification process.
2. To determine if the BHC or SLHC is in compliance with the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement (Regulation Y, appendix C), including whether the BHC’s debt is being reduced within the required or expected time periods.

2090.2.5 INSPECTION PROCEDURES

1. Review all commitments made by the company and its shareholders to determine compliance therewith.
2. Determine whether the BHC or SLHC is in compliance with the Small Bank Holding Company and Savings and Loan Holding Company Policy Statement (Regulation Y, appendix C) by—
   a. verifying that the board of directors and senior management have established and regularly maintain a plan to
      • retire the BHC’s or the SLHC’s debt within 25 years of incurring the debt
      • reach a debt-to-equity ratio of .30:1 or less within 12 years of incurring the debt.
3. Ascertain if the BHC uses a regular periodic monitoring process to ensure the full retirement of the holding company’s debt within the above-stated required or expected periods.
4. Determine whether each insured depository subsidiary of a small BHC is well capitalized or, if not, whether it will be well capitalized within a brief period of time.
5. Determine whether the payment of corporate dividends has been restricted until the BHC’s debt-to-equity ratio is 1.0:1 or less and until the BHC otherwise meets the criteria set forth in sections 225.14(c)(1)(ii), 225.14(c)(2), and 225.14(c)(7) of Regulation Y.

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
“Bootstrapping” is the term generally used to describe a treasury stock transaction in which a company incurs debt to purchase or redeem its own outstanding shares. Bootstrapping is often used to facilitate a change in control whereby a shareholder or shareholder group need only buy few or no shares in order to gain control. The repurchase or redemption is often made in accordance with a written agreement made between a former controlling shareholder(s) and the new controlling shareholder(s).

Section 225.4(b) of Regulation Y requires a bank holding company to file prior written notice with the Board before a purchase or redemption of any of its own equity securities if the gross consideration for the purchase or redemption, when aggregated with the net consideration paid by the company for all such purchases or redemptions during the preceding 12 months, is equal to 10 percent or more of the company’s consolidated net worth. (Net consideration is the gross consideration paid by the company for all of its equity securities purchased or redeemed during the period minus the gross consideration received for all of its equity securities sold during the period other than as a part of a new issue.)

Each notice shall furnish the following information:

• The purpose of the transaction, a description of the securities to be purchased or redeemed, the total number of each class outstanding, the gross consideration to be paid, and the terms of any debt incurred in connection with the transaction.
• A description of all equity securities redeemed within the preceding 12 months, the net consideration paid, and the terms of any debt incurred in connection with those transactions.
• A current and pro forma consolidated balance sheet if the bank holding company has total assets of over $150 million, or a current and pro forma parent-company-only balance sheet if the bank holding company has total assets of $150 million or less.

2090.3.1 CHANGE IN CONTROL ACT CONSIDERATIONS

As indicated earlier, treasury stock redemptions are often intended to facilitate a change in control of a bank holding company. By redeeming the shares held by an existing shareholder(s), the remaining shareholder(s) increases his proportionate ownership. If a “person’s” share ownership should rise above 25 percent or more of the remaining outstanding shares (subsequent to March 9, 1979), that person would then “control” the BHC. Under these circumstances, a change in control notification would have to be filed. If the treasury stock redemption is for an amount sufficient to trigger the requirement for a prior notification of redemption, then dual notifications are called for (change in control and redemption of treasury shares).

Similarly, prior notification is also required if a treasury stock redemption should result in a shareholder’s holdings rising to between 10 percent and 25 percent of the remaining outstanding shares, and if (a) that shareholder is the firm’s largest single shareholder immediately after the acquisition; or (b) the institution is registered under section 12 of the Securities Exchange Act of 1934 (i.e., corporations having assets exceeding $1 million, more than 500 shareholders, and securities that are publicly traded). For additional information on change in control notification requirements, see section 2090.1.

Additional notices under the CIBC Act do not have to be filed if regulatory clearance had already been received to acquire 10 percent or more of the voting shares of a bank holding company, and subsequent treasury stock redemptions resulted in ownership of between 10 and 25 percent of the shares of the bank holding company. Refer to section 225.41(a)(2) of Regulation Y.1

2090.3.2 INSPECTION OBJECTIVES

1. To determine that a BHC that has redeemed shares of its own stock has complied with section 225.4(b) of Regulation Y.
2. To determine that any new controlling shareholder of a BHC that has redeemed shares of its own stock has complied with section 225.41(a) of Regulation Y.
3. To determine if a treasury stock transaction has taken place for the purpose of depleting the original 25 percent equity investment in the purchase price.

1. Revised by the Board, effective November 9, 1990.
2090.3.3 INSPECTION PROCEDURES

1. Review the BHC’s reconcilement of stockholders’ equity to determine if shares have been redeemed.
2. If shares have been redeemed, review for compliance with treasury stock redemption approval and reporting requirements.
3. Determine whether the BHC is using, repeatedly, the less than 10 percent ownership exemption to avoid notice requirements, thus undermining the capital position of the banking organization, resulting in an unsafe and unsound practice.
4. Determine if the less than 10 percent ownership exemption is being used by the bank holding company when it does not satisfy the requirements of the Board’s capital guidelines for redemptions.

The exemption should not be used by a bank holding company that does not meet the Board’s capital guidelines for redemptions. Redemptions of permanent equity or other capital instruments before stated maturity could have a significant impact on an organization’s overall capital structure. Use of the exemption could significantly reduce its capital. Consequently, an organization considering such a step should consult with the Federal Reserve before redeeming any equity (prior to maturity) if such redemption could have a material effect on the level or composition of the organization’s capital base.

5. If shares have been redeemed, determine if any shareholder’s holdings have risen to 25 percent or more of the outstanding shares.
6. If shares have been redeemed, determine if any shareholder’s holdings have risen to between 10 percent and 25 percent of the outstanding shares. Furthermore, determine whether the shareholder is then the largest shareholder or the institution has registered securities under section 12 of the Securities Exchange Act of 1934.
7. If a stock redemption occurred recently in a bank holding company, determine if the shareholders have maintained a 25 percent equity investment.
WHAT’S NEW IN THIS REVISED SECTION

Effective January 2009, this section has been revised to incorporate the Board’s September 21, 2008, “Policy Statement on Equity Investments in Banks and Bank Holding Companies.” (See the Board’s September 22, 2008, Press Release and section 2090.4.4.) The policy statement provides additional guidance on the Board’s position on minority equity investments in banks and bank holding companies that generally do not constitute “control” for purposes of the Bank Holding Company Act. This policy updates the guidance found in the Board’s July 1982 “Policy Statement on Nonvoting Equity Investments by Bank Holding Companies.”

2090.4.1 OVERVIEW AND GUIDING PRINCIPLES

For many years, bank holding companies, nonbank financial companies, private equity funds, and other firms made minority equity investments in banks and bank holding companies. These investments often raised questions about the extent to which the investment would cause the investor to become subject to supervision, regulation, and the other requirements applicable to bank holding companies under the Bank Holding Company Act (BHC Act or the Act) and the Board’s Regulation Y. In general, the BHC Act applies to any company that controls a bank or bank holding company (banking organization). The BHC Act provides that a company has control over a banking organization if (1) the company directly or indirectly or acting through one or more other persons owns, controls, or has power to vote 25 percent or more of any class of voting securities of the banking organization; (2) the company controls, in any manner, the election of a majority of the directors or trustees of the banking organization; or (3) the Board determines, after notice and opportunity for hearing, that the company directly or indirectly exercises a controlling influence over the management or policies of the banking organization.1 Minority equity investments in banking organizations are designed not to trigger either of the first two prongs of the definition of control. These investments often raised questions, however, regarding whether the investor would be able to exercise a controlling influence over the management or policies of a banking organization.2

The text and legislative history of the control definition in the BHC Act make manifest that possession by an investor of a modicum of influence over a banking organization would not amount to a controlling influence. At the same time, the definition does not require that an investor have absolute control over the management and policies of a banking organization. Instead, the Act requires that an investor be able to exercise an amount of influence over a banking organization’s management or policies that is significant but less than absolute control in fact of the banking organization. Notably, the primary definition of control in the Act is based on ownership of 25 percent or more of the voting shares of a banking organization—an amount that does not provide an investor in most cases with complete control over decisions but would allow the investor to play a significant role in the decision-making process.

In assessing whether an investor has the ability to exercise a controlling influence over a banking organization, the Board has been especially mindful of two key purposes of the BHC Act. First, the BHC Act was intended to ensure that companies that acquire control of banking organizations have the financial and managerial strength, integrity, and competence to exercise that control in a safe and sound manner. The BHC Act is premised on the principle that a company that controls a banking organization may reap the benefits of its successful management of the banking organization but also must be prepared to provide additional financial and managerial resources to the banking organization to support the company’s exercise of control. In this way, the Act ties the potential upside benefits of having a controlling influence over the management and policies of a banking organization to responsibility for the potential downside results of exercising that controlling influence. By tying control and responsibility together, the Act ensures that

---

2. Contemporaneous minority investments in the same banking organization by multiple different investors also often raise questions about whether the multiple investors are a group acting in concert for purposes of the Change in Bank Control Act or are a single association for purposes of the BHC Act. These questions are beyond the scope of the 2008 Policy Statement.
companies have positive incentives to run a successful banking organization but also bear the costs of their significant involvement in the banking organization’s decision-making process, thus protecting taxpayers from imprudent risk taking by companies that control banking organizations. Minority investors in banking organizations typically seek to limit their potential downside financial exposure in the event of the failure of the banking organization. Concomitantly, the BHC Act requires that minority investors seeking this protection limit their influence over the management and policies of the banking organization.

Second, the BHC Act was intended to limit the mixing of banking and commerce. In particular, the Act effectively prevents commercial firms and companies with commercial interests from also exercising a controlling influence over a banking organization. Many minority investors in banking organizations own commercial investments that conflict with this limitation.

2090.4.2 BOARD’S 1982 POLICY STATEMENT ON NONVOTING EQUITY INVESTMENTS BY BANK HOLDING COMPANIES

On July 8, 1982, the Board issued a Policy Statement on Nonvoting Equity Investments by Bank Holding Companies (the 1982 Policy Statement) to provide guidance on the Board’s interpretation of the “controlling influence” prong of the control definition in the BHC Act. The statement for the first time outlined the policies that the Board would consider in reviewing whether a minority investment in a banking organization would result in the exercise by the investor of a controlling influence over the management or policies of the banking organization. The 1982 Policy Statement focused on issues of particular concern in the 1980s in the context of investments by bank holding companies in out-of-state banking organizations. For example, the 1982 Policy Statement primarily addressed investments that included a long-term merger or stock purchase agreement between the investor and the banking organization that would be triggered on a change in the interstate banking laws, and so-called “lock-up” arrangements designed to prevent another company from acquiring the banking organization without the permission of the investor.

The 1982 Policy Statement sets out the Board’s concerns with these investments, the considerations the Board will take into account in determining whether the investments are consistent with the Act, and the general scope of arrangements to be avoided by bank holding companies. The Board recognized that the complexity of legitimate business arrangements precludes rigid rules designed to cover all situations and that decisions regarding the existence or absence of control in any particular case must take into account the effect of the combination of provisions and covenants in the agreement as a whole and the particular facts and circumstances of each case.

2090.4.2.1 Statutory and Regulatory Provisions

Under section 3(a) of the Act, a bank holding company may not acquire direct or indirect ownership or control of more than 5 percent of the voting shares of a bank without the Board’s prior approval (12 U.S.C. 1842(a)(3)). In addition, this section of the Act provides that a bank holding company may not, without the Board’s prior approval, acquire control of a bank: that is, in the words of the statute, “for any action to be taken that causes a bank to become a subsidiary of a bank holding company” (12 U.S.C. 1842(a)(2)). Under the Act, a bank is a subsidiary of a bank holding company if

1. The company directly or indirectly owns, controls, or holds with power to vote 25 percent or more of the voting shares of the bank;
2. The company controls in any manner the election of a majority of the board of directors of the bank; or
3. The Board determines, after notice and opportunity for hearing that the company has the power, directly or indirectly, to exercise a controlling influence over the management or policies of the bank (12 U.S.C. 1841(d)).

2090.4.2.2 Review of Agreements

Prior to the permissibility of interstate banking, bank holding companies sought to make substantial equity investments in other bank holding companies across state lines, but without obtaining more than 5 percent of the voting shares or control of the acquiree. These invest-

---

3. See 1982 FRB 413, 12 C.F.R. 225.143, or the F.R.R.S at 4-172.1.
ments involved a combination of the following arrangements:

1. Options on, warrants for, or rights to convert nonvoting shares into substantial blocks of voting securities of the acquiree bank holding company or its subsidiary bank(s);

2. Merger or asset acquisition agreements with the out-of-state bank or bank holding company that are to be consummated in the event interstate banking is permitted;

3. Provisions that limit or restrict major policies, operations, or decisions of the acquiree; and

4. Provisions that make acquisitions of the acquiree or its subsidiary bank(s) by a third party either impossible or economically impracticable.

The various warrants, options, and rights were not exercisable by the investing bank holding company until interstate banking was permitted. They were transferred by the investor either immediately or after the passage of a period of time or upon the occurrence of certain events.

After a careful review of a number of these arrangements, the Board concluded that investments in nonvoting stock, absent other arrangements, could be consistent with the Act. Some of the agreements reviewed appeared consistent with the Act because they were limited to investments of relatively moderate size in nonvoting equity that may become voting equity.

However, other agreements reviewed by the Board raised substantial problems of consistency with the control provisions of the Act because the investors, by their terms, sought to assure the soundness of their investments, prevent takeovers by others, and allow for sale of their options, warrants, or rights to a person of their choice to prevent being locked into what may become an unwanted investment. The Board took the position that the ability to control the ultimate disposition of voting shares to a person of the investor’s choice and to secure the economic benefits therefrom indicated control of the shares under the Act. The Board concluded that the ability to transfer rights to large blocks of voting shares, even if nonvoting in the hands of the investing company, could result in such a substantial position of leverage over the management of the acquiree as to involve a structure that would inevitably result in control prohibited by the Act.

2090.4.2.3 Provisions that Avoid Control

In 1982, the context of any particular agreement, provisions of the type described above were acceptable if combined with other provisions that serve to preclude control. The Board believed that such agreements would not be consistent with the Act unless provisions are included that will preserve management’s discretion over the policies and decisions of the acquiree and avoid control of voting shares.

As a first step towards avoiding control, management had to be free to conduct banking and permissible nonbanking activities. Another step to avoid control included the right of the acquiree to “call” the equity investment and

---

options or warrants to assure that covenants that may become inhibiting can be avoided by the acquiree. This right made such investments or agreements more like a loan in which the borrower has a right to escape covenants and avoid the lender’s influence by prepaying the loan.

A measure to avoid problems of control arising through the investor’s control over the ultimate disposition of rights to substantial amounts of voting shares of the acquiree might have included a provision granting the acquiree a right of first refusal before warrants, options, or other rights may be sold and requiring a public and dispersed distribution of those rights if the right of first refusal is not exercised.

The Board concluded that agreements that involve rights to less than 25 percent of the voting shares, with a requirement for a dispersed public distribution in the event of sale, have a much greater prospect of achieving consistency with the Act than agreement involving a greater percentage. This guideline was drawn by analogy from the provision in the Act that ownership of 25 percent or more of the voting securities of a bank constitutes control of the bank.

One effect of the guideline was to hold down the size of the nonvoting equity investment by the investing company relative to the acquiree’s total equity, thus avoiding the potential for control because the investor holds a very large proportion of the acquiree’s total equity. Observance of the 25 percent guideline also made provisions in agreements providing for a right of first refusal or a public and widely dispersed offering of rights to the acquiree’s shares more practical and realistic.

Finally, acquirers were to avoid certain arrangements regardless of other provisions in the agreement that were designed to avoid control. These are

1. Agreements that enabled the investing bank holding company (or its designee) to direct in any manner the voting of more than 5 percent of the voting shares of the acquiree;
2. Agreements whereby the investing company had the right to direct the acquiree’s use of the proceeds of an equity investment by the investing company to effect certain actions, such as the purchase and redemption of the acquiree’s voting shares; and
3. The acquisition of more than 5 percent of the voting shares of the acquiree that “simultaneously” with their acquisition by the investing company become nonvoting shares, remain nonvoting shares while held by the investor, and revert to voting shares when transferred to a third party.

2090.4.2.4 Review by the Board

The 1982 Policy Statement did not constitute the exclusive scope of the Board’s concerns, nor were the considerations with respect to control outlined in this statement an exhaustive catalog of permissible or impermissible arrangements. The Board instructed its staff to review agreements of the kind discussed in this statement and to bring to the Board’s attention those that raise problems of consistency with the Act.

2090.4.3 ACTIVITIES OF BANKING ORGANIZATIONS AND BOARD DETERMINATIONS SUBSEQUENT TO THE 1982 POLICY STATEMENT

Many aspects of the 1982 Policy Statement have broader applicability and have served as the foundation for the Board’s review more generally of whether a minority investment in a banking organization would give the investor a controlling influence over the management or policies of the banking organization. In this regard, the 1982 Policy Statement identified a number of structural measures that the Board believed would limit the ability of an investor to exercise a controlling influence over a banking organization. These included restricting the use of covenants that constrain the discretion of banking organization management, limiting the amount of voting and nonvoting shares of the banking organization acquired by the investor, and limiting the ability of the investor to transfer large blocks of voting shares.

The Board made clear in the 1982 Policy Statement that the complexity of legitimate business arrangements precluded establishing rigid rules designed to cover all situations and that decisions regarding the presence or absence of control must take into account the specific facts and circumstances of each case. Accordingly, since the 1982 Policy Statement, the Board has determined whether an equity investor in a banking organization has a controlling influence over the management or policies of the banking organization by considering carefully all the facts and circumstances surrounding the investor’s investment in, and relationship with, the banking organization. Large minority investors in a banking organization typically
have avoided acquiring a controlling influence over the banking organization by providing the Board with a set of passivity commitments and by avoiding certain control-enhancing mechanisms. Specifically, minority investors have avoided acquiring control over a banking organization by, among other things

- restricting the size of their voting and total equity investment in the banking organization;
- avoiding covenants that would enable the investor to restrict the ability of the banking organization’s management to determine the major policies and operations of the banking organization;
- not attempting to influence the banking organization’s process for making decisions about major policies and operations;
- limiting director and officer interlocks with the banking organization; and
- limiting business relationships between the investor and the banking organization.

2090.4.4 BOARD’S 2008 POLICY STATEMENT ON EQUITY INVESTMENTS IN BANKS AND BANK HOLDING COMPANIES

Since issuing the 1982 Policy Statement, the Board has reviewed a significant number of noncontrolling investments in banking organizations. The Board believed that it would be useful and appropriate to update its guidance in this area and therefore issued its Policy Statement on Equity Investments in Banks and Bank Holding Companies (the 2008 Policy Statement) on September 21, 2008. (See the Board’s September 22, 2008, Press Release.)

2090.4.4.1 Specific Approaches to Avoid Control

The 2008 Policy Statement discusses the Board’s views on specific approaches to avoid control.5

2090.4.4.1.1 Director Representation

The Board generally has not permitted a company that acquires between 10 and 24.9 percent of the voting stock of a banking organization (a minority investor) to have representation on the board of directors of the banking organization. The principal exception to this guideline has been in situations in which the investor owns less than 15 percent of the voting stock of the banking organization and another person (or group of persons acting together) owns a larger block of voting stock of the banking organization.

The Board has reexamined its precedent in this area and, based on its experience with minority investors and director representation, believes that a minority investor generally should be able to have a single representative on the board of directors of a banking organization without acquiring a controlling influence over the management or policies of the banking organization. Typically, boards of directors of banking organizations have 9 or 10 members. Although having a representative on the board of the banking organization enhances the influence of a minority investor, the Board’s experience has shown that, in the absence of other indicia of control, it would be difficult for a minority investor with a single board seat to have a controlling influence over the management or policies of the banking organization.6

Moreover, a minority investor that has up to 2 representatives on the board of directors of the banking organization is unlikely, absent other indicia of control, to be able to exercise a controlling influence over the banking organization when the investor’s aggregate director representation is proportionate to its total interest in the banking organization7 but does not exceed 25 percent of the voting members of the board.8

5. See the 2008 Policy Statement at 12 C.F.R. 225.144, beginning at paragraph (c).

6. In addition to formal representation on the board of directors of a banking organization, minority investors also frequently seek to have a representative attend meetings of the board of directors of the banking organization in the capacity of a nonvoting observer. Attendance by a representative of a minority investor as an observer at meetings of the board of directors of a banking organization allows the investor access to information and a mechanism for providing advice to the banking organization but has not in previous situations allowed the investor to exercise a controlling influence over the management or policies of the banking organization as long as the observer does not have any right to vote at meetings of the board.

7. An investor’s total interest is equal to the greater of the investor’s voting interest or total equity interest in the banking organization.

8. For example, an investor with a 10 percent voting interest and a 20 percent total equity interest generally could have two representatives on the board of directors of the banking organization if the investor’s director representation does not exceed 20 percent of the board seats. On the other hand, an investor with a 15 percent voting interest and a 33 percent total equity interest generally could have two representatives on the board of directors of the banking organization if the investor’s director representation does not exceed 25 percent.
and another shareholder of the banking organization is a bank holding company that controls the banking organization under the BHC Act. The presence of another larger, controlling shareholder of the banking organization that has been approved by the Board, is subject to supervision and regulation by the Board, and is obligated to serve as a source of strength for the banking organization should serve as a powerful countervailing force to whatever influence the minority investor may have as a result of its investment and proportional director representation.

The Board continues to believe that a representative of a minority investor that serves on the board of directors of the banking organization should not serve as the chairman of the board of the banking organization or as the chairman of a committee of the board of the banking organization. The Board generally believes, however, that representatives of a non-controlling minority investor may serve as members of committees of the board of the banking organization when those representatives do not occupy more than 25 percent of the seats on any committee and do not have the authority or practical ability unilaterally to make (or block the making of) policy or other decisions that bind the board or management of the banking organization.

2090.4.4.1.2 Total Equity

The three-prong control test in the BHC Act makes no explicit reference to nonvoting equity investments. Nevertheless, the Board has long subscribed to the view that the overall size of an equity investment, including both voting and nonvoting equity, is an important indicator of the degree of influence an investor may have. Accordingly, the Board traditionally has taken account of the presence and size of nonvoting equity investments in its controlling influence analysis. For example, in the 1982 Policy Statement, the Board set forth a guideline that nonvoting equity investments that exceed 25 percent of the total equity of a banking organization generally raise control issues under the BHC Act. The Board has recognized in a few limited circumstances, however, that ownership by a minority investor of 25 percent or more of a banking organization’s total equity may not confer a controlling influence, usually in situations when another controlling investor is present or other extenuating circumstances indicate that the exercise of a controlling influence by the minority investor is unlikely.

The Board continues to believe that an investor that makes a very large equity investment in a banking organization is likely to have a controlling influence over the banking organization’s management or policies. Investors with large equity investments have a powerful incentive to wield influence over the banking organization in which they have invested. They have a substantial amount of money at stake in the enterprise, are among the first to absorb losses if the banking organization has financial difficulties, and participate in the profits of the banking organization going forward. Moreover, a banking organization is likely to pay heed to its large shareholders to help ensure it has the ability to raise equity capital in the future and to prevent the negative market signal that would be created by the sale of a large block of equity by an unhappy existing shareholder.

On the other hand, the Board recognizes that nonvoting equity does not provide the holder with voting rights that empower the holder to participate directly in the selection of banking organization management or otherwise in the banking organization’s decision-making process. Moreover, as noted above, the BHC Act defines control in terms of ownership of 25 percent or more of a class of voting securities but does not impose an express limit on ownership of nonvoting shares. The Board continues to believe that, in most circumstances, an investor that owns 25 percent or more of the total equity of a banking organization owns enough of the capital resources of a banking organization to have a controlling influence over the management or policies of the banking organization. The Board continues to recognize, however, that the ability of an investor to exercise a controlling influence through nonvoting equity instruments depends significantly on the nature and extent of the investor’s overall investment in the banking organization and on the capital structure of the banking organization.

9. In determining what amount of director representation is proportional to an investor’s voting interest in a banking organization, the investor should round to the nearest whole number. For example, the Board would consider a minority investor that owns 15 percent of the voting stock of a banking organization to have proportionate director representation if it had two representatives on a board of directors with 10 or more members (but not on a board of directors with 9 or fewer members).

10. 12 C.F.R. 225.143(d)(4) and (d)(5).
In particular, the Board would not expect that a minority investor would have a controlling influence over a banking organization if the investor owns a combination of voting shares and nonvoting shares that, when aggregated, represents less than one-third of the total equity of the organization (and less than one-third of any class of voting securities, assuming conversion of all convertible nonvoting shares held by the investor) and does not allow the investor to own, hold, or vote 15 percent or more of any class of voting securities of the organization. In these situations, the limitation on voting rights reduces the potential that the investor may exercise influence that is controlling.

In previous cases, investors that have acquired nonvoting shares often have sought the right to convert those shares to voting shares under various circumstances. The Board continues to believe that nonvoting shares that may be converted into voting shares at the election of the holder of the shares, or that mandatorily convert after the passage of time, should be considered voting shares at all times for purposes of the BHC Act. However, in previous cases, the Board has recognized that nonvoting shares that are convertible into voting shares carry less influence when the nonvoting shares may not be converted into voting shares in the hands of the investor and may only be transferred by the investor: (1) to an affiliate of the investor or to the banking organization; (2) in a widespread public distribution; (3) in transfers in which no transferee (or group of associated transferees) would receive 2 percent or more of any class of voting securities of the banking organization; or (4) to a transferee that would control more than 50 percent of the voting securities of the banking organization without any transfer from the investor. Ownership of this form of nonvoting, convertible shares, within the limits discussed above, allows investors to provide capital to a banking organization in a way that is useful to the organization, minimizes the opportunity for the investor to exercise a controlling influence over the organization, and allows the investor to exit the investment without conveying control to another party outside the parameters of the BHC Act.

2090.4.4.1.3 Consultations with Management

In many previous cases, minority investors have agreed not to attempt to influence the operations, management, or strategies of the banking organization in which they have invested; not to threaten to sell their shares in the banking organization as a method for influencing decisions of banking organization management; and not to solicit proxies on any matter from the other shareholders of the banking organization. These commitments were designed to limit the exercise by a minority investor of a controlling influence over the management or policies of a banking organization.

The Board believes that it would be useful to provide additional guidance on the extent of communications between a minority investor and a banking organization’s management that would be consistent with a noncontrol determination. The Board believes that a noncontrolling minority investor, like any other shareholder, generally may communicate with banking organization management about, and advocate with banking organization management for changes in, any of the banking organization’s policies and operations. For example, an investor may, directly or through a representative on a banking organization’s board of directors, advocate for changes in the banking organization’s dividend policy; discuss strategies for raising additional debt or equity financing; argue that the banking organization should enter into or avoid a new business line or divest a material subsidiary; or attempt to convince banking organization management to merge the banking organization with another firm or sell the banking organization to a potential acquirer. These communications also generally may include advocacy by minority investors for changes in the banking organization’s management and recommendations for new or alternative management.11 Although these types of discussions represent attempts by an investor to influence the management or policies of the banking organization, discussions alone are not the type of controlling influence targeted by the BHC Act.

To avoid the exercise of a controlling influence, in all cases, the decision whether or not to adopt a particular position or take a particular action must remain with the banking organization’s shareholders as a group, its board of directors, or its management, as appropriate. The role of the minority investor in these decisions must be limited to voting its shares in its discretion at a meeting of the shareholders of the banking organization.

11. As discussed later in the 2008 Policy Statement, a minority investor may not have a contractual right to determine (or a veto right over) any of the major policies and operations of the bank or the composition of the bank’s management team.
organization (directly or by proxy, including in connection with a proxy solicitation launched by another shareholder), and by exercising voting privileges as a member of the board of directors of the banking organization (to the extent permitted as discussed above). Importantly, communications by minority investors should not be accompanied by explicit or implicit threats to dispose of shares in the banking organization or to sponsor a proxy solicitation as a condition of action or non-action by the banking organization or its management.

2090.4.4.1.4 Other Indicia of Control

2090.4.4.1.4.1 Business Relationships

The Board traditionally has prohibited a non-controlling minority investor in a banking organization from having any material business transactions or relationships with the banking organization. The Board historically has taken the view that a major supplier, customer, or lender to a banking organization can exercise considerable influence over the banking organization’s management and policies—especially when coupled with a sizeable voting stock investment—by threatening to terminate or change the terms of the business relationship.
