Examiners will inform the CAE as to whether the function is deemed to be effective or ineffective. Internal audit's overall processes could be deemed effective even though some aspects of the internal audit function may require enhancements or improvements such as additional documentation with respect to specific audit processes (for example, risk assessments or work papers). In these situations, the required enhancements or improvements generally should not be a critical part of the overall internal audit function, or the function should be deemed to be ineffective.

Relying on the Work Performed by Internal Audit

Examiners may rely on internal audit at supervised institutions if internal audit was deemed effective at the most recent examination of internal audit. In examining an institution's internal audit function, examiners will supplement their examination procedures through continuous monitoring and an assessment of key elements of internal audit, including (1) the adequacy and independence of the audit committee; (2) the independence, professional competence, and quality of the internal audit function; (3) the quality and scope of the audit methodology, audit plan, and risk assessment; and (4) the adequacy of audit programs and work paper standards. On at least an annual basis, examiners should review these key elements to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding their adequacy.

Examiners may choose to rely on the work of internal audit when internal audit's overall function and related processes are effective and when recent work was performed by internal audit in an area where examiners are performing examination procedures. For example, if an internal audit department performs internal audit work in an area where examiners might also review controls, examiners may evaluate whether they can rely on the work of internal audit (and either eliminate or reduce the testing scheduled as part of the regulatory examination processes). In high-risk areas, examiners will consider whether additional examination work is needed even where internal audit has been deemed effective and its work reliable.

(End of the January 23, 2013, Supplemental Policy Statement)

INDEPENDENCE OF INTERNAL AUDITORS

The ability of the internal audit function to achieve its audit objectives depends, in large part, on the independence maintained by audit personnel. Frequently, the independence of internal auditing can be determined by its reporting lines within the organization and by the person or level to whom these results are reported. In most circumstances, the internal audit function is under the direction of the board of directors or a committee thereof, such as the audit committee. This relationship enables the internal audit function to assist the directors in fulfilling their responsibilities.

The auditor's responsibilities should be addressed in a position description, with reporting lines delineated in personnel policy, and audit results should be documented in audit committee and board of directors' minutes. Examiners should review these documents, as well as the reporting process followed by the auditor, in order to subsequently evaluate the tasks performed by the internal audit function. The internal auditor should be given the authority necessary to perform the job, including free access to any records necessary for the proper conduct of the audit. Furthermore, internal auditors generally should not have responsibility for the accounting system, other aspects of the institution's accounting function, or any operational function not subject to independent review.

Competence of Internal Auditors

The responsibilities and qualifications of internal auditors vary depending on the size and complexity of a bank's operations and on the emphasis placed on the internal audit function by the directorate and management. In many banks, the internal audit function is performed by an individual or group of individuals whose sole responsibility is internal auditing. In other banks, particularly small ones, internal audit may be performed on a part-time basis by an officer or employee.

The qualifications discussed below should not be viewed as minimum requirements but should be considered by the examiner in evaluating the work performed by the internal auditors or audit departments. Examples of the type of qualifications an internal audit department manager should have are—

- academic credentials comparable to other bank officers who have major responsibilities within the organization,
- commitment to a program of continuing education and professional development,
- audit experience and organizational and technical skills commensurate with the responsibilities assigned, and
- oral and written communication skills.

The internal audit department manager must be properly trained to fully understand the flow of data and the underlying operating procedures. Training may come from college courses, courses sponsored by industry groups such as the Bank Administration Institute (BAI), or in-house training programs. Significant work experience in various departments of a bank also may provide adequate training. Certification as a chartered bank auditor, certified internal auditor, or certified public accountant meets educational and other professional requirements. In addition to prior education, the internal auditor should be committed to a program of continuing education, which may include attending technical meetings and seminars and reviewing current literature on auditing and banking.

The internal auditor's organizational skills should be reflected in the effectiveness of the bank's audit program. Technical skills may be demonstrated through internal audit techniques, such as internal control and other questionnaires, and an understanding of the operational and financial aspects of the organization.

In considering the competence of the internal audit staff, the examiner should review the educational and experience qualifications required by the bank for filling the positions in the internal audit department and the training available for that position. In addition, the examiner must be assured that any internal audit supervisor understands the audit objectives and procedures performed by the staff.

In a small bank, it is not uncommon to find that internal audit, whether full- or part-time, is a one-person department. The internal auditor may plan and perform all procedures personally or may direct staff borrowed from other departments. In either case, the examiner should expect, at a minimum, that the internal auditor possesses qualifications similar to those of an audit department manager, as previously discussed.

The final measure of the competence of the internal auditor is the quality of the work performed, the ability to communicate the results of that work, and the ability to follow up on deficiencies noted during the audit work. Accordingly, the examiner's conclusions with respect to an auditor's competence should also reflect the adequacy of the audit program and the audit reports.

IMPLEMENTATION OF THE INTERNAL AUDIT FUNCTION

The annual audit plan and budgets should be set by the internal audit manager and approved by the board, audit committee, or senior management. In many organizations, the internal audit manager reports to a senior manager for administrative purposes. The senior manager appraises the audit manager's performance, and the directors or an audit committee approves the evaluation.

Risk Assessment

In setting the annual audit plan, a risk assessment should be made that documents the internal audit function's understanding of the institution's various business activities and their inherent risks. In addition, the assessment also evaluates control risk, or the potential that deficiencies in the system of internal control would expose the institution to potential loss. The assessment should be periodically updated to reflect changes in the system of internal control, work processes, business activities, or the business environment. The risk-assessment methodology of the internal audit function should identify all auditable areas, give a detailed basis for the auditors' determination of relative risks, and be consistent from one audit area to another. The risk assessment can quantify certain risks, such as credit risk, market risk, and legal risk. It can also include qualitative aspects, such as the timeliness of the last audit and the quality of management. Although there is no standard approach to making a risk assessment, it should be appropriate to the size and complexity of the institution. While smaller institutions may not have elaborate risk-assessment systems, some analysis should still be available to explain why certain areas are more frequently audited than others.

Within the risk assessment, institutions should clearly identify auditable units along business activities or product lines, depending on how the institution is managed. There should be evidence that the internal audit manager is regularly notified of new products, departmental changes, and new general ledger accounts, all of which should be factored into the audit schedule. Ratings of particular business activities or corporate functions may change with time as the internal audit function revises its method for assessing risk. These changes should be incremental. Large-scale changes in the priority of audits should trigger an investigation into the reasonableness of changes to the risk-assessment methodology.

Audit Plan

The audit plan is based on the risk assessment. The plan should include a summary of key internal controls within each significant business activity, the timing and frequency of planned internal audit work, and a resource budget.

A formal, annual audit plan should be developed based on internal audit's risk assessment. The audit plan should include all auditable areas and set priorities based on the rating determined by the risk assessment. The schedule of planned audits should be approved by the board or its audit committee, as should any subsequent changes to the plan. Many organizations develop an audit plan jointly with the external auditors. In this case, the audit plan should clearly indicate what work is being performed by internal and external auditors and what aspects of internal audit work the external auditors are relying on.

Typically, the schedule of audit is cyclic; for example, high risks are audited annually, moderate risks every two years, and low risks every three years. In some cases, the audit cycle may extend beyond three years. In reviewing the annual plan, examiners should determine the appropriateness of the institution's audit cycle. Some institutions limit audit coverage of their low-risk areas. Examiners should review areas the institution has labeled "low risk" to determine if the classification is appropriate and if coverage is adequate.

Audit Manual

The internal audit department should have an audit manual that sets forth the standards of work for field auditors and audit managers to use in their assignments. A typical audit manual contains the audit unit's charter and mission, administrative procedures, workpaper-documentation standards, reporting standards, and review procedures. Individual audits should conform to the requirements of the audit manual. As a consequence, the manual should be up-to-date with respect to the audit function's mission and changes to the professional standards it follows.

Performance of Individual Audits

The internal audit manager should oversee the staff assigned to perform the internal audit work and should establish policies and procedures to guide them. The internal audit function should be competently supervised and staffed by people with sufficient expertise and resources to identify the risks inherent in the institution's operations and to assess whether internal controls are effective. While audits vary according to the objective, the area subjected to audit, the standards used as the basis for work performed, and documentation, the audit process generates some common documentation elements, as described below.

Audit Program and Related Workpapers

The audit program documents the audit's objectives and the procedures that were performed. Typically, it indicates who performed the work and who has reviewed it. Workpapers document the evidence gathered and conclusions drawn by the auditor, as well as the disposition of audit findings. The workpapers should provide evidence that the audit program adheres to the requirements specified in the audit manual.

Audit Reports

The audit report is internal audit's formal notice of its assessment of internal controls in the audited areas. The report is given to the area's managers, senior management, and directors. A typical audit report states the purpose of the audit and its scope, conclusions, and recommendations. Reports are usually prepared for each audit. In larger institutions, monthly or quarterly summaries that highlight major audit issues are prepared for senior management and the board.

EXAMINER REVIEW OF INTERNAL AUDIT

The examination procedures section describes the steps the examiner should follow when conducting a review of the work performed by the internal auditor. The examiner's review and evaluation of the internal audit function is a key element in determining the scope of the examination. In most situations, the competence and independence of the internal auditors may be reviewed on an overall basis; however, the adequacy and effectiveness of the audit program should be determined separately for each examination area.

The examiner should assess if the work performed by the internal auditor is reliable. It is often more efficient for the examiner to determine the independence or competence of the internal auditor before addressing the adequacy or effectiveness of the audit program. If the examiner concludes that the internal auditor possesses neither the independence nor the competence deemed appropriate, the examiner must also conclude that the internal audit work performed is not reliable.

The examiner should indicate in the report of examination any significant deficiencies concerning the internal audit function. Furthermore, the examiner should review with management any significant deficiencies noted in the previous report of examination to determine if these concerns have been appropriately addressed.

Program Adequacy and Effectiveness

An examiner should consider the following factors when assessing the adequacy of the internal audit program—

- scope and frequency of the work performed,
- content of the programs,
- documentation of the work performed, and
- conclusions reached and reports issued.

The scope of the internal audit program must be sufficient to attain the audit objectives. The frequency of the audit procedures performed should be based on an evaluation of the risk associated with each targeted area under audit. Among the factors that the internal auditor should consider in assessing risk are the nature of the operation of the specific assets and liabilities under review, the existence of appropriate policies and internal control standards, the effectiveness of operating procedures and internal controls, and the potential materiality of errors or irregularities associated with the specific operation.

To further assess the adequacy and effectiveness of the internal audit program, an examiner needs to obtain audit workpapers. Workpapers should contain, among other things, audit work programs and analyses that clearly indicate the procedures performed, the extent of the testing, and the basis for the conclusions reached.

Although audit work programs are an integral part of the workpapers, they are sufficiently important to deserve separate attention. Work programs serve as the primary guide to the audit procedures to be performed. Each program should provide a clear, concise description of the work required, and individual procedures should be presented logically. The detailed procedures included in the program vary depending on the size and complexity of the bank's operations and the area subject to audit. In addition, an individual audit work program may encompass several departments of the bank, a single department, or specific operations within a department. Most audit programs include procedures such as—

- surprise examinations, where appropriate;
- maintenance of control over records selected for audit;
- review and evaluation of the bank's policies and procedures and the system of internal control;
- reconciliation of detail to related control records; and
- verification of selected transactions and balances through procedures such as examination of supporting documentation, direct confirmation and appropriate follow-up of exceptions, and physical inspection.

The internal auditor should follow the specific procedures included in all work programs to reach audit conclusions that will satisfy the related audit objectives. Audit conclusions should be supported by report findings; such reports should include, when appropriate, recommendations by the internal auditor for any required remedial actions.

The examiner should also analyze the internal reporting process for the internal auditor's findings, since required changes in the bank's internal controls and operating procedures can be made only if appropriate officials are informed of the deficiencies. This means that the auditor must communicate all findings and recommendations clearly and concisely, pinpointing problems and suggesting solutions. The auditor also should submit reports as soon as practical, and the reports should be routed to those authorized to implement the suggested changes.

The final measure of the effectiveness of the audit program is a prompt and effective management response to the auditor's recommendations. The audit department should determine the reasonableness, timeliness, and completeness of management's response to their recommendations, including follow-up, if necessary. Examiners should assess management's response and follow up when the response is either incomplete or unreasonable.

EXTERNAL AUDITS

The Federal Reserve requires bank holding companies with total consolidated assets of $500 million or more to have annual independent audits. Generally, banks must have external audits for the first three years after obtaining FDIC insurance (an FDIC requirement) and upon becoming a newly chartered national bank (an OCC requirement). The SEC also has a longstanding audit requirement for all public companies, which applies to bank holding companies that are SEC registrants and to state member banks that are subject to SEC reporting requirements pursuant to the Federal Reserve's Regulation H.

For insured depository institutions with fiscal years beginning after December 31, 1992, FDICIA, through its amendments to section 36 of the FDI Act, requires annual independent audits for all FDIC-insured banks that have total assets in excess of $500 million. (See SR-94-3 and SR-96-4.) In September 1999, the Federal Financial Institutions Examination Council (FFIEC) issued an interagency policy statement on external auditing programs of banks and savings associations.[37] The policy encourages banks and savings associations that have *less than* $500 million in total assets and that are not subject to other audit requirements to adopt an external auditing program as a part of their overall risk-management process. (See the following subsection for the complete text of the interagency policy statement.)

Independent audits enhance the probability that financial statements and reports to the FRB and other financial-statement users will be accurate and will help detect conditions that could adversely affect banking organizations, the FRB, or the public. The independent audit process also subjects the internal controls and the accounting policies, procedures, and records of each banking organization to periodic review.

Banks often employ external auditors and other specialists to assist management in specialized fields, such as taxation and management information systems. External auditors and consultants often conduct in-depth reviews of the operations of specific bank departments; the reviews might focus on operational procedures, personnel requirements, or other specific areas of interest. After completing the reviews, the auditors may recommend that the bank strengthen controls or improve efficiency.

External auditors provide services at various times during the year. Financial statements are examined annually. Generally, the process commences in the latter part of the year, with the report issued as soon thereafter as possible. Other types of examinations or reviews are performed at various dates on an as-required basis.

The examiner is interested in the work performed by external auditors for three principal reasons. First, situations will arise when internal audit work is not being performed or when such work is deemed to be of limited value to the examiner. Second, the work performed by external auditors may affect the amount of testing the examiner must perform. Third, external audit reports often provide the examiner with information pertinent to the examination of the bank.

The major factors that should be considered in evaluating the work of external auditors are similar to those applicable to internal auditors, namely, the competence and independence of the auditors and the adequacy of the audit program.

The federal banking agencies view a full-scope annual audit of a bank's financial statements by an independent public accountant as preferable to other types of external auditing programs. The September 1999 policy statement recognizes that a full-scope audit may not be feasible for every small bank. It therefore encourages those banks to pursue appropriate alternatives to a full-scope audit. Small banks are also encouraged to establish an audit committee consisting of outside directors. The policy statement provides guidance to examiners on the review of external auditing programs.

The policy statement is consistent with the Federal Reserve's longstanding guidance that encourages the use of external auditing programs, and with its goals for (1) ensuring the accuracy and reliability of regulatory reports, (2) improving the quality of bank internal controls over financial reporting, and (3) enhancing the efficiency of the risk-focused examination process. The Federal Reserve adopted the FFIEC policy statement effective for fiscal years beginning on or after January 1, 2000. (See SR-99-33.)

INTERAGENCY POLICY STATEMENT ON EXTERNAL AUDITING PROGRAMS OF BANKS AND SAVINGS ASSOCIATIONS

Introduction

The board of directors and senior managers of a banking institution or savings association (institution) are responsible for ensuring that the institution operates in a safe and sound manner. To achieve this goal and meet the safety-and-soundness guidelines implementing section 39 of the Federal Deposit Insurance Act (FDI Act) (12 USC 1831p-1),[38] the institution should maintain effective systems and internal control[39] to produce reliable and accurate financial reports.

37. See 64 *Fed. Reg.* 52319 (September 28, 1999).

38. See 12 CFR 30 for national banks; 12 CFR 364 for state nonmember banks; 12 CFR 208 for state member banks; and 12 CFR 510 for savings associations.

39. This policy statement provides guidance consistent

Accurate financial reporting is essential to an institution's safety and soundness for numerous reasons. First, accurate financial information enables management to effectively manage the institution's risks and make sound business decisions. In addition, institutions are required by law[40] to provide accurate and timely financial reports (e.g., Reports of Condition and Income [call reports] and Thrift Financial Reports) to their appropriate regulatory agency. These reports serve an important role in the agencies'[41] risk-focused supervision programs by contributing to their pre-examination planning, off-site monitoring programs, and assessments of an institution's capital adequacy and financial strength. Further, reliable financial reports are necessary for the institution to raise capital. They provide data to stockholders, depositors and other funds providers, borrowers, and potential investors on the company's financial position and results of operations. Such information is critical to effective market discipline of the institution.

To help ensure accurate and reliable financial reporting, the agencies recommend that the board of directors of each institution establish and maintain an external auditing program. An external auditing program should be an important component of an institution's overall risk-management process. For example, an external auditing program complements the internal auditing function of an institution by providing management and the board of directors with an independent and objective view of the reliability of the institution's financial statements and the adequacy of its financial-reporting internal controls. Additionally, an effective external auditing program contributes to the efficiency of the agencies' risk-focused examination process. By considering the significant risk areas of an institution, an effective external auditing program may reduce the examination time the agencies spend in such areas. Moreover, it can improve the safety and soundness of an institution substantially and lessen the risk the institution poses to the insurance funds administered by the Federal Deposit Insurance Corporation (FDIC).

This policy statement outlines the characteristics of an effective external auditing program and provides examples of how an institution can use an external auditor to help ensure the reliability of its financial reports. It also provides guidance on how an examiner may assess an institution's external auditing program. In addition, this policy statement provides specific guidance on external auditing programs for institutions that are holding company subsidiaries, newly insured institutions, and institutions presenting supervisory concerns.

The adoption of a financial statement audit or other specified type of external auditing program is generally only required in specific circumstances. For example, insured depository institutions covered by section 36 of the FDI Act (12 USC 1831m), as implemented by part 363 of the FDIC's regulations (12 CFR 363), are required to have an external audit and an audit committee. Therefore, this policy statement is directed toward banks and savings associations which are exempt from part 363 (i.e., institutions with less than $500 million in total assets at the beginning of their fiscal year) or are not otherwise subject to audit requirements by order, agreement, statute, or agency regulations.

Overview of External Auditing Programs

Responsibilities of the Board of Directors

The board of directors of an institution is responsible for determining how to best obtain reasonable assurance that the institution's financial statements and regulatory reports are reliably prepared. In this regard, the board is also responsible for ensuring that its external auditing program is appropriate for the institution and adequately addresses the financial-reporting aspects of the significant risk areas and any other areas of concern of the institution's business.

To help ensure the adequacy of its internal and external auditing programs, the agencies encourage the board of directors of each institution that is not otherwise required to do so to establish an audit committee consisting entirely of outside directors.[42] However, if this is impracticable, the board should organize the

with the guidance established in the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.

40. See 12 USC 161 for national banks; 12 USC 1817a for state nonmember banks; 12 USC 324 for state member banks; and 12 USC 1464(v) for savings associations.

41. Terms are defined at the end of the policy statement.

42. Institutions with $500 million or more in total assets must establish an independent audit committee made up of outside directors who are independent of management. See 12 USC 1831m(g)(1) and 12 CFR 363.5.

audit committee so that outside directors constitute a majority of the membership.

Audit Committee

The audit committee or board of directors is responsible for identifying at least annually the risk areas of the institution's activities and assessing the extent of external auditing involvement needed over each area. The audit committee or board is then responsible for determining what type of external auditing program will best meet the institution's needs (see the descriptions under "Types of External Auditing Programs").

When evaluating the institution's external auditing needs, the board or audit committee should consider the size of the institution and the nature, scope, and complexity of its operations. It should also consider the potential benefits of an audit of the institution's financial statements or an examination of the institution's internal control structure over financial reporting, or both. In addition, the board or audit committee may determine that additional or specific external auditing procedures are warranted for a particular year or several years to cover areas of particularly high risk or special concern. The reasons supporting these decisions should be recorded in the committee's or board's minutes.

If, in its annual consideration of the institution's external auditing program, the board or audit committee determines, after considering its inherent limitations, that an agreed-upon procedures/state-required examination is sufficient, they should also consider whether an independent public accountant should perform the work. When an independent public accountant performs auditing and attestation services, the accountant must conduct his or her work under, and may be held accountable for departures from, professional standards. Furthermore, when the external auditing program includes an audit of the financial statements, the board or audit committee obtains an opinion from the independent public accountant stating whether the financial statements are presented fairly, in all material respects, in accordance with generally accepted accounting principles (GAAP). When the external auditing program includes an examination of the internal control structure over financial reporting, the board or audit committee obtains an opinion from the independent public accountant stating whether the financial-reporting process is subject to any material weaknesses.

Both the staff performing an internal audit function and the independent public accountant or other external auditor should have unrestricted access to the board or audit committee without the need for any prior management knowledge or approval. Other duties of an audit committee may include reviewing the independence of the external auditor annually, consulting with management, seeking an opinion on an accounting issue, and overseeing the quarterly regulatory reporting process. The audit committee should report its findings periodically to the full board of directors.

External Auditing Programs

Basic Attributes

External auditing programs should provide the board of directors with information about the institution's financial-reporting risk areas, e.g., the institution's internal control over financial reporting, the accuracy of its recording of transactions, and the completeness of its financial reports prepared in accordance with GAAP.

The board or audit committee of each institution at least annually should review the risks inherent in its particular activities to determine the scope of its external auditing program. For most institutions, the lending and investment-securities activities present the most significant risks that affect financial reporting. Thus, external auditing programs should include specific procedures designed to test at least annually the risks associated with the loan and investment portfolios. This includes testing of internal control over financial reporting, such as management's process to determine the adequacy of the allowance for loan and lease losses and whether this process is based on a comprehensive, adequately documented, and consistently applied analysis of the institution's loan and lease portfolio.

An institution or its subsidiaries may have other significant financial-reporting risk areas such as material real estate investments, insurance underwriting or sales activities, securities broker-dealer or similar activities (including securities underwriting and investment advisory services), loan-servicing activities, or fiduciary activities. The external auditing program should address these and other activities the board or audit committee determines present significant financial-reporting risks to the institution.

Types of External Auditing Programs

The agencies consider an annual audit of an institution's financial statements performed by an independent public accountant to be the preferred type of external auditing program. The agencies also consider an annual examination of the effectiveness of the internal control structure over financial reporting or an audit of an institution's balance sheet, both performed by an independent public accountant, to be acceptable alternative external auditing programs. However, the agencies recognize that some institutions only have agreed-upon procedures/state-required examinations performed annually as their external auditing program. Regardless of the option chosen, the board or audit committee should agree in advance with the external auditor on the objectives and scope of the external auditing program.

Financial statement audit by an independent public accountant. The agencies encourage all institutions to have an external audit performed in accordance with generally accepted auditing standards (GAAS). The audit's scope should be sufficient to enable the auditor to express an opinion on the institution's financial statements taken as a whole.

A financial statement audit provides assurance about the fair presentation of an institution's financial statements. In addition, an audit may provide recommendations for management in carrying out its control responsibilities. For example, an audit may provide management with guidance on establishing or improving accounting and operating policies and recommendations on internal control (including internal auditing programs) necessary to ensure the fair presentation of the financial statements.

Reporting by an independent public accountant on an institution's internal control structure over financial reporting. Another external auditing program is an independent public accountant's examination and report on management's assertion on the effectiveness of the institution's internal control over financial reporting. For a smaller institution with less complex operations, this type of engagement is likely to be less costly than an audit of its financial statements or its balance sheet. It would specifically provide recommendations for improving internal control, including suggestions for compensating controls, to mitigate the risks due to staffing and resource limitations.

Such an attestation engagement may be performed for all internal controls relating to the preparation of annual financial statements or specified schedules of the institution's regulatory reports.[43] This type of engagement is performed under generally accepted standards for attestation engagements (GASAE).[44]

Balance-sheet audit performed by an independent public accountant. With this program, the institution engages an independent public accountant to examine and report only on the balance sheet. As with the audit of the financial statements, this audit is performed in accordance with GAAS. The cost of a balance-sheet audit is likely to be less than a financial-statement audit. However, under this type of program, the accountant does not examine or report on the fairness of the presentation of the

43. Since the lending and investment-securities activities generally present the most significant risks that affect an institution's financial reporting, management's assertion and the accountant's attestation generally should cover those regulatory report schedules. If the institution has trading or off-balance-sheet activities that present material financial-reporting risks, the board or audit committee should ensure that the regulatory report schedules for those activities also are covered by management's assertion and the accountant's attestation. For banks and savings associations, the lending, investment-securities, trading, and off-balance-sheet schedules consist of:

Area	*Reports of Condition and Income Schedules*	*Thrift Financial Report Schedules*
Loans and lease-financing receivables	RC-C, Part I	SC, CF
Past-due and nonaccrual loans, leases, and other assets	RC-N	PD
Allowance for credit losses	RI-B	SC, VA
Securities	RC-B	SC, SI, CF
Trading assets and liabilities	RC-D	SO, SI
Off-balance-sheet items	RC-L	SI, CMR

These schedules are not intended to address all possible risks in an institution.

44. An attestation engagement is not an audit. It is performed under different professional standards than an audit of an institution's financial statements or its balance sheet.

institution's income statement, statement of changes in equity capital, or statement of cash flows.

Agreed-upon procedures/state-required examinations. Some state-chartered depository institutions are required by state statute or regulation to have specified procedures performed annually by their directors or independent persons.[45] The bylaws of many national banks also require that some specified procedures be performed annually by directors or others, including internal or independent persons. Depending upon the scope of the engagement, the cost of agreed-upon procedures or a state-required examination may be less than the cost of an audit. However, under this type of program, the independent auditor does not report on the fairness of the institution's financial statements or attest to the effectiveness of the internal control structure over financial reporting. The findings or results of the procedures are usually presented to the board or the audit committee so that they may draw their own conclusions about the quality of the financial reporting or the sufficiency of internal control.

When choosing this type of external auditing program, the board or audit committee is responsible for determining whether these procedures meet the external auditing needs of the institution, considering its size and the nature, scope, and complexity of its business activities. For example, if an institution's external auditing program consists solely of confirmations of deposits and loans, the board or committee should consider expanding the scope of the auditing work performed to include additional procedures to test the institution's high-risk areas. Moreover, a financial statement audit, an examination of the effectiveness of the internal control structure over financial reporting, and a balance-sheet audit may be accepted in some states and for national banks in lieu of agreed-upon procedures/state-required examinations.

Other Considerations

Timing. The preferable time to schedule the performance of an external auditing program is as of an institution's fiscal year-end. However, a quarter-end date that coincides with a regulatory report date provides similar benefits. Such an approach allows the institution to incorporate the results of the external auditing program into its regulatory reporting process and, if appropriate, amend the regulatory reports.

External auditing staff. The agencies encourage an institution to engage an independent public accountant to perform its external auditing program. An independent public accountant provides a nationally recognized standard of knowledge and objectivity by performing engagements under GAAS or GASAE. The firm or independent person selected to conduct an external auditing program and the staff carrying out the work should have experience with financial-institution accounting and auditing or similar expertise and should be knowledgeable about relevant laws and regulations.

Special Situations

Holding Company Subsidiaries

When an institution is owned by another entity (such as a holding company), it may be appropriate to address the scope of its external audit program in terms of the institution's relationship to the consolidated group. In such cases, if the group's consolidated financial statements for the same year are audited, the agencies generally would not expect the subsidiary of a holding company to obtain a separate audit of its financial statements. Nevertheless, the board of directors or audit committee of the subsidiary may determine that its activities involve significant risks to the subsidiary that are not within the procedural scope of the audit of the financial statements of the consolidated entity. For example, the risks arising from the subsidiary's activities may be immaterial to the financial statements of the consolidated entity, but material to the subsidiary. Under such circumstances, the audit committee or board of the subsidiary should consider strengthening the internal audit coverage of those activities or implementing an appropriate alternative external auditing program.

45. When performed by an independent public accountant, "specified procedures" and "agreed-upon procedures" engagements are performed under standards, which are different professional standards than those used for an audit of an institution's financial statements or its balance sheet.

Newly Insured Institutions

Under the FDIC statement of policy on applications for deposit insurance, applicants for deposit insurance coverage are expected to commit the depository institution to obtain annual audits by an independent public accountant once it begins operations as an insured institution and for a limited period thereafter.

Institutions Presenting Supervisory Concerns

As previously noted, an external auditing program complements the agencies' supervisory process and the institution's internal auditing program by identifying or further clarifying issues of potential concern or exposure. An external auditing program also can greatly assist management in taking corrective action, particularly when weaknesses are detected in internal control or management information systems affecting financial reporting.

The agencies may require a financial institution presenting safety-and-soundness concerns to engage an independent public accountant or other independent external auditor to perform external auditing services.[46] Supervisory concerns may include—

- inadequate internal control, including the internal auditing program;
- a board of directors generally uninformed about internal control;
- evidence of insider abuse;
- known or suspected defalcations;
- known or suspected criminal activity;
- probable director liability for losses;
- the need for direct verification of loans or deposits;
- questionable transactions with affiliates; or
- the need for improvements in the external auditing program.

The agencies may also require that the institution provide its appropriate supervisory office with a copy of any reports, including management letters, issued by the independent public accountant or other external auditor. They also may require the institution to notify the supervisory office prior to any meeting with the independent public accountant or other external auditor at which auditing findings are to be presented.

46. The Office of Thrift Supervision requires an external audit by an independent public accountant for savings associations with a composite rating of 3, 4, or 5 under the Uniform Financial Institution Rating System, and on a case-by-case basis.

Examiner Guidance

Review of the External Auditing Program

The review of an institution's external auditing program is a normal part of the agencies' examination procedures. An examiner's evaluation of, and any recommendations for improvements in, an institution's external auditing program will consider the institution's size; the nature, scope, and complexity of its business activities; its risk profile; any actions taken or planned by it to minimize or eliminate identified weaknesses; the extent of its internal audit program; and any compensating controls in place. Examiners will exercise judgment and discretion in evaluating the adequacy of an institution's external auditing program.

Specifically, examiners will consider the policies, processes, and personnel surrounding an institution's external auditing program in determining whether—

- the board of directors or its audit committee adequately reviews and approves external auditing program policies at least annually;
- the external auditing program is conducted by an independent public accountant or other independent auditor and is appropriate for the institution;
- the engagement letter covering external auditing activities is adequate;
- the report prepared by the auditor on the results of the external auditing program adequately explains the auditor's findings;
- the external auditor maintains appropriate independence regarding relationships with the institution under relevant professional standards;
- the board of directors performs due diligence on the relevant experience and competence of the independent auditor and staff carrying out the work (whether or not an independent public accountant is engaged); and
- the board or audit committee minutes reflect approval and monitoring of the external auditing program and schedule, including board or

committee reviews of audit reports with management and timely action on audit findings and recommendations.

Access to Reports

Management should provide the independent public accountant or other auditor with access to all examination reports and written communication between the institution and the agencies or state bank supervisor since the last external auditing activity. Management also should provide the accountant with access to any supervisory memoranda of understanding, written agreements, administrative orders, reports of action initiated or taken by a federal or state banking agency under section 8 of the FDI Act (or a similar state law), and proposed or ordered assessments of civil money penalties against the institution or an institution-related party, as well as any associated correspondence. The auditor must maintain the confidentiality of examination reports and other confidential supervisory information.

In addition, the independent public accountant or other auditor of an institution should agree in the engagement letter to grant examiners access to all the accountant's or auditor's workpapers and other material pertaining to the institution prepared in the course of performing the completed external auditing program.

Institutions should provide reports[47] issued by the independent public accountant or other auditor pertaining to the external auditing program, including any management letters, to the agencies and any state authority in accordance with their appropriate supervisory office's guidance.[48] Significant developments regarding the external auditing program should be communicated promptly to the appropriate supervisory office. Examples of those developments include the hiring of an independent public accountant or other third party to perform external auditing work and a change in, or termination of, an independent public accountant or other external auditor.

Definitions

Agencies. The agencies are the Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), the Office of the Comptroller of the Currency (OCC), and the Office of Thrift Supervision (OTS).

Appropriate supervisory office. The regional or district office of the institution's primary federal banking agency responsible for supervising the institution or, in the case of an institution that is part of a group of related insured institutions, the regional or district office of the institution's federal banking agency responsible for monitoring the group. If the institution is a subsidiary of a holding company, the term "appropriate supervisory office" also includes the federal banking agency responsible for supervising the holding company. In addition, if the institution is state-chartered, the term "appropriate supervisory office" includes the appropriate state bank or savings association regulatory authority.

Audit. An examination of the financial statements, accounting records, and other supporting evidence of an institution performed by an independent certified or licensed public accountant in accordance with generally accepted auditing standards (GAAS) and of sufficient scope to enable the independent public accountant to express an opinion on the institution's financial statements as to their presentation in accordance with generally accepted accounting principles (GAAP).

Audit committee. A committee of the board of directors whose members should, to the extent possible, be knowledgeable about accounting and auditing. The committee should be responsible for reviewing and approving the institution's internal and external auditing programs or

47. The institution's engagement letter is not a "report" and is not expected to be submitted to the appropriate supervisory office unless specifically requested by that office.

48. When an institution's financial information is included in the audited consolidated financial statements of its parent company, the institution should provide a copy of the audited financial statements of the consolidated company and any other reports by the independent public accountant in accordance with their appropriate supervisory office's guidance. If several institutions are owned by one parent company, a single copy of the reports may be supplied in accordance with the guidance of the appropriate supervisory office of each agency supervising one or more of the affiliated institutions and the holding company. A transmittal letter should identify the institutions covered. Any notifications of changes in, or terminations of, a consolidated company's independent public accountant may be similarly supplied to the appropriate supervisory office of each supervising agency.

recommending adoption of these programs to the full board.

Balance-sheet audit performed by an independent public accountant. An examination of an institution's balance sheet and any accompanying footnotes performed and reported on by an independent public accountant in accordance with GAAS and of sufficient scope to enable the independent public accountant to express an opinion on the fairness of the balance-sheet presentation in accordance with GAAP.

Engagement letter. A letter from an independent public accountant to the board of directors or audit committee of an institution that usually addresses the purpose and scope of the external auditing work to be performed, period of time to be covered by the auditing work, reports expected to be rendered, and any limitations placed on the scope of the auditing work.

Examination of the internal control structure over financial reporting. See "Reporting by an independent public accountant on an institution's internal control structure over financial reporting."

External auditing program. The performance of procedures to test and evaluate high-risk areas of an institution's business by an independent auditor, who may or may not be a public accountant, sufficient for the auditor to be able to express an opinion on the financial statements or to report on the results of the procedures performed.

Financial statement audit by an independent public accountant. See Audit.

Financial statements. The statements of financial position (balance sheet), income, cash flows, and changes in equity together with related notes.

Independent public accountant. An accountant who is independent of the institution and registered or licensed to practice, and holds himself or herself out, as a public accountant, and who is in good standing under the laws of the state or other political subdivision of the United States in which the home office of the institution is located. The independent public accountant should comply with the American Institute of Certified Public Accountants' (AICPA) Code of Professional Conduct and any related guidance adopted by the Independence Standards Board and the agencies. No certified public accountant or public accountant will be recognized as independent who is not independent both in fact and in appearance.

Internal auditing. An independent assessment function established within an institution to examine and evaluate its system of internal control and the efficiency with which the various units of the institution are carrying out their assigned tasks. The objective of internal auditing is to assist the management and directors of the institution in the effective discharge of their responsibilities. To this end, internal auditing furnishes management with analyses, evaluations, recommendations, counsel, and information concerning the activities reviewed.

Outside directors. Members of an institution's board of directors who are not officers, employees, or principal stockholders of the institution, its subsidiaries, or its affiliates, and who do not have any material business dealings with the institution, its subsidiaries, or its affiliates.

Regulatory reports. These reports are the Reports of Condition and Income (call reports) for banks, Thrift Financial Reports (TFRs) for savings associations, Federal Reserve (FR) Y reports for bank holding companies, and the H-(b)11 Annual Report for thrift holding companies.

Reporting by an independent public accountant on an institution's internal control structure over financial reporting. Under this engagement, management evaluates and documents its review of the effectiveness of the institution's internal control over financial reporting in the identified risk areas as of a specific report date. Management prepares a written assertion, which specifies the criteria on which management based its evaluation about the effectiveness of the institution's internal control over financial reporting in the identified risk areas and states management's opinion on the effectiveness of internal control over this specified financial reporting. The independent public accountant is engaged to perform tests on the internal control over the specified financial reporting in order to attest to management's assertion. If the accountant concurs with management's assertion, even if the assertion discloses one or more instances of material internal control weakness, the accountant would provide a report attesting to management's assertion.

Risk areas. Those particular activities of an institution that expose it to greater potential losses if problems exist and go undetected. The areas with the highest financial-reporting risk in most institutions generally are their lending and investment-securities activities.

Specified procedures. Procedures agreed upon by the institution and the auditor to test its activities in certain areas. The auditor reports findings and test results, but does not express an opinion on controls or balances. If performed by an independent public accountant, these procedures should be performed under generally accepted standards for attestation engagements (GASAE).

Issued by the FFIEC on September 28, 1999.

UNSAFE AND UNSOUND USE OF LIMITATION OF LIABILITY PROVISIONS IN EXTERNAL AUDIT ENGAGEMENT LETTERS

On February 9, 2006, the Federal Reserve and the other financial institution regulatory agencies (the agencies)[49] issued an interagency advisory (the advisory) to address safety-and-soundness concerns that may arise when financial institutions enter into external audit contracts (typically referred to as *engagement letters*) that limit the auditors' liability for audit services.[50] The advisory informs financial institutions'[51] boards of directors, audit committees, management, and external auditors of the safety-and-soundness implications that may arise when the financial institution enters into engagement letters that contain provisions to limit the auditors' liability. Such provisions may weaken the external auditors' objectivity, impartiality, and performance and, thus, reduce the agencies' ability to rely on audits. Therefore, certain limitation-of-liability provisions (described in the advisory) are unsafe and unsound. In addition, such provisions may not be consistent with the auditor-independence standards of the SEC, the PCAOB, and the AICPA.

The advisory does not apply to previously executed engagement letters. However, any financial institution subject to a multiyear audit engagement letter containing unsafe and unsound limitation-of-liability provisions should seek an amendment to its engagement letter to be consistent with the advisory for periods ending in 2007 or later. (See SR-06-4.)

Scope of the Advisory on Engagement Letters

The advisory applies to engagement letters between financial institutions and external auditors with respect to financial-statement audits, audits of internal control over financial reporting, and attestations on management's assessment of internal control over financial reporting (collectively, *audit* or *audits*).

The advisory does not apply to—

- nonaudit services that may be performed by financial institutions' external auditors,
- audits of financial institutions' 401(k) plans, pension plans, and other similar audits,
- services performed by accountants who are not engaged to perform financial institutions' audits (e.g., outsourced internal audits or loan reviews), and
- other service providers (e.g., software consultants or legal advisers).

While the agencies have observed several types of limitation-of-liability provisions in external audit engagement letters, this advisory applies to any agreement that a financial institution enters into with its external auditor that limits the external auditor's liability with respect to audits in an unsafe and unsound manner.

External Audits and Their Engagement Letters

A properly conducted audit provides an independent and objective view of the reliability of a financial institution's financial statements. The

49. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency (OCC), the Office of Thrift Supervision (OTS), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA).

50. The advisory is effective for audit engagement letters issued on or after February 9, 2006.

51. As used in this advisory, the term *financial institutions* includes banks, bank holding companies, savings associations, savings and loan holding companies, and credit unions.

external auditor's objective in an audit is to form an opinion on the financial statements taken as a whole. When planning and performing the audit, the external auditor considers the financial institution's internal control over financial reporting. Generally, the external auditor communicates any identified deficiencies in internal control to management, which enables management to take appropriate corrective action. In addition, certain financial institutions are required to file audited financial statements and internal control audit or attestation reports with one or more of the agencies. The agencies encourage financial institutions not subject to mandatory audit requirements to voluntarily obtain audits of their financial statements. The FFIEC's *Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations* notes,[52] "[a]n institution's internal and external audit programs are critical to its safety and soundness." The policy also states that an effective external auditing program "can improve the safety and soundness of an institution substantially and lessen the risk the institution poses to the insurance funds administered by the FDIC."

Typically, a written engagement letter is used to establish an understanding between the external auditor and the financial institution regarding the services to be performed in connection with the financial institution's audit. The engagement letter commonly describes the objective of the audit, the reports to be prepared, the responsibilities of management and the external auditor, and other significant arrangements (for example, fees and billing). Boards of directors, audit committees, and management are encouraged to closely review all of the provisions in the audit engagement letter before agreeing to sign. As with all agreements that affect a financial institution's legal rights, the financial institution's legal counsel should carefully review audit engagement letters to help ensure that those charged with engaging the external auditor make a fully informed decision.

The advisory describes the types of objectionable limitation-of-liability provisions and provides examples.[53] Financial institutions' boards of directors, audit committees, and management should also be aware that certain insurance policies (such as error and omission policies and directors' and officers' liability policies) might not cover losses arising from claims that are precluded by limitation-of-liability provisions.

Limitation-of-Liability Provisions

The provisions of an external audit engagement letter that the agencies deem to be unsafe and unsound can be generally categorized as follows: a provision within an agreement between a client financial institution and its external auditor that effectively—

- indemnifies the external auditor against claims made by third parties;
- holds harmless or releases the external auditor from liability for claims or potential claims that might be asserted by the client financial institution, other than claims for punitive damages; or
- limits the remedies available to the client financial institution, other than punitive damages.

Collectively, these categories of provisions are referred to in this advisory as *limitation-of liability-provisions.*

Provisions that waive the right of financial institutions to seek punitive damages from their external auditor are not treated as unsafe and unsound under the advisory. Nevertheless, agreements by clients to indemnify their auditors against any third-party damage awards, including punitive damages, are deemed unsafe and unsound under the advisory. To enhance transparency and market discipline, public financial institutions that agree to waive claims for punitive damages against their external auditors may want to disclose annually the nature of these arrangements in their proxy statements or other public reports.

Many financial institutions are required to have their financial statements audited, while others voluntarily choose to undergo such audits. For example, federally insured banks with $500 million or more in total assets are required

52. See 64 *Fed. Reg.* 52319 (September 28, 1999).

53. In the majority of external audit engagement letters reviewed, the agencies did not observe provisions that limited an external auditor's liability. However, for those reviewed external audit engagement letters that did have external auditor limited-liability provisions, the agencies noted a significant increase in the types and frequency of the provisions. The provisions took many forms, which made it impractical for the agencies to provide an all-inclusive list. Examples of auditor limitation-of-liability provisions are illustrated in the advisory's appendix A, which can be found in section A.1010.1 of this manual.

to have annual independent audits.[54] Furthermore, financial institutions that are public companies[55] must have annual independent audits. The agencies rely on the results of audits as part of their assessment of a financial institution's safety and soundness.

For audits to be effective, the external auditors must be independent in both fact and appearance, and they must perform all necessary procedures to comply with auditing and attestation standards established by either the AICPA or, if applicable, the PCAOB. When financial institutions execute agreements that limit the external auditors' liability, the external auditors' objectivity, impartiality, and performance may be weakened or compromised, and the usefulness of the audits for safety-and-soundness purposes may be diminished.

By their very nature, limitation-of-liability provisions can remove or greatly weaken external auditors' objective and unbiased consideration of problems encountered in audit engagements and may diminish auditors' adherence to the standards of objectivity and impartiality required in the performance of audits. The existence of such provisions in external audit engagement letters may lead to the use of less extensive or less thorough procedures than would otherwise be followed, thereby reducing the reliability of audits. Accordingly, financial institutions should not enter into external audit arrangements that include unsafe and unsound limitation-of-liability provisions identified in the advisory, regardless of (1) the size of the financial institution, (2) whether the financial institution is public or not, or (3) whether the external audit is required or voluntary.

Auditor Independence

Currently, auditor-independence standard-setters include the SEC, PCAOB, and AICPA. Depending on the audit client, an external auditor is subject to the independence standards issued by one or more of these standard-setters. For all nonpublic financial institutions that are not required to have annual independent audits, the FDIC's rules, pursuant to part 363, require only that an external auditor meet the AICPA independence standards. The rules do not require the financial institution's external auditor to comply with the independence standards of the SEC and the PCAOB.

In contrast, for financial institutions subject to the audit requirements in part 363 of the FDIC's regulations, the external auditor should be in compliance with the AICPA's Code of Professional Conduct and meet the independence requirements and interpretations of the SEC and its staff.[56] In this regard, in a December 13, 2004, frequently asked question (FAQ) on the application of the SEC's auditor-independence rules, the SEC staff reiterated its long-standing position that when an accountant and his or her client enter into an agreement that seeks to provide the accountant immunity from liability for his or her own negligent acts, the accountant is not independent. The FAQ also stated that including in engagement letters a clause that would release, indemnify, or hold the auditor harmless from any liability and costs resulting from knowing misrepresentations by management would impair the auditor's independence.[57] The FAQ is consistent with the SEC's Codification of Financial Reporting Policies, section 602.02.f.i , "Indemnification by Client." (See section A.1010.1 of this manual.)

On the basis of the SEC guidance and the agencies' existing regulations, certain limits onauditors' liability are already inappropriate in audit engagement letters entered into by—

- public financial institutions that file reports with the SEC or with the agencies,
- financial institutions subject to part 363, and
- certain other financial institutions that are required to have annual independent audits.

In addition, certain of these limits on auditors' liability may violate the AICPA independence standards. Notwithstanding the potential applicability of auditor-independence standards, the limitation-of-liability provisions discussed in the advisory present safety-and-soundness concerns for all financial institution audits.

54. For banks, see section 36 of the FDI Act (12 USC 1831m) and part 363 of the FDIC's regulations (12 CFR 363).

55. Public companies are companies subject to the reporting requirements of the Securities Exchange Act of 1934.

56. See part 363 of the FDIC's regulation (12 CFR 363), *Appendix A—Guidelines and Interpretations,* Guideline 14, *"Role of the Independent Public Accountant-Independence."*

57. In contrast to the SEC's position, AICPA Ethics Ruling 94 (ET, section 191.188–189) currently concludes that indemnification for "knowing misrepresentations by management" does *not* impair independence.

Alternative Dispute-Resolution Agreements and Jury-Trial Waivers

The agencies observed that a review of the engagement letters of some financial institutions revealed that they had agreed to submit disputes over external audit services to mandatory and binding alternative dispute resolution, binding arbitration, or other binding nonjudicial dispute-resolution processes (collectively, *mandatory ADR*) or to waive the right to a jury trial. By agreeing in advance to submit disputes to mandatory ADR, financial institutions may waive the right to full discovery, limit appellate review, or limit or waive other rights and protections available in ordinary litigation proceedings.

Mandatory ADR procedures and jury-trial waivers may be efficient and cost-effective tools for resolving disputes in some cases. Accordingly, the agencies believe that mandatory ADR or waiver of jury-trial provisions in external audit engagement letters do not present safety-and-soundness concerns, provided that the engagement letters do not also incorporate limitation-of-liability provisions. Institutions are encouraged to carefully review mandatory ADR and jury-trial provisions in engagement letters, as well as review any agreements regarding rules of procedure, and to fully comprehend the ramifications of any agreement to waive any available remedies. Financial institutions should ensure that any mandatory ADR provisions in audit engagement letters are commercially reasonable and—

- apply equally to all parties,
- provide a fair process (for example, neutral decision makers and appropriate hearing procedures), and
- are not imposed in a coercive manner.

The Advisory's Conclusion

Financial institutions' boards of directors, audit committees, and management should not enter into any agreement that incorporates limitation-of-liability provisions with respect to audits. In addition, financial institutions should document their business rationale for agreeing to any other provisions that limit their legal rights.

The inclusion of limitation-of-liability provisions in external audit engagement letters and other agreements that are inconsistent with the advisory will generally be considered an unsafe and unsound practice. Examiners will consider the policies, processes, and personnel surrounding a financial institution's external auditing program in determining whether (1) the engagement letter covering external auditing activities raises any safety-and-soundness concerns and (2) the external auditor maintains appropriate independence regarding relationships with the financial institution under relevant professional standards. The agencies may take appropriate supervisory action if unsafe and unsound limitation-of-liability provisions are included in external audit engagement letters or other agreements related to audits that are executed (accepted or agreed to by the financial institution).

CERTIFIED PUBLIC ACCOUNTANTS

This section discusses the standards for competence and independence of certified public accountants (CPAs) as well as the standards required in connection with their audits.

Standards of Conduct

The Code of Professional Ethics for CPAs who are members of the American Institute of Certified Public Accountants (AICPA) requires that audits be performed according to generally accepted auditing standards (GAAS). GAAS, as distinct from generally accepted accounting principles, or GAAP, are concerned with the auditor's professional qualifications, the judgment the auditor exercises in the performance of an audit, and the quality of the audit procedures.

On the other hand, GAAP represents all of the conventions, rules, and procedures that are necessary to define accepted accounting practices at a particular time. GAAP includes broad guidelines of general application and detailed practices and procedures that have been issued by the Financial Accounting Standards Board (FASB), the AICPA, the SEC, or other authoritative bodies that set accounting standards. Thus, GAAP provides guidance on financial-reporting and disclosure matters.

Generally Accepted Auditing Standards

GAAS are grouped into three categories: general standards, standards of field work, and standards of reporting.

The *general standards* require that the audit be performed by a person or persons having adequate technical training and proficiency; that independence in mental attitude be maintained; and that due professional care be exercised in the performance of the audit and the preparation of the report.

Standards of field work require that the work be adequately planned; assistants, if any, be properly supervised; a proper study and evaluation of existing internal controls be made for determining the audit scope and the audit procedures to be performed during the audit; and sufficient evidence be obtained to formulate an opinion regarding the financial statements under audit.

Standards of reporting require that the CPA state whether the financial statements are presented in accordance with GAAP. The application of GAAP in audited financial statements and reports must achieve the fundamental objectives of financial accounting, which are to provide reliable financial information about the economic resources and obligations of a business enterprise. In addition, the informative disclosures in the financial statements must follow GAAP, or the CPA must state otherwise in the report.

GAAS recognizes that management—not the CPA—has primary responsibility for the preparation of the financial statements and the presentations therein. The auditor's responsibility is to express an opinion on the financial statements. GAAS (or the audit requirements previously set forth) require that audits cover the following financial statements: balance sheet, income statement, statement of changes in stockholders' equity, and statement of cash flows.

GAAS require that CPAs plan and perform auditing procedures to obtain reasonable assurance that financial statements are free from material misstatement. Under GAAS, an audit includes examining on a test basis and should include evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial-statement presentation.

Independence

In the performance of their work, CPAs must be independent of those they serve. Traditionally, independence has been defined as the ability to act with integrity and objectivity. In accordance with the rule on independence included in the SEC's independence rules and the Code of Professional Ethics and related AICPA interpretations, the independence of a CPA is considered to be impaired if, during the period of his or her professional engagement, the CPA or his or her firm had any direct or material indirect financial interest in the enterprise or had any loan to or from the enterprise or any officer, director, or principal stockholder thereof. The latter prohibition does not apply to the following loans from a financial institution when made under normal lending procedures, terms, and requirements:

- automobile loans and leases collateralized by the automobile
- loans in the amount of the cash surrender value of a life insurance policy
- borrowings fully collateralized by cash deposits at the same financial institution (for example, passbook loans)
- credit cards and cash advances under lines of credit associated with checking accounts with aggregate unpaid balances of $5,000 or less

Such loans must, at all times, be kept current by the CPA as to all terms.

Other loans have been grandfathered by the AICPA under recent ethics interpretations. These other loans (mortgage loans, other secured loans, and loans not material to the AICPA member's net worth) must, at all times, be current as to all terms and shall not be renegotiated with the client financial institution after the latest of—

- January 1, 1992;
- the date that the financial institution first becomes a client;
- the date the loans are sold from a nonclient financial institution to the client financial institution; or
- the date of becoming a member in the AICPA.

The examiner may decide under certain circumstances to test the independence of the CPA through reviews of loan listings, contracts, stockholder listings, and other appropriate measures. Concerns about independence should be identified in the report of examination.

The SEC has also released guidance relating to the independence of auditors for public institutions. According to SEC Rule 101, the independence of an auditor would be impaired if financial, employment, or business relationships exist between auditors and audit clients, and if there are relationships between auditors and audit clients in which the auditors provide certain nonaudit services to their audit clients. Much of the language found in the SEC's independence rules is incorporated in the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.

EXTERNAL AUDIT REPORTS

The external auditor generates various types of reports and other documents. These reports typically include—

- the standard audit report, which is generally a one-page document;
- a "management letter" in which the auditor confidentially presents detailed findings and recommendations to management; and
- an attestation report in which the auditor attests to management's assertion of internal controls and procedures over financial reports (for public companies and institutions subject to section 36 of the FDI Act); and
- other reports from the auditor to regulators during the audit period.

The major types of standard audit reports will never have a heading or other statement in the report that identifies which type it is. Rather, the type of report is identified by certain terminology used in the text of the report. The major types of standard audit reports are described below.

The *unqualified report,* sometimes referred to as a *clean opinion,* states that the financial statements are "presented fairly" in conformity with GAAP and that the necessary audit work was done. The *qualified report* may generally have the same language as the unqualified report but will use the phrase "except for" or some other qualification to indicate that some problem exists. The types of problems include a lack of sufficient evidential matter, restrictions on the scope of audit work, or departures from GAAP in the financial statements. This type of report is not necessarily negative but indicates that the examiner should ask additional questions of management.

An *adverse report* basically concludes that the financial statements are not presented fairly in conformity with GAAP. This type of report is rarely issued because auditors and management usually work out their differences in advance.

A *disclaimer* expresses no opinion on the financial statements. CPAs may issue a disclaimer when they have concluded that substantial doubt exists about the ability of the institution to continue as a going concern for a reasonable period of time. This disclaimer is intended to indicate that the CPA is not assuming any responsibility for these statements.

REVIEW OF THE EXTERNAL AUDITOR'S INDEPENDENCE AND AUDIT

Because of the professional and ethical standards of the public accounting profession, the Federal Reserve has concluded that the examiner should conduct an in-depth review of the competence and independence of the CPA only in unusual situations. One such situation would be a recent change in CPAs by a bank, particularly if the change was made after an audit had commenced.

Ordinarily, specific tests to determine independence are not necessary. However, there may be occasions when the examiner has sufficient reason to question the independence of a CPA or the quality of his or her work. For example, the examiner may discover that during the period of a CPA's professional engagement, which includes the period covered by the financial statements on which the CPA has expressed an opinion, the CPA or a member of his or her firm—

- had a direct financial interest in the bank;

- was connected with the bank in a capacity equivalent to that of a member of management or was a director of the bank;
- maintained, completely or in part, the books and records of the bank and did not perform audit tests with respect to such books and records; or
- had a prohibited loan from the bank (as discussed earlier).

In these and similar instances, the CPA would not have complied with professional standards.

The examiner should determine the scope of the CPA's examination by reviewing the most recent report issued by the CPA. If the audit is in progress or is planned to commence in the near future, the examiner should review any engagement letter to the bank from the CPA. The examiner also should obtain and review any adjusting journal entries suggested by the CPA at the conclusion of the examination. This should be done to determine whether such entries were the result of breakdowns in the internal control structure and procedures for financial reporting.

Under certain circumstances, a CPA may issue a qualified or adverse opinion or may disclaim an opinion on a bank's financial statements. In such circumstances, the examiner should first determine the reasons for the particular type of opinion issued. If the matters involved affect specific areas of the bank's operations, a review of the work performed by the CPA may help the examiner understand the problem that gave rise to this opinion. The examination procedures (section 1010.3) describes the steps the examiner should follow when conducting a review of the work performed by the CPA. (See the FFIEC interagency Policy Statement on the External Auditing Programs of Banks and Savings Associations (effective January 1, 2000) (SR-99-33)).

LIMITATIONS OF AUDITS AND AUDITED FINANCIAL STATEMENTS

Although auditing standards are designed to require the use of due care and objectivity, a properly designed and executed audit does not necessarily guarantee that all misstatements of amounts or omissions of disclosure in the financial statements have been detected. Moreover, a properly designed and executed audit does not guarantee that the auditor addressed FRB safety-and-soundness considerations. Examination personnel should be cognizant of the limitations inherent in an audit. The following examples illustrate some common limitations of audits:

- The auditor is not responsible for deciding whether an institution operates wisely. An unqualified audit report means that the transactions and balances are reported in accordance with GAAP. It does not mean that the transactions made business sense, that the associated risks are managed in a safe and sound manner, or that the balances can be recovered upon disposition or liquidation.
- The auditor's report concerning financial statements does not signify that underwriting standards, operating strategies, loan-monitoring systems, and workout procedures are adequate to mitigate losses if the environment changes. The auditor's report that financial statements fairly present the bank's financial position is based on the prevailing evidence and current environment, and it indicates that reported assets can be recovered in the normal course of business. In determining that reported assets can be recovered in the normal course of business, the auditor attempts to understand financial-reporting internal controls and can substitute other audit procedures when these controls are weak or nonexistent.
- The quality of management and how it manages risk are not considered in determining historical cost and its recoverability. Although certain assets and instruments are marked to market (for example, trading accounts), GAAP generally uses historical cost as the basis of presentation. Historical cost assumes that the entity is a going concern. The going-concern concept allows certain mark-to-market losses to be deferred because management believes the cost basis can be recovered during the remaining life of the asset.
- GAAP financial statements offer only limited disclosures of risks, uncertainties, and the other safety-and-soundness factors on which the institution's viability depends.
- Under GAAP, loan-loss reserves are provided for "probable losses" currently "inherent" (that is, anticipated future charge-offs are based on current repayment characteristics) in the portfolio. GAAP defines probable as the likelihood that a future event will occur, confirming the fact of the loss. Additionally, the amount of the loss must be reasonably estimable.

COMMUNICATION WITH EXTERNAL AUDITORS

GAAS requires that the external auditor can consider regulatory authorities as a source of competent evidential matter when conducting an audit of the financial statements of a banking organization. Accordingly, an external auditor may review communications from, and make inquiries of, the regulatory authorities.

Generally, the Federal Reserve encourages auditors to attend examination exit conferences upon completion of the examiner's field work or to attend other meetings concerning examination findings between supervisory examiners and an institution's management or board of directors (or a committee thereof). Banks should ensure that their external auditors are informed in a timely manner of scheduled exit conferences and other relevant meetings with examiners and of the FRB's policies regarding auditor attendance at such meetings.

When other conferences between examiners and management are scheduled (those that do not involve examination findings that are relevant to the scope of the external auditor's work), the institution should first obtain the approval of the appropriate Federal Reserve Bank personnel for the auditor to attend the meetings. The interagency policy statement of July 23, 1992, does not preclude the Federal Reserve from holding meetings with the management of banks without auditor attendance or from requiring that the auditor attend only certain portions of the meetings. (See SR-92-28.)

The 1992 interagency policy statement was issued to improve coordination and communication between external auditors and examiners. Examination personnel should provide banking organizations with advance notice of the starting date of the examination when appropriate, so management can inform external auditors in advance and facilitate the planning and scheduling of their audit work.

Some institutions prefer that audit work be completed at different times than examination work to reduce demands on their staff members and facilities. Other institutions prefer to have audit work and examination work performed during similar periods so the institution's operations are affected only at certain times during the year. By knowing when examinations are planned, institutions have the flexibility to schedule external audit work concurrent with, or separate from, examinations.

Meetings and Discussions Between External Auditors and Examiners

An external auditor may request a meeting with the FRB regulatory authorities involved in the supervision of the institution or its holding company during or after completion of examinations to inquire about supervisory matters relevant to the institution under audit. External auditors should provide an agenda in advance. The FRB regulatory authorities will generally request that management of the institution under audit be represented at the meeting. In this regard, examiners will generally only discuss with an auditor examination findings that have been presented to bank management.

In certain cases, external auditors may wish to discuss with examiners matters relevant to the institution without bank management representation. External auditors may request such confidential meetings with the FRB regulatory authorities, who may also request such meetings with the external auditor.

Information Required to Be Made Available to External Auditors

Section 931 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) and section 112 of FDICIA (12 USC 1811) pertain to depository institutions insured by the FDIC that have engaged the services of an external auditor to audit the banking organization within the past two years. FIRREA and FDICIA require banks to provide the auditor with copies of the most recent Report of Condition (Call Report), report of examination, and pertinent correspondence or reports received from its regulator. This information is to be provided to the external auditor by the bank under audit, not by the FRB. In addition, banking organizations must provide the independent auditor with—

- a copy of any supervisory memorandum of understanding or written agreement between a federal or state banking agency and the bank put into effect during the period covered by the audit, and

- a report of any formal action taken by a federal or state banking agency during such period, or any civil money penalty assessed with respect to the bank or any banking organization–affiliated party.

Regulatory personnel should ascertain if the banking organization is in compliance with the requirements of section 931 of FIRREA (12 USC 1817(a)) and section 112 of FDICIA and should report instances of noncompliance in the report of examination.

Confidentiality of Supervisory Information

While the policies of the FRB regulatory authorities permit external auditors to have access to the information described above, institutions and their auditors are reminded that information contained in examination reports, inspection reports, and supervisory discussions—including any summaries or quotations—is confidential supervisory information and must not be disclosed to any party without the written permission of the FRB. Unauthorized disclosure of confidential supervisory information may lead to civil and criminal actions and fines and other penalties.

Examination procedures are available on the Examination Documentation (ED) modules page on the Board's website. See the following ED modules for examination procedures:

- Management and Internal Control Evaluation
- Internal and External Audit Evaluation

The information in the first part of this section is reprinted from a publication of the Bank Administration Institute (BAI), entitled “Statement of Principle and Standards for Internal Auditing in the Banking Industry.” The second part of this section reproduces appendixes A and B from the February 9, 2006, Interagency Advisory on the Unsafe and Unsound Use of Limitation of Liability Provisions in External Audit Engagement Letters. (See section 1010.1 of this manual.)

A STATEMENT OF PRINCIPLE CONCERNING INTERNAL AUDITING IN THE BANKING INDUSTRY

Internal auditing is that management function which independently evaluates the adequacy, effectiveness and efficiency of the systems of control within an organization and the quality of ongoing operations.

The systems of control comprise the plan of organization and all methods and measures designed to:

- Provide reasonable assurance that assets are safeguarded, information (financial and other) is timely and reliable, and errors and irregularities are discovered and corrected promptly.
- Promote operational efficiency.
- Encourage compliance with managerial policies, laws, regulations, and sound fiduciary principles.

Ongoing operations comprise all activities involved in the conduct of the organization’s business.

The internal auditor is accountable to the board of directors and executive management. This accountability precludes the auditor from organizational relationships that may conflict with the need for independence.

STANDARDS OF INTERNAL AUDITING IN THE BANKING INDUSTRY

Organization Standards

1. The organization shall have an internal audit function responsible for evaluating the adequacy, effectiveness and efficiency of its systems of control and the quality of ongoing operations.
2. The organization shall maintain an environment within which the auditor has the freedom to act.
3. The organization shall allocate sufficient resources to the audit function to enable it to conform to the standards of internal auditing.
4. The organization shall require management to respond formally to adverse audit findings and to take appropriate corrective action.
5. The organization’s systems of control shall include measurement of audit effectiveness and efficiency.

Personal Standards

1. An internal auditor shall have adequate technical training and proficiency.
2. An internal auditor shall maintain a sufficiently independent state of mind to clearly demonstrate objectivity in matters affecting audit conclusions.
3. An internal auditor shall respect the confidentiality of information acquired while performing the audit function.
4. An internal auditor shall only engage in activities that do not conflict with the interests of the organization.
5. An internal auditor shall adhere to conduct that enhances the professional stature of internal auditing.
6. An internal auditor shall exercise due professional care in the performance of all duties and in the fulfillment of all responsibilities.

Performance Standards

1. The internal auditor shall prepare a formal audit plan that covers all significant organizational activities over an appropriate cycle of time.
2. The audit plan shall include an evaluation of controls within new systems and significant modifications to existing systems before they become operational.
3. Audit procedures shall provide sufficient and competent evidential matter to support conclusions regarding the adequacy, effectiveness and efficiency of the systems of control and the quality of ongoing operations.
4. The organization of the audit function and related administrative practice shall provide for the proper supervision of persons performing audits and for the proper review of work performed.

Communication Standards

1. The auditor shall prepare a formal report on the scope and results of each audit performed.
2. Each audit report shall contain an opinion on the adequacy, effectiveness and efficiency of the systems of control and the quality of ongoing operations; the degree of compliance with previously evaluated systems of control; or an explanation of why an opinion cannot be expressed. When an adverse opinion is expressed, the report shall contain a statement about the exposures that may exist in the absence of corrective action.
3. The auditor shall communicate audit findings in a timely manner to the managers responsible for corrective action.
4. At least once each year the auditor shall make a summary report of audit activities to the board of directors and executive management. The report shall include an opinion on the overall condition of the organization's controls and operations.

COMMENTARY

The following comments are presented in order to promote the acceptance of the "Statement of Principle and Standards for Internal Auditing in the Banking Industry," to provide a context for the application of its concepts and to enhance the understanding of internal auditing. It is intended that the statement and the commentary will serve as a basis for the continuing advancement of the profession's influence and service.

Internal Auditing as a Discipline

Internal auditing is developing a broader perspective by recognizing that all operations are properly subject to control and within the scope of auditing. The internal auditor's concern for control should extend beyond accounting matters. This broader concept better serves the board of directors and executive management to whom the internal auditor is accountable. Bank Administration Institute believes the systems of control and ongoing operations, as defined herein, provide a preferred perspective for discussing internal auditing within the framework of the auditing discipline taken as a whole.

Concepts of Control

The systems of control exist to assure the achievement of intended results, to promote operating efficiency and to encourage compliance with policies and other established constraints. Although internal auditors have a definite interest in verifying the results of business activity, their primary concern must be the continuing effectiveness of the systems of control that influence business results. The important qualities that must be evaluated are adequacy, effectiveness and efficiency.

In evaluating adequacy, the auditor analyzes systems to determine that they include design features proper to the circumstances and reasonably sufficient to effect control. The evaluation of adequacy begins with the comparison of "what should be" to "what is." Initial audits and audits of proposed procedures or organization structures focus primarily on the adequacy of control.

In evaluating effectiveness, the auditor measures the degree of compliance with control features and the extent to which compliance serves the intended purposes. The question that must be answered is: "Do the controls work?"

In evaluating efficiency, the auditor judges the practicality of controls in terms of their cost relative to their intended benefit. It is not intended that the auditor should evaluate adequacy or effectiveness in absolute terms, nor is it intended that the auditor judge efficiency in absolute terms. An internal auditor's evaluation of efficiency is restricted to the controls themselves and does not extend to the measures of operating performance associated with the functioning of such controls. In judging efficiency, the internal auditor must conclude whether the benefits provided by the controls exceed their cost.

The systems of control and not the audit function:

- Provide reasonable assurance that assets are safeguarded, information (financial and other) is timely and reliable, and errors and irregularities are discovered and promptly corrected.
- Promote operational efficiency.
- Encourage adherence to managerial policies, laws, regulations and sound fiduciary principles.

Those members of management who are responsible for policy implementation are also responsible for the design and the maintenance of the systems of control. Internal auditors are responsible for that management function which independently evaluates the adequacy, effectiveness and efficiency of the systems of control. Internal auditors should make sure that those who rely on their opinions understand that no practical system can guarantee the quality of future performance.

Controls act as a positive force to facilitate successful operations as well as a negative one that restricts activities. Accordingly, the auditor should evaluate control systems in terms of the incentives they provide as well as the sanctions.

Safeguarding assets relates to physical, legal and all other protective means by which the organization assures the full realization of its resources.

All information should be subject to the systems of control. Timely information is that which anticipates a decision need and is available to the persons who will use it when they need it. Reliable information provides a sound basis for decision because of the authenticity of its source, the manner in which it is recorded and the form and content of its presentation.

The systems of control must detect and correct errors and irregularities when preventive controls fail. Sound systems of control contain safeguards that will counteract failures in other controls.

The systems of control should promote operational efficiency. The features of control systems that promote operational efficiency include the processes used to select and train personnel, establish procedures, set performance requirements, measure results and provide incentives.

Managerial policies, laws, regulations and sound fiduciary principles establish bounds within which the organization can conduct its business. The features of the control system that encourage compliance with these requirements include the separation of duties, the employment of persons likely to comply, the establishment of authority limits and the communication of expected conduct.

Ongoing Operations

Management must evaluate the quality of operations based on information provided by the control systems. Adequate control systems produce sufficient information to reliably appraise operations. To confirm that the control systems are adequate and effective, the internal auditor should independently evaluate the quality of ongoing operations. Only ongoing operations have future significance.

Internal auditors should express their opinion on whether the quality of ongoing operations is satisfactory or unsatisfactory. Satisfactory operations are those which, in the opinion of the auditor, require no extraordinary intervention by executive management or the directors. Conversely, unsatisfactory operations require extraordinary intervention before appropriate remedial action is likely to occur. A qualified opinion may be expressed by citing specific exceptions to satisfactory operations. Auditors may assess the quality of operations more precisely and report on grades of quality, provided the grades are clearly understood by management.

Circumstances may preclude the auditor from forming an opinion on the quality of ongoing operations. This, by itself, is significant because the information provided by the control systems should be adequate for the evaluation of ongoing operations.

Accountability

Accountability refers to the measures of effective audit performance. The organization standards of this statement define the conditions necessary to hold the auditor accountable for the other standards.

Only the board of directors can protect the auditor's need for independence; consequently, the board should be the final judge of the auditor's performance. The fact that the process of measurement may be done through an audit committee does not alter the auditor's ultimate accountability to the board.

Both the auditor and executive management have received a delegation of authority from the board: management to design and maintain systems of control; the auditor to evaluate these systems of control. Because the evaluation process exists to serve the design and maintenance responsibility, the auditor must also be accountable to executive management. This accountability, however, does not create the usual corollary right of the executive to directly apply sanctions or to otherwise restrict the auditor's functional independence. Such action, if necessary, must be decided by the board.

The auditor should be mindful that the audit function serves many users. The auditor has an obligation, if not accountability, to those users. The auditor's personal relationship with others should be characterized by integrity, open communication and mutual respect. User satisfaction should be an important consideration in the board's evaluation of audit performance.

Independence is a matter of personal quality rather than of rules. The auditor's relationships, as indicated by the plan of organization and by the way in which the work is conducted, must always be such that a presumption of independence logically follows in the mind of the observer.

Organization Standards

A banking organization can best evidence its support and commitment to the professional standards of internal auditing by formally adopting these standards.

The organization standards are prerequisites to the personal, performance and communication standards. The simply state that an internal auditor cannot be accountable for adherence to the other standards without the necessary resources and support of the organization.

Many banks cannot afford the services of a competent and independent internal auditor. It should be clearly understood that those banks are not in compliance with these standards. Their directors and executive management, therefore, bear the burden of providing additional supervision to assure the adequacy, effectiveness and efficiency of the systems of control and the quality of ongoing operations.

The organization shall provide and maintain an environment within which the internal auditor has the freedom to act. Persons whose duties and responsibilities are subject to audit cannot have the authority to regulate the scope of audit work nor the procedures considered necessary by the auditors. The auditor's responsibility to independently evaluate the systems of control must carry with it the authority to set the scope and choose the means of examination.

Budgeting should be based on a complete plan of audit that demonstrates fulfillment of the organization's audit needs and adherence to the standards of internal auditing. In committing resources to the internal audit function, the organization should expect the auditor to properly support requested allocations through the established budget process.

The audit process is not complete until the auditor is satisfied that audit findings have received appropriate attention. By requiring management to respond formally to audit findings, the organization contributes to the effectiveness of the audit function and increases the likelihood that the findings will receive appropriate attention.

The organization should measure the performance of its internal audit function in relation to the timeliness, efficiency and the quality of its work. Timeliness is indicated by scheduling the work in recognition of risk assessments and by the prompt issuance of reports. Efficiency is indicated by completing the work within the time budgeted. An efficient internal audit program also minimizes the time required by examiners and public accountants without affecting adequate coverage. Formal work programs, workpapers and the form and content of reports evidence the quality of an audit function. The organization should consider using the opinions formed by bank examiners, certified public accountants and other professional auditors to assist in this performance evaluation. Smaller banks may find the services offered by their correspondents include such evaluations.

Personal Standards

Personal standards relate to the qualifications of auditors, the quality of audit practice and the rules of professional conduct. They concern all persons who apply audit procedures under a delegation of authority from the board to support conclusions regarding the systems of control. Personal standards are prerequisites to performance and communication standards.

All persons engaged in the practice of internal auditing shall have the technical training and proficiency necessary to conduct their audit duties in accordance with these standards. Technical training and proficiency are separate requirements. Technical training relates to education; proficiency relates to the skill and judgment acquired through experience.

The qualified internal auditor will have successfully completed a course of study and training in disciplines having audit significance and will understand their application to banking. These disciplines include the principles of accounting, auditing, economics, finance, operations analysis, management, statistics, commercial law and computer science.

Experience is gained by working under the close supervision and review of an experienced professional. This relationship should make the job itself a vehicle for seasoning and refining the technical training acquired through formal education. On-the-job training should be carefully planned and organized. Those responsible for managing the audit function should define the elements of knowledge and judgment that may be gained from experience and establish a way to measure the resulting proficiency.

Proficiency is demonstrated by the proper exercise of professional judgment. It is difficult for users of professional services to accurately assess proficiency. Therefore, recognized professions, including internal auditing, provide certification programs for their practitioners. Each person engaged in the internal audit function can demonstrate proficiency by earning a professional designation such as chartered bank auditor, certified internal auditor or certified public accountant. The last two designations, however, require successful banking or related experience to demonstrate a practical knowledge of the industry.

The modern business environment demands that an internal auditor maintain proficiency by active participation in programs of continuing education and professional association.

There is no concept more important to internal auditing than independence. The essence of independence is intellectual honesty informing conclusions and expressing opinions. Conclusions must be reached fairly without bias or the propensity to prejudge circumstances. Opinions must be expressed forthrightly despite the conflicts that may arise. Although the appearance of independence relies on a plan of organization that grants the auditor freedom from conflicting accountabilities, the actual attainment of independence depends solely on the individual. The concept of independence is most fundamental to the definition and practice of auditing.

Independence is not isolation. Auditors should not allow their need for independence to inhibit the contacts and rapport necessary for a fully effective audit function.

Banking organizations properly require all employees to honor the confidentiality of financial and other information obtained during their employment. This requirement is all the more important for internal auditors because of the nature and scope of their work. Confidentiality also applies to the judicious use of information within the organization.

An internal auditor should not accept employment or participate in activities that compete or otherwise oppose the lawful objectives of the organization. Loyalty reflects integrity and credibility. Relationships which may, even by implication, raise doubt concerning the auditor's loyalty to the bank therefore must be avoided.

All members of a profession owe allegiance to their colleagues. The reputation of all depends to some degree on the conduct of each. Internal auditors develop professional recognition by supporting and participating in associations organized to serve their common needs. Each internal auditor is also obligated to maintain proficiency and awareness through self-education.

Due professional care imposes an ethical obligation on all auditors to demonstrate competency. Due care acts as a safeguard against negligence and oversight. Due professional care applies to the administrative practices that bear on the quality of audit results as well as to the use of audit procedures that provide sufficient competent evidence.

Due professional care is a subjective standard based on reasonableness. The duty of due professional care requires the auditor to know the extent of reliance that others within the organization place on audit results. When such reliance is unrealistic or misunderstood, the auditor should resolve the misunderstanding and temper unrealistic expectations.

The organization should require the presentation of audit findings in a manner that convinces management that the auditor exercised due professional care.

Performance Standards

The audit plan should be written and presented in a form that is suitable for critical review by audit committees, certified public accountants, regulatory examiners and others who must evaluate the adequacy of audit coverage.

An audit plan is based on a catalog of examinations that includes all significant activities of the organization classified by logical units for work scheduling. For example, demand deposit bookkeeping functions may be classified as three separate audits: overdraft control practices, confirmation of balances and bookkeeping operations.

The frequency of audit should be determined by reference to factors affecting risk, management information, customer satisfaction and the need to create an awareness of audit presence. Risk assessment involves audit judgment regarding how often and to what extent the systems of control must be evaluated.

In mature audit operations, the problem of balancing audit objectives with audit resources has usally been solved. Risk assessment in the context of audit planning does not normally change in the near range. The audit plan for each cycle does not prescribe a detailed listing of tests and procedures to be applied. These tactical steps are to be found in the work program.

The audit plan, which usually represents work contemplated for the current year, should present the information necessary to schedule and assign the work. It should cover resources requirements, administrative goals and objectives and the estimated costs of audit. Resource plans identify the number of persons needed, schedule their time (including such non-audit time as administration, vacation, lost days, staff training) and specify the level of ability. Administrative goals and objectives should reflect the audit implications of conditions that influence the organization. Audit costs should be identified in sufficient detail to encourage the audit manager to justify their cost and impact on the organization.

While cost justifying the audit plan, the audistor should recognize that the organization's cost of control includes its cost of auditing. In certain areas, efficiencies may best be achieved by strengthening the control systems as an alternative to audit coverage.

The audit plan shall include an evaluation of the adequacy of controls within new systems and significant modifications to existing systems before they become operational. This evaluation should include the controls designed into the conversion plan. Significant modifications are those that affect controls to an extent that audit concern is created regarding the organization's resulting exposure to loss.

The second performance standard concerns the timing of audit but not its scope. Identifying significant changes and establishing audit procedures is a matter of individual audit judgment. Modern complex systems are expensive to develop and maintain. Building adequate controls within the original design is usually less costly than adding them after the system is operational. The cost of evaluation, however, is usually no greater before implementation than after.

The reliability of audit results depends on the character of supporting evidence. Audit procedures should be selected and applied in a way that assures such evidence is sufficient and competent.

The term "sufficient" as used here means that enough evidence is assembled to assure that audit conclusions are well founded. The internal auditor's determination of what constitutes enough evidence is a matter of professional judgment relative to the controls and operations under evaluation. Frequently, sufficiency can be demonstrated by the application of statistical sampling techniques.

The term "competent" means relevant and valid. Competent evidence has the requisite ability to convince. Both the substance and the interrelationship of evidence demonstrate competence. Whereas sufficient is a quantitative concept, competent is a qualitative one.

Competency for audit purposes depends on the procedures used to obtain evidence. Direct knowledge, such as obtained by observation or inspection, is more reliable than indirect knowledge, such as obtained by confirmation and inquiry. Obtaining the most competent evidence, however, is not always feasible. Selecting and applying those procedures that collectively produce the most competent evidence under the circumstances demonstrates audits proficiency.

Audit work should be organized so that the objectives at each level of detail are clearly defined. Each phase of the work as well as the contribution of each person should be viewed by a superior. Audit management should review the audit programs, questionnaires and other planning features for completeness, applicability and efficiency. The reviewer should be satisfied that those who perform field work understand the systems under examination and the audit procedures that have been selected for application.

The auditor in charge of each assignment should perform a detailed review of the work as it is completed. No work should be accepted unless it complies with the standard of evidence. Audit management should conduct a comprehensive final review of the workpapers to determine that proper procedures were applied, sufficient evidence was assembled and all exceptions were properly evaluated in terms of their control significance. Audit management should also make interim field reviews.

Reviews must be documented. All auditors should appreciate the importance of the review process and perform their work in a manner that facilitates review. Review serves as an educational process as well as a control. Directors of banks employing only one auditor should supervise the auditor's work in a manner that provides a check on audit quality.

Communication Standards

The auditor has a responsibility to report the results of all audit work performed. Some auditors prefer to report only significant exceptions; however, this practice reinforces a negative view of the audit function. The auditor's responsibility to evaluate control systems and ongoing operations carries with it an obligation to report the results of that evaluation. Without a report, management does not have positive assurance that auditing is meeting its commitments. Consequently, management can only assume that adequate coverage is maintained and that the systems of control are functioning adequately, effectively and efficiently. By implication, audit reporting only on an exception basis extends the auditor's responsibility beyond what the actual work can support and causes misunderstanding.

Requiring auditors to express an opinion on the adequacy, effectiveness and efficiency of the systems of control and the quality of ongoing operations enables the board of directors, management and other interested parties to better judge the reliability of the control systems and ongoing operations. This service is a natural and logical part of the internal auditor's accountability.

Expressing an opinion imposes a serious obligation on the auditor. The requirement of due professional care extends to both the opinion and the commentary supporting it. Clear identification of the systems of control audited is the key to a meaningful opinion.

Each auditor should develop standard language for rendering an opinion. Standardization of language minimizes misunderstanding and promotes recognition of circumstances that require responsive action.

It is suggested that auditors develop their opinion statement along the following lines:

> "In our opinion (the audit subject's) operating and accounting procedures include those practices usually necessary to provide adequate and efficient control. Also in our opinion, the degree of compliance with such procedures provided effective control during the (period of audit). We found the quality of ongoing operations satisfactory."

This opinion assumes the auditor has reviewed the systems of control before they became operational and is satisfied that they include design features proper to the circumstances and reasonably sufficient to effect control. The second sentence of the opinion addresses the degree of compliance with control features previously found adequate and efficient. Audits of operations that are subject to a common control system such as a typical branch bank audit need not include a review of the system each time a unit audit is performed. The auditor, however, should be satisfied that all modifications to the existing system that significantly affect control have been evaluated.

Auditors occasionally form adverse conclusions concerning the adequacy, effectiveness or efficiency of the systems of control or the quality of ongoing operations. In these cases, they should qualify their opinion and identify exposures that may exist in the absence of corrective action. Risk measures the degree to which exposures are uncontrolled. The applicable equation is: Exposure minus control equals risk. A calculated risk is taken only when the exposure is fully identified and the implications of the lack of control are understood. To make an adverse opinion clear and meaningful, therefore, the auditor must identify relevant exposures and explain their significance.

Every audit report should identify the area audited and disclose all matters the auditor believes require responsive action by the recipient. Auditors should clearly distinguish between those matters to which they take exception and those that are reported for other reasons. The degree of detail reported is largely a matter of judgment, influenced greatly by the preferences of management. Some managements prefer to have all audit findings reported no matter how minor. Others prefer only a general description of significant findings. Auditors must bear in mind that their ultimate accountability demands that findings of major significance be brought to the attention of executive management and the board of directors.

The standards do not require the auditor to recommend corrective action. In practice, however, auditors find that many managements expect suggestions for corrective action, particularly when the technincal aspects of controls are involved. By suggesting corrective action, the auditor demonstrates a positive approach to the organization's problems. In making suggestions, auditors should recognize that their recommendations may not be the only means of achieving the control purpose intended. The focus of concern should be the control purpose and not the particular means selected from a range of acceptable choices.

A draft of each audit report should be made available to the manager of those operations under examination. Findings should be discussed with the manager before final issuance of the report. Any revisions should be similarly reviewed. The final report must clearly present audit findings and avoid language that may imply a meaning inconsistent with the supporting evidence. A review and a discussion of the draft assure this result.

Auditors must establish the facts of their findings but do not have to obtain complete management acceptance of their comments before issuing a report. Auditors should be prepared for occasional conflict and disagreement.

The ease with which auditors can retrieve information, support fact and amplify findings validates the adequacy and the quality of audit evidence. The extent to which auditors gain acceptance of their comments ultimately measures the effectiveness of internal auditing's contribution to the organization.

The timeliness with which audit findings are reported is very important and often critical for effective response. When timeliness is critical, the auditor should communicate findings promptly and not await the preparation of a formal report. Findings should be communicated to the manager whose operation is directly affected.

The extent and frequency of audit reports required by the board of directors varies with the organization. At least annually, however, the auditor shall formally report to the board of directors and executive management. The board of directors and executive management are entitled to a report that measures audit performance against plan and provides information normally required to establish accountability. The auditor should use this opportunity to promote an understanding of the audit function and how it serves the organization.

In the summary report, the auditor should express an opinion on the overall condition of the organization's controls and ongoing operations. The report should present all known control problems of significance as well as an evaluation of corrective action taken. Although the report is formal, it should be presented personally to ensure proper interpretation and to provide the benefit that flows from the exchange of information and concerns.

Fraud and the Auditor's Responsibility

The auditor is charged with understanding the purposes of the business, the control practices usually necessary to achieve them, and the type of evidence that indicates they will continue to be achieved. The following questions are prerequisite to evaluating the systems of control: What is the purpose of the system? How is it controlled? What can go wrong?

Audit proficiency includes the ability to evaluate fraud exposures. Sufficient information is available in the literature on auditing concerning how frauds may be committed in banking. The auditor should be familiar with that literature.

The systems of control and not the internal audit function provide the primary assurance against fraud. Internal auditors, however, must evaluate the capability of the systems to achieve that end. When in doubt, the auditor should consider applying additional procedures to determine if fraud has actually occurred.

In fixing the internal auditor's responsibility for detecting fraud, it should be recognized that the internal auditor cannot be responsible for detecting irregular transactions for which there is no record, e.g., an unrecorded receipt of cash from a source for which there is no evidence of accountability; an isolated transaction that does not recur, e.g., a single fraudulent loan; or irregularities that are well concealed by collusion. However, in the usual course of the audit cycle, the internal auditor should detect irregularities that significantly affect the financial statements, repeatedly follow a suspicious pattern of concurrence, or those that can be detected by a reasonable audit sampling. Internal auditors must also accept responsibility for those irregularities that result from their failure to report known weaknesses in the systems of control.

In judging the preventive capacity of the control systems and the internal auditor's responsibility, the principle of relative risk should not be ignored, namely, costs must be balanced against intended benefit.

CONCLUSION

Professional internal auditors can contribute a wealth of information to their organizations over and above the assurance they provide by evaluating the quality of control systems and ongoing operations. The word, "audit," comes from the Latin word, *audire*, meaning to hear. Internal auditors should be good listeners and observers. They should demonstrate an in-depth understanding of the strengths and weaknesses of the organization, the accomplishments and current problems of its departments, the quality of its services, the pride and concerns of its people and the efficiencies and diseconomies of its operations. In turn, executives and directors should listen to professional internal auditors and capitalize on their observations.

EXAMPLES OF UNSAFE AND UNSOUND LIMITATION-OF-LIABILITY PROVISIONS

The following information was contained in appendix A of the February 9, 2006, interagency advisory.

Presented below are some of the types of limitation-of-liability provisions (with an illustrative example of each type) that the agencies observed in financial institutions' external audit engagement letters. The inclusion in external audit engagement letters or agreements related to audits of any of the illustrative provisions (which do not represent an all-inclusive list) or any other language that would produce similar effects is considered an unsafe and unsound practice.

1. "Release from Liability for Auditor Negligence" Provision

In this type of provision, the financial institution agrees *not* to hold the audit firm liable for *any* damages, *except* to the extent determined to have resulted from willful misconduct or fraudulent behavior by the audit firm.

Example: In no event shall [the audit firm] be liable to the Financial Institution, whether a claim be in tort, contract or otherwise, for any consequential, indirect, lost profit, or similar damages relating to [the audit firm's] services provided under this engagement letter, except to the extent finally determined to have resulted from the willful misconduct or fraudulent behavior of [the audit firm] relating to such services.

2. "No Damages" Provision

In this type of provision, the financial institution agrees that *in no event* will the external audit firm's liability include responsibility for any compensatory (incidental or consequential) damages claimed by the financial institution.

Example: In no event will [the audit firm's] liability under the terms of this Agreement include responsibility for any claimed incidental or consequential damages.

3. "Limitation of Period to File Claim" Provision

In this type of provision, the financial institution agrees that *no* claim will be asserted after a fixed period of time that is shorter than the applicable statute of limitations, effectively agreeing to limit the financial institution's rights in filing a claim.

Example: It is agreed by the Financial Institution and [the audit firm] or any successors in interest that no claim arising out of services rendered pursuant to this agreement by, or on behalf of, the Financial Institution shall be asserted more than two years after the date of the last audit report issued by [the audit firm].

4. "Losses Occurring During Periods Audited" Provision

In this type of provision, the financial institution agrees that the external audit firm's liability will be limited to any losses occurring during periods covered by the external audit, and will *not* include any losses occurring in later periods for which the external audit firm is not engaged. This provision may not only preclude the collection of consequential damages for harm in later years, but could preclude any recovery at all. It appears that no claim of liability could be brought against the external audit firm until the external audit report is actually delivered. Under such a clause, any claim for liability thereafter might be precluded because the losses did not occur during the period covered by the external audit. In other words, it might limit the external audit firm's liability to a period before there could be any liability. Read more broadly, the external audit firm might be liable for losses that arise in subsequent years only if the firm continues to be engaged to audit the client's financial statements in those years.

Example: In the event the Financial Institution is dissatisfied with [the audit firm's] services, it is understood that [the audit firm's] liability, if any, arising from this engagement will be limited to any losses occurring during the periods covered by [the audit firm's] audit, and shall not include any losses occurring in later periods for which [the audit firm] is not engaged as auditors.

5. "No Assignment or Transfer" Provision

In this type of provision, the financial institution agrees that it will not assign or transfer any claim against the external audit firm to another party. This provision could limit the ability of another party to pursue a claim against the external auditor in a sale or merger of the financial institution, in a sale of certain assets or a line of business of the financial institution, or in a supervisory merger or receivership of the financial institution. This provision may also prevent the financial institution from subrogating a claim against its external auditor to the financial institution's insurer under its directors' and officers' liability or other insurance coverage.

Example: The Financial Institution agrees that it will not, directly or indirectly, agree to assign or transfer any claim against [the audit firm] arising out of this engagement to anyone.

6. "Knowing Misrepresentations by Management" Provision

In this type of provision, the financial institution releases and indemnifies the external audit firm from any claims, liabilities, and costs attributable to any knowing misrepresentation by management.

Example: Because of the importance of oral and written management representations to an effective audit, the Financial Institution releases and indemnifies [the audit firm] and its personnel from any and all claims, liabilities, costs, and expenses attributable to any knowing misrepresentation by management.

7. "Indemnification for Management Negligence" Provision

In this type of provision, the financial institution agrees to protect the external auditor from third-party claims arising from the external audit firm's failure to discover negligent conduct by management. It would also reinforce the defense of contributory negligence in cases in which the financial institution brings an action against its external auditor. In either case, the contractual defense would insulate the external audit firm from claims for damages even if the reason the external auditor failed to discover the negligent conduct was a failure to conduct the external audit in accordance with generally accepted auditing standards or other applicable professional standards.

Example: The Financial Institution shall indemnify, hold harmless and defend [the audit firm] and its authorized agents, partners and employees from and against any and all claims, damages, demands, actions, costs and charges arising out of, or by reason of, the Financial Institution's negligent acts or failure to act hereunder.

8. "Damages Not to Exceed Fees Paid" Provision

In this type of provision, the financial institution agrees to limit the external auditor's liability to the amount of audit fees the financial institution paid the external auditor, regardless of the extent of damages. This may result in a substantial unrecoverable loss or cost to the financial institution.

Example: [The audit firm] shall not be liable for any claim for damages arising out of or in connection with any services provided herein to the Financial Institution in an amount greater than the amount of fees actually paid to [the audit firm] with respect to the services directly relating to and forming the basis of such claim.[1]

FREQUENTLY ASKED QUESTIONS ON THE APPLICATION OF THE SEC's AUDITOR-INDEPENDENCE RULES

The following information is contained in appendix B of the February 9, 2006, interagency advisory.

Question[2]

Inquiry was made as to whether an accountant who certifies financial statements included in a registration statement or annual report filed with the commission under the Securities Act or the Exchange Act would be considered independent if he had entered into an indemnity agreement with the registrant. In the particular illustration cited, the board of directors of the registrant formally approved the filing of a registration statement with the commission and agreed to indemnify and save harmless each and every accountant who certified any part of such statement "from any and all losses, claims, damages or liabilities arising out of such act or acts to which they or any of them may become subject under the Securities Act, as amended, or at 'common law,' other than for their willful misstatements or omissions."

Answer

When an accountant and his client, directly or through an affiliate, have entered into an agreement of indemnity which seeks to assure to the accountant immunity from liability for his own negligent acts, whether of omission or commission, one of the major stimuli to objective and unbiased consideration of the problems encountered in a particular engagement is removed or greatly weakened. Such condition must frequently induce a departure from the standards of objectivity and impartiality which the concept of independence implies. In such difficult matters, for example, as the determination of the scope of audit necessary, existence of such an agreement may easily lead to the use of less extensive or thorough procedures than would otherwise be followed. In other cases it may result in a failure to appraise with professional acumen the information disclosed by the examination. *Consequently, the accountant cannot be recognized as independent for the purpose of certifying the financial statements of the corporation.*

Question

Has there been any change in the commission's long-standing view (Financial Reporting

1. The agencies also observed a similar provision that limited damages to a predetermined amount not related to fees paid.

2. The subtitles in this section have been revised for this manual.

Policies—Section 600—602.02.f.i., “Indemnification by Client”) that when an accountant enters into an indemnity agreement with the registrant, his or her independence would come into question?

Answer

No. When an accountant and his or her client, directly or through an affiliate, enter into an agreement of indemnity that seeks to provide the accountant immunity from liability for his or her own negligent acts, whether of omission or commission, the *accountant is not independent.* Further, including in engagement letters a clause that a registrant would release, indemnify or hold harmless from any liability and costs resulting from *knowing misrepresentations by management would also impair the firm’s independence.*[3]

3. U.S. Securities and Exchange Commission; Office of the Chief Accountant: Application of the Commission’s Rules on Auditor Independence—Frequently Asked Questions; Other Matters, Question 4 (issued December 13, 2004).

Examiners are expected to assess the adequacy of an institution's internal controls—the involved procedures, processes, and systems of its internal control structure. In so doing, they may refer to the available Internal Control Questionnaire(s) pertaining to the various transactions and activities discussed at the end of most sections of the manual. (See also section 1010.1.) When assessing the adequacy of a bank's internal control system and structure, the examiner needs to have a good understanding of the meaning of internal control and be able to evaluate its design and effectiveness. Internal control is a process initiated by a bank's board of directors, management, and other personnel, and is designed to provide reasonable assurance that specific objectives are achieved as to the bank's (1) effectiveness and efficiency of operations, (2) reliability of financial reporting, and (3) extent of compliance with applicable laws and regulations.[1]

The concept of control structure involves the controls that have been established and the control environment—management's monitoring of procedures, activities, and attitudes. Internal control is part of the bank's basic operations.

The components of internal control are

- *Control environment*—the environment established by the bank's employees who are responsible for its operations, including their ethical values, integrity, and competence
- *Risk assessment*—the identification, analysis, and management of risks
- *Control activities*—the institution's established policies and procedures that are designed to provide assurance that appropriate actions, which are determined by management, are taken to address identified risks
- *Information and communication*—the bank's activities that provide the basis for the gathering and exchange of information that is needed to conduct, manage, and control the organization
- *Monitoring*—the bank's continuous monitoring of the internal controls system and structure to allow for appropriate and necessary changes.

The components of internal control overlap the internal control objectives. The components of internal control must be addressed individually to assess their effectiveness relative to a specific objective.

The bank's board of directors and senior management have an important role in ensuring the adequate development, execution, maintenance, and compliance monitoring of the bank's internal controls. When determining the adequacy of a bank's management, examiners should carefully analyze and review its internal control systems, processes, and procedures.

STATEMENT ON REQUIRED ABSENCES FROM SENSITIVE POSITIONS

One of the many basic tenets of internal control is that a bank needs to ensure that its employees in sensitive positions are absent from their duties for a minimum of two consecutive weeks. Such a requirement enhances the viability of a sound internal control environment because most frauds or embezzlements require the continuous presence of the wrongdoer. After making this assessment, the bank should require that employees in sensitive key positions, such as trading and wire transfer, not be allowed to transact or otherwise carry out, either physically or through electronic access, their assigned duties for a minimum of two consecutive weeks per year. The prescribed period of absence should be sufficient to allow all pending transactions to clear. The bank should also require that an individual's daily work be processed by another employee during the employee's absence. See SR-96-37, which emphasizes the need for a bank to conduct an assessment of significant risk areas before developing a policy on required absences from sensitive positions.

A comprehensive system of internal controls is essential for a bank to safeguard its assets and capital, and to avoid undue reputational and legal risk. Senior management is responsible for establishing an appropriate system of internal controls and monitoring compliance with that system. Although no single control element

1. For additional information on internal controls, see the Committee of Sponsoring Organizations of the Treadway Commission's study on internal controls, *Internal Control—Integrated Framework* (AICPA, 1992).

should be relied on to prevent fraud and abuse, these acts are more easily perpetrated when proper segregation and rotation of duties do not exist. As a result, the Federal Reserve reemphasizes the following prudent banking practices that should be incorporated into a bank's internal control procedures. These practices are designed to enhance the viability of a sound internal control environment, as most internal frauds or embezzlements necessitate the constant presence of the offender to prevent the detection of illegal activities.

When developing comprehensive internal control procedures, each bank should first make a critical assessment of its significant areas and sensitive positions. This assessment should consider all employees, but should focus more on those with authority to execute transactions, those with signing authority and access to the books and records of the bank, as well as those employees who can influence or cause such activities to occur. Particular attention should be paid to areas engaged in trading and wire-transfer operations, including personnel who may have reconciliation or other back-office responsibilities.

After producing a profile of high-risk areas and activities, it would be expected that a minimum absence of two consecutive weeks per year be required of employees in sensitive positions. The prescribed period of absence should, under all circumstances, be sufficient to allow all pending transactions to clear and to provide for an independent monitoring of the transactions that the absent employee was responsible for initiating or processing. This practice could be implemented through a requirement that affected employees take vacation or leave, the rotation of assignments in lieu of required vacation, or a combination of both so the prescribed level of absence is attained. Some banks, particularly small community banks, might consider compensating controls such as continuous rotation of assignments in lieu of required absences to avoid placing an undue burden on the bank or its employees.

For the policy to be effective, individuals having electronic access to systems and records from remote locations must be denied this access during their absence. Similarly, indirect access can be controlled by not allowing others to take and carry out instructions from the absent employee. Of primary importance is the requirement that an individual's daily work be processed by another employee during his or her absence; this process is essential to bring to the forefront any unusual activity of the absent employee.

Exceptions to the required-absence policy may be necessary from time to time. However, management should exercise the appropriate discretion and properly document any waivers that are granted. Internal auditing should be made aware of individuals who receive waivers and the circumstances necessitating the exceptions.

If a bank's internal control procedures do not include the above practices, they should be promptly amended. After the procedures have been enhanced, they should be disseminated to all employees, and the documentation regarding their receipt and acknowledgment maintained. Additionally, adherence to the procedures should be included in the appropriate audit schedules, and the auditors should be cognizant of potential electronic access or other circumventing opportunities.

The development and implementation of procedures on required absences from sensitive positions is just one element of an adequate control environment. Each bank should take all measures to establish appropriate policies, limits, and verification procedures for an effective overall risk-management system.

Required Absences from Sensitive Positions Examination Objectives

Effective date April 2009

1. To determine whether a critical assessment has been performed of a bank's significant areas and sensitive positions.
2. To ascertain that sound internal controls exist, including policies and procedures that provide assurances that employees in sensitive positions are absent from their duties for a minimum of two consecutive weeks per year.
3. To ascertain whether the bank has taken all measures to establish appropriate policies, limits, and verification procedures for an effective overall risk-management system.
4. To establish that the appropriate audit schedules and the audits include a review of minimum absence policies and procedures, including potential electronic access or other circumventing actions by employees.

1. Determine that a profile of high-risk areas and activities is performed on a regular, periodic basis.
2. Ascertain if employees assigned to sensitive positions are required to be absent for a minimum of two weeks per year while—
   a. pending, sensitive transactions are monitored while they clear, and
   b. daily work is monitored and processed by another employee during the regularly assigned employee's absence.
3. Determine if required internal control procedures for minimum absences (for example, rotation of assignments, vacation or leave, or a combination of both) are being used in sensitive operations such as trading, trust, wire transfer, reconciliation, or other sensitive back-office responsibilities.
4. Ascertain if appropriate policies, limits, and verification procedures have been established and maintained for an effective overall risk-management system.
5. Determine whether the bank—
   a. prohibits others from taking and carrying out instructions from the absent employees, and
   b. prevents remote electronic access to systems and records involving sensitive transactions during the regularly assigned employee's required minimum two-week absence.
6. Ascertain if waivers from the bank's two-week minimum absence policies and procedures involving sensitive positions are documented.
7. Determine that the appropriate audit schedules and the audits include a review of such procedures, including potential electronic access or other circumventing actions by employees.

The guidance[1] discussed below highlights generally the accounting and reporting requirements unique to business combinations resulting in bargain purchase gains. The guidance does not provide a comprehensive discussion on all aspects of accounting for business combinations. (See SR-10-12 and its attachment.)

SUPERVISORY CONSIDERATIONS

Compliance with GAAP and Regulatory Reporting Requirements

Accurate regulatory reports are critical for effective supervision and, because of their public availability, for enhancing the transparency of an institution's risk profile and financial position. Business combinations, including bargain purchase transactions and assisted transactions, should be accounted for in accordance with the Financial Accounting Standards Board's Accounting Standards Codification (ASC) Topic 805, "Business Combinations." The management of an acquiring institution is responsible for preparing regulatory reports in accordance with generally accepted accounting principles (GAAP), regulatory reporting requirements, and relevant supervisory guidance. The complexity of the accounting requirements related to a business combination does not relieve management of this responsibility and should be factored into management's overall analysis of the practicability of a potential acquisition. The management of each institution is responsible for establishing and maintaining appropriate governance and an effective internal control structure over the preparation of regulatory reports commensurate with the institution's size, complexity, and risk profile. This structure should include written policies and procedures that provide clear guidelines on accounting and reporting matters related to business combinations. Management is encouraged to discuss applicable regulatory reporting requirements and supervisory considerations with its primary federal regulator prior to consummating a business combination.

1. Part III of the June 7, 2010, "Interagency Supervisory Guidance on Bargain Purchases and FDIC- and NCUA-Assisted Acquisitions" was issued by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the National Credit Union Administration, and the former Office of Thrift Supervision.

Fair-Value Measurements

The valuation of the assets acquired and liabilities assumed in a business combination presents accounting and supervisory challenges. For example, many of these assets and liabilities are illiquid and lack quoted market prices, which complicates the estimation of their acquisition-date fair values. Thus, a key issue underlying fair-value estimates is the appropriateness of inputs and the appropriate selection and use of valuation techniques. Some valuation techniques employ complex models and, therefore, warrant further supervisory review. For example, reliability concerns may arise when the institution does not use clear and rigorous valuation techniques or where one or more significant inputs to a valuation estimate are not observable, even indirectly, from active markets. This is especially true when estimating the fair value of illiquid financial instruments, indemnification assets, and identifiable intangible assets that are acquired in a business combination.

It is management's responsibility to report fair values in accordance with ASC Topic 820, "Fair Value Measurement." Because of the significant impact fair-value measurements and any resultant goodwill or bargain purchase gain have on the financial statements, management should have appropriate written fair-value measurement policies, procedures, and controls in place. These policies, procedures, and controls should be executed by experienced and qualified individuals knowledgeable in both GAAP and regulatory reporting requirements for business combinations. Furthermore, management's fair-value measurements should be well supported and are subject to review by examiners.

If management does not possess the expertise to identify and measure the identifiable assets acquired and the liabilities assumed in a business combination (and the equity or member interests in the acquiree in a combination of mutual institutions), management should engage a qualified third-party expert to provide professional guidance and support for the preparation of fair-value measurements required by ASC Topic 805 and determined in accordance with ASC Topic 820. For example, management may use a third party to estimate the expected cash flows and the fair value of a loan portfolio acquired in an assisted acquisition (and the related expected cash flows and fair value of an FDIC loss-sharing indemnification asset). The use of outside resources, however, does not relieve management of its responsibility to ensure that fair-value estimates are measured in accordance with GAAP. Management must sufficiently understand the bases for the measurement and valuation techniques used by outside parties to determine the appropriateness of these techniques, the underlying inputs and assumptions, and the resulting fair-value measurements.

Retrospective Adjustments of Fair-Value Measurements during the Measurement Period

During the measurement period, management should finalize its fair-value measurement estimates and retrospectively adjust the provisionally recorded amounts to reflect the information it was seeking about the acquisition-date facts and circumstances promptly after receipt of this information. The existence of a measurement period does not permit management to delay completion of comprehensive fair-value measurements that conform to the requirements of ASC Topic 820. Rather, at the earliest possible reporting date, management should establish and report appropriate fair-value estimates for the identifiable assets acquired and liabilities assumed in a business combination (and the equity or member interests in the acquiree in a combination of mutual institutions).

An acquiring institution's regulatory capital is subject to retrospective adjustments made during the measurement period. Although bargain purchase gains are reported in earnings and included in the computation of regulatory capital under the agencies' capital standards, the acquiring institution's primary federal regulator may determine an estimated bargain purchase gain lacks sufficient necessary permanence to rely on the estimate as a component of regulatory capital.

The Federal Reserve System relies on the timely and accurate filing of regulatory reports by domestic and foreign financial institutions. Data collected from regulatory reports facilitate early identification of problems that can threaten the safety and soundness of reporting institutions; ensure timely implementation of the prompt-corrective-action provisions required by law; and serve other legitimate supervisory purposes. Certain regulatory report information is used for public disclosure so investors, depositors, and creditors can better assess the financial condition of the reporting banks. Information that comes primarily from the Consolidated Reports of Condition and Income (Call Reports) is used to prepare the Uniform Bank Performance Report (UBPR), which employs ratio analyses to detect unusual or significant changes in a bank's financial condition as of the reporting dates. The UBPR is also used to detect changing patterns of behavior in the entire banking system; consequently, any inaccurate data in the regulatory reports may result in ratios that conceal deteriorating trends in the bank or the industry.

Generally, all regulatory reports of financial condition and income that domestic and foreign banking organizations file with the Federal Reserve are required by statute or regulation. The Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) and the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) amended various banking statutes to enhance the Federal Reserve's authority to assess civil money penalties against state member banks, bank holding companies, and foreign institutions that file "late," "false," or "misleading" regulatory reports. The civil money penalties also can be assessed against individuals who cause or participate in such filings.

The Federal Reserve has identified a late regulatory report as an official copy of a report that is not received by the Reserve Bank or its designated electronic collection agent in a timely manner. Each bank must file its Call Report in one of the following two ways:

- A bank may use computer software to prepare its report and then submit the report directly to the Federal Financial Institutions Examination Council's (FFIEC) Central Data Repository (CDR), an Internet-based system for data collection or
- The institution may complete its reports in paper form and arrange with a software vendor or another party to convert its paper reports into the electronic format that can be processed by the CDR. The software vendor or other party then must electronically submit the data file containing the bank's Call Report to the CDR.

The filing of a Call Report in paper form directly with the FDIC or with the appropriate Federal Reserve Bank is not an acceptable method of submission.

Reserve Banks will monitor the filing of all regulatory reports to ensure that they are filed, as required, on a timely basis and that they are accurate and not misleading. The Federal Reserve System's Committee on Current Series Reporting, which consists of staff from the statistics functions at each of the Reserve Banks and at the Board, will play an active role in this process. (See SR-04-15.) Many reporting errors can be screened through validity edit checks. Also, Reserve Banks have additional monitoring procedures that they use to confirm the timely submission of reports and to confirm that the reports are accurate and not misleading. On a case-by-case basis, the Reserve Banks will continue to determine if and when a financial institution or other banking organization is a chronic late, inaccurate, or false reporter; in these cases, the Banks will determine what supervisory action, if any, to recommend for a noncompliant reporter.

The filing of a false report generally involves the submission of mathematically incorrect data, such as addition errors or transpositions, or the submission of a regulatory report without its appropriate schedules. Conversely, the filing of a misleading report involves some degree of negligent behavior on the part of the filer that results in the submission of inaccurate information to the Federal Reserve.

REVIEW AND REFILING OF REGULATORY REPORTS

Review of regulatory reports involves determining whether the management of the member bank has submitted all required reports to the Federal Reserve in a timely and accurate manner. The examiner assigned to a specific area of examination is responsible for reviewing the reports relating to that area and for verifying that they are accurate and meet statutory and regulatory requirements. If the examiner finds a material difference in the reports, management should be instructed to refile corrected copies, if appropriate.

Examiners should discuss on the "Examination Conclusions and Comments" and "Matters Requiring Board Attention" pages of the examination report material errors or the filing of chronically late reports. (See section 6000.1.) They should also discuss with Reserve Bank staff any regulatory report filing that is considered misleading, such a report could lead to the issuance of criminal referrals against the involved individuals. In addition, management should be reminded that civil money penalties or other enforcement proceedings could occur as a result of chronically late or false regulatory report filing.

Banks should maintain effective manual or automated internal systems and procedures to ensure that reporting meets the appropriate regulatory requirements. Banks should develop clear, concise, and orderly workpapers to support the compilation of data. Preparation of proper workpapers provides not only a logical tie between report data and the bank's financial records but also facilitates accurate reporting and verification. Ideally, as part of an effective internal control program, bank management should implement a procedure to verify the compilation of the data. At a minimum, an independent person or department should verify the data that have been compiled for inclusion in the report.

A bank's internal control and audit programs for regulatory reports should be sufficient to ensure that all required reports are submitted on time and are accurate. The specific internal controls a bank employs to meet those objectives depend largely on the volume of reports, the scope of a bank's operations, and the complexity of its accounting system.

COMMONLY REQUIRED REGULATORY REPORTS

This section describes the regulatory reports most commonly required either to be submitted by the member bank to the Federal Reserve Bank or the Board, or to be maintained by the member bank for review during an examination.

Consolidated Reports of Condition and Income

Under 12 USC 324 and the Board's Regulation H, all state member banks are required to file Consolidated Reports of Condition and Income (Call Reports) as of the last day of each calendar quarter. The specific reporting requirements, including the reporting form to be used (for example, FFIEC 031 or FFIEC 041), depend on the asset size of the bank and whether it has a foreign office. Details of the appropriate reporting guidelines, along with the specific reporting form to be filed, are found in the instructions for preparation of Reports of Condition and Income. The reporting forms and instructions can be found on the FFIEC's website: www.ffiec.gov.

The bank should submit completed Call Reports to the CDR no later than 30 calendar days after the report date. Any bank with more than one foreign office, other than a shell branch or international banking facility, must submit data to the CDR no later than 35 days after the report date. State member banks are *not* required to publish their Reports of Condition or Income, according to federal statute. However, a state member bank may be required to publish its Report of Condition under state law.

The Report of Condition provides consolidated, detailed financial information on assets, liabilities, capital, and off-balance-sheet activity, which permits a uniform analysis and comparison of the reporting bank's data to that of other insured banks. The report also aggregates certain figures on loans to executive officers, directors, principal shareholders, and their related interests. The Report of Income provides information such as consolidated earnings, changes in capital accounts and the allowance for loan and lease losses, and charge-offs and recoveries.

The examiner should carefully review both reports to ensure that all pertinent data have been reported and are properly categorized in accordance with the instructions. To understand a particular bank's Call Report, the examiner must understand the bank's accounting methods as well as the information located in, and the relationships between, the bank's general books and subsidiary ledgers. This understanding can be obtained only by a careful review of the workpapers used in the preparation of these reports and their supplementary schedules.

REPORTS REQUIRED BY THE MONETARY CONTROL ACT OF 1980 AND THE INTERNATIONAL BANKING ACT OF 1978

The Federal Reserve has established a basic deposits-reporting framework for administering Regulation D, Reserve Requirements of Depository Institutions, and for constructing, analyzing, and controlling the monetary and reserves aggregates. The framework consists of four categories of deposit reporting. Every institution is placed into one of these four categories for deposit reporting purposes.[1] In general, the larger the institution, the more detailed or more frequent the institution will have to report.

The first two reporting categories, characterized as "detailed reporting," apply to those institutions that are not exempt from reserve requirements ("non-exempt" institutions). The last two reporting categories, characterized as "reduced reporting," apply to institutions that are exempt from reserve requirements ("exempt" institutions). The reserve-requirement "exemption amount" is the amount of total reservable liabilities at each depository institution that is subject to a zero-percent reserve requirement. The exemption amount is used to make the distinction between detailed deposit reporting and reduced reporting.

- Institutions with net transaction accounts equal to or less than the exemption amount over prescribed periods are exempt from reserve requirements and are subject to reduced reporting (categories 3 and 4).
- Institutions with net transaction accounts greater than the exemption amount over prescribed periods are *not* exempt from reserve requirements and are subject to detailed reporting (categories 1 and 2).

Both measures are indexed annually; see Regulation D for the appropriate exemption and cutoff amounts.

The exemption amount and the deposit cutoff for any one calendar year are used by the Federal Reserve to determine deposit-reporting panels in July, effective for September of that year, which continues to September of the following year. All deposit reports are mandatory.

1. Depository institutions that are required to maintain reserves are defined in section 204.1(c) of Regulation D (12 CFR 204.1(c)).

Reporting Categories

"Non-exempt" institutions subject to detailed reporting file the Report of Transaction Accounts, Other Deposits and Vault Cash (FR 2900). Institutions file the report either weekly or quarterly, generally depending on the level of an institution's deposits. The report is used in the calculation of reserve requirements.

"Exempt" institutions subject to "reduced reporting" file either the Annual Report of Deposits and Reservable Liabilities (FR 2910a) or no report at all, depending on their deposit levels.

Report forms and instructions can be found on the Federal Reserve Board's website.

Category One

Depository institutions (other than banking Edge and agreement corporations and U.S. branches and agencies of foreign banks) with net transaction accounts greater than the exemption amount and with a sum of total transaction accounts, savings deposits, and small time deposits greater than or equal to the nonexempt deposit cutoff, or with a sum of total transaction accounts, savings deposits, and small time deposits greater than or equal to the reduced reporting limit, regardless of the amount of net transaction accounts, will be required to submit the FR 2900 weekly.

Banking Edge and agreement corporations and U.S. branches and agencies of foreign banks, regardless of size, must also submit the FR 2900 weekly. They are not eligible for reporting categories 2 through 4 below.

The weekly reporting period for the FR 2900 covers the seven-day period beginning on Tuesday and ending the following Monday.

Category Two

Depository institutions with net transaction accounts greater than the exemption amount and with a sum of total transaction accounts, savings deposits, and small time deposits less than the nonexempt deposit cutoff are required to submit the FR 2900 once each quarter, in March, June, September, and December.

The quarterly reporting period for the FR 2900 covers the seven-day period beginning on the third Tuesday of the report month and ending the following Monday.

Category Three

Depository institutions with net transaction accounts less than or equal to the exemption amount and with total deposits greater than the exemption amount but with total transaction accounts, savings deposits, and small time deposits below the reduced reporting limit are required to submit the FR 2910a. This report is filed as of June 30 each year.

Category Four

Depository institutions whose net transaction accounts and total deposits are less than or equal to the exemption amount are not required to submit any Federal Reserve deposit report as long as data on the level of an institution's deposits are readily available on a condition report.

Institutions for which deposit data are not readily available on a condition report will be required to submit the FR 2910a report to determine the appropriate reporting category.

See page IV-4 and IV-5 of the Federal Reserve's *Reserve Maintenance Manual* at https://www.federalreserve.gov/monetarypolicy/reserve-maintenance-manual-about-this-manual.htm.

Annual Panel Determinations

Each year the Federal Reserve reviews the institutions in the four reporting categories, and reassignments of institutions ("panel shifts") are determined each July and become effective in September. The panel shifts reflect movements in each individual depository institution's total deposits or total reservable liabilities across the prevailing boundaries (the exemption amount and the deposit cutoff) that separate the reporting categories. Documentation is available on the Federal Reserve's procedures (including the reports, data items, and reporting periods) for measuring an institution's total reservable liabilities and total deposits against the prevailing cutoffs for the annual panel determinations. Two special types of panel shifts are described below.

- *Voluntary shifts.* In July, the Federal Reserve informs each institution of its particular reporting requirement effective for September of that year to September of the following year. Any depository institution assigned to one particular category may elect instead to report deposits (and, if appropriate, to maintain reserves) in accordance with a higher-level category. (For example, an institution assigned to the FR 2900 quarterly reporting category may elect instead to report the FR 2900 weekly.) However, any such voluntary shifts may take place only once a year during the normal September panel shifts. Voluntary shifts to a lower-level category are not permitted.

- *Fast-growing institutions.* The Federal Reserve may require a depository institution that is experiencing above-normal growth to report on a more detailed or frequent basis before the September panel shifts.

For more detailed information, see the Federal Reserve's "Reserve Maintenance Manual."

REPORTS REQUIRED UNDER REGULATION H AND THE SECURITIES EXCHANGE ACT OF 1934

Section 12(i) of the Securities Exchange Act of 1934 (the 1934 act), as amended by the Sarbanes-Oxley Act of 2002, vests the Board with the authority to administer and enforce certain provisions of the 1934 act and the Sarbanes-Oxley Act with respect to state member banks that have a class of securities registered under section 12(b) or 12(g) of the 1934 act (registered state member banks). In particular, the Board is charged with enforcing sections 12, 13, 14(a), 14(c), 14(d), 14(f), and 16 of the 1934 act and sections 301, 302, 303, 304, 306(a), 401(b), 404, 406, and 407 of the Sarbanes-Oxley Act[2] with

2. See 15 USC 78j-1, 78*l*–78n, 78p, 7241–7244(a), 7261(b), 7262, 7264, and 7265.

respect to registered state member banks. Section 208.36(a) of Regulation H, which implements these provisions, generally requires registered state member banks to comply with any rules, regulations, and reporting forms adopted by the Securities and Exchange Commission (SEC) under the above-listed sections of the 1934 act and the Sarbanes-Oxley Act. (See 12 CFR 208.36(a), as amended by 68 *Fed. Reg.* 4096 (January 28, 2003).) Registered state member banks, however, generally must file any forms or reports required by these rules with the Board, rather than the SEC.

If a state member bank has a class of securities registered under section 12 of the 1934 act and, thus, is a registered state member bank, the examiner should consult with the bank's management to ensure that the reports required by Regulation H are properly filed with the Board. Listed below are a few of the most common forms and reports that must be filed with the Board by a registered state member bank pursuant to Regulation H. This list, however, is not exclusive and examiners should consult Board staff or Regulation H, the 1934 act, the Sarbanes-Oxley Act, and the SEC's implementing rules if questions arise concerning the filing of reports by a registered state member bank. See the list of reporting forms and the individual reporting forms and instructions on the SEC's website: www.sec.gov.

Section 12 of the 1934 Act

Form 8-A is for the registration of certain classes of securities pursuant to sections 12(b) or 12(g) of the 1934 act for, among other things, listing on national securities exchanges. Form F-10 is the general reporting form for registration of securities pursuant to the 1933 act and sections 12(b) or 12(g) of the 1934 act for classes of securities of issuers for which no other reporting form is prescribed.

Section 13 of the 1934 Act

Form 8-K must be filed within 4 business days after the occurrence of the earliest of one or more specified events that are required to be reported and that affect the bank or its operations, such as changes in control of registrant or an acquisition or disposition of a significant amount of assets. See the "Information to be Included in the Report" within the report instructions. Form 10-Q is for quarterly and transition reports and must be filed within 40 days for large accelerated filers; accelerated filers; or for others, 45 days after the end of each of the first three fiscal quarters. Form 10-K is for annual and transition reports that must be filed within 60 to 90 calendar days after the end of the registrant's fiscal year.

Section 16 of the 1934 Act

Section 16 requires the directors, officers, and principal shareholders of public companies to file reports concerning the purchase and sale of the company's equity securities. Form 3 collects the insider's initial beneficial ownership of registered companies, including banks. Form 4 collects changes in the insider's beneficial ownership. Form 5 is an annual statement of changes in beneficial ownership of securities.

Sarbanes-Oxley Act

The Sarbanes-Oxley Act[3] (the act) and the SEC's implementing rules require the principal executive officer and principal financial officer of public companies to file certain certifications with the company's annual 10-K report and quarterly 10-Q reports. The certifications must, among other things, state that the officer has reviewed the report, indicate that the report (to the officer's knowledge) does not contain any material misstatements or omissions, and contain certain representations concerning the company's internal controls.

The act requires the annual 10-K report of public companies to include a statement of management's responsibility for maintaining adequate internal-control structures and procedures for financial reporting and to contain an assessment of the effectiveness of these controls and procedures.[4] The company's external auditor must attest to, and report on, management's assessment. These reports and attestations are similar to the internal-control reports and attestations required by section 36 of the Federal Deposit Insurance Act (12 USC 1831m) for

3. See 15 USC 7241 (section 302 of the act).
4. See 15 USC 7262 (section 404 of the act).

insured depository institutions with total assets of $500 million or more.

The act[5] and the SEC's rules also require public companies to disclose in their periodic reports whether the company has adopted a code of ethics for its senior financial officers and whether the company's audit committee includes a "financial expert." If the company has not adopted a code of ethics or does not have a financial expert on its audit committee, the company must explain the reasons why not.

REPORTING AND INQUIRY REQUIREMENTS FOR LOST AND STOLEN SECURITIES

Every national securities exchange member, registered securities association member, broker, dealer, municipal securities dealer, government securities broker or dealer, registered transfer agent, and registered clearing agency and its participants, as well as every member bank of the Federal Reserve System and every bank whose deposits are insured by the Federal Deposit Insurance Corporation (reporting institutions), must register with the SEC's designee, the Securities Information Center, Inc. (SIC). All lost, missing, stolen, or counterfeit securities must be reported to the SIC. Except in certain limited circumstances, each insured bank is responsible for contacting the SIC to determine if the securities coming into its possession, whether by pledge, transfer, or some other manner, have been previously reported as missing, lost, stolen, or counterfeit.

All functions within a bank that handle or process securities are subject to the *reporting* requirements. Only the transfer-agent function is exempt from the *inquiry* requirements. Accordingly, all bank departments likely to be affected, including the trust, investment, transfer-agent, custody, or dealer departments, and the lending operations as relating to collateral loans, should be familiar with the requirements set out in 17 CFR 240.17f-1. Securities exempt from the reporting requirements are—

- registered U.S. Treasury securities of the U.S. government and federal agencies thereof,
- securities that have not been assigned CUSIP numbers, and
- bond coupons
- global securities
- uncertified securities, and
- any securities issue for which there is neither a record nor beneficial owners that can obtain negotiable securities certificates.

Securities exempt from the inquiry requirements are—

- securities received directly from the issuer or its agent at issuance,
- securities received from another reporting institution or from a Federal Reserve Bank or Branch,
- securities received from a customer of the reporting institution in the name of the customer or nominee, and
- securities that are a part of a transaction of $10,000 or less (aggregate face value for bonds or market value for stocks).

Lost, Missing, Stolen, or Counterfeit Securities

Form X-17F-1A must be filed with the SIC within one business day after the discovery of—

- a theft or loss of any security when there is a substantial indication of criminal activity,
- a security that has been lost or missing for two business days when criminal actions are not suspected, and
- a security that is counterfeit.

The reporting form must be filed within two business days of notification of nonreceipt when delivery of securities sent by the bank—

- is made by mail or draft and payment is not received within 10 business days, and confirmation of nondelivery has been made by the receiving institution; and
- is in person and no receipt is maintained by the bank.

If securities sent by the bank, either in person or through a clearing agency, are lost in transit and the certificate numbers of the securities can be determined, the bank (delivering institution) must report the certificate numbers of the secu-

5. See 15 USC 7264–7265 (sections 406 and 407 of the act).

rities within two business days after notice of non-receipt or as soon as the certificate numbers of the securities can be ascertained.

When a shipment of retired securities certificates is in transit between any unaffiliated transfer agents, banks, brokers, dealers, or other reporting institutions, and the delivering institution fails to receive notice of receipt or non-receipt of the certificates, the delivering institution is required to act to determine the facts. When the certificates are not recovered by the delivering institution, the delivering institution must report the certificates as lost, stolen, or missing within a reasonable time period, but in any event within twenty business days from the date of shipment. The delivery of lost or missing securities to the bank must be reported within one business day after discovery and notification of certificate numbers. Securities that are considered lost or missing as a result of count or verifications must be reported no later than 10 business days after discovery or as soon as certificate numbers can be ascertained.

Copies of all reports required to be filed under 17 CFR 240.17f-1 must also be submitted to the registered transfer agent for the issue being reported and, if criminal activities are suspected, to the Federal Bureau of Investigation. Copies of filed or received Forms X-17F-1A must be maintained in an easily accessible place for three years.

TRANSFER-AGENT ACTIVITIES

If a bank acts as a transfer agent for its own stock, the stock of its holding company, or any other equity security, it may have to register with the Board as a transfer agent pursuant to the requirements of Regulation H (section 208.31). State member bank transfer agents must comply with the SEC's rules prescribing operational and reporting requirements, which the SEC adopted pursuant to section 17A(2) of the 1934 act (15 USC 78q-1). For member banks, see 17 CFR 240.17Ac2 (1-2) and 240.17Ad-1-240.17Ad-16). (See section 208.31(b) of Regulation H.) Any entity performing transfer agent functions for a security is required to register if the security is registered on a national securities exchange and if the issuer has total assets of $10 million and a class of equity security held on record by 500 or more persons. The registrations are public filings and are *not* confidential.

The interagency Transfer Agent Registration and Amendment Form, Form TA-1, is used by member banks and other entities to register before becoming, and then to act as, a transfer agent. They also use the reporting form to amend registration information as necessary. The information collected includes the company name, all business addresses, and information about the registrant's proposed activities as a transfer agent.

The Federal Reserve uses the information to act upon registration applications and to aid in performing supervisory duties. The Federal Reserve forwards copies of the completed registration forms to the Securities and Exchange Commission, which maintains registration data to aid in its statutory mandate to develop rules and standards applicable to all registered transfer agents.

Municipal Securities Dealer Activities

A state member bank, subsidiary, department, or division thereof that is a municipal securities dealer must register and file amendments with both the SEC and the Federal Reserve Board Board as a municipal securities dealer by filing the SEC's Form MSD, pursuant to Section 15 B(a) of the Securities Exchange Act of 1934 and the SEC's rule 15Ba2-1. A discussion of the bank's responsibilities as a municipal securities dealer, filing requirements, and other information, including examination procedures, are discussed in section 2030.1. A notice of withdrawal from registration as a municipal securities dealer pursuant to section 15B(c) must be filed with the SEC and the Board on the SEC's Form MSDW when the municipal securities dealer is a bank, or a separately identifiable department or division of a bank.

Government Securities Broker and Dealer Activities

If a state member bank, a foreign bank, a state branch or an agency of a foreign bank, or a commercial lending company owned or controlled by a foreign bank acts as a government securities broker or dealer, it may have to file notice with the Board as a government securities broker or dealer by filing FR G-FIN, pursuant to section 15C(a)(1)(B) of the Securities and

Exchange Act of 1934. This notice collects the institution's identifying information and the names and titles of its managers of government securities activities; the notice requires the institution to state whether any person associated with the respondent's government securities activities has been involved in disciplinary proceedings related to securities sales. When such a financial institution intends to cease engaging in broker or dealer activities, it must notify its regulator by using the Notice by Financial Institutions of Termination of Activities as a Government Securities Broker or Government Securities Dealer (FR G-FINW). A discussion of the bank's responsibilities as a government securities broker or dealer, filing requirements, and other information, including examination procedures, are discussed in SR-87-37, as amended. See also SR-94-5, 93-40, 90-1, and 88-26. The Board has also developed a Summary Report of Government Securities Broker/Dealer Activities (GSB-D report).

INTERNATIONAL ACTIVITIES

A bank must file certain reports if it is conducting or intends to conduct international activities through either foreign branches or Edge Act or agreement corporations. Listed below is a brief description of each of these reports.

FFIEC 009—Country Exposure Report

FFIEC 009 is filed quarterly by all U.S. banks and bank holding companies that meet certain ownership criteria and that, on a fully consolidated basis, have total outstanding claims of $30 million or more (or equivalent) on foreign residents of the U.S. Information is collected on the distribution by country of these foreign claims on foreigners held by U.S. banks and bank holding companies.

FFIEC 009a—Country Exposure Information Report

FFIEC 009a is a quarterly supplement to the Country Exposure Report (FFIEC 009) that provides specific information about the reporting institution's exposures in particular countries of U.S. banking institutions. Part A must be filed when exposure to a single country exceeds 1 percent of the banking institution's total assets or 20 percent of that institution's capital, whichever is less. Part B provides a list of countries where exposures were between 0.75 percent and 1 percent of the respondent's assets or between 15 percent and 20 percent of capital.

FFIEC 030/FFIEC 030S—Foreign Branch Report of Condition/Abbreviated Foreign Branch Report of Condition

These reports collect information on the structure and geographic distribution of foreign branch assets, liabilities, derivatives, and off-balance-sheet data of foreign branches of insured U.S.-chartered commercial banks. For purposes of this report, branches in Puerto Rico and other U.S. territories and possessions are considered foreign branches. Participation in the completion and submittal of the reports is mandatory.

The FFIEC 030 is filed quarterly for significant branches, with either $2 billion or commitments to purchase foreign currencies and U.S. dollar exchange of at least $5 billion. It is filed annually for other branches with total assets in excess of $250 million. The Federal Reserve uses the data to plan examinations and to analyze the foreign operations of domestic banks. Growth trends can be measured by bank, by country, and by bank within country. Aggregate data are a useful source of information on bank activities.

The FFIEC 030S collects financial data items for smaller, less-complex branches. It is filed annually, as of December 31, for foreign branches that do not meet the criteria to file the FFIEC 030 but have total assets of $50 million or more (but less than or equal to $250 million).

FR 2064—Recordkeeping Requirements

Effective September 1, 2001, the FR 2064 reporting form was replaced with a recordkeeping requirement and certain structure information was moved to the FR Y-10, Report of Changes in Organizational Structure. Internationally active U.S. banking organizations are still expected to maintain adequate internal records to allow examiners to review compliance with the investment provisions of Regulation K, under the recordkeeping requirements of FR 2064 (no form is associated with this recordkeeping requirement). For each investment made under subpart A of Regulation K, records should be maintained on the type of investment (for example, equity (voting shares, nonvoting shares, partnerships, interests conferring ownership rights, participating loans)), binding commitments, capital contributions, and subordinated debt), the amount of the investment, the percentage ownership, activities conducted by the company and the legal authority for such activities, and whether the investment was made under general-consent, prior-notice, or specific-consent authority. For those investments made under general-consent authority, information also must be maintained that demonstrates compliance with the various limits set out in sections 211.8 and 211.10 of Regulation K.

Information maintained by the banking organization should be made available to examination staff during the course of on-site examinations and pursuant to other supervisory requests. The recordkeeping must be adequate to permit examiners to determine compliance. Examiners are expected to review a sample of these investments to determine the accuracy of the organization's records and to determine compliance with the regulation. (See SR-02-2.)

FR 2314/FR 2314S—Financial Statements of Foreign Subsidiaries of U.S. Banking Organizations

The FR 2314 is reported quarterly or annually, as of the last calendar day of the quarter, based on certain threshold criteria. The FR 2314 collects selected financial information for direct or indirect foreign subsidiaries of U.S. state member banks, Edge and agreement corporations, and bank holding companies. The FR 2314 consists of a balance sheet and income statement; information on changes in equity capital, changes in the allowance for loan and lease losses, off-balance-sheet items, and loans; and a memoranda section. The FR 2314S should be filed annually as of December 31 and collects four financial data items for smaller, less complex subsidiaries.

FR 2502q—Quarterly Report of Assets and Liabilities of Large Foreign Offices of U.S. Banks

The FR 2502q report is to be submitted by U.S. head offices of bank holding companies, commercial banks, and Edge and agreement corporations that file for their major foreign branches and large banking subsidiaries. It provides a geographic breakdown of each office's assets and liabilities. Branches of a U.S. bank with $500 million or more in total assets and foreign banking subsidiaries with $2 billion or more in total assets, or $10 million in deposit liabilities, are required to file this report quarterly.

FR 2886b—Consolidated Report of Condition and Income for Edge Act and Agreement Corporations

FR 2886b covers the operations of the reporting corporation, including any international banking facilities of the reporter. Corporations engaged in banking must submit the data at least quarterly.

FR 2915—Report of Foreign Currency Deposits

FR 2915 collects seven-day averages of the amounts outstanding of foreign currency–denominated deposits held at U.S. offices of the depository institution, converted to U.S. dollars and included in the Report of Transaction Accounts, Other Deposits and Vault Cash (FR 2900). The report is collected with the reporting week that begins the third Tuesday of March, June, September, and December.

FR Y-10—Report of Changes in Organizational Structure

The Y-10 is used to report, among other things, information on worldwide organizational structure of bank holding companies (BHCs), member banks, Edge and agreement corporations, and the U.S. operations of foreign banking organizations (FBOs)[6]. The reporting form

6. An FBO with U.S. operations that is not or ceases to be a "qualifying foreign banking organization" (QFBO) within

includes detailed information on the structure of top-tier BHCs organized under U.S. or foreign law that are not FBOs, regardless of financial holding company (FHC) status; FBOs (both qualifying and nonqualifying) whether or not a BHC; state member banks not controlled by a BHC or FBO; Edge and agreement corporations not controlled by a BHC, FBO, or member bank; and nationally chartered banks not controlled by a BHC or FBO, but only with respect to their foreign investments. Within 30 calendar days of the event, banking organizations are required to report changes in investments as well as new activities (both foreign and domestic) on the FR Y-10 report. The reporting form includes the structure information on changes in FBOs (formerly the FR Y-10F) and the change in status of foreign branch of U.S. banking organizations (formerly the FR 2058).

The Board has placed greater importance on monitoring the level of international investments to ensure compliance with relevant banking laws and regulations, and to ensure that banking organizations do not expose themselves to undue risk. Examiners and other Federal Reserve System staff have a continuing need to monitor compliance with the Federal Reserve Act and sections 211.8–211.10 of the revised Regulation K.

Investments of less than 25 percent of the voting shares of a foreign nonbanking company are reported on the FR Y-10.[7] However, using the FR Y-6 (Annual Report of Bank Holding Companies) and the FR Y-7 report (Annual Report of Foreign Banking Organizations), banking organizations are required to report annually all investments, including those between 5 percent and 25 percent of voting shares.[8] The FR Y-6, FR Y-7, and the FR Y-10 collect information on structure and geographical information relating to foreign investments for ongoing monitoring.

the meaning of Regulation K, and is not otherwise treated as a QFBO under Regulation K, should consult with Federal Reserve staff regarding the scope of its reporting obligations. In general, an FBO that is not or is not treated as a QFBO is subject to the nonbanking restrictions of the BHC Act with respect to its worldwide operations and, thus, would have to report on the FR Y-10 changes to its worldwide organizational structure.

7. Regulation K authorizes portfolio investments in less than 20 percent of the shares of a foreign company regardless of the activities engaged in by that company. Portfolio investments within the general-consent limits are required to be reported annually on the FR Y-6.

8. Investments representing less than 5 percent ownership are not required to be reported.

Examiners are expected to review investment amounts and activities during the examination process. The portion of an examination dealing with Regulation K compliance should focus on confirming investments made pursuant to the general-consent provisions to meet the restrictions on investment amount and activities in sections 211.8–211.10 of Regulation K. Investments made under the general-consent provisions of Regulation K can be sizable, and thus can pose significant risk to the banking organization. Examiners should keep in mind that the Board has the authority to rescind an organization's general-consent investment privileges for various reasons, including safety-and-soundness concerns and noncompliance with the existing requirements of Regulation K. (See SR-02-2.)

Treasury International Capital Forms

The following reports are collected to gather information on international capital movements by U.S. banks and their Edge Act and agreement corporations, other depository institutions, international banking facilities, and bank holding companies.

- BC: Report of U.S. Dollar Claims of Depository Institutions, Bank Holding Companies/Financial Holding Companies, Brokers, and Dealers on Foreigners
- BL-1: Report of U.S. Dollar Liabilities of Depository Institutions, Bank Holding Companies/Financial Holding Companies, Brokers, and Dealers to Foreign-Residents
- BL-2: Report of Customers' U.S. Dollar Liabilities to Foreigners
- BQ-1: Report of Customers' U.S. Dollar Claims on Foreigners
- BQ-2: Part 1. Report of Foreign Currency Liabilities and Claims of Depository Institutions, Bank Holding Companies/ Financial Holding Companies, Brokers and Dealers, and of Their Domestic Customers vis-à-vis Foreigners
- BQ-2: Part 2. Report of Customers' Foreign Currency Liabilities to Foreigners
- BQ-3: Report of Maturities of Selected Liabilities of Depository Institutions, Bank Holding Companies/Financial Holding Companies, Brokers, and Dealers to Foreigners

D: Report of Holdings of, and Transactions in, Financial Derivatives Contracts

S: Purchases and Sales of Long-Term Securities by Foreign-Residents

SHC/SHCA: Report of U.S. Ownership of Foreign Securities, Including Selected Money Market Instruments

SHL/SHLA: Foreign-Residents' Holdings of U.S. Securities, Including Selected Money Market Instruments

Consolidated Foreign Currency Reports of Major Market Participants

The Treasury Foreign Currency (TFC) Report of major market participants collects data on the foreign exchange contracts and actively manages positions of major nonbank market participants. This report is collected and processed by the Federal Reserve System, acting as fiscal agent for the Department of the Treasury. These data are designed to assess and monitor the foreign exchange developments in the spot, forward, futures, and options markets on an individual and aggregate basis. The TFC series is comprised of three reports: (1) the Weekly Consolidated Foreign Currency Report of Major Market Participants (TFC-1), (2) the Monthly Consolidated Foreign Currency Report of Major Market Participants (TFC-2), and (3) the Quarterly Consolidated Foreign Currency Report (TFC-3).

Key Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC)® References

In June 2009, the FASB issued Statement No. 168, The FASB Accounting Standards Codification® and the Hierarchy of Generally Accepted Accounting Principles (FAS 168), to establish the FASB Codification as the single source of authoritative nongovernmental U.S. generally accepted accounting principles. The FASB Codification is effective for interim and annual periods ending after September 15, 2009. The following table is largely applicable to Call Reports and other regulatory reports, which are discussed in more detail in section 4150 of this manual. The table can also be used for precodification FASB references that are found throughout the *Commercial Bank Examination Manual*. More information regarding the FASB ASC Codification can be accessed at http://asc.fasb.org/.

Review of Regulatory Reports
Examination Objectives
Effective date May 1996

Section 4550.2

1. To determine that required reports are being filed on time.
2. To determine that the contents of reports are accurate.
3. To effect corrective action when official reporting, practices, policies, or procedures are deficient.

1. Complete or update the Internal Control Questionnaire, if selected for implementation.
2. Determine the bank's historical record of submitting timely and accurate reports by reviewing workpapers and the Regulatory Reports Monitoring Program.
3. Instruct those examiners assigned specific departments that generate regulatory reports to:
   a. Determine from department records what regulatory reports should have been filed because of the passage of time or the occurrence of an event.
   b. Obtain copies of all regulatory reports filed by the department since the previous examination.
   c. Check the reports obtained in the preceding step and the date of filing against statutory and regulatory requirements.
   d. Instruct the bank to prepare and submit any delinquent reports.
   e. For the most recent filing of those reports submitted on a periodic basis and all other reports submitted since the last examination, perform the following:
      - Reconcile the line items shown on the reports to the bank's general ledger, subsidiary ledgers, or daily statements.
      - Obtain the bank's workpapers applicable to each line item and reconcile individual items to the reports.
      - Determine whether other examining personnel uncovered any misstatement of assets, liabilities, income, or expense during their examination of the various departments.
      - Determine that the reports are prepared in accordance with Federal Reserve and/or other applicable instructions.
   f. On the basis of the work performed in the preceding step, perform either of the following, as appropriate:
      - If the reports are found to be substantially correct, limit the review of the remaining periodic reports filed since the last examination to the reconciliation of financial statement account categories to general ledger control accounts.
      - If the reports are found to be substantially incorrect, extend the procedures outlined in step 3.e to the remaining periodic reports filed since the last examination for those areas where items were found to be substantially incorrect.
   g. Scan all periodic reports for unusual fluctuations. Investigate fluctuations, if any.
4. Review compliance with the missing, lost, counterfeit, or stolen securities requirements of 17 CFR 240.17f-1 by:
   a. Discussing with appropriate officers and personnel the procedures in effect regarding the filing of Form X-17F-1A (Missing, Lost, Stolen, or Counterfeit Securities Report).
   b. Discussing with the appropriate persons the procedures in effect regarding compliance with the inquiry requirements.
   c. Substantiating Internal Control questions 6 through 15, as appropriate.
5. Prepare comments in appropriate report form and discuss with management:
   a. Violations of law or regulations.
   b. Inaccurate reports, and, if applicable, the need for amended reports. If amended reports are considered appropriate, consult with Reserve Bank supervisory personnel before requesting the bank to refile the report(s).
   c. Material differences in the annual report of the state member bank whose securities are subject to registration pursuant to the Securities Exchange Act of 1934. (State law governs the furnishing of annual reports to stockholders for banks with less than 500 shareholders.)
   d. Recommended corrective action when policies, practices, or procedures are deficient or when reports have been filed incorrectly, late, or not at all.

   The comments must include, if applicable, the name(s) and the "as of" date(s) of amended report(s); and the date of filing, amount of, and explanation of any material difference existing in either the numerical items or narrative statements in the annual report.
6. Update the workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices, and procedures for regulatory reports. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information.

1. Do requests for all regulatory reports come to one individual or department?
2. Does that individual or department have the authority to request that required information be prepared by the applicable banking department?
3. To ensure that all regulatory reports are submitted on a timely basis and are accurate, determine the following:
   a. If completion of the report requires information from several departments:
      - Is a written memorandum sent to the various departments requesting the information?
      - Is the memorandum addressed to a department head?
      - Does the memorandum have a due date?
      - Are procedures in effect to send second requests if the memorandum is not returned by its original due date?
      - Does completion of the memorandum require two signatures, that of the person gathering the information and that of the person's superior who is held responsible for its accuracy?

   b. If completion of the report requires information from one department, is there separation of duties to ensure that the raw data to complete the report is compiled by one person and verified by another person, prior to submission?
4. After the report is prepared, but prior to its submission, is it checked by:
   a. The supervisor of the department preparing the report, who takes personal responsibility for its accuracy and submission on a timely basis?
   b. Bank personnel who have no part in the report's preparation?
5. Do report workpapers leave a clear audit trail from the raw data to the finished report and are they readily available for inspection?

Review the bank's system for compliance with the reporting and inquiry requirements of the lost and stolen securities provisions of 17 CFR 240.17f-1.

6. Has the bank registered as a direct or indirect inquirer with the Securities Information Center, Inc.?
7. Are reports submitted within one business day of discovery when:
   a. Theft or loss of a security is believed to have occurred through criminal activity?
   b. A security has been missing or lost for two business days, except in certain cases?
   c. A security is counterfeit?
8. Are reports submitted by the bank, as a delivering institution, within two business days of notification of nonreceipt when:
   a. Delivery is in person and no receipt is maintained by the bank?
   b. Delivery of securities is made by mail or via draft, and payment is not received within 10 business days and confirmation of nondelivery has been made by the receiving institution?
   c. Securities are lost in transit and the certificate number(s) can be determined?
9. Are reports submitted by the bank, as a receiving institution, within one business day of discovery and notification of the certificate number(s) when:
   a. Securities are delivered through a clearing agency and the delivering institution has supplied the certificate numbers within the required two business days after request?
   b. Securities are delivered over the window and the delivering institution has a receipt and supplies the certificate number(s) within the required two business days after request?
10. Are securities that are considered to be lost or missing as a result of counts or verifications reported no later than ten business days after discovery or as soon after as the certificate number(s) can be ascertained?
11. Are copies of those reports submitted to the registered transfer agent for the issue and, in

the case of suspected criminal activity, the Federal Bureau of Investigation?

12. Are all recoveries of securities reported within one business day of recovery or finding? (Note: Only the institution that initially reported the security as missing can make a recovery report.)
13. Are inquiries made when the bank takes in any security that is not:
    a. Received directly from the issuer or issuing agent at issuance?
    b. Received from another reporting institution or Federal Reserve bank in its capacity as fiscal agent?
    c. Received from a bank customer and is registered in the name of the customer or its nominee?
14. Are all reports made on Form X-17F-1A or facsimile?
15. Are copies of Form X-17F-1A and subsequent confirmations and other information received maintained for three years in an easily accessible location?

CONCLUSION

16. Does the foregoing information provide an adequate basis for evaluating internal controls in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
17. Are internal controls adequate based on a composite evaluation, as evidenced by answers to the foregoing questions?

To meet competitive pressures, banks provide a large number of customer services that normally do not result in assets and liabilities subject to entry on the general ledger, but that may involve significant risk. These customer services include fiduciary accounts, investment management, customer safekeeping, rental of safe deposit box facilities, purchase and sale of investments for customers, sale of traveler's checks, and collection department services. The bank is responsible for properly maintaining and safeguarding all consigned items. Banks accomplish the necessary control and review of consigned and collection items through non-ledger control or memorandum accounts. Automated systems, such as a Securities Movements Accounting and Control system (SMAC), can provide proper control for fiduciary, customer safekeeping, custodial, and investment management accounts.

CUSTOMER SAFEKEEPING

Custodial and Investment Management Accounts

Banks may act as custodians for customers' investments such as stocks, bonds, or gold. Custodial responsibilities may involve simple physical storage of the investments, as well as recording sales, purchases, dividends, and interest.[1] On the other hand, responsibilities may be expanded to include actually managing the account. This type of account management includes advising customers when to sell or buy certain investments, as well as meeting their recording requirements. In addition, the bank may lend securities from custodial accounts if authorized by the customer. This transaction allows the bank, as custodian, to charge a fee for lending the securities, thereby reducing its net custody costs. Also, both the bank and the custodial account benefit from interest earned on the transaction. This type of transaction should be governed by a policy that clearly specifies quality and maturity parameters. Additionally, to prevent defaults, borrowers should be subject to minimum credit standards, ongoing financial monitoring, and aggregate borrowing limits. Banks may also indemnify customer accounts against losses from a borrower or collateral default. Such indemnification creates a contingent financial risk to the institution.

Before providing such management and/or lending services, the bank should seek the advice of legal counsel about applicable state and federal laws concerning that type of bank-customer relationship. In addition, the use of signed agreements or contracts that clearly define the services to be performed by the bank is a vitally important first step in limiting the bank's potential liability and risk. The bank must also ensure that a proper control environment, including joint custody and access procedures, is established and maintained in support of custodial and management activities. Clearly, the largest and most active companies take on an increased level of risk. For companies that are aggressively pursuing custodial services or other nontraditional lines of business, the examiner should consider an expanded scope of review for these activities.

Safe Deposit Boxes

When banks maintain safe deposit box facilities, the bank and the customer enter into a contract whereby the bank receives a fee for renting safe deposit boxes. The bank assumes the responsibility of exercising reasonable care and precaution against loss of the box's contents. When a loss does occur, unless the bank can demonstrate it has maintained the required standard of care, it could be held liable for the loss. The required standard of care is defined as that which would be taken by a reasonably prudent and careful person engaged in the same business. Two different keys are required to open the box, and the customer and the bank each have one. Careful verification of a customer's identification is critical to meeting an appropriate standard of care. The customer is not required to disclose the contents of the box to the bank and upon court order the bank may gain access to the box without the presence of the customer.

1. Collection of interest and dividend income cannot be facilitated by the bank where the securities held are still in the customer's name, unless the paying agent is advised to change the dividend/interest address. Typically, when securities remain in the registered name of the holder, the holder continues to receive the dividend/interest payments. If the securities are re-registered into the name of the bank (or its nominee), then dividends and interest are received by the bank for the credit of the custodial customer.

Safekeeping

In addition to items held as collateral for loans, banks occasionally hold customers' valuables for short periods of time. The bank may or may not charge a fee for the service. Although it is a convenience for bank customers, many banks attempt to discourage the practice by emphasizing the benefits of a safe deposit box. When it is not possible or practical to discourage a customer, the same procedures that are employed in handling collateral must be followed. Items to be stored should be inventoried by two persons and maintained under dual control in the bank's vault. A multicopy, prenumbered, safekeeping receipt should be prepared with a detailed description of the items accepted and it should be signed by the customer. Sealed packages with contents unknown to the bank should never be accepted for safekeeping.

COLLECTION ITEMS

The collection department is one of the most diversified areas in the bank. It engages in receiving, collecting, and liquidating items which generally require special handling and for which credit normally is given only after final payment is received. The bank acts as agent for its customers or correspondents and receives a fee for that service. Even though general ledger accounts rarely are used in the collection process, the importance and value of customer assets under bank control demand the use of accounting procedures adequate to provide a step-by-step historical summary of each item processed. An audit trail must be developed to substantiate the proper handling of all items and to reduce the bank's potential liability.

CONSIGNED ITEMS

The most common items held on consignment by banks are unissued gift or traveler's checks; commemorative coins, postage stamps, and other consigned or promotional assets; and gold. Traveler's checks may be useful to customers because of the possibility that customers can obtain a refund if the checks are lost or stolen. Traveler's checks are issued for a fee or commission shared by the consignor and the issuing bank. Generally, a working supply of the checks is maintained at the teller line or selling station and a reserve supply is maintained under dual control in the bank's vault.

Under paragraph 7 of section 5136 of the Revised Statutes, national banks may exercise their powers "by buying and selling exchange, coin and bullion." This statute is applied to state member banks under section 9, paragraph 20, of the Federal Reserve Act. Consequently, banks may deal only in gold or silver that qualifies as coin or bullion. The term "coin" means coins minted by a government or exact restrikes, minted at a later date by, or under the authority of, the issuing government.

Rarely does a bank receive sufficient revenues from the above transactions to cover the cost of handling them. However, banks must offer a full range of services to be competitive and attract customers. The bank assumes the responsibility and related contingent liability to properly maintain the assets of others and to properly record all transactions involved with the consigned items.

INTERNAL CONTROL CONSIDERATIONS

It is essential that bank policy provides for proper internal controls, operating procedures, and safeguards. In all cases, control totals must be generated and the function balanced periodically by someone not associated with the function. Proper insurance protection must also be obtained to protect against claims arising from mishandling, negligence, mysterious disappearance, or other unforeseen occurrences. If an employee should, by fraud or negligence, permit unauthorized removal of items held for safekeeping or issue traveler's checks improperly, the bank may be held liable for losses. Therefore, banks should maintain adequate bonding for contingent liabilities and the examiner should review applicable insurance policies.

Other Non-Ledger Control Accounts

Examination Objectives

Effective date May 1996

Section 4560.2

1. To determine if the policies, practices, procedures, and internal controls regarding custodial activities, consigned items, and other non-ledger control accounts are adequate.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To determine compliance with laws and regulations.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

1. If selected for implementation, complete or update the Consigned Items and Other Non-Ledger Control Accounts section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned ‘‘Internal Control’’ and determine if appropriate corrections have been made.
4. Obtain a listing of consigned items or assets, payment instruments, and other non-ledger control accounts from the bank.
5. Scan any existing control accounts for any significant fluctuations and determine the cause of fluctuations.
6. Compare bank control records to remittance records for unissued U.S. savings bonds and state-issued food stamp value-payment cards or instruments.
7. Determine compliance with laws and regulations pertaining to non-ledger control accounts by determining, through observation and discussion with management, that there exist no violation of the prohibition against a bank participating in lotteries (section 9A of the Federal Reserve Act (12 USC 25A)).
8. Prepare in appropriate report form, and discuss with appropriate officer(s):
   a. Violations of laws and regulations.
   b. Recommended corrective action when policies, practices or procedures are deficient.
9. Update the workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices and procedures for consigned items and other non-ledger items. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

SAFE DEPOSIT BOXES

1. Has counsel reviewed and approved the lease contract in use which covers the rental, use and termination of safe deposit boxes?
*2. Is a signed lease contract on file for each safe deposit box in use?
3. Are receipts for keys to the safe deposit box obtained?
4. Are officers or employees of the bank prohibited from acting as a deputy or having the right of access to safe deposit boxes except their own or one rented in the name of a member of their family?
5. Is the guard key to safe deposit boxes maintained under absolute bank control?
6. Does the bank refuse to hold, for renters, any safe deposit box keys?
7. Is each admittance slip signed in the presence of the safe deposit clerk and the time and date of entry noted?
8. Are admittance slips filed numerically?
9. Are vault records noted for joint tenancies and co-rental contracts requiring the presence of two or more persons at each access?
10. Are the safe deposit boxes locked closed when permitting access and the renter's key removed and returned to the customer?
11. Is the safe deposit clerk prohibited from assisting the customer in looking through the contents of a box?
12. Does the safe deposit clerk witness the relocking of the box?
13. Are all coupon booths examined by an attendant after being used but before being assigned to another renter, to be sure the previous person did not leave behind anything of value?
14. Has a standard fee schedule for this service been adopted?
15. Are all collections of rental income recorded when received?
16. Are all safe deposit boxes where lessee is delinquent in rent, flagged or otherwise marked so that access will be withheld until rent is paid?
17. Is there a file maintained of all attachments, notices of bankruptcy, letters of guardianship and letters testamentary served on the bank?
18. Is an acknowledgment of receipt of all property, and a release of liability signed upon termination of occupancy?
19. Are locks changed when boxes are surrendered, whether or not keys are lost?
20. Is drilling of boxes witnessed by two individuals?
21. Are the contents of drilled boxes inventoried, packaged, and placed under dual control?
*22. Are all extra locks and keys maintained under dual control?

Conclusion

23. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
24. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

ITEMS IN SAFEKEEPING

*25. Are such items segregated from bank-owned assets and maintained under dual control?
26. Is there a set charge or schedule of charges for this service?

27. Do bank policies prohibit holding items in safekeeping free of charge?
28. Are duplicate receipts issued to customers for items deposited in safekeeping?
29. Are the receipts prenumbered?
*30. Is a safekeeping register maintained to show details of all items for each customer?
*31. Is a record maintained of all entries to custodial boxes or vaults?
32. Does the bank refuse to accept sealed packages when the contents are unknown?
33. If the bank has accepted sealed packages for safekeeping, the contents of which are not described, has the approval of the bank's counsel been obtained?
34. When safekeeping items are released, are receipts obtained from the customer?

Conclusion

35. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
36. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

CUSTODIAN ACCOUNTS

(Omit this section if the bank's trust department handles such accounts).

*37. Does the bank have written contracts on hand for each account that clearly define the functions to be performed by the bank?
38. Has bank counsel reviewed and approved the type and content of the contracts being used?
39. Does the bank give customers duplicate receipts with detailed descriptions, including dates of coupons attached, if applicable, for all items accepted?
40. Are those receipts prenumbered?
41. Do bank procedures prohibit its holding any investments not covered by a sale or purchase order in this department?
42. Are all orders for the purchase and sale of investments properly authorized in the account contract or signed by customers?
43. For coupon securities held by the bank:
    a. Is a tickler file or other similar system used to ensure prompt coupon redemption on accounts where the bank has been authorized to perform that service?
    b. Are procedures in effect to prevent clipping of coupons where bank is not so authorized?
    c. Have procedures been adopted to insure prompt customer credit when coupon proceeds or other payments are received?
*44. Are all investment items handled in this area maintained under dual control?
45. Have procedures been established for withdrawal and transmittal of items to customers?
*46. Does an officer review and approve all withdrawals prior to the transaction?
47. Has a standard fee schedule for this service been adopted?

Conclusion

48. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
49. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

COLLECTION ITEMS

50. Is access to the collection area controlled (if so, indicate how)?
*51. Are permanent registers kept for incoming and outgoing collection items?
52. Are all collections indexed in the collection register?
53. Do such registers furnish a complete history of the origin and final disposition of each collection item?

54. Are receipts issued to customers for all items received for collection?
55. Are serial numbers or prenumbered forms assigned to each collection item and all related papers?
*56. Are all incoming tracers and inquiries handled by an officer or employee not connected with the processing of collection items?
57. Is a record kept to show the various collection items which have been paid and credited as a part of the day's business?
58. Is an itemized daily summary made of all collection fees, showing collection numbers and amounts?
59. Are employees handling collection items periodically rotated, without advance notification, to other banking duties?
*60. Is the employee handling collection items required to make settlement with the customer on the same business day that payment of the item is received?
61. Does the bank have an established policy of not allowing the customer credit until final payment is received?
*62. Have procedures been established, including supervision by an officer, for sending tracers and inquiries on unpaid collection items in the hands of correspondents?
63. In the event of nonpayment of a collection item, is the customer notified and the item promptly returned?
*64. Are the files of notes entered for collection clearly and distinctly segregated from bank-owned loans and discounts?
*65. Are collection notes above maintained under memorandum control and is the control balanced regularly?
66. Are collection files locked when the employee handling such items is absent?
67. Are vault storage facilities provided for collection items carried over to the next day's business?
*68. Does the collection teller turn over all cash to the paying teller at the close of business each day and start each day with a standard change fund?
69. Has a standard fee schedule for this service been adopted?
70. Is the fee schedule always followed?
71. Is a permanent record maintained for registered mailed?

Conclusion

72. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
73. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

CONSIGNED ITEMS

*74. Is the reserve stock of consigned items maintained under dual control?
75. Are working supplies kept to a reasonable minimum, i.e., two or three days' supply, and adequately protected during banking hours?
*76. Is a memorandum control maintained of consigned items?
77. Are separate accounts with the consignor maintained at each issuing location (branch), if applicable?
*78. Is the working supply put in the vault at night and over weekends or holidays or is it otherwise protected?
79. Are remittances for sales made on a regularly scheduled basis, if not daily?

Conclusion

80. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
81. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

Sale of Uninsured Nondeposit Debt Obligations on Bank Premises

Effective date May 1996

Section 4570.1

INTRODUCTION

State member banks have, at times, engaged in issuing nondeposit debt securities on their own behalf or assisted in the sale of these instruments (for example, commercial paper or other short-term or long-term debt securities, such as thrift notes and subordinated debentures) on behalf of their parent bank holding companies or other affiliates. It is important to ensure that these securities are not issued, marketed, or sold in a manner that could give the purchaser the impression that the obligations are federally insured deposits. Consequently, state member banks and their subsidiaries that have issued or plan to issue nondeposit debt securities should not market or sell these instruments in any public area of the bank where retail deposits are accepted, including any lobby area of the bank.

PROCEDURES

This policy is not intended to prevent banks from selling their uninsured debt instruments in a manner that is consistent with sound and prudent banking practices. These instruments generally may be sold to investors in various ways away from the retail deposit-taking and general lobby areas of the bank. In this regard, personnel not regularly involved in deposit-taking activities or in opening new deposit accounts may make prospective investors in the community aware of uninsured debt obligations outside of the retail deposit-taking and general lobby areas. Also, these instruments may generally be sold by an employee or officer segregated from the retail deposit-taking and general lobby areas of the bank, even if the employee or officer occasionally accepts deposits or opens an account (but not as a part of his or her regular duties), so long as the arrangement is not structured in a way that misleads the purchaser or is otherwise contrary to supervisory guidelines.

Further, state member banks involved in this activity should establish procedures to ensure that potential purchasers understand that the debt security is not federally insured or guaranteed. Specifically, the debt security should boldly state on its face that it is not insured by the Federal Deposit Insurance Corporation. In addition, this information should be verbally stated to the purchaser, and, in cases where purchasers do not take physical possession of the obligation, the purchaser should be provided with printed advice that conveys this information.

SUPERVISORY GUIDANCE

As noted, a state member bank may also become involved in the sale of uninsured debt obligations of its parent bank holding company or a nonbank affiliate. It is a longstanding policy of the Federal Reserve that debt obligations of a bank holding company or a nonbank affiliate not be issued, marketed, or sold in a way that conveys the misimpression or misunderstanding that these instruments are either (1) federally insured deposits or (2) obligations of or guaranteed by the subsidiary bank. The purchase of these holding company obligations by retail depositors of the subsidiary bank can, in the event of default, result in losses to individuals who believed that they had acquired federally insured or guaranteed instruments. In addition to the problems created for these individuals, this situation could impair public confidence in the bank and lead to unexpected withdrawals or liquidity pressures.

If a state member bank intends to market or sell or to allow its parent holding company or a nonbank affiliate to market or sell uninsured nondeposit debt obligations on bank premises, the bank should establish internal controls to ensure that the promotion, sale, and subsequent customer relationship resulting from the sale of these debt obligations is separated from the retail deposit-taking functions of the bank. For further information on commercial paper, see section 2030, “Bank Dealer Activities.”

Sale of Uninsured Nondeposit Debt Obligations on Bank Premises
Examination Objectives
Effective date May 1996

Section 4570.2

1. To determine if uninsured nondeposit debt obligations of the state member bank or an affiliate are sold on bank premises.
2. To determine if the policies, practices, procedures, and internal controls for the sale of uninsured nondeposit debt instruments are adequate.
3. To ensure that the marketing and sale of uninsured nondeposit debt instruments are not conducted in a manner that conveys the impression or suggestion that they are federally insured deposits. Additionally, holding company or affiliate instruments should not convey the impression or suggestion that they are obligations of or guaranteed by the state member bank.
4. To ensure that the marketing and sale of uninsured nondeposit debt obligations are sufficiently separated and distinguished from retail banking operations, particularly the deposit-taking function.
5. To initiate corrective action if policies, practices, or procedures related to the sale of uninsured nondeposit debt instruments are deficient.

Sale of Uninsured Nondeposit Debt Obligations on Bank Premises

Examination Procedures

Effective date September 1992

Section 4570.3

1. Verify that the bank does not sell uninsured nondeposit debt instruments at teller windows or other areas where retail deposits are routinely accepted, including general lobby areas surrounding teller windows and personal banking desks.
2. Assess the adequacy of disclosures and the separation of the marketing and sale of uninsured nondeposit debt obligations from the retail deposit-taking function by assuring that:
   a. the debt instrument, advertising, and all related documents disclose prominently in bold print that the debt instrument is not insured by the Federal Deposit Insurance Corporation (bank holding company debt instruments should also state that the instrument is not an obligation of, or guaranteed by, the bank);
   b. advertisements that promote uninsured debt obligations of the bank (or an affiliate) do not also promote insured deposits of the bank in a way that could lead to confusion;
   c. the obligor of the uninsured debt instrument is prominently disclosed and names or logos of the bank are not used on holding company or nonbank affiliate instruments in a way that might suggest the insured bank is the obligor;
   d. adequate verbal disclosures are made during telemarketing contacts and at the time of sale (a review of employee instructions or a telemarketing script, or appropriate questions directed to an employee handling this function, could assist an examiner in assessing the adequacy of verbal disclosure);
   e. retail deposit-taking employees of the insured depository institution are not engaged in the promotion or sale of uninsured nondeposit debt instruments;
   f. information on uninsured nondeposit debt instruments is not contained in the retail deposit statements of customers or in the immediate retail deposit-taking area; and
   g. account information on holdings of uninsured nondeposit debt instruments is not included on insured deposit statements.
3. Encourage the bank to obtain a signed statement from the customer indicating that the customer understands that the uninsured debt instrument is not a deposit and is not FDIC insured.

Depository institutions have become increasingly involved in selling uninsured nondeposit investment products, such as mutual funds or annuities, on their premises to retail customers. In response to this development, an interagency statement on retail sales of nondeposit investment products (interagency statement) was issued on February 15, 1994, to enhance customer protection and lessen possible customer confusion that these products are insured deposits.[1] The interagency statement applies to all insured banks and thrifts, including state member banks and the U.S. branches and agencies of foreign banks.

The guidelines contained in the interagency statement apply to retail recommendations or sales of nondeposit investment products made by—

- employees of a depository institution,
- employees of an affiliated or unaffiliated third party occurring on the premises of the banking organization (including telephone sales, investment recommendations by employees, and sales or recommendations initiated by mail from its premises), and
- sales resulting from a referral of retail customers by the institution to a third party when the depository institution receives a benefit for the referral.

Retail sales include (but are not limited to) sales to individuals by depository-institution personnel or third-party personnel conducted in or adjacent to a depository institution's lobby area. The sales of government and municipal securities made in a depository institution's dealer department located away from the lobby area are not subject to the interagency statement. In addition, the interagency statement generally does not apply to fiduciary accounts administered by a depository institution. However, for fiduciary accounts where the customer directs investments, such as self-directed individual retirement accounts, the disclosures prescribed by the interagency statement (see the "Disclosures and Advertising" subsection below) should be provided. Furthermore, the interagency statement applies to affiliated broker-dealers when the sales occur on the premises of the depository institution. The interagency statement also applies to sales activities of an affiliated broker-dealer resulting from a referral of retail customers by the depository institution.

The Rules of Fair Practice of the Financial Industry Regulatory Authority govern sales of securities by its member broker-dealers. In addition, the federal securities laws prohibit materially misleading or inaccurate representations in connection with the offer or sale of securities and require that sales of registered securities be accompanied by a prospectus that complies with SEC disclosure requirements.

Examiners should determine whether the institution has adequate policies and procedures to govern the conduct of the sales activities on bank premises and, in particular, whether sales of nondeposit investment products are distinguished from the deposit-taking activities of the bank through disclosure and physical means that are designed to prevent customer confusion.

Although the interagency statement does not apply to sales of nondeposit investment products to nonretail customers, such as fiduciary customers, examiners should also apply the examination procedures prescribed in SR-94-34 ("Examination Procedures for Retail Sales of Nondeposit Investment Products," May 26, 1994) when retail customers are directed to the institution's trust department, where they may purchase nondeposit investment products by simply completing a customer agreement.

PROGRAM MANAGEMENT

Banks must adopt policies and procedures governing nondeposit investment product retail sales programs. These policies and procedures should be in place before the commencement of the retail sale of nondeposit investment products on bank premises.

The bank's board of directors is responsible for ensuring that retail sales of nondeposit investment products comply with the interagency statement and with all applicable state and federal laws and regulations. Therefore, the

1. The interagency statement was issued to Federal Reserve Banks under cover of a supervisory letter, SR-94-11 ("Interagency Statement on Retail Sales of Nondeposit Investment Products," February 17, 1994). Additional guidance is provided in SR-95-46 ("Interpretation of Interagency Statement on Retail Sales of Nondeposit Investment Products," September 14, 1995).

board, or a designated committee of the board, should adopt written policies that address the risks and management of these sales programs. Policies and procedures should reflect the size, complexity, and volume of the institution's activities or, when applicable, the institution's arrangements with any third parties selling these products on bank premises. The bank's policies and procedures should be reviewed periodically by the board of directors, or its designated committee, to ensure that they are consistent with the institution's current practices, applicable laws, regulations, and guidelines.

A bank's policies and procedures for nondeposit investment products should, at a minimum, address (1) disclosure and advertising, (2) the physical separation of investment sales from deposit-taking activities, (3) compliance and audit requirements, (4) suitability concerns, and (5) other sales practices and related risks. In addition, policies and procedures should address the following areas.

Types of Products Sold

When evaluating nondeposit investment products, management should consider what products best meet the needs of the bank's customers. Policies should outline the criteria and procedures that will be used to select and periodically review nondeposit investment products that are recommended or sold on the bank's premises. Institutions should periodically review the products offered to ensure that they meet their customers' needs.

Use of Identical or Similar Names

Because of the possibility of customer confusion, a nondeposit investment product must not have a name that is identical to the name of the bank or its affiliates. However, a bank may sell a nondeposit investment product with a similar name as long as the sales program addresses the even greater risk that customers may regard the product as an insured deposit or other obligation of the bank. Moreover, the bank should review the issuer's disclosure documents for compliance with SEC requirements, which call for a thorough explanation of the relationship between the bank and the mutual fund.

The Federal Reserve applies a stricter rule to investment adviser activities under Regulation Y (12 CFR 225.125) when a bank holding company (as opposed to a bank) or nonbank subsidiary acts as an investment advisor to a mutual fund. In this case, the fund may not have a name that is identical to, similar to, or a variation of the name of the bank holding company.

Permissible Use of Customer Information

Banks should adopt policies and procedures on the use of confidential customer information for any purpose in connection with the sale of nondeposit investment products. The industry guidelines permit institutions to share with third parties only limited customer information, such as the name, address, telephone number, and types of products owned. The guidelines do not permit the sharing of more confidential information, such as specific or aggregate dollar amounts of investments or net worth, without the customer's prior acknowledgment and written consent.

Arrangements with Third Parties

A majority of all nondeposit investment products sold on bank premises are sold by representatives of third parties. Under these arrangements, the third party has access to the institution's customers, and the bank is able to make nondeposit investment products available to interested customers without having to commit the resources and personnel necessary to sell the products directly. Third parties include wholly owned subsidiaries of a bank, bank-affiliated broker-dealers (section 20 companies[2] or discount brokerage firms), unaffiliated broker-dealers, insurance companies, or other companies in the business of distributing nondeposit investment products on a retail basis.

Bank management should conduct a comprehensive review of an unaffiliated third party before entering into any arrangement. The review should include an assessment of the third party's

2. A nonbank subsidiary of a bank holding company that has been authorized to underwrite and deal in certain debt and equity securities that cannot be underwritten or dealt in by member banks directly.

financial status, management experience, reputation, and ability to fulfill its contractual obligations to the bank, including its compliance with the interagency statement.

Banks should enter into written agreements with any affiliated and unaffiliated third parties that sell nondeposit investment products on bank premises. These agreements should be approved by the bank's board of directors or its designated committee. Agreements should outline the duties and responsibilities of each party; describe third-party activities permitted on the institution's premises; address the sharing or use of confidential customer information for investment sales activities; and define the terms for use of the bank's office space, equipment, and personnel. If an arrangement includes dual employees (bank employees also utilized by a third party), the agreement must provide for written employment contracts that specify the duties of these employees and their compensation arrangements.

In addition, a third-party agreement should specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the interagency statement. The agreement should authorize the institution to monitor the third party's compliance with its agreement, as well as authorize the bank and Federal Reserve examination staff to have access to third-party records considered necessary to evaluate this compliance. These records should include examination results, sales practice reviews, and related correspondence provided to the third party by securities regulatory authorities. Finally, the agreement should provide for indemnification of the institution by an unaffiliated third party for the conduct of its employees in connection with its sales activities. Notwithstanding the provisions of a third-party agreement, bank management should monitor the conduct of nondeposit investment product sales programs to ensure that sales of the products are distinct from other bank activities and are not conducted in a manner that could confuse customers about the lack of insurance coverage for these investments.

Contingency Planning

Nondeposit investment products are subject to price fluctuations caused by changes in interest rates and stock market valuations. In the event of a sudden, sharp drop in the market value of nondeposit investment products, institutions may experience a heavy volume of customer inquiries, complaints, and redemptions. Therefore, management should develop contingency plans to address these situations. A major element of any contingency plan should be to provide customers with access to information about their investments. Other factors to consider in contingency planning include public relations and the ability of operations staff to handle increased volumes of transactions.

DISCLOSURES AND ADVERTISING

Content, Form, and Timing of Disclosures

Nondeposit investment product sales programs should ensure that customers are clearly and fully informed of the nature and risks associated with these products. In addition, nondeposit investment products must be clearly differentiated from insured deposits. The interagency statement identifies the following minimum disclosures that must be made to customers when providing investment advice, making investment recommendations, or effecting nondeposit investment product transactions:

- They are not insured by the FDIC.
- They are not deposits or other obligations of the institution and are not guaranteed by the institution.
- They are subject to investment risks, including the possible loss of the principal invested.

There are limited situations in which the disclosure guidelines need not apply or where a shorter logo format may be used in lieu of the longer written disclosures.

The interagency statement disclosures do not need to be provided in the following situations:

- radio broadcasts of 30 seconds or less;
- electronic signs,[3] and
- signs, such as banners and posters, when they are used only as location indicators.

3. "Electronic signs" may include billboard-type signs that are electronic, time-and-temperature signs, and ticker-tape signs. Electronic signs would not include such media as television, on-line services, or ATMs.

Additionally, third-party vendors not affiliated with the depository institution need not make the interagency statement disclosures on nondeposit investment product confirmations and in account statements that may incidentally, with a valid business purpose, contain the name of the depository institution.

Shorter, logo-format disclosures may be used in visual media, such as television broadcasts, ATM screens, billboards, signs, posters, and written advertisements and promotional materials, such as brochures. The text of an acceptable logo-format disclosure would include the following statements:

- Not FDIC-Insured.
- No Bank Guarantee.
- May Lose Value.

Disclosure is the most important way of ensuring that the differences between nondeposit investment products and insured deposits are understood by retail customers. Accordingly, it is critical that the minimum disclosures be presented clearly and concisely in both oral and written communications. In this regard, the minimum disclosures should be provided—

- orally during any sales presentations (including telemarketing contacts) or when investment advice is given,
- orally and in writing before or at the time an investment account to purchase these products is opened, and
- in all advertisements and other promotional materials (discussed further below).

The minimum disclosures may be made on a customer account agreement or on a separate disclosure form. The disclosures must be conspicuous (highlighted through bolding, boxes, and/or a larger typeface). Disclosures contained directly on a customer account agreement should be located on the front of the agreement or adjacent to the customer signature block.

Banks are to obtain a written acknowledgment—on the customer account agreement or on a separate form—from a customer confirming that he or she has received and understands the minimum disclosures. For nondeposit investment product accounts established before the issuance of the interagency statement, banks should obtain a disclosure acknowledgment from the customer at the time of the customer's next purchase transaction. If an institution solicits customers by telephone or mail, it should ensure that the customers receive the written disclosures and an acknowledgment to be signed and returned to the institution.

Customer account statements, including combined statements for linked accounts and trade confirmations that are provided by the bank or an affiliate, should contain the minimum disclosures if they display the name or logo of the bank or its affiliate. Statements that provide account information about insured deposits and nondeposit investment products should clearly segregate the information about nondeposit investment products from the information about deposits to avoid customer confusion.

Advertising

The interagency statement provides that advertisements in all media forms that identify specific investment products must conspicuously include the minimum disclosures and must not suggest or convey any inaccurate or misleading impressions about the nature of a nondeposit investment product. Promotional material that contains information about both FDIC-insured products and nondeposit investment products should clearly segregate the information about the two product types. When promotional sales materials related to nondeposit investment products are displayed in the bank's retail areas, they should be grouped separately from material related to insured bank products.

Telemarketing scripts should be reviewed to determine whether bank personnel are inquiring about customer investment objectives, offering investment advice, or identifying particular investment products or types of products. In these cases, the scripts must contain the minimum disclosures, and bank personnel relying on the scripts must be formally authorized to sell nondeposit investment products by their employers. Further, these personnel must have training that is the substantive equivalent of that required for personnel qualified to sell securities as registered representatives (see the "Training" subsection below).

Additional Disclosures

A bank should apprise customers of certain material relationships. For example, a customer should be informed by sales personnel orally and in writing before the sale about any advisory relationship existing between the bank (or an affiliate) and a mutual fund whose shares are being sold by the institution. Similarly, fees, penalties, or surrender charges associated with a nondeposit investment product should be disclosed by sales personnel orally and in writing before or at the time the customer purchases the product. The SEC requires written disclosure of this information in the investment product's prospectus.

If sales activities include any written or oral representations concerning insurance coverage by any entity other than the FDIC (for example, SIPC insurance of broker-dealer accounts, a state insurance fund, or a private insurance company), then clear and accurate explanations of the coverage must also be provided to customers at that time to minimize possible confusion with FDIC insurance. These disclosures should not suggest that other forms of insurance are the substantive equivalent to FDIC deposit insurance.

SETTING AND CIRCUMSTANCES

Physical Separation from Deposit Activities

Selling or recommending nondeposit investment products on bank premises may give the impression that the products are FDIC-insured or are obligations of the bank. To minimize customer confusion with deposit products, nondeposit investment product sales activities should be conducted in a location that is physically distinct from the areas where retail deposits are taken. Bank employees located at teller windows may not provide investment advice, recommend investment products, or accept orders (even unsolicited orders) for nondeposit investment products.

To decide whether nondeposit investment product sales activities are sufficiently separate from deposit activities, the particular circumstances of each bank need to be evaluated. FDIC insurance signs and insured deposit-related promotional material should be removed from the investment product sales area and replaced with appropriate signs indicating that the area is used for the sale of investment products. Signs referring to specific investments should prominently contain the minimum disclosures. In the limited situation where physical constraints prevent nondeposit investment product sales activities from being conducted in a distinct and separate area, the institution has a heightened responsibility to ensure that appropriate measures are taken to minimize customer confusion.

In the case of banks that are affiliated with section 20 companies that sell retail investment products directly to bank customers, the requirement for separation of deposit-taking facilities from the securities operations of the section 20 company is absolute under the relevant firewall conditions imposed on these companies by the Board. Accordingly, retail sales activities conducted by a section 20 company must be in a separate office which, at a minimum, is set off from deposit-taking activities by partitions and identified by signs with the name of the section 20 company. Further, section 20 company employees may not be dual employees of the bank. Business cards for designated sales personnel should clearly indicate that they sell nondeposit investment products or, if applicable, are employed by a broker-dealer.

The interagency statement was intended generally to cover sales made to retail customers in the bank lobby. However, some institutions may have an arrangement whereby retail customers purchase nondeposit investment products at a location of the institution that is generally confined to institutional services (for example, corporate money desk). In these cases, the bank should still ensure that retail customers receive the minimum disclosures to minimize any possible customer confusion with nondeposit investment products and insured deposits.

Hybrid Instruments and Accounts

When an institution offers accounts that link traditional bank deposits with nondeposit investment products, such as a cash-management account,[4] the accounts should be opened in the investment sales area by trained personnel. In light of the hybrid characteristics of these products, the opportunity for customer confusion is amplified, and the institution should take special care during the account-opening process to ensure that a customer is accurately informed that

4. A hybrid account may incorporate deposit and brokerage services, credit/debit card features, and automated sweep arrangements.

- funds deposited into a sweep account will only be FDIC-insured until they are swept into a nondeposit investment product account and
- customer account statements may disclose balances for both insured and nondeposit product accounts.

DESIGNATION, TRAINING, AND SUPERVISION OF PERSONNEL

Hiring and Training of Sales Personnel

Banks hiring sales personnel for nondeposit investment product programs should investigate the backgrounds of prospective employees. When a candidate for employment has previous investment industry experience, the bank should check whether the individual has been the subject of any disciplinary actions by securities, state, or other regulators.

Unregistered bank sales personnel should receive training that is the substantive equivalent of that provided to personnel qualified to sell securities as registered representatives. Training should cover the areas of product knowledge, trading practices, regulatory requirements and restrictions, and customer-protection issues. In addition, training programs should cover the bank's policies and procedures for sales of nondeposit investment products and should be conducted continually to ensure that staff are familiar with new products and compliance issues.

For those bank employees whose sales activities are limited to mutual funds or variable annuities, the equivalent training is that ordinarily needed to pass NASD's series 6 limited representative examination, which typically involves approximately 30 to 60 hours of preparation, including about 20 hours of classroom training. Bank employees who are authorized to sell additional investment products and securities should receive training that is appropriate to pass the NYSE's series 7 general securities representative examination, which typically involves 160 to 250 hours of study, including at least 40 hours of classroom training.

The training of third-party or dual employees is the responsibility of the third party. When entering into an agreement with a third party, bank management should be satisfied that the third party is able to train third-party and dual employees with respect to compliance with the minimum disclosures and other requirements of the interagency statement. Copies of third-party training and compliance materials should be obtained and reviewed by the bank to monitor the third party's performance regarding its training obligations.

Training of Bank Personnel Who Make Referrals

Bank employees, such as tellers and platform personnel, who are not authorized to provide investment advice, make investment recommendations, or sell nondeposit investment products, but who may refer customers to authorized nondeposit investment products sales personnel, should receive training about the strict limitations on their activities. In general, bank personnel who are not authorized to sell nondeposit investment products are not permitted to discuss general or specific investment products, prequalify prospective customers as to financial status and investment history and objectives, open new accounts, or take orders on a solicited or unsolicited basis. These personnel may contact customers for the purposes of—

- determining whether the customer wishes to receive investment information
- inquiring whether the customer wishes to discuss investments with an authorized sales representative, and
- arranging appointments to meet with authorized bank sales personnel or third-party broker-dealer registered sales personnel.

The minimum disclosure guidelines do not apply to referrals made by personnel not authorized to sell nondeposit investment products if the referral does not provide investment advice, identify specific investment products, or make investment recommendations.

Supervision of Personnel

Bank policies and procedures should designate, by title or name, the individuals responsible for supervising nondeposit investment product sales activities, as well as the referral activities of bank employees not authorized to sell these products. Personnel responsible for managing the sales programs for these products should have supervisory experience and training equivalent to that required of a general securities principal, as required by the NASD for broker-dealers. Supervisory personnel should be responsible for the bank's compliance with policies and procedures on nondeposit investment products, applicable laws and regulations, and the interagency statement. When sales of these products are conducted by a third party, supervisory personnel should be responsible for monitoring compliance with the agreement between the bank and the third party, as well as compliance with the interagency statement, particularly the guideline calling for nondeposit investment product sales to be separate and distinct from the deposit activities of the bank.

SUITABILITY AND SALES PRACTICES

Suitability of Recommendations

Suitability refers to the matching of customer financial means and investment objectives with a suitable product. If customers are placed into unsuitable investments, the resulting loss of consumer confidence could have detrimental effects on the bank's reputation. Many first-time investors may not fully understand the risks associated with nondeposit investment products and may assume that the bank is responsible for the preservation of the principal of their investment.

Banks that sell nondeposit investment products directly to customers should develop detailed policies and procedures addressing the suitability of investment recommendations and related recordkeeping requirements. Sales personnel that recommend nondeposit investment products to customers should have reasonable grounds for believing that the recommended products are suitable for the particular customer on the basis of information he or she has provided. A reasonable effort must be made to obtain, record, and update information concerning the customer's financial profile (for example, tax status, other investments, income), investment objectives, and other information necessary to make recommendations.

In determining whether sales personnel are meeting their suitability responsibilities, examiners should review the practices for conformance with the bank's policies and procedures. The examiner's review should include a sample of customer files to determine the extent of customer information collected, recorded, and updated (for subsequent purchases) and should determine whether investment recommendations appear unsuitable in light of this information.

Nondeposit investment product sales programs conducted by third-party broker-dealers are subject to the NASD's suitability and other sales practice rules. To avoid duplicating NASD examination efforts, examiners should rely on the NASD's most recent sales practice review of the third party, when available. If an NASD review has not been completed within the last two years, Reserve Banks should consult with Board staff to determine an appropriate examination scope for suitability compliance before proceeding further.

Sales Practices and Customer Complaints

Banks should have policies and procedures that address undesirable practices by sales personnel, such as practices to generate additional commission income for the employee by churning or switching accounts from one product to another. Banks should have policies and procedures for handling customer complaints related to nondeposit investment products. The process should provide for the recording and tracking of all complaints and require periodic reviews of complaints by compliance personnel. The merits and circumstances of each complaint (including all documentation relating to the transaction) should be considered when determining the proper form of resolution. Reasonable timeframes should be established for addressing complaints.

COMPENSATION

Incentive compensation programs specifically related to the sale of nondeposit investment products may include sales commissions, limited fees for referring prospective customers to an authorized sales representative, and nonmonetary compensation (prizes, awards, and gifts). Compensation that is paid by unaffiliated third parties (for example, mutual fund distributors) to bank staff must be approved in writing by bank management, be consistent with the bank's written internal code of conduct for the acceptance of remuneration from third parties, and be consistent with the proscriptions of the Bank Bribery Act (18 USC 215) and the banking agencies' implementing guidelines to that act. Compensation policies should establish appropriate limits on the extent of compensation that may be paid to banking organization staff by unaffiliated third parties.

Incentive compensation programs must not be structured in such a way that they result in unsuitable investment recommendations or sales to customers. In addition, if sales personnel sell both deposit and nondeposit products, similar financial incentives should be in place for sales of both types of products. A compensation program that offers significantly higher remuneration for selling a specific product (such as a proprietary mutual fund) may be inappropriate if it results in unsuitable recommendations to customers. A compensation program that is intended to provide remuneration for a group of bank employees (such as a branch or department) is permissible as long as the program is based on the group's overall performance in meeting bank objectives for a broad variety of bank services and products and not on the volume of sales of nondeposit investment products.

Individual bank employees, such as tellers, may receive a one-time nominal fee of a fixed-dollar amount for referring customers to authorized sales personnel to discuss nondeposit investment products. However, the payment of the fee should not depend on whether the referral results in a transaction. Nonmonetary compensation to bank employees for referrals should be similarly structured. Auditors and compliance personnel should not participate in incentive compensation programs that are directly related to the results of nondeposit investment product sales programs.

COMPLIANCE

Banks must develop and maintain written policies and procedures that effectively monitor and assess compliance with the interagency statement and other applicable laws and regulations and that ensure appropriate follow-up to correct identified deficiencies. Compliance programs should be independent of sales activities with respect to scheduling, compensation, and performance evaluations. Compliance findings should periodically be reported to the bank's board of directors or a designated committee of the board as part of the institution's ongoing oversight of nondeposit investment product activities. Compliance personnel should have appropriate training and experience with nondeposit investment product sales programs, applicable laws and regulations, and the interagency statement.

Banks should institute compliance programs for nondeposit investment products that are similar to those of securities broker-dealers. This includes a review of new accounts and a periodic review of transactions in existing accounts to identify any potentially abusive practices, such as unsuitable recommendations, churning, or switching. Compliance personnel should also oversee the prompt resolution of customer complaints and review complaint logs for questionable sales practices. Management-information-system reports on early redemptions and sales patterns for specific sales representatives and products should also be used by compliance personnel to identify any potentially abusive practices. In addition, the referral activities of bank personnel should be reviewed to ensure that they conform to the guidelines in the interagency statement.

When nondeposit investment products are sold by third parties on bank premises, the bank's compliance program should provide for oversight of the third party's compliance with its agreement with the bank, including its conformance to the disclosure and separate-facilities guidelines of the interagency statement. The results of this oversight should be reported to the board of directors or a designated committee of the board. Management should obtain the third party's commitment to promptly correct identified problems. Proper follow-up by the bank's compliance personnel should verify the third party's corrective actions.

AUDITS

Audit personnel should be responsible for assessing the effectiveness of the institution's compliance function and overall management of the nondeposit investment product sales program. The scope and frequency of audit reviews of nondeposit investment product activities will depend on the complexity and sales volume of a sales program and on whether there are any indications of potential or actual problems. Audits should cover all of the issues discussed in the interagency statement. Internal audit staff should be familiar with nondeposit investment products and receive ongoing training. Findings should be reported to the board of directors or to a designated committee of the board, and proper follow-up should be performed. Audit activities with respect to third parties should include a review of their compliance function and the effectiveness of the bank's oversight of the third party's activities.

Retail Sales of Nondeposit Investment Products
Examination Objectives
Effective date May 1996

Section 4580.2

1. To determine that the banking organization has taken appropriate measures to ensure that retail customers clearly understand the differences between insured deposits and nondeposit investment products and that they receive the minimum disclosures both orally during sales presentations (including telemarketing) and in writing.
2. To assess the adequacy of the institution's policies and procedures, sales practices, and oversight by management and the board of directors to ensure an operating environment that fosters customer protection in all facets of the sales program.
3. To ensure that the sales program is conducted in a safe and sound manner that is in compliance with the interagency statement, Federal Reserve guidelines, regulations, and applicable laws.
4. To assess the effectiveness of the institution's compliance and audit programs for nondeposit investment product operations.
5. To obtain commitments for corrective action when policies, procedures, practices, or management oversight is deficient or when the institution has failed to comply with the interagency statement or applicable laws and regulations.

Retail Sales of Nondeposit Investment Products
Examination Procedures

Effective date September 1992

Section 4580.3

1. Verify through the minutes of the board of directors that the directors have approved the sale of uninsured annuities, reviewed, and approved the choice of an underwriter in the past year.
2. Determine if the bank adequately evaluates the underwriter's financial condition at least annually and regularly reviews the credit ratings assigned to the underwriter by at least two independent agencies evaluating annuity underwriters. (Banks engaged in the sale of annuities are expected to sell only products of financially secure underwriters and to make current ratings of the underwriter available to an investor when purchasing an uninsured annuity.)
3. Verify that the bank does not sell uninsured annuities at teller windows or other areas where retail deposits are routinely accepted.
4. Assess the adequacy of disclosures and the separation of the marketing and sale of uninsured annuities from the retail deposit-taking function by ensuring that—
   a. the contract, advertising, and all related documents disclose prominently in bold print that the annuities are not deposits or obligations of an insured depository institution and are not insured by the Federal Deposit Insurance Corporation;
   b. advertisements do not contain words, such as "deposit," "CD," etc., that could lead an investor to believe an annuity is an insured deposit instrument;
   c. the obligor of the annuity contract is prominently disclosed and names or logos of the insured bank are not used in a way that might suggest the insured bank is the obligor;
   d. adequate verbal disclosures are made during telemarketing contacts and at the time of sale;
   e. retail deposit-taking employees of the insured depository institution are not engaged in the promotion or sale of uninsured annuities;
   f. information on uninsured annuities is not contained in retail deposit statements of customers (either as advertising on deposit statements or as "junk mail" stuffers included with deposit statements) or in the immediate retail deposit-taking area;
   g. account information on annuities owned by customers is not included on insured deposit statements; and
   h. officer or employee remuneration associated with selling annuities is limited to reasonable levels in relation to the individual's salary. (As a guideline in reviewing remuneration, see the Board's policy statement on disposition of credit life insurance, as discussed in the Consumer Credit, Examination Procedures, section of this manual.)
5. If the bank allows a third-party entity to market annuities on depository-institution premises, assess the adequacy of disclosures and the separation of the marketing and sale of uninsured annuities from the retail deposit-taking function by determining that—
   a. the bank has ensured that the third-party company is properly registered or licensed to conduct this activity,
   b. bank personnel are not involved in sales activities conducted by the third party,
   c. desks or offices used to market or sell annuities are separate and distinctly identified as being used by an outside party, and
   d. bank personnel do not normally use desks or offices used by a third party for annuities sales.
6. Encourage the bank to obtain a signed statement from the customer indicating that the customer understands that the annuity is not a deposit or any other obligation of the bank, that the bank is only acting as an agent for the insurance company (underwriter), and that the annuity is not FDIC-insured.

5000—OTHER EXAMINATION AREAS

The 5000 series of sections provide background on the supervisory assessment of certain bank activities in which a state member bank may or may not engage. These examination activities are sometimes referred to as “specialty examinations” and are conducted by examiners who have subject matter expertise or specialized training. More specifically, there is a section on a bank’s fiduciary or asset and wealth management activities. There are also sections that are salient to the supervisory assessment of information technology and payment systems risks.

Fiduciary activities and other related services generally include traditional trust services, such as personal trust, corporate trust, and transfer-agent services and employee benefit account products and services, as well as custody and securities-lending services, clearing and settlement, private banking, asset management, and investment advisory activities. (See SR-01-5.)

Pursuant to 12 USC 24 (seventh), 92a, and 93a, the Office of the Comptroller of the Currency (OCC) has established standards (the OCC rules for fiduciary activities of national banks). These rules are typically considered the industry standard for fiduciary activities of all financial institutions operating in the United States. (See 12 CFR 9.) When considering whether a state member bank has adhered to industry standards for fiduciary activities, Federal Reserve System (FRS) examiners can refer to the guidance set forth in the OCC rules and FRS and OCC examination manuals, as well as the examination materials issued by other U.S. financial institution regulatory agencies. With respect to a state member bank subsidiary, the appropriate bank, thrift, or functional regulator has the primary supervisory responsibility for evaluating risks, hedging, and risk management at the legal-entity level for the entity that the regulator supervises. (See SR-00-13.) Examiners should seek to use the examination findings of the functional regulator.

A risk-focused fiduciary examination concentrates on understanding and evaluating risk and assessing the internal controls the state member bank has employed to manage risk. The program encompasses continuous monitoring; targeted reviews of fiduciary activities; preparation of supervisory risk profiles and assessments; and the development of supervisory plans, which are integrated into the preplanning of an examination. Conclusions are used to develop an overall safety-and-soundness evaluation of the state member bank's fiduciary activities. (See SR-96-10.)

The Federal Reserve System's fiduciary-examination program reviews and assesses the risk-management practices and related aspects of a state member bank's fiduciary activities. This approach results in (1) the use of a more diversified examiner population, including those with capital-markets, information systems, and safety-and-soundness experience; (2) an emphasis on assessing the individual organization's unique risk profile; and (3) reviews of risk identification, measurement, monitoring, and control. Examiners should use the state member bank's control disciplines (internal audit, risk management, and compliance program) whenever possible.

Examiners have access to a broad variety of FRS supervisory information and analytical support tools to evaluate the fiduciary activities of financial institutions. The Uniform Bank Performance Report (UBPR) can assist examiners in evaluating a state member bank's fiduciary business lines or activities relative to its peers. (See the UBPR, pages Trust 1 and Trust 1A.) Beginning with the December 2002 release, "Section II: Technical Information" of the *UBPR User's Guide* (available online at www.ffiec.gov/ubprguide.htm) discusses the availability of the Total Fiduciary Assets within a fiduciary group number (peer group). (See page II-3.) "Total Fiduciary Assets" are the totals of managed and nonmanaged fiduciary assets for FDIC-insured commercial and savings banks, as reported on Schedule RC-T of the call report.

COMPLEX FIDUCIARY ORGANIZATIONS

SR-01-5 explains that complex fiduciary organizations are those banking organizations that conduct significant or complex fiduciary activities. This includes large complex banking organizations (LCBOs), other large or regional institutions for which fiduciary activities represent a significant portion of their business, and clearing agencies registered with the Securities and Exchange Commission (SEC) for which the Federal Reserve is the primary supervisor. The fiduciary-examination frequency should be determined on the basis of the impact that fiduciary activities have on the organization's risk profile. At a minimum, all material fiduciary business lines should be subject to examination over a two-year period or examination cycle as part of the continuous supervision process, with higher-risk areas generally reviewed annually.

Composite Uniform Interagency Trust Rating System (UITRS) ratings and transfer-agent ratings reflecting the overall condition of the fiduciary function at each institution, and any component ratings considered relevant, should be assigned or updated in a timely manner on the basis of the results of examinations, targeted reviews, or other assessments of fiduciary activities. UITRS ratings do not need to be assigned for each targeted business-line review. However, at a minimum, composite UITRS and transfer-agent ratings should be updated annually, and any material findings related to these areas should be included in the annual summary supervisory report. Any significant concerns should be reflected in the safety-and-soundness examination ratings. Fiduciary risks and fiduciary-risk management assessments should also be reflected in the relevant risk-assessment and risk-management ratings for the banking organization, as necessary.

OTHER INSTITUTIONS OFFERING FIDUCIARY AND TRANSFER-AGENT SERVICES

The frequency of fiduciary and transfer-agent examinations for other institutions, generally smaller state-chartered Federal Reserve member banks and trust companies with noncomplex operations, should be determined on the basis of the significance of their fiduciary and transfer-agent activities and an assessment of the level of risk the activities present to the institution. This scheduling guidance also applies to initial examinations of new institutions and to those institutions subject to Federal Reserve supervision as a result of a charter conversion.

At a minimum, fiduciary activities should be reviewed no less frequently than during every other routine safety-and-soundness examination. Examinations governed by alternating examination programs with state banking authorities may continue to be performed in accordance with those arrangements or as necessary to incorporate the provisions of SR-01-5. Examinations of fiduciary activities at noncomplex limited-purpose trust companies and other fiduciary institutions subject to supervision by the Federal Reserve that do not receive routine safety-and-soundness examinations should be conducted no less frequently than every two years.

Composite UITRS and transfer-agent examination ratings reflecting the overall condition of the function, and any component ratings considered relevant, should be assigned or updated at the completion of the examination or assessment. Material examination findings should be integrated into the overall examination report for the institution, which should clearly indicate the significance of any findings to the safety and soundness of the institution and the impact of the findings on any relevant risk assessments and risk-management ratings.

ORGANIZATIONS WITH SUPERVISORY CONCERNS

Organizations whose fiduciary activities have raised supervisory concerns should be subject to an additional level of supervisory attention on the basis of the severity of those supervisory concerns. Generally, this would include those organizations with a composite UITRS rating of 3, 4, or 5; a transfer-agent rating of B or C; or significant deficiencies in one or more component-rating categories. In the case of an institution assigned a UITRS rating of 4 or 5 or a transfer-agent rating of C, supervisory action should be initiated promptly and continued until the problems or deficiencies have been appropriately addressed.

Under the Securities and Exchange Act of 1934, the Federal Reserve continues to be responsible for examining transfer agents and clearing agencies for which it is the primary supervisor, including reviewing compliance with SEC rules. Any material violations of transfer-agent or clearing-agency rules must be reported promptly to Board staff to facilitate coordination with the SEC.

RISK PROFILE OF FIDUCIARY ACTIVITIES

Regular supervisory assessments of the risk of fiduciary activities, as outlined in SR-01-5, support the supervisory process. Risk profiles for LCBOs are updated quarterly. These risk profiles should include explicit consideration of the risks of fiduciary activities. For other complex fiduciary organizations, risk profiles reflecting fiduciary activities should be prepared and updated as needed, but no less frequently than annually. For these organizations, supervisory plans should detail the fiduciary specialist's recommended examination coverage of fiduciary activities. For banking organizations supervised by the Federal Reserve that have smaller, noncomplex fiduciary operations, formal risk profiles may not be necessary. However, fiduciary-risk information should normally be updated at each examination or inspection and incorporated into supervisory plans.

Risk profiles should include an assessment of the inherent risk in the organization's fiduciary activities, as well as a consideration of the effectiveness of its risk management. Risk assessments would normally include the following factors:

- the size and number of fiduciary accounts and assets administered
- the nature and complexity of fiduciary products and services offered
- significant changes to management or staffing for fiduciary services
- significant changes to data processing systems supporting fiduciary services
- new affiliations, partnerships, or outsourcing arrangements
- changes in strategic direction affecting fiduciary services or exposure to emerging risks
- significant litigation, settlements, or charge-offs
- the length of time since the last on-site examination in which fiduciary activities were reviewed, and the scope of that examination
- the significance of prior examination findings
- the effectiveness of the organization's control environment, including its audit function, and the adequacy of its risk-management practices relative to the nature and scope of its business

RISK FOCUS

As explained in SR-96-10, for a complex institution, fiduciary examiners will direct their attention to assessing the organization's functions and its ability to identify, measure, monitor, and control fiduciary, market, credit, and operational risks. Examiners should assess risks that result from the fiduciary's investment-management, investment advisory, mutual funds, global custody, and securities-lending and processing activities. Any other activities that are subject to adverse movements in market rates or prices, or to operating problems associated with processing a large volume of securities, should also be assessed. These fiduciary activities could result in material losses to trust customers and, in turn, expose the institution to financial losses and litigation if not conducted in a manner consistent with the fiduciary's duty of loyalty and the investor's stated objectives.

A review of internal controls and policies and procedures is an integral part of the examination program. Facets of a fiduciary examination include management competence and accountability, management's review of risks associated with the introduction of new products and services, and management's overall risk awareness.

The emphasis on risk assessment and control parallels the guidelines and procedures pertaining to state member bank examinations and bank holding company inspections, as described in SR-95-51 and SR-16-11, and recognizes the efforts of many progressive institutions in establishing fiduciary-risk assessment and control initiatives of their own. When rating the quality of risk management of fiduciary activities, examiners should place primary consideration on findings relating to the following elements of a sound risk-management system: (1) active board and senior management oversight; (2) adequate policies, procedures, and limits; (3) adequate risk-measurement, -monitoring, and management information systems; and (4) comprehensive internal controls. Each of these elements is described further below, along with a list of considerations relevant to assessing the adequacy of each element.

Active Board and Management Oversight

Given that a board of directors has ultimate responsibility for all of the activities of its institution, the board should approve overall fiduciary business strategies and policies, including those related to identifying, measuring, monitoring, and controlling fiduciary risks. A board of directors must understand the nature of the risks that are significant to the organization, and it should ensure that management is taking the steps necessary to manage these risks.

Senior management has the responsibility for implementing approved strategies in a way that will limit fiduciary risks and ensure compliance with laws and regulations. Senior management should, therefore, be fully involved in the fiduciary activities of their institution and have sufficient knowledge of all fiduciary business lines to ensure that necessary policies, controls, and risk-monitoring systems are in place and that accountability and lines of authority are clearly defined. In assessing the quality of fiduciary oversight by boards of directors and senior management, examiners should consider whether these conditions exist:

- The board and senior management have a clear understanding and working knowledge of the types of fiduciary activities the institution performs and of the risks inherent in them. They have approved appropriate policies, procedures, recordkeeping systems, and reporting systems to support the fiduciary activities and to help measure and monitor risks. They have established procedures to stay informed about changes in fiduciary activities and the associated risks.
- Management at all levels adequately supervises the daily activities of officers and employees to ensure that the lines of fiduciary business are managed and staffed by persons whose knowledge, experience, and expertise are consistent with the nature and scope of the organization's fiduciary activities.
- Before offering new services or introducing new products, management identifies the fiduciary risks associated with them and ensures that internal controls are in place to manage the service or product and its accompanying risk.

Adequate Policies, Procedures, and Limits

An institution's directors and senior management should establish fiduciary and fiduciary-risk management policies and procedures commensurate with the types of activities the institution conducts. The policies and procedures should provide enough detailed guidance to ensure that all material areas of fiduciary activity and risk are addressed. They should also be modified when necessary to respond to changes in the organization's activities. A smaller, less complex institution that has effective management and that is heavily involved in daily operations generally would be expected to have more basic policies addressing the significant areas of its activities and setting forth a limited but appropriate set of requirements and procedures. In a larger institution, where senior management must rely on a widely dispersed staff to implement strategies in a wide range of complex situations, far more detailed policies and related procedures would be expected. In assessing the adequacy of an institution's fiduciary and fiduciary-risk management policies and procedures, examiners should consider whether these conditions exist:

- The institution's policies and procedures adequately address the fiduciary activities performed and are consistent with management's experience level and with the institution's stated goals and objectives.
- The institution's policies and procedures provide for adequate identification, measurement, monitoring, and control of the risks posed by its fiduciary activities.
- Policies clearly establish accountability and set forth lines of authority.
- Policies provide for review of new fiduciary services and activities to ensure that they are suitable and consistent with fiduciary-customer objectives, and to ensure that the systems necessary to identify, measure, monitor, and control risks associated with new services and activities are in place before the activity is initiated.

Adequate Risk-Monitoring and Management Information Systems

Risk monitoring requires institutions to identify and measure all areas of material fiduciary risk continuously. Risk-monitoring activities must be supported by management information systems that provide senior management with timely reports on financial condition, operating performance, marketing efforts, new products and services, pending or threatened litigation, and risk exposure arising from fiduciary activities. The information system also must provide regular and more detailed reports for managers engaged in the daily management of the institution's activities.

The sophistication of risk-monitoring and control information systems should be commensurate with the complexity of the institution's fiduciary operations. Less complex institutions may require only a limited number of management reports to support risk-monitoring activities. Larger, more complex institutions, however, would be expected to have much more comprehensive reporting and monitoring systems. These systems would allow for more frequent reporting and closer monitoring of complex activities. In assessing the adequacy of an institution's measurement and monitoring of fiduciary risk, examiners should consider whether these conditions exist:

- The institution's fiduciary-risk monitoring practices and reports encompass all of its business lines and activities, and they are structured to monitor exposures consistent with established goals, limits, and objectives.
- Key assumptions, data sources, and procedures used in identifying, measuring, and monitoring fiduciary risk are appropriate for the activities the institution performs and are adequately documented and continuously tested for reliability.
- Reports to management are accurate and timely and contain sufficient information for policy and decision makers to identify any adverse trends and any potential or real problems. The reports must be adequate for management to evaluate the level of fiduciary risk faced by the institution.

Adequate Internal Controls

A comprehensive internal-control structure is critical to the safe and sound functioning of an institution and its fiduciary-risk management system. Establishing and maintaining a system of internal controls that sets forth official lines of authority and an appropriate segregation of duties is one of management's most important responsibilities.

A well-structured system of internal controls promotes effective fiduciary operations and reliable reporting; safeguards assets; and helps to ensure compliance with laws, regulations, and institutional policies. Controls should be periodically tested by an independent party (preferably the auditor or at least an individual not involved in the process being reviewed) who reports directly to either the institution's board of directors or one of its designated committees. Given the importance of appropriate internal controls to organizations of all sizes and risk profiles, the results of these reviews should be adequately documented, as should management's responses to them. In evaluating the adequacy of an institution's internal controls as they relate to fiduciary activities, examiners should consider whether these conditions exist:

- The system of internal controls is appropriate to the type and level of fiduciary activities.
- The institution's organizational structure establishes clear lines of authority and responsibility.
- Reporting lines are sufficiently independent of the control areas and from the business lines, and there is adequate separation of duties throughout the institution.
- Financial, operational, and regulatory reports are reliable, accurate, and timely.
- Adequate procedures exist for ensuring compliance with laws and regulations.
- Internal-audit or other control-review practices provide for independence and objectivity.
- Internal controls and information systems are adequately tested and reviewed, with findings documented and weaknesses given appropriate and timely attention.
- The board of directors or the audit committee reviews the effectiveness of internal audits and other control-review activities regularly.

The fiduciary-risk assessment and control categories and tools listed above are not all-inclusive. They are guidelines for the fiduciary examiner and fiduciary-activities management to use in their risk-assessment and -control efforts. The examination of fiduciary activities may require some modification, depending on how the activities are organized and the complexity of the products and services offered.

INVESTMENT OF FIDUCIARY ASSETS IN MUTUAL FUNDS AND POTENTIAL CONFLICTS OF INTEREST

Banks and trust institutions encounter various direct or indirect financial incentives to place trust assets with particular mutual funds. These incentives include fees for using nonaffiliated fund families as well as incentives for using an institution's proprietary mutual funds. The primary supervisory concern is that an institution may fail to act in the best interest of its beneficiaries if it stands to benefit independently from a particular investment. As a result, an institution may be exposed to an increased risk of legal action by account beneficiaries, and it could potentially violate laws or regulations. The Federal Reserve Board issued SR-99-7 to help institutions minimize these risks and ensure that their activities meet fiduciary standards.

Institutions should ensure that they perform and document an appropriate level of due diligence before entering into any compensation arrangements with mutual fund providers or before placing fiduciary assets in their own proprietary mutual funds. SR-99-7 discusses the type of measures that should be included in this process, including a reasoned legal opinion addressing the activity, appropriate policies and procedures, and documented analysis and ongoing review of investment decisions. For issues pertaining to retail sales of nondeposit investment products and matters relating to compensation, see section 4170.1.

Types of Financial Incentives

Financial incentives for placing trust assets with particular mutual funds range from payments structured as reimbursements for services or for transferring business to an unaffiliated fund family, to financial benefits that arise from using mutual funds that are managed by the institution or an affiliate. In some cases, such as service fees for administrative and recordkeeping functions performed by the trust institution, the permissibility of such payments may be specifically addressed under state law. However, guidance under applicable law may be less clear for other financial incentives. In all cases, decisions to place fiduciary assets in particular investments must be consistent with the underlying trust documents and must be undertaken in the best interest of the trust beneficiary.

Certain mutual fund providers offer compensation in the form of ‘‘service’’ fees to institutions that invest fiduciary assets in particular mutual funds. These fees, referred to variously as shareholder, subaccounting, or administrative-service fees, are structured as payments to reimburse the institution for performing standard recordkeeping and accounting functions for the institution's fiduciary accounts, such as maintaining shareholder subaccounts and records, transmitting mutual fund communications as necessary, and arranging mutual fund transactions. These fees are typically based on a percentage or basis-point amount of the dollar value of assets invested or on transaction volume.

Nearly every state legislature modified its laws in the 1990s to allow explicitly the acceptance of such service fees by fiduciaries under certain conditions. These conditions often include compliance with standards of prudence, quality, and appropriateness for the account, and a determination of the ‘‘reasonableness’’ of the fees received by the institution. The Office of the Comptroller of the Currency (OCC) also adopted these general standards for national banks.[1] However, the Employee Retirement Income Security Act of 1974 (ERISA) generally prohibits fee arrangements between fiduciaries and third parties, such as mutual fund providers, with limited exceptions.[2] ERISA requirements supersede state laws and guidelines put forth by the bank regulatory agencies.

Although there has been no comprehensive review of the extent to which mutual fund providers are offering the types of incentive payments cited above, the practice is not uncommon. In addition to these service fees, another form of compensation reportedly offered by some mutual fund providers is a lump-sum payment based on assets transferred into a mutual fund.

Similar conflict-of-interest concerns are raised by the investment of fiduciary-account assets in mutual funds for which the institution or an affiliate acts as investment adviser (referred to as ‘‘proprietary’’ funds). In this case, the institution receives a financial benefit from management fees generated by the mutual fund investments.[3]

Due-Diligence Measures

Although many state laws explicitly authorize certain fee arrangements in conjunction with the investment of trust assets in mutual funds,

1. In general, national banks may make these investments and receive such fees if the practice is authorized by applicable law and if the investment is prudent and appropriate for fiduciary accounts and consistent with fiduciary requirements established by state law. These requirements include a ‘‘reasonableness’’ test for any fees received by the institution. (OCC Interpretive Letter No. 704, February 1996.)

2. ERISA section 406(b)(3), Department of Labor, Pension Welfare and Benefits Administration Advisory Opinion 97-15A and Advisory Opinion 97-16A.

3. A Board interpretation of Federal Reserve Regulation Y addresses the investment of fiduciary-account assets in mutual funds for which the trustee bank's holding company acts as investment adviser. In general, such investments are prohibited unless specifically authorized by the trust instrument, court order, or state law. See *Federal Reserve Regulatory Service* 4–177.

institutions nonetheless face heightened legal and compliance risks from activities in which a conflict of interest exists, particularly if proper fiduciary standards are not observed and documented. Section 23B of the Federal Reserve Act (FRA) requires, before a member bank purchases shares issued by an affiliate, including investment-fund shares, that the board of directors approve the purchase based on a determination that the purchase is a sound investment for the bank, irrespective that an affiliate is the principal underwriter.[4] Even for investments in which the institution does not exercise investment discretion, disclosure or other requirements may apply. Therefore, institutions should ensure that they perform and document an appropriate level of due diligence before entering into any fee arrangements similar to those described above or before placing fiduciary assets in proprietary mutual funds. According to SR-99-7, the following measures should be included in this process:

- *A reasoned legal opinion.* The institution should obtain a reasoned opinion of counsel that addresses the conflict of interest inherent in the receipt of fees or other forms of compensation from mutual fund providers in connection with the investment of fiduciary assets. The opinion should address the permissibility of the investment and compensation under applicable state or federal laws, the trust instrument, or court order, as well as any applicable disclosure requirements or "reasonableness" standard for fees set forth in the law.
- *Establishment of policies and procedures.* The institution should establish written policies and procedures governing the acceptance of fees or other compensation from mutual fund providers, as well as the use of proprietary mutual funds. The policies must be reviewed and approved by the institution's board of directors or its designated committee. Policies and procedures should, at a minimum, address the following issues: (1) designation of decision-making authority; (2) analysis and documentation of investment decisions; (3) compliance with applicable laws, regulations, and sound fiduciary principles, including any disclosure requirements or reasonableness standards for fees; and (4) staff training and methods for monitoring compliance with policies and procedures by internal or external audit staff.
- *Analysis and documentation of investment decisions.* Where an institution receives fees or other compensation in connection with fiduciary-account investments over which it has investment discretion or where such investments are made in the institution's proprietary mutual funds, the institution should fully document its analysis supporting the investment decision. This analysis should be performed on a regular, ongoing basis and would typically include factors such as historical performance comparisons to similar mutual funds, management fees and expense ratios, and ratings by recognized mutual-fund rating services. The institution should also document its assessment that the investment is, and continues to be, appropriate for the individual account, in the best interest of account beneficiaries, and in compliance with section 23B of the FRA and with provisions of the "prudent-investor" or "prudent-man rules," as appropriate.

4. 12 USC 371c-1(b)(2).

UNIFORM INTERAGENCY TRUST RATING SYSTEM

In December 1998, the Federal Reserve Board issued implementing guidelines for the Uniform Interagency Trust Rating System (UITRS).[5] The revised UITRS was made effective for examinations commencing on or after January 1, 1999.[6] Federal Reserve examiners should assign UITRS ratings in conformance with the definitions adopted by the Federal Financial Institutions Examination Council (FFIEC), as augmented by the guidance below.

A full composite UITRS rating is *required* to be assigned as a result of all trust examinations, except for targeted examinations, where component ratings need only be assigned for those areas included within the examination's scope. In those cases, component ratings should be assigned as the targeted examinations are completed. When an institution's trust activities are examined as a series of limited reviews over a

5. The UITRS was developed by the Federal Financial Institutions Examination Council. SR-98-37 mandated the use of UITRS for Federal Reserve examinations of fiduciary activities.

6. See 63 *Fed. Reg.* 54704 (October 13, 1998).

period of time, the full UITRS rating should be assigned when the examination is considered complete, or at least as often as required under SR-01-05.

Additional Considerations for Specific UITRS Components

Management

The revised UITRS puts greater emphasis on assessing the quality of an institution's risk management, consistent with guidance previously provided to Federal Reserve examiners in SR-96-10. Examiners should continue to include in risk profiles and risk-management assessments the key risks outlined in SR-95-51, including reputation risk, operational risk, legal risk, credit risk, market risk, and liquidity risk. See also SR-16-11. Whether all of these risks or a subset of them is relevant to the assessment of risk management, and thus to the management rating, depends on the scope of the particular institution's fiduciary activities. The other four UITRS rating components may also include consideration of the institution's ability to manage some or all of these risks.

Earnings

Examiners must *evaluate* earnings for all institutions that exercise fiduciary powers. In addition, an earnings *rating* must be assigned for institutions that, at the time of the examination, have total fiduciary assets of more than $100 million and for all nondeposit trust companies. For all other institutions, examiners are not required to assign a rating and should only do so in cases where fiduciary activities are significant and the earnings rating would be meaningful to the overall rating. In these cases, examiners should use the standard earnings-rating definition, rather than the alternate-rating definitions provided in the UITRS. For examinations where no earnings rating is assigned, a rating of 0 should be given for the earnings component, and this component should be excluded from consideration in the composite rating.

Earnings ratings of 3 or worse should be reserved for institutions whose earnings performance indicates a supervisory problem requiring corrective action, which, if left unaddressed, may pose a risk to the institution. Federal Reserve examiners may, therefore, assign an earnings rating of 2 for an institution that has experienced losses in its fiduciary activities, provided that (1) management has determined that there are benefits to the overall institution or its community from offering fiduciary services, (2) losses from fiduciary activities are stable and consistent with management expectations, and (3) such losses do not have a significant adverse effect on the profitability of the institution as a whole.

Asset Management

As noted in the UITRS, the asset-management component may not be applicable for some institutions because their activities do not involve the management of discretionary assets. A rating for asset management may, therefore, be omitted for examinations of institutions whose operations are limited to activities such as directed-agency relationships, securities clearing, nonfiduciary custody relationships, or transfer-agent or registrar activities. However, this component rating should be assigned for an institution that provides investment advice, even though it does not have discretion over the account assets. Where an asset-management rating is not assigned for a particular examination, a rating of 0 should be given, and this component should be excluded from consideration in the composite rating.

Examination Reports

SR-96-26 requires that the UITRS rating be disclosed to the institution in the summary section of each examination report. In addition, the individual numerical component ratings, which should also be disclosed in the open section of the report, may be included in the summary section. If the component ratings are included in the summary section, the ratings should also be included in the open-section pages of the report in which trust findings are presented. If the Reserve Bank prefers not to disclose the examiner's evaluation of the component ratings to the institution, this information may be included in the confidential section of the report. Regardless of where in the report it appears, the evaluation must include sufficient detail to justify the rating assigned.

UITRS Description

Under the UITRS, the fiduciary activities of financial institutions are assigned a composite rating based on an evaluation and rating of five essential components of an institution's fiduciary activities. Composite and component ratings are assigned based on a 1-to-5 numerical scale. A 1 is the highest rating and indicates the strongest performance and risk-management practices and the least degree of supervisory concern. A 5 is the lowest rating and indicates the weakest performance and risk-management practices and, therefore, the highest degree of supervisory concern. The evaluation of the composite and components considers the size and sophistication, the nature and complexity, and the risk profile of the institution's fiduciary activities.

The composite rating generally bears a close relationship to the component ratings assigned. However, the composite rating is not derived by computing an arithmetic average of the component ratings. Each component rating is based on a qualitative analysis of the factors that make up a particular component and on its interrelationship with the other components. When assigning a composite rating, some components may be given more weight than others depending on the situation at the institution. In general, the assignment of a composite rating may incorporate any factor that bears significantly on the overall administration of the financial institution's fiduciary activities. Assigned composite and component ratings are disclosed to the institution's board of directors and senior management.

Management's ability to respond to changing circumstances and address the risks that may arise from changing business conditions, or from the initiation of new fiduciary activities or products, is an important factor in evaluating an institution's overall fiduciary-risk profile and the level of supervisory attention warranted. For this reason, the management component is given special consideration when assigning a composite rating.

The ability of management to identify, measure, monitor, and control the risks of its fiduciary operations is also taken into account when assigning each component rating. It is recognized, however, that appropriate management practices may vary considerably among financial institutions, depending on the size, complexity, and risk profiles of their fiduciary activities. For less complex institutions engaged solely in traditional fiduciary activities and whose directors and senior managers are actively involved in the oversight and management of day-to-day operations, relatively basic management systems and controls may be adequate. On the other hand, at more complex institutions, detailed and formal management systems and controls are needed to address a broader range of activities and to provide senior managers and directors with the information they need to supervise day-to-day activities.

All institutions are expected to properly manage their risks. For less complex institutions engaging in less risky activities, detailed or highly formalized management systems and controls are not required to receive strong or satisfactory component or composite ratings.

Composite Ratings

Composite ratings are based on a careful evaluation of how an institution conducts its fiduciary activities. The review encompasses the capability of management, the soundness of policies and practices, the quality of service rendered to the public, and the effect of fiduciary activities on the soundness of the institution. The composite ratings are defined as follows.

Composite 1

Administration of fiduciary activities is sound in every respect. Generally, all components are rated 1 or 2. Any weaknesses are minor and can be handled in a routine manner by management. The institution is in substantial compliance with fiduciary laws and regulations. Risk-management practices are strong relative to the size, complexity, and risk profile of the institution's fiduciary activities. Fiduciary activities are conducted in accordance with sound fiduciary principles and give no cause for supervisory concern.

Composite 2

Administration of fiduciary activities is fundamentally sound. Generally, no component rating should be more severe than 3. Only moderate weaknesses are present and are well within management's capabilities and willingness to correct. Fiduciary activities are conducted in substantial compliance with laws and regulations. Overall risk-management practices are satisfactory relative to the institution's size, complexity, and risk profile. There are no material supervisory concerns and, as a result, the supervisory response is informal and limited.

Composite 3

Administration of fiduciary activities exhibits some degree of supervisory concern in one or more of the component areas. A combination of weaknesses exists that may range from moderate to severe; however, the magnitude of the deficiencies generally does not cause a component to be rated more severely than 4. Management may lack the ability or willingness to effectively address weaknesses within appropriate time frames. Additionally, fiduciary activities may reveal some significant noncompliance with laws and regulations. Risk-management practices may be less than satisfactory relative to the institution's size, complexity, and risk profile. Although problems of relative significance may exist, they are not of such importance as to pose a threat to the trust beneficiaries generally or to the soundness of the institution. The institution's fiduciary activities require more-than-normal supervision and may include formal or informal enforcement actions.

Composite 4

Fiduciary activities generally exhibit unsafe and unsound practices or conditions, resulting in unsatisfactory performance. The problems range from severe to critically deficient and may be centered around inexperienced or inattentive management, weak or dangerous operating practices, or an accumulation of unsatisfactory features of lesser importance. The weaknesses and problems are not being satisfactorily addressed or resolved by the board of directors and management. There may be significant noncompliance with laws and regulations. Risk-management practices are generally unacceptable relative to the size, complexity, and risk profile of fiduciary activities. These problems pose a threat to the account beneficiaries generally and, if left unchecked, could evolve into conditions that could cause significant losses to the institution and ultimately undermine public confidence in the institution. Close supervisory attention is required, which means, in most cases, formal enforcement action is necessary to address the problems.

Composite 5

Fiduciary activities are conducted in an extremely unsafe and unsound manner. Administration of fiduciary activities is critically deficient in numerous major respects, with problems resulting from incompetent or neglectful administration, flagrant or repeated disregard for laws and regulations, or a willful departure from sound fiduciary principles and practices. The volume and severity of problems are beyond management's ability or willingness to control or correct. Such conditions evidence a flagrant disregard for the interests of the beneficiaries and may pose a serious threat to the soundness of the institution. Continuous close supervisory attention is warranted and may include termination of the institution's fiduciary activities.

Component Ratings

The five key components used to assess an institution's fiduciary activities are (1) the capability of management; (2) the adequacy of operations, controls, and audits; (3) the quality and level of earnings; (4) compliance with governing instruments, applicable law (including self-dealing and conflicts-of-interest laws and regulations), and sound fiduciary principles; and (5) the management of fiduciary assets. Each of the component-rating descriptions is divided into three sections: a narrative description of the component, a list of the principal factors used to evaluate that component, and a description of each numerical rating for that component. Some of the evaluation factors are repeated under one or more of the other components to reinforce the interrelationship among components.

Management

The management rating reflects the capability of the board of directors and management, in their respective roles, to identify, measure, monitor, and control the risks of an institution's fiduciary activities. The rating also reflects the ability of the board of directors and management to ensure that the institution's fiduciary activities are conducted in a safe and sound manner and in compliance with applicable laws and regulations. Directors should provide clear guidance regarding acceptable risk-exposure levels and ensure that appropriate policies, procedures, and practices are established and followed. Senior fiduciary management is responsible for developing and implementing policies, procedures, and practices that translate the board's objectives and risk limits into prudent operating standards.

Depending on the nature and scope of an institution's fiduciary activities, management practices may need to address some or all of the following risks: reputation, operating or transaction, strategic, compliance, legal, credit, market, liquidity, and other risks. Sound management practices are demonstrated by active oversight by the board of directors and management; competent personnel; adequate policies, processes, and controls that consider the size and complexity of the institution's fiduciary activities; and effective risk-monitoring and management information systems. This rating should reflect the board's and management's ability as it applies to all aspects of fiduciary activities in which the institution is involved.

The management rating is based on an assessment of the capability and performance of management and the board of directors, including, but not limited to, the following evaluation factors:

- the level and quality of oversight and support of fiduciary activities by the board of directors and management, including committee structure and adequate documentation of committee actions
- the ability of the board of directors and management, in their respective roles, to plan for and respond to risks that may arise from changing business conditions or the introduction of new activities or products
- the adequacy of and conformance with appropriate internal policies, practices, and controls addressing the operations and risks of significant fiduciary activities
- the accuracy, timeliness, and effectiveness of management information and risk-monitoring systems appropriate for the institution's size, complexity, and fiduciary-risk profile
- the overall level of compliance with laws, regulations, and sound fiduciary principles
- responsiveness to recommendations from auditors and regulatory authorities
- strategic planning for fiduciary products and services
- the level of experience and competence of fiduciary management and staff, including issues relating to turnover and succession planning
- the adequacy of insurance coverage
- the availability of competent legal counsel
- the extent and nature of pending litigation associated with fiduciary activities, and its potential impact on earnings, capital, and the institution's reputation
- the process for identifying and responding to fiduciary-customer complaints.

Ratings of management. A rating of 1 indicates strong performance by management and the board of directors and strong risk-management practices relative to the size, complexity, and risk profile of the institution's fiduciary activities. All significant risks are consistently and effectively identified, measured, monitored, and controlled. Management and the board are proactive and have demonstrated the ability to promptly and successfully address existing and potential problems and risks.

A rating of 2 indicates satisfactory management and board performance and risk-management practices relative to the size, complexity, and risk profile of the institution's fiduciary activities. Moderate weaknesses may exist, but are not material to the sound administration of fiduciary activities and are being addressed. In general, significant risks and problems are effectively identified, measured, monitored, and controlled.

A rating of 3 indicates management and board performance that needs improvement or risk-management practices that are less than satisfactory given the nature of the institution's fiduciary activities. The capabilities of management or the board of directors may be insufficient for the size, complexity, and risk profile of the institution's fiduciary activities. Problems and significant risks may be inadequately identified, measured, monitored, or controlled.

A rating of 4 indicates deficient management and board performance or risk-management practices that are inadequate considering the size, complexity, and risk profile of the institution's fiduciary activities. The level of problems and risk exposure is excessive. Problems and significant risks are inadequately identified, measured, monitored, or controlled and require immediate action by the board and management to protect the assets of account beneficiaries and to prevent erosion of public confidence in the institution. Replacing or strengthening management or the board may be necessary.

A rating of 5 indicates critically deficient management and board performance or risk-management practices. Management and the board of directors have not demonstrated the ability to correct problems and implement appropriate risk-management practices. Problems and significant risks are inadequately identified, measured, monitored, or controlled and now threaten the continued viability of the institution or its administration of fiduciary activities, and they pose a threat to the safety of the assets of account beneficiaries. Replacing or strengthening management or the board of directors is necessary.

Operations, Internal Controls, and Auditing

The operations, internal controls, and auditing rating reflects the adequacy of the institution's fiduciary operating systems and internal controls in relation to the volume and character of business conducted. Audit coverage must ensure the integrity of the financial records, the sufficiency of internal controls, and the adequacy of the compliance process.

Fiduciary operating systems, internal controls, and the audit function subject an institution primarily to transaction and compliance risk. Other risks, including reputation, strategic, and financial risk, also may be present. The ability of management to identify, measure, monitor, and control these risks is reflected in this rating.

The operations, internal controls, and auditing rating is based on, but not limited to, an assessment of the following evaluation factors:

- operations and internal controls, including the adequacy of—
  - — staff, facilities, and operating systems;
  - — records, accounting, and data processing systems (including controls over systems access and such accounting procedures as aging, investigation, and disposition of items in suspense accounts);
  - — trading functions and securities-lending activities;
  - — vault controls and securities movement;
  - — segregation of duties;
  - — controls over disbursements (checks or electronic) and unissued securities;
  - — controls over income-processing activities; and
  - — reconciliation processes (depository, cash, vault, subcustodians, suspense accounts, etc.)
- disaster or business-recovery programs—
  - — hold-mail procedures and controls over returned mail, and
  - — investigation and proper escheatment of funds in dormant accounts
- auditing, including—
  - — the independence, frequency, quality, and scope of the internal and external fiduciary-audit function relative to the volume, character, and risk profile of the institution's fiduciary activities;
  - — the volume or severity of internal-control and audit exceptions and the extent to which these issues are tracked and resolved; and
  - — the experience and competence of the audit staff.

Ratings of operations, internal controls, and auditing. A rating of 1 indicates that operations, internal controls, and auditing are strong in relation to the volume and character of the institution's fiduciary activities. All significant risks are consistently and effectively identified, measured, monitored, and controlled.

A rating of 2 indicates that operations, internal controls, and auditing are satisfactory in relation to the volume and character of the institution's fiduciary activities. Moderate weaknesses may exist, but are not material. Significant risks, in general, are effectively identified, measured, monitored, and controlled.

A rating of 3 indicates that operations, internal controls, or auditing need improvement in relation to the volume and character of the institution's fiduciary activities. One or more of these areas are less than satisfactory. Problems and significant risks may be inadequately identified, measured, monitored, or controlled.

A rating of 4 indicates deficient operations, internal controls, or audits. One or more of these areas are inadequate or the level of problems and risk exposure is excessive in relation to the volume and character of the institution's fiduciary activities. Problems and significant risks are inadequately identified, measured, monitored, or controlled and require immediate action. Institutions with this level of deficiencies may make little provision for audits, or they may evidence weak or potentially dangerous operating practices in combination with infrequent or inadequate audits.

A rating of 5 indicates critically deficient operations, internal controls, or audits. Operating practices, with or without audits, pose a serious threat to the safety of assets of fiduciary accounts. Problems and significant risks are inadequately identified, measured, monitored, or controlled and now threaten the ability of the institution to continue engaging in fiduciary activities.

Earnings

The earnings rating reflects the profitability of an institution's fiduciary activities and their effect on the financial condition of the institution. The use and adequacy of budgets and earnings projections by functions, product lines, and clients are reviewed and evaluated. Risk exposure that may lead to negative earnings is also evaluated.

An evaluation of earnings is required for all institutions with fiduciary activities. An assignment of an earnings rating, however, is required only for institutions that, at the time of the examination, have total trust assets of more than $100 million or that are a nondeposit trust company.

The evaluation of earnings is based on, but not limited to, an assessment of the following factors:

- the profitability of fiduciary activities in relation to the size and scope of those activities and to the overall business of the institution
- the overall importance to the institution of offering fiduciary services to its customers and local community
- the effectiveness of the institution's procedures for monitoring fiduciary-activity income and expense relative to the size and scope of these activities and their relative importance to the institution, including the frequency and scope of profitability reviews and planning by the institution's board of directors or a committee thereof

For those institutions for which a rating of earnings is mandatory, additional factors should include the following:

- the level and consistency of profitability, or the lack thereof, generated by the institution's fiduciary activities in relation to the volume and character of the institution's business
- dependence on nonrecurring fees and commissions, such as fees for court accounts
- the effects of charge-offs or compromise actions
- unusual features regarding the composition of business and fee schedules
- accounting practices that contain practices such as (1) unusual methods of allocating direct and indirect expenses and overhead, or (2) unusual methods of allocating fiduciary income and expense where two or more fiduciary institutions within the same holding company family share fiduciary services or processing functions
- the extent of management's use of budgets, projections, and other cost-analysis procedures
- methods used for directors' approval of financial budgets or projections
- management's attitude toward growth and new-business development
- new-business development efforts, including types of business solicited, market potential, advertising, competition, relationships with local organizations, and an evaluation by management of the risk potential inherent in new business areas

Ratings of earnings. A rating of 1 indicates strong earnings. The institution consistently earns a rate of return on its fiduciary activities that is commensurate with the risk of those activities. This rating would normally be supported by a history of consistent profitability over time and a judgment that future earnings prospects are favorable. In addition, management techniques for evaluating and monitoring earnings performance are fully adequate, and there is appropriate oversight by the institution's board of directors or a committee thereof. Management makes effective use of budgets and cost-analysis procedures. Methods used for reporting earnings information to the board of directors, or a committee thereof, are comprehensive.

A rating of 2 indicates satisfactory earnings. Although the earnings record may exhibit some weaknesses, earnings performance does not pose a risk to the overall institution nor to its ability to meet its fiduciary obligations. Generally, fiduciary earnings meet management targets and appear to be at least sustainable. Management processes for evaluating and monitoring earnings are generally sufficient in relationship to the size and risk of fiduciary activities that exist, and any deficiencies can be addressed in the normal course of business. A rating of 2 may also be assigned to institutions with a history of profitable operations if there are indications that management is engaging in activities with which it is not familiar or where there may be inordinately high levels of risk present that have not been adequately evaluated. Alternatively, an institution with otherwise strong earnings performance may also be assigned a 2 rating if there are significant deficiencies in its methods used to monitor and evaluate earnings.

A rating of 3 indicates less-than-satisfactory earnings. Earnings are not commensurate with the risk associated with the fiduciary activities undertaken. Earnings may be erratic or exhibit downward trends, and future prospects are unfavorable. This rating may also be assigned if management processes for evaluating and monitoring earnings exhibit serious deficiencies, provided the deficiencies identified do not pose an immediate danger to either the overall financial condition of the institution or its ability to meet its fiduciary obligations.

A rating of 4 indicates earnings that are seriously deficient. Fiduciary activities have a significant adverse effect on the overall income of the institution and its ability to generate adequate capital to support the continued operation of its fiduciary activities. The institution is characterized by fiduciary earnings performance that is poor historically or that faces the prospect of significant losses in the future. Management processes for monitoring and evaluating earnings may be poor. The board of directors has not adopted appropriate measures to address significant deficiencies.

A rating of 5 indicates critically deficient earnings. In general, an institution with this rating is experiencing losses from fiduciary activities that have a significant negative impact on the overall institution, representing a distinct threat to its viability through the erosion of its capital. The board of directors has not implemented effective actions to address the situation.

Alternate rating of earnings. The UITRS alternate rating of earnings is *not* for use by Federal Reserve System examiners, per the December 1998 Federal Reserve UITRS implementing guidelines. For institutions where the assignment of an earnings rating is not required by the UITRS, an FFIEC federal supervisory agency has the option to assign an earnings rating using an alternate set of ratings. The alternate ratings are provided here so examiners will be able to interpret earnings ratings assigned by other banking supervisors that have adopted the alternate-rating system for earnings. Under the alternate-ratings scheme, alternate ratings are assigned based on the level of implementation of four minimum standards by the board of directors and management:

- *Standard No. 1.* The institution has reasonable methods for measuring income and expense commensurate with the volume and nature of the fiduciary services offered.
- *Standard No. 2.* The level of profitability is reported to the board of directors, or a committee thereof, at least annually.
- *Standard No. 3.* The board of directors periodically determines that the continued offering of fiduciary services provides an essential service to the institution's customers or to the local community.
- *Standard No. 4.* The board of directors, or a committee thereof, reviews the justification for the institution to continue to offer fiduciary services, even if the institution does not earn sufficient income to cover the expenses of providing those services.

Ratings to be applied for the alternate rating of earnings. A rating of 1 may be assigned where an institution has implemented all four minimum standards. If fiduciary earnings are lacking, management views this as a cost of doing business as a full-service institution and believes that the negative effects of not offering fiduciary services are more significant than the expense of administrating those services.

A rating of 2 may be assigned where an institution has implemented, at a minimum, three of the four standards. This rating may be assigned if the institution is not generating positive earnings or where formal earnings information may not be available.

A rating of 3 may be assigned if the institution has implemented at least two of the four standards. Although management may have attempted to identify and quantify other revenue to be earned by offering fiduciary services, it has decided that these services should be offered as a service to customers, even if they cannot be operated profitably.

A rating of 4 may be assigned if the institution has implemented only one of the four standards. Management has undertaken little or no effort to identify or quantify the collateral advantages, if any, to the institution from offering fiduciary services.

A rating of 5 may be assigned if the institution has implemented none of the standards.

Compliance

The compliance rating reflects an institution's overall compliance with applicable laws, regulations, accepted standards of fiduciary conduct, governing account instruments, duties associated with account administration, and internally established policies and procedures. This component specifically incorporates an assessment of a fiduciary's duty of undivided loyalty and compliance with applicable laws, regulations, and accepted standards of fiduciary conduct related to self-dealing and other conflicts of interest.

The compliance component includes reviewing and evaluating the adequacy and soundness of adopted policies, procedures, and practices generally and as they relate to specific transactions and accounts. It also includes reviewing policies, procedures, and practices to evaluate the sensitivity of management and the board of directors to refrain from self-dealing, minimize potential conflicts of interest, and resolve actual conflict situations in favor of the fiduciary-account beneficiaries.

Risks associated with account administration are potentially unlimited because each account is a separate contractual relationship that contains specific obligations. Risks associated with account administration include failure to comply with applicable laws, regulations, or terms of the governing instrument; inadequate account-administration practices; and inexperienced management or inadequately trained staff. Risks associated with a fiduciary's duty of undivided loyalty generally stem from engaging in self-dealing or other conflict-of-interest transactions. An institution may be exposed to compliance, strategic, financial, and reputation risk related to account-administration and conflicts-of-interest activities. The ability of management to identify, measure, monitor, and control these risks is reflected in this rating. Policies, procedures, and practices pertaining to account administration and conflicts of interest are evaluated in light of the size and character of an institution's fiduciary business.

The compliance rating is based on, but not limited to, an assessment of the following evaluation factors:

- compliance with applicable federal and state statutes and regulations, including, but not limited to, federal and state fiduciary laws, the Employee Retirement Income Security Act of 1974, federal and state securities laws, state investment standards, state principal and income acts, and state probate codes
- compliance with the terms of governing instruments
- the adequacy of overall policies, practices, and procedures governing compliance, considering the size, complexity, and risk profile of the institution's fiduciary activities
- the adequacy of policies and procedures addressing account administration
- the adequacy of policies and procedures addressing conflicts of interest, including those designed to prevent the improper use of "material inside information"
- the effectiveness of systems and controls in place to identify actual and potential conflicts of interest
- the adequacy of securities-trading policies and practices relating to the allocation of brokerage business; the payment of services with "soft dollars"; and the combining, crossing, and timing of trades
- the extent and permissibility of transactions with related parties, including, but not limited to, the volume of related commercial and fiduciary relationships and holdings of corporations in which directors, officers, or employees of the institution may be interested
- the decision-making process used to accept, review, and terminate accounts
- the decision-making process related to account-administration duties, including cash balances, overdrafts, and discretionary distributions

Ratings of compliance. A rating of 1 indicates strong compliance policies, procedures, and practices. Policies and procedures covering conflicts of interest and account administration are appropriate in relation to the size and complexity of the institution's fiduciary activities. Accounts are administered in accordance with governing instruments, applicable laws and regulations, sound fiduciary principles, and internal policies and procedures. Any violations are isolated, technical in nature, and easily correctable. All significant risks are consistently and effectively identified, measured, monitored, and controlled.

A rating of 2 indicates fundamentally sound compliance policies, procedures, and practices in relation to the size and complexity of the institution's fiduciary activities. Account administration may be flawed by moderate weaknesses in policies, procedures or practices. Management's practices indicate a determination to minimize the instances of conflicts of interest. Fiduciary activities are conducted in substantial compliance with laws and regulations, and any violations are generally technical in nature. Management corrects violations in a timely manner and without loss to fiduciary accounts. Significant risks are effectively identified, measured, monitored, and controlled.

A rating of 3 indicates compliance practices that are less than satisfactory in relation to the size and complexity of the institution's fiduciary activities. Policies, procedures, and controls have not proven effective and require strengthening. Fiduciary activities may be in substantial noncompliance with laws, regulations, or governing instruments, but losses are no worse than minimal. Although management may have the ability to achieve compliance, the number of violations that exist, or the failure to correct prior violations, is an indication that management has not devoted sufficient time and attention to its compliance responsibilities. Risk-management practices generally need improvement.

A rating of 4 indicates an institution with deficient compliance practices in relation to the size and complexity of its fiduciary activities. Account administration is notably deficient. The institution makes little or no effort to minimize potential conflicts or refrain from self-dealing, and it is confronted with a considerable number of potential or actual conflicts. Numerous substantive and technical violations of laws and regulations exist, and many may remain uncorrected from previous examinations. Management has not exerted sufficient effort to effect compliance and may lack the ability to effectively administer fiduciary activities. The level of compliance problems is significant and, if left unchecked, may subject the institution to monetary losses or reputation risk. Risks are inadequately identified, measured, monitored, and controlled.

A rating of 5 indicates critically deficient compliance practices. Account administration is critically deficient or incompetent, and there is a flagrant disregard for the terms of the governing instruments and interests of account beneficiaries. The institution frequently engages in transactions that compromise its fundamental duty of undivided loyalty to account beneficiaries. There are flagrant or repeated violations of laws and regulations and significant departures from sound fiduciary principles. Management is unwilling or unable to operate within the scope of laws and regulations or within the terms of governing instruments, and efforts to obtain voluntary compliance have been unsuccessful. The severity of noncompliance presents an imminent monetary threat to account beneficiaries and creates significant legal and financial exposure to the institution. Problems and significant risks are inadequately identified, measured, monitored, or controlled and now threaten the ability of management to continue engaging in fiduciary activities.

Asset Management

The asset-management rating reflects the risks associated with managing the assets (including cash) of others. Prudent portfolio management is based on an assessment of the needs and objectives of each account or portfolio. An evaluation of asset management should consider the adequacy of processes related to the investment of all discretionary accounts and portfolios, including collective investment funds, proprietary mutual funds, and investment advisory arrangements.

The institution's asset-management activities subject it to reputation, compliance, and strategic risks. In addition, each individual account or portfolio managed by the institution is subject to financial risks such as market, credit, liquidity, and interest-rate risk, as well as transaction and compliance risk. The ability of management to identify, measure, monitor, and control these risks is reflected in this rating.

The asset-management rating is based on, but not limited to, an assessment of the following evaluation factors:

- the adequacy of overall policies, practices, and procedures governing asset management, considering the size, complexity, and risk profile of the institution's fiduciary activities

- the decision-making processes used for selection, retention, and preservation of discretionary assets, including adequacy of documentation, committee review and approval, and a system to review and approve exceptions
- the use of quantitative tools to measure the various financial risks in investment accounts and portfolios
- the existence of policies and procedures addressing the use of derivatives or other complex investment products
- the adequacy of procedures related to the purchase or retention of miscellaneous assets, including real estate, notes, closely held companies, limited partnerships, mineral interests, insurance, and other unique assets
- the extent and adequacy of periodic reviews of investment performance, taking into consideration the needs and objectives of each account or portfolio
- the monitoring of changes in the composition of fiduciary assets for trends and related risk exposure
- the quality of investment research used in the decision-making process and documentation of the research
- the due-diligence process for evaluating investment advice received from vendors or brokers (including approved or focus lists of securities)
- the due-diligence process for reviewing and approving brokers or counterparties used by the institution

This rating may not be applicable for some institutions because their operations do not include activities involving the management of any discretionary assets. Functions of this type would include, but not necessarily be limited to, directed-agency relationships, securities clearing, nonfiduciary custody relationships, and transfer-agent and registrar activities. In institutions of this type, the rating for asset management may be omitted by the examiner in accordance with the examining agency's implementing guidelines. However, this component should be assigned when the institution provides investment advice, even though it does not have discretion over the account assets. An example of this type of activity would be where the institution selects or recommends the menu of mutual funds offered to participant-directed 401(k) plans.

Ratings of asset management. A rating of 1 indicates strong asset-management practices. Identified weaknesses are minor in nature. Risk exposure is modest in relation to management's abilities and the size and complexity of the assets managed.

A rating of 2 indicates satisfactory asset-management practices. Moderate weaknesses are present and are well within management's ability and willingness to correct. Risk exposure is commensurate with management's abilities and the size and complexity of the assets managed. Supervisory response is limited.

A rating of 3 indicates that asset-management practices are less than satisfactory in relation to the size and complexity of the assets managed. Weaknesses may range from moderate to severe; however, they are not of such significance as to generally pose a threat to the interests of account beneficiaries. Asset-management and risk-management practices generally need to be improved. An elevated level of supervision is normally required.

A rating of 4 indicates deficient asset-management practices in relation to the size and complexity of the assets managed. The levels of risk are significant and inadequately controlled. The problems pose a threat to account beneficiaries generally and, if left unchecked, may subject the institution to losses and could undermine the reputation of the institution.

A rating of 5 represents critically deficient asset-management practices and a flagrant disregard of fiduciary duties. These practices jeopardize the interests of account beneficiaries, subject the institution to losses, and may pose a threat to the soundness of the institution.

Examination procedures are available on the Examination Documentation (ED) modules page on the Board's website. See the following ED module for examination procedures on this topic:

- Trust

The role of bank regulators in supervising private-banking activities is (1) to evaluate management's ability to measure and control the risks associated with such activities and (2) to determine if the proper internal control and audit infrastructures are in place to support effective compliance with relevant laws and regulations. In this regard, the supervisors may determine that certain risks have not been identified or adequately managed by the institution, a potentially unsafe and unsound banking practice.

Private-banking functions may be performed in a specific department of a commercial bank, an Edge corporation or its foreign subsidiaries, a nonbank subsidiary, a branch or agency of a foreign banking organization, or multiple areas of an institution. Private banking may also be the sole business of an institution. Regardless of how an institution is organized or where it is located, the results of the private-banking review should be reflected in the entity's overall supervisory assessment.[1]

This section provides examiners with guidance for reviewing private-banking activities at all types and sizes of financial institutions. It is intended to supplement, not replace, existing guidance on the examination of private-banking activities and to broaden the examiner's review of general risk-management policies and practices governing private-banking activities. In addition to providing an overview of private banking, the general types of customers, and the various products and services typically provided, the ''Functional Review'' subsection describes the critical functions that constitute a private-banking operation and identifies certain safe and sound banking practices. These critical functions are supervision and organization, risk management, fiduciary standards, operational controls, management information systems, audit, and compliance. Included in the risk-management portion is a discussion of the basic ''customer-due-diligence'' (CDD) principle that is the foundation for the safe and sound operation of a private-banking business. The ''Preparation for Examination'' subsection assists in defining the examination scope and provides a list of core requests to be made in the first-day letter. Additional examination guidance can be found in this manual, the Federal Financial Institutions Examination Council's (FFIEC) *Bank Secrecy Act/Anti-Money Laundering (BSA/AML) Examination Manual*, the Federal Reserve System's *Trading and Capital-Markets Activities Manual,* and the FFIEC *Information Technology Examination Infobase*.

In reviewing specific functional and product-examination procedures (as found in the private-banking activities module that is part of the framework for risk-focused supervision of large complex institutions), all aspects of the private-banking review should be coordinated with the rest of the examination to eliminate unnecessary duplication of effort. Furthermore, this section has introduced the review of trust activities and fiduciary services, critical components of most private-banking operations, as part of the overall private-banking review. Although the product nature of these activities differs from that of products generated by other banking activities, such as lending and deposit taking, the functional components of private banking (supervision and organization, risk management, operational controls and management information systems, audit, compliance, and financial condition/business profile) should be reviewed across product lines.

Private banking offers the personal and discrete delivery of a wide variety of financial services and products to an affluent market, primarily to high net worth individuals and their corporate interests. A private-banking operation typically offers its customers an all-inclusive money-management relationship, including investment portfolio management, financial-planning advice, offshore facilities, custodial services, funds transfer, lending services, overdraft privileges, hold mail, letter-of-credit financing, and bill-paying services. As the affluent market grows, both in the United States and globally, competition to serve it is becoming more intense. Consequently, the private-banking marketplace includes banks, nonbanks, and other types of banking organizations and financial institutions. Private-banking products, services, technologies, and distribution channels are still evolving. A range of private-banking products and services may be offered to customers throughout an institution's global network of affiliated entities—including branches, subsidi-

1. Throughout this section, the word *bank* will be used to describe all types of financial institutions, and the term *board of directors* will be interchangeable with *senior management* of branches and agencies of foreign banks.

aries, and representative offices—in many different regions of the world, including offshore secrecy jurisdictions.

Typically, private-banking customers are high net worth individuals or institutional investors who have minimum investible assets of $1 million or more. Institutions often differentiate domestic from international private banking, and they may further segregate the international function on the basis of the geographic location of their international client base. International private-banking clients may be wealthy individuals who live in politically unstable nations and are seeking a safe haven for their capital. Therefore, obtaining detailed background information and documentation about the international client may be more difficult than it is for the domestic customer. Private-banking accounts may, for example, be opened in the name of an individual, a commercial business, a law firm, an investment adviser, a trust, a personal investment company (PIC), or an offshore mutual fund.

In 2001, the USA PATRIOT Act (the Patriot Act) established new and enhanced measures to prevent, detect, and prosecute money laundering and terrorist financing. In general, these measures were enacted through amendments to the Bank Secrecy Act (BSA). The measures directly affecting banking organizations are implemented primarily through regulations issued by the U.S. Department of the Treasury (31 CFR 1010).[2] Section 326 of the Patriot Act (see the BSA at 31 USC 5318(*l*)) requires financial institutions (such as banks, savings associations, and credit unions) to have customer identification programs.

A customer identification program is dependent on whether an account has been created. An "account" is defined in the CIP rule as "a formal banking relationship established to provide or engage in services, dealings, or other financial transactions, including a deposit account, a transaction or asset account, a credit account or other extension of credit." An account also includes "a relationship established to provide a safety deposit box or other safekeeping services or to provide cash management, custodian, or trust services."[3] Under the CIP rule, a person that opens a new account is deemed a customer.[4] An account *does not include*:

- "products and services for which a formal banking relationship is not generally established with a person, such as check cashing, wire transfer, or the sale of a check or money order" or
- any account that the bank acquires, or accounts opened, to participate in an employee benefit plan established under the Employee Retirement Income Security Act of 1974.

(Refer to SR-16-7 and its interagency attachment.) Customer identification programs are to include measures to—

- require that certain information be obtained at account opening (for individuals, the information would generally include their name, address, tax identification number, and date of birth);
- verify the identity of new account holders within a reasonable time period;
- ensure that a banking organization has a reasonable belief that it knows each customer's identity;
- maintain records of the information used to verify a person's identity; and
- compare the names of new customers against government lists of known or suspected terrorists or terrorist organizations.

A customer identification program is an important component of a financial institution's overall anti-money-laundering and BSA compliance program.

The FFIEC *BSA/AML Examination Manual* provides the interagency BSA examination procedures that should be used to evaluate banking organizations' compliance with the regulation. The examination's scope can be tailored to the reliability of the banking organization's compliance-management system and to the level of risk that the organization assumes. Relevant interagency guidance (in a frequently-asked-question format) has been issued to address the customer identification program rules. (See SR-05-9.)

2. For banking organizations, the regulation implementing the requirements of section 326 of the Patriot Act was jointly issued by the U.S. Department of the Treasury, through the Financial Crimes Enforcement Network (FinCEN), and the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration.

3. 31 CFR 1020.100 (a)(1).

4. 31 CFR 1020.100(c)(1)(i).

Private-banking accounts are usually generated on a referral basis. Every client of a private-banking operation is assigned a salesperson or marketer, commonly known as a relationship manager (RM), as the primary point of contact with the institution. The RM is generally charged with understanding and anticipating the needs of his or her wealthy clients and then recommending services and products for them. The number of accounts an RM handles varies, depending on the portfolio size or net worth of the particular accounts. RMs strive to provide a high level of support, service, and investment opportunities to their clients and tend to maintain strong, long-term client relationships. Frequently, RMs take accounts with them to other private-banking institutions if they change employment. Historically, initial and ongoing due diligence of private-banking clients is not always well documented in the institution's files because of RM turnover and confidentiality concerns.

Clients may choose to delegate a great deal of authority and discretion over their financial affairs to RMs. Given the close relationship between clients and their account officers, an integral part of the examination process is assessing the adequacy of managerial oversight of the nature and volume of transactions conducted within the private-banking department or with other departments of the financial institution, as well as determining the adequacy and integrity of the RM's procedures. Policy guidelines and management supervision should provide parameters for evaluating the appropriateness of all products, especially those involving market risk. Moreover, because of the discretion given to RMs, management should develop effective procedures to review the activity of client accounts in order to protect the client from any unauthorized activity. In addition, ongoing monitoring of account activity should be conducted to detect activity that is inconsistent with the client profile (for example, frequent or sizable unexplained transfers flowing through the account).

Finally, as clients develop a return-on-assets (ROA) outlook to enhance their returns, the use of leveraging and arbitrage is becoming more evident in the private-banking business. Examiners should be alert to the totality of the client relationship product by product, in light of increasing client awareness and use of derivatives, emerging-market products, foreign exchange, and margined accounts.

Products and Services

Personal Investment Companies, Offshore Trusts, and Token-Name Accounts

Private-banking services almost always involve a high level of confidentiality for clients and their account information. Consequently, it is not unusual for private bankers to help their clients achieve their financial-planning, estate-planning, and confidentiality goals through offshore vehicles such as personal investment companies (PICs), trusts, or more-exotic arrangements, such as hedge fund partnerships. While these vehicles may be used for legitimate reasons, without careful scrutiny, they may camouflage illegal activities. Private bankers should be committed to using sound judgment and enforcing prudent banking practices, especially when they are assisting clients in establishing offshore vehicles or token-name accounts.

Through their global network of affiliated entities, private banks often form PICs for their clients. These "shell" companies, which are incorporated in offshore secrecy jurisdictions such as the Cayman Islands, Channel Islands, Bahamas, British Virgin Islands, and Netherlands Antilles, are formed to hold the customer's assets as well as offer confidentiality by opening accounts in the PIC's name. The "beneficial owners" of the shell corporations are typically foreign nationals. The banking institution should know and be able to document that it knows the beneficial owners of such corporations and that it has performed the appropriate due diligence to support these efforts. Emphasis should be placed on verifying the source or origin of the customer's wealth. Similarly, offshore trusts established in these jurisdictions should identify grantors of the trusts and sources of the grantors' wealth. *Anonymous relationships or relationships in which the RM does not know and document the beneficial owner should not be permitted.*

PICs are typically passive personal investment vehicles. However, foreign nationals have established PICs as operating accounts for business entities they control in their home countries. Accordingly, financial institutions should use extra care when dealing with beneficial owners of PICs and associated trusts; these vehicles can be used to conceal illegal activities.

Deposit Taking

A client's private-banking relationship frequently begins with a deposit account and then expands into other products. In fact, many institutions require private-banking customers to establish a deposit account before maintaining any other accounts. Deposit accounts serve as conduits for a client's money flows. To distinguish private-banking accounts from retail accounts, institutions usually require significantly higher minimum account balances and assess higher fees. The private-banking function or institution should have account-opening procedures and documentation requirements that must be fulfilled before a deposit account can be opened. (These standards are described in detail in the "Functional Review" subsection.)

Most private banks offer a broad spectrum of deposit products, including multicurrency deposit accounts that are used by clients who engage in foreign-exchange, securities, and derivatives transactions. The client's transaction activity, such as wire transfers, check writing, and cash deposits and withdrawals, is conducted through deposit accounts (including current accounts). It is very important that the transaction activity into and out of these deposit accounts (including internal transfers between affiliated depository accounts) be closely monitored for suspicious transactions that are inconsistent with the client's profile of usual transactions. Suspicious transactions could warrant the filing of a Suspicious Activity Report for Depository Institutions (SAR) form. A bank holding company or any nonbank subsidiary thereof, or a foreign bank that is subject to the Bank Holding Company Act (or any nonbank subsidiary of such a foreign bank operating in the United States), is required to file a SAR form in accordance with the provision of section 208.62 of the Federal Reserve Board's Regulation H (12 CFR 208.62) when suspicious transactions or activities are initially discovered and warrant or require reporting. See the expanded procedures for private banking in the FFIEC's *BSA/AML Examination Manual.*

On March 15, 2006, the Board approved a revision to Regulation K (effective April 19, 2006) that incorporates by reference into sections 211.5 and 211.24 of Regulation K section 208.63 of Regulation H. The incorporation results in the requirement that Edge and agreement corporations and other foreign banking organizations (that is, Federal Reserve supervised U.S. branches, agencies, and representative offices of foreign banks) must establish and maintain procedures reasonably designed to ensure and monitor compliance with the BSA and related regulations. Each of these banking organizations' compliance programs must include, at a minimum (1) a system of internal controls to ensure ongoing compliance, (2) independent testing of compliance by the institution's personnel or by an outside party, (3) the designation of an individual or individuals responsible for coordinating and monitoring day-to-day compliance, and (4) training for appropriate personnel. (See SR-06-7.)

Investment Management

In private banking, investment management usually consists of two types of accounts: (1) discretionary accounts in which portfolio managers make the investment decisions on the basis of recommendations from the bank's investment research resources and (2) nondiscretionary (investment advisory) accounts in which clients make their own investment decisions when conducting trades. For nondiscretionary clients, the banks typically offer investment recommendations subject to the client's written approval. Discretionary accounts consist of a mixture of instruments bearing varying degrees of market, credit, and liquidity risk that should be appropriate to the client's investment objectives and risk appetite. Both account types are governed under separate agreements between the client and the institution.

Unlike depository accounts, securities and other instruments held in the client's investment accounts are not reflected on the balance sheet of the institution because they belong to the client. These managed assets are usually accounted for on a separate ledger that is segregated according to the customer who owns the assets.

Credit

Private-banking clients may request extensions of credit on either a secured or an unsecured basis. Loans backed by cash collateral or managed assets held by the private-banking function are quite common, especially in international private banking. Private-banking clients may pledge a wide range of their assets, including cash, mortgages, marketable securities, land, or buildings, to securitize their loans. Management should demonstrate an understanding of the purpose of the credit, the source of repayment, the loan tenor, and the collateral used in the financing. When lending to individuals with high net worths, whether on a secured or an unsecured basis, the creditworthiness determination is bolstered by a thorough and well-structured customer-due-diligence process. If that process is not thorough, collateral derived from illicit activities may be subject to government forfeiture.

Borrowing mechanisms are sometimes established to afford nonresident-alien customers the ability to keep financial assets in the United States and to use such assets (via collateralized borrowing arrangements) to provide operating capital for businesses they own and operate in their home countries. Such arrangements enable these customers to keep the existence of the financial assets secret from their home-country authorities and others, while they continue to use the funds (via collateralized borrowings) to fund the businesses at home.

Private bankers need to maintain in the United States adequate CDD information on such nonresident-alien customers and their primary business interests. A well-documented CDD file may include information on the customer from "who's who" and similar services, Internet research, foreign tax returns and financial statements, checks conducted by the Office of Foreign Assets Control (OFAC), and written and appropriately documented Call Reports prepared by the RM.

While these lending mechanisms may be used for legitimate reasons, management needs to determine whether the arrangements are being used primarily to obfuscate the beneficial ownership of collateral assets, making it difficult for the customer's home-country government to identify who owns the assets. If so, management needs to further determine whether the practice varies from both the appropriate standards of international cooperation for transparency issues and with prudent banking practices, and if so, whether the institution is exposed to elevated legal risk.

Payable-Through Accounts

Another product that may be available in private-banking operations is payable-through accounts (PTAs). PTAs are transaction deposit accounts through which U.S. banking entities ("payable-through banks") extend check-writing privileges to the customers of a foreign bank. The foreign bank ("master account holder") opens a master checking account with the U.S. bank and uses this account to provide its customers with access to the U.S. banking system. The master account is divided into "subaccounts," each in the name of one of the foreign bank's customers. The foreign bank extends signature authority on its master account to its own customers, who may not be known to the U.S. bank. Consequently, the U.S. bank may have customers who have not been subject to the same account-opening requirements imposed on its U.S. account holders. These subaccount customers are able to write checks and make deposits at the U.S. banking entity. The number of subaccounts permitted under this arrangement may be virtually unlimited.

U.S. banking entities engage in PTAs primarily because they attract dollar deposits from the domestic market of their foreign correspondents without changing the primary bank-customer relationship; PTAs also provide substantial fee income. Generally, PTAs at U.S. banking entities have the following characteristics: they are carried on the U.S. banking entity's books as a correspondent bank account, their transaction volume is high, checks passing through the account contain wording similar to "payable through XYZ bank," and the signatures appearing on checks are not those of authorized officers of the foreign bank. See the expanded examination procedures for PTAs in the FFIEC's *BSA/AML Examination Manual.*

Personal Trust and Estates

In trust and estate accounts, an institution offers management services for a client's assets. When dealing with trusts under will, or "testamentary trusts," the institution may receive an estate appointment (executor) and a trustee appointment if the will provided for the trust from the probate. These accounts are fully funded at origination with no opportunity for an outside party to add to the account, and all activities are subject to review by the probate or surrogates' court. On the other hand, with living trusts, or "grantor trusts," the customer (grantor) may continually add to and, in some instances, has control over the corpus of the account. Trusts and estates require experienced attorneys, money managers, and generally well-rounded professionals to set up and maintain the accounts. In certain cases, bankers may need to manage a customer's closely held business or sole proprietorship. In the case of offshore trust facilities, recent changes in U.S. law have imposed additional obligations on those banks that function as trustees or corporate management for offshore trusts and PICs.

A critical element in offering personal trust and estate services is the fiduciary responsibility of the institutions to their customers. This responsibility requires that institutions always act in the best interest of the clients pursuant to the trust documentation, perhaps even to the detriment of the bank. In these accounts, the bank is the fiduciary and the trust officer serves as a representative of the institution. Fiduciaries are held to higher standards of conduct than other bankers. Proper administration of trusts and estates includes strict controls over assets, prudent investment and management of assets, and meticulous recordkeeping. See the expanded examination procedures for trust and asset-management services in the FFIEC's *BSA/AML Examination Manual.*

Custody Services

Custodial services offered to private-banking customers include securities safekeeping, receipt and disbursement of dividends and interest, recordkeeping, and accounting. Custody relationships can be established in many ways, including by referrals from other departments in the bank or from outside investment advisers. The customer or a designated financial adviser retains full control of the investment management of the property subject to the custodianship. Sales and purchases of assets are made by instruction from the customer, and cash disbursements are prearranged or as instructed. Custody accounts involve no investment supervision and no discretion. However, the custodian may be responsible for certain losses if it fails to act properly according to the custody agreement. Therefore, procedures for proper administration should be established and reviewed.

An escrow account is a form of custody account in which the institution agrees to hold cash or securities as a middleman, or a third party. The customer, for example, an attorney or a travel agency, gives the institution funds to hold until the ultimate receiver of the funds "performs" in accordance with the written escrow agreement, at which time the institution releases the funds to the designated party.

Funds Transfer

Funds transfer, another service offered by private-banking functions, may involve the transfer of funds between third parties as part of bill-paying and investment services on the basis of customer instructions. The adequacy of controls over funds-transfer instructions that are initiated electronically or telephonically is extremely important. Funds-transfer requests are quickly processed and, as required by law, funds-transfer personnel may have limited knowledge of the customers or the purpose of the transactions. Therefore, strong controls and adequate supervision over this area are critical. See section 4063.1.

Hold Mail, No Mail, and Electronic-Mail Only

Hold-mail, no-mail, or electronic-mail-only accounts are often provided to private-banking customers who elect to have bank statements and other documents maintained at the institution rather than mailed to their residence. Agreements for hold-mail accounts should be in place, and the agreements should indicate that it was the customer's choice to have the statements retained at the bank and that the customer will pick up his or her mail at least annually. Variations of hold-mail services include delivery of mail to a prearranged location (such as another branch of the bank) by special courier or the bank's pouch system.

Bill-Paying Services

Bill-paying services are often provided to private-banking customers for a fee. If this service is provided, an agreement between the bank and the customer should exist. Typically, a customer may request that the bank debit a deposit account for credit card bills, utilities, rent, mortgage payments, or other monthly consumer charges. In addition, the increased use of the Internet has given rise to the "electronic-mail-only" account, whereby customers elect to have statements, notices, etc., sent to them only by e-mail.

FUNCTIONAL REVIEW

When discussing the functional aspects of a private-banking operation, *functional* refers to managerial processes and procedures, such as reporting lines, quality of supervision (including involvement of the board of directors), information flows, policies and procedures, risk-management policies and methodologies, segregation of duties, management information systems, operational controls (including BSA/AML monitoring), and audit coverage. The examiner should be able to draw sound conclusions about the quality and culture of management and stated private-banking policies after reviewing the functional areas described below. Specifically, the institution's risk-identification process and risk appetite should be carefully defined and assessed. Additionally, the effectiveness of the overall control environment maintained by management should be evaluated by an internal or external audit. The effectiveness of the following functional areas is critical to any private-banking operation, regardless of its size or product offerings.

Supervision and Organization

As part of the examiner's appraisal of an organization, the quality of supervision of private-banking activities is evaluated. The appraisal of management covers the full range of functions and activities related to the operation of the private bank. The discharge of responsibilities by bank directors should be effected through an organizational plan that accommodates the volume and business services handled, local business practices and the bank's competition, and the growth and development of the institution's private-banking business. Organizational planning is the joint responsibility of senior bank and private-bank management, should be integrated with the long-range plan for the institution, and should be consistent with any enterprise-wide-risk-management program.

Both the directors and management have important roles in formulating policies and establishing programs for private-banking products, operations, internal controls, and audits. However, management alone must implement policies and programs within the organizational framework instituted by the board of directors.

Risk Management

Sound risk-management processes and strong internal controls are critical to safe and sound banking generally and to private-banking activities in particular. Management's role in ensuring the integrity of these processes has become increasingly important as new products and technologies are introduced. Similarly, the client-selection, documentation, approval, and account-monitoring processes should adhere to sound and well-identified practices.

The quality of risk-management practices and internal controls is given significant weight in the evaluation of management and the overall condition of private-banking operations. A bank's failure to establish and maintain a risk-management framework that effectively identifies, measures, monitors, and controls the risks associated with products and services should be considered unsafe and unsound conduct. Furthermore, well-defined management practices should indicate the types of clients that the institution will and will not accept and should establish multiple and segregated levels of authorization for accepting new clients. Institutions that follow sound practices will be better positioned to design and deliver products and services that match their clients' legitimate needs, while reducing the likelihood that unsuitable clients might enter their client account base. Deficiencies noted in this area are weighted in context of the relative risk they pose to the institution and are appropriately reflected in the appraisal of management.

The private-banking function is exposed to a number of risks, including reputational, fiduciary, legal, credit, operational, and market. A brief description of some of the different types of risks follows:

- *Reputational risk* is the potential that negative publicity regarding an institution's business practices and clients, whether true or not, could cause a decline in the customer base, costly litigation, or revenue reductions.
- *Fiduciary risk* refers to the risk of loss due to the institution's failure to exercise loyalty;

safeguard assets; and, for trusts, to use assets productively and according to the appropriate standard of care. This risk generally exists in an institution to the extent that it exercises discretion in managing assets on behalf of a customer.

- *Legal risk* arises from the potential of unenforceable contracts, client lawsuits, or adverse judgments to disrupt or otherwise negatively affect the operations or condition of a banking organization. One key dimension of legal risk is supervisory action that could result in costly fines or other punitive measures being levied against an institution for compliance breakdowns.
- *Credit risk* arises from the potential that a borrower or counterparty will fail to perform on an obligation.
- *Operational risk* arises from the potential that inadequate information systems, operational problems, breaches in internal controls, fraud, or unforeseen catastrophes will result in unexpected losses.

Although effective management of all of the above risks is critical for an institution, certain aspects of reputational, legal, and fiduciary risks are often unique to a private-banking function. In this regard, the following customer-due-diligence policies and practices are essential in the management of reputational and legal risks in the private-banking functions. (In addition, sound fiduciary practices and conflicts-of-interest issues that a private-banking operation may face in acting as fiduciary are described in the subsection on fiduciary standards.)

Customer-Due-Diligence Policy and Procedures

Sound customer-due-diligence (CDD) policies and procedures are essential to minimize the risks inherent in private banking. The policies and procedures should clearly describe the target client base in terms such as “minimum investable net worth” and “types of products sought,” as well as specifically indicate the type of clientele the institution will or will not accept. Policies and procedures should be designed to ensure that effective due diligence is performed on all potential clients, that client files are bolstered with additional CDD information on an ongoing basis, and that activity in client accounts is monitored for transactions that are inconsistent with the client profile and may constitute unlawful activities, such as money laundering. The client’s identity, background, and the nature of his or her transactions should be documented and approved by the back office before opening an account or accepting client monies. Certain high-risk clients like foreign politicians or money exchange houses should have additional documentation to mitigate their higher risk.

Money laundering is associated with a broad range of illicit activities: the ultimate intention is to disguise the money’s true source—from the initial placement of illegally derived cash proceeds to the layers of financial transactions that disguise the audit trail—and make the funds appear legitimate. Under U.S. money-laundering statutes, a bank employee can be held personally liable if he or she is deemed to engage in “willful blindness.” This condition occurs when the employee fails to make reasonable inquiries to satisfy suspicions about client account activities.

Since the key element of an effective CDD policy is a comprehensive knowledge of the client, the bank’s policies and procedures should clearly reflect the controls needed to ensure the policy is fully implemented. CDD policies should clearly delineate the accountability and authority for opening accounts and for determining if effective CDD practices have been performed on each client. In addition, policies should delineate documentation standards and accountability for gathering client information from referrals among departments or areas within the institution as well as from accounts brought to the institution by new RMs.

In carrying out prudent CDD practices on potential private-banking customers, management should document efforts to obtain and corroborate critical background information. Private-banking employees abroad often have local contacts who can assist in corroborating information received from the customer. The information listed below should be corroborated by a reliable, independent source, when possible:

- The customer’s current address and telephone number for his or her primary residence, which should be corroborated at regular intervals, can be verified through a variety of methods, such as—
  - — visiting the residence, office, factory, or farm (with the RM recording the results

of the visit or conversations in a memorandum);
- — checking the information against the telephone directory; the client's residence, as indicated on his or her national ID card; a mortgage or bank statement or utility or property tax bill; or the electoral or tax rolls;
- — obtaining a reference from the client's government or known employer or from another bank;
- — checking with a credit bureau or professional corroboration organization; or
- — any other method verified by the RM.

- Sufficient business information about the customer should be gathered so that the RM understands the profile of the customer's commercial transactions. This information should include a description of the nature of the customer's business operations or means of generating income, primary trade or business areas, and major clients and their geographic locations, as well as the primary business address and telephone number. These items can be obtained through a combination of any of the following sources:
  - — a visit to the office, factory, or farm
  - — a reliable third party who has a business relationship with the customer
  - — financial statements
  - — Dun and Bradstreet reports
  - — newspaper or magazine articles
  - — LexisNexis reports on the customer or customer's business
  - — "Who's Who" reports from the home country
  - — private investigations
- Although it is often not possible to get proof of a client's wealth, the RM can use his or her good judgment to derive a reasonable estimate of the individual's net worth.
- As part of the ongoing CDD process, the RM should document in memos or "call reports" the substance of discussions that take place during frequent visits with the client. Additional information about a client's wealth, business, or other interests provides insight into potential marketing opportunities for the RM and the bank, and updates and strengthens the CDD profile.

As a rule, most private banks make it a policy not to accept walk-in clients. If an exception is made, procedures for the necessary documentation and approvals supporting the exception should be in place. Similarly, other exceptions to policy and procedures should readily identify the specific exception and the required due-diligence and approval process for overriding existing procedures.

In most instances, all CDD information and documentation should be maintained and available for examination and inspection at the location where the account is located or where the financial services are rendered. If the bank maintains centralized customer files in locations other than where the account is located or the financial services are rendered, complete customer information, identification, and documentation must be made available at the location where the account is located or where the financial services are rendered within 48 hours of a Federal Reserve examiner's request. Off-site storage of CDD information will be allowed only if the bank has adopted, as part of its customer-due-diligence program, specific procedures designed to ensure that (1) the accounts are subject to ongoing Office of Foreign Assets Control screening that is equivalent to the screening afforded other accounts, (2) the accounts are subject to the same degree of review for suspicious activity, and (3) the bank demonstrates that the appropriate review of the information and documentation is being performed by personnel at the offshore location.

CDD procedures should be no different when the institution deals with a financial adviser or other type of intermediary acting on behalf of a client. To perform its CDD responsibilities when dealing with a financial adviser, the institution should identify the beneficial owner of the account (usually the intermediary's client, but in rare cases, it is the intermediary itself) and perform its CDD analysis with respect to that beneficial owner. The imposition of an intermediary between the institution and counterparty should not lessen the institution's CDD responsibilities.

The purpose of all private-banking relationships should also be readily identified. Incoming customer funds may be used for various purposes, such as establishing deposit accounts, funding investments, or establishing trusts. The bank's CDD procedures should allow for the collection of sufficient information to develop a transaction or client profile for each customer, which will be used in analyzing client transactions. Internal systems should be developed for monitoring and identifying transactions that may be inconsistent with the transaction or client profile for a customer and which may thus constitute suspicious activity.

Suspicious Activity Reports by Depository Institutions. The proper and timely filing of Suspicious Activity Report (SAR) forms is an important component of a bank's CDD program. Since 1996, the federal financial institution supervisory agencies and the Department of the Treasury's Financial Crimes Enforcement Network (FinCEN) have required banking organizations to report known or suspected violations of law as well as suspicious transactions on a suspicious activity report or SAR form. See the Board's SAR form regulation (Regulation H, section 208.62 (12 CFR 208.62)).[5] Law enforcement agencies use the information reported on the form to initiate investigations, and Federal Reserve staff use the SAR form information in their examination and oversight of supervised institutions.

A member bank is required to file a SAR form with the appropriate federal law enforcement agencies and the Department of the Treasury. A SAR form must be prepared in accordance with the form's instructions and is to be sent to FinCEN when an institution detects—

- insider abuse involving any amount,
- violations aggregating $5,000 or more in which a suspect can be identified,
- violations aggregating $25,000 or more regardless of a potential suspect, or
- transactions aggregating $5,000 or more that involve potential money laundering or violations of the Bank Secrecy Act.

When a SAR form is filed, the management of a member bank must promptly notify its board of directors or a committee thereof.

A SAR form must be filed within 30 calendar days after the date of initial detection of the facts that may constitute a basis for filing a SAR form. If no suspect was identified on the date of detection of the incident requiring the filing, a member bank may delay filing a SAR form for an additional 30 calendar days in order to identify the suspect. Reporting may not be delayed more than 60 calendar days after the date of initial detection of a reportable transaction. In situations involving violations requiring immediate attention, such as when a reportable violation is ongoing, the financial institution is required to immediately notify an appropriate law enforcement authority in addition to its timely filing of a SAR form.

A bank's internal systems for capturing suspicious activities should provide essential information about the nature and volume of activities passing through customer accounts. Any information suggesting that suspicious activity has occurred should be pursued, and, if an explanation is not forthcoming, the matter should be reported to the bank's management. Examiners should ensure that the bank's approach to SAR forms is proactive and that well-established procedures cover the SAR form process. Accountability should exist within the organization for the analysis and follow-up of internally identified suspicious activity; this analysis should conclude with a decision on the appropriateness of filing a SAR form. See the core procedures concerning suspicious-activity-reporting requirements in the FFIEC *BSA/AML Examination Manual.*

5. The Board's SAR form rules apply to state member banks, bank holding companies and their nonbank subsidiaries, some of which have other independent SAR requirements (for example, broker-dealers), Edge and agreement corporations, and the U.S. branches and agencies of foreign banks supervised by the Federal Reserve.

Credit-Underwriting Standards

The underwriting standards for private-banking loans to high net worth individuals should be consistent with prudent lending standards. The same credit policies and procedures that are applicable to any other type of lending arrangement should extend to these loans. At a minimum, sound policies and procedures should address the following: all approved credit products and services offered by the institution, lending limits, acceptable forms of collateral, geographic and other limitations, conditions under which credit is granted, repayment terms, maximum tenor, loan authority, collections and charge-offs, and prohibition against capitalization of interest.

An extension of credit based solely on collateral, even if the collateral is cash, does not ensure repayment. While the collateral enhances the bank's position, it should not substitute for regular credit analyses and prudent lending practices. If collateral is derived from illegal activities, it is subject to forfeiture through the seizure of assets by a government agency. The bank should perform its due diligence by adequately and reasonably ascertaining and documenting that the funds of its private-banking customers were derived from legitimate means. Banks should also verify that the use of the loan proceeds is for legitimate purposes.

In addition, bank policies should explicitly describe the terms under which "margin loans," loans collateralized by securities, are made and should ensure that they conform to applicable regulations. Management should review and approve daily MIS reports. The risk of market deterioration in the value of the underlying collateral may subject the lender to loss if the collateral must be liquidated to repay the loan. In the event of a "margin call," any shortage should be paid for promptly by the customer from other sources pursuant to the terms of the margin agreement.

In addition, policies should address the acceptance of collateral held at another location, such as an affiliated entity, but pledged to the private-banking function. Under these circumstances, management of the private-banking function should, at a minimum, receive frequent reports detailing the collateral type and current valuation. In addition, management of the private-banking function should be informed of any changes or substitutions in collateral.

Fiduciary Standards

Fiduciary risk is managed through the maintenance of an effective and accountable committee structure; retention of technically proficient staff; and development of effective policies, procedures, and controls. In managing its fiduciary risk, the bank must ensure that it carries out the following fiduciary duties:

- *Duty of loyalty.* Trustees are obligated to make all decisions based exclusively on the best interests of trust customers. Except as permitted by law, trustees cannot place themselves in a position in which their interests might conflict with those of the trust beneficiaries.
- *Avoidance of conflicts of interest.* Conflicts of interest arise in any transaction in which the fiduciary simultaneously represents the interests of multiple parties (including its own interests) that may be adverse to one another. Institutions should have detailed policies and procedures regarding potential conflicts of interest. All potential conflicts identified should be brought to the attention of management and the trust committee, with appropriate action taken. Conflicts of interest may arise throughout an institution. Care should be taken by fiduciary business lines, in particular, to manage conflicts of interest between fiduciary business lines and other business lines (including other fiduciary business lines). Consequently, management throughout the institution should receive training in these matters. For more information on the supervision of fiduciary activities, see section 4200.0 in this manual and section 3120.0 of the *Bank Holding Company Supervision Manual.*
- *Duty to prudently manage discretionary trust and agency assets.* Since 1994, the majority of states have adopted laws concerning the prudent investor rule (PIR) with respect to the investment of funds in a fiduciary capacity. PIR is a standard of review that imposes an obligation to prudently manage the portfolio as a whole, focusing on the process of portfolio management, rather than on the outcome of individual investment decisions. Although this rule only governs trusts, the standard is traditionally applied to all accounts for which the institution is managing funds.

Operational Controls

To minimize any operational risks associated with private-banking activities, management is responsible for establishing an effective internal control infrastructure and reliable management information systems. Critical operational controls over any private-banking activity include the establishment of written policies and procedures, segregation of duties, and comprehensive management reporting. Throughout this section, specific guidelines and examination procedures for assessing internal controls over different private-banking activities are provided. Listed below are some of those guidelines that cover specific private-banking services.

Segregation of Duties

Banking organizations should have guidelines on the segregation of employees' duties in order to prevent the unauthorized waiver of documentation requirements, poorly documented referrals, and overlooked suspicious activities. Independent oversight by the back office helps to ensure compliance with account-opening procedures and CDD documentation. Control-conscious institutions may use independent units, such as compliance, risk management, or senior management to fill this function in lieu of the back office. The audit and compliance functions of the private-banking entity should be similarly independent so that they can operate autonomously from line management.

Inactive and Dormant Accounts

Management should be aware that banking laws in most states prohibit banks from offering services that allow deposit accounts to be inactive for prolonged periods of time (generally, 12 or more months with no externally generated account-balance activity). These regulations are based on the presumption that inactive and dormant accounts may be subject to manipulation and abuse by insiders. Policies and procedures should delineate when inactivity occurs and when inactive accounts should be converted to dormant status. Effective controls over dormant accounts should include a specified time between the last customer-originated activity and its classification as dormant, the segregation of signature cards for dormant accounts, dual control of records, and the blocking of the account so that entries cannot be posted to the account without review by more than one member of senior management.

Pass-Through Accounts and Omnibus Accounts

Pass-through accounts (PTAs) extend checking-account privileges to the customers of a foreign bank; several risks are involved in providing these accounts. In particular, if the U.S. banking entity does not exercise the same due diligence and customer vetting for PTAs as it does for domestic account relationships, the use of PTAs may facilitate unsafe and unsound banking practices or illegal activities, including money laundering. Additionally, if accounts at U.S. banking entities are used for illegal purposes, the entities could be exposed to reputational risk and risk of financial loss as a result of asset seizures and forfeitures brought by law enforcement authorities. It is recommended that U.S. banking entities terminate a payable-through arrangement with a foreign bank in situations in which (1) adequate information about the ultimate users of PTAs cannot be obtained, (2) the foreign bank cannot be relied on to identify and monitor the transactions of its own customers, or (3) the U.S. banking entity is unable to ensure that its payable-through accounts are not being used for money laundering or other illicit purposes.

Omnibus, or general clearing, accounts may also exist in the private-banking system. They may be used to accommodate client funds before an account opening to expedite a new relationship, or they may fund products such as mutual funds in which client deposit accounts may not be required. However, these accounts could circumvent an audit trail of client transactions. Examiners should carefully review a bank's use of such accounts and the adequacy of its controls on their appropriate use. Generally, client monies should flow through client deposit accounts, which should function as the sole conduit and paper trail for client transactions.

Hold-Mail, No Mail, and E-mail-Only Controls

Controls over hold-mail, no-mail, and e-mail-only accounts are critical because the clients have relinquished their ability to detect unauthorized transactions in their accounts in a timely manner. Accounts with high volume or significant losses warrant further inquiry. Hold-mail, no-mail, and e-mail-only account operations should ensure that client accounts are subject to dual control and are reviewed by an independent party.

Funds Transfer—Tracking Transaction Flows

One way that institutions can improve their customer knowledge is by tracking the transaction flows into and out of customer accounts and payable-through subaccounts. Tracking should include funds-transfer activities. Policies and procedures to detect unusual or suspicious activities should identify the types of activities that would prompt staff to investigate the customer's activities and should provide guidance on the appropriate action required for suspicious activity. The following is a checklist to guide bank personnel in identifying some potential abuses:

- indications of frequent overrides of established approval authority or other internal controls
- intentional circumvention of approval authority by splitting transactions
- wire transfers to and from known secrecy jurisdictions
- frequent or large wire transfers for persons who have no account relationship with the bank, or funds being transferred into and out of an omnibus or general clearing account instead of the client's deposit account
- wire transfers involving cash amounts in excess of $10,000
- inadequate control of password access
- customer complaints or frequent error conditions

Custody—Detection of Free Riding

Custody departments should monitor account activity to detect instances of *free-riding,* the practice of offering the purchase of securities without sufficient capital and then using the proceeds of the sale of the same securities to cover the initial purchase. Free-riding poses significant risk to the institution and typically occurs without the bank's prior knowledge. Free-riding also violates margin rules (Regulations T, U, and X) governing the extension of credit in connection with securities transactions. (See SR-93-13.)

Management Information Systems

Management information systems (MIS) should accumulate, interpret, and communicate information on (1) the private-banking assets under management, (2) profitability, (3) business and transaction activities, and (4) inherent risks. The form and content of MIS for private-banking activities will be a function of the size and complexity of the private-banking organization. Accurate, informative, and timely reports that perform the following functions may be prepared and reviewed by RMs and senior management:

- aggregate the assets under management according to customer, product or service, geographic area, and business unit
- attribute revenue according to customer and product type
- identify customer accounts that are related to or affiliated with one another through common ownership or common control
- identify and aggregate customer accounts by source of referral
- identify beneficial ownership of trust, PIC, and similar accounts

To monitor and report transaction activity and to detect suspicious transactions, management reports may be developed to—

- monitor a specific transaction criterion, such as a minimum dollar amount or volume or activity level;
- monitor a certain type of transaction, such as one with a particular pattern;
- monitor individual customer accounts for variations from established transaction and activity profiles based on what is usual or expected for that customer; and
- monitor specific transactions for BSA compliance.

In addition, reports prepared for private-banking customers should be accurate, timely, and informative. Regular reports and statements prepared for private-banking customers should adequately and accurately describe the application of their funds and should detail all transactions and activity that pertain to the customers' accounts.

Furthermore, MIS and technology play a role in building new and more direct channels of information between the institution and its private-banking customers. Active and sophisticated customers are increasing their demand for data relevant to their investment needs, which is fostering the creation of online information services. Online information can satisfy customers' desire for convenience, real-time access to information, and a seamless delivery of information.

Audit

An effective audit function is vital to ensuring the strength of a private bank's internal controls. As a matter of practice, internal and external auditors should be independently verifying and confirming that the framework of internal controls is being maintained and operated in a manner that adequately addresses the risks associated with the activities of the organization. Critical elements of an effective internal audit function are the strong qualifications and expertise of the internal audit staff and a sound risk-assessment process for determining the scope and frequency of specific audits. The audit process should be risk-focused and should ultimately determine the risk rating of business lines and client CDD procedures. Compliance with CDD policies and procedures and the detailed testing of files for CDD documentation are also key elements of the audit function. Finally, examiners should review and evaluate management's responsiveness to criticisms by the audit function.

Compliance

The responsibility for ensuring effective compliance with relevant laws and regulations may vary among different forms of institutions, depending on their size, complexity, and availability of resources. Some institutions may have a distinct compliance department with the centralized role of ensuring compliance institution-wide, including private-banking activities. This arrangement is strongly preferable to a situation in which an institution delegates compliance to specific functions, which may result in the management of private-banking operations being responsible for its own internal review. Compliance has a critical role in monitoring private-banking activities; the function should be independent of line management. In addition to ensuring compliance with various laws and regulations such as the Bank Secrecy Act and those promulgated by the Office of Foreign Assets Control, compliance may perform its own internal investigations and due diligence on employees, customers, and third parties with whom the bank has contracted in a consulting or referral capacity and whose behavior, activities, and transactions appear to be unusual or suspicious. Institutions may also find it beneficial for compliance to review and authorize account-opening documentation and CDD adequacy for new accounts. The role of compliance is a control function, but it should not be a substitute for regular and frequent internal audit coverage of the private-banking function. Following is a description of certain regulations that may be monitored by the compliance function.

Office of Foreign Assets Control

The Office of Foreign Assets Control (OFAC) of the U.S. Department of the Treasury administers and enforces economic and trade sanctions based on U.S. foreign policy and national security goals. Sanctions are imposed against targeted foreign countries, terrorists, international narcotics traffickers, and those engaged in activities related to the proliferation of weapons of mass destruction. OFAC acts under presidential wartime and national emergency powers, as well as under authority granted by specific legislation, to impose controls on transactions and freeze foreign assets under U.S. jurisdiction. Many of the sanctions are based on United Nations and other international mandates, are multilateral in scope, and involve close cooperation with allied governments. Under the International Emergency Economic Powers Act, the President can impose sanctions, such as trade embargoes, the freezing of assets, and import surcharges, on certain foreign countries and the "specially designated nationals" of those countries.

A "specially designated national" is a person or entity who acts on behalf of one of the countries under economic sanction by the United States. Dealing with such nationals is prohibited. Moreover, their assets or accounts in the United States are frozen. In certain cases, the Treasury Department can issue a license to a designated national. This license can then be presented by the customer to the institution, allowing the institution to debit his or her account. The license can be either general or specific.

OFAC screening may be difficult when transactions are conducted through PICs, token names, numbered accounts, or other vehicles that shield true identities. Management must ensure that accounts maintained in a name other than that of the beneficial owner are subject to the same level of filtering for OFAC specially designated nationals and blocked foreign countries as other accounts. That is, the OFAC screening process must include the account's beneficial ownership as well as the official account name.

Any violation of regulations implementing designated national sanctions subjects the violator to criminal prosecution, including prison sentences and fines to corporations and individuals, per incident. Any funds frozen because of OFAC orders should be placed in a blocked account. Release of those funds cannot occur without a license from the Treasury Department.

Bank Secrecy Act

Guidelines for compliance with the Bank Secrecy Act (BSA) can be found in the FFIEC *BSA/AML Examination Manual.* See also the question-and-answer format interpretations (SR-05-9) of the U.S. Department of Treasury's regulation (31 CFR 1010) for banking organizations, which is based on section 326 of the Patriot Act. In addition, the procedures for conducting BSA examinations of foreign offices of U.S. banks are detailed in the FFIEC *BSA/AML Examination Manual*. The SAR form filing requirements for nonbank subsidiaries of bank holding companies and state member banks are also set forth in SR-10-8.

PREPARATION FOR EXAMINATION

The following subsections provide examiners with guidance on preparing for the on-site examination of private-banking operations, including determination of the examination scope and drafting of the first-day-letter questionnaire that is provided to the institution.

Preexamination Review

To prepare the examiners for their assignments and to determine the appropriate staffing and scope of the examination, the following guidelines should be followed during the preexamination planning process:

- Review the prior report of examination and workpapers for the exam scope; structure and type of private-banking activities conducted; and findings, conclusions, and recommendations of the prior examination. The prior examination report and examination plan should also provide insight to key contacts at the institution and to the time frame of the prior private-banking review.
- Obtain relevant correspondence sent since the prior examination, such as management's response to the report of examination, any applications submitted to the Federal Reserve, and any supervisory action.
- Research press releases and published news stories about the institution and its private-banking activities.
- Review internal and external audit reports and any internal risk assessments performed by the institution on its private-banking activities. Such reports should include an assessment of the internal controls and risk profile of the private-banking function.
- Contact the institution's management to ascertain what changes have occurred since the last exam or are planned in the near future. For example, examiners should determine if there have been changes to the strategic plan; senior management; or the level and type of private-banking activities, products, and services offered. If there is no mention of private banking in the prior examination report, management should be asked at this time if they have commenced or plan to commence any private-banking activities.
- Follow the core examination procedures in the FFIEC *BSA/AML Examination Manual* in order to establish the base scope for the examination of private-banking activities. Review and follow the expanded procedures for private banking and any other expanded procedures that are deemed necessary.

Examination Staffing and Scope

Once the exam scope has been established and before beginning the new examination, the examiner-in-charge and key administrators of the examination team should meet to discuss the private-banking examination scope, the assignments of the functional areas of private banking, and the supplemental reviews of specific private-banking products and services. If the bank's business lines and services overlap and if its customer base and personnel are shared throughout the organization, examiners may be forced to go beyond a rudimentary review of private-banking operations. They will probably need to focus on the policies, practices, and risks within the different divisions of a particular institution and throughout the institution's global network of affiliated entities.

Reflection of Organizational Structure

The review of private-banking activities should be conducted on the basis of the financial institution's organizational structure. These structures may vary considerably, depending on the size and sophistication of the institution, its country of origin and the other geographic markets in which it competes, and the objectives and strategies of its management and board of directors. To the extent possible, examiners should understand the level of consolidated private-banking activities an institution conducts in the United States and abroad. This broad view is needed to maintain the "big picture" impact of private banking for a particular institution.

Risk-Focused Approach

Examiners reviewing the private-banking operations should implement the risk-focused examination approach. The exam scope and degree of testing of private-banking practices should reflect the degree of risk assumed, prior exam findings on the implementation of policies and procedures, the effectiveness of controls, and an assessment of the adequacy of the internal audit and compliance functions. If initial inquiries into the institution's internal audit and other assessment practices raise doubts about the internal system's effectiveness, expanded analysis and review are required. Examiners should then perform more transaction testing. Examiners will usually need to follow the core examination procedures in the FFIEC *BSA/AML Examination Manual* as well as the expanded procedures for private banking. Other expanded procedures should be followed if circumstances dictate.

First-Day Letter

As part of the examination preparation, examiners should customize the first-day-letter questionnaire to reflect the structure and type of private-banking activities of the institution and the scope of the exam. The following is a list of requests regarding private banking that examiners should consider including in the first-day letter. Responses to these items should be reviewed in conjunction with responses to the BSA, fiduciary, audit, and internal control inquiries:

- organizational chart for the private bank on both a functional and legal-entity basis
- business or strategic plan
- income and expense statements for the prior fiscal year and current year to date, with projections for the remainder of the current and the next fiscal year, and income by product division and marketing region
- balance-sheet and total assets under management (list the most active and profitable accounts by type, customer domicile, and responsible account officer)
- most recent audits for private-banking activities
- copies of audit committee minutes
- copy of the CDD and SAR form policies and procedures
- list of all new business initiatives introduced last year and this year, relevant new-product-approval documentation that addresses the evaluation of the unique characteristics and risk associated with the new activity or product, and an assessment of the risk-management oversight and control infrastructures in place to manage the risks
- list of all accounts in which an intermediary is acting on behalf of clients of the private bank, for example, as financial advisers or money managers
- explanation of the methodology for following up on outstanding account documentation and a sample report
- description of the method for aggregating client holdings and activities across business units throughout the organization
- explanation of how related accounts, such as common control and family link, are identified
- name of a contact person for information on compensation, training, and recruiting programs for relationship managers
- list of all personal investment company accounts
- list of reports that senior management receives regularly on private-banking activities
- description and sample of the management information reports that monitor account activity
- description of how senior management monitors compliance with global policies for world-

wide operations, particularly for offices operating in secrecy jurisdictions
- appropriate additional items from the core and expanded procedures for private banking, as set forth in the FFIEC *BSA/AML Examination Manual,* as well as any other items from the expanded procedures that are needed to gauge the adequacy of the BSA/AML program for private-banking activities.

1. To determine if the policies, practices, procedures, and internal controls regarding private-banking activities are adequate for the risks involved.
2. To determine if the bank's officers and employees are operating in conformance with established guidelines for conducting private-banking activities.
3. To assess the financial condition and income-generation results of the private-banking activities.
4. To determine the scope and adequacy of the audit function for private-banking activities.
5. To determine compliance with applicable laws and regulations for private banking.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient, or when violations of laws or regulations are found.

As appropriate, the examiner-in-charge should supplement the following procedures with the examination procedures for private banking set forth in the FFIEC's *BSA/AML Examination Manual.* See that manual's core examination procedures for the BSA/AML compliance program and the expanded examination procedures for private banking.

PRIVATE-BANKING PREEXAMINATION PROCEDURES

1. As the examiner-in-charge, conduct a meeting with the lead members of the private-banking examination team and discuss—
   a. the private-banking examination scope (The examination may need to extend beyond a rudimentary review of private-banking operations if the bank's business lines and services overlap and if its customer base and personnel are shared throughout the organization. Examiners will probably need to focus on the policies, practices, and risks within the different divisions of the bank and, if applicable, throughout the bank's domestic or foreign-affiliated entities.);
   b. examiner assignments for the functional areas of private banking; and
   c. the supplemental reviews of specific private-banking products and services.
2. Review the prior report of examination and the previous examination's workpapers; description of the examination scope; structure and type of private-banking activities conducted; and findings, conclusions, and recommendations of the prior examination. The prior examination report and examination plan should also provide information and insight on key contacts at the bank and on the time frame of the prior private-banking review.
3. Review relevant correspondence exchanged since the prior examination, such as management's response to the report of examination, any applications submitted to the Federal Reserve, and any supervisory actions.
4. Research press releases and published news stories about the bank and its private-banking activities.
5. Review internal and external audit reports and any internal risk assessments performed by the bank's internal or external auditors on its private-banking activities. Review information on any assessments of the internal controls and risk profile of the private-banking function.
6. Contact management at the bank to ascertain what changes in private-banking services have occurred since the last examination or if there are any planned in the near future.
   a. Determine if the previous examination or examination report(s) mention private banking; if not, ask management if they have commenced or plan to commence any private-banking activities within any part of the bank's organization.
   b. Determine if there have been any changes to the strategic plan; senior management; or the level and type of private-banking activities, products, and services offered.
   c. During the entire examination of private-banking activities, be alert to the totality of the client relationship, product by product, in light of increasing client awareness and use of derivatives, emerging-market products, foreign exchange, and margined accounts.

FULL-EXAMINATION PHASE

1. After reviewing the private-banking functional areas, draw sound conclusions about the quality and culture of management and stated private-banking policies.
2. Evaluate the adequacy of risk-management policies and practices governing private-banking activities.
3. Assess the organization of the private-banking function and evaluate the quality of management's supervision of private-banking activities. An appraisal of management covers the—
   a. full range of functions (i.e., supervision and organization, risk management, fiduciary standards, operational controls, management information systems, audit, and compliance) and activities related to

the operation of the private-banking activities and

b. discharge of responsibilities by the bank's directors through a long-range organizational plan that accommodates the volume and business services handled, local business practices and the bank's competition, and the growth and development of the bank's private-banking business.

4. Determine if management has effective procedures for conducting ongoing reviews of client-account activity to detect, and protect the client from, any unauthorized activity and any account activity that is inconsistent with the client's profile (for example, frequent or sizable unexplained transfers flowing through the account).
5. Determine if the bank has initiated private-banking account-opening procedures and documentation requirements that must be satisfied before an account can be opened. Determine if the bank maintains internal controls over these procedures and requirements.
6. Determine if the bank requires its subsidiary entities and affiliates to maintain and adhere to well-structured customer-due-diligence (CCD) procedures.
7. Determine if the bank has proper controls and procedures to ensure its proper administration of trust and estates, including strict controls over assets, prudent investment and management of assets, and meticulous recordkeeping. Review previous trust examination reports and consult with the designated Federal Reserve System trust examiners.
8. Ascertain whether the bank adequately supervises its custody services. The bank should ensure that it, and its nonbank entities, have established and currently maintain procedures for the proper administration of custody services, including the regular review of the services on a preset schedule.
9. Determine whether the bank's nonbank subsidiaries and affiliates are required to, and actually maintain, strong controls and supervision over funds transfers.
10. Ascertain if the bank's management and staff are required to perform due diligence, that is, to verify and document that the funds of its private-banking customers were derived through legitimate means, and when extending credit, to verify that the use of loan proceeds was legitimate.
11. Review the bank's use of deposit accounts.
    a. Assess the adequacy of the bank's controls and whether they are appropriately used.
    b. Determine if client monies flow through client deposit accounts and whether the accounts function as the sole conduit and paper trail for client transactions.
12. Determine and ensure that the bank's approach to Suspicious Activity Reports is proactive and that it has well-established procedures covering the SAR process. Establish whether there is accountability within the organization for the analysis and follow-up of internally identified suspicious activity (this analysis includes a sound decision on whether the bank needs to file, or is required by regulation to file, a SAR).

Employee benefit trusts are specialized trusts most commonly established to provide retirement benefits to employees. However, they may also be established for employee stock ownership or thrift purposes, or to provide medical, accident, and disability benefits. There are qualified and unqualified plans. Retirement plans are qualified under section 401 of the Internal Revenue Code (IRC), and employee benefit trusts are tax exempt under section 501(a) of the IRC. The major types of qualified plans are profit sharing, money purchase, stock bonus, employee stock ownership plans (ESOPS), 401(k) plans, and defined benefit pension plans.

Since 1974, state jurisdiction of employee benefit trusts and their administration has been largely preempted by a comprehensive scheme of federal laws and regulations under the Employee Retirement Income Security Act of 1974 (ERISA). ERISA is divided into four titles: Title I, ''Protection of Employee Benefit Rights,'' includes the fiduciary responsibility provisions (in part 4) that are interpreted and enforced by the U.S. Department of Labor (DOL). Title II, ''Amendments to the Internal Revenue Code Relating to Retirement Plans,'' is similar to Title I, but the Internal Revenue Service (IRS) is responsible for its enforcement. Title III, ''Jurisdiction, Administration, Enforcement,'' grants jurisdiction and powers for administration to various governmental units. Title IV, ''Plan Termination Insurance,'' establishes the Pension Benefit Guaranty Corporation (PBGC). The PBGC ensures that defined benefit plans have sufficient resources to provide minimum levels of benefits to participants. In addition to the PBGC, the primary agencies that have promulgated necessary regulations and interpretations pursuant to ERISA are the DOL and IRS. However, state and federal banking agencies also have a recognized role under this statute.

Numerous laws affecting employee benefit plans have been enacted since the adoption of ERISA; however, the most sweeping changes were imposed by the Tax Reform Act of 1986. These changes include (1) imposing numerous excise taxes on employers and employees for failure to meet new plan contribution and distribution rules, (2) lowering the maximum amount of contributions and benefits allowed under qualified defined contribution and defined benefit plans, (3) lowering the amount an individual can contribute to a 401(k) plan, and (4) providing new nondiscrimination rules covering plan contributions and distributions. Virtually all qualified plans had to be amended to comply with this law.

A specific statutory provision of ERISA mandates the exchange of information among federal agencies. Accordingly, the federal banking agencies have entered into an agreement with the DOL whereby a banking agency noting any possible ERISA violations that meet certain specific criteria will refer the matter to the DOL.

ERISA imposes very complex requirements on banks acting as trustees or in other fiduciary capacities for employee benefit trusts. Severe penalties can result from violations of statutory obligations. With respect to a bank's own employees' retirement plan, the bank (or ''plan sponsor''), regardless of whether it is named trustee, is still a ''party-in-interest'' pursuant to the statute. Therefore, unless a transaction qualifies for narrowly defined statutory exemptions (or unless it is the subject of a specific ''individual'' exemption granted by the DOL), any transaction involving the purchase or sale of an asset of the plan from or to the bank, any affiliate, officer, or employee could constitute a prohibited transaction under ERISA.

The current and projected costs of employee benefit plans should be analyzed for their impact on the expenses and overall financial condition of the bank. Excessive pension or profit-sharing benefits, large expense accounts, employment contracts, or bonuses for officers or directors (especially if they are also large shareholders) could prove detrimental and even lead to civil liability for the bank or its board.

Depending on the type of plan and the allocations of its fiduciary duties, certain reporting, disclosure, and plan design requirements are imposed on the plan sponsor and/or its designated supervising committee. Therefore, a bank should have appropriate expertise, policies, and procedures to properly administer the type of employee benefit accounts established for its employees.

If an examiner, as part of any examination assignment, detects possible prohibited transactions, self-dealing, or other questionable activities involving the bank's employee benefit plan, an appropriate investigation should be undertaken. Substantial conversions of existing defined benefit plans or plan assets into holdings of bank or affiliate stock, under certain circumstances, could involve ERISA violations. An examiner should refer a complicated question arising out of any of these situations to the examiner-in-charge for resolution or submission to the Reserve Bank.

Part I of the following examination procedures (section 4080.3) should be completed for every commercial bank examination; part II should also be completed if the employee benefit plan is not trusteed by the bank or by an affiliate bank subject to supervision by a federal banking agency. Parts I and II may be completed by a trust specialist, if available. When a bank trust department is named as trustee, the examiner should determine whether compliance with ERISA was reviewed during the previous trust examination. If not, then part II should be completed.

1. To determine if the policies, practices, procedures, internal controls, and available expertise regarding employee benefit trusts are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the impact of employee benefit plans and related benefits on the financial condition of the bank.
4. To determine compliance with laws, regulations, and instrument provisions.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws, regulations, or the governing instruments have been noted.

PART I

1. If selected for implementation, complete or update the Employee Benefit Trusts section of the Internal Controls Questionnaire.
2. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned "Internal Control," and determine if appropriate corrections have been made.
3. Determine the approximate number, size and types of employee benefit plans held for the benefit of the bank's officers and employees.
4. Obtain plan instruments or amendments thereto (if any) and summarize key features for the work papers. As appropriate, add or update the following information:
   a. Date of adoption of new plan or amendment and brief summary of the plan or amendment.
   b. Parties or committees named trustee and (if different) person(s) responsible for making investment decisions.
   c. Individuals, committees or outside parties named as responsible for plan administration.
   d. Basic investment/funding characteristics (e.g., "non-contributory profit-sharing, up to 100% in own BHC stock;" "contributory defined benefit pension plan, purchasing diversified securities," etc.).
   e. Latest Form 5500 (IRS) filed for plan (may be omitted if plan administrator is an affiliate bank or bank holding company).

   Example: First Bank established a non-contributory profit sharing trust in 1975 for all officers and employees. Latest amendment, as of December 31, 19XX, made technical alterations to the vesting and forfeiture provisions. The most recent available valuation of the trust's assets, dated June 30, 19XX, indicated total assets of $22,093,000 (market value). Assets were comprised of U.S. government securities (42%), listed stocks (53%) and cash equivalents. Bank of ___________, as trustee, has sole investment responsibility.

5. If a plan is a defined benefit pension plan, ascertain the actuarily-determined amount of unfunded pension liability, if any, and the bank's arrangements for amortization. (Note: Unfunded pension liability represents a contingent liability per instructions for the Report of Condition.)

6. Determine if the current and projected costs of the employee benefit plan(s) is reasonable in light of the bank's financial condition.

Complete part II of these procedures, if applicable, then continue to step 7, below. Part II is to be completed when a plan for the bank's employees is administered by the bank or a bank committee and is not trusteed by the bank itself or an affiliate bank subject to supervision by a federal banking agency.

7. Determine whether any instances of possible violations of ERISA have been noted, and that as to each such instance, full information has been developed for current workpapers to support a referral to DOL pursuant to SR-81-697/TR-81-46.

   Note: While the final decision on whether or not to make a referral to the DOL is to be made by the Board's staff after receipt of the report of examination, complete information should always be obtained regarding possible ERISA violations in the event the decision is made to refer the matter. If gathering certain of the information would impose an undue burden upon the resources of the examiners or the bank, Board's staff (Trust Activities Program) should be consulted. Where a significant prohibited transaction such as self dealing has taken place, the bank should be clearly informed that it is expected to undertake all such corrective and/or remedial actions as are necessary under the circumstances. One measure would be for the bank to apply to the DOL for a retroactive exemption under ERISA section 408(a).

8. Reach a conclusion concerning:
   a. The adequacy of policies, practices and procedures relating to employee benefit trusts.
   b. The manner in which bank officers are operating in conformance with established policy.
   c. The accuracy and completeness of any schedules obtained.
   d. Internal control deficiencies or exceptions.
   e. The quality of departmental management.
   f. Other matters of significance.
9. Prepare in appropriate report format, and discuss with appropriate officer(s):
   a. Violations of laws and regulations.
   b. Recommended corrective action when policies, practices or procedures are deficient.
10. Update the workpapers with any information that will facilitate future examinations.

PART II

1. Review plan asset listings, valuations, or printouts obtained for any instances of possible prohibited transactions (ERISA sections 406(a) and (b)). The listings should include holdings of:
   a. Loans.
   b. Leases.
   c. Real Estate.
   d. Employer stock or other securities or obligations.
   e. Own bank time deposits.
   f. Other assets which might constitute, or result from, prohibited transactions.
2. Review transaction(s)/holding(s) in the previous step for conformity to:
   a. ERISA provisions regarding employer securities or real estate (sections 407(a), (b) and (c)) and related regulations.
   b. Statutory exemptions of ERISA (section 408(b)).
   c. “Exclusive benefit,” prudence and diversification requirements of ERISA (sections 404(a) and (b)).

Review the bank's internal controls, policies, practices and procedures for employee benefit accounts. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Part I should be completed as part of every examination; both parts I and II should be completed whenever the plan, administered by the bank or a bank committee, is *not* trusteed by the bank itself or by an affiliate bank subject to supervision by a federal banking agency.

PART I

1. Are new employee benefit plans, significant amendments thereto, and related costs and features approved by the bank's board of directors?

*2. Does the institution obtain and maintain on file the following minimum documentation:

   a. The plan and the corporate resolution adopting it?

   b. IRS "determination" or "opinion" letter substantiating the tax-exempt status of the plan?

   c. The trust agreement and the corporate resolution appointing the trustee(s), if applicable? (On occasion, fully insured plans may have no named trustee.)

   d. Amendments to the plan or trust documents?

3. If the bank or a committee of its officers and employees acts as plan administrator for any plan(s), does it have internal procedures and/or has it arranged by contract for external administrative expertise sufficient to assure compliance with reporting, disclosure and other administrative requirements of ERISA and related regulations?

4. Have the bank, its officers, directors or employees, or any affiliate(s) entered into any transactions to buy or sell assets to the bank's employee benefit plan(s)?

5. Do plan investments conform to instrument investment provisions?

PART II

1. When exercising fiduciary responsibility in the purchase or retention of employer securities or employer real estate, does the bank have procedures to assure conformity with ERISA section 407 and related provisions?

   Note: The requirements of ERISA and the associated DOL regulation with respect to "employer securities and employer real estate" include:

   a. A plan may not acquire or hold any but "qualifying employer securities and employer real estate."

   b. A defined benefit plan may hold no more than 10 percent of the fair market value of its assets in qualifying employer securities and/or qualifying employer real property, except as provided by ERISA sections 407(a)(3) or 414(c)(1) and (2), and adopted regulations.

   c. Any dispositions of such property from a plan to a party-in-interest shall conform to ERISA sections 414(c)(3) and (5) and adopted regulations, but certain acquisitions and sales may be made pursuant to the section 408(a) exemption.

   d. The plan instrument, for an eligible individual account plan which is to hold in excess of 10 percent of the fair market value of its assets in qualifying employer securities or real property, shall provide explicitly the extent to which such plan may hold such assets. [ERISA sections 407(b)(1) and (d)(3)]

2. Does the bank have procedures to ensure conformance to the following statutory exemptions (and associated regulations) from the prohibited transactions provisions of ERISA:

   a. Loans made by the plan to parties-in-interest who are participants or beneficiaries? [ERISA section 408(b)(1)]

   b. Investment in deposits which bear a reasonable rate of interest of a bank which is a fiduciary of the plan? [ERISA section 408(b)(4)]

   Note: Other statutory exemptions which may on occasion be applicable are:

c. Arrangements for office space or legal, accounting or other necessary services? [ERISA section 408(b)(2)]
d. Loans to employee stock ownership trusts? [ERISA section 408(b)(3)]
e. Transactions between a plan and a collective trust fund maintained by a party-in-interest which is a bank or trust company? [section 408(b)(8)]
f. Providing of any ancillary service by a bank or trust company which is a fiduciary of the plan? [ERISA section 408(b)(6)]

3. If exercising or sharing fiduciary responsibility, does the bank have procedures designed:

   a. To ensure that duties are executed for the exclusive benefit of plan participants and beneficiaries, in accordance with the "prudent man" standard? [ERISA sections 404(a)(1)(A) and (B)]

   b. To ensure that investments are diversified, unless it is clearly prudent not to do so or otherwise excepted by other provisions of ERISA? [ERISA section 404(a)(1)(C)]

A bank operates as a securities dealer when it underwrites, trades, or deals in securities. These activities may be administered in a separately identifiable trading department or incorporated within the overall treasury department. The organizational structure will generally be a function of the level of activity and the importance of the activity as a product line. If a repetitive pattern of short-term purchases and sales demonstrates that the bank holds itself out to other dealers or investors as a securities dealer, the bank is trading, regardless of what department or section of the bank is engaged in the activity.

The authority under which a bank may engage in securities trading and underwriting is found in section 5136 of the Revised Statutes (12 USC 24 (seventh)). That authority is restricted by limitations on the percentage holding of classes of securities as found in 12 CFR 1.3. This regulation allows banks to deal, underwrite, purchase, and sell (1) type I securities without limit and (2) type II securities subject to a limit of 10 percent of capital and unimpaired surplus per issue. Banks are prohibited from underwriting or dealing in type III securities for their own accounts. See section 2020.1, "Investment Securities and End-User Activities," for further information on types I, II, and III securities.

Banks are involved in three major types of securities transactions. First, the bank, acting as broker, buys and sells securities on behalf of a customer. These are agency transactions in which the agent (bank) assumes no substantial risk and is compensated by a prearranged commission or fee. A second type of securities transaction banks frequently execute is a "riskless-principal" trade. Upon the order of an investor, the dealer buys (or sells) securities through its own account, with the purchase and sale originating almost simultaneously. Because of the brief amount of time the security is held in the dealer's own account, exposure to market risks is limited. Profits result from dealer-initiated markup (the difference between the purchase and sale prices). Finally, as a dealer, the bank buys and sells securities for its own account. This is termed a principal transaction because the bank is acting as a principal, buying or selling qualified securities through its own inventory and absorbing whatever market gain or loss is made on the transaction.

The volume of bank dealer activity and the dealer's capacity in the transaction are critical to an examiner's assessment regarding the examination scope and the required examiner resources and expertise. Dealers engaging primarily in agency or riskless-principal transactions are merely accommodating customers' investment needs. Market risk will be nominal, and the key examination concern will be operational risk and efficiency. Active dealers generally carry larger inventory positions and may engage in some degree of proprietary trading. Their market-risk profile may be moderate to high.

Bank dealers' securities transactions involve customers and other securities dealers. The word "customer," as used in this section, means an investor. Correspondent banks purchasing securities for an investment account would also be considered a customer. Transactions with other dealers are not considered customer transactions unless the dealer is buying or selling for investment purposes.

The following subsections include general descriptions of significant areas of bank trading and underwriting activities. Foreign exchange is covered in detail in the "International" sections of this manual. Additional bank dealer activities, particularly in derivative products, are extensively covered in the *Trading and Capital-Markets Activities Manual*. In addition, many money-center banks and larger regional banks have transferred dealing activities to separately capitalized holding company subsidiaries (known as underwriting affiliates). The *Bank Holding Company Supervision Manual* contains a separate section on nonbank subsidiaries engaged in underwriting and dealing in bank-ineligible securities.

OVERVIEW OF RISK

For bank dealer activities, risk is generally defined as the potential for loss on an instrument or portfolio. Significant risk can also arise from operational weakness and inadequate controls. Risk management is the process by which managers identify, assess, and control all risks associated with a financial institution's activities. The increasing complexity of the financial industry and the range of financial instruments banks use have made risk management more difficult to accomplish and evaluate.

The four fundamental elements for evaluating the risk-management process for bank dealer activities are—

- active board and management oversight,
- adequate risk-management policies and limits,
- appropriate risk measurement and management information systems, and
- comprehensive internal controls and audit procedures.

For risk management to be effective, an institution's board and senior management must be active participants in the process. They must ensure that adequate policies and risk-tolerance limits are developed for managing the risk in bank dealer activities, and they must understand, review, and approve these limits across all established product lines. For policies and limits to be effective and meaningful, risk measures, reports, and management information systems must provide management and the board with the information and analysis necessary to make timely and appropriate responses to changing conditions. Risk management must also be supported by comprehensive internal controls and audit procedures that provide appropriate checks and balances to maintain an ongoing process of identifying any emerging weaknesses in an institution's management of risk.[1] At a minimum, the effectiveness of the institution's policies, limits, reporting systems, and internal controls must be reviewed annually.

In assessing the adequacy of the above elements at individual institutions, examiners should consider the nature and volume of a bank's dealer activities and its overall approach toward managing the various types of risks involved. The sophistication or complexity of policies and procedures used to manage risk depends on the bank dealer's chosen products, activities, and lines of business. Accordingly, examiners should expect risk-management activities to differ among institutions.

As a financial institution's product offerings and geographic scope expand, examiners must review the risk-management process not only by business line, but on a global, consolidated basis. In more sophisticated institutions, the role of risk management is to identify the risks associated with particular business activities and to aggregate summary data into generic components, ultimately allowing exposures to be evaluated on a common basis. This methodology enables institutions to manage risks by portfolio and to consider exposures in relationship to the institution's global strategy and risk tolerance.

A review of the global organization may reveal risk concentrations that are not readily identifiable from a limited, stand-alone evaluation of a branch, agency, Edge Act institution, nonbank subsidiary, or head office. Consolidated risk management also allows the institution to identify, measure, and control its risks, while giving necessary consideration to the breakdown of exposure by legal entity. Sometimes, if applicable rules and laws allow, identified risks at a branch or subsidiary may be offset by exposures at another related institution. However, risk management across separate entities must be done in a way that is consistent with the authorities granted to each entity. Some financial institutions and their subsidiaries may not be permitted to hold, trade, deal, or underwrite certain types of financial instruments unless they have received special regulatory approval. Examiners should ensure that a financial institution only engages in those activities for which it has received regulatory approval. Furthermore, examiners should verify that the activities are conducted in accordance with any Board conditions or commitments attached to the regulatory approval.

Ideally, an institution should be able to identify its relevant generic risks and should have measurement systems in place to quantify and control these risks. While it is recognized that not all institutions have an integrated risk-management system that aggregates all business activities, the ideal management tool would incorporate a common measurement denominator. Risk-management methodologies in the marketplace and an institution's scope of business are continually evolving, making risk management a dynamic process. Nonetheless, an institution's risk-management system should always be able to identify, aggregate, and control all risks posed by underwriting, trading, or dealing in securities that could have a significant impact on capital or equity.

Trading and market-risk limits should be customized to address the nature of the products

1. Existing policies and examiner guidance on various topics applicable to the evaluation of risk-management systems can be found in SR-93-69, "Examining Risk Management and Internal Controls for Trading Activities of Banking Organizations." Many of the managerial and examiner practices contained in this document are fundamental and are generally accepted as sound practices for trading activities.

and any unique risk characteristics. Common types of limits include earnings-at-risk limits, stop-loss limits, limits on notional amounts (both gross and duration-weighted), maturity limits, and maturity-gap limits. The level of sophistication needed within the limit matrix will depend on the type of instrument involved and the relative level of trading activity. Straightforward notional and tenor limits may be adequate for most dealers; however, dealers involved in a wide array of products and more complex transactions will need stronger tools to measure and aggregate risk across products.

In general, risk from trading and dealing activities can be broken down into the following categories:

- Market or price risk is the exposure of an institution's financial condition to adverse movements in the market rates or prices of its holdings before such holdings can be liquidated or expeditiously offset. It is measured by assessing the effect of changing rates or prices on either the earnings or economic value of an individual instrument, a portfolio, or the entire institution.
- Funding-liquidity risk refers to the ability to meet investment and funding requirements arising from cash-flow mismatches.
- Market-liquidity risk refers to the risk of being unable to close out open positions quickly enough and in sufficient quantities at a reasonable price.
- Credit risk is the risk that a counterparty to a transaction will fail to perform according to the terms and conditions of the contract, thus causing the security to suffer a loss in cashflow or market value. Because securities settlements are typically "delivery vs. payment" and settlement periods are relatively short, securities transactions do not involve a significant level of counterparty credit risk. Repurchase transactions, securities lending, and money market transactions, however, involve significantly higher levels of credit risk if not properly controlled. As a result, credit risk is discussed in greater detail in the subsections addressing these products. Credit risk can also arise from positions held in trading inventory. Although U.S. government and agency securities do not generally involve credit risk, other securities (for example, municipal and corporate securities) carried in inventory can decline in price due to a deterioration in credit quality.
- Clearing or settlement risk is (1) the risk that a counterparty who has received a payment or delivery of assets defaults before delivery of the asset or payment or (2) the risk that technical difficulties interrupt delivery or settlement despite the counterparty's ability or willingness to perform.
- Operations and systems risk is the risk of human error or fraud, or the risk that systems will fail to adequately record, monitor, and account for transactions or positions.
- Legal risk is the risk that a transaction cannot be consummated as a result of some legal barrier, such as inadequate documentation, a regulatory prohibition on a specific counterparty, non-enforceability of bilateral and multilateral close-out netting, or collateral arrangements in bankruptcy.

The *Trading and Capital-Markets Activities Manual* contains a comprehensive discussion of these risks, including examination objectives, procedures, and internal control questionnaires by risk category.

GOVERNMENT AND AGENCY SECURITIES

The government securities market is dominated by a number of investment banks, broker-dealers, and commercial banks known as primary dealers in government securities. These dealers make an over-the-counter market in most government and federal-agency securities. Primary dealers are authorized to deal directly with the Open Market Desk of the Federal Reserve Bank of New York. As market makers, primary dealers quote bid-ask prices on a wide range of instruments, and many publish daily quotation sheets or provide live electronic data feeds to larger customers or other dealers.

Government securities trading inventories are generally held with the objective of making short-term gains through market appreciation and dealer-initiated markups. Common factors that affect the markup differential include the size of a transaction, the dealer efforts extended, the type of customer (active or inactive), and the nature of the security. Markups on government securities generally range between $\frac{1}{32}$ and $\frac{4}{32}$ of a point. Long-maturity issues or derivative products may have higher markups due to the higher risk and potentially larger volatility that may be inherent in these products.

According to industry standards, payments for and deliveries of U.S. government and most agency securities are settled one business day following the trade date, although government dealers and customers can negotiate same-day or delayed settlement for special situations.

When-Issued Trading

A significant potential source of risk to dealers involves “when-issued” (WI) trading in government securities. WI trading is the buying and selling of securities in the one- to two-week interim between the announcement of an offering and the security auction and settlement. Although the vast majority of transactions settle on the next business day, WI trading results in a prolonged settlement period. This could increase both the market risk and counterparty credit risk associated with trading these instruments. The prolonged settlement period also provides an opportunity for a dealer to engage in a large volume of off-balance-sheet trading without having to fund the assets or cover the short positions. In essence, WI trading allows the dealers to create securities. If the overall level of WI trading is significant in relation to the size of the issue, the resulting squeeze on the market could increase volatility and risk. Given these potential risk characteristics, WI trading should be subject to separate sublimits to cap the potential exposure.

Short Sales

Another area of U.S. government securities activity involves short-sale transactions. A short sale is the sale of a security that the seller does not own at the time of the sale. Delivery may be accomplished by buying the security or by borrowing the security. When the security delivered is borrowed, the short seller likely will ultimately have to acquire the security in order to satisfy its repayment obligation. The borrowing transaction is collateralized by a security (or securities) of similar value or cash (most likely the proceeds of the short sale). Reverse repurchase transactions are also used to obtain the security needed to make delivery on the security sold short. Carrying charges on borrowed government securities should be deducted from the short sale and purchase spread to determine net profit. Short sales are conducted to (1) accommodate customer orders, (2) obtain funds by leveraging existing assets, (3) hedge the market risk of other assets, or (4) allow a dealer to profit from a possible future decline in market price by purchasing an equivalent security at a later date at a lower price.

Government Securities Clearing

Securities-clearing services for the bulk of U.S. government securities transactions and many federal-agency securities transactions are provided by the Federal Reserve as part of its electronic securities-transfer system. The various Federal Reserve Banks will wire-transfer most government securities between the book-entry safekeeping accounts of the seller and buyer. The Federal Reserve’s systems are also used to facilitate security borrowings, loans, and pledges.

Government Securities Act

In response to the failures of a number of unregulated government securities dealers between 1975 and 1985, Congress passed the Government Securities Act of 1986 (GSA). GSA established, for the first time, a federal system for the regulation of the entire government securities market, including previously unregulated brokers and dealers. The primary goal of GSA was to protect investors and ensure the maintenance of a fair, honest, and liquid market.

The GSA granted the Department of the Treasury (Treasury) authority to develop and implement rules for transactions in government and agency securities effected by government securities brokers or dealers (that is, securities firms as well as other financial institutions), and to develop and implement regulations relating to the custody of government securities held by depository institutions. The rules were intended to prevent fraudulent and manipulative acts and practices and to protect the integrity, liquidity, and efficiency of the government securities market. At the same time, the rules were designed to preclude unfair discrimination among brokers, dealers, and customers. Enforcement of the rules for the GSA is generally carried out by an institution's primary regulatory organization.

The rules for the GSA had the most significant effect on those entities that were not previously subject to any form of federal registration and regulation. These entities included not only firms registered as government securities brokers or dealers but also firms registered as brokers or dealers trading in other securities and financial products. For the first time, the government securities activities of these entities were subject to the discipline of financial responsibility, customer protection, recordkeeping, and advertising requirements. For nonbank dealers, this regulation is enforced by a self-regulatory organization, the Financial Industry Regulatory Authority (FINRA), which conducts routine examinations under the oversight of the Securities and Exchange Commission (SEC).

The provisions of the GSA that had the most significant effect on government securities brokers and dealers (both bank and nonbank broker-dealers) relate to hold-in-custody repurchase agreement rules. Congress targeted this area because of abuses that had resulted in customer losses. Several requirements to strengthen customer protection were imposed: (1) written repurchase agreements must be in place, (2) the risks of the transactions must be disclosed to the customer, (3) specific repurchase securities must be allocated to and segregated for the customer, and (4) confirmations must be made and provided to the customer by the end of the day on which a transaction is initiated and on any day on which a substitution of securities occurs. For a more detailed description of the rules for the GSA requirements, see the procedures for the examination of government securities activities issued by the Board of Governors of the Federal Reserve System, or 17 CFR 400–450 for the actual text of the regulations.

Registration Exemptions

Most banks acting as government securities brokers or dealers are required to file a form known as a G-FIN. This form details the bank's capacity, the locations where government securities activities are performed, and the persons responsible for supervision. However, certain bank government securities activities are exempt from the filing requirements. Banks handling only U.S. savings bond transactions or submitting tender offers on original issue U.S. Treasury securities are exempt from registration.

Limited government securities brokerage activities are also exempt from registration under certain circumstances. Banks that engage in fewer than 500 government securities transactions annually (excluding savings bond transactions and Treasury tender offers) are exempt. Similarly, banks are exempt if they deal with a registered broker-dealer under a "networking" arrangement, assuming they meet the following conditions: (1) the transacting broker must be clearly identified, (2) bank employees perform only clerical or administrative duties and do not receive transaction-based compensation, and (3) the registered broker-dealer receives and maintains all required information on each customer. Exempt networking arrangements must be fully disclosed to the customer. Finally, banks are exempt from registration requirements if their activities are limited to purchases and sales in a fiduciary capacity or purchases and sales of repurchase or reverse repurchase agreements.

The preceding exemptions provide relief from registration, but exempt banks must comply (if applicable) with regulations addressing custodial holdings for customers (17 CFR 450). Additionally, banks effecting repurchase/reverse repurchase agreements must comply with repurchase-transaction requirements detailed in 17 CFR 403.5(d).

MUNICIPAL SECURITIES

Municipal securities are debt obligations issued by state and local governments and certain agencies and authorities. There are two broad categories of municipal bonds: general obligation bonds and revenue bonds. General obligation bonds (GOs) are backed by the full faith and credit and taxing authority of the government issuer. General obligation bonds are either limited or unlimited tax bonds. Limited tax bonds are issued by government entities whose taxing authority is limited to some extent by law or statute. For instance, a local government may face restrictions on the level of property taxes it can levy on property owners. State and local entities may also issue special tax bonds, which are supported by a specific tax. For instance, a highway project may be financed by a special gasoline tax levied to pay for the bonds. Unlimited tax bonds are issued by government entities that are not restricted by law or statute in the amount of taxes they can levy; however, there may be some political limitations.

Municipal revenue bonds are backed by a specific project or government authority, and they are serviced by fees and revenues paid by users of the government entity. Revenue bonds are backed by public power authorities, nonprofit hospitals, housing authorities, transportation authorities, and other public and quasi-public entities.

Effective March 13, 2000, well-capitalized state member banks were authorized by the Gramm-Leach-Bliley Act (GLB Act) to deal in, underwrite, purchase, and sell municipal revenue bonds without any limitations based on the bank's capital. (See 12 USC 24 (seventh).) Previously, banks were limited to only underwriting, dealing in, or investing in, without limitation, general obligation municipal bonds backed by the full faith and credit of an issuer with general powers of taxation. Member banks could invest in, but not underwrite or deal in, municipal revenue bonds, but the purchases and sales of such investment securities for any obligor were limited to 10 percent of a member bank's capital and surplus. As a result of the GLB Act amendment, municipal revenue bonds are the equivalent of type I securities for well-capitalized state member banks.[2] (See SR-01-13.) Banks that are not well capitalized may engage in more limited municipal securities activities relating to type II and type III securities. For example, banks may also deal in, underwrite, or invest in revenue bonds that are backed by housing, university, or dormitory projects.

In addition to municipal bonds, state and local governments issue obligations to meet short-term funding needs. These obligations are normally issued in anticipation of some specific revenue. The types of debt issued include tax-anticipation notes (TANs), revenue-anticipation notes (TRANs), grants-anticipation notes (GANs), bond-anticipation notes (BANs), commercial paper, and others.

Because of the large number and diverse funding needs of state and local governments (over 50,000 state and local governments have issued debt in the United States), there is a wide variety of municipal securities. Some municipal security issues have complex structures that require an increased level of technical expertise to evaluate. As with all areas of banking, dealers who invest in complex instruments are expected to understand the characteristics of the instruments and how these instruments might affect their overall risk profile. While there are some large issuers, like the states of New York and California, most issuers are small government entities that place modest amounts of debt. Many of these issues are exempt from federal, state, and local income taxes; these exemptions, in part, determine the investor base for municipal bonds.

The customer base for tax-exempt municipal securities is investors who benefit from income that is exempt from federal income tax. This group includes institutional investors, such as insurance companies, mutual funds, and retail investors, especially individuals in high income-tax brackets.

Credit Risk

Municipal securities activities involve differing degrees of credit risk depending on the financial capacity of the issuer. Larger issuers of municipal securities are rated by nationally recognized rating agencies (Moody's, S&P, etc.). Other municipalities achieve an investment-grade rating through the use of credit enhancements, usually in the form of a standby letter of credit issued by a financial institution. Banks are also involved in underwriting and placing nonrated municipal securities. Nonrated issues are typically small and are placed with a limited number of investors. Liquidity in the secondary market is limited, and bank dealers rarely carry nonrated issues in trading inventory.

Management should take steps to limit undue concentrations of credit risk arising from municipal-security underwriting and dealing. Exposure to nonrated issuers should be approved through the bank's credit-approval process with appropriate documentation to support the issuer's financial capacity. Activity in nonrated issues outside the bank's target or geographic market should also be avoided. In addition, exposure should be aggregated on a consolidated basis, taking into account additional credit

2. The Office of the Comptroller of the Currency published final amendments to its investment securities regulation (12 CFR 1) on July 2, 2001. (See 66 *Fed. Reg.* 34784.)

risk arising from traditional banking products (loans, letters of credit, etc.).

Municipal Securities Rulemaking Board

The Securities Act Amendments of 1975 (15 USC 78o-4) extended a comprehensive network of federal regulation to the municipal securities markets. Pursuant to the act, municipal securities brokers and dealers are required to register with the SEC. The act also created a separate, self-regulatory body, the Municipal Securities Rulemaking Board (MSRB), to formulate working rules for the regulation of the municipal securities industry. The Federal Reserve is required to ensure compliance with those rules as they apply to state member banks.

A bank engaged in the business of buying and selling municipal securities must register with the SEC as a municipal securities dealer if it is involved in—

- underwriting or participating in a syndicate or joint account for the purpose of purchasing securities;
- maintaining a trading account or carrying dealer inventory; or
- advertising or listing itself as a dealer in trade publications, or otherwise holding itself out to other dealers or investors as a dealer.

Generally, a bank that buys and sells municipal securities for its investment portfolio or in a fiduciary capacity is not considered a dealer.

If a bank meets the SEC's criteria for registering as a municipal securities dealer, it must maintain a separately identifiable department or division involved in municipal securities dealing that is under the supervision of officers designated by the bank's board of directors. These designated officers are responsible for municipal securities dealer activities and should maintain separate records.

The Federal Reserve conducts a separate examination of the municipal securities dealer activities in banks that engage in such activities. This examination is designed to ensure compliance with the rules and standards formulated by the MSRB. For a complete description of the activities of a municipal securities dealer and detailed procedures performed by the Federal Reserve examiners, see the *Municipal Securities Dealer Bank Examination Manual* issued by the Board of Governors of the Federal Reserve System.

REPURCHASE AGREEMENTS AND SECURITIES LENDING

Repurchase agreements (repos) play an important role in the securities markets. A repo is the simultaneous agreement to sell a security and repurchase it at a later date. Reverse repos are the opposite side of the transaction, securities purchased with a later agreement to resell. From the dealer's perspective, a repo is a financing transaction (liability), and a reverse repo is a lending transaction (asset). Overnight repos are a one-day transaction; anything else is referred to as a "term repo." Approximately 80 percent of the repo market is overnight. Although any security can be used in a repurchase transaction, the overwhelming majority of transactions involve government securities.

Securities dealers use repos as an important source of liquidity. The majority of government securities trading inventory will typically be financed with repos. Reverse repos are used to obtain securities to meet delivery obligations arising from short positions or from the failure to receive the security from another dealer. Reverse repos also are an effective and low-risk means to invest excess cash on a short-term basis.

The repo rate is a money market rate that is lower than the federal funds rate due to the collateralized nature of the transaction. Opportunities also arise to obtain below-market-rate financing. This situation arises when demand exceeds supply for a specific bond issue and it goes on "special." Dealers who own the bond or control it under a reverse repo transaction can earn a premium by lending the security. This premium comes in the form of a below-market-rate financing cost on a repo transaction.

Many of the larger dealers also engage in proprietary trading of a matched book, which consists of a moderate to large volume of offsetting repos and reverse repos. The term "matched book" is misleading as the book is rarely perfectly matched. Although profit may be derived from the capture of a bid/ask spread on matched transactions, profit is more often derived from maturity mismatches. In a falling-rate environment, traders lend long (reverse repos) and borrow short (repos). It is more difficult to profit in rising-rate environments because of the shape of the yield curve, which is usually upward-sloping. The overall size of the matched book and the length of the maturity mismatches will generally decline in a rising environment. Matched books are also used to create opportunities to control securities that may go on special, resulting in potential profit opportunities. Dealers engaging in matched-book trading provide important liquidity to the repo market.

Risk in a matched book should be minimized by establishing prudent limits on the overall size of the book, size of maturity mismatches, and restrictions on the maximum tenor of instruments. The overall risk of a matched book is usually small in relation to other trading portfolios. Maturity mismatches are generally short-term, usually 30 to 60 days, but may extend up to one year. Risk can be quickly neutralized by extending the maturity of assets or liabilities. Financial instruments (futures and forward rate agreements) can also be used to reduce risk.

Securities dealers may also engage in "dollar-roll" transactions involving mortgage-backed securities, which are treated as secured financings for accounting purposes. The "seller" of the security agrees to repurchase a "substantially identical" security from the "buyer," rather than the same security. Many of the supervisory considerations noted above for repurchase agreements also apply to dollar-roll transactions. However, if the security to be repurchased is not substantially identical to the security sold, the transaction generally should be accounted for as a sale and not as a financing arrangement. The accounting guidance for "substantially identical" is described in American Institute of Certified Public Accountants (AICPA) Statement of Position 90-3, which generally requires debt instruments to have the same primary obligor or guarantor, the same form and type, the identical contractual interest rate, the same maturity or weighted average maturity, and other factors.

In addition, securities dealers may engage in securities lending or borrowing transactions. In substance, these transactions are very similar to repo transactions except the transactions have no stated maturity. The transactions are conducted through open-ended "loan" agreements that may be terminated on short notice by the lender or borrower. Although lending transactions have historically been centered in corporate debt and equity obligations, the market increasingly involves loans of large blocks of U.S. government and federal-agency securities. To participate in this market, a bank may lend securities held in its investment account or trading account. Like repos, securities are lent to cover fails (securities sold but not available for delivery) and short sales. Collateral for the transactions can consist of other marketable securities or standby letters of credit; however, the large majority of transactions are secured by cash. Investors are willing to lend securities due to the additional investment income that can be earned by investing the cash collateral. When a securities loan is terminated, the securities are returned to the lender and the collateral to the borrower.

Credit Risk

Since repurchase agreements and securities lending transactions are collateralized, credit risk is relatively minor if properly controlled. Some dealers have underestimated the credit risk associated with the performance of the counterparty and have not taken adequate steps to ensure their control of the securities serving as collateral. The market volatility of the securities held as collateral can also add to the potential credit risk associated with the transaction.

As an added measure of protection, dealers require customers to provide excess collateral. This excess is referred to as "margin." The size of the margin will be a function of the volatility of the instrument serving as collateral and the length of the transaction. In addition to initial margin, term repos and security lending arrangements require additional margin if the value of the collateral declines below a specified level. Excess margin is usually returned to the counterparty if the value of the collateral increases. A daily "mark-to-market" or valuation procedure must be in place to ensure that calls for additional collateral are made on a timely basis. The valuation procedures should be independent of the trader and take into account the value of accrued interest on debt securities. It is important to point out that credit risk can arise from both asset transactions (reverse repos and securities borrowed) and liability transactions (repos and securities lent) because of market fluctuations in collateral provided and received. Dealers should take steps to ensure that collateral provided is not excessive.

Policies and procedures should be in place to ensure transactions are conducted only with approved counterparties. Credit-limit approvals should be based on a credit analysis of the borrower. An initial review should be performed before establishing a relationship, with periodic reviews thereafter. Credit reviews should include an analysis of the bor-rower's financial statement, capital, management, earnings, business reputation, and any other relevant factors. Analyses should be performed in an independent department of the lender institution, by persons who routinely perform credit analyses. Analyses performed solely by the person managing the repo or securities lending programs are not sufficient. Credit and concentration limits should take into account other extensions of credit by other departments of the bank or affiliates. Procedures should be established to ensure that credit and concentration limits are not exceeded without proper authorization from management.

Other Uses and Implications of Securities Lending

In addition to lending their own securities, financial institutions have become increasingly involved in lending customers' securities held in custody, safekeeping, trust, or pension accounts. These activities are typically organized within the bank's trust department. Not all institutions that lend securities or plan to do so have relevant experience. Because the securities available for lending often greatly exceed the demand, inexperienced lenders may be tempted to ignore commonly recognized safeguards. Bankruptcies of broker-dealers have heightened regulatory sensitivity to the potential for problems in this area.

Fees received on securities loans are divided between the custodial institution and the customer account that owns the securities. In situations involving cash collateral, part of the interest earned on the temporary investment of cash is returned to the borrower and the remainder is divided between the lender institution and the customer account that owns the securities.

In addition to a review of controls, examiners should take steps to ensure that cash collateral is invested in appropriate instruments. Cash should be invested in high-quality, short-term money market instruments. Longer-term floating-rate instruments may also be appropriate; however, illiquid investments and products with customized features (for example, structured notes with imbedded options) should be avoided. Several banks have reported significant losses associated with inappropriate investments in securities lending areas.

Securities-Lending Capacity

Securities lending may be done in various capacities and with differing associated liabilities. It is important that all parties involved understand in what capacity the lender institution is acting. The relevant capacities are described below.

Principal

A lender institution offering securities from its own account is acting as principal. A lender institution offering customers' securities on an undisclosed basis is also considered to be acting as principal.

Agent

A lender institution offering securities on behalf of a customer-owner is acting as an agent. To be considered a bona fide or "fully disclosed" agent, the lending institution must disclose the names of the borrowers to the customer-owners and the names of the customer-owners to the borrowers (or give notice that names are available upon request). In all cases, the agent's compensation for handling the transaction should be disclosed to the customer-owner. Undisclosed agency transactions, that is, "blind brokerage" transactions in which participants cannot determine the identity of the contra party, are treated as if the lender institution were the principal.

Directed Agent

A lender institution that lends securities at the direction of the customer-owner is acting as a directed agent. The customer directs the lender institution in all aspects of the transaction, including to whom the securities are loaned, the terms of the transaction (rebate rate and maturity/call provisions on the loan), acceptable collateral, investment of any cash collateral, and collateral delivery.

Fiduciary

A lender institution that exercises discretion in offering securities on behalf of and for the benefit of customer-owners is acting as a fiduciary. For supervisory purposes, the underlying relationship may be as agent, trustee, or custodian.

Finder

A finder brings together a borrower and a lender of securities for a fee. Finders do not take possession of the securities or collateral. Delivery of securities and collateral is directly between the borrower and the lender, and the finder does not become involved. The finder is simply a fully disclosed intermediary.

MONEY MARKET INSTRUMENTS

In addition to bank-eligible securities activities, banks may engage in a substantial volume of trading in money market instruments. Federal funds, banker's acceptances, commercial paper, and certificates of deposit are forms of money market instruments. While these instruments may be used as part of the overall funding strategy, many firms actively engage in discretionary or proprietary trading in these instruments. As in matched-book repo activities, profits from trading money market instruments are derived from the bid/ask spread on matched transactions and the net interest spread from maturity mismatches.

This activity may result in overall money market arbitrage. Arbitrage is the coordinated purchase and sale of the same security or its equivalent, for which there is a relative price imbalance in the market. The objective of such activity is to obtain earnings by taking advantage of changing yield spreads. Arbitrage can occur with items such as Eurodollar CDs, banker's acceptances, and federal funds, and with financial instruments such as futures and forwards.

Although the risk of money market trading is relatively straightforward, the potential risk can be significant based on the volume of trading and size of the mismatches. Despite the potential risk, these activities may offer attractive profit opportunities if effectively controlled. Short-term interest-rate markets are very liquid, and risk can be quickly neutralized by changing the maturity profile of either assets or liabilities. Financial instruments (such as futures and forward rate agreements) can also be an effective tool to manage risk. Money market trading may be managed as a separate product line or may be integrated with trading in other interest-rate products (such as swaps, caps, or floors). Examiners should take steps to ensure that appropriate limits are in place for money market trading, including restrictions on aggregate notional size, the size of maturity mismatches, and the maximum tenor of instruments.

Federal Funds

Commercial banks actively use the federal funds market as a mechanism to manage fluctuations in the size and composition of their balance sheet. Federal funds are also an efficient means to manage reserve positions and invest excess cash on a short-term basis. Although transactions are generally unsecured, they can also be secured. The majority of transactions are conducted overnight; however, term transactions are also common. Federal funds trading will often involve term transactions in an attempt to generate positive net interest spread by varying the maturities of assets and liabilities.

Banks have traditionally engaged in federal funds transactions as principal, but an increasing number of banks are conducting business as agent. These agency-based federal funds transactions are not reported on the agent's balance sheet. Dealer banks may also provide federal funds clearing services to their correspondent banks.

Banker's Acceptances

Banker's acceptances are time drafts drawn on and accepted by a bank. They are the customary means of effecting payment for merchandise sold in import-export transactions, as well as a source of financing used extensively in international trade. Banker's acceptances are an obligation of the acceptor bank and an indirect obligation of the drawer. They are normally secured by rights to the goods being financed and are available in a wide variety of principal amounts. Maturities are generally less than nine months. Acceptances are priced like Treasury bills, with a discount figured for the actual number of days to maturity based on a 360-day year. The bank can market acceptances to the general public but must guarantee their performance.

Commercial Paper

Commercial paper is a generic term that is used to describe short-term, unsecured promissory notes issued by well-recognized and generally sound corporations. The largest issuers of commercial paper are corporations, bank holding companies, and finance companies, which use the borrowings as a low-cost alternative to bank financing. Commercial paper is exempt from registration under the Securities Act of 1933 if it meets the following conditions:

- prime quality and negotiable
- not ordinarily purchased by the general public
- issued to facilitate current operational business requirements
- eligible for discounting by a Federal Reserve Bank
- maturity does not exceed nine months

Actively traded commercial paper is ordinarily issued in denominations of at least $100,000 and often in excess of $1 million. Commercial paper issuers usually maintain unused bank credit lines to serve as a source of back-up liquidity or contingency financing, principally in the form of standby letters of credit. Major commercial paper issuers are rated by nationally recognized rating agencies (Moody's, S&P, and others). Other issuers achieve higher ratings through the use of a credit enhancement, usually in the form of a standby letter of credit issued by a financial institution.

Based on Supreme Court rulings, commercial paper was considered a security for purposes of the former Glass-Steagall Act. As a result, banks were generally prohibited from underwriting and dealing in commercial paper. Despite this restriction, banks participated in this market in an "agency capacity." When establishing a commercial paper dealership, many of the larger banks pursued business through an aggressive interpretation of an agency-transaction role. In practice, bank dealers engage in riskless-principal or best-efforts placement of commercial paper. Taking this logic a step further, others actively engage in competitive bidding and intraday distribution of newly issued paper. Because the paper settles on a same-day basis, the transactions are never part of the official end-of-day records of the bank. Although this technical point has been the subject of discussion, the practice has not been subject to regulatory challenge.

Commercial paper may be issued as an interest-bearing instrument or at a discount. Market trades are priced at a current yield, net of accrued interest due the seller or, if the commercial paper was issued at a discount, at a discount figured for the actual number of days to maturity based on a 360-day year.

The sale of commercial paper issued by bank affiliates must conform to legal restrictions and avoid conflicts of interest. Each certificate and confirmation should disclose the facts that the commercial paper is not a deposit and is not insured by the Federal Deposit Insurance Corporation.

Certificates of Deposit

Negotiable certificates of deposit (CDs) issued by money-center banks are actively traded in denominations of $100,000 to $1 million. Interest generally is calculated on a 360-day year and paid at maturity. Secondary-market prices are computed based on current yield, net of accrued interest due the seller. Eurodollar CDs trade like domestic CDs except their yields are usually higher and their maturities are often longer.

Credit-Risk and Funding Concentrations

In addition to market risk, money market policies and guidelines should recognize the credit risk inherent in these products. Federal funds sold and deposit placements are essentially unsecured advances. To avoid undue concentrations of credit risk, activity with these products should be limited to approved counterparties. Limits should be established for each prospective counterparty. Tenor limits should also be considered to reduce the potential for credit deterioration over the life of the transaction. The size of limits should be based on both anticipated activity and the counterparty's financial capacity to perform. The credit analysis should be performed by qualified individuals in a credit department that is independent from the money market dealing function. In assessing the creditworthiness of other organizations, institutions should not rely solely on outside sources, such as standardized ratings provided by independent rating agencies, but should perform their own analysis of a counterparty's or issuer's financial strength. At a minimum, limits should be reassessed and credit analyses updated annually. Once established, limits should be monitored with exceptions documented and approved by the appropriate level of senior management. Exposure should also be aggregated on a consolidated basis with any other credit exposure arising from other product areas. Exposure to foreign bank counterparties should also be aggregated by country of domicile to avoid country-risk concentrations. The limit structure should be reviewed to ensure compliance with the requirements of Regulation F, Limitations on Interbank Liabilities, which places prudent limits on credit exposure to correspondent banks.

Maintaining a presence in the wholesale funding markets requires a strong reputation and increases potential liquidity risk. The prolonged use of a large volume of purchased funds to support a money market trading operation could also reduce the capacity to tap this market, if needed, for core funding. Guidelines should be in place to diversify sources of funding. Contingency plans should include strategies to exit or reduce the profile in these markets if the situation warrants.

OPERATIONS AND INTERNAL CONTROLS

A bank dealer's operational functions should be designed to regulate the custody and movement of securities and to adequately account for trading transactions. Because of the dollar volume and speed of trading activities, operational inefficiencies can quickly result in major problems.

Sound Practices for Front- and Back-Office Operations

Bank dealer activities vary significantly among financial institutions, depending on the size and complexity of the trading products; trading, back-office, and management expertise; and the sophistication of systems. As a result, practices, policies, and procedures in place in one institution may not be necessary in another. The adequacy of internal controls requires sound judgment on the part of the examiner. The following is a list of policies and procedures that should be reviewed:

- Every organization should have comprehensive policies and procedures in place that describe the full range of bank dealer activities performed. These documents, typically organized into manuals, should at a minimum address front- and back-office operations; reconciliation guidelines and frequency; revaluation and accounting guidelines; descriptions of accounts; broker policies; a code of ethics; and the risk-measurement and -management methods, including a comprehensive limit structure.
- Every institution should have existing policies and procedures to ensure the segregation of duties among the trading, control, and payment functions.
- Revaluation sources should be independent from the traders for accounting purposes, risk oversight, and senior management reporting, although revaluation of positions may be conducted by traders to monitor positions.
- Trader and dealer telephone conversations should be taped to facilitate the resolution of disputes and to serve as a valuable source of information to auditors, managers, and examiners.
- Trade tickets and blotters (or their electronic equivalents) should be timely and complete to allow for easy reconciliation and for appropriate position and exposure monitoring. The volume and pace of trading may warrant virtually simultaneous creation of these records in some cases.
- Computer hardware and software applications must have the capacity to accommodate the

current and projected level of trading activity. Appropriate disaster-recovery plans should be tested regularly.
- Every institution should have a methodology to identify and justify any off-market transactions. Ideally, off-market transactions would be forbidden.
- A clear institutional policy should exist for personal trading. If such trading is permitted at all, procedures should be established to avoid even the appearance of conflicts of interest.
- Every institution should ensure that the management of after-hours and off-premises trading, if permitted at all, is well documented so that transactions are not omitted from the automated blotter or the bank's records.
- Every institution should ensure that staff is both aware of and complies with internal policies governing the trader-broker relationship.
- Every institution that uses brokers should monitor the patterns of broker usage, be alert to possible undue concentrations of business, and review the list of approved brokers at least annually.
- Every institution that uses brokers should establish a policy that minimizes name substitutions of brokered transactions. All such transactions should be clearly designated as switches, and relevant credit authorities should be involved.
- Every institution that uses brokers for foreign-exchange transactions should establish a clear statement forbidding the lending or borrowing of brokers' points as a method to resolve discrepancies.
- Every organization should have explicit compensation policies to resolve disputed trades for all traded products. Under no circumstances should "soft-dollar" (the exchange of services in lieu of dollar compensation) or off-the-books compensation be permitted for dispute resolution.
- Every institution should have know-your-customer policies, and they should be understood and acknowledged by trading and sales staff.
- The designated compliance officer should perform a review of trading practices at least annually. In institutions with a high level of trading activity, interim reviews may be warranted.
- The organization should have an efficient confirmation-matching process that is fully independent from the dealing function. Documentation should be completed and exchanged as close to completion of a transaction as possible.
- Auditors should review trade integrity and monitoring on a schedule in accordance with its appropriate operational-risk designation.
- Organizations that have customers who trade on margin should establish procedures for collateral valuation and segregated custody accounts.

Fails

In some cases, a bank may not receive or deliver a security by settlement date. "Fails" to deliver for an extended time or a substantial number of cancellations are sometimes characteristic of poor operational control or questionable trading activities.

Fails should be controlled by prompt reporting and follow-up procedures. The use of multicopy confirmation forms enables operational personnel to retain and file a copy by settlement date and should allow for prompt fail reporting and resolution.

Revaluation

The frequency of independent revaluation should be driven by the level of an institution's trading activity. Trading operations with high levels of activity may need to perform daily revaluation; however, it is important to note that independent revaluations are less critical when inventory is turning over quickly or end-of-day positions are small. In these situations, the majority of profit and loss is realized rather than unrealized. Only unrealized profit and loss on positions carried in inventory are affected by a revaluation. At a minimum, every institution should conduct an independent revaluation at the end of each standard accounting period (monthly or quarterly). There will be situations when certain securities will be difficult to price due to lack of liquidity or recent trading activity. If management relies on trader estimates in these situations, a reasonableness test should be performed by personnel who are independent from the trading function. A matrix-pricing approach may also be employed. This involves the use of prices on similar securities (coupon, credit quality, and tenor) to establish market prices.

Control of Securities

Depository institutions need to adopt procedures to ensure that ownership of securities is adequately documented and controlled. While this documentation and control once involved taking physical possession of the securities either directly or through a third-party custodian, the securities markets are quickly moving to a book-entry system. In this context, safekeeping is more of a concept than a reality. As the markets change, documenting the chain of ownership becomes the primary mechanism to prevent losses arising from a counterparty default. This documentation involves the matching of incoming and outgoing confirmations and frequent reconcilements of all accounts holding securities (Federal Reserve, customer, custodian, and other dealers). When the dealer holds securities on behalf of its customers, similar safeguards also need to be in place. Although this documentation process can be burdensome, it is necessary to protect a dealer's interest in securities owned or controlled. Many active dealers have automated the reconcilement and matching process. This reduces the potential for human error and increases the likelihood that exceptions can be uncovered and resolved quickly.

Because of the relatively short periods of actual ownership associated with repurchase agreements, potential losses could be significant if prudent safeguards are not followed. Significant repo volume or matched-book trading activities only heighten this concern. To further protect their interests, dealers should enter into written agreements with each prospective repurchase-agreement counterparty. Although the industry is moving toward standardized master agreements, some degree of customization may occur. The agreements should be reviewed by legal counsel for their content and compliance with established minimum documentation standards. In general, these agreements should specify the terms of the transaction and the duties of both the buyer and seller. At a minimum, provisions should cover the following issues:

- acceptable types and maturities of collateral securities
- initial acceptable margin for collateral securities of various types and maturities
- margin maintenance, call, default, and sellout provisions
- rights to interest and principal payments
- rights to substitute collateral
- individuals authorized to transact business on behalf of the depository institution and its counterparty

Written agreements should be in place before commencing activities.

TRADING AND CAPITAL-MARKETS ACTIVITIES MANUAL

The *Trading and Capital-Markets Activities Manual*, developed by the Federal Reserve System, is a valuable tool to help examiners understand the complex and often interrelated risks arising from capital-markets activities. The products addressed in the previous subsections and their associated risks are covered in greater detail in the manual.

As noted in the preceding sections, and further addressed in the *Trading and Capital-Markets Activities Manual*, other trading instruments could be included in the bank dealer or money market trading operation. Financial instruments such as futures and forward rate agreements are often used to modify or hedge the risk associated with cash instruments (dealer inventory and money market positions). The bank dealer may also be involved in other instruments including asset-backed securities (mortgage-backed and consumer-receivable-backed). Other departments of the bank may also use securities products as part of an unrelated trading activity. For example, interest-rate-swap traders often use cash bonds to hedge or modify market-risk exposure. In this capacity, the swap desk would be a customer of the government securities dealer. These overlaps in product focus and usage make it critical for examiners to understand the organizational structure and business strategies before establishing examination scope.

OTHER ISSUES

Intercompany Transactions

Examiners should review securities and repurchase-agreement transactions with affiliates to determine compliance with sections 23A and 23B of the Federal Reserve Act. Money market transactions may also be subject to limitations under section 23A; however, these restrictions generally do not apply to transactions between bank subsidiaries that are80 percent or more commonly owned by a bank holding company. Intercompany transactions between securities underwriting affiliates and their bank affiliates should be carefully reviewed to ensure compliance with Board operating standards and sections 23A and 23B.

Agency Relationships

Many dealer banks engage in securities transactions only in an agency capacity. Acting as an agent means meeting customers' investment needs without exposing the firm to the price risk associated with dealing as principal. Risk is relatively low as long as appropriate disclosures are made and the bank does not misrepresent the nature or risk of the security.

Agency-based federal funds transactions are also becoming more common. By serving only as an agent to facilitate the transaction, a bank can meet its correspondent's federal funds needs without inflating the balance sheet and using capital. Examiners should review agency-basedmoney market transactions to ensure that the transactions are structured in a manner that insulates the bank from potential recourse, either moral or contractual. If legal agreements are not structured properly, the courts could conclude that the agent bank was acting a principal. In this situation, the loss could be recognized by the agent bank, not its customer.

Although no single feature can determine whether an agency relationship really exists, the courts have recognized a variety of factors in distinguishing whether the persons to whom "goods" were transferred were buyers or merely agents of the transferor. Although some of these distinguishing factors may not apply to federal-funds transactions because they involve the transfer of funds rather than material goods, some parallels can be drawn. An agency relationship would appear to encompass, although not necessarily be limited to, the following elements:

- The agent bank must agree to act on behalf of the seller of the federal funds ("seller") and not on its own behalf.
- The agent should fully disclose to all parties to the transaction that it is acting as agent on behalf of the seller and not on its own behalf.
- The seller, not the agent bank, must retain title to the federal funds before their sale to a purchasing institution.
- The seller, not the agent bank, must bear the risk of loss associated with the federal-funds sale.
- The agent bank's authority in selling federal funds and accounting for these sales to the seller should be controlled by the seller or by some guidelines to which the seller has agreed. The agent bank should sell only to those banks stipulated on a list of banks approved, reviewed, and confirmed periodically by the seller bank.
- The agent bank should be able to identify the specific parties (sellers and purchasers) to a federal-funds sale and the amount of each transaction for which the agent has acted.
- The agent bank's compensation should generally be based on a predetermined fee schedule or percentage rate (for example, a percentage based on the number or size of transactions). The agent should generally not receive compensation in the form of a spread over a predetermined rate that it pays to the seller. (If the agent bank's compensation is in the form of a spread over the rate it pays to the seller, this situation would appear to be more analogous to acting as a principal and suggests that the transactions should be reported on the "agent's" balance sheet.)

By structuring agency agreements to include provisions that encompass these factors and by conducting agency activities accordingly, agent banks can lower the possibility that they would be considered a principal in the event of a failure of a financial institution that had purchased funds through the agent. Generally, as a matter of prudent practice, each bank acting as an agent should have written agreements with principals encompassing the above elements and have a written opinion from legal counsel as to the bona fide nature of the agency relationships.

Selling through an agent should not cause a bank to neglect a credit evaluation of the ultimate purchasers of these funds. Under the more traditional mode of conducting federal-funds transactions, banks sell their federal funds to other banks, which in many instances are larger regional correspondents. These correspondent banks in turn may resell the federal funds to other institutions. Since the correspondent is acting as a principal in these sales, the banks selling the funds to the correspondent are generally not concerned about the creditworthiness of those purchasing the federal funds from the correspondent/principal. Rather, the original selling banks need to focus solely on the creditworthiness of their correspondent banks, with which they should be quite familiar.

However, when conducting federal-funds sales through an agent, selling banks, in addition to considering the financial condition of their agent, should also subject the ultimate purchasing banks to the same type of credit analysis that would be considered reasonable and prudent if the seller banks were lending directly to the ultimate borrowers rather than through agents. Banks selling federal funds through agents should not relinquish their credit-evaluation responsibilities to their agent banks.

REPORTING

Securities held for trading purposes and the income and expense that results from trading activities should be isolated by specific general ledger or journal accounts. The balances in those accounts should be included in the appropriate reporting categories for regulatory reporting.

Instructions for the Consolidated Report of Condition and Income (call report) require that securities, derivative contracts, and other items held in trading accounts be reported consistently at market value, or at the lower of cost or market value, with unrealized gains and losses recognized in current income. For further detail, refer to the glossary section of the call report instructions under "trading account." With either method, the carrying values of trading-security inventories should be evaluated periodically (monthly or quarterly), based on current market prices. The increase or decrease in unrealized appreciation or depreciation resulting from that revaluation should be credited or charged to income. Periodic independent revaluation is the most effective means of measuring the trading decisions of bank management.

For reporting purposes, the trading department's income should include not only revaluation adjustments, but also profits and losses from the sale of securities, and other items related to the purchase and sale of trading securities. Interest income from trading assets, salaries, commissions, and other expenses should be excluded from trading income for reporting purposes; however, these items should be considered by management when evaluating the overall profitability of the business.

When the lender institution is acting as a fully disclosed agent, securities-lending activities need not be reported on the call report. However, lending institutions offering indemnification against loss to their customer-owners should report the associated contingent liability gross in Schedule RC-L as "other significant commitments and contingencies."

Recordkeeping and Confirmation Rules

Regulation H contains rules establishing uniform standards for bank recordkeeping, confirmation, and other procedures in executing securities transactions for bank customers. The regulation applies, in general, to those retail commercial activities where the bank effects securities transactions at the direction and for the account of customers. The purpose of the rules is to ensure that purchasers of securities are provided adequate information concerning a transaction and that adequate records and controls are maintained for securities transactions. Under the rules, banks are required to maintain certain detailed records concerning securities transactions, to provide written confirmations to customers under certain circumstances, and to establish certain written policies and procedures. The requirements generally do not apply to banks that make 200 or fewer securities transactions a year for customers (exclusive of transactions in U.S. government and agency obligations) and to transactions subject to the requirements of the MSRB.

Due Bills

A "due bill" is an obligation that results when a firm sells a security or money market instrument and receives payment, but does not deliver the item sold. Due bills issued should be considered as borrowings by the issuing firm, and alternatively, due bills received should be considered as lending transactions. Dealers should not issue due bills as a means of obtaining operating funds or when the underlying security can be delivered at settlement. Customers of the dealer enter transactions with an implicit understanding that securities transactions will be promptly executed and settled unless there is a clear understanding to the contrary. Consequently, dealers should promptly disclose the issuance of a due bill to a customer when funds are taken but securities or money market instruments are not delivered to the customer. Such disclosure should reference the applicable transaction; state the reason for the creation of a due bill; describe any collateral securing the due bill; and indicate that to the extent the market value of the collateral is insufficient, the customer may be an unsecured creditor of the dealer.

Due bills that are outstanding for more than three days and are unsecured could be construed as funding and should be reported as "liabilities for borrowed monies" on the call report. These balances are subject to reserve requirements imposed by Regulation D.

ESTABLISHING SCOPE

Obtaining an overview of the organization, management structure, products offered, and control environment is a critical step in the examination process. Based on this assessment, an examiner should determine the appropriate resources and skill level. In situations where an institution is active in either the government or municipal securities markets, it is essential to allocate additional resources for GSA and MSRB compliance. The assigned examiners should be familiar with the provisions of GSA and MSRB as well as with the related examination procedures. For active proprietary trading units, it is important to assign examiners who have a reasonable working knowledge of the concepts outlined in the *Trading Activities Manual*.

1. To determine if the policies, practices, procedures, and internal controls regarding bank dealer activities are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the trading portfolio for credit quality and marketability.
4. To determine the scope and adequacy of the audit compliance functions.
5. To determine compliance with applicable laws and regulations.
6. To ensure investor protection.
7. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulations have been noted.

1. If selected for implementation, complete or update the Bank Dealer Activities section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal/external auditors determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned "Internal Control," and determine if corrections have been accomplished.
4. Request that the bank provide the following schedules:
   a. An aged schedule of securities that have been acquired as a result of underwriting activities.
   b. An aged schedule of trading account securities and money market instruments held for trading or arbitrage purposes. Reflect commitments to purchase and sell securities and all joint account interests.
   c. A schedule of short-sale transactions.
   d. An aged schedule of due bills.
   e. A list of bonds borrowed.
   f. An aged schedule of "fails" to receive or deliver securities on unsettled contracts.
   g. A schedule of approved securities borrowers and approved limits.
   h. A schedule of loaned securities.
   i. A schedule detailing account names and/or account numbers of the following customer accounts:
      - Own bank trust accounts.
      - Own bank permanent portfolio.
      - Affiliated banks' permanent portfolio accounts.
      - Personal accounts of employees of other banks.
      - Accounts of brokers or other dealers.
      - Personal accounts of employees of other brokers or dealers.
   j. A list of all joint accounts entered into since the last examination.
   k. A list of underwriting since the last examination and whether such securities were acquired by negotiation or competitive bid.
   l. A list of all financial advisory relationships.
5. Agree balances of appropriate schedules to general ledger and review reconciling items for reasonableness.
6. Determine the extent and effectiveness of trading policy supervision by:
   a. Reviewing the abstracted minutes of meetings of the board of directors and/or of any appropriate committee.
   b. Determining that proper authorization for the trading officer or committee has been made.
   c. Ascertaining the limitations or restrictions on delegated authorities.
   d. Evaluating the sufficiency of analytical data used in the most recent board or committee trading department review.
   e. Reviewing the methods of reporting by department supervisors and internal auditors to ensure compliance with established policy and law.
   f. Reaching a conclusion about the effectiveness of director supervision of the bank's trading policy. Prepare a memo for the examiner assigned "Duties and Responsibilities of Directors" stating your conclusions. All conclusions should be supported by factual documentation.

(Before continuing, refer to steps 14 and 15. They should be performed in conjunction with the remaining examination steps.)

7. Ascertain the general character of underwriting and direct placement activities and the effectiveness of department management by reviewing underwriter files and ledgers, committee reports and offering statements to determine:
   a. The significance of underwriting activities and direct placements of type III securities as reflected by the volume of sales and profit or loss on operations. Compare current data to comparable prior periods.
   b. Whether there is a recognizable pattern in:

- The extent of analysis of materialinformation relating to the ability of the issuer to service the obligation.
- Rated quality of offerings.
- Point spread of profit margin for unrated issues.
- Geographic distribution of issuers.
- Syndicate participants.
- Bank's trust department serving as corporate trustee, paying agent and transfer agent for issuers.
- Trustee, paying agent and transfer agent business being placed with institutions that purchase a significant percentage of the underwriter or private placement offering.

c. The volume of outstanding bids. Compare current data to comparable prior periods.

d. The maturity, rated quality and geographic distribution of takedowns from syndicate participations.

e. The extent of transfer to the bank's own or affiliated investment or trading portfolios or to trust accounts and any policies relating to this practice.

8. Determine the general character of trading account activities and whether the activities are in conformance with stated policy by reviewing departmental reports, budgets and position records for various categories of trading activity and determining:
   a. The significance of present sales volume compared to comparable prior periods and departmental budgets.
   b. Whether the bank's objectives are compatible with the volume of trading activity.
9. Review customer ledgers, securities position ledgers, transaction or purchase and sales journals and analyze the soundness of the bank's trading practices by:
   a. Reviewing a representative sample of agency and contemporaneous principal trades and determining the commission and price mark-up parameters for various sizes and types of transactions.
   b. Selecting principal transactions that have resulted in large profits and determining if the transaction involved:
      - ''Buy-backs'' of previously traded securities.
      - Own bank or affiliated bank portfolios.
      - A security that has unusual quality and maturity characteristics.
   c. Reviewing significant inventory positions taken since the prior examination and determining if:
      - The quality and maturity of the inventory position was compatible with prudent banking practices.
      - The size of the position was within prescribed limits and compatible with a sound trading strategy.
   d. Determining the bank's exposure on offsetting repurchase transactions by:
      - Reviewing the maturities of offsetting re-po and reverse re-po agreements to ascertain the existence, duration, amounts and strategy used to manage unmatched maturity ''gaps'' and extended (over 30 days) maturities.
      - Reviewing records since the last examination to determine the aggregate amounts of:
        — Matched repurchase transactions.
        — Reverse re-po financing extended to one or related firms(s).
      - Performing credit analysis of significant concentrations with any single or related entity(ies).
      - Reporting the relationship of those concentrations to the examiners assigned ''Concentration of Credits'' and ''Funds Management.''
10. Determine the extent of risk inherent in trading account securities which have been in inventory in excess of 30 days and:
    a. Determine the dollar volume in extended holdings.
    b. Determine the amounts of identifiable positions with regard to issue, issuer, yield, credit rating, and maturity.
    c. Determine the current market value for individual issues which show an internal valuation mark-down of 10 percent or more.
    d. Perform credit analyses on the issuers of non-rated holdings identified as significant positions.
    e. Perform credit analyses on those issues with valuation write-downs considered significant relative to the scope of trading operations.
    f. Discuss plans for disposal of slow moving inventories with management and determine the reasonableness of those plans in light of current and projected market trends.

11. Using an appropriate technique, select issuesfrom the schedule of trading account inventory. Test valuation procedures by:
    a. Reviewing operating procedures and supporting workpapers and determining if prescribed valuation procedures are being followed.
    b. Comparing bank prepared market prices, as of the most recent valuation date, to an independent pricing source (use trade date "bid" prices).
    c. Investigating any price differences noted.
12. Using an appropriate technique, select transactions from the schedule of short sales and determine:
    a. The degree of speculation reflected by basis point spreads.
    b. Present exposure shown by computing the cost to cover short sales.
    c. If transactions are reversed in a reasonable period of time.
    d. If the bank makes significant use of due-bill transactions to obtain funds for its banking business:
        - Coordinate with the examiner assigned "Review of Regulatory Reports" to determine if the bank's reports of condition reflect due bill transactions as "liabilities for borrowed money."
        - Report amounts, duration, seasonal patterns and budgeted projections for due bills to the examiner assigned "Funds Management."
13. If the bank is involved in agency-based federal funds activity:
    a. At the beginning or in advance of each examination of a banking organization which has been acting as an agent in the purchase and sale of federal funds for other institutions, examiners should obtain certain information which will help them determine the nature and extent of this activity. The information should include:
        - A brief description of the various types of agency relationships (i.e., involving federal funds or other money market activities) and the related transactions.
        - For each type of agency relationship, copies of associated forms, agency agreements, documents, reports and legal opinions. In addition, if the banking organization has documented its analysis of the risks associated with the activity, a copy of the analysis should be requested by the examiner.
        - For each type of agency relationship, a summary of the extent of the activity including:
            — The number of institutions serviced as principals.
            — The size range of the institutions (i.e., institutions serviced have total assets ranging from $______ to $______).
            — General location of sellers and purchasers serviced under agency relationships (i.e., New York State, Midwest, etc.)
            — Estimate of average daily volume of federal funds or money market instruments purchased and sold under agency relationships and the high and low volume over the period since the last examination inquiry (or since activity was begun, if more recent).
            — Names of individuals in the bank that are responsible for these agency relationships.
        - A historical file of this information should be maintained in order to determine the nature, extent and growth of these activities over time.
    b. Once the examination work in this area has been started, the examiner should attempt to discern any situation, activity or deficiency in this area that might suggest that an agency relationship does *not* actually exist. A negative response to the following examination guidelines section dealing with agency agreements may signal such a deficiency. In addition, any other money market agency relationships that involve new or unusual financial transactions should be evaluated to determine the nature of the risks involved and compliance, to the extent applicable, with the guidelines.
    c. The examiner should determine that the banking organization's written policies, procedures, and other documentation associated with this activity are consistent with the Federal Reserve System's Examination Guidelines. If the bank does not have written policies the examiner should strongly advise that they be developed due to the complex nature of

this activity and the potential risks associated with it.

d. After reviewing the policies, procedures, and appropriate documentation, the examiner should be able to respond positively to the following questions:
   - Banking organizations acting as *agents in the sale of federal funds*[1]
     — Has this form of activity been approved by the board of directors?
     — Are the bank's individual agency arrangements and transactions:
       - supported by written agency agreements, and
       - reviewed and approved by appropriate officers?
     — Do the written agency agreements that support this activity include provisions indicating that (a negative answer may indicate that the bank is not in fact an agent):
       - the agent bank will be acting *on behalf of the original or principal seller of federal funds ("seller")* in conducting these activities and not on the agent bank's own behalf?
       - the agency relationship will be fully disclosed to all banks involved in the transactions?
       - the seller, and not the agent bank, must retain legal title to the federal funds before they are sold to a third party bank?
       - the seller, and not the agent bank, bears the risk of loss?
       - the agent bank's authority in selling federal funds and in accounting for this activity to the seller should be controlled by the seller or by standards to which it has agreed? To implement this, does the agreement or its attachments include the following seller-approved items:
         1. lists of banks to whom the agent may sell federal funds,[2] and
         2. limits on the amounts that can be sold to these banks?
     — Does the agent have a written opinion from its legal counsel as to the bona fide nature of the agency relationship?
     — Does the accounting and reporting system of the agent bank *enable* it to account for the federal funds transactions on a period basis (i.e., at least weekly) to the sellers? (Although more frequent accounting may not be required by the sellers, the agent on any day should have the capacity to identify for the seller the banks to whom the seller's funds have been sold.)
     — Does the agent's accounting system identify *each bank* which has purchased federal funds from a particular seller bank and include (at least) the following information for *each bank* in which the funds are being invested?[3]
       - information to clearly identify the name and location of the bank (or other entity)
       - amount of federal funds sold and amount of interest earned
       - terms of transaction, and maturity date
       - lending limits agreed to
     — Does the agent bank actually disclose to banks or other organizations that are part of these agency-based transactions that it is acting as agent?
     — Is the agent bank's compensation in the form of a predetermined fee schedule or percentage rate based, for example, on the size of transactions, as opposed to compensation in the form of a spread over the rate that it pays to the seller bank? (If the agent bank's compen-

1. Although it is conceivable that a purchaser could engage an agent to *obtain* federal funds on its behalf, these guidelines focus primarily on situations where the seller has engaged an agent to sell federal funds on its behalf because the associated risks of such transactions are borne by the sellers and their agents.

2. Seller banks could conceivably design their lists of approved banks to encompass a large number of financially sound institutions and still be considered to be fulfilling this supervisory requirement.

3. The entities referred to as "ultimate purchasers" or "ultimate borrowers" are those that have the *responsibility to repay* the original seller bank, and not any intervening agents that may pass on the federal funds to these purchasers.

sation is in the form of a spread over the rate it pays to the selling bank, this situation would appear to be more akin to acting as an intermediary and suggests that the transactions should be reported on its balance sheet.)

- Banking organizations that are involved in agency-based federal funds relationships as *sellers*
  - — Does the bank support its transactions with written agency agreements?
  - — Does the seller bank evaluate the credit worthiness of the ultimate borrowers of federal funds and establish limits for each and are these limits periodically reviewed at least every six months?[3,4]
  - — Does the bank periodically (i.e., at least weekly) receive an accounting from the agent which includes the following information for *each bank* to whom the seller bank's federal funds were sold?
    - information to identify name and location of bank
    - amount of federal funds sold and interest earned
    - federal funds sales limits agreed to (if the seller bank is a principal)
  - — Is the bank's management and board of directors aware of and have they approved the agency relationship?
- Do internal and/or external auditors periodically review the policies, procedures, and internal controls associated with this activity and the activity's impact on the earnings and financial condition of the banking organization? Is their evaluation reported to management? (Applies to banks acting as *agents* in the sale of federal funds, *and* those banks involved as *sellers* of federal funds.)
- In addition to the items considered above, the examiner should determine what the impact of these transactions has been on the bank's earnings and financial condition. If the impact has been negative, or if the answer to any of the above questions is negative, the examiner should discuss these matters with bank management and seek remedial action.

14. Analyze the effectiveness of operational controls by reviewing recent cancellations and fail items that are a week or more beyond settlement date and determine:
    a. The amount of extended fails.
    b. The planned disposition of extended fails.
    c. If the control system allows a timely, productive follow-up on unresolved fails.
    d. The reasons for cancellations.
    e. The planned disposition of securities that have been inventoried prior to the recognition of a fail or a cancellation.
15. Determine compliance with applicable laws, rulings, and regulations by performing the following for:
    a. *12 CFR 1.3—Eligible Securities:*
       - Review inventory schedules of underwriting and trading accounts and determine if issues whose par value is in excess of 10 percent of the bank's captial and unimpaired surplus are type I securities.
       - Determine that the total par value of type II investments does not exceed 10 percent of the bank's capital and unimpaired surplus, based on the combination of holdings and permanent portfolio positions in the same securities.
       - Elicit management's comments and review underwriting records on direct placement of type III securities, and determine if the bank is dealing in type III securities for its own account by ascertaining if direct placement issues have been placed in own bank or affiliated investment portfolios or if underwriting proceeds were used to reduce affiliate loans.
    b. *Section 23A of the Federal Reserve Act (12 USC 371(c) and 375)—Preferential Treatment:* Obtain a list of domestic affiliate relationships and a list of directors and principal officers and their business interests from appropriate examiners and determine whether transactions, include securities clearance services, involving affiliates, insiders or their

4. This requirement is intended to mean that seller banks should conduct the type of credit analysis that would be considered reasonable and prudent for a direct federal funds activity (i.e., those federal funds activities not conducted through agents).

interests are on terms less favorable to the bank than those transactions involving unrelated parties.

c. *Regulation D (12 CFR 204.2)—Due Bills:*
   - Review outstanding due bills and determine if:
     — The customer was informed that a due bill would be issued instead of the purchased security.
     — Safekeeping receipts are sent to safekeeping customers only after the purchased security has been delivered.
   - Review due bills outstanding over three business days and determine if they are collateralized or properly reserved.
   - Review collateralized due bills and determine if the liability is secured by securities of the same type and of comparable maturity and with a market value at least equal to that of the security that is the subject of the due bill.

d. *Regulation H (12 CFR 208.8(k))—Recordkeeping and Confirmation Requirements:* If the bank effects securities transactions at the direction and for the account of customers, determine if it is in compliance with this regulation by substantiating Internal Control questions 24–35.

16. Test for unsafe and unsound practices and possible violations of the Securities Exchange Act of 1934 by:
    a. Reviewing customer account schedules of own bank and affiliated bank permanent portfolios, trusts, other broker-dealers, employees of own or other banks and other broker-dealers. Use an appropriate technique to select transactions and compare trade prices to independently established market prices as of the date of trade.
    b. Reviewing transactions, including U.S. government tender offer subscription files, involving employees and directors of own or other banks and determine if the funds used in the transactions were misused bank funds or the proceeds of reciprocal or preferential loans.
    c. Reviewing sales to affiliated companies to determine that the sold securities were not subsequently repurchased at an additional mark-up and that gains were not recognized a second time.
    d. Reviewing commercial paper sales journals or confirmations to determine if the bank sells affiliate commercial paper. If so, determine if:
       - The bank sells affiliate-issued commercial paper to institutions and financially sophisticated individuals only.
       - Sales are generally denominated in amounts of $25,000 or more.
       - Each sale confirmation discloses that the affiliate-issued commercial paper is not an insured bank deposit.
    e. Reviewing securities position records and customer ledgers with respect to large volume repetitive purchase and sales transactions and:
       - Independently testing market prices of significant transactions which involve the purchase and resale of the same security to the same or related parties.
       - Investigating the purchase of large blocks of securities from dealer firms just prior to month end and their subsequent resale to the same firm just after the beginning of the next month.
    f. Reviewing lists of approved dealer firms and determining that the approval of any firm that handles a significant volume of agency transactions is based on competitive factors rather than deposit relationships.
    g. Reviewing customer complaint files and determining the reasons for such complaints.

17. Discuss with an appropriate officer and prepare report comments concerning:
    a. The soundness of trading objectives, policies and practices.
    b. The degree of legal and market risk assumed by trading operations.
    c. The effectiveness of analytical, reporting and control systems.
    d. Violations of law.
    e. Internal control deficiencies.
    f. Apparent or potential conflicts of interest.
    g. Other matters of significance.

18. Reach a conclusion regarding the quality of department management and state your conclusions on the management brief provided by the examiner assigned "Management Assessment."

19. Update workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices and procedures regarding bank dealer activities. The bank's system should be documented in a complete, concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

This section applies to all bank dealer activities except those involving municipal securities, which are reviewed as part of a separate and distinct Municipal Bond Dealer Examination.

SECURITIES UNDERWRITING TRADING POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written securities underwriting/trading policies that:
   a. Outline objectives?
   b. Establish limits and/or guidelines for:
      - Price mark-ups?
      - Quality of issues?
      - Maturity of issues?
      - Inventory positions (including when issued (WI) positions)?
      - Amounts of unrealized loss on inventory positions?
      - Length of time an issue will be carried in inventory?
      - Amounts of individual trades or underwriter interests?
      - Acceptability of brokers and syndicate partners?
   c. Recognize possible conflicts of interest and establish appropriate procedures regarding:
      - Deposit and service relationships with municipalities whose issues have underwriting links to the trading department?
      - Deposit relationships with securities firms handling significant volumes of agency transactions or syndicate participations?
      - Transfers made between trading account inventory and investment portfolio(s)?
      - The bank's trust department acting as trustee, paying agent, and transfer agent for issues which have an underwriting relationship with the trading department?
   d. State procedures for periodic, monthly or quarterly, valuation of trading inventories to market value or to the lower of cost or market price?
   e. State procedures for periodic independent verification of valuations of the trading inventories?
   f. Outline methods of internal review and reporting by department supervisors and internal auditors to insure compliance with established policy?
   g. Identify permissible types of securities?
   h. Ensure compliance with the rules of fair practice that:
      - Prohibit any deceptive, dishonest or unfair practice?
      - Adopt formal suitability checklists?
      - Monitor gifts and gratuities?
      - Prohibit materially false or misleading advertisements?
      - Adopt a system to determine the existence of possible control relationships?
      - Prohibit the use of confidential, non-public information without written approval of the affected parties?
      - Prohibit improper use of funds held on another's behalf?
      - Allocate responsibility for transactions with own employees and employees of other dealers?
      - Require disclosure on all new issues?
   i. Provide for exceptions to standard policy?
2. Are the underwriting/trading policies reviewed at least quarterly by the board to determine their adequacy in light of changing conditions?
3. Is there a periodic review by the board to assure that the underwriting/trading department is in compliance with its policies?

OFFSETTING RESALE AND REPURCHASE TRANSACTIONS

4. Has the board of directors, consistent with its duties and responsibilities, adopted written offsetting repurchase transaction policies that:
   a. Limit the aggregate amount of offsetting repurchase transactions?
   b. Limit the amounts in unmatched or extended (over 30 days) maturity transactions?
   c. Determine maximum time gaps for unmatched maturity transactions?
   d. Determine minimumly acceptable interest rate spreads for various maturity transactions.
   e. Determine the maximum amount of funds to be extended to any single or related firms through reverse re-po transactions, involving unsold (through forward sales) securities?
   f. Require firms involved in reverse re-po transactions to submit corporate resolutions stating the names and limits of individuals, who are authorized to commit the firm?
   g. Require submission of current financial information by firms involved in reverse re-po transactions?
   h. Provide for periodic credit reviews and approvals for firms involved in reverse re-po transactions?
   i. Specify types of acceptable offsetting repurchase transaction collateral (if so, indicate type __________).
5. Are written collateral control procedures designed so that:
   a. Collateral assignment forms are used?
   b. Collateral assignments of registered securities are accompanied by powers of attorney signed by the registered owner?
      - Registered securities are registered in bank or bank's nominee name when they are assigned as collateral for extended maturity (over 30 days) reverse re-po transactions?
   c. Funds are not disbursed until reverse re-po collateral is delivered into the physical custody of the bank or an independent safekeeping agent?
   d. Funds are only advanced against predetermined collateral margins ordiscounts?
      - If so, indicate margin or discount percentage __________.
   e. Collateral margins or discounts are predicated upon:
      - The type of security pledged as collateral?
      - Maturity of collateral?
      - Historic and anticipated price volatility of the collateral?
      - Maturity of the reverse re-po agreements?
   f. Maintenance agreements are required to support predetermined collateral margin or discount?
   g. Maintenance agreements are structured to allow margin calls in the event of collateral price declines?
   h. Collateral market value is frequently checked to determine compliance with margin and maintenance requirements (if so, indicate frequency ________)?

CUSTODY AND MOVEMENT OF SECURITIES

*6. Are the bank's procedures such that persons do not have sole custody of securities in that:
   a. They do not have sole physical access to securities?
   b. They do not prepare disposal documents that are not also approved by authorized persons?
   c. For the security custodian, supporting disposal documents are examined or adequately tested by a second custodian?
   d. No person authorizes more than one of the following transactions: execution of trades, receipt and delivery of securities, and collection or disbursement of payment?
7. Are securities physically safeguarded to prevent loss, unauthorized disposal or use? And:
   a. Are negotiable securities kept under dual control?
   b. Are securities counted frequently, on a surprise basis, reconciled to the securi-

ties record, and the results of such counts reported to management?

c. Does the bank periodically test for compliance with provisions of its insurance policies regarding custody of securities?

d. For securities in the custody of others:
   - Are custody statements agreed periodically to position ledgers and any differences followed up to a conclusion?
   - Are statements received from brokers and other dealers reconciled promptly, and any differences followed up to a conclusion?
   - Are positions for which no statements are received confirmed periodically, and stale items followed up to a conclusion?

8. Are trading account securities segregated from other bank owned securities or securities held in safekeeping for customers?

*9. Is access to the trading securities vault restricted to authorized employees?

10. Do withdrawal authorizations require countersignature to indicate security count verifications?

11. Is registered mail used for mailing securities, and are adequate receipt files maintained for such mailings (if registered mail is used for some but not all mailings, indicate criteria and reasons)?

12. Are prenumbered forms used to control securities trades, movements and payments?

13. If so, is numerical control of prenumbered forms accounted for periodically by persons independent of those activities?

14. Do alterations to forms governing the trade, movement, and payment of securities require:
   *a. Signature of the authorizing party?
   b. Use of a change of instruction form?

15. With respect to negotiability of registered securities:
   a. Are securities kept in non-negotiable form whenever possible?
   b. Are all securities received, and not immediately delivered, transferred to the name of the bank or its nominee and kept in non-negotiable form whenever possible?
   c. Are securities received checked for negotiability (endorsements, signature, guarantee, legal opinion, etc.) and for completeness (coupons, warrants, etc.) before they are placed in the vault?

RECORDS MAINTENANCE

16. Does the bank maintain:
   a. Order tickets which include:
      - Capacity as principal or agent?
      - If order is firm or conditional?
      - Terms, conditions or instructions and modifications?
      - Type of transaction (purchase or sale)?
      - Execution price?
      - Description of security?
      - Date and time of order receipt?
      - Date and time of execution?
      - Dealer's or customer's name?
      - Delivery and payment instructions?
      - Terms, conditions, date and time of cancellation of an agency order?
   b. Customer confirmations:
      - Bank dealer's name, address and phone number?
      - Customer's name?
      - Designation of whether transaction was a purchase from or sale to the customer?
      - Par value of securities?
      - Description of securities, including at a minimum:
        - — Name of issuer?
        - — Interest rate?
        - — Maturity date?
        - — Designation, if securities are subject to limited tax?
        - — Subject to redemption prior to maturity (callable)?
        - — Designation, if revenue bonds and the type of revenue?
        - — The name of any company or person in addition to the issuer who is obligated, directly or indirectly, to pay debt service on revenue bonds? (In the case of more than one such obligor, the phrase "multiple obligors" will suffice.)
        - — Dated date, if it affects price or interest calculations?
        - — First interest payment date, if other than semi-annual?

   - Designation, if securities are "fully registered" or "registered as principal"?
   - Designation, if securities are "pre-refunded"?
   - Designation, if securities have been "called," maturity date fixed by call notice and amount of call price?
   - Denominations of bearer bonds, if other than denominations of $1,000 and $5,000 par value?
   - Denominations of registered bonds, if other than multiples of $1,000 par value up to $100,000 par value?
   - Denominations of municipal notes?
- Trade date and time of execution, or a statement that time of execution will be furnished upon written request of the customer?
- Settlement date?
- Yield and dollar price? Only the dollar price need to be shown for securities traded at par.
   - For transactions in callable securities effected on a yield basis, the resulting price calculated to the lowest of price to call premium, par option (callable at par) or to maturity, and if priced to premium call or par option, a statement to that effect and the call or option date and price used in the calculation?
- Amount of accrued interest?
- Extended principal amount?
- Total dollar amount of transaction?
- The capacity in which the bank dealer effected the transaction:
   - As principal for own account?
   - As agent for customer?
   - As agent for a person other than the customer?
   - As agent for both the customer and another person (dual agent)?
- If a transaction is effected as agent for the customer or as dual agent:
   - Either the name of the contra-party or a statement that the information will be furnished upon request?
   - The source and amount of any commission or other remuneration to the bank dealer?
- Payment and delivery instructions?
- Special instructions, such as:
   - "Ex-legal" (traded without legal opinion)?
   - "Flat" (traded without interest)?
   - "In default" as to principal or interest?

c. Dealer confirmations:
- Bank dealer's name, address and telephone number?
- Contra-party identification?
- Designation of purchase from or sale to?
- Par value of securities?
- Description of securities, including at a minimum:
   - Name of issuer?
   - Interest rate?
   - Maturity date?
   - Designation, if securities are limited tax?
   - Subject to redemption prior to maturity (callable)?
   - Designation, if revenue bonds and the type of revenue?
   - Dated date, if it affects price or interest calculations?
   - First interest payment date, if other than semi-annual?
   - Designation, if securities are "fully registered" or "registered as principal"?
   - Designation, if securities are "pre-refunded"?
   - Designation, if securities have been "called," maturity date fixed by call notice and amount of call price?
   - Denominations of bearer bonds, if other than denominations of $1,000 and $5,000 par value?
   - Denominations of registered bonds, if other than multiples of $1,000 par value up to $100,000 par value?
- CUSIP number, if assigned (effective January 1, 1979)?
- Trade date?
- Settlement date?
- Yield to maturity and resulting dollar price? Only the dollar price need be

shown for securities traded at par or on a dollar basis.
  - — For transactions in callable securities effected on a yield basis, the resulting price calculated to the lowest of price to call premium, par option (callable at par) or to maturity?
  - — If applicable, the fact that securities are priced to premium call or par option and the call or option date and price used in the calculation?
- Amount of accrued interest?
- Extended principal amount?
- Total dollar amount of transaction?
- Payment and delivery instructions?
- Special instructions, such as:
  - — ‘‘Ex-legal’’ (traded without legal opinion)?
  - — ‘‘Flat’’ (traded without interest)?
  - — ‘‘In default’’ as to principal or interest?

d. Purchase and sale journals or blotters which include:
- Trade date?
- Description of securities?
- Aggregate par value?
- Unit dollar price or yield?
- Aggregate trade price?
- Accrued interest?
- Name of buyer or seller?
- Name of party received from or delivered to?
- Bond or note numbers?
- Indication if securities are in registered form?
- Receipts or disbursements of cash?
- Specific designation of ‘‘when issued’’ transactions?
- Transaction or confirmation numbers recorded in consecutive sequence to insure that transactions are not omitted?
- Other references to documents of original entry?

e. Short sale ledgers which include:
- Sale price?
- Settlement date?
- Present market value?
- Basis point spread?
- Description of collateral?
- Cost of collateral or cost to acquire collateral?
- Carrying charges?

f. Security position ledgers, showing separately for each security positioned for the bank’s own account:
- Description of the security?
- Posting date (either trade or settlement date, provided posting date is consistent with other records of original entry)?
- Aggregate par value?
- Cost?
- Average cost?
- Location?
- Count differences classified by the date on which they were discovered?

g. Securities transfer or validation ledgers which include:
- Address where securities were sent?
- Date sent?
- Description of security?
- Aggregate par value?
- If registered securities:
  - — Present name of record?
  - — New name to be registered?
- Old certificate or note numbers?
- New certificate or note numbers?
- Date returned?

h. Securities received and delivered journals or tickets which include:
- Date of receipt or delivery?
- Name of sender and receiver?
- Description of security?
- Aggregate par value?
- Trade and settlement dates?
- Certificate numbers?

i. Cash or wire transfer receipt and disbursement tickets which include:
- Draft or check numbers?
- Customer accounts debited or credited?
- Notation of the original entry item that initiated the transaction?

j. Cash or wire transfer journals which additionally include:
- Draft or check reconcilements?
- Daily totals of cash debits and credits?
- Daily proofs?

k. Fail ledgers which include:
- Description of security?
- Aggregate par value?
- Price?
- Fail date?
- Date included on fail ledger?
- Customer or dealer name?
- Resolution date?

  - A distinction between a customer and a dealer fail?
  - Follow-up detail regarding efforts to resolve the fail?

l. Securities borrowed and loaned ledgers which include:
  - Date of transaction?
  - Description of securities?
  - Aggregate par value?
  - Market value of securities?
  - Contra-party name?
  - Value at which security was loaned?
  - Date returned?
  - Description of collateral?
  - Aggregate par value of collateral?
  - Market value of collateral?
  - Collateral safekeeping location?
  - Dates of periodic valuations?

m. Records concerning written or oral put options, guarantee and repurchase agreements which include:
  - Description of the securities?
  - Aggregate par value?
  - Terms and conditions of the option, agreement or guarantee?

n. Customer account information which includes:
  - Customer's name and residence or principal business address?
  - Whether customer is of legal age?
  - Occupation?
  - Name and address of employer? And:
    — Whether customer is employed by a securities broker or dealer or by a municipal securities dealer?
  - Name and address of beneficial owner or owners of the account if other than customer? And:
    — Whether transactions are confirmed with such owner or owners?
  - Name and address of person(s) authorized to transact business for a corporate, partnership or trusteed account? And:
    — Copy of powers of attorney, resolutions or other evidence of authority to effect transactions for such an account?
  - With respect to borrowing or pledging securities held for the accounts of customers:
    — Written authorization from the customer authorizing such activities?
  - Customer complaints including:
    — Records of all written customer complaints?
    — Record of actions taken concerning those complaints?

o. Customer and the bank dealer's own account ledgers which include:
  - All purchases and sales of securities?
  - All receipts and deliveries of securities?
  - All receipts and disbursements of cash?
  - All other charges or credits?

p. Records of syndicates' joint accounts or similar accounts formed for the purchase of municipal securities which include:
  - Underwriter agreements? And:
    — Description of the security?
    — Aggregate par value of the issue?
  - Syndicate or selling group agreements? And:
    — Participants' names and percentages of interest?
    — Terms and conditions governing the formation and operation of the syndicate?
    — Date of closing of the syndicate account?
    — Reconcilement of syndicate profits and expenses?
  - Additional requirements for syndicate or underwriting managers which include:
    — All orders received for the purchase of securities from the syndicate or account, except bids at other than the syndicate price?
    — All allotments of securities and the price at which sold?
    — Date of settlement with the issuer?
    — Date and amount of any good faith deposit made with the issuer?

q. Files which include:
  - Advertising and sales literature
  - Prospectus delivery information?

r. Internal supervisory records which include:
  - Account reconcilement and follow-up?
  - Profit analysis by trader?
  - Sales production reports?

- Periodic open position reports computed on a trade date or when issued basis?
- Reports of own bank credit extensions used to finance the sale of trading account securities?

PURCHASE AND SALES TRANSACTIONS

17. Are all transactions promptly confirmed in writing to the actual customers or dealers?
18. Are confirmations compared or adequately tested to purchase and sales memoranda and reports of execution of orders, and any differences investigated and corrected (including approval by a designated responsible employee)?
    a. Are confirmations and purchase and sale memoranda checked or adequately tested for computation and terms by a second individual?
19. Are comparisons received from other dealers or brokers compared with confirmations, and any differences promptly investigated?
    a. Are comparisons approved by a designated individual (if so, give name __________)?

CUSTOMER AND DEALER ACCOUNTS

20. Do account bookkeepers periodically transfer to different account sections or otherwise rotate posting assignments?
21. Are letters mailed to customers requesting confirmation of changes of address?
22. Are separate customer account ledgers maintained for:
    - Employees?
    - Affiliates?
    - Own bank's trust accounts?
23. Are customer inquiries and complaints handled exclusively by designated individuals who have no incompatible duties?

RECORDKEEPING AND CONFIRMATION REQUIREMENTS FOR CUSTOMER SECURITIES TRANSACTIONS (REGULATION H)

24. Are chronological records of original entry containing an itemized daily record of all purchases and sales of securities maintained?
25. Do the original entry records reflect:
    a. The account or customer for which each such transaction was effected?
    b. The description of the securities?
    c. The unit and aggregate purchase or sale price (if any)?
    d. The trade date?
    e. The name or other designation of the broker-dealer or other person from whom purchased or to whom sold?

If the bank has had an average of 200 or more securities transactions per year for customers over the prior three-calendar-year period, exclusive of transactions in U.S. government and federal agency obligations, answer questions 26, 27 and 28.

26. Does the bank maintain account records for each customer which reflect:
    a. All purchases and sales of securities?
    b. All receipts and deliveries of securities?
    c. All receipts and disbursements of cash for transactions in securities for such account?
    d. All other debits and credits pertaining to transactions in securities?
27. Does the bank maintain a separate memorandum (order ticket) of each order to purchase or sell securities (whether executed or cancelled) which includes:
    a. The account(s) for which the transaction was effected?
    b. Whether the transaction was a market order, limit order, or subject to special instructions?
    c. The time the order was received by the trader or other bank employee responsible for affecting the transaction?
    d. The time the order was placed with the broker-dealer, or if there was no broker-dealer, the time the order was executed or cancelled?
    e. The price at which the order was executed?

f. The broker-dealer used?

28. Does the bank maintain a record of all broker-dealers selected by the bank to effect securities transactions and the amount of commissions paid or allocated to each such broker during the calendar year?
29. Does the bank, subsequent to effecting a securities transaction for a customer, mail or otherwise furnish to such customer either a copy of the confirmation of a broker-dealer relating to the securities transaction or a written trade confirmation of a broker-dealer relating to the securities transaction or a written trade confirmation prepared by the bank?
30. If customer notification is provided by furnishing the customer with a copy of the confirmation of a broker-dealer relating to the transaction, and if the bank is to receive remuneration from the customer or any other source in connection with the transaction, and the remuneration is not determined pursuant to a written agreement between the bank and the customer, does the bank also provide a statement of the source and amount of any remuneration to be received?
31. If customer notification is provided by furnishing the customer with a trade confirmation prepared by the bank, does the confirmation disclose:
    a. The name of the bank?
    b. The name of the customer?
    c. Whether the bank is acting as agent for such customer, as principal for its own account, or in any other capacity?
    d. The date of execution and a statement that the time of execution will be furnished within a reasonable time upon written request of such customer?
    e. The identity, price and number of shares of units (or principal amount in the case of debt securities) of such securities purchased or sold by such customer?
32. For transactions which the bank effects in the capacity of agent, does the bank, in addition to the above, disclose:
    a. The amount of any remuneration received or to be received, directly or indirectly, by any broker-dealer from such customer in connection with the transaction?
    b. The amount of any remuneration received or to be received by the bank from the customer and the source and amount of any other remuneration to be received by the bank in connection with the transaction, unless remuneration is determined pursuant to a written agreement between the bank and the customer?
    c. The name of the broker-dealer used. Where there is no broker-dealer, the name of the person from whom the security was purchased or to whom it was sold, or the fact that such information will be furnished within a reasonable time upon written request?
33. Does the bank maintain the above records and evidence of proper notification for a period of at least three years?
34. Does the bank furnish the written notification described above within five business days from the date of the transaction, or if a broker-dealer is used, within five business days from the receipt by the bank of the broker-dealer's confirmation? If not, does the bank use one of the alternative procedures described in Regulation H?
35. Unless specifically exempted in Regulation H, does the bank have established written policies and procedures ensuring:
    a. That bank officers and employees who make investment recommendations or decisions for the accounts of customers, who particpate in the determination of such recommendations or decisions, or who, in connection with their duties, obtain information concerning which securities are being purchased or sold or recommended for such action, report to the bank, within 10 days after the end of the calendar quarter, all transactions in securities made by them or on their behalf, either at the bank or elsewhere in which they have a beneficial interest (subject to certain exemptions)?
    b. That in the above required report the bank officers and employees identify the securities purchased or sold and indicate the dates of the transactions and whether the transactions were purchases or sales?
    c. The assignment of responsibility for supervision of all officers or employees who (1) transmit orders to or place orders with broker-dealers, or (2) execute transactions in securities for customers?

d. The fair and equitable allocation of securities and prices to accounts when orders for the same security are received at approximately the same time and are placed for execution either individually or in combination?
e. Where applicable, and where permissible under local law, the crossing of buy and sell orders on a fair and equitable basis to the parties to the transaction?

OTHER

36. Are the preparation, additions, and posting of subsidiary records performed and/or adequately reviewed by persons who do not also have sole custody of securities?
37. Are subsidiary records reconciled, at least monthly, to the appropriate general ledger accounts and are reconciling items adequately investigated by persons who do not also have sole custody of securities?
38. Are fails to receive and deliver under a separate general ledger control?
    a. Are fail accounts periodically reconciled to the general ledger, and any differences followed up to a conclusion?
    b. Are periodic aging schedules prepared (if so, indicate frequency __________)?
    c. Are stale fail items confirmed and followed up to a conclusion?
    d. Are stale items valued periodically and, if any potential loss is indicated, is a particular effort made to clear such items or to protect the bank from loss by other means?
39. With respect to securities loaned and borrowed positions:
    a. Are details periodically reconciled to the general ledger, and any differences followed up to a conclusion?
    b. Are positions confirmed periodically (if so, indicate frequency ___________)?
40. Is the compensation of all department employees limited to salary and a nondepartmentalized bonus or incentive plan?
    a. Are sales representatives' incentive programs based on sales volume and not department income?

CONCLUSION

41. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
42. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

Banking organizations increasingly rely on information technology (IT) to conduct their operations and manage risks. The use of IT can have important implications for a banking organization's financial condition, risk profile, and operating performance and should be incorporated into the safety-and-soundness assessment of each organization. As a result, all safety-and-soundness examinations (or examination cycles) conducted by the Federal Reserve should include an assessment and evaluation of IT risks and risk management. Further information about banks' IT activities and examination methodology can be found in the *FFIEC Information Technology Examination Handbook* (the *IT Handbook*) and in supervisory guidance issued by the Federal Reserve and the other federal banking agencies.

ASSESSING INFORMATION TECHNOLOGY IN THE RISK-FOCUSED SUPERVISORY FRAMEWORK

The risk-focused supervisory process is evolving to adapt to the changing role of IT in banking organizations, with greater emphasis on an assessment of IT's effect on an organization's safety and soundness. Accordingly, examiners should explicitly consider IT when developing risk assessments and supervisory plans. Examiners should use appropriate judgment in determining the level of review, given the characteristics, size, and business activities of the organization. Moreover, to determine the scope of supervisory activities, close coordination is needed between general safety-and-soundness examiners and IT specialists during the risk-assessment and planning phase, as well as during on-site examinations. Given the variability of IT environments, the level of technical expertise needed for a particular examination will vary across institutions and should be identified during the planning phase of the examination. In general, examiners should accomplish the following goals during a risk-focused examination:

- Develop a broad understanding of the organization's approach to, and strategy and structure for, IT activities within and across business lines. Determine also the role and importance of IT to the organization and any unique characteristics or issues.
- Incorporate an analysis of IT activities into risk assessments, supervisory plans, and scope memoranda. An organization's IT systems should be considered in relation to the size, activities, and complexity of the organization, as well as the degree of reliance on these systems across particular business lines. Although IT concerns would clearly affect an institution's operational risk profile, IT also can affect other business risks (such as credit, market, liquidity, legal, and reputational risk), depending upon the specific circumstances, and should be incorporated into these assessments as appropriate.
- Assess the organization's critical systems, that is, those that support its major business activities, and the degree of reliance those activities have on IT systems. The level of review should be sufficient to determine that the systems are delivering the services necessary for the organization to conduct its business in a safe and sound manner.
- Determine whether senior management is adequately identifying, measuring, monitoring, and controlling the significant risks associated with IT for the overall organization and its major business activities.

INTERAGENCY GUIDELINES ESTABLISHING INFORMATION SECURITY STANDARDS

The federal banking agencies jointly issued interagency guidelines establishing information security standards (the information security standards), which became effective July 1, 2001.[1] (See the appendix to this section.) The Board of Governors of the Federal Reserve System approved amendments to the standards on December 16, 2004 (effective July 1, 2005). The amended information security standards implement sections 501 and 505 of the Gramm-Leach-Bliley Act (15 U.S.C. 6801 and 6805) and section 216 of the Fair and Accurate Credit Transactions Act of 2003 (15 U.S.C. 1681w).

1. See 66 Fed. Reg. 8616–8641 (February 1, 2001) and 69 Fed. Reg. 77,610–77,612 (December 28, 2004); Regulation H, 12 CFR 208, appendix D-2; Regulation K, 12 CFR 211.9 and 211.24; and Regulation Y, 12 CFR 225, appendix F.

The Gramm-Leach-Bliley Act requires the agencies to establish financial-institution information security standards for administrative, technical, and physical safeguards for customer records and information. (See SR-01-15.)

Under the information security standards, institutions must establish an effective *written* information security program to assess and control risks to customer information. An institution's information security program should be appropriate to its size and complexity and to the nature and scope of its operations. The board of directors should oversee the institution's development, implementation, and maintenance of the information security program and also approve written information security policies and programs.

The information security program should include administrative, technical, and physical safeguards appropriate to the size and complexity of the bank and the nature and scope of its activities. The program should be designed to ensure the security and confidentiality of customer information;[2] protect against anticipated threats or hazards to the security or integrity of such information; protect against unauthorized access to, or use of, such information that could result in substantial harm or inconvenience to any customer;[3] and ensure the proper disposal of customer information and consumer information. Each institution must assess risks to customer information and implement appropriate policies, procedures, training, and testing to manage and control these risks. Institutions must also report annually to the board of directors or a committee of the board of directors.

The information security standards outline specific security measures that banking organizations should consider in implementing a security program based on the size and complexity of their operations. Training and testing are also critical components of an effective information security program. Financial institutions are required to oversee their service-provider arrangements in order to (1) protect the security of customer information maintained or processed by service providers; (2) ensure that its service providers properly dispose of customer and consumer information; and (3) where warranted, monitor its service providers to confirm that they have satisfied their contractual obligations.

The Federal Reserve recognizes that banking organizations are highly sensitive to the importance of safeguarding customer information and the need to maintain effective information security programs. Existing examination procedures and supervisory processes already address information security. As a result, most banking organizations may not need to implement any new controls and procedures.

Examiners should assess compliance with the standards during each safety-and-soundness examination, which may include targeted reviews of information technology. Ongoing compliance with the standards should be monitored, as needed, during the risk-focused examination process. Material instances of noncompliance should be noted in the examination report.

The information security standards apply to customer information maintained by, or on behalf of, state member banks and bank holding companies and the nonbank subsidiaries of each.[4] The information security standards also address standards for the proper disposal of consumer information, pursuant to sections 621 and 628 of the Fair Credit Reporting Act (15 U.S.C. 1681s and 1681w). To address the risks associated with identity theft, a financial institution is generally required to develop, implement, and maintain, as part of its existing information security program, appropriate measures to properly dispose of consumer information derived from consumer reports.

Consumer information is defined as any record about an individual, whether in paper, electronic, or other form, that is a consumer report or is derived from a consumer report and that is maintained or otherwise possessed by or on behalf of the bank for a business purpose.

2. *Customer information* is defined to include any record, whether in paper, electronic, or other form, containing *nonpublic personal information*, as defined in Regulation P, about a financial institution's customer that is maintained by, or on behalf of, the institution.

3. A *customer* is defined in the same manner as in Regulation P: a consumer who has established a continuing relationship with an institution under which the institution provides one or more financial products or services to the consumer to be used primarily for personal, family, or household purposes. The definition of customer does not include a business, nor does it include a consumer who has not established an ongoing relationship with the financial institution.

4. The information security standards do not apply to brokers, dealers, investment companies, and investment advisers, or to persons providing insurance under the applicable state insurance authority of the state in which the person is domiciled. The appropriate federal agency or state insurance authority regulates insurance entities under sections 501 and 505 of the GLB Act.

Consumer information also means a compilation of such records.

The following are examples of consumer information:

- a consumer report that a bank obtains
- information from a consumer report that the bank obtains from its affiliate after the consumer has been given a notice and has elected not to opt out of that sharing
- information from a consumer report that the bank obtains about an individual who applies for but does not receive a loan, including any loan sought by an individual for a business purpose
- information from a consumer report that the bank obtains about an individual who guarantees a loan (including a loan to a business entity)
- information from a consumer report that the bank obtains about an employee or prospective employee

Consumer information does not include any record that does not personally identify an individual, nor does it include the following:

- aggregate information, such as the mean score, derived from a group of consumer reports
- blind data, such as payment history on accounts that are not personally identifiable, that may be used for developing credit scoring-models or for other purposes
- information from a consumer report that the bank obtains about an individual who applies for but does not receive a loan, including any loan sought by an individual for a business purpose
- information from a consumer report that the bank obtains about an individual who guarantees a loan (including a loan to a business entity)
- information from a consumer report that the bank obtains about an employee or prospective employee

An institution or banking organization is not required to implement a *uniform* information security program. For example, a bank holding company may include subsidiaries within the scope of its information security program, or the subsidiaries may implement separate information security programs. The institution or bank holding company is expected, however, to coordinate all the elements of its information security program.

Institutions must exercise due diligence when selecting service providers, including reviewing the service provider's information security program or the measures the service provider uses to protect the institution's customer information.[5] All contracts must require that the service provider implement appropriate measures designed to meet the objectives of the standards. Institutions must also conduct ongoing oversight to confirm that the service provider maintains appropriate security measures. An institution's methods for overseeing its service-provider arrangements may differ depending on the type of services or service provider or the level of risk. For example, if a service provider is subject to regulations or a code of conduct that imposes a duty to protect customer information consistent with the objectives of the standards, the institution may consider that duty in exercising its due diligence and oversight of the service provider. In situations where a service provider hires a subservicer (or subcontractor), the subservicer would not be considered a "service provider" under the guidelines.

Response Programs for Unauthorized Access to Customer Information and Customer Notice

Response programs specify actions that are to be taken when a financial institution suspects or detects that unauthorized individuals have gained access to customer information systems, including appropriate reports to regulatory and law enforcement agencies.[6] A response program is the principal means for a financial institution to protect against unauthorized "use" of customer information that could lead to "substantial harm or inconvenience" to the institution's customer. For example, customer notification is an important tool that enables a customer to take steps to prevent identity theft, such as by arranging to have a fraud alert placed in his or her credit file.

The measures enumerated in the information security standards include "response programs

5. A *service provider* is deemed to be a person or entity that maintains, processes, or is otherwise permitted access to customer information through its provision of services directly to the bank.

6. See the information security standards, 12 CFR 208, appendix D-2, section III.C.

that specify actions to be taken when the bank suspects or detects that unauthorized individuals have gained access to customer information systems, including appropriate reports to regulatory and law enforcement agencies."[7] Prompt action by both the institution and the customer following the unauthorized access to customer information is crucial to limiting identity theft. As a result, every financial institution should develop and implement a response program appropriate to its size and complexity and to the nature and scope of its activities. The program should be designed to address incidents of unauthorized access to customer information.

The Interagency Guidance on Response Programs for Unauthorized Access to Customer Information and Customer Notice[8] (the guidance) interprets section 501(b) of the Gramm-Leach-Bliley Act (the GLB Act) and the information security standards.[9] The guidance describes the response programs, including customer notification procedures, that a financial institution should develop and implement to address unauthorized access to or use of customer information that could result in substantial harm or inconvenience to a customer.

When evaluating the adequacy of an institution's information security program that is required by the information security standards, examiners are to consider whether the institution has developed and implemented a response program equivalent to the guidance. At a minimum, an institution's response program should contain procedures for (1) assessing the nature and scope of an incident, and identifying what customer information systems and types of customer information have been accessed or misused; (2) notifying its primary federal regulator as soon as possible when the institution becomes aware of an incident involving unauthorized access to or use of *sensitive* customer information, as defined later in the guidance; (3) immediately notifying law enforcement in situations involving federal criminal violations requiring immediate attention; (4) taking appropriate steps to contain and control the incident to prevent further unauthorized access to or use of customer information, such as by monitoring, freezing, or closing affected accounts, while preserving records and other evidence; and (5) notifying customers when warranted.

The guidance does not apply to a financial institution's foreign offices, branches, or affiliates. However, a financial institution subject to the information security standards is responsible for the security of its customer information, whether the information is maintained within or outside of the United States, such as by a service provider located outside of the United States.

The guidance also applies to *customer information,* meaning any record containing "nonpublic personal information" about a financial institution's customer, whether the information is maintained in paper, electronic, or other form, *that is maintained by or on behalf of the institution.*[10] (See the Board's privacy rule, Regulation P, at section 216.3(n)(2) (12 CFR 216.3 (n)(2).) Consequently, the guidance applies only to information that is within the control of the institution and its service providers. The guidance would not apply to information directly disclosed by a customer to a third party, for example, through a fraudulent web site.

The guidance also does not apply to information involving business or commercial accounts. Instead, the guidance applies to nonpublic personal information about a *customer,* as that term is used in the information security standards, namely, a consumer who obtains a financial product or service from a financial institution to be used primarily for personal, family, or household purposes and who has a continuing relationship with the institution.[11]

Response Programs

Financial institutions should take preventative measures to safeguard customer information against attempts to gain unauthorized access to the information. For example, financial institutions should place access controls on customer information systems and conduct background checks for employees who are authorized to

7. See the information security standards, section III.C.1.g.

8. The guidance was jointly issued on March 23, 2005 (effective March 29, 2005), by the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

9. See 12 CFR 208, appendix D-2, and 12 CFR 225, appendix F. The Interagency Guidelines Establishing Information Security Standards were formerly known as the Interagency Guidelines Establishing Standards for Safeguarding Customer Information.

10. See the information security standards, 12 CFR 208, appendix D-2, section I.C.2.e.

11. See the information security standards, 12 CFR 208, appendix D-2, section I.C.2.d., and the Board's privacy rule (Regulation P), section 216.3(h) (12 CFR 216.3(h)).

access customer information.[12] However, every financial institution should also develop and implement a risk-based response program to address incidents of unauthorized access to customer information in customer information systems[13] that occur nonetheless. A response program should be a key part of an institution's information security program.[14] The program should be appropriate to the size and complexity of the institution and the nature and scope of its activities.

In addition, each institution should be able to address incidents of unauthorized access to customer information in customer information systems maintained by its domestic and foreign service providers. Therefore, consistent with the obligations in the information security standards that relate to these arrangements, and with existing guidance on this topic issued by the agencies,[15] an institution's contract with its service provider should require the service provider to take appropriate actions to address incidents of unauthorized access to the financial institution's customer information, including notification to the institution as soon as possible of any such incident, to enable the institution to expeditiously implement its response program.

Components of a response program. At a minimum, an institution's response program should contain procedures for the following:

- assessing the nature and scope of an incident, and identifying what customer information systems and types of customer information have been accessed or misused
- notifying its primary federal regulator as soon as possible when the institution becomes aware of an incident involving unauthorized access to or use of *sensitive* customer information, as defined below
- consistent with the Suspicious Activity Report regulations,[16] notifying appropriate law enforcement authorities, in addition to filing a timely SAR in situations involving federal criminal violations requiring immediate attention, such as when a reportable violation is ongoing
- taking appropriate steps to contain and control the incident to prevent further unauthorized access to or use of customer information, for example, by monitoring, freezing, or closing affected accounts, while preserving records and other evidence
- notifying customers when warranted

Where an incident of unauthorized access to customer information involves customer information systems maintained by an institution's service providers, it is the responsibility of the financial institution to notify the institution's customers and regulator. However, an institution may authorize or contract with its service provider to notify the institution's customers or regulator on its behalf.

Customer Notice

Financial institutions have an affirmative duty to protect their customers' information against unauthorized access or use. Notifying customers of a security incident involving the unauthorized access or use of the customer's information in accordance with the standard set forth below is a key part of that duty. Timely notification of customers is important to managing an institution's reputation risk. Effective notice also may reduce an institution's legal risk, assist in maintaining good customer relations, and enable the institution's customers to take steps to protect themselves against the consequences of identity theft. When customer notification is warranted, an institution may not forgo notifying its customers of an incident because the institution believes that it may be potentially embarrassed or inconvenienced by doing so.

12. Institutions should also conduct background checks of employees to ensure that the institution does not violate 12 U.S.C. 1829, which prohibits an institution from hiring an individual convicted of certain criminal offenses or who is subject to a prohibition order under 12 U.S.C. 1818(e)(6).

13. Under the information security standards, an institution's *customer information systems* consist of all the methods used to access, collect, store, use, transmit, protect, or dispose of customer information, including the systems maintained by its service providers. See the information security standards, 12 CFR 208, appendix D-2, section I.C.2.f.

14. Reserved footnote.

15. See SR-23-4, "Interagency Guidance on Third-Party Relationships: Risk Management."

16. An institution's obligation to file a SAR is set out in regulations and supervisory guidance. See 12 CFR 208.62 (state member banks); 12 CFR 211.5(k) (Edge and agreement corporations); 12 CFR 211.24(f) (uninsured state branches and agencies of foreign banks); and 12 CFR 225.4(f) (bank holding companies and their nonbank subsidiaries). See the FFIEC BSA/AML Examination Manual and also SR-01-11, "Identity Theft and Pretext Calling."

Standard for providing notice. When a financial institution becomes aware of an incident of unauthorized access to sensitive customer information, the institution should conduct a reasonable investigation to promptly determine the likelihood that the information has been or will be misused. If the institution determines that misuse of its information about a customer has occurred or is reasonably possible, it should notify the affected customer as soon as possible. Customer notice may be delayed if an appropriate law enforcement agency determines that notification will interfere with a criminal investigation and provides the institution with a written request for the delay. However, the institution should notify its customers as soon as notification will no longer interfere with the investigation.

Sensitive customer information. Under the information security standards, an institution must protect against unauthorized access to or use of customer information that could result in substantial harm or inconvenience to any customer. Substantial harm or inconvenience is most likely to result from improper access to *sensitive customer information* because this type of information is most likely to be misused, as in the commission of identity theft. For purposes of the guidance, *sensitive customer information* means a customer's name, address, or telephone number, in conjunction with the customer's Social Security number, driver's license number, account number, credit or debit card number, or a personal identification number or password that would permit access to the customer's account. Sensitive customer information also includes any combination of components of customer information that would allow someone to log onto or access the customer's account, such as a user name and password or a password and an account number.

Affected customers. If a financial institution, on the basis of its investigation, can determine from its logs or other data precisely which customers' information has been improperly accessed, it may limit notification to those customers for whom the institution determines that misuse of their information has occurred or is reasonably possible. However, there may be situations in which the institution determines that a group of files has been accessed improperly but is unable to identify which specific customers' information has been accessed. If the circumstances of the unauthorized access lead the institution to determine that misuse of the information is reasonably possible, it should notify all customers in the group.

Content of customer notice. Customer notice should be given in a clear and conspicuous manner. The notice should describe the incident in general terms and the type of customer information that was the subject of unauthorized access or use. It should also generally describe what the institution has done to protect the customers' information from further unauthorized access. In addition, it should include a telephone number that customers can call for further information and assistance.[17] The notice also should remind customers of the need to remain vigilant over the next 12 to 24 months, and to promptly report incidents of suspected identity theft to the institution. The notice should include the following additional items, when appropriate:

- a recommendation that the customer review account statements and immediately report any suspicious activity to the institution
- a description of fraud alerts and an explanation of how the customer may place a fraud alert in the customer's consumer reports to put the customer's creditors on notice that the customer may be a victim of fraud
- a recommendation that the customer periodically obtain credit reports from each nationwide credit reporting agency and have information relating to fraudulent transactions deleted
- an explanation of how the customer may obtain a credit report free of charge
- information about the availability of the FTC's online guidance regarding steps a consumer can take to protect against identity theft (The notice should encourage the customer to report any incidents of identity theft to the FTC and should provide the FTC's web site address and toll-free telephone number that customers may use to obtain the identity theft guidance and to report suspected incidents of identity theft.[18]

17. The institution should, therefore, ensure that it has reasonable policies and procedures in place, including trained personnel, to respond appropriately to customer inquiries and requests for assistance.

18. See the FTC's website for more information.

Financial institutions are encouraged to notify the nationwide consumer reporting agencies before sending notices to a large number of customers when those notices include contact information for the reporting agencies.

Delivery of customer notice. Customer notice should be delivered in any manner designed to ensure that a customer can reasonably be expected to receive it. For example, the institution may choose to contact all affected customers by telephone, by mail, or by electronic mail, in the case of customers for whom it has a valid e-mail address and who have agreed to receive communications electronically.

IDENTITY THEFT RED FLAGS PROGRAM

The federal financial institution regulatory agencies[19] and the Federal Trade Commission (FTC) have issued joint regulations and guidelines on the *detection, prevention,* and *mitigation* of identity theft in connection with opening of certain accounts or maintaining certain existing accounts in response to the Fair and Accurate Credit Transactions Act of 2003 (The FACT Act).[20] The regulations require (debit and credit) card issuers to validate notifications of changes of address under certain circumstances. The joint rules also provide guidelines regarding reasonable policies and procedures that a user of consumer reports must employ when a consumer reporting agency sends the user a notice of address discrepancy. Financial institutions or creditors[21] that offer or maintain one or more "covered accounts" must develop and implement a written Identity Theft Prevention Program (Program).[22] A Program is to be designed to detect, prevent, and mitigate identity theft in connection with the opening of a covered account or any existing covered account. The Program must be tailored to the entity's size, complexity, and the nature and scope of its operations and activities. For more information, see section 6068, "Regulation V: Fair Credit Reporting (Identity Theft Red Flags)."

IT EXAMINATION FREQUENCY AND SCOPE

All safety-and-soundness examinations (or examination cycles) of banking organizations conducted by the Federal Reserve should include an assessment and evaluation of IT risks and risk management. The scope of the IT assessment should generally be sufficient to assign a composite rating under the Uniform Rating System for Information Technology (URSIT). URSIT component ratings may be updated at the examiner's discretion, based on the scope of the assessment. The scope would normally be based on factors such as—

- implementation of new systems or technologies since the last examination;
- significant changes in operations, such as mergers or systems conversions;
- new or modified outsourcing relationships for critical operations;
- targeted examinations of business lines whose internal controls or risk-management systems depend heavily on IT; and
- other potential problems or concerns that may have arisen since the last examination or the need to follow up on previous examination or audit issues.

Institutions that outsource core processing functions, although not traditionally subject to IT examinations, are exposed to IT-related risks. For these institutions, some or all components of the URSIT rating may not be meaningful. In these cases, the assessment of IT activities may be incorporated directly into the safety-and soundness rating for the institution, rather than through the assignment of an URSIT rating. The scope of the IT assessment for such institutions should evaluate the adequacy of the institution's oversight of service providers for critical processing

19. The Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA).

20. Section 111 of the FACT Act defines "identity theft" as "a fraud committed or attempted using the identifying information of another person."

21. The term financial institution should be interpreted to mean a "financial institution or creditors" with regard to the Red Flags Program joint regulations and the accompanying interagency guidance.

22. "Covered accounts" are (1) accounts that a financial institution offers or maintains, primarily for personal, family, or household purposes, that involves or is designed to permit multiple payments or transactions and (2) any other account that the financial institution offers or maintains for which there is a reasonably foreseeable risk to customers or to the safety and soundness of the financial institution from identity theft.

activities and should incorporate the results of any relevant supervisory reviews of these service providers. The assessment should also include reviews of any significant in-house activities, such as management information systems and local networks, and the implementation of new technologies, such as Internet banking. As noted above, the assessment of IT should be reflected in the overall safety-and- soundness examination report and in the appropriate components of the safety-and-soundness examination rating assigned to the institution, as well as in the associated risk-profile analysis. (See SR-00-3.)

Targeted IT examinations may be conducted more frequently, if deemed necessary, by the Reserve Bank. A composite URSIT rating should be assigned for targeted reviews when possible. In addition, institutions for which supervisory concerns have been raised (normally those rated URSIT 3, 4, or 5) should be subject to more frequent IT reviews, until such time as the Reserve Bank is satisfied that the deficiencies have been corrected.

RISK ELEMENTS

To provide a common terminology and consistent approach for evaluating the adequacy of an organization's IT, five IT elements are defined below. These elements may be used to evaluate the IT processes at the functional business level or for the organization as a whole and to determine the impact on the business risks outlined in SR-95-51 and SR-16-11, as well as their impact on the IT rating (URSIT) discussed below. (See SR-98-9.)

1. *Management processes.* Management processes encompass planning, investment, development, execution, and staffing of IT from a corporate-wide and business-specific perspective. Management processes over IT are effective when they are adequately and appropriately aligned with and support the organization's mission and business objectives. Management processes include strategic planning; budgeting; management and reporting hierarchy; management succession; and a regular, independent review function. Examiners should determine if the IT strategy for the business activity or organization is consistent with the organization's mission and business objectives and whether the IT function has effective management processes to execute that strategy.
2. *Architecture.* Architecture refers to the underlying design of an automated information system and its individual components. The underlying design encompasses both physical and logical architecture, including operating environments, as well as the organization of data. The individual components refer to network communications, hardware, and software, which includes operating systems, communications software, database-management systems, programming languages, and desktop software. Effective architecture meets current and long-term organizational objectives, addresses capacity requirements to ensure that systems allow users to easily enter data at both normal and peak processing times, and provides satisfactory solutions to problems that arise when information is stored and processed in two or more systems that cannot be connected electronically. When assessing the adequacy of IT architecture, examiners should consider the ability of the current infrastructure to meet operating objectives, including the effective integration of systems and sources of data.
3. *Integrity.* Integrity refers to the reliability, accuracy, and completeness of information delivered to the end-user. Integrity risk could arise from insufficient controls over systems or data, which could adversely affect critical financial and customer information. Examiners should review and consider whether the organization relies on information system audits or independent reviews of applications to ensure the integrity of its systems. Examiners should review the reliability, accuracy, and completeness of information delivered in key business lines.
4. *Security.* Security risk is the risk of unauthorized disclosure or destruction of critical or sensitive information. To mitigate this risk, physical access and logical controls are generally provided to achieve a level of protection commensurate with the value of the information. Security risk is managed effectively when controls prevent unauthorized access, modification, destruction, or disclosure of sensitive information during creation, transmission, processing, maintenance, or storage. Examiners should ensure that operating procedures and controls are commensurate with the potential for and risks asso-

ciated with security breaches, which may be either physical or electronic, inadvertent or intentional, internal or external.

5. *Availability.* Availability refers to the timely delivery of information and processes to end-users in support of business and decision-making processes and customer services. In assessing the management of availability risk, examiners should consider the capability of IT functions to provide information to the end-users from either primary or secondary sources, as well as consider the ability of back-up systems, as presented in contingency plans, to mitigate business disruption. Contingency plans should set out a process for an organization to restore or replace its information-processing resources; reconstruct its information assets; and resume its business activity from disruption caused by human error or intervention, natural disaster, or infrastructure failure (including loss of utilities and communication lines and the operational failure of hardware, software, and network communications).

UNIFORM RATING SYSTEM FOR INFORMATION TECHNOLOGY

The Uniform Rating System for Information Technology (URSIT) is an interagency examination rating system adopted by the Federal Financial Institutions Examination Council (FFIEC) agencies to evaluate the IT activities of financial institutions. The rating system includes component—and composite-rating descriptions and the explicit identification of risks and assessment factors that examiners consider in assigning component ratings. This rating system helps examiners assess risk and compile examination findings. However, the rating system should not drive the scope of an examination. In particular, not all assessment factors or component-rating areas are required to be assessed at each examination. Examiners should use the rating system to help evaluate the entity's overall risk exposure and risk-management performance and to determine the degree of supervisory attention believed necessary to ensure that weaknesses are addressed and that risk is properly managed. (See SR-99-8.)

The URSIT rating framework is based on a risk evaluation of four general areas: audit, management, development and acquisition, and support and delivery. These components are used to assess the overall IT functions within an organization and arrive at a composite URSIT rating. Examiners evaluate the areas identified within each component to assess the institution's ability to identify, measure, monitor, and control IT risks.

In adopting the URSIT rating system, the FFIEC recognized that management practices vary considerably among financial institutions depending on their size and sophistication, the nature and complexity of their business activities, and their risk profile. For less complex information systems environments, detailed or highly formalized systems and controls are not required to receive the higher composite and component ratings.

URSIT Composite-Rating Definitions

Financial institutions rated URSIT composite 1 exhibit strong performance in every respect and generally have components rated 1 or 2. Weaknesses in IT functions are minor and are easily corrected during the normal course of business. Risk-management processes provide a comprehensive program to identify and monitor risk relative to the size, complexity, and risk profile of the entity. Strategic plans are well defined and fully integrated throughout the organization. This allows management to quickly adapt to the changing market, business, and technology needs of the entity. Management identifies weaknesses promptly and takes appropriate corrective action to resolve audit and regulatory concerns.

Financial institutions rated URSIT composite 2 exhibit safe and sound performance but may demonstrate modest weaknesses in operating performance, monitoring, management processes, or system development. Generally, senior management corrects weaknesses in the normal course of business. Risk-management processes adequately identify and monitor risk relative to the size, complexity, and risk profile of the entity. Strategic plans are defined but may require clarification, better coordination, or improved communication throughout the organization. As a result, management anticipates, but responds less quickly to changes in the market, business, and technological needs of the entity. Management normally identifies weaknesses and takes appropriate corrective action. However, greater reliance is placed on audit and regulatory intervention to identify and resolve concerns. While internal control weaknesses may exist, there are no significant supervisory concerns. As a result, supervisory action is informal and limited.

Financial institutions rated URSIT composite 3 exhibit some degree of supervisory concern due to a combination of weaknesses that may range from moderate to severe. If weaknesses persist, further deterioration in the condition and performance of the institution is likely. Risk-management processes may not effectively identify risks and may not be appropriate for the size, complexity, or risk profile of the entity. Strategic plans are vaguely defined and may not provide adequate direction for IT initiatives. As a result, management often has difficulty responding to changes in the business, market, and technological needs of the entity. Self-assessment practices are weak and generally reactive to audit and regulatory exceptions. Repeat concerns may exist, indicating that management may lack the ability or willingness to resolve concerns. While financial or operational failure is unlikely, increased supervision is necessary. Formal or informal supervisory action may be necessary to secure corrective action.

Financial institutions rated URSIT composite 4 operate in an unsafe and unsound environment that may impair the future viability of the entity. Operating weaknesses are indicative of serious managerial deficiencies. Risk-management processes inadequately identify and monitor risk, and practices are not appropriate given the size, complexity, and risk profile of the entity. Strategic plans are poorly defined and not coordinated or communicated throughout the organization. As a result, management and the board are not committed to, or may be incapable of, ensuring that technological needs are met. Management does not perform self-assessments and demonstrates an inability or unwillingness to correct audit and regulatory concerns. Failure of the financial institution may be likely unless IT problems are remedied. Close supervisory attention is necessary and, in most cases, formal enforcement action is warranted.

Financial institutions rated URSIT composite 5 exhibit critically deficient operating performance and are in need of immediate remedial action. Operational problems and serious weaknesses may exist throughout the organization. Risk-management processes are severely deficient and provide management little or no perception of risk relative to the size, complexity, and risk profile of the entity. Strategic plans do not exist or are ineffective, and management and the board provide little or no direction for IT initiatives. As a result, management is unaware of or inattentive to the technological needs of the entity. Management is unwilling or incapable of correcting audit and regulatory concerns. Ongoing supervisory attention is necessary.

URSIT Component Ratings

Audit

Financial institutions and service providers are expected to provide independent assessments of their exposure to risks and of the quality of internal controls associated with the acquisition, implementation, and use of IT. Audit practices should address the IT risk exposures throughout the institution and the exposures of its service provider(s) in the areas of user and data center operations, client/server architecture, local and wide area networks, telecommunications, information security, electronic data interchange, systems development, and contingency planning. This rating should reflect the adequacy of the organization's overall IT audit program, including the internal and external auditor's abilities to detect and report significant risks to management and the board of directors on a timely basis. It should also reflect the internal and external auditor's capability to promote a safe, sound, and effective operation. The performance of an audit is rated based on an assessment of factors such as—

- the level of independence maintained by audit and the quality of the oversight and support provided by the board of directors and management;
- the adequacy of audit's risk-analysis methodology used to prioritize the allocation of audit resources and to formulate the audit schedule;
- the scope, frequency, accuracy, and timeliness of internal and external audit reports;
- the extent of audit participation in application development, acquisition, and testing, to ensure the effectiveness of internal controls and audit trails;
- the adequacy of the overall audit plan in providing appropriate coverage of IT risks;

- the auditor's adherence to codes of ethics and professional audit standards;
- the qualifications of the auditor, staff succession, and continued development through training;
- the existence of timely and formal follow-up and reporting on management's resolution of identified problems or weaknesses; and
- the quality and effectiveness of internal and external audit activity as it relates to IT controls.

A rating of 1 indicates strong audit performance. Audit independently identifies and reports weaknesses and risks to the board of directors or its audit committee in a thorough and timely manner. Outstanding audit issues are monitored until resolved. Risk analysis ensures that audit plans address all significant IT operations, procurement, and development activities with appropriate scope and frequency. Audit work is performed in accordance with professional auditing standards, and report content is timely, constructive, accurate, and complete. Because audit is strong, examiners may place substantial reliance on audit results.

A rating of 2 indicates satisfactory audit performance. Audit independently identifies and reports weaknesses and risks to the board of directors or audit committee, but reports may be less timely. Significant outstanding audit issues are monitored until resolved. Risk analysis ensures that audit plans address all significant IT operations, procurement, and development activities; however, minor concerns may be noted with the scope or frequency. Audit work is performed in accordance with professional auditing standards; however, minor or infrequent problems may arise with the timeliness, completeness, and accuracy of reports. Because audit is satisfactory, examiners may rely on audit results but because minor concerns exist, examiners may need to expand verification procedures in certain situations.

A rating of 3 indicates less-than-satisfactory audit performance. Audit identifies and reports weaknesses and risks; however, independence may be compromised and reports presented to the board or audit committee may be less than satisfactory in content and timeliness. Outstanding audit issues may not be adequately monitored. Risk analysis is less than satisfactory. As a result, the audit plan may not provide sufficient audit scope or frequency for IT operations, procurement, and development activities. Audit work is generally performed in accordance with professional auditing standards; however, occasional problems may be noted with the timeliness, completeness, or accuracy of reports. Because audit is less than satisfactory, examiners must use caution if they rely on the audit results.

A rating of 4 indicates deficient audit performance. Audit may identify weaknesses and risks, but it may not independently report to the board or audit committee, and report content may be inadequate. Outstanding audit issues may not be adequately monitored and resolved. Risk analysis is deficient. As a result, the audit plan does not provide adequate audit scope or frequency for IT operations, procurement, and development activities. Audit work is often inconsistent with professional auditing standards, and the timeliness, accuracy, and completeness of reports is unacceptable. Because audit is deficient, examiners cannot rely on audit results.

A rating of 5 indicates critically deficient audit performance. If an audit function exists, it lacks sufficient independence and, as a result, does not identify and report weaknesses or risks to the board or audit committee. Outstanding audit issues are not tracked and no follow-up is performed to monitor their resolution. Risk analysis is critically deficient. As a result, the audit plan is ineffective and provides inappropriate audit scope and frequency for IT operations, procurement, and development activities. Audit work is not performed in accordance with professional auditing standards and major deficiencies are noted regarding the timeliness, accuracy, and completeness of audit reports. Because audit is critically deficient, examiners cannot rely on audit results.

Management

The management rating reflects the abilities of the board and management as they apply to all aspects of IT acquisition, development, and operations. Management practices may need to address some or all of the following IT-related risks: strategic planning, quality assurance, project management, risk assessment, infrastructure and architecture, end-user computing, contract administration of third-party service providers, organization and human resources, and regulatory and legal compliance. Generally, directors need not be actively involved in day-to-day operations; however, they must provide clear guidance regarding acceptable risk-exposure levels and ensure that appropriate policies, procedures, and practices have been established. Sound management practices are demonstrated through active oversight by the board of directors and management, competent personnel, sound IT plans, adequate policies and standards, an effective control environment, and risk monitoring. The management rating should reflect the board's and management's ability as it applies to all aspects of IT operations. The performance of management and the quality of risk management are rated based on an assessment of factors such as—

- the level and quality of oversight and support of the IT activities by the board of directors and management;
- the ability of management to plan for and initiate new activities or products in response to information needs and to address risks that may arise from changing business conditions;
- the ability of management to provide information reports necessary for informed planning and decision making in an effective and efficient manner;
- the adequacy of, and conformance with, internal policies and controls addressing the IT operations and risks of significant business activities;
- the effectiveness of risk-monitoring systems;
- the timeliness of corrective action for reported and known problems;
- the level of awareness of and compliance with laws and regulations;
- the level of planning for management succession;
- the ability of management to monitor the services delivered and to measure the organization's progress toward identified goals effectively and efficiently;
- the adequacy of contracts and management's ability to monitor relationships with third-party servicers;
- the adequacy of strategic planning and risk-management practices to identify, measure, monitor, and control risks, including management's ability to perform self-assessments; and
- the ability of management to identify, measure, monitor, and control risks and to address emerging IT needs and solutions.

A rating of 1 indicates strong performance by management and the board. Effective risk-management practices are in place to guide IT activities, and risks are consistently and effectively identified, measured, controlled, and monitored. Management immediately resolves audit and regulatory concerns to ensure sound operations. Written technology plans, policies and procedures, and standards are thorough and properly reflect the complexity of the IT environment. They have been formally adopted, communicated, and enforced throughout the organization. IT systems provide accurate, timely reports to management. These reports serve as the basis for major decisions and as an effective performance-monitoring tool. Outsourcing arrangements are based on comprehensive planning; routine management supervision sustains an appropriate level of control over vendor contracts, performance, and services provided. Management and the board have demonstrated the ability to promptly and successfully address existing IT problems and potential risks.

A rating of 2 indicates satisfactory performance by management and the board. Adequate risk-management practices are in place and guide IT activities. Significant IT risks are identified, measured, monitored, and controlled; however, risk-management processes may be less structured or inconsistently applied and modest weaknesses exist. Management routinely resolves audit and regulatory concerns to ensure effective and sound operations; however, corrective actions may not always be implemented in a timely manner. Technology plans, policies and procedures, and standards are adequate and formally adopted. However, minor weaknesses may exist in management's ability to communicate and enforce them throughout the organization. IT systems provide quality reports to management which serve as a basis for major decisions and a tool for performance planning and monitoring. Isolated or temporary problems with timeliness, accuracy, or consistency of reports may exist. Outsourcing arrangements are adequately planned and controlled by management, and they provide for a general understanding of vendor contracts, performance standards, and services provided. Management and the board have demonstrated the ability to address existing IT problems and risks successfully.

A rating of 3 indicates less-than-satisfactory performance by management and the board. Risk-management practices may be weak and offer limited guidance for IT activities. Most IT risks are generally identified; however, processes to measure and monitor risk may be flawed. As a result, management's ability to control risk is less than satisfactory. Regulatory and audit concerns may be addressed, but time frames are often excessive and the corrective action taken may be inappropriate. Management may be unwilling or incapable of addressing deficiencies. Technology plans, policies and procedures, and standards exist but may be incomplete. They may not be formally adopted, effectively communicated, or enforced throughout the organization. IT systems provide requested reports to management, but periodic problems with accuracy, consistency, and timeliness lessen the reliability and usefulness of reports and may adversely affect decision making and performance monitoring. Outsourcing arrangements may be entered into without thorough planning. Management may provide only cursory supervision that limits their understanding of vendor contracts, performance standards, and services provided. Management and the board may not be capable of addressing existing IT problems and risks, which is evidenced by untimely corrective actions for outstanding IT problems.

A rating of 4 indicates deficient performance by management and the board. Risk-management practices are inadequate and do not provide sufficient guidance for IT activities. Critical IT risks are not properly identified, and processes to measure and monitor risks are deficient. As a result, management may not be aware of and is unable to control risks. Management may be unwilling or incapable of addressing audit and regulatory deficiencies in an effective and timely manner. Technology plans, policies and procedures, and standards are inadequate and have not been formally adopted or effectively communicated throughout the organization, and management does not effectively enforce them. IT systems do not routinely provide management with accurate, consistent, and reliable reports, thus contributing to ineffective performance monitoring or flawed decision making. Outsourcing arrangements may be entered into without planning or analysis, and management may provide little or no supervision of vendor contracts, performance standards, or services provided. Management and the board are unable to address existing IT problems and risks, as evidenced by ineffective actions and long-standing IT weaknesses. Strengthening of management and its processes is necessary.

A rating of 5 indicates critically deficient performance by management and the board. Risk-management practices are severely flawed and provide inadequate guidance for IT activities. Critical IT risks are not identified, and processes to measure and monitor risks do not exist or are not effective. Management's inability to control risk may threaten the continued viability of the institution. Management is unable or unwilling to correct audit- and regulatory-identified deficiencies, and immediate action by the board is required to preserve the viability of the institution. If they exist, technology plans, policies and procedures, and standards are critically deficient. Because of systemic problems, IT systems do not produce management reports that are accurate, timely, or relevant. Outsourcing arrangements may have been entered into without management planning or analysis, resulting in significant losses to the financial institution or ineffective vendor services.

Development and Acquisition

The rating of development and acquisition reflects an organization's ability to identify, acquire, install, and maintain appropriate IT resources. Management practices may need to address all or parts of the business process for implementing any kind of change to the hardware or software used. These business processes include an institution's purchase of hardware or software, development and programming performed by the institution, purchase of services from independent vendors or affiliated data centers, or a combination of these activities. The business process is defined as all phases taken to implement a change, including researching alternatives available, choosing an appropriate option for the organization as a whole, and converting to the new system or integrating the new system with existing systems. This rating reflects the adequacy of the institution's systems-development methodology and related risk-management practices for acquisition and deployment of IT. This rating also reflects the board and management's ability to enhance and replace IT prudently in a controlled environment. The performance of systems development and acquisition and related risk-management practice is rated based on an assessment of factors such as—

- the level and quality of oversight and support of systems-development and acquisition activities by senior management and the board of directors;
- the adequacy of the organizational and management structures to establish accountability and responsibility for IT systems and technology initiatives;
- the volume, nature, and extent of risk exposure to the financial institution in the area of systems development and acquisition;
- the adequacy of the institution's Systems Development Life Cycle (SDLC) and programming standards;
- the quality of project-management programs and practices that are followed by developers, operators, executive management or owners, independent vendors or affiliated servicers, and end-users;
- the independence of the quality-assurance function and the adequacy of controls over program changes;
- the quality and thoroughness of system documentation;
- the integrity and security of the network, system, and application software;
- the development of IT solutions that meet the needs of end-users; and
- the extent of end-user involvement in the system-development process.

A rating of 1 indicates strong systems-development, acquisition, implementation, and change-management performance. Management and the board routinely demonstrate successfully the ability to identify and implement appropriate IT solutions while effectively managing risk. Project-management techniques and the SDLC are fully effective and supported by written policies, procedures, and project controls that consistently result in timely and efficient project completion. An independent quality-assurance function provides strong controls over testing and program-change management. Technology solutions consistently meet end-user needs. No significant weaknesses or problems exist.

A rating of 2 indicates satisfactory systems-development, acquisition, implementation, and change-management performance. Management and the board frequently demonstrate the ability to identify and implement appropriate IT solutions while managing risk. Project management and the SDLC are generally effective; however, weaknesses may exist that result in minor project delays or cost overruns. An independent quality-assurance function provides adequate supervision of testing and program-change management, but minor weaknesses may exist. Technology solutions meet end-user needs. However, minor enhancements may be necessary to meet original user expectations. Weaknesses may exist; however, they are not significant and are easily corrected in the normal course of business.

A rating of 3 indicates less-than-satisfactory systems-development, acquisition, implementation, and change-management performance. Management and the board may often be unsuccessful in identifying and implementing appropriate IT solutions; therefore, unwarranted risk exposure may exist. Project-management techniques and the SDLC are weak and may result in frequent project delays, backlogs, or significant cost overruns. The quality-assurance function may not be independent of the programming function, which may have an adverse impact on the integrity of testing and program-change management. Technology solutions generally meet end-user needs but often require an inordinate level of change after implementation. Because of weaknesses, significant problems may arise that could result in disruption to operations or significant losses.

A rating of 4 indicates deficient systems-development, acquisition, implementation, and change-management performance. Management and the board may be unable to identify and implement appropriate IT solutions and do not effectively manage risk. Project-management techniques and the SDLC are ineffective and may result in severe project delays and cost overruns. The quality-assurance function is not fully effective and may not provide independent or comprehensive review of testing controls or program-change management. Technology solutions may not meet the critical needs of the organization. Problems and significant risks exist that require immediate action by the board and management to preserve the soundness of the institution.

A rating of 5 indicates critically deficient systems-development, acquisition, implementation, and change-management performance. Management and the board appear to be incapable of identifying and implementing appropriate IT solutions. If they exist, project-management techniques and the SDLC are critically deficient and provide little or no direction for development of systems or technology projects. The quality-assurance function is severely deficient or not present, and unidentified problems in testing and program-change management have caused significant IT risks. Technology solutions do not meet the needs of the organization. Serious problems and significant risks exist, which raise concern for the financial institution's ongoing viability.

Support and Delivery

The rating of support and delivery reflects an organization's ability to provide technology services in a secure environment. It reflects not only the condition of IT operations but also factors such as reliability, security, and integrity, which may affect the quality of the information-delivery system. The factors include user support and training, as well as the ability to manage problems and incidents, operations, system performance, capacity planning, and facility and data management. Risk-management practices should promote effective, safe, and sound IT operations that ensure the continuity of operations and the reliability and availability of data. The scope of this component rating includes operational risks throughout the organization. The rating of IT support and delivery is based on a review and assessment of requirements such as—

- the ability to provide a level of service that meets the requirements of the business;
- the adequacy of security policies, procedures, and practices in all units and at all levels of the financial institution;
- the adequacy of data controls over preparation, input, processing, and output;
- the adequacy of corporate contingency planning and business resumption for data centers, networks, and business units;
- the quality of processes or programs that monitor capacity and performance;
- the adequacy of controls and the ability to monitor controls at service providers;
- the quality of assistance provided to users, including the ability to handle problems;
- the adequacy of operating policies, procedures, and manuals;
- the quality of physical and electronic security, including the privacy of data; and
- the adequacy of firewall architectures and the security of connections with public networks.

A rating of 1 indicates strong IT support and delivery performance. The organization provides technology services that are reliable and consistent. Service levels adhere to well-defined service-level agreements and routinely meet or exceed business requirements. A comprehensive corporate contingency and business-resumption plan is in place. Annual contingency-plan testing and updating is performed, and critical systems and applications are recovered within acceptable time frames. A formal written data-security policy and awareness program is communicated and enforced throughout the organization. The logical and physical security for all IT platforms is closely monitored, and security incidents and weaknesses are identified and quickly corrected. Relationships with third-party service providers are closely monitored. IT operations are highly reliable, and risk exposure is successfully identified and controlled.

A rating of 2 indicates satisfactory IT support and delivery performance. The organization provides technology services that are generally reliable and consistent; however, minor discrepancies in service levels may occur. Service performance adheres to service agreements and meets business requirements. A corporate contingency and business-resumption plan is in place, but minor enhancements may be necessary. Annual plan testing and updating is performed, and minor problems may occur when recovering systems or applications. A written data-security policy is in place but may require improvement to ensure its adequacy. The policy is generally enforced and communicated throughout the organization, for example, through a security-awareness program. The logical and physical security for critical IT platforms is satisfactory. Systems are monitored, and security incidents and weaknesses are identified and resolved within reasonable time frames. Relationships with third-party service providers are monitored. Critical IT operations are reliable and risk exposure is reasonably identified and controlled.

A rating of 3 indicates that the performance of IT support and delivery is less than satisfactory and needs improvement. The organization provides technology services that may not be reliable or consistent. As a result, service levels periodically do not adhere to service-level agreements or meet business requirements. A corporate contingency and business-resumption plan is in place but may not be considered comprehensive. The plan is periodically tested;

however, the recovery of critical systems and applications is frequently unsuccessful. A data-security policy exists; however, it may not be strictly enforced or communicated throughout the organization. The logical and physical security for critical IT platforms is less than satisfactory. Systems are monitored; however, security incidents and weaknesses may not be resolved in a timely manner. Relationships with third-party service providers may not be adequately monitored. IT operations are not acceptable, and unwarranted risk exposures exist. If not corrected, weaknesses could cause performance degradation or disruption to operations.

A rating of 4 indicates deficient IT support and delivery performance. The organization provides technology services that are unreliable and inconsistent. Service-level agreements are poorly defined and service performance usually fails to meet business requirements. A corporate contingency and business-resumption plan may exist, but its content is critically deficient. If contingency testing is performed, management is typically unable to recover critical systems and applications. A data-security policy may not exist. As a result, serious supervisory concerns over security and the integrity of data exist. The logical and physical security for critical IT platforms is deficient. Systems may be monitored, but security incidents and weaknesses are not successfully identified or resolved. Relationships with third-party service providers are not monitored. IT operations are not reliable and significant risk exposure exists. Degradation in performance is evident and frequent disruption in operations has occurred.

A rating of 5 indicates critically deficient IT support and delivery performance. The organization provides technology services that are not reliable or consistent. Service-level agreements do not exist, and service performance does not meet business requirements. A corporate contingency and business-resumption plan does not exist. Contingency testing is not performed, and management has not demonstrated the ability to recover critical systems and applications. A data-security policy does not exist, and a serious threat to the organization's security and data integrity exists. The logical and physical security for critical IT platforms is inadequate, and management does not monitor systems for security incidents and weaknesses. Relationships with third-party service providers are not monitored, and the viability of a service provider may be in jeopardy. IT operations are severely deficient, and the seriousness of weaknesses could cause failure of the financial institution if not addressed.

OUTSOURCING INFORMATION TECHNOLOGY

Banking organizations are increasingly relying on services provided by other entities to support a range of banking operations. Outsourcing of information- and transaction-processing activities, either to affiliated institutions or third-party service providers, may help banking organizations manage data processing and related personnel costs, improve services, and obtain expertise not available internally. At the same time, the reduced operational control over outsourced activities may expose an institution to additional risks. The federal banking agencies have established procedures to examine and evaluate the adequacy of institutions' controls over service providers, which can be found in the FFIEC's *IT Handbook* and related guidance. Additional information on specific areas is provided in

- Section 4062.1, "Risk Management of Third-Party Relationships"
- SR-23-4, "Interagency Guidance on Third-Party Relationships: Risk Management"
- *Community Bank Access to Innovation through Partnerships* (September 2021)
- *Conducting Due Diligence on Financial Technology Companies: A Guide for Community Banks* (August 2021)

INFORMATION-PROCESSING ENVIRONMENT

Many factors influence an institution's decision about whether to use internal or external data processing services, including the initial investment, operating costs, and operational flexibility. Historically, small financial institutions, which usually lack the funds or transaction volume to justify an in-house information system, were the chief users of external data processing companies. However, as advances in technology have decreased the cost of data processing, small institutions have become much more willing to invest in an in-house information system. At the same time, some financial institutions with internal information systems have discovered that they can save money by using external data processing companies for certain banking applications. Other financial institutions have engaged national companies or facilities-management organizations to assume their processing operations, while certain holding companies have organized their data processing departments as subsidiaries to centralize operations for their affiliate institutions.

The decision to establish an internal data processing center is a major one. Any bank's board of directors and management considering such a decision should thoroughly review and consider alternatives before proceeding. While a bank may gain a number of competitive advantages from an in-house facility, there are also many risks associated with this decision. Technological advances have reduced the price of small computer networks and made them more affordable, but banks should not use this as the sole justification for an internal data processing center.

A comprehensive feasibility study should precede any decision to develop an in-house system. This study should describe the costs, benefits, and risks and also give management the opportunity to compare current and future needs with existing abilities. The FFIEC's *IT Handbook* contains a complete discussion of feasibility studies.

The management of a financial institution must carefully identify the organization's needs for data processing. After these needs are properly identified (including the customers' needs for these services), management must carefully evaluate how the institution can best meet them. The costs and complexity of changing data processing arrangements can be substantial, so management must ensure that all related costs and benefits are identified and considered before deciding on a service. The following are the major external providers of data processing and IT services for financial institutions.

Correspondent Banks

Small financial institutions sometimes receive their IT services from a major correspondent bank. These services may be just one of a host of services available from the correspondent. Historically, the correspondent bank has been the least expensive servicer for many institutions. Correspondent banks may offset some of their own IT costs by using their excess processing capacity to provide services to correspondents.

Affiliated Financial Institutions and Banking Organizations

IT departments in holding companies or subsidiaries are one common form of an affiliated servicer. An affiliated data center may offer cost savings to other affiliates, since all parties are generally using the same software system. The serviced institutions can eliminate the duplication of tasks, and the affiliated data center and the overall organization can realize cost savings through economies of scale. Thus, charges for IT services to affiliates are generally very competitive.

Regulatory guidelines strictly govern IT-servicing arrangements between affiliated institutions. Sections 23A and 23B of the Federal Reserve Act (12 U.S.C. 371c and 371c-1) address the question of allowable transactions between affiliates. This statute also states that the terms of transactions between affiliated parties must be comparable to the terms of similar transactions between nonaffiliated parties. An affiliated data center is allowed to set fees to recover its costs or to recover its costs plus a reasonable profit, or to set charges for data processing services that are comparable to those of a nonaffiliated servicer. Other restrictions may also apply.

Independent Service Bureaus

Independent service bureaus are present in most areas, but mergers and acquisitions have caused the number of bureaus to decline. When management investigates a service bureau's operations, it should determine if the servicer is familiar with the IT needs of financial institutions. Determining the percentage of the service bureau's business that comes from financial institutions will help the institution select a vendor that specializes in this type of processing. Independent service bureaus are normally responsive to user requests for specialized programs, since developing these programs for clients is generally a significant source of revenue. Tailoring a software program to a particular institution's needs becomes less attractive to the independent service bureau if the institution accounts for only a small portion of the bureau's workload or if the bureau offers a standardized software package as its primary product. However, some standardized software systems allow a modest amount of processing and report adjustments without requiring servicer modifications. Also, report-generator software, which provides clients with customized reports they can prepare without any help from the service bureau, is sometimes available from service bureaus.

Cooperative Service Corporations

A cooperative service corporation is a data processing facility formed by a group of financial institutions that agrees to share the operating costs. Under the right circumstances, this arrangement works well. For this strategy to succeed, however, all members of the group must be the same approximate size and have similar IT requirements. Typically, each institution owns a share of the facility or bears a share of the costs on a pro rata basis through investment in a bank service corporation. There must be a strong working relationship among the institutions. Although the institutions are not directly involved in the data processing center's daily operations, they are ultimately responsible for the center's success or failure.

One advantage of a cooperative service corporation is that individual institutions have increased control over the design of the data processing operation. Therefore, institutions can tailor computerized applications to meet their own needs. Resource pooling often provides for economies of scale as well, and cooperative ventures normally attract more highly skilled and more experienced employees.

Facilities-Management Providers

Medium- and large-sized financial institutions that already have an in-house data processing facility are the most likely users of facilities-management (FM) contracts. Small institutions typically do not have the work volume that is a prerequisite to hiring an FM company. Service contracts with FM companies are usually for a minimum term of five years, during which time the FM company assumes full responsibility for the institution's data processing operations. The institution pays the FM company a monthly fee to reimburse it for the costs of providing IT services plus a profit. The FM company usually carries out its tasks in the institution's former data processing center.

Financial institutions have various reasons for using FM companies, such as controlling or reducing the growth of data processing costs, ensuring better management of data center personnel, or using more modern software systems. Management of financially strained institutions may enter into FM arrangements to augment their capital position by selling their equipment or facilities to the FM company.

Although an institution's contract with an FM company may provide a quick and easy solution to data processing problems with minimal involvement of senior officials, management should be aware of potential problems. FM contracts can have clauses that require the institution to pay more for services as work volume grows and can also contain provisions for periodic increases. The contract may include a substantial penalty for cancellation. Another risk is that the FM company may make personnel changes that are not advantageous to the institution, such as reassigning its best workers elsewhere or reducing the size of the data processing staff. Bank management should make sure that FM service contracts contain specific quality-measurement clauses and should monitor the quality of data processing services provided.

Other Purchased Services

Computer Time

A financial institution that designed its own data processing system and that maintains its own files only needs to rent computer time from an external servicer. This arrangement usually occurs when the financial institution's equipment or schedule makes it unable to handle some unusual processing task.

Time-Shared Computer Services

Most external providers of time-sharing services have a library of standardized programs available to any user. A user also may generate programs and store them in a reserved library. Financial institutions frequently use time-sharing services for financial analysis rather than recordkeeping. Applications with low input and output requirements and repetitive calculations, such as those required for a securities portfolio, lend themselves to a time-sharing arrangement. The external servicer in this arrangement normally does not maintain the client institution's data files. Financial institutions that store master files on the external servicer's equipment should maintain adequate documentation to facilitate the examination process. Under this arrangement, management should be concerned about ensuring logical and physical access to the terminal and about the availability of audit trails that indicate who has made changes to master files. Management should establish and monitor controls over passwords, terminals, and access to master files. For a complete discussion of controls over passwords and terminals, see the FFIEC's *IT Handbook.*

Satellite Processing

Satellite (remote) processing has become popular with some financial institutions that are located far away from an external servicer and that must process a large volume of transactions. A distinguishing characteristic of satellite processing is that the institution and the data center each perform a portion of the processing. Although the institution collects the data and sometimes prepares reports, the servicer makes the necessary master-file updates. To capture data and print reports, the serviced institution must acquire a terminal-entry device, a printer, an MICR reader/sorter, and a tape or disk unit. Since the system is usually online, the serviced institution must install modems and communications lines linking it to the servicer. The level of skill necessary to perform remote job entry in a satellite system is less sophisticated than the level needed to operate an in-house system. Most of the traditional control functions remain at the institution. The FFIEC's *IT Handbook* contains further information on satellite processing, remote job entry, and distributive processing systems.

Standard Program Packages

Most bank data centers and service bureaus specialize in processing one or more standard software packages. By using the same software for several users, external servicers achieve certain operating economies, which allow them to recover initial development costs more quickly. Most standard software packages are parameter driven, providing the user with some degree of flexibility. For example, in demand deposit and savings applications, standard program modules or common subroutines often allow the user to designate the format and frequency of reports. In addition, the user may select the parameters necessary to generate certain reports, such as the number of inactive days before an account becomes dormant or the minimum dollar amount for checks listed on the large-item report. The user can also be involved in selecting the criteria for interest rates, balance requirements, and other operating values, allowing for a tailored application within a standardized software system.

Tailored Applications

If standard program packages do not meet a financial institution's needs, an external servicer can be hired to design tailored applications to process the institution's data. The institution must clearly describe the proposed system and its operations to the servicer. Internal or external auditor participation in reviewing controls is also advisable. The initial cost of this approach is high, as are the costs of maintaining and updating the tailored applications.

OPERATIONAL AND TECHNOLOGICAL USER CONTROLS

Using computerized programs and networks, banks maintain a large number of accounts and record a high volume of transactions every day. Text-processing systems store vast amounts of correspondence. Transmission of data and funds regularly occurs over public communications links, such as telephone lines and satellite networks. The use of new technologies to transfer funds and records, while improving customer service and the institution's internal operations, has increased the potential for errors and abuse, which can result in loss of funds, lawsuits arising from damaged reputations, improper disclosure of information, and regulatory sanctions.

Controls must be implemented to minimize the vulnerability of all information and to keep funds secure. Bank management must assess the level of control necessary in view of the degree of exposure and the impact of unexpected losses on the institution. Certain practices can strengthen information and financial security. The most basic practices are the implementation of sound policies, practices, and procedures for physical security, separation of duties, internal quality control, hardware and software access controls, and audits. Bank management should institute information security controls that are designed to—

- ensure the integrity and accuracy of management information systems;
- prevent unauthorized alteration during data creation, transfer, and storage;
- maintain confidentiality;
- restrict physical access;
- authenticate user access;
- verify the accuracy of processing during input and output;
- maintain backup and recovery capability; and
- provide environmental protection against damage or destruction of information.

Although security features vary, they are usually available for all computer systems. The controls adopted should apply to information produced and stored by both automated and manual methods.

Written policies are generally recommended and, in most cases, institutions have chosen to establish and communicate security principles in writing. However, if an institution follows sound fundamental principles to control the risks discussed here, a written policy is not necessarily required. If sound principles are not effectively practiced, management may be required to establish written policies to formally communicate risk parameters and controls. Federal Reserve System policy does, however, require written contingency and disaster-recovery plans.

Examiners should regularly conduct reviews of information security. These reviews may include an assessment of—

- the adequacy of security practices,
- compliance with security standards, and
- management supervision of information security activities.

When conducting reviews of controls over information security, examiners must understand the difference between master files and transaction files. A master file is a main reference file of information used in a computer system, such as all mortgage loans. It provides information to be used by the program and can be updated and maintained to reflect the results of the processed operation. A transaction file or detail file contains specific transaction information, such as mortgage loan payments.

Manual Controls

The following discussion covers basic operational controls in a financial institution receiving external IT services. Similar controls should also be applied to information processed by an IT department within a user's own institution.

Separation of Duties

A basic form of operational control is separation of duties. With this control in place, no one person should be able to both authorize and execute a transaction, thereby minimizing the risk of undetected improper activities. Data center personnel should not initiate transactions or correct data except when it is necessary to complete processing in a reasonable time period. If this unusual situation arises, proper authorization should be obtained from data center and bank management. Both the servicer and the serviced institution should maintain documentation of these approvals, including details of the circumstances requiring the action. The same person normally should not perform input and output duties. However, in some instances, staff limitations may make one person responsible for several activities, such as—

- preparing batches and blocks or other input for entry to the system or shipment to the servicer;
- operating data entry equipment, including check reader/sorter machines, proof machines, or data-conversion devices;
- preparing rejects and nonreaders for reentry into the system;

- reconciling output to input or balancing the system;
- distributing output to ultimate users; and
- posting the general ledger and balancing computer output to the general ledger.

Rotation of assignments and periodic scheduled absences may improve internal controls by preventing one person from controlling any one job for an extended time period (and by providing cross-training and backup for all personnel). When vacations are scheduled, management may require staff to take uninterrupted vacations that are long enough to allow pending transactions to clear. These practices are most effective if vacations or other types of absences extend over the end of an accounting period or are for two consecutive weeks. Written policies and procedures may require job rotation.

Application manuals usually consist of a user's guide provided by the servicer that is supplemented by procedures written by the user. Manuals normally cover the preparation and control of source documents, certain control practices for moving documents or electronic images to and from the user and servicer, the daily reconcilement of totals to the general ledger, and master-file changes.

Management should implement dual control over automated systems. Personnel should place supervisory holds on customer accounts requiring special attention. For example, dormant accounts, collateral accounts, and accounts with large uncollected funds balances generally have holds that can be removed only by authorizations from two bank officials. In addition, certain types of transactions (for example, master-file changes) should require authorization from two bank officials by means of special codes or terminal keys. When employees add or remove a hold on an account or when the system completes a transaction requiring supervisory approval, the computer should generate an exception report. Assigned personnel not involved in the transaction should promptly review these reports for unusual or unauthorized activity.

Internal Quality Controls

Generally, there are three basic types of information systems, with many combinations and variations:

- *Inquiry-only system.* This system allows the user to search and review machine-readable records but not to alter them. Controls and security concerns related to this system are few; the major concern is unauthorized access to confidential information.
- *Memo-post system.* More sophisticated than the inquiry-only system, the memo-post system allows the user to create interim records. The servicer performs permanent posting routines using batch-processing systems. Controls for a memo-post system include limiting physical and logical access to the system and restricting certain transactions to supervisory personnel only. Appropriate levels of management should review memo-post reports daily.
- *Online-post system.* This system, sometimes called a real-time system, requires the strictest controls. Online-post systems are vulnerable because all accepted transactions are transferred to machine-readable records. In addition to access controls, system reports should record all activity and exceptions. Appropriate levels of management should review these reports daily.

Internal controls fall into three general categories:

- *Administrative controls.* Administrative controls usually consist of management review of daily operations and output reports. Each application includes basic controls and exception reports that are common to all operations. To be effective, operations personnel must properly use exception reports and controls. This is especially true for controlling dormant accounts, check kiting, draws against uncollected funds, overdrafts, and the posting of computer-generated income and expense entries.
- *Dollar controls.* Dollar controls ensure processing for all authorized transactions. Operations personnel should establish work and control totals before forwarding data records to the data processor. Those same employees should not complete balancing procedures by reconciling trial balances to input, control sheets, and the general ledger. Report distribution should follow a formal procedure. Personnel should account for all rejects corrected and resubmitted.
- *Condoler controls.* Condoler controls are used when dollar values are not present in the data, as in name and address changes. Controls should be established before forwarding work

for processing. Management should also implement procedures designed to ensure that its servicer processes all condoler transactions. For example, personnel should check new-account reports against new-account input forms or written customer-account applications to make sure that data are properly entered. To protect data integrity, management should develop procedures to control master-file and program changes. These procedures should also verify that the servicer is making only authorized changes and ensure that data processing employees do not initiate master-file changes.

Technological Controls

Encryption

Encryption is a process by which mathematical algorithms are used to convert plain text into encrypted strings of meaningless symbols and characters. This helps prevent unauthorized viewing and altering of electronic data during transmission or storage. The industry commonly uses the Data Encryption Standard (DES) for encoding personal identification numbers (PINs) on access cards, storing user passwords, and transferring funds on large-dollar payment networks.

Message-Authentication Code

A message-authentication code (MAC) is a code designed to protect against unauthorized alteration of electronic data during transmission or storage. This code is used with data encryption to further secure the transmission of large-dollar payments.

User Passwords

User passwords consist of a unique string of characters that a programmer, computer operator, or user must supply before gaining access to the system or data. These are individual access codes that should be specific to the user and known only to the user. Other security features of passwords should, at a minimum, require the users to change them periodically and store them in encrypted files. In addition, the passwords should be composed of a sufficient number of alphanumeric characters to make them difficult to guess. User passwords should not be displayed during the access process and should not be printed on reports.

Security Software

Security software is software designed to restrict access to computer-based data, files, programs, utilities, and system commands. Some systems can control access by user, transaction, and terminal. The software can generate reports that log actual and attempted security violations as well as access to the system.

Restricted Terminals

Limiting certain types of transactions to certain terminals or groups of terminals can help reduce exposure to loss. The offsetting problem is that loss of the ability to use these terminals can stop processing for an entire application. Bank management should therefore evaluate both the exposure and processing risks.

An automatic time-out feature can minimize the exposure risk. Since unauthorized users may target an unattended terminal, this feature automatically signs off the user when there has been no activity for a certain period of time. Using time-of-day restrictions can also limit unauthorized use of terminals during periods when an entire department or section would be unattended.

Restricted Transactions

Restricted transactions are specialized transactions that can be performed only by supervisory or management personnel. Examples include reversing transactions, dollar adjustments to customer accounts, and daily balancing transactions. Management should periodically review user needs and the appropriateness of restricting the performance of these transactions. System-generated reports can be used to review this activity more frequently.

Activity and Exception Reports

Report output will vary, depending on the sophistication of the data communications and applications software. Management should receive activity reports that detail transactions by terminal, operator, and type. More sophisticated software will produce activity and exception reports on other criteria, such as the number of inquiries by terminal, unsuccessful attempts to access the system, unauthorized use of restricted information, and any unusual activities (that is, infrequently used transactions).

Activity reports are used to monitor system use and may not be printed daily. However, management should periodically review and summarize these reports in an effort to ensure that machines are used efficiently. Exception reports should be produced and reviewed daily by designated personnel who have no conflicting responsibilities. A problem with many reporting systems is that the log contains a record of every event, making it cumbersome and more difficult to identify problems.

Controls over Software-Program-Change Requests

Requests for system changes, such as software-program changes, should be documented on a standard change-request form. The form is used to describe the request and document the review and approval process. It should contain the following information:

- date of the change request
- sequential control number
- program or system identification
- reason for the change
- description of the requested change
- person requesting the change
- benefits contemplated from the change
- projected cost
- signed approval authorizing the change including, at a minimum, the user, IT personnel with the proper authority, and an auditor (at least for significant changes)
- name of programmer assigned to make the change
- anticipated completion date
- user and information systems approval of the completed program change
- implementation procedures (steps for getting the program into the production library)
- audit review of change (if deemed necessary)
- documented sign-off

End-User Computing

End-user computing results from the transfer of information-processing capabilities from centralized data centers onto the user's desktop. End-user computing systems may range in size and computing power from laptop notebook computers to standalone personal computers, client server networks, or small systems with sufficient computing power to process all significant applications for a financial institution. Small systems that are entirely supported by a hardware or software vendor are referred to as turnkey systems. Control considerations discussed throughout this subsection generally apply to all end-user computing systems.

In many cases, end-user systems are linked by distributed processing networks. Linking several microcomputers together and passing information between them is called networking. A system configured in this manner is commonly called a local area network (LAN). The ability to decentralize the data processing function is largely a result of the development of powerful microcomputers or PCs. Microcomputers are now powerful enough to process significant applications when used as standalone systems. These microcomputers can also be connected to a host computer and configured to serve as a data entry or display terminal. In this terminal-emulation mode, information can be passed between the host and the PC with the processing occurring at either machine.

When linked by a network, end-user computing offers several advantages to financial institutions, including—

- low cost compared with other platforms,
- efficiency through the sharing of resources,
- ease of expansion for future growth,
- enhanced communication capabilities,
- portability,
- data availability, and
- ease of use.

While end-user computing systems provide several advantages, they also have greater risks to data integrity and data security, including—

- difficulty in controlling access to the system and in controlling access to confidential information that may be stored on individual personal computers and not on the system (such as payroll records, spreadsheets, budgets, and

information intended for the board of directors of the financial institution),
- the lack of sophisticated software to ensure security and data integrity,
- insufficient capabilities to establish audit trails,
- inadequate program testing and documentation,
- lack of segregated duties of data entry personnel.

As the trend toward distributed processing continues, financial institutions should have proper policies, procedures, and reporting to ensure the accurate and timely processing of information. The controls governing access in an end-user computing environment should be no less stringent than those used in a traditional mainframe environment. Strict rules should govern the ability of users to access information. As a general rule, no user should be able to access information that is beyond what is needed to perform the tasks required by his or her job description. In this new environment, management and staff should assume responsibility for the information assets of the organization.

CONTINGENCY PLANNING, RECORD PROTECTION, AND RETENTION

Data communications systems are susceptible to software, hardware, and transmission problems that may make them unusable for extended periods of time. If a financial institution depends on data communication for its daily operations, appropriate back-up provisions are necessary. Back-up is the ability to continue processing applications in the event the communications system fails. Management can provide back-up by various methods, including batch-processing systems, intelligent terminals or PCs operating in an off-line mode, data capture at the controller if transmission lines are lost, redundant data communication lines, and back-up modems.

Regardless of the method used, FFIEC interagency issuances and specific supporting Federal Reserve System policy issuances that address corporate contingency planning require a comprehensive back-up plan with detailed procedures. When using a batch back-up system, operations personnel must convert data to a machine-readable format and transport the data to the servicer. This process may require additional personnel (data-entry operators and messengers) and equipment. An institution's contingency plan should include detailed procedures on how to obtain and use the personnel and equipment. Because on-line systems are updated or improved frequently, a batch back-up may not remain compatible. Institution personnel should perform periodic tests of batch and other back-up capabilities to ensure that protection is available and that employees are familiar with the plan.

Institutions should create computerized back-up copies of the institution's critical records and have alternative methods of processing those records. When IT operations are performed outside the institution, both the servicer and the financial institution should have adequate control over the records. Bank management should determine which records are best protected by the servicer and which are best protected internally. Service contracts should outline the servicer's responsibility for storing bank records. If the servicer does not or will not permit specific reference to record retention in the contract, a general reference may be sufficient. The institution should obtain a copy of the servicer's back-up policy and retention procedures, and bank management should thoroughly understand which records are protected by whom and to what extent.

The bank should also review the servicer's software and hardware back-up arrangements. It should review the service provider's contingency plan and results of routine tests of the contingency plan. The review should determine how often data and software back-ups are made, the location of stored materials, and which materials are stored at that site. Management should also determine the availability of software replacement and vendor support, as well as the amount and location of duplicate software documentation. Software replacement and documentation procedures should be developed for both operating and application systems.

Management should review the servicer's hardware back-up arrangements to determine if (1) the servicer has a contract with a national recovery service and, if so, the amount and type of back-up capacity provided under the contract; (2) the servicer has an alternate data center with sufficient capacity and personnel to provide full service if necessary; or (3) multiple processing sites within the same facility are available for disaster-processing problems and if each site has an alternate power supply. The alternate site should be able to provide continued processing of data and transmission of reports.

Contracts or contingency plans should specify the availability of source documentation in the event of a disaster, including insolvency of the servicer. FFIEC interagency issuances and Federal Reserve System policy statements require financial institutions to evaluate the adequacy of a servicer's contingency plan and to ensure that its own contingency plan is compatible with the servicer's plan.

Since the duplication of records may vary from site to site, most organizations develop schedules for automatic retention of records on a case-by-case basis. The only way to ensure sufficient record protection is to continually review the flow of documents, data, and reports. Some records may be available in both hard-copy and machine-readable formats. In addition to determining the types of back-up records, management should determine whether it is possible to re-create current data from older records. Certain records also have uses apart from their value in reconstructing current data, such as meeting institutional and regulatory reporting requirements. These records usually include month-end, quarter-end, and year-end files.

The location of an external data center is another factor to consider when evaluating retention procedures. If the external data center is located in a building adjacent to the institution, the possibility that a disaster may affect both organizations increases. Such a situation may make off-site storage of back-up materials even more important. If, on the other hand, the serviced institution is located far from the data center, physical shipment of both input and output may become necessary. Management should determine if fast, reliable transportation between the two sites is available.

If a major disaster occurs, an alternate facility may not be available to process duplicated machine-readable media. Management should consider remote record storage that would facilitate the manual processing of records, if necessary. Furthermore, microfilming all items before shipment would protect the institution if any items are lost, misplaced, or destroyed. Optical-disk storage, which involves scanning and storing a document electronically, offers another alternative for storage and retrieval of original data after processing has occurred. The FFIEC's *IS Handbook* and related FFIEC and Federal Reserve System issuances are sources of information about planning for unexpected contingencies.

Processing personnel should regularly copy and store critical institution records in an off-site location that is sufficiently accessible to obtain records in a reasonable time period. These records should include data files, programs, operating systems, and related documentation. This also applies to critical data in hard-copy documents. In addition, an inventory of the stored information should be maintained along with a defined retention period.

AUDITS

Examiners need to determine the appropriateness of the scope and frequency of audit activities related to information systems and the reliability of internal or third-party audits of servicer-processed work. Furthermore, examiners should review the methods by which the board of directors is apprised of audit findings, recommendations, and corrective actions taken. In reviewing audit activities, examiners should consider the following factors (if applicable):

- the practicality of the financial institution's having an internal IT auditor and, if the institution has an internal IT auditor, the auditor's level of training and experience
- the training and experience of the institution's external auditors
- the audit functions performed by the institution's outside auditors, the servicer, the servicer's outside auditor, and supervisory personnel
- internal IT audit techniques currently being followed

The audit function should review controls and operating procedures that help protect the institution from losses caused by irregularities and willful manipulations of the data processing system. Thus, a regular, comprehensive audit of IT activities is necessary. Additionally, designated personnel at each serviced institution should periodically perform "around-the-computer" audit examinations, such as:

- developing data controls (proof totals, batch totals, document counts, number of accounts, and prenumbered documents) at the institution before submitting data to the servicer and sampling the controls periodically to ensure their accuracy;

- spot-checking reconcilement procedures to ensure that output totals agree with input totals, less any rejects;
- sampling rejected, unpostable, holdover, and suspense items to determine why they cannot be processed and how they were disposed of (to make sure they were properly corrected and re-entered on a timely basis);
- verifying selected master-file information (such as service-charge codes), reviewing exception reports, and cross-checking loan extensions to source documents;
- spot-checking computer calculations, such as the dollar amounts of loan rebates, interest on deposits, late charges, service charges, and past-due loans, to ensure proper calculations;
- tracing transactions to final disposition to ensure audit trails are adequate;
- reviewing source documents to ascertain whether sensitive master-file change requests were given the required supervisory approval;
- assessing the current status of controls by either visiting the servicer or reviewing independent third-party reviews of the servicer;
- reviewing processing procedures and controls; and
- evaluating other audits of the servicer.

In addition, "through-the-computer" audit techniques allow the auditor to use the computer to check data processing steps. Audit software programs are available to test extensions and footings and to prepare verification statements.

Regardless of whether an institution processes data internally or externally, the board of directors must provide an adequate audit program for all automated records. If the institution has no internal IT audit expertise, the nontechnical "around-the-computer" methods will provide minimum coverage, but not necessarily adequate coverage. A comprehensive external IT audit, similar to those discussed in the FFIEC's *IS Handbook*, should be carried out to supplement nontechnical methods.

INSURANCE

A financial institution should periodically review its insurance coverage to ensure that the amount of coverage is adequate to cover any exposure that may arise from using an external IT provider. To determine what coverage is needed, the institution should review its internal operations, the transmission or transportation of records or data, and the type of processing performed by the servicer. This review should identify risks to data, namely the accountability for data, at both the user and servicer locations and while in transit. Insurance covering physical disasters, such as fires, floods, and explosions, should be sufficient to cover replacement of the data processing system. Coverage that protects specialized computer and communications equipment may be more desirable than the coverage provided by regular hazard insurance. Expanded coverage protects against water infiltration, mechanical breakdown, electrical disturbances, changes in temperature, and corrosion. The use of an "agreed-amount" endorsement can provide for full recovery of covered loss.

Bank management should also review the servicer's insurance coverage to determine if the amounts and types are adequate. Servicer coverage should be similar to what the financial institution would normally purchase if it were performing its data processing internally. Servicer-provided coverage should complement and supplement the bank's coverage.

If a loss is claimed under the user's coverage, the user need only prove that a loss occurred to make a claim. However, if the loss is claimed under the servicer's coverage, the institution must prove that a loss occurred and also that the servicer was responsible for the loss.

Examiners should review the serviced institution's blanket bond coverage, as well as similar coverage provided by the servicer. The coverage period may be stated in terms of a fixed time period. The loss, the discovery, and the reporting of the loss to the insurer must occur during that stated period. Extended discovery periods are generally available at additional cost if an institution does not renew its bond. The dollar amount of the coverage now represents an aggregate for the stated period. Each claim paid, including the loss, court costs, and legal fees, reduces the outstanding amount of coverage, and recoveries do not reinstate previous levels of coverage. Since coverage extends only to locations stated in the policy, the policy must individually list all offices. Additionally, policies no longer cover certain types of documents in transit.

The bank's board of directors should be involved in determining insurance coverage since each board member will be acknowledging the terms, conditions, fees, riders, and exclusions of the policy. Insurance companies consider any provided information as a warranty of coverage. Any omission of substantive information could result in voided coverage.

The bank or servicer should consider buying additional coverage. Media-reconstruction policies defray costs associated with recovering data contained on the magnetic media. Media-replacement policies replace blank media. Extra-expense policies reimburse organizations for expenses incurred over and above the normal cost of operations. In addition, servicers often purchase policies covering unforeseen business interruptions and the liabilities associated with errors and omissions. Both servicer and banking organizations may purchase transit insurance that covers the physical shipment of source documents. Additionally, electronic funds transfer system (EFTS) liability coverage is available for those operations that use electronic transmission.

Several factors may influence an institution's decision to purchase insurance coverage or to self-insure: the cost of coverage versus the probability of occurrence of a loss, the cost of coverage versus the size of the loss of each occurrence, and the cost of coverage versus the cost of correcting a situation that could result in a loss. Some institutions engage risk consultants to evaluate these risks and the costs of insuring against them.

SERVICE CONTRACTS

Contract Practices

A poorly written or inadequately reviewed contract can be troublesome for both the serviced financial institution and the servicer. To avoid or minimize contract problems, bank legal counsel who are familiar with the terminology and specific requirements of a data processing contract should review it to protect the institution's interests. Since the contract likely sets the terms for a multiyear understanding between the parties, all items agreed on during negotiations must be included in the final signed contract. Verbal agreements are generally not enforceable, and contracts should include wording such as "no oral representations apply" to protect both parties from future misunderstandings. The contract should also establish baseline performance standards for data processing services and define each party's responsibilities and liabilities, where possible.

Although contracts between financial institutions and external data processing companies are not standardized in a form, they share a number of common elements. For a further discussion of IT contract elements and considerations, see the FFIEC's *IS Handbook*.

Additionally, section 225 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) states, "An [FDIC-] insured depository institution may not enter into a written or oral contract with any person to provide goods, products or services to or for the benefit of such depository institution if the performance of such contract would adversely affect the safety or soundness of the institution." An institution should ascertain during contract negotiations whether the servicer can provide a level of service that meets the needs of the institution over the life of the contract. The institution is also responsible for making sure it accounts for each contract in accordance with GAAP. Regulatory agencies consider contracting for excessive servicing fees and/or failing to properly account for such transactions an unsafe and unsound practice. When entering into service agreements, banks must ensure that the method by which they account for such agreements reflects the substance of the transaction and not merely its form. See FFIEC Supervisory Policy SP-6, "Interagency Statement on EDP Service Contracts."

Risk of Termination

Many financial institutions have become so dependent on outside data processing servicers that any extended interruption or termination of service would severely disrupt normal operations. Termination of services generally occurs according to the terms of the service contract. Banks may also experience an interruption of services that is caused by a physical disaster to the servicer, such as a fire or flood, or by bankruptcy. The serviced institution must prepare differently for each type of termination. The contract should allow either party to terminate the agreement by notifying the other party 90 to 180 days in advance of the termination date, which should give a serviced institution adequate time to locate and contract with another servicer.

Termination caused by physical disaster occurs infrequently, but it may present the institution with a more serious problem than termination by contract. However, if the servicer has complied with basic industry standards and maintains a proper contingency plan, disruption of services to users will ordinarily be minimal. The contingency plan must require the servicer to maintain current data files and programs at an alternate site and arrange for back-up processing time with another data center. At a minimum, these provisions should allow the servicer to process the most important data applications. Since equipment vendors can often replace damaged machines within a few days, the servicer should be able to resume processing with little delay. The servicer, not the serviced institution, is responsible for the major provisions of its back-up contingency plan. However, the institution must have a plan that complements the servicer's.

Termination caused by bankruptcy of the servicer is potentially the most devastating to a serviced institution. There may not be advance notice of termination or an effective contingency plan (because servicer personnel may not be available). In this situation, the serviced institution is responsible for finding an alternate processing site.

Although user institutions can ordinarily obtain data files from a bankrupt servicer with little trouble, the programs (source code) and documentation required to process those files are normally owned by the servicer and are not available to the user institutions. These programs are often the servicer's only significant assets. Therefore, a creditor of a bankrupt servicer, in an attempt to recover outstanding debts, will seek to attach those assets and further limit their availability to user institutions. The bankruptcy court may provide remedies to the user institutions, but only after an extended length of time.

An escrow agreement is an alternative to giving vendors sole control of the source code. In this agreement, which should either be part of the service contract or a separate document, the financial institution would receive the right to access source programs under certain conditions, such as discontinued product support or the financial insolvency of the vendor. A third party would retain these programs and related documents in escrow. Periodically, the financial institution should determine that the source code maintained in escrow is up-to-date, for example, an independent party should verify the version number of the software. Without an escrow agreement, a serviced institution has two alternatives: (1) pay off the creditor and hire outside specialists to operate the center or (2) convert data files to another servicer. Either alternative is likely to be costly and cause severe operating delays.

Institutions should normally determine the financial viability of its servicer annually. Once the review is complete, management must report the results to the board of directors or a designated committee. At a minimum, management's review should contain a careful analysis of the servicer's annual financial statement. Management may also use other sources of information to determine a servicer's condition, such as investment analyst reports and bond ratings. Reports of independent auditors and examination reports for certain service providers obtainable from appropriate regulatory agencies may contain useful information.

AUTOMATED CLEARINGHOUSE

Automated clearinghouses (ACHs) form a nationwide electronic payments system used by a large number of depository institutions and corporations. ACH rules and regulations are established by the National Automated Clearing House Association (NACHA) and the local ACH associations, and they are referenced in the ACH operating circulars of the Federal Reserve Banks.

ACH is a value-based system that supports both credit and debit transactions. In ACH credit transactions, funds flow from the depository institution originating the transaction to the institutions receiving the transactions. Examples of credit payments include direct deposits of payroll, dividend and interest payments, Social Security payments, and corporate payments to contractors and vendors. In a debit transaction, funds flow from the depository institutions receiving the transaction instructions to the institution originating the transaction. Examples of ACH debit transactions include collection of insurance premiums, mortgage and loan payments, consumer bill payments, and transactions to facilitate corporate cash management. ACH transactions are deposited in batches at Federal Reserve Banks (or private-sector ACH processors) for processing one or two business days before the settlement date. These transactions are processed and delivered to the receiving institutions through the nightly processing cycle for a given day.

ACH transactions continue to grow significantly. Additional uses of the ACH continue to be developed as depository institutions, corporations, and consumers realize its efficiency and low cost compared with large-dollar payments systems and check payments. One area of growth is the use of debit transactions for the collection of large payments due to the originator, such as the cash concentration of a company's nationwide branch or subsidiary accounts into one central account and other recurring contractual payments.

While several organizations can be involved in processing ACH transactions, the Federal Reserve System is the principal ACH processor. For the Federal Reserve ACH system, depository institutions send ACH transactions to and receive ACH transactions from one of the Federal Reserve processing sites via a communications system linking each location. Access may be by direct computer interface or intelligent terminal connections.

As with any funds-transfer system, the ACH system has inherent risks, including error, credit risk, and fraud. When reviewing ACH activities, examiners should evaluate the following:

- agreements covering delivery and settlement arrangements maintained by the depository institution as an originator or receiver of ACH transactions
- monitoring of the institution's and customer's intraday positions
- balancing procedures of ACH transactions processed
- the credit policy and effectiveness of procedures to control intraday and overnight overdrafts, resulting from extensions of credit to an ACH customer, to cover the value of credit transfers originated (Since ACH transactions may be originated one or two days before the settlement date, the originating institution is exposed to risk from the time it submits ACH credit transfers to the ACH processor to the time its customer funds those transfers.)
- uncollected-funds controls and the related credit policy for deposits created through ACH debit transactions (ACH debits can be returned for insufficient funds in the payor's account or for other reasons, such as a court order.)
- exception reports (that is, large-item and new-account reports)
- control procedures for terminals through which additions, deletions, and other forms of maintenance could be made to customer databases
- the retention of all entries, return entries, and adjustment entries transmitted to and received from the ACH for a period of six years after the date of transmittal

RETAIL FUNDS-TRANSFER SYSTEMS

Automation has enabled banks to electronically perform many retail banking functions formerly handled manually by tellers, bookkeepers, data-entry clerks, and other banking personnel. Accordingly, the need for physical banking facilities and related staff has been reduced. Electronic funds transfer (EFT) and related banking services have also brought access to and control of accounts closer to the consumer through the use of widely distributed unmanned terminals and merchant facilities. EFT-related risk to a financial institution for individual customer transactions is generally low, since the transactions are usually for relatively small amounts. However, weaknesses in controls that could lead to incorrect or improper use of several accounts could lead to significant losses or class action suits against a financial institution. Examinations of retail EFT facilities should focus on the potential large-scale risks of a given product. Examples of retail EFT systems include automated teller machines, point-of-sale networks, debit and "smart" cards, and home banking.

Automated Teller Machines

An automated teller machine (ATM) is a terminal that is capable of performing many routine banking services for the customer. ATMs handle deposits, transfers between savings and checking accounts, balance inquiries, withdrawals, small short-term loans, and loan payments. ATMs may also handle other transactions, such as cash advances on credit cards, statement printing, and postage-stamp dispensing. ATMs usually operate 24 hours a day and are located not only on bank premises but in other locations, such as shopping malls and businesses. Daily withdrawals are usually, and should be, limited to relatively small amounts ($200 to $500). Deposits are processed in the same manner as if they were handled by a teller. ATMs are generally activated through the use of a plastic card encoded with a machine-readable customer identification number and the customer's entry of a corresponding personal identification number (PIN). Some financial institutions may refer to this identification number as the personal identification code (PIC).

ATMs operate in either off-line or on-line mode. Off-line transactions are those that occur when the customer's account balance is not available for verification. This situation can be the result of telecommunication problems between the financial institution and the ATM network. In addition, an off-line transaction can occur when a customer's account balance is not available because the financial institution is updating its files. Financial institutions usually update their files during low-volume periods. In either case, transactions are usually approved up to the daily withdrawal limit, which is a risk to the bank because a customer can withdraw more than is available in the account. On-line systems are directly connected to a financial institution's computer system and the corresponding customer account information. The computer processes each transaction immediately and provides immediate account-balance verification. With either system, a card is normally captured (kept by the ATM) if misuse is indicated (for example, the card has been reported stolen or too many attempts have been made with an invalid PIN).

Financial institutions are usually members of several ATM networks, which can be regional and national. Through these networks, separate institutions allow each other's customers to use their ATM machines. This is known as an interchange system. To be involved in an interchange system, a financial institution must either be an owner or member of the ATM network.

Fraud, robbery, and malfunction are the major risks of ATMs. The use of plastic cards and PINs are a deterrent, but there is still the risk that an unauthorized individual may obtain them. Customers may even be physically accosted while making withdrawals or deposits at ATM locations. Institutions have decreased this risk by installing surveillance cameras and access-control devices. For example, the ATM card can be used as an access-control device, unlocking the door to a separate ATM enclosure and relocking it after the customer has entered. Fraud may also result from risks associated with the issuance of ATM cards, the capture of cards, and the handling of customer PINs. Appropriate controls are needed to prevent the financial institution's personnel from unauthorized access to unissued cards, PINs, and captured cards.

Point-of-Sale Systems

A point-of-sale (POS) system transaction is defined as an electronic transfer of funds from a customer's checking or savings account to a merchant's account to pay for goods or services. Transactions are initiated from POS terminals located in department stores, supermarkets, gasoline stations, and other retail outlets. In an electronic POS system, a customer pays for purchases using a plastic card (such as an ATM, credit, or debit card). The store clerk enters the payment information into the POS terminal, and the customer verifies the transaction by entering a PIN. This results in a debit to the customer's account and a credit to the merchant's account.

POS transactions may be processed through either single-institution unshared systems or multi-institution shared networks. Participants in a shared system settle daily, on a net transaction basis, between each other. In unshared systems, the merchants and customers have accounts with the same financial institution. Thus, the need to settle between banks is eliminated.

As with other EFT systems, POS transactions are subject to the risk of loss from fraud, mistakes, and system malfunction. POS fraud is caused by stolen cards and PINs, counterfeit cards, and unauthorized direct computer access. The system is also susceptible to errors such as debiting or crediting an account by too much or too little, or entering unauthorized transactions. For the most part, POS systems usually deal with these risks by executing bank-merchant and bank-customer contracts that delineate each party's liabilities and responsibilities. Also, consumers are protected by state and federal statutes limiting their liability if they give notice of a lost, stolen, or mutilated card within a specified time period. Other risks inherent in POS systems are computer malfunction or downtime.

Financial institutions offering POS services should provide for back-up of their records through adequate contingency planning. Internal control guidelines for POS systems should address the following:

- confidentiality and security of customer-account information, including protection of PINs
- maintenance of contracts between banks and merchants, customers and banks, and banks and networks
- policies and procedures for credit and check authorization, floor limits, overrides, and settlement and balancing
- maintenance of transaction journals to provide an adequate audit trail
- generation and review of daily exception reports with provisions for follow-up of exception items
- provisions for back-up and contingency planning
- physical security surrounding POS terminals

Internal Controls for Retail EFT Systems

Regardless of the EFT system employed, financial institutions should ensure that adequate internal controls are in place to minimize errors, discourage fraud, and provide an adequate audit trail. Recommended internal-control guidelines for all systems include:

- establishing measures to establish proper customer identification (such as PINs) and maintain their confidentiality
- installing a dependable file-maintenance and retention system to trace transactions
- producing, reviewing, and maintaining exception reports to provide an audit trail

The most critical element of EFT systems is the need for undisputed identification of the customer. Particular attention should be given to the customer-identification systems. The most common control is the issuance of a unique PIN that is used in conjunction with a plastic card or, for noncard systems, an account number. The following PIN control guidelines, as recommended by the American Bankers Association, are encouraged.

Storage:

- PINs should not be stored on other source instruments (for example, plastic cards).
- Unissued PINs should never be stored before they are issued. They should be calculated when issued, and any temporary computer storage areas used in the calculation should be cleared immediately after use.
- PINs should be encrypted on all files and databases.

Delivery:

- PINs should not appear in printed form where they can be associated with customers' account numbers.
- Bank personnel should not have the capability to retrieve or display customers' PIN numbers.
- All the maintenance to PINs stored in databases should be restricted. Console logs and security reports should be reviewed to determine any attempts to subvert the PIN security system.
- PIN mailers should be processed and delivered with the same security accorded the delivery of bank cards to cardholders. (They should never be mailed to a customer together with the card).

Usage:

- The PIN should be entered only by the cardholder and only in an environment that deters casual observation of entries.
- The PIN should never be transmitted in unencrypted form.
- PIN systems should record the number of unsuccessful PIN entries and should restrict access to a customer's account after a limited number of attempts.
- If a PIN is forgotten, the customer should select a new one rather than have bank personnel retrieve the old one, unless the bank has the ability to generate and mail a hard copy of the PIN directly to the customer without giving bank personnel the ability to view the PIN.

Control and security:

- Systems should be designed, tested, and controlled to preclude retrieval of stored PINs in any form.

- Application programs and other software containing formulas, algorithms, and data used to calculate PINs must be subject to the highest level of access control for security purposes.
- Any data-recording medium, for example, magnetic tape and removable disks, used in the process of assigning, distributing, calculating, or encrypting PINs must be cleared immediately after use.
- Employees with access to PIN information must be subject to security clearance and must be covered by an adequate surety bond.

System design:

- PIN systems should be designed so that PINs can be changed without reissuing cards.
- PINs used on interchange systems should be designed so that they can be used or changed without any modification to other participants' systems.
- Financial institutions electing to use encryption as a security technique for bank card systems are strongly encouraged to consider the data encryption standards established by the National Institute of Standards and Technology.

In addition, institutions should consider controls over other aspects of the process. Control guidelines appropriate for plastic cards include those covering procurement, embossing or encoding, storage, and mailing. Controls over terminal sharing and network switching are also appropriate. Institutions should address backup procedures and practices for retail funds-transfer systems and insurance coverage for these activities.

APPENDIX—INTERAGENCY GUIDELINES ESTABLISHING INFORMATION SECURITY STANDARDS

Sections II and III of the information security standards are provided below. For more information, see the Interagency Guidelines Establishing Information Security Standards, in Regulation H, section 208, appendix D-2 (12 CFR 208, appendix D-2). The guidelines were previously titled Interagency Guidelines Establishing Standards for Safeguarding Customer Information. The information security standards were amended, effective July 1, 2005, to implement section 216 of the Fair and Accurate Credit Transactions Act of 2003 (the FACT Act). To address the risks associated with identity theft, the amendments generally require financial institutions to develop, implement, and maintain, as part of their existing information security program, appropriate measures to properly dispose of consumer information derived from consumer reports. The term *consumer information* is defined in the revised rule.

II. Standards for Safeguarding Customer Information

A. Information Security Program

Each bank is to implement a comprehensive written information security program that includes administrative, technical, and physical safeguards appropriate to the size and complexity of the bank and the nature and scope of its activities. While all parts of the bank are not required to implement a uniform set of policies, all elements of the information security program are to be coordinated. A bank is also to ensure that each of its subsidiaries is subject to a comprehensive information security program. The bank may fulfill this requirement either by including a subsidiary within the scope of the bank's comprehensive information security program or by causing the subsidiary to implement a separate comprehensive information security program in accordance with the standards and procedures in sections II and III that apply to banks.

B. Objectives

A bank's information security program shall be designed to—

1. ensure the security and confidentiality of customer information;
2. protect against any anticipated threats or hazards to the security or integrity of such information;
3. protect against unauthorized access to or use of such information that could result in substantial harm or inconvenience to any customer; and

4. ensure the proper disposal of customer information and consumer information.

III. Development and Implementation of Information Security Program

A. Involve the Board of Directors

The board of directors or an appropriate committee of the board of each bank is to—

1. approve the bank's written information security program; and
2. oversee the development, implementation, and maintenance of the bank's information security program, including assigning specific responsibility for its implementation and reviewing reports from management.

B. Assess Risk

Each bank is to—

1. identify reasonably foreseeable internal and external threats that could result in unauthorized disclosure, misuse, alteration, or destruction of customer information or customer information systems;
2. assess the likelihood and potential damage of these threats, taking into consideration the sensitivity of customer information;
3. assess the sufficiency of policies, procedures, customer information systems, and other arrangements in place to control risks; and
4. ensure the proper disposal of customer information and consumer information.

C. Manage and Control Risk

Each bank is to—

1. Design its information security program to control the identified risks, commensurate with the sensitivity of the information as well as the complexity and scope of the bank's activities. Each bank must consider whether the following security measures are appropriate for the bank and, if so, adopt those measures the bank concludes are appropriate:
   a. access controls on customer information systems, including controls to authenticate and permit access only to authorized individuals and controls to prevent employees from providing customer information to unauthorized individuals who may seek to obtain this information through fraudulent means
   b. access restrictions at physical locations containing customer information, such as buildings, computer facilities, and records storage facilities to permit access only to authorized individuals
   c. encryption of electronic customer information, including while in transit or in storage on networks or systems to which unauthorized individuals may have access
   d. procedures designed to ensure that customer information system modifications are consistent with the bank's information security program
   e. dual control procedures, segregation of duties, and employee background checks for employees with responsibilities for or access to customer information
   f. monitoring systems and procedures to detect actual and attempted attacks on or intrusions into customer information systems
   g. response programs that specify actions to be taken when the bank suspects or detects that unauthorized individuals have gained access to customer information systems, including appropriate reports to regulatory and law enforcement agencies
   h. measures to protect against destruction, loss, or damage of customer information due to potential environmental hazards, such as fire and water damage or technological failures
2. Train staff to implement the bank's information security program.
3. Regularly test the key controls, systems, and procedures of the information security program. The frequency and nature of such tests should be determined by the bank's risk assessment. Tests should be conducted or reviewed by independent third parties or staff independent of those that develop or maintain the security programs.
4. Develop, implement, and maintain, as part of its information security program, appropriate measures to properly dispose of customer information and consumer information in accordance with each of the requirements in this section III.

D. Oversee Service-Provider Arrangements

Each bank is to—

1. exercise appropriate due diligence in selecting its service providers;
2. require its service providers by contract to implement appropriate measures designed to meet the objectives of the information security standards; and
3. where indicated by the bank's risk assessment, monitor its service providers to confirm that they have satisfied their obligations with regard to the requirements for overseeing provider arrangements. As part of this monitoring, a bank should review audits, summaries of test results, or other equivalent evaluations of its service providers.

E. Adjust the Program

Each bank is to monitor, evaluate, and adjust, as appropriate, the information security program in light of any relevant changes in technology, the sensitivity of its customer information, internal or external threats to information, and the bank's own changing business arrangements, such as mergers and acquisitions, alliances and joint ventures, outsourcing arrangements, and changes to customer information systems.

F. Report to the Board

Each bank is to report to its board or an appropriate committee of the board at least annually. This report should describe the overall status of the information security program and the bank's compliance with the information security standards. The reports should discuss material matters related to its program, addressing issues such as risk assessment; risk management and control decisions; service-provider arrangements; results of testing; security breaches or violations and management's responses; and recommendations for changes in the information security program.

G. Implement the Standards

(For the effective dates, see 12 CFR 208, appendix D-2, section III.G.)

Information about banks' information technology activities and examination procedures can be found in the *FFIEC Information Technology Handbook* (*IT Handbook*), which is used by examiners at the Federal Reserve and the other federal banking agencies.

Electronic and Internet banking products and services have been widely adopted by financial institutions and are now a regular component of the business strategies at most institutions. Electronic and Internet delivery of services can have many far-reaching benefits for financial institutions and their customers. In some cases, however, these activities can have implications for a financial institution's financial condition, risk profile, and operating performance.

EXAMINATION APPROACH

In general, examiners should review electronic and Internet banking activities when these services are newly implemented, particularly in institutions that may not have significant experience or expertise in this area or when an institution is conducting novel activities that may pose a heightened risk. Periodic reviews should be conducted thereafter based on any significant changes to the scope of services or nature of the operations, as indicated by an assessment of risk to the institution.

Clearly, electronic and Internet banking concerns could affect an institution's operational-risk profile. Yet, these activities could also affect other financial and business risks, depending on the specific circumstances. Accordingly, examiners should consider an institution's electronic and Internet banking activities when developing risk assessments and supervisory plans. Although electronic and Internet banking may be assessed within the context of an information technology review, the nontechnical aspects of an electronic banking operation should be reviewed and coordinated closely with other examination areas. Rather than conduct detailed technical reviews, examiners should assess the overall level of risk any electronic and Internet banking activities pose to the institution and the adequacy of its approach to managing these risks.

To determine the scope of supervisory activities, close coordination is needed with information technology specialist examiners and consumer compliance examiners during the risk-assessment and planning phase, as well as during on-site examinations. Given the variability of electronic and Internet banking environments, the level of technical expertise required for a particular examination will differ across institutions and should be identified during the planning phase of the examination. When the bank has developed the electronic and Internet banking products or services internally or when a direct connection exists between the institution's electronic and Internet banking systems and its core data processing system, consideration should be given to involving an information technology specialist examiner in the on-site review. The determination of the examination scope should be based on factors such as the following:

- implementation of significant new electronic banking products and services since the last examination
- significant changes in the composition or level of customers, earnings, assets, or liabilities generated or affected by the electronic banking activities
- new or significantly modified systems or outsourcing relationships for activities related to electronic banking
- the need for targeted examinations of business lines that rely heavily on the electronic banking systems or activities
- other potential problems or concerns that may have arisen since the last examination or the need to follow up on previous examination or audit issues

Many resources are available to examiners for reviewing electronic and Internet banking activities. In addition to the procedures in this section, further information can be found in section 4060.1, "Information Technology," and in the *Federal Financial Institutions Examination Council (FFIEC) Information Systems Examination Handbook.* Other federal banking agencies have issued examination guidance relating to electronic and Internet banking, information technology, and information security that may be helpful to examiners in reviewing electronic banking activities. Consumer compliance issues are not addressed in this section.[1]

1. See the Federal Reserve regulations, FFIEC, and other interagency supervisory guidance. See also the FFIEC's "Guidance on Electronic Financial Services and Consumer Compliance" (July 15, 1998), for further information regarding compliance with consumer laws and regulations.

OVERVIEW OF ELECTRONIC BANKING SERVICES

Types of Services

Electronic banking services (including Internet banking services) are designed to provide banking customers with the capability to conduct banking business remotely through personal computers and other electronic devices. Electronic banking comprises personal computer (PC) banking through traditional proprietary communication channels; retail and corporate Internet banking services; telephone banking; and, potentially, other forms of remote electronic access to banking services.

Both large and small institutions offer a variety of Internet-based financial services. Many financial institutions are using the Internet to enhance their service offerings to existing customers. Other organizations may choose to expand their customer base to a wider geographic area by accepting online applications for loan and deposit products. A very small number of banking organizations are focusing on the Internet as their primary delivery channel, whether or not they maintain physical branches.

Current electronic banking products and services typically allow customers to obtain information on bank products and services through the bank's Internet web sites, apply online for new products and services, view loan- and deposit-account balances and transactions, transfer funds between accounts, and perform other banking functions. Most electronic banking services operate using standard Internet browser software installed on the customer's personal computer and do not require that the customer have any additional software or hardware. While electronic banking services have been oriented toward retail customers, many banking organizations offer small-business applications and corporate cash-management services through the Internet. These services typically include payroll, automated clearinghouse (ACH), and wire transfers. Wholesale banking services, which have been conducted electronically for many years, are also beginning to move from proprietary networks and communications channels to the Internet.

Information-only web sites provide the most basic and common form of electronic banking service. Most institutions contract with an Internet service provider (ISP) to provide Internet access and "host," or maintain and operate, the institution's web site. In some cases, the web site is maintained on the institution's own computers (web servers). Even if access to account information is not possible through the web site, institutions may receive e-mail inquiries from customers through their web site.

Transactional Internet banking sites allow customers to obtain online access to their account information and initiate transactions over the Internet. With most Internet banking services, the customer interacts with a stand-alone Internet banking system that has been preloaded with the customer's account balances, transaction history, and other information. Transactions initiated through the Internet banking system are processed by a separate Internet banking application and periodically posted to the institution's general ledger, deposit, and loan accounting systems. Interface or connection with the financial institution's core data processing and accounting systems typically occurs through either (1) a direct connection to the core processing system over a network or (2) a manual download or transfer of transaction data to a diskette or other portable media, which is then uploaded or sent to the core processing system. Most standardized Internet banking software packages now available have been designed with standard interfaces between Internet banking systems and common core-processing systems and software.

Electronic bill-payment services are typically provided to customers as part of most standard electronic banking services. These services generally include capabilities to pay any third party the customer designates, as well as pay companies designated for routine bill payments, such as utilities and credit card issuers. Electronic bill-presentment services, which are much less common, involve the electronic transmission of billing statements to the customer through e-mail or a web site, for subsequent payment through the electronic banking service.

Telephone banking, a fairly conventional form of electronic banking, is provided by many institutions. Telephone banking services generally allow customers to check account balances and transactions and to pay bills through touch-tone or voice-response systems. Banking organizations also offer consumer products and services through wireless devices, such as cellular telephones, pagers, personal digital assistants, handheld computers, or other devices that can provide wireless access to an institution's services, either directly or through the Internet. Account aggregation is a web-based service offered by some financial institutions that consolidates customer-account information from multiple financial or commercial web sites and presents it on a single web site. Aggregated information may include information from financial and nonfinancial accounts held by the customer. Some institutions have established "portals," web sites that link customers to a variety of third-party sites, and alliances with other companies to provide banking or nonbanking services.

Operations

There are a variety of operational methods for providing electronic banking services. Banking organizations may perform their core data processing internally but outsource the Internet banking activities to a different vendor or service provider. A dedicated workstation at the financial institution is often used to transmit transaction data files between the institution's core processing system and the Internet application; the workstation also allows the financial institution to update parameters and perform other maintenance. Alternatively, the service provider for Internet banking may interface directly with the bank's core-processing service provider, if that function is also outsourced. In addition, many banking organizations purchase Internet banking services from their primary core-processing service provider, eliminating the need for external data transmissions. Even with this last structure, the institution maintains a local workstation to provide access to customer information or perform other administrative and maintenance functions for the Internet banking system.

Other institutions operate an electronic banking system in their own computer facilities by purchasing an "off-the-shelf" or turnkey electronic banking software application from a software vendor and then installing the software on their own system. Turnkey options vary from a bank's purchase and use of templates or modules, in which the bank chooses from a selection of standard services, to more complex situations in which the software vendor designs and develops the electronic banking software application to the bank's specifications. Turnkey vendors often provide hardware, software, and ongoing system service and maintenance.

Bill-payment processing is generally conducted through a specialized third-party processor. The payment processor receives payment instructions from the financial institution or the Internet banking service provider, initiates an ACH debit to the account of the customer, and credits the account of the payee. Payments to payees not set up to receive ACH payments, such as individuals and smaller companies, are transmitted by mailing a paper check to the payee.

RISK MANAGEMENT

Board and Management Oversight

Financial institutions commonly implement electronic banking services as a means of delivering existing banking products and services to existing customers. As a result, not all institutions have established a distinct risk-management program for electronic banking. In many cases, policies and procedures for electronic banking activities will be incorporated into existing policies and procedures, such as those governing deposit accounts, payments processing, information security, and lending functions.

Bank management should assess the financial impact of the implementation and ongoing maintenance of electronic banking services. For example, ongoing maintenance and marketing costs of Internet banking operations can be substantial, particularly for smaller banks, depending on the institution's business plan. Bank management should consider the potential impact on the institution's customer base, loan quality and composition, deposit volume, volatility, liquidity sources, and transaction volume, as well as the impact on other relevant factors that may be affected by the adoption of new delivery channels. These areas should be monitored and analyzed on an ongoing basis to ensure that any impact on the institution's financial condition resulting from electronic banking services is appropriately managed and controlled.

In addition, bank management may wish to review periodic reports tracking customer usage, problems such as complaints and downtime, unreconciled accounts or transactions initiated through the electronic banking system, and system usage relative to capacity. Management should also consider the expertise of internal or external auditors to review electronic banking activities and the inclusion of electronic banking activities within audit plans. Insurance policies may need to be updated or expanded to cover losses due to system security breaches, system downtime, or other risks from electronic banking activities.[2]

A change in an institution's business strategy to an Internet-only or Internet-focused operation is generally considered a significant change in business plan.[3] In addition, certain technology operations, such as providing ISP services to the general public, may not be considered permissible banking activities or may be considered permissible by the institution's chartering authority only within certain limitations.

A financial institution should also consider legal ownership of its Internet address (for example, www.bankname.com), also known as its "domain name." Contracts with third-party vendors may specifically address any arrangements to have the third-party vendor register the domain name on behalf of the institution.

Operational and Internal Controls

Web Site Information Maintenance

Because an institution's web site is available on an ongoing basis to the general public, appropriate procedures should be established to ensure the accuracy and appropriateness of its information. Key information changes and updates, such as loan rates, are normally subject to documented authorization and dual verification. Establishing procedures and controls to frequently monitor and verify web site information may help prevent any inadvertent or unauthorized modifications or content, which could lead to reputational damage or violations of advertising, disclosure, or other compliance requirements.

In addition, some institutions provide financial-calculator, financial-management, tax-preparation, and other interactive programs to customers. Institutions may provide online resources for customers to research available options associated with savings products, mortgages, investments, insurance, or other products and services. To protect the institution from potential liability or reputational harm, the bank should test or otherwise verify the accuracy and appropriateness of these tools.

Banks should carefully consider how links to third-party Internet web sites are presented. Hyperlinks to other web pages provide customers with convenient access to related or local information, as well as provide a means for targeted cross-marketing through agreements between the institution and other web site operators. However, such linkages may imply an endorsement of third-party products, services, or information that could lead to implicit liability for the institution. As a result, institutions commonly provide disclaimers when such links take the customer to a third-party web site. Institutions should ensure that they clearly understand any potential liabilities arising out of any cross-marketing arrangements or other agreements with third parties. Any links to sites offering nondeposit investment or insurance products must comply with relevant interagency guidelines.[4] Links to other sites should be verified regularly for their accuracy, functionality, and appropriateness.

Customer Authentication in an Electronic Banking Environment and Administrative Controls

Customer authentication guidance issuances. The federal banking agencies have issued various iterations of examination guidance on authentication in an Internet banking environment to assist examiners with this evolving issue. On August 8, 2001, the FFIEC initially released "Authentication in an Electronic Banking Environment," which reviewed the risks and risk-management controls of authentication tools used to verify the identity of new cus-

2. See section 4040.1, "Management of Insurable Risks," for further information about fraud and computer-related insurance that may be applicable to electronic banking activities.

3. Regulation H sets forth the requirements for membership of state-chartered banks in the Federal Reserve System and imposes certain conditions of membership on applicant banks. A member bank must "at all times conduct its business and exercise its powers with due regard to safety and soundness" and "may not, without the permission of the Board, cause or permit any change in the general character of its business or in the scope of the corporate powers it exercises at the time of admission to membership" (12 CFR 208.3(d)(1) and (2)).

4. See section 4170.3, "Examination Procedures—Retail Sales of Nondeposit Investment Products," and the consumer protection rules for sales of insurance (65 *Fed. Reg.* 75,822 (December 4, 2000)).

tomers and authenticate existing customers. In response to significant legal and technological changes, the FFIEC issued a similarly titled statement on October 12, 2005, which replaced the 2001 guidance. As discussed in this section, the 2005 guidance addressed the need for risk-based assessments, customer awareness, and enhanced security measures to authenticate customers using Internet-based products and services that process high-risk transactions involving access to customer information or the movement of funds to other parties. One of the key points of emphasis of the guidance was that single-factor authentication, as the only control mechanism, is inadequate for high-risk transactions involving access to customer information or the movement of funds to other parties. (See SR-05-19.) To assist the banking industry and examiners, the Board, the FFIEC, and the other federal banking and thrift agencies issued frequently asked questions (FAQs) on August 15, 2006. (See SR-06-13.) The FAQs are designed to assist the financial institutions and their technology service providers in conforming to the guidance by addressing common questions on the scope, risk assessments, timing, and other issues.

On June 29, 2011, the FFIEC released "Supplement to Authentication in an Internet Banking Environment." (See SR-11-9.) The purpose of the 2011 supplement is to reinforce the existing guidance on risk-management framework and update the agencies' expectations regarding customer authentication, layered security, or other controls in the increasingly hostile online environment. The supplement establishes minimum control expectations for certain online banking activities and identifies controls that are less effective in certain situations.

Customer authentication background. Authentication describes the process of verifying the identity of a person or entity. The authentication process is one method used to control access to customer accounts and personal information, and is dependent upon customers providing valid identification data followed by one or more authentication credentials (factors) to prove their identity. Many banks use the same account-opening procedures for electronic applications as they do for mailed or in-person applications. Procedures for accepting electronic account applications generally address areas such as—

- the type of funding accepted for initial deposits;
- funds-availability policies for deposits in new accounts;
- the timing of account-number, check, and ATM-card issuance;
- the minimum customer information required to open new accounts;
- single-factor, tiered single-factor, and multifactor authentication procedures for verification of information provided by the applicant (for example, verifying customer information against credit bureau reports); and
- screening for prior fraudulent account activity, typically using fraud-detection databases.[5]

Strong customer-authentication practices are necessary to help institutions detect and reduce fraud, detect and reduce identity theft, and enforce anti-money-laundering measures. Customer interaction with institutions continues to migrate from physical recognition and paper-based documentation to remote electronic access and transaction initiation. Significant risks potentially arise when an institution accepts new customers through the Internet or other purely electronic channels because of the absence of the physical cues that bankers traditionally use to identify individuals. The risks of doing business with unauthorized or incorrectly identified individuals in an electronic banking environment could result in financial loss and reputation damage.

In addition to limiting unauthorized access, effective authentication provides institutions with the appropriate foundation for electronic agreements and transactions. First, effective authentication provides the basis for the validation of parties to the transaction and their agreement to its terms. Second, authentication is a necessary element to establish the *authenticity* of the records evidencing the electronic transaction if there is ever a dispute. Third, authentication is a necessary element for establishing the *integrity* of the records evidencing the electronic transaction. Because state laws vary, management should involve legal counsel in the design and implementation of authentication systems.

The success of a particular authentication method depends on more than the technology.

5. For information on practices that my help prevent fraudulent account activity, see SR-01-11, "Identity Theft and Pretext Calling."

Success also depends on an institution's having appropriate policies, procedures, and controls. An effective authentication method has the following characteristics: customer acceptance, reliable performance, scalability to accommodate growth, and interoperability with existing systems and future plans. The June 29, 2011, "Supplement to Authentication in an Internet Banking Environment" discusses the effectiveness of certain authentication techniques, namely device identification and the use of challenge questions.

Institutions can use a variety of authentication tools and methodologies to authenticate customers. These tools include the use of passwords and personal identification numbers (PINs), digital certificates using a public key infrastructure (PKI), physical devices such as smart cards or other types of "tokens," database comparisons, and biometric identifiers. The level of risk protection afforded by each of these tools varies and is evolving as technology changes.

Existing authentication methodologies involve three basic "factors":

- something the user *knows* (a password or PIN)
- something the user *possesses* (an ATM card or a smart card)
- something the user *is* (a biometric characteristic, such as a fingerprint or retinal pattern)

Authentication methods that depend on more than one factor typically are more difficult to compromise than single-factor systems. Accordingly, properly designed and implemented multifactor authentication methods are more reliable indicators of authentication and are stronger fraud deterrents. For example, the use of a log-on ID or password is single-factor authentication (something the user knows), whereas a transaction using an ATM typically requires two-factor authentication (something the user possesses—the card—combined with something the user knows—the PIN). In general, multifactor authentication methods should be used on higher-risk systems. Further, institutions should be sensitive to the fact that proper implementation is key to the reliability and security of any authentication system. For example, a poorly implemented two-factor system may be less secure than a properly implemented single-factor system.

Risk assessment. An effective authentication program should be implemented on an enterprise-wide basis to ensure that controls and authentication tools are adequate among all products, services, and lines of business. Authentication processes should be designed to maximize interoperability and should be consistent with the financial institution's overall strategy for electronic banking and e-commerce customer services. The level of authentication a financial institution uses in a particular application should be appropriate to the level of risk in that application.

The implementation of appropriate authentication methods starts with an assessment of the risk posed by the institution's electronic banking systems. The risk-assessment process should

- identify all transactions and levels of access associated with Internet-based customer products and services;
- identify and assess the risk-mitigation techniques, including authentication methodologies, employed for each transaction type and level of access; and
- include the ability to gauge the effectiveness of risk-mitigation techniques for current and changing risk factors for each transaction type and level of access.

The risk should be evaluated in light of the type of customer (retail or commercial), the institution's transactional capabilities (bill payment, wire transfer, or loan origination), the sensitivity and value of the stored information to both the institution and the customer, the ease of using the authentication method, and the size and volume of transactions.

For example, online retail transactions generally involve accessing account information, bill payment, intrabank funds transfers, and occasional interbank funds transfers or wire transfers. Since the frequency and dollar amounts of these transactions are generally lower than commercial transactions, they pose a comparatively lower level of risk. Online commercial transactions generally involve ACH file origination and frequent interbank wire transfers. Since the frequency and dollar amounts of these transactions are generally higher than consumer transactions, they pose a comparatively increased level of risk to the institution and its customer. As such, it is recommended that institutions offer multifactor authentication to their business customers.

The Federal Reserve expects financial institutions to assess the risks to the institution and its customers and to implement appropriate authentication methods to effectively manage risk. Financial institutions should review and update their existing risk assessments as new information becomes available, prior to implementing new electronic financial services, or at least every 12 months. (See *FFIEC IT Examination Handbook*, Information Security Booklet, July 2006, Key Risk Assessment Practices section.) Updated risk assessments should consider, but not be limited to, the following factors:

- changes in the internal and external threat environment (see the attachment to SR 11-9 for more information)
- changes in the customer base adopting electronic banking
- changes in the customer functionality offered through electronic banking
- actual incidents of security breaches, identity theft, or fraud experienced by the institution or industry

A comprehensive approach to authentication requires development of and adherence to corporate standards and architecture, integration of authentication processes within the overall information security framework, risk assessments within the institution's lines of business that support the selection of authentication tools, and a central authority for oversight and risk monitoring. The authentication process should be consistent and support the financial institution's overall security and risk-management programs.

The methods of authentication used in a specific electronic application should be appropriate and "reasonable," from a business perspective, in light of the reasonably foreseeable risks in that application. Because the standards for implementing a commercially reasonable system may change over time as technology and other procedures develop, financial institutions and service providers should periodically review authentication technology and ensure appropriate changes are implemented.

Single-factor authentication tools, including passwords and PINs, have been widely utilized in a variety of retail e-banking activities, including account inquiry, bill payment, and account aggregation. However, not every online transaction poses the same level of risk. Therefore, financial institutions should implement more robust controls as the risk level of the transaction increases. Financial institutions should assess the adequacy of existing authentication techniques in light of changing or new risks (for example, the increasing ability of hackers to compromise less robust single-factor techniques or the risks posed by phishing, pharming, or malware). Financial institutions should no longer rely on one form of customer authentication. A one-dimensional customer authentication program is simply not robust enough to provide the level of security that customers expect and that protects institutions from financial and reputation risk. Instead, multifactor techniques are appropriate for high-risk applications and transactions, which involve access to customer information or the movement of funds to other parties. Institutions should recognize that a single-factor system may be "tiered" to enhance security without implementing a two-factor system. A tiered single-factor authentication system would include the use of multiple levels of a single factor (for example, the use of two or more passwords or PINs employed at different points in the authentication process).

Account origination and customer verification. Institutions need to use reliable methods for originating new customer accounts online. Customer-identity verification during account origination is important in reducing the risk of identity theft, fraudulent account applications, and unenforceable account agreements or transactions. In an electronic banking environment, reliance on traditional forms of paper-based authentication is decreased substantially. Accordingly, financial institutions need to use reliable alternative methods. For example, verification of personal information could include the following:

- *Positive verification* to ensure that material information provided by an applicant matches information available from trusted third-party sources. More specifically, an institution can verify a potential customer's identity by comparing the applicant's answers to a series of detailed questions against information in a trusted database (for example, a reliable credit report) to see if the information supplied by the applicant matches information in the database. As the questions become more specific and detailed, correct answers provide the institution with an increasing level of confidence that the applicants are who they say they are.
- *Logical verification* to ensure that information provided is logically consistent. (For example,

do the telephone area code, ZIP code, and street address match?)
- *Negative verification* to ensure that information provided has not previously been associated with fraudulent activity. For example, applicant information can be compared against fraud databases to determine whether any of the information is associated with known incidents of fraudulent behavior. In the case of commercial customers, however, a sole reliance on online electronic database comparison techniques is not adequate since certain documents needed to establish an individual's right to act on a company's behalf (for example, bylaws) are not available from databases. Institutions must still rely on traditional forms of personal identification and document validation combined with electronic verification tools.

Transaction initiation and authentication of established customers. Once an institution has successfully verified a customer's identity during the account-origination process, it should authenticate customers who wish to gain access to the online banking system. Institutions can use a variety of methods to authenticate existing customers. These methods include the use of passwords, PINs, digital certificates and a PKI, physical devices such as tokens, and biometrics.

Minimizing fraud risk. An institution's policies and procedures should address the management of existing customers' accounts to minimize the risk of fraudulent activity. For example, the customer's ability to expand an existing account relationship through the electronic banking system may warrant added controls, such as sending a separate notification to a customer's physical address when online account access is first requested or when PINs, e-mail addresses, or other key parameters are changed.

To mitigate fraud risk, institutions may establish dollar limits on transactions initiated through the electronic banking application, or they may monitor transactions above specified limits, depending on the type of account (for example, consumer versus corporate). These limits or a similar monitoring system may help detect unusual account activity, which could indicate fraudulent transactions or other suspicious activity.

Funds transfer systems and Internet banking. Any manual interface between the electronic banking system and funds transfer systems, such as capabilities for uploading ACH or Fedwire transactions initiated through the electronic banking system to Fedline terminals, should be subject to system-access controls and appropriate internal controls, such as segregation of duties. Some institutions also permit electronic banking customers to initiate electronic (ACH) debits against accounts held at other institutions; reliable controls to verify that the customer is entitled to draw funds from the particular account are needed if this feature is offered.

Electronic bill-payment services are commonly provided as a component of electronic banking services. The institution should have a direct agreement with bill-payment providers, which may be subcontractors of the provider for the institution's Internet banking services. In this situation, it may be difficult for the institution or its customers to obtain timely and accurate information regarding the status of payment requests. As a result, contracts with service providers that encompass bill-payment services should generally address how payments are made, when payments are debited from a customer account, the treatment of payments when the account has insufficient funds on the settlement date, reconcilement procedures, and problem-resolution procedures.

Even when Internet banking operations are outsourced to a service provider, institutions will generally have access to the electronic banking system through a dedicated desktop computer or workstation. This hardware allows the institution to upload and download transaction information; review transaction logs or audit trails; print daily reports; or, in some cases, reset customer passwords, resolve errors, or respond to customer inquiries. These workstations should be located in secure areas and be subject to normal authorization and access controls and transaction audit trails.

Information Security

Electronic banking activities should be addressed in an institution's information security program, which should include compliance with the federal banking agencies' information security standards.[6] Institutions

6. See section 4060.1 under "Standards for Safeguarding Customer Information" for further details and examination procedures. See also SR-01-25. See also the *FFIEC IT*

need to pay particular attention to the security of customer information, given the heightened security concerns associated with providing access to customer information over the Internet. An institution's written information security policies and procedures should include electronic banking activities. Institutions should implement prudent controls that limit the risk of unauthorized access to key systems, including password-administration controls, firewalls, encryption of sensitive information while it is in transit or being stored, maintenance of all current updates and security patches to software and operating systems, and controls to prevent insider misuse of information. Sound information security practices include procedures and systems to detect changes to software or files, intrusion-detection systems, and security-vulnerability assessments.

Sound information security practices are also based on the concept of layered security, which is the use of different controls at different points in a transaction process so that a weakness in one control is generally compensated for by the strength of a different control. Layered security can substantially strengthen the overall security of Internet-based services and be effective in protecting sensitive customer information, preventing identity theft, and reducing account takeovers and the resulting financial losses. Financial institutions should implement a layered approach to security for high-risk Internet-based systems. Other regulations and guidelines also specifically address financial institutions' responsibilities to protect customer information and prevent identity theft.[7]

Effective controls that may be included in a layered security program include, but are not limited to

- fraud detection and monitoring systems that include consideration of customer history and behavior and enable a timely and effective institution response;
- the use of dual customer authorization through different access devices;
- the use of out-of-band verification for transactions;
- the use of "positive pay," debit blocks, and other techniques to appropriately limit the transactional use of the account;
- enhanced controls over account activities, such as transaction value thresholds, payment recipients, number of transactions allowed per day, and allowable payment windows (e.g., days and times);
- Internet protocol (IP) reputation-based tools to block connection to banking servers from IP addresses known or suspected to be associated with fraudulent activities;
- policies and practices for addressing customer devices identified as potentially compromised and customers who may be facilitating fraud;
- enhanced control over changes to account maintenance activities performed by customers either online or through customer service channels; and
- enhanced customer education to increase awareness of the fraud risk and effective techniques customers can use to mitigate the risk.

At a minimum, an institution's layered security program should (1) detect and respond to suspicious activity and (2) control administrative functions. To detect and respond to suspicious activities, appropriate control processes should be instituted that detect anomalies and effectively respond to suspicious or anomalous activity related to initial login and authentication of customers requesting access to the institution's electronic banking system, as well as the initiation of electronic transactions involving the transfer of funds to other parties. Manual or automated transaction monitoring or anomaly detection and response may prevent instances of ACH/wire transfer fraud since fraudulent wire activities are typically anomalous when compared with the customer's established patterns of behavior.

A layered security program should also control administrative functions. For business accounts, layered security should include enhanced controls for system administrators who are granted privileges to set up or change system configurations, such as setting access privileges and application configurations and/or limitations. These enhanced controls should exceed the controls applicable to routine business customer users. For example, a preventive control could include requiring an additional authenti-

Examination Handbook, Information Security Booklet, July 2006, Key Concept section.

7. See Interagency Final Regulation Guidelines on Identity Theft Red Flags, 12 CFR parts 41, 222, 334, 571, and 717; Interagency Guidelines Establishing Information Security Standards, 12 CFR parts 30, 208, 225, 364, and 570, Appendix B. See also Section 4060.1 under "Identity Theft Red Flags Program" for further details and examination procedures.

cation routine or a transaction verification routine prior to final implementation of the access or application changes. An example of a detective control could include a transaction verification notice immediately following implementation of the submitted access or application changes. Out-of-band authentication, verification, or alerting can be effective controls. Overall, enhanced controls over administrative access and functions can effectively reduce money transfer fraud.

While the technical aspect of information security considerations for electronic banking activities is complex, widely used turnkey software applications for Internet banking generally conform to accepted industry standards for technical security. Detailed assessments of the technical security of specific systems are the responsibility of the institution and its qualified engineers and internal and external auditors. Examiners should focus on the institution's implementation of key security controls for the particular software application.

Any security breaches of an institution's electronic banking service or web site that may lead to potential financial losses or disclosure of sensitive information should be reported to an appropriate management level within the institution. If necessary, the appropriate suspicious-activity report should be filed. Institutions should ensure that their service providers notify them of any computer security breaches in their operations that may affect the institution. Institutions should determine the cause of any such intrusions and develop an appropriate plan to limit any resulting financial losses to the bank and its customers and to prevent recurrence.

Passwords and System-Access Controls

Most institutions use identifiers such as account numbers or ATM card numbers, together with passwords or PINs, to verify the authorization of users accessing the retail electronic banking system. (Wholesale or corporate cash-management systems may use more secure methods, such as smart cards that contain customer credentials, real-time passwords (passwords that can be immediately changed online), or dedicated terminals, to authenticate users.) Prudent password-administration procedures generally require that customer passwords be changed if compromised and that passwords do not automatically default to easily guessed numbers or names. Passwords and PINs are (1) generally encrypted while in transit or storage on insecure networks or computers, (2) suppressed on screen when entered on a keyboard, and (3) suspended after a predetermined number of failed log-in attempts. Institutions should establish clear policies and procedures for retrieving or resetting customer passwords when customers lose or forget their password to minimize the risk that passwords are disclosed to unauthorized individuals.[8]

Firewalls

A firewall is a security control consisting of hardware, software, and other security measures established to protect the bank's internal data and networks, as well as its web sites, from unauthorized external access and use through the Internet. A number of banks and their vendors use various firewall products that meet industry standards to secure their Internet banking services, web sites, and other bank networks. For a firewall to adequately protect a bank's internal networks and systems, it must be properly installed and configured. Firewalls are most effective when all updates and patches to the firewall systems are installed and when the firewall configuration is reassessed after every system change or software update.

Viruses

Computer viruses can pose a threat to information systems and networks that are connected to the Internet. In addition to destroying data and possibly causing system failure, viruses can potentially establish a communication link with an external network, allow unauthorized system access, or even initiate unauthorized data transmission. Widely used protection measures include using anti-virus products that are installed and are resident on a computer or network or providing for virus scanning during downloads of information or the execution of any program. Bank employees and electronic banking customers should be educated about the risks posed to systems by viruses and other malicious programs, as well as about the proper procedures for accessing information to help avoid these threats.

8. See SR-05-19 for further information on password-administration practices.

Encryption of Communications

Information transmitted over the Internet may be accessible to parties other than the sender and receiver. As a result, most retail electronic commerce services use industry-standard secure sockets layer (SSL) technology to encrypt sensitive transactional information between the customer and the web site to minimize the risk of unauthorized access to this information while it is in transit. Although stronger encryption techniques may be warranted for higher-value corporate or wholesale transactions, SSL is generally considered adequate for retail Internet banking transactions.

In addition, many banks accept communications through standard Internet e-mail; in some cases, account applications containing sensitive customer data may be sent to the bank. These communications are generally not protected by SSL or a similar technology but are open to potential unauthorized access. If the electronic banking system does not provide for encrypted e-mail, the bank should ensure that customers (and customer-service representatives) are alerted not to send confidential information by unencrypted e-mail.

Security Testing and Monitoring

Assessments of information security vulnerability, penetration testing, and monitoring help ensure that appropriate security precautions have been implemented and that system security configurations are appropriate. Some institutions contract with third-party security experts to provide these services. Vulnerability assessments provide an overall analysis of system security and report any system vulnerabilities. Such assessments can detect known security flaws in software and hardware, determine system susceptibility to known threats, and identify vulnerabilities such as settings that are contrary to established security policies.

Penetration testing and vulnerability assessments identify an information system's vulnerability to intrusion. Penetration tests examine system security by mimicking external intrusion attempts to circumvent the security features of a system. However, a penetration test is only a snapshot in time and does not guarantee that the system is secure.

Intrusion detection is an ongoing process that monitors the system for intrusions and unusual activities. Intrusion-detection systems, which can be installed on individual computers and at locations on a network, can be configured to alert appropriate system personnel to potential intrusions at the time they occur. In addition, the detection systems provide ongoing reporting and monitoring of unusual events such as potential intrusions or patterns of misuse.

Customer Awareness and Education

Because customer awareness is a key defense against fraud and identity theft, financial institutions should make efforts to educate their customers. Institutions should evaluate their consumer education efforts to determine if additional steps are necessary. The June 29, 2011, "Supplement to Authentication in an Internet Banking Environment" states that financial institution's customer awareness and educational efforts should address both retail and commercial account holders and, at a minimum, include the following elements:

- an explanation of protections provided, and not provided, to account holders relative to electronic funds transfers under Regulation E, and a related explanation of the applicability of Regulation E to the types of accounts with Internet access
- an explanation of under what, if any, circumstances and through what means the institution may contact a customer on an unsolicited basis and request the customer's provision of electronic banking credentials
- a suggestion that commercial online banking customers perform a related risk assessment and controls evaluation periodically
- a listing of alternative risk control mechanisms that customers may consider implementing to mitigate their own risk, or alternatively, a listing of available resources where such information can be found
- a listing of institutional contacts for customers' discretionary use in the event they notice suspicious account activity or experience customer information security-related events

Contingency Planning

Periodic downtime and outages are common with online services. But when the duration or disruption of these outages is significant, it can lead to reputational risk for the institution. For many institutions, short disruptions of electronic banking services may not have a material effect on their operations or customers, as other delivery channels are available. Nevertheless, electronic banking services should be covered by an institution's business-continuity plans. Institutions should assess their disaster-recovery needs by considering the length of time that electronic banking services could be unavailable to customers or for internal processing, and then design backup capabilities accordingly. In some cases, institutions may need to establish the capability to move processing to a different network or data center, or to move electronic banking services to a backup web site.

Typically, the electronic banking system includes capabilities to generate backup files on tapes, diskettes, or other portable electronic media containing key transaction and customer data. Web site information should also be subject to periodic backup. Security and internal controls at backup locations should be as sophisticated as those in place at the primary site. If a bank outsources electronic banking operations to a service provider, the institution should have a full understanding of the service provider's contingency and business-recovery commitments.[9]

Outsourcing Arrangements

Many institutions outsource electronic banking operations to an affiliate or third-party vendor. In addition to operating the Internet banking software application, service providers may provide services such as web site hosting and development, Internet access, and customer service or call-center maintenance. As with other areas of a bank's operations, examiners should evaluate the adequacy of the institution's oversight of its critical service providers.[10]

Banking organizations should consider requiring Internet banking service providers to obtain periodic security reviews performed by an independent party. The client institution should receive reports summarizing the findings.

9. For additional information on business resumption and contingency planning in relation to outsourcing, see section 5300.1, "Information Technology," and the *FFIEC Information Systems Examination Handbook*.

10. See section 5300.1, "Information Technology," and the *FFIEC Information Systems Examination Handbook* for information on risk management for outsourcing arrangements.

1. To develop an understanding of the significance of the bank's electronic banking activities within and across business lines.
2. To assess the types and levels of risks associated with the bank's electronic banking activities.
3. To exercise appropriate judgment when determining the level of review, given the characteristics, size, and business activities of the organization.
4. To assess the current and potential impact of electronic banking activities on the institution's financial profile and condition.
5. To assess the adequacy of risk management and oversight of electronic banking activities, including outsourced activities.
6. To determine if the institution is complying with other applicable laws, rules and regulations.
7. To prepare examination report comments on significant deficiencies and recommended corrective action.
8. To determine the impact, if any, of electronic banking risks on the CAMELS rating, information technology rating, and risk-management ratings.
9. To update the workpapers with any information that will facilitate future examinations.

1. Identify the bank's current and planned electronic banking activities and review the bank's public Internet web sites. Consider whether the bank provides the following types of services:
   a. telephone banking
   b. retail Internet banking services
   c. corporate or wholesale Internet banking services
   d. Internet service provider (ISP)
   e. brokerage services over the Internet
   f. insurance services over the Internet
   g. trust services over the Internet
   h. account aggregation
   i. electronic bill payment
   j. other activities (for example, web portals, financial calculators, cross-marketing arrangements and alliances, or unique services)
2. Review prior examination findings and workpapers related to electronic banking, including consumer compliance, information technology, and other examination areas that may be relevant.
3. Determine if material changes have been made to electronic banking products, services, or operations since the last examination and if any significant changes are planned in the near future.
   a. Ensure the bank has reviewed and updated the existing risk assessment prior to implementing new electronic financial services.
   b. If the bank has not materially changed its electronic banking services, determine if the board or senior management has reviewed the risk assessment within the past 12 months.
4. Determine the significance of the bank's electronic banking activities. Consider the following areas:
   a. approximate percentages and numbers of customers (for example, loan and deposit) that regularly use electronic banking products and services
   b. lending and deposit volumes generated from Internet applications
   c. the current monthly transaction and dollar volume for electronic banking services
   d. costs and fees to operate the system and related services or marketing programs
5. Incorporate an analysis of electronic banking activities into risk assessments, supervisory plans, and scope memoranda, considering the size, activities, and complexity of the organization, as well as the significance of the activities across particular business lines.
6. Assess the level of risk and the current or potential impact of electronic banking activities on the organization's earnings, liquidity, asset quality, operational risk, and consumer compliance. Communicate any concerns to examiners reviewing these areas.
7. Determine if the bank operates its web sites, electronic banking systems, or core data processing systems internally and whether any activities are outsourced to a vendor. If outsourced, all activities should be supported by written agreements that have been reviewed by the bank's legal counsel. Identify the location of the following operations:
   a. design and maintenance of the bank's public web site or home page
   b. computer or server for the bank's public web site
   c. development and maintenance of the bank's electronic banking systems
   d. computer or server for the bank's electronic banking systems
   e. customer service (for example, a call center) for electronic banking services
   f. electronic bill-payment processing or other ancillary services
8. If the bank operates the electronic banking system or core data processing system in-house, review the topology (schematic diagram) of the systems and networks, and determine whether there is a direct, online connection between the bank's core processing systems and the electronic banking system.
9. If the bank operates the electronic banking system or core data processing system in-house, review the transaction-processing flows between the electronic banking system and the bank's core processing systems and identify key control points. Determine

whether information is exchanged in a real-time, batch (overnight), or hybrid-processing mode.

10. Review any available audits or third-party reviews of vendors or service providers the bank uses, such as Service Organization Control Reports (formerly SAS 70 reports).[1] Review any Federal Financial Institutions Examination Council (FFIEC) Shared Application Software Review (SASR) reports or any FFIEC or other supervisory examination reports of service providers that the institution uses.
11. Determine the adequacy of risk management for electronic banking activities (including authentication methods for prospective and existing customers), given the level of risk these activities pose to the institution.[2] Complete or update relevant portions of the electronic banking internal control questionnaire as needed for the specific electronic banking activities identified in the previous steps of these procedures to evaluate the adequacy of—
    a. policies and procedures governing electronic banking activities,
    b. internal controls and security for electronic banking activities,
    c. audit coverage for electronic banking activities,
    d. monitoring and compliance efforts,
    e. vendor and outsourcing management, and
    f. board and management oversight.
12. Determine if the bank engages in any "high-risk" transactions involving access to customer information or the movement of funds to other parties.
    a. If the bank engages in high-risk transactions, ensure the institution has implemented a layered security program and does not rely solely on any single control for authorizing such transactions.[3]
    b. Ensure the bank's layered security program is consistent with the risk for covered consumer and business (commercial) transactions.
13. Perform additional analysis and review, consulting with information technology specialists, consumer compliance specialists, or other subject-matter experts as needed, on areas of potential concern.
14. Determine the impact of any electronic banking activities or internal-control deficiencies on the financial condition of the organization.
15. Determine the extent of supervisory attention needed to ensure that any weaknesses are addressed and that associated risk is adequately managed.
16. Determine the impact of any deficiencies on the CAMELS rating, information technology rating, operational-risk rating, and any other relevant supervisory ratings.
17. Prepare comments for the examination report on any significant deficiencies and recommended corrective action.
18. Update the workpapers with any information that will facilitate future examinations.

1. Effective June 15, 2011, the Statement on Standards for Attestation Engagements (SSAE) No. 16, "Reporting on Controls at a Service Organization," replaces the guidance for service auditors in the American Institute of Certified Public Accountants (AICPA) Statement of Auditing Standards (SAS) No. 70 "Service Organizations."

2. See SR-05-19, "FFIEC Guidance on Authentication in an Internet Banking Environment," and SR-11-19, "Interagency Supplement to Authentication in an Internet Banking Environment."

3. See SR-11-9 and Section 4063.1.

Review the bank's internal controls, policies, practices, and procedures for electronic banking activities. Complete those questions necessary to assess whether any potential concerns warrant further review.

POLICIES AND PROCEDURES

1. Are updates and changes to the bank's public web sites—
   a. made only by authorized staff?
   b. subject to dual verification?
2. Are web site information and links to other web sites regularly verified and reviewed by the bank for—
   a. accuracy and functionality?
   b. potential reputational, compliance, and legal risk?
   c. appropriate disclaimers?
3. Do operating policies and procedures include—
   a. procedures for and controls over the opening of new customer accounts submitted through electronic channels in order to verify potential customer identity and financial condition?
   b. single-factor and tiered single-factor or multifactor procedures for authenticating the identity of prospective and existing customers when administering access to the electronic banking system (for example, customer passwords, personal identification numbers (PINs), or account numbers)?
   c. requirements for review of or controls over wire transfers or other large transfers initiated through the electronic banking system, to watch for potentially suspicious activity?
   d. appropriate authorizations for electronic debits initiated against accounts at other institutions, if such transfers are allowed?
   e. depending on the type of account, dollar limits on transactions over a given time period initiated through the electronic banking service?
   f. reconcilement and accounting controls over transactions initiated through the electronic banking system, including electronic bill-payment processing?
4. Do written information security policies and procedures address electronic banking products and services?
5. Are business-recovery procedures adequate? Do the procedures address—
   a. events that could affect the availability of the electronic banking system, such as system outages, natural disasters, or other disruptions?
   b. planned recovery times that are consistent with how important electronic banking activities are to the institution?
6. Has management established an adequate incident-response plan to handle and report potential system security breaches, web site disruptions, malicious tampering with the web site, or other problems?

AUDIT AND INDEPENDENT REVIEW

1. Do the bank's internal and external audit programs address electronic banking activities and systems?
2. Is the level of audit review commensurate with the risks in electronic banking activities and systems?
3. Do audits address—
   a. the review and testing of the bank's internal controls relating to electronic banking?
   b. the review of service-provider performance relative to contract terms, if services are outsourced?
   c. the review of the service providers' internal or external audits or third-party reviews, if services are outsourced?
4. Is management's response to any audit recommendations timely and appropriate?

INTERNAL CONTROLS AND SECURITY

1. Has the bank or service provider implemented a firewall to protect the bank's web site?
2. Are ongoing monitoring and maintenance arrangements for the firewall in place to ensure that it is properly maintained and configured?

3. If the bank uses a turnkey electronic banking software package or outsources to a service provider—
   a. are bank staff familiar with key controls detailed by the vendor's security and operating manuals and training materials?
   b. are workstations that interface with the service provider's system for administrative procedures or for the transfer of files and data kept in a secure location with appropriate password or other access control, dual-verification procedures, and other controls?
4. Does the bank's control of customer access to the electronic banking system include—
   a. procedures to ensure that only appropriate staff are authorized to access electronic banking systems and data, including access to any workstations connected to a remote system located at a service provider?
   b. levels of authentication methods that are commensurate with the level of risk in the bank's electronic banking applications?
   c. the length and composition of passwords and PINs?
   d. encryption of passwords and PINs in transit and storage?
   e. the number of unsuccessful log-on attempts before the password is suspended?
   f. procedures for resetting customer passwords and PINs?
   g. automatic log-off controls for user inactivity?
5. Have security-vulnerability assessments and penetration tests of electronic banking systems been conducted? Has the bank reviewed the results?
6. Has the bank or its service provider established—
   a. an intrusion-detection system for electronic banking applications?
   b. procedures to detect changes in electronic banking files and software?
   c. measures to protect the electronic banking system from computer viruses?
   d. procedures for ensuring on an ongoing basis that electronic banking applications, operating systems, and the related security infrastructure incorporate patches and upgrades that are issued to address known security vulnerabilities in these systems?
7. If e-mail is used to communicate with customers, are communications encrypted or does the bank advise customers not to send confidential information through e-mail?

MONITORING AND COMPLIANCE

1. Are adequate summary reports made available to management to allow for monitoring of—
   a. web site usage?
   b. transaction volume?
   c. system-problem logs?
   d. exceptions?
   e. unreconciled transactions?
   f. other customer or operational issues?
2. Has management established adequate procedures for monitoring and addressing customer problems with electronic banking products and services?
3. Does management accurately report its primary public web-site address on its Consolidated Report of Condition and Income?
4. Have required Suspicious Activity Reports involving electronic banking, including any computer intrusions, been filed? See the requirements for suspicious-activity reporting in section 208.62 of the Board's Regulation H (12 CFR 208.62), and the Bank Secrecy Act compliance program in section 208.63 (12 CFR 208.63).

VENDORS AND OUTSOURCING

1. Is each significant vendor, service provider, consultant, or contractor relationship that is involved in the development and maintenance of electronic banking services covered by a written, signed contract? Depending on the nature and criticality of the services, do contracts specify—
   a. minimum service levels and remedies or penalties for nonperformance?
   b. liability for failed, delayed, or erroneous transactions processed by the service provider and for other transactions in which losses may be incurred (for example, insufficient funds)?
   c. contingency plans, recovery times in the event of a disruption, and responsibility for backup of programs and data?

   d. data ownership, data usage, and compliance with the bank's information security policies?
   e. bank access to the service provider's financial information and results of audits and security reviews?
   f. insurance to be maintained by the service provider?
2. Has legal counsel reviewed the contracts to ensure they are legally enforceable and that they reasonably protect the bank from risk?
3. Has the bank ensured that any service provider responsible for hosting or maintaining the bank's web site has implemented—
   a. controls to protect the bank's web site from unauthorized alteration and malicious attacks?
   b. procedures to notify the bank in the event of such incidents?
   c. regular backup of the bank's web site information?
4. Depending on the nature and criticality of the services, does the bank conduct initial and periodic due-diligence reviews of service providers, including—
   a. reviewing the service provider's standards, policies, and procedures relating to internal controls, security, and business contingency to ensure they meet the bank's minimum standards?
   b. monitoring performance relative to service-level agreements and communicating any deficiencies to the service provider and to bank management?
   c. reviewing reports provided by the service provider on response times, availability and downtime, exception reports, and capacity reports, and communicating any concerns to bank management and the vendor?
   d. periodically reviewing the financial condition of the service provider and determining whether backup arrangements are warranted as a result?
   e. reviewing third-party audits, SAS 70 reports, and regulatory examination reports on the service provider, if available, and following up on any findings with the service provider?
   f. conducting on-site audits of the service provider, if appropriate based on the level of risk?
   g. participating in user groups?
   h. ensuring the bank's staff receives adequate training and documentation from the vendor or service provider?
5. If the bank operates a turnkey electronic banking software package—
   a. is software held under an escrow agreement?
   b. has the bank established procedures to ensure that relevant program files and documentation held under the software escrow agreement are kept current and complete?
6. If a vendor maintains the bank's electronic banking system, does the bank monitor the on-site or remote access of its systems by the vendor, through activity logs or other measures?

BOARD AND MANAGEMENT OVERSIGHT

1. Does the board or an appropriate committee approve the introduction of new electronic banking products and services on the basis of a written business plan and risk analysis that are commensurate with the proposed planned activity?
2. Has the bank considered—
   a. whether the service is designed to provide information on existing services to existing customers or to attract new customers?
   b. whether financial incentives will be offered to attract customers through the electronic banking service? What is the financial impact of such incentives on the bank?
   c. the potential impact of electronic banking products and services on the composition of the bank's customer base?
   d. the projected financial impact of the new service, including up-front and operating costs and any impact on fees or other revenue or expenses?
   e. internal controls appropriate for the new product or service?
   f. whether adequate management reports are provided and subject to periodic review?
   g. whether any new nonbanking activities are permissible under applicable state and federal banking laws?

h. the extent of outsourcing and responsibilities for managing vendor and service-provider relationships?

3. Has the bank evaluated the adequacy of its insurance coverage to cover operational risks in its electronic banking activities?
4. Has the bank's legal counsel been involved in the development and review of electronic banking agreements (for example, agreements with third-party vendors)? Has the bank's legal counsel also been involved in the development and review of its authentication methods to ensure that the methods provide a foundation to enforce agreements and transactions and to validate the parties involved, consistent with applicable state laws?

INTRODUCTION

Modern economies require an efficient system for transferring funds between financial institutions and between financial institutions and their customers. Banks and other depository institutions use payment systems both to transfer funds related to their own operations—for example, when engaging in federal-funds transactions—and to transfer funds on behalf of their customers. Depository institutions and the Federal Reserve together provide the basic infrastructure for the nation's payment system.

Commercial banks maintain accounts with each other and with the Federal Reserve Banks; through these accounts, the payments of the general public are recorded and ultimately settled. The demand for electronic funds transfer (EFT) services has increased with improved data communication and computer technology. Community banks that previously executed EFT transactions through a correspondent can now initiate their own same-day settlement transactions nationwide. The need for same-day settlement transactions has precipitated financial institutions' increased reliance on EFT systems. Financial institutions commonly use their EFT operations to make and receive payments, buy and sell securities, and transmit payment instructions to correspondent banks worldwide. In the United States, most of the dollar value of all funds transfers is concentrated in two electronic payment systems: the Fedwire Funds Service, which is a real-time gross settlement system provided by the Federal Reserve Banks, and the Clearing House Interbank Payments System (CHIPS), which is a private-sector multilateral settlement system owned and operated by the Clearing House Payments Company.

Final settlement occurs when payment obligations between payment-system participants are extinguished with unconditional and irrevocable funds. For transactions settled in physical currency, payment and settlement finality occur simultaneously. On occasion, settlement finality may not occur on the same day a payment is made. Without immediate settlement finality, the recipient of a payment faces the uncertainty of not receiving the value of funds that has been promised. The exposure to this uncertainty is generally referred to as *payment system risk* (PSR).

Payment system risk refers to the risk of financial loss to the participants in, and operators of, payment systems due to a variety of exposures, such as counterparty or customer default, operational problems, fraud, or legal uncertainty about the finality of settled payments. A major source of payment system risk arises when participants in, or the operator of, a payment system extends unsecured, intraday credit to facilitate the smooth and efficient flow of payments. For example, the aggregate value of intraday credit extended by the Federal Reserve, in the form of daylight overdrafts in institutions' Federal Reserve accounts, is substantial and creates significant credit exposure for the Federal Reserve Banks.

A daylight overdraft occurs whenever an institution has a negative account balance during the business day. Such a credit exposure can occur in an account that an institution maintains with a Federal Reserve Bank or with a private-sector financial institution. At a Reserve Bank, a daylight overdraft occurs when an institution has insufficient funds in its Federal Reserve account to cover Fedwire funds transfers, incoming book-entry securities transfers, or other payment activity processed by the Reserve Bank, such as automated clearinghouse or check transactions. Similarly, banks are exposed to credit risk when they permit their customers to incur daylight overdrafts in their accounts. More specific information about the types of risks involved under the rubric of payment systems risk is discussed later in this section.

When developing an institution's overview, performing annual and quarterly risk assessments, and conducting the institution's examination, examiners should review an institution's payment system risk and EFT practices. Supervisory and examination guidance and procedures should be followed to determine the risk assessment, matrix, supervisory plan, and scope of an examination. This guidance should also be used when conducting the examination. An overall initial analysis of an institution's payment system risk practices can provide examiners with quick insight on the adequacy of its current internal controls and risk-management practices, and on whether the institution's payment activity creates intraday exposures that may pose significant risk if not managed properly.

In general, examiners should review the frequency, magnitude, and trend of daylight overdrafts in an institution's Federal Reserve account, as well as any breaches of its net debit cap. Examiners should analyze the reasons for the daylight overdrafts and cap breaches; the nature of the transactions causing the overdrafts (for example, correspondent check clearings or funds transfers); whether the number of customers, correspondents, and respondents is concentrated among only a few entities; whether there is a clear pattern of transactions; and the types of activities involved. In addition, examiners should review and determine the adequacy of the resolution by the board of directors authorizing the institution's net debit cap and use of Federal Reserve intraday credit (as required by the PSR policy). The examiners' most important goal is to ensure that banks have and use appropriate risk-management policies and procedures that effectively monitor and control their exposure to payment system risk.

POLICY ON PAYMENT SYSTEM RISK

The Board of Governors of the Federal Reserve recognizes that the Federal Reserve has an important role in providing intraday balances and credit to foster the smooth operation of the payment system. The Reserve Banks provide intraday balances by way of supplying temporary, intraday credit to healthy depository institutions, predominantly through collateralized intraday overdrafts.

The Policy on Payment System Risk (PSR policy) governs the provision of intraday credit, or daylight overdrafts, to healthy depository institutions with accounts at the Federal Reserve Banks. The PSR policy is intended to foster the safety and efficiency of payment and settlement systems. The PSR policy contains three parts. Part II governs the provision of daylight overdrafts in accounts at the Reserve Banks.

Comprehensive information about payment system risk and the PSR policy is available on the Board's website.

- Payment Systems Risk (includes the most recent version of the PSR policy)
- Payment Systems Risk: Related Policy Documents
- Daylight Overdrafts and Fees

TYPES OF PAYMENT SYSTEMS

An understanding of the mechanics of the various payment systems is necessary to evaluate the operational procedures depository institutions use to control payment-processing risks for their own or their customers' accounts.

Funds Transfer Systems

Fedwire Funds Service

The Fedwire funds-transfer system is a real-time gross settlement system in which depository institutions initiate funds transfers that are immediate, final, and irrevocable when processed. Depository institutions that maintain a master account with a Federal Reserve Bank may use Fedwire to directly send or receive payments to, or receive payments from, other account holders directly. Depository institutions use Fedwire to handle large-value and time-critical payments, such as payments for the settlement of interbank purchases and sales of federal funds; the purchase, sale, and financing of securities transactions; the disbursement or repayment of loans; and the settlement of real estate transactions.

In the Fedwire funds-transfer system, only the originating financial institution can remove funds from its Federal Reserve account. Originators provide payment instructions to the Federal Reserve either online or offline. Online participants send instructions through a mainframe or PC connection to Fedwire, and no manual processing by the Federal Reserve Banks is necessary. Offline participants give instructions to the Reserve Banks by telephone. Once the telephone request is authenticated, the Reserve Bank enters the transfer instruction into the Fedwire system for execution. The manual processing required for offline requests makes them more costly; thus, they are suitable only for institutions that have small, infrequent transfers. (For further information, see https://www.federalreserve.gov/paymentsystems.)

CHIPS

The Clearing House Interbank Payments System (CHIPS) is a large-value funds-transfer system for U.S. dollar payments between domestic or foreign banks that have offices located in the United States. CHIPS provides a final intraday settlement system, continuously matching, netting, and settling queued payment orders throughout the business day.

All CHIPS payment orders are settled against positive balances and are simultaneously offset by incoming payment orders, or some combination of both. To facilitate this process, the funding participants jointly maintain an account (CHIPS account) on the books of the Federal Reserve Bank of New York. Each CHIPS participant must fund this account via a Fedwire funds transfer to fulfill its pre-funded opening-position requirement. These required balances are then used to settle payment orders throughout the day.

During the operating day, participants submit payment orders to a centralized queue maintained by CHIPS. Payment orders that do not pass certain settlement conditions are held in the central queue until an opportunity for settlement occurs or until the end-of-day settlement process. The sending and receiving participants are not obligated to settle these queued payment orders.

Each afternoon, each participant with a closing-position requirement must transfer, through Fedwire, its requirement to the CHIPS account at the Federal Reserve Bank of New York.[1] These requirements, when delivered, are credited to participants' balances at CHIPS. After completion of this process, CHIPS will transfer to those participants who have any balances remaining, that is, participants in an overall net positive position for the day, the full amount of those positions.

Manual Systems

Not all financial institutions employ an EFT system. Some banks execute such a small number of EFT transactions that the cost of a computer-based system such as Fedwire is prohibitive. Instead, these banks will continue to execute EFTs by a telephone call to a correspondent bank. Executing EFT transactions in this way is an acceptable practice as long as the bank has adequate internal control procedures.

1. Although CHIPS no longer makes distinctions between settling and nonsettling participants, CHIPS participants can use nostro banks to make transfers on their behalf.

Message Systems

The message systems employed by financial institutions, corporations, or other organizations to originate payment orders—either for their own benefit or for payment to a third party—are indispensable components of funds-transfer activities. Unlike payment systems, which transmit actual debit and credit entries, message systems process administrative messages and instructions to move funds. The actual movement of the funds is then accomplished by initiating the actual entries to debit the originating customer's account and to credit the beneficiary's account at one or more financial institutions. If the beneficiary's account or the beneficiary bank's account is also with the originator's bank, the transaction is normally handled internally through *book entry.* If the beneficiary-related accounts are outside the originating customer's bank, the transfer may be completed by use of a payment system such as Fedwire or CHIPS. The means of arranging payment orders ranges from manual methods (for example, memos, letters, telephone calls, fax messages, or standing instructions) to electronic methods using telecommunications networks. These networks may include those operated by the private sector, such as SWIFT or Telex, or other networks operated internally by particular financial institutions.

Even though the transfers initiated through systems such as SWIFT and Telex do not result in the immediate transfer of funds from the issuing bank, they do result in the issuing bank's having an immediate liability, which is payable to the disbursing bank. Therefore, the internal operating controls of these systems should be as stringent as the ones implemented for systems such as Fedwire and CHIPS.

SWIFT

The Society for Worldwide Interbank Financial Telecommunications (SWIFT) is a nonprofit cooperative of member banks that serves as a worldwide interbank telecommunications network for structured financial messaging. Based in Brussels, Belgium, SWIFT is the primary system employed by financial institutions worldwide to transmit either domestic or international payment instructions. (For further information, see https://www.swift.com.)

Automated Clearinghouse and Check Transactions

The automated clearinghouse (ACH) is an electronic payment delivery system used to process low-dollar retail payments. The system is used for preauthorized recurring payments and one-time payments. First introduced in the early 1970s as a more efficient alternative to checks, ACH has evolved into a nationwide mechanism that processes electronically originated credit and debit transfers for any participating institution nationwide. An alternative to paper checks, the ACH handles billions of payments annually.

Financial institutions are encouraged to obtain a copy of the ACH rules of the National Automated Clearing House Association (NACHA): *A Complete Guide to Rules and Regulations Governing the ACH Network.* The ACH rules provide detailed information on rule changes, their operational impact, and whether any software changes are required. The rulebook is designed to help financial institutions comply with the current NACHA rules, which are applicable to all ACH participants and include a system of national fines. (For further information, see www.nacha.org.)

The Federal Reserve ACH is governed by Operating Circular #4, "Automated Clearing House Items." Other important federal legislation concerning the ACH can be found in Regulation E (primarily regarding consumer rights pertaining to electronic funds transfers) and Regulation CC (concerning the availability of funds). (For further information, see www.frbservices.org.)

There are two types of ACH transactions: ACH debits and ACH credits. In an ACH debit transaction, the originator of the transaction is debiting the receiver's account. Therefore, funds flow from the receiver to the originator of the transaction. Mortgage payments for which consumers authorize the mortgage company to debit their accounts each month are examples of ACH debit transactions. ACH debits are also being used increasingly for one-time payments authorized through the telephone, Internet, or mail.

ACH debit transactions have similarities to check transactions. Both receivers of ACH debit files and payers of checks have the right to return transactions for various reasons, such as insufficient funds in the account or a closed account. The major risk facing institutions that originate ACH debit transactions and collect checks for customers is return-item risk. Return-item risk extends from the day funds are made available to the customer until the individual return items are received.

In an ACH credit transaction, the originator of the transaction is crediting the receiver's account. An ACH credit transaction is similar to Fedwire funds transfers in that funds flow from the originator of the transaction to the receiver. A company payroll payment to its employee would be an example of an ACH credit transaction: the bank sending payments on behalf of a customer (the employer in this instance) has a binding commitment to settle for the payments when the bank sends them to the ACH operator. Since the ACH is a value-dated mechanism, that is, transactions may be originated one or two days before the specified settlement day, the bank is exposed to temporal credit risk that may extend from one to three business days, depending on when the customer (the employer) funds the payments it originates. If the customer fails to fund the payments on the settlement day, the potential loss faced by the originating bank is equal to the total value of payments from the time the payments are sent to the ACH operator until the customer funds these payments.

SECURITIES CLEARING AND SETTLEMENT SYSTEMS

Fedwire Securities

The Fedwire Securities Service is a securities settlement system that provides safekeeping services and transfer and settlement services. The safekeeping services enable eligible participants to hold securities issued by the U.S. Department of the Treasury, federal agencies, government-sponsored enterprises (GSEs), and certain international organizations in securities accounts at the Reserve Banks. The transfer and settlement services enable eligible participants to transfer securities to other eligible participants against payment or free of payment.

Participants in the Fedwire Securities Service generally maintain a master account and have routine access to Reserve Bank intraday credit. Like the Fedwire Funds Service, access to the Fedwire Securities Service is limited to depository institutions and a few other organizations, such as federal agencies, state government treasurers' offices (which are designated by the U.S.

Department of the Treasury to hold securities accounts), and limited-purpose trust companies that are members of the Federal Reserve System. Nonbank brokers and dealers typically hold and transfer their securities through clearing banks, which are Fedwire participants that provide specialized government securities clearing services. (For more information, see www.federalreserve.gov/paymentsystems/)

Securities transfers can be made free of payment or against a designated payment. Most securities transfers involve the delivery of securities and the simultaneous exchange of payment for the securities, a transaction called delivery-versus-payment. The transfer of securities and related funds (if any) is final at the time of transfer.

Transfer-Size Limit on Book-Entry Securities

Secondary-market book-entry securities transfers on Fedwire are limited to a transfer size of $50 million par value. This limit is intended to encourage partial deliveries of large trades in order to reduce position building by dealers, a major cause of book-entry securities overdrafts before the introduction of the transfer-size limit and daylight-overdraft fees. This limitation does not apply to—

- original-issue deliveries of book-entry securities from a Reserve Bank to an institution, or
- transactions sent to or by a Reserve Bank in its capacity as fiscal agent of the United States, government agencies, or international organizations.

Thus, requests to strip or reconstitute Treasury securities or to convert bearer or registered securities to or from book-entry form are exempt from this limitation. Also exempt are pledges of securities to a Reserve Bank as principal (for example, discount window collateral) or as agent (for example, Treasury Tax and Loan collateral).

Private Systems

In addition to U.S. Treasury and government-agency securities, major categories of financial instruments commonly traded in the United States include corporate equities and bonds, municipal (state and local) government securities, money market instruments, and derivatives such as swaps and exchange-traded options and futures. These instruments are generally traded through recognized exchanges or over-the-counter dealer markets. The mechanisms for clearance and settlement vary by type of instrument and generally involve specialized financial intermediaries, such as clearing corporations and depositories. Clearing corporations provide trade comparison and multilateral netting of trade obligations. Securities depositories, in contrast, hold physical securities and provide book-entry transfer and settlement services for their members.

The vast majority of corporate equity and bond trades are cleared through the National Securities Clearing Corporation (NSCC). Most corporate securities, as well as municipal government bonds, are held at the Depository Trust Company (DTC) in New York. Settlement of securities cleared through the NSCC is effected by book-entry transfers at the DTC. The DTC and the NSCC are owned by the Depository Trust and Clearing Corporation, an industry-owned holding company. (For more information, see www.dtcc.com.)

U.S. Treasury, federal-agency, and mortgage-backed securities are generally traded in over-the-counter markets. The Fixed Income Clearing Corporation (FICC) compares and nets its members' trades in most U.S. Treasury and federal-agency securities. The FICC relies on the Fedwire securities service, discussed above, to effect final delivery of securities to its participants. The FICC is owned by the DTCC. (For more information see www.dtcc.com.)

The FICC also provides automated post-trade comparison, netting, risk-management, and pool-notification services to the mortgage-backed securities market. The FICC provides its specialized services to major market participants active in various Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (Freddie Mac or FHLMC), and Federal National Mortgage Association (Fannie Mae or FNMA) mortgage-backed securities programs. The net settlement obligations of FICC participants are settled through the Fedwire book-entry securities system.

ELECTRONIC FUNDS TRANSFER ACTIVITIES

EFT MANAGEMENT

Economic and financial considerations have led financial institutions and their customers to recognize the need to manage cash resources more efficiently. The PSR policy calls on private networks and institutions to reduce their own credit and operational risks. It also depends on the role of the Federal Reserve and other financial institution regulators in examining, monitoring, and counseling institutions. To ensure that banking institutions are following prudent banking practices in their funds-transfer activities, examinations should focus equally on the evaluation of credit, liquidity, and operational risks.

The bank should establish guidelines for types of allowable transfers. Procedures should be in effect to prevent transfers drawn against uncollected funds. Thus, banks should not transfer funds against simple ledger balances unless preauthorized credit lines have been established for that account.

Errors and omissions, as well as the fraudulent alteration of the amount of a transfer or of the account number to which funds are to be deposited, could result in losses to the bank. Losses may include total loss of the transferred funds, loss of availability of funds, interest charges, and administrative expenses associated with the recovery of the funds or correction of the problem.

Management is responsible for assessing the inherent risks in the EFT system, establishing policies and controls to protect the institution against unreasonable exposures, and monitoring the effectiveness of safeguards. Regulatory agencies will ensure that each financial institution has evaluated its own risks realistically and has adequate accounting records and internal controls to keep exposures within reasonable, established limits.

The risks associated with any computerized EFT system can be reduced if management implements the controls that are available on the system. For example, the authority to enter, verify, and send transfers can be segregated, and the dollar amount of transactions can be limited. Effective risk management requires that management establish and maintain—

- reasonable credit limits (payments in excess of these limits that involve significant credit risk must be properly approved by appropriate lending authorities),
- adequate recordkeeping to determine the extent of any intraday overdrafts and potential overnight overdrafts before releasing payments, and
- proper monitoring of respondents' accounts when the institution sets the positions of others. Responsibility for this function should be assigned to an appropriate supervisory level of management that will ensure the use of adequate internal controls.

Authentication or Verification Methods

The same due care that financial institutions use when executing EFT transactions must be used when accepting EFT requests from customers. Management must implement security procedures for ensuring that the transfer requests are authentic. As stated in Uniform Commercial Code (UCC) section 4A-201, "Authorized and Verified Payment Orders," security procedures may require the use of algorithms or other codes, identifying words, or numbers; encryption; callback procedures; or similar security devices. An explanation of authorized and verified payment orders is detailed in UCC section 4A-202.

Signature Verification

One method to verify the authenticity of a customer's EFT request is to verify the customer's signature. Unfortunately, this procedure cannot be performed when the customer requests the transaction by telephone. Some financial institutions have implemented policies whereby the customer completes and signs a transfer request, and then faxes the request to the bank. However, this is not a safe EFT procedure because, although the bank can verify the signature on the faxed request, it cannot be certain that the transfer request is legitimate. Any document that is transmitted electronically can be altered (for example, by changing the amount or account number). The alteration can occur before the document is digitalized (that is, before being fed into the fax machine) or after. In most instances, these alterations cannot be detected by the receiving entity. If there is any question about a document's authenticity, the transaction should be reconfirmed through other sources.

Personal Identification Numbers

One way for financial institutions to authenticate transfers initiated over the telephone is through the use of personal identification numbers (PINs) issued to each customer. When a customer requests a transfer, his or her identity is verified by comparing the supplied PIN with the customer's PIN-request form that is on file. At a minimum, the following safeguards should be implemented for these types of transfers:

- All nonretail customers should be requested to sign an agreement whereby the bank is held harmless in the event of an unauthorized transfer if the bank follows routine authentication procedures. The customer is responsible for informing the bank about changes in who is authorized to execute EFTs. These procedures should minimize the risk to the bank if someone is able to execute a fraudulent transaction. (These procedures are described in detail in UCC section 4A-202.)
- All transactions over a specific dollar amount should be re-verified by a callback routine. The bank should require that the person being called for re-verification is someone other than the person who initially requested the transaction.
- Whenever new PINs are issued, they should be mailed in sealed, confidential envelopes (preferably computer-generated) by someone who does not have the ability to execute wire transfers.
- The number of bank employees who have access to PINs should be very limited.

Tape Recording

The tape recording of EFT requests made over the telephone is another internal control practice. When possible, verifying and recording the incoming telephone number (that is, using a caller-ID system) is also a good practice. The laws addressing telephone recording vary by state. Some states require that the caller be informed that the conversation is being recorded; others do not have this requirement. Regardless of the state's law, the bank should inform callers that, for their protection, conversations are being recorded. Moreover, banks should have in place a policy for archiving the taped telephone records and should retain them for a specified period of time, at least until the statements from the Federal Reserve or correspondent banks have been received and reconciled.

Statements of Activity

Some larger banks have implemented a procedure whereby customers are electronically sent a summary statement at the end of each day. The statement lists the transfers executed and received on their behalf. The statement can be sent through a fax machine, a personal computer, or a remote printer. This procedure quickly identifies any transfers the customer did not authorize.

Test Keys

EFT requests can be authenticated using *test keys.* A test key is a calculated number that is derived from a series of codes that are contained in a test-key book. The codes in a test-key book represent such variables as the current date, hour of the day, receiving institution, receiving account number, and amount of the transfer. The value derived from these variables equals the test key. The financial institution or corporate customer initiating the transfer will give its EFT information, along with the test-key value. The receiving bank will recalculate the test key and, if the two test keys equal the same amount, the EFT request is considered authenticated. Test-key code books should be properly secured to prevent unauthorized access or fraudulent use. The use of test keys has declined in recent years as more and more institutions implement PC-based EFT systems.

Blanket Bond

Although computer-related employee misappropriations are normally covered, financial institution blanket bond policies generally exclude certain types of EFT activities from standard coverage. Separate coverage for EFT systems is available and should be suggested to management, particularly if a significant risk exposure exists. A bank's fidelity bond insurance could be declared null and void by the carrier if a fraudulent transfer were to occur and the loss was directly attributable to weak internal controls. (See section 4040.1, "Management of Insurable Risks.")

SUPERVISORY RISK EVALUATION

Bank management is responsible for assessing the inherent risks in the EFT system (or systems) it uses. Management should establish policies and controls to protect the institution against unreasonable exposures, as well as monitor the effectiveness of the established safeguards.

Examiner Responsibilities

Examiners are responsible for ensuring that financial institutions have assessed and evaluated their risks realistically and have adopted internal controls that are adequate to keep those risks within acceptable limits. The types of risks involved in EFT systems, as well as payment systems generally, are discussed below.

Credit Risk

Credit risk is the risk that a counterparty will not settle an obligation for full value when due, nor at any time subsequently. Any time an institution extends credit to a customer or permits a customer to use provisional funds to make a payment, the institution is exposed to the risk that the customer will not be able to meet its payment obligation. If the customer is unable or unwilling to repay the credit extension, the institution could incur a financial loss. Similarly, an institution that receives a payment in provisional funds has a credit exposure to the sender until such time as the payment is settled with finality, that is, until the payment becomes unconditional and irrevocable. If an institution permits a customer to withdraw or make a payment with provisional funds received, then the institution incurs credit exposure to both the sender of the provisional funds and the customer. Those credit exposures are not extinguished until the provisional funds received are settled with finality. With respect to payment systems risk, overall credit risk consists of (1) direct-credit risk to the Federal Reserve, that is, a borrowing institution may be unable to cover its intraday overdraft arising from a transfer of funds or receipt of book-entry securities, thus causing a Federal Reserve Bank to incur a loss; (2) private direct-credit risk, or the possibility of loss to institutions extending credit; and (3) systemic risk, which is the possibility of loss to multiple creditors when borrowing institutions fail to cover their obligations to creditor institutions. Variants of credit risk include sender risk, receiver risk, and return-item risk.

Systemic risk. Stated more clearly, systemic risk occurs when one participant in a payment system, or in the financial markets generally, fails to repay its required obligation when due, and this failure prevents other private or market participants or financial institutions from meeting their settlement obligations when due. Systemic risk may result from extraneous events, actions, or reasons that are independent of the institution, or from developments in the payment system. Changes in the capital markets, domestic political or government announcements or actions, unplanned events, or sovereign actions of other countries are examples of events that may cause systemic risk.

Sender risk. Sender risk is the risk that results if a depository institution uses an extension of credit to make an irrevocable payment on behalf of a customer. This credit can be a loan or an extension of payment against uncollected or provisional funds or against insufficient balances.

Receiver risk. Receiver risk arises when an institution accepts funds from a sender who may be a customer, another institution, or the payment system. As the receiver of funds, the institution relies on the sender's ability to settle its obligations. The risk exists while payments are revocable within the system and remains until final settlement.

Return-item risk. The major risk in originating ACH debit transactions and collecting checks for customers is return-item risk. Return-item risk extends from the day funds are made available to customers until the individual items can no longer legally be returned. The receiver of ACH debit transactions, or the payer of checks, has the right to return transactions for various reasons, including insufficient funds in its customer's account. To minimize its exposure, an institution should perform credit assessments of all customers that originate large dollar volumes of ACH debit transactions, and for all customers for which the institution collects large volumes of checks. Such assessments ensure that if ACH or check items are returned after the customer has been granted use of the funds, the customer will be able to return the funds to the institution.

Liquidity Risk

Liquidity risk is the risk that a counterparty will not settle an obligation for full value when due, even though the counterparty may later settle the obligation. Liquidity risk may result from unexpected market or operational disruptions or from catastrophic or unplanned events. It may also result from sovereign actions; therefore, sovereign risk can give rise to liquidity risk.

Sovereign Risk

Sovereign risk refers to the financial capacity of governments to generate foreign-currency revenues to repay their obligations. This capacity is generally limited because government assets are predominantly the discounted value of future taxes denominated in the local currency. Governments have direct access to foreign-currency revenues only when the economy is dominated by a public sector that derives most of its revenues from exports (for example, oil or gold). Sovereign risk is not limited to the country's federal government debt. It also includes debt contracted by all public and publicly guaranteed entities (such as provincial, state, or local governments and all other debt with a government's guarantee).

Actions taken by nondomestic governments can affect the payments of certain participants in a payment system, and these actions can be detrimental to other participants in the system. Sovereign risk can include the imposition of exchange-control regulations on a bank participating in international foreign-exchange activities. While the bank itself may be both willing and able to settle its position, government intervention may prevent it from doing so. The risk can be controlled by regularly monitoring the payment-system laws of other countries and by taking specific alternative actions to lessen the risk. Alertness to a bank's sovereign-risk exposure to its counterparties located in other nations, and to possible alternative actions, can considerably lessen this risk.

Legal Risk

Any transaction occurring in a payment system is subject to the interpretation of courts in different countries and legal systems. This issue is normally addressed by adopting "governing-law" provisions in the rules of the systems themselves. These provisions provide for all disputes between members to be settled under the laws of a specific jurisdiction. However, if a local court refuses to recognize the jurisdiction of a foreign court, the rules may be of limited use. This risk is difficult to address because there is no binding system of international commercial law for electronic payments. Banks should seek a legal opinion regarding the enforceability of transactions settled through a particular system.

Operational Risk

Operational risk may arise from—

- a system failure caused by a breakdown in the hardware or software supporting the system, possibly resulting from design defects, insufficient system capacity to handle transaction volumes, or a mechanical breakdown, including telecommunications;
- a system disruption if the system is unavailable to process transactions, possibly due to system failure, destruction of the facility (from natural disasters, fires, or terrorism), or operational shutdown (from employee actions, a business failure, or government action); or
- the system being compromised as a result of fraud, malicious damage to data, or error.

Whatever the source, the loss of availability of a payment system can adversely affect major participants, their correspondents, markets, and interdependent payment mechanisms.

Banks should control operational risk through a sound system of internal controls, including physical security, data security, systems testing, segregation of duties, backup systems, and contingency planning. In addition, a disruption to a bank's own internal payment processing systems or its access to external payment systems can adversely affect both the bank's own payments activities, as well as those of other participants in a payment system. As such, a comprehensive audit program is essential to assess the risks, adequacy of controls, and compliance with bank policies.

Risk-Control Issues

Bank management should consider and develop risk-management policies and procedures to address the variety of credit, liquidity, operational, and other risks that can arise in the normal course of conducting its payment business—regardless of the clearing and settlement method of the particular payment systems in which the bank participates. EFT systems differ widely in form, function, scale, and scope of activities. Consequently, the specific risk-management measures an institution employs for a particular EFT system will differ depending on the inherent risks in the system. As a general matter, an institution should adopt risk-management controls commensurate with the nature and magnitude of risks involved in a particular EFT system.

In addition to assessing the adequacy of an institution's risk-management procedures for measuring, monitoring, and controlling its risks from participating in a payment system (or systems) and from providing payment services to its customers, examiners should consider the following internal control guidelines when they review policies and procedures covering EFT activities:

- Job descriptions for personnel responsible for a bank's EFT activities should be well defined, providing for the logical flow of work and adequate segregation of duties.
- No single person in an EFT operation should be responsible for all phases of the transaction (that is, for data input, verification, and transmission or posting).
- All funds transfers should be reconciled at the end of each business day. The daily balancing process should include a reconciliation of both the number and dollar amount of messages transmitted.
- All adjustments required in the processing of a transfer request should be approved by a bank's supervisory personnel, with the reasons for the adjustment documented. Transfer requests "as of" a past or future date should require the supervisor's approval with well-defined reasons for those requests.
- Only authorized persons should have access to EFT equipment.

Considerable documentation is necessary to maintain adequate accounting records and auditing control. Many banks maintain transfer-request logs, assign sequence numbers to incoming and outgoing messages, and keep an unbroken electronic copy of all EFT messages. At the end of each business day, employees who are independent of the transfer function should compare request forms with the actual transfers to ensure that all EFT documents are accounted for. When reviewing the adequacy of internal controls, examiners should review the funds-transfer operations to determine that recordkeeping systems are accurate and reliable, all transactions are handled promptly and efficiently, duties are separated appropriately, audit coverage is adequate, and management recognizes the risks associated with these activities.

Examination procedures are available on the Examination Documentation (ED) modules page on the Board's website. See the following ED module for examination procedures on this topic:

- Electronic Funds Transfer Risk Assessment

INTRODUCTION

As used in the context of state member bank supervision, the term "crypto-asset" generally refers to any digital asset implemented using cryptographic techniques, including tokens denominated in national currencies and issued using distributed ledger technology or similar technologies to facilitate payments (dollar tokens).[1] Crypto-asset-related activities may include, but are not limited to, crypto-asset safekeeping and traditional custody services; ancillary custody services; loans collateralized by crypto-assets; and issuance and distribution of dollar tokens.

The structure, risk, and scope of a state member bank's crypto-asset-related activities can vary considerably. While crypto-asset-related activities may present opportunities to banks, they could also pose risks related to safety and soundness, consumer protection, and financial stability. As such, state member banks engaging in permissible crypto-asset-related activities should have appropriate controls in place to engage in these activities in a safe-and-sound manner. The provision of traditional banking services (e.g., deposit accounts, ordinary lending) to crypto-asset-related entities is not considered to be a crypto-asset-related activity for a state member bank. State member banks should take appropriate measures to mitigate risks, including liquidity risks, associated with providing such services to crypto-asset-related entities. However, state member banks are neither prohibited nor discouraged from providing banking services to customers of any specific class or type, as permitted by law or regulation.

The purpose of this manual section is to

- clarify supervisory expectations regarding notification of engagement in crypto-asset-related activities;
- discuss legal permissibility concerns associated with a state member bank's engagement in crypto-asset-related activities;
- describe the supervisory nonobjection process for state member banks seeking to engage in certain activities involving dollar tokens;
- discuss statements on crypto-asset-related risks to banking organizations; and
- outline supervisory considerations in assessing state member banks engaged in crypto-asset-related activities.

NOTIFICATION REGARDING ENGAGEMENT IN CRYPTO-ASSET-RELATED ACTIVITIES

A state member bank should notify its lead supervisory point of contact at the responsible Reserve Bank prior to engaging in any crypto-asset-related activity. Any state member bank that is already engaged in crypto-asset-related activities should notify its Reserve Bank point of contact promptly regarding such activities, if it has not already done so.

Before engaging in any crypto-asset-related activities, a state member bank must ensure such activity is legally permissible and determine whether any filings are required under applicable federal or state laws. A state member bank should, prior to engaging in these activities, have in place adequate systems, risk management, and controls to conduct such activities in a safe-and-sound manner and consistent with all applicable laws, including applicable consumer protection statutes and regulations.

For more information, see SR 22-6/CA 22-6, "Engagement in Crypto-Asset-Related Activities by Federal Reserve-Supervised Banking Organizations."

LEGAL PERMISSIBILITY OF CRYPTO-ASSET-RELATED ACTIVITIES

Prior to engaging in new activities of any kind, a state member bank must ensure that such activities are legally permissible. A state member bank seeking to engage in (or currently engaged in) crypto-asset-related activities must

1. In Office of the Comptroller of the Currency (OCC) Interpretive Letter 1174, the OCC specifically recognized the authority of national banks to use distributed ledger technology or similar technologies to conduct payments activities as principal, including by issuing, holding, or transacting in dollar tokens. See OCC Interpretive Letter No. 1174 (January 4, 2021). The OCC uses the term "stablecoin" and the Board of Governors of the Federal Reserve (Board) uses the term "dollar token," but the terms are synonymous for purposes of OCC Interpretive Letter 1174. For the avoidance of doubt, any bank liabilities (including deposits) that meet the definition of dollar token above are "dollar tokens."

analyze the permissibility of such activities under relevant state and federal laws and determine whether any filings are required under state and federal laws and regulations, including the Federal Reserve Act, the Federal Deposit Insurance Act, and the Board's Regulation H (12 CFR pt. 208).

On January 27, 2023, the Board issued a Policy Statement on Section 9(13) of the Federal Reserve Act (Policy Statement). The Policy Statement sets out a rebuttable presumption that the Board will exercise its discretion under section 9(13) of the Federal Reserve Act to limit state member banks to engaging as principal in only those activities that are permissible for national banks—in each case, subject to the terms, conditions, and limitations placed on national banks with respect to the activity—unless those activities are permissible for state banks under federal law.[2]

A state member bank may rebut the presumption set out by the Policy Statement if

- there is a clear and compelling rationale for the Board to allow the proposed deviation in regulatory treatment among federally supervised banks; and
- the state member bank has robust plans for managing the risks of the proposed activity in accordance with principles of safe-and-sound banking.[3]

The preamble to the Policy Statement includes a discussion about how the Board would presumptively apply section 9(13) of the Federal Reserve Act to certain crypto-asset-related activities:[4]

- The Board would presumptively prohibit state member banks from holding most crypto-assets as principal.[5] Examiners should promptly notify Board Legal if they become aware of any state member bank holding crypto-assets as principal.[6]
- Further, state member banks seeking to issue, hold, or transact in dollar tokens would need to demonstrate, to the satisfaction of Federal Reserve supervisors, that the bank has controls in place to conduct the activity in a safe-and-sound manner and receive a supervisory nonobjection before commencing such activity.

The preamble also clarifies that nothing in the Policy Statement would prohibit a state member bank from providing safekeeping services for crypto-assets in a custodial capacity if such activities are conducted in a safe-and-sound manner and in compliance with consumer, anti-money-laundering, and anti-terrorist-financing laws.

The Policy Statement also reminds state member banks that legal permissibility is a necessary, but not sufficient, condition to establish that a state member bank may engage in a particular activity. It reiterates that a state member bank must, at all times, conduct its business and exercise its powers with due regard to safety and soundness. It states that a supervised banking organization is expected, at a minimum, to have internal controls and information systems that are appropriate for the nature, scope, and risks of its activities, including crypto-asset-related activities.[7]

2. 12 CFR 208.112(c). Board staff expects that, in these circumstances, insured state banks would likely be prohibited from engaging in the activity under section 24 of the Federal Deposit Insurance Act unless they receive authorization from the Federal Deposit Insurance Corporation (FDIC). See 12 CFR 208.112(e).

3. 12 CFR 208.112(d).

4. 88 Fed. Reg. 7848 (February 7, 2023).

5. For the purposes of the Policy Statement, the term "crypto-assets" refers to digital assets issued using distributed ledger technology and cryptographic techniques (for example, bitcoin and ether) but does not include such assets to the extent they are more appropriately categorized within a recognized, traditional asset class (for example, securities with an effective registration statement filed under the Securities Act of 1933 that are issued, stored, or transferred through the system of a regulated clearing agency and in compliance with all applicable federal and state securities laws). To the extent transmission using distributed ledger technology and cryptographic techniques changes the risks of a traditional asset (for example, through issuance, storage, or transmission on an open, public, and/or decentralized network, or similar system), the Board reserves the right to treat it as a "crypto-asset." See 88 Fed. Reg. 7848 (February 7, 2023).

6. Any question about whether a state member bank is conducting the activity "as principal" should be referred to Board Legal.

7. See 12 CFR 208.112(f); 12 CFR 208, Appendix D-1.

SUPERVISORY NONOBJECTION PROCESS FOR STATE MEMBER BANKS SEEKING TO ENGAGE IN CERTAIN ACTIVITIES INVOLVING DOLLAR TOKENS

SR-23-8/CA-23-5, "Supervisory Nonobjection Process for State Member Banks Seeking to Engage in Certain Activities Involving Dollar Tokens," clarifies that a state member bank seeking to engage in activities permitted for national banks under OCC Interpretive Letter 1174, including issuing, holding, or transacting in dollar tokens to facilitate payments, is required to demonstrate, to the satisfaction of Federal Reserve supervisors, that the bank has controls in place to conduct the activity in a safe-and-sound manner.[8] To verify this requirement has been met, a state member bank should receive a written notification of supervisory nonobjection from the Federal Reserve before engaging in the proposed activities.

A state member bank seeking to engage in such dollar token activities, including for the purpose of testing, must notify its lead supervisory point of contact at the Federal Reserve of the bank's intention to engage in the proposed activity and should include a description of the proposed activity. Federal Reserve supervisory staff may follow up with the bank to seek additional information in order to better understand the proposal and the control framework that the state member bank has put in place. After receiving a written notification of supervisory nonobjection, state member banks will continue to be subject to supervisory review and heightened monitoring of these activities.

To obtain a written notification of supervisory nonobjection, the state member bank should demonstrate that it has established appropriate risk-management practices for the proposed activities, including having adequate systems in place to identify, measure, monitor, and control the risks of its activities, and the ability to do so on an ongoing basis. Federal Reserve staff will focus on the risks discussed in the preamble to the Policy Statement with respect to dollar tokens, including

- *operational risks,* including those risks associated with the governance and oversight of the network; clarity of the roles, responsibilities, and liabilities of parties involved; and the transaction validation process (e.g., timing and finality of settlement of transactions, potential irreversibility of transactions, and the central authority of transaction records);
- *cybersecurity risks,* including risks associated with the network on which the dollar token is transacted, the use of smart contracts, and any use of open source code;
- *liquidity risks,* including the risk that the dollar token could experience substantial redemptions in a short period of time that would trigger rapid outflows of deposits;
- *illicit finance risks,* including risks relating to compliance with Bank Secrecy Act and Office of Foreign Asset Control requirements, which include requiring banking organizations to verify the identity of a customer, perform due diligence to understand the nature and purpose of the customer relationship, and perform ongoing monitoring to identify and report suspicious activity; and
- *consumer compliance risks,* including risks related to identifying and ensuring compliance with any consumer protection statutes and regulations that apply to the specific dollar token activity.

Federal Reserve staff will also assess whether the bank has demonstrated that it understands and will comply with laws that apply to the proposed activities.

For more information, see SR-23-8/CA-23-5.

STATEMENTS ON CRYPTO-ASSET-RELATED RISKS TO BANKING ORGANIZATIONS

Joint Statement on Crypto-Asset Risks to Banking Organizations

On January 3, 2023, the Board, FDIC, and OCC (federal banking agencies) issued a Joint Statement on Crypto-Asset Risks to Banking Organizations (Interagency Statement), which highlights key risks associated with crypto-assets and crypto-asset sector participants of which banking organizations should be aware and describes the federal banking agencies' ap-

8. Depending on the specifics of the proposed activity, filing requirements may apply. For example, some activities involving dollar tokens may represent a change in the general character of a bank's business. See 12 CFR 208.3.

proaches to supervision in this area. The Interagency Statement reiterates that supervised banking organizations should ensure that any crypto-asset-related activities that they intend to engage in can be performed in a safe-and-sound manner, and in compliance with applicable laws and regulations, including those designed to protect consumers (such as fair lending laws and prohibitions against unfair, deceptive, or abusive acts or practices).

The key risks associated with crypto-assets and crypto-asset sector participants cited in the Interagency Statement include

- risk of fraud and scams among crypto-asset sector participants;
- legal uncertainties related to custody practices, redemptions, and ownership rights, some of which are currently the subject of legal processes and proceedings;
- inaccurate or misleading representations and disclosures by crypto-asset companies, including misrepresentations regarding federal deposit insurance, and other practices that may be unfair, deceptive, or abusive, contributing to significant harm to retail and institutional investors, customers, and counterparties;
- significant volatility in crypto-asset markets, the effects of which include potential impacts on deposit flows associated with crypto-asset companies;
- susceptibility of stablecoins (dollar tokens) to run risk, creating potential deposit outflows for banking organizations that hold stablecoin (dollar token) reserves;
- contagion risk within the crypto-asset sector resulting from interconnections among certain crypto-asset participants, including through opaque lending, investing, funding, service, and operational arrangements. These interconnections may also present concentration risks for banking organizations with exposures to the crypto-asset sector;
- risk-management and governance practices in the crypto-asset sector exhibiting a lack of maturity and robustness; and
- heightened risks associated with open, public, and/or decentralized networks, or similar systems, including, but not limited to, the lack of governance mechanisms establishing oversight of the system; the absence of contracts or standards to clearly establish roles, responsibilities, and liabilities; and vulnerabilities related to cyber-attacks, outages, lost or trapped assets, and illicit finance.

The Interagency Statement also noted that

- the federal banking agencies have significant safety-and-soundness concerns with business models that are concentrated in crypto-asset-related activities or have concentrated exposures to the crypto-asset sector; and
- based on current understanding and experience to date, the federal banking agencies believe that issuing or holding as principal crypto-assets that are issued, stored, or transferred on an open, public, and/or decentralized network, or similar system, is highly likely to be inconsistent with safe-and-sound banking practices.

Joint Statement on Liquidity Risks to Banking Organizations Resulting from Crypto-Asset Market Vulnerabilities

On February 23, 2023, the federal banking agencies issued a Joint Statement on Liquidity Risks to Banking Organizations Resulting from Crypto-Asset Market Vulnerabilities (Interagency Liquidity Statement) on the liquidity risks presented by certain sources of funding from crypto-asset-related entities and some effective practices to manage such risks.

The Interagency Liquidity Statement does not create new risk-management principles but instead reminds banking organizations to apply existing risk-management principles, including as highlighted in the 2010 Interagency Policy Statement on Funding and Liquidity Risk Management,[9] to relationships with crypto-asset-related entities.

The Interagency Liquidity Statement notes that certain sources of funding from crypto-asset-related entities may pose heightened liquidity risks to banking organizations due to the unpredictability of the scale and timing of deposit inflows and outflows, including, for example

- *Deposits placed by a crypto-asset-related entity that are for the benefit of the crypto-asset-related entity's customers (end customers).* The stability of such deposits may be driven by the behavior of the end customer or crypto-asset sector dynamics, and not solely by the crypto-asset-related entity itself, which is the

9. SR-10-6, "Interagency Policy Statement on Funding and Liquidity Risk Management."

banking organization's direct counterparty. The stability of the deposits may be influenced by, for example, periods of stress, market volatility, and related vulnerabilities in the crypto-asset sector, which may or may not be specific to the crypto-asset-related entity. Such deposits can be susceptible to large and rapid inflows and outflows, when end customers react to crypto-asset-sector-related market events, media reports, and uncertainty. This uncertainty and resulting deposit volatility can be exacerbated by end customer confusion related to inaccurate or misleading representations of deposit insurance by a crypto-asset-related entity.
- *Deposits that constitute stablecoin-related (dollar token-related) reserves.* The stability of such deposits may be linked to demand for dollar tokens, the confidence of dollar token holders in the dollar token arrangement, and the dollar token issuer's reserve management practices. Such deposits can be susceptible to large and rapid outflows stemming from, for example, unanticipated dollar token redemptions or dislocations in crypto-asset markets.

The Interagency Liquidity Statement also notes that it is important for banking organizations to actively monitor the liquidity risks inherent in certain funding sources from crypto-asset-related entities, such as those described above, and to establish and maintain effective risk management and controls commensurate with the level of liquidity risks from such funding sources. The Interagency Liquidity Statement asserts that effective risk-management practices could include

- understanding the direct and indirect drivers of potential behavior of deposits from crypto-asset-related entities and the extent to which those deposits are susceptible to unpredictable volatility;
- assessing potential concentration or interconnectedness across deposits from crypto-asset-related entities and the associated liquidity risks;
- incorporating the liquidity risks or funding volatility associated with crypto-asset-related deposits into contingency funding planning, including liquidity stress testing and, as appropriate, other asset-liability governance and risk-management practices; and
- performing robust due diligence and ongoing monitoring of crypto-asset-related entities that establish deposit accounts, including assessing the representations made by those crypto-asset-related entities to their end customers about such deposit accounts that, if inaccurate, could lead to rapid outflows of such deposits.

The Interagency Liquidity Statement reiterates that banking organizations are neither prohibited nor discouraged from providing banking services to customers of any specific class or type, as permitted by law or regulation.

SUPERVISORY CONSIDERATIONS IN ASSESSING STATE MEMBER BANKS WITH CRYPTO-ASSET-RELATED ACTIVITIES

Examiners should assess a state member bank's crypto-asset-related activities following the general approach that is used for assessing other activities and risks at state member banks. Different crypto-asset-related activities and different business models should be evaluated according to their specific risks and may affect different CAMELS component ratings. For example, failure to mitigate the risks of a high concentration of deposits from crypto-asset-related entities would impact the Management and Liquidity ratings. Furthermore, examiners would address the financial weaknesses in the quality and performance of loans secured by crypto-assets in the bank's Asset Quality component rating.

Examiners should, to the extent possible in the scoping or supervisory planning process, understand the nature and volume of a state member bank's ongoing and planned crypto-asset-related activities prior to the examination or supervisory event. Examiners should identify the risks associated with a state member bank's ongoing and planned crypto-asset-related activities and assign Federal Reserve staff with appropriate expertise to assist in the supervisory assessment of the state member bank. Examiners should consider the following when reviewing a state member bank's ongoing and planned crypto-asset-related activities:

1. Identify each ongoing and planned crypto-asset-related activity, and consult internally with Board Legal or other staff, as appropriate, to determine whether such activity is

legally permissible and whether any filings or applications may be required.
   a. This may include an assessment, to be conducted by Board Legal, of whether a state member bank's crypto-asset-related activities have caused a change in the general character of the bank's business or in the scope of its corporate powers.[10]
   b. This also may include an assessment of whether a state member bank seeking to issue, hold, or transact in dollar tokens to facilitate payments must demonstrate, to the satisfaction of Federal Reserve supervisors, that the bank has controls in place to conduct the activity in a safe-and-sound manner and receive a supervisory nonobjection before commencing such activity.
2. Assess whether the state member bank's board understands its crypto-asset-related activities and risks and whether the activities align with the organization's overall risk tolerance or appetite.
3. Identify the state member bank's long-term strategic goals and assess how its crypto-asset-related activities support those goals and if there are any planned expansions of the existing crypto-asset-related activities to achieve those goals.
4. Assess whether senior management has the required expertise to manage the bank's crypto-asset-related activities.
5. Assess whether adequate training and educational resources are provided to all relevant staff, especially regarding any enhanced operational resilience, Bank Secrecy Act/Anti-Money-Laundering, and "know your customer" requirements.
6. Determine whether policies, procedures, and risk limits, including any concentrations, are appropriate.
7. Determine whether the state member bank has in place internal controls and information systems that are appropriate to the nature, scope, and risks of its activities.[11]
8. Ascertain whether the state member bank has appropriate systems to monitor and control risks, including
   a. financial risks (including liquidity, credit, and market);
   b. operational risks (including cybersecurity and use of third parties); and
   c. compliance risks (including compliance with Bank Secrecy Act and Office of Foreign Asset Control requirements to reduce the risk of illicit financial activity).
9. Determine whether reporting and communication systems are adequate and accurate.
10. Assess whether audit and independent review functions over crypto-asset-related activities are adequate.

10. 12 CFR 208.3(d)(2).

11. See 12 CFR pt. 208, appendix D-1.

6000—BANK REGULATIONS

The 6000 series of sections provide information on selected regulations that pertain to safety and soundness examinations of state member banks that are not already addressed in other parts of the manual. These sections summarize and explain the rules, as amended, but are not substitutes for the rules themselves. Refer to the *Code of Federal Regulations* (CFR) for more information on the Federal Reserve's regulations.

It is important for a federally insured depository institution[1] (bank) to control and limit the risk exposures posed to it by another domestic bank (whether or not that institution is an insured depository institution) or foreign bank with which it does business (referred to as a *correspondent*). These exposures may include all extensions of credit to a correspondent; deposits or reverse repurchase agreements with a correspondent; guarantees, acceptances, or standby letters of credit on behalf of a correspondent; purchases or acceptance as collateral of correspondent-issued securities; and all similar transactions. A bank needs to develop internal procedures to evaluate and control the risk exposures to the bank from its correspondents. Such procedures would help prevent a situation whereby the failure of a single correspondent could trigger the failure of a federally insured depository institution having claims on the failed correspondent. (See SR-93-36.)

A bank's principal sources of exposure to its correspondent tend to arise from two types of activity. First, banks may become exposed when obtaining services from (such as check-collection services), or providing services to, their correspondents. Second, exposure may arise when banks engage in transactions with correspondents in the financial markets. Each type of exposure has its own characteristics and its own risks.

Correspondent banking services are the primary source of interbank exposure for the majority of banks, particularly small and medium-sized banks. In connection with check-collection services and other trade- or payment-related correspondent services, banks often maintain balances with their correspondents in order to settle transactions and compensate the correspondents for the services provided. These balances give rise to exposure to the correspondents. Although correspondent services are in some cases provided on a fee basis, many correspondents may prefer compensating-balance arrangements, as these balances provide the correspondents with a stable source of funding. Also, some banks may prefer to pay for services with "soft charges" in the form of balances instead of "hard charges" in the form of fees.

Exposure to a correspondent may be significant, particularly when a bank uses one correspondent for all of its check collections and other payment services; loans excess reserve account balances (federal, or fed, funds) to the correspondent,[2] or engages in other banking transactions with correspondents.[3] This exposure may increase when interest rates fall, as higher levels of compensating balances may be required to provide adequate compensation to the correspondent.

Money-center banks and large regional banks may have significant exposure to correspondents[4] through their activities in interbank markets, such as the securities, swap, and foreign-exchange markets. Interbank transactions that call for performance in the future (such as swaps, foreign-exchange contracts, and over-the-counter options) give rise to exposure to the correspondents that act as counterparties[5] in such transactions. In addition to credit risk, such transactions may involve interest-rate risk,

1. A federally insured depository institution refers to a bank, as defined in section 3 of the Federal Deposit Insurance Act (12 USC 1813), and includes a federally insured national bank, state bank, District bank, or savings association, and a federally insured branch of a foreign bank.

2. In the fed funds market, a loan of fed funds is often referred to as a sale. Borrowing of fed funds is referred to as a purchase.

3. Although a bank's primary correspondent often will borrow (purchase) fed funds as principal directly from the bank, a correspondent may act as agent to place the funds with another institution. In such agency arrangements, a bank may provide its correspondent with a preapproved list of institutions with which the correspondent may place the funds. When a correspondent is acting as the bank's agent in placing fed funds, the bank's exposure would be to the ultimate purchaser of the funds, not to the correspondent placing the funds on its behalf.

Generally, fed funds loans are unsecured. A bank may also provide funds to a correspondent through transactions known as *reverse repurchase agreements*, in which the bank provides funds to the correspondent by buying an asset, generally a government security. The correspondent agrees that it will repurchase the asset from the bank at the expiration of a set period, generally overnight, at a repurchase price calculated to compensate the bank for the use of its funds. Unlike fed funds loans, these transactions are essentially secured transactions.

4. Although the depository institutions that are parties to transactions in the interbank markets discussed above generally are referred to as *counterparties*, the term *correspondent* is used in this discussion to denote any domestic depository institution or a foreign bank to which a bank is exposed. The term *correspondent* does not include a commonly controlled correspondent, as defined in section 206.2(b) of Regulation F.

5. In other banking transactions, such as foreign-exchange, money market, and other permissible transactions, activities, or contractual arrangements, the other party to the transaction is referred to as the counterparty rather than as the correspondent.

foreign-exchange risk, and settlement risk. Settlement risk is the risk that a counterparty will fail to make a payment or delivery in a timely manner. Settlement risk may arise from unsecured transactions in the government securities, foreign-exchange, or other markets, and it may result from operational, liquidity, or credit problems.

Lending limits prohibit national banks from lending amounts equal to more than 15 percent of a national bank's unimpaired capital and surplus to a single borrower on an unsecured basis (12 USC 84(a)(1)); these limits also prohibit a national bank from lending an additional 10 percent on a secured basis (12 USC 84(a)(2)). The national bank lending limits apply only to "loans and extensions of credit," and the limits do not include most off-balance-sheet transactions that may provide significant sources of exposure to correspondents. Additionally, the national bank lending limits do not apply to overnight fed funds loans, a significant source of short-term exposure to correspondents. State limits generally do not apply to a broader range of transactions than the national bank limits, although some states include fed funds transactions within their limits.

State-chartered banks generally are subject to lending limits under state law. Almost all states impose lending limits on the banks they charter. Most of these limits are patterned on the national bank lending limits, although the specific percentages or transactions covered vary. The state limits generally do not apply to a broader range of off-balance-sheet transactions, although some states include fed funds transactions within their limits. A number of states, however, exclude interbank transactions from their lending limits entirely.

LIMITS ON INTERBANK LIABILITIES

Regulation F, Limitations on Interbank Liabilities (12 CFR 206), implemented section 308 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), which amended section 23 of the Federal Reserve Act (12 USC 371b-2). Section 23, as amended, requires the Board of Governors of the Federal Reserve System (the Board) to prescribe standards to limit the risks posed by exposure of banks to other domestic depository institutions and foreign banks. Regulation F sets forth these standards. All depository institutions insured by the FDIC are subject to the Federal Reserve Board's Regulation F.[6] Regulation F was first adopted in 1992 and has remained substantially the same, except for the technical amendments adopted by the Board on September 10, 2003. (See 68 *Fed. Reg.* 53,283.) Regulation F consists of two primary parts: (1) prudential standards that apply to exposures generally (section 206.3) and (2) special rules that apply to credit exposure under certain circumstances (section 206.4).

The "Prudential Standards" section requires depository institutions to develop and adopt internal policies and procedures to evaluate and control all types of exposures to correspondents with which they do business.[7] Policies and procedures are to be established and maintained to prevent excessive exposure to any individual correspondent in relation to the condition of the correspondent. The "Prudential Standards" section requires a bank to adopt internal exposure limits when the financial condition of the correspondent and the form or maturity of the exposure create a significant risk that payments will not be made in full or on time. This section also provides that a bank shall structure the transactions of a correspondent or monitor exposures to a correspondent such that the bank's exposure ordinarily does not exceed its internal limits.

The "Credit Exposure" section provides that a bank's internal limit on interday *credit exposure* to an individual correspondent may not be more than 25 percent of the exposed bank's total capital, unless the bank can demonstrate that its correspondent is at least "adequately capitalized," as defined in section 206.5(a) of the rule. No limit is specified for credit exposure to correspondents that are at least adequately capitalized, but prudential standards are required for all correspondents, regardless of capital level. The term *correspondent* includes both domestically chartered depository institutions that are FDIC insured and foreign banks; the term does not include a commonly controlled correspondent.

6. Correspondent is defined in section 206.2(c) of Regulation F to mean a U.S. depository institution or a foreign bank to which a bank has exposure, but does not include commonly controlled correspondents.

7. Banks had to have the internal policies and procedures in place on June 19, 1993.

Prudential Standards

Standards for Selecting Correspondents

Banks are to address the risk arising from exposure to a correspondent, taking into account the financial condition of the correspondent and the size, form, and maturity of its exposure to the correspondent. Banks must adopt internal policies and procedures that evaluate the credit and liquidity risks, including operational risks, in selecting correspondents and terminating those relationships. Depository institutions are permitted to adopt flexible policies and procedures in order to permit resources to be allocated in a manner that will result in real reductions in risk. The policies and procedures must be reviewed annually by the bank's board of directors, but individual correspondent relationships need not be approved by the board. Examiners should determine that the policies and procedures adopted by the board provide for a determination of the credit, liquidity, and operational risks of a correspondent when the relationship with the correspondent is established and as it is maintained.[8] Additionally, if the bank has significant operational risk—such as relying on a correspondent for extensive data processing—that exposure could also lead to liquidity problems. This exposure may not be an issue for institutions that are not operationally dependent on any particular correspondent. Many banks may also address this exposure elsewhere in their operational procedures.

A bank's policies and procedures should provide for periodic review of the financial condition of any correspondent to which the bank has significant exposure. This review should evaluate whether the size and maturity of the exposure is commensurate with the correspondent's financial condition.[9] Factors bearing on the financial condition of the correspondent include, but are not necessarily limited to, (1) the capital level of the correspondent, (2) the level of nonaccrual and past-due loans and leases, and (3) the level of earnings.

Examiners should determine that a bank has periodically reviewed the financial condition of any correspondent to which the bank has significant exposure. The frequency of these reviews will depend on the size and maturity of the exposure and the condition of the correspondent. For example, the policies of many banks provide for an extensive annual review of a correspondent's financial condition; such policies may also provide for less extensive interim reviews under some circumstances, such as when exposure to a correspondent is very high or when a correspondent has experienced financial difficulty. A bank need not require periodic review of the financial condition of all correspondents. For example, periodic reviews would not be necessary for a correspondent to which the bank has only insignificant levels of exposure, such as small balances maintained for clearing purposes.[10] Significant levels of exposure should reflect those amounts that a prudent bank believes deserve analysis for risk of loss.

A bank may base its review of the financial condition of a correspondent on publicly available information, such as bank Call Reports, financial statements or reports, Uniform Bank Performance Reports, or annual reports, or the bank may use financial information obtained from a rating service. A bank generally is not required to obtain nonpublic information to use as the basis for its analysis and review of the financial condition of a correspondent.[11] For

8. *Liquidity risk* and *operational risk* are terms used in the definition of exposure. Liquidity risk is the risk that payment will be delayed for some period of time. For example, a bank is subject to the liquidity risk that a payment due from a failed correspondent will not be made on time; the bank's credit risk may be a lesser amount due to later distributions from the correspondent's receiver. Liquidity risk is included in the definition of exposure.

Operational risk is the risk that a correspondent's operational problems may prevent it from making payments, thereby creating liquidity risks for other banks. For example, a computer failure at a correspondent that a bank relies on for extensive data processing support may prevent the correspondent from making payments, and thus may create liquidity problems for the bank and other banks as well. Operational risk is also included in the definition of exposure.

9. Because exposure to a Federal Reserve Bank or Federal Home Loan Bank poses minimal risk to a respondent, Federal Reserve Banks and Federal Home Loan Banks are not included in the definition of correspondent.

10. Other forms of exposure that generally would not be considered significant include (1) a collecting bank's risk that a check will be returned, (2) an originating bank's risk that an automated clearinghouse (ACH) debit transfer will be returned or its settlement reversed, (3) a receiving bank's remote risk that settlement for an automated credit transfer could be reversed, or (4) a credit card transaction. In these types of transactions, the amounts involved are generally small, and the exposed bank usually has prompt recourse to other parties.

11. A bank *is* required to obtain nonpublic information to evaluate a correspondent's condition for those foreign banks for which no public financial statements are available. In these limited circumstances, the bank would need to obtain financial information for its review (including information obtained directly from the correspondent).

correspondents with which a bank has a significant relationship, a bank may have considerable nonpublic information, such as information on the quality of management, general portfolio composition, and similar information, but such information is not always available and is not required.

Regardless of whether public or nonpublic sources of information are used, a bank may rely on another party, such as a bank rating agency, its bank holding company, or another correspondent, to assess the financial condition of or select a correspondent, provided that the board of directors has reviewed and approved the general assessment or selection criteria used by that party. Examiners should ascertain that the bank reviews and approves the assessment criteria used by such other parties. Additionally, when a bank relies on its bank holding company to select and monitor correspondents—or relies on a correspondent, such as a bankers' bank, to choose other correspondents with which to place the bank's federal funds or other deposits—examiners should ensure that the bank has reviewed and approved the selection criteria used.

Internal Limits on Exposure

When the financial condition of the correspondent and the form or maturity of the exposure represent a significant risk that payments will not be made in full or in a timely manner, a bank's policies and procedures must limit its exposure to the correspondent, either by the establishment of internal limits or by other means. Limits are to be consistent with the risks undertaken, considering the financial condition and the form and maturity of the exposure to the correspondent. Limits may specify fixed exposure amounts, or they may be more flexible and be based on factors such as the monitoring of exposure and the financial condition of the correspondent. Different limits may be set for different forms of exposure, different products, and different maturities.

When a bank has exposure to a correspondent that has a deteriorating financial condition, examiners should determine if the bank took that deterioration into account when it evaluated the correspondent's creditworthiness. The examiner should also evaluate if the bank's level of exposure to the correspondent was appropriate.

Examiners need to determine that the bank's policy and procedural limits are consistent with the risk undertaken, given the maturity of the exposure and the condition of the correspondent. Inflexible dollar limits may not be necessary in all cases. As stated earlier, limits can be flexible and be based on factors such as the level of the bank's monitoring of its exposure and the condition of the correspondent. For example, a bank may choose not to establish a specific limit on exposure to a correspondent when the bank is able to ascertain account balances with the correspondent on a daily basis, because such balances could be reduced rapidly if necessary. In appropriate circumstances, a bank may establish limits for longer-term exposure to a correspondent, while not setting limits for interday (overnight) or intraday (within the day) exposure. Generally, banks do not need to set one overall limit on their exposure to a correspondent. Banks may prefer instead to set separate limits for different forms of exposure, products, or maturities. A bank's evaluation of its overall facility with a correspondent should take into account utilization levels and procedures for further limiting or monitoring overall exposure.

When a bank has established internal limits for its significant exposure, examiners should ensure that the bank either (1) has procedures to monitor its exposure to remain within established limits or (2) structures transactions with the correspondent to ensure that the exposure ordinarily remains within the bank's established internal limits. While some banks may monitor actual overall exposure, others may establish individual lines for significant sources of exposure, such as federal funds sales. For such banks, the examiner should ensure that the bank has established procedures to ensure that exposure generally remains within the established lines. In some instances, a bank may accomplish this objective by establishing limits on exposure that are monitored by a correspondent, such as for sales of federal funds through the correspondent as agent.

When a bank monitors its exposures, the appropriate level of monitoring will depend on (1) the type and volatility of the exposure, (2) the extent to which the exposure approaches the bank's internal limits for the correspondent, and (3) the condition of the correspondent. Generally, monitoring may be conducted retrospectively. Examples of retrospective monitoring include checking close-of-business balances at a correspondent for the prior day or obtaining daily balance records from a correspondent at the end of each month. Thus, banks are not expected to monitor exposure to correspondents on a real-time basis.

The purpose of requiring banks to monitor or structure their transactions that are subject to limits is to ensure that the bank's exposure generally remains within established limits. However, occasional excesses over limits may result from factors such as unusual market disturbances, unusual favorable market moves, or other unusual increases in activity or operational problems. Unusual late incoming wires or unusually large foreign cash letters (international pouch) would be considered examples of activities that could lead to excesses over internal limits and that would not be considered impermissible under the rule. Examiners should verify that banks have established appropriate procedures to address any excesses over internal limits.

A bank's internal policies and procedures must address intraday exposure. However, as with other exposure of longer maturities (i.e., interday or longer), the rule does not necessarily require that limits be established on intraday exposure. Examiners should expect to see such limits or frequent monitoring of balances only if the size of the intraday exposure and the condition of the correspondent indicate a significant risk that payments will not be made as contemplated. Examiners should keep in mind that intraday exposure may be difficult for a bank to actively monitor and limit. Consequently, like interday exposure, intraday exposure may be monitored retrospectively. In addition, smaller banks may limit their focus on intraday exposure to being aware of the range of peak intraday exposure to particular institutions and the effect that exposure may have on the bank. For example, a bank may receive reports on intraday balances from a correspondent on a monthly basis and would only need to take actions to limit or more actively monitor such exposure if the bank becomes concerned about the size of the intraday exposure relative to the condition of the correspondent.

Credit Exposure

A bank's internal policies and procedures must limit overnight credit exposure to an individual correspondent to not more than 25 percent of the exposed bank's total capital, unless the bank can demonstrate that its correspondent is at least adequately capitalized.[12] The credit exposure of a bank to a correspondent shall consist of the bank's assets and off-balance-sheet items that are (1) subject to capital requirements under the capital adequacy guidelines of the bank's primary federal supervisor and (2) involve claims on the correspondent or capital instruments issued by the correspondent.[13] Credit exposure therefore includes items such as deposit balances with a correspondent, fed funds sales, and credit-equivalent amounts of interest-rate and foreign-exchange-rate contracts and other off-balance-sheet transactions. Credit exposure does not include settlement of transactions, transactions conducted in an agency or similar capacity where losses will be passed back to the principal or other party, and other sources of exposure that are not covered by the capital adequacy guidelines or that do not involve exposure to a correspondent.[14] A bank may exclude the following from the calculation of credit exposure to a correspondent: (1) transactions, including reverse repurchase agreements, to the extent that the transactions are secured by government securities or readily marketable collateral; (2) the proceeds of checks and other cash items depos-

12. Total capital is the total of a bank's tier 1 and tier 2 capital calculated according to the risk-based capital guidelines of the bank's primary federal supervisor. For an insured branch of a foreign bank organized under the laws of a country that subscribes to the principles of the Basel Capital Accord, *total capital* means total tier 1 and tier 2 capital as calculated under the standards of that country. For an insured branch of a foreign bank organized under the laws of a country that does not subscribe to the principles of the Basel Capital Accord, *total capital* means total tier 1 and tier 2 capital as calculated under the provisions of the accord. The limit on credit exposure of the insured branch of a foreign bank is based on the foreign bank's total capital, as defined in this section, not on the imputed capital of the branch.

For purposes of Regulation F, an adequately capitalized correspondent is a correspondent with a total risk-based capital ratio of 8.0 percent or greater, a tier 1 risk-based capital ratio of 4.0 percent or greater, and a leverage ratio of 4.0 percent or greater. The leverage ratio does not apply to correspondents that are foreign banks. See section 206.5(e) for definitions of these terms.

13. A bank is required to include with its own credit exposure 100 percent of the credit exposure of any subsidiary that the bank is required to consolidate on its bank Call Report. This provision generally captures the credit exposure of any majority-owned subsidiary of the bank. Therefore, none of a minority-owned subsidiary's exposure and all of a majority-owned subsidiary's exposure would be included in the parent bank's exposure calculation.

14. For example, when assets of a bank, such as securities, are held in safekeeping by a correspondent, there is no exposure to the correspondent, even though the securities themselves may be subject to a capital charge.

ited in an account at a correspondent that are not yet available for withdrawal, (3) quality assets on which the correspondent is secondarily liable, or obligations of the correspondent on which a creditworthy obligor in addition to the correspondent is available; (4) exposure that results from the merger with or acquisition of another bank for one year after that merger or acquisition is consummated; and (5) the portion of the bank's exposure to the correspondent that is covered by federal deposit insurance. (See section 206.4(d) for a more detailed discussion of these exclusions.) This regulatory limit on credit exposure should be implemented as part of the bank's policies and procedures required under the "Prudential Standards" section. Regulation F does not impose regulatory limits for "credit exposure" to adequately or well-capitalized correspondents.

Quarterly monitoring of capital is only required for correspondents to which a bank's potential credit exposure is more than 25 percent of its total capital.[15] If the internal systems of a bank ordinarily limit credit exposure to a correspondent to 25 percent or less of the exposed bank's total capital, no monitoring of the correspondent's capital would be necessary, although periodic reviews of the correspondent's financial condition may be required under the "Prudential Standards" section if exposure to the correspondent is significant. Every effort should be made to allow banks to use existing risk-monitoring and -control systems and practices when these systems and practices effectively maintain credit exposure within the prescribed limits. For smaller institutions, it is relatively easy to determine how their measure of exposure compares with the definition of credit exposure in Regulation F because these institutions have relatively simple types of exposure. Examiners should remember that the regulation emphasizes appropriate levels of exposure based on the exposed bank's analysis of the creditworthiness of its correspondents. Accordingly, for those correspondents that the bank has not demonstrated are at least adequately capitalized, this limit should be viewed as a maximum credit-exposure level rather than as a safe-harbor level of credit exposure.

Examiners should ensure that the bank has in place policies and procedures that ensure the quarterly monitoring of the capital of its domestic correspondents. This quarterly schedule allows the bank to pick up information from the correspondent's most recent bank Call Report, financial statement, or bank rating report. Currently, it is difficult to obtain information on the risk-based capital levels of a correspondent. Regulation F requires that a bank must be able to demonstrate only that its correspondent's capital ratios qualify it as at least adequately capitalized.

A bank is not limited to a single source of information for capital ratios. A bank may rely on capital information obtained from a correspondent, a bank rating agency, or another reliable source of information. Further, examiners should anticipate that most banks will receive information on their correspondent's capital ratios either directly from the correspondents or from a bank rating agency. The standard used in the rule is based solely on capital ratios and does not require disclosure of CAMELS ratings. For foreign bank correspondents, monitoring frequency should be related to the frequency with which financial statements or other regular reports are available. Although such information is available quarterly for some foreign banks, financial statements for many foreign banks are generally available only on a semiannual basis.

Information on risk-based capital ratios may not be available for many foreign bank correspondents. As with domestic correspondents, however, examiners should anticipate that in most instances the correspondent will provide the information to the banks with which it does business.

A bank's internal policies and procedures should limit overnight credit exposure to a correspondent to not more than 25 percent of the exposed bank's total capital, unless the bank can demonstrate that its correspondent is at least adequately capitalized, as defined by the rule. However, examiners should not necessarily expect banks to have formal limits on credit exposure to a correspondent for which the bank does not maintain quarterly capital information or that is a less than adequately capitalized correspondent if the banks' policies and procedures effectively limit credit exposure to an amount below the 25 percent limit of total capital. Such situations include those in which

15. Because information on risk-based capital ratios for banks is generally based on the bank Call Report, a bank would be justified in relying on the most recently available reports based on Call Report data. While there may be a significant lag in such data, Call Reports are useful for monitoring trends in the condition of a correspondent—especially when a bank follows the data on a continuing basis.

only small balances are maintained with the correspondent or in which the correspondent has only been approved for a limited relationship. Although in many cases it will be necessary for a bank to establish formal internal limits to meet the regulatory limit, the provisions of section 206.3 (prudential standards) concerning excesses over internal limits also apply to limits established for the purpose of controlling credit exposure under section 206.4 of Regulation F.

The following examination objectives should be considered when examiners are (1) evaluating the bank's interbank liabilities with respect to its credit exposures to correspondents and (2) assessing the bank's compliance with Regulation F.

1. To determine if the policies, practices, procedures, and internal controls for interbank liabilities adequately address the risks posed by the bank's exposure to other domestic depository institutions and foreign banks.
2. To determine if bank officers and employees are operating in compliance with the policies and procedures established by the bank.
3. To determine if the financial condition of correspondents to which the bank has significant exposure—significant both in the size and maturity of the exposure and the financial condition of the correspondent—is reviewed periodically.
4. To determine if internal limits on exposure (1) have been established where necessary and (2) are consistent with the risk undertaken.
5. To determine if (1) exposure ordinarily remains within the established internal limits and (2) appropriate procedures have been established to address excesses over internal limits.
6. To determine that a bank's credit exposure to less than adequately capitalized correspondents is not more than 25 percent of the exposed bank's total capital. (Note that Regulation F places greater emphasis on maintaining appropriate levels of exposure based on a bank's analysis of the creditworthiness of its correspondents as opposed to merely staying within regulatory established limits.)
7. To determine if those correspondents to which the bank has credit exposure exceeding 25 percent of total capital are monitored quarterly to ensure that such correspondents remain at least adequately capitalized.
8. To reach agreement with the board of directors and senior management to initiate corrective action when policies, procedures, or internal controls are deficient, or when there are violations of laws or regulations.

Examiners should obtain or prepare the information necessary to perform the appropriate procedural steps.

1. If selected for implementation, complete or update the "Interbank Liabilities" section of the internal control questionnaire.
2. On the basis of an evaluation of the bank's internal controls, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures.
4. Request bank files relating to its exposure to its correspondents, as exposure is defined in Regulation F and applied and used in the "Prudential Standards" section of the regulation.

   a. Request documentation demonstrating that the bank has periodically reviewed the financial condition of any correspondent to which the depository institution has significant exposure. Factors bearing on the financial condition of the correspondent that should be addressed by the bank (depository institution) include the capital level of the correspondent, the level of nonaccrual and past-due loans and leases, the level of earnings, and other factors affecting the financial condition of the correspondent.
   b. Request that the bank provide information indicating its level of exposure to each correspondent, as measured by the bank's internal control systems (for smaller banks, this information may include correspondent statements and a list of securities held in the investment portfolio).
   c. Determine if the frequency of the bank's reviews of its correspondents' financial condition is adequate for those correspondents to which the bank has very large or long maturities or for correspondents in deteriorating condition.
   d. If a bank relies on another party (such as a bank rating agency, its bank holding company, or another correspondent) to provide financial analysis of a correspondent, determine if the bank's board of directors has reviewed and approved the assessment criteria used by the other party.
   e. When the bank relies on its bank holding company or on a correspondent, such as a bankers' bank, to select and monitor correspondents or to choose other correspondents with which to place the depository institution's federal funds, ensure that the bank's board of directors has reviewed and approved the selection criteria used.
   f. If the bank is exposed to a correspondent that has experienced deterioration in its financial condition, ascertain whether the bank has taken the deterioration into account in its evaluation of the creditworthiness of the correspondent and of the appropriate level of exposure to the correspondent.
   g. When the bank has established internal limits for significant exposure, determine that the bank either monitors its exposure or structures transactions with the correspondent to ensure that exposure ordinarily remains within the bank's internal limits for the risk undertaken.
   h. If the bank chooses to set separate limits for different forms of exposure, products, or maturities and does not set an overall internal limit on exposure to a correspondent, review information on actual interday exposure to determine if the aggregate exposure (especially for less than adequately capitalized correspondents or financially deteriorating correspondents) is consistent with the risk undertaken.
   i. When a bank monitors its exposures, determine if the level of monitoring of significant exposure (especially for less than adequately capitalized correspondents or financially deteriorating correspondents) is adequate, commensurate with the type and volatility of exposure, the extent to which the exposure approaches the bank's internal limits, and the condition of the correspondent.
   j. Determine if the bank had any occasional excesses in exposure over its internal

limits. If so, verify that the bank used appropriate and adequate procedures to address such excesses.

k. If the size of intraday exposure to a correspondent and the condition of the correspondent indicate a significant risk that payments will not be made in full or in a timely manner, verify that the bank has established intraday limits consistent with the risk undertaken and that it has monitored its intraday exposure.

5. Request and review a list of the correspondent transaction files for all domestic depository institutions and foreign banks to which the bank regularly has credit exposure (as defined in section 206.4 of Regulation F) exceeding 25 percent of the bank's total capital during a specified time interval. (Where appropriate, every effort should be made to allow banks to use existing risk-monitoring and -control systems and practices when these systems and practices effectively maintain credit exposure within the prescribed limits). Review the bank's files to—
   a. verify that the correspondent's capital levels are monitored quarterly;
   b. verify that these correspondents are at least adequately capitalized, in compliance with Regulation F; and
   c. determine that the credit exposure to those correspondents that are at risk of dropping below the adequately capitalized capital levels could be reduced to 25 percent or less of the bank's total capital in a timely manner.

Review the bank's internal controls, policies, practices, and procedures for interbank liabilities and compliance with the Board's Regulation F. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. When identifying and resolving any existing deficiencies, examiners should seek the answers to the following key questions.

PRUDENTIAL STANDARDS

1. Has the bank developed written policies and procedures to evaluate and control its exposure to all of its correspondents?
2. Have the written policies and procedures been reviewed and approved by the board of directors annually?
3. Do the written policies and procedures adequately address the bank's exposure(s) to a correspondent, including credit risk, liquidity risk, operational risk, and settlement risk?
4. Has the bank adequately evaluated its intraday exposure? Does the bank have significant exposure to its correspondent from operational risks, such as extensive reliance on a correspondent for data processing? If so, has the bank addressed these operational risks?
5. Do the bank's written policies and procedures establish criteria for selecting a correspondent or terminating that relationship?
6. Do the bank's written policies and procedures require a periodic review of the financial condition of a correspondent whenever the size and maturity of exposure is considered significant in relation to the financial condition of the correspondent?
7. When exposure is considered significant, is the financial condition of a correspondent periodically reviewed?
8. Does the periodic review of a correspondent's financial condition include—
   a. the level of capital?
   b. the level of nonaccrual and past-due loans and leases?
   c. the level of earnings?
   d. other factors affecting the financial condition of the correspondent?
9. If a party other than bank management conducts the financial analysis of or selects a correspondent, has the bank's board of directors reviewed and approved the general assessment and selection criteria used by that party?
10. If the financial condition of a correspondent, or the form or maturity of the bank's exposure to that correspondent, creates significant risk, do the bank's written policies and procedures establish internal limits or other procedures, such as monitoring, to control exposure?
11. Are the bank's internal limits or controls appropriate for the level of its risk exposure to correspondents? If no internal limits have been established, is this appropriate based on the financial condition of a correspondent and the size, form, and maturity of the bank's exposure? What are your reasons for this conclusion?
12. When internal limits for significant exposure to a correspondent have been set, has the bank established procedures and structured its transactions with the correspondent to ensure that the exposure ordinarily remains within the bank's established internal limits?
13. If not, is actual exposure to a correspondent monitored to ensure that the exposure ordinarily remains within the bank's established internal limits?
14. Is the level (frequency) of monitoring performed appropriate for—
    a. the type and volatility of the exposure?
    b. the extent to which the exposure approaches the bank's internal limits?
    c. the financial condition of the correspondent?
15. Are transactions and monitoring reports on exposure reviewed for compliance with internal policies and procedures? If so, by whom and how often?
16. Do the bank's written policies and procedures address deterioration in a correspondent's financial condition with respect to—
    a. the periodic review of the correspondent's financial condition?
    b. appropriate limits on exposure?
    c. the monitoring of the exposure, or the

structuring of transactions with the correspondent, to ensure that the exposure remains within the established internal limits?

Are these measures appropriate and realistic?

17. Do the bank's written procedures establish guidelines to address excesses over its internal limits? (Such excesses could include unusual late incoming wires, unusually large foreign cash letters (international pouch), unusual market moves, or other unusual increases in activity or operational problems.) Are the procedures appropriate?

CREDIT-EXPOSURE LIMITS

1. Do the bank's written policies and procedures effectively limit overnight credit exposure to 25 percent or less of the bank's total capital, if a correspondent is less than adequately capitalized?
2. If credit exposure is not limited to 25 percent or less of the bank's total capital, does the bank—
   a. obtain quarterly information to determine its correspondent's capital levels (if so, determine the source of the information)?
   b. monitor its overnight credit exposure to its correspondents (if so, determine the frequency)?

This interagency guidance reminds institutions of supervisory expectations on sound practices for managing risks associated with funding and credit concentrations arising from correspondent relationships (correspondent concentration risk).[1] The guidance highlights the need for institutions to identify, monitor, and manage correspondent concentration risk on a standalone and organization-wide basis and to take into account exposures to the correspondents' affiliates as part of their prudent risk-management practices. Institutions also should be aware of their affiliates' exposures to correspondents as well as the correspondents' subsidiaries and affiliates. The guidance also reinforces the supervisory view that financial institutions should perform appropriate due diligence on all credit exposures to, and funding transactions with, other financial institutions. See SR-10-10 and its attachments. Also see 75 *Fed. Reg.* 23764, May 4, 2010.

INTERAGENCY GUIDANCE ON CORRESPONDENT CONCENTRATION RISKS

A financial institution's[2] relationship with a correspondent[3] may result in credit (asset) and funding (liability) concentrations. On the asset side, a credit concentration represents a significant volume of credit exposure that a financial institution has advanced or committed to a correspondent. On the liability side, a funding concentration exists when an institution depends on one or a few correspondents for a disproportionate share of its total funding.

The Federal Reserve[4] realizes some concentrations meet certain business needs or purposes, such as a concentration arising from the need to maintain large ''due from'' balances to facilitate account clearing activities. However, correspondent concentrations represent a lack of diversification, which adds a dimension of risk that management should consider when formulating strategic plans and internal risk limits.

The Federal Reserve considers credit exposures greater than 25 percent of total capital[5] as concentrations. While a liability concentration threshold has not been established, the Federal Reserve has seen instances where funding exposures as low as 5 percent of an institution's total liabilities have posed an elevated liquidity risk to the recipient institution.

These levels of credit and funding exposures are not firm limits but indicate an institution has concentration risk with a correspondent. Such relationships warrant robust risk-management practices, particularly when aggregated with other similarly sized funding concentrations, in addition to meeting the minimum regulatory requirements specified in applicable regulations. Financial institutions should identify, monitor, and manage both asset and liability correspondent concentrations and implement procedures to perform appropriate due diligence on all credit exposures to and funding transactions with correspondents, as part of their overall risk-management policies and procedures.

This guidance does not supplant or amend applicable regulations, such as the Board's *Limitations on Interbank Liabilities* (Regulation F).[6] This guidance clarifies that financial institutions should consider taking actions beyond the minimum requirements established in Regulation F to identify, monitor, and manage correspondent concentration risks in order to maintain risk-management practices consistent with safe and sound operations, especially when there are rapid changes in market conditions or in a correspondent's financial condition.

1. See, for example, section 2015.1 or SR-93-36.
2. This guidance applies to all banks and their subsidiaries, bank holding companies and their nonbank subsidiaries, savings associations and their subsidiaries, and savings and loan holding companies and their subsidiaries that are supervised by the Board of Governors of the Federal Reserve System.
3. Unless the context indicates otherwise, references to ''correspondent'' include the correspondent's holding company, subsidiaries, and affiliates. A correspondent relationship results when a financial organization provides another financial organization a variety of deposit, lending, or other services.
4. The interagency guidance references, collectively, the Agencies, meaning the Board of Governors of the Federal Reserve System (Board), the Federal Deposit Insurance Corporation (FDIC), the Office of the Comptroller of the Currency (OCC), and the Office of Thrift Supervision (OTS).
5. For purposes of this guidance, the term ''total capital'' means the total risk-based capital as reported for commercial banks and thrifts in the Report of Condition and the Thrift Financial Report, respectively.
6. 12 CFR 206. All depository institutions insured by the FDIC are subject to the Board's Regulation F.

Identifying Correspondent Concentrations

Institutions should implement procedures for identifying correspondent concentrations. For prudent risk-management purposes, these procedures should encompass the totality of the institutions' aggregate credit and funding concentrations to each correspondent on a standalone basis, as well as take into account exposures to each correspondent organization as a whole.[7] In addition, the institution should be aware of exposures of its affiliates to the correspondent and its affiliates.

Credit Concentrations

Credit concentrations can arise from a variety of assets and activities. For example, an institution could have due from bank accounts, federal funds sold on a principal basis and direct or indirect loans to, or investments in, a correspondent. In identifying credit concentrations for risk-management purposes, institutions should aggregate all exposures, including but not limited to

- due from bank accounts (demand deposit accounts (DDA) and certificates of deposit (CD));
- federal funds sold on a principal basis;
- the over-collateralized amount on repurchase agreements;
- the under-collateralized portion of reverse repurchase agreements;
- net current credit exposure on derivatives contracts;
- unrealized gains on unsettled securities transactions;
- direct or indirect loans to, or for the benefit of, the correspondent;[8] and
- investments, such as trust preferred securities, subordinated debt, and stock purchases, in the correspondent.

7. Financial institutions should identify and monitor all direct or indirect relationships with their correspondents. Institutions should take into account exposures of their affiliates to correspondents and how those relationships may affect the institution's exposure. While each financial institution is responsible for monitoring its own credit and funding exposures, institution holding companies, if any, should manage their organizations' concentration risk on a consolidated basis.

8. Exclude loan participations purchased without recourse from a correspondent, its holding company, or an affiliate.

Funding Concentrations

Depending on its size and characteristics, a concentration of credit for a financial institution may be a funding exposure for the correspondent. The primary risk of a funding concentration is that an institution will have to replace those advances on short notice. This risk may be more pronounced if the funds are credit sensitive or if the financial condition of the party advancing the funds has deteriorated.

The percentage of liabilities or other measurements that may constitute a concentration of funding is likely to vary depending on the type and maturity of the funding and the structure of the recipient's sources of funds. For example, a concentration in overnight unsecured funding from one source might raise different concentration issues and concerns than unsecured term funding, assuming compliance with covenants and diversification with short- and long-term maturities. Similarly, concerns arising from concentrations in long-term unsecured funding typically increase as these instruments near maturity.

Calculating Credit and Funding Concentrations

When identifying credit and funding concentrations for risk-management purposes, institutions should calculate both gross and net exposures to the correspondent on a standalone basis and on a correspondent organization-wide basis as part of their prudent risk-management practices. Exposures are reduced to net positions to the extent that the transactions are secured by the net realizable proceeds from readily marketable collateral or are covered by valid and enforceable netting agreements. Appendix A and appendix B contain examples, which are provided for illustrative purposes only.

Monitoring Correspondent Relationships

Prudent management of correspondent concentration risks includes establishing and maintaining written policies and procedures to prevent excessive exposure to any correspondent in relation to the correspondent's financial condition. For risk-management purposes, institutions' procedures and frequency for monitoring correspondent relationships may be more or less aggressive depending on the nature, size, and risk of the exposure.

In monitoring correspondent relationships for risk-management purposes, institutions should specify internal parameters relative to what information, ratios, or trends will be reviewed for each correspondent on an ongoing basis. In addition to a correspondent's capital, level of problem loans, and earnings, institutions may want to monitor other factors, which could include but are not limited to

- deteriorating trends in capital or asset quality.
- reaching certain target ratios established by management (for example, aggregate of non-accrual and past due loans and leases as a percentage of gross loans and leases).
- increasing level of other real estate owned.
- attaining internally specified levels of volatile funding sources such as large CDs or brokered deposits.
- experiencing a downgrade in its credit rating, if publicly traded.
- being placed under a public enforcement action.

For prudent risk-management purposes, institutions should implement procedures that ensure ongoing, timely reviews of correspondent relationships. Institutions should use these reviews to conduct comprehensive assessments that consider their internal parameters and are commensurate with the nature, size, and risk of their exposure. Institutions should increase the frequency of their internal reviews when appropriate, as even well-capitalized institutions can experience rapid deterioration in their financial condition, especially in economic downturns.

Institutions' procedures also should establish documentation requirements for the reviews conducted. In addition, the procedures should specify when relationships that meet or exceed internal criteria are to be brought to the attention of the board of directors or the appropriate management committee.

Managing Correspondent Concentrations

Institutions should establish prudent internal concentration limits, as well as ranges or tolerances for each factor being monitored for each correspondent. Institutions should develop plans for managing risk when these internal limits, ranges, or tolerances are met or exceeded, either on an individual or collective basis. Contingency plans should provide a variety of actions that could be considered relative to changes in the correspondent's financial condition. However, contingency plans should not rely on temporary deposit insurance programs for mitigating concentration risk.

Prudent risk management of correspondent concentration risks should include procedures that provide for orderly reductions of correspondent concentrations that exceed internal parameters over a reasonable timeframe that is commensurate with the size, type, and volatility of the risk in the exposure. Such actions could include, but are not limited to

- reducing the volume of uncollateralized/uninsured funds.
- transferring excess funds to other correspondents after conducting appropriate reviews of their financial condition.
- requiring the correspondent to serve as agent rather than as principal for federal funds sold.
- establishing limits on asset and liability purchases from, and investments in, correspondents.
- specifying reasonable timeframes to meet targeted reduction goals for different types of exposures.

Examiners will review correspondent relationships during examinations to ascertain whether an institution's policies and procedures appropriately identify and monitor correspondent concentrations. Examiners also will review the adequacy and reasonableness of institutions' contingency plans to manage correspondent concentrations.

Performing Appropriate Due Diligence

Financial institutions that maintain credit exposures in, or provide funding to, other financial institutions should have effective risk-management programs for these activities. For this purpose, credit or funding exposures may include but are not limited to due from bank accounts; federal funds sold as principal; direct or indirect loans (including participations and syndications); trust preferred securities; subordinated debt; and stock purchases of the correspondent.

An institution that maintains or contemplates entering into any credit or funding transactions with another financial institution should have written investment, lending, and funding policies and procedures, including appropriate limits, that govern these activities. In addition, these procedures should ensure that the institution conducts an independent analysis of credit transactions prior to committing to engage in the transactions. The terms for all such credit and funding transactions should strictly be on an arm's-length basis; conform to sound investment, lending, and funding practices; and avoid potential conflicts of interest.

APPENDIX A

Calculating Respondent *Credit Exposures* on an *Organization-Wide* Basis

Respondent Bank's *Gross Credit Exposure* to a Correspondent, its Holding Company, and Affiliates

Due from DDA with correspondent	$ 50,000,000
Due from DDA with correspondent's two affiliated insured depository institutions (IDIs)	1,000,000
CDs issued by correspondent bank	1,000,000
CDs issued by one of correspondent's two affiliated IDIs	500,000
Federal funds sold to correspondent on a principal basis	51,500,000
Federal funds sold to correspondent's affiliated IDIs on a principal basis	2,500,000
Reverse repurchase agreements	3,750,000
Net current credit exposure on derivatives[1]	250,000
Direct and indirect loans to, or for benefit of, a correspondent, its holding company, or affiliates	4,500,000
Investments in the correspondent, its holding company, or affiliates	2,500,000
Gross Credit Exposure	**$117,500,000**
Total Capital	**$100,000,000**
Gross Credit Concentration	**118%**

Respondent Bank's *Net Credit Exposure* to a Correspondent, its Holding Company, and Affiliates

Due from DDA (less checks/cash not available for withdrawal and federal deposit insurance (FDI))[2]	$ 17,850,000
Due from DDA with correspondent's two affiliated IDIs (less FDI)[2]	500,000
CDs issued by correspondent bank (less FDI)	750,000
CDs issued by one of correspondent's two affiliated IDIs (less FDI)	250,000
Federal funds sold on a principal basis	51,500,000
Federal funds sold to correspondent's affiliated IDIs on a principal basis	2,500,000
Under-collateralized amount on reverse repurchase agreements (less the current market value of government securities or readily marketable collateral pledged)[3]	100,000
Uncollateralized net current derivative position[1]	50,000
Direct and indirect loans to, or for benefit of, a correspondent, its holding company, or affiliates	4,500,000
Investments in the correspondent, its holding company, or affiliates	2,500,000
Net Credit Exposure	**$ 80,500,000**
Total Capital	**$100,000,000**
Net Credit Concentration	**81%**

APPENDIX A—*continued*

Calculating Correspondent *Funding Exposures* on an *Organization-Wide* Basis

Correspondent's *Gross Funding Exposure* to a Respondent Bank	
Due to DDA with respondent	$ 50,000,000
Correspondent's two affiliated IDIs' due to DDA with respondent	1,000,000
CDs sold to respondent bank	1,000,000
CDs sold to respondent from one of correspondent's two affiliated IDIs	500,000
Federal funds purchased from respondent on a principal basis	51,500,000
Federal funds sold to correspondent's affiliated IDIs on a principal basis	2,500,000
Repurchase Agreements	1,000,000
Gross Funding Exposure	**$ 107,500,000**
Total Liabilities	**$1,350,000,000**
Gross Funding Concentration	**7.96%**

Correspondent's *Net Funding Exposure* to a Respondent, its Holding Company, and Affiliates	
Due to DDA with respondent (less checks and cash not available for withdrawal and FDI)[2]	$ 17,850,000
Correspondent's two affiliated IDIs' due to DDA with respondent (less FDI)[2]	500,000
CDs sold to correspondent (less FDI)	750,000
One of correspondent's two affiliated IDIs' CDs sold to respondent (less FDI)[2]	250,000
Federal funds purchased from respondent on a principal basis	51,500,000
Federal funds sold to correspondent's affiliated IDIs on a principal basis	2,500,000
Under-collateralized amount of repurchase agreements relative to the current market value of government securities or readily marketable collateral pledged[3]	150,000
Net Funding Exposure	**$ 73,500,000**
Total Liabilities	**$1,350,000,000**
Net Funding Concentration	**5.44%**

Note: Respondent bank has $1 billion in total assets, comprising 10 percent of total assets or $100 million in total capital and 90 percent of total assets or $900 million in total liabilities. The correspondent has $1.5 billion in total assets, comprising 10 percent of total assets or $1.15 million in total capital and 90 percent of total assets or $1.35 billion in total liabilities.

1. There are five derivative contracts with a mark-to-market fair value position as follows: Contract 1 ($100,000), Contract 2 + $400,000, Contract 3 ($50,000), Contract 4 +$150,000, and Contract 5 ($150,000), subtotal of $250,000 fair value for the derivative contracts. Subtracting the pledged collateral's fair value of $200,000 leaves a subtotal of $50,000 or a net uncollateralized position of $50,000.

2. While temporary deposit insurance programs may provide certain transaction accounts with higher levels of federal deposit insurance coverage, institutions should not rely on such programs for mitigating concentration risk.

3. Government securities means obligations of, or obligations fully guaranteed as to principal and interest by, the U.S. government or any department, agency, bureau, board, commission, or establishment of the United States, or any corporation wholly owned, directly or indirectly, by the United States.

APPENDIX B

Calculating Respondent *Credit Exposures* on a *Correspondent-Only* Basis

Respondent Bank's *Gross Credit Exposure* to a Correspondent	
Due from DDA with correspondent	$ 50,000,000
Due from DDA with correspondent's two affiliated IDIs	0
CDs issued by correspondent bank	1,000,000
CDs issued by one of correspondent's two affiliated IDIs	0
Federal funds sold to correspondent on a principal basis	51,500,000
Federal funds sold to correspondent's affiliated IDIs on a principal basis	0
Reverse repurchase agreements	3,750,000
Net current credit exposure on derivatives[1]	250,000
Direct and indirect loans to, or for benefit of, a correspondent, its holding company, or affiliates	4,500,000
Investments in the correspondent, its holding company, or affiliates	2,500,000
Gross Credit Exposure	**$113,500,000**
Total Capital	**$100,000,000**
Gross Credit Concentration	**114%**

Respondent Bank's *Net Credit Exposure* to a Correspondent	
Due from DDA (less checks/cash not available for withdrawal and FDI)[2]	$ 17,850,000
Due from DDA with correspondent's two affiliated IDIs (less FDI)[2]	0
CDs issued by correspondent bank (less FDI)	750,000
CDs issued by one of correspondent's two affiliated IDIs (less FDI)	0
Federal funds sold on a principal basis	51,500,000
Federal funds sold to correspondent's affiliated IDIs on a principal basis	0
Under-collateralized amount on reverse repurchase agreements (less the current market value of government securities or readily marketable collateral pledged)[3]	100,000
Uncollateralized net current derivative position[1]	50,000
Direct and indirect loans to, or for benefit of, a correspondent, its holding company, or affiliates	4,500,000
Investments in the correspondent, its holding company, or affiliates	2,500,000
Net Credit Exposure	**$ 77,250,000**
Total Capital	**$100,000,000**
Net Credit Concentration	**77%**

APPENDIX B—*continued*

Calculating Correspondent *Funding Exposures* on a *Correspondent-Only* Basis

Correspondent's *Gross Funding Exposure* to a Respondent	
Due to DDA with respondent	$ 50,000,000
Correspondent's two affiliated IDIs' due to DDA with respondent	0
CDs sold to respondent bank	1,000,000
CDs sold to respondent from one of correspondent's two affiliated IDIs	0
Federal funds purchased from respondent on a principal basis	51,500,000
Federal funds sold to correspondent's affiliated IDIs on a principal basis	0
Repurchase agreements	1,000,000
Gross Funding Exposure	**$ 103,500,000**
Total Liabilities	**$1,350,000,000**
Gross Funding Concentration	**7.67%**

Correspondent's *Net Funding Exposure* to a Respondent	
Due to DDA with respondent (less checks and cash not available for withdrawal and FDI)[2]	$ 17,850,000
Correspondent's two affiliated IDIs' due to DDA with respondent (less FDI)[2]	0
CDs sold to correspondent (less FDI)	750,000
One of correspondent's two affiliated IDIs' CDs sold to respondent (less FDI)[2]	0
Federal funds purchased from respondent on a principal basis	51,500,000
Federal funds sold to correspondent's affiliated IDIs on a principal basis	0
Under-collateralized amount on repurchase agreements (less the current market value of government securities or readily marketable collateral pledged)[3]	100,000
Net Funding Exposure	**$ 70,200,000**
Total Liabilities	**$1,350,000,000**
Net Funding Concentration	**5.20%**

Note: Respondent bank has $1 billion in total assets, comprising 10 percent of total assets or $100 million in total capital and 90 percent of total assets or $900 million in total liabilities. The correspondent has $1.5 billion in total assets, comprising 10 percent of total assets or $1.15 million in total capital and 90 percent of total assets or $1.35 billion in total liabilities.

1. There are five derivative contracts with a mark-to-market fair value position as follows: Contract 1 ($100,000), Contract 2 + $400,000, Contract 3 ($50,000), Contract 4 +$150,000, and Contract 5 ($150,000), subtotal of $250,000 fair value. Adding the collateral's fair value of $200,000 leaves a subtotal of $450,000 or a net uncollateralized position of $50,000.

2. While temporary deposit insurance programs may provide certain transaction accounts with higher levels of federal deposit insurance coverage, institutions should not rely on such programs for mitigating concentration risk.

3. Government securities means obligations of, or obligations fully guaranteed as to principal and interest by, the U.S. government or any department, agency, bureau, board, commission, or establishment of the United States, or any corporation wholly owned, directly or indirectly, by the United States.

SCOPE OF BANK SECRECY ACT/ANTI-MONEY-LAUNDERING CONTENT IN THIS MANUAL

The purpose of this section is to provide a brief introduction of the Bank Secrecy Act (BSA) and anti-money-laundering (AML) compliance program and suspicious activity reporting requirements for banks under Regulation H.[1] For additional detail on the BSA/AML program, suspicious activity reporting requirements and all other laws and regulations pertaining to the BSA, examination objectives and procedures as well as supervisory expectations, refer to the *Federal Financial Institutions Examination Council (FFIEC) BSA/AML Examination Manual*. BSA requirements and expectations are briefly covered in other sections of this manual, including "Cash Accounts," "Deposit Accounts," "Private Banking Activities," and "Managing Outsourcing Risks." Also, refer to the *BSA/AML Examination Manual* for objectives and procedures for conducting Office of Foreign Assets Control examinations.

INTRODUCTION

Banks should take reasonable and prudent steps to combat money laundering and terrorist financing and to minimize their vulnerability to the risks associated with such activities. Banks encounter legal and compliance risks when failing to implement adequate controls within their organization to comply with the BSA and other applicable AML laws and regulations. Each bank under supervision of the Federal Reserve is required to establish and maintain a BSA compliance program,[2] implement a customer identification program,[3] and identify and report suspicious activity.[4] In addition, the regulations promulgated by the Financial Crimes Enforcement Network (FinCEN), the administrator of the BSA and a bureau of the Department of the Treasury, require banks to guard against money laundering and terrorist financing.[5]

A review of the BSA/AML compliance program is required at each full-scope examination of an insured depository institution and is an important aspect of safety-and-soundness examinations.[6] In supervising state member banks, evaluating the adequacy of the BSA/AML compliance program would generally help inform the rating of the management component of the Uniform Financial Institutions Rating System. The management rating reflects the capability of the board of directors and management, in their respective roles, to identify, measure, monitor, and control the risks of a bank's activities and to ensure a safe, sound, and efficient operation in compliance with applicable laws and regulations. The impact of BSA/AML compliance problems on the management rating should be assessed on a case-by-case basis, and will depend on the severity of the issues at the bank. Examiners evaluate the adequacy of a bank's BSA/AML compliance program relative to its risk profile and its compliance with applicable laws and regulations, recognizing that banks vary in focus and complexity, and that these differences create for each bank a unique risk profile.[7] In addition to influencing ratings, consideration of a bank's effectiveness in combating money laundering activities is a required component of the application process.[8] As such, BSA/AML problems can have an impact on a bank's strategic plan.

Certain federal and state government agencies play a critical role in implementing BSA regulations, developing examination guidance, ensuring compliance with the BSA, and enforcing the BSA. These agencies include the U.S. Treasury, FinCEN, various state banking agencies and the federal banking agencies.[9] The federal

1. Federal Reserve supervised institutions that are subject to the BSA include state member banks (Regulation H, 12 CFR 208), bank holding companies (Regulation Y, 12 CFR 225), Edge and agreement corporations, and foreign banking organizations operating in the United States (Regulation K, 12 CFR 211).
2. 12 CFR 208.63.
3. 12 CFR 208.63(b)(2).
4. 12 CFR 208.62.
5. 31 CFR 1010 (general provisions) and 31 CFR 1020 (rules for banks).
6. 12 USC 1818(s)(2).
7. See SR letter 19-11, "Joint Statement on Risk-Focused Bank Secrecy Act/Anti-Money Laundering Supervision."
8. See SR letter 14-2, "Enhancing Transparency in the Federal Reserve's Applications Process," and SR letter 02-8, "Implementation of Section 327 of the USA PATRIOT Act in the Applications Process," for more information.
9. The federal banking agencies include the Board of

banking agencies may use their authority, as granted under section 8 of the Federal Deposit Insurance Act (FDIA), to enforce compliance with appropriate banking rules and regulations, including compliance with the BSA. FinCEN, as administrator of the BSA, may also pursue civil enforcement actions when warranted.

REGULATION H

The Board's Regulation H requires a state member bank to establish a BSA compliance program and file suspicious activity reports (SAR). In accordance with the Board's regulation, a bank's BSA compliance program must be in writing and approved by its board of directors, with the approval noted in the board minutes. As part of its overall BSA compliance program, a bank is required to develop and implement a customer identification program. At a minimum, the BSA compliance program must

- provide for a system of internal controls to assure ongoing compliance;
- provide for independent testing for compliance to be conducted by bank personnel or by an outside party;
- designate an individual or individuals responsible for coordinating and monitoring day-to-day compliance; and
- provide training for appropriate personnel.

The Board's regulations also require a bank to report certain activity to law enforcement that may be useful to the government in criminal, tax, or regulatory proceedings. A bank must electronically file a SAR with FinCEN no later than 30 calendar days in the following circumstances of suspected unlawful activity:

- insider abuse involving any amount;
- violations aggregating $5,000 or more in which a suspect can be identified;
- violations aggregating $25,000 or more regardless of a potential suspect; or
- transactions aggregating $5,000 or more that involve potential money laundering or violations of the BSA.

Suspicious activity reporting is one of the many tools that law enforcement authorities use to combat money laundering, terrorist financing, and other financial crimes. A SAR and any information that would reveal the existence of a SAR are confidential, except as is necessary to fulfill BSA obligations and responsibilities.

For comprehensive information regarding the BSA Compliance Program and SAR filing requirements, including examination procedures, please refer to the FFIEC *Bank Secrecy Act/Anti-Money Laundering Examination Manual*.

COMMUNICATIONS OF SUPERVISORY FINDINGS ABOUT COMPLIANCE WITH THE BSA

When examiners identify supervisory concerns related to a bank's BSA/AML compliance in the course of an examination, they should communicate those concerns as outlined in this manual in the section entitled "Examination Strategy and Risk-Focused Examinations." Generally, findings would be contained in the report of examination or in other formal communication. This includes Matters Requiring Immediate Attention (MRIAs), Matters Requiring Attention (MRAs), and violations of law.

For more serious issues of noncompliance, the Federal Reserve Board has a broad range of formal and informal enforcement powers. For more information on enforcement actions, refer to the enforcement actions section of this manual and consult with staff of the Board of Governors.

REPORTING OF SUSPECTED CRIMINAL VIOLATIONS BY FEDERAL RESERVE

The Board has outlined procedures for the referral to law enforcement of potential criminal activity identified during the supervisory process through the filing of a SAR with FinCEN. The Board has also established steps that Board and Reserve Bank staff should follow with respect to the reporting of suspicious activity.

Examiners should focus on whether a financial institution has an effective SAR decision-making process, not individual SAR decisions. Examiners may review individual SAR decisions as a means to test the effectiveness of the SAR monitoring, detecting, reporting, and deci-

Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the National Credit Union Administration, and the Office of the Comptroller of the Currency.

sionmaking process. If, for example, during the course of an examination an examiner determines that a financial institution's failure to file a SAR is indicative of significant suspected illegal activity or deficient SAR processes that warrants criticism, these findings should be expressly communicated to the bank's management. The examiner should document the situation, including any response or corrective action taken by management to address the examiner's concerns. In general, examiners should also cite the bank in the report of examination (ROE) for an apparent violation of law. If the suspicious activity involves an insider, an examiner must not disclose the existence of a SAR filing to the subject of the SAR, who may have access to the ROE or other correspondence. In these instances, examiners should consult Board staff to determine the appropriate course of action.

Limited circumstances may exist where a financial institution is unwilling or unable to report suspicious activity to law enforcement. The Federal Reserve has developed specific procedures for examiners for requesting consideration of a SAR filing with law enforcement. The Board's Legal Division has primary responsibility for the referral of criminal matters for the Federal Reserve System to the appropriate law enforcement authorities. The Board may make a referral to law enforcement by filing a SAR with FinCEN. Importantly, the Board's ability to file a SAR is only one method of making a referral to law enforcement and other referral methods may be more appropriate depending on the facts and circumstances. For example, the Board's Legal Division may contact the U.S. Department of Justice directly to make a referral in certain circumstances. In determining whether the Board should file a SAR, staff from the Board's Legal Division may consider a variety of factors, including any prior communications with law enforcement regarding the activity.

INTRODUCTION

The Depository Institution Management Interlocks Act (Interlocks Act), as implemented by Regulation L (12 CFR 212) and Subpart J of Regulation LL (12 CFR 238.91-.99), prohibits a management official of a depository institution or depository institution holding company from serving simultaneously as a management official of another depository organization if the organizations are not affiliated and both either are very large or are located in the same local area.[1] The Interlocks Act fosters competition among depository organizations by prohibiting interlocking relationships of management officials where the management interlock likely would have an anticompetitive effect. The Board's regulations implementing the Interlocks Act apply to management officials of state member banks, depository institution holding companies, and their affiliates.

PROHIBITIONS

The Interlocks Act and the Federal Reserve Board's implementing regulations generally prohibit management interlocks in the following three situations, unless the interlock is otherwise exempted:

1. *Community prohibition:* Restricts management interlocks between unaffiliated depository organizations if the organizations in question (or a depository institution affiliate thereof) have offices in the same "community" as defined in the regulations.
2. *Relevant metropolitan statistical area (RMSA) prohibition:* Restricts management interlocks between unaffiliated depository organizations if each has total assets of $50 million or more, and both depository organizations, or any of their depository institution affiliates, have offices in the same RMSA.
3. *Major assets prohibition:* Restricts management interlocks between two unaffiliated depository organizations, each with total assets exceeding $10 billion (or any affiliate of such organizations), regardless of the location of the two depository organizations.[2]

STATUTORY AND REGULATORY EXEMPTIONS

The Interlocks Act includes several specific exemptions from the general interlocks prohibitions. Under these statutory exemptions (codified in 12 USC 3204 and 3205, and set forth in 12 CFR 212.4 and 12 CFR 238.94), the Interlocks Act permits a management interlock for the following organizations and persons:

- an Edge or agreement corporation;
- a depository organization in formal liquidation or a similar type situation;
- a credit union being served by a management official of another credit union;
- a depository institution that does not do business in the United States except as an incident to its activities outside the United States;
- a state-chartered savings and loan guaranty corporation;
- a Federal Home Loan Bank or other bank organized solely for the purpose of serving depository institutions or solely for the purpose of providing securities clearing services and related services related to other depository institutions;
- a depository organization that is closed or is in danger of closing as determined by the appropriate federal depository institution's regulatory agency and is acquired by another depository organization; or
- a diversified savings and loan holding company (as defined in section 10(a)(1)(F) of the Home Owners' Loan Act (12 USC 1467a(a)(1)(F)) with respect to the service of a director of such company who also is a director of an unaffiliated depository organization.

The Interlocks Act also provides general authority for the Federal Reserve Board to

1. The Board's rules define "depository organizations" to include depository institutions and depository holding companies. The Board has authority under the Interlocks Act to prescribe regulations necessary to carry out the Interlocks Act with respect to state member banks, bank holding companies, and savings and loan holding companies (12 USC 3207(2)). For more information on management official interlocks at savings and loan holding companies, see the Federal Reserve Board's Regulation LL (12 CFR 238 subpart J).

2. 84 *Fed. Reg.* 54,465 (October 10, 2019).

establish exemptions through its regulations. The Federal Reserve Board has used this authority to establish the small market share exemption and other general exemptions.

Under the small market share exemption (12 CFR 212.5 and 12 CFR 238.95), a management interlock is permissible if (1) the interlock is not prohibited by major asset prohibition, and (2) the depository organizations (and their depository institution affiliates) hold, in the aggregate, no more than 20 percent of the deposits in each RMSA or community in which both depository organizations (or their depository institution affiliates) have offices. The amount of deposits is determined by reference to the most recent annual Summary of Deposits published by the Federal Deposit Insurance Corporation for the RMSA or community. Small market share exemptions are automatic, contingent on the interlocked depository organizations maintaining sufficient records to support the determination of eligibility and must be reconfirmed on an annual basis.

In addition, the Federal Reserve Board may exempt a prohibited interlock in response to an application by a depository organization if the Federal Reserve Board finds that the interlock would not result in a monopoly or substantial lessening of competition, and would not present safety and soundness concerns. Section 212.6(b) of Regulation L, as well as section 238.96(b) of Regulation LL, identifies certain proposals that are presumed not to result in a monopoly or substantial lessening of competition. These are

- depository organizations primarily serving low- and moderate-income areas,
- depository organizations controlled or managed by members of a minority group or by women,
- depository institutions that have been chartered for fewer than two years, and
- depository organizations in "troubled condition" as defined in the Federal Reserve Board's Regulation Y.[3]

An exemption obtained pursuant to 12 CFR 212.6(a) or 238.96(a) may continue for so long as it does not result in a monopoly or substantial lessening of competition, or is unsafe or unsound. If the Federal Reserve Board grants an interlock exemption in reliance upon a presumption listed at 12 CFR 212.6(b) or 12 CFR 238.96(b), the interlock may continue for three years, unless otherwise provided by the Board in writing.

CHANGE IN CIRCUMSTANCES

A management official must terminate their service or apply for an exemption if a change in circumstances causes the management interlock to become prohibited (see 12 CFR 212.7 and 238.97). A change in circumstances may include an increase in asset size of a depository organization, a change in the delineation of the RMSA or community, the establishment of an office, an increase in the aggregate deposits of the depository organization, or an acquisition, merger, consolidation, or reorganization of the ownership structure of a depository organization that causes a previously permissible interlock to become prohibited.

A management interlock that becomes prohibited due to a change in circumstances under 12 CFR 212.7 or 12 CFR 238.97 may continue for 15 months following the date of the change in circumstances. The Federal Reserve Board may shorten this period under appropriate circumstances.

3. The Board's Regulation Y (12 CFR 225.71) states that troubled condition for a regulated institution means an institution that (1) has a composite rating, as determined in its most recent report of examination or inspection, of 4 or 5 under the CAMELS rating system or the Federal Reserve Bank Holding Company rating system; (2) is subject to a cease-and-desist order or formal written agreement that requires action to improve the financial condition of the institution, unless otherwise informed in writing by the Board or Reserve Bank; or (3) is informed in writing by the Board or Reserve Bank that it is in troubled condition for purposes of the requirements of subpart H of Regulation Y on the basis of the institution's most recent report of condition or report of examination or inspection, or other information available to the Board or Reserve Bank. Note that with the Federal Reserve Bank Holding Company rating system, there is no presumption that a firm rated "Deficient-1" would be deemed to be in "troubled condition." Whether a firm subject to the Federal Reserve Bank Holding Company rating system rated "Deficient-1" receives a "troubled condition" designation will be determined by the facts and circumstances at that firm. However, firms rated "Deficient-1" due to financial weaknesses in either capital or liquidity would be more likely to be deemed in "troubled condition" than firms rated "Deficient-1" due solely to issues of governance or controls. See 83 *Fed. Reg.* 58,724 (November 21, 2018) and 84 *Fed. Reg.* 4309 (February 15, 2019) for more information.

Regulation O: Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks

Effective date April 2020

Section 6050.1

PURPOSE AND APPLICABILITY

The Federal Reserve Board's Regulation O (12 CFR 215) implements many of the laws pertaining to extensions of credit by banks to their insiders.[1] Regulation O was issued pursuant to Sections 22(g) and 22(h) of the Federal Reserve Act. Regulation O is designed to mitigate the potential for conflicts of interest and self-dealing by individuals who may be in a position to influence a bank's lending decisions. The regulation limits the amount and type of credit that a member bank may extend to an insider and includes reporting and recordkeeping requirements for a member bank to track and report such activity. The regulation requires that extensions of credit to executive officers, directors, principal shareholders, and their related interests be made substantially on the same terms and follow credit underwriting procedures that are not less stringent than those prevailing at the time for comparable transactions with persons not covered by the regulation. In addition, such extensions of credit should not involve more than the normal risk of repayment or present other unfavorable features. Regulation O also imposes individual and aggregate lending limits and prior approval requirements for certain extensions of credit.

Moreover, certain extensions of credit to executive officers of member banks are subject to additional restrictions. In addition, a member bank is prohibited from making payments of overdrafts to directors or executive officers absent a written, preauthorized plan for the overdraft to be treated as an extension of credit that bears interest or a transfer of funds from another account at the bank.

With regards to applicability, the Federal Reserve's Regulation O governs any extension of credit by a member bank to an executive officer, director, or principal shareholder of

1. The member bank,
2. Any company of which the member bank is a subsidiary, and
3. Any other subsidiary of that company.

1. This section summarizes and explains the rule, as amended, but is not a substitute for the rule itself.

The regulation also applies to any extension of credit by a member bank to the related interests of executive officers, directors, or principal shareholders, including companies controlled by such a person and political or campaign committees that benefit or are controlled by such a person.

Extensions of credit by a member bank to its executive officers, directors, principal shareholders, and their related interests, as well as other items related to Regulation O, are reported on Schedule RC-M of the Consolidated Reports of Condition and Income (Call Report). For more information on reporting, refer to the appropriate Call Report form and instructions.

EXTENSION OF CREDIT (12 CFR 215.3)

Regulation O defines an "extension of credit" to include the making or renewal of any loan, a granting of a line of credit, or an extending of credit in any manner whatsoever including

1. A purchase under repurchase agreement of securities, other assets, or obligations;
2. An advance by means of an overdraft, cash item, or otherwise;
3. Issuance of a standby letter of credit (or other similar arrangement regardless of name or description) or an ineligible acceptance;
4. An acquisition by discount, purchase, exchange, or otherwise of any note, draft, bill of exchange, or other evidence of indebtedness upon which an insider may be liable as maker, drawer, endorser, guarantor, or surety;
5. An increase of an existing indebtedness, but not if the additional funds are advanced by the bank for its own protection for (a) accrued interest or (b) taxes insurance, or other expenses incidental to the existing indebtedness;
6. An advance of unearned salary or other unearned compensation for a period in excess of 30 days; and
7. Any other similar transaction as a result of which a person becomes obligated to pay money (or its equivalent) to a bank, whether the obligation arises directly or indirectly, or

because of an endorsement on an obligation or otherwise, or by any means whatsoever.[2]

The requirements of Regulation O apply at the time a loan or extension of credit is made, which is the time the bank enters into a binding commitment to make the extension of credit.[3] Thus, loans or extensions of credit that were made to an individual before they became an insider are grandfathered, as long as they were made in good faith and not in contemplation of the individual becoming an insider. If such loans exceed the amount permitted by Regulation O, they will be considered nonconforming rather than a violation of Regulation O. However, if the loans are nonconforming, no new extensions of credit subject to Regulation O may be made to the individual, and existing loans may not be renewed, except in compliance with Regulation O.[4]

LIMITS ON EXTENSIONS OF CREDIT TO INSIDERS (12 USC 375B AND 12 CFR 215.4)

Terms and Creditworthiness

Regulation O applies limits and prohibitions to extensions of credit made by a member bank to all insiders—executive officers, directors, and principal shareholders, and the related interests of these persons—including insiders of affiliates. Regulation O specifies that a member bank may not extend credit to an insider of the bank or an insider of the bank's affiliates unless the extension is made on substantially the same terms as other loans, in accordance with underwriting procedures used for other loans for comparable transactions, does not involve more than the normal risk of repayment, and does not present other unfavorable terms. Exceptions are provided for certain extensions of credit made pursuant to a benefit or compensation program that is widely available to all employees of the member bank and does not give preference over employees that are not insiders.

Prior Approval

Regulation O requires prior approval by the member bank's board of directors for extensions of credit that exceed the higher of $25,000 or 5 percent of the bank's unimpaired capital stock and surplus.[5] Such approval should be documented within the board's minutes, and the insider who would receive the loan should abstain from the board's approval process. In addition, if the extension of credit exceeds $500,000, it must follow the prior approval procedure.

Individual and Aggregate Lending Limits

Extensions of credit to insiders are restricted on an individual and aggregate level. No member bank may extend credit to any insider of the bank or insider of its affiliates in an amount that, when aggregated with the amount of all other extensions of credit by the member bank to that person and to all related interests of that person, exceeds the lending limit of the member bank specified in 12 CFR 215.2(i). For loans that are not fully secured, this amount is 15 percent of the bank's unimpaired capital stock and unimpaired surplus. An additional 10 percent of the bank's unimpaired capital and unimpaired surplus is added for loans that are fully secured by readily marketable collateral having a market value—as determined by reliable and continuously available price quotations—that is at least equal to the amount of the loan. Additionally, a member bank may not extend credit to any insider of the bank or insider of its affiliates if the extension of credit is in an amount that, when aggregated with the amount of all outstanding extensions of credit by that bank to all insiders, exceeds the bank's unimpaired capital and unimpaired surplus.

2. The Dodd-Frank Wall Street Reform and Consumer Protection Act added to the definition of an "extension of credit" an insured depository institution's credit exposure to a person arising from a derivative transaction, repurchase agreement, reverse repurchase agreement, securities lending transaction, or securities borrowing transaction. Refer to Regulation O for information on what an "extension of credit" does not include and for the other regulatory provisions.

3. 12 CFR 215.3(d).

4. For more information, see 22 *Fed. Res. Bull.* 121 (1936); *Fed. Res. Reg. Serv.* 3-1036; letter of J. Virgil Mattingly, Jr., General Counsel, Board of Governors of the Federal Reserve System (September 16, 1992), 1992 WL 693697 (FRB). See also the OCC's Interpretive Letter #1096 (March 20, 2008).

5. 12 CFR 215.4(b).

Overdrafts

In addition, a member bank is prohibited from paying an overdraft of an executive officer or director unless the overdraft is made pursuant to a written, preauthorized, interest-bearing extension-of-credit plan that specifies a method of repayment, or a written, preauthorized transfer of funds from another account of the insider at the bank. This prohibition does not apply to the payment of inadvertent overdrafts in aggregate of $1,000 or less, as long as the account was not overdrawn for more than five business days and the standard overdraft fee was charged.

EXTENSIONS OF CREDIT TO EXECUTIVE OFFICERS (12 USC 375A AND 12 CFR 215.5)

Regulation O imposes additional limits on extensions of credit to executive officers of member banks (but not to their related interests and not to executive officers of affiliates). Aggregate loans to an executive officer may not exceed the higher of $25,000 or 2.5 percent of the institution's unimpaired capital and surplus but in no event more than $100,000.

However, a member bank may extend credit to an executive officer of a member bank in any amount to finance or refinance

- the purchase, construction, maintenance, or improvement of a single residence of an executive officer if the loan is secured by a first lien on the residence that the executive officer owns (or expects to own after the extension of credit); or
- the education of their children.

An executive officer may have only one of each such loan from the member bank outstanding at a time. Certain secured loans may be permitted (12 CFR 215.5(c)(3)) in excess of the lending limit set by 12 CFR 215.5(c)(4). It is important to note that, although mortgage and educational loans are not subject to limitation under 12 USC 375a and 12 CFR 215.5, aggregate loans to an individual executive officer of a member bank (including mortgage and education loans) collectively are limited by 12 USC 375b and 12 CFR 215.4.

INSIDER USE OF A BANK-OWNED CREDIT CARD

Federal Reserve Board staff issued a May 22, 2006, legal opinion in response to a request for clarification from the Federal Deposit Insurance Corporation (FDIC) on the application of the Board's Regulation O to credit cards that are issued to bank insiders for the bank's business purposes. The FDIC asked whether, and under what circumstances, an insider's use of a bank-owned credit card would be deemed an extension of credit by the bank to the insider for purposes of Regulation O. The Federal Reserve Board staff's legal opinion applies only to the specific issues and circumstances described in the letter and does not address any other issues or circumstances. For more information, see the Federal Reserve Board's legal opinion on its public website.

SUPERVISORY CONSIDERATIONS

Business transactions between a member bank and insiders require close supervisory review. Many of these transactions are soundly structured and have a legitimate business purpose so that all parties are treated equitably. However, absent the protection of an arm's-length transaction, the potential for or appearance of abuse is greater and necessitates intensified review. A member bank's extension of credit to an insider may be considered abusive or self-serving if its terms are unfavorable to the lender or if the credit would not have been extended on the same terms to a non-insider. That is, it would be improbable that each party to the credit would have entered into the credit transaction under the same terms if the relationship did not exist.

Examiners should pay close attention to credit extensions of a member bank to its insiders and their related interests. Extensions of credit to insiders or their related interests should be reviewed to determine whether the amount of credit extended, both to a single borrower and in aggregate to all borrowers, conform to the provisions of Regulation O. Furthermore, examiners should review the terms of the credit, particularly interest rate and collateral terms, to ensure no preferential treatment was given, and the credit does not involve more than a normal repayment risk. Documentation of comparable transactions must be available for examiner review in order to determine that the terms of substantially the same as third-party transactions and that the underwriting standards are not less stringent for insiders.

Examples of preferential treatment include

- lower interest rates than those other customers pay on similar type of loans;
- lower collateral requirements or unwarranted unsecured extensions of credit;
- longer maturities than typical for the nature and purpose of the loan;
- no personal guarantee of corporate debt if required from all other bank customers;
- a loan allowed for a purpose that would not be extended to other bank customers; and
- no requirement for a financial statement on the insider or other documentation that would be requested of other bank customers.

The examination procedures (ED modules) provide more information on assessing a member bank's compliance with Regulation O. If a credit extension appears to circumvent the intent of Regulation O, examiners should discuss the credit extension with the member bank's management to obtain additional information on the terms of the credit. Examiners should assess whether the potentially noncompliant credit extension was an inadvertent instance of noncompliance with Regulation O as well as whether the member bank incurred any losses as a result of the credit extension. The examiner and examiner-in-charge (EIC) should discuss with the member bank's management its plans to bring any noncompliant credit extension into compliance and the need for management to improve controls to prevent further instances of inadvertent noncompliance. Examiners should disclose the noncompliance credit extension(s) and any corresponding matters requiring attention in the report of examination, as appropriate.

For more serious apparent violations of Regulation O, such as intentional or systematic reporting issues, the EIC should raise the issue to Reserve Bank management. Examiners should also notify Reserve Bank management if it is unclear whether the borrower is subject to Regulation O. In these instances, Reserve Bank management will coordinate any necessary discussions with Reserve Bank Legal and/or Board Legal staff. If it is determined that supervisory corrective action is required, the EIC and Reserve Bank management will draft the informal or formal supervisory action in consultation with the Board enforcement staff. See also this manual's section on Formal and Informal Supervisory Actions for more information.

Status of Certain Investment Funds and Their Portfolio Investments for Purposes of Regulation O

The popularity of mutual funds, exchange traded funds, and similar index-based investment products has resulted in several large asset management companies becoming principal shareholders of a number of banks. These funds and products have triggered the Regulation O presumption of control of a related interest over an increasing number of companies in the asset managers' portfolios.

The Federal Reserve Board, the FDIC, and the OCC (agencies) issued an interagency statement in 2019 to explain that the agencies will exercise discretion in not taking enforcement action against banks or asset managers, which become principal shareholders of banks, with respect to certain extensions of credit by banks that otherwise would violate Regulation O. See SR-19-16 for more information.

As detailed in the statement, the agencies are providing this temporary relief while the Board, in consultation with the other agencies, considers whether to amend Regulation O to address this issue. The relief covers extensions of credit to fund complex-controlled portfolio companies only, and does not extend to any extension of credit to principal shareholder fund complexes. The statement provides more specific information on the application of Regulation O in this specific context.

Objective: Assess the bank's compliance with the Federal Reserve Board's Regulation O (12 CFR 215).

Regulation O governs any extension of credit by a bank to an insider, a term defined to include a director, executive officer, or principal shareholder of the bank, the bank holding company of the bank and any other subsidiary of the bank holding company. The regulation also applies to an extension of credit to insiders' related interests and prohibits preferential lending by a bank to insiders of another bank when there is a correspondent account relationship between the banks.

The purpose of Regulation O is to prevent insiders from using their positions and leverage to procure loans on more preferential terms or conditions than would otherwise be available to other customers of the bank.

Regulation O is made applicable to state nonmember banks by Section 18(j)(2) of the Federal Deposit Insurance Act. See also 12 CFR section 337.3 of FDIC Regulations.

Savings Associations: Savings associations, both state and Federal, are subject to Regulation O pursuant to section 11(b) of the Home Owners Loan Act (12 USC section 1468(b)). See also 12 CFR section 215.12.

PRELIMINARY REVIEW

1. Identify previous concerns by reviewing prior examination reports, file correspondence, and audits.
2. Review board minutes since the previous examination and note all discussions and votes related to borrowings of insiders and their related interests.
3. Request a list of extensions of credit to insiders and their related interests and review all internal reports used to monitor extensions of credit to insiders and their related interests.
4. Review internal audits and loan reviews pertaining to insider borrowings, and assess remedial actions taken by management to address prior audit, loan review, or examination findings.

POLICY CONSIDERATIONS

5. Determine whether the bank adopted written policies and procedures to address Regulation O requirements, such as
   - appropriately identifying executive officers, directors, principal shareholders, and their related interests of the bank and its affiliates as defined by section 215.2 of Regulation O;
   - appropriately identifying all extensions of credit related to insiders as defined by section 215.3 of the regulation, including those considered extensions under the tangible economic benefit rule;
   - ensuring extensions of credit to insiders are made at arm's length on substantially the same terms and following underwriting procedures that are not less stringent than those used for comparable transactions, do not give preference to any insider over other employees, and do not involve more than normal risk of repayment or present other unfavorable features as set forth in section 215.4(a);
   - ensuring appropriate prior approval of extensions of credit to insiders of the bank and its affiliates as delineated in section 215.4(b);
   - accurately aggregating extensions of credit to ensure compliance with individual and aggregate lending limits designated in sections 215.4(c) and 215.4(d), respectively;
   - identifying and monitoring transaction accounts of directors and executive officers of the bank and its affiliates to ensure compliance with section 215.4(e);
   - ensuring that all extensions of credit to executive officers of the bank do not exceed the regulatory limits as prescribed in section 215.5;
   - maintaining appropriate records necessary for compliance with section 215.8;
   - appropriately disclosing credit extended from banks to insiders and their related interests as mandated by section 215.9 (when requested in writing); and
   - ensuring that directors and executive officers report annually to the board any

outstanding credit secured by the shares of the bank not traded publicly (section 215.10).

MANAGEMENT INFORMATION SYSTEMS

6. Determine whether management information systems accurately identify and aggregate extensions of credit to insiders and their related interests.

SECTION 215.4 (A)—GENERAL PROHIBITIONS—TERMS AND CREDITWORTHINESS

Applies to insiders of the bank (executive officers, directors, principal shareholders, and their related interests), and to insiders of the bank's affiliates in most circumstances.

A bank may not extend credit to any insider of the bank or to an insider of its affiliates unless the extension of credit is made on substantially the same terms and conditions, and with underwriting standards that are not less stringent, than those terms and standards prevailing at the time for comparable transactions by the bank to non-insider customers.

In addition to the not-more-favorable terms requirements, an extension of credit to a bank insider or an insider of a bank affiliate may not involve more than the normal risk of repayment, or present other unfavorable features.

7. Review loans to insiders and their related interests and review a sample of similar loans to non-insiders. Determine whether insider loans were granted on terms and conditions more favorable than comparable transactions to non-insiders or other employees.

8. Determine whether any loans to insiders involved more than the normal risk of repayment or present other unfavorable features when compared with loans to non-insiders or other employees.

SECTION 215.4 (B)—PRIOR APPROVAL

Applies to insiders of the bank and in most circumstances to insiders of the bank's affiliates. Approval by the board is not required under this section for an extension of credit made pursuant to a line of credit approved under this section within 14 months of the date of the extension of credit. However, this extension of credit must still comply with section 215.4(a).

A majority of the board of directors must approve any extension of credit to an insider that, when aggregated with all other extensions of credit to that insider and their related interest, exceeds the higher of $25,000 or 5 percent of unimpaired capital and surplus, not to exceed $500,000 except by complying with the requirements of 215.4(b).

9. List any insiders and related interests to whom the bank has extended aggregate credit exceeding the threshold calculated above. For relevant time periods, review board minutes to ensure that those extensions exceeding the prior approval threshold were
   - pre-approved by a majority of the bank's board of directors, and
   - approved without the direct or indirect participation of the insider obtaining the loan.[1]

SECTION 215.4(C)—INDIVIDUAL LENDING LIMIT

Applies to insiders of the bank and in most circumstances to insiders of the bank's affiliates.

No bank may extend credit to an insider that, when aggregated with all other extensions to that insider and their related interests, exceeds the legal lending limit of the institution. The legal lending limit is generally 15 percent of capital plus an additional 10 percent if the additional 10 percent is fully secured by readily marketable collateral. The 10 percent limitation is separate from and in addition to the initial 15 percent limitation.

When state law establishes a lending limit for a bank that is lower than the amount permitted

1. Minutes typically reflect that the affected insiders excused themselves during the discussions and abstained from voting on those extensions of credit.

in this calculation, the state's lending limit is the applicable lending limit for the bank.

10. Determine whether managerial reports documenting loans to insiders and their related interests accurately aggregate extensions of credit. Review totals for each insider to assess compliance with calculated limits. Verify that loans segregated in the 10 percent category are fully secured by readily marketable collateral having a reliable and continuously available market value.
11. Determine whether loans to insiders and their related interests are not subject to exceptions to the Individual Lending Limit as outlined in Appendix to Part 215—Section 5200 of the Revised Statutes Total Loans and Extensions of Credit.

SECTION 215.4(D)—AGGREGATE LENDING LIMIT

Applies to insiders of the bank and in most circumstances to insiders of the bank's affiliates.

A bank may not extend credit to any insider of the bank or insider of its affiliates unless the amount of the extension of credit, when aggregated with the amount of all outstanding extensions of credit to all such insiders, does not exceed the bank's unimpaired capital and unimpaired surplus.

A bank with total deposits of less than $100 million may, by annual board resolution, adopt a higher aggregate lending limit not to exceed two times the bank's unimpaired capital and surplus if

- *the board of directors determines that such a high limit is consistent with prudent, safe and sound banking practices in light of the bank's experience in lending to its insiders and is necessary to attract or retain directors or to prevent restricting the availability of credit in small communities;*
- *the resolution sets forth the facts and reasoning on which the board of directors bases the finding, including the amount of the bank's lending to its insiders as a percentage of the bank's unimpaired capital and unimpaired surplus as of the date of the resolution;*
- *the bank meets or exceeds all applicable capital requirements established by the appropriate federal banking agency; and the bank received a satisfactory composite rating in its most recent report of examination.*

12. Determine whether extensions of credit to insiders and their related interests do not exceed the bank's unimpaired capital and unimpaired surplus or that those banks with less than $100 million in total deposits meet the criteria for the exception outlined above.
13. For banks that have adopted a resolution authorizing a higher limit but subsequently fail to meet the four requirements, verify that they have not extended any additional credit (including a renewal of any existing extension of credit) to any insider of the bank or its affiliates, unless such extensions of credit do not exceed the bank's unimpaired capital and surplus.
14. Verify that loans to insiders and their related interests are not subject to exceptions to the Aggregate Lending Limit as outlined in Appendix to Part 215—Section 5200(c) of the Revised Statutes Total Loans and Extensions of Credit.

SECTION 215.4(E)—OVERDRAFTS—TRANSACTION TESTING/SAMPLE REVIEW

Applies to executive officers and directors of the bank and in most circumstances those of its affiliates. It does not apply to related interests. It does not apply to principal shareholders, unless they are also an executive officer or director.

No bank may pay an overdraft of an executive officer or director of the bank or an executive officer or director of its affiliates on an account at the bank, unless the payment of funds is made in accordance with a written, preauthorized, interest-bearing extension-of-credit plan that specifies a method of repayment, or a written, preauthorized transfer of funds from another account of the account holder at the bank.

Certain inadvertent overdrafts on an executive officer or director account that total $1,000 or less are allowed provided

- *the account is not overdrawn for more than five business days, and*
- *the bank charges the same fee charged to any other customer of the bank in similar circumstances.*

15. Review overdraft, bounce protection, check kiting, uncollected funds, and large item reports for activity related to overdrafts of executive officers and directors of the bank and its affiliates. Determine whether any overdrafts were paid in contravention of established bank policies, such as no pay, all pay, or ad hoc overdraft arrangements.
16. Determine whether the bank has established written, preauthorized, interest bearing credit plans (overdraft protection) with executive officers or directors of the bank or executive officers or directors of its affiliates. Ensure that these plans specify a method of repayment and verify that the credit plans are performing as agreed.
17. Determine whether the bank has established written, preauthorized agreements for fund transfers from another account in the event of an overdraft. Determine whether any overdrafts noted in director or executive officers' accounts are covered by a transfer agreement.

ADDITIONAL RESTRICTIONS ON LOANS TO EXECUTIVE OFFICERS OF BANKS (SECTION 215.5)

Only applies to executive officers of the bank.

Aggregate loans to an executive officer may not exceed the higher of $25,000 or 2.5 percent of unimpaired capital and surplus and in no event more than $100,000, as defined in section 215.5.

There are no dollar limits on loans for the education of children or for the purchase, construction, maintenance, or improvement of a single residence if secured by a first lien and the residence is owned by the officer. Furthermore, there are no dollar limits on loans secured by U.S. government and agency securities or by a deposit account in the respective bank. The aggregate calculation should also exclude credit card debt of $15,000 or less [section 215.3(b)(5)] and indebtedness of $5,000 or less arising from an interest bearing overdraft credit plan [section 215.3(b)(6)].

18. Review extensions of credit made to executive officers or any partnerships in which one or more executive officers are partners, and individually or together, hold a majority interest, to determine that qualifying loans were made within applicable limits.

19. Review extensions of credit to executive officers and determine whether the loans were promptly reported to the board of directors. (Any extension of credit by a bank to an executive officer must be promptly reported to the bank's board of directors, and comply with the terms and creditworthiness requirements of section 215.4(a).) See also section 215.5(d).

20. Review loans files and other relevant documentation to ensure that reportable transactions were preceded by the submission of a detailed, current financial statement of the officer and include a condition that the extension will, at the option of the bank, become due and payable at any time that the officer is indebted to any other bank or banks in an aggregate amount greater than the limit for 215.5(c). See also section 215.5(d).

RECORDKEEPING AND REPORTING REQUIREMENTS—SECTIONS 215.8, 215.9, AND 215.10

Applies to insiders of banks and their affiliates; however, there are certain exclusions for directors and executive officers of affiliates. See section 215.2 for specific conditions under which directors and executive officers of affiliates can be excluded.

21. Determine whether the recordkeeping method adopted by the bank accurately maintains records of extensions of credit to insiders and their related interests as required by section 215.8.

22. Verify that the bank, upon receipt of written request from the public, has made available the names of each of its executive officers and principal shareholders to whom, or to whose related interests, the bank had an outstanding extension of credit, that when aggregated with all other outstanding extensions, equaled or exceeded 5 percent of capital and surplus, or $500,000, whichever amount is less. Verify that requests for this information and the disposition of such

requests are maintained for at least two years.[2]

23. If applicable, determine whether executive officers and directors of a bank whose shares are not publicly traded report annually to the board of directors of the bank any outstanding credit secured by shares of the bank. This requirement is only applicable to shares of bank stocks that are not publicly traded (section 215.10). (Note: Applies to executive officers and directors of the bank only.)
24. Determine whether extensions of credit from a correspondent bank to a respondent bank insider and from a respondent bank to a correspondent bank insider, as well as accounts opened by banks with a loan to an insider of a correspondent bank, are all on market terms. (Note: While the reporting requirements for lending from correspondent banks to insiders and from banks to the insiders of correspondent banks are no longer a requirement of Regulation O, the substantive restrictions remain a part of 12 USC 1972 (2).)

2. Disclosure is not required if the aggregate amount of all extensions of credit outstanding, including to related interests of such person, does not exceed $25,000.

OVERVIEW

The Fair and Accurate Credit Transactions Act of 2003 (FACT Act) was enacted on December 4, 2003.[1] The FACT Act added several provisions to the Fair Credit Reporting Act of 1970 (FCRA).[2] Section 114 of the FACT Act[3] amended section 615 of the FCRA, and directed the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the National Credit Union Administration, and the Federal Trade Commission to issue joint regulations and guidelines regarding the detection, prevention, and mitigation of identity theft. Further, the agencies were directed to issue special regulations requiring debit and credit card issuers to validate notifications of changes of address under certain circumstances. In 2007, the agencies issued joint regulations and guidelines.[4] See section 222 of the Board's Regulation V—Fair Credit Reporting (12 CFR pt. 222).

The goal of the identity theft red flags rule (12 CFR pt. 222, Subpart J) and its Guidelines (12 CFR 222, Appendix J) is to ensure that financial institutions and creditors are alert for signs or indicators that an identity thief is misusing another individual's sensitive data, typically to obtain products or services from the institution or creditor. The identity theft red flags rule periodically requires a financial institution to determine whether it offers or maintains accounts covered by the regulation.[5] A covered account generally is a consumer account or any other account the institution determines carries a foreseeable risk of identity theft. For new or existing covered accounts, the regulation requires an institution to develop and implement a written Identity Theft Prevention Program (program) that is designed to detect, prevent, and mitigate identity theft. The program must be appropriate to the size and complexity of the financial institution and the nature and scope of its activities.

In general, safety-and-soundness examiners with experience in operational risk will review institutions for compliance with the identity theft red flags rule. This manual section explains certain financial institution safety-and-soundness provisions of the identity theft red flags rule and guidelines.

For additional information, see

- SR-08-7/CA-08-10, "Interagency Examination Procedures for the Identity Theft Red Flags and Other Regulations under the Fair Credit Reporting Act"
- Frequently Asked Questions on Identity Theft Rules (Jun. 11, 2009)
- The Board's Regulation V, "Fair Credit Reporting" (12 CFR pt. 222)

IDENTITY THEFT RED FLAGS PROGRAM

The term "account" is defined in the identify theft red flags rule as a continuing relationship established by a person with a financial institution or creditor to obtain a product or service for personal, family, household, or business purposes. The definition of "covered account" is divided into the following two parts:

(1) Accounts that a financial institution offers or maintains, primarily for personal, family, or household purposes, that involves or is designed to permit multiple payments or transactions; and
(2) Any other account that the financial institution offers or maintains for which there is a reasonably foreseeable risk to customers or to the safety and soundness of the financial institution from identity theft.

1. Pub. L. 108–159.
2. 15 U.S.C. 1681 et seq.
3. 15 U.S.C. 1681m(e).
4. 72 Fed. Reg. 63,718 (Nov. 9, 2007).
5. The term financial institution means a "financial institution or creditor" with regard to the red flags program joint regulations and the accompanying interagency guidance. The FCRA definition of "financial institution" applies to: (1) all banks, savings associations, and credit unions, regardless of whether they hold a transaction account belonging to a consumer; and (2) any other person that directly or indirectly holds a transaction account belonging to a consumer. Accordingly, all banks, savings associations, and credit unions are covered by the red flags rules and Guidelines as "financial institutions," whether or not they hold a transaction account belonging to a consumer. Further, banks and savings associations, including those whose powers are limited to trust activities, are covered by the red flags rules and Guidelines. See also the Frequently Asked Questions on Identity Theft Rules (Jun. 11, 2009).

Risk Assessment

As part of developing and maintaining an effective program, a financial institution must initially and then periodically conduct a risk assessment to determine whether it offers or maintains covered accounts. The program must take into consideration (1) the methods it provides to open its accounts, (2) the methods it provides to access accounts, and (3) its previous experiences with identity theft.

If the financial institution determines that it has covered accounts, the risk assessment will enable it to identify which of its accounts the program must address. If a financial institution initially determines that it does not have covered accounts, the identity theft red flag rule requires the institution to periodically reassess whether it must develop and implement a program in light of changes in the accounts that it offers or maintains.

Elements of the Identity Theft Prevention Program

The elements of an institution's program will vary depending on the size and complexity of the financial institution. A financial institution that determines that it is required to establish and maintain a program must

- identify relevant red flags for its covered accounts,[6]
- detect and respond to the red flags that have been incorporated into its program,
- respond appropriately to the detected red flags, and
- periodically update the program to address the changing risks from identity theft associated with its customers and their accounts and to the safety and soundness of the financial institution.

Administration of the Identity Theft Prevention Program

Each financial institution or creditor that is required to implement a program must provide for the continued administration of the program by

- obtaining approval of the initial written program from either its board of directors or an appropriate committee of the board of directors;
- involving the board of directors, an appropriate committee thereof, or a designated employee at the level of senior management in the oversight, development, implementation, and administration of the program;
- training staff, as necessary, to effectively implement the program; and
- exercising appropriate and effective oversight of service provider arrangements.

GUIDELINES (12 CFR PT. 222, APPENDIX J)

Each financial institution that is required to implement an Identity Theft Prevention Program must consider the Guidelines for Identity Theft Detection, Prevention, and Mitigation's in Appendix J (12 CFR pt. 222, Appendix J) and include those guidelines that are appropriate in its program. Section I of the guidelines, "The Program," discusses an Identity Theft Prevention Program's design that may include, as appropriate, existing policies, procedures, and arrangements that control foreseeable risks to the institution's customers or to the safety and soundness of the financial institution from identity theft.

Identification of Red Flags

A financial institution should include red flags into its program from sources such as (1) incidents of identity theft that it has experienced, (2) methods of identity theft that have been identified as reflecting changes in identity theft risks, and (3) applicable supervisory guidance.

Categories of Red Flags

The program should follow the approach regarding the identification of red flags in section II(c) of the guidelines, "Categories of Red Flags," which provides guidance in identifying relevant red flags. No specific red flags are mandatory for all financial institutions, but a financial institu-

6. The red flags are patterns, practices, or specific activities that indicate the possible existence of identity theft or the potential to lead to identity theft.

tion should include, as appropriate:[7]

- alerts, notifications, or other warnings received from consumer reporting agencies or service providers, such as fraud detection services;
- the presentation of suspicious documents and personal identifying information, such as a suspicious address change;
- the unusual use of, or other suspicious activity related to, a covered account; and
- a notice received from customers, victims of identity theft, law enforcement authorities, or other persons regarding possible identity theft in connection with covered accounts held by the financial institution.

The above categories do not represent a comprehensive list of all types of red flags that may indicate the possibility of identity theft. Institutions should also consider the types of covered accounts it offers and maintains, the methods it provides to open and access those accounts, and any previous exposures to identity theft.

Detect the Identity Theft Prevention Program's Red Flags

In accordance with section III of the guidelines, each financial institution's program should address the detection of red flags in connection with the opening of covered accounts and existing covered accounts. The policies and procedures regarding opening a covered account and existing covered accounts subject to the program should address the detection of red flags, such as by obtaining identifying information about, and verify the identity of, a person opening an account and, in the case of existing covered accounts, authenticating customers, monitoring transactions, and verifying the validity of change of address request.

Respond Appropriately to Any Detected Red Flags

Section IV of the guidelines, "Preventing and Mitigating Identity Theft," states that an institution's procedures should provide for appropriate responses to detected red flags that are commensurate with the degree of risk posed. When determining an appropriate response, the institution should consider factors that may heighten the institution's identity-theft risk. Such factors may include (1) a data security incident that results in unauthorized access to a customer's account records held by the financial institution, creditor, or third party, or (2) notice that a customer has provided information related to a covered account held by the financial institution or creditor to someone fraudulently claiming to represent the financial institution or creditor or to a fraudulent website.

Appropriate responses may include the following:

- monitoring a covered account for evidence of identity theft;
- contacting the customer;
- changing any passwords, security codes, or other security devices that permit access to a secured account;
- reopening a covered account with a new account number;
- closing an existing covered account;
- notifying law enforcement; or
- determining that no response is warranted under the particular circumstances.

Depending on the circumstances, refraining from making a response may be the most prudent course of action for the financial institution to prevent and mitigate identity theft. For example, the financial institution could elect to

- not open a new covered account; or
- not attempt to collect on a covered account or to sell a covered account to a debt collector.

Periodically Updating the Program's Relevant Red Flags

Section V of the guidelines, "Updating the Program," states that a financial institution should periodically update its program (including its relevant red flags) to reflect any changes in risks to its customers or to the safety and soundness of the institution from identity theft, based on (but not limited to) factors such as

7. Examples of red flags from each of these categories are appended as supplement A to appendix J.

- the experiences of the financial institution with identity theft;
- changes in methods of identity theft;
- changes in methods to detect, prevent, and mitigate identity theft;
- changes in the types of accounts that the financial institution offers or maintains; and
- changes in the financial institution's structure, including its mergers, acquisitions, joint ventures, and any business arrangements, such as alliances and service provider arrangements.

Administration of Program

Under the identity theft red flags rule, a financial institution that is required to implement a program must provide for the continued oversight and administration of its program. Section VI of the Guidelines, "Methods for Administering the Program," outlines steps to effectively administer the program.

The board of directors, an appropriate committee of the board, or a designated employee at the level of senior management should:

- assign specific responsibility for the program's implementation,
- review reports regarding the institution's compliance, and
- approve material changes to the program as necessary to address changing identity theft risks.

Financial institution staff responsible for developing, implementing, and administrating the program should report to the board of directors, an appropriate committee of the board, or a designated employee at the level of senior management at least annually. The report should address

- the effectiveness of the policies and procedures in addressing the risk of identity theft in connection with the opening of covered accounts and with respect to existing covered accounts;
- significant incidents involving identity theft and management's response;
- recommendations for material changes to the program; and
- service provider arrangements.

Whenever a financial institution engages a service provider to perform an activity in connection with one or more covered accounts, the institution should ensure that the activity of a service provider is conducted in accordance with reasonable policies and procedures designed to detect, prevent, and mitigate the risk of identity theft. For example, the financial institution could establish a contract with the service provider that specifies policies and procedures to detect relevant red flags that may arise in the performance of the service provider's activities, which should be mitigated and be reported to the financial institution or creditor.

SECTIONS 23A AND 23B OF THE FEDERAL RESERVE ACT AND REGULATION W

Section 23A of the Federal Reserve Act (FRA) (12 USC 371c) is the primary statute governing transactions between a member bank and its affiliates. Section 23A (1) designates the types of companies that are affiliates of a bank; (2) specifies the types of transactions covered by the statute; (3) sets the quantitative limitations on a bank's covered transactions with any single affiliate, and with all affiliates combined; (4) sets forth collateral requirements for certain bank transactions with affiliates; and (5) requires all covered transactions to be conducted on terms consistent with safe and sound banking practices.

In addition to the statutory provisions of section 23A, the Board approved the issuance of Regulation W, which became effective April 1, 2003, implementing sections 23A and 23B of the FRA. To facilitate compliance with these statutes, the rule[1] provides several exemptions and combines the statutory restrictions on transactions between a member bank and its affiliates with numerous Board interpretations and exemptions that were previously issued.

Quantitative Limits

Section 23A(a)(1)(A) states that a member bank[2] may engage in a covered transaction with an affiliate if the aggregate amount of covered transactions with that particular affiliate does not exceed 10 percent of the member bank's capital stock and surplus. Sections 223.11 and 223.12 of the rule sets forth these quantitative limits. A bank that has crossed the 10 percent threshold with one affiliate may still conduct additional covered transactions with other affiliates, if transactions with all affiliates would not exceed 20 percent of the bank's capital stock and surplus.[3] The bank is prohibited from engaging in a new covered transaction with that affiliate if the bank's transactions would exceed the 10 percent threshold with that affiliate or if the level of covered transactions with all its affiliates would exceed the 20 percent threshold. The rule generally does not require the member bank to unwind existing covered transactions if the bank exceeds the 10 percent or 20 percent limit because its capital declined or a preexisting covered transaction increased in value.

The Board strongly encourages member banks with covered transactions in excess of the 10 percent threshold with any affiliate to reduce those transactions before expanding the scope or extent of the bank's relationships with other affiliates.

Capital Stock and Surplus

Under section 23A of the FRA, the quantitative limits on covered transactions are based on the "capital stock and surplus" of the member bank. Section 223.3(d) of the rule defines a member bank's capital stock and surplus, for the purposes of section 23A of the FRA, as (1) the sum of the member bank's tier 1 capital and tier 2 capital under the risk-based capital guidelines, (2) the balance of the bank's allowance for loan and lease losses not included in its tier 2 capital for the purposes of the risk-based capital calculation, and (3) the amount of any investment in a financial subsidiary that counts as a covered transaction that is required to be deducted from the bank's regulatory capital.[4]

Examiners can determine the amount of the quantitative limits based on the bank's most recent Consolidated Report of Condition and Income (Call Report).

1. In this section of the manual, Regulation W is referred to as "the rule" or by a specific section number of the rule.
2. Member bank is defined in section 223.3(w) as "any national bank, state bank, banking association, or trust company that is a member of the Federal Reserve System." Other provisions of federal law apply section 23A to state nonmember banks and savings associations. The rule also states that most subsidiaries of a member bank are to be treated as part of the member bank itself for purposes of sections 23A and 23B. The only subsidiaries of a member bank that are excluded from this treatment are financial subsidiaries, insured depository institution subsidiaries, and certain joint venture subsidiaries—companies that are generally deemed affiliates of the member bank under the rule. This treatment of subsidiaries reflects the fact that the statute typically does not distinguish between a member bank and its subsidiaries, and all the significant restrictions of the statute apply to actions taken by a member bank "and its subsidiaries."
3. See 12 USC 371c(a)(1). Sections 223.11 and 223.12 of the rule set forth these quantitative limits.
4. 12 CFR 223.3(d).

Affiliates

The definition of an affiliate is found in section 23A(b) of the FRA. Section 223.2 of Regulation W further defines "affiliate" as including

1. any company that controls[5] the member bank and any other company that is controlled by the company that controls the member bank;
2. any bank subsidiary of the member bank;
3. any company—
   - that is controlled directly or indirectly, by a trust or otherwise, by or for the benefit of shareholders who beneficially or otherwise control, directly or indirectly, by trust or otherwise, the member bank or any company that controls the member bank; or
   - in which a majority of its directors or trustees constitute a majority of the persons holding any such office with the member bank or any company that controls the member bank;
4. any company, including a real estate investment trust, that is sponsored and advised on a contractual basis by the member bank or any subsidiary or affiliate of the member bank;
5. any investment company with respect to which a member bank or any affiliate thereof is an investment adviser as defined in section 2(a)(20) of the Investment Company Act of 1940 (the 1940 Act);
6. any investment fund for which the member bank or any affiliate of the member bank serves as an investment adviser, if the member bank and its affiliates own or control in the aggregate more than 5 percent of any class of voting securities or of the equity capital of the fund (any investment fund or company with respect to which a member bank or affiliate thereof is an investment adviser; see section 608(a)(l)(A) of the Dodd-Frank Act);
7. a depository institution that is a subsidiary of the member bank;
8. a financial subsidiary of the member bank;
9. any company in which a holding company of the member bank owns or controls, directly or indirectly, or acting through one or more other persons, 15 percent or more of the equity capital of the other company[6] pursuant to the merchant banking authority in section 4(k)(4)(H) or (I) of the Bank Holding Company Act (BHC Act) (12 USC 1843(k)(4)(H) or (I));
10. any partnership for which the member bank or any affiliate of the member bank serves as a general partner or for which the member bank or any affiliate of the member bank causes any director, officer, or employee of the member bank or affiliate to serve as a general partner;
11. any subsidiary of an affiliate described in paragraphs (a)(1) through (10) of section 223.2 of Regulation W; and
12. any company that the Board, or the appropriate federal banking agency for the bank, determines by regulation or order to have a relationship with the member bank or any subsidiary or affiliate of the member bank, such that covered transactions by the member bank or its subsidiary with that company may be affected by the relationship, to the detriment of the member bank or its subsidiary.

The following are not considered to be affiliates to a bank:

1. a nonbank subsidiary of that bank (other than a financial subsidiary) unless the Board determines not to exclude such a subsidiary;
2. a company engaged solely in holding that bank's premises;
3. a company engaged solely in conducting a safe deposit business;
4. a company engaged solely in holding obligations of the United States or its agencies or obligations fully guaranteed by the United States or its agencies as to principal and interest; and
5. a company in which control arises from the exercise of rights arising out of a bona fide debt previously contracted (for the period of time specified by section 23A).

5. By statute, "control" is defined as the power to (1) vote 25 percent or more of the voting shares of a company, (2) elect a majority of the directors of a company, or (3) exercise a controlling influence over a company.

6. The financial holding company may provide information acceptable to the Board demonstrating that it does not control the other company.

Definition of Affiliates by Type of Entity

Investment funds advised by the member bank or an affiliate of the member bank. Regulation W includes as an affiliate any company that is sponsored and advised on a contractual basis by the member bank or any of its affiliates,[7] as well as any investment company for which the member bank or its affiliate serves as an investment adviser, as defined in the 1940 Act.[8] In Regulation W, the Board used its statutory authority to define as an affiliate any investment fund—even if not an investment company for purposes of the 1940 Act—for which the member bank or an affiliate of the bank serves as an investment adviser, if the bank or an affiliate of the bank owns or controls more than 5 percent of any class of voting securities or similar interests of the fund.

Many investment funds that are advised by a member bank (or an affiliate of a member bank) are affiliates of the bank under section 23A because the funds either are investment companies under the 1940 Act or are sponsored by the member bank (or an affiliate of the member bank). The member bank or its affiliate, in some instances, however, may advise but not sponsor an investment fund that is not an investment company under the 1940 Act.[9] The advisory relationship of a member bank or affiliate with an investment fund presents the same potential for conflicts of interest regardless of whether the fund is an investment company under the 1940 Act.[10] The Dodd-Frank Act treats any investment fund as an affiliate if the bank or an affiliate of the bank serves as an investment adviser to the fund.

Financial Subsidiaries. In 1999, the Gramm-Leach-Bliley Act (the GLB Act) authorized banks to own "financial subsidiaries" that engage in activities not permissible for the parent bank to conduct directly, such as underwriting and dealing in bank-ineligible securities. The GLB Act amended section 23A to define a financial subsidiary of a bank as an affiliate of the bank and thus subjected covered transactions between the bank and a financial subsidiary to the limitations of sections 23A and 23B.

Section 23A defines a financial subsidiary as a subsidiary of any bank (state or national) that is engaged in an activity that is not permissible for national banks to engage in directly other than a subsidiary that federal law specifically authorizes national banks to own or control. Specifically, a "financial subsidiary" is defined as "any company that is a subsidiary of a bank that would be a financial subsidiary of a national bank under section 5136A of the Revised Statutes of the United States."[11] Section 5136A, in turn, defines a financial subsidiary as any company that is controlled by one or more insured depository institutions (IDIs), other than (1) a subsidiary that engages solely in activities that national banks are permitted to engage in directly or (2) a subsidiary that national banks are specifically authorized to control by the express terms of a federal statute (other than section 5136A), such as an Edge Act corporation or a small business investment company (SBIC).[12] (See 12 USC 24a(g)(3).) Section 5136A also generally prohibits a financial subsidiary of a national bank from engaging in insurance underwriting, real estate investment and development, or merchant banking activities.[13] (See 12 USC 24a(a)(2)). Regulation W (1) defines a financial subsidiary of a bank, (2) exempts certain companies from the definition, and (3) sets forth special valuation and other rules for financial subsidiaries. (See sections 223.2(a)(8), 223.3(p), and 223.32 of the rule.)

Partnerships. Banks fund legitimate commercial transactions through partnerships. Partnerships for which a member bank or an affiliate serves as a general partner are affiliates.

Regulation W also defines an affiliate of a member bank as any partnership, if the member bank or an affiliate of the bank causes any director, officer, or employee of the bank or affiliate to serve as a general partner of the partnership (unless the partnership is an operating subsidiary of the bank). Also, if a company,

7. 12 USC 371c(b)(1)(D)(i).
8. 12 USC 371c(b)(1)(D)(ii).
9. 12 USC 371c(b)(1)(E).
10. An investment fund typically escapes from the definition of investment company under the 1940 Act because it (1) sells interests only to a limited number of investors or only to sophisticated investors or (2) invests primarily in financial instruments that are not securities. A member bank may face greater risk from the conflicts of interest arising from its relationships with an investment fund that is not registered than an investment company under the 1940 Act because the 1940 Act restricts transactions between a registered investment company and entities affiliated with the company's investment adviser. (See 15 USC 80a-17.)

11. 12 USC 24a(g)(3). (See also 12 USC 371c(e)(1)).
12. 12 USC 24a(a)(2).
13. 12 USC 371c(e)(1).

such as a bank holding company (BHC), controls more than 25 percent of the equity through a partnership, that company is an affiliate under Regulation W.

Subsidiaries of affiliates. Regulation W deems a subsidiary of an affiliate as an affiliate of the member bank.

Companies Designated by the Appropriate Federal Banking Agency

Under section 223.2(a)(12), the Board can determine that any company that has certain relationships with a member bank or an affiliate of the bank is itself an affiliate of the bank such that covered transactions by the bank with that company may be affected by the relationship to the detriment of the bank. The Board and the federal banking agencies can thus protect the member bank in their transactions with associated companies. A member bank may petition the Board for review of any such affiliate determination made by the institution's appropriate federal banking agency under the general procedures established by the Board for review of actions taken under delegated authority.[14]

Companies That Are Not Affiliates

Joint venture companies. Under section 223.2(b)(1)(iii) of the rule, certain joint venture subsidiary companies of a member bank are treated as affiliates. A subsidiary of a member bank is treated as an affiliate if one or more affiliates of the bank, or one or more controlling shareholders of the bank, directly control the joint venture. For example, if a bank controls 30 percent of Company A and an affiliate controls 70 percent of Company A, then Company A is an affiliate. This provision also covers situations in which a controlling natural-person shareholder or group of controlling natural-person shareholders of the member bank (who, as natural persons, are not themselves section 23A affiliates of the bank) exercise direct control over the joint venture company.

The rule's treatment of certain bank-affiliate joint ventures as affiliates does not apply to joint ventures between a member bank and any affiliated IDIs. For example, if two affiliated member banks each own 50 percent of the voting common shares of a company, the company would continue to qualify as a subsidiary and not an affiliate of each bank (despite the fact that an affiliate of each bank owned more than 25 percent of a class of voting securities of the company). The Board has retained its authority to treat such joint ventures as affiliates under section 23A on a case-by-case basis.

Employee benefit plans. Regulation W clarifies that under section 223.2(b)(1)(iv), an employee stock option plan (ESOP) of a member bank or an affiliate of the bank cannot itself avoid classification as an affiliate of the bank by also qualifying as a subsidiary of the bank. Many, but not all, ESOPs, trusts, or similar entities that exist to benefit shareholders, members, officers, directors, or employees of a member bank or its affiliates are treated as affiliates of the bank for purposes of sections 23A and 23B. The ESOP's share ownership or the interlocking management between the ESOP and its associated member bank (or BHC), in many cases, exceeds the statutory thresholds for determining that a company is an affiliate. For example, if an ESOP controls more than 25 percent of the voting shares of the bank or BHC, the ESOP is an affiliate.

The relationship between a member bank and its (or its) affiliate's ESOP generally warrants coverage by sections 23A and 23B. Member banks have made unsecured loans to their ESOPs or their affiliates or have guaranteed loans to such ESOPs that were made by a third party. These ESOPs, however, generally have no means to repay the loans other than with funds provided by the member bank. In addition, even if the ESOP's ownership does not warrant treatment as an affiliate, the issuance of holding company shares to an ESOP that is funded by a loan from the holding company's subsidiary bank could be used as a vehicle by the bank to provide funds to its parent company when the bank is unable to pay dividends or is otherwise restricted in providing funds to its holding company. The attribution rule (12 CFR 223.16) subjects such transactions to the restrictions of sections 23A and 23B.

14. See 12 CFR 265.3.

Determination of Control

Section 23A provides that a company or shareholder shall be deemed to have control over another company if, among other things, such company or shareholder controls in any manner the election of a majority of the "directors or trustees" of the other company.[15] The rule, under section 223.3(g), expands the control definition of section 23A by providing, as in Regulation Y, that control also exists when a company or shareholder controls the election of a majority of the "general partners (or individuals exercising similar functions)" of another company. A company or shareholder would be deemed to control another company (including a partnership, limited-liability company, or other similar organization) under section 23A if the company or shareholder controls the election of a majority of the principal policymakers of such other company.

Under Regulation W, the definition of "control" is similar, but not identical, to the definition used in the BHC Act. Under the rule, a company or shareholder shall be deemed to have control over another company if—

- such company or shareholder, directly or indirectly, or acting through one or more other persons, owns, controls, or has power to vote 25 percent or more of any class of voting securities of the other company;
- such company or shareholder controls in any manner the election of a majority of the directors or trustees or general partners or individuals exercising similar functions of the other company; or
- the Board determines, after notice and opportunity for hearing, that such company or shareholder, directly or indirectly, exercises a controlling influence over the management or policies of the other company.[16]

In addition, under the rule, three additional presumptions of control are provided, similar to the presumptions of control in Regulation Y. First, a company will be deemed to control securities, assets, or other ownership interests controlled by any subsidiary of the company.[17] Second, a company that controls instruments (including options and warrants) that are convertible or exercisable, at the option of the holder or owner, into securities, will be deemed to control the securities.[18] Third, a rebuttable presumption provides that a company or shareholder that owns or controls 25 percent or more of the equity capital of another company controls the other company, unless the company or shareholder demonstrates otherwise to the Board based on the facts and circumstances of the particular case.[19] (See section 223.3(g).) Such a presumption of control is particularly appropriate in the section 23A context because a BHC may have incentives to divest the resources of a subsidiary bank to any company in which the holding company has a substantial financial interest, regardless of whether the holding company owns any voting securities of the company.

Section 23A and Regulation W provide that no company shall be deemed to own or control another company by virtue of its ownership or control of shares in a fiduciary capacity, except (1) a company that is controlled, directly or indirectly, by a trust for the benefit of shareholders who beneficially or otherwise control, directly or indirectly, a member bank or (2) if the company owning or controlling such shares is a business trust.

Covered Transactions

The restrictions of section 23A do not apply to every transaction between a member bank and its affiliates.[20] The section only applies to seven "covered transactions" between a member bank and its affiliates.

A covered transaction under section 23A means

1. a loan or extension of credit to an affiliate, including a purchase of assets subject to an agreement to repurchase;
2. a purchase of or an investment in securities issued by an affiliate;
3. a member bank's purchase of assets from an

15. 12 USC 371c(b)(3)(A)(ii).
16. See 12 CFR 223.3(g) of the rule.
17. See 12 CFR 225.2(e)(2)(i).
18. See 12 CFR 225.31(d)(1)(i). The rule refers more generically to convertible "instruments." It clarifies that the convertibility presumption applies regardless of whether the right to convert resides in a financial instrument that technically qualifies as a "security" under section 23A or the federal securities laws.
19. See, for example, 12 CFR 225.144 and 225.145 (1982 and 2008 Board Policy Statements on Nonvoting Equity Investments).
20. 12 USC 371c(b)(7).

affiliate, except for purchases of real and personal property as may be specifically exempted by the Board by order or regulation;
4. the acceptance of securities or other debt obligations issued by an affiliate as collateral for a loan to any person or company;[21] or
5. the issuance of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate.
6. a transaction with an affiliate that involves the borrowing or lending of securities to the extent that the transaction causes a member bank or a subsidiary to have credit exposure to the affiliate; or
7. a derivative transaction, as defined in 12 USC 84(b) with an affiliate, to the extent that the transaction causes a member bank or a subsidiary to have credit exposure to the affiliate.

If a transaction between a member bank and an affiliate is not within one of the above categories, it is not a covered transaction for the purposes of section 23A and is not subject to its limitations. All covered transactions must be conducted on terms and conditions that are consistent with safe and sound banking practices.[22]

Among the transactions that generally are not subject to section 23A are dividends paid by a member bank to its holding company, sales of assets by a member bank to an affiliate for cash, an affiliate's purchase of securities issued by a member bank, and many service contracts between a member bank and an affiliate. Certain classes of transactions between a member bank and an affiliate are discussed below as to whether they are covered transactions for purposes of section 23A. (See section 223.3(h).)

Attribution Rule

The "attribution rule," found in section 223.16, provides that any covered transaction by a member bank or its subsidiary with any person is deemed to be a transaction with an affiliate of the bank if any of the proceeds of the transaction are used for the benefit of, or are transferred to, the affiliate. For example, a member bank's loan to a customer for the purpose of purchasing securities from the inventory of a broker–dealer affiliate of the bank would be a covered transaction under section 23A.

Credit Transactions with an Affiliate

Extension of Credit to an Affiliate or Other Credit Transaction with an Affiliate

Section 23A includes a "loan or extension of credit" to an affiliate as a covered transaction but does not define these terms. Section 223.3(o) of the rule defines "extension of credit" to an affiliate to mean the making or renewal of a loan to an affiliate, the granting of a line of credit to an affiliate, or the extending of credit to an affiliate in any manner whatsoever, including on an intraday basis. A list of transactions are defined to be extensions of credit in the rule, but are not limited to the following transactions:

1. an advance to an affiliate by means of an overdraft, cash item, or otherwise
2. a sale of federal funds to an affiliate
3. a lease that is the functional equivalent of an extension of credit to an affiliate
4. an acquisition by purchase, discount, exchange, or otherwise of a note or other obligation, including commercial paper or other debt securities, of an affiliate[23]
5. any increase in the amount of, extension of the maturity of, or adjustment to the interest-rate term or other material term of, an extension of credit to an affiliate[24]

21. The acceptance of an affiliate's securities for a loan where the proceeds are transferred to, or used for the benefit of, an affiliate is prohibited.

22. Board staff has taken the position that safety and soundness requires the transaction be conducted on market terms.

23. The Board would consider a full-payout net lease permissible for a national bank under 12 USC 24 (seventh) and 12 CFR 23 to be the functional equivalent of an extension of credit.

24. A floating-rate loan does not become a new covered transaction whenever there is a change in the relevant index (for example, LIBOR or the member bank's prime rate) from which the loan's interest rate is calculated. If the member bank and the borrower, however, amend the loan agreement to change the interest-rate term from "LIBOR plus 100 basis points" to "LIBOR plus 150 basis points," the parties have engaged in a new covered transaction.

6. any other similar transaction as a result of which an affiliate becomes obligated to pay money (or its equivalent) to a member bank[25]

A member bank's purchase of a debt security issued by an affiliate is an extension of credit by the bank to the affiliate for purposes of section 23A under the rule. A member bank that buys debt securities issued by an affiliate has made an extension of credit to an affiliate under section 23A and must collateralize the transaction in accordance with the collateral requirements of section 23A. An exemption from the collateral requirements is provided for situations in which a member bank purchases an affiliate's debt securities from a third party in a bona fide secondary-market transaction.

Issuance of a Guarantee or Letter of Credit

Confirmation of a Letter of Credit Issued by an Affiliate

Section 23A includes as a covered transaction the issuance by a member bank of a letter of credit on behalf of an affiliate, including the confirmation of a letter of credit issued by an affiliate as a covered transaction. See section 223.3(h)(5).[26] When a bank confirms a letter of credit, it assumes the risk of the underlying transaction to the same extent as if it had issued the letter of credit. Accordingly, a confirmation of a letter of credit issued by an affiliate is treated in the same fashion as an issuance of a letter of credit on behalf of an affiliate.

Credit Enhancements Supporting a Securities Underwriting

The definition of guarantee in section 23A does not include a member bank's issuance of a guarantee in support of securities issued by a third party and underwritten by a securities affiliate of the bank.[27] Such a credit enhancement would not be issued "on behalf of" the affiliate. Although the guarantee does provide some benefit to the affiliate (by facilitating the underwriting), this benefit is indirect. The proceeds of the guarantee would not be transferred to the affiliate for purposes of the attribution rule of section 23A.[28] Section 23B would apply to the transaction and, where an affiliate was issuer as well as underwriter, the transaction would be covered by section 23A because the credit enhancement would be on behalf of the affiliate.

Cross-Guarantee Agreements and Cross-Affiliate Netting Arrangements

A cross-guarantee agreement among a member bank, an affiliate, and a nonaffiliate in which the nonaffiliate may use the bank's assets to satisfy the obligations of a defaulting affiliate is a guarantee for purposes of section 23A. The cross-guarantee arrangements among member banks and their affiliates are subject to the quantitative limits and collateral requirements of section 23A. (See section 223.3(h)(5).)

As for cross-affiliate netting arrangements (CANAs), such arrangements involve a member bank, one or more affiliates of the bank, and one or more nonaffiliates of the bank, where a nonaffiliate is permitted to deduct obligations of an affiliate of the bank to the nonaffiliate when settling the nonaffiliate's obligations to the bank. These arrangements also would include agreements in which a member bank is required or permitted to add the obligations of an affiliate of the bank to a nonaffiliate when determining the bank's obligations to the nonaffiliate.

These types of CANAs expose a member bank to the credit risk of its affiliates because the bank may become liable for the obligations of its affiliates. Because the exposure of a member bank to an affiliate in such an arrangement resembles closely the exposure of a member bank when it issues a guarantee on behalf of an affiliate, the rule explicitly includes such arrangements in the definition of covered transaction. Accordingly, the quantitative limits of section 23A would prohibit a member bank from entering into such a CANA to the extent that the netting arrangement does not cap the potential exposure of the bank to the participating affiliate (or affiliates).

25. The definition of extension of credit would cover, among other things, situations in which an affiliate fails to pay on a timely basis for services rendered to the affiliate by the member bank or fails to pay a tax refund to the member bank.

26. See UCC 5-107(2).

27. See 62 *Fed. Reg.* 45295 (August 27, 1997).

28. See 12 USC 371c(a)(2).

Keepwell Agreements

In a keepwell agreement between a member bank and an affiliate, the bank typically commits to maintain the capital levels or solvency of the affiliate. The credit risk incurred by the member bank in entering into such a keepwell agreement is similar to the credit risk incurred by a member bank in connection with issuing a guarantee on behalf of an affiliate. As a consequence, keepwell agreements generally should be treated as guarantees for purposes of section 23A and, if unlimited in amount, would be prohibited by the quantitative limits of section 23A.

Valuation of Credit Transactions with an Affiliate

A credit transaction between a member bank and an affiliate initially must be valued at the amount of funds provided by the member bank to, or on behalf of, the affiliate plus any additional amount that the bank could be required to provide to, or on behalf of, the affiliate. The section 23A value of a credit transaction between a member bank and an affiliate is the greater of (1) the principal amount of the credit transaction; (2) the amount owed by the affiliate to the member bank under the credit transaction; or (3) the sum of (a) the amount provided to, or on behalf of, the affiliate in the transaction and (b) any additional amount that the member bank could be required to provide to, or on behalf of, the affiliate under the terms of the transaction.

The first prong of the rule's valuation formula for credit transactions ("the principal amount of the credit transaction") would likely determine the valuation of a transaction in which a member bank purchased a zero-coupon note issued by an affiliate. A member bank should value such an extension of credit at the principal, or face, amount of the note (that is, at the amount that the affiliate ultimately must pay to the bank) rather than at the amount of funds initially advanced by the bank. For example, assume a member bank purchased from an affiliate for $50 a 10-year zero-coupon note issued by the affiliate with a face amount of $100. The rule's valuation formula requires the member bank to value this transaction at $100.

The second prong of the rule's valuation formula for credit transactions ("the amount owed by the affiliate") likely would determine the valuation of a transaction in which an affiliate fails to pay a member bank when due a fee for services rendered by the bank to the affiliate. This prong of the valuation formula does not include within section 23A's quantitative limits items such as accrued interest not yet due on a member bank's loan to an affiliate.

Member banks will be able to determine the section 23A value for most credit transactions under the third prong of the rule's valuation formula. Under this prong, for example, a $100 term loan is a $100 covered transaction, a $300 revolving credit facility is a $300 covered transaction (regardless of how much of the facility the affiliate has drawn down), and a guarantee backstopping a $500 debt issuance of the affiliate is a $500 covered transaction.

Under section 23A and the rule, a member bank has made an extension of credit to an affiliate if the bank purchases from a third party a loan previously made to an affiliate of the bank. A different valuation formula is provided for these indirect credit transactions. The member bank must value the transaction at the price paid by the bank for the loan plus any additional amount that the bank could be required to provide to, or on behalf of, the affiliate under the terms of the credit agreement.

For example, if a member bank pays a third party $90 for a $100 term loan that the third party previously made to an affiliate of the bank (because, for example, the loan was at a fixed rate and has declined in value because of a rise in the general level of interest rates), the covered transaction amount is $90 rather than $100. The lower covered-transaction amount reflects the fact that the member bank's maximum loss on the transaction is $90 rather than the original principal amount of the loan. For another example, if a member bank pays a third party $70 for a $100 line of credit to an affiliate, of which $70 had been drawn down by the affiliate, the covered-transaction amount would be $100 (the $70 purchase price paid by the bank for the credit plus the remaining $30 that the bank could be required to lend under the credit line).

In another example, a member bank makes a term loan to an affiliate that has a principal amount of $100. The affiliate pays $2 in up-front fees to the member bank, and the affiliate receives net loan proceeds of $98. The member bank must initially value the covered transaction at $100.

Although the rule considers a member bank's purchase of, or investment in, a debt security issued by an affiliate as an extension of credit to an affiliate, these transactions are not valued like other extensions of credit. See section 223.23 for the valuation rules for purchases of, and investments in, the debt securities of an affiliate.

Timing of a Credit Transaction with an Affiliate

A member bank has entered into a credit transaction with an affiliate at the time during the day that the bank becomes legally obligated to make the extension of credit to, or issue the guarantee, acceptance, or letter of credit on behalf of, the affiliate. A covered transaction occurs at the moment that the member bank executes a legally valid, binding, and enforceable credit agreement or guarantee and does not occur only when a member bank funds a credit facility or makes payment on a guarantee. Consistent with section 23A, the rule only requires a member bank to compute compliance with its quantitative limits when the bank is about to engage in a new covered transaction. The rule does not require a member bank to compute compliance with the rule's quantitative limits on a continuous basis. See section 223.21(b)(1) of the rule.

The burden of the timing rule is significantly mitigated by the exemption for intraday extensions of credit found in section 223.42(l). The intraday credit exemption generally applies only to extensions of credit that a member bank expects to be repaid, sold, or terminated by the end of its U.S. business day. The bank must have policies and procedures to manage and minimize the credit exposure. Any such extension of credit that is outstanding at the end of the bank's business day must be treated as an extension of credit and must meet the regulatory quantitative and collateral requirements.

Asset Purchases from an Affiliate

Regulation W provides that a purchase of assets by a member bank from an affiliate initially must be valued at the total amount of consideration given by the bank in exchange for the asset. (See section 223.22.) This consideration can take any form and includes an assumption of liabilities by the member bank. Asset purchases are a covered transaction for a member bank for as long as the bank holds the asset. The value of the covered transaction after the purchase may be reduced to reflect amortization or depreciation of the asset, to the extent that such reductions are consistent with generally accepted accounting principles (GAAP) and are reflected on the bank's financial statements.

Certain asset purchases by a member bank from an affiliate are not valued in accordance with the general asset-purchase valuation formula. First, if the member bank buys from one affiliate a loan to a second affiliate, the bank must value the transaction as a credit transaction with the second affiliate under section 223.21. Second, if the member bank buys from one affiliate a security issued by a second affiliate, the bank must value the transaction as an investment in securities issued by the second affiliate under section 223.23. Third, if the member bank acquires an affiliate that becomes an operating subsidiary of the bank after the acquisition, the bank must value the transaction under section 223.31.

A special valuation rule applies to a member bank's purchase of a line of credit or loan commitment from an affiliate. A member bank initially must value such asset purchases at the purchase price paid by the bank for the asset plus any additional amounts that the bank is obligated to provide under the credit facility.[29] This special valuation rule ensures that there are limits on the amount of risk a company can shift to an affiliated bank.

Section 23A(d)(6) provides an exemption for purchasing assets having a readily identifiable and publically available market quotation. Section 223.42(e) codifies this exemption. Section 223.42(f) of the rule expands the statutory (d)(6) exemption[30] to allow a member bank to purchase securities from an affiliate based on price quotes obtained from certain electronic services so long as, among other things, (1) the selling affiliate is a broker–dealer registered with the Securities and Exchange Commission (SEC), (2) the securities have a ready market and are eligible for purchase by state member banks, (3) the securities are not purchased within 30 days of an underwriting (if an affiliate of the

29. A member bank would not be required to include unfunded, but committed, amounts in the value of the covered transaction if (1) the credit facility being transferred from the affiliate to the bank is unconditionally cancelable (without cause) at any time by the bank and (2) the bank makes a separate credit decision before each drawing under the facility.

30. 12 USC 371c(d)(6).

bank is an underwriter of the securities), and (4) the securities are not issued by an affiliate.

In contrast with credit transactions, an asset purchase from a nonaffiliate that later becomes an affiliate generally does not become a covered transaction for the purchasing member bank. If a member bank purchases assets from a nonaffiliate in contemplation of the nonaffiliate's becoming an affiliate of the bank, however, the asset purchase becomes a covered transaction at the time the nonaffiliate becomes an affiliate. In addition, the member bank must ensure that the aggregate amount of the bank's covered transactions (including any such asset purchase from the nonaffiliate) would not exceed the quantitative limits of section 23A at the time the nonaffiliate becomes an affiliate.

The following examples are provided to assist member banks in valuing purchases of assets from an affiliate. A member bank's receipt of an encumbered asset from an affiliate ceases to be a covered transaction when, for example, the bank sells the asset.

- *Cash purchase of assets.* A member bank purchases a pool of loans from an affiliate for $10 million. The member bank initially must value the covered transaction at $10 million. Going forward, if the borrowers repay $6 million of the principal amount of the loans, the member bank may value the covered transaction at $4 million.
- *Purchase of assets through an assumption of liabilities.* An affiliate of a member bank contributes real property with a fair market value of $200,000 to the member bank. The member bank pays the affiliate no cash for the property, but assumes a $50,000 mortgage on the property. The member bank has engaged in a covered transaction with the affiliate and initially must value the transaction at $50,000. Going forward, if the member bank retains the real property but pays off the mortgage, the member bank must continue to value the covered transaction at $50,000. If the member bank, however, sells the real property, the transaction ceases to be a covered transaction at the time of the sale (regardless of the status of the mortgage).

Purchase of, and Investment in, Securities Issued by an Affiliate

Section 23A includes as a covered transaction a member bank's purchase of, or investment in, securities issued by an affiliate. Section 223.23 of the rule requires a member bank to value a purchase of, or investment in, securities issued by an affiliate (other than a financial subsidiary of the bank) at the greater of the bank's purchase price or carrying value of the securities.[31] A member bank that paid no consideration in exchange for affiliate securities has to value the covered transaction at no less than the bank's carrying value of the securities. In addition, if the member bank's carrying value of the affiliate securities increased or decreased after the bank's initial investment (due to profits or losses at the affiliate), the amount of the bank's covered transaction would increase or decrease to reflect the bank's changing financial exposure to the affiliate. However, the amount of the bank's covered transaction cannot decline below the amount paid by the bank for the securities.

Several important considerations support the general carrying-value approach of this valuation rule. First, the approach is consistent with GAAP, which would require a bank to reflect its investment in securities issued by an affiliate at carrying value throughout the life of the investment, even if the bank paid no consideration for the securities.

Second, the approach is supported by the terms of the statute, which defines both a "purchase of," and an "investment in," securities issued by an affiliate as a covered transaction. The statute's "investment in" language indicates that Congress was concerned with a member bank's continuing exposure to an affiliate through an ongoing investment in the affiliate's securities.

Finally, the carrying-value approach is consistent with the purposes of section 23A—limiting the financial exposure of banks to their affiliates and promoting safety and soundness. The valuation rule requires a member bank to revalue upwards the amount of an investment in affiliate securities only when the bank's exposure to the affiliate increases (as reflected on the bank's financial statements) and the bank's capital increases to reflect the higher value of the

31. Carrying value refers to the amount at which the securities are carried on the GAAP financial statements of the member bank.

investment. In these circumstances, the valuation rule merely reflects the member bank's greater financial exposure to the affiliate and enhances safety and soundness by reducing the bank's ability to engage in additional transactions with an affiliate as the bank's exposure to that affiliate increases.

The valuation rule also provides that the covered-transaction amount of a member bank's investment in affiliate securities can be no less than the purchase price paid by the bank for the securities, even if the carrying value of the securities declines below the purchase price. Although this aspect of the valuation rule is not consistent with GAAP, using the member bank's purchase price for the securities as a floor for valuing the covered transaction is appropriate. First, it ensures that the amount of the covered transaction never falls below the amount of funds actually transferred by the member bank to the affiliate in connection with the investment. In addition, the purchase-price floor limits the ability of a member bank to provide additional funding to an affiliate as the affiliate approaches insolvency. If investments in securities issued by an affiliate were valued strictly at carrying value, then the member bank could lend more funds to the affiliate as the affiliate's financial condition worsened. As the affiliate declined, the member bank's carrying value of the affiliate's securities would decline, the section 23A value of the bank's investment likely would decline, and, consequently, the bank would be able to provide additional funding to the affiliate under section 23A. This type of increasing support for an affiliate in distress is what section 23A was intended to restrict.

The examples provided below are designed to assist member banks in valuing purchases of, and investments in, securities issued by an affiliate.

- *Purchase of the debt securities of an affiliate.* The parent holding company of a member bank owns 100 percent of the shares of a mortgage company. The member bank purchases debt securities issued by the mortgage company for $600. The initial carrying value of the securities is $600. The member bank initially must value the investment at $600.
- *Purchase of the shares of an affiliate.* The parent holding company of a member bank owns 51 percent of the shares of a mortgage company. The member bank purchases an additional 30 percent of the shares of the mortgage company from a third party for $100. The initial carrying value of the shares is $100. The member bank initially must value the investment at $100. Going forward, if the member bank's carrying value of the shares declines to $40, the member bank must continue to value the investment at $100.
- *Contribution of the shares of an affiliate.* The parent holding company of a member bank owns 100 percent of the shares of a mortgage company and contributes 30 percent of the shares to the member bank. The member bank gives no consideration in exchange for the shares. If the initial carrying value of the shares is $300, then the member bank initially must value the investment at $300. Going forward, if the member bank's carrying value of the shares increases to $500, the member bank must value the investment at $500.

Extensions of Credit Secured by Affiliates' Securities

Extensions of Credit—General Valuation Rule (Section 223.24(a) and (b))

Section 23A defines as a covered transaction a member bank's acceptance of securities issued by an affiliate as collateral for a loan or extension of credit to any person or company. This type of covered transaction has two classes: one in which the only collateral for the loan is solely affiliate securities and another in which the loan is secured by a combination of affiliate securities and other collateral.[32]

Extensions of Credit Secured by Mutual Fund Shares

Section 23A(b)(7)(D) of the FRA defines as a covered transaction a member bank's acceptance of securities issued by an affiliate as collateral security for a loan or extension of credit to any person or company.[33]

32. The securities issued by an affiliate cannot be used as collateral for a loan to any affiliate (12 USC 371c (c)(4).

33. See 12 USC 371c(b)(7)(D). This covered transaction only arises when the member bank's loan is to a nonaffiliate. Under section 23A, the securities issued by an affiliate are not acceptable collateral for a loan or extension of credit to any affiliate. See 12 USC 371c(c)(4). If the proceeds of a loan that is secured by an affiliate's securities are transferred to an

Section 223.24(c) of the rule provides an exemption for extensions of credit by a member bank that are secured by shares of an affiliated mutual fund. To qualify for the exemption, the transaction must meet several conditions. First, to ensure that the affiliate collateral is liquid and trades at a fair price, the affiliated mutual fund must be an open-end investment company that is registered with the SEC under the 1940 Act. Second, to ensure that the member bank can easily establish and monitor the value of the affiliate collateral, the affiliated mutual fund's shares serving as collateral for the extension of credit must have a publicly available market price. Third, to reduce the member bank's incentives to use these extensions of credit as a mechanism to support the affiliated mutual fund, the member bank and its affiliates must not own more than 5 percent of the fund's shares (excluding certain shares held in a fiduciary capacity). Finally, the proceeds of the extension of credit must not be used to purchase the affiliated mutual fund's shares serving as collateral or otherwise used to benefit an affiliate. In such circumstances, the member bank's extension of credit would be covered by section 23A's attribution rule. For example, a member bank proposes to lend $100 to a nonaffiliate secured exclusively by eligible affiliated mutual fund securities. The member bank knows that the nonaffiliate intends to use all the loan proceeds to purchase the eligible affiliated mutual fund securities that would serve as collateral for the loan. Under the attribution rule in section 223.16, the member bank must treat the loan to the nonaffiliate as a loan to an affiliate, and because securities issued by an affiliate are ineligible collateral under section 223.14, the loan would not be in compliance with section 223.14.

Under the rule, if the credit extension is secured exclusively by affiliate securities, then the transaction is valued at the full amount of the extension of credit. This approach reflects the difficulty of measuring the actual value of typically untraded and illiquid affiliate securities and conservatively assumes that the value of the securities is equal to the full value of the loan that the securities collateralize. An exception is provided to the general rule when the affiliate securities held as collateral have a ready market (as defined by section 223.42 of the rule). In that case, the transaction may be valued at the fair market value of the affiliate securities. The exception grants relief in those circumstances when the value of the affiliate securities is independently verifiable by reference to transactions occurring in a liquid market.[34]

Covered transactions of the second type, in which the credit extension is secured by affiliate securities and other collateral, are valued at the lesser of (1) the total value of the extension of credit minus the fair market value of the other collateral or (2) the fair market value of the affiliate securities (if the securities have a ready market). The rule's ready-market requirement applies regardless of the amount of affiliate collateral.[35]

A Member Bank's Acquisition of an Affiliate That Becomes an Operating Subsidiary

Section 223.31 (a)–(c) of the rule provides guidance to a member bank that acquires an affiliate. The first situation is when a member bank directly purchases or otherwise acquires the affiliate's assets and assumes the affiliate's liabilities. In this case, the transaction is treated as a purchase of assets, and the covered-transaction amount is equal to the amount of any separate consideration paid by the member bank for the affiliate's assets (if any), plus the amount of any liabilities assumed by the bank in the transaction.

The rule provides that the acquisition by a member bank of a company that was an affiliate of the bank before the acquisition is treated as a purchase of assets from an affiliate if (1) as a result of the transaction, the company becomes an operating subsidiary of the bank and (2) the company has liabilities, or the bank gives cash or any other consideration in exchange for the securities. The rule also provides that these

affiliate by the unaffiliated borrower (for example, to purchase assets or securities from the inventory of an affiliate), the loan should be treated as a loan to the affiliate, and the affiliate's securities cannot be used to meet the collateral requirements of sections 23A. The loan must then be secured with other collateral in an amount and of a type that meets the requirements of section 23A for loans by a member bank to an affiliate.

34. In either case, the transaction must comply with section 23B; that is, the member bank must obtain the same amount of affiliate securities as collateral on the credit extension that the bank would obtain if the collateral were not affiliate securities.

35. Under the rule, a member bank may use the higher of the two valuation options for these transactions if, for example, the bank does not have the procedures and systems in place to verify the fair market value of affiliate securities.

transactions must be valued initially at the sum of (1) the total amount of consideration given by the member bank in exchange for the securities and (2) the total liabilities of the company whose securities have been acquired by the member bank. In effect, the rule requires member banks to treat such share donations and purchases in the same manner as if the member bank had purchased the assets of the transferred company at a purchase price equal to the liabilities of the transferred company (plus any separate consideration paid by the bank for the shares). (See 12 CFR 223.31.)

Similarly, when an affiliate donates a controlling block of an affiliate's shares to a member bank, a covered transaction occurs if the affiliate has liabilities that the member bank assumes. For example, the parent holding company of a member bank contributes between 25 percent and 100 percent of the voting shares of a mortgage company to the member bank. The parent holding company retains no shares of the mortgage company. The member bank gives no consideration in exchange for the transferred shares. The mortgage company has total assets of $300,000 and total liabilities of $100,000. The mortgage company's assets do not include any loans to an affiliate of the member bank or any other asset that would represent a separate covered transaction for the member bank upon consummation of the share transfer. As a result of the transaction, the mortgage company becomes an operating subsidiary of the member bank. The transaction is treated as a purchase of the assets of the mortgage company by the member bank from an affiliate under paragraph (a) of section 223.31. The member bank initially must value the transaction at $100,000, the total amount of the liabilities of the mortgage company. Going forward, if the member bank pays off the liabilities, the member bank must continue to value the covered transaction at $100,000. However, if the member bank sells $15,000 of the transferred assets of the mortgage company or if $15,000 of the transferred assets amortize, the member bank may value the covered transaction at $85,000.

Another situation is when a member bank acquires an affiliate by merger. Because a merger with an affiliate generally results in the member bank's acquiring all the assets of the affiliate and assuming all the liabilities of the affiliate, this transaction is effectively equivalent to the purchase and assumption transaction described in the previous paragraph. Accordingly, the merger transaction also is treated as a purchase of assets, and the covered-transaction amount is equal to the amount of any consideration paid by the member bank for the affiliate's assets (if any), plus the amount of any liabilities assumed by the bank in the transaction.[36]

The assets and liabilities of an operating subsidiary of a member bank are treated in the rule as assets and liabilities of the bank itself for purposes of section 23A.[37] The rule only imposes asset-purchase treatment on affiliate share transfers when the company whose shares are being transferred to the member bank was an affiliate of the bank before the transfer. If the transferred company was not an affiliate before the transfer, it would not be appropriate to treat the share transfer as a purchase of assets from an affiliate. Similarly, the rule only requires asset-purchase treatment for affiliate share transfers when the transferred company becomes a subsidiary and not an affiliate of the member bank through the transfer.

If a member bank purchases, or receives a donation, of a partial interest in an entity that remains an affiliate, that transaction is treated as a purchase of, or investment in, securities issued by an affiliate. This type of transaction is valued according to the purchase price or GAAP carrying value. (See 12 CFR 223.23.)

Step-Transaction Exemption (Section 223.31(d) and (e))

Under section 223.31(d) of the rule, an exemption is provided for certain step transactions that are treated as asset purchases under section 223.31(a) when an affiliate owned the transferred company for a limited period of time. Regulation W provides an exemption when a company acquires the stock of an unaffiliated company and, immediately after consummation of the acquisition, transfers the shares of the acquired company to the holding company's

36. As noted, section 223.3(dd) of the rule makes explicit the Board's view that these merger transactions generally involve the purchase of assets by a member bank from an affiliate.

37. Because a member bank usually can merge a subsidiary into itself, transferring all the shares of an affiliate to a member bank often is functionally equivalent to a transaction in which the bank directly acquires the assets and assumes the liabilities of the affiliate. In a direct acquisition of assets and assumption of liabilities, the covered transaction amount would be equal to the total amount of liabilities assumed by the member bank.

subsidiary member bank. For example, a BHC acquires 100 percent of the shares of an unaffiliated leasing company. At that time, the subsidiary member bank of the holding company notifies its appropriate federal banking agency and the Board of its intent to acquire the leasing company from its holding company. On the day after consummation of the acquisition, the holding company transfers all of the shares of the leasing company to the member bank. No material change in the business or financial condition of the leasing company occurs between the time of the holding company's acquisition and the member bank's acquisition. The leasing company has liabilities. The leasing company becomes an operating subsidiary of the member bank at the time of the transfer. This transfer by the holding company to the member bank, although deemed an asset purchase by the member bank from an affiliate under paragraph (a) of section 223.31, would qualify for the exemption in paragraph (d) of section 223.31.

The rule exempts these "step" transactions under certain conditions. First, the member bank must acquire the target company immediately after the company became an affiliate (by being acquired by the bank's holding company, for example).[38] The member bank must acquire the entire ownership position in the target company that its holding company acquired. Also, there must be no material change in the business or financial condition of the target company during the time between when the company becomes an affiliate of the member bank and when the bank is in receipt of the company. Finally, the entire transaction must comply with the market-terms requirement of section 23B, and the bank must notify its appropriate federal banking agency and the Board, at or before the time that the target company becomes an affiliate of the bank, of its intent ultimately to acquire the target company.

Regulation W requires that the bank consummate the step transaction immediately to ensure the quality and fairness of the transaction. To the extent that the member bank acquires the target company some time after the company becomes an affiliate, the transaction looks less like a single transaction in which the bank acquires the target company and more like two separate transactions, the latter of which involves the bank acquiring assets from an affiliate.

The Board recognized, however, that banking organizations may need a reasonable amount of time to address legal, tax, and business issues relating to an acquisition. Regulation W thus permits member banks to avail themselves of the step-transaction exemption if the bank acquires the target company within three months after the target company becomes an affiliate so long as the appropriate federal banking agency for the bank has approved the longer time period.

The 100 percent ownership requirement (that the member bank must acquire the entire ownership position in the target company that its holding company acquired) prevents a holding company from keeping the good assets of the target company and transferring the bad assets to the holding company's subsidiary member bank. If a banking organization fails to meet the terms of the step-transaction exemption, the organization may be able to satisfy the conditions of the rule's internal-corporate-reorganization exemption or may be able to obtain a case-by-case exemption from the Board.

Prohibition on the Purchase of Low-Quality Assets

Section 23A generally prohibits the purchase by a member bank of a low-quality asset from an affiliate.[39] In addition, a member bank cannot purchase or accept as collateral a low-quality asset from an affiliate. Section 23A defines a low-quality asset to include (1) an asset classified as "substandard," "doubtful," or "loss," or treated as "other loans specially mentioned," in the most recent report of examination or inspection by a federal or state supervisory agency (a "classified asset"); (2) an asset in nonaccrual status; (3) an asset on which payments are more than 30 days past due; or (4) an asset whose terms have been renegotiated or compromised due to the deteriorating financial condition of the obligor.[40] Any asset meeting one of the above four criteria, including securities and real

38. This exemption can be used only by BHCs that are in existence at the time of the transaction. A BHC in formation cannot take advantage of the exemption. For example, a leasing company that applies to become a BHC cannot use the exemption to transfer its leasing assets to the bank.

39. 12 USC 371c(a)(3). Section 23A does not prohibit an affiliate from donating a low-quality asset to a member bank, so long as the bank provides no consideration for the asset, and no liabilities are associated with the asset.

40. 12 USC 371c(b)(10).

property, is a low-quality asset.[41]

Regulation W expands the definition of low-quality assets in several respects. (See 12 CFR 223.3(v).) First, an asset is identified by examiners as a low-quality asset if they represent credits to countries that are not complying with their external debt-service obligations but are taking positive steps to restore debt service through economic adjustment measures, generally as part of an International Monetary Fund program. Although such assets may not be considered classified assets, examiners are to consider these assets in their assessment of a bank's asset quality and capital adequacy. See also section 7040.3 and SR-08-12.

Second, the rule considers a financial institution's use of its own internal asset-classification systems. The rule includes within the definition of low-quality asset not only assets classified during the last examination but also assets classified or treated as special mention under the institution's internal classification system (or assets that received an internal rating that is substantially equivalent to classified or special mention in such an internal system).

The purchase by a depository institution from an affiliate of assets that have been internally classified raises potentially significant safety-and-soundness concerns. The Board expects companies with internal rating systems to use the systems consistently over time and over similar classes of assets and will view as an evasion of section 23A any company's deferral or alteration of an asset's rating to facilitate sale of the asset to an affiliated institution.

Finally, the rule defines low-quality asset to include foreclosed property designated "other real estate owned" (OREO), until it is reviewed by an examiner and receives a favorable rating. It further defines as a low-quality asset any asset (not just real estate) that is acquired in satisfaction of a debt previously contracted (not just through foreclosure) if the asset has not yet been reviewed in an examination or inspection. Under the rule, if a particular asset is good collateral taken from a bad borrower, the asset should cease to be a low-quality asset upon examination.

Section 23A provides a limited exception to the general rule prohibiting purchase of low-quality assets if the bank performs an independent credit evaluation and commits to the purchase of the asset before the affiliate acquires the asset.[42] Section 223.15 of the rule also provides an exception from the prohibition on the purchase by a member bank of a low-quality asset from an affiliate for certain loan renewals. The rule allows a member bank that purchased a loan participation from an affiliate to renew its participation in the loan, or provide additional funding under the existing participation, even if the underlying loan had become a low-quality asset, so long as certain criteria were met. These renewals or additional credit extensions may enable both the affiliate and the participating member bank to avoid or minimize potential losses. The exception is available only if (1) the underlying loan was not a low-quality asset at the time the member bank purchased its participation and (2) the proposed transaction would not increase the member bank's proportional share of the credit facility. The member bank must also obtain the prior approval of its entire board of directors (or its delegees) and it must give a 20-days' post-consummation notice to its appropriate federal banking agency. A member bank is permitted to increase its proportionate share in a restructured loan by 5 percent (or by a higher percentage with the prior approval of the bank's appropriate federal banking agency). The scope of the exemption includes renewals of participations in loans originated by any affiliate of the member bank (not just affiliated depository institutions).

Financial Subsidiaries

Section 23A Statutory Provisions for Financial Subsidiaries

Section 23A has several special provisions that apply to covered transactions between a bank and its financial subsidiary. Section 23A defines a "financial subsidiary" as any company that is a subsidiary of a bank that would be a financial subsidiary of a national bank under section 5136A of the Revised Statutes of the United

41. The federal banking agencies generally consider non-investment-grade securities to be classified assets. See, for example, the Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks (May 7, 1979) and also table 3 in section 2020.1 of this manual. Assets identified by examiners through the Shared National Credit and Interagency Country Exposure Review Committee processes also should be considered classified assets for purposes of section 23A.

42. 12 USC 371c(a)(3).

States.[43] Section 5136A, in turn, defines a financial subsidiary of a national bank as any company that is controlled by one or more IDIs, other than (1) a subsidiary that engages solely in activities that national banks are permitted to engage in directly (and subject to the same terms and conditions that apply to national banks) or (2) a national bank that is specifically authorized by the express terms of a federal statute (other than section 5136A), such as an Edge Act corporation or an SBIC.[44] Section 5136A also prohibits a financial subsidiary of a national bank from engaging in insurance underwriting, real estate investment and development, or merchant banking activities.[45]

The Dodd-Frank Act amended section 23A as it relates to financial subsidiaries of a bank. First, the 10 percent quantitative limit of section 23A between a bank and any individual affiliate now applies to covered transactions between a bank and any individual financial subsidiary of the bank. In addition, for purposes of section 23A, the amount of a bank's investment in its financial subsidiary includes the retained earnings of the financial subsidiary. See section 609(a) of the Dodd-Frank Act.

Section 23A generally applies only to transactions between (1) a bank and an affiliate of the bank and (2) a bank and a third party in which some benefit from either type of transaction accrues to an affiliate of the bank. The statute generally does not apply to transactions between two affiliates. Section 23A establishes two special anti-evasion rules, however, that govern transactions between a financial subsidiary of a bank and another affiliate of the bank. First, the FRA provides that any purchase of, or investment in, the securities of a bank's financial subsidiary by an affiliate of the bank will be deemed to be a purchase of, or investment in, such securities by the bank itself. Second, the GLB Act authorizes the Board to deem a loan or other extensions of credit made by a bank's affiliate to any financial subsidiary of a bank to be an extension of credit by the bank to the financial subsidiary, if the Board determines that such action is necessary or appropriate to prevent evasion.

43. 12 USC 24a(g)(3).
44. 12 USC 24a(2).
45. 12 USC 371c(c)(1).

Regulation W Provisions for Financial Subsidiaries

Regulation W (1) defines a financial subsidiary of a bank, (2) exempts certain companies from the definition, and (3) sets forth special valuation and other rules for financial subsidiaries. (See sections 223.3(a)(8), 223.3(p), and 223.32 of the rule.) In section 223.32, Regulation W also includes, several special rules that apply to transactions for financial subsidiaries.

Applicability of the 10 percent quantitative limit to transactions with a financial subsidiary. The 10 percent quantitative limit in section 23A applies with respect to covered transactions between a member bank and any individual financial subsidiary of the bank.

Valuation of investments in securities issued by a financial subsidiary. Because financial subsidiaries of a member bank are considered affiliates of the bank for purposes of section 23A, a member bank's purchases of, and investments in, the securities of its financial subsidiary are covered transactions under the statute. The Dodd-Frank Act further provides that a member bank's investment in its own financial subsidiary, for purposes of section 23A, shall include the retained earnings of the financial subsidiary. In light of this statutory provision, section 223.32(b) of Regulation W contains a special valuation rule for investments by a member bank in the securities of its own financial subsidiary.[46] Such investments must be valued at the greater of (1) the price paid by the member bank for the securities or (2) the carrying value of the securities on the financial statements of the member bank (determined in accordance with GAAP but without reflecting the bank's pro rata share of any earnings retained or losses incurred by the financial subsidiary after the bank's acquisition of the securities).[47]

46. The rule's special valuation formula for investments by a member bank in its own financial subsidiary does not apply to investments by a member bank in a financial subsidiary of an affiliated depository institution. Such investments must be valued using the general valuation formula set forth in section 223.23 for investments in securities issued by an affiliate and, further, may trigger the anti-evasion rule contained in section 223.32(c)(1) of the rule.

47. The rule also makes clear that if a financial subsidiary is consolidated with its parent member bank under GAAP, the carrying value of the bank's investment in the financial subsidiary shall be determined based on parent-only financial statements of the bank.

The following examples were designed to assist banks in valuing investments in securities issued by a financial subsidiary of the bank. Each example involves a securities underwriter that becomes a financial subsidiary of the bank after the transactions described below.

Initial valuation.

- *Direct acquisition by a bank.* A bank pays $500 to acquire 100 percent of the shares of a securities underwriter. The initial carrying value of the shares on the member bank's parent-only GAAP financial statements is $500. The member bank initially must value the investment at $500.
- *Contribution of a financial subsidiary to a bank.* The parent holding company of a member bank acquires 100 percent of the shares of a securities underwriter in a transaction valued at $500 and immediately contributes the shares to the member bank. The member bank gives no consideration in exchange for the shares. The bank initially must value the investment at the carrying value of the shares on the bank's parent-only GAAP financial statements. Under GAAP, the bank's initial carrying value of the shares would be $500.

Anti-evasion rules as they pertain to financial subsidiaries. Section 23A generally applies only to transactions between a bank and an affiliate of the bank and transactions between a member bank and a third party when some benefit of the transaction accrues to an affiliate of the bank. The statute generally does not apply to transactions between two affiliates. The GLB Act establishes two special anti-evasion rules, however, that govern transactions between a financial subsidiary of a member bank and another affiliate of the bank.[48] First, the GLB Act provides that any purchase of, or investment in, securities issued by a member bank's financial subsidiary by an affiliate of the bank will be deemed to be a purchase of, or investment in, such securities by the bank itself. Second, the GLB Act authorizes the Board to deem an extension of credit made by a member bank's affiliate to any financial subsidiary of the bank to be an extension of credit by the bank to the financial subsidiary, if the Board determines that such action is necessary or appropriate to prevent evasions of the FRA or the GLB Act. Section 223.32(c) of the rule incorporates both of these provisions.

The Board exercised its authority under the second anti-evasion rule by stating that an extension of credit to a financial subsidiary of a bank by an affiliate of the bank would be treated as an extension of credit by the bank itself to the financial subsidiary if the extension of credit is treated as regulatory capital of the financial subsidiary. An example of the kind of credit extension covered by this provision would be a subordinated loan to a financial subsidiary that is a securities broker–dealer where the loan is treated as capital of the subsidiary under the SEC's net capital rules. Treating such an extension of credit as a covered transaction is appropriate because the extension of credit by the affiliate has a similar effect on the subsidiary's regulatory capital as an equity investment by the affiliate, which is treated as a covered transaction by the terms of the GLB Act (as described above). The rule generally does not prevent a BHC or other affiliate of a member bank from providing financial support to a financial subsidiary of the bank in the form of a senior or secured loan.

Collateral for Certain Transactions with Affiliates

Section 23A(c) requires a member bank's use of collateral for certain transactions between a member bank and its affiliates.[49] Each loan or extension of credit to an affiliate[50] or guarantee, acceptance, or letter of credit issued on behalf of an affiliate (herein referred to as credit transactions) by a member bank or its subsidiary, and any credit exposure of a member bank or a subsidiary to an affiliate resulting from a securities borrowing or lending transaction, or a derivatives transaction shall be secured at all times by collateral ("credit exposure") at the amounts required by the statute. The required collateral varies[51] depending on the type of collateral used to secure the transaction.[52]

48. GLB Act section 121(b)(1), codified at 12 USC 371c(e)(4)).

49. The bank must perfect the security interest in the collateral (*Fitzpatrick v. FDIC*, 765 F.2d 569 (6th Cir. 1985)). A purchase of assets from an affiliate does not require collateral.

50. 12 USC 371c(b)(7).

51. "Credit extended" means the loan or extension of credit, guarantee, acceptance, or letter of credit.

52. 12 USC 371c(c)(1).

The specific collateral requirements are—

1. 100 percent of the amount of such loan or extension of credit, guarantee, acceptance, letter of credit or credit exposure, if the collateral is composed of
   a. obligations of the United States or its agencies;
   b. obligations fully guaranteed by the United States or its agencies as to principal and interest;
   c. notes, drafts, bills of exchange, or banker's acceptances that are eligible for rediscount or purchase by a Federal Reserve Bank;[53] or
   d. a segregated, earmarked deposit account with the member bank that is for the sole purpose of securing a credit transaction between the member bank and its affiliates and is identified as such;
2. 110 percent of the amount of the credit extended if the collateral is composed of obligations of any state or political subdivision of any state;
3. 120 percent of the amount of the credit extended if the collateral is composed of other debt instruments, including receivables; or
4. 130 percent of the amount of the credit extended if the collateral is composed of stock, leases, or other real or personal property.

For example, a member bank makes a $1,000 loan to an affiliate. The affiliate posts as collateral for the loan $500 in U.S. Treasury securities, $480 in corporate debt securities, and $130 in real estate. The loan satisfies the collateral requirements of this section because $500 of the loan is 100 percent secured by obligations of the United States, $400 of the loan is 120 percent secured by debt instruments, and $100 of the loan is 130 percent secured by real estate. The statute prohibits a member bank from counting a low-quality asset toward section 23A's collateral requirements for credit transactions with affiliates.[54] A member bank must maintain a perfected security interest at all times in the collateral that secures the credit transaction.

Section 23A(c)(1) requires that credit transactions must meet the collateral requirements of the statute at all times. A low-quality asset cannot be used to satisfy the statute or the regulation's collateral requirements, but can be taken as additional collateral.

Collateral Requirements in Regulation W

The collateral requirements for credit transactions are found in section 223.14 of Regulation W.

Deposit Account Collateral. Under section 23A, a member bank may satisfy the collateral requirements of the statute by securing a credit transaction with an affiliate with a "segregated, earmarked deposit account" maintained with the bank in an amount equal to 100 percent of the credit extended.[55]

Member banks may secure covered transactions with omnibus deposit accounts so long as the member bank takes steps to ensure that the omnibus deposit accounts fully secure the relevant covered transactions. Such steps might include substantial overcollateralization or the use of subaccounts or other recordkeeping devices to match deposits with covered transactions. To obtain full credit for any deposit accounts taken as section 23A collateral, member banks must ensure that they have a perfected, first-priority security interest in the accounts. (See section 223.14(b)(1)(i)(D).)

Ineligible collateral. The purpose of section 23A's collateral requirements is to ensure that member banks that engage in credit transactions with affiliates have legal recourse, in the event of affiliate default, to tangible assets with a value at least equal to the amount of the credit extended.

The statute recognizes that certain types of assets are not appropriate to serve as collateral for credit transactions with an affiliate. In particular, the statute provides that low-quality assets and securities or other debt obligations issued by an affiliate are not eligible collateral for such covered transactions.[56]

Under section 223.14(c) of the rule, intangible assets also are not deemed acceptable to meet the collateral requirements imposed by

53. Regulation A includes a representative list of acceptable government obligations (12 CFR 201.108).
54. 12 USC 371c(c)(3).
55. 12 USC 371c(c)(1)(A)(iv).
56. 12 USC 371c (c)(3) and (4).

section 23A.[57] Intangible assets, including servicing assets, are particularly hard to value, and a member bank may have significant difficulty in collecting and selling such assets in a reasonable period of time.

Section 23A(c) requires that credit transactions with an affiliate be "secured" by collateral. A credit transaction between a member bank and an affiliate supported only by a guarantee or letter of credit from a third party does not meet the statutory requirement that the credit transaction be secured by collateral. Guarantees and letters of credit often are subject to material adverse change clauses and other covenants that allow the issuer of the guarantee or letter of credit to deny coverage. Letters of credit and guarantees are not balance-sheet assets under GAAP and, accordingly, would not constitute "real or personal property" under section 23A. There is a particularly significant risk that a member bank may have difficulty collecting on a guarantee or letter of credit provided by a nonaffiliate on behalf of an affiliate of the bank. Accordingly, guarantees and letters of credit are not acceptable section 23A collateral.[58]

As noted above, section 23A prohibits a member bank from accepting securities or other debt obligations issued by an affiliate as collateral for an extension of credit to any affiliate. The rule clarifies that securities issued by the member bank itself also are not eligible collateral to secure a credit transaction with an affiliate. Equity securities issued by a lending member bank, and debt securities issued by a lending member bank that count as regulatory capital of the bank, are not eligible collateral under section 23A. If a member bank were forced to foreclose on a credit transaction with an affiliate secured by such securities, the bank may be unwilling to liquidate the collateral promptly to recover on the credit transaction because the sale might depress the price of the bank's outstanding securities or result in a change in control of the bank. In addition, to the extent that a member bank is unable or unwilling to sell such securities acquired through foreclosure, the transaction would likely result in a reduction in the bank's capital, thereby offsetting any potential benefit provided by the collateral.

Perfection and priority. Under section 223.14(d) of the rule, a member bank's security interest in any collateral required by section 23A must be perfected in accordance with applicable law to ensure that a member bank has good access to the assets serving as collateral for its credit transactions with affiliates. This requirement ensures that the member bank has the legal right to realize on the collateral in the case of default, including a default resulting from the affiliate's insolvency or liquidation. A member bank also is required to either obtain a first-priority security interest in the required collateral or deduct from the amount of collateral obtained by the bank the lesser of (1) the amount of any security interests in the collateral that are senior to that obtained by the bank or (2) the amount of any credits secured by the collateral that are senior to that of the bank. For example, if a member bank lends $100 to an affiliate and takes as collateral a second lien on a parcel of real estate worth $200, the arrangement would only satisfy the collateral requirements of section 23A if the affiliate owed the holder of the first lien $70 or less (a credit transaction secured by real estate must be secured at 130 percent of the amount of the transaction).

The rule includes the following example of how to compute the section 23A collateral value of a junior lien: A member bank makes a $2,000 loan to an affiliate. The affiliate grants the member bank a second-priority security interest in a piece of real estate valued at $3,000. Another institution that previously lent $1,000 to the affiliate has a first-priority security interest in the entire parcel of real estate. This transaction is not in compliance with the collateral requirements of this section. Because of the existence of the prior third-party lien on the real estate, the effective value of the real estate collateral for the member bank for purposes of this section is only $2,000—$600 less than the amount of real estate collateral required by this section for the transaction ($2,000 x 130 percent = $2,600).

Unused portion of an extension of credit. Section 23A requires that the "amount" of an extension of credit be secured by the statutorily prescribed levels of collateral. Under the statute, if a member bank provides a line of credit to an affiliate, it must secure the full amount of the

57. The rule does not confine the definition of intangible assets by reference to GAAP.

58. The rule also provides that instruments "similar" to guarantees and letters of credit are ineligible collateral. For example, in the Board's view, a member bank cannot satisfy section 23A's collateral requirements by purchasing credit protection in the form of a credit-default swap referencing the affiliate's obligation.

line of credit throughout the life of the credit. Section 223.14(f)(2) of the rule, however, provides an exemption to the collateral requirements of section 23A for the unused portion of an extension of credit to an affiliate so long as the member bank does not have any legal obligation to advance additional funds under the credit facility until the affiliate has posted the amount of collateral required by the statute with respect to the entire used portion of the extension of credit.[59] In such credit arrangements, securing the unused portion of the credit line is unnecessary from a safety-and-soundness perspective because the affiliate cannot require the member bank to advance additional funds without posting the additional collateral required by section 23A. If a member bank voluntarily advances additional funds under such a credit arrangement without obtaining the additional collateral required under section 23A to secure the entire used amount (despite its lack of a legal obligation to make such an advance), the Board views this action as a violation of the collateral requirements of the statute. The entire amount of the line of credit counts against the bank's quantitative limit, even if the line does not need to be secured.

Purchasing affiliate debt securities in the secondary market. A member bank's investment in the debt securities issued by an affiliate is an extension of credit by the bank to the affiliate and thus is subject to section 23A's collateral requirements. Section 223.14(f)(3) of the rule provides an exemption that permits member banks in certain circumstances to purchase debt securities issued by an affiliate without satisfying the collateral requirements of section 23A. The exemption is available where a member bank purchases an affiliate's debt securities from a third party in a bona fide secondary-market transaction. When a member bank buys an affiliate's debt securities in a bona fide secondary-market transaction, the risk that the purchase is designed to shore up an ailing affiliate is reduced. Any purchase of affiliate debt securities that qualifies for this exemption would still remain subject to the quantitative limits of section 23A and the market-terms requirement of section 23B. In analyzing a member bank's good faith under this exemption transaction, examiners should look at the time elapsed between the original issuance of the affiliate's debt securities and the bank's purchase, the existence of any relevant agreements or relationships between the bank and the third-party seller of the affiliate's debt securities, any history of bank financing of the affiliate, and any other relevant information.

59. This does not apply to guarantees, acceptances, and letters of credit issued on behalf of an affiliate. These instruments must be fully collateralized at inception. Moreover, the transaction is still subject to the 10 and 20 percent limits of the statute.

Credit transactions with nonaffiliates that become affiliates. Banks sometimes lend money to, or issue guarantees on behalf of, unaffiliated companies that later become affiliates of the bank. Section 223.21(b)(2) provides transition rules that exempt credit transactions from the collateral requirements in situations in which the member bank entered into the transactions with the nonaffiliate at least one year before the nonaffiliate became an affiliate of the bank.

For example, a member bank with capital stock and surplus of $1,000 and no outstanding covered transactions makes a $120 unsecured loan to a nonaffiliate. The member bank does not make the loan in contemplation of the nonaffiliate becoming an affiliate. Nine months later, the member bank's holding company purchases all the stock of the nonaffiliate, thereby making the nonaffiliate an affiliate of the member bank. The member bank is not in violation of the quantitative limits of the rule's section 223.11 or 223.12 at the time of the stock acquisition. The member bank is, however, prohibited from engaging in any additional covered transactions with the new affiliate at least until such time as the value of the loan transaction falls below 10 percent of the member bank's capital stock and surplus. The transaction counts towards the 20 percent limit for transactions for all affiliates. In addition, the member bank must bring the loan into compliance with the collateral requirements of section 223.14 promptly after the stock acquisition. Transactions with nonaffiliates in contemplation of the nonaffiliate becoming an affiliate must meet the quantitative and collateral requirements of the rule at the time of the inception of the credit transaction and of the affiliation.

Limitations on Collateral

Member banks may accept as collateral for covered transactions receivables, leases, or other real or personal property.[60] The following are limitations and collateral restrictions:

1. A low-quality asset is not acceptable as collateral for a loan or extension of credit to, or for a guarantee, acceptance, or letter of credit issued on behalf of, an affiliate or credit exposure to an affiliate resulting from a secured borrowing or lending transaction or derivative transaction.
2. Securities or other debt obligations issued by an affiliate of a member bank shall not be acceptable as collateral for a loan or extension of credit to, or for a guarantee, acceptance, or letter of credit issued on behalf of, or credit exposure from a securities borrowing or lending transaction or derivatives transaction to, that affiliate or any other affiliate of the member bank. The above collateral requirements are not applicable to an acceptance that is already fully secured either by attached documents or by other property that is involved in the transaction and has an ascertainable market value.

Derivative Transactions Between Insured Depository Institutions and Their Affiliates

Derivative transactions between a bank and its affiliates generally arise either from the risk-management needs of the bank or the affiliate. Transactions arising from the bank's needs typically arise when a bank enters into a swap or other derivative contract with a customer but chooses not to hedge directly the market risk generated by the derivative contract or is unable to hedge the risk directly because the bank is not authorized to hold the hedging asset. In order to manage the market risk, the bank may have an affiliate acquire the hedging asset. The bank would then do a "bridging" derivative transaction between itself and the affiliate maintaining the hedge.

Other derivative transactions between a member bank and its affiliate are affiliate-driven. A bank's affiliate may enter into an interest-rate or foreign-exchange derivative with the bank in order to accomplish the asset-liability management goals of the affiliate. For example, a BHC may hold a substantial amount of floating-rate assets but issue fixed-rate debt securities to obtain cheaper funding. The BHC may then enter into a fixed-to-floating interest-rate swap with its subsidiary bank to reduce the holding company's interest-rate risk.

Banks and their affiliates that seek to enter into derivative transactions for hedging purposes could enter into the desired derivatives with unaffiliated companies. Banks and their affiliates often choose to use each other as their derivative counterparties, however, in order to maximize the profits of, and manage risks within, the consolidated financial group.

Section 23A on Derivative Transactions

The Dodd-Frank Act provides that the credit exposure resulting from a derivative transaction with an affiliate is a covered transaction (12 USC 371c(b)(7)(G)). In addition, Regulation W requires the member bank to establish and maintain policies and procedures designed to manage the credit exposure arising from the derivative. These policies and procedures require, at a minimum, that the bank monitor and control its exposure to its affiliates by imposing appropriate credit controls and collateral requirements.

Regulation W provides that credit derivatives between an institution and an unaffiliated third party that reference the obligations of an affiliate of the institution, and that are the functional equivalent of a guarantee by the institution on behalf of an affiliate, should be treated as a guarantee by the institution on behalf of an affiliate for the purposes of section 23A.[61]

Section 23B and Regulation W Regarding Derivative Transactions

Derivative transactions between a member bank and an affiliate also are subject to section 23B of the FRA under the express terms of the statute.[62]

60. As noted above, letters of credit and mortgage servicing rights may not be accepted as collateral for purposes of section 23A. See 12 CFR 223.14(c)(4) and (5).

61. The novation of a derivative between a bank and its affiliate is treated as a purchase of assets under the statute.

62. In addition to applying to covered transactions, as defined in section 23A of the FRA, the market-terms requirement of section 23B of the FRA applies broadly to, among other things, "[t]he payment of money or the furnishing of services to an affiliate under contract, lease or otherwise" (12

In this regard, section 23B requires a member bank to treat an affiliate no better than a *similarly situated* nonaffiliate. Section 23B generally does not allow a member bank to use with an affiliate the terms and conditions it uses with its most creditworthy unaffiliated customer, unless the bank can demonstrate that the affiliate is of comparable creditworthiness as the bank's most creditworthy unaffiliated customer. Instead, section 23B requires that an affiliate be treated comparably (with respect to terms, conditions, and credit limits) to the majority of third-party customers engaged in the same business, and having comparable credit quality and size as the affiliate. Because a bank generally has the strongest credit rating within a holding company, the Board generally would not expect an affiliate to obtain better terms and conditions from a member bank than the member bank receives from its major unaffiliated counterparties. In addition, market terms for derivatives among major financial institutions generally include daily marks to market and two-way collateralization above a relatively small exposure threshold.

Covering Derivatives That Are the Functional Equivalent of a Guarantee

Section 223.33 of the rule provides that credit derivatives between a member bank and a nonaffiliate in which the bank protects the nonaffiliate from a default on, or a decline in the value of, an obligation of an affiliate of the bank are covered transactions under section 23A. Such derivative transactions are viewed as guarantees by a member bank on behalf of an affiliate (and, hence, are covered transactions) under section 23A.

The rule provides that these credit derivatives are covered transactions under section 23A and gives several examples.[63] A member bank is not allowed to reduce its covered-transaction amount for these derivatives to reflect hedging positions established by the bank with third parties. A credit derivative is treated as a covered transaction only to the extent that the derivative provides credit protection with respect to obligations of an affiliate of the member bank.

USC 371c-1(a)(2)(C)). Institution-affiliate derivatives generally involve a contract or agreement to pay money to the affiliate or furnish risk-management services to the affiliate.

63. This does not apply to guarantees, acceptances, and letters of credit issued on behalf of an affiliate. These instruments must be fully collateralized at inception. In most instances, the covered-transaction amount for such a credit derivative would be the notional principal amount of the derivative.

Exemptions from Section 23A

Section 23A exempts seven transactions or relations from its quantitative limits and collateral requirements.[64] Regulation W, subpart E, clarifies certain of these exemptions and exempts a number of additional types of transactions.

The Board reserves the right to revoke or modify any additional exemption granted by the Board in Regulation W, if the Board finds that the exemption is resulting in unsafe or unsound banking practices. The Board also reserves the right to terminate the eligibility of a particular member bank to use any such exemption if the bank's use of the exemption is resulting in unsafe or unsound banking practices.

Covered Transactions Exempt from the Quantitative Limits and Collateral Requirements

Under the rule's section 223.41, the quantitative limits (sections 223.11 and 223.12) and the collateral requirements (section 223.14) do not apply to the following transactions. The transactions are, however, subject to the safety-and-soundness requirement (section 223.13) and the prohibition on the purchase of a low-quality asset (section 223.15).

- *Parent institution/subsidiary institution transactions.* Transactions with a depository institution if the member bank controls 80 percent or more of the voting securities of the depository institution or the depository institution controls 80 percent or more of the voting securities of the member bank.
- *Purchase of loans on a nonrecourse basis from an affiliated depository institution.* Banks that are commonly controlled (i.e., at least 25 percent common ownership) can purchase loans on a nonrecourse basis. This allows chain banks and banks in companies that are not owned 80 percent by the same company to achieve the same efficiency as sister banks.

64. 12 USC 371c(d).

Sister-bank exemption (section 223.41(b)). Regulation W exempts transactions with a depository institution if the same company controls 80 percent or more of the voting securities of the member bank and the depository institution.[65] In addition, the statute provides that covered transactions between sister banks must be consistent with safe and sound banking practices.[66]

The sister-bank exemption, by its terms, only exempts transactions by a member bank with a sister-bank affiliate;[67] hence, the sister-bank exemption cannot exempt a member bank's extension of credit or other covered transaction to an affiliate that is not a sister bank (even if the extension of credit was purchased from a sister bank). For example, a member bank purchases from Sister-Bank Affiliate A a loan to Affiliate B in a purchase that qualifies for the sister-bank exemption in section 23A. The member bank's asset purchase from Sister-Bank Affiliate A would be an exempt covered transaction under section 223.41(b), but the member bank also would have acquired an extension of credit to Affiliate B, which would be a covered transaction between the member bank and Affiliate B under section 223.3(h)(1) that does not qualify for the sister-bank exemption.

Internal corporate reorganizations. Section 223.41(d) of Regulation W provides an exemption for asset purchases by a bank from an affiliate that are part of a one-time internal corporate reorganization of a banking organization.[68] The exemption includes purchases of assets in connection with a transfer of securities issued by an affiliate to a member bank, as described in section 223.31(a).

Under this exemption, a member bank would be permitted to purchase assets (other than low-quality assets) from an affiliate (including in connection with an affiliate share transfer that section 223.31 of the rule treats as a purchase of assets) exempt from the quantitative limits of section 23A if the following conditions are met.

First, the purchase must be part of an internal corporate reorganization of a holding company that involves the transfer of all or substantially all of the shares or assets of an affiliate or of a division or department of an affiliate to an IDI.[69] The asset purchase must not be part of a series of periodic, ordinary-course asset transfers from an affiliate to a member bank.[70] Second, the member bank's holding company must provide the Board with contemporaneous notice of the transaction and must commit to the Board to make the bank whole, for a period of two years, for any transferred assets that become low-quality assets.[71] Third, a majority of the member bank's directors must review and approve the transaction before consummation. Fourth, the section 23A value of the covered transaction must be less than 10 percent of the member bank's capital stock and surplus (or up to 25 percent of the bank's capital stock and surplus with the prior approval of the appropriate federal banking agency). Fifth, the holding company and all its subsidiary depository institutions must be well capitalized and well managed and must remain well capitalized upon consummation of the transaction.

65. Banks that are affiliated in this manner are referred to as "sister banks." Sister banks can improve their efficiency through intercorporate transfers under this exception. Also, "company" in this context is not limited to a BHC. For example, if a retail corporation owns two credit card banks, the two credit card banks would be sister banks, although owned by a retail corporation, and the sister-bank exemption could be used for transactions between two credit card banks.

66. A member bank and its operating subsidiaries are considered a single unit for purposes of section 23A. Under the statute and the regulation, transactions between a member bank (or its operating subsidiary) and the operating subsidiary of a sister IDI generally qualify for the sister-bank exemption.

67. The sister-bank exemption in section 23A does not allow a member bank to avoid any restrictions on sister-bank transactions that may apply to the bank under the prompt-corrective-action framework set forth in section 38 of the FDI Act (12 USC 1831o) and regulations adopted thereunder by the bank's appropriate federal banking agency.

68. See 1998 *Fed. Res. Bull.* 985 and 1013–14.

69. The notice also must describe the primary business activities of the affiliate whose shares or assets are being transferred to the member bank and must indicate the anticipated date of the reorganization.

70. The IDI must provide the Board, as well as the appropriate federal agency, a notice that describes the primary business activities of the affiliate whose shares or assets are being transferred to the IDI and must indicate the anticipated date of the reorganization.

71. The holding company can meet these criteria either by repurchasing the assets at book value plus any write-down that has been taken or by making a quarterly cash contribution to the bank equal to the book value plus any write-downs that have been taken by the bank. The purchase or payment must be made within 30 days of each quarter end. In addition, if a cash payment is made, the member bank will hold an amount of risk-based capital equal to the book value of any transferred asset that becomes low-quality so long as the bank retains ownership of the transferred asset. For example, under this dollar-for-dollar capital requirement, the risk-based capital charge for each transferred low-quality loan asset would be 100 percent (equivalent to a 1250 percent risk weight) rather than the 8 percent requirement (equivalent to a 100 percent risk weight) that would apply to a similar defaulted loan asset that is not a part of the transferred asset pool. See Board letter dated December 21, 2007, to Andres L. Navarette (Capital One Financial Corp.)

Covered Transactions Also Exempt from the Quantitative Limits, Collateral Requirements, and Low-Quality-Asset Prohibition

The quantitative limits (sections 223.11 and 223.12), the collateral requirements (section 223.14), and the prohibition on the purchase of a low-quality asset (section 223.15) do not apply to the following exempted transactions. (See section 223.42.) The transactions are, however, subject to the safety-and-soundness requirement (section 223.13) and certain conditions. Detailed conditions or restrictions pertaining to these exemptions are discussed after this list.

1. Making correspondent banking deposits in an affiliated depository institution (as defined in section 3 of the FDI Act (12 USC 1813)) or an affiliated foreign bank that represent an ongoing, working balance maintained in the ordinary course of correspondent business
2. Giving immediate credit to an affiliate for uncollected items received in the ordinary course of business
3. Transactions secured by cash or U.S. government securities
4. Purchasing securities of a servicing affiliate as defined by the BHC Act
5. Purchasing certain liquid assets
6. Purchasing certain marketable securities
7. Purchasing certain municipal securities
8. Purchasing from an affiliate an extension of credit subject to a repurchase agreement that was originated by a member bank and sold to the affiliate subject to a repurchase agreement or with recourse
9. Asset purchases from an affiliate by a newly formed member bank, if the appropriate federal banking agency for the member bank has approved the asset purchase in writing in connection with the review of the formation of the member bank
10. Transactions approved under the Bank Merger Act that involve affiliated federally IDIs and the U.S. branches and agencies of a foreign bank
11. Purchasing, on a nonrecourse basis, an extension of credit from an affiliate
12. Intraday extensions of credit
13. Riskless-principal transactions

Correspondent banking. Section 23A exempts from its quantitative limits and collateral requirements a deposit by a member bank in an affiliated bank or affiliated foreign bank that is made in the ordinary course of correspondent business, subject to any restrictions that the Board may impose.[72] Section 223.42(a) of the rule further provides that such deposits must represent ongoing, working balances maintained by the member bank in the ordinary course of conducting the correspondent business.[73] Although not required by section 23A or the Home Owners' Loan Act (HOLA), the rule also provides that correspondent deposits in an affiliated insured savings association are exempt if they otherwise meet the requirements of the exemption.

Secured credit transactions. Section 23A and section 223.42(c) of the rule exempt any credit transaction by a member bank with an affiliate that is "fully secured" by obligations of the United States or its agencies or obligations fully guaranteed by the United States or its agencies as to principal and interest.[74] A deposit account meets the "segregated, earmarked" requirement only if the account exists for the sole purpose of securing credit transactions between the member bank and its affiliates and is so identified. Under section 23A, if U.S. government obligations or deposit accounts are sufficient to fully secure a credit transaction, then the transaction is completely exempt from the quantitative limits of the statute. If, however, the U.S. government obligations or deposit accounts represent less than full security for the credit transaction, then the amount of U.S. government obligations or deposits counts toward the collateral requirements of section 23A, but no part of the transaction is exempt from the statute's quantitative limits.

The exemption provides that a credit transaction with an affiliate will be exempt "to the extent that the transaction is and remains secured" by appropriate (d)(4) collateral. If a member bank makes a $100 nonamortizing term loan to an affiliate that is secured by $50 of U.S. Treasury securities and $75 of real estate, the value of the covered transaction will be $50. If the market value of the U.S. Treasury securities falls to $45 during the life of the loan, the value

72. 12 USC 371c(d)(2).

73. Unlike the sister-bank exemption, the exemption for correspondent banking deposits applies to deposits placed by a member bank in an uninsured depository institution or foreign bank.

74. 12 USC 371c(d)(4). A partial list of such obligations can be found at 12 CFR 201.108.

of the covered transaction would increase to $55. The Board expects member banks that use this expanded (d)(4) exemption to review the market value of their U.S. government obligations collateral regularly to ensure compliance with the exemption.

Purchases of assets with readily identifiable market quotes. Section 23A(d)(6) exempts the purchase of assets by a member bank from an affiliate if the assets have a “readily identifiable and publicly available market quotation” and are purchased at their current market quotation. The rule (section 223.42(e)) limits the availability of this exemption (the (d)(6) exemption) to purchases of assets with market prices that are recorded in widely disseminated publications that are readily available to the general public, such as newspapers with a national circulation. Because as a general matter only exchange-traded assets are recorded in such publications, this test has ensured that the qualifying assets are traded actively enough to have a true “market quotation” and that examiners can verify that the assets are purchased at their current market quotation. The rule applies if the asset is purchased at or below the asset’s current market quotation.[75]

If a member bank purchases from one affiliate securities issued by another affiliate, the bank has engaged in two types of covered transactions: a purchase of securities from an affiliate and the investment in securities issued by an affiliate. Under the rule, although the (d)(6) exemption may exempt the one-time asset purchase from the first affiliate, it would not exempt the ongoing investment in securities being issued by the second affiliate.

The (d)(6) exemption may apply to a purchase of assets that are not traded on an exchange. In particular, purchases of foreign exchange, gold, and silver, and purchases of over-the-counter (OTC) securities and derivative contracts, whose prices are recorded in widely disseminated publications, may qualify for the (d)(6) exemption.

75. The rule provides that a U.S. government obligation is an eligible (d)(6) asset only if the obligation’s price is quoted routinely in a widely disseminated publication that is readily available to the general public. Although all U.S. government obligations have low credit risk, not all U.S. government obligations trade in liquid markets at publicly available market quotations.

Purchases of Certain Marketable Securities under Regulation W. Regulation W provided an additional exemption from section 23A for certain purchases of securities by a member bank from an affiliate. The rule expanded the statutory (d)(6) exemption to allow a member bank to purchase securities from an affiliate based on price quotes obtained from certain electronic services so long as, among other things, the selling affiliate is a broker–dealer registered with the SEC, the securities have a ready market and are eligible for purchase by state member banks, the securities are not purchased within 30 days of an underwriting (if an affiliate of the bank is an underwriter of the securities), and the securities are not issued by an affiliate. All securities purchases are subject to section 23B.

- *Broker–Dealer Requirement.* Under Regulation W, the selling affiliate must be a broker–dealer securities affiliate that is registered with the SEC. Broker–dealers that are registered with the SEC are subject to supervision and examination by the SEC and are required by SEC regulations to keep and maintain detailed records concerning each securities transaction conducted by the broker–dealer. In addition, SEC-registered broker–dealers have experience in determining whether a security has a “ready market” under SEC regulations. The rule does not expand the exemption to include securities purchases from foreign broker–dealers. The rule explicitly provides, however, that a member bank may request that the Board exempt securities purchases from a particular foreign broker–dealer, and the Board would consider these requests on a case-by-case basis in light of all the facts and circumstances.
- *Securities eligible for purchase by a state member bank.* The exemption requires that the bank’s purchase of securities be eligible for purchase by a state member bank. For example, the Board determined that a member bank may purchase equity securities from an affiliate if the member bank’s purchase is made to hedge the bank’s permissible customer-driven equity derivative transaction. The purchase must be treated as a purchase of a security on the bank Call Report.
- *No purchases within 30 days of an underwriting.* The exemption generally prohibits a member bank from using the exemption to purchase securities during an underwriting, or within 30 days of an underwriting, if an

affiliate of the bank is an underwriter of the securities. This provision applies unless the security is purchased as part of an issue of obligations of, or obligations fully guaranteed as to principal and interest by, the United States or its agencies. The rule includes the 30-day requirement because of the uncertain and volatile market values of securities during and shortly after an underwriting period and because of the conflicts of interest that may arise during and after an underwriting period, especially if an affiliate has difficulty selling its allotment.

- *No securities issued by an affiliate.* If a member bank purchases from one affiliate securities issued by another affiliate, it would not exempt the investment in securities issued by the second affiliate, even though the (d)(6) exemption may exempt the asset purchase from the first affiliate. The transaction would be treated as a purchase of, or an investment in, securities issued by an affiliate.
- *Price-verification methods.* The (d)(6) exemption applies only in situations in which the member bank is able to obtain price quotes on the purchased securities from an unaffiliated electronic, real-time pricing service. The Board reaffirms its position that it would not be appropriate to use independent dealer quotations or economic models to establish a market price for a security under the (d)(6) exemption. A security that is not quoted routinely in a widely disseminated news source or a third-party electronic financial network may not trade in a sufficiently liquid market to justify allowing a member bank to purchase unlimited amounts of the security from an affiliate.
- *Record retention.* The rule expressly includes a two-year record-retention and supporting information requirement that is sufficient to enable the appropriate federal banking agencies to ensure that the member bank is in compliance with the terms of the (d)(6) exemption.

Purchasing municipal securities. Section 223.42(g) of the rule exempts a member bank's purchase of municipal securities from an affiliate if the purchase meets certain requirements.[76] First, the member bank must purchase the municipal securities from a broker–dealer affiliate that is registered with the SEC. Second, the municipal securities must be eligible for purchase by a state member bank, and the member bank must report the transaction as a securities purchase in its Call Report. Third, the municipal securities must either be rated by a nationally recognized statistical rating organization (NRSRO) or must be part of an issue of securities that does not exceed $25 million in size. Finally, the price for the securities purchased must be (1) quoted routinely on an unaffiliated electronic service that provides indicative data from real-time financial networks; (2) verified by reference to two or more actual independent dealer quotes on the securities to be purchased or securities that are comparable to the securities to be purchased; or (3) in the case of securities purchased during the underwriting period, verified by reference to the price indicated in the syndicate manager's written summary of the underwriting.[77] Under any of the three pricing options, the member bank must purchase the municipal securities at or below the quoted or verified price, and all purchases are subject to section 23B.

Purchases of assets by newly formed banks. Section 223.42(i) of the rule exempts a purchase of assets by a newly formed member bank from an affiliate if the appropriate federal banking agency for the bank has approved the purchase. This exemption allows companies to charter a new bank and to transfer assets to the bank free of the quantitative limits and low-quality-asset prohibition of section 23A.

Transactions approved under the Bank Merger Act. The Bank Merger Act exemption applies to transactions between a member bank and certain IDI affiliates. Section 223.42(j) exempts transactions between IDIs that are approved pursuant to the Bank Merger Act. The rule also makes the Bank Merger Act exemption available for mergers and other related transactions between a member bank and a U.S. branch or agency of an

76. Municipal securities are defined by reference to section 3(a)(29) of the Securities Exchange Act. That act defines municipal securities as direct obligations of, or obligations guaranteed as to principal or interest by, a state or agency, instrumentality, or political subdivision thereof, and certain tax-exempt industrial development bonds. (See 17 USC 78c(a)(29).)

77. Under the Municipal Securities Rulemaking Board's Rule G-11, the syndicate manager for a municipal bond underwriting is required to send a written summary to all members of the syndicate. The summary discloses the aggregate par values and prices of bonds sold from the syndicate account.

affiliated foreign bank, if the transaction has been approved by the responsible federal banking agency pursuant to the Bank Merger Act, and should help ensure that such transactions do not pose significant risks to the member bank. There is no regulatory exemption for merger transactions between a national bank and its nonbank affiliate. Any member bank merging or consolidating with a nonbank affiliate may be able to take advantage of the regulatory exemption for internal-reorganization transactions contained in section 223.41(d) of the rule.

Purchases of extensions of credit—the purchase exemption. Regulation W codified, with changes, the exemption that previously was found at 12 CFR 250.250. In general,

- The purchase of an extension of credit on a nonrecourse basis from an affiliate is exempt from section 23A's quantitative limits provided that—
  - — the extension of credit is originated by the affiliate,
  - — the member bank makes an independent evaluation of the creditworthiness of the borrower before the affiliate makes or commits to make the extension of credit,
  - — the member bank commits to purchase the extension of credit before the affiliate makes or commits to the extension of credit, and
  - — the member bank does not make a blanket advance commitment to purchase extensions of credit from the affiliate. (See section 223.42(k) of the rule.)

  The rule also includes a 50 percent limit on the amount of loans a bank may purchase from an affiliate under the purchase exemption. When a member bank purchases more than half of the extensions of credit originated by an affiliate, the purchases represent the principal ongoing funding mechanism for the affiliate. The member bank's status as the predominant source of financing for the affiliate calls into question the availability of alternative funding sources for the affiliate, places significant pressure on the bank to continue to support the affiliate through asset purchases, and reduces the bank's ability to make independent credit decisions with respect to the asset purchases.
- *"Substantial, ongoing funding" test.* The rule allows the appropriate federal banking agency for a member bank to reduce the 50 percent threshold prospectively, on a case-by-case basis, in those situations in which the agency believes that the bank's asset purchases from an affiliate under the exemption may cause harm to the bank.
- *Independent credit review by the bank.* To qualify for the purchase exemption under section 223.42(k), a member bank must independently review the creditworthiness of the borrower before committing to purchase each loan. Under established Federal Reserve guidance, a bank is required to have clearly defined policies and procedures to ensure that it performs its own due diligence in analyzing the credit and other risks inherent in a proposed transaction.[78] This function is not delegable to any third party, including affiliates of the member bank. Accordingly, to qualify for this exemption, the member bank, independently and using its own credit policies and procedures, must itself review and approve each extension of credit before giving a purchase commitment to its affiliate.
- *Purchase of loans from an affiliate must be without recourse.* In connection with a bank's purchase of loans from an affiliate, the affiliate cannot retain recourse on the loans. The rule (section 223.42(k)) specifies that the exemption does not apply in situations where the affiliate retains recourse on the loans purchased by the member bank. The rule also specifies that the purchase exemption only applies in situations where the member bank purchases loans from an affiliate that were originated by the affiliate. The exemption cannot be used by a member bank to purchase loans from an affiliate that the affiliate purchased from another lender. The exemption is designed to facilitate a member bank's using its affiliate as an origination agent, not to permit a member bank to take off an affiliate's books loans that the affiliate purchased from a third party.

Intraday extensions of credit. Section 223.42(l) of the rule provides that intraday credit extensions by a member bank to an affiliate are extensions of credit under section 23A covered transactions but exempts all such intraday credit extensions from the quantitative and collateral requirements of section 23A if the member bank

78. See, for example, SR-97-21.

(1) maintains policies and procedures for the management of intraday credit exposure and (2) has no reason to believe that any affiliate receiving intraday credit would have difficulty repaying the credit in accordance with its terms. The establishment of policies and procedures are for—

- monitoring and controlling the credit exposure arising at any one time from the member bank's intraday extensions of credit to each affiliate and all affiliates in the aggregate and
- ensuring that any intraday extensions of credit by the member bank to an affiliate comply with the market-terms requirement of section 223.51 of the rule.

Standard under which the Board may grant additional exemptions. The FDIC, OCC, and the Board may grant additional section 23A exemptions requested on a case-by-case basis for the institutions they supervise. The FDIC must find that the exemptions do not present unacceptable risk to the insurance fund. In addition, the Board and the FDIC must find that the exemptions are in the public interest.

Exemptions and Interpretation from the Attribution Rule of Section 23A

The attribution rule of section 23A provides that "a transaction by a member bank with any person shall be deemed a transaction with an affiliate to the extent that the proceeds of the transaction are used for the benefit of, or transferred to, that affiliate" (12 USC 371c(a)(2)). One respective interpretation and three exemptions are discussed below.

Interpretation—Loans to a nonaffiliate that purchases securities or other assets through a depository institution affiliate agent or broker. In Regulation W, the Board issued an interpretation (12 CFR 223.16(b)) regarding a member bank's loan to a nonaffiliate that purchases assets through an institution's affiliate that is acting as agent. This interpretation confirms that section 23A of the FRA does not apply to extensions of credit an IDI grants to customers that use the loan proceeds to purchase a security or other asset through an affiliate of the depository institution, so long as (1) the affiliate is acting exclusively as an agent or broker in the transaction and (2) the affiliate retains no portion of the loan proceeds as a fee or commission for its services.

Under this interpretation, the Board concluded that when the affiliated agent or broker retains a portion of the loan proceeds as a fee or commission, the portion of the loan not retained by the affiliate as a fee or commission would still be outside the coverage of section 23A. On the other hand, the portion of the loan retained by the affiliate as a fee or commission would be subject to section 23A because it represents proceeds of a loan by a depository institution to a third party that are transferred to, and used for the benefit of, an affiliate of the institution. The Board, however, granted an exemption from section 23A for that portion of a loan to a third party that an affiliate retains as a market-rate brokerage or agency fee. (See 12 CFR 223.16(c)(2).)

The interpretation would not apply if the securities or other assets purchased by the third-party borrower through the affiliate of the depository institution were issued or underwritten by, or sold from the inventory of, another affiliate of the depository institution. In that case, the proceeds of the loan from the depository institution would be transferred to, and used for the benefit of, the affiliate that issued, underwrote, or sold the assets on a principal basis to the third party.

The above-mentioned transactions are subject to the market-terms requirement of section 23B, which applies to "any transaction in which an affiliate acts as an agent or broker or receives a fee for its services to the bank or any other person" (12 USC 371c-1(a)(2)(D)). A market-rate brokerage commission or agency fee refers to a fee or commission that is no greater than that prevailing at the same time for comparable agency transactions the affiliate enters into with persons who are neither affiliates nor borrowers from an affiliated depository institution. (See Regulation W at 12 CFR 223.16(b).)

Exemption—Loans to a nonaffiliate that purchases securities from a depository institution securities affiliate that acts as a riskless principal. The Board has granted an exemption in Regulation W from section 23A of the FRA for extensions of credit by an IDI to customers who use the loan proceeds to purchase a security that is issued by a third party via a broker–dealer affiliate of the institution that acts as riskless principal. The exemption for riskless-principal transactions would not apply if the broker-

–dealer affiliate sold to the third-party borrower securities that were issued or underwritten by, or sold out of the inventory of, an affiliate of the depository institution. Riskless-principal trades, although the functional equivalent of securities brokerage transactions, involve the purchase of a security by the depository institution's broker–dealer affiliate. Accordingly, the broker–dealer retains the loan proceeds at least for some moment in time.

There is negligible risk that loans a depository institution makes to borrowers to engage in riskless-principal trades through a broker–dealer affiliate of the depository institution would be used to fund the broker–dealer. For this reason, the Board adopted an exemption from section 23A to cover riskless-principal securities transactions engaged in by depository institution borrowers through broker–dealer affiliates of the depository institution. This exemption is applicable even if the broker–dealer retains a portion of the loan proceeds as a market-rate markup for executing the riskless-principal securities trade. (See Regulation W at 12 CFR 223.16(c)(1) and (2).

Exemption—Depository institution loan to a nonaffiliate pursuant to a preexisting line of credit and the proceeds are used to purchase securities from the institution's broker–dealer affiliate. The Board approved an exemption in Regulation W from section 23A for loans by an IDI to a nonaffiliate pursuant to a preexisting line of credit, in which the loan proceeds are used to purchase securities from a broker–dealer affiliate. In more detail, the Board exempted extensions of credit by an IDI to its customers that use the credit to purchase securities from a registered broker–dealer affiliate of the institution, so long as the extension of credit is made pursuant to, and consistent with any conditions imposed in, a preexisting line of credit. This line of credit should not have been established in expectation of a securities purchase from or through an affiliate of the institution. The preexisting requirement is an important safeguard to ensure that the depository institution did not extend credit for the purpose of inducing a borrower to purchase securities from or issued by an affiliate. The preexisting line of credit exemption may not be used in circumstances in which the line has merely been preapproved. (See Regulation W at 12 CFR 223.16(c)(3)).

Exemption—Credit card transactions. Regulation W also provides an exemption from section 23A's attribution rule for general-purpose credit card transactions that meet certain criteria. (See section 223.16(c)(4).) The rule defines a general-purpose credit card as a credit card issued by a member bank that is widely accepted by merchants that are not affiliates of the bank (such as a Visa card or Mastercard) if less than 25 percent of the aggregate amount of purchases with the card are purchases from an affiliate of the bank. Extensions of credit to unaffiliated borrowers pursuant to special-purpose credit cards (that is, credit cards that may only be used or are substantially used to buy goods from an affiliate of the member bank) are subject to the rule.

The credit card exemption includes several different methods that are provided for a member bank to demonstrate that its credit card meets the 25 percent test. If a member bank has no commercial affiliates (other than those permitted for a financial holding company (FHC) under section 4 of the BHC Act), the bank would be deemed to satisfy the 25 percent test if the bank has no reason to believe that it would fail the test. (A member bank could use this method of complying with the 25 percent test even if, for example, the bank's FHC controls, under section 4(a)(2), 4(c)(2), or 4(k)(4)(H) of the BHC Act, several companies engaged in nonfinancial activities.) Such a member bank would not be obligated to establish systems to verify strict, ongoing compliance with the 25 percent test. If a member bank has commercial affiliates (beyond those permitted for an FHC under section 4 of the BHC Act), the bank would be deemed to satisfy the 25 percent test if—

- the bank establishes systems to verify compliance with the 25 percent test on an ongoing basis and periodically validates its compliance with the test or
- the bank presents information to the Board demonstrating that its card would comply with the 25 percent test. (One way that a member bank could demonstrate that its card would comply with the 25 percent test would be to show that the total sales of the bank's affiliates are less than 25 percent of the total purchases by cardholders.)

Second, for those member banks that fall out of compliance with the 25 percent test, there is a three-month grace period to return to compliance before extensions of credit under the card become covered transactions. Third, member banks that are required to validate that their ongoing compliance with the 25 percent test have a fixed method, time frames, and examples for computing compliance.

Example of calculating compliance with the 25 percent test. A member bank seeks to qualify a credit card as a general-purpose credit card under section 223.16, paragraph (c)(4)(ii)(A), of the rule. The member bank assesses its compliance under paragraph (c)(4)(iii) of this section on the 15th day of every month (for the preceding 12 calendar months). The credit card qualifies as a general-purpose credit card for at least three consecutive months. On June 15, 2005, however, the member bank determines that, for the 12-calendar-month period from June 1, 2004, through May 31, 2005, 27 percent of the total value of products and services purchased with the card by all cardholders were purchases of products and services from an affiliate of the member bank. Unless the credit card returns to compliance with the 25 percent limit by the 12-calendar-month period ending August 31, 2005, the card will cease to qualify as a general-purpose credit card as of September 1, 2005. Any outstanding extensions of credit under the credit card that were used to purchase products or services from an affiliate of the member bank would become covered transactions at such time.

Application of Sections 23A and 23B of Subpart G to U.S. Branches and Agencies of Foreign Banks

Applicability of sections 23A and 23B to foreign banks engaged in underwriting insurance, underwriting or dealing in securities, merchant banking, or insurance company investment in the United States. By its terms, sections 23A and 23B of the FRA do not apply to the U.S. branches, agencies, or commercial lending offices of foreign banks. The Board, however, used its authority that it was granted by the GLB Act to impose restrictions on transaction between the branches, agencies, and lending offices and any affiliate of the foreign bank that operates in the United States in order to ensure that such transactions met certain prudential standards and provided competitive equality with U.S. banking organizations. The Board accomplished these goals by imposing the definition of affiliate of sections 23A and 23B on transactions between the branches, agencies, and lending offices and those affiliates if the company is also

1. directly engaged in the United States in certain activities. These activities are significant because a U.S. bank cannot engage in these activities directly or through an operating subsidiary, and the 23A and 23B limitations help ensure competitive equality between U.S. banks and foreign banks. These activities are as follows:
   - Insurance underwriting pursuant to section 4(k)(4)(B) of the Bank Holding Company Act (12 U.S.C. 1843(k)(4)(B));
   - Securities underwriting, dealing, or market making pursuant to section 4(k)(4)(E) of the Bank Holding Company Act (12 USC 1843(k)(4)(E));
   - Merchant banking activities pursuant to section 4(k)(4)(H) of the Bank Holding Company Act (12 USC 1843(k)(4)(H)) (but only to the extent that the proceeds of the transaction are used for the purpose of funding the affiliate's merchant banking activities);
   - Insurance company investment activities pursuant to section 4(k)(4)(I) of the Bank Holding Company Act (12 USC 1843(k)(4)(I)); or
   - Any other activity designated by the Board.
2. a portfolio company (as defined in the merchant banking subpart of Regulation Y (12 CFR 225.177(c))) controlled by the foreign bank or an affiliate of the foreign bank or a company that would be an affiliate of the branch, agency, or commercial lending company of the foreign bank under paragraph (a)(9) of section 223.2 if such branch, agency, or commercial lending company were a member bank; or
3. a subsidiary of an affiliate as described in paragraph (b)(1) or (2) of section 223.61.

Regulation W also provides that for purposes of subpart G, the "capital stock and surplus" of a U.S. branch, agency, or commercial lending company of a foreign bank will be determined by reference to the capital of the foreign bank as calculated under its home country capital standards.

SECTION 23B OF THE FEDERAL RESERVE ACT

Section 23B of the FRA became law on August 10, 1987, as part of the Competitive Equality Banking Act of 1987. This section also regulates transactions with affiliates. Section 23B applies to any covered transactions with an affiliate but excludes banks from the term "affiliate" as that term is defined in section 23A.

Regulation W, subpart F, sets forth the principal restrictions of section 23B. These include (1) a requirement that most transactions between a member bank and its affiliates be on terms and circumstances that are substantially the same as those prevailing at the time for comparable transactions with nonaffiliates; (2) a restriction on a member bank's purchase as fiduciary of assets from an affiliate unless certain criteria are met; (3) a restriction on a member bank's purchase, during the existence of an underwriting syndicate, of any security if a principal underwriter of the security is an affiliate; and (4) a prohibition on publishing an advertisement or entering into an agreement stating that a member bank will be responsible for the obligations of its affiliates. For the most part, subpart F restates the operative provisions of section 23B. The following transactions with affiliates are covered by section 23B:

- any covered transaction with an affiliate
- the sale of securities or other assets to an affiliate, including assets subject to repurchase
- the payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise
- any transaction in which an affiliate acts as an agent or broker or receives a fee for its services to the bank or to any other person
- any transaction or series of transactions with a nonaffiliate if an affiliate—
  - — has a financial interest in the third party or
  - — is a participant in the transaction or series of transactions

Any transaction by a member bank or its subsidiary with any person is deemed to be a transaction with an affiliate of the bank if any of the proceeds of the transaction are used for the benefit of, or are transferred to, the affiliate. A member bank and its subsidiaries may engage in the transactions covered by section 23B of the FRA only on terms and under circumstances, including credit standards, that are substantially the same, or at least as favorable to the bank or its subsidiary, as those prevailing at the time for comparable transactions with, or that in good faith would be offered to, nonaffiliate companies.

Section 23B restricts the following transactions with affiliates:

- A member bank or its subsidiary cannot purchase as fiduciary any securities or other assets from any affiliate unless the purchase is permitted—
  - — under the terms of the instrument creating the fiduciary relationship,
  - — by court order, or
  - — by the law of the jurisdiction governing the fiduciary relationship.
- A member bank or its subsidiary, whether acting as principal or fiduciary, cannot knowingly purchase or acquire, during the existence of any underwriting or selling syndicate, any security if a principal underwriter of that security is an affiliate of the bank. This limitation applies unless the purchase or acquisition of the security has been approved before it is initially offered for sale to the public by a majority of the directors of the bank. The purchase should be based on a determination that it is a sound investment for the bank irrespective of the fact that an affiliate of the bank is a principal underwriter of the securities.

Transactions Exempt from Section 23B of the Federal Reserve Act

The market-terms requirement of section 23B applies to, among other transactions, any "covered transaction" between a member bank and an affiliate.[79] Section 23B(d)(3) makes clear that the term "covered transaction" in section 23B has the same meaning as the term "covered transaction" in section 23A but does not include any transaction that is exempt under section 23A(d)—for example, transactions between sister banks,[80] transactions fully secured by a deposit account or U.S. government obligations, and purchases of assets from an affiliate at a

79. 12 USC 371c-1(a)(2)(A).

80. Although transactions between banks are exempt from section 23B, the safety-and-soundness provisions of section 23A apply and generally require that transactions be conducted on terms similar to those terms and standards outlined in section 23B.

readily identifiable and publicly available market quotation.[81] Consistent with the statute, Regulation W's section 223.52(a)(1) exempts from section 23B any transaction that is exempt under section 23A(d).[82]

The rule also excludes from section 23B any covered transaction that is exempt from section 23A under section 223.42(i) or (j) (that is, asset purchases by a newly formed member bank and transactions approved under the Bank Merger Act). The Board excluded from section 23B this additional set of transactions because, in each case, the appropriate federal banking agency for the member bank involved in the transaction should ensure that the terms of the transaction are not unfavorable to the bank.

Other transactions that are exempt from section 23A are subject to section 23B, however. The purchase of marketable securities, municipal securities, and extensions of credit are subject to the market terms requirement of section 23B. In addition, intraday extensions of credit and riskless principal transactions between an IDI and an affiliate are subject to the market terms requirement of the statute and regulation. (See 12 CFR 223.52(a)(1) and 223.42(f), (g), (k), (1), and (m).)

Purchases of Securities for Which an Affiliate Is the Principal Underwriter

The GLB Act amended section 23B to permit a member bank to purchase securities during an underwriting conducted by an affiliate if the following two conditions are met. First, a majority of the directors of the member bank (with no distinction drawn between inside and outside directors) must approve the securities purchase before the securities are initially offered to the public. Second, such approval must be based on a determination that the purchase would be a sound investment for the member bank regardless of the fact that an affiliate of the bank is a principal underwriter of the securities.[83] Section 223.53(b) includes this standard and clarifies that if a member bank proposes to make such a securities purchase in a fiduciary capacity, then the directors of the bank must base their approval on a determination that the purchase is a sound investment for the person on whose behalf the bank is acting as fiduciary.

A member bank may satisfy this director-approval requirement by obtaining specific prior director approval of each securities acquisition otherwise prohibited by section 23B(b)(1)(B). The rule clarifies, however, that a member bank also satisfies this director-approval requirement if a majority of the directors of the bank approves appropriate standards for the bank's acquisition of securities otherwise prohibited by section 23B(b)(1)(B), and each such acquisition meets the standards adopted by the directors. In addition, a majority of the member bank's directors must periodically review such acquisitions to ensure that they meet the standards and must periodically review the standards to ensure they meet the "sound investment" criterion of section 23B(b)(2). The appropriate period of time between reviews would vary depending on the scope and nature of the member bank's program, but such reviews should be conducted by the directors at least annually. Before the passage of the GLB Act, Board staff informally allowed member banks, based on the legislative history of section 23B, to meet the director-approval requirement in this fashion, and there is no indication that Congress in the GLB Act intended to alter the procedures that a member bank could use to obtain the requisite director approval.[84] The rule codifies staff's preexisting approach to the director-approval requirement.[85]

81. 12 USC 371c-1(d)(3).

82. Regulation W will again be subsequently referred to as the "rule" or by its specified section-numbered discussion of section 23B provisions.

83. 12 USC 371c-1(b)(2). The rule provides that a U.S. government obligation is an eligible (d)(6) asset only if the obligation's price is quoted routinely in a widely disseminated publication that is readily available to the general public. Although all U.S. government obligations have low credit risk, not all U.S. government obligations trade in liquid markets at publicly available market quotations.

84. The conference report accompanying the Competitive Equality Banking Act of 1987 stated that the prior-approval requirement of section 23B(b) could be met "by the establishment in advance of specific standards by the outside directors for such acquisitions. If the outside directors establish such standards, they must regularly review acquisitions to assure that the standards have been followed, and they must periodically review the standards to assure that they continue to be appropriate in light of market and other conditions." See H.R. Conf. Rep. No. 100-261 at 133 (1987).

85. The rule also provides, consistent with existing Board interpretations, that a U.S. branch, agency, or commercial lending company of a foreign bank may comply with this requirement by obtaining the required approvals and reviews from either a majority of the directors or a majority of the senior executive officers of the foreign bank.

Definition of Affiliate Under Section 23B

Section 23B states that the term "affiliate" under section 23B has the meaning given to such term in section 23A except that the term "affiliate" under section 23B does not include a "bank," as defined in section 23A.[86] In the case of the sister-bank exemption, the rule's section 223.2(c) clarifies that the only companies that qualify for the "bank" exception to section 23B's definition of affiliate are insured depository institutions.

86. 12 USC 371c-1(d)(1).

Advertising and Guarantee Restriction

In section 23B(c), the "advertising restriction" prohibits a member bank from publishing any advertisement or entering into any agreement stating or suggesting that the bank shall in any way be responsible for the obligations of its affiliates. Regulation W clarifies this restriction to permit such guarantees and similar transactions if the transaction satisfies the quantitative and collateral restrictions of section 23A.[87] The rule also clarifies that section 23B(c) does not prohibit a member bank from making reference to such a guarantee, acceptance, or letter of credit in a prospectus or other disclosure document, for example, if otherwise required by law.

87. 12 USC 371c-1(c).

Regulation W: Transactions Between Member Banks and Their Affiliates

Examination Objectives

Effective date May 2001

Section 6070.2

1. To determine compliance with sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W.
2. To determine the relationships between the bank and its affiliates and the effects of those relationships and their transactions on the operations and safety and soundness of the bank.
3. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulations have been noted.

Regulation W: Transactions Between Member Banks and Their Affiliates

Examination Procedures

Effective date November 2003

Section 6070.3

1. *Section 23A of the Federal Reserve Act (12 USC 371c), Relations with Affiliates, and the Board's Regulation W.* By coordinating work with the examiners assigned to the various loan areas, determine compliance with laws and regulations pertaining to related organizations by performing the following procedures.
   a. Obtain a listing of loans to affiliates.
   b. Compare the listing with the bank's customer liability records to determine the list's accuracy and completeness.
   c. Obtain a listing of other covered transactions with affiliates (that is, for example, purchase of securities issued by an affiliate, purchase of assets, acceptance of securities issued by an affiliate as collateral for a loan to any person or company, or the issuance of a guarantee, acceptance, or letter of credit on behalf of an affiliate).
   d. Conduct transaction testing of intercompany affiliate transactions[1] for compliance with the limitations of section 23A of the Federal Reserve Act and the Board's Regulation W (see SR-03-02) by—
      - reviewing—
        - — the time elapsed between the original issuance of the affiliate's debt securities and the bank's purchase,
        - — the existence of any relevant agreements or relationships between the bank and the third-party seller of the affiliate's debt securities,
        - — any history of bank financing of the affiliate, and
        - — any other relevant information;
      - documenting any violations or potential violations, and reaching an agreement with the directors and senior management to resolve violations quickly; and
      - considering the inclusion of defaulted country risk problem assets in the evaluation of asset quality and capital adequacy. (See section 7040.1.)
   e. Ensure that transactions with affiliates meet the collateral requirements of section 23A.
   f. Ensure that low-quality loans have not been purchased from an affiliate.
   g. Determine that all transactions with affiliates are on terms and conditions that are consistent with safe and sound banking practices.
   h. *Policies and procedures.*
      - Obtain the bank's policies and procedures to determine compliance with sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W.
      - Ensure the policies and procedures cover all relevant affiliates (e.g., financial subsidiaries and joint ventures) and transactions covered by section 23A, and verify that the bank treats "sponsored and advised" companies as affiliates ("Sponsored and advised" companies would include, at a minimum, any company that receives investment advice and administrative services on a contractual basis from a member bank, whose trustees or managers are selected by the bank, and that has a name similar to that of the bank.).
      - Ensure that the policies and procedures are comprehensive and include adequate controls—
        - — to identify covered transactions and
        - — to ensure that necessary steps are performed for identified transactions (e.g., the required collateralization of loans to affiliates).
   i. *Covered transactions.*
      - If the controls for section 23A are considered adequate, use the list of covered transactions provided by the bank.
      - If controls are considered inadequate (for example, for transactions testing), review the bank's general ledger to identify transactions that are covered transactions.
      - Verify that covered transactions count against required limits and are collateralized when required.

1. Examples of affiliates include a bank holding company and its nonbank subsidiaries, companies under the member bank's control (see Regulation W, section 223.3(g)), any mutual fund advised by a member bank, merchant banking investments, a member bank or affiliate serving as a general partner in a partnership, and affiliates' subsidiaries. In addition, certain joint venture companies, ESOPs of banks and their affiliates, and special-purpose entities are affiliates if the regulatory definitions of control are met.

- If the bank uses an internal rating system for its assets, determine that the bank has not deferred or altered an asset's rating to facilitate sale of the asset to an affiliate.
- Review controls for monitoring compliance with the established limits and for collateralizing required credit-extension transactions.
- If controls are considered inadequate (for example, for transactions testing), ensure that covered transactions are properly valued.
- Verify that identified covered transactions comply with the limits of sections 23A and 23B (If the covered transactions do not comply with the limits, criticize the bank for inadequate controls, and discuss what steps the bank will use to correct the violations).
- Obtain collateral listings, and verify that necessary covered transactions are adequately collateralized:
  - — Verify that the values of omnibus deposit accounts used to secure covered transactions are sufficient to fully secure the relevant covered transactions.
  - — Review collateral documentation to ensure that the bank's interest is adequately perfected and prioritized (Regulation W, section 223.14(d)).

j. *Corporate lending (funding).* Ensure that there is compliance with the collateral requirements and quantitative limits:
- Obtain the bank's ″trial balances″ of loans.
- Check that loans to affiliates are included on the list of "covered transactions" and included in measurements for compliance with the quantitative limits. If some loans are not included, ascertain why.
- If an exemption is being used, verify that its application is correct.
- Verify that the loans are collateralized (using collateral listings), and review the documentation to ensure proper collateralization.

k. *Verification of exemptions.*
- For renewal of participations involving problem loans (see Regulation W, section 223.15(b)) involving nondepository affiliates, review supporting documentation to ensure that—
  - — the loan was not low quality at the time the bank purchased the participation,
  - — the renewal is approved at the board committee or senior management level as appropriate, and
  - — the bank's share of the renewal does not exceed its original share by more than 5 percent (unless approved by an appropriate federal bank regulator) and that the bank notified the federal bank regulator within 20 days.
- For retail lending (e.g., credit cards and mortgage banking) involving the funding of loans and the purchase of loans, ensure compliance with quantitative limits (for funding and compliance with collateral requirements) as follows:
  - — For credit card examinations, obtain the "trial balances" of the outstanding balances, and for mortgage banking, obtain lists of the loans sold.
  - — Check that credit card amounts generated by bank affiliates and mortgage loans sold to the bank by affiliates are included on the list of covered transactions and in measurements for compliance with the quantitative limits. If they are not included, ascertain why.
  - — If an exemption is being used, verify that its use is correct.
  - — Verify that loans are collateralized (using collateral), and review the documentation to ensure proper collateralization.
- For the general-purpose credit card exemption (Regulation W, section 223.16(c)(4)), verify, through review of relevant documentation, that the bank can demonstrate that its credit card meets the less than 25 percent test through one of three available methods. (An exemption from the attribution rule for extensions of credit under a general-purpose credit card is defined as one on which "less than 25 percent of the aggregate amount of purchases are purchases from a bank affiliate.")
  - — The bank has no commercial affiliates.
  - — The bank establishes systems to verify compliance with the less than 25 percent test on an ongoing basis.

— The bank presents information to the Board of Governors to demonstrate its card would comply.
- For purchases of extensions of credit—the "250.250 exemption" (Regulation W, section 223.42(k))—review supporting documentation to ensure that—
  — the member bank makes an independent creditworthiness evaluation before the affiliate makes or commits to make the loan,
  — the bank commits to make the loan purchase before the affiliate makes the loan,
  — the bank does not make a blanket advance commitment to purchase loans, and
  — the purchases from the affiliate by the depository institution and all depository institution affiliates in the prior 12 months represent 50 percent or less of all loans originated by the affiliate during such period.

l. If the bank is critically undercapitalized (under prompt-corrective-action rules), determine if the bank has engaged in any covered transaction, as defined in section 23A, without the prior approval of the FDIC or FRS.

m. *Internal controls.*
- Determine the bank's methods for identifying transactions subject to sections 23A and 23B of the Federal Reserve Act. Determine if these methods adequately identify such transactions. Consider the following information:
  — internal reports (Management should document any covered transactions with affiliates.)
  — loan records
  — deposit accounts
  — accounts payable and receivable
  — board minutes
- Determine if management understands what services its affiliates provide.
- Determine the volume and frequency of inter-institution transactions, such as loan participations or sales, purchases or sales of other assets, bank stock loans, insider transactions, and contractual obligations for services. Review these transactions for possible noncompliance or abusive practices.
- Review any formal or informal agreements regarding covered transactions. Determine if management adequately documents the cost, fee structure, and quality of services.
- Determine the bank's compliance with any outstanding conditions of an approved order or commitment issued by the regulator.

n. Determine if the affiliates are in compliance with the capital requirements of their functional regulator.

o. If the bank has used the expanded (d)(4) exemption, determine that the bank regularly reviews the market value of its U.S. government obligations collateral.

p. Determine that the bank's program for monitoring and controlling the credit exposure from derivative transactions with affiliates includes, at a minimum, imposing appropriate credit limits, mark-to-market or fair value requirements, and collateral requirements.

q. Determine that the limits and requirements reflect the nature, volume, and complexity of the bank's derivatives transactions.

r. Determine that the limits and requirements on credit exposures from derivative transactions have been approved by the board of directors of the bank or an appropriate board committee.

s. Determine that the bank's program for monitoring and controlling the credit exposure from intraday extensions of credit to affiliates includes, at a minimum, imposing appropriate credit limits (on a per-affiliate and aggregate basis) and collateral requirements.

t. Determine that that the limits and requirements imposed by the bank reflect the volume of intraday credit transactions and the reasons for those transactions.

u. Determine that the limits and requirements on intraday credit transactions have been approved by the board of directors of the bank or an appropriate board committee.

2. *Section 23B of the Federal Reserve Act (12 USC 371c-1), Restrictions on Transactions with Affiliates, and the Board's Regulation W*

a. Determine that covered transactions with affiliates comply with the restrictions in section 23B.

b. If the bank has derivative transactions with affiliates, determine that the bank has treated the affiliate no better than a similarly situated nonaffiliate.

c. Determine that management and other fees paid by the bank have a direct relationship to the value of the actual goods and services rendered, based on reasonable costs consistent with current market values for such goods and services.
d. Review any mortgage banking activity and servicing contracts with affiliates, if applicable. Give particular attention to—
   - the capacity in which the affiliate is acting,
   - the nature of the services provided,
   - the billing arrangement, frequency of billing, method of computation, and the basis for fees,
   - the method of compensating the bank for balances maintained and net interest earned on warehouse loans and lines of credit (This method should not be preferential.),
   - the pricing of loan and servicing-right sales,
   - advertising restrictions (for noncompliance).

INTRODUCTION

The examination of bank-related organizations must be of sufficient scope to determine a bank's compliance with laws and to evaluate its investments through an appraisal of related organizations' assets, earnings, management, and operations. In addition, the examination must fully disclose the nature of the relationships between the bank and its related organizations, as well as the effects of these relationships on the operations and safety and soundness of the bank.

FORMS OF RELATED ORGANIZATIONS

Various laws, rulings, and regulations have permitted banks to expand their services by forming or acquiring related organizations. Examples include

- the purchase for its own account, shares of a corporation that performs functions that the bank is empowered to perform directly; and
- authorization by specific laws to invest in various statutory subsidiaries, including Edge Act subsidiaries and agreement corporations.

In addition, a bank also may be controlled by an individual or company that controls other bank or nonbank entities. Regardless of the legal organizational structure between a bank and a related organization, a sound financial and satisfactory management relationship between both groups is essential to the bank's operation. Related organizations may assume several forms, as described in this section. Section 23A and 23B of the Federal Reserve Act (FRA) define the relationship between banks and affiliates.[1]

Affiliates

Affiliates are defined in subsection (b)(1) of section 23A of the FRA. Generally an affiliate is a company that is under common control with the bank. In addition, section 23A specifically states that certain entities are not considered affiliates of a member bank. See this manual's section entitled, "Transactions Between Member Banks and Their Affiliates," regarding the detailed provisions of section 23A and section 23B of the FRA, and Regulation W.

1. See 12 USC 371c and c-1.

Operations Subsidiaries

The Board has authorized member banks to establish and own operations subsidiaries. "Operations subsidiaries" are bank subsidiaries that engage in activities in which the bank could otherwise engage directly.

Member Bank Purchases of Stock of Operations Subsidiaries

The Board concluded in 1968 that "...a member bank may purchase for its own account shares of a corporation to perform, at locations at which the bank is authorized to engage in business, functions that the bank is empowered to perform directly" (12 CFR 250.141(i)). The Board reasoned that this authority could reasonably be interpreted as within a bank's incidental powers to ''organize its operations in the manner that it believes best facilitates the performance thereof,'' and that the subsidiary essentially constitutes a separately incorporated division or department of the bank.

No specific rule requires a state member bank to give the Board prior notice of, or to acquire the Board's approval for, the acquisition of an operations subsidiary to engage in activities that the bank itself may perform lawfully. However, section 208.3(d)(2) of Regulation H (12 CFR 208.3(d)(2)) prohibits a state member bank from causing or permitting a change in the general character of its business or in the scope of its corporate powers approved at the time of admission to membership, except with the permission of the Board.

Transactions between a State Member Bank and Its Operations Subsidiary

In general, section 23A exempts covered transactions between a bank and its operating subsidiary. In general, an operating subsidiary is a subsidiary that engages in activities that the bank can engage directly or are specifically authorized by federal law.

Operations Subsidiary Not Wholly Owned

The previously mentioned 1968 interpretation only expressly authorized state member banks to establish wholly owned operations subsidiaries in that a wholly owned subsidiary of a bank is functionally indistinguishable from a division or department of the bank. In enacting the Gramm-Leach-Bliley Act (GLB Act), Congress recognized the authority of national and state member banks to own and control an operations subsidiary. The GLB Act recognized traditional operations subsidiaries by distinguishing them from financial subsidiaries. The definition of financial subsidiary excludes a company engaged solely in activities that a parent bank may perform, subject to the limitations that govern the conduct of these activities.

The GLB Act also does not require that a state member bank own 100 percent of an operations subsidiary or a financial subsidiary. The GLB Act defines the term "subsidiary" by reference to the Bank Holding Company (BHC) Act. Under the BHC Act, a company is a "subsidiary" of a bank holding company if the BHC (1) owns or controls 25 percent or more of the company's voting shares or (2) controls the election of a majority of the company's directors.[2]

The Board thus believes that, as a result of the GLB Act and consistent with section 5136 of the Revised Statutes (12 USC 24 (Seventh)) and the Board's 1968 interpretation, a state member bank may acquire shares of a company that is not wholly owned and that (1) on consummation of the acquisition would be a subsidiary of the bank within the meaning of the BHC Act, and (2) engages only in activities in which the parent bank may engage, at locations at which the bank may engage in the activities, subject to the same limitations as if the bank were engaging in the activities directly.

2. See 12 USC 1841(d). A company also is considered a subsidiary of a bank holding company if the Board determines, after notice and opportunity for a hearing, that the bank holding company directly or indirectly exercises a controlling influence over the management or policies of the company.

FINANCIAL SUBSIDIARIES

Qualifying state member banks may control or hold an interest in a "financial subsidiary." A financial subsidiary is any company that is controlled by one or more insured depository institutions and engages in activities that are financial in nature or incidental to a financial activity. A financial subsidiary does not include (1) a subsidiary that the state member bank is specifically authorized to hold by the express terms of federal law (other than by section 9 of the FRA), such as an Edge Act subsidiary held under section 25 of the FRA, or (2) a subsidiary that engages only in activities that the parent bank could conduct directly and that are conducted on the same terms and conditions that govern the conduct of the activity by the state member bank. Financial subsidiaries are authorized for national banks by section 5136A of the Revised Statutes (12 USC 24a) and for state banks by section 46 of the Federal Deposit Insurance Act (FDI Act) (12 USC 1831w). To implement the authorization for state member banks, a new subpart G was added to Regulation H (12 CFR 208.71 et seq.).

Investing in or Controlling a Financial Subsidiary

Under the GLB Act, a state member bank may control, or hold an interest in, a financial subsidiary only if

- the state member bank and each of its depository institution affiliates are well capitalized and well managed;[3]
- the aggregate consolidated total assets of all the bank's financial subsidiaries do not exceed the lesser of 45 percent of the consolidated total assets of the bank or $50 billion;[4]
- the state member bank, if it is one of the 100

3. An institution is "well capitalized" if it meets or exceeds the capital levels designated by the institution's appropriate federal banking agency (section 38 of the FDI Act (12 USC 1831o)). A depository institution will be deemed "well managed" by references to specific examination ratings, or if the depository institution has not been examined by its federal or state banking agency and its federal banking agency determines that the existence and use of managerial resources are satisfactory (see 12 CFR 208.77(h)(ii)).

4. This dollar amount will be adjusted based on an indexing mechanism that is established jointly by the Federal Reserve Board and the Secretary of the Treasury.

largest insured banks, meets the following debt-rating or alternative debt-rating requirements:

- for the 50 largest insured banks, the bank must have at least one issue of outstanding eligible debt that is currently rated in one of the three highest investment-grade rating categories by a nationally recognized statistical rating organization;[5]
- for the next 50 largest insured banks, the bank must meet the issuer-credit-rating requirement for the 50 largest insured banks or the bank must meet the alternative criteria established jointly by regulation by the Secretary of the Treasury and the Federal Reserve[6] (the debt-rating and alternative criteria are not applicable if the bank's financial subsidiaries engage in any newly authorized financial activities solely as agent and not as principal); and

• the state member bank obtains the Federal Reserve's approval to engage in the activities of the financial subsidiary (using the notice procedures in section 208.76 of Regulation H). The state member bank also must obtain any necessary approvals from its state supervisory authority.

Issuer-Credit-Rating Requirement

The issuer-credit-rating requirement of Regulation H (12 CFR 208.71(b)(ii)) requires a long-term issuer credit rating from a nationally recognized statistical rating organization that is within the three highest investment-grade rating categories used by the organization. An "issuer credit rating" is one that assesses the bank's overall capacity and willingness to pay, on a timely basis, its unsecured financial obligations. An issuer credit rating differs from a debt rating in that it does not assess the bank's ability or willingness to make payments on any individual class or issue of debt, nor does it reflect payment priority or payment preferences among financial obligations.

5. "Eligible debt" refers to unsecured debt that has an initial maturity of more than 360 days. The debt must be issued and outstanding, may not be supported by any form of credit enhancement, and may not be held in whole or any significant part by affiliates or insiders of the bank or by any other person acting on behalf of or with funds from the bank or an affiliate.

6. The size of an insured bank is determined based on the consolidated total assets of the bank as of the end of each calendar year.

Under Regulation H, the issuer credit rating must be assigned to the national or state member bank that controls or holds an interest in a financial subsidiary if the bank is subject to section 208.71(b)(ii) of Regulation H. Issuer credit ratings that are assigned to a subsidiary or affiliate of the parent bank, such as a subsidiary engaged in derivatives activities, do not meet the regulation's requirements. Rating organizations may issue long-term or short-term issuer credit ratings for the same bank and separate ratings for dollar-denominated and foreign-currency-denominated obligations. Only long-term issuer ratings for dollar-denominated obligations satisfy the requirements of the regulation. A "long-term credit rating" is a written opinion that is issued by a nationally recognized statistical rating organization regarding the bank's overall capacity and willingness to pay on a timely basis its unsecured, dollar-denominated financial obligations maturing in no less than one year.

Prudential Standards

A state member bank that owns a financial subsidiary must comply with certain prudential safeguards. These standards pertain to the bank's capital requirements and its establishment of policies and procedures arising from financial subsidiary ownership.

As for the capital requirements, the state member bank must "deconsolidate" the assets and liabilities of all of its financial subsidiaries from those of the bank. Although the GLB Act requires a bank to deconsolidate the assets and liabilities of any financial subsidiary for regulatory capital purposes, a financial subsidiary remains a subsidiary of a state member bank. The Board will continue to review the operations and financial and managerial resources of the bank on a consolidated basis as part of the supervisory process. The Board may take appropriate supervisory action if it believes that the bank does not have the appropriate financial and managerial resources (including capital resources and risk-management controls) to conduct its direct or indirect activities in a safe and sound manner.

In addition to the deconsolidation described above, the bank must also deduct a specified percentage of the aggregate amount of the equity investment (including retained earnings) ("the aggregate amount") in all financial subsidiaries from the bank's calculation of its risk-based capital, leverage, and tangible equity ratios. In particular, the bank must make the following deductions:

- 50 percent of the aggregate amount from both the bank's tier 1 capital and its tier 2 capital for purposes of determining its risk-based capital ratios;
- 50 percent of the aggregate amount from the bank's tier 1 capital for purposes of determining its leverage ratios; and
- 100 percent of the aggregate amount from its tangible equity for purposes of determining its tangible equity capital ratio. It must also deduct 100 percent of the aggregate amount from the bank's risk-weighted assets, average total assets, and total assets when determining its risk-based, leverage, and tangible capital ratios.

The bank must meet all capital requirements—including the "well-capitalized" requirement (Regulation H, section 208.71) and the capital levels established by the Board under section 38 of the FDI Act—after the adjustments described above. Beginning on January 1, 2014, for a state member bank that is an advanced approaches bank, and beginning on January 1, 2015, for all state member banks, a state member bank that controls or holds an interest in a financial subsidiary must comply with the rules set forth in §217.22(a)(7) of Regulation Q (12 CFR 217.22(a)(7)) in determining its compliance with applicable regulatory capital standards (including the well capitalized standard of section 208.71(a)(1)).

The member bank must also establish and maintain policies and procedures to manage the financial and operational risks associated with its ownership of a financial subsidiary. These procedures must identify and manage financial and operational risks with the bank and its financial subsidiaries. They must adequately protect the bank from such risks and preserve the bank's separate corporate identity and the limited liability of the bank and its financial subsidiaries. In addition, a financial subsidiary of a state member bank is considered an affiliate of the bank for purposes of sections 23A and 23B of the FRA and a subsidiary of the BHC (and not a subsidiary of a bank) for the purposes of the anti-tying prohibitions of the BHC Act Amendments of 1970.

Permissible Activities for a Financial Subsidiary

A financial subsidiary can engage in three types of permissible activities:

1. Those activities that are determined to be closely related to banking, activities determined to be usual in connection with the transaction of banking abroad, and activities that are financial in nature or incidental to financial activities under section 4(k)(4) of the BHC Act. These permissible activities include
   - general insurance agency activities in any location and travel agency activities;
   - underwriting, dealing in, and making a market in all types of securities; and
   - any activity that the Federal Reserve determined by regulation or order to be closely related to banking or managing or controlling banks so as to be a proper incident thereto and that was in effect on the effective date of the GLB Act. (See section 225.86 of the Board's Regulation Y (12 CFR 225.86).)
2. Activities that the Secretary of the Treasury, in consultation with the Board, determines to be financial in nature or incidental to financial activities and permissible for financial subsidiaries of national banks pursuant to section 5136A(b) of the Revised Statutes of the United States (12 USC 24a(b)).
3. Activities that the state member bank is permitted to engage in directly under state law, subject to the same terms and conditions that govern the conduct of the activity by the state member bank (12 USC 24a(a)(2)(A)(ii)).

Impermissible Activities for a Financial Subsidiary

As discussed in 12 CFR 208.72(b), a financial subsidiary may not engage in the following activities: (1) as principal in insurance underwriting (except to the extent permitted for national banks by the Comptroller of the Currency as of January 1, 1999, and not subsequently overturned in certain grandfathered title insurance activities); (2) providing or issuing annuities; (3) real estate investment or development (except as expressly authorized by law); and (4) merchant banking and insurance company investment activities.

Federal Reserve Approval Requirements

Federal Reserve approval of a financial subsidiary involves a streamlined notice procedure. A state member bank must file a notice with the appropriate Reserve Bank before acquiring control of, or an interest in, a financial subsidiary, or before engaging in an additional financial activity through an existing financial subsidiary. No notice is required for a financial subsidiary to engage in an additional activity that the parent state member bank could conduct directly. The notice must include basic information on the financial subsidiary and its existing and proposed activities. In the case of an acquisition, the notice should include a description of the transaction through which the bank proposes to acquire control of, or an interest in, the financial subsidiary. The notice also must contain a certification that the state member bank and its depository institution affiliates meet the capital, management, and credit-rating requirements to own a financial subsidiary, as stated in the GLB Act and subpart G of Regulation H. If the notice is for the state member bank's initial affiliation with a company engaged in insurance activities, the notice must describe the company's insurance activities and identify the states where the company holds an insurance license. A notice will be considered approved on the 15th day after receipt of a complete notice by the appropriate Reserve Bank, unless before that date, the notice is approved or denied or the bank is notified that additional time is needed to review the submitted notice.

The GLB Act permits a state member bank to acquire an interest in or control a financial subsidiary if the bank meets the criteria and requirements set forth in Regulation H. The Board, however, retains its general supervisory authority for state member banks and may restrict or limit the activities of, or the acquisition or ownership of a subsidiary by, a state member bank if the Board finds that the bank does not have the appropriate financial and managerial resources to conduct the activities or to acquire or retain ownership of the company.

AGRICULTURAL CREDIT CORPORATIONS

Most agricultural credit corporations are under the direct supervision of the district Federal Intermediate Credit Bank (FICB) where the corporations discount most of their loans. However, an agricultural credit corporation may obtain funds exclusively in the open market and avoid FICB regulation.

For agricultural credit corporations, the central point of contact or the examiner-in-charge normally decides when to examine such an entity. A complete analysis of the entity's activities should always be performed if

- the corporation is not supervised by the Federal Intermediate Credit Bank (FICB),
- the most recent FICB examination occurred over a year ago, or
- the most recent FICB examination indicates that the corporation is in less than satisfactory condition.

The extent of any analysis should be based on the examiner's assessment of the corporation's effect on the parent bank. That analysis should include, but not be limited to, a review of

- asset quality;
- the volatility, maturity, and interest-rate sensitivity of the asset and liability structures; and
- the bank's liability for guarantees issued on behalf of the corporation.

When the same borrower is receiving funds from both the corporation as well as the parent bank and the combined exposure exceeds 25 percent of total consolidated capital, the debt should be detailed on the concentration section of the examination report. The consolidation procedures listed in the instructions for the preparation of Consolidated Reports of Condition and Income should be used when consolidating the figures of the corporation with those of its parent.

EDGE ACT AND AGREEMENT CORPORATIONS

U.S.-based corporations and permissible activities for their Edge Act and agreement corporation subsidiaries are described in detail in the

Board's Regulation K (12 CFR 211 subpart A). Edge Act and agreement corporations provide banks with a vehicle for engaging in international banking or foreign financial operations. They also have the power, with supervisory consent, to purchase and hold the stock of foreign banks and other international financial concerns. Edge Act and agreement corporations are examined by the Federal Reserve, and their respective reports of examination should be reviewed during each examination of a parent member bank. The examiner should review the Federal Reserve examination report and also the amount and quality of negotiable instruments (e.g., commercial paper) held when evaluating the bank's investment in the Edge corporation.

Transactions between the parent bank and the bank's Edge Act and agreement corporation subsidiaries are not subject to the limitations in section 23A and the Board's Regulation W. However, they are subject to limitations under section 25 of the FRA (12 USC 601) and under the Board's Regulation K. In addition, transactions with such bank subsidiaries and the parent bank's affiliates are aggregated with transactions by the bank and its affiliates for purposes of section 23A limitations and restrictions. Transactions between a bank and Edge Act and agreement corporation subsidiaries of the bank's holding company are subject to section 23A.

FOREIGN BANKING ORGANIZATIONS

Under section 211.21(o) of Regulation K (12 CFR 211.21(o)), the term foreign banking organization includes

- a foreign bank, as defined in section 1(b)(7) of the International Banking Act (12 USC 3101(7)) that
  - — operates a branch, agency, or commercial lending company subsidiary in the United States;
  - — controls a bank in the United States; or
  - — controls an Edge corporation acquired after March 5, 1987; and any company of which the foreign bank is a subsidiary.

On March 15, 2006, the Board approved a revision to Regulation K (effective April 19, 2006), incorporating the provisions of section 208.63 of Regulation H by reference into sections 211.5 and 211.24 of Regulation K. Edge and agreement corporations and other foreign banking organizations (that is, U.S. branches, agencies, and representative offices of foreign banks that are supervised by the Federal Reserve) must establish and maintain procedures reasonably designed to ensure and monitor compliance with the Bank Secrecy Act and related regulations. Each of these banking organizations' compliance programs must include, at a minimum, (1) a system of internal controls to ensure ongoing compliance, (2) independent testing of compliance by the institution's personnel or by an outside party, (3) the designation of an individual or individuals responsible for coordinating and monitoring day-to-day compliance, and (4) training for appropriate personnel. (See 12 CFR part 211.)

FOREIGN BANKS

The Board's Regulation K defines a *foreign bank* in subpart A (12 CFR 211.2(j)), which governs the foreign activities of U.S banking organizations. Under subpart A, a foreign bank

- is organized under the laws of a foreign country;
- engages directly in the business of banking;
- is recognized as a bank by the bank supervisory or monetary authority of the country of its organization or principal banking operations;
- receives deposits to a substantial extent in the regular course of its business; and
- has the power to accept demand deposits.

The Board's Regulation K also defines a *foreign bank* in subpart B (12 CFR 211.21(n)), which pertains to foreign banking organizations. Under subpart B, a foreign bank

- is an organization that is organized under the laws of a foreign country;
- engages directly in the business of banking; and
- does not include a central bank of a foreign country that does not engage or seek to engage in a commercial banking business in the United States through an office.

U.S. OFFICES OF FOREIGN BANKS

Regulation K (12 CFR 211.21(t)) defines a *foreign bank office* as any branch, agency, representative office, or commercial lending company subsidiary of a foreign bank operating in the United States.

Branches of a Foreign Bank

A *branch of a foreign bank* is defined (12 CFR 211.21(e)) as any place of business of a foreign bank, located in any state, at which deposits are received, and that is not an agency.

Agencies

Regulation K (12 CFR 211.21(b)) defines an *agency* of a foreign bank as any place of business of a foreign bank, located in any state, at which credit balances are maintained, checks are paid, money is lent, or, to the extent not prohibited by state or federal law, deposits are accepted from a person or entity that is not a citizen or resident of the United States. Obligations are not to be considered credit balances unless they are

- incidental to, or arise out of the exercise of, other lawful banking powers;
- to serve a specific purpose;
- not solicited from the general public;
- not used to pay routine operating expenses in the United States such as salaries, rent, or taxes;
- withdrawn within a reasonable period of time after the specific purpose for which they were placed has been accomplished; and
- drawn upon in a manner reasonable in relation to the size and nature of the account.

Commercial Lending Company

A *commercial lending company* is defined as any organization, other than a bank or an organization operating under section 25 of the FRA (12 USC 601-604a), organized under the laws of any state, that maintains credit balances permissible for an agency and engages in the business of making commercial loans. A commercial lending company includes any company chartered under article XII of the banking law of the state of New York. (See Regulation K, section 211.21(g) (12 CFR 211.21(g)).)

Representative Office

A *representative office* is defined as any office of a foreign bank that is located in any state and is not a federal branch, federal agency, state branch, state agency, or commercial lending company subsidiary. (See section 211.21(x) of Regulation K (12 CFR 211.21(x)).) A representative office is usually established when a bank's board of directors and management desire to establish a physical presence in a foreign market and very limited functions are to be (or can be made) available. A representative office cannot provide traditional banking services, such as accepting deposits or making loans directly. The office generally serves as a liaison and marketing vehicle for the parent bank in the United States.

A U.S. subsidiary of a foreign bank may be considered to be a representative office of the foreign bank when it holds itself out to the public as a representative of the foreign bank that is acting on behalf of the foreign bank, even if the subsidiary engages in other nonbank business. In addition, an individual or a unit of a subsidiary that acts as a representative of a foreign bank from the location of the nonbank subsidiary may be treated as a representative office. A representative office may make credit decisions only if

- the foreign bank also operates one or more branches or agencies in the United States,
- the loans approved at the representative office are made by a U.S. office of the bank, and
- the loan proceeds are not disbursed in the representative office.

(See section 211.24(d)(1)(ii) of Regulation K (12 CFR 211.24(d)(1)(ii)).)

CORRESPONDENT BANKS

A correspondent bank provides certain services to banks located in other countries that do not have local offices or whose local office is prohibited from engaging in certain activities. Such a relationship allows a foreign bank to provide trade-related and foreign-exchange services for its multinational customers in a foreign market without having to establish a physical presence in that market.

PARALLEL-OWNED BANKING ORGANIZATIONS

A parallel-owned banking organization is created when at least one U.S. depository institution and a foreign bank[7] are controlled, either directly or indirectly, by the same person or group of persons[8] who are closely associated in their business dealings or otherwise acting in concert. Parallel-owned banking organizations do not include structures in which one depository institution is a subsidiary of the other or in which the organization is controlled by a company subject to the BHC Act or the Savings and Loan Holding Company Act.[9] The banking agencies[10] consider whether "control" of a depository institution exists when a person or group of persons controls 10 percent or more of any class of the depository institution's voting shares. Parallel-owned banking organizations are established and maintained for a variety of reasons, including tax and estate planning and the potential risks associated with nationalization. While these reasons may be legitimate and not prohibited by U.S. or foreign law, the structure of such organizations creates or increases certain risks and may make it more difficult for supervisors to monitor and address those risks. On April 23, 2002, the U.S. banking agencies issued a joint agency statement that addresses the potential risks associated with parallel-owned banking organizations. The existence of one or more of the following factors may, depending on the circumstances, warrant additional inquiry regarding the existence of a parallel banking organization:

- An individual or group of individuals acting in concert that controls a foreign bank also controls any class of voting shares of a U.S. depository institution, or financing for persons owning or controlling the shares that are received from, or arranged by, the foreign bank, especially if the shares of the U.S. depository institution are collateral for the stock-purchase loan.
- The U.S. depository institution has adopted particular or unique policies or strategies similar to those of the foreign bank, such as common or joint marketing strategies, sharing of customer information, cross-selling of products, or linked websites.
- An officer or director of the U.S. depository institution either (1) serves as an officer or director[11] of a foreign bank or (2) controls a foreign bank or is a member of a group of individuals acting in concert or with common ties that controls a foreign bank.
- The name of the U.S. depository institution is similar to that of the foreign bank.

Parallel-owned banking organizations present supervisory risks similar to those arising from chain-banking organizations in the United States. The fundamental risk presented by these organizations is that they may be acting in a de facto organizational structure that, because it is not formalized, is not subject to comprehensive consolidated supervision. Therefore, relationships between the U.S. depository institution and other affiliates may be harder to understand and monitor. To reduce these risks, the U.S. banking agencies (1) work with appropriate non-U.S. supervisors to better understand and monitor the activities of the foreign affiliates and owners; (2) share information, as appropriate, with foreign and domestic bank supervisory agencies; and (3) impose special conditions or obtain special commitments or representations related to an application or an enforcement or other supervisory action, when warranted.

Parallel-owned banking organizations may foster additional management and supervisory risks:

7. References to "foreign bank" or "foreign parallel bank" also include a holding company of the foreign bank and any U.S. or foreign affiliates of the foreign bank. References to "U.S. depository institution" do not include a U.S. depository institution that is controlled by a foreign bank.

8. The term "persons" includes both business entities and natural persons, which may or may not be U.S. citizens.

9. A bank holding company or savings and loan holding company, however, may be a component of a parallel-owned banking organization. This situation may arise when a bank holding company or savings and loan holding company controls the U.S. depository institution, and the holding company, in turn, is controlled by a person or group of persons who also controls a foreign bank.

10. The Federal Reserve System, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation.

11. The sharing of a director, by itself, is unlikely to indicate common control of the U.S. and foreign depository institutions.

- Officers and directors of the U.S. depository institution may be unable or unwilling to exercise independent control to ensure that transactions with the foreign parallel bank or affiliates are legitimate and comply with applicable laws and regulations. As a result, the U.S. depository institution may be the conduit or participant in a transaction that violates U.S. law or the laws of a foreign country, or that is designed to prefer a foreign bank or nonbank entity in the group, to the detriment of the U.S. depository institution.
- Money-laundering concerns may be heightened due to the potential lack of arm's-length transactions between the U.S. depository institution and the foreign parallel bank. Specifically, the flow of funds through wires, pouch activity, and correspondent accounts may be subject to less internal scrutiny by the U.S. depository institution than usually is warranted.[12] This risk is greatly increased when the foreign parallel bank is located in an offshore jurisdiction or other jurisdiction that limits exchange of information through bank secrecy laws, especially if the jurisdiction has been designated as a "non-cooperating country or territory" or the jurisdiction or the foreign bank has been found to be of primary money-laundering concern under the International Money Laundering Abatement and Financial Anti-Terrorism Act of 2001.
- Securities, custodial, and trust transactions may be preferential to the extent that assets, earnings, and losses are artificially allocated among parallel banks. Similarly, low-quality assets and problem loans can be shifted among parallel banks to manipulate earnings or losses and avoid regulatory scrutiny. Also, if the foreign parallel bank were to begin experiencing financial difficulties, the foreign bank or the common owners might pressure the U.S. depository institution to provide credit support or liquidity to an affiliate in excess of the legal limits of 12 USC 371c and 371c-1.
- The home country of the foreign parallel bank may have insufficient mechanisms or authority to monitor changes in ownership or to ensure arm's-length intercompany transactions between the foreign parallel bank and other members of the group, including the U.S. depository institution, or to monitor concentrations of loans or transactions with third parties that may present safety-and-soundness concerns to the group.
- Capital may be generated artificially through the use of international stock-purchase loans. Such loans can be funded by the U.S. depository institution to the foreign affiliate or to a nonaffiliate with the purpose of supporting a loan back to the foreign affiliate and used to leverage the U.S. depository institution or vice versa. This concern is heightened for parallel-owned banking organizations if the foreign bank is not adequately supervised.
- Political, legal, or economic events in the foreign country may affect the U.S. depository institution. Events in the foreign country, such as the intervention and assumption of control of the foreign parallel bank by its supervisor, may trigger a rapid inflow or outflow of deposits at the U.S. depository institution, thereby affecting liquidity. Foreign events may increase reputational risk to the U.S. depository institution. In addition, these events may adversely affect the foreign bank owner's financial resources and decrease the ability of the foreign bank owner to provide financial support to the U.S. depository institution. Foreign law may change without the U.S. depository institution or the banking agencies becoming aware of the effect of legal changes on the parallel-owned banking organization, including the U.S. depository institution.
- Parallel-owned banking organizations may seek to avoid legal lending limits or limita-

12. On October 28, 2002, the U.S. Department of the Treasury's regulation to implement sections 313 and 319(b) of the USA PATRIOT Act became effective. (See 31 CFR 1010.630 and 1010.670.) The regulation implemented new provisions of the Bank Secrecy Act that relate to foreign correspondent accounts. A covered financial institution (CFI) (a financial institution that is covered by the regulation) is prohibited from establishing, maintaining, administering, or managing a correspondent account in the United States for, or on behalf of, a foreign shell bank (a foreign bank that has no physical presence in any country) that is not affiliated with a U.S.-domiciled financial institution or with a foreign bank that maintains a physical presence in the United States or a foreign country and that is supervised by its home-country banking authority. A CFI must take reasonable steps to ensure that a correspondent account of a foreign bank (an account established by a CFI for a foreign bank to receive deposits from, to make payments or other disbursements on behalf of a foreign bank, or to handle other financial transactions related to the foreign bank) is not being used to indirectly provide banking services to foreign shell banks. The regulation includes recordkeeping requirements and required account-termination procedures that are to be used by CFIs having correspondent accounts of foreign banks. See SR-05-9 for a discussion of the PATRIOT Act's requirements for a financial institution's customer identification program. A customer identification program should be part of an institution's overall anti-money-laundering and BSA compliance program. See also the *FFIEC Bank Secrecy Act/Anti-Money Laundering Examination Manual*.

tions imposed by securities or commodities exchanges or clearinghouses on transactions by one counterparty, thereby unduly increasing credit risk and other risks to the banking organizations and others.

To minimize risks, the U.S. banking agencies coordinate the supervision of a parallel-owned banking organization's U.S. operations. The supervisory approach may include unannounced coordinated examinations if more than one regulator has examination authority. Such examinations may be conducted if regulators suspect irregular transactions between parallel-owned banks, such as the shifting of problem assets between the depository institutions. Factors to consider in determining whether to conduct coordinated reviews of an organization's U.S. operations include: (1) intercompany and related transactions; (2) strategy and management of the parallel-owned banking organization; (3) political, legal, or economic events in the foreign country; and (4) compliance with commitments or representations made or conditions imposed in the application process, or conditions pursuant to prior supervisory action.

The U.S. depository institution's board of directors and senior management are expected to be cognizant of the risks associated with being part of a parallel-owned banking structure, especially with respect to diversion of a depository institution's resources, conflicts of interest, and affiliate transactions. The depository institution's internal policies and procedures should provide guidance on how personnel should interact with affiliates. The Federal Reserve and other U.S. banking agencies will expect to have access to such policies, as well as to the results of any audits of compliance with the policies. The agencies will seek an overview of the entire organization, as well as a better understanding of how foreign bank affiliates are supervised. Authorized bank regulatory supervisory staff will work with foreign supervisors to better understand the activities of the foreign affiliates and owners. As appropriate and feasible, and in accordance with applicable law, such authorized staff will share information regarding material developments with foreign and domestic supervisory agencies that have supervisory responsibility over relevant parts of the parallel-owned banking organization.

DOMESTIC AND FOREIGN SUBSIDIARIES

Domestic subsidiaries are any majority-owned companies, other than Edge Act or agreement corporations, domiciled in the United States and its territories and possessions. Foreign subsidiaries are any majority-owned or -controlled companies domiciled in a foreign country or any Edge Act or agreement corporation. Section 211.13 of Regulation K (12 CFR 211.13) requires foreign subsidiaries to maintain effective systems of records, controls, and reports to keep bank management informed of their activities and conditions. In particular, these systems are to provide information on risk assets, exposure to market risk, liquidity management, operations, internal controls, and conformance with management policies. Reports on risk assets must be sufficient enough to allow for an appraisal of credit quality and an assessment of exposure to loss; for that purpose, they must provide full information on the condition of material borrowers. Reports on the operations and controls are to include internal and external audits of the branch or subsidiary.

On-site examinations of foreign subsidiaries are sometimes precluded because of objections voiced by foreign directors, minority shareholders, or local bank supervisors. In addition, secrecy laws in some countries may preclude on-site examinations. When on-site examinations cannot be performed, foreign subsidiary reports submitted according to section 211.13 and reports submitted to foreign banking authorities must serve as the basis for evaluating the bank's investment.

Additionally, Regulation K allows for investments in foreign companies to be made under the general-consent provisions without prior approval of the Board. These investments can be sizable and can pose significant risk to the banking organization. Investments in foreign subsidiaries should be reviewed for compliance with the FRA and investment limitations in Regulation K. (See Regulation K, sections 211.8 and 211.9.)

SIGNIFICANT SUBSIDIARIES

As used in the consolidation instructions for certain regulatory reports (for example, the FR Y-11/FR Y-11S, "Financial Statements of

U.S. Nonbank Subsidiaries of U.S. Holding Companies"), "significant subsidiaries" generally refers to subsidiaries that meet any one of the following tests:

- a majority-owned subsidiary in which the bank's direct and indirect investment and advances represent 5 percent or more of the parent bank's equity capital accounts,
- a majority-owned subsidiary whose gross operating revenues amount to 5 percent or more of the parent bank's gross operating revenues,
- a majority-owned subsidiary whose "income (loss) before income taxes and securities gains or losses" amounts to 5 percent or more of the parent bank's "income (loss) before income taxes and securities gains or losses," or
- a majority-owned subsidiary that is the parent of one or more subsidiaries that, when consolidated, constitute a "significant subsidiary" as defined above.

ASSOCIATED COMPANIES

Associated companies are those in which the bank directly or indirectly owns 20 percent to 50 percent of the outstanding common stock, unless the bank can rebut to the Federal Reserve the presumption of exercising significant influence. However, as noted above, for purposes of section 23A, affiliation is defined by 25 percent share ownership. Because of the absence of direct or indirect control, regulators have no legal authority to conduct full examinations of this type of company. Investments in these companies are generally appraised in the same way as commercial loans, that is, by a credit analysis of the underlying financial information.

CHAIN-BANKING ORGANIZATIONS

Chain-banking organizations exist when an individual (or group of individuals) is a principal in two or more banking institutions, in either banks or BHCs or a combination of both types of institutions. Chain-banking organizations can also exist in savings and loan holding companies (SLHCs). In these systems, the possibility exists that problems in one or more of the entities may adversely affect the safety and soundness of the bank entities because of pressure exerted by their common principal (or principals). Examiners should determine whether the bank is a member of a chain. If so, the extent of its relationship with other links of the chain should be determined, as well as the effects these relationships have on the bank.

REAL ESTATE INVESTMENT TRUSTS AND OTHER RELATED ORGANIZATIONS

Although a bank, its parent holding company, or its nonbank affiliate may not have a direct investment in an "other related organization," the bank may sponsor, advise, or influence the activities of these companies. The most notable examples are real estate investment trusts (REITs) or special-purpose vehicles (SPVs). Transactions between the bank and REITs and between other investment companies may be subject to the limitations in section 23A and Regulation W. In other cases, because of nonownership or a less-than-majority ownership, legal authority to conduct an examination does not exist.

A REIT may be considered an affiliate if it is advised by the member bank or by any subsidiary or affiliate of the member bank. In these cases, transactions between the bank and an affiliated REIT are subject to the requirements of section 23A. Because a REIT frequently carries a name that closely identifies it with its sponsoring bank or BHC, failure of the REIT could have an adverse impact on public confidence in the holding company and its subsidiaries.

The examiner should be aware of all significant transactions between the bank under examination and its related REIT in order to determine conflicts of interest and contingent risks. In several instances, REITs have encountered serious financial problems and have attempted to avoid failure by selling questionable assets to, or swapping these assets with, their bank affiliates. In other instances, because of the adversary relationship, REITs have been encouraged to purchase assets of inferior quality from their related organizations.

HOLDING COMPANIES

As defined in section 2 of the BHC Act of 1956 (12 USC 1841 et seq.), a BHC is any company that directly or indirectly, or acting through one or more other persons, owns, controls, or has power to vote 25 percent or more of any class of voting securities of the bank or company; that controls in any manner the election of a majority of the directors or trustees of the bank or company; or that the Board determines, after notice and opportunity for hearing, directly or indirectly exercises controlling influence over the management or policies of the bank or company.

The Home Owners' Loan Act (HOLA) defines an SLHC as any company that directly or indirectly controls a savings association or that controls any other company that is a savings and loan holding company. In general, a company controls a savings association if one or more persons directly or indirectly owns, controls, or has the power to vote more than 25 percent of the voting shares of the savings association, or controls in any manner the election of a majority of the directors of the savings association.

A parent holding company is considered an affiliate when the holding company controls the insured depository institution (IDI) in a manner consistent with the definition of control in section 23A of the FRA. Section 23A exempts from the quantitative and collateral requirements of the law all transactions (except for the purchase of low-quality assets) between "sister" IDIs (IDIs with 80 percent or more common ownership) by a company. A low-quality asset is any asset (1) classified "substandard," "doubtful," or "loss," or treated as "special mentioned" or "other transfer risk problems" in the most recent federal or state examination or inspection report; (2) on nonaccrual status; (3) with principal or interest payments more than 30 days past due; (4) whose terms have been renegotiated or compromised due to the deteriorated financial condition of the borrower; or (5) acquired through foreclosure, repossession, or otherwise in satisfaction of a debt previously contracted, if the asset has not yet been reviewed in an examination or inspection.

Under the BHC Act, the Federal Reserve has authority to inspect BHCs and their nonbank subsidiaries.[13] The Federal Reserve requires periodic inspections of all BHCs, the frequency of which is based on the size, complexity, and condition of the organization. If a BHC is inspected at the same time as the examination of its state member bank subsidiaries, the examiner at the bank should collaborate closely with inspection personnel on those holding company issues that directly affect the condition of the bank. When the BHC inspection is not conducted simultaneously with the examination, the bank examiner should closely review the most recent report of inspection and may also need to consult the FR Y-series of reports regularly submitted to the Federal Reserve System by BHCs.

Many depository institutions are owned by holding companies. To understand the effects of the holding company structure on the subsidiary IDI, the examiner should evaluate the overall financial support provided by the parent company, quality of supervision and centralized functions provided, and appropriateness of intercompany transactions. Since financial and managerial issues at the holding company and subsidiary IDI levels are so closely connected, it is strongly recommended that a holding company inspection and its respective bank examination(s) be conducted at the same time or shortly after the examination of the lead bank. A combined examination/inspection report, as discussed in SR 94-46, is available to facilitate this coordination when the lead subsidiary is a state member bank.

Financial Support

The holding company structure can provide its subsidiary IDI with strong financial support because of its greater ability to attract and shift funds to less capital-intensive areas and to enter markets in a wider geographic area than would otherwise be possible. Financial support may take the form of capital (equity or debt) or funding of loans and investments. In general, the lower the parent BHC's leverage, the more it is able to serve as a source of financial strength to its IDI subsidiaries. This is because less cash flow will be required from the IDIs for debt servicing and the parent has more borrowing capacity, which could be used to provide funds to the IDI. When the financial condition of the holding company or its nonbanking subsidiaries is unsound, the operations of its subsidiary IDI can be adversely affected. To service its debt or provide support to another subsidiary that is experiencing financial difficulty, the holding

13. Title III of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) transfers to the Board of Governors of the Federal Reserve System the supervisory functions of the Office of Thrift Supervision related to savings and loan holding companies (SLHCs) and their nondepository subsidiaries beginning on July 21, 2011.

company may involve its IDI subsidiary in the following imprudent actions:

- engaging in high-risk investments to obtain increased yields,
- purchasing or swapping its high-quality assets for the parent's or other affiliate's lower-quality assets,
- entering into intercompany transactions that are detrimental because of inordinately high fees or inadequate or unnecessary services,
- paying excessive dividends, or
- making improper tax payments or unfavorably altering its tax situation.

Even when the holding company's structure is financially sound, the holding company's ability to sell short- or long-term debt and to pass the proceeds down to its IDI subsidiary in the form of equity capital may still present problems. This procedure is frequently referred to as "double leveraging," the amount of the equity investment in the bank subsidiary that is financed by debt. Problems may arise when the holding company must service its debt out of dividends from the subsidiary, and the subsidiary, if it encounters an earnings problem or is prevented by regulatory agreement or action, may not be able to pass dividends up to its parent.

Another potential problem may develop when the holding company sells its commercial paper and funds its subsidiary's loans with those proceeds. This may cause a liquidity problem if the maturities of the commercial paper sold and loans funded are not matched appropriately and if the volume of such funding is large in relation to the subsidiary's overall operations.

The Board's Regulation Y provides that a BHC shall serve as a source of financial and managerial strength to their subsidiary banks.[14] Regulation Y reiterates a general policy that has been expressed on numerous occasions in accordance with authority that is provided under the BHC Act and the enforcement provisions of the FDI Act. The FDI Act also requires SLHCs to act as a source of strength to their depository institution subsidiaries. See section 38A of the FDI Act and section 616(d) of the Dodd-Frank Act.

14. 12 CFR 225.4 (a)(1).

Holding Company Oversight of Subsidiaries

BHCs use a variety of methods to supervise their bank subsidiaries, including

- having holding company senior officers serve as directors on the bank's board;
- establishing reporting lines from senior bank management to corporate staff;
- formulating or providing input into key policies; and
- establishing management information systems, including internal audit and loan review.

As part of the evaluation of bank management, the examiner should be aware of these various control mechanisms and determine whether they are beneficial to the bank. Examiners should keep in mind that, even in a holding company organization, the directors and senior management of the bank are ultimately responsible for operating it in a safe and sound manner.

In addition, many bank functions (investment management, asset/liability management, human resources, operations, internal audit, and loan review) may be performed on behalf of the bank by its parent BHC or by a nonbank affiliate. These functions are reviewed at inspections of the holding company. Examiners at the bank should be aware of the evaluation of these functions by inspection personnel, either at a concurrent inspection or in the report of a prior inspection. In addition, a review of these same issues at the level of the subsidiary bank is useful to determine compliance with corporate policies, corroborate inspection findings, and identify any inappropriate transactions that may have been overlooked in the more general, top-down review at the parent level.

FINANCIAL HOLDING COMPANIES

Section 4(k) of the BHC Act authorizes affiliations among banks, securities firms, insurance firms, and other financial companies. It provides for the formation of financial holding companies (FHCs) and allows a BHC or foreign bank that qualifies as an FHC to engage in a broad range of activities that are (1) defined by the GLB Act to be financial in nature or incidental to a financial activity or (2) determined by the Board, in consultation with the secretary of the Treasury, to be financial in nature or incidental to a financial activity or that are determined by the Board to be complementary to a financial activity, which would not pose a substantial risk to the safety and soundness of depository institutions or the financial system generally.

Certain conditions must be met for a BHC, SLHC, or a foreign bank to be deemed an FHC and to engage in the expanded activities. BHCs that do not qualify as FHCs are limited to engaging in those nonbanking activities that are permissible under section 4(c)(8) of the BHC Act. Section 4(k) of the BHC Act authorizes an FHC to engage in designated financial activities, including insurance and securities underwriting and agency activities, merchant banking, and insurance company portfolio investment activities.

Supervisory Oversight

The Federal Reserve has supervisory oversight authority and responsibility for SLHCs and BHCs that operate as FHCs and for SLHCs and BHCs that are not FHCs. The GLB Act sets parameters for operating relationships between the Federal Reserve and other regulators. The GLB Act differentiates between the Federal Reserve's relations with (1) depository institution regulators and (2) functional regulators, which include insurance, securities, and commodities regulators. The Federal Reserve's relationships with functional regulators will, in practice, depend on the extent to which an FHC is engaged in functionally regulated activities; those relationships will also be influenced by existing working arrangements between the Board and the functional regulator.

The Federal Reserve's supervisory oversight role is that of an umbrella supervisor concentrating on a consolidated or group-wide analysis of an organization. Umbrella supervision is not an extension of more traditional bank-like supervision throughout an FHC. The FHC framework is consistent with and incorporates principles that are well established for BHCs. The FHC supervisory policy focuses on addressing supervisory practice for and relationships with FHCs, particularly those that are engaged in securities or insurance activities. (See SR 00-13 and SR 14-9).

The Federal Reserve is responsible for the consolidated supervision of FHCs. The Federal Reserve thus assesses the holding company on a consolidated or group-wide basis. The objective is to ensure that the holding company does not threaten the viability of its depository institution subsidiaries. Depository institution subsidiaries of FHCs are supervised by their appropriate primary bank or thrift supervisor (federal and state). However, the GLB Act did not change the Federal Reserve's role as the federal BHC supervisor.

Nonbank (or nonthrift) subsidiaries engaged in securities, commodities, or insurance activities are to be supervised by their appropriate functional regulators. Examples of these functionally regulated subsidiaries include a broker, dealer, investment adviser, and investment company registered with and regulated by the Securities and Exchange Commission (SEC) (or, in the case of an investment adviser, registered with any state); an insurance company or insurance agent subject to supervision by a state insurance regulator; and a nonbank subsidiary engaged in activities regulated by the Commodity Futures Trading Commission (CFTC).

As the umbrella supervisor, the Federal Reserve will seek to determine that FHCs are operated in a safe and sound manner so that their financial condition does not threaten the viability of affiliated depository institutions. Oversight of FHCs (particularly those engaged in a broad range of financial activities) at the consolidated level is important because the risks associated with an FHC's activities can cut across legal entities and business lines. The purpose of FHC supervision is to identify and evaluate, on a consolidated or group-wide basis, the significant risks that exist in a diversified holding company to assess how these risks might affect the safety and soundness of depository institution subsidiaries.

The Federal Reserve's focus will be on the financial strength and stability of FHCs, their consolidated risk-management processes, and overall capital adequacy. The Federal Reserve will review and assess internal policies, reports, and procedures, as well as the effectiveness of the FHC consolidated risk-management process. The appropriate bank, thrift, or functional regulator will continue to have primary responsibility for evaluating risks, hedging, and risk management at the legal-entity level for the entity or entities that it supervises.

Permissible Activities

Permissible activities for FHCs include any activity that the Board determined to be closely related to banking under section 4(c)(8) of the BHC Act by regulation that was in effect prior to November 12, 1999, or by order that was in effect on November 12, 1999. This includes the long-standing "laundry list" of nonbanking activities for BHCs. (See section 225.28(b) of Regulation Y.) Section 225.86(a)(2) of Regulation Y lists the nonbanking activities approved for BHCs by Board order as of November 12, 1999.[15]

Section 4(k)(4)(G) of the BHC Act also defines "financial in nature" as any activity (1) in which a BHC may engage outside the United States and (2) that the Board has determined, by regulation or interpretations issued under section (4)(c)(13) of the BHC Act that were in effect on November 11, 1999, to be usual in conducting banking or other financial services abroad. Section 225.86(b) of Regulation Y lists three activities that the Board has found to be usual in connection with the transaction of banking or other financial operations abroad.[16] The activities are (1) providing management consulting services; (2) operating a travel agency; and (3) organizing, sponsoring, and managing a mutual fund. The conduct of each activity has certain prescribed limitations. Management consulting services must be advisory and not allow the FHC to control the person to whom the services are provided. These services, however, may be offered to any person on nonfinancial matters. An FHC may also operate a travel agency in connection with financial services offered by the FHC or others. Finally, a mutual fund organized, sponsored, or managed by an FHC may not exercise managerial control over the companies in which the fund invests, and the FHC must reduce its ownership of the fund, if any, to less than 25 percent of the equity of the fund within one year of sponsoring the fund (or within such additional period as the Board permits).

The activities that a BHC is authorized to engage in outside the United States under section 211.10 of Regulation K have been either (1) authorized for FHCs in a broader form by the GLB Act (for example, underwriting, distributing, and dealing in securities and underwriting various types of insurance) or (2) authorized in the same or a broader form in Regulation Y (for example, data processing activities; real and personal property leasing; and acting as agent, broker, or adviser in leasing property). Section 4(k)(4)(G) of the BHC Act and section 225.86 of Regulation Y only authorize FHCs to engage in the activities that are listed in section 211.10 of Regulation K, as interpreted by the Board. The Board has also approved activities found in individual orders issued under section 4(c)(13) of the BHC Act. Section 4(k)(4)(G) and Regulation Y do not authorize an FHC to engage in activities that the Board authorized a BHC to provide in individual orders issued under section 4(c)(13) of the BHC Act.

The remaining activities authorized by section 4(k)(4) of the BHC Act are those that are defined to be "financial in nature" under section 4(k)(4)(A) through (E), (H), and (I). (See section 225.86(c) of Regulation Y.) These activities include issuing annuity products and acting as principal, agent, or broker for purposes of insuring, guaranteeing, or indemnifying against loss, harm, damage, illness, disability, or death. Permissible insurance activities as principal include reinsuring insurance products. An FHC acting under section 4(k)(4) of the BHC Act may conduct insurance activities without regard to the restrictions on the insurance activities imposed on BHCs under section 4(c)(8). (See section 3905.0 of the *Bank Holding Company Supervision Manual* for more information pertaining to the activities of FHCs.)

INTERCOMPANY TRANSACTIONS

As with the supervision of subsidiaries, intercompany transactions should be reviewed at both the parent level during inspections and at the subsidiary-bank level during examinations. The transactions should comply with sections 23A and 23B of the FRA, Regulation W, and should not otherwise adversely affect the financial condition of the bank.

15. Section 20 company activities are not included in this list. Section 4(k)(4)(E) of the BHC Act authorizes FHCs to engage in securities underwriting, dealing, and market-making activities in a broader form than was previously authorized by Board order.

16. See section 211.10 of Regulation K (12 CFR 211.10).

Intercompany Tax Payments

SR letter 98-38, "Interagency Policy Statement on Tax Allocation in a Holding Company Structure," provides guidance to banking organizations and savings associations regarding the allocation and payment of taxes among a holding company and its subsidiaries. A holding company and its depository institution subsidiaries will often file a consolidated group income tax return. However, each depository institution is viewed as, and reports as, a separate legal and accounting entity for regulatory purposes. Accordingly, each depository institution's applicable income taxes, reflecting either an expense or benefit, should be recorded as if the institution had filed on a separate entity basis. Furthermore, the amount and timing of payments or refunds should be no less favorable to the subsidiary than if it were a separate taxpayer. The 2014 addendum to the policy statement provides that the holding company is acting as an agent on behalf of its IDIs when it relates to tax allocation within the company. See 79 *Fed. Reg.* 35338 (June 19, 2014) and SR 14-6.

Management and Other Fees

IDIs often obtain goods and services from the parent holding company or an affiliated nonbank subsidiary. These arrangements may benefit the IDI, since the supplier may offer lower costs because of economies of scale, such as volume dealing. Furthermore, IDIs may be able to purchase a package of services that otherwise might not be available. However, because of the relationship between the IDI and the supplier, examiners should ensure that the fees being paid represent reasonable reimbursement for goods and services received. Fees paid by the IDI to the parent or nonbank affiliates should have a direct relationship to, and be based solely on, the fair value of goods and services provided. Fees should compensate the affiliated supplier only for providing goods and services that meet the legitimate needs of the IDI.

IDIs should retain satisfactory records that substantiate the value of goods and services received, their benefit to the IDI, and their cost efficiencies. There are no other minimum requirements for records, but an examiner should be able to review the records maintained and determine that fees represent reasonable payment. In general, the supplier will decide on the amount to be charged by the comparative free-market value of the services.

When the servicer incurs overhead expenses, recovery of those costs is acceptable to the extent they represent a legitimate and integral part of the service rendered. Overhead includes salaries and wages, occupancy expenses, utilities, payroll taxes, supplies, and advertising. Debt-service requirements of holding companies, shareholders, or other related organizations are not legitimate overhead expenses for a subsidiary bank.

Generally, the payment of excessive fees is considered an unsafe and unsound practice and is a violation of section 23B of the FRA and the Board's Regulation W. When fees are not justified, appear excessive, do not serve legitimate needs, or are otherwise abusive, the examiner should inform the board of directors through appropriate criticism in the report of examination.

Dividends

Dividends represent a highly visible cash outflow by banks. If the dividend-payout ratio exceeds the level at which the growth of retained earnings can keep pace with the growth of assets, the bank's capital ratios will deteriorate. Examiners should evaluate the appropriateness of dividends relative to the bank's financial condition, prospects, and asset-growth forecast.

Purchases or Swaps of Assets

Asset purchases or swaps between IDIs and their affiliates create the potential for abuse. Regulatory concern focuses on the fairness of such asset transactions, their financial impact, and timing. Fairness and financial considerations include the quality and collectibility of such assets and liquidity effects. Asset exchanges may be a mechanism to avoid regulations designed to protect subsidiary banks from becoming overburdened with nonearning assets. Most asset purchases by an IDI from an affiliate are subject to sections 23A and 23B of the FRA.

Compensating Balances

A subsidiary bank may be required to maintain excess balances at a correspondent bank that lends to other parts of the holding company organization, possibly to the detriment of the bank. The subsidiary bank may be foregoing earnings on such excess funds, which may adversely affect its financial condition.

Split-Dollar Life Insurance

Split-dollar life insurance is a type of life insurance in which the purchaser of the policy pays at least part of the insurance premiums and is entitled to only a portion of the cash surrender value, or death benefit, or both. In some circumstances, when the subsidiary bank pays all or substantially all of the insurance premiums, an unsecured extension of credit from the bank to its parent holding company generally results because the bank has paid the holding company's portion of the premium, and the bank will not be fully reimbursed until later. In other arrangements, when the parent uses the insurance policy as collateral for loans from the subsidiary bank, the loan may not meet the collateral requirements of section 23A or Regulation W. In addition, split-dollar arrangements may not comply with section 23B or Regulation W if the return to the bank is not commensurate with the size and nature of its financial commitment. Finally, split-dollar arrangements may be considered unsafe and unsound, which could be the case if the bank is paying the entire premium but is not the beneficiary of the policy, or if it receives less than the entire proceeds of the policy. This type of transaction may also result in a violation of the Board's Regulation W. (See SR 93-37, "Split-Dollar Life Insurance.")

Other Transactions with Affiliates

Checking accounts of the parent or nonbank subsidiaries at subsidiary banks present the potential for overdrafts, which are regarded as unsecured extensions of credit to an affiliate by the subsidiary bank, and are in violation of section 23A of the FRA. In general, a subsidiary bank should be adequately compensated for its services or for the use of its facilities and personnel by other parts of the holding company organization. In addition, a subsidiary bank should not pay for expenses for which it does not receive a benefit (for example, the formation expenses of a BHC or SLHC).

Situations sometimes arise in which more than one legal entity in a banking organization shares offices or staff. In certain cases, it can be hard to determine whether a legal entity is operating within the scope of its permissible activities. In addition, a counterparty may be unclear as to which legal entity an employee is representing. Finally, there may be expense-allocation problems and, thus, issues pertaining to sections 23A and 23B of the FRA or Regulation W. Examiners should be aware of these concerns and make sure that institutions have the proper records and internal controls to ensure an adequate separation of legal entities. (See SR 95-34 "Sharing of Facilities and Staff by Banking Organizations.")

EVALUATION OF INVESTMENTS IN AND LOANS TO BANK-RELATED ORGANIZATIONS

To properly evaluate affiliates and other bank-related organizations[17] relative to the overall condition of the bank, the examiner must

- know the applicable laws and regulations that define and establish limitations with respect to investments in, and extensions of credit to, affiliates and
- analyze thoroughly the propriety of the related organizations' carrying value, the nature of the relationships between the bank and its related organizations, and the effect of such relationships on the affairs and soundness of the bank.

The propriety of the carrying value of a bank's investment in any related organization is determined by evaluating the balance sheet and income statement of the company in which the bank has the investment. At times, this may not

17. Information about related organizations and interlocking directorates and officers can be obtained from the bank holding company form FR Y-6 and SEC form 10-K, if applicable, or from other required domestic and foreign regulatory reports. Further information on business interests of directors and principal officers of the bank can be obtained by reviewing information maintained by the bank in accordance with the Board's Regulation O.

seem important in relation to the overall condition of the bank because the amount invested may be small relative to the bank's capital. It may appear that a cursory appraisal of the company's assets would therefore be sufficient. However, the opposite is often true. Even though a bank's investment in a subsidiary or associated company is relatively small, the underlying fiduciary or compliance obligations may be substantial and may greatly exceed the total amount of the reported investment. If the subsidiary experiences large losses, the bank may have to recapitalize the subsidiary by injecting much more than its original investment to protect unaffiliated creditors of the subsidiary or protect its own reputation.

When examining and evaluating the bank's investment in and loans to related organizations, classified assets held by such companies should first be related to the capital structure of the company and then be used as a basis for classifying the bank's investment in and loans to that company.

One problem that examiners may encounter when they attempt to evaluate the assets of some subsidiaries and associated companies is inadequate on-premises information. This may be especially true of foreign investments and associated companies in which the bank has less than a majority interest. In those instances, the examiner should request that adequate information be obtained during the examination and should establish agreed-on standards for that information in the future. The examiner should insist that the organization have adequate supporting information readily obtainable or available in the bank and that the information be of sufficient quality to allow for an informed evaluation of the investment. Bank management, as well as regulatory authorities, must be adequately informed of the condition of the companies in which the bank has an investment. For subsidiary companies, it is necessary that bank representatives be a party to policy decisions, have some on-premises control of the company (such as board representation), and have audit authority. In the case of an associated company, the bank should participate in company affairs to the extent practicable. Information documenting the nature, direction, and current financial status of all such companies should be maintained at the bank's head office or maintained regionally for global companies. Full audits by reputable certified public accountants are often used to provide much of this information.

For foreign subsidiaries, in addition to the audited financial information prepared for management, the bank should have on file the following:

- reports prepared according to the Board's Regulation K;
- reports prepared for foreign regulatory authorities;
- information on the country's regulatory structure, current economic conditions, anticipated relaxation or strengthening of capital or exchange controls, and fiscal policy, political goals, and a determination as to the potential risk of expropriation; and
- adequate information to review compliance with the investment provisions of Regulation K. (For each investment, information should be provided on the type of investment (equity, binding commitments, capital contributions, subordinated debt), dollar amount of the investment, percentage ownership, activities conducted by the company, legal authority for such activities, and whether the investment was made under Regulation K's general-consent, prior-notice, or specific-consent procedures. With respect to investments made under the general-consent authority, information also must be maintained that demonstrates compliance with the various limits set out in section 211.9 of Regulation K. (See Regulation K, sections 211.8 and 211.9.)

Examination procedures are available on the Examination Documentation (ED) modules page on the Board's website. See the following ED module for examination procedures on this topic:

- Related Organizations

INTERAGENCY POLICY ON BANKS AND THRIFTS PROVIDING FINANCIAL SUPPORT TO FUNDS ADVISED BY THE BANKING ORGANIZATION OR ITS AFFILIATES

On January 5, 2004, the federal banking agencies[1] (the agencies) issued an interagency policy statement to alert banking organizations, including their boards of directors and senior management, of the safety-and-soundness implications of, and the legal impediments to, a bank providing financial support to investment funds[2] advised by the bank, its subsidiaries, or affiliates (affiliated investment funds). A banking organization's investment advisory services can pose material risks to the bank's liquidity, earnings, capital, and reputation and can harm investors, if the associated risks are not effectively controlled. (See SR-04-1.)

Banks are under no statutory requirement to provide financial support to the funds they advise; however, circumstances may motivate banks to do so for reasons of reputation risk and liability mitigation. This type of support by banking organizations to funds they advise has included credit extensions, cash infusions, asset purchases, and the acquisition of fund shares. In very limited circumstances, certain arrangements between banks and the funds they advise have been expressly determined to be legally permissible and safe and sound when properly conducted and managed. However, the agencies are concerned about other occasions when emergency liquidity needs may prompt banks to support their advised funds in ways that raise prudential and legal concerns. Federal laws and regulations place significant restrictions on transactions between banks and their advised funds. In particular, sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W (12 CFR 223) place quantitative limits and collateral and market-terms requirements on many transactions between a bank and certain of its advised funds.

1. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the Office of Thrift Supervision (OTS). Title III of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd Frank Act) abolished the OTS, which had been responsible for regulating state and federal savings associations and their holding companies. See 12 U.S.C 5413 (Dodd-Frank Act 313). The OTS's functions and powers were transferred to the OCC, FDIC, and the Board. The Board acquired regulatory and rulemaking authority over savings and loan holding companies. See 12 U.S.C. 5412 (Dodd-Frank Act 312). The OCC acquired supervisory and rulemaking authority over federal savings associations. The FDIC acquired supervisory and rulemaking authority over state-chartered savings associations.

2. Bank-advised investment funds include mutual funds, alternative strategy funds, collective investment funds, and other funds where the bank, its subsidiaries, or affiliates is the investment adviser and receives a fee for its investment advice. For purposes of the guidance, "banks" includes banks and savings associations.

Interagency Policy

To avoid engaging in unsafe and unsound banking practices, banks should adopt appropriate policies and procedures governing routine or emergency transactions with bank-advised investment funds. Such policies and procedures should be designed to ensure that the bank will *not* (1) inappropriately place its resources and reputation at risk for the benefit of the funds' investors and creditors; (2) violate the limits and requirements contained in sections 23A and 23B of the Federal Reserve Act and Regulation W, other applicable legal requirements, or any special supervisory condition imposed by the agencies; or (3) create an expectation that the bank will prop up the advised fund. Further, the agencies expect banking organizations to maintain appropriate controls over investment advisory activities that include:

- Establishing alternative sources of emergency support from the parent holding company, nonbank affiliates, or external third parties prior to seeking support from the bank.
- Instituting effective policies and procedures for identifying potential circumstances triggering the need for financial support and the process for obtaining such support. In the limited instances that the bank provides financial support, the bank's procedures should include an oversight process that requires formal approval from the bank's board of directors, or an appropriate board-designated committee, independent of the investment advisory function. The bank's audit committee also should review the transaction to

ensure that appropriate policies and procedures were followed.
- Implementing an effective risk-management system for controlling and monitoring risks posed to the bank by the organization's investment advisory activities. Risk controls should include establishing appropriate risk limits, liquidity planning, performance measurement systems, stress testing, compliance reviews, and management reporting to mitigate the need for significant bank support.
- Implementing policies and procedures that ensure that the bank is in compliance with existing disclosure and advertising requirements to clearly differentiate the investments in advised funds from obligations of the bank or insured deposits.
- Ensuring proper regulatory reporting of contingent liabilities arising out of its investment advisory activities in the banking organization's published financial statements in accordance with Accounting Standards Codification subtopic 450-20, Contingencies: Loss Contingencies, and fiduciary settlements, surcharges, and other losses arising out of its investment advisory activities in accordance with the instructions for completing Call Report Schedule RC-T (Fiduciary and Related Services).

Notification of a Banking Organization's Primary Federal Regulator

Because of the potential risks posed by the provision of financial support to advised funds, bank management should notify and consult with its appropriate federal banking agency prior to the bank providing material financial support to its advised funds. The appropriate federal banking agency will closely scrutinize the circumstances surrounding the transaction and will address situations that raise supervisory concerns.

1. To determine if the bank provides support to an advised fund and, if so, the type of support that is being provided.
2. If the bank is providing support to an advised fund, to ascertain whether the type of support raises prudential (safety-and-soundness) or legal concerns, such as noncompliance with sections 23A and 23B of the Federal Reserve Act, and with Regulation W.
3. To determine whether the bank has adopted appropriate policies and procedures governing routine or emergency transactions with funds that it advises.
4. To find out if the bank has established appropriate controls over investment advisory activities.
5. If a bank has provided material financial support to an advised fund, to determine if the bank notified its primary federal regulator before engaging in the activity.

1. Determine if the bank has inappropriately placed its resources at risk for the benefit of an affiliated investment fund's investors and creditors.
2. Ascertain whether the bank's advisory services to investment funds pose material risks to the bank's liquidity, earnings, and capital.
3. Determine if the bank provides support to an investment fund and if that support violates the limits and requirements of sections 23A and 23B of the Federal Reserve Act, and Regulation W; other applicable legal requirements; or any special supervisory condition imposed by the bank's primary federal supervisory agency.
4. Find out if the bank has given any form of assurances or expectations that it will provide financial or other support to an advised fund.
5. Ascertain whether the bank has established appropriate controls over investment advisory activities, such as:
   a. Establishing alternative sources of emergency support that can be made available to an advised fund from the parent holding company, nonbank affiliates, or external third parties before the fund seeks financial support from the bank.
   b. Instituting effective policies and procedures to—
      - identify potential circumstances that would trigger the need for financial support by an affiliated fund, and establish the process for obtaining that support;
      - ensure that the bank is in compliance with existing disclosure and advertising requirements that clearly differentiate the investments in advised funds from the bank's other obligations or federally insured deposits; and
      - avoid unsafe and unsound banking practices by initiating procedures that govern routine or emergency transactions with bank-advised investment funds.
   c. Implementing an effective risk-management system for controlling and monitoring risks posed to the bank by its investment advisory activities.
   d. Ensuring the bank's proper reporting, in its financial statements, of contingent liabilities that arise out of its investment advisory activities.
6. Determine if the bank notified and consulted with the appropriate supervising Federal Reserve Bank before providing financial support to an affiliated investment fund.

Review the bank's internal controls, policies, practices, and procedures concerning investment funds that it advises. When performing that task, conduct examination reviews and procedures to answer the following questions:

1. Has the bank—
   a. inappropriately placed its financial resources or reputation at risk for the benefit of affiliated investment funds' investors and creditors?
   b. violated the limits and requirements in sections 23A and 23B of the Federal Reserve Act and in Regulation W, with regard to its transactions with advised investment funds?
   c. created any expectation that the bank will prop up an advised fund?
2. Do the bank's advisory services pose material risks to its liquidity, earnings, and capital?
3. Does the bank encourage its advised investment funds to establish alternative sources of financial support so that the funds can avoid seeking support from the bank itself?
4. Has the bank provided support to the funds it advises, such as with extensions of credit, cash infusions, asset purchases, acquisition of fund shares, or any other type of financial support?
5. Has the bank implemented and maintained an effective risk-management system for controlling and monitoring the risks posed to the bank by its investment advisory activities?
6. Did the bank's board of directors adopt appropriate policies and procedures to avoid engaging in unsafe and unsound banking practices with respect to routine or emergency transactions with bank-advised investment funds?
7. Has the bank's management properly reported contingencies arising out of its investment advisory activities, in accordance with Accounting Standards Codification subtopic 450-20, Contingencies: Loss Contingencies, and also any fiduciary settlements, surcharges, and other losses arising out of its investment advisory activities, in accordance with the instructions of the bank Call Report Schedule RC-T (Fiduciary and Related Services)?
8. Has the bank's management notified and consulted with its appropriate supervising Federal Reserve Bank before providing material financial support to advised funds?

INTRODUCTION

Among other things, section 106 of the Bank Holding Company Act Amendments of 1970 (section 106) prohibits a bank from conditioning the availability or price of one product on a requirement that the customer also obtain another product from the bank or an affiliate of the bank.[1] The statute is intended to prevent banks from using their ability to offer bank products in a coercive manner to gain a competitive advantage in markets for other products and services.[2] Tying arrangements that are prohibited by section 106 may be addressed by the bank's appropriate federal banking agency through an enforcement action, by the Department of Justice through a request for an injunction, or by a customer or other person injured by the tying arrangement through a request for an injunction or a legal action against the bank for damages.[3]

Although section 106 prohibits banks from imposing certain types of tying arrangements on their customers, the statute also expressly permits banks to engage in other forms of tying and authorizes the Board to grant additional exceptions to the statute's prohibitions by regulation or order.

PROHIBITIONS UNDER SECTION 106

Section 106 prohibits a bank from extending credit, leasing or selling property, furnishing any service, or fixing or varying the consideration for any of the foregoing on the condition or requirement that a customer

- obtain some additional credit, property, or service from the bank or its affiliates other than a loan, discount, deposit, or trust service;
- provide some additional credit, property, or service to the bank or its affiliates, other than those related to and usually provided in connection with a loan, discount, deposit, or trust service; or
- not obtain some additional credit, property, or service from a competitor of the bank or of an affiliate of the bank unless the condition is reasonably imposed in a credit transaction to assure the soundness of the credit.[4]

The most common types of tying arrangements are those where a bank product or consideration for a bank product to a customer is conditioned upon the customer obtaining another product from the bank or an affiliate. There are two elements necessary to establish an impermissible tying arrangement under these circumstances: (1) the arrangement must involve two or more separate products and (2) the customer is, in fact, required to buy a tied product in order to get a tying product.

APPLICABILITY OF SECTION 106

Section 106 applies only to tying arrangements that are imposed by a bank, whether or not they are subsidiaries of holding companies. The statute does not apply to tying arrangements imposed by affiliates of the bank. However, an examination of the facts and circumstances of a tying arrangement imposed by a bank affiliate that involves a bank product could reveal that the arrangement essentially is a tying arrangement set forth by the bank, but structured to appear as though it is required by the bank affiliate. These arrangements may constitute prohibited tying arrangements.

Section 106 specifically allows a bank to engage in a tying arrangement if the tied product is a "loan, discount, deposit, or trust service" (a "traditional bank product" provided to a customer).[5] The Board has not clarified the scope of this exception.

A parallel provision, codified in section 5(q) of the Home Owners' Loan Act of 1933, applies to savings associations and is also administered by the Board.[6]

1. 12 U.S.C. 1972. Although part of the Bank Holding Company Act Amendments of 1970, section 106 applies to a bank whether or not the bank is owned or controlled by a bank holding company.
2. Banks and their affiliates, including nonbank affiliates, are also subject to the tying restrictions contained in the federal antitrust laws (the Sherman and Clayton Acts). 15 U.S.C. 1 et seq.; 15 U.S.C. 12 et seq.
3. 12 U.S.C. 1972, 1973, 1975, and 1976.
4. 12 U.S.C. 1972(1).
5. 12 U.S.C. 1972(1)(A). Products or services in the form of a "loan, discount, deposit, or trust service" are considered to be traditional bank products.
6. 12 U.S.C. 1464(q).

EXCEPTIONS TO SECTION 106

Section 106 expressly permits a bank to condition the availability or price of a product on a requirement that the customer also obtain a loan, discount, deposit or trust service from the bank. The statute also expressly permits a bank to condition the availability or price of a product on a requirement that the customer provide the bank with some additional product that is related to and usually provided in connection with a loan, discount, deposit, or trust service. Mixed-product arrangements—or arrangements whereby bank customers can receive a discount if they choose several products among a larger menu of products—may or may not violate section 106 depending on the facts and circumstances.

In addition to the statutory exceptions set forth in section 106, additional regulatory exceptions can be found in the Board's Regulation Y (12 CFR 225.7). These exceptions include (1) situations where the tied product is a traditional bank product offered by an affiliate of the bank, (2) combined-balance discount packages, and (3) bank transactions with foreign persons.

The Board is also authorized, in consultation with the Office of the Comptroller of the Currency and the Federal Deposit Insurance Corporation, to grant additional exceptions to the statute's prohibitions by regulation or order.

INTERNAL CONTROLS TO PROMOTE COMPLIANCE WITH PROHIBITIONS OF SECTION 106

Banks should have policies, procedures and systems in place that are reasonably designed to promote bank compliance with the tying prohibitions of section 106. The types of policies, procedures, and systems appropriate for a particular bank depend on the bank's size, and the nature, scope, and complexity of its activities. Banks should review and update their policies, procedures, and systems periodically to ensure that they reflect any changes in the nature, scope, or complexity of their activities or applicable statutes, regulations, or supervisory guidance.

Banks should also ensure that appropriate bank personnel receive education and training concerning the provisions of section 106. A bank's internal audit function should periodically review and test its tying policies, procedures, and systems in order to confirm that they are working effectively and in the manner intended.

SUPERVISORY CONSIDERATIONS

Federal Reserve examiners review and evaluate a bank's policies and procedures related to tying arrangements.[7] Depending on the facts and circumstances, it may be appropriate to assess compliance with section 106 at the holding company or the state member bank. Examiners should focus on the holding company's responsibility to oversee and safeguard against prohibited tying arrangements by its bank subsidiaries and affiliates. In addition, examiners may conduct more targeted examinations of the marketing programs, training materials, internal reports and internal tying investigations of a bank. Examiners should be aware that the principal objective of section 106 is to eliminate any potential for "arm twisting" customers into buying some other product to get the product they desire. In assessing tying arrangements, examiners should focus their review on the bank's policies, procedures, and internal controls as well as training and audit programs covering compliance with section 106.

As part of this supervisory review, examiners should consider whether tying arrangement policies and procedures have been updated to reflect changes in products and services. Effective policies may contain examples of impermissible practices relevant to the product lines and procedures for employees to follow if questions arise concerning the application of the tying prohibitions.

Examiners should assess whether bank management has established and reviewed key risk management practices to eliminate impermissible tying arrangements when offering customers multiple products or services. For instance, effective training programs raise bank staff's awareness of the prohibitions against tying arrangements. Examiners should determine whether a bank has adopted adequate training programs for employees and whether the training material is appropriately updated. Examiners also should ascertain whether bank management appropri-

7. Section 3500 of the *Bank Holding Company Supervision Manual* provides detailed examination objectives and procedures related to section 106.

ately responds to questions from bank staff about tying.

Examiners should assess the adequacy of the bank's audit and compliance programs related to tying arrangements. If the audit program focused on tying arrangements is infrequent or inadequate, examiners may consider reviewing a sample of pertinent extensions of credit (for example, loans, lines of credit, and letters of credit) that may be susceptible to improper tying arrangements. Examiners should

- review pertinent extensions of credit (for example, loans, lines of credit, and letters of credit) to borrowers whose credit facilities or services may be susceptible to tying arrangements imposed by the bank or company in violation of section 106 or the Board's regulations;
- monitor incentives that may encourage tying by bank employees, such as commission structures and fee-splitting arrangements between departments; and
- respond to any customer allegations of prohibited tying arrangements.

The determination of whether a violation of section 106 has occurred often requires a careful review of the specific facts and circumstances associated with the relevant transaction between the bank and the customer. If there is an apparent violation of law at the bank, examiners generally should communicate the findings in the report of examination or supervisory letter. Examiners should

- name the applicable law (Section 106 of the Bank Holding Company Act Amendments of 1970 (12 U.S.C. 1972)) or regulation (Regulation Y, 12 CFR 225.7);
- provide a brief description of the scope of the relevant law;
- describe the requirements of the regulation or statute;
- note how or why the violation occurred; and
- describe any plans or recommendations for corrective action.

7000—INTERNATIONAL

Generally, the basic objectives and procedures used for the examination and verification of international operations are similar to those used for other domestic bank functions. However, some procedures are modified for different types of bank assets and liabilities and contingent accounts as well as for separate laws and regulations that may be applicable. Documentation and accounting procedures for international operations may also differ from those used in the examination of a bank's U.S. domestic activities. The examination process may also include a review of international banking facilities (IBFs) and periodic visits to selected foreign branches and subsidiaries to determine the safety and soundness of their operations and the adequacy of reporting procedures used by the head office or parent bank to monitor the foreign office.

The global nature of economic activities has made international banking operations more important to bank customers, importers and exporters of goods and services, and a bank's domestic customers with overseas operations who require a source of international financial assistance. U.S. commercial banks provide this assistance to customers through global networks of representative offices, branches, and affiliates, as well as through correspondent relationships.

Many domestic banking activities are also conducted internationally, including providing cash and collection services, placing and taking deposits, making investments, granting loans and overdrafts, and borrowing. International examiners can reference the appropriate sections in this manual when reviewing these activities. The examination procedures for the international aspects of these and other activities are covered in the following international sections.

Certain activities that are conducted by bank on an international basis are similar to activities conducted by a bank in its domestic operations. For example, a bank may provide domestic and international customers with a letter of credit for a formal commitment to extend credit provided that certain collateral and documentary conditions exist. Foreign-exchange trading activities are similar to money-trading operations conducted at domestic funding desks. Foreign-exchange positions are similar to commodity inventories carried at book value that are exposed to fluctuating market prices. Separate international sections in this manual relate to these functions.

For other international banking activities, such as direct lease financing, installment loans, real estate loans, real estate construction loans, ownership of bank premises and equipment, and other real estate owned, examiners rely on information provided in sections entitled, "Other Assets and Other Liabilities," and "Assessment of Capital Adequacy." International examinations will also require reference to other sections of this manual. Guidelines for using these other sections in international examinations are provided below.

EXAMINATION STRATEGY

Careful planning and control are as important in international examinations as they are in domestic examinations. For more information, see this manual's section, "Examination Strategy and Risk-Focused Examinations."

When developing the scope of examination activities and identifying examiner resources, the examiner considers the bank's organization and management structure, as well as the range of international business activities and services. For example, many banks have consolidated their foreign-exchange trading and money market operations into a single division that is responsible for the bank's global money market operations. Similar situations may be encountered for other international-related functions that are combined with domestic operations.

In some examinations, examiners may encounter certain activities that are not addressed by any particular section of the international portion of this manual. In these instances, the examiner should refer to the material in other sections of this manual.

The examiner should be certain that all types of individual customer liabilities have been analyzed on a consolidated basis, regardless of the office where the bank books the activity However, since the procedures for the collection and consolidation of customer liabilities booked in overseas offices differ among banks, the examiner should determine whether the bank's accounting and financial reporting policies are adequate to provide for consolidated reporting.

INTERNAL CONTROL

Examiners should reference this manual's section entitled, "Internal Control and Audit Function, Oversight, and Outsourcing," to evaluate the objectives of and the work performed by internal and external auditors for the bank's international operations. The internal control section sets forth general criteria to be considered in evaluating the work of internal and external auditors.

EXAMINATION PLANNING

Examiners assigned to review the international activities of a bank should work closely with commercial examiners, especially in those areas in which international and domestic activities have a direct relationship. The pre-examination analysis of the bank is intended to determine high risk activities and provide for adequate staffing.

INFORMATION TECHNOLOGY

During an examination that covers information technology (IT), provided either in-house or externally, examiners should review the contents of the IT portion of the report of examination to determine which sections may be applicable to international operations. An IT examiner will generally perform the procedures in this section and should be consulted on matters applicable to international operations.

ASSET AND LIABILITY MANAGEMENT

Asset and liability management and interest-rate risk management sections of the manual are completed by domestic examiners for the entire bank, based, in part, on information prepared by examiners assigned to various international banking activities. Whether applicable segments of these sections will be completed during overseas examinations depends on the type of overseas examination conducted.

BANK-RELATED ORGANIZATIONS

Domestic examiners assigned to bank-related organizations obtain and circulate lists and information to international examiners concerning bank-related organizations involved in international activities. Besides determining the legality of the relationships, examiners should verify the accuracy and completeness of the information obtained.

REVIEW OF REGULATORY REPORTS

International examiners will prepare any necessary comments concerning regulatory reporting issues on the appropriate examination report and will discuss those comments with bank management.

LITIGATION AND OTHER LEGAL MATTERS, EXAMINATION-RELATED SUBSEQUENT EVENTS

International examiners should request from bank management a list of pending or threatened litigation and subsequent events applicable to international operations of the bank. Comments in the report of examination should be limited to events or transactions that could materially affect the soundness of the bank.

MANAGEMENT ASSESSMENT

The overall evaluation of the management of international operations should be made by the examiner assigned to review international operations who is in a position to identify the strengths and weaknesses of the bank's management team. If the scope of the examination includes the review of the operations of foreign branches and subsidiaries, examiners should assess the adequacy and effectiveness of local management of these entities.

OVERALL CONCLUSIONS REGARDING CONDITION OF THE BANK

The examiner-in-charge for the state member bank is typically responsible for overall conclusions regarding the condition of the bank. Therefore, the examiner-in-charge and those examiners assigned to review a bank's international operations should discuss and agree upon the scope of activities to be conducted on a bank's international activities. For example, certain examination procedures relating to earnings, liquidity, operational risk, management, and corporate governance and control apply to the entire bank and not to the international activities alone. Further, international examiners should assist domestic examiners in developing report comments when international activities have a significant impact on the analysis of these areas.

Acceptance. A time draft (bill of exchange or usance draft) drawn by one party and acknowledged by a second party. The drawee, known as the "acceptor," stamps or writes the word "accepted" on the face of the draft and, above his or her signature, the place and date of payment. Once the draft is accepted, it carries an unconditional obligation on the part of the acceptor to pay the drawer the amount of the draft on the date specified. A *bank acceptance* is a draft drawn on, and accepted by, a bank. A *trade acceptance* is a draft drawn by the seller of goods on the buyer and accepted by the buyer. See also *Banker's acceptance*.

Account-account dealing. Foreign-exchange dealing that involves settlement from bank-to-bank in the due from accounts. No third party (bank) is involved.

Account party. The party, usually the buyer, who instructs the bank to open a letter of credit and on whose behalf the bank agrees to make payment.

Ad valorem. A term meaning "according to value," used for assessing customs duties that are fixed as a percentage of the value stated on an invoice.

Advance. (1) A drawing or payout of funds representing the disbursement of a loan, including disbursement in stages. (2) In international banking, an extension of credit, usually recurring, in which no instrument (other than a copy of the advice of an advance) is used as evidence of a specified indebtedness, except in special cases. A signed agreement must be on file in the department and state the conditions applicable to payments made to the borrower. This loan category does not include commercial account overdrafts, but an advance may be created to finance payments effected under a commercial letter of credit, to finance payments of collections, or to refinance a maturing loan.

Advance against documents. An advance made on the security of the documents covering a shipment.

Advised letter of credit. See *Letter of credit—advised.*

Advised line. A credit authorization that will be made known to the customer. See also *Guidance line.*

Affiliate. With regard to a member bank, any company (including corporate or other forms of a business entity) of which a member bank is a subsidiary or any other subsidiary of that company.

After sight. When a draft bears this name, the time to maturity begins at its presentation or acceptance.

Agent bank. The bank that leads and documents a syndicated loan.

Aggregate limit. The total volume of unliquidated foreign-exchange contracts allowed to be outstanding at any one time.

Agreement corporation. A company chartered or incorporated under state law that, like an Edge Act corporation, is principally engaged in international banking. See also *Edge Act.*

Allocated transfer-risk reserve (ATRR). The ATRR is a special reserve established and maintained for specified international assets pursuant to the International Lending Supervision Act of 1983.[1] At least annually, the Federal Reserve and the other federal banking agencies (federal banking agencies) determine jointly—

- which international assets that are subject to transfer risk warrant establishment of an ATRR,
- the amount of the ATRR for the specified assets, and
- whether an ATRR previously established for specified assets may be reduced.

When determining whether an ATRR is required for particular international assets, the federal banking agencies consider if the quality of a banking institution's assets has been impaired by a protracted inability of public or private obligors in a foreign country to make payments on their external indebtedness, as indicated by factors as to—

- whether such obligors have failed to make full interest payments on external indebtedness, or
- whether such obligors have failed to comply with the terms of any restructured indebtedness, or
- whether a foreign country has failed to comply with any International Monetary Fund (IMF) or other suitable adjustment program, or
- whether no definite prospects exist for the orderly restoration of debt service.

1. See 12 USC 3904(a). See also the Board's January 9, 2003, approval of a revision to subpart D (on international lending supervision) of Regulation K (12 CFR 211), International Banking Operations (69 *Fed. Reg.* 1158–1161).

Also, when determining the amount of the ATRR, the federal banking agencies consider—

- the length of time the quality of the asset has been impaired,
- what recent actions have been taken to restore debt-service capability,
- the prospects for restored asset quality, and
- any other factors relevant to the quality of the asset.

The initial year's provision for the ATRR will be 10 percent of the principal amount of each specified international asset, or such greater or lesser percentage determined by the federal banking agencies. Additional provisions, if any, in subsequent years will be 15 percent of the principal amount of each specified international asset, or such greater or lesser percentage determined by the federal banking agencies.

The ATRR is established only by a charge to current income. The amounts charged cannot be included in the banking institution's capital or surplus. (For these and other requirements, as well as for certain other accounting procedures for the ATTR, the reporting and disclosure of international assets, and the accounting for fees on international loans, see sections 211.43, 211.44, and 211.45 of Regulation K.) A banking institution does not have to establish an ATRR if it writes down in the period in which the ATRR is required, or has written down in prior periods, the value of the specified international assets in the requisite amount for each such asset.

Amortizing swap. A transaction in which the notional value of the agreement declines over time.

Appreciation. A rise in the value of a currency relative to the market of another currency.

Arbitrage. Simultaneous buying and selling of foreign currencies, securities, or commodities to realize profits from discrepancies between exchange rates prevailing at the same time in different markets, between forward margins for different maturities, or between interest rates prevailing at the same time in different markets or currencies.

Asian currency unit. A foreign-exchange trading department of a bank located in Singapore that has received a license from the monetary authority in that country to deal in external currencies.

Asked price. The price sought by any prospective seller of an asset or the price at which a market maker of an asset will sell.

Assignment. The transfer in writing by one person to another of title to personal property. In banking, one bank may assign another the right to receive loan principal and interest from a borrower. The assignment of stocks or registered bonds may be effected by filling in the form printed on the reverse of the certificate.

Association of International Bond Dealers (AIBD). A private association founded in Zurich, Switzerland, in 1969 to establish uniform issuing and trading procedures in the international bond markets.

At sight. A term indicating that a negotiable instrument is payable upon presentation or demand.

At the money. A term used to refer to a call or put option whose strike price is equal (or virtually equal) to the current price of the asset on which the option is written.

Authority to pay. An advice from a buyer, sent by his or her bank to the seller's bank, authorizing the seller's bank to pay the seller's (exporter's) drafts up to a fixed amount. The seller has no protection against cancellation or modification of the instrument until the issuing bank pays the drafts drawn on it, in which case the seller is no longer liable to its bank. These instruments are usually not confirmed by the seller's American bank.

Authority to purchase. Similar to an authority to pay, except that drafts under an authority to purchase are drawn directly on the buyer. The correspondent bank purchases them with or without recourse against the drawer and, as in the case of the authority to pay, they are usually not confirmed by an American bank. This type of transaction is unique to Far Eastern trade.

Baker Plan. Proposed in 1985, this initiative encouraged banks, the IMF, and the World Bank to jointly increase lending to less developed countries (LDCs) that were having difficulty servicing their debt, provided the countries undertook prudent measures to increase productive growth.

Balance of payments. A term indicating a nation's external cash flow (to other countries, whether positive or negative) for a given period of time, including trade, current financial, and capital inflows and outflows.

Balance of trade. The difference between a country's total imports and total exports for a given period of time. A "favorable" balance of trade exists when exports exceed imports.

Band. The maximum range that a currency may fluctuate from its parity with another currency or group of currencies by official agreement.

Bank for International Settlements (BIS). Established in 1930 in Basel, Switzerland, the BIS is the oldest functioning international financial organization. It provides a forum for frequent consultation among central bankers on a wide range of issues.

Banker's acceptance. A time draft that has been drawn on and accepted by a bank. The bank accepting the time bill becomes primarily liable for payment. See also *Acceptance*.

Banker's acceptance liability. The moment the draft is accepted by the bank, a direct liability is recorded in its "Acceptances Executed" account. The contra account on the asset side of the balance sheet is "Customer's Liability on Acceptances." On the date of maturity of the banker's acceptance, the bank charges the customer's account and retires the acceptance by paying the beneficiary or drawee of the draft. The bank's liability records at this point are liquidated, and the transaction is completed.

Barter. The exchange of commodities using merchandise as consideration instead of money. This scheme has been employed in recent years by countries that have blocked currencies.

Base rate. A rate used as the basis or foundation for determining the current interest rate to be charged to a borrower, such as the prime rate or London Interbank Offered Rate (LIBOR).

Basel Capital Accord. An agreement among the central banks of leading industrialized countries, including those of Western Europe, Canada, the United States, and Japan, to impose common capital requirements on their internationally active banks to take into account bank risk exposure.

Basis. The cash or spot price minus the futures price.

Basis risk. The risk associated with nonparallel movement of interest rates. Banks face exposure in two situations. The first occurs when an operator uses, for example, a Treasury bill to hedge an interest-rate risk in Eurodollars. The interest rates for T-bills and Eurodollars do not always move exactly parallel to each other. The risk of this lack of parallel movement is basis risk. The second occurs when the period of time for which a financial risk exists is not identical with the period of time for which the hedge is arranged, for example, when a three-month interest risk in a revolving Eurodollar loan is hedged with a six-month futures contract in Eurodollars. A change in the shape of the yield curve can bring about nonparallel movements in interest rates for the two different maturities.

Basis swap. A transaction in which one participant pays a floating rate of interest based on one index, and the other party pays a floating rate of interest based on another interest-rate index.

Beneficiary. The person or company in whose favor a letter of credit is opened or a draft is drawn.

Bid-asked spread. The difference between a bid and the asked price, for example, the difference between 0.4210 and 0.4215 would be a spread of 0.0005 or 5 points.

Bid rate. The price at which the quoting party is prepared to purchase a currency or accept a deposit. If the bid rate is accepted by the party to whom it was quoted, then that party will sell currency or place or lend money at that price. The opposite transaction takes place at the offer rate.

Bilateral trade. Commerce between two countries, usually in accordance with specific agreements on amounts of commodities to be traded during a specific period of time. Balances due are remitted directly between the two nations.

Bill of exchange. An instrument by which the drawer orders another party (the drawee) to pay a certain sum to a third party (the payee) at a definite future time. The terms "bill of exchange" and "draft" are generally interchangeable.

Bill of lading. A receipt issued by a carrier to a shipper for merchandise delivered to the carrier for transportation from one point to another. A bill of lading serves as a receipt for the goods, document of title, and contract between the carrier and the shipper covering the delivery of the merchandise to a certain point or designated person. It is issued in two primary forms: an "order bill of lading," which provides for the delivery of goods to a named person or to his or her order (designee), but only on proper endorsement and surrender of the bill of lading to the carrier or its agents, and a "straight bill of lading," which provides for delivery of the goods only to the person designated by the bill of lading.

- *Clean bill of lading*. A bill of lading in which the described merchandise has been received

in "apparent good order and condition" and without qualification.
- *Ocean bill of lading*. A document signed by the captain, agents, or owners of a vessel furnishing written evidence for the conveyance and delivery of merchandise sent by sea. It is both a receipt for merchandise and a contract to deliver it as freight.
- *Order bill of lading*. A bill of lading, usually drawn to the order of the shipper, that can be negotiated like any other negotiable instrument.
- *Order "notify" bill of lading*. A bill of lading usually drawn to the order of the shipper or a bank with the additional clause that the consignee is to be notified upon arrival of the merchandise. However, the mention of the consignee's name does not confer title to the merchandise.
- *Stale bill of lading*. A bill of lading that has not been presented under a letter of credit to the issuing bank within a reasonable time after its date, thus precluding its arrival at the port of discharge by the time the ship carrying the related shipment has arrived.
- *Straight bill of lading*. A bill of lading drawn directly to the consignee and therefore not negotiable.
- *Through bill of lading*. A bill of lading used when several carriers are used to transport merchandise, for example, from a train to a vessel or vice versa.
- *Unclean bill of lading*. A bill of lading across the face of which exceptions to the receipt of goods "in apparent good order" are noted. Examples of exceptions include burst bales, rusted goods, and smashed cases.

Black market. A private market that operates in contravention of government restrictions.

Blocked account. An account from which payments, transfers, withdrawals, or other dealings may not be made without Office of Foreign Asset Control (OFAC) or U.S. Treasury Department approval. Although the bank is prohibited from releasing funds from these accounts, deposits may be accepted. Banks are subject to significant fines for releasing funds from blocked accounts. See also *Office of Foreign Asset Control, Specially designated nationals*.

Blocked currency. A currency that is prohibited by law from being converted into another foreign currency.

Book-entry form. The method by which marketable securities are issued with the buyer receiving only a receipt rather than an engraved certificate, which indicates that the purchase is recorded on the issuer's books or recorded in another approved location.

Brady Plan. Proposed in 1989 and named after then U.S. Treasury Secretary Nicholas Brady, the Brady Plan sought to reduce the debt-service requirements of various developing countries and to provide new loans (Brady bonds) to service existing obligations.

Break-even exchange rate. The particular spot exchange rate that must prevail at the maturity of a deposit or debt in a foreign currency (which has not been covered in the forward market) so that there will be no advantage to any party from interest-rate differentials.

Bulldog bonds. British pound sterling–denominated foreign bonds issued in London.

Bullion. Unminted precious metals (gold, silver) of standard or stipulated fineness in the form of bars, ingots, or nuggets. The value of gold bullion, usually in bars, used in the settlement of international balances is determined by weight and degree of fineness.

Buyer's option contract. A contract in which the buyer has the right to settle a forward contract at any time within a specified period. See also *Option contracts*.

Buying rates. Rates at which foreign-exchange dealers will buy a foreign currency from other dealers in the market and at which potential sellers are able to sell foreign exchange to those dealers.

C & I loans. Commercial and industrial loans.

Cable. A message sent and delivered by an international record carrier via satellite or cable connections to a foreign country. "Cable" as used in the international sections also includes messages transmitted by bank telex. The terms "cable" and "telex" are generally used interchangeably.

Call money. Funds placed with a financial institution without a fixed maturity date. The money can be "called" (withdrawn) at any time by telephone. "Same day" call money means the call must (usually) be made before 10:00 a.m. In addition, "24-hour," "48-hour," and "7-day" call money means the money must be called one, two, or seven calendar days before the actual payment date. Although these are the most common varieties of call money, two parties can agree on different dates.

Call option. A contract giving the purchaser the right, but not the obligation, to buy an asset at a stated price on or before a stated date.

Capital controls. Governmental restrictions on the acquisition of foreign assets or foreign liabilities by domestic citizens or restrictions on the acquisition of domestic assets or domestic liabilities by foreign citizens.

Cedel. Formerly one of the two main clearing systems in the Eurobond market, Cedel, based in Luxembourg, began operations in 1971. Cedel ceased to exist as an independent entity as part of a merger with Clearstream International clearinghouse in 2000. The merger was completed in 2002.

Central bank intervention. Direct action by a central bank to increase or decrease the supply of currency to stabilize prices in the spot or forward market or to move them in a desired direction. On occasion, the announcement of an intention to intervene might achieve the desired results.

Certificate of inspection. A document often required for shipment of perishable goods in which certification is made as to the good condition of the merchandise immediately before shipment.

Certificate of manufacture. A statement, sometimes notarized, by a producer who is usually also the seller of merchandise that manufacture has been completed and that goods are at the disposal of the buyer.

Certificate of origin. A document issued by the exporter certifying the place of origin of the merchandise to be exported. The information contained in this document is needed primarily to comply with tariff laws that may extend more favorable treatment to products of certain countries.

Chain. A method of calculating cross rates. For example, if a foreign-exchange trader knows the exchange rate for Japanese yen against U.S. dollars and for Swiss francs against U.S. dollars, the "chain" makes possible a calculation of the cross rates for Japanese yen against Swiss francs.

Charges forward. A banking term used when foreign and domestic bank commission charges, interest (if any), and government taxes in connection with the collection of a draft are for account of the drawee.

Charges here. A banking term used when foreign and domestic bank commission charges, interest (if any), and government taxes in connection with the collection of a draft are for account of the drawer.

Charter party. A contract, expressed in writing on a special form, between the owner of a vessel and the one (the charterer) desiring to employ the vessel, setting forth the terms of the arrangement, such as freight rate and ports involved in the trip contemplated.

Chicago Board of Trade (CBT). A futures exchange that merged with the Chicago Mercantile Exchange in 2007 and ceased to exist as an independent entity.

Chicago Board Options Exchange (CBOE). An options exchange in which European foreign-currency options on spot exchange are traded.

Chicago Mercantile Exchange (CME). A futures exchange.

Clean collection. A collection in which a draft or other demand for payment is presented without additional attached documentation.

Clean draft. A sight or time draft to which no other documents, such as shipping documents, bills of lading, or insurance certificates, are attached. This is to be distinguished from a documentary draft. See also *Documentary draft*.

Clean risk at liquidation. A type of credit risk that occurs when exchange contracts mature. There may be a brief interval (usually no more than a few hours) during which one of the parties to the contract has fulfilled its obligations, but the other party has not. During this period, the first party is subject to a 100 percent credit risk, on the chance that, in the interval, an event may prevent the second party from fulfilling its obligations under the contract.

Clearing corporation. A clearinghouse that exists as an independent corporation rather than as a subdivision of an exchange.

Clearinghouse. A subdivision of an exchange or an independent corporation through which all trades must be confirmed, matched, and settled daily until offset.

Clearinghouse funds. Funds used in settlement of a transaction that are available for use or that become good funds after one business day.

Clearing House Interbank Payments System (CHIPS). A computerized telecommunications network provided by the New York Clearing House Association (NYCHA), which serves as an automated clearinghouse for interbank funds transfers.

Closing a commitment. Allowing a covered foreign-exchange position to expire on maturity or reversing it before maturity by a swap operation.

Closing a position. Covering open long or short positions by means of a spot operation and/or outright forward operation.

Comanager. A bank ranking just below that of lead manager in a syndicated Eurocredit or an international bond issue. The status of comanager usually indicates a larger share in the loan or a larger bond allotment, and a larger share in the fees, than banks of lower rank. Comanagers may also assist the lead managers in assessing the market or determining terms of the loan.

Combined transport document. A through bill of lading that applies to more than one mode of transport.

Commercial paper. A short-term, unsecured debt instrument issued by a corporation and sold at a discount from its maturity value.

Commercial transaction. A transaction between a dealing bank and a nonbanking (commercial) party.

Commodities Futures Trading Commission (CFTC). A U.S. regulatory body that regulates exchange-based futures trading in the United States.

Commodity Credit Corporation (CCC). An instrument of the federal government whose principal purpose is to provide the necessary financial services to carry forward the public price-support activities, including government lending, purchasing, selling, storing, transporting, and subsidizing certain agricultural commodities.

Common carrier. An individual, partnership, or corporation, such as a shipping line, railroad, or airline, that undertakes for hire to transport persons or commodities from place to place. Governed by special laws, common carriers must accept all business offered them under their regulations.

Compromises. Occasions when both parties agree to alter the terms of an existing foreign-exchange contract. These alterations should be approved by an impartial bank officer and the operations personnel must be advised of each compromise to avoid settlement in accordance with the original terms.

Confirmation. The written communication to the counterparty in a foreign exchange, interbank deposit, or other money market transaction that recites all the relevant details agreed upon by phone or telex.

Confirmed letter of credit. See *Letter of credit*.

Consignment. The physical transfer of goods from a seller (consignor), with whom the title remains, to another legal entity (consignee), who acts as a selling agent, selling the goods and remitting the net proceeds to the consignor.

Consular documents. Bills of lading, certificates of origin, or special forms of invoice that carry the official signature of the consul of the country of destination.

Consular invoice. A detailed statement on the character of goods shipped, which is duly certified by the consul at the port of shipment. Required by certain countries, including the United States, its principal function is to accurately record the types of goods and their quantity, grade, and value for import duty and general statistical purposes.

Contract limit. A maximum limit on the total gross notional principal amount of outstanding contracts booked with one customer.

Contract risk (counterparty risk). Risk that the counterparty will default before settlement.

Convertibility. Freedom to exchange a currency, under certain circumstances, without government restrictions or controls.

Correspondent bank. A bank located in one geographic area that accepts deposits from a bank in another region and provides services on behalf of this other bank. Internationally, many banks maintain one account with a correspondent bank in each major country to be able to make payments in all major currencies. Correspondent banks are usually established on a reciprocal basis.

Cost, insurance, and freight (C.I.F.). A price quotation under which the seller defrays all expenses involved in the delivery of goods.

Counterpart funds. Local currencies deposited in a special account by recipient governments that represent grant aid extended by another government. Those funds, while remaining the property of the recipient government, can generally be used only by agreement of the donor government.

Country exposure. A measurement of the volume of assets and off-balance-sheet items considered to be subject to the risk of a given country. This measurement is based, in part, on identifying the country of domicile of the entity ultimately responsible for the credit risk of a particular transaction.

Country limit. The amount of money that a bank has established as the maximum it is willing to lend borrowers in a given country regardless of the type of borrower or the currencies involved.

Country risk. Refers to the spectrum of risks arising from the economic, social, and political environment of a given foreign country, which could have favorable or adverse consequences for foreigners' debt and/or equity investments in that country.

Cover. The execution of an offsetting foreign-exchange trade to close or eliminate an open exposure.

Covered interest arbitrage. The process of taking advantage of a disparity between the net accessible interest differential between two currencies and the forward exchange premium or discount on the two currencies against each other.

Crawling peg system. An exchange-rate system in which the exchange rate is adjusted every few weeks, usually to reflect prevailing inflation rates.

Credit risk. The possibility that the buyer or seller of foreign exchange or some other traded instrument may be unable to meet his or her obligation on maturity.

Credit swap. A link transaction wherein one party places a deposit in one currency (probably dollars) with a foreign bank during the period that the foreign bank lends another currency to a third party. The deposit serves as an inducement for the transaction, and its value is considered in pricing the loan.

Cross-border exposure. The risk that arises when an office of a bank, regardless of its location or currency, extends credit to a borrower that is located outside the booking unit's national border.

Cross-currency risk. The risk associated with maintaining exchange positions in two foreign currencies as the result of one transaction. For example, if a U.S. operator borrows Swiss francs at 5 percent and invests the proceeds in British pounds at 12 percent, the cross-currency risk is the chance that the pounds will depreciate in value against the Swiss francs to such an extent that there will be a loss on the transaction in spite of the favorable interest-rate differential.

Cross-default. A term used to describe a clause in a syndicated loan or bond contract that gives the lender the right to accelerate repayment of the loan if the borrower defaults on another loan.

Cross-hedging. The hedging of an asset with a futures contract of a different asset.

Cross rate. The ratio between the exchange rates of two foreign currencies in terms of a third currency.

Currency futures and options contracts. An agreement that allows businesses or individuals acquiring or selling foreign currencies to protect themselves against future fluctuations in currency prices by shifting currency risk to someone willing to bear that risk.

Currency liquidity. In a multicurrency investment portfolio, the liquidity of a given foreign currency has to be viewed in terms of exchange liquidity and instrument liquidity. Exchange liquidity depends on the ease with which a currency can be converted into and out of another major currency. Instrument liquidity depends on the ease with which a negotiable instrument denominated in that currency can be purchased and sold without noticeably affecting the market rate for that instrument.

Currency swap. A contractual obligation entered into by two parties to deliver a sum of money in one currency against a sum of money in another currency at stated intervals (or a stated interval) or according to negotiated terms. See *Swap*.

Current account. Those items in the balance of payments involving imports and exports of goods and services as well as unilateral transfers.

Customs union. An agreement between two or more countries in which they arrange to abolish tariffs and other import restrictions on each other's goods and to establish a common tariff for the imports of all other countries.

Date draft. A draft drawn to mature on a fixed date, regardless of its acceptance.

Daylight limit. The maximum net foreign-exchange position that a bank will allow during business hours.

Dealer (or trader). A person who executes foreign-exchange, interbank deposit, or other money market trades for a dealing bank.

Debt for equity swaps. Debt (usually LDC government debt) that is discounted and exchanged for equity in local businesses (often newly privatized).

Debt swaps. The exchange of LDC loans based on the prices quoted in the secondary market. Swaps are often used to decrease exposure to certain countries.

Default risk. The risk to the holder of debt securities that a borrower will not meet all promised payments at the times agreed upon.

Del credere agent. A sales agent who, for a certain percentage above his or her sales commission, guarantees payment to the person for whom he or she is selling on shipments made to the seller's customers.

Delivery. The offset of an obligation to buy or sell an asset by an actual transfer of title to the asset at a prearranged price. In the futures market, the transfer or receipt of a cash instrument against a short or long futures contract.

Delivery order. An order addressed to the holder of goods and issued by anyone who has authority to do so, that is, by one who has the legal right to order delivery of merchandise. A delivery order is not considered a good titled document.

Delivery risk. The possibility that a seller of foreign exchange, having collected the payment in local currency, may fail to deliver the exchange in the foreign center where it was sold. Also called settlement risk.

Delta of an option. The rate of change of the value of an option with respect to the price of the underlying asset, reference rate, or index evaluated at the current market price of that underlier.

Demand draft. A draft that is payable immediately upon presentation to the drawee. This type of draft is also termed a ‘‘sight’’ or ‘‘presentation’’ draft.

Deposit dealer. A term used in the United States for bank personnel responsible for lending and borrowing funds in the interbank market.

Deposit trader. A term used in Europe for bank personnel responsible for lending and borrowing funds in the interbank market.

Depreciation. A drop in the value of a currency relative to the value of another currency.

Depth of the market. The amount of currency that can be traded in the market at a given time without causing a price fluctuation. Thin markets are usually characterized by wide spreads and substantial price fluctuations during a short period of time. Strong markets tend to be characterized by relatively narrow spreads of stable prices.

Derivative instrument. An instrument that is based on or derived from the value of an underlying asset, reference rate, or index. For example, interest-rate futures are based on various types of securities trading in the cash market. Some interest-rate options are derived from interest-rate futures.

Devaluation. An official act wherein the official parity of a country’s currency is adjusted downward to the dollar, gold, Special Drawing Rights (SDRs), or another currency. After a devaluation, there are more devalued currency units relative to the dollar, gold, SDRs, or other currency. See also *Revaluation*.

Development bank. A lending agency that provides assistance to encourage economic development.

Direct quote. The method of quoting fixed units of foreign exchange in variable numbers of the local currency unit. Also called a ‘‘fixed’’ or ‘‘certain’’ quotation.

Dirty float (or Managed float). A floating exchange-rate system in which some government intervention still takes place. A government may announce that it will let its currency float, that is, it will let the currency’s value be determined by the forces of supply and demand in the market. The government, however, may secretly allow its central bank to intervene in the exchange market to avoid too much appreciation or depreciation of the currency.

Discount.

- *Lending*—To subtract from a loan, when it is first made, the amount of interest that will be due when it is repaid.
- *Foreign exchange*—The amount by which the forward exchange rate of one currency against another currency is less than the spot exchange rate between the two currencies.
- *Financial*—A deduction from the face value of commercial paper, such as bills of exchange and acceptances, in consideration of cash the seller has received before the maturity date. The rates of discount vary according to the state of the given money market, the financial standing of the persons involved, and other circumstances surrounding the transaction.
- *Commercial*—An allowance from the quoted price of goods, usually made by the deduction of a certain percentage from the invoice price.

Discount rate. Most commonly the rate at which a Federal Reserve Bank (or, in many instances, foreign central banks) is prepared to lend to financial institutions against eligible collateral.

Dishonor. Refusal on the part of the drawee to accept a draft or to pay it when due.

Divergence indicator system. One aspect of the European Monetary System that measures the departure of a country’s economic policies from the European Union’s ‘‘average.’’ The measure of divergence is based exclusively on the movement of a country’s exchange rate with respect to the euro.

Dock receipt. A receipt issued by an ocean carrier or its agent for merchandise delivered at its dock or warehouse that is awaiting shipment.

Documentary collection. A collection in which a draft is accompanied by shipping or other documents.

Documentary credit. A commercial letter of credit providing for payment by a bank to the named beneficiary, who is usually the seller of merchandise, against delivery of documents specified in the credit.

Documentary draft. A draft to which documents are attached, that is delivered to the drawee upon acceptance or payment of the draft and that ordinarily controls title to the merchandise.

Documents. The shipping and other papers customarily attached to foreign drafts, consisting of ocean bills of lading, marine insurance certificates, and commercial invoices. Certificates of origin and consular invoices may also be required.

Documents against acceptance (D/A). Instructions given by an exporter to a bank that the documents attached to a draft for collection are deliverable to the drawee only against his or her acceptance of the draft.

Documents against payment (D/P). Instructions given by an exporter to his or her bank that the documents attached to a draft for collection are deliverable to the drawee only against his or her payment of the draft.

Domestic bond. A domestic debt security sold by an issuer in its own country and denominated in that country's currency.

Domicile. The place where a draft or acceptance is made payable.

Draft. An order in writing signed by one party (the drawer) requesting a second party (the drawee) to make payment at a determinable future time to a third party (the payee). It may be accompanied by a bill of lading, which the bank will surrender to the buyer upon payment of the draft. The buyer may then claim the goods at the office of the carrier who transported them to the buyer's place of business. See also *Sight draft* or *Time draft*.

Dragon bond. A bond issued by a foreign borrower in an Asian or Pacific country (excluding Japan—see *Samurai bond)*.

Drawee. The addressee of a draft, that is, the person on whom the draft is drawn.

Drawer. The issuer or signer of a draft.

Duration. A time-weighted present-value measure of the cash flow of a loan or security that takes into account the amount and timing of all promised interest and principal payments associated with that loan or security.

Duty. (1) Ad valorem duty (according to the value) is an assessment at a certain percentage rate on the actual value of an article. (2) Specific duty is an assessment on the weight or quantity of an article without reference to its monetary value or market price. (3) Drawback is a recovery in whole or in part of duty paid on imported merchandise at the time of reexportation, whether in the same or different form.

Edge Act. Incorporated as section 25A of the Federal Reserve Act, this act authorizes the Board of Governors to charter corporations (Edge corporations) for the purpose of engaging in international or foreign banking or in other international operations.

Eligible acceptance. A banker's acceptance that meets Federal Reserve requirements related to its financing purpose and term.

Eligible value date. A normal business day on which a payment to settle a money market transaction can be made. An eligible value date for a foreign-exchange transaction must be a business day in the home countries of both of the currencies involved.

Engineered swap transaction. A spot transaction and an offsetting forward transaction in which each of the two transactions is carried out with a different party.

Eurobank. A bank that regularly accepts foreign currency-denominated deposits and makes foreign-currency loans.

Eurobonds. Long-term debt securities denominated in a currency other than that of the country or countries where most or all of the security is sold.

Euroclear. Euroclear Clearance System Limited is one of two main clearing systems in the Eurobond market. Euroclear, which began operations in December 1968, is located in Brussels and managed by Euroclear Bank SA. See also *Cedel*.

Eurocurrency. The nonresident ownership of one of the major western European currencies. Eurocurrencies, similar to Eurodollars, are frequently available for borrowing in the London Interbank Market.

Eurocurrency market. The money market for borrowing-and-lending currencies that are held in the form of deposits in banks located outside the countries in which those currencies are issued as legal tender.

Eurodollars. Dollar deposit claims on U.S. banks that are deposited in banks located outside the United States, including foreign branches of U.S. banks. These claims, in turn, may be redeposited with banks or lent to companies, individuals, or governments outside the United States.

Eurodollar deposit rate. The interest rate at which a quoting bank is willing to take wholesale Eurodollar funds with a particular maturity from other than an interbank participant. The rate is usually one-eighth to one-sixteenth of one percent lower than LIBOR.

European Currency Unit (ECU). A portfolio currency used in the European Monetary System as a community "average" exchange rate. It was also used in the private market as a means of payment and as a currency of denomination for lending, borrowing, and trade. On January 1, 1999, the euro replaced the ECU.

European Monetary System (EMS). An arrangement introduced in March 1979 for economic and monetary cooperation among the members of the European Union. The ultimate aim of the EMS is a single European currency and the establishment of a European central bank.

European Union (EU). Formerly the European Community, an economic association of European countries founded by the Treaty of Rome in 1957. The goals of the EU are the removal of trade barriers among countries, the formation of a common commercial policy toward non-EU countries, and the removal of barriers restricting competition and the free mobility of factors of production. Members include Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom.

Exchange contracts. Documents issued by foreign-exchange dealers, banks dealing in foreign exchange, and foreign-exchange brokers confirming foreign-exchange transactions.

Exchange control or restrictions. Limits on free dealings in foreign exchange or of free transfers of funds into other currencies and other countries.

Exchange control risk. The possibility of defaults on obligations by imposing or reinforcing exchange control.

Exchange-rate differential. The difference between two exchange rates in a swap transaction.

Exchange rates. The price of one currency in terms of another. See also *Spot exchange, Buying rates, Fixed rate of exchange, Floating rate,* and *Interbank rate of exchange.*

Exchange reserves. The total amount of freely convertible foreign currencies held by a country's central bank.

Exchange risk. The possibility of a loss on an open position as a result of an appreciation or depreciation of the exchange.

Exercise. The use of the right given by an option: purchase (if a call) or sale (if a put) of an asset at the strike price stated in the option contract.

Exit bonds. Low-interest government bonds issued in LDCs that are equivalent to a portion of the country's existing bank debt. Designed to facilitate debt management.

Expiration date. The last day on which an option may be exercised.

Export credit insurance. A system to insure the collection of credits extended by exporters against various contingencies. In some countries, only noncommercial risks can be insured.

Export declaration. A document required by the U.S. government for shipments abroad and used to maintain statistics on our exports.

Export-Import Bank of the United States (Eximbank). An institution that provides intermediate and long-term nonrecourse financing for U.S. exports when these facilities are not available from commercial banks. All of the Eximbank's shares are held by the U.S. Treasury.

Export trading company (ETC). A company designed to facilitate U.S. exports. An ETC may be an affiliate of a bank holding company.

Fail. Nonperformance of an obligation on the specified day, for example, failure to make prompt settlement for either side of a foreign-exchange contract, usually due to a clerical or trader error. A fail usually leads to an interest adjustment for an overdraft in the paying or receiving bank.

F.A.S. See *Free alongside ship.*

Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA). This act had various aims, including the least-cost resolution of troubled insured depository institutions, improvement of bank supervision and examinations, and provision of additional resources to the Bank Insurance Fund.

Federal funds. Deposits held by commercial banks at a Federal Reserve Bank. Since reserve requirements of commercial banks are satisfied by federal funds, banks with deposits in excess of required reserves will lend the excess deposits to banks with a reserve shortage at a market-determined interest rate, called the federal funds rate.

Federal Reserve System. The central bank of the United States, created by the Federal Reserve Act of 1913, consisting of the Board of Governors in Washington, D.C., and 12 regional Federal Reserve Banks. The Federal Reserve controls the country's monetary base and has the power to set reserve requirements, conduct open-market operations, and lend directly to banks.

Fedwire. The large-value payment mechanism owned and operated by the Federal Reserve System. Fedwire provides depository institutions with real-time settlement in the central bank of funds transfers and book-entry securities transfers made for their own account or on behalf of their customers.

Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA). The purpose of this act was to reform, recapitalize, and consolidate the federal deposit insurance system and to enhance the regulatory and enforcement powers of federal financial institutions' regulatory agencies.

Fixed exchange-rate system. A system in which the exchange rate of a country's currency is tied to one major currency, such as the U.S. dollar.

Fixed rate of exchange. A rate of exchange set by a foreign government relative to the dollar, gold, another currency, or perhaps Special Drawing Rights. It remains in effect as long as that government is willing or able to buy and sell at the set rates.

Fixed-rate payer. A position applicable to a rate swap, in which the fixed payer pays the fixed rate and receives the floating rate.

Flexible rate of exchange. A rate of exchange subject to relatively frequent changes. It is determined by market forces but subject to various floors or ceilings relative to the dollar, gold, Special Drawing Rights, or another currency when the rate fluctuates beyond certain parameters.

Floating exchange-rate system. A system in which the values of the currencies of various countries relative to each other are established by supply and demand forces in the market without government intervention.

Floating rate. A rate of exchange that is determined completely by market forces, with no floor or ceiling vis-a-vis the dollar, gold, Special Drawing Rights, or another currency.

Floating-rate notes. Bonds that pay interest at an agreed margin above a market reference rate. The interest rate varies according to variations in the market reference rate.

Floating-rate payer. A position applicable to a rate swap, in which the floating payer pays the floating rate and receives the fixed rate.

F.O.B. See *Free on board (destination* or *vessel)*.

Foreign Bank Supervision Enhancement Act (FBSEA). Part of the FDIC Improvement Act of 1991, FBSEA expanded the supervisory authority of the Federal Reserve over the U.S. operations of foreign banks.

Foreign bonds. Bonds issued by nonresidents but underwritten primarily by banks registered in the country where the issue is made.

Foreign Credit Insurance Association (FCIA). An insurance company established under the auspices of Eximbank. Insurers trade credits granted by U.S. suppliers of products to purchasers abroad who qualify as normal risks. The insurance protects the exporter, up to an agreed percentage, against any nonpayment resulting from commercial or political risks, or both. Eximbank provides reinsurance for the entire portion of the commercial credit risk and is the sole insurer of the political risk.

Foreign currency. The currency of any foreign country that is the authorized medium of circulation and the basis for recordkeeping in that country. Foreign currency is traded by banks either by the actual handling of currency and checks or by the establishment of balances in foreign currencies with banks in those countries.

Foreign deposits. Those deposits that are payable at a financial institution outside the jurisdiction of the U.S. government and in the currency of the country in which the depository is located. See also *Nostro account*.

Foreign draft. An official bank order drawn on a foreign correspondent bank to pay on demand to a designated payee a specific sum of foreign money or U.S. dollars at the drawee's buying rate.

Foreign exchange. The trading or exchange of a foreign currency in relation to another currency.

Foreign-exchange futures contracts. Standardized contracts traded on an organized futures exchange and settled through the clearinghouse of the exchange. Each contract defines the currencies, contract amounts, and delivery dates for its own contracts.

Foreign-exchange market. Communications between dealers and brokers to transact wholesale business in foreign exchange and Eurocurrencies.

Foreign-exchange rationing. A government requirement that all holders of bills of exchange relinquish them at a stipulated rate.

Foreign-exchange reserves (official). The reserves maintained by a central bank, which usually include gold and easily traded currencies of major industrial nations.

Foreign-exchange risk. The risk associated with exposure to fluctuation in spot exchange rates.

Foreign Investment Advisory Service (FIAS). Established in 1986, FIAS counsels developing countries on attracting foreign capital. FIAS operates under the aegis of the World Bank and its affiliates, the International Finance Corporation and the Multilateral Investment Guarantee Agency.

Foreign trade zone. An area where goods may be received and stored without entering a country's customs jurisdiction and without paying duty. Sometimes called a "free trade zone."

Forward book. The aggregate of all forward contracts for a given currency or all currencies.

Forward contract. A contract that obligates one party to sell and another to buy a specific asset for a specified price at a designated time.

Forward discount ("at a forward discount"). A phrase used to describe a currency whose forward price is cheaper than its spot price.

Forward exchange. Foreign currency traded for settlement beyond two working or business days from today.

Forward exchange position. The long or short position that a dealer may have in the forward market, as compared to spot dealing.

Forward exchange risk. The possibility of a loss on a covered position as a result of a change in the swap margin.

Forward-forward dealing. The simultaneous purchase and sale of a currency for different forward dates.

Forward premium ("at a forward premium"). A phrase used to describe a currency whose forward price is more expensive than its spot price.

Forward purchase. An outright purchase of a forward contract.

Forward rates. The actual rates at which foreign exchange for future delivery are quoted, bought, and sold.

Forward swap. A transaction in which the initial fixed- and floating-rate payments are deferred until a future period of time.

Forward transaction date. Value dates that are more than two business days following the trade date. Regular forward dates are 30, 60, and 90 days from the trade date.

Free alongside ship (F.A.S.). A term for a price quotation under which the seller delivers merchandise free of charge to the steamer's side and pays lighterage expenses up to that destination, if necessary.

Free on board (F.O.B.) (destination). A term for a price quotation under which the seller undertakes at his or her risk and expense to load the goods on a carrier at a specified location. Expenses subsequent thereto are for account of the buyer.

Free on board (F.O.B.) (vessel). A term for a price quotation under which the seller delivers the goods at his or her expense on board the steamer at the location named. Subsequent risks and expenses are for account of the buyer.

Free port. A foreign trade zone, open to all traders on equal terms, where merchandise may be stored duty-free pending its reexport or sale within that country.

Free trade area. An arrangement between two or more countries for free trade among themselves, although each nation maintains its own independent tariffs toward nonmember nations. It should not be confused with "free trade zone," which is synonymous with "foreign trade zone."

Fungible securities. Securities that are not individually designated by serial number as belonging to a particular owner. Instead, a clearing system or depository institution credits owners with a given number of a particular bond issue (or other security issue). The owner may have title to 50 bonds, but not to 50 specific bonds with designated serial numbers.

Futures commission merchant (FCM). A firm that is registered with the CFTC and legally authorized to solicit or accept orders from the public for the purchase or sale of futures contracts. Acts as an intermediary between a public customer and a floor broker.

Futures contract. An exchange-traded contract in which one party agrees to buy a security and another agrees to sell a security in the future. If held until maturity, the futures contract may involve accepting (if long) or delivering (if short) the asset on which the futures price is based.

Futures market. A market in which contracts are traded for future delivery of commodities, currencies, and financial instruments. The purchase or sale of a futures contract requires that a deposit, called margin, be maintained with a broker. The market is designed in such a way that it is easy to get out of a contract or cancel. The vast majority of participants, the buyers and sellers of futures contracts, do not intend to take delivery or deliver what they bought or sold. Futures contracts are used as an investment vehicle and as a vehicle for hedging positions.

G-10 countries. The informal term for the

Group of 10 countries, which consists of Belgium, Canada, France, Germany, Italy, Japan, Luxembourg, the Netherlands, Sweden, the United Kingdom, and the United States. Switzerland joined in 1984, but the name remains as is.

Gap. The period, in foreign-exchange transactions, between the maturities for purchases and those for sales of each foreign currency (exchange gap). In money market transactions, the period between the maturities of placements (loans) and the maturities of borrowing (deposits) of each currency (money market gap). The former occurs when a currency is purchased against one currency and sold against another, each time for different maturities. The money market gap is created by lending an amount of a certain currency for a longer or shorter period than that for which the same currency is borrowed.

Global bond. A temporary debt certificate issued by a Eurobond borrower, representing the borrower's total indebtedness. The global bond will subsequently be replaced by individual bearer bonds.

Global line. A bank-established aggregate limit that sets the maximum exposure the bank is willing to have to any one customer on a worldwide basis. See also *Multicurrency line*.

Gray market. A forward market for newly issued bonds that takes the form of forward contracting between market participants during the period between the announcement day of a new issue and the day final terms of the bond issue are signed. Bonds are traded at prices stated at a discount of premium to the issue price.

Group of Eight (G-8). A group of industrialized countries comprising Canada, France, Germany, Italy, Japan, Russia, the United Kingdom, and the United States.

Guidance line. An authorization, unknown to the customer, for a line of credit. If communicated to the customer, the guidance line becomes an advised line of credit commitment.

Hard currency. The term ''hard currency'' is a carryover from the days when sound currency was freely convertible into ''hard'' metal, that is, gold. It is used today to describe a currency that is sufficiently sound so that it is generally accepted internationally at face value.

Hedging. A transaction used by dealers in foreign exchange, commodities, or securities, as well as manufacturers and other producers, to protect against severe fluctuations in exchange rates and prices. A current sale or purchase is offset by contracting to purchase or sell at a specified future date. The object is to defer a profit or loss on the current purchase or sale by realizing a profit or loss on a future purchase or sale. The hedge contract may run for a period that coincides with the expected liquidation of the asset or it may merely last for one, three, six, or twelve months to offset the exchange risk for an asset that is expected to be held for a long term, in which case the choice of the term of the hedge is a matter of relative cost and judgment. Also referred to as ''covering.''

Host currency. See *Local currency*.

Hot money. Funds temporarily transferred to a financial center and subject to withdrawal at any moment.

ICERC. See *Interagency Country Exposure Review Committee*.

Impact loan. A loan specifically designated by a government as important for the development of the country. It usually involves production for export. The term is most often used in regard to Japanese loans.

Implied forward rate. The rate of interest at which a borrowing or a lending transaction of a shorter maturity may be rolled over to yield an equivalent interest rate with a borrowing or a lending transaction of longer maturity.

Indirect quote. Quotation of a fixed unit of the local currency in variable units of foreign currencies.

Ineligible acceptance. An acceptance that does not meet the Federal Reserve eligibility requirements for use at the discount window.

In the money. A term used to refer to a call option whose strike price is below or a put option whose strike price is above the current price of the asset on which the option is written.

Initial margin. The minimum deposit a futures exchange requires from customers for any futures contract in which a customer has a net long or short position.

Interagency Country Exposure Review Committee (ICERC). A nine-member joint committee of three federal regulatory agencies established to administer the country risk supervision program. ICERC centralizes decision making for determinations about the creditworthiness of individual countries.

Interbank offered rate (IBOR). The rate at which banks will lend to other banks for a particular currency at a particular location.

Interest arbitrage. Involves the movement of short-term funds from one currency to another for the purpose of investing idle funds at a higher yield. However, the real yield advantage in this situation is not merely the difference in interest rates between the two investment choices, but rather the difference in subtracting the cost of transferring funds into the desired currency and back again from the interest differential. There are four types of interest arbitrage: (1) covered interest arbitrage (transfer of short-term funds into a foreign currency for the sake of a higher yield, with the exchange risk covered), (2) inward interest arbitrage (transfer of short-term funds into local currency for a higher yield), (3) outward interest arbitrage (transfer of short-term funds into a foreign currency for a higher yield), and (4) uncovered interest arbitrage (transfer of short-term funds into a foreign currency for a higher yield, without covering the exchange risk).

Interest negative. The commission charged on foreign deposits on which no interest is allowed.

Interest parities. Differences at a given time between interest rates charged in two financial centers on short-term credits, investments, or time deposits of identical maturities.

Interest rate. The amount (generally expressed as a per annum percentage) of money charged for allowing another party the use of one's money.

Interest-rate cap. A transaction whereby a bank pays a fee up-front and will later receive payments if a designated interest rate exceeds a minimum threshold established in the contract. If during the contract, interest rates do not exceed the threshold, the bank loses the initial fee paid. By contrast, if interest rates exceed the threshold, a bank will receive progressively higher payments to offset higher interest expense. The payment received represents the difference between the designated rate and the threshold.

Interest-rate collar. The collar combines an interest-rate cap and a floor. A bank buys a cap and pays a fee, which protects the institution should interest rates exceed a stated threshold. The bank simultaneously sells a floor and receives a fee to offset the cost of the cap. The collar establishes a band of interest rates for liabilities—rates cannot exceed the cap's ceiling or the floor's minimum.

Interest-rate differential. The difference between the interest rates on two different currencies. Also the swap rate between two currencies expressed as a per annum percentage premium or discount.

Interest-rate floor. The floor obligates a seller to pay funds to the buyer if a specified interest rate falls below a strike rate.

Interest-rate futures. Interest-rate futures contracts offer a vehicle through which banks can shift interest-rate risk to the market for financial futures. Interest-rate futures are analogous to futures contracts on commodities. See also *Futures market*.

Interest-rate swap. A contractual obligation entered into by two parties to deliver a fixed sum of money against a variable sum of money at periodic intervals. It typically involves an exchange of payments on fixed- and floating-rate debt. If the sums involved are in different currencies, the swap is simultaneously an interest-rate swap and a currency swap.

International Banking Act of 1978 (IBA). The principal legislation pertaining to the activities of foreign banks in the United States. It established a policy of national treatment of foreign banks with regard to their operations in the United States.

International banking facility (IBF). A set of asset and liability accounts segregated on the books and records of a depository institution, U.S. branch or agency of a foreign bank, or an Edge Act or agreement corporation. IBF activities are essentially limited to accepting deposits from and extending credit to foreign residents (including banks), other IBFs, and the institutions establishing the IBF. IBFs are not required to maintain reserves against their time deposits or loans. IBFs may receive certain tax advantages from individual states.

International Center for Settlement of Investment Disputes (ICSID). See *World Bank*.

International Lending Supervision Act (ILSA). Enacted in 1983, the act requires U.S. banking agencies to consult with bank supervisory authorities in other countries to achieve consistent policies and practices in international lending.

International Monetary Fund (IMF). A specialized agency of the United Nations, the IMF encourages monetary cooperation, promotes stable exchange policy, and makes short-term advances and standby credits to members experiencing temporary payments difficulties. Its resources come mainly from subscriptions of members.

International Money Market of the Chicago Mercantile Exchange (IMM). The IMM is one of the world's largest markets for foreign-currency and Eurodollar futures trading.

International Swap Derivatives Association

(ISDA). A trade association for derivative contracts.

Intervention. The actions of a central bank designed to influence the foreign-exchange rate of its currency. The bank can use its exchange reserves to buy its currency if it is under too much downward pressure or to sell its currency if it is under too much upward pressure.

Intracountry foreign-currency exposure. The risk that exists whenever a subsidiary or a branch lends, invests, places, or extends credit to entities that are located within the same country as the booking unit, but in a currency different from that of the country where the borrower and the booking unit are located.

Intraday position. The size of spot and forward positions allowed for a dealer during the business day, which may be larger than that allowed for the end of the date. Sometimes also called ''daylight'' limits.

Intrinsic value. The amount, if any, by which the current market price of the underlying instrument is above the exercise price for calls and below the exercise price for puts.

Issue price. The price at which a new issue of securities is placed on sale.

Joint venture. The participation of two or more entities in a single business activity. Used to facilitate entry into a market in which other forms of operation may be proscribed.

Last trading date. The final day on a futures or options exchange when trading may occur in a given futures contract month or in a given option series.

Latin American Free Trade Association (LAFTA). Originally developed to create a common market in Latin America among member countries, it has since been reorganized into the Latin American Integration Association (ALADI). Members include Argentina, Bolivia, Brazil, Chile, Colombia, Cuba, Ecuador, Mexico, Paraguay, Peru, Uruguay, and Venezuela.

Lead manager. The commercial or investment bank with the primary responsibility for organizing a syndicated bank credit or bond issue. This includes the recruitment of additional lending or underwriting banks, the negotiation of terms with the borrower, and the assessment of market conditions.

Lending margin. The fixed percentage above the reference rate paid by a borrower in a rollover credit or on a floating-rate note.

Letter of credit—advised. An export letter of credit issued by a bank that requests another bank to advise the beneficiary that the credit has been opened in its favor. This occurs when the issuing bank does not have an office in the country of the beneficiary and uses the facilities of the advising bank. The advising bank is potentially liable only for its own error in making the notification.

Letter of credit—back-to-back. A letter of credit issued on the strength (or ''backing'') of another letter of credit, involving a related transaction and nearly identical terms. For example, ABC company in the United States is designated as the beneficiary of an irrevocable letter of credit confirmed by a U.S. bank to supply XYZ company in Bolivia, whose bank issued the letter of credit, with goods to be purchased from a third company. The third company, however, will not fill ABC's order unless it receives prepayment for the goods, either through cash or some other type of financing. If ABC is unable to prepay in cash, it will request its bank to issue a letter of credit in favor of the third company. If ABC's bank agrees, the domestic credit is then ''backed'' by the foreign letter of credit and a back-to-back letter-of-credit transaction exists.

Letter of credit—cash. A letter addressed from one bank to one or more of its correspondents that makes available to a party named in the letter a fixed sum of money up to a future specific date. The sum indicated in the letter is equal to an amount deposited in the issuing bank by the party before the letter is issued.

Letter of credit—commercial. A letter addressed by a bank, on behalf of a buyer of merchandise, to a seller authorizing the seller to draw drafts up to a stipulated amount under specified terms and undertaking conditionally or unconditionally to provide payment for drafts drawn.

- *Confirmed irrevocable letter of credit*—A letter in which a bank in addition to the issuing bank is responsible for payment.
- *Irrevocable letter of credit*—A letter in which the issuing bank waives all right to cancel or in any way amend without consent of the beneficiary or seller.
- *Revocable letter of credit*—A letter in which the issuing bank reserves the right to cancel or amend that portion of the amount that has not been demanded before the actual payment or negotiation of drafts drawn.
- *Revolving credit*—A letter in which the issuing bank notifies a seller of merchandise that the amount of credit when used will again

become available, usually under the same terms and without the issuance of another letter.

- *Special clauses—*
  - — *Green clause*—Similar to the red clause letter of credit below, except that advance payment is made, generally upon presentation of warehouse receipts evidencing storage of the goods.
  - — *Red clause*—A clause permitting the beneficiary to obtain payment in advance of shipment so that the seller may procure the goods to be shipped.
  - — *Telegraphic transfer clause*—A clause in which the issuing bank agrees to pay the invoice amount to the order of the negotiating bank upon receipt of an authenticated cablegram from the latter that the required documents have been received and are being forwarded.

Letter of credit—confirmed. A letter of credit issued by the local bank of the importer and to which a bank, usually in the country of the exporter, has added its commitment to honor drafts and documents presented in accordance with the terms of the credit. Thus, the beneficiary has the unconditional assurance that, if the issuing bank refuses to honor the draft against the credit, the confirming bank will pay (or accept) it. In many instances, the seller (exporter) may ask that the letter of credit be confirmed by another bank when the seller is not familiar with the foreign issuing bank or as a precaution against unfavorable exchange regulations, foreign-currency shortages, political upheavals, or other situations.

Letter of credit—deferred payment. A letter of credit under which the seller's draft specifies that the draft is payable at a later date, for example, 90 days after the bill-of-lading date or 90 days after presentation of the documents.

Letter of credit—export. A letter of credit opened by a bank, arising from the financing of exports from a country. The issuing bank may request another bank to confirm or advise the credit to the beneficiary. If confirmed, the credit becomes a confirmed letter of credit, and, if advised, it becomes an advised (unconfirmed) letter of credit.

Letter of credit—guaranteed. A letter of credit guaranteed by the customer (applicant) and often backed by collateral security. In domestic banks, the payment of drafts drawn under this credit is recorded in the general-ledger asset account "Customer Liability—Drafts Paid Under Guaranteed L/C."

Letter of credit—import. A letter of credit issued by a bank on behalf of a customer who is importing merchandise into a country. Issuance of an import credit carries a definite commitment by the bank to honor the beneficiary's drawings under the credit.

Letter of credit—irrevocable. A letter of credit that cannot be modified or revoked without the customer's consent or that cannot be modified or revoked without the beneficiary's consent.

Letter of credit—negotiation. A letter of credit requiring negotiation (usually in the locality of the beneficiary) on or before the expiration date. The engagement clause to honor drafts is in favor of the drawers, endorsers, or bona fide holders.

Letter of credit—nontransferable. A letter of credit that the beneficiary is not allowed to transfer in whole or in part to any party.

Letter of credit—reimbursement. A letter of credit issued by one bank and payable at a second bank that, in turn, draws on a third bank for reimbursement of the second bank's payment to the beneficiary. Those credits are generally expressed in a currency other than that of the buyer (issuing bank) or the seller, and, because of wide acceptability, many are settled in the United States through yet another bank as the reimbursing agent. Upon issuance, the correspondent sends the reimbursing bank an authorization to honor drawings presented by the negotiating bank.

Letter of credit—revocable. A letter of credit that can be modified or revoked by the issuing bank up until the time payment is made.

Letter of credit—revolving. A letter of credit issued for a specific amount that renews itself for the same amount over a given period. Usually, the unused renewable portion of the credit is cumulative as long as drafts are drawn before the expiration of the credit.

Letter of credit—standby. A letter of credit or similar arrangement, however named or described, that represents an obligation to the beneficiary on the part of the issuer—

- to repay money borrowed by or advanced to or for the account party,
- to make payment on account of any indebtedness undertaken by the account party, or
- to make payment on account of any default by the account party in the performance of an obligation.

Letter of credit—straight. A credit requiring presentation on or before the expiration date at the office of the paying bank. The engagement clause to honor drafts is in favor of the beneficiary only.

Letter of credit—transferable. A credit under which the beneficiary has the right to give instructions to the bank called upon to effect payment or acceptance to make the credit available in whole or in part to one or more third parties (second beneficiaries). The credit may be transferred only upon the express authority of the issuing bank and provided that it is expressly designated as transferable. It may be transferred in whole or in part, but may only be transferred once.

Letter of credit—traveler's. A letter of credit addressed to the issuing bank's correspondents, authorizing them to negotiate drafts drawn by the beneficiary named in the credit upon proper identification. The customer is furnished with a list of the bank's correspondents. Payments are endorsed on the reverse side of the letter of credit by the correspondent banks when they negotiate the drafts. This type of letter of credit is usually prepaid by the customer.

Letter of credit—usance. A letter of credit that calls for payment against time drafts, drafts calling for payment at some specified date in the future. Usance letters of credit allow buyers a grace period of a specified number of days, usually not longer than six months.

London Interbank Offered Rate (LIBOR). The rate at which, theoretically, banks in London place Eurocurrencies/Eurodollars with each other.

London International Financial Futures Exchange (LIFFE). A London exchange where foreign-currency and Eurodollar futures, as well as foreign-currency options, are traded on spot exchange. LIFFE was taken over by Euronext in 2002 and subsequently merged with the New York Stock Exchange in 2007.

Limits (bank customer—foreign-exchange and interbank). Maximum line amounts allowed with other banks for forward exchange transactions, Eurocurrency and Eurodollar transactions, and payments arising from foreign-exchange transactions on the same day.

Listing. The formal process required to have a security regularly quoted on an exchange. Eurobonds are usually listed so that they can be purchased by those institutional investors who are constrained to invest in listed securities.

Local-currency exposure. The amount of assets and non-balance-sheet items that are denominated in the local currency of that country.

Lock-up. The term used to refer to procedures followed in a Eurobond issue to prevent the sale of securities to U.S. investors during the period of initial distribution.

Long position. An excess of assets (and/or forward purchase contracts) over liabilities (and/or forward sale contracts) in the same currency. A dealer's position when the net purchases and net sales leave him or her in a net-purchased position.

Loro accounts. Current accounts banks hold with foreign banks in a foreign currency on behalf of their customers.

Maintenance margin. The minimum equity a futures exchange requires in a customer's account for each futures contract subsequent to deposit of the initial margin.

Managed float. See *Dirty float*.

Management fee. The fee received by lead banks as compensation for managing a large-syndicate financing.

Manager of participation. The original lender of any loan in which participations are later sold and who generally has a fiduciary relationship with the other lenders. See also *Agent bank*.

Manager of syndicate. The bank that solicits the loan from the borrower and solicits other lenders to join the syndicate making the loan.

Margin. The amount of money and/or securities that must be posted as a security bond to ensure performance on a contract.

Marine insurance. Insurance for losses arising from specified marine casualties. Marine insurance is more extensive than other types as it may provide not merely for losses arising from fire, but also from piracy, wrecks, and most injuries sustained at sea.

- *Average*—A term in marine insurance signifying loss or damage to merchandise.
- *General average*—A loss arising from a voluntary sacrifice of any portion of a shipment or cargo to prevent loss of the whole and for the benefit of all persons at interest. The value of this loss is apportioned not only among all the shippers, including those whose property is lost, but also to the vessel itself. Until the assessment is paid, a lien lies against the whole cargo.
- *Particular average*—A partial loss or damage of merchandise caused by a peril insured against and that does not constitute a general average loss.
- *Free of particular average (F.P.A.)*—Insurance against partial loss regardless of the percentage of the loss.
- *Casco insurance*—Marine insurance on the ship itself (hull) that is usually purchased by

the owners.

- *Cover note*—English equivalent of American binder.
- *Open policy*—A contract between an insurance company and a shipper by which all shipments made by the insured are automatically protected from the time the merchandise leaves the initial shipping point until delivery at destination.

Mark-to-market. The revaluation of a traded asset or commodity to reflect the most recently available market price.

Market-maker. A bank or other financial institution that gives two-sided (bid and offer) quotations. A market-maker stands prepared to do business on either side of the market without knowing if the inquiring institution intends to buy or sell.

Market order. An order that is to be executed immediately at the best available price in the market.

Matched. A forward purchase is matched when it is offset by a forward sale for the same date or vice versa. As a necessity, however, when setting limits for unmatched positions, a bank may consider a contract matched if the covering contract falls within the same week or semimonthly period.

Maturity date. The settlement date or delivery date for a forward contract.

Medium-term notes. Intermediate-term notes that carry a maturity between nine months and ten years.

Merchant bank. A European form of an investment bank.

Money market. A wholesale market for low-risk, highly liquid, short-term debt instruments.

Multicurrency line. A line of credit that gives the borrower the option of using any of the readily available major currencies.

Multilateral exchange contract. An exchange contract involving two foreign currencies against each other, for example, a contract for U.S. dollars against Swiss francs made in London or a contract for British pounds against Japanese yen made in New York. Also called an arbitrage exchange contract.

Multinational bank. A commercial bank engaged in selling services or conducting operations in more than one country.

Nationalization. The act whereby a central government assumes ownership and operation of private enterprises within its territory.

Negative interest. A fee charged by a bank for accepting a deposit from a customer. This can happen when a currency is under pressure to appreciate. A central bank in this situation can establish capital-import controls and limit the amount of deposits that a bank can receive from nonresidents. If market participants want to deposit more money in the country than the central bank will allow, interest rates will drop initially to zero and, if the pressure continues, produce negative interest. Any taxes that a central bank may impose on foreign deposits can also create negative interest.

Negative pledge. A contractual promise by a borrower in a syndicated loan or a bond issue not to undertake some future action. One typical negative pledge is that future new creditors will not be given rights greater than those of existing creditors.

Negotiable instruments. Written orders or promises to pay that may be transferred by endorsement or delivery, for example, by checks, bills of exchange, drafts, and promissory notes. Governed by article 3 of the Uniform Commercial Code.

Negotiate. (1) Letters of credit—To verify that the documents presented under a letter of credit conform to requirements and then, if the documents are in order, to pay the seller of the goods. (2) Negotiable instruments—To transfer possession of an instrument by a person other than the issuer to another person who thereby becomes its holder.

Net accessible interest differential. The difference between the interest rates that can actually be obtained on two currencies. This difference is usually the basis of the swap rate between the two currencies and, in most cases, is derived from external interest rates rather than domestic ones. These external rates, or Euro-rates, are free from reserve requirements (which would increase the interest rate) and from exchange controls (which would limit access to the money).

Net exchange position. An imbalance between all the assets and purchases of a currency, and all the liabilities and sales of that currency.

Net position. A bank has a net position in a foreign currency when its assets (including future contracts to purchase) and liabilities (including future contracts to sell) in that currency are not equal. An excess of assets over liabilities, including future contracts, is called a net “long” position, and liabilities in excess of assets result in a net “short” position. A net long position in a currency that is depreciating results in a loss because, with each day, the position is convertible into fewer units of local currency. A net short position in a currency that is appreciating represents a loss because, with each day, satisfaction of the position costs more units of local currency.

Netting arrangement. Agreement by two counterparties to examine all contracts settling in the same currency on the same day and to agree to exchange only the net currency amounts. Also applies to net market values of several contracts.

Nominal interest rate. The interest rate stated as a percentage of the face value of a loan. Depending on the frequency of interest collection over the life of the loan, the nominal rate may differ from the effective interest rate.

Nonrevolving. A line of credit that cannot be reused once it has been drawn down to a specified amount.

Nostro accounts. Demand accounts of banks with their correspondents in foreign countries in the currency of that country. These accounts are used to make and receive payments in foreign currencies for a bank's customers and to settle maturing foreign-exchange contracts. Also called due from foreign bank—demand accounts, our balances with them, or due from balances.

Novation. The substitution of a new party for one of the original parties to a contract. The result is a new contract with the same terms, but at least one new party.

Odd dates. Deals within the market are usually for spot, one month, two months, three months, or six months forward. Other dates are odd dates, and prices for them are frequently adjusted with more than a mathematical difference. Hence, most market deals are for regular dates, although commercial deals for odd dates are common.

Offer rate. The price at which a quoting party is prepared to sell or lend currency. This is the same price at which the party to whom the rate is quoted will buy or borrow if it desires to do business with the quoting party. The opposite transactions take place at the bid rate.

Offering circular. A document giving a description of a new securities issue, as well as a description of the entity making the issue.

Office of Foreign Asset Control (OFAC). An office within the U.S. Treasury Department that administers U.S. laws imposing economic sanctions against targeted hostile foreign countries. While OFAC is responsible for administration of these statutes, all of the bank regulatory agencies cooperate in ensuring compliance.

Official rate. The rate established by a country at which it permits conversion of its currency into that of other countries.

Offshore branch. Banking organization designed to take advantage of favorable regulatory or tax environments in another country. Many of these operations are shell branches with no physical presence.

Offshore dollars. The same as Eurodollars, but encompassing the deposits held in banks and branches anywhere outside of the United States, including Europe.

Open contracts (open positions). The difference between long positions and short positions in a foreign currency or between the total of long and short positions in all foreign currencies. Open spot or open forward positions that have not been covered with offsetting transactions. See also *Net position*.

Open interest. The total number of futures contracts for a particular asset that have not been liquidated by an offsetting trade or that have not been fulfilled by delivery.

Open market operations. Purchases or sales of securities or other assets by a central bank on the open market.

Open position limit. A limit placed on the size of the open position in each currency to manage off-balance-sheet items.

Opening bank. The bank that draws up and opens the letter of credit and that makes payment according to the conditions stipulated.

Option contract. A contract giving the purchaser the right, but not the obligation, to buy (call option) or sell (put option) an asset at a stated price (strike or exercise price) on a stated date (European option) or at any time before a stated date (American option).

Organisation for Economic Co-operation and Development (OECD). Founded as a successor organization to the Organization for European Economic Cooperation (OEEC). The OEEC was originally established to administer aid under the Marshall Plan during the post-World War II period. The goals of the successor OECD are to stimulate world trade, economic growth, and economic development. Members include Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Korea, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

Organization of American States (OAS). An organization of 35 independent states of the Americas formed to promote intergovernmental cooperation in the Western Hemisphere.

Organization of the Petroleum Exporting Countries (OPEC). A federation of oil-exporting countries that sets petroleum prices for member countries. Members include Algeria, Angola, Ecuador, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela.

Out-of-the-money. A term used to refer to a call option whose strike price is above or to a put option whose strike price is below the current price of the asset on which the option is written.

Outright. Forward exchange bought and sold independently from a simultaneous sale or purchase of spot exchange.

Outright forward rate. A forward exchange rate that is expressed in terms of the actual price of one currency against another, rather than, as is customary, by the swap rate. The outright forward rate can be calculated by adding the swap premium to the spot rate or by subtracting the swap discount from the spot rate.

Overbought. The position of a trader who has bought a larger amount of a commodity or asset than he or she has sold.

Overnight. A swap transaction involving same-day settlement of the spot transaction against a value date of the next business day on the forward contract.

Overnight position. A foreign-exchange or money market position maintained overnight. There is more risk involved in this position than in one maintained during the day because political and economic events may take place at night when the operator cannot react immediately to them.

Override limit. The total amount of money (measured in terms of a bank's domestic currency) that the bank is willing to commit to all foreign-exchange net positions.

Oversold. The position of a trader who has sold a larger amount of a certain asset or commodity than he or she has bought.

Over-the-counter (OTC). Transactions not conducted in an organized exchange. OTC markets have no fixed location or listing of products.

Paris Club. An ad hoc group of western creditor governments that meets informally under the chairmanship of the French Treasury. Its function is to start the process of rescheduling a country's official debt.

Parity. A term derived from par, meaning the equivalent price for a certain currency or security relative to another currency or security, or relative to another market for the currency or security after making adjustments for exchange rates, loss of interest, and other factors.

Parity grid. The system of fixed bilateral par values in the European Monetary System. The central banks of the countries whose currencies are involved in an exchange rate are supposed to intervene in the foreign-exchange market to maintain market rates within a set range defined by an upper and a lower band around the par value.

Participation. The act of taking part in a syndicated credit or a bond issue.

Par value. The official parity value of a currency relative to the dollar, gold, Special Drawing Rights, or another currency.

Paying agent. A bank or syndicate of banks responsible for paying the interest and principal of a bond issue to bondholders on behalf of the bond issuer.

Performance bond. A bond supplied by one party to protect another against loss in the event of the default of an existing contract.

Placement memorandum. A document in a syndicated Eurocredit that sets out details of the proposed loan and gives information about the borrower.

Political risk. Political changes or trends, often accompanied by shifts in economic policy, that may affect the availability of foreign exchange to finance private or public external obligations. The banker must understand the subtleties of current exchange procedures and restrictions, as well as the possibilities of war, revolution, or expropriation in each country with which the bank transacts business, regardless of the actual currencies involved. See also *Country Risk.*

Portfolio investment. An investment in an organization, other than a subsidiary or joint venture, in which less than 20 percent of the voting shares are held.

Position. A situation created through foreign-exchange contracts or money market contracts in which changes in exchange rates or interest rates could create profits or losses for the operator.

Position book. A detailed, ongoing record of an institution's dealings in a particular foreign currency or money market instrument.

Position risk. See *Net position*.

Position-trader. A speculator in the futures market who takes a position in the market for a period of time.

Premium. The adjustment to a spot price that is made in arriving at a quote for future delivery. If a dealer were to quote $2.00 and $2.05 (bid and asked) for sterling, and the premiums for six months forward are 0.0275 and 0.0300, the forward quotes would be adjusted to $2.0275 and $2.0800. The premium usually represents differences in interest rates for comparable instruments in two countries. However, in periods of crisis for a currency, the premium may represent the market anticipation of a higher price.

Price quotation system. A method of giving exchange rates in which a certain specified amount of a foreign currency (1 or 100, usually) is stated as the corresponding amount in local currency.

Primary dealers. Securities firms that are recognized by the Federal Reserve System to buy and sell securities with the Fed.

Private placement. The process of negotiating for the sale of securities, debt, equity, or a combination thereof to a relatively small group of investors.

Protest. The formal legal process of demanding payment of a negotiable item from the maker or drawee who has refused to pay.

Public Law (P.L.) 480. The most common reference to the Agricultural Trade Development and Assistance Act of 1954. Generally, P.L. 480 authorizes the President to provide various types of assistance to American agricultural exporters, such as making sales in the currency of the destination country.

Put. The ability of the bank to require repayment of the debt of a borrower by a third party because of nonperformance of the borrower through an agreement other than a formal guarantee.

Put option. A contract giving the purchaser the right, but not the obligation, to sell a particular asset at a stated strike price on or before a stated date.

Rate risk. In the money market, the chance that interest rates may rise when an operator has a negative money market gap (a short position) or that interest rates may go down when the operator has a positive money market gap (a long position). In the exchange market, the chance that the spot rate may rise when the trader has a net oversold position (a short position), or that the spot rate may go down when the operator has a net overbought position (a long position).

Rate swap. A transaction in which one participant pays a fixed rate of interest on a notional amount for a given period of time and the other pays a floating rate.

Reciprocal rate. The price of one currency in terms of a second currency, when the price of the second currency is given in terms of the first.

Recourse. The ability to pursue judgment for a default on a negotiable instrument against parties who signed the note.

Representations. Statements made by a borrower in a syndicated credit or bond issue describing the borrower's financial condition.

Representative office. A facility established in U.S. or foreign markets by a bank to sell its services and assist clients; in the United States, these offices cannot accept deposits or make loans.

Repurchase agreement (repo or RP). A holder of assets sells those assets to an investor with an agreement to repurchase them at a fixed price on a fixed date. The security "buyer" in effect lends the "seller" money for the period of the agreement, and the terms of the agreement are structured to compensate the buyer for this. Dealers use repo extensively to finance their positions.

Reserve account. Those items in the balance of payments that measure changes in the central bank's holdings of foreign assets (such as gold, convertible securities, or Special Drawing Rights).

Reserve currency. A foreign currency held by a central bank (or exchange authority) for the purposes of exchange intervention or the settlement of intergovernmental claims.

Reserve requirements. Obligations imposed on commercial banks to maintain a certain percentage of deposits with the central bank or in the form of central-bank liabilities.

Retiming. Restructuring of the timing of interest payable on bonds.

Revaluation. An official act wherein the parity of a currency is adjusted relative to the dollar, gold, Special Drawing Rights, or another currency, resulting in less revalued units relative to those currencies. (See also *Devaluation*.) Also, the periodic computations of the current values (revaluations) of ledger accounts and unmatured future purchase and sales contracts.

Revolving credit. A line of bank credit that may be used at the borrower's discretion. Interest is paid on the amount of credit actually in use, while a commitment fee is paid on the unused portion.

Revolving into term. A commitment that allows a revolving line of credit (usually one to three years) with term provision at the expiration of the revolver for an additional period of time. Most common is a two-year revolver with a five-year, fully amortizing term portion.

Revolving line of credit. A line of credit that permits successive drawings and payments at the borrower's discretion. The funds available to the borrower are replenished by any payments of principal.

Risk-management tools. Financial devices (such as futures or options) that permit a borrower or lender of funds to protect against the risks of changing currency prices and/or interest rates.

Risk participation. An agreement whereby a bank shares the risk in an outstanding credit or instrument. Credit-equivalent amounts of risk participations are assigned based on the risk category appropriate to the account party obligor or, if relevant, to the nature of the collateral or guarantees. Usually treated as a direct credit substitute.

Rollover. The process of selling new securities to pay off old ones coming due, refinancing an existing loan, or extending a maturing forward foreign-exchange contract.

Rollover credit. A bank loan with an interest rate periodically updated to reflect market interest rates. The interest rate in the loan for each subperiod is specified as the sum of a reference rate and a lending margin.

Rollover date. The end of an interest period in a revolving term loan.

Same-day funds. Federal funds, or the equivalent, used in the settlement of a transaction that will probably create an interest adjustment of the trading rate to compensate for the difference in the availability of the funds for use.

Samurai bonds. Yen-denominated bonds issued by a foreign borrower in Japan.

Scalpers. Floor or pit traders in the futures market with short-term horizons who sell slightly above the most recent trade and buy at a price slightly below.

Seasoned securities. Securities that have traded in the secondary market for more than 90 days.

Secondary market. A market in which securities are traded following the time of their original issue.

Selling concession. The share of total investment-banking fees accruing to the selling group.

Selling group. All banks involved in selling or marketing a new issue of bonds. Sometimes the term is used in reference to dealers acting only as sellers and is intended to exclude reference to underwriters or managers.

Seller's option contract. A contract in which the seller has the right to settle a forward contract at his or her option anytime within a specified period. See also *Option contract*.

Selling rates. Rates at which dealers are prepared to sell foreign exchange in the market.

Settlement day. The day on which the actual transfer of two currencies or the transfer of money for an asset takes place at a previously arranged price.

Settlement price. The official daily closing price for a futures or option contract. This price is established and used by a clearinghouse to determine each clearing firm's settlement variation.

Settlement risk. The possibility that a seller of foreign exchange or securities, having collected the payment in local currency, may fail to deliver the exchange or securities to the buyer.

Settlement variation. The sum of all changes in amount for each of a firm's futures or options positions as calculated from each day's settlement price. This amount is paid to or received from the clearinghouse each day based on the previous day's trading.

Shell branch. See *Offshore branch*.

Shogun bonds. Foreign bonds issued in Tokyo and denominated in currencies other than the Japanese yen. The usual denomination is the U.S. dollar.

Short position. An excess of liabilities (and/or forward sale contracts) over assets (and/or forward purchase contracts) in the same currency. A dealer's position when the net of purchases and sales leaves the trader in a net-sold or oversold position.

Sight draft. A draft payable upon presentation to the drawee or within a brief period thereafter known as "days of grace."

Society for Worldwide Interbank Financial Telecommunications (SWIFT). A telecommunications network established by major financial institutions to facilitate messages among SWIFT participants. These messages typically result in a monetary transaction between institutions. The network is based in Brussels.

Soft currency. A currency that is not freely convertible into other currencies.

Soft loans. Loans with exceptionally lenient repayment terms, such as low interest, extended amortization, or the right to repay in the currency of the borrower.

Sole of exchange. A phrase appearing on a draft to indicate that no duplicate is being presented.

Sovereign risk. The risk that the government of a country may interfere with the repayment of debt.

Space arbitrage. The buying of a foreign currency in one market and the selling of it for a profit in another market.

Special Drawing Rights (SDRs). International paper money created and distributed to governments by the IMF in quantities dictated by special agreements among its member countries. The value of SDRs is determined by the weighted value of a ‘‘basket’’ of major currencies.

Specially designated nationals. Persons or entities listed by OFAC. These persons or entities are typically front organizations and are subject to OFAC prohibitions. See also *Blocked account, Office of Foreign Asset Control*.

Speculation. The purchase or sale of a trading unit, usually on a forward basis, in hopes of making a profit at a later date. The term is used in the foreign-exchange, commodity, stock, and option markets.

Spot contract. A foreign-exchange contract traded in the interbank market in which the value date is two business days from the trade date.

Spot exchange (or spot currency). Foreign exchange purchased or sold for immediate delivery and paid for on the day of the delivery. Immediate delivery is usually considered delivery in one to two business days after the conclusion of the transaction. Many U.S. banks consider transactions maturing in as many as ten business days as spot exchange. Their reasons vary but are generally to facilitate revaluation accounting policies and to initiate final confirmation and settlement verification procedures on future contracts nearing maturity. See also *Futures (or forward) exchange contract*.

Spot month. The futures-contract month that is also the current calendar month.

Spot/next. In the foreign-exchange market, a term used to describe a swap transaction for value on the spot date with the reverse transaction taking place the next working day after the spot date. In the Eurocurrency market, a term used to describe a loan or deposit for value on the spot date with maturity on the next working day after the spot date.

Spot transaction. A transaction for spot exchange or currency.

Spread. The difference between the bid rate and the offer rate in an exchange-rate quotation or an interest quotation. This difference is not identical with the profit margin because traders seldom buy and sell at their bid and offer rates at the same time. In another sense (for example, Eurodollar loans priced at a mark-up over LIBOR), spread means a mark-up over cost, and, in this context, the spread is identical with the profit margin.

Square exchange position (or square-off). To make the inflows of a given currency equal to the outflows of that currency for all maturity dates. This produces a square exchange position in that currency.

Stabilization. The efforts by a lead manager in a securities issue to regulate the price at which securities trade in the secondary market, during the period that the securities syndicate is still in existence.

Sterilization. Intervention in the foreign-exchange market by a central bank in which the change in the monetary base caused by the foreign-exchange intervention is offset by open market operations involving domestic assets.

Straight bill of lading. A bill of lading drawn directly to the consignee and therefore not negotiable. See also *Bill of lading*.

Strike price. The price at which an option buyer may purchase (if a call option) or sell (if a put option) the asset upon which the option is written.

Subscription agreement. An agreement between a securities issuer and the managing banks that describes the terms and conditions of the issue and the obligation of the parties to the agreement.

Subscription period. The time period between the day on which a new securities issue is announced and the day on which the terms of the issue are signed and the securities are formally offered for sale.

Subsidiary. Entity in which a bank has a modicum of control. Used to facilitate entry into foreign markets in which other operations are proscribed.

Sushi bonds. Dollar-denominated Eurobonds issued by Japanese companies and purchased primarily by Japanese investors. These bond issues are typically managed by Japanese banks.

Swap. The combination of a spot purchase or sale against a forward sale or purchase of one currency in exchange for another. The trading of one currency (lending) for another currency (borrowing) for that period of time between which the spot exchange is made and the forward contract matures. See also *Swap cost (or profit)*.

Swap arrangement—reciprocal. A bilateral agreement between central banks enabling each party to initiate swap transactions up to an agreed limit to gain temporary possession of the other party's currency.

Swap cost (or profit). In a swap transaction, the cost or profit related to the temporary movement of funds into another currency and back again. That exchange cost or profit must then be applied to the rate of interest earned on the loan or investment for which the exchange was used. Furthermore, the true trading profits or losses generated by the foreign-exchange trader cannot be determined if swap profits or costs are charged to the exchange function rather than allocated to the department whose loans or investments the swap actually funded.

Swap and deposit. A combination of swap transactions that enables the borrower to have use of both currencies for the duration of the transaction.

Swap position. A situation in which the scheduled inflows of a given currency are equal to the scheduled outflows, but the maturities of those flows are purposely mismatched. The expectation in a swap position is that the swap rate will change and that the gap can be closed at a profit.

Swap rate. The difference between the spot exchange rate of a given currency and its forward exchange rate.

Swap-swap. A swap transaction involving one forward maturity date against another forward maturity date.

Swaption. An option on a swap. It gives the buyer the right, but not the obligation, to enter into an interest-rate swap at a future period of time.

Syndicate. A group of banks that acts jointly, on a temporary basis, to loan money in a bank credit (syndicated credit) or to underwrite a new issue of bonds (bond underwriting syndicate).

Syndicate leader. See *Manager of syndicate*.

Syndicate participation. Usually, a large credit arranged by a group of lenders, each of whom advances a portion of the required funds. It differs from a participation loan because the banks participate at the outset and are known to the borrower.

Take-down. The receipt of the principal of a loan by the borrower.

Tariff. A duty or tax on imports that can be either a percentage of cost or a specific amount per unit of import.

Telegraphic transfer (TT) rate. The basic rate at which banks buy and sell foreign exchange. Buying rates for mail transfers, foreign-currency drafts, traveler's checks, and similar instruments are all based on the TT rate. The TT rate may be slightly less favorable than other rates because of the time required for collection. Foreign-currency time (usance) drafts also are bought at the TT rate, but interest to maturity is deducted for the time which must elapse until maturity.

Telex. Direct communication between two banks or companies and organizations via satellite or underwater cable.

Tenor. A term designating payment of a draft as being due at sight, a given number of days after sight, or a given number of days after the date of the draft.

Term structure. The level of interest rates on debt instruments of a particular type, viewed as a function of term to maturity. The interest-rate level may rise or fall with increasing maturity.

Terms of trade. Relative price levels of goods exported and imported by a country.

Test key. A code used in transferring funds by cable or telephone so that the recipient may authenticate the message. A test key generally consists of a series of numbers, including a fixed number for each correspondent bank; a number for the type of currency; a number for the total amount; and, possibly, numbers for the day of the month and day of the week. A single number code indicates whether the total amount is in thousands, hundreds, tens, or digits. To arrive at a test number, the indicated numbers are totaled, and the total amount usually precedes the text of the message.

Third-country bills. Banker's acceptances issued by banks in one country that finance the transport or storage of goods traded between two other countries.

Tied loan. A loan made by a governmental agency that requires the borrower to spend the proceeds in the lender's country.

Time draft. A draft drawn to mature at a fixed time after presentation or acceptance.

Time value. The amount by which an option's market value exceeds its intrinsic value.

Tombstone. In a syndicated credit, an advertisement placed in a newspaper or magazine by banks to record their participation in the loan or, in a bond issue, to record their role in managing, underwriting, or placing the bonds.

Tomorrow next (tom/next). The simultaneous purchase and sale of a currency for receipt and payment on the next and second business day, respectively, or vice versa.

Tradable amount. The minimum amount accepted by a foreign-exchange broker for the interbank market, for example, 100,000 Canadian dollars or 50,000 pounds sterling.

Trade acceptance. A draft drawn by the seller (drawer) on the buyer (drawee) and accepted by the buyer. Also called a trade bill, customer acceptance, and two-name trade paper. See also *Acceptance*.

Trade accounts. Those parts of the balance of payments that reflect money spent abroad by the citizens of a country on goods and services and the money spent by foreigners in the given country for goods and services.

Trader's (or dealer's) ticket (slip). The handwritten record of a foreign-exchange trade and/or placing and taking of deposits that is written by the dealer who executed the transaction.

Trading position worksheet. A record of incomplete transactions in a particular currency.

Tranche. One of a number of drawings of funds made by a borrower under a term loan.

Transaction date. The date on which a contract's terms are negotiated and agreed on.

Transfer risk. The risk arising when a borrower incurs a liability in a currency that is not the currency in which revenues are generated. The borrower may not be able to convert its local currency to service an international loan if foreign exchange is not generated.

Trending of rates. Quoting a slightly higher or lower two-way rate in order to reflect a preference for either purchasing or selling.

Trust receipt. Used extensively in letter-of-credit financing, this is a document or receipt in which the buyer promises to hold the property received in the name of the releasing bank, although the bank retains title to the goods. The merchant is called the trustee, the bank the entruster. Trust receipts are used primarily to allow an importer to take possession of the goods for resale before payment to the issuing bank.

Two-way quotation. A simultaneous quotation of foreign-exchange buying and selling rates implying the willingness of the bank to deal either way.

Two-way rate. An exchange-rate or an interest-rate quotation that contains both a bid rate and an offer rate. The size of the spread between the two rates indicates the relative quality of the quotation.

Unconfirmed letter of credit. See *Letter of credit—advised*.

Undervalued. Decline of the spot rate below purchasing power parities, so that the goods of one county are cheaper than in another country. In relation to forward exchange, "undervalued" means that forward premiums are narrower or forward discounts are wider than the interest parities between the two financial centers.

Underwriting allowance. The share of total investment-banking fees accruing to the underwriting group.

Underwriting syndicate. The banks, in a new securities issue, that agree to pay a minimum price to the borrower even if the securities cannot be sold on the market at a higher price.

Uniform customs and practices for documentary credits. Sets of rules governing documentary letters of credit formulated by the International Chamber of Commerce. Includes general provisions, definitions, forms, responsibilities, documents, and the transfer of documentary letters of credit.

Unmatched. A forward purchase is unmatched when a forward sale for the same date has not been executed or vice versa.

Unmatured transactions. Trading transactions that have not reached their settlement dates.

Usance. The period of time between presentation of a draft and its maturity. See also *Tenor*.

Value-compensated. The payment or collection of a settlement cost on an open forward contract to cancel the contract rather than to execute an offsetting contract for the same maturity date.

Value date. The date on which foreign exchange bought and sold must be delivered and on which the price for the exchange must be paid.

Value-impaired. A category assigned by the Interagency Country Exposure Review Committee that indicates a country has protracted debt problems.

Value today. An arrangement by which spot exchange must be delivered and paid for on the day of the transaction instead of two business days later.

Value tomorrow. An arrangement by which spot exchange must be delivered and paid for on the business day following the transaction instead of two business days after the transaction.

Variation margins. Positive or negative changes in the value of a security bought on margin or a futures contract. These variations must be paid daily in cash. All securities bought or sold on margin and futures contracts are marked to market.

Volatility. The standard deviation of changes in the logarithm of an asset price, expressed at a yearly rate. The volatility is a variable that appears in option formulas.

Volume quotation system. A method of giving exchange rates in which a certain specified amount of local currency (usually 1 or 100) is stated as the corresponding amount in foreign currency.

Vostro account. A demand account maintained for a bank by a correspondent bank in a foreign country. The nostro account of one bank is the vostro account of the other bank. See also *Nostro account*.

Warehouse receipt. An instrument that lists and is a receipt for goods or commodities deposited in the warehouse that issues the receipt. These receipts may be negotiable or non-negotiable. A negotiable warehouse receipt is made to the "bearer," while a nonnegotiable warehouse receipt specifies precisely to whom the goods shall be delivered. There are several alternatives for releasing goods held under warehouse receipts: (1) the delivery of goods may be allowed only against cash payment or substitution of similar collateral; (2) some or all of the goods may be released against the trust receipt without payment, or (3) a warehouseman may release a stipulated quantity of goods without a specific delivery order. Banks will accept a warehouse receipt as collateral for a loan only if the issuer of a receipt is a bonded warehouseman. The bank must have protected assurances for the authenticity of the receipt and the fact that the commodities pledged are fully available as listed on the warehouse receipt.

Wash. A transaction that produces neither profit nor loss.

Wire. Often the words "wire" and "cable" are used interchangeably. In some cases, "wire" denotes messages sent within the confines of the United States, and "cable" refers to messages transmitted overseas. Others use "wire" to mean a transfer of funds by telephone rather than by cable, telex, or telegram.

Withholding tax. A tax imposed by a country on the gross amount of payments to a foreign lender from an in-country borrower.

Within-line facility (or facilities). Subfacilities of the line of credit that establish parameters, terms, and conditions of various other facilities available for specific additional purposes or transactions. The aggregate sum of all outstandings under within-line facilities must not exceed the total of the overall line of credit.

World Bank (The International Bank for Reconstruction and Development). An international financial organization whose purpose is to aid the development of productive facilities in member countries, particularly in developing countries. The chief source of funds is capital contributions made by member countries, which vary with the financial strength of the country. Another funding source is the sale of long-term bonds.

Writer. An individual who issues an option and, consequently, has the obligation to sell the asset (if the option is a call) or to buy the asset (if the option is a put) on which the option is written if the option buyer exercises the option.

Yankee bond. A dollar-denominated foreign bond issued in the U.S. market.

Yield curve. The interest rates for each different tenor or maturity of a financial instrument. A graph of the yield curve has interest rates on the vertical axis and time-to-maturity on the horizontal axis. When longer maturities have higher interest rates than shorter maturities, the curve is called a positive or upward-sloping yield curve. The opposite type of curve is called a negative, downward-sloping, or inverted yield curve. When interest rates are the same for all maturities, the curve is called a flat yield curve. See also *Term structure*.

Yield to maturity. The rate of interest on a bond when calculated as that rate of interest which, if applied uniformly to future time periods, sets the discounted value of future bond coupon and principal payments equal to the current market price of the bond.

Zero coupon bond. A bond that pays no interest but that is redeemed at its face value at maturity.

Although the methods of international loan portfolio management are similar to those established for domestic lending, the additional risks in international lending require specialized expertise and careful management by the bank. Banks conducting international lending activities should establish strong policies that include not only the basic components found in domestic policies but also the following segments.

Geographic limits. The bank should delineate those countries or geographic areas where it can lend profitably and soundly in accordance with its objectives and in consideration of country risks. International lending officers must know the specific country limits established by the board of directors, and the bank should have a monitoring system to ensure adherence to those limits. The limits established will depend on each bank's available financial resources, the qualifications and skills of its staff, the extent of its lending activities, and its further growth potential.

Distribution by category. Limitations based on aggregate percentages of total international loans in real estate, consumer credit, ship financing, or other categories are common. Although loan distribution policy may differ among banks, international loans are generally granted in the following categories:

- import and export financing
- loans to corporations or their overseas branches, subsidiaries, or affiliates with a parent guarantee or other form of support
- loans granted to foreign local borrowers including foreign entities of U.S. concerns that borrow without any form of support from the parent corporation
- loans and placements to foreign banks or to overseas branches of U.S. banks
- loans to foreign governments or foreign governmental entities

The categories of credit extensions that the bank's international division should engage in and the nature of any limitations will depend on the particular bank and its customers. Deviations from policy limitations that have been approved by the board of directors or its designated committee(s) should be allowed to meet the changing requirements of the bank's customers. During times of heavy loan demand in one category, an inflexible loan distribution policy could cause that category to be slighted in favor of another.

Types of credits. The lending policy should state the types of international credits that the bank can make and set guidelines to follow in granting specific credits. The decision about the types of credits to be granted should be based on consideration of the expertise of the lending officers, deposit structure of the bank, and anticipated credit needs of its customers. Complex credits requiring more than normal policing should be avoided unless or until the bank obtains the necessary personnel to administer those credits properly. Types of credit that have resulted in an abnormal loss to the bank's international division should be controlled or avoided within the framework of stated policy. Syndications and other types of term loans should be limited to a given percentage of the bank's stable funds.

Maximum maturities. International credits should be granted with realistic repayment plans. Maturity scheduling should be related to the anticipated source of repayment, the purpose of the credit, the useful life of the collateral, and the degree of country risk. For term loans, a lending policy should state the maximum number of months during which loans may be amortized. Specific procedures should be developed for situations requiring balloon payments and modifications to the original terms of a loan. If the bank requires a cleanup (out-of-debt) period for lines of credit, that period should be explicitly stated.

Loan pricing. Interest rates, fees, commissions, and discounts on various loan types established by the loan policy must be sufficient to cover the costs of funds loaned, servicing of the loan (including general overhead), and probable losses, while providing for a reasonable rate of return. Periodic review allows the rates to be adjusted to account for changes in costs and competitive factors. Additionally, the bank must establish practices to ensure a continuous examination of the relationships between loan pricing and the cost of funds.

Foreign-exchange risks. Lending policy should include controls that minimize risks for loan portfolios in one currency funded by borrowings in another. These activities must be identified and should be limited by the bank if—

- a particular foreign government is expected to impose stringent exchange controls;
- the currencies involved are or will be subject to wide exchange-rate fluctuations; or
- political, social, or economic developments are likely to intensify exchange risks.

Multicurrency credit commitments permit borrowers to select from a specific list of currencies the one they prefer to use in each rollover period. The listed currencies, however, may be unavailable or available only at a high cost. The bank should protect itself by stating in the loan agreement that its requirement to provide any of the currencies listed is subject to availability at the time requested by the borrower. For detailed information on foreign-exchange risks, see section 7100, ''International—Foreign Exchange.''

Documentation and collateral. Trade financing often represents a significant amount of an international division's lending activity. In this type of financing, the bank deals only in documents, while its customer is responsible for the merchandise under the terms of the sales contract. The bank's control of documents, especially title documents, is crucial. Lending officers and applicable personnel, therefore, must be knowledgeable in handling documentation, which may be the bank's ultimate support for certain transactions.

The bank must establish policies for taking overseas collateral as security for a loan to ensure that local required procedures are met. For example, in many countries, liens on fixed assets must be registered with the local government, depending on the type of asset. Lending against current assets also requires special care and monitoring. The bank must know which countries do not recognize the legality of trust receipts as recognized in the United States. In other countries, borrowers sign powers of attorney or similar documents permitting lenders to take specifically defined collateral at any time. For these and other reasons, the bank must retain local lawyers who are thoroughly familiar with that country's laws, regulations, and practices and who will check loan agreements, guarantees, debt instruments, drafts, corporate resolutions, and other loan documentation. There are significant differences between loan agreements drawn in the United States and those drawn abroad. Nevertheless, the bank must ensure that its loan agreements with borrowers protect it adequately. Generally, few restrictive covenants are required for international loans because of competition in offshore markets and differing local practices. Nevertheless, the bank should insist on protective covenants when appropriate, especially if the borrowers are small or medium-sized obligors. The bank also should ensure that loan agreements provide for the borrower to reimburse the lender for certain unanticipated costs, including the imposition of taxes on interest withheld at the source without corresponding credits gained on the levy of U.S. taxes and the need to establish or increase bad debt reserves.

Financial information. Current and complete financial information is necessary at the inception and throughout the term of an international loan. The lending policy should specifically define financial-statement requirements for businesses, foreign banks, foreign governments, other foreign public-sector entities, and individuals, and it should include criteria for the requirement of audited, nonaudited, fiscal, interim, operating, cash-flow, and other statements. The requirements should be defined clearly enough so that any credit data exception in the examination report is a clear exception to the bank's lending policy.

The reliability of financial statements and accompanying information differs greatly among countries. In some countries, accounting standards and traditions are lax and audited statements are virtually unknown. Financial information provided for tax-collection purposes in foreign countries may differ from that given in confidence to the bank to obtain credit.

In analyzing financial statements of foreign entities, factors are present that do not exist when analyzing those of U.S. enterprises, such as markedly different accounting concepts, the wide use of ''hidden reserves,'' translation problems, different methods of valuing assets, or unfamiliar and sharply different legal principles. A general rule in analyzing local currency statements is not to translate figures to U.S. dollar equivalents. Fluctuating exchange rates can have a significant impact on the analysis of U.S. dollar equivalents over a period of time. If a loan is to be repaid in currency other than the borrower's domestic currency, an analysis of probable future foreign-exchange-rate movements is necessary to assess the borrower's ability to generate sufficient local currency to buy the necessary exchange. An analysis of the availability of exchange is also required to ensure full repayment at maturity. Financial Accounting Standards Board Statement No. 52, "Foreign-Currency Translation," takes certain translation adjustments out of earnings and places them in a separate component of equity capital ("foreign-currency translation adjustments"), thereby reducing the fluctuations in earnings produced by changing exchange rates. Since the financial information provided is not always reliable, the bank's policies should enable it to determine by other means the capacity, integrity, experience, and reputation of the foreign borrower.

Extensions of credit to foreign banks constitute an important segment of an international division's foreign loans. It is important to obtain information on the nature of the bank's business; its assets, liabilities, and contingent accounts; and its record of past earnings. A review of these data should lead to a determination of the strength of the bank and its ability to meet its obligations in the foreseeable future. At minimum, this review should include—

- the size and liquidity of primary and secondary reserves;
- the nature of lending activities, including types and terms of loans, extent of collateral held, and loss experience;
- lending policies and controls in effect to ensure compliance with applicable lending laws and regulations;
- the size and character of investments;
- the size of fixed assets;
- the size and nature of investments in subsidiaries and other affiliates and the extent to which the bank will support those entities in times of difficulty;
- the source and nature of deposits and their volatility;
- the nature and extent of other liabilities and contingent liabilities, including standby facilities;
- the earnings and dividend record and the adequacy of capital;
- the activities of the bank in the foreign-exchange and interbank markets;
- the size and character of the bank's international business; and
- the competency of management.

The quality of management is the key to the analysis of foreign banks and is best determined by frequent visits by officers of the lending bank. Credit checks from other lenders should be required with periodic updates. Credit reports are not available in all countries and, when provided, are often incomplete or vague. Consequently, there is no substitute for firsthand information obtained from visits to overseas banks.

Country risk. Balance of payments; exchange control; and economic, political, and social information on each borrower's home country should be on file to enable the bank to assess the elements of country risk. The lack of this information is as serious a weakness as the lack of financial information on the borrowers. For additional information, see section 7040, "International—Transfer Risk."

Limits and guidelines for purchasing loans. Purchasing loans from dealers or correspondent banks is a common practice in banks with limited opportunities to generate international credit extensions on their own. However, these purchases may restrict a bank to low-profit loans at narrow spreads over a medium-to long-term period. Buying loans seldom builds relationships with borrowers since the relationship generally stays with the bank originating the loan. Therefore, the lending policy should limit the amount of paper purchased from any one outside source and should state an aggregate limit on all these loans.

Limitation on aggregate outstanding loans. Limitations on the total amount of loans outstanding relative to other balance-sheet accounts should be established for the bank, with limits (or sublimits) applicable to international loans clearly defined. Controls over the international loan portfolio are usually expressed relative to deposits, capital structure, or total assets.

Concentration of credits. The same types of concentrations of credits found in a domestic loan portfolio may exist in the international portfolio. In international banking, however, an additional concentration involves loans to a foreign government, its agencies, and its majority-owned or -controlled entities. Loans to specific private businesses may be included in those concentrations if an interrelationship exists in the form of guarantees, moral commitments, significant subsidies, or other factors indicating dependence on the government. The bank's directorate should evaluate the risks involved in various concentrations and determine those concentrations that should be avoided or limited. The lending policy should also require that all concentrations in the international division be reviewed and reported frequently. For a full discussion of this component, see section 2050, "Concentrations of Credits."

Loan authority. The lending policy should establish written limits for all international lending officers. Lending limits also may be established for group authority, allowing a combination of officers or a committee to approve loans larger than those the members would be permitted to approve individually. The reporting procedures and the frequency of committee meetings should be defined. If the bank operates foreign branches, head office–delegated lending authority should be clearly defined and understood by overseas lending officers.

Nonperforming credits and charge-offs. The lending policy should define nonperforming credit extensions of all types (delinquencies, nonaccruals, or reduced rates) and should specify their accounting and reporting requirements. Reports should be submitted regularly to the board of directors and senior management. The management of banks with overseas branches must take extra care to define and communicate their banks' policies and procedures on nonperforming credits to ensure that all bank offices are properly identifying, accounting for, and reporting credits. The reports should include sufficient detail to allow for the determination of risk factors, loss potentials, and alternative courses of action to effect repayment of nonperforming credits. The policy governing delinquent credits should require a follow-up notice procedure that is systematic and progressively stronger. Guidelines should be established to ensure that all accounts are presented to and reviewed by senior management or the directorate for potential charge-off at a stated period of delinquency.

Other. The lending policy should be supplemented with other written guidelines for specific departments concerned with credit extensions, such as letters of credit, banker's acceptances, and discounted trade bills. Written policies and procedures approved and enforced in those departments should be referenced in the general lending policy of the bank.

Before a bank grants international credit, its objectives, policies, and practices must be clearly established. The bank must consider its overall size, financial resources, the nature of its customers, its geographic location, and the qualifications and skills of its staff. An examiner should review policies and practices to determine if they are clearly defined and adequate to monitor the condition of the portfolio. If written guidelines do not exist, there is a major deficiency in the lending area, and the board of directors is not properly discharging its duties and responsibilities. If no exception is taken to the objectives, policies, and practices, the international loan portfolio can then be reviewed to ensure compliance.

The failure of the directors to establish a sound international lending policy, of the management to establish adequate written procedures, or of both to monitor and administer the international lending function within established guidelines has resulted in serious problems for banks. Major sources and causes of loan trouble, as discussed in domestic "Loan Portfolio Management," section 2040, also apply to international lending.

International—Loan Portfolio Management
Examination Objectives
Effective date May 1996

Section 7020.2

1. To determine if policies, practices, procedures, and internal controls for international loan portfolio management are adequate.
2. To determine if bank officers are operating in conformance with the established bank guidelines.
3. To determine the scope and adequacy of the audit function as it relates to international lending procedures.
4. To determine the overall quality of the international loan portfolio and how that quality affects the soundness of the bank.
5. To prepare information on the bank's lending function in a concise, reportable format.
6. To determine compliance with applicable laws and regulations.
7. To recommend corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws and regulations are cited.

1. If selected for implementation, complete or update the International Loan Portfolio Management section of the Internal Control Questionnaire.
2. Test for compliance with policies, practices, procedures, and internal controls in conjuction with performing the remaining examining procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
3. Request reports on the following from the bank's international division, by department, as of the examination date unless otherwise specified:
   a. Past-due loans. This report should cover:
      - Single payment and demand notes past due.
      - Single payment and demand notes on which interest is due and unpaid for 30 days or more.
      - Consumer, mortgage and term loans payable in regular installments on which one installment is due and unpaid for 30 days or more.
      - Outstandings under cancelled advance (overdraft) facilities that are unpaid.
      - Discounted (purchased) outgoing foreign bills matured and unpaid and advances secured by pledged delinquent foreign bills.
      - Unauthorized overdrafts including any resulting from customers not paying the bank for banker's acceptances or drafts it paid.

      And should include the following information:
      - Name of the obligor.
      - Original amount of the loan.
      - Outstanding balance of the loan.
      - Date the loan was made.
      - Due date.
      - Terms of the loan.
      - Number of payments the loan is delinquent.
      - Date of the borrower's last payment.
      - Date to which interest is paid.

      For larger international loans, the report should also include:
      - Purpose of the loan.
      - Any action being taken to bring the loan current.
   b. International loans on which interest is not being collected in accordance with the terms of the loan.
   c. International loans the terms of which have been modified by a reduction of interest rate or principal payment or by a deferral of interest or principal.
   d. International loans for which repayment terms have been restructured.
   e. International loan participations purchased and sold and participations in consortium credits since the previous examination.
   f. International loans sold in full since the previous examination.
   g. International credits considered ''problem credits'' by management (this report may be either as of the examination date or as of the date the report was last submitted to the officer's loan review committee(s), the loan and discount committee(s), or the board of directors).
   h. International credit commitments and other contingent liabilities.
   i. Loans secured by stock of other banks and rights, interest, or powers of a savings and loan association.
   j. Extensions of credit to employees, officers, directors, or their interests.
   k. Extensions of credit to executive officers, directors, principal shareholders and their interests of correspondent banks.
   l. Miscellaneous loan debit and credit suspense accounts.
   m. Current interest rate structure.
   n. Current lending authorities of officers and credit committee(s).
4. Obtain the following information:
   a. A copy of written policies covering all international lending functions.
   b. A statement of whether a standing committee administers the lending function.
   c. Copies of reports furnished to the board of directors for its meetings.
   d. Lists of directors, executive officers, principal shareholders and their interests.
   e. A summary of the officer borrowing report (debts to own and other banks).

   f. A list of previously charged-off loans approved by the directors.
5. Obtain a copy of the latest reports furnished to the international loan and discount committee(s). (The domestic loan and discount committee(s) sometimes handle(s) international loans and discounts.)
6. Review international lending policies and updates and abstract appropriate excerpts on:
   a. Distribution of loans by category.
   b. Geographic area and country exposure limitations.
   c. Type of borrowing and industrial concentration limitations.
   d. Lending authorities of committees and officers.
   e. Any prohibited types of international loans.
   f. Maximum maturities for various types of international loans.
   g. Interest rate structure.
   h. Minimum downpayment for various types of loans.
   i. Collateral appraisal policies including:
      - Persons authorized to perform appraisals.
      - Lending values of various types of assets.
   j. Financial information requirements by types of loans.
   k. Guidelines for purchasing other banker's acceptances and commercial paper.
   l. Guidelines for loans to major shareholders, directors, officers, or their interests.
7. When more than one international lending policy exists, determine if they are internally consistent by reviewing the guidelines previously obtained.
8. Review minutes of the bank's international loan and discount committee(s) meetings to obtain:
   a. Present members and their attendance record.
   b. Scope of work performed.
   c. Any information considered useful in the examination of specific loan categories or other areas of the bank.
9. Compare reports furnished to the board of directors and the loan and discount committee(s), and those received from the bank in step 3 to determine any material differences and that the differences are transmitted to the board in a timely manner.
10. Compare the lists of directors, officers and their related interests to determine:
    a. Preliminary compliance with Regulation O (12 CFR 215) (loans to insiders).
    b. Preliminary compliance with established policies.
11. Perform the following steps for past-due loans:
    a. Compare the following to determine any material inconsistencies:
       - The past-due schedule received in step 3. Delinquency reports submitted to the board.
       - List of loans considered ''problem'' loans by management.
    b. Scan the delinquency lists submitted to the board of directors and senior management to determine that reports are sufficiently detailed to evaluate risk factors.
    c. Compile current aggregate totals of past-due paper.
12. Perform the following using the loan commitments and contingent schedules obtained in step 3:
    a. Reconcile appropriate contingency totals to memoranda ledger controls.
    b. Review reconciling items for reasonableness.
13. Obtain the listing of Uniform Review of Shared National Credits and update the listing based on information obtained in step 3.
14. Obtain the classifications and categories of strong, moderately strong, and weak countries from Interagency Country Exposure Review Committee meeting for which writeups have been made available and update that data based on information obtained in step 3.
15. Distribute the applicable schedules and other information obtained in the preceding steps to the examiners performing the loan examination programs. Request that the examiners test the accuracy of the information. Also, request that they perform appropriate steps in the separate program ''Concentration of Credits.''
16. Determine the general distribution and characteristics of the international loan portfolio by:
    a. Determining the percentage of total loans in specific classes and geographic areas.
    b. Comparing international loan category distributions to policy guidelines.

17. Obtain the results of the reviews performed of the various segments of the international division during the course of the examination, and perform the following:
    a. Determine any nonadherence to internally established policies, practices, procedures, and controls.
    b. Compare the various international division results to determine the extent of nonadherence and if it is systemwide.
    c. Organize internal guideline exceptions in order of relative importance.
    d. Determine the aggregate amount of statutory bad debts.
    e. Organize violations by law and regulation.
    f. Review international credit classifications and assets listed for special mention to determine:
        - Inclusion of all necessary information.
        - Substantiation of classification or criticism.
    g. Determine the aggregate amount of credit extensions listed in each of the four levels of criticism.
    h. Compile a listing of all credit extensions not supported by current and satisfactory credit information.
    i. Compile a listing of all credit extensions not supported by complete collateral documentation.
    j. Review the separate procedures for ''Concentration of Credits'' and determine:
        - If all necessary data is included.
        - If there is substantiation for including specific items in the report of examination as a concentration.
        - If the concentration is undue or unwarranted.
    k. Compute the following ratios and compare to computations from prior examinations:
        - Aggregate international division past due paper to international division loans and overdrafts outstanding.
        - Aggregate international division "A" paper to international division past due.
        - Total international division past due, nonaccural and renegotiated rate credits to total international division credits.
        - Aggregate classified international credits to primary capital funds.
        - Aggregate classified international credit to total bank classified credits.
        - Weighted classified international credits to primary capital funds.
18. Forward the totals of international division loss and doubtful classifications to the examiner assigned to analyze the adequacy of the bank's capital.
19. Compare management's list of ''problem'' credits from step 3 to the examiner's listing of international classified and criticized credits to determine the extent of management's knowledge of its own international credit problems.
20. Determine, through an in-depth analysis of information previously generated, the causes of existing problems or weaknesses within the international division's systems which present potential for future problems.
21. Forward the following information to the examiner assigned to analyze the bank's loan loss reserves.
    a. A listing of international division credits considered "problem" credits by management.
    b. A listing of classified and criticized credits relating to the international division.
    c. A listing of previously charged-off loans.
22. Organize the results of the examination of the international lending function to facilitate discussion with the examiner-in-charge and, upon approval, with senior management of the bank.
23. During discussion with senior management, structure inquiries in such a manner as to:
    a. Gain insight into management's international lending philosophy.
    b. Elicit management responses for correction of deficiencies.
24. Write, in appropriate report format, general remarks which may include:
    a. The scope of the examination of the international lending function.
    b. The quality of internal policies, practices, procedures, and controls over the international lending function.
    c. The general level of adherence to internal policies, practices, procedures, and controls that govern the bank's international lending function.
    d. The scope and adequacy of the internal loan review system regarding international credit extensions.
    e. The quality of the entire international credit portfolio.

f. The competency of management with respect to the international lending function.

g. Causes of existing credit problems.

h. Expectations for continued sound international lending and correction of existing credit control and quality deficiencies.

i. Promises made by management for correction of credit control and quality deficiencies.

j. Credit extensions to insiders and their interests.

25. Compile or prepare all information which provides substantiation for your general remarks.

26. Update the workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices, and procedures for managing the bank's loan portfolio. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information.

1. Has the board of directors, consistent with its duties and responsibilities, adopted written international loan portfolio management objectives and policies that:
   a. Establish suggested guidelines for distribution of international loans by different categories?
   b. Establish geographic area limits for credits?
   c. Establish suggested guidelines for aggregate outstanding international loans in relation to other balance sheet categories?
   d. Establish international loan authority of committees and individual lending officers?
   e. Define acceptable types of international loans?
   f. Establish maximum maturities for various types of international loans?
   g. Establish international loan pricing?
   h. Establish appraisal policy?
   i. Establish minimum financial information required at inception of the credits?
   j. Establish limits and guidelines for purchasing paper?
   k. Establish guidelines for loans to bank directors, officers, and their related interests?
   l. Establish collection procedures?
   m. Define the duties and responsibilities of international loan officers and loan committees?
   n. Outline international loan portfolio management objectives that acknowledge:
      - Concentrations of credit within specific industries and relating to country credits?
      - The need to employ personnel with specialized knowledge and experience?
      - Possible conflicts of interest?
2. Are international loan portfolio management objectives and policies reviewed at least annually to determine if they are compatible with changing market conditions?
3. Are the following reported to the board of directors or its designated committees (indicate which) at their regular meetings (at least monthly):
   a. Past-due single payment loans (if so, indicate the minimum days past due for them to be included ___________)?
   b. Loans on which interest only is past due (if so, indicate the minimum days past due for them to be included ________)?
   c. Term loans on which one installment is past due (if so, indicate the minimum days past due for them to be included ___________)?
   d. Outstandings under overdraft facilities that are unpaid (if so, indicate the minimum days past due for them to be included ___________)?
   e. Discounted (purchased) outgoing foreign bills matured and unpaid (or advances collateralized by pledged delinquent foreign bills) (if so, indicate the minimum days past due for them to be included ___________)?
   f. Overdrafts resulting from a customer not paying the bank for banker's acceptances or drafts the bank paid (if so, indicate minimum days past due for them to be included ___________)?
   g. Total outstanding international loan commitments?
   h. Loans requiring special attention?
   i. New loans and loan renewals or restructured loans?
4. Are reports submitted to the board or its committees rechecked by a designated person for possible omissions prior to their submission?
5. Are written applications required for all international loans?
6. Does the bank maintain credit files for all international borrowers?
7. Does the credit file contain information on:
   a. The purpose of the loan?
   b. The planned repayment schedule?
   c. The disposition of loan proceeds?

  d. The points to be raised regarding the borrower from which to base questions during officer calling programs?
  e. Lending officer calls on customers and foreign countries?
8. Does the bank require periodic submission of financial statements by all international division borrowers whose loans are not fully secured by readily marketable collateral?
9. Is a tickler file maintained to assure that current financial information is requested and received?
10. Does the bank require submission of certified financial statements based on dollar amount of commitment (if so, state the dollar or equivalent minimum $________)?
11. Are financial statements of foreign borrowers spread in the credit file by local currency and U.S. dollar equivalents, if appropriate, on a yearly comparative basis?
12. Are borrower financial statements spread with those of comparable borrowers in the same country?
13. Does the bank perform a credit investigation on proposed and existing borrowers for new loan applications?
14. Does the bank have a periodic lending officer call program for:
  a. Customers?
  b. Countries?
15. Is it required that all international loan commitments be in writing?
16. Are international lines of credit reviewed and updated at least annually?
17. Are borrower's outstanding liabilities checked to appropriate lines of credit prior to granting additional advances?
18. Is there an internal review system (it may be a function of the internal audit department) which covers each department and:
  a. Rechecks interest, discounts, fees, commissions, and maturity date computations?
  b. Re-examines debt instruments for proper execution, receipt of all required supporting papers, and proper disclosure forms?
  c. Determines that international loan approvals are within the limits of the bank's lending authorities?
  d. Determines that international loans outstanding and committed are within the bank's foreign country or foreign currency limits?
  e. Determines that notes and debt instruments are being approved initially by the loan officer?
  f. Ascertains that new international loans are within the limitations set for the borrower by corporate resolution?
  g. Rechecks liability ledgers to determine that new loans have been accurately posted?
  h. Rechecks the preparation of maturity and interest notices?
  i. Examines entries to various general ledger loan controls?
  j. Confirms collateral, loans, and discounts with customers on a test basis?
19. Does the bank have an international loan review section or the equivalent?
20. Is the loan review section independent of the international lending function?
21. Are the initial results of the international loan review process submitted to a person or committee which is also independent of the international lending function?
22. Are all international loans exceeding a certain dollar amount selected for review?
23. Do international lending officers recommend loans for review?
24. Is a method, other than those detailed in steps 23 or 24, used to select international loans for review (if so, provide details)?
25. Are internal reviews conducted at least annually for all international lending areas?
26. In an officer identification system, are guidelines in effect which define the consequences of an officer withholding a loan from the review process?
27. Is the bank's international problem loan list periodically updated by the lending officers?
28. Does the bank maintain a list of international loans reviewed, indicating the date of the review and the credit rating?
29. Does the loan review section prepare summaries to substantiate credit ratings, including pass loans?
30. Are loan review summaries maintained in a central location or in appropriate credit files?
31. Are followup procedures in effect for internally classified international loans, including an update memorandum to the appropriate credit file?
32. Are officers and employees prohibited from holding blank signed notes and other debt

instruments in anticipation of future borrowings?

33. Are paid and renewed notes cancelled and promptly returned to customers?
34. Do loan proceeds disbursed in cash require a customer receipt?
35. Are international loan records retained in accordance with record retention policy and legal requirements?
36. Are new notes microfilmed daily?
37. Is a systematic and progressively stronger follow-up notice procedure utilized for delinquent loans?
38. Does the bank maintain loan interest, discount, fee, and commission rate schedules for various types of international loans?
39. Does the bank periodically update the above rate schedules (if so, state normal frequency ___________)?
40. Does the bank maintain records in sufficient detail to generate the following information by type of advance:
    a. The cost of funds loaned?
    b. The cost of servicing loans, including overhead?
    c. The cost factor of probable losses?
    d. The programmed profit margin?
41. Does the international division maintain adequate and current country analysis information?
42. Has the international division conducted studies for those industries in which it is a substantial lender?

CONCLUSION

43. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
44. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

A bank's international division lends, either directly or through state entities, to U.S. importers and exporters, foreign companies, multinational corporations, foreign banks, and foreign governments. The terms of these lending activities are consistent with the purpose of the financing.

Short-term working-capital loans to commercial business enterprises commonly finance inventories or receivables arising from trade. Receivable pledges, warehouse receipts, and liens on inventory or commodities may be held as collateral. However, in certain countries, these forms of collateral are not legally recognized and, therefore, the banks must be thoroughly familiar with applicable local laws, regulations, and practices. Loans to foreign banks are usually short-term and unsecured.

Medium-term lending (one to five years) generally represents capital goods financing, shipping loans, and various specialized credits. Long-term loans (those exceeding five years) are normally used to finance extensive projects of multinational corporations, foreign governments, or foreign state entities. Government guarantees of private long-term loans are common when the project has significant importance to a national economy.

The methods of loan financing in an international division are the same as those for domestic lending. Loans in the international division may be direct or discounted. In both of these instances, the bank holds a promissory note or similar instrument evidencing indebtedness. Current account advances, however, are a category of loans unique to international banking. This method of financing is an American substitute, used by banks in the United States, for the European method of financing by overdrafts, which is also a common lending method of overseas offices of U.S. banks. Current account advances, like overdrafts, are extensions of credit in which no instrument of specific indebtedness is used; however, a signed agreement is on file stating the conditions applicable to advances made by the bank to the obligor. Other types of international financing treated as loans include own acceptances purchased (discounted), other banker's acceptances purchased, and discounted trade acceptances.

The same credit risks apply to international division loans as to those made in domestic loan departments, with the addition of country risk, which is the primary additional component that distinguishes an international loan from a domestic loan. Country risk encompasses the entire spectrum of risks arising from the economic, social, and political environments of a foreign country and from the governmental policies structured to respond to those conditions that may have adverse consequences for the repayment of a foreign borrower's debt. More specifically, there is a risk associated with a borrower's capacity to obtain the foreign exchange required to service its cross-border debt (that is, transfer risk). An obligor may have the financial means in its domestic currency to repay its indebtedness, but nationalization, expropriation, governmental repudiation of external indebtedness, the imposition of exchange controls, or currency devaluation may preclude the lender from obtaining timely repayment. Apart from a nation's outright repudiation of external debt, these developments might not result in an uncollectible extension of credit; however, the delay in collection could adversely affect the condition of the lending bank.

This section is designed to apply to most types of loans and current account advances found in an international division. However, lending areas in many international divisions and overseas branches are often segregated into separate departments and differ substantially from international loans and current account advances. Those are discussed in separate sections of this manual: "International—Financing Foreign Receivables," "International—Banker's Acceptances," "International—Letters of Credit," and "International—Guarantees Issued," sections 7050, 7060, 7080, and 7090, respectively.

1. To determine the adequacy of policies, practices, procedures, and internal controls for international loans and advances.
2. To determine if bank officers are operating in conformance with established bank guidelines.
3. To evaluate the portfolio for credit quality, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function as it relates to international lending procedures.
5. To determine compliance with applicable laws and regulations.
6. To recommend corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws and regulations are cited.

1. If selected for implementation, complete or update the international lending section of the internal control questionnaire.
2. Determine the scope of the examination on the basis of the evaluation of internal controls and the work performed by internal and external auditors.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest reviews done by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
4. Obtain a trial balance of the customer liability records.
   a. Reconcile balances to department controls and the general ledger.
   b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select borrowers for examination, review the loan and collateral documentation, and prepare credit line cards.
6. Obtain the following information:
   a. past-due, nonaccrual, and reduced-rate loans and advances
   b. loans whose terms have been modified by a reduction in interest rate or principal payment or by a deferral of interest or principal
   c. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination.
   d. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
   e. loan commitments and other contingent liabilities
   f. reports of the indebtedness of executive officers, principal shareholders, and their related interests to correspondent banks
   g. a list of correspondent banks
   h. extensions of credit to major stockholders of the bank and to bank employees, officers, and directors, and to their related interests (specify which officers are considered executive officers)
   i. miscellaneous loan-debit and credit-suspense accounts
   j. Interagency Country Exposure Review Committee (ICERC) determinations
   k. criticized Shared National Credits (applicable international division credits)
   l. loans considered "problem loans" by management
   m. specific guidelines in the lending policy
   n. current lending authorities of bank officers and credit committees
   o. the current interest-rate lending structure of the bank
   p. any useful information on international division credit extensions resulting from the review of the minutes of the loan and discount committee(s) and any other credit committee(s)
   q. reports on international division credit extensions furnished to the loan and discount committee(s) and any other credit committee(s)
   r. relevant reports furnished to the board of directors
   s. loans criticized during the previous examination
7. Review the information received and perform the following procedures.
   a. *Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap.*
      • Participations only:
        — Test participation certificates and records, and determine that the parties share in the risks and contractual payments on a pro rata basis.
        — Determine that the bank exercises similar controls and procedures over loans serviced for others as for loans in its own portfolio.
        — Determine that the bank, as lead or agent in a credit, exercises similar controls and procedures over syndications and participations sold as for loans in its own portfolio.
      • All transfers:
        — Investigate any situations in which loans were transferred immediately

before the date of examination to determine if any were transferred to avoid possible criticism during the examination.

— Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.

— Determine that the consideration received for low-quality loans transferred from the bank to an affiliate is properly reflected on the bank's books and is equal to the fair market value of the transferred loans (while fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such loans as well as an appropriate risk premium). Section 23A of the Federal Reserve Act generally prohibits a state member bank from purchasing a low-quality asset.

— Determine that low-quality assets transferred to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and its affiliate.

— If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:

(1) name of originating institution
(2) name of receiving institution
(3) type of transfer (i.e., participation, purchase or sale, swap)
(4) date of transfer
(5) total number of loans transferred
(6) total dollar amount of loans transferred
(7) status of the loans when transferred (e.g., nonperforming, classified, etc.)
(8) any other information that would be helpful to the other regulator

b. *Miscellaneous loan-debit and credit-suspense accounts.*
   - Discuss with management any large or old items.
   - Perform additional procedures as considered appropriate.

c. *Loan commitments and other contingent liabilities.* Analyze the commitment or contingent liability together with the combined amounts of the current loan balance, if any.

d. *Loans criticized during the previous examination.* Determine disposition of loans so criticized by transcribing the current balance and payment status or the date the loan was repaid and the source of repayment.
   - Investigate any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank or as a result of a participation, sale, or swap with another lending institution.
   - If repayment was a result of a participation, sale, or swap, refer to step 7a of this section for the appropriate examination procedures.

e. *Shared National Credits.*
   - Compare the schedule of international loans and current account advances included in the Uniform Review of National Credits program with the bank's reports of international loans outstanding.
   - For each loan or advance so identified, transcribe appropriate information to line cards. No further examination procedures are necessary for these credits.

f. *ICERC credits.*
   - Identify any loans that were selected for review that are criticized for transfer-risk reasons by ICERC.
   - For each loan or advance so identified, transcribe appropriate information to line cards. No further examination procedures are necessary for these credits.

8. Transcribe or compare information from the above schedules to credit line cards, where appropriate, and indicate any past-due status.
9. Prepare credit line cards for any international loan not previously selected for review that, on the basis of information derived

from the above schedules, requires an in-depth review.

10. Obtain customer liability and other information on common borrowers from examiners assigned to cash items, overdrafts, and other lending areas, and together decide who will review the borrowing relationship. Pass or retain complete credit line cards.
11. Prepare collateral line cards for all borrowers selected in the preceding steps.
12. Obtain credit files for all borrowers for whom examiner credit line cards were prepared, and complete the credit line cards, where appropriate. To analyze the international loans, perform the following procedures:
    a. Analyze balance sheets and profit-and-loss figures as shown in current and preceding financial statements, and determine the existence of any favorable or adverse trends or ratios.
    b. Review components of the balance sheet as shown in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure of the borrower.
    c. Review supporting information for the major balance-sheet items and the techniques used in consolidation, and determine the primary sources of repayment and evaluate the adequacy of those sources.
    d. Ascertain compliance with provisions of credit agreements.
    e. Review digests of officers' memoranda, mercantile reports, credit checks, and correspondence to determine the existence of any problems that might deter the contractual repayment programs of the borrower's indebtedness.
    f. Relate collateral values to outstanding debt, and determine when the collateral was last appraised.
    g. Compare interest rates charged with the current interest-rate schedule of the bank, and determine that the terms are within established guidelines.
    h. Compare the original amounts of the customer's obligations to the bank with the lending officer's authority.
    i. Analyze secondary support afforded by guarantors and endorsers.
    j. Ascertain compliance with the bank's established international loan policy.
13. For loans selected for review, check the central liability file for borrowers indebted above the cutoff line or for borrowers displaying credit weakness or suspected of having additional liability in other lending areas.
14. Transcribe significant liability and other information on officers, principals, and affiliations of borrowers selected for review. Cross-reference line cards to borrowers, where appropriate.
15. Determine the bank's compliance with laws and regulations pertaining to international lending by performing the following steps:
    a. *Lending limits.*
        - Determine the bank's lending limit as prescribed by state law.
        - Determine advances or combinations of advances with aggregate balances above the limit, if any.
    b. *Section 23A, Relations with Affiliates (12 USC 371c), and section 23B, Restrictions on Transactions with Affiliates (12 USC 371c-1), of the Federal Reserve Act, and the Board's Regulation W.*
        - Obtain a listing of loans to affiliates.
        - Test-check the listing against the bank's customer liability records to determine its accuracy and completeness.
        - Ensure that loans to affiliates do not exceed limits of section 23A and Regulation W.
        - Ensure that loans to affiliates meet the collateral requirements of section 23A and Regulation W.
        - Determine that low-quality assets have not been purchased from an affiliate.
        - Determine that all covered transactions with affiliates are on terms and conditions that are consistent with safe and sound banking practices.
        - Determine that all transactions with affiliates comply with the market-terms requirement of section 23B and Regulation W.
    c. *18 USC 215, Receipt of Commission or Gift for Procuring Loans.*
        - While examining the international lending function, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.

- Investigate any such suspected instances.

d. *Federal Election Campaign Act (2 USC 441b), Political Contributions and Loans.*
- While examining the international lending area, determine the existence of any loans in connection with any political campaigns.
- Review each such credit to determine whether it is made in accordance with applicable banking laws and in the ordinary course of business.

e. *Regulation Y (12 CFR 225.7), Tie-In Provisions.* While reviewing international credit and collateral files, especially loan agreements, determine whether any extension of credit is conditioned upon—
- obtaining or providing any additional credit, property, or service from or to the bank or its holding company (or a subsidiary of its holding company), other than a loan, discount, deposit, or trust service, or
- the customer not obtaining a credit, property, or service from a competitor of the bank or its holding company (or a subsidiary of its holding company), other than a reasonable condition to ensure the soundness of the credit.

f. *Insider lending activities.* The examination procedures for checking compliance with the relevant law and regulation covering insider lending activities and reporting requirements are as follows: (The examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment.)
- *Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders and Their Related Interests.* While reviewing information relating to insiders received from the bank or appropriate examiner (including loan participations, loans purchased and sold, and loan swaps)—
  - — test the accuracy and completeness of information about international loans by comparing it with the trial balance or loans sampled;
  - — review credit files on insider loans to determine that required information is available;
  - — determine that loans to insiders do not contain terms more favorable than those afforded other borrowers;
  - — determine that loans to insiders do not involve more than normal risk of repayment or present other unfavorable features;
  - — determine that loans to insiders do not exceed the lending limits imposed by Regulation O;
  - — if prior approval by the bank's board was required for a loan to an insider, determine that such approval was obtained;
  - — determine compliance with the various reporting requirements for insider loans;
  - — determine that the bank has made provisions to comply with the disclosure requirements for insider loans; and
  - — determine that the bank maintains records of public disclosure requests and the disposition of the requests for a period of two years after the dates of the requests.
- *Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (P.L. 95–630), as amended by the Garn–St Germain Depository Institutions Act of 1982, Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.*
  - — Obtain from, or request that the examiners reviewing due from banks and deposit accounts verify, a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.
  - — Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.

g. *12 USC 1828(v), Loans Secured by Bank Stock.*
- While examining international loans, determine the existence of any loans or discounts that are secured by the insured financial institution's own stock.
- In each such case, determine that the chief executive officer has promptly

reported such fact to the proper regulatory authority.

h. *12 USC 83 (Rev. Stat. 5201), made applicable to state member banks by section 9, paragraph 6, of the Federal Reserve Act (12 USC 324), Loans Secured by Own Stock (see also* Federal Reserve Regulatory Service *3–1505):*
   - While examining international loans, determine the existence of any loans secured by the bank's own shares or capital notes and debentures.
   - Confer with the examiner assigned investment securities to determine whether the bank owns any of its own shares or its own notes and debentures.
   - In each case in which such collateral or ownership exists, determine whether the collateral or ownership was taken to prevent a loss on a debt previously contracted (DPC) transaction.
   - In each case of ownership, determine whether the shares or subordinated notes and debentures have been held for a period of not more than six months.

i. *Regulation U (12 CFR 221).* While reviewing credit files, check the following for all loans that are secured directly or indirectly by margin stock and that were extended for the purpose of buying or carrying margin stock:
   - Except for credits specifically exempted under Regulation U, determine that the required Form FR U-1 has been executed for each credit by the customer and that it has been signed and accepted by a duly authorized officer of the bank acting in good faith.
   - Determine that the bank has not extended more than the maximum loan value of the collateral securing such credits, as set by section 221.7 of Regulation U, and that the margin requirements are being maintained.
   - Determine compliance with other specific exceptions and restrictions of the regulation as they relate to the credits reviewed.

j. *Regulation K (12 CFR 211) and Regulation Y (12 CFR 225), International Banking Operations.*
   - Review all applicable sections, especially those concerned with—
     - loans or extensions of credit to foreign banks,
     - loans to executive officers of foreign branches of state member banks,
     - a statement of policy or the availability of information to facilitate supervision of foreign operations, and
     - reporting and disclosure of international assets and accounting for fees on international loans.

k. *Financial Recordkeeping and Reporting of Currency and Foreign Transactions, Retention of Credit Files.* Review the operating procedures and credit file documentation, and determine if the bank retains records of each extension of credit over $10,000, specifying the name and address of the borrower, the amount of the credit, the nature and purpose of the loan, and the date thereof. (See 31 CFR 1010.410.) (Loans secured by an interest in real property are exempt.)

l. *Export-Import Bank of the United States.* Review extensions of credit to determine compliance with Eximbank's lending standards, policies, guidelines, and regulations as they relate to direct lending programs, cooperative financing facilities, private export funding, exporter credit programs, medium-term export debt obligations, leasing, loan guarantees, export credit insurance, and discount programs.

m. *7 CFR 1400–1499, Commodity Credit Corporation.* Determine the compliance of international loans relating to Commodity Credit Corporation programs.

n. *22 CFR 200–299, Agency for International Development.* Review to determine the compliance of international loans related to Agency for International Development programs.

o. *Section 909, International Lending Supervision Act (12 USC 3908).* Section 909 of the International Lending Supervision Act of 1983 (the act) requires that FDIC-insured banks and Edge and agreement corporations prepare a written economic feasibility evaluation signed by a senior official of the banking institution for any proposed extension of credit by the lead U.S. banking institution or institutions, which individually or when aggregated with credits of other U.S. banking institutions exceeds $20 million per project, to finance the construction or operation of any mining operation, any metal or mineral primary processing operation, any metal fabricating facility or operation, or any metal-making (semi- and finished) operation located outside the United States or its territories or possessions. The act stipulates that the evaluation shall consider the profit potential, the competitive and economic impact of the project, and the reasonable expectation of repayment. The act also mandates that any new evaluations be reviewed by federal examiners in the context of every examination. The following checklist should be used to test compliance with the requirements of the act:

- Does the banking institution have a written economic feasibility evaluation for all credit extensions by that banking institution alone or in conjunction with other U.S. banking institutions, which individually or when aggregated with credits of other U.S. banking institutions exceed $20 million per project, to finance any of the designated projects?
- Is the evaluation signed by a senior officer of the examined or the lead U.S. banking institution?
- Does the evaluation consider the following:
  - — profit potential of the project
  - — impact of the project on world markets
  - — inherent competitive advantages and disadvantages of the project over the entire life of the project
  - — the likely effect of the project on the overall long-term economic development of the country in which it is located
  - — the reasonable expectation of repayment from revenues generated by the project, without regard to any subsidy provided by the government involved or any instrumentality of any country

Although the bank's evaluation should be done in a professional manner, examiners need not verify its accuracy. However, any negative responses to the foregoing questions would be indicative of noncompliance with the statute and should be discussed with the appropriate level of bank management. Any apparent violations should be cited in the examination report, along with a discussion of any remedial actions taken by bank management during the examination.

16. Perform the appropriate steps in "Concentrations of Credit," section 2050.3.
17. Discuss with appropriate officers, and prepare summaries in appropriate report form of—
    a. delinquent loans;
    b. violations of laws and regulations;
    c. loans not supported by current and complete financial information;
    d. loans on which collateral documentation is deficient;
    e. concentrations of credit;
    f. criticized loans;
    g. inadequately collateralized loans;
    h. extensions of credit to major shareholders, employees, officers, directors, and their related interests;
    i. loans whose ultimate collection is questionable for any other reason; and
    j. other matters regarding the condition of the department.
18. Provide details of classified international participation loans that are not covered by the Shared National Credit Program. Include the names and addresses of all participating state member banks and copies of the criticized loan comments.
19. Provide the examiner-in-charge with your findings on—
    a. the adequacy of written policies relating to international loans;
    b. the manner in which bank officers are operating in conformance with established policy;
    c. adverse trends within the international lending function;
    d. the accuracy and completeness of the schedules obtained from "International—Loan Portfolio Management," section 7020.3.
    e. internal control deficiencies or exceptions;
    f. recommended corrective action when policies, practices, or procedures are deficient;

g. the competency of management of the international lending function; and
h. other matters of significance.

20. Update the workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices, and procedures for granting and servicing international loans. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written international loan policies that:
   a. Establish procedures for reviewing international loan applications?
   b. Define qualified borrowers?
   c. Establish minimum standards for documentation in accordance with the Uniform Commercial Code?
2. Are international loan policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

*3. Is the preparation and posting of subsidiary international loan records performed or reviewed by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

*4. Are the subsidiary international loan records (control totals) balanced daily with the appropriate general ledger accounts and reconciling items adequately investigated by persons who do not normally handle loans and post records?

5. Are the following properly recorded as "loans" for accounting and call report purposes:
   a. Acceptances of other banks purchased?
   b. Own acceptances purchased (discounted)?
   c. Customer's liability to the bank on drafts paid under letters of credit for which the bank has not been reimbursed?

*6. Is a loan delinquency report prepared for and reviewed by management frequently (if so, how often ___________)?

*7. Are inquiries about loan balances received and investigated by persons who do not process loans, handle settlements, or post records?

*8. Are bookkeeping adjustments checked and approved by an appropriate officer?

9. Is a daily record maintained summarizing loan transaction details, i.e., loans granted, payments received, and interest collected, to support applicable general ledger account entries?

10. Are frequent note (or record copy) and liability trial balances prepared and reconciled monthly with control accounts by employees who do not process or record loan transactions?

INTEREST

*11. Is the preparation and posting of interest records performed or reviewed by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

12. Are any independent interest computations made and compared or adequately tested to initial interest records by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

COLLATERAL

13. Are multicopy, pre-numbered records maintained that detail the complete description of collateral pledged?
14. Are the functions of receiving and releasing collateral to borrowers and of making entries in the collateral register performed by different employees?
15. Is negotiable collateral held under joint custody?
16. Are receipts obtained and filed for released collateral?
17. Are securities valued and margin requirements reviewed at least monthly?

18. When collateral support is the cash surrender value of insurance policies, is a periodic accounting received from the insurance company and maintained with the policy?
19. Is a record maintained of entry to the collateral vault?
20. Are stock powers filed separately to bar negotiability and to deter abstraction of both the security and the negotiating instrument?
21. Are securities out for transfer, exchange, etc., controlled by pre-numbered temporary vault-out tickets?
22. Are pledged deposit accounts properly coded to negate unauthorized withdrawal of funds?
23. Are acknowledgements received for pledged deposits held at other banks?
24. Is an officer's approval necessary before collateral can be released or substituted?

OTHER

25. Are notes and advance slips safeguarded during bank hours and locked in the vault overnight?
26. Are all loan rebates approved by an officer and made only by official check?
27. Does the bank have an internal review system that:
    a. Re-examines collateral items and supporting documentation for negotiability and proper assignment?
    b. Test checks values assigned to collateral when the loan is made and at frequent intervals thereafter?
    c. Determines that items released on temporary vault-out tickets are authorized and have not been outstanding for an unreasonable length of time?
    d. Determines that loan payments are promptly posted?
28. Are all notes and advances recorded on a register or similar record and assigned consecutive numbers?
29. Are payment notices prepared and sent by someone not connected with loan processing?
30. Are any notes signed by a customer in blank and held in anticipation of future borrowings properly safeguarded?
31. Are lending officers frequently informed of maturing loans and credit lines?

CONCLUSION

32. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
33. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

When banks engage in international lending, they undertake customary credit risk as denoted by the possibility of nonpayment because of an obligor's weak financial condition or a lack of adequate collateral protection. International lending also bears risks associated with conditions within a foreign borrower's home country; these risks are commonly referred to as country risk. Conditions that may give rise to country risk include a country's underlying economic, political, and social trends and movements that may have potential consequences for foreigners' debt and equity investments in that country. In addition to the adverse effect that deteriorating economic conditions and political and social unrest may have on the rate of default by obligors in a country, country risk includes the possibility of nationalization or expropriation of assets, government repudiation of external indebtedness, exchange controls, and currency depreciation or devaluation. An assessment about the level of country risk should reflect an evaluation of the effect of prevailing (and possible future) economic, political, and social conditions on a country's ability to sustain external debt service, as well as reflect the impact of these conditions on the credit risk of individual counterparties located in the country.

Transfer risk is a facet of country risk. It is the possibility that an asset cannot be serviced in the currency of the payment because the obligor's country lacks the necessary foreign exchange or has put restraints on its availability.[1]

The traditional examination approach to commercial credit risk is treated separately in other sections of this manual. The purpose of this section is to delineate the current examination policies, objectives, and procedures for evaluating a bank's country- and transfer-risk exposures and its management system for monitoring and controlling them.

1. Exchange controls are an example of transfer risk. The Interagency Country Exposure Review Committee (ICERC) assigns ratings to foreign exposures based on its evaluation of the level of transfer risk associated with a country. See the *Guide to the Interagency Country Exposure Review Committee Process*, which was issued in November 2008, for a comprehensive discussion of the operations of the ICERC. See also section 7040.3.

COUNTRY RISK

Country or sovereign risk encompasses the entire spectrum of risks and factors that arise from the economic, social, and political environments of a foreign country that may have potential consequences for foreigners' debt and equity investments in that country. A detailed description of these factors is described below.

Macroeconomic Factors

The first factor affecting country risk is the size and structure of a country's external debt in relation to its economy, more specifically—

- the current level of short-term debt and the potential effect that a liquidity crisis would have on the ability of otherwise creditworthy borrowers in the country to continue servicing their obligations, and
- to the extent the external debt is owed by the public sector, the ability of the government to generate sufficient revenues, from taxes and other sources, to service its obligations.

The condition and vulnerability of the country's current account is also an important consideration, including—

- the level of international reserves, including forward market positions of the country's monetary authority (especially when the exchange rate is fixed);
- the level of import coverage provided by the country's international reserves;
- the importance of commodity exports as a source of revenue, the existence of any price-stabilization mechanisms, and the country's vulnerability to a downturn in either its export markets or the price of an exported commodity; and
- the potential for sharp movements in exchange rates and their effect on the relative price of the country's imports and exports.

The role of foreign sources of capital in meeting the country's financing needs is another important consideration in the analysis of country risk, including—

- the country's access to international financial markets and the potential effects of a loss of market liquidity;
- the country's relationships with private-sector creditors, including the existence of loan commitments and the attitude among bankers toward further lending to borrowers in the country;
- the country's current standing with multilateral and official creditors, including the ability of the country to qualify for and sustain an International Monetary Fund or other suitable economic adjustment program;
- the trend in foreign investments and the country's ability to attract foreign investment in the future; and
- the opportunities for privatization of government-owned entities.

Past experience has highlighted the importance of a number of other important macroeconomic considerations, including—

- the degree to which the country's economy may be adversely affected through the contagion of problems in other countries;
- the size and condition of the country's banking system, including the adequacy of the country's system for bank supervision and any potential burden of contingent liabilities that a weak banking system might place on the government;
- the extent to which state-directed lending or other government intervention may have adversely affected the soundness of the country's banking system, or the structure and competitiveness of the favored industries or companies; and
- for both in-country and cross-border exposures, the degree to which macroeconomic conditions and trends may have adversely affected the credit risk associated with counterparties in the country.

Social, Political, and Legal Climate

The analysis of country risk should also consider the country's social, political, and legal climate, including—

- the country's natural- and human-resource potential;
- the willingness and ability of the government to recognize economic or budgetary problems and implement appropriate remedial action;
- the degree to which political or regional factionalism or armed conflicts are adversely affecting the government of the country;
- any trends toward government-imposed price, interest-rate, or exchange controls;
- the degree to which the country's legal system can be relied on to fairly protect the interests of foreign creditors and investors;
- the accounting standards in the country and the reliability and transparency of financial information;
- the extent to which the country's laws and government policies protect parties in electronic transactions and promote the development of technology in a safe and sound manner;
- the extent to which government policies promote the effective management of the institution's exposures; and
- the level of adherence to international legal and business-practice standards.

Institution-Specific Factors

Finally, an institution's analysis of country risk should consider factors relating to the nature of its actual (or approved) exposures in the country, including, for example—

- the institution's business strategy and its exposure-management plans for the country;
- the mix of exposures and commitments, including the types of investments and borrowers, the distribution of maturities, the types and quality of collateral, the existence of guarantees, whether exposures are held for trading or investment, and any other distinguishing characteristics of the portfolio;
- the economic outlook for any specifically targeted industries within the country;
- the degree to which political or economic developments in a country are likely to affect the institution's chosen lines of business in the country (For instance, the unemployment rate or changes in local bankruptcy laws may affect certain activities more than others.);
- for an institution involved in capital markets, its susceptibility to changes in value based on market movements (As the market value of claims against a foreign counterparty rises, the

counterparty may become less financially sound, thus increasing the risk of nonpayment. This is especially true for over-the-counter derivative instruments.);
- the degree to which political or economic developments are likely to affect the credit risk of individual counterparties in the country (For example, foreign counterparties with healthy export markets or whose business is tied closely to supplying manufacturing entities in developed countries may have significantly less exposure to the local country's economic disruptions than do other counterparties in the country.); and
- the institution's ability to effectively manage its exposures in a country through in-country or regional representation, or by some other arrangement that ensures the timely reporting of, and response to, any problems.

Risk-Management Process for Country Risk

Country risk has an overarching effect on an institution's international activities and should explicitly be taken into account in the risk assessment of all exposures (including off-balance-sheet) to all public- and private-sector foreign-domiciled counterparties. The risk associated with even the strongest counterparties in a country will increase if, for example, political, social, or macroeconomic conditions cause the exchange rate to depreciate and the cost of servicing external debt to rise. Country risk can occur in many different forms, and the nature of specific risks can change over time. A U.S. banking organization with significant direct or indirect international exposure should have in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities. Examiners should be continually evaluating the adequacy of the country-risk management process at internationally active institutions, and they should regularly update their assessments. An institution's country-risk management process should give particular attention to any concentrations of country risk.

Country risk is not necessarily limited to institutions with direct international exposures. Domestic counterparties with significant economic dependence on a foreign country or region (for example, through export dependence) can pose an indirect country risk to institutions that do not have direct international activity. While institutions are not required to incorporate indirect country risk into a formal country-risk management process, they should nevertheless take these country-risk factors into account, where appropriate, when assessing the creditworthiness of domestic counterparties. Examiners should ensure that the overall credit-risk management process takes into account indirect country risk where applicable in all supervised institutions.

To effectively control the risk associated with international activities, institutions must have a risk-management process that focuses on the broadly defined concept of country risk. A sound country-risk management process includes effective oversight by the board of directors, adequate risk-management policies and procedures, an accurate country-exposure reporting system, an effective country-risk analysis process, a country-risk rating system, country-exposure limits, ongoing monitoring of country conditions, periodic stress testing of foreign exposures, and adequate internal controls and an audit function.

Oversight by the Board of Directors

If country risk is to be managed properly, the board of directors must oversee the process effectively. The board is responsible for periodically reviewing and approving policies governing the institution's international activities to ensure that they are consistent with the institution's strategic plans and goals. The board is also responsible for reviewing and approving limits on country exposure and ensuring that management is effectively controlling the risk. When evaluating the adequacy of the institution's capital and allowance for loan and lease losses (ALLL), the board should take into account the volume of foreign exposures and the ratings of the countries to which the institution is exposed.

Policies and Procedures for Managing Country Risk

Bank management is responsible for implementing sound, well-defined policies and procedures for managing country risk that—

- establish risk-tolerance limits;
- delineate clear lines of responsibility and accountability for country-risk management decisions;
- specify authorized activities, investments, and instruments; and
- identify both desirable and undesirable types of business.

Management should also ensure that country-risk management policies, standards, and practices are clearly communicated to the affected offices and staff.

Country-Exposure Reporting System

To effectively manage country risk, the institution must have a reliable system for capturing and categorizing the volume and nature of foreign exposures. The reporting system should cover all aspects of the institution's operations. An accurate country-exposure reporting system is also necessary to support the regulatory reporting of foreign exposures on the quarterly Country Exposure Report, FFIEC 009.

The board of directors should regularly receive reports on the level of foreign exposures. If the level of foreign exposures in an institution is significant,[2] or if a country to which the institution is exposed is considered to be high risk, exposures should be reported to the board at least quarterly. More frequent reporting is appropriate when a deterioration in foreign exposures would threaten the soundness of the institution.

Country-Risk Analysis Process

Although the nature of the country-risk analysis process and the level of resources devoted to it will vary from institution to institution, depending on the size and sophistication of its international operations, a number of considerations are relevant to evaluating the process in all institutions:

- Is there a quantitative and qualitative assessment of the risk associated with each country in which the institution is conducting or planning to conduct business?
- Is a formal analysis of country risk conducted at least annually, and does the institution have an effective system for monitoring developments in the interim?
- Does the analysis take into account all aspects of the broadly defined concept of country risk, as well as any unique risks associated with specific groups of counterparties the institution may have targeted in its business strategy?
- Is the analysis adequately documented, and are conclusions concerning the level of risk communicated in a way that provides decision makers with a reasonable basis for determining the nature and level of the institution's exposures in a country?
- Given the size and sophistication of the institution's international activities, are the resources devoted to the analysis of country risk adequate?
- As a final check of the process, are the institution's conclusions concerning a country reasonable in light of information available from other sources, including external research and rating services and the Interagency Country Exposure Review Committee (ICERC)?

Country-Risk Ratings

Country-risk ratings summarize the conclusions of the country-risk analysis process. The ratings are an important component of country-risk management because they provide a framework for establishing country-exposure limits that reflect the institution's tolerance for risk.

Because some counterparties may be more exposed to local country conditions than others, it is a common and acceptable practice for institutions to distinguish between different types of exposures when assigning their country-risk ratings. For example, trade-related and banking-sector exposures typically receive better risk ratings than other categories of exposure because the importance of these types of transactions to a country's economy has usually moved governments to give them preferential treatment for repayment.

The risk-rating systems of some institutions differentiate between public-sector and private-sector exposures. In some institutions, a country's private-sector credits cannot be rated less

2. For purposes of this guidance, concentrations of exposures to individual countries that exceed 25 percent of the institution's tier 1 capital plus the ALLL are considered significant. However, in the case of particularly troubled countries, lesser degrees of exposure may also be considered to be significant.

severely than its public-sector credits (that is, the institution imposes a "sovereign ceiling" on the rating for all exposures in a country). Both are acceptable practices.

An institution's country-risk ratings may differ from the ICERC-assigned transfer-risk ratings because the two ratings differ in purpose and scope. An institution's internally assigned ratings help it to decide whether to extend additional credit, as well as how it should manage existing exposures. Such ratings should, therefore, have a forward-looking and broad country-risk focus. The ICERC's more narrowly focused transfer-risk ratings are primarily a supervisory tool and should not replace a bank's own country-risk analysis process.

The ICERC only rates countries that are in default where U.S. banks' aggregate exposures meet certain thresholds. Default occurs when a country is not complying with its external debt-service obligations or is unable to service the existing loan according to its terms, as evidenced by failure to pay principal and interest fully and on time, arrearages, forced restructuring, or rollovers. The ICERC reviews countries to which the aggregate exposure of U.S. banking organizations is at least $1 billion for at least two consecutive quarters or between $200 million and $1 billion if the exposure at five or more U.S. banks exceeds 25 percent of capital (tier 1 capital + ALLL).

For purposes of determining whether a country meets the threshold for review by the ICERC, aggregate exposure is based on the exposure reported in the most recent Country Exposure Lending Survey, which is published quarterly by the Federal Financial Institutions Examination Council (FFIEC). The Country Exposure Lending Survey summarizes the aggregate, by country, exposures of U.S. banks, bank holding companies, and Edge and agreement corporations filing the FFIEC 009 regulatory reporting form (Country Exposure Report). Specifically, aggregate exposure is the sum of "Transfer Risk Claims" and "Unused Commitments" and "Guarantees and Credit Derivatives."[3]

If a country in default does not meet at least one of the exposure criteria for two consecutive quarters, the committee decides whether it should continue to be reviewed based on the number of banks with exposure and the trend of conditions in the country.

3. The "Guarantees and Credit Derivatives" component captures the notional value of credit derivatives sold. This measure is a conservative estimate of contingent liabilities where a bank has taken exposure to a referenced credit in the given country. Netting does not take place in the reporting of credit derivatives since counterparty positions may not offset.

Country-Exposure Limits

As part of their country-risk management process, internationally active institutions should adopt a system of country-exposure limits. Because the limit-setting process often involves divergent interests within the institution (such as the country managers, the institution's overall country-risk manager, and the country-risk committee), country-risk limits will usually reflect a balancing of several considerations, including—

- the overall strategy guiding the institution's international activities,
- the country's risk rating and the institution's appetite for risk,
- perceived business opportunities in the country, and
- the desire to support the international business needs of domestic customers.

Country-exposure limits should be approved by the board of directors, or a committee thereof, and communicated to all affected departments and staff. Exposure limits should be reviewed and approved at least annually—and more frequently when concerns about a particular country arise.

An institution should consider whether its international operations are such that it should supplement its aggregate exposure limits with more discrete controls. Such controls might take the form of limits on the different lines of business in the country, limits by type of counterparty, or limits by type or tenor of exposure. An institution might also limit its exposure to local currencies. Institutions that have both substantial capital-market exposures and credit-related exposures typically set separate aggregate exposure limits for each because exposures to the two lines of business are usually measured differently.

Although country-by-country exposure limits are customary, institutions should also consider limiting (or at least monitoring) exposures on a broader (for example, regional) basis. A troubled country's problems often affect its neighbors, and the adverse effects may also extend to geographically distant countries with close ties through trade or investment. By monitoring and controlling exposures on a regional basis, institutions are in a better position to respond if the adverse effects of a country's problems begin to spread.

For institutions that are engaged primarily in direct lending activities, monthly monitoring of compliance with country-exposure limits is adequate. However, institutions with more volatile portfolios, including those with significant trading accounts, should monitor compliance with approved limits more frequently. Exceptions to approved country-exposure limits should be reported to an appropriate level of management or the board so that it can consider corrective measures.

Monitoring Country Conditions

The institution should have a system in place to monitor current conditions in each of the countries where it is significantly exposed. The level of resources devoted to monitoring conditions within a country should be proportionate to the institution's level of exposure and the perceived level of risk. If the institution maintains an in-country office, reports from the local staff are an obviously valuable resource for monitoring country conditions. In addition, periodic country visits by the regional or country manager are important to properly monitor individual exposures and conditions in a country. The institution may also draw on information from rating agencies and other external sources.

Communication between senior management and the responsible country managers should be regular and ongoing. The institution should not rely solely on informal lines of communication and ad hoc decision making in times of crisis. Established procedures should be in place for dealing with exposures in troubled countries, including contingency plans for reducing risk and, if necessary, exiting the country.

Stress Testing

Institutions should periodically stress-test their foreign exposures and report the results to the board of directors and senior management. As used here, stress testing does not necessarily refer to the use of sophisticated financial modeling tools, but rather to the need for all institutions to evaluate in some way the potential impact different scenarios may have on their country-risk profiles. The level of resources devoted to this effort should be commensurate with the significance of foreign exposures in the institution's overall operations.

Internal Controls and Audit

Institutions should ensure that their country-risk management process includes adequate internal controls and that an audit mechanism ensures the integrity of the information used by senior management and the board to monitor compliance with country-risk policies and exposure limits. The system of internal controls should, for example, ensure that the responsibilities of marketing and lending personnel are properly segregated from the responsibilities of personnel who analyze country risk, rate country risk, and set country limits.

TRANSFER RISK

Transfer risk focuses on a borrower's capacity to obtain the foreign exchange required to service its cross-border debt. The examination of transfer risk entails (1) the identification of selected country exposures of a bank that are considered significant relative to the bank's capital and the economic performance of the country; (2) the classifications of substandard, value-impaired, and loss; (3) a determination as to the adequacy of mandated special reserves against certain international assets classified value-impaired; (4) the analysis of those non-classified credits that warrant bank management's close attention and concentrations that warrant special comment; and (5) an in-depth assessment of the adequacy of the systems the bank employs to monitor and control this facet of international lending. Four report pages have been designed to reflect an examiner's analysis of the transfer-risk element in international lending for a particular bank, as follows.

The first page, "Selected Country Exposures," merely lists, without comments, exposures that are deemed significant in relation to a bank's capital and the economic performance of the country. Exposures, depending on the country grouping, are taken from the bank's last quarterly Country Exposure Report, FFIEC 009, and compared with the bank's capital as of the same date.

The second page, "Classifications Due to Transfer Risk," reflects credits ICERC has classified because of their transfer risk. Totals in each classification should be carried forward to the "Summary of Classified Items" page, with adjustments to eliminate those credits classified because of commercial risk, in accordance with the instructions in section 7040.3.

In December 1983, the federal banking agencies adopted examination categories for identifying credits that have been adversely affected by transfer-risk problems. In addition, the International Lending Supervision Act of 1983 requires banks to establish and maintain a special reserve when the value of international assets has been impaired by a protracted inability of the borrowers in a country to make payments on external indebtedness or when no definite prospects exist for orderly restoration of debt service. Both issues are outlined in section 7040.3.

The third page, "Nonclassified Credits Warranting Attention II; Concentrations of Transfer Risk Warranting Special Comment," identifies exposures, as of the examination date, in which a combination of the amount outstanding in relation to the bank's capital funds, the composition of the portfolio, and the economic performance of the country would warrant the bank to focus special attention on its exposure.

The fourth page, "Analysis of the Country Exposure Management System," presents in narrative form an assessment of a bank's system for monitoring and controlling its transfer-risk exposures. Included are comments relative to the bank's procedures for measuring exposure, the system for establishing country lending limits, and the bank's capability to analyze countries. Examination Conclusions and Comments in the report of examination may range from criticisms of weaknesses in the country-exposure-management system to high concentrations of risk in potentially weak or problematic countries.

COUNTRY-RISK MANAGEMENT

1. If the bank is internationally active, to determine the nature and extent of the bank's direct and indirect country-risk exposure.
2. If the bank has significant direct or indirect international exposure, to evaluate and determine whether it has in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities.
3. To review and determine if the bank's system of policies, procedures, and internal controls and if its rating system and stress testing for county-risk management are adequate and reliable.
4. To determine if the bank's board of directors oversees and regularly reviews its country-risk management process, approves limits on country exposure, provides for adequate capital that is commensurate with its direct and indirect country-risk exposures, and ensures that management is effectively controlling the risk.
5. To determine if management clearly communicates the bank's country-risk management policies, standards, and practices to the affected offices and staff.
6. To determine if the scope of the bank's audit function is adequate and if the function is sufficiently comprehensive to ensure the integrity of the information senior management and the board use to monitor the bank's country-risk management process. To ensure that the board of directors or its audit committee has provided for adequate audit coverage of country-risk management functions.
7. To recommend corrective action if a bank's country-risk management process and controls are deficient in relation to the level of country-risk exposure.
8. To determine if the bank is properly preparing the Country Exposure Report, FFIEC 009, which is required to be filed quarterly with the Federal Reserve Bank of New York.
9. To identify and report individual country exposures considered significant in relation to the bank's capital and the economic performance of the country.

CLASSIFICATIONS DUE TO TRANSFER RISK

1. To evaluate the portfolio to identify those credits in countries considered subject to classification by the Interagency Country Exposure Review Committee (ICERC).
2. To determine if the bank has adequately provided the required allocated transfer risk reserves for those international assets included in the country exposures classified value impaired.
3. To develop information on the composition of those exposures subject to classification.
4. To prepare report pages on all transfer risks subject to classification.
5. To determine the effect of total transfer-risk classifications on the overall quality of the international loan portfolio, as well as on the total bank.

NONCLASSIFIED CREDITS WARRANTING ATTENTION—CONCENTRATIONS OF TRANSFER RISK WARRANTING SPECIAL COMMENT

1. To identify and report any concentrations of transfer risk warranting special comment.
2. To develop information on the composition of those concentrations for the report page.

ANALYSIS OF THE COUNTRY-RISK MANAGEMENT SYSTEM

1. To determine if the bank's policies, practices, procedures, and internal controls for the management of transfer risk are adequate.
2. To determine if bank officers are operating in conformance with established guidelines.
3. To prepare narrative commentary on the bank's country-exposure management system and on any noted deficiencies, in a concise reportable format.

COUNTRY RISK

Country risk, which has an overarching effect on the realization of an institution's foreign assets, encompasses all of the uncertainties arising from the economic, social, and political conditions in a country. It includes the possibility of deteriorating economic conditions, political and social upheaval, nationalization and expropriation of assets, government repudiation of external indebtedness, exchange controls, and currency depreciation or devaluation.

Analysis of the Country-Risk Management System

Generally, all banks have systems for appraising, monitoring, and controlling their foreign-lending activities. These systems differ from bank to bank in terms of the measure of the outstanding exposure, the independence of transfer-risk assessments and control from marketing considerations, the capability to make country judgments on the basis of analytical factors and firsthand knowledge of the country, the centralization and formality of procedures, and the level of in-depth review. When performing and updating the bank's risk assessment, the central point of contact for the institution should include an analysis of the institution's direct and indirect country-risk exposures (including any significant country-risk concentrations) and the adequacy and reliability of its country-risk management. Given the variations, banks' country-risk management systems should consist of three important components.

One component is the provision for evaluation of economic trends, political developments, and the social fabric within countries where bank funds are at risk. These so-called country studies are derived from economic data supplied by the borrower or published by institutional lenders; sociopolitical commentaries; on-site reports from bank branches, subsidiaries, or affiliates; or bank-officer visits to the country.

The second component involves the undertaking by the board of directors and senior management to define the level of country exposure the bank is willing to assume. This undertaking normally includes the establishment of limits on aggregate outstandings, maturities, and categories of risk exposures by country, which serve as a guide to operating management in the development and servicing of the bank's international credit portfolio.

The third component is the bank's internal-reporting system designed to monitor and control country exposure. A comprehensive reporting system is required to accurately assign risk exposures to the country of risk, ensure adherence to the directives of the board, provide for at least an annual review of portfolio composition in individual countries, and establish a clear-cut methodology for reporting exceptions to established limits.

A summary of the country-risk management system should be prepared. Set forth below are guidelines and procedures for examiners to use in evaluating the systems banks use to monitor and control country-risk elements in their international loan portfolios. In assessing the quality of the country-risk management system, examiners should, as a matter of course, spot-check the accuracy of the data submitted on the Country Exposure Report, FFIEC 009. The review should include the exposures for at least several countries. Material exceptions should be commented on. To prepare this summary, the examiner should perform the following procedures:

1. Obtain any written policies, procedures, or summaries of the bank's country-risk management system. Determine whether the bank's country-risk management system includes—
   a. effective oversight by the board of directors,
   b. adequate risk-management policies and procedures,
   c. an accurate country-exposure reporting system,
   d. an effective country-risk analysis process,
   e. a country-risk rating system,
   f. country-exposure limits,
   g. ongoing monitoring of country conditions,
   h. periodic stress testing of foreign exposures, and
   i. adequate internal controls and an audit function. (See SR-02-5.)

2. Obtain the following from a review of the minutes and reports of the board of directors:
   a. a copy of written policies covering transfer risk
   b. the name and composition of the committee responsible for administration of transfer risk
3. Review international-lending policies and determine—
   a. if the board of directors regularly reviews and gives final approval to the limits on country exposure at least annually (or quarterly, if the foreign exposures are high risk or the concentrations are significant);
   b. who initiates the country ratings and country limits;
   c. how frequently and by whom country ratings and limits are reviewed and changed;
   d. how the bank defines the ratings assigned to the various countries;
   e. how country limits are determined;
   f. who is responsible for monitoring compliance with country limits;
   g. if country-risk limits consider—
      - the overall strategy guiding the institution's international activities,
      - the country's risk rating and the institution's appetite for risk,
      - perceived business opportunities in the country, and
      - the desire to support the international business needs of domestic customers;
   h. to what extent country limits are viewed as guidelines that may be exceeded;
   i. if the bank has different sublimits for private- and public-sector credits;
   j. if separate limits are established for private- and public-sector credits;
   k. if the board of directors or a committee thereof periodically reviews country ratings and limits, and evaluates the bank's performance against those standards;
   l. to what extent comments or classifications of bank supervisors are considered in establishing, increasing, or decreasing country limits;
   m. how the system has been changed since the last examination;
   n. if the bank has a reliable system for capturing and categorizing the volume and nature of foreign exposures;
   o. whether the bank has a system to monitor current conditions in each of the countries where it is significantly exposed;
   p. if there is regular, ongoing communication between senior management and the responsible country managers;
   q. if established procedures are in place for dealing with exposures in troubled countries, including contingency plans for reducing risk and, if necessary, exiting the country; and
   r. whether the bank periodically conducts stress tests (financial modeling or measuring the impact of various scenarios on its country-risk profiles) of its foreign exposures and if the results are reported to senior management and the board of directors.
4. Review reports furnished to the board or the appropriate committee to ensure that comprehensive and accurate information is being submitted on a timely basis.
5. Obtain the bank's report on the general distribution and characteristics of the international loan portfolio and compare loan-category distributions for adherence to guidelines.
6. During discussion with senior management, direct inquiries to—
   a. gain insight into general management's international lending philosophy, and
   b. elicit management responses for correction of deficiencies.

When reporting on the bank's country-risk management system, the examiner should consider factors such as—

1. the quality of internal policies, practices, procedures, and controls over the international-lending functions;
2. the scope and adequacy of the internal loan-review system as it pertains to country risk;
3. causes of existing problems;
4. commitments from management for correction of deficiencies;
5. expectations for continued sound international lending or correction of existing deficiencies;
6. the ability of management to monitor and control transfer risk;
7. the general level of adherence to internal policies, practices, procedures, and controls; and
8. the scope and adequacy of the bank's analysis of country conditions.

TRANSFER RISK

Transfer risk is one facet of the more broadly defined concept of country risk. Transfer risk focuses more on the availability of foreign exchange to service a country's external debt.

The transfer-risk examination procedures emphasize diversification of exposure in relation to a bank's capital as the primary method of moderating transfer risk. Where concentrations are noted, the degree of risk inherent therein is assessed in light of the composition of the portfolio and the general economic and political factors that may affect the debt-service capacity of the individual countries.

INTERAGENCY COUNTRY EXPOSURE REVIEW COMMITTEE

The Interagency Country Exposure Review Committee (ICERC) is responsible for providing an assessment of the degree of transfer risk that is inherent in the cross-border and cross-currency exposures of U.S. banks. The ICERC's transfer-risk ratings are primarily a supervisory tool and should not replace a bank's own country-risk analysis process. Supervisors expect institutions under their supervision to continue to monitor closely their cross-border exposure to all countries; to have robust country-risk assessment systems; to have appropriate sovereign exposure limits in place for each sovereign entity; to perform solid financial analysis on the sovereign entities to which the institutions are exposed; and, generally, to continue to apply sound risk management to all of their cross-border exposures, not just to the countries rated by ICERC. Such risk-management functions will continue to be evaluated during the course of regular supervisory examinations. While banks are advised of the results of the ICERC's evaluations, this information is sensitive, and adequate safeguards should be established to ensure that it is not accessible to unauthorized personnel. The chief executive officers of those banks filing the quarterly FFIEC 009 receive copies of the write-ups on classified countries for *only* those classifications applicable to their own bank. In no event should the complete listing of country groupings be divulged. This approach parallels that of the Shared National Credit Program.

To promote uniform and consistent application of these procedures, examiners should avoid ad hoc interpretations of the instructions and should address all questions to their respective offices. The federal banking agencies have developed a publication, *Guide to the Interagency Country Exposure Review Committee Process*, to clarify and make more transparent the role of the ICERC in the supervisory process. (See SR-08-12.)

Application of ICERC Ratings

ICERC transfer-risk ratings are applicable in—

- every U.S.-chartered insured commercial bank in the 50 states of the United States, the District of Columbia, Puerto Rico, and U.S. territories and possessions;
- every U.S. bank holding company, including its Edge and agreement corporations and other domestic and foreign nonbank subsidiaries; and
- the U.S. branches and agencies of foreign banks (however, the allocated transfer-risk reserve (ATRR) requirement does not apply to these entities).

ICERC ratings are generally applicable to all types of foreign assets held by an institution, with the exception of premises, other real estate owned, and goodwill. For purposes of the ICERC rating, the determination of where the transfer risk for a particular exposure lies takes into consideration the existence of any guarantees and is based on the country of residence of the ultimate obligor. (See the instructions for the FFIEC 009.)

The ICERC transfer-risk rating is the only rating applicable to sovereign exposures in a reviewed country (that is, direct or guaranteed obligations of the country's central government or government-owned entities). However, if they are carried on the institution's books as an investment, securities issued by a sovereign entity are also subject to the FFIEC's Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks. The FFIEC agreement provides for specific, and possibly more severe, classification treatment of sub-investment-quality securities. Furthermore, except as noted in the next paragraph, the ICERC transfer-risk rating is also the minimum risk rating applicable to *all other* cross-border and cross-currency exposures of U.S. banks in a reviewed country.

Regardless of the currencies involved, to the extent that an institution's claims on local country residents are funded by liabilities to local country residents, the ICERC's transfer-risk ratings *do not* apply. For example, to the extent that it has liabilities to local residents (such as sterling deposits), claims of the London branch of a U.S. bank on a public- or private-sector obligor in the United Kingdom (whether the claims are denominated in sterling, dollars, or euros) are not subject to the ICERC transfer-risk rating.

The ICERC is not able to evaluate the credit risk associated with individual, private-sector exposures in a country. Therefore, based on an evaluation of credit-risk factors (including the effects of country risk), examiners may assign credit-risk ratings to individual, private-sector exposures that are more severe than the ICERC-assigned transfer-risk rating for the country. For any given private-sector exposure, the applicable rating is *the more severe* of either the ICERC-assigned transfer-risk rating for the country or the examiner-assigned credit-risk rating (including ratings assigned as a result of the Shared National Credit Program).

Questions sometimes arise concerning the consideration that examiners should give to informal expressions of support by the central government of a country for a particular borrower or sector of the economy (most often, banking). Unless they constitute a guarantee or other legally binding commitment, examiners should view such expressions of support as no more than a mitigating factor in their evaluation of the counterparty's credit risk. Informal expressions of support by the central government would not cause the counterparty's credit-risk rating to revert to the ICERC-assigned transfer-risk rating for the country.

Special Categories of Exposure

Although the ICERC may have rated ordinary short- and/or long-term exposures in a country as substandard, value-impaired, or loss, several special categories of exposure in a country may receive a less severe transfer-risk rating if certain conditions are met, as described below.

- *Performing short-term bank and performing short-term trade exposures.*[1] Short-term bank and trade exposures, which have maturities of one year or less, are generally considered to have a lower level of transfer risk because, historically, they have received priority in the allocation of a country's foreign-exchange resources. In recognition of their historical performance, the ICERC usually assigns a more favorable rating to these types of exposures.
- *Securities held in trading accounts.* Presuming that there is an active and liquid market for the securities and that the bank has procedures in place to appropriately value them, the ICERC may, on a case-by-case basis, assign a less severe transfer-risk rating to specific securities held in the bank's trading account. In any case, because FASB Financial Accounting Standard No. 115 requires that they be marked-to-market, trading-account securities are not subject to an ATRR requirement.
- *Direct-equity investments.* The ICERC may, on a case-by-case basis, assign a less severe transfer-risk rating to specific direct-equity investments when *all* of the following conditions are met:
  - — The investment has been marked-to-market or is valued using the equity-accounting method.
  - — The institution has provided the ICERC with evidence that the foreign business is financially viable.
  - — The institution has provided the ICERC with evidence of its ability to repatriate dividends, interest payments, and proceeds from the sale of assets on a timely basis.

EXAMINATION REPORTING OF TRANSFER RISK

The entire examination section dealing with transfer risk should be placed in an international

1. A *performing credit* is current and has not been restructured to avoid delinquency or because of a deterioration in the financial condition of the borrower. A credit is considered "current" if it has not been reported as "past due" or "nonaccrual" for the bank call report. *Trade credit* consists of credit extensions that are directly related to imports or exports and that will be liquidated through the proceeds of international trade. These credit extensions will include pre-export financing only when there is a firm export sales order and the proceeds of the order will pay off the indebtedness.

operations section of the commercial report of examination. In addition, the discussion of transfer-risk assets should be separated from the discussion of all other loans and assets classified or specially mentioned elsewhere in the report.

Selected Country Exposures

A list should be presented of those transfer-risk exposures considered large relative to the bank's own capital funds, after taking into account the economic, social, and political circumstances within a country. These exposures, which comprise total claims and contingencies, should be taken from the last quarterly FFIEC 009 filed by the bank under examination and compared with consolidated bank capital as of the same date. For this purpose, capital is defined as tier 1 and tier 2, and it should be footnoted as such on this page. The examiner should also note that this report of country exposure and its comparison with bank capital may differ from actual exposure as of the date of examination. The level at which exposure is listed is based on a review of the performance of each country by the ICERC.

Examiners are encouraged to review the instructions for preparing the country-exposure report for further information concerning the preparation of this page. While it is not expected that examiners review the country-exposure reports filed between examinations for accuracy, a spot-check to verify that such reports are being prepared properly should be made. Material reporting errors uncovered during the examination should be included in comments on reporting exceptions elsewhere in the report of examination. When bank management relies on the data generated for the country-exposure report, and when reporting exceptions are noted, comments should be incorporated in the analysis of the country-risk management system.

Ratings and Classifications Due to Transfer Risk

A list of exposures subject to classification as a result of transfer-risk considerations should be prepared. The decision to classify a bank's exposure to a particular country is made by the ICERC based on criteria incorporated into the provisions of the International Lending Supervision Act of 1983.

The ICERC's assessment of transfer risk reflects the committee's application of the following category definitions.

Substandard

This category applies when a country is not complying with its external debt-service obligations, as evidenced by arrearages, forced restructuring, or rollovers; and if either of the two following conditions exists:

- The country is not in the process of adopting an IMF or other suitable economic adjustment program, or is not adequately adhering to such a program.
- The country and its bank creditors have not negotiated a viable rescheduling and are unlikely to do so in the near future.

Value-Impaired

A country has protracted arrearages, as indicated by more than one of the following:

- The country has not fully paid its interest for six months.
- The country has not complied with IMF programs (and there is no immediate prospect for compliance).
- The country has not met rescheduling terms for more than one year.
- The country shows no definite prospects for an orderly restoration of debt service in the near future.

Loss

A loan is considered uncollectible and of such little value that its continuance as a bankable asset is not warranted. An example would be an outright repudiation by a country of its obligations to banks, the IMF, or other lenders.

The ICERC also prepares the write-ups supporting each classification. Examiners are to provide commentary on the disaggregation of each country exposure subject to classification. Include comments relative to the bank's country lending limit and any references to any proposed increases or decreases to such limit.

The examiner's commentary is to be followed by a standardized write-up on each country for which the bank has exposures, prepared by the ICERC.

ALLOCATED TRANSFER RISK RESERVE

The responsibility for recognizing and accounting for deterioration in the value of a bank's assets, including a deterioration due to transfer-risk problems, rests with the management of a bank and its auditors. The banking agencies also have a responsibility to ensure that banks are following reasonable and prudent policies in this regard, and that necessary adjustments are being made consistently. To ensure this, the federal banking agencies, pursuant to the International Lending Supervision Act, require U.S. banks to establish an ATRR on a consolidated basis against the risks presented in certain international assets whose value has been found by the ICERC to have been significantly impaired by protracted transfer-risk problems. The ATRR should be applied to certain international assets that have been classified for transfer-risk reasons as value-impaired. The act also requires that the ATRR be established by a charge against current income, be segregated from the bank's allowance for loan and lease losses (ALLL), be deducted from gross loans and leases, and not be included as part of bank capital.

The alternative to establishing an ATRR is the direct charge to the ALLL or a reduction in the principal amount of the asset by applying interest payments or other collections on the asset. However, if this alternative accounting treatment is used, the institution may not write up the value of the assets if the ATRR requirement is later reduced or eliminated. No ATRR provisions are required if the bank has previously written down or charged off the requisite amounts. Furthermore, no ATRR will be required on contingent liabilities. Instead, contingent liabilities to value-impaired countries will be reviewed on a case-by-case basis.

The ATRR amounts mandated will be reviewed regularly by the ICERC to determine if additional reserves are required or whether downward adjustments need to be made. Initially, special reserves would not apply to net new lending when additional loans are made in the context of an IMF or other appropriate economic adjustment program, and when the lending generally enhances the debt-service capability of the country concerned. Whether an ATRR is subsequently required for these new loans would be determined by the ICERC on the basis of performance and the continued inapplicability of the established criteria.

To calculate the reserves, examiners must multiply the reserve percentage times the amount of the adjusted exposure subject to transfer risk and the ATRR. This calculation should be done on the face amount of each loan outstanding before deducting any previous write-downs. For purposes of this computation (as noted above), interest payments that have been applied to existing loan balances are tantamount to write-downs and are an acceptable alternative to the establishment of an ATRR. The number derived after the calculation should be netted against previous write-downs to arrive at the mandated ATRR. In accordance with SR-92-2, the resulting net exposure, after adjusting for the ATRR, is included in the total classified value-impaired, but is weighted like a substandard credit *only* in determining the asset quality of the bank and other measures of financial soundness. The resulting net exposure, after adjustment for the ATRR, is included in the total classified value-impaired and is looked on as a doubtful classification *only* in determining the asset quality of the bank and other measures of financial soundness. When a shortfall exists, management should be apprised and be expected to comply with the statute in establishing the required reserve. Remarks relative to any shortfall and management's actions should be made in the Examination Conclusions and Comments. Although the general rule is that all exposures rated value-impaired are subject to the ATRR requirement, over the years there have been a number of clarifications and refinements. (See 12 CFR 28, 211.43, and 347.)

Aggregate exposures rated "Substandard" are relevant to any assessment of possible concentrations of risk, and should be factored into the evaluation of the adequacy of the bank's capital and ALLL.

OTHER MATTERS

Discussion of Transfer Risk in the Examiner's Comments and Conclusions

As a general rule, classifications due to transfer risk are included in the total assets classified and discussed under a major heading, such as "Asset Quality." Transfer-risk classifications of any significance should be highlighted. When the bank has other exposures of concern that warrant not only senior management's special attention, but the attention of the bank's board of directors, comments may be generated under a separate caption entitled "Transfer Risks." The examiner should include comments relative to the classifications; the shortfall, if any, in the mandatory reserves against exposures considered value-impaired; concentrations warranting special comment; and any other noted deficiency, such as an ineffective country-risk management system.

Sharing Information with State Banking Examiners

When an examination of a state member bank is being conducted concurrently or on a joint basis with state authorities, Federal Reserve examiners may share with state banking examiners information on those countries to which the bank under examination has exposures subject to classification or comment.

Country Categories

The complete listing of countries as prepared by the ICERC is highly confidential and for internal use only. In discussions with bank management, examiners should refer only to countries that will be commented on in that bank's examination report. In this context, any reference to a "categorization" of countries should be couched in neutral terms.

Examiners are to provide the examiner-in-charge with essential information that will help facilitate future examinations. In addition, all workpapers should be maintained in an orderly manner, properly labeled, and available for inspection when and if necessary.

International—Country Risk and Transfer Risk

Internal Control Questionnaire

Effective date April 2009

1. Has the board of directors, consistent with its duties and responsibilities, adopted written objectives and policies for international loan portfolio management? Do these policies and objectives—
   a. establish country-exposure limits for credits, including sublimits for transfer risk?
   b. establish limits for distribution of credits by type and maturity?
   c. acknowledge concentrations of credit within countries, and acknowledge the need to employ personnel with appropriate specialized knowledge and experience to supervise those concentrations?
2. Are objectives and policies for international loan portfolio management reviewed at least annually to determine if they are compatible with changing market conditions?
3. Are significant changes in country conditions or levels of exposure promptly brought to the attention of the board of directors or its designated committee?
4. Are country limits revised in response to substantive changes in economic, political, and social conditions within particular countries?
5. Is a formal analysis of country risk prepared, and are country limits reviewed, updated, and approved by the board of directors at least annually?
   a. Does the analysis take into account all aspects of the broadly defined concept of country risk, as well as any unique risks associated with specific groups of counterparties the institution may have targeted in its business strategy?
   b. Is the analysis adequately documented, and are conclusions concerning the level of risk communicated in a way that provides decision makers with a reasonable basis for determining the nature and level of the institution's exposures in a country?
   c. Are the bank's conclusions concerning a country reasonable in light of information available from other sources, including external research and rating services and the Interagency Country Exposure Review Committee (ICERC)?
6. Before granting additional advances or commitments, are outstanding advances or commitments checked against appropriate country limits?
7. Are lending officers cognizant of specific country limitations?
8. Are procedures for exceeding country limits clearly defined?
9. Does the bank have a periodic foreign call program for countries?
10. Is there an internal-review system to determine that international risk assets outstanding and committed are within the bank's foreign-exposure limits?
11. Are country-risk factors (economic, political, and social) and other factors in a particular country considered in the bank's internal periodic review of its risk assets?
12. Does the bank have an adequate, current system for country-risk analysis? Does the system consist of a regular, periodic quantitative and qualitative assessment and review of risk for each country in which the bank conducts or plans to conduct business, and does this system include—
    a. a review of country conditions on a regular basis (state the frequency and indicate who performs analyses)?
    b. a continuing review of current country data obtained from internal and external sources?
    c. an analysis of economic, political, social, and other factors affecting country risk?
13. Does the bank have a formal reporting system on country risk?
14. Does the reporting system provide complete exposure data quickly and in sufficient detail to assess particular risks?
15. Does the bank's country-risk evaluation system accurately recognize exposure from country to country, on the basis of legally binding guarantees, collateral, or reallocation by the office of responsibility?
16. Given the size and sophistication of the institution's international activities, are the resources devoted to the analysis of country risk adequate?
17. Is a regular determination made about each country's transfer risk, including whether transfer risk is increased due to the bank's heavy debt servicing or other financial

restraints, and whether the country has exchange controls and hard-currency restrictions?

18. Has the bank adequately provided the required allocated transfer risk reserves for those international assets that are included in the country exposures classified value-impaired?

INTRODUCTION

Financing foreign receivables, a specialized area of commercial lending in an international banking division, includes open-account financing, sales on consignment, advances against collections, discounting trade acceptances, banker's acceptances, factoring, and forfaiting. Certain foreign receivables are guaranteed or insured against cross-border risk by the Export-Import Bank of the United States, the Foreign Credit Insurance Association, and other U.S. and foreign organizations. Factoring is discussed in section 2180 of this manual, and accounts receivable financing is discussed in section 2160 (Asset-Based Lending) of this manual.

OPEN-ACCOUNT FINANCING

The simplest method of financing foreign receivables is on open account. In this type of sale, the buyer and seller agree on payment at a specified date without a negotiable instrument, such as a draft or acceptance, evidencing the obligation. In most instances, the shipping documents are sent directly to the buyer rather than through a bank. The exporter may request that the buyer make payment to the bank at which the exporter maintains an account. The advantages of an open-account sale are its simplicity, lack of bank charges, and the avoidance of stamp duties that certain countries apply to drafts.

The financing of open-account sales does have certain risks. Neither the lending bank nor the exporter have control over the shipping documents, and the buyer (importer) may take possession of the goods without the consent of the bank or exporter. In addition, if the importer does not register the goods with the proper authorities, the importer may not have access to the amount of foreign exchange necessary to pay for the imports at the time of payment. Perhaps the greatest risk in open-account financing is the lack of standard trade-financing documentation on which to base legal action against the importer in the event of default. Therefore, open-account sales are most appropriate when the buyer is a subsidiary of a related company or is well known to the seller and when the importing country has no significant economic, political, or social problems and, consequently, is not encountering foreign-exchange difficulties.

SALES ON CONSIGNMENT

Under a consignment arrangement, goods are consigned to the importer (consignee) abroad, and the exporter (consignor) retains title to them until they are sold to a third party. However, unless the shipment is made to an exporter's overseas branch or subsidiary, the exporter's credit risk may be considerable. As with open-account sales, there is a lack of standard trade-financing documentation on which to base legal action if the consignee defaults. The exporter should thoroughly understand the inherent credit risks, especially when goods are consigned to an agent, representative, or import house abroad.

In countries with free ports or free trade zones, consigned goods may be placed under bonded warehouse control in the name of a foreign bank or branch of the bank. Arrangements may then be made to release the consigned merchandise at the time it is sold. Merchandise is cleared through customs after the sale has been completed. However, that type of consignment should not be made and will not usually be accepted by foreign banks until all pertinent conditions and regulations are verified and storage facilities are arranged. The exporter's bank also should verify that goods not sold may be returned to the country of origin. Consignment shipments financed by the bank should be limited to countries that do not have burdensome foreign-exchange restrictions and that have sufficient foreign exchange available to pay for imports.

To overcome the disadvantages of financing shipments on an open-account or consignment basis, exporters frequently ship goods against documentary collections. Consequently, the exporter, in the case of a time or arrival draft, or the exporter and the importer jointly, in the case of a sight draft, finance the shipment. The exporter and the importer may have unused credit lines with their banks and be in a position to borrow the needed money without tying the financing to the trade transaction. However, often the exporter's or the importer's regular bank lines are fully drawn down, so they may seek bank financing in the form of advances against outward collections, discounting trade acceptances, banker's acceptances, factoring, or forfaiting.

ADVANCES AGAINST FOREIGN COLLECTIONS

A manufacturer or merchant conducting a strictly domestic business often obtains a loan from a bank, finance company, factor, or forfaiter using accounts receivable as security. The same general type of financing vehicle is available to exporters to finance their foreign receivables.

A common method of financing foreign receivables is through the exporter pledging all outward collections to its bank. The exporter may then borrow from the bank up to a stated maximum percentage of the total amount of receivables pledged at any one time. When notes rather than drafts are used to finance foreign receivables, they are usually paid on demand, enabling the exporter to increase or decrease the loan depending on its needs and the current amount of collections outstanding. Preferably, all of the collections lodged with the exporter's bank should be pledged to the bank. When a particular collection is paid, it is remitted by a foreign collecting bank to the exporter's bank, which has already advanced the funds to the exporter. The exporter's bank then uses the proceeds of the collection to reduce the exporter's loan.

Some exporters have no need for a continuous financing arrangement but occasionally may wish to obtain financing on only one large foreign receivable. In these instances, the exporter's bank may be willing to advance funds to the exporter with only that one receivable as security. Again, the bank establishes a maximum percentage of the amount of the receivable that it is willing to advance. When payment for the receivable is obtained, the bank uses the proceeds to liquidate the loan, crediting any excess to the exporter. Bank financing in the form of advances against export receivables is an accepted practice in international trade and is not considered factoring.

Besides having a lien on the exporter's outward collections, the bank usually retains recourse to the exporter, whose credit strength and reputation are of prime importance. Other factors, however, are also significant. If the foreign importers are companies with strong reputations and financial strength, the bank will likely advance a larger percentage on collections directed to them. The bank will also likely advance a larger percentage of funds to importers in those countries in which importers promptly pay drafts drawn on them. In other countries where payment is generally slow, perhaps because importers are financially weak or because U.S. dollar or other foreign-currency exchange is hard to obtain, the bank will advance a lower percentage on collections. The exporter's bank may be completely unwilling to finance collections directed to importers or countries with reputations for habitually slow payments.

When a bank advances against foreign receivables, it must carefully scrutinize the supporting documents. Since the bank wishes to maintain control of the merchandise, the bill of lading should be either "to the order of" the shipper and blank-endorsed or "to the order of" the bank. The bill of lading must not be consigned to the buyer (importer) since this gives the buyer control over the goods. Also, financed shipments should be covered by adequate insurance.

DISCOUNTING TRADE ACCEPTANCES

A draft accepted by the foreign importer becomes a trade acceptance carrying the full credit obligation of the importer. These trade acceptances are also frequently called "trade bills" or "trade paper." The acceptance is returned to and becomes the property of the exporter, who will ask the collecting bank to present it to the importer or acceptor for payment at maturity. The exporter is, therefore, providing the financing or "carrying" its own foreign receivables. However, if the exporter needs the funds before maturity of the trade acceptance, the exporter may ask the bank to "discount" the draft. If the primary obligor (the acceptor) is a well-known company of good credit standing, the bank may be willing to discount the draft without recourse to the exporter. More commonly, however, the lending bank looks to the exporter for recourse should the primary obligor fail to pay the amount when due.

When discounting a trade acceptance, the bank applies a discount to the face amount of the draft and advances the remainder to the exporter until the draft's maturity. The bank is "buying" the trade acceptance for value and is entitled to any benefits from the primary obligor to which it is due as a holder in due course of a negotiable instrument. This is also the case whenever the bank advances against a single collection or a pool of collections. Any intermediary "collecting" bank also has a financial interest in the collection and has all the rights of a holder in due course under the Uniform Commercial Code.

BANKER'S ACCEPTANCES CREATED AGAINST FOREIGN COLLECTIONS

During periods of tight money, banks may choose to finance foreign collections by using banker's acceptances. Banker's acceptances are discussed in section 7060, "International—Banker's Acceptances," so the following comments relate only to the financing of foreign collections.

As with all acceptance financing, the exporter first submits a signed acceptance agreement to its bank. To obtain acceptance financing for foreign receivables, the exporter draws two drafts. The first is a time draft drawn on the foreign buyer (the importer) that, along with the necessary documents, is sent for collection in the usual manner. The second draft, for the same or a smaller amount as agreed to by the bank and the exporter, is drawn by the exporter on its bank and has the same tenor as the draft drawn on the importer. The bank accepts the second draft and discounts it, crediting the net amount to the exporter's account. The bank has now created a banker's acceptance that can be sold in the highly liquid acceptance market, provided the bank's reputation is solid. When payment is received from the importer, the bank applies the proceeds towards its own acceptance, which will be presented for payment if sold in the market. Should the drawee default, the bank has recourse to the drawer and can demand payment from that source.

FORFAITING

Forfaiting is basically nonrecourse financing of receivables, similar to factoring. However, although a factor normally purchases a company's short-term receivables, a forfait bank purchases notes that are long-term receivables with maximum maturities of eight years. The forfaiting bank has no recourse to the seller of the goods, but gets the notes at a substantial discount in exchange for cash. Zurich and Vienna are the centers of forfaiting. Many large banks, including U.S. institutions, provide forfaiting through either their branches or specialized subsidiaries in these cities.

Forfaiting is used when government export credits or credit guarantees are not available or when a seller does not extend long-term credits to areas such as Eastern Europe. Forfaiting is also an important method of financing for small and medium-sized companies because it enables them to engage in transactions that would normally exceed their financial capabilities. By using forfaiting, small and medium-sized concerns can immediately sell their long-term receivables without recourse.

Forfaiting presents all of the risks associated with factoring, along with the risks associated with the long-term nature of purchased receivables. The examiner should review the bank's forfaiting activities carefully to determine whether long-term receivables have been purchased from countries prone to periodic political or economic turmoil and the resulting fluctuations in exchange rates.

U.S. AND FOREIGN RECEIVABLES GUARANTEE AND INSURANCE PLANS

To reduce credit, political, and other risks associated with foreign receivables financing, banks may avail themselves of a variety of guarantee and insurance plans, both public and private, that are available in many countries. Because of the complexity of the numerous plans available, an examiner must frequently rely on the technical knowledge of the staff in a bank's international division who handle these transactions. Nevertheless, the examiner should know the risk coverage and claim adjustment provisions of the major plans. Often a bank's experience with its receivables insurance and guarantee plans is indicative of its effectiveness and of whether the bank has properly met its responsibilities under the programs.

Export-Import Bank of the United States

The Export-Import Bank of the United States (Eximbank) issues to commercial banks, for a fee, guarantees of payment for foreign receivables that the bank purchases from exporters, generally without recourse to the exporter. The maturities of the receivables range from 181 days to over five years. Generally, the foreign buyer must make a cash payment, either before or upon delivery, of at least 10 percent of the invoice value, and the amount of receivables purchased by the bank without recourse to the exporter normally cannot exceed 90 percent of the financed portion of the sale (invoice amount less cash payment). This guarantee covers political risks, such as inconvertibility of foreign currencies into U.S. dollars, governmental actions preventing importation of goods, war, civil strife, expropriation, and confiscation by government action. Commercial risks, basically the credit risk of the foreign purchaser, usually are covered from six months to five years.

Foreign Credit Insurance Association

The Foreign Credit Insurance Association (FCIA) is an association of leading marine, property, and casualty insurance companies. In cooperation with Eximbank, FCIA offers a comprehensive selection of credit insurance policies that protect policyholders against loss from failure to receive payment from foreign buyers.

FCIA coverage protects the exporter against the failure of the buyer to pay dollar obligations for commercial or political reasons; enables the exporter to offer foreign buyers competitive terms of payment; supports the exporter's prudent penetration of higher risk foreign markets; and gives the exporter greater liquidity and flexibility in administering a foreign receivables portfolio. The FCIA does not itself finance export sales. However, the exporter who insures account receivables against commercial and political risks is usually able to obtain financing from commercial banks and other lending institutions at lower rates and on more liberal terms than would otherwise be possible by assigning the proceeds of the FCIA insurance to the lenders.

Comprehensive FCIA policies protect exporters against nonpayment of receivables due to unforeseeable commercial and political occurrences. Commercial risks covered include insolvency or protracted default, which may be caused by economic deterioration in the buyer's market area, shifts in demand, unanticipated competition, tariffs, or technical changes. Political risk coverage applies to defaults due to government action, such as currency inconvertibility, expropriation, and cancellation of import license, and to political disturbances, such as war, revolution, and insurrection.

FCIA generally offers four basic types of policies covering political and commercial risks:

- Short-term policies covering shipments normally sold on terms up to 180 days. The usual policy covers 100 percent of political risks and 90 percent of any losses from commercial risk.
- Medium-term policies insuring transactions from six months to five years. FCIA covers up to 100 percent of political risks and 90 percent of commercial risks, with the remainder retained by the exporter.
- Combined short-term/medium-term policies for sales that pass through distributors before reaching final buyers.
- Master policies that include the basic insurance features of the previous policies plus discretionary and deductible provisions. Under a master policy, usually only for short-term transactions, exporters may obtain FCIA authority to grant insured credit up to a certain amount without seeking prior approval. The deductible provision, used only for commercial risks and not political risks, requires the exporter to assume a fixed amount of the first loss on total debts.

Other Insurers

Numerous other private and governmental institutions, both in the United States and overseas, guarantee or insure risks assumed by commercial banks financing foreign receivables. Some examples of these institutions in other countries are the Export Credits Guarantee Department (ECGD) in the United Kingdom, COFACE in France, and HERMES in Germany.

In the United States, the Overseas Private Investment Corporation (OPIC), a corporation wholly owned by the U.S. government, offers insurance against the political risks of inconvertibility, expropriation, war, revolution, and insurrection and guarantees the repayment of private U.S. loans for U.S. citizens, U.S. concerns that are substantially and beneficially U.S.-owned, and foreign concerns that are at least 95 percent owned by U.S. individuals or entities.

1. To determine if the policies, practices, procedures, and internal controls for the financing of foreign receivables are adequate.
2. To determine if bank officers are operating in conformance with established bank guidelines.
3. To evaluate the portfolio for credit quality, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function as it relates to the financing of foreign receivables.
5. To determine compliance with laws and regulations.
6. To recommend corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws and regulations are cited.

1. If selected for implementation, complete or update the international—financing foreign receivables section of the internal control questionnaire.
2. Determine the scope of the examination on the basis of the evaluation of internal controls and the work performed by internal or external auditors.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest reviews done by internal and external auditors from the examiner assigned to the audit review, and determine if appropriate corrections have been made.
4. Obtain trial balances of applicable customer liability records.
   a. Reconcile balances to department controls and the general ledger.
   b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select borrowers for examination.
6. Prepare examiners' credit line cards to include—
   a. customers' aggregate foreign receivables–financing liability and
   b. debt instruments aggregating customers' total outstanding liability.
7. Obtain the following information:
   a. past-due, nonaccrual, and reduced-rate loans, advances, and acceptances
   b. loans whose terms have been modified by a reduction in the interest rate or the principal payment or by a deferral of interest or principal
   c. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
   d. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
   e. loan commitments and other contingent liabilities
   f. loans to principal shareholders, officers, and directors and to their related interests (indicate which officers are considered executive officers)
   g. reports on the indebtedness of executive officers and principal shareholders and their related interests to correspondent banks
   h. a list of correspondent banks
   i. miscellaneous loan-debit and credit-suspense accounts
   j. Interagency Country Exposure Review Committee determinations
   k. criticized Shared National Credits (applicable international credits)
   l. loans considered "problem loans" by management
   m. background information on directors, executive officers, principal shareholders, and their related interests
   n. specific guidelines in the lending policy governing the financing of foreign receivables
   o. current lending authorities of officers and lending committee (or committees)
   p. the current interest-rate structure
   q. any useful information obtained from the review of the minutes of the loan and discount committee or any similar committee
   r. reports furnished to the loan and discount committee or any similar committee
   s. relevant reports furnished to the board of directors
   t. loans classified during the previous examination
8. Review the information received and perform the following:
   a. *Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap.* Perform procedures in step 7a of section 7030.3, "International—Loans and Current Account Advances: Examination Procedures."
   b. *Miscellaneous loan-debit and credit-suspense accounts.*
      - Discuss with management any large or old items.
      - Perform additional procedures as considered appropriate.

c. *Loan commitments and other contingent liabilities.* Analyze the commitments and contingent liabilities of the obligors together with the combined amounts of their current loan balances.
d. *Loans criticized during the previous examination.* Determine disposition of loans so classified by transcribing the current balance and payment status, or the date the loan was repaid and the source of repayment.
   - Investigate any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank or as a result of a participation, sale, or swap with another lending institution.
   - If repayment was a result of a participation, sale, or swap, refer to step 7a of "International—Loans and Current Account Advances: Examination Procedures," section 7030.3, for the appropriate examination procedures.
e. *Shared National Credits.*
   - Compare the schedule of foreign receivables financed included in the uniform review of Shared National Credits Program with the listing of credits selected for review to determine which loans in the sample are portions of Shared National Credits.
   - For each loan so identified, transcribe appropriate information from the schedule to line cards. No further examination procedures are necessary in this area.
f. *Interagency Country Exposure Review Committee credits.* Identify any credits that were selected for review that are criticized for transfer-risk reasons by the Interagency Country Exposure Review Committee.

9. Transcribe or compare information from the above schedules to credit line cards, where appropriate, and indicate any past-due status.
10. Prepare credit line cards for any loan not in the sample that, on the basis of information derived from the above schedules, requires an in-depth review.
11. Obtain liability and other information on common borrowers from examiners assigned to international cash accounts, over-drafts, and other loan areas, and together decide who will review the borrowing relationship. Pass or retain completed credit line cards.
12. Prepare collateral line cards for all borrowers selected in the preceding steps.
13. Obtain credit files for all borrowers for whom examiner credit line cards were prepared, and complete credit line cards, where appropriate. To analyze foreign receivables financed, perform the following procedures:
    a. Analyze the customers' balance sheets and profit-and-loss figures as shown in current and preceding financial statements, and determine the existence of any favorable or adverse trends.
    b. Review components of the balance sheet as shown in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure.
    c. Review supporting information for the major balance-sheet items and the techniques used in consolidation, determine the primary sources of repayment, and evaluate their adequacy.
    d. Determine compliance with provisions of loan agreements.
    e. Review digests of officers' memoranda, mercantile reports, credit checks, and correspondence to determine the existence of any problems that might deter the contractual repayment program.
    f. Obtain the following information:
       - *Open-account financing.*
         — whether the shipment is directed to third parties or branches and subsidiaries of the borrower
         — the financial strength and trustworthiness of the overseas buyer
         — the extent of foreign-exchange control and the availability of exchange for the importer to effect payment
         — the bank's past experience in dealing with the borrower who sells on open account
       - *Sales on consignment.*
         — whether the shipment is directed to third parties or branches and subsidiaries of the obligor
         — the financial strength and trustworthiness of the foreign consignee
         — the responsibilities of the foreign sales agent, overseas representative, or import house under contract

- the extent of foreign-exchange control and the availability of exchange for that type of transaction in the country of destination
- whether the borrower's goods, without a definite buyer, are consigned abroad in the name of the borrower's bank or a foreign bank
- whether the goods being shipped are assigned to a responsible warehouseman
- any arrangements that have been made whereby the selling agent negotiates for the sale of the goods
- the regulations in the country of destination regarding the return of unsold consigned goods to the country of origin
- the bank's past experience in dealing with the borrower who sells on consignment

• *Advances against collections.*
- the relationship between the amount collected in a month on the collections pledged as collateral and the borrower's credit limit
- the tenor of sight drafts—a stated number of days after sight or a stated number of days after the date of the draft
- instructions regarding delivery of documents against payment (D/P) or documents against acceptance (D/A)
- whether amounts advanced against collections are within the percentage of advance limitation established
- aging of drafts (collections)
- ineligible drawees, including house bills
- concentrations of drawees
- financial strength of drawees
- unusual situations such as disputes, nonacceptance of goods, and possession of goods without payment
- dishonor and protest instructions
- any special instructions
- the extent of foreign-exchange controls and the availability of exchange for that type of transaction in the country of destination
- the bank's experience in dealing with the borrower who receives advances against collections

• *Discounted trade acceptances.*
- the relationship between the amount collected in a month on the trade acceptances discounted and the borrower's credit limit
- whether the bank discounted the trade acceptance with or without recourse
- whether the borrower retains a percentage of the trade acceptance endorsed to the bank
- aging of trade acceptances
- ineligible drawees, including house bills
- concentrations of drawees
- financial strength of the drawees
- unusual situations, such as disputes, nonacceptance of goods, and possession of goods without payment
- dishonor and protest instructions
- any special instructions
- the extent of foreign-exchange controls and the availability of exchange for that type of transaction in the country of destination
- the bank's experience in dealing with the borrower for whom its trade acceptances are discounted by the bank

• *Banker's-acceptance financing.*
- the relationship between the amount collected from the foreign buyer in a month and the borrower's credit limit
- whether the discounted draft drawn by the exporter (customer) on the exporter's bank has the same tenor as the draft addressed to the foreign buyer
- the procedures for applying payment received from the foreign buyer to pay the bank's own acceptance
- aging of time drafts drawn on the importer (drawee)
- ineligible foreign buyers (drawees), including house bills
- concentrations of foreign buyers (drawees)
- financial strength of the foreign buyers (drawees)
- disputes, nonacceptance of goods, and possession of goods without payment

— dishonor and protest instructions
— any special instructions
— the extent of foreign-exchange control and the availability of exchange for that type of transaction in the country of destination
— the bank's experience in dealing with the borrower

• *Factoring.*
— the extent the factor "guarantees" letters of credit opened by the bank in favor of overseas suppliers
— whether the title documents on import transactions are consigned to or endorsed over to the factor
— whether the importer who receives goods under trust receipt agrees to hold them in trust for the factor
— whether the imported goods held under warehouse receipt are stored in an independent warehouse for the account of the factor
— whether usance letters of credit are paid to the bank by the factor at maturity, and whether the resulting acceptances are charged to the bank customer's account for payment to the factor when due
— whether the factor borrows from the bank or creates a banker's acceptance pending payment of accounts receivable resulting from the sale of goods imported under letters of credit
— the financial strength of the importer for whom the bank opened the letter of credit
— any disputes, nonacceptance of goods, and possession of goods without payment
— the bank's experience in dealing with the factor

• *Forfaiting.*
— agings of debtor accounts purchased
— ineligible debtor accounts purchased, including affiliate receivables, if any
— concentration of debtor accounts purchased
— the adequacy of the bank's credit investigation before approving the sale (or signing of a sales contract) creating a receivable
— the financial strength of the debtor accounts purchased
— the capability of the exporter from whom receivables were purchased to provide any required after-sales service and to honor warranties
— disputes and returns
— the extent of foreign exchange restrictions, availability of exchange, and country risk involved that could jeopardize collection of receivables purchased
— the bank's experience in dealing with both the debtors and the exporter

• *U.S. and foreign receivables guarantee and insurance plans.* Determine whether foreign receivables coverage by FCIA, Eximbank, or other insurance or guarantee programs is sufficient, adequately identifies risks, and is consistent with established limits.

g. Analyze secondary support offered by guarantors and endorsers.
h. Determine compliance with the bank's established international loan policy.

14. For loans in the sample, check the central liability file on borrowers indebted above the cutoff line or borrowers displaying credit weaknesses or suspected of having additional liability in other loan areas.
15. Transcribe significant liability and other information of officers, principals, and affiliations of appropriate borrowers contained in the sample. Cross-reference line cards to borrowers, where appropriate.
16. Determine compliance with laws and regulations pertaining to financing foreign receivables by performing the following steps.
    a. *Lending limits.* Determine the bank's lending limit as prescribed by state law, and note any exceptions.
    b. *Section 23A, Relations with Affiliates (12 USC 371c), and section 23B, Restrictions on Transactions with Affiliates (12 USC 371c-1), of the Federal Reserve Act, and the Board's Regulation W.* Perform procedures in step 15b of "International—Loans and Current Account Advances: Examination Procedures," section 7030.3.
    c. *18 USC 215, Receipt of Commission or Gift for Procuring Loans.*

- While examining foreign receivables financing, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
- Investigate any such suspected irregularities.

d. *Federal Election Campaign Act (2 USC 441b), Political Contributions.*
- Determine the existence of any loans in connection with any political campaigns.
- Review each such credit to determine whether it is made in accordance with applicable banking laws and in the ordinary course of business.

e. *12 USC 1972 and Regulation Y (12 CFR 225.7), Tie-In Provisions and Exceptions.* Determine whether any credit extension is conditioned upon—
- obtaining or providing any additional credit, property, or service from or to the bank or its holding company (or a subsidiary of its holding company), other than a loan, discount, deposit, or trust service, or
- the customer not obtaining a credit, property, or service from a competitor of the bank or its holding company (or a subsidiary of its holding company), other than a reasonable condition to ensure the soundness of the credit

f. *Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders and Their Related Interests, and Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 USC 1972(2)), as amended by the Garn–St Germain Depository Institutions Act of 1982, Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.* Perform the Regulation O procedures of ''International—Loans and Current Account Advances: Examination Procedures,'' section 7030.3.

g. *Financial Recordkeeping and Reporting of Currency and Foreign Transactions, Retention of Credit Files.* Review the operating procedures and credit file documentation, and determine if the bank retains records of each extension of credit over $10,000, specifying the name and address of the borrower, the amount of the credit, the nature and purpose of the loan, and the date thereof. (Loans secured by an interest in real property are exempt.) (See 31 CFR 1010.410.)

17. Perform the appropriate procedural steps in "Concentrations of Credit: Examination Procedures," section 2050.3.
18. Discuss with appropriate officers, and prepare summaries in appropriate report form of—
    a. delinquent loans;
    b. loans not supported by current and complete financial information;
    c. loans on which documentation is deficient;
    d. loans with credit weaknesses;
    e. inadequately collateralized loans;
    f. criticized loans, including supporting commentaries;
    g. concentrations of credit;
    h. extensions of credit to major shareholders, officers, and directors and to their related interests;
    i. violations of laws and regulations; and
    j. other matters regarding the condition of the department.
19. Evaluate the bank for—
    a. the adequacy of written policies relating to financing foreign receivables;
    b. the manner in which bank officers are operating in conformance with established policy;
    c. adverse trends in those sections of the international sector of the bank concerned with financing foreign receivables;
    d. the accuracy and completeness of the schedules obtained from ''International—Loan Portfolio Management,'' section 7020.3;
    e. recommended corrective action when policies, practices, or procedures are deficient;
    f. the competency of departmental management; and
    g. other matters of significance.
20. Update the workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices, and procedures regarding foreign receivables financing. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written foreign receivables financing policies that:
   a. Establish procedures for reviewing financing applications?
   b. Establish standards for determining credit lines?
   c. Establish standards for determining the percentage of advances made against acceptable collections (receivables)?
   d. Define acceptable receivables (collections)?
   e. Establish minimum requirements for verification of borrower's receivables (collections)?
   f. Establish minimum standards for documentation in accordance with the Uniform Commercial Code?
2. Are foreign receivables financing policies reviewed at least annually to determine if they are compatible with changing market conditions?

ACCOUNTING RECORDS

*3. Is the preparation and posting of subsidiary records performed or adequately reviewed by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

*4. Are subsidiary records reconciled, at least monthly, with the appropriate general ledger accounts and reconciling items adequately investigated by persons who do not normally handle foreign receivables financing?

5. Are inquiries regarding foreign receivables financing loan balances received and investigated by persons who do not normally process documents, handle settlements, or post records?

*6. Are bookkeeping adjustments checked and approved by an appropriate officer?

*7. Is a daily record maintained summarizing transaction details, i.e., loans made, payments received, and interest collected to support applicable general ledger entries?

*8. Are frequent debt instrument and liability ledger trial balances prepared and reconciled monthly with control accounts by employees who do not process or record loan transactions?

DOCUMENTATION

9. Are terms, dates, weights, description of the merchandise, etc., shown on invoices, shipping documents, trust receipts, and bills of lading scrutinized for differences?
10. Are procedures in effect to determine if the signatures shown on the above documents are authentic?
11. Are payments received from customers scrutinized for differences in invoice dates, numbers, terms, etc.?

LOAN INTEREST

*12. Is the preparation and posting of loan interest records performed or adequately reviewed by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

13. Are independent interest computations made and compared or adequately tested to initial loan interest records by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

COLLATERAL

*14. Does the bank record on a timely basis a first lien on assigned foreign receivables for each borrower?

15. Do loans granted on the security of the foreign receivables also have an assignment of the inventory?
16. Does the bank verify the borrower's receivables or require independent verification on a periodic basis?
17. Does the bank require the borrower to provide aged receivables schedules on a periodic basis?
18. Are underlying bills of lading covering shipments either to the order of the shipper or blank endorsed to the order of the bank rather than the foreign buyer?
19. Are the shipments being financed covered by adequate insurance?

ADVANCES AGAINST COLLECTIONS AND DISCOUNTED TRADE ACCEPTANCES

20. Are permanent registers kept for foreign collections against which advances were made or trade acceptances discounted?
21. Are all collections indexed in a collection register?
22. Do these registers furnish a complete history of the origin and final disposition of each collection against which advances were made or trade acceptances discounted?
23. Are receipts issued to loan customers for all collections received from them?
24. Are serial numbers or prenumbered forms assigned to each collection item and all related papers?

*25. Are all incoming tracers and inquiries handled by an officer or employee not connected with the processing of collections?

26. Is a daily record maintained showing the various collections which have been paid and credited to the borrower's advance?

*27. Are proceeds of paid collections credited to the correct customer's advance?

28. Is an itemized daily summary made of all interest charged and received from the exporter or importer (drawee) indicating underlying collection numbers and amounts?
29. Are payments collected from importers (drawees) by foreign banks or branches of U.S. banks forwarded directly to the bank and not through the exporter?
30. If the exporter accepts importer (drawee) payments directly, are controls established or audits of exporter's books conducted (if so, explain briefly)?
31. Are employees handling collections periodically rotated, without advance notification, to other banking duties?

*32. Is the employee handling collection proceeds required to apply them to the borrower's advance on the same business day that payment is received?

33. Is the disposition of each collection noted on the register so that verification of disposition can be made?

*34. Has a regular policy of following procedures been established for sending tracers and inquiries on unpaid collections in the hands of correspondents?

*35. Should the foreign drawee refuse to honor the draft, are instructions clear as to what actions should be taken by the collecting bank?

36. In the event of non-payment of the collection, is the borrower promptly notified by the bank?

*37. Are collections against which advances have been made or trade acceptances discounted distinctly segregated from ordinary collection items?

*38. Are collections above maintained under memorandum control and is the control balanced regularly?

*39. Are collections against which advances have been made or trade acceptances discounted booked by persons other than employees handling those items?

*40. Are collections carried over to the next business day adequately secured?

41. Does the customer for whom trade acceptances were discounted know whether they were purchased with or without recourse to that customer?

*42. Do all parties, i.e., the seller (exporter), importer (buyer), and banks, clearly understand whether interest, discount, and collection charges are to be absorbed by the seller or paid by the importer?

FACTORING

43. Has the bank properly surrendered the

shipping documents to the factor either through endorsement or consignment?

*44. Do bank advances or banker's acceptances to the factor in payment of sight or time draft coincide with the expected payment of the accounts receivable by the ultimate customer?

FOREIGN CREDIT INSURANCE ASSOCIATION INSURANCE

45. Is the bank aware of risks not covered under its FCIA insurance?
46. Does the bank monitor whether the borrower exceeded its FCIA established credit limits?
47. Does the bank monitor whether the borrower properly assigned the proceeds of its FCIA insurance to the bank?
48. Is the bank aware whether the FCIA insurance is on either "simple notice" or a "special assignment" basis?
49. Does the bank retain recourse to the exporter under its FCIA arrangement?
50. Has the bank reported delinquencies to FCIA in accordance with its agreement with the Association?
51. If default occurs, does the bank file a proper claim with FCIA?

EXPORT-IMPORT BANK OF THE UNITED STATES

52. Does the bank, financing under Eximbank arrangements, have properly executed Eximbank guarantees or commitments covering transactions?
53. If the bank has discretionary authority from Eximbank, does it nevertheless inform Eximbank of each transaction thereunder?
54. If the bank has been issued an "equipment political risk guarantee" by Eximbank, does it have a written statement from the government of the country in which the equipment will be used indicating that it will permit the importation, use, and any subsequent exportation of the equipment?
55. Does the bank monitor whether loan agreements between applicable borrowers and the bank are acceptable to Eximbank?
56. Does the bank report delinquencies to Eximbank in a timely manner as specified in its agreement with that agency?
57. If default occurs, does the bank file a proper claim with Eximbank?

CONCLUSION

58. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
59. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

One method of financing international trade is by the use of a banker's acceptance. This instrument may be used to finance all of the successive stages of the movement of goods through the channels of trade from the point of origin to the final destination.

A banker's acceptance is an order in the form of a time draft (also referred to as a bill of exchange or a usance draft) drawn by one party (the drawer) in favor of itself or another party (the payee), addressed to (drawn on) a bank (the drawee), and accepted by that bank to pay the holder a certain sum on or before a specified date. The bank's acceptance of this order from the drawer, by stamping "ACCEPTED" across the face of the draft and dating and signing the stamp, is a formal acknowledgment of the obligation and constitutes an unconditional promise by that bank to honor the time draft at maturity. The drawee bank creating the acceptance is primarily liable for the instrument while the payee, as first endorser, is secondarily liable for paying the holder in due course. If the drawee (acceptor) is other than a bank, the instrument is a trade acceptance, not a banker's acceptance.

Most banker's acceptances are used to finance trade transactions. Accordingly, acceptances are often created in connection with a letter of credit, although they may arise in connection with collection or open-account transactions. (See section 7080, "International—Letters of Credit.") In general, acceptance credit is considered self-liquidating in that it must provide the means for its own payment at maturity. To accomplish this, the acceptance must be based on a specific trade transaction in which goods are being shipped before entering the channels of trade. There should be satisfactory evidence to indicate that the draft, when created, is based on an actual shipment or storage and that, at maturity of the draft, the proceeds from the sale of the goods will be used to settle the draft. To a lesser extent, acceptances also finance the domestic shipment of goods and domestic or foreign storage of readily marketable staples.

The payee of the acceptance may hold an acceptance until maturity, discount it with his or her bank, or sell it in the acceptance market. When a bank discounts (purchases) its own acceptance for the payee, its "Customer's Liability on Acceptances" (asset) and "Bank's Liability on Acceptances" (liability) accounts are reduced, and the discounted acceptance is recorded with other loans and discounts. If the accepting bank subsequently rediscounts (sells) the acceptance in the market, that acceptance is rebooked as "Customer's Liability on Acceptances" and "Bank's Liability on Acceptances," and the loan and discount accounts are reduced. Rediscounted acceptances are not considered borrowings. The customer's liability on acceptances is reduced by a customer's prepayment or anticipation of an acceptance outstanding. The bank's liability is not similarly reduced by an anticipation.

The established market for banker's acceptances in the United States is regulated by the Federal Reserve System. Federal Reserve Banks are authorized to discount or purchase eligible banker's acceptances subject to qualitative and quantitative limits, thus providing a source of liquidity to the selling banks. The creation of banker's acceptances is governed by section 13 of the Federal Reserve Act, which establishes criteria that must be met for the instrument to be eligible for either discount or purchase by a Federal Reserve Bank. The rules governing whether an acceptance meets the eligibility requirements for discount or purchase are important for two major reasons. First, acceptances meeting the conditions of eligibility are more readily salable in the market than acceptances that do not satisfy these conditions and, as such, provide a greater degree of liquidity for the accepting bank. Second, ineligible acceptances, unlike those that are eligible, are subject to reserve maintenance requirements, thus raising the cost to the borrower over that of an eligible acceptance. The examiner must be familiar with the criteria used for determining eligibility for discount or purchase by a Federal Reserve Bank.

Section 207 of the Bank Export Services Act (title II of P.L. 97-290), which amended section 13 of the Federal Reserve Act (12 USC 372), limits the aggregate amount of eligible banker's acceptances that may be created by a member bank to 150 percent (or 200 percent with the permission of the Board) of its paid-up and unimpaired capital stock and surplus. In addition, a member bank is prohibited from creating eligible banker's acceptances for any one person in the aggregate in excess of 10 percent of the institution's capital. Eligible banker's acceptances growing out of domestic transactions are not to exceed 50 percent of the aggregate of all eligible acceptances authorized for a member bank. All of the foregoing limitations are also applicable to U.S. branches and agencies of foreign banks that are subject to reserve requirements under section 7 of the International Banking Act of 1978 (12 USC 3105).

Banker's acceptances as a source of financing and investment offer significant advantages to borrowers, accepting banks, and investors alike. Over the years, a banker's acceptance has often been a cheaper financing vehicle than a loan since it is readily marketable, considered an important secondary reserve for the accepting bank, and a relatively secure investment to the investor because of its two-name backing.

Examination Objectives

Effective date May 1996

1. To determine if objectives, policies, practices, procedures, and internal controls for banker's acceptances are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function as it applies to banker's acceptances.
4. To evaluate the portfolio for documentation and collateral sufficiency, credit quality, and collectibility.
5. To determine compliance with applicable laws and regulations.
6. To recommend corrective action when objectives, policies, practices, procedures, or internal controls are deficient or when violations of laws and regulations have been cited.

1. If selected for implementation, complete or update the banker's acceptance section of the Internal Control Questionnaire.
2. Determine the scope of the examination based on the evaluation of internal controls and the work performed by internal and external auditors.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
4. Obtain a trial balance of the customer liability records and:
   a. Reconcile balances to department controls and the general ledger.
   b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select borrowers for examination.
6. Prepare credit line cards to include:
   a. Customer's aggregate banker's acceptance liability.
   b. Banker's acceptances aggregating the customer's total liability, listing:
      - Current balance of the acceptance.
        — Indicate any prepayments (anticipations) and portions sold under participation certificate.
      - Date the acceptance was created.
      - Tenor of the acceptance (give exact maturity date, if specified).
      - Type of acceptance.
        — Import.
        — Export.
        — Third country shipment.
        — Domestic shipment.
        — Storage.
        — To create dollar exchange.
        — Working capital and/or pre-export.
        — Refinancing of sight letters of credit.
        — Current status of the acceptance.
7. Obtain the following information, if applicable to banker's acceptances, which may necessitate inclusion of additional customers (borrowers) in the credit review:
   a. Delinquencies.
   b. Participations purchased and sold (including syndicate participations).
      - Acceptance participations sold.
      - Acceptance pool participations (borrowings).
   c. Loan commitments and other contingent liabilities.
   d. Extensions of credit to major stockholders, officers, directors and their interests.
   e. Extensions of credit to executive officers, directors and their interests of correspondent banks.
   f. Miscellaneous loan debit and credit suspense accounts.
   g. Criticized shared national credits (applicable foreign credits).
   h. Interagency Country Exposure Review Committee determinations.
   i. Extensions of credit considered "problem loans" by management.
   j. Information on directors, executive officers, principal shareholders and their interests.
   k. Specific guidelines in the lending policy pertaining to banker's acceptances.
   l. Each officer's current lending authority.
   m. The current fee structure.
   n. Any useful information resulting from the review of the minutes of the Loan and Discount Committee or any similar committee.
   o. Reports furnished to the Loan and Discount Committee or any similar committee.
   p. Reports furnished to the directorate.
   q. Loans criticized during the previous examination.
8. Review the information received and perform the following for:
   a. Participations purchased and sold:
      - Test participation certificates and records and determine that the parties share in the risks and contractual payments according to the agreement.
      - Determine that the books and records of the bank properly reflect the bank's liability.
      - Investigate any participations sold immediately prior to the date of examination to determine if any were sold to

avoid possible criticism during the examination.

b. Loan commitments (including acceptance commitments) and contingent liabilities.
   - Analyze the commitment or contingent liability if the borrower has been advised of the commitment together with the combined amounts of the current loan balance, if any.

c. Banker's acceptances created for officers and directors of other banks:
   - Investigate any circumstances which indicate preferential treatment.

d. Miscellaneous loan debit and credit suspense accounts:
   - Discuss with management any large or old items relating to banker's acceptances.

e. Shared national credits:
   - Compare the schedule of banker's acceptances included in the Uniform Review of National Credits Program to the sample selection to determine which banker's acceptances in the sample are portions of shared national credits (including applicable foreign credits).
   - For each banker's acceptance so identified, transcribe appropriate information from the schedule to line sheets and return the schedule. No further examination procedures are necessary for this area.

f. Cross-border lending:
   - Review credit risk without regard to cross-border considerations which will be analyzed separately. No further examination procedures are necessary in this area.

g. Loans criticized during the previous examination:
   - Determine disposition of banker's acceptances so criticized by transcribing:
     — current balance and payment status, or
     — date the banker's acceptance was repaid and the source of repayment.

9. Transcribe or compare information from the above schedules to credit line cards, where appropriate, and indicate any past-due status.

10. Prepare a credit line card for any banker's acceptance not in the sample which, based on information derived from the above schedules, requires an in-depth review.

11. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, and other loan areas and, together, decide who will review the borrowing relationship. Pass or retain completed credit line cards.

12. Obtain credit files for all borrowers for whom credit line cards were prepared and complete credit line cards, where appropriate. To analyze the loans, perform the following procedures:

    a. Analyze balance sheet and profit and loss figures as shown in current and preceding financial statements, and determine the existence of any unfavorable trends.
    b. Relate items or groups of items in the current financial statements to other items or groups of items set forth in the statements, and determine the existence of any favorable or adverse ratios.
    c. Review components of the balance sheet as shown in the current financial statements and determine the reasonableness of each item as it relates to the total financial structure.
    d. Review supporting information for the major balance sheet items and the techniques used in consolidation and determine the primary sources of repayment and evaluate their adequacy.
    e. Review compliance with the provisions of acceptance agreements.
    f. Review the digest of officer's memoranda, mercantile reports, credit checks and correspondence to determine the existence of any problems which might deter the contractual liquidation program.
    g. Relate any collateral values to outstanding debt, including margin and cash collateral deposits.
    h. Compare fees charged to the fee schedule(s) and determine that the terms are within established guidelines.
    i. Compare the amount of banker's acceptances outstanding with the lending officer's authority.
    j. Analyze secondary support afforded by guarantors.
    k. Ascertain compliance with the bank's established banker's acceptance policy.

13. For banker's acceptances in the sample, check the central liability file on borrowers indebted above the cutoff and on borrowers displaying credit weaknesses or suspected of having additional liability in loan areas.
14. Transcribe significant liability and other information on officers, principals and affiliations of appropriate obligors contained in the sample. Cross-reference line sheets to borrowers, where appropriate.
15. Determine compliance with laws, regulations, and eligibility requirements regarding banker's acceptance financing by performing the following steps:
    a. Determine bank compliance with state limits or the aggregate amount of acceptances that may be created for any one customer, and acceptances created to furnish dollar exchange.
    b. Determine compliance with stipulated aggregate liability limitations on acceptances outstanding. (See Federal Reserve Act, section 13 for single person and aggregate limitation provisions.)
    c. Determine which acceptances are ineligible and therefore subject to loan limitations imposed by state law. In general, an eligible banker's acceptance is one which must arise out of a transaction described in section 13 of the Federal Reserve Act. For details of eligibility requirements, refer to the operating provisions of the Federal Open Market Committee and interpretations of the Board of Governors of the Federal Reserve System. Eligibility can be determined by reviewing documentary evidence detailing the nature of the transaction underlying the credit extended. This evidence may be correspondence, title documents or document transmittal letters which provide sufficient detail to judge eligibility according to established criteria. Details provided should cover:
        - Value of merchandise.
        - Description of merchandise.
        - Origin and destination of shipment.
        - Date of shipment.
        - Certification that the merchandise is not being financed elsewhere.
    d. Ensure that all of the bank's own acceptances discounted that are not rediscounted, whether eligible or ineligible, are booked as loans and thus subject to the loan limitations imposed by state law.
    e. Determine if state law imposes loan limitations on eligible acceptances of other banks purchased.
    f. Review acceptance participation agreements to determine if the purchaser has recourse to the bank in the event of default by the account party, in which case the liability would be considered a borrowing. Such borrowings may be subject to limitations on indebtedness of member banks imposed by state law.
    g. Determine acceptances issued on behalf of an affiliate which constitute extensions of credit under section 23A of the Federal Reserve Act.
16. Perform appropriate procedural steps in the Concentration of Credits section.
17. Discuss with appropriate officer and prepare summaries in appropriate report form of:
    a. Violations of laws and regulations.
    b. Acceptances not supported by current and complete financial information.
    c. Acceptances on which collateral documentation is deficient.
    d. Concentrations of credit.
    e. Criticized loans.
    f. Inadequately collateralized acceptances, if applicable.
    g. Banker's acceptances created for major shareholders, employees, officers, directors and related interests.
    h. Banker's acceptances which, for any other reason, are questionable as to quality and ultimate collection.
18. Evaluate the bank with respect to:
    a. The adequacy of written policies relating to banker's acceptances.
    b. The manner in which bank officers are operating in conformance with established policy.
    c. Adverse trends within the banker's acceptance department.
    d. The accuracy and completeness of the schedules obtained.
    e. Internal control deficiencies or exceptions.
    f. Recommended corrective action when policies, practices or procedures are deficient.
    g. The quality of departmental management.
    h. Other matters of significance.
19. Update the workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices and procedures for creating and servicing banker's acceptances. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written banker's acceptance policies that:
   a. Establish procedures for reviewing banker's acceptance applications?
   b. Define qualified customers?
   c. Establish minimum standards for documentation in accordance with the Uniform Commercial Code?
2. Are banker's acceptance policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

3. Is the preparation and posting of subsidiary banker's acceptance records performed or reviewed by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?
4. Are the subsidiary banker's acceptance records balanced daily with the appropriate general ledger accounts and reconciling items adequately investigated by persons who do not normally handle acceptances and post records?
5. Are acceptance delinquencies prepared for and reviewed by management on a timely basis?
6. Are inquiries about acceptance balances received and investigated by persons who do not normally handle settlements or post records?
7. Are bookkeeping adjustments checked and approved by an appropriate officer?
8. Is a daily record maintained summarizing acceptance transactions details, i.e., bankers acceptances created, payments received and fees collected, to support applicable general ledger account entries?
9. Are acceptances of other banks that have been purchased in the open market segregated on the bank's records from the bank's own acceptances created?
10. Are prepayments (anticipations) on outstanding banker's acceptances netted against the appropriate asset account "Customer Liability for Acceptances" (or loans and discounts, depending upon whether or not the bank has discounted its own acceptance), and do they continue to be shown as a liability "Bank's Liability on Acceptances"?
11. Are banker's acceptance record copies and liability ledger trial balances prepared and reconciled monthly with control accounts by employees who do not process or record acceptance transactions?

FEES

12. Is the preparation and posting of fees and discounts performed or reviewed by persons who do not also:
    a. Issue official checks or drafts?
    b. Handle cash?
13. Are any independent fee and discount computations made and compared or adequately tested to initial fee and discount records by persons who do not also:
    a. Issue official checks or drafts?
    b. Handle cash?

COLLATERAL

See International—Loans and Current Account Advances section.

OTHER

14. Are acceptance record copies, own acceptances discounted (purchased), and acceptances of other banks purchased safeguarded during banking hours and locked in the vault overnight?

15. Are blank (pre-signed) customer drafts properly safeguarded?
16. Are any acceptance fee rebates approved by an officer?
17. Does the bank have an internal review system that:
    a. Re-examines collateral and supporting documentation held for negotiability and proper assignment?
    b. Test checks the values assigned to collateral at frequent intervals?
    c. Determines that lending officers are periodically advised of maturing banker's acceptances or acceptance lines.
18. Does the bank's acceptance filing system provide for the identification of each acceptance, e.g., by consecutive numbering and applicable letter of credit, to provide a proper audit trail?

CONCLUSION

19. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
20. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

U.S. banks and their overseas branches maintain interest-bearing time deposits, known as "due from banks—time," with foreign banks and overseas branches of U.S. banks. These assets may also be referred to as placements, placings, interbank placements (deposits), call money, or redeposits. Due from banks—time deposits have maturities ranging from one day to several months or years. Certain examination procedures, internal control considerations, and verification procedures in the domestic due from banks section (section 2010) are relevant to international due from banks—time. However, the specialized nature of foreign deposits necessitates additional examination procedures.

Constraints are placed on the amount member banks may deposit with domestic depository institutions. A member bank may not keep on deposit with any depository institution not having access to the Federal Reserve discount window more than 10 percent of its paid-in and unimpaired capital and surplus funds. State member banks may keep on deposit with foreign banks an amount exceeding that 10 percent limitation.

Due from banks—time deposit activities became important with the growth of the Eurodollar market. The bulk of due from banks—time deposits now consists of Eurodollars with smaller amounts in other Eurocurrencies. Other Eurocurrency time deposits are placed in substantially the same manner as Eurodollar deposits, but may be subject to differing exchange control regulations depending on the location of the office making the deposit.

Eurodollar deposits are sometimes linked with foreign-exchange transactions. As a result, the Eurocurrency deposit trader will frequently work closely with the foreign-exchange trader when making the deposit decision. Foreign-exchange brokers may act as intermediaries if warranted by market conditions, local customers, the size of the bank, or other factors.

Due from banks—time deposits are treated as deposits in the Report of Condition, but contain the same credit and country risks as loans or extensions of credit. Consequently, a prudently managed bank should place deposits only with other sound and well-managed banks. The deposit traders should be provided with a list of approved banks with which funds can be deposited up to specific limits. Due from banks—time deposits differ from other types of credit extensions because they often represent deposits of relatively short maturity, which normally receive first priority on repayment in case of insolvency. Nevertheless, as credit and transfer risk exists, exposure limits are to be established by credit officers and not by foreign-exchange or deposit traders. These limits must be reviewed regularly by credit officers, particularly during periods of money market uncertainty or rapidly changing economic and political conditions. Incoming confirmations of transactions from depository institutions must be carefully verified against bank records to protect against fraud and error. Similarly, a systematic follow-up on nonreceipt of incoming confirmations should be closely monitored.

Examination Objectives

Effective date May 1996

1. To determine if the policies, practices, procedures, and internal controls for due from banks—time (interbank placements and call money) are adequate.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To determine that all due from banks—time accounts are reasonably stated and represent funds on deposit with other banks.
4. To determine whether the bank evaluates the credit quality of banks with which time accounts are maintained.
5. To determine the scope and adequacy of the internal and external audit function as it applies to international due from banks—time.
6. To determine compliance with laws and regulations.
7. To recommend corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws, rulings, or regulations have been cited.

1. If selected for implementation, complete or update the Due from Banks—Time (placement and call money) section of the Internal Control Questionnaire.
2. Determine the scope of the examination based on the evaluation of internal controls and the work performed by internal and external auditors.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
4. Obtain a trial balance of the customer liability records pertaining to due from banks—time by currency and maturity and:
   a. Reconcile balance to department controls and general ledger.
   b. Review reconciling items for reasonableness.
5. Determine those due from banks—time deposits that are unconfirmed as of examination date and:
   - Determine why incoming matching confirmations are lacking.
   - Review the extent of follow-up procedures.
6. Using an appropriate technique, select deposit customers for examination.
7. Prepare credit line cards on the customers selected for review to include the following:
   a. Name of bank and location.
   b. Customer's aggregate due from bank-time liability.
   c. For each due from bank—time deposit placement comprising the customer's total exposure to the bank, record the following information:
      - Amount.
      - Currency.
      - Inception date.
      - Value date.
      - Maturity date.
      - Interest rate.
8. Determine whether selected customers are:
   a. Affiliates of the bank or other banks.
   b. Banks and not finance companies or commercial borrowers.
9. Obtain and review the following information, if applicable:
   a. Matured and unpaid due from banks—time deposits.
   b. Miscellaneous loan debit and credit suspense accounts.
   c. Interagency Country Exposure Review Committee determinations.
   d. Due from banks—time deposit placements that are considered problem assets by management.
   e. Specific guidelines stated in bank policy relating to due from banks—time.
   f. A current listing of due from banks—time approved customer lines.
   g. The current interest rate structure.
   h. Any useful information resulting from the review of the minutes of the Loan and Discount Committee or any similar committee.
   i. Reports furnished to the Board of Directors.
   j. Due from banks—time deposit placements that were criticized during the previous examination.
   k. A listing of due from banks—time deposits that were previously charged-off.
10. Transcribe or compare information from the above schedules to credit line cards where appropriate, and indicate any cancelled bank lines.
11. Prepare credit line cards for any due from bank—time not in the sample which, based on information derived from the above schedules, requires an in-depth review.
12. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, and loan areas and decide who will review the borrowing relationship. Pass or retain completed credit line cards.
13. Obtain credit files for all borrowers for whom credit line cards were prepared and complete credit line cards where appropriate. To analyze due from banks—time, perform the following procedures:
    a. Analyze balance sheet and profit and loss figures as shown in current and preceding financial statements, and determine

the existence of any favorable or adverse trends.

b. Relate items or groups of items in the current financial statements to other items or groups of items set forth in the statements, and determine the existence of any favorable or adverse ratios.
c. Review components of the balance sheet as shown in the current financial statements, and determine the reasonableness of each item as it relates to the customer's total financial structure.
d. Review supporting information for the major balance sheet items and the techniques used in consolidation, and determine the primary sources of repayment and evaluate their adequacy.
e. Compare each bank's balance sheet, profit and loss items and ratios with those of comparable banks in the same country to help identify banks which may be overextended.
f. Review compliance with provisions of due from banks—time deposit agreements.
g. Review digest of officers' memoranda, mercantile reports, credit checks and correspondence to determine the existence of any problems which might deter the contractual liquidation program.
h. Compare interest rate(s) charged to the interest rate schedule(s), and determine that the terms are within established guidelines.
i. Compare the amount of due from banks—time deposits with:
   - Lending officer's authority.
   - Depositor's limit established by the bank.
j. Detail the major owners of the bank and whether there is any support by the government.
k. Ascertain compliance with established bank policy.

14. For banks in the sample, check the customer central liability reporting system for any other indebtedness.
15. Transcribe significant liability and other information on officers, principals and affiliates of banks contained in the sample. Cross-reference line cards to banks (borrowers), where appropriate.
16. Determine compliance with state laws and regulations pertaining to due from banks—time.
17. Determine the existence of any concentration of time deposits with other banks. Include due from banks—demand (nostro), time deposits and any call money in computation. For concentrations exceeding 25 percent of the bank's capital structure, forward information to examiners assigned "Concentrations of Credit" for possible inclusion in the report of examination.
18. Discuss with appropriate officer(s) and prepare summaries in appropriate report form of:
    a. Matured and unpaid due from banks—time deposits.
    b. Violations of laws and regulations.
    c. Due from banks—time deposits not supported by current and complete financial information.
    d. Due from banks—time deposits on which documentation is deficient.
    e. Concentrations.
    f. Criticized credits (portions applicable to due from banks—time deposits).
    g. Due from banks—time deposits which, for any other reason, are questionable as to quality and ultimate repayment.
    h. Other matters regarding the condition of the department.
19. Evaluate the bank with respect to:
    a. The adequacy of written policies relating to due from banks—time.
    b. The manner in which bank officers are operating in conformance with established policy.
    c. Adverse trends within the due from banks—time department.
    d. The accuracy and completeness of the schedules.
    e. Internal control deficiencies or exceptions.
    f. Recommended corrective action when policies, practices or procedures are found to be deficient.
    g. The quality of departmental management.
    h. Other matters of significance.
20. Update the workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices and procedures regarding due from banks—time. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written policies for international due from banks—time that:
   a. Establish maximum limits of the aggregate amount of due from bank—time deposits for each:
      - The bank?
      - The currency of deposit?
      - The country of deposit?
   b. Restrict due from bank—time deposits to only those customers for whom lines have been established?
   c. Establish definite procedures for:
      - Balancing of accounts?
      - Holdover deals?
      - Rendering of reports to management, external auditors and regulating agencies?
      - Accounting cutoff deadlines?
      - Handling of interest?

CERTIFICATES OF DEPOSIT

2. Are bank issued certificates of deposits safeguarded as other negotiable investment instruments?
3. Are safekeeping receipts for certificates of deposits issued, but held by others, checked to the original purchase order for accuracy?

DEALING ROOM INSTRUCTIONS

(Although dealing room and instructions functions must be separate, often foreign exchange and due from bank—time activities relating to those functions are combined.)

4. Are dealer slips and contract/confirmation sets relating to due from banks—time numbered sequentially and checked periodically?
5. Is a positions clerk present in the dealing room to maintain dealers' memoranda records of due from bank—time deposits?
6. Is due from banks—time "instructions" (operations) organizationally and physically separate from the foreign exchange dealers?

*7. Do good communications appear to exist between the dealing room and instructions to assure:
   a. An effective working relationship with operations and management to ensure adequate control and management information?
   b. Coordination with operations regarding correct delivery/settlement instructions?

*8. Does operations maintain all official accounting records relating to due from banks—time?

*9. Does operations:
   a. Balance official records against dealing room memoranda records as scheduled by management?
   b. Check confirmations for errors?
   c. Receive, review and control dealer's slips?
   d. Handle all payments and receipts?

*10. Are confirmations compared to the general ledger entries for accuracy?

CONFIRMATIONS

*11. Does operations monitor follow-up on non-receipt of incoming confirmations?

*12. Are outgoing and incoming confirmations ever handled by dealers who initiate due from bank—time transactions?

*13. Does the bank check that there are no confirmation deals dated:
   a. Prior to the bank's own due from bank—time deal dates?
   b. After the bank's own due from bank—time deal dates?

TESTING ARRANGEMENTS

(See the Wire Transfer section.)

SIGNATURE BOOKS

*14. Are customer signature books updated with regard to those with whom regular business is transacted?

*15. Does the bank check signatures on incoming confirmations for authenticity? (Many banks do not check signatures on incoming confirmations.)

*16. Does the bank check signatures for deals with non-bank customers?

*17. Are banks that do not sign confirmations asked to confirm such practice in writing over an authorized signature?

ACCOUNT RECORDS

*18. Are subsidiary records reconciled with the general ledger accounts and reconciling items adequately investigated by persons who do not post transactions to such records?

19. Is a due from foreign bank—time deposit trial balance prepared on a periodic basis (if so, indicate frequency _______)?

20. Is a daily reconcilement made of due from bank—time deposit controls to the general ledger?

21. Are reconciliations reviewed by an officer independent of the reconciliation?

OTHER

22. Are individual interest computations checked or adequately tested by persons independent of those functions?

23. Are accrual balances for due from banks—time verified periodically by an authorized official (if so, indicate frequency _______)?

24. Do all internal entries require the approval of appropriate officials?

CONCLUSION

25. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

26. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

INTRODUCTION

Letters of credit are the most widely used instrument to finance foreign transactions. The two major types of letters of credit are the commercial documentary letter of credit and the standby letter of credit.

COMMERCIAL DOCUMENTARY LETTERS OF CREDIT

This type of letter of credit is used most commonly to finance a commercial contract for the shipment of goods from seller to buyer. A commercial documentary letter of credit is a letter addressed by a bank (issuing bank) on behalf of its customer, a buyer of merchandise (account party), to a seller (beneficiary) authorizing the seller to draw drafts up to a stipulated amount under specified terms. The beneficiary will be paid when the terms of the letter of credit are met and the required documents are submitted to the paying bank.

Generally, the issuance of letters of credit is governed by article 5 of the Uniform Commercial Code (UCC). However, if the credit is issued under New York law, the credit will be governed instead by the Uniform Customs and Practice for Documentary Credits (UCP). The parties may also stipulate that the UCP rather than the UCC applies. Letters of credit may also be governed by foreign law. Generally, letters of credit are—

- signed and in writing,
- in favor of a definite beneficiary,
- for a specific amount of money, and
- in a form clearly stating how payment to the beneficiary is to be made and under what conditions.

In addition, they are issued with a definite expiration date.

Commercial letters of credit are issued in either irrevocable or revocable form. Once the beneficiary receives an irrevocable letter of credit, it cannot be canceled or amended without the beneficiary's consent. Conversely, a revocable letter of credit can be canceled or amended by the issuing bank at any time without notice to or consent from the customer or the beneficiary.

An irrevocable letter of credit constitutes a definite commitment by the issuing bank to pay, provided the beneficiary complies with the letter's terms and conditions. In contrast, the revocable credit is not truly a bank credit but serves as a device that provides the buyer and seller with a means of settling payments. Since a revocable credit can be canceled or changed without notice, the beneficiary should not rely on the credit but rather on the willingness and ability of the buyer to meet the terms of the underlying contract.

The letter of credit may be sent to the beneficiary directly by the issuing bank or through the issuing bank's correspondent (advising bank) located in the same place as the beneficiary. The advising bank gives notice of the issuance of a letter of credit without assuming any obligation to honor demands for payment. Advised letters of credit will bear a notation by the advising bank that it makes "no engagement" or words to that effect. An irrevocable advised letter of credit is, therefore, an undertaking to pay by the issuing bank, but not by the advising bank.

Some beneficiaries (sellers), particularly those not familiar with the issuing bank, request the buyer to have the irrevocable credit issued in the buyer's country and "confirmed" by a bank in the seller's country. Confirmed letters of credit are evidenced by the confirming bank's notation: "We undertake that all drafts drawn . . . will be honored by us" or similar words. The beneficiary of a confirmed credit has a definite commitment to pay from a bank in his or her country and need not be concerned with the willingness or ability of the issuing bank to pay. An advising bank may add its confirmation and be designated in the letter as the paying bank.

Payment terms of a letter of credit usually vary from sight to 180 days, although other terms are sometimes used. The letter will specify on which bank drafts are to be drawn. If the draft is drawn at sight, the bank will effect payment upon presentation of the draft, provided the terms of the credit have been met. If the draft is drawn on a time basis, the bank will accept the draft (by stamping "Accepted" on the face of the draft), which then can be held by the seller or the bank until maturity. Alternatively, the accepted draft can be sold or discounted.

(See section 7060, "International—Banker's Acceptances.")

Certain categories of commercial letters of credit, such as back-to-back and red clause credits, contain an element of risk, and banks should exercise caution in their negotiation. Similarly, deferred-payment letters of credit, which become direct assets and liabilities of a bank after presentation and receipt of the beneficiary's documents, involve greater potential risk when coupled with the length of time the credit is outstanding.

A transferable letter of credit enables the original beneficiary to transfer the rights of payment to one or more beneficiaries. Frequently, the beneficiary is a middleman who does not own the goods at the time the letter of credit is issued. Thus, the beneficiary may seek to use the letter of credit to finance the acquisition of the goods. Under the UCP, a transferable letter of credit may be transferred only once unless otherwise stated.

A revolving letter of credit allows for monthly shipments with payments being either cumulative or noncumulative. In the case of cumulative credits, undrawn amounts carry over to future periods. However, most letters of credit are nonrevolving and are valid for one transaction. Since the maximum exposure under an irrevocable revolving credit can be large, most revolving credits are issued in revocable form.

Documentation is of paramount importance in all letter of credit transactions. The bank is required to examine all documents with care to determine that they conform to all of the terms and conditions of the letter of credit. Many letters of credit are part of continuous transactions, evolving from letters of credit to sight drafts or acceptances or to notes and advances covered by trust receipts or warehouse receipts. Ultimate repayment often depends on the eventual sale of the goods involved. Thus, the proper handling and accuracy of the documents required under the letter of credit is of primary concern.

STANDBY LETTERS OF CREDIT

A standby letter of credit guarantees payment to the beneficiary by the issuing bank in the event of default or nonperformance by the account party (the bank's customer). Although a standby letter of credit may arise from a commercial transaction, it is not linked directly to the shipment of goods from seller to buyer. It may cover performance of a construction contract, serve as an assurance to a bank that the seller will honor his or her obligations under warranties, or relate to the performance of a purely monetary obligation, for example, when the credit is used to guarantee payment of commercial paper at maturity.

Under all letters of credit, the banker expects the customer to be financially able to meet his or her commitments. A banker's payment under a commercial credit for the customer's account is usually reimbursed immediately by the customer and does not become a loan. However, the bank makes payment on a standby letter of credit only when the customer, having defaulted on his or her primary obligation, is unable to reimburse it.

A standby letter of credit transaction involves greater potential risk for the issuing bank than a commercial documentary letter of credit. Unless the transaction is fully secured, the issuer of a standby letter of credit retains nothing of value to protect against loss, whereas a commercial documentary letter of credit provides the bank with title to the goods being shipped. To reduce the risk of a standby letter of credit, the issuing bank's credit analysis of the account party should be equivalent to the analysis of a borrower in an ordinary loan situation.

The standby letter of credit transactions of state member banks are subject to the legal restrictions of Regulation H and section 23A of the Federal Reserve Act. For reporting purposes, standby letters of credit are shown as contingent liabilities in the issuer's Report of Condition.

Under the revised capital/risk assets guidelines, banks now must allocate capital against standby letters of credit. See the capital adequacy guidelines of November 1995 for information concerning capital allocation requirements against standby letters of credit.

ANTI-BOYCOTT REGULATIONS

The Export Administration Act of 1973 prohibits banks from taking or knowingly agreeing to take actions that support any boycott against a country friendly to the United States. Under anti-boycott regulations (which are issued by the Department of Commerce and enforced by the Office of Anti-Boycott Compliance), U.S. banks are required to report letters of credit they receive that include illegal boycott terms or conditions and should establish an ongoing program to review all letters of credit. These regulations apply to both domestic and overseas branches of all U.S. banks.

The anti-boycott provisions prohibit banks from opening, negotiating, confirming, or paying international letters of credit that contain illegal terms or conditions. The improper language is most often seen in documentary letters of credit, sight reimbursements, and pass-on letters of credit, but may also appear in drafts and wire payments. Often, a bank's customer may try to add improper language orally rather than in writing. Boycott language includes clauses or requirements such as—

- certification that the goods are not of a particular origin, such as Israeli or South African;
- certification that any supplier or provider of services does not appear on the Arab blacklist;
- the condition, "Do not negotiate with blacklisted banks," or words to that effect;
- a request not to ship goods on an Israeli carrier or on a vessel or carrier that calls at Israel en route to a boycotting country; and
- a request for a certificate stating the origin of the goods or the destination of the goods.

1. To determine if objectives, policies, practices, procedures, and internal controls for letters of credit are adequate.
2. To determine whether bank officers are operating in conformance with established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To evaluate the portfolio for documentation and collateral sufficiency, credit quality, and collectibility.
5. To determine compliance with applicable laws and regulations.
6. To recommend corrective action when objectives, policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations are noted.

1. If selected for implementation, complete or update the Letters of Credit section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal and external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
4. Obtain a trial balance of the customer liability records and:
   a. Reconcile balances to department controls and the general ledger.
   b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select customers for examination.
6. Prepare examiners' credit line cards for each customer selected to include:
   a. Total line available for letters of credit.
   b. Total outstanding letters of credit.
      - Undrawn amount.
      - Date of issuance.
      - Expiration date of the credit.
      - Name of the beneficiary.
      - Tenor of the drafts to be drawn.
      - Purpose for the credit.
      - Issued or confirmed.
      - Revocable or irrevocable.
      - Negotiable or non-negotiable.
      - Revolving.
        — Cumulative or noncumulative.
      - Transferable.
      - Assignable.
      - Amendments.
      - Issued on behalf of domestic banks.
      - Application (with official approval) is on file and in agreement with letter of credit terms.
      - Bank's copy is initialed by the officer who signed the original letter of credit.
7. Obtain the following information if it is applicable to the letter of credit department. Such information may necessitate inclusion of additional customers in the credit review.
   a. Delinquencies.
   b. Participations purchased and sold since the preceding examination (including syndicate participations).
   c. Loan commitments and other contingent liabilities.
   d. Letters of credit issued (or confirmed) for major shareholders, officers, directors and their related interests.
   e. Letters of credit issued (or confirmed) for employees, officers and directors of other banks.
   f. Miscellaneous loan debit and credit suspense accounts.
   g. Criticized shared national credits (applicable foreign credits).
   h. Interagency Country Exposure Review Committee determinations.
   i. Letters of credit considered problems by management.
   j. Information on directors, executive officers, principal shareholders and their interests.
   k. Specific guidelines in the lending policies.
   l. Each officer's current lending authority.
   m. Current letter of credit commission and fee structure.
   n. Any useful information obtained from the review of the minutes of the Loan and Discount Committee or any similar committee.
   o. Reports furnished to the Loan and Discount Committee or any similar committee.
   p. Reports furnished to the board of directors.
   q. Loans criticized during the previous examination.
8. Review the information received and perform the following for:
   a. Participations purchased and sold (including syndicate participations).
      - Test participation certificates and records and determine that the parties share in the risks and contractual payments according to the agreement.

- Determine that the books and records of the bank properly show the bank's liability.
- Investigate any participations sold immediately prior to the date of examination to determine if any were sold to avoid possible criticism during the examination.

b. Loan commitments and other contingent liabilities:
- Analyze the commitment or contingent liability if the borrower has been advised of the commitment and the combined amounts of the current loan balance (if any) and the commitment or other contingent liability exceeds the cutoff.

c. Letters of credit issued (or confirmed) for officers, directors and their interests:
- Investigate any circumstances which indicate preferential treatment.

d. Letters of credit issued (or confirmed) for officers and directors of other banks.
- Investigate any circumstances which indicate preferential treatment.

e. Miscellaneous loan debit and credit suspense accounts relating to letters or credit.
- Determine liability to the bank on drafts paid under letters of credit for work which the bank has not been reimbursed by the customer.
- Investigate any large or old items.

f. Shared national credits:
- Compare the schedule of letters of credit included in the program to the bank's reports of unexpired letters of credit.
- For each letter of credit so identified, transcribe appropriate information to line cards. No further examination procedures are necessary in this area.

g. Interagency Country Exposure Review Committee credits:
- Identify any credits that were selected for review that are criticized for transfer risk reasons by the Interagency Country Exposure Review Committee.

h. Letters of credit criticized during the previous examination:
- Determine disposition of letters of credit so criticized by transcribing:
  — Current balance and payment status, or
  — Date the letter of credit was drawn down (refinanced), paid, expired or cancelled, and the source of repayment.

9. Transcribe or compare information from the above schedules to credit line cards, where appropriate, and indicate any past due status relating to letters of credit.
10. Prepare credit line cards for any letter of credit not in the sample which, based on information derived from the above schedules, requires an in-depth review.
11. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, and loan areas and decide who will review the borrowing relationship. Pass or retain examination credit line cards.
12. Obtain credit files for all bank customers for whom credit line cards were prepared and complete credit line cards, where appropriate. To analyze the letters of credit, perform the following procedures:
    a. Analyze balance sheet and profit and loss items as shown in current and preceding financial statements, and determine the existence of any favorable or adverse trends.
    b. Relate items or groups of items in the current financial statements to other items or groups of items set forth in the statements, and determine the existence of any favorable or adverse ratios.
    c. Review components of the balance sheet as shown in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure.
    d. Review supporting information for the major balance sheet items and the techniques used in consolidation, and determine the primary sources of repayment and evaluate their adequacy.
    e. Review compliance with provisions of letter of credit agreements.
    f. Review digest of officers' memoranda, mercantile reports, credit checkings and correspondence to determine the existence of any problems which might deter the contractual liquidation program.
    g. Relate any collateral values, including margin and cash collateral deposits, to outstanding letter of credit debt.
    h. Compare fees charged to the fee schedule(s), and determine that terms are within established guidelines.

i. Compare the amount of letters of credit outstanding with the lending officer's authority.
j. Analyze any secondary support afforded by guarantors.
k. Ascertain compliance with the bank's established commercial loan policy.
l. Analyze the following specific types of letters of credit (when applicable) to determine the following:
- For red-clause letters of credit (packing credits)—
  - — is clean advance or anticipatory drawing finance to the beneficiary (exporter or agent) authorized under the letter of credit?
  - — does the beneficiary undertake to deliver, within the expiration date, the shipping documents called for in the letter of credit?
  - — does the foreign bank make advances to the beneficiary, and is it paid by drawing its own draft on the opening bank, or is the beneficiary authorized to draw its draft on the issuing bank, and are the drafts received charged to the importer?
- For traveler's letters of credit—
  - — is a traveler's letter of credit authorizing the issuing bank's correspondent to negotiate drafts drawn by the beneficiary named in the credit, up to a specified amount, upon proper identification?
  - — is the customer furnished with a list of the issuing bank's correspondents abroad?
  - — is the letter of credit prepaid in full?
- For back-to-back letters of credit—
  - — is the backing letter of credit properly assigned as collateral to the bank issuing the letter of credit?
  - — are the terms of the letter of credit issued identical to the backing credit, except that—
    - the beneficiary and account party are different,
    - the amount may be less but not more than the backing credit,
    - the expiration date is reduced by sufficient time to allow completion of the transaction before the backing letter of credit expires, and
  - — the beneficiary of the backing letter of credit is a regular customer of the bank opening the second letter of credit?
- For standby letters of credit—
  - — do they represent undertakings to pay up to a specific amount on presentation of a draft (or drafts) or documents before a specified date?
  - — do they represent obligations to a beneficiary on the part of the issuer to—
    - repay money borrowed by or advanced to, or for the account of, a party; or
    - make payment on account of any indebtedness undertaken by the account party, or make payment on account of default by the account party in the performance of an obligation, for example, default on loans, performance of contracts, or relating to maritime liens?
- For deferred-payment letters of credit (trade-related)—
  - — does the letter of credit call for drawing of sight drafts with the provison that such drafts are not to be presented until a specified period after presentation and surrender of shipping documents to the bank?
  - — is the bank's liability for outstanding letters of credit calling for deferred payment reflected as a contingent liability until presentation of such documents?
  - — has the bank received, approved, and acknowledged receipt of the documents, thereby becoming directly liable to pay the beneficiary at a determinable future date (or dates)?
  - — will payment be made to the beneficiary in a specified number of months or quarterly, semiannually, annually, or beyond? (If the bank has advanced money to the beneficiary against the deferred-payment letter of credit, with its proceeds assigned as collateral to repay the advance, the transaction should be

treated as a loan rather than a deferred-payment letter of credit).

- For clean deferred-payment letters of credit—
  - — do such deferred-payment credits call for future payment against simple receipt without documents evidencing an underlying trade transaction?
  - — are such letters of credit shown as direct liabilities on the bank's records when drafts are presented by the beneficiary and received by the bank?
- For authority to purchase—
  - — is the authority to purchase with recourse to the drawer, without recourse to the drawer, or without recourse to the drawer but confirmed by the negotiating bank?
- For Agency for International Development (AID) letters of credit—
  - — does the bank have an AID letter of commitment authorizing the transaction?
  - — has the bank checked to make sure that all documents, including those presented by the beneficiary, comply with the terms of both the letter of credit and the AID commitment?
  - — does a letter of agreement between the bank and the foreign government exist, whereby the bank has recourse if AID fails to reimburse the bank?
- For Commodity Credit Corporation (CCC) letters of credit—
  - — does the bank have a CCC letter of commitment authorizing the bank under examination to issue letters of credit to beneficiaries supplying eligible commodities to foreign importers?
  - — in instances where the bank has issued standby letters of credit in favor of the CCC, have the following requirements been met:
    - Has at least 10 percent of the financed amount been confirmed, i.e., guaranteed by a U.S. bank, for commercial credit risk? Is the total value of the credit advised through a U.S. bank?
- For the Export-Import Bank (Eximbank) of the United States—
  - — does the bank have an agency agreement from Eximbank stating—
    - that Eximbank has entered into a line of credit with a foreign borrower,
    - the amount of the line,
    - that the bank has been designated to issue the letter of credit (or credits), and
    - that any payments made under an Eximbank-approved letter of credit will be reimbursed by Eximbank?
  - — has the bank checked to make sure that all documents, including those presented by the beneficiary, comply with the terms of both the letter of credit and the Eximbank agreement?
- For advised (notified) letters of credit—
  - — is the bank only advising the beneficiary without responsibility on its part? (These banks should not be examined unless the bank has notified the letter-of-credit terms erroneously to the beneficiary, thus resulting in a possible liability for the bank.)
- For other types of letters of credit—
  - — do any of the following U.S. government agencies and international organizations reimburse the bank for issuing letters of credit on their behalf:
    - International Bank for Reconstruction and Development (World Bank)
    - Inter-American Development Bank
    - Overseas Private Investment Corporation

13. For loans in the sample, check the central liability file on borrowers who are indebted above the cutoff, or on borrowers who display credit weaknesses or are suspected of having additional liability in other loan areas.
14. Transcribe significant liability and other information on officers, principals, and affiliations of appropriate obligors contained in the sample. Cross-reference line cards to borrowers, where appropriate.

15. Determine compliance with section 208.24 of Regulation H regarding standby letters of credit by performing the following steps:
    a. Determine which letters of credit are standby letters of credit as defined by section 208.24(a) of Regulation H.
    b. Determine that the amount of standby letters of credit does not exceed the legal limitations on loans imposed by the state (including limitations to any one customer or on aggregate extensions of credit).
        - Combine standby letters of credit with any other nonexcepted loans to the account party by the issuing bank for the purpose of applying state loan limitations to any one customer.
        - A standby letter of credit is not subject to loan limitations imposed by state law in the following instances:
            — Before or at the time of issuance of the credit, the issuing bank is paid an amount equal to the bank's maximum liability under the standby letter of credit.
            — Before or at the time of issuance, the bank has set aside sufficient funds in a segregated, clearly earmarked deposit account to cover the bank's maximum liability under the standby letter of credit.
    c. Determine, for standby letters of credit that constitute extensions of credit under section 23A of the Federal Reserve Act when issued on behalf of an affiliate, that—
        - the legal lending limits pertaining to loans to affiliates have not been exceeded, and
        - appropriate collateral requirements have been met.
    d. Determine that the bank maintains adequate control and clearly earmarked subsidiary records of its standby letters of credit in conformance with section 208.24 of Regulation H.
    e. Determine that the credit standing of the account party under any standby letter of credit is the subject of credit analysis that is equivalent to that applicable to a potential borrower in an ordinary loan situation.
16. Perform the appropriate procedural steps in the "Concentration of Credits" section.
17. Discuss with the appropriate officer (or officers) and prepare summaries in appropriate report form of—
    a. letters of credit not supported by current and complete financial information,
    b. letters of credit on which collateral documentation is deficient,
    c. inadequately collateralized letters of credit,
    d. criticized letters of credit,
    e. concentrations of credit,
    f. letters of credit issued in favor of major shareholders, employees, officers, directors, and their interests,
    g. letters of credit which, for any other reason, are questionable in quality,
    h. violations of laws and regulations, and
    i. other matters regarding the condition of the letters-of-credit department.
18. Prepare and give to the examiner-in-charge a written evaluation of the letters-of-credit department with respect to—
    a. the adequacy of written policies relating to letters of credit;
    b. the manner in which bank officers are operating in conformance with established policies;
    c. delinquencies relating to letters of credit, segregating those considered "A" paper;
    d. adverse trends within the letter-of-credit department;
    e. the accuracy and completeness of the schedules obtained;
    f. internal-control deficiencies or exceptions;
    g. recommended corrective action when policies, practices, or procedures are deficient;
    h. the quality of departmental management; and
    i. other matters of significance.
19. Update the workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices and procedures for letters of credit issued and confirmed. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written letter of credit policies that:
   a. Establish procedures for reviewing letter of credit applications?
   b. Define qualified customers?
   c. Establish minimum standards for documentation in accordance with the Uniform Commercial Code?
2. Are letter of credit policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

*3. Is the preparation and posting of subsidiary letter of credit records performed or reviewed by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

*4. Are the subsidiary letter of credit records (control totals) balanced daily with the appropriate general ledger accounts and reconciling items adequately investigated by persons who do not normally handle letters of credit and post records?

*5. Are delinquencies arising from the nonpayment of instruments relating to letters of credit prepared for and reviewed by management on a timely basis?

*6. Are inquiries regarding letter of credit balances received and investigated by persons who do not normally process documents, handle settlements or post records?

*7. Are bookkeeping adjustments checked and approved by an apropriate officer?

*8. Is a daily record maintained summarizing letter of credit transaction details, i.e., letters of credit issued, payments received, and commissions and fees collected, to support applicable general ledger account entries?

9. Are frequent letter of credit record copies and liability ledger trial balances prepared and reconciled monthly with control accounts by employees who do not process or record letter of credit transactions?

COMMISSIONS

*10. Is the preparation and posting of commission records performed or reviewed by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

11. Are any independent commission computations made and compared or adequately tested to initial commission records by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

DOCUMENTATION

12. Are terms, dates, weights, description of merchandise, etc. shown on invoices, shipping documents, delivery receipts and bills of lading scrutinized for differences with those detailed in the letters of credit instruments?
13. Are procedures in effect to determine if:
   a. The above documents are signed when required?
   b. All copies of letters of credit are initialed by the officer who signed the original letter of credit?
   c. All amendments to letters of credit are approved by an officer?

COLLATERAL

(See International—Loans and Current Account Advances section.)

DEFERRED PAYMENT LETTERS OF CREDIT

*14. Are deferred payment letters of credit:
   a. Recorded as direct liabilities of the bank after it acknowledges receipt of the beneficiary's documents?
   b. Included in "Other Assets" and "Other Liabilities" in the call report?

STANDBY LETTERS OF CREDIT

*15. Are standby letters of credit segregated or readily identifiable from other types of letters of credit and/or guarantees?

OTHER

16. Are outstanding letter of credit record copies and unissued forms safeguarded during banking hours and locked in the vault overnight?

*17. Are advised letters of credit recorded as memoranda accounts separate from letters of credit issued or confirmed by the bank?

18. Are letters of credit which have been issued with reliance upon a domestic bank, whether on behalf of, at the request of, or under an agency agreement with the domestic bank, recorded as contingent liabilities under the name of that domestic bank?

19. Are any commission rebates approved by an officer?

20. Does the bank have an internal review system that:
   a. Re-examines collateral items for negotiability and proper assignment?
   b. Test check values assigned to collateral when the letter of credit is issued or confirmed and at frequent intervals thereafter?
   c. Determines that customer payments of letters of credit issued are promptly posted?
   d. Determines all delinquencies arising from the non-payment of instruments relating to letters of credit?

21. Are all letters of credit recorded and assigned consecutive numbers?

22. Are lending officers frequently informed of maturing letters of credit and letter of credit lines?

CONCLUSION

23. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

24. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

State member banks may not issue guarantees and sureties except for those that may be incidental or usual in conducting banking business, such as when a bank has a substantial interest in the performance of the transaction involved or has a segregated deposit sufficient in amount to cover its total potential liability. A state member bank also may guarantee or endorse notes or other obligations sold by the bank for its own account. The amount of the obligations covered by the guaranty or endorsement is to be recorded as a liability on the bank's records. These liabilities are included in computing the aggregate indebtedness of the bank, which may be subject to limitations imposed by state law. Furthermore, a state member bank is permitted to guarantee the deposits and liabilities of its Edge Act and agreement corporations and of its corporate instrumentalities in foreign countries.

A foreign branch of a member bank may engage in certain activities under Regulation K (12 CFR 211) in addition to its general banking powers to the extent that they are consistent with its charter. Those additional activities include guaranteeing a customer's debts or agreeing to make payment on the occurrence of readily ascertainable events, including, but not limited to, nonpayment of taxes, rentals, customs duties, the cost of transportation and loss, or the nonconformance of shipping documents. The guarantee or agreement must specify maximum monetary liability. The liabilities outstanding are subject to loan limitations on any one customer imposed by state law.

A common example of a guarantee is a shipside bond. Frequently, in an international sale of goods, the merchandise arrives at the importer's (buyer's) port before the arrival of correct and complete bills of lading. In these instances, it is customary for the importer (buyer) to obtain immediate possession of the goods by providing the shipping company with a bank guarantee, often called a shipside bond, that holds the shipping company blameless for damage resulting from release of the goods without proper or complete documents. Usually, the bank's guarantee relies on a counter-guarantee issued to the bank by the importer.

All types of guarantees issued are to be recorded as contingent liabilities by the bank. Usually, the party for whom the guarantee was issued will reimburse the bank should it be required to pay under the guarantee; however, in certain situations, some other designated party may reimburse the bank. That other party may be designated in the guarantee agreement with the bank or in the guarantee instrument itself. The bank may also be reimbursed from segregated deposits held, from pledged collateral, or by a counter-guarantor. Letters of credit, as distinguished from guarantees, are discussed in section 7080, "International—Letters of Credit."

International—Guarantees Issued
Examination Objectives
Effective date May 1996

Section 7090.2

1. To determine if policies, practices, procedures, and internal controls for guarantees issued are adequate.
2. To determine if bank officers are operating in conformance with established guidelines.
3. To evaluate the portfolio of guarantees for credit quality, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function as it applies to guarantees.
5. To determine compliance with applicable laws and regulations.
6. To recommend corrective action when objectives, policies, practices, procedures, or internal controls are deficient and when violations of laws and regulations have been cited.

1. If selected for implementation, complete or update the Guarantees Issued section of the Internal Control Questionnaire.
2. Determine the scope of the examination based upon the evaluation of internal controls and the work performed by internal and external auditors.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
4. Obtain a trial balance of the customer (account party) liability records and:
   a. Reconcile balances to department controls and the general ledger.
   b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select guarantee account parties for examination.
6. Prepare credit line cards to include:
   a. Total line available for guarantees.
   b. Total outstanding guarantees.
7. Obtain the following information if it is applicable to the guarantees issued area:
   a. Loan commitments and contingent liabilities.
   b. Miscellaneous loan debit and credit suspense accounts.
   c. Criticized shared national credits.
   d. Interagency Country Exposure Review Committee determinations.
   e. Loans considered "problem loans" by management.
   f. Specific guidelines in the lending policy.
   g. Each officer's current lending authority.
   h. Any useful information resulting from the review of the minutes of the Loan and Discount Committee or any similar committee.
   i. Reports furnished to the Loan and Discount Committee or any similar committee.
   j. Reports furnished to the board of directors.
   k. Loans criticized during the previous examination.
8. Review the information received and perform the following for:
   a. Miscellaneous loan debit and credit suspense accounts:
      - Determine any liability to the bank resulting from guarantees paid by the bank for which it has not been reimbursed by an account party.
      - Discuss with management any large or old items.
      - Perform additional procedures as considered appropriate.
   b. Shared national credits:
      - Compare the schedule of guarantees issued included in the program to the bank's reports of unexpired guarantees.
      - For each guarantee so identified, transcribe appropriate information to line cards. No further examination procedures are necessary for these items.
   c. Interagency Country Exposure Review Committee Credits:
      - Identify any guarantees that were selected for review that are criticized for transfer risk reason by the Interagency Country Exposure Review Committee.
9. Transcribe or compare information from the above schedules to credit line cards, where appropriate, and indicate any past due status.
10. Prepare credit line cards for any guarantee not in the sample which, based on information derived from the above schedules, requires an in-depth review.
11. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, loans and current account advances, due from foreign banks—time, and other loan areas and decide who will review the borrowing relationship. Pass on or retain completed credit line cards.
12. Obtain credit files for all customers (account parties) for whom credit line cards were prepared and complete credit line cards, where appropriate. To analyze the guarantees, perform the following procedures:
    a. Analyze balance sheet and profit and loss figures as shown in current and preced-

ing financial statements, and determine the existence of any favorable or adverse trends.

b. Relate items or groups of items in the current financial statements to other items or groups of items set forth in the statements, and determine the existence of any favorable or adverse ratios.

c. Review components of the balance sheet as reflected in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure.

d. Review supporting information for the major balance sheet items and the techniques used in consolidation. Determine the primary sources of repayment and evaluate the adequacy of those sources.

e. Determine compliance with the provisions of guarantee agreements.

f. Review digest of officers' memoranda, mercantile reports, credit checkings and correspondence to determine the existence of any problems which might deter the contractual liquidation program.

g. Relate collateral values, if any, to outstanding guarantee.

h. Compare fees charged to the bank's fee schedule and determine that the terms are within established guidelines.

i. Compare the original amount of the guarantee with the lending officer's authority.

j. Analyze support afforded by counterguarantors.

k. Ascertain compliance with the bank's established guarantee issued policy.

13. For guarantees issued in the sample, check central liability file on borrower(s) indebted above the cutoff or borrower(s) displaying credit weakness or suspected of having additional liability in loan areas.

14. Transcribe significant liability and other information on officers, principals and affiliations of appropriate account parties contained in the sample. Cross-reference line cards to borrowers, where appropriate.

15. Determine compliance with state laws and regulations pertaining to guarantees issued by performing the following steps:

    a. Determine that the obligations covered by such guarantees or endorsements are shown as contingent liabilities on the records and in the reports of condition of the bank and that such liabilities are included in computing the aggregate indebtedness of the bank, if such limitations are imposed by state law.

    b. Determine which guarantees are subject to individual loan limitations to any one customer by state law. Combine guarantees with any other extensions of credit to the account party by the issuing bank subject to loan limitations imposed by state law.

16. Perform appropriate procedural steps in the Concentration of Credits section, as applicable.

17. Discuss with appropriate officers and prepare summaries in appropriate report form of:

    a. Guarantees not supported by current and complete financial information.
    b. Guarantees on which collateral documentation is deficient.
    c. Concentrations of credit.
    d. Criticized guarantees.
    e. Inadequately collateraled guarantees, if applicable.
    f. Guarantees issued in favor of major shareholders, employees, officers, directors and related interests.
    g. Guarantees, which for any other reason, are questionable as to quality and ultimate collection.
    h. Violations of laws and regulations.

18. Evaluate the bank with respect to:

    a. The adequacy of written policies relating to guarantees issued.
    b. The manner in which bank officers are operating in conformance with established policy.
    c. Adverse trends within the guarantees issued department.
    d. The accuracy and completeness of the schedules obtained.
    e. Internal control deficiencies or exceptions.
    f. Recommended corrective action when policies, practices or procedures are deficient.
    g. The quality of departmental management.
    h. Other matters of significance.

19. Update the workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices and procedures for issuing and servicing guarantees. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written policies pertaining to guarantees issued that:
   a. Establish procedures for reviewing guarantee applications?
   b. Define qualified guarantee account parties?
   c. Establish minimum standards for documentation in accordance with the Uniform Commercial Code?
2. Are guarantees issued policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

*3. Is the preparation and posting of subsidiary guarantee records performed or reviewed by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

*4. Are the subsidiary guarantees issued records balanced daily with the general ledger and are reconciling items adequately investigated by persons who do not normally handle guarantees?

*5. Are guarantee delinquencies prepared for and reviewed by management on a timely basis?

6. Are inquiries regarding guarantee balances received and investigated by persons who do not normally handle guarantees or post records?

*7. Are bookkeeping adjustments checked and approved by an appropriate officer?

*8. Is a daily record maintained summarizing guarantee transaction details, i.e., guarantees issued, guarantees cancelled or renewed, payment made under guarantees and fees collected, which support general ledger entries?

9. Are frequent guarantee instrument and liability ledger trial balances prepared and are they reconciled monthly with control accounts by persons who do not process or record guarantee transactions?

GUARANTEE FEES

*10. Is the preparation and posting of fees collected records performed or reviewed by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

11. Are independent fee computations made, compared or adequately tested to initial fee records by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?

COLLATERAL

(See International—Loans and Current Account Advances section.)

OTHER

12. Are guarantees issued instruments safeguarded during banking hours and locked in the vault overnight?
13. Are all guarantees issued recorded as liabilities and assigned consecutive numbers?
14. Are all guarantees issued recorded on individual customer (account party) liability ledgers?

CONCLUSION

15. Is the foregoing information an adequate basis for evaluating internal control in that

there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

16. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

This section provides examiners with the basic principles and risks associated with foreign exchange trading. By its very nature, foreign exchange trading involves risk. The examiner's primary function is to understand that risk and ensure that bank management, by means of policies, limits, and systems, is controlling that risk in a prudent manner. For the purpose of this section, foreign currency money market functions will be combined with foreign exchange activities since the principles and risks are virtually the same.

In order to evaluate a bank's foreign exchange and controls, the examiner needs a basic understanding of the foreign exchange market, the commercial bank's role in the market, trading fundamentals, and the principal risks involved in trading.

The foreign exchange market exists to service the foreign currency needs of importers, exporters, manufacturers, and retailers. Foreign exchange transactions arising from international trade and investment are frequently large and recurrent.

Large or small, all foreign exchange transactions represent the exchange of one country's money for another's. The exchange rate is simply the price of one currency in terms of another.

Until the late 1970s, foreign exchange rates in this country were normally expressed and quoted in dollars per unit of foreign currency, also known as "U.S. Terms." Under this method, for example, the rate for Swiss francs would be expressed as CHFl=U.S.$1.5500. However, because of vastly improved communications and a rapidly expanding market, it became necessary for traders worldwide to quote rates in a uniform manner. As a result, American foreign exchange traders began using foreign currency units per dollar or "European Terms" for most rates. Using European terms, the quote in this example would be U.S.$1=CHF.64516. Thus, European terms represent the value of the U.S. dollar in units of the foreign currency. A quote in European terms is simply the reciprocal of a quote in U.S. terms. One major exception to this shift is the British pound sterling which, for historical purposes, is always quoted in U.S. terms such as 1£=$1.7450.)

Any commercial bank which maintains due from bank balances, commonly known as "nostro" accounts, in banks in foreign countries in the local currency has the capability of engaging in foreign exchange. The majority of U.S. banks restrict foreign exchange to the servicing of their customers' foreign currency needs. The banks will simply sell the currency at a rate slightly above the market and subsequently offset the amount and maturity of the transaction through a purchase from another correspondent bank at market rates. This level of activity involves virtually no exposure as currency positions are covered within minutes. A small profit is usually generated from the rate differential, but the activity is clearly designated as a service center.

Greater emphasis is placed on foreign exchange activity by regional banks. The servicing of the corporate customers' needs is also a priority, but most regional banks also participate in the interbank market. These banks look at the trading function as a profit center as well as a service. Such banks usually employ several experienced traders and, unlike the previous group, will take positions in given currencies based on anticipated rate movements.

Multinational banks assume, by far, the most significant role in the foreign exchange marketplace. While still servicing customer needs, these banks are heavily engaged in the interbank market and look to their foreign exchange trading operation for sizable profits. Such banks trade foreign exchange on a global basis through international branch networks.

A major aspect of any foreign exchange review is the ability of the examiner to determine if the bank has the capability to adequately handle the level of its foreign exchange volume and the extent of the exposures taken. This judgment is, by necessity, subjective; however, it must take into consideration asset size, capital base, customer volume in foreign exchange, depth and experience of traders, and management understanding of and commitment to trading. The fundamental principles of foreign exchange trading outlined below are designed to assist the examiner in this analysis.

SPOT TRADING

Buying and selling foreign exchange at market rates for immediate delivery represents spot trading. In reality, spot trades have a "value date'' (maturity or delivery date) of two to five business days (one for Canada and Mexico). Foreign exchange rates that represent the present market value for the currency are known as spot rates. The risk of spot trading results from rate movements occurring when the bank's position in foreign currency is not balanced with regard to exchange bought and sold. Such unbalanced positions are referred to as net open positions and are defined as follows:

Net Open Positions—A bank has a net position in a foreign currency when its assets, including spot and future contracts to purchase, and its liabilities, including spot and future contracts to sell, in that currency are not equal. An excess of assets over liabilities is called a net ''long'' position and liabilities in excess of assets a net ''short'' position. A ''long'' position in a foreign currency which is depreciating will result in an exchange loss relative to book value because, with each day, that position (asset) is convertible into fewer units of local currency. Similarly, a ''short'' position in a foreign currency which is appreciating represents an exchange loss relative to book value because, with each day, liquidation of that position (liability) will cost more units of local

1. Does not include a Swiss franc 1,000M (U.S. $386M) unhedged investment in a Swiss subsidiary and Swiss franc 573M (U.S. $217M) unhedged investment in branch fixed assets. The unhedged term ''long'' position was approved by senior bank management.

2. Net overnight position in excess of established limit. Formally approved as a special situation by senior management prior to the transaction.

currency. (Examples of net open position schedules appropriate for use in preparing the report of examination appear on the preceding page.)

It is important to remember that the net open position consists of both balance sheet accounts and contingent liabilities. For most banks, the nostro accounts represent the principal assets; however, foreign currency loans as well as any other assets or liability accounts denominated in foreign currency that are sizable in certain banks, must be included. All future foreign exchange contracts outstanding are contingents. When a contract matures, the entries are posted to a nostro account in the appropriate currency.

Each time a bank enters into a spot foreign exchange contract, its net open position is changed. For example, assume that Bank A opens its business day with a balanced net open position in pound sterling (assets plus purchased contracts equal liabilities plus sold contracts). This is often referred to as a "flat" position. Bank A then receives a telephone call from Bank B requesting a "market" in sterling. Because it is a participant in the interbank foreign exchange trading market, Bank A is a "market maker." This means it will provide Bank B with a two-sided quote consisting of its bid and offer for sterling. If a different currency was requested, European terms would be the opposite as the bid and offer would be for dollars instead of the foreign currency. In determining the market given, Bank A's trader of sterling will determine where the market presently is (from brokers and/or other banks) and attempt to anticipate where it is headed and whether Bank B is planning to buy or sell sterling.

When Bank A gives its quote on sterling, $1.7115–25 for example, it is saying that it will buy sterling (its bid) at $1.7115 or sell sterling at $1.7125 (its offer). If Bank B's interest is to buy sterling and the given quote is appealing, it will buy sterling from Bank A at $1.7125 (Bank A's offer of sterling). Note, that while Bank B may choose to buy, sell, or pass as it wishes, it must do business on the terms established by Bank A. These terms will be in Bank A's favor. As soon as Bank B announces it will purchase sterling at $1.7125, Bank A acquires a net open position (short) in sterling. Bank A must then decide whether to hold its short position (in anticipation of a decline in sterling) or cover its position. Should it wish to cover, it may call another bank and purchase the amount it sold to Bank B. However, in this case, as the calling bank, Bank A would buy its sterling from the offered side of the quote it receives and must buy it at $1.7125 or less to avoid a loss.

Banks engaging in interbank spot trading will often be involved with sizable net open positions, though many for just brief periods. No matter how skilled the trader, each will encounter at least occasional losses. Knowing when to close a position and take a small loss before it becomes large is a necessary trait for a competent trader. Many banks employ a "stop loss policy" whereby a net open position must be covered if losses from it reach a certain level. While a trader's forecast may ultimately prove correct within a day or week, rapid rate movements often force a loss within an hour or even minutes. Also, access to up-to-the-minute information is vital for involvement in spot trading. Banks who lack the vast informational resouces of the largest multinationals may be particularly vulnerable to sudden spot rate movements prompted by inside information or even rumors. As a result, examiners should closely review banks where foreign exchange activities consist primarily of interbank spot trading.

FORWARD TRADING

A forward transaction differs from a spot transaction in that the value date is more than two to five business days in the future. The maturity of a forward foreign exchange contract can be a few days, months, or even years in some instances. The exchange rate is fixed at the time the transaction is agreed. But nostro accounts are not debited or credited, i.e., no money actually changes hands, until the maturity date of the contract. There will be a specific exchange rate for each forward maturity, and each of those rates will generally differ from today's spot exhange rate. If the forward exchange rate for a currency is higher than the current spot rate, dealers say the currency is trading at a "premium" for that forward maturity. If the forward rate is below the spot rate, then the currency is said to be trading at a "discount." For instance, sterling for value in three months is at a discount if the spot rate is $1.75 and the three-month forward rate is $1.72.

Banks active in the foreign exchange market find that interbank currency trading for any specific value date in the future is inefficient and engage in it only infrequently. Instead, for future maturities, banks trade among themselves as well as with some corporate customers on the basis of a transaction known as a "swap." A swap transaction is a simultaneous purchase and sale of a certain amount of foreign currency for two different value dates. The key aspect is that the bank arranges the swap as a single transaction with a single counterparty, either another bank or a nonbank customer. This means that, unlike outright spot or forward transactions, a trader does not incur a net open position since the bank contracts both to pay and to receive the same amount of currency at specified rates.

A swap allows each party to use a currency for a period in exchange for another currency that is not needed during that time. Thus, the swap offers a useful investment facility for temporary idle currency balances of a corporation or a financial institution. Swaps also provide a mechanism for a bank to accommodate the outright forward transactions executed with customers or to bridge gaps in the maturity structure of its outstanding spot and forward contracts.

The two value dates in a swap transaction can be any two dates. But, in practice, markets exist only for a limited number of standard maturities. One of these standard types is called a "spot against forward" swap. In a spot against forward swap transaction, a trader buys or sells a currency for the spot value date and simultaneously sells or buys it back for a value date a week, a month, or three months later.

Another type of transaction of particular interest to professional market-making banks is called a "tomorrow-next" swap or a "rollover." These are transactions in which the dealer buys or sells a currency for value the next business day and simultaneously sells or buys it back for value the day after. A more sophisticated type of swap is called a "forward-forward" in which the dealer buys or sells currency for one future date and sells or buys it back for another future date. Primarily, multinational banks specialize in transactions of that type.

Any swap transaction can be thought of as if it were a simultaneous borrowing and lending operation. For example, on September 11, Bank A "swaps in" three-month sterling in a spot against a forward transaction with Bank B. On September 13, Bank A pays dollars to Bank B's account at a New York bank and Bank A receives sterling for its account at a bank in London. On December 13, the swap is reversed. Bank A pays back the sterling to Bank B, while B pays back the dollars to A. In the meantime, Bank A has the use of the sterling, in effect "borrowing" sterling, while giving up use of the dollars, in effect "lending" the dollars. Banks recognize this close equivalence to actual short-term borrowing and lending. Many fold in swap transactions with other money market transactions in managing their global banking activities.

Forward exchange rates can be expressed in three ways. Like spot rates, outright forward prices are expressed in dollars and cents per currency unit or vice versa. Traders normally only quote forward prices to corporate customers or to small correspondent banks seeking to buy or sell a currency for a particular future date. For instance, a trader may quote an outright six-month rate to buy sterling of $1.8450, while, by comparison, a quotation to buy spot sterling might be less ($1.8200) or more ($1.8625).

In swap transactions, the trader is only interested in the difference between spot and forward rates, the premium or discount, rather than the outright spot and forward rates themselves. Premiums and discounts expressed in points ($0.0001 per pound sterling or € 0.0001 per dollar) are called swap rates. For the first spot rate above, the premium is 250 points ($0.0250). For the second, the discount is 175 points ($0.0175).

Since, in a swap, a trader is effectively borrowing one currency and lending the other for the period between the two value dates, the premium or discount is often evaluated in terms of percent per annum. For the examples above, the premium of 250 points is equivalent to 2.75 percent per annum, while the discount of 175 points is equivalent to 1.88 percent per annum. To calculate the percentage premium for the first case:

- Take the swap rate ($0.0250)
- Multiply by 12 months and divide by 6 months (a per annum basis)
- Divide by the spot rate ($1.8200), and
- Multiply by 100 (to get a percent basis).

On a formula basis, this can be expressed as:

$$\text{\% per annum} = \left(\frac{\text{Premium or Discount} \times 12}{\text{Spot rate} \times \text{number of months of forward contract}} \right) \times 100$$

As can be seen from the above, forward rates (premiums or discounts) are solely influenced by the interest rate differentials between the two countries involved. As a result, when the differential changes, forward contracts previously booked could now be covered at either a profit or loss. For example, assume an interest rate differential between sterling and dollars of 3 percent (with the sterling rate lower). Using this formula, with a spot rate of $1.80, the swap rate on a three month contract would be a premium of 135 points. Should that interest rate differential increase to 4 percent (by a drop in the sterling rate or an increase in the dollar rate), the premium would increase to 180 points. Therefore, a trader who bought sterling three months forward sterling at 135 points premium could now sell it at 180 points premium, or at a profit of 45 points (expressed as .0045).

Thus, the dealer responsible for forward trading must be able to analyze and project dollar interest rates as well as interest rates for the currency traded. Additionally, because forward premiums or discounts are based on interest rates differentials, they do not reflect anticipated movements in spot rates.

Active trading banks will, of course, have a large number of forward contracts outstanding. The portfolio of forward contracts is often called a "forward book." As a result, these forward positions must be managed on a gap basis. Normally, banks will segment their forward books into 15-day periods and show the net (purchased forward contracts less sold ones) balance for each period. A typical forward book would look as follows:

Foreign Currency	*Maturity Date*	*Purchases*	*Sales*	*Net Position for Period*
England	Dec. 1–15	1 000 000	800 000	200 000
(amounts in)	16–31	700 000	900 000	(200 000)
pound sterling)	Jan. 1–15	1 500 000	500 000	1 000 000
	16–31	1 400 000	600 000	800 000
	Feb. 1–15	1 100 000	700 000	400 000
	16–28	1 400 000	400 000	1 000 000
	Mar. 1–31	200 000	1 300 000	(1 100 000)
	Apr. 1–30	400 000	1 600 000	(1 200 000)
	May 1–31	300 000	900 000	(600 000)
	June 1–30	350 000	450 000	(100 000)
	July 1–31	550 000	450 000	100 000
	Aug. 1–31	1 000 000	1 000 000	—
	Sept. 1–30	500 000	600 000	(100 000)
	Oct. 1–31	600 000	500 000	100 000
	Nov. 1–30	100 000	100 000	—
	Dec. 1–31	100 000	200 000	(100 000)
	Totals	11 200 000	11 000 000	200 000

In this forward book, volumes and net positions are limited with only the first three months segregated into 15-day periods with the remainder grouped monthly. The trader will use the forward book to manage his overall forward positions.

A forward book in an active currency may consist of numerous large contracts but, because of the risks in a net open position, total forward purchases will approximately equal total forward sales. (Note: In the above forward book, the net position is only £200,000.) What matters in reviewing a forward book is the distribution of the positions by period. In the above example, the forward sterling is long a net 3,200,000 for the first three months (December through February) and short a net 3,000,000 for the next four months (March through June). In this instance, the forward book is structured for an anticipated decline in dollar interest rates as compared with sterling interest rates since these sold positions could be offset (purchase of a forward contract to negate the sold forward position) at a lower price—either reduced premium or increased discount.

Trading forward foreign exchange thus involves projecting interest rate differentials and managing a forward book to be compatible with these projections. An understanding of these concepts is essential when looking at forward trading from risk and profitability aspects.

COMPUTING FOREIGN EXCHANGE PROFITS AND LOSSES

If traders did nothing but spot transactions and never took open positions from day to day, calculating profit or loss would be straightforward. For example: on January 21, the traders buy £1,000,000 spot at $1.75 and £3,000,000 at $1.74 and sell £2,000,000 at $1.7450 and £2,000,000 at $1.7380. On the spot value dates, two business days later, the bank's nostro or clearing account in London is credited and debited by £4,000,000 from the maturing transactions.

The sterling position is square, since debits and credits are equal. In New York, the bank pays $6,970,000 but receives only $6,966,000. There is a net loss of $4,000 on the four transactions. This is so because the bank's accountant would calculate that the traders acquired sterling at an average rate of $1.7425 =

$$\frac{\pounds 1{,}000{,}000 \times \$1.75 + \pounds 3{,}000{,}000 \times \$1.74}{\pounds 4{,}000{,}000}$$

Against that, the traders sold sterling at $1.7450, for a profit of $5,000 (i.e., $1.7450 $1.7425 = $0.0025 × 2,000,000 = $5,000). Traders also sold another £2,000,000 at $1.7380 for a loss of $9,000 ($1.7380 $1.7425 = $0.0045 × £2,000,000 = $9.000). In this instance, the computed net loss of $4,000 is precisely the same as the excess of dollar payments over dollar receipts.

In practice, computing profits and losses is far more complex for two basic reasons. Banks do not trade only for spot value—they also do forward contracts. Moreover, most major banks do not operate from day to day with completely square positions in each currency. Because of the way different forward contracts mature each day, it is unusual for payments and receipts to balance perfectly until the traders arrange swaps to achieve that result. Because some traders take a view about the future movements of a currency, short or long positions are built up; and, because of the changing influences on market developments and traders' decisions, long or short positions can be altered any number of times each and every day.

In this kind of fluid trading environment, a bank needs to establish accounting procedures for calculating profits and losses which can handle the problem of maturity mismatches and open foreign currency positions. The principles underlying the accounting procedures are much the same from bank to bank, although specific practices vary. The first principle is that banks do not formally calculate profits or losses daily; most compute profits and losses monthly. Some banks do make these calculations more frequently for management information purposes.

The next principle is that banks calculate profits or losses on the entire foreign exchange book as of the calculation date. On any day, the book includes all spot and forward contracts which have not yet matured, along with nostro balances in each currency. Each contract represents a purchase or sale of a foreign currency at a specified exchange rate.

On the profit calculation date, the bank's accountants revalue the foreign exchange book. They use the latest market exchange rates, spot and forward, for each value date on which contracts are outstanding. For each contract, the difference between the current market rate for the value date of the contract and the rate specified in the contract is calculated. For example, if the bank previously bought a currency, e.g., sterling at $1.75, and the current market rate for the relevant maturity is higher, e.g., sterling at $1.80, there is an unrealized profit.

These calculated unrealized profits and losses are amalgamated with the realized profits or rlosses that accrue every day as foreign exchange contracts mature. The net profit or loss, realized plus unrealized, is then incorporated in bank operating income, reflecting the net contribution of foreign exchange trading before expenses.

To recapitulate, a bank with a large number of spot and forward contracts and possibly with open positions in one or more currencies needs a formal method of computing unrealized profits and losses at regular intervals. It uses a revaluation procedure that, in effect, measures what the profits and losses would be if the bank covered in the market all outstanding positions that were not already covered. The revaluation procedure ensures that the bank's open positions show changes in exchange rates as they occur, rather than when open positions are eventually covered or when individual contracts mature. Periodic profit and loss calculations therefore provide bank management with ongoing insights into the performance of the trading function.

Following is an illustration of the revaluation procedure. Assume that on the revaluation date, January 15, Bank A had three outstanding contracts in its sterling book:

- A sale of £1,000,000 at $1.75 for value March 15.
- A purchase of £3,000,000 at $1.70 for value May 15.
- A sale of £1,000,000 at $1.65 for value August 15.

The book is "long" £1,000,000 since purchases of sterling are greater than sales. For now, the nostro account and the calculations of realized profits and losses are left aside.

To revalue the book, the accountants find on January 15 that two-month, four-month, and seven-month forward rates in the market are $1.80, $1.75, and $1.70, respectively. They proceed conceptually as if the traders were to cover the contracts at the going market rates, buying sterling to offset sales and selling sterling to offset purchases. On this basis, for the first contract, they compute an urealized loss of $50,000 ($1.75 $1.80 = $0.05 × £1,000,000). For the second contract, they compute an unrealized profit of $150,000 ($1.75 $1.70 = $0.05 × £3,000,000). For the third contract, they compute an unrealized loss of $50,000 ($1.65 $1.70 = $0.05 × £1,000,000). The net is an unrealized profit of $50,000 which is entered on the income statement as the trading profit.

The accountant's task actually is far more complicated. A foreign exchange book of a major bank may include hundreds of outstanding contracts in a dozen or more currencies. Value dates range from the next day to a year or more in the future. Market exchange rates are readily available for the "even" dates—one, two, three, six, twelve, and twenty-four months into the future. The Federal Reserve Bank of New York publishes such a daily series which can be used by bank accountants and examiners. But for "odd" dates, the accountant must approximate rates, possibly through a computer program that interpolates between even date quotations.

As contracts in the foreign exchange book mature, they affect the cash flow of the bank. Maturing purchase and sale contracts are treated asymmetrically. In a U.S. bank, which posts its profits and losses in dollars, maturing purchase contracts result in credits to its nostro account in that currency. Each day, the bank's accountants compute a new average acquisition rate for the nostro account based on existing holdings and all flows into the account that day. Maturing sale contracts result in debits to the nostro account. They yield a gain or loss measured against the average acquisition rate for funds available in the nostro account. The net realized profit or loss is placed in a suspense account which, at regular intervals, is incorporated into the bank's income statement along with the unrealized profits or losses resulting from the periodic revaluation of the foreign exchange book. In practice, the revaluation can be done on a worksheet as long as net positions for time periods and present market rates are known. While banks will revalue monthly and make the appropriate entries to income accounts, traders will spot-check their profitability more frequently. Examiners should understand the revaluation procedure for the necessary test checking of reported profits, as time restrictions do not normally allow for the proving of all of the bank's open positions.

To revalue the nostro accounts, which represent realized profit or loss, the net foreign currency balance is multiplied by the current spot rate and the result, or market value, is compared to the U.S. $ equivalent on the books to determine profit or loss as shown below:

Foreign Amount	*Spot Rate*	*Market Value*	*U.S. $ Equivalent Book Value of Ledger Accounts*	*Profit or Loss*

15,172	$1.7155	26,028	21,229	+4,799

The same principle holds true when comparing market value to book, even if credit balances exist. (A market value of -19.055 and a book value of -20,155 would result in a profit of 1,100.)

A worksheet revaluation of forward contracts, for unrealized profits, is an expansion of the forward book previously shown. All rates must be expressed in "U.S. terms."

FORWARD BOOK

Foreign Currency	*Maturity Date*	*Purchases*	*Sales*	*Net Position for Period*	*D-Discount P-Premium Rate*	*Profit*	*Loss*
England	Dec. 1–15	1 000 000	800 000	200 000	.0025 P	500	
	16–31	700 000	900 000	(200 000)	25 P		500
	Jan. 1–15	1 500 000	500 000	1 000 000	15 P	1,500	
	16–31	1 400 000	600 000	800 000	15 P	1,200	
	Feb. 1–15	1 100 000	700 000	400 000	5 P	200	
	16–28	1 400 000	400 000	1 000 000	5 P	500	
	Mar. 1–31	200 000	1 300 000	(1 100 000)	5 D	550	
	Apr. 1–30	400 000	1 600 000	(1 200 000)	15 D	1,800	
	May 1–31	300 000	900 000	(600 000)	30 D	1,800	
	June 1–30	350 000	450 000	(100 000)	45 D	450	
	July 1–31	550 000	450 000	100 000	5 P	50	
	Aug. 1–31	1 000 000	1 000 000	—	25 D	—	
	Sept. 1–30	500 000	600 000	(100 000)	0	—	
	Oct. 1–31	600 000	500 000	100 000	45 D		450
	Nov. 1–30	100 000	100 000	—	25 D	—	
	Dec. 1–31	100 000	200 000	(100 000)	5 P		50
	Totals	11 200 000	11 000 000	200 000		+7550	

In completing a worksheet in the above format, the following must be kept in mind:

- A long position at a premium = profit
- A short position at a premium = loss
- A long position at a discount = loss
- A short position at a discount = profit

The $7,550 is simply the profit that would be obtained if the forward book positions were fully liquidated at this time, i.e., purchases offset by sales. To calculate the profit, the unrealized profit from the previous month ($6,400 in this example) must be reversed. Thus, the sterling profit for this month would be:

$4,799	Nostro balance profit
7,550	Forward book profit (unrealized)
-6,400	Reversal of last month's forward book
$5,949	Sterling profit for the month

Most automated systems will eliminate the need for manual calculations. However, the resulting figure is only as accurate as the rates applied. As a result, examiners should test-check at least one major currency using independent rates (supplied by the Federal Reserve Bank of New York or another independent source). This should be done concurrently with the bank's own monthly revaluation. If a sizeable discrepancy results, rates and revaluation methods used by the bank should be reviewed with both management and the traders.

DEFINING AND CONTROLLING FOREIGN EXCHANGE RISKS

Foreign exchange trading encompasses a variety of risks. Exchange rate risk, maturity gaps and interest rate risk relate to spot and forward trading. The latter two risks relate to exposures inherent in all phases of international banking.

Exchange Rate Risk

Exchange rate risk is an inevitable consequence of trading in a world in which foreign currency values move up and down in response to shifting market supply and demand. When a bank's dealer buys or sells a foreign currency from another bank or nonbank customer, exposure from a net open position is created. Until the time that the position can be covered by selling or buying an equivalent amount of the same currency, the bank is exposed to the risk that the exchange rate might move against it. That risk exists even if the dealer immediately seeks to cover the position because, in a market in which exchange rates are constantly changing, a gap of just a few moments can be long enough to transform a potentially profitable transaction into a loss. Since exchange rate movements can readily accumulate in one direction, a position carried overnight or over a number of days entails greater risk than one carried a few minutes or hours. Again, the acid test of a good trader is to know when to take a small loss before it becomes larger.

At any time, the trading function of a bank may have long positions in some currencies and short positions in others. These positions do not offset each other, even though, in practice, some currencies do tend to move more or less together. The bank's traders recognize the possibility that the currencies in which they have long positions may fall in value and currencies in which they have short positions may rise. Consequently, gross trading exposure is measured by adding the absolute value of each currency position expressed in dollars. The individual currency positions and the gross dealing exposure must be controlled to avoid unacceptable risks.

To accomplish this, management limits the open positions dealers may take in each currency. Practices vary among banks, but, at a minimum, limits are established on the magnitude of open positions which can be carried from one day to the next (overnight limits). Several banks set separate limits on open positions dealers may take during the day. These are called "daylight" limits. Formal limits on gross dealing exposure also are established by some banks, while others review gross exposure more informally. The various limits may be administered flexibly, but the authority to approve a temporary departure from the norm is typically reserved for a senior officer.

For management and control purposes, most banks distinguish between positions arising from actual foreign exchange transactions (trading exposure) and the overall foreign currency exposure of the bank. The former includes the positions recorded by the bank's trading operations at the head office and at branches abroad. In addition to trading exposure, overall exposure incorporates all bank assets and liabilities denominated in foreign currencies including loans, investments, deposits, and the capital of foreign branches. Control of overall foreign currency exposure usually is the responsibility of a senior officer accountable to the bank's senior management.

Maturity Gaps and Interest Rate Risk

Interest rate risk arises whenever there are mismatches or gaps in the maturity structure of a bank's foreign exchange forward book. Managing maturity mismatches is an exacting task for a foreign exchange trader.

In practice, the problem of handling mismatches is involved. Eliminating maturity gaps on a contract-by-contract basis is impossible for an active trading bank. Its foreign exchange book may include hundreds of outstanding contracts. Some will mature each business day. Since the book is changing continually as new transactions are made, the maturity gap structure also changes constantly.

While remaining alert to unusually large mismatches in maturities that call for special action, traders generally balance the net daily payments and receipts for each currency through the use of rollovers. Rollovers simplify the handling of the flow of maturing contracts and reduce the number of transactions needed to balance the book. Reliance on day-to-day swaps is a relatively sound procedure as long as interest rate changes are gradual and the size and length of maturity gaps are controlled. However, it does leave the bank exposed to sudden changes in relative interest rates between the United States and other countries, which influence market quotations for swap transactions and, consequently, the cost of bridging the maturity gaps in the foreign exchange book.

The problem of containing interest rate risk is familiar to major money market banks. Their business often involves borrowing short-term and lending longer-term to benefit from the normal tendency of interest rates to be higher for longer maturities. But in foreign exchange trading, it is not just the maturity pattern of interest rates for one currency that counts. Rather, in handling maturity gaps, the differential between interest rates for two currencies is decisive. So the problem is more complex.

To control interest rate risk, senior management generally imposes limits on the magnitude of mismatches in the foreign exchange book. Procedures vary, but separate limits are often set on a day-to-day basis for contracts maturing during the following week or two and for each consecutive half-monthly period for contracts maturing later. At the same time, management relies on branch officers abroad, domestic money market experts, and its Economic Research Department to provide an ongoing analysis of interest rate trends.

Credit Risk

When a bank books a foreign exchange contract, it faces a risk, however small, that the counterparty will not perform according to the terms of the contract. In both instances, there is a credit risk, although, in the foreign exchange case no extension of credit is intended. To limit credit risk, a careful evaluation of the creditworthiness of the customer is essential. Just as no bank can lend unlimited amounts to a single customer, no bank would want to trade unlimited amounts of foreign exchange with one counterparty.

Credit risk arises whenever a bank's counterparty is unable or unwilling to fulfill its contractual obligations. That happens most blatantly when a corporate customer enters bankruptcy or a bank counterparty is declared insolvent. In any foreign exchange transaction, each counterparty agrees to deliver a certain amount of currency to the other on a particular date. Every contract is immediately entered into the bank's foreign exchange book. In balancing its trading position, a bank counts on that contract being carried out in accordance with the agreed upon terms. If the contract is not liquidated, then the bank's position is unbalanced and the bank is exposed to the risk of changes in the exchange rates. To put itself in the same position it would have been in if the contract had been performed, a bank must arrange for a new transaction. The new transaction may have to be arranged at an adverse exchange rate. The trustee for a bankrupt company may perform only contracts which are advantageous to the company and disclaim those contracts which are disadvantageous.

Another and potentially more pernicious form of credit risk stems from the time zone differences between the United States and foreign nations. Inevitably, a bank selling sterling, for instance, must pay pounds to a counterparty earlier in the day than it will be credited with dollars in New York. In the intervening hours, a company can go into bankruptcy or a bank can be declared insolvent. Thus, the dollars may never be credited.

Managing credit risk is the joint responsibility of the bank's trading department and its credit officers. A bank normally deals with corporations and banks with which it has an established relationship. Dealing limits are set for each counterparty and are adjusted in response to changes in its financial condition. In addition, some banks set separate limits on the value of contracts that may mature on a single day with a particular customer. Some banks, recognizing credit risk increases as maturities lengthen, restrict dealings with certain customers to spot transactions or require compensating balances on forward transactions. A bank's procedures for evaluating credit risk and minimizing exposure are reviewed by supervisory authorities as part of the regular examination process.

Transfer Risk

At one time or another, virtually every country has interfered with international transactions in its currency. Interference might take the form of regulation of the local exchange market, restrictions on foreign investment by residents, or limits on inflows of investment funds from abroad. Governments take such measures for a variety of reasons: to improve control over the domestic banking system, or to influence the pattern of receipts and payments between residents and foreigners. Restrictions on the exchange market or on international transactions generally are intended to affect the level or movement of the exchange rate.

Changes in regulations or restrictions usually do have an important exchange market impact. From the viewpoint of a commercial bank's foreign currency traders, most disruptive are changes in rules which interfere with the normal payments mechanism. Traders make foreign exchange contracts on the expectation that both parties will perform according to the terms of the contract. But if government regulations change and a counterparty is either forbidden to perform as expected or is required to do something extra, then a trader might be left with an unintended open position or an unintended maturity mismatch. As described in the previous section, dealing with unintended long or short positions can be costly.

Other changes in official regulations do not in the first instance, affect the payments mechanism, but they do influence international investment transactions. Consequently, when one of the factors affecting the buying or selling of a currency changes, the exchange rate is likely to respond. Currency traders usually try to limit open positions and maturity gap mismatches, whenever modifications in official regulations appear likely. Nevertheless, changes in controls often are unpredictable; and unanticipated changes in regulations can spark significant exchange rate response.

Monitoring and responding to changing official exchange controls abroad has to be done by a well-run foreign exchange trading function. Most U.S. banks have judged that the simplest approach is to avoid trading in those currencies for which the market is heavily regulated. This decision is reflected in turnover statistics which show that trading is concentrated in the major currencies subject to the fewest controls; generally the euro, Canadian dollar, British pound sterling, Swiss franc, and Japanese yen.

POLICY

The relative importance of each of those risk determinants varies with each currency traded and with the country of each counterparty. Senior bank management must fully understand the risks involved in foreign exchange and money market operations and must establish, in writing, its goals and policies regarding those risks. Management must be able to defend logically the basis upon which such policies are formed. It is imperative that responsible officers, traders, clerks and auditors fully understand the intent as well as the detail set forth in those directives.

At a minimum, policies should define dealing limits and reporting requirements as well as accounting and audit and control systems to provide for proper surveillance over those limits and exceptions thereto.

Limits must be established for overnight net positions in each currency. Depending on the size of the limits and the manner in which they are calculated, a smaller aggregate position limit for all currencies may be desirable. An aggregate limit should not permit the netting of short against long positions, but should require that they be added to determine conformance to that limit. Many U.S. banks consider whether to establish daylight (intraday) position limits only if efficient computerization and input systems are in effect to incorporate each trade into the appropriate currency position at nearly the precise moment it is transacted.

Gap (net inflow and outflow) limits must be instituted to control the risk of adverse rate movement and liquidity pressures for each currency for each daily, weekly, and biweekly future time frame designated in the bank's maturity reports. Such limits might range from stated absolute amounts for each time frame to weighted limits that emphasize increasing rate movement exposure applicable to the relative distance into the future in which the gap appears.

Aggregate trading and placement limits must be established for each customer, based primarily on the amount of business considered to be appropriate to its creditworthiness and, secondly, on the volume of its foreign currency needs. In addition, absolute sub-limits should be placed upon the amount of that customer's business that may be settled on one day. Should the customer be unable to meet obligations on one day, the trader will:

- Be forewarned against delivery prior to receipt of customer funds on the remaining contracts outstanding, and
- Have an opportunity to determine whether alternate cover must be obtained to meet

third-party transactions that may initially have provided cover for the remaining transactions with that customer.

It is difficult to monitor aggregate volume limits effectively and ensure compliance with settlement limits for a large number of customers. An effective settlement limit program for at least those relationships that possess a greater potential for late delivery or default should be enacted by senior management.

REPORTS

Properly designed reports are the most important supervisory tool available to management. They must be prepared in a concise, uniform, and accurate manner and submitted punctually. Management should receive daily net position reports for each currency traded. Normally, position reports should include all foreign currency balance sheet items and future contracts as well as afterhour and holdover transactions, excepting fixed assets and equity investments. The hedging of those investments is usually a management decision outside the normal responsibility of the traders. The reports should be prepared by the foreign exchange and money market bookkeeping section and reconciled daily to the trader's blotter. In the event that formal position reports cannot be submitted at the end of a business day, management should be apprised of the traders estimated position at the end of each day and especially before weekends and holidays.

Gap or maturity reports are essential to the proper management of a bank's liquidity in each foreign currency and significant maturity gaps may affect overall liquidity. Those reports should show daily gaps for at least the first two weeks to one month. Beyond that time, gap periods of a maximum of two weeks each are preferred. Gap reports are generally accurate only for the day on which they are prepared. Therefore, it is essential that banks have the capability to produce detailed management reports daily. Loans, deposits, and future contracts, as well as commitments to take or place deposits should be reflected in the periods in which they are scheduled for rollover or interest adjustment. In most instances, an additional report showing those items at final maturity is desirable in analyzing the bank's medium- and longer-term dependence on money market funding sources.

Exception reports must be promptly generated upon the creation of excesses to position limits, gap limits, and customer trading and settlement limits. Excesses over any established limits should conform to overall policy guidelines and should receive prior approval by the responsible supervisory officers. If prior approval is not possible, evidence of subsequent officer concurrence or disagreement as well as any corrective action should be available for audit review and management records.

REVALUATION AND ACCOUNTING SYSTEMS

Revaluation and accounting systems should be in place to accurately determine actual as well as estimated future profits and losses and to present them in such a manner as to facilitate proper income analysis by management, bank supervisory personnel, and the public. A bank's revaluation procedure should be test-checked at the time of monthly revaluation using independently obtained rates. While methods and systems may vary to some degree within banks, all revaluation systems should incorporate the following two aspects:

- Actual realized profit or loss as determined by applying current spot rates to balance sheet accounts as well as contracts of near maturities. Adjustments to the local currency book values would either be allocated and posted to each of the applicable local currency ledger accounts or, for short interim periods, be charged to a separate foreign exchange adjustment account with an offset to the profit and loss account.
- Unrealized (estimated future) profit or loss on future transactions as determined by applying the appropriate forward rates to the net positions shown for each future period appearing in the bank's gap or maturity reports. An account such as "estimated profit (loss) on foreign exchange—futures" should be charged or credited for the amount of the adjustment with an offset to the profit and loss account. Provided that the amount of that adjustment is the difference between the existing forward rates and the actual contract rates, each month's entries merely involves reversing the

adjustment from the prior revaluation and entering the new figures.

SPECIALIZED TRANSACTIONS

Financial Swaps

A financial swap is the combination of a spot purchase or sale against a forward sale or purchase of one currency in exchange for another. It is merely trading one currency (lending) for another currency (borrowing) for that period of time between which the spot exchange is made and the forward contract matures. The swap is the simple identification of one transaction contracted at the spot rate with another transaction contracted at the forward rate to establish the exchange cost or profit related to the temporary movement of funds into another currency and back again. That exchange (swap) profit or cost must then be applied to the rate of interest earned on the loan or investment for which the exchange was used. For example, the true yield of an investment for 90 days in United Kingdom Treasury bills cannot be determined without having considered the cost or profit resulting from the swap needed to make pounds sterling available for that investment. Likewise, the trading profits or losses generated by the trader cannot be determined if financial swap profits and expenses are charged to the exchange function rather than being allocated to the department whose loans or investments the swap actually funded.

Arbitrage

As it pertains to money markets and foreign exchange, arbitrage may take several forms. The creation of an open position in a currency in anticipation of a favorable future movement in the exchange rate, in addition to being speculative, is sometimes referred to as "arbitrage in time." Buying a currency in one market and simultaneously selling it for a profit in another market is called "arbitrage in space." Slightly more involved is the practice of interest arbitrage which involves the movement of funds from one currency to another so they may be invested at a higher yield. The real yield advantage in such a situation is not determined merely by the difference in interest rates between the two investment choices, but rather by subtracting the cost of transferring funds into the desired currency and back again (the swap cost) from the interest differential. For example, there is no arbitrage incentive involved in swapping from dollars into the other currency at a 60 point per month discount (swap cost) which exactly offsets the 3 percent gain in interest. However, should the swap rate move to 40 points per month (or 480 points per year), the investment might become attractive. This can be tested by converting the swap rate to an annual percentage rate:

$$\frac{\text{Discount or Premium} \times 360 \times 100}{\text{Spot rate} \times \text{No. of days of future contract}} = \%\ \text{P.A.}$$

$$\frac{.0040 \times 360 \times 100}{2.4000 \times 30} = 2\%\ \text{P.A.}$$

This results in a true yield incentive of 1 percent, 3 percent less the swap cost of 2 percent.

Unless the bank's accounting system can identify swap costs or profits and allocate them to the investments for which they were entered, both the earnings on those investments and the earnings upon which the trader's performance are measured will be misstated.

Options

Option contracts permit a bank to contract to buy from or sell to a customer when that customer can only generally predict the dates when the currency will be required. The option contract specifies the dates, and the rate cited is that which, in the judgment of the trader at the time of making the contract, contains the least exposure for the bank. This type of contract is commonly requested by commercial customers who wish to cover drafts drawn under letters of credit denominated in a foreign currency. Such contracts involve more risk as there is no way for the bank to acquire a precisely matching cover.

Compensated Contracts

There are occasions when both parties are agreeable to altering the terms of an existing contract. Such alterations should be approved by a bank officer without responsibilities in the trading room and the operations personnel must be advised of each compromise to avoid settlement in accordance with the original instructions and terms.

OTHER RELATED MATTERS

Departmental Organization and Control

It is imperative that there be a distinct separation of duties and responsibilities between the trading and the accounting and confirmation functions within the department. Many opportunities exist to avoid established limits and policies or for personal financial gain, whether by speculating beyond loosely controlled limits, concealing contracts because of poor confirmation procedures or by simple fraud. Periodic audits and examinations are no substitute for the existence of sound safeguards.

Supervision of Branches and Subsidiaries

Whether a bank maintains central control over all foreign-exchange and money market activities at the head office or elects to decentralize that control, the policies, systems, internal controls, and reporting procedures should not differ among separate offices within the bank.

The bank should be apprised of its worldwide positions by daily summary reports. Detailed net position and maturity gap reports should be received periodically in order to prepare consolidated positions, as required, and to monitor individual unit trading volume and funding methods.

Examination Objectives

Effective date March 1984

1. To determine if the policies, practices, procedures and internal controls regarding foreign exchange activities are adequate.
2. To determine if bank officers, traders and clerks are operating within the established guidelines.
3. To determine the extent of risk attributable to net open positions, maturity gaps and counterparty credit weakness.
4. To determine the scope and adequacy of the audit function.
5. To determine if the revaluation and accounting systems are adequate and accurately reflect the results of the trading operation.
6. To determine compliance with laws and regulations.
7. To initiate corrective action when policies, practices, procedures or internal controls are deficient, or when violations of laws or regulations have been noted.

1. If selected for implementation, complete or update the foreign exchange section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal and external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal/external auditors, and determine if appropriate corrections have been made.
4. Obtain a trial balance, including local currency book values, of customer spot and future contract liabilities by customer and by maturities and:
   a. Agree or reconcile balances to appropriate subsidiary controls and to the general ledger.
   b. Review reconciling items for reasonableness.
5. Review foreign currency and appropriate local currency subsidiary control ledgers to determine that for each local currency entry there is an accompanying foreign currency entry unless they represent:
   a. Brokerage charges to the local currency ledger.
   b. Profit and loss adjustments to the local currency ledger.
   c. Correction of errors in either ledger.
6. Provide liability and other information on common borrowers to the examiner assigned to "International—Loans and Current Account Advances."
7. Identify those contracts with counterparties who are affiliates of or otherwise relatead to the bank, its directors, officers, employees, or major shareholders, and
   a. Compare the contracted rates with available rates for the same transaction date or with other similar contracts entered as of the same transaction date.
   b. Investigate any instances involving off-market rates.
8. Perform an independent revaluation of at least one major currency using rates obtained from independent sources, and compare results to the accounting department's monthly foreign exchange profit and loss entries.
9. Check the most recent revaluation workpapers and resultant accounting entries to determine that:
   a. Foreign currency amounts and book values were properly reconciled to subsidiary ledger controls.
   b. Rates used are representative of market rates as of revaluation date.
   c. Arithmetic is correct.
   d. Profit and loss results are separately recorded and reported to management for:
      - Realized profit or loss, i.e., that which is determined through the application of spot rates.
      - Unrealized (estimated future) profit and loss, i.e., that which is determined through the application of forward rates.
   e. Financial swap related assets, liabilities and future contracts are excluded from the normal revaluation process so that the results identified in step 9d reflect more accurately the trader's outright dealing performance.
   f. Financial swap related costs and profits are:
      - Amortized over the life of the applicable swap.
      - Appropriately accounted for as interest income and expense on loans, securities, etc. Test financial swap income and expense calculations and verify the accounting entries.
10. Review workpapers for selected revaluations performed since last examination. Testcheck and, if satisfied that they are accurate,
    a. Analyze combined realized earnings to determine that profits are commensurate with risks taken.
    b. Analyze monthly unrealized revaluation results (forecasts) to determine that:
       - The resulting amount for the last revaluation, if loss, is not large.
       - An increasing loss trend over previous revaluations does not exist. (Although month-to-month variations are not uncommon, an increasing unrealized loss trend could indicate that a trader is

caught in a loss position and is pursuing a notion that a negative trend in the exchange rate for that currency will reverse and, if combined with an ever multiplying increase in volume, might eventually be able to repay accumulated losses.)

11. Obtain the percentage of total contracts outstanding (dollar value of purchases plus sales that are with corporate customers). Analyze this percentage in regard to trend and comparison, if possible, to banks with similar trading volume. Ascertain if corporate volume is commensurate with written policy in regards to purpose and scope of the foreign exchange trading function.
12. Determine compliance with laws and regulations pertaining to foreign exchange activities by performing the following for Foreign Currency Forms FC–1, FC–1a, FC–2, and FC–2a:
    a. Obtain the most recently prepared monthly and weekly reports and review for accuracy.
    b. Select random bank-prepared daily net position reports for Wednesdays and month-end business days and test to see that:
       - Reports are being filed as required.
       - Reports are accurate.

       Be aware of instances in which net positions are generally large but reduced as of Wednesday and month-end reporting dates.
13. Discuss with appropriate officers and prepare in appropriate report format:
    a. Net position schedules.
    b. Maturity gap schedules.
    c. Frequent or sizeable excesses over any established limits.
    d. Any limits deemed excessive relative to:
       - Management's policy goals regarding the nature and volume of business intended.
       - The bank's capital structure.
       - The creditworthiness of trading counterparties.
       - Individual currencies which are subject to or are experiencing relatively sporadic rate changes.
       - Individual currencies for which limited spot and future markets exist.
       - Experience of traders.
       - The bank's foreign exchange earnings record.
    e. The absence of any limits deemed appropriate in present and foreseeable circumstances.
    f. Customers whose obligations are otherwise previously classified or intended to be criticized.
    g. Foreign exchange contracts which, for any other reason, are questionable in quality or ultimate settlement.
    h. Violations of laws and regulations.
    i. Deficiencies in internal controls.
    j. Other matters regarding the efficiency and general condition of the foreign exchange eepartment.
14. Update the workpapers with any information that will facilitate future examinations.

A review of the bank's internal controls, policies, practices and procedures regarding foreign exchange trading is essential to ensure no excessive risk or exposures exist. The bank's systems should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk are particularly significant and require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its responsibilities, adopted written policies governing:
   a. Trading limits, including:
      - Overall trading volume?
      - Overnight net position limits per currency?
      - Intra-day net position limits per currency?
      - Aggregate net position limit for all currencies combined?
      - Maturity gap limits per currency?
      - Individual customer aggregate trading limits, including spot transactions?
      - Written approval of excesses to above limits?

   b. Segregation of duties among traders, bookkeepers and confirmation personnel?
   c. Accounting and revaluation procedures?
   d. Management reporting requirements?
2. Do policies attempt to minimize:
   a. Undue pressure on traders to meet specific budgeted earnings goals?
   b. Undue pressure on traders, by account officers, to provide preferred rates to certain customers?

*3. Are traders prohibited from dealing with customers for whom trading lines have not been established?

4. Are all personnel, except perhaps the head trader, prohibited from effecting transactions via off-premises communication facilities?
5. Is approval by a non-trading officer required for all compensated transactions?
6. Do credit approval procedures exist for settlement (delivery) risk either in the form of settlement limits or other specific management controls?
7. Does a policy procedure exist to ensure that, in case of an uncertain or emergency situation, the bank's delivery will not be made before receipt of counterpart funds?
8. Do the above policies apply to all branch offices as well as majority-owned or controlled subsidiaries of the bank?
9. Does the bank have written policies covering:
   a. Foreign exchange transactions with its own employees?
   b. Foreign exchange transactions with members of its board of directors?
   c. Its traders' personal foreign exchange activities?
   d. Its employees' personal business relationships with foreign exchange and money brokers with whom the bank trades?

*10. Are the above policies understood and uniformly interpreted by all traders as well as accounting and auditing personnel?

TRADING FUNCTION

11. Is a trader's position sheet maintained for each currency traded?

*12. Does management receive a trader's position report at the end of each trading day?

*13. Does the trader's position report reflect the same day's holdover and after-hours transactions?

14. Are trader's dealing tickets prenumbered?
    a. If so, are records and controls adequate to ascertain their proper sequential and authorized use?

    *b. Regardless of whether or not prenumbered,
      - Are dealing tickets time date stamped, as completed, or
      - Are dealing tickets otherwise identified with the number of the resultant contract to provide a proper audit trail?

ACCOUNTING AND REPORTING

*15. Is there a definite segregation of duties, responsibility and authority between the trading room and the accounting and reporting functions within the division and/or branch?

16. Are contract forms prenumbered (if so, are records and controls adequate to ensure their proper sequential and authorized use)?

17. Are contracts signed by personnel other than the traders?

*18. Are after-hours or holdover contracts posted as of the dates contracted?

*19. Do accounting personnel prepare a daily position report, for each applicable currency, from the bank's general ledger and:
   a. Do reports include all accounts denominated in foreign currency?
   b. Are those reports reconciled daily to the trader's position reports?
   c. Are identified or unreconciled differences reported immediately to management and to the head trader?
   d. Are all counterparty non-deliveries on expected settlements reported immediately to management and to the head trader?

*20. Are maturity gap reports prepared for liquidity and foreign exchange managers at least biweekly to include:
   a. Loans and deposits reflected in the appropriate forward maturity periods along with foreign exchange contracts?
   b. Loans, deposits and foreign exchange contracts (specify whether reflected in the maturity periods in which they fall due or in which they are scheduled for rollover ___________)?
   c. Commitments to accept or place deposits reflected in the appropriate maturity periods by both value and maturity dates?
   d. All those items (specify whether as of the day on which they mature or bi-weekly or monthly maturity periods ___________)?
   e. All those items as of the day on which they mature, if necessary, i.e., in the event of a severe liquidity situation?

*21. Does the accounting system render excesses of all limits identified at step 1 immediately to appropriate management and is officer approval required?

*22. Are local currency equivalent subsidiary records for foreign exchange contracts balanced daily to the appropriate general ledger account(s)?

*23. Are foreign exchange record copy and customer liability ledger trial balances prepared and reconciled monthly to subsidiary control accounts by employees who do not process or record foreign exchange transactions?

24. Do the accounting and filing systems provide for easy identification of ''financial swap'' related assets, liabilities and future contracts by stamping contracts or maintaining a control register?

CONFIRMATIONS

25. Is there a designated ''confirmation clerk'' within the accounting section of the division or branch?
   *a. Incoming confirmations:
      • Are incoming confirmations delivered directly to the confirmation clerk and not to trading personnel?
      • Are signatures on incoming confirmations verified with signature cards for:
         — Authenticity?
         — Compliance with advised signatory authorizations of the counterparty?
      • Are all data on each incoming confirmation verified with file copies of contracts to include:
         — Name?
         — Currency denomination and amount?
         — Rate?
         — Transaction date?
         — Preparation date if different from transaction date?
         — Maturity date?
         — Delivery instructions, if applicable?
      • Are discrepancies directed to an officer apart from the trading function for resolution?
      • Is a confirmation discrepancy log or other record maintained to reflect the identity and disposition of each discrepancy?

- Are telex tapes retained for at least 90 days as ready reference to rates and delivery instructions?

*b. Outgoing confirmations:
- Are outgoing confirmations mailed/telexed on the day during which each trade is effected?
- Are outgoing confirmations addressed to the attention of persons other than trading personnel at counterparty locations?
- Does the accounting and/or filing system adequately segregate and/or identify booked contracts for which no incoming confirmations have been received?
- Are follow-up confirmations sent by the confirmation clerk if no corresponding, incoming confirmation is received within a limited number of days after the contract is effected (if so, specify ___________)?
- Is involvement by the auditing department required if no confirmation is received within a limited number of days after the transmittal of the second request referred to above (if so, specify ___________)?
- Are confirmation forms sent in duplicate to customers who do not normally confirm?
- Are return copies required to be signed?

REVALUATIONS

*26. Are revaluations of foreign currency accounts performed at least monthly?

a. Does the revaluation system provide for segregation of and separate accounting for:
- Realized profits and losses, i.e., those which are determined through the application of spot rates?
- Unrealized profits and losses, i.e., those which are determined through the application of forward rates?

b. Are financial swap related assets, liabilities and future contracts excluded from the revaluation process so that the results identified in step 26a above more accurately reflect the trader's outright dealing performance?

c. Are financial swap costs and profits:
- Amortized over the life of the applicable swap?
- Appropriately accounted for as interest income and expense on loans, securities, etc?

d. Are rates provided by, or at least verified with, sources other than the traders?

OTHER

*27. Is the bank's system capable of adequately disclosing sudden increases in trading volume by any one trader?

28. Do such increases require officer review to insure that the trader is not doubling volume in an attempt to regain losses in his or her positions?

29. Does the bank retain information on, and authorizations for, all overdraft charges and brokerage bills within the last 12 months?

30. Does an appropriate officer review a comparison of brokerage charges, monthly, to determine if an inordinate share of the bank's business is directed to or handled by one broker?

CONCLUSION

31. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

32. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

International—Purchases, Sales, Trading, Swaps, Rentals, and Options of LDC Assets

Effective date September 1992

Section 7110.1

The prospects for full LDC debt repayment decreased during the mid-1980s because of depressed commodity prices and inflated interest rates. The market value of public and private sector LDC loans fell sharply below book value to the point where those loans became deeply discounted. A secondary market for trading LDC debt evolved and reached a degree of maturity in 1987 when banks significantly increased their loan loss reserves for their exposures to LDCs. Financial institutions in the United States and overseas, including commercial, merchant and investment banks, began to actively purchase, sell, swap and rent debt obligations of less developed countries for their own account and as intermediaries for others. U.S. multinational banks with significant LDC loan exposures established LDC trading units which initially had the primary responsibility to decrease the banks' LDC portfolios. As the secondary market matured, these units not only traded for their own accounts but became market makers and/or active participants in purchasing, selling, swapping and renting LDC debt. An options market based on LDC debt also is emerging.

The LDC debt market, once dismissed as illiquid, has evolved from a trickle of activity between 1985 through 1988, to a turnover of approximately $100 billion during 1990. This momentum is expected to continue as participants in this market have realized the potential for generating substantial profits in trading LDC debt. The majority of this paper is Latin American, followed by Eastern European and African obligations. Debt of approximately 30 countries in 300 instruments may be handled by an active participant.

The LDC trading arena includes a broad range of counterparties. Although multinational banks with significant LDC debt exposures are the most active participants in the market, the number of intermediaries and principals has grown substantially. International financial institutions, corporations, high net worth individuals and public sector entities are primarily engaged in buying, selling and renting LDC debt for their own account.

The price of LDC paper, which is almost always at a discount from face amount, may vary widely, depending on the issuer and maturity of the instrument and the country of risk. Prices (and liquidity) in the LDC debt market are influenced by a multitude of factors such as the ability/intent of public and private sector borrowers to service the debt, availability of debt-equity exchange programs, anticipated refinancing of existing debt programs and the underlying political and economic conditions in the developing countries.

Banks generally participate in this market to decrease their LDC exposures; however, some banks are also motivated to:

- Generate trading profits from the spread between the bid and offer prices
- Produce fee and commission revenues from acting as intermediaries for principals and brokers
- Participate in swap programs to facilitate debt/equity market development

Pricing, liquidity, potential conflicts of interest, violation of U.S. and foreign country laws and operational inefficiencies are the major problems faced by banks which are active market participants. The lack of liquidity in the secondary market for LDC paper could present a variety of risks to market participants. In the absence of depth in the market, the judgement of the trader is a significant factor in determining the current price of thinly traded issues. The reliance on one individual to determine prices and using those amounts to revalue the position, could result in under or overstating the profit and loss and the valuation of the position itself. A conflict of interest could result in potential future liability if there is no clear segregation of duties and responsibilities between a bank's trading in LDC assets and its role on debt renegotiation committees.

Access to LDC debt rescheduling information could give a bank unfair advantage over other creditor banks, which do not participate in the restructuring process. Another concern is the potential for a bank or its employees to knowingly or inadvertently violate U.S. or foreign country laws or aid or abet violations by its customers or trading partners. It is clear that banks have a responsibility to determine that they deal only with reputable counterparties. The relative newness of the market and the absence of industry guidelines pose challenges to both bank managements and the bank supervisory agencies.

International—Purchases, Sales, Trading, Swaps, Rentals, and Options of LDC Assets
Examination Objectives
Effective date September 1992

Section 7110.2

The objectives of conducting an examination of LDC asset purchases, sales, trading, swaps, rentals and options should include the following:

1. To determine if LDC asset purchases, sales, trading, swaps, rental and options policies, procedures and internal controls are adequate.
2. To evaluate the ability of the bank's reporting system to adequately monitor compliance to established policies, procedures and limits.
3. To review the bank's reporting system to determine whether it is adequate and effective.
4. To ascertain, to the extent possible, whether LDC trading activities are in compliance with applicable U.S. and local foreign laws.
5. To determine the extent of involvement by committees responsible for LDC trading activity in strategy and planning. For example, have contingency plans been developed if the need arises to liquidate a portfolio of LDC paper.
6. To identify potential conflicts of interest liability between those on committees for debt renegotiations or those acting as agents for the debtor country and those on the portfolio sales personnel and LDC debt traders.
7. To determine whether accounting procedures that have been established properly identify and account for loan sales, purchases, swaps, rentals and other LDC trading activity. Compare these accounting procedures to industry practices.
8. To ascertain that outstandings and traders' positions are reconciled to the official records of the bank.
9. To evaluate the LDC asset purchases, sales, trading, swaps or rentals for profitability.
10. To review the revaluation process utilized in determining profitability.
11. To determine the adequacy of the bank's risk management as it relates to LDC activities. Evaluate the bank's ability to monitor and control the following risks:
    a. Market risk
    b. Credit risk
    c. Settlement risk
    d. Liquidity risk
    e. Operational risk
    f. Legal risk
12. To review and assess the adequacy of the audit coverage with respect to the frequency and scope of the audit program, experience of auditors, quality of audit reports and effectiveness of management follow-up. Determine the extent of the outside accountants involvement in reviewing these activities.
13. To determine if sufficient legal documentation exists to establish an enforceable agreement, and to ascertain the nature of and purpose behind the underlying transaction.
14. To review the bank's procedures for conducting due diligence on nonbank parties.
15. To determine the sufficiency of the bank's transaction files.
16. To determine if the bank allows sales, borrowing or substitutions from its loan portfolio to its trading positions. If yes, how is the pricing on the loan portfolio done? Does the bank have the proper accounting and tracking procedures in place?
17. To review any unusual charges/fees and any split of fees or unusual destination of a payment.
18. To review margin lending practices and policies of banks offering financing to customers dealing in LDC debt.
19. To review bank's policies and procedures regarding traders' ability to trade in LDC debt for their own personal account to ensure that adequate controls are in place to avoid conflicts of interest and diversion of bank's corporate opportunities to traders' personal benefit.

International—Purchases, Sales, Trading, Swaps, Rentals, and Options of LDC Assets

Examination Procedures

Effective date September 1992

Section 7110.3

An examination of a bank's LDC asset purchases, sales, trading, swaps, rental, and options program should focus on written policies, accounting, management reporting, conflict of interest, risk management, and internal controls. In addition, the examiners should address the general nature, volume and importance of these activities.

1. Evaluate the adequacy of the bank's written policies regarding its LDC trading activity and determine whether:
   a. The objectives, strategy and philosophy adhere to those approved by the bank's board of directors.
   b. All documentation and legal requirements (both local and foreign) regarding this activity have been addressed.
   c. An approval process has been established to execute unusual or complex transactions in LDC paper that lacks liquidity or has some unusual feature.
   d. The policy stipulates the options available if the need arises to remove the asset from inventory.
2. Review the bank's accounting policy for LDC transactions.
   a. Review the accounting and reporting guidelines to assure that all aspects of this activity are captured on the books of the bank.
   b. Review the subsidiary ledgers and reconcile these with the general ledger and contingent accounts.
   c. Reconcile the traders position sheet with the general ledger accounts.
   d. Review the accounting procedures governing the bank borrowing LDC debt from its own portfolio and purchasing or borrowing from a third party.
   e. Determine if the revaluation process is conducted separately from the trading process and that the resultant gains or losses are properly recorded.
3. Determine whether the bank has addressed the "conflict of interest" issue sufficiently, so that trading activities are not being influenced by other areas of the bank that may be negotiating debt restructuring activities or that may have provided advice to such country on financial or economic matters. Are the same individuals participating as members of a debt renegotiating committee or acting in an agency capacity for the debtor country also involved in or communicating with those trading, swapping and renting LDC debt?
   a. Does the policy address all the roles that the bank performs? Has management established procedures to identify the responsibility of renegotiating committee members, agency personnel, portfolio sales personnel and LDC debt traders?
4. Review the bank's procedures to ensure that it is complying with local and sovereign laws.
   a. Is the bank aware of local and foreign laws governing the trading of a particular country's debt? Are there records demonstrating that legal personnel are reviewing transactions to determine compliance with U.S. and foreign laws? To what extent is this information disseminated to traders?
   b. Is the bank assuring itself that trading partners are not violating these laws or are using the bank to circumvent compliance with applicable laws and regulations?
5. Evaluate management's understanding of the risks associated with LDC asset purchases, sales, trading, swaps, options and rentals. Determine whether all risks have been considered and assess management's ability to monitor and control them. The following risks should be considered:
   a. *Market Risk*—The relevant risk interval for counterparty exposure is the time period from trade date to final settlement date. The exposure is a function of the change in the price during the risk interval. Determine how the bank monitors and controls its exposure to an increase in price, if it is buying, and decrease in price, if selling.
   b. *Credit Risk*—Does the bank require credit approval from appropriate lending officers for each counterparty? Review counterparty credit lines for proper approval.

Review margin lending practices as related to LDC debt sales.

c. *Settlement Risk*—While it occurs only when purchasing LDC assets, examiners should determine how the bank protects itself from this risk.
d. *Liquidity Risk*—Have restrictions been placed on dealing in LDC debt which is not actively traded?
e. *Operating Risk*—Review the bank's policies and procedures for deficiencies. Assure that all operating groups supporting this activity are adhering to established guidelines.
f. *Legal Risk*—Has counsel reviewed all segments of this activity from a legal perspective?

6. Determine whether the bank's LDC trading activities are subject to regular audits.
   a. Obtain copies of all recent audits and review their findings;
   b. Determine whether the audit procedures covering these activities are sufficiently comprehensive; and
   c. Determine whether management has taken appropriate action to resolve significant audit concerns.
7. Evaluate the bank's internal control policies and procedures with emphasis on:
   a. Are traders' lines and LDC debt limits established by country, type of paper and customer?
   b. Are limits established by credit officers who are independent of the LDC trading function?
   c. Determine that exceptions to established limits have been properly reported and approved.
8. Evaluate the policies and procedures governing traders' behavior:
   a. What type of controls are in place with regard to after hour trading?
   b. Describe the bank's procedures for recording phone conversations. Are traders permitted to override the recording devices? How long are these recordings retained?
   c. Describe the bank's policy regarding traders' remuneration.
   d. What types of procedures and policies have the bank implemented to address self-dealing in LDC debt by traders?
   e. In what manner are the traders educated about the bank's policies and procedures?
9. Describe the type of LDC transactions entered into by the bank:
   a. Does the bank engage in fronting (i.e., sales of participations, etc.) transactions? When engaging in fronting transactions, does the bank conduct the proper legal analysis regarding whether such transaction would violate any U.S. or foreign laws or restructuring agreements? Does the bank inquire as to the customer's purpose for acquiring LDC debt in fronting transactions?
   b. Does the bank engage in parking transactions through a third party or another banking unit? Does the bank permit other financial institutions to park debt with it?
10. Evaluate the private banking unit/group's involvement in LDC transactions:
    a. How are the private banking clients obtained?
    b. What types of LDC transactions does the bank enter into for its private banking clients? Does the bank inquire as to purpose of transactions entered into for private banking clients?
    c. What type of scrutiny is performed to assure that the bank "knows its private banking clients?"
11. Describe the types of fees which the bank pays when engaging in LDC transactions:
    a. What are the amounts of broker fees? Are these fees easily determinable? Are these fees in line with the industry practices?
    b. Does the bank have any other type of fee arrangements (i.e., specially negotiated fees, partnerships, etc.)?
    c. Has the bank diversified its use of brokers adequately?
12. Evaluate broker involvement in the LDC trading activity and review the fee structure on transactions.

8000—STATUTES ADMINISTERED BY THE FEDERAL RESERVE

The 8000 series provides a table of statutes and regulations that apply to the Federal Reserve System and to banking institutions that the Federal Reserve Board supervises and regulates. The table provides the name of the law, as enacted by Congress, and the section of the United States Code where the statute can be found. The table includes a summary of the particular section of the statute as well as the implementing regulation from the *Code of Federal Regulations* (CFR).

Following is a table of statutes and regulations that apply to the Federal Reserve System and to banking institutions that the Federal Reserve Board supervises and regulates. The table consists of five columns:

Statute. The name of the law as enacted by Congress and the section.

U.S. Code citation. The section of the United States Code where the statute can be found.

Description. A summary of the particular section of the statute.

FRB regulation. The implementing regulation, usually the Federal Reserve regulation, and the appropriate citation from the Code of Federal Regulations (CFR).

FRRS locator number. The location of the statute, regulation, or other reference in the *Federal Reserve Regulatory Service* (FRRS).

Statute	*U.S. Code Citation*	*Description*	*FRB Regulation*	*FRRS Locator Number*
Federal Election Campaign Act	2 USC 441b	Limits political contributions by member banks.		
Foreign Gifts and Decorations Act	5 USC 7342	Restricts Board members' and employees' acceptance of foreign gifts and decorations.	Rules Regarding Foreign Gifts and Decorations, 12 CFR 264b	8-610 et seq.
Federal Reserve Act, sec. 10, para. 8	12 USC 1	Issuance of national currency and Federal Reserve notes under general supervision of FRB.		1-084
National Bank Act, as amended by the Banking Act of 1935	12 USC 51b-1	Impairment of the capital of national banks and state member banks.	Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208.4	1-307 3-159
National Bank Act, as amended by the Banking Acts of 1933 and 1935	12 USC 71a	Specific criteria for director selection and qualification for national banks and state member banks.		1-292
Emergency Banking Act of 1933, sec. 4	12 USC 95	Provides the president with power to require member banks to suspend operations during an emergency period.		1-323
Trading with the Enemy Act, sec. 5	12 USC 95a	Provides the president with wartime powers over banking.		1-440 1-441

Statute	U.S. Code Citation	Description	FRB Regulation	FRRS Locator Number
Federal Reserve Act, sec. 1; Banking Act of 1933, sec. 2	12 USC 221, 221a	Definition of basic terms in Federal Reserve Act, including "bank" and "affiliate."		1-002 1-309
Federal Reserve Act, sec. 2, paras. 1, 2, 3, and 13	12 USC 222–225, 281–282	Federal Reserve Bank organization; requirement that all national banks be members.		1-004 et seq. 1-016
Federal Reserve Act, sec. 2A, para. 1	12 USC 225a	Requires Federal Reserve and the Federal Open Market Committee to— • maintain long-run growth of the monetary and credit aggregates to advance the economy's long-run potential; and • report semiannually to each house of Congress on monetary and credit aggregate ranges.	Open Market Operations of Federal Reserve Banks, 12 CFR 270	1-017 8-823 et seq.
Federal Reserve Act, sec. 10, paras. 1–7 and 10	12 USC 241–247a	Creation and organization of Board of Governors; qualifications; terms of office; vacancies; assessments on Federal Reserve Banks; construction of Federal Reserve Board building; annual report to Congress; record of FOMC actions.	Rules of Organization	1-077–1-083 1-086 8-000 et seq.
Federal Reserve Act, sec. 11	12 USC 248	Powers of the Board of Governors.		1-091 et seq.
Federal Reserve Act, sec. 11(a)(1)	12 USC 248(a)(1)	Authorizes Board to examine and require reports of Reserve Banks and member banks.	Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208	1-092 3-150 et seq.
Federal Reserve Act, sec. 11(a)(2)	12 USC 248(a)(2)	Authorizes Board to require reports from any depository institution as necessary or desirable for monetary control purposes.	Reg D, Reserve Requirements of Depository Institutions, 12 CFR 204.3	1-092 2-159 et seq.
Federal Reserve Act, sec. 11(b)	12 USC 248(b)	Authorizes Board to permit Federal Reserve Banks to rediscount paper of other Federal Reserve Banks and to fix rates of interest for rediscounted paper.	Reg A, Extensions of Credit by Federal Reserve Banks, 12 CFR 201	1-093 2-001 et seq.

Statute	*U.S. Code Citation*	*Description*	*FRB Regulation*	*FRRS Locator Number*
Federal Reserve Act, sec. 11(c)	12 USC 248(c)	Authorizes Board to suspend reserve requirements.	Reg D, Reserve Requirements of Depository Institutions, 12 CFR 204	1-094 2-122 et seq.
Federal Reserve Act, sec. 11(d)	12 USC 248(d)	Authorizes Board to supervise and regulate the issue and retirement of Federal Reserve notes through the OCC.		1-095
Federal Reserve Act, sec. 11(m)	12 USC 248(m)	Authorizes Board to fix the percentage of individual member bank capital and surplus that may be represented by loans secured by stock or bond collateral. Limits amount of loans secured by nongovernmental stock or bond collateral to any individual to 15% of bank's capital and surplus.		1-104

Federal Deposit Insurance Act, sec. 38	12 USC 1831o	Prompt corrective action—defines the capital measures and capital levels used for determining supervisory actions.	Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208.40	1-400.4 et seq. 3-325 3-326
Federal Deposit Insurace Act, sec. 39	12 USC 1831p-1	Safety-and-soundness standards. Requires banking agency to prescribe standards relating to banking operations, asset quality, earnings, and executive compensation.	Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208, app. D-1	1-401 et seq. 3-1579.3
Consumer Checking Account Equity Act of 1980; Federal Reserve Act, sec. 19(i)	12 USC 1832, 371a	Authorizes depository institutions to offer NOW accounts and automatic transfers from savings to checking.		1-175
Bank Holding Company Act of 1956	12 USC 1841 et seq.	Governs acquisition of bank stock by companies and provides generally for the separation of banking and commerce by restricting the activities in which bank affiliates may engage.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225	4-001 et seq.

Statute	*U.S. Code Citation*	*Description*	*FRB Regulation*	*FRRS Locator Number*
Bank Holding Company Act of 1956, sec. 2(h)(2); International Banking Act of 1978	12 USC 1841(h)(2) 12 USC 3101 et seq.	Permits foreign banks that are subject to the International Banking Act to hold shares of a foreign nonbanking company that engages in business in the United States, provided that the U.S. activities are in the same line of business as the foreign activities of the foreign nonbank company. Exemption does not extend to securities activities or banking or financial operations.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.22(h); Reg K, International Banking Operations, 12 CFR 211, subpart B	4-064 4-037 1-562 et seq. 3-671 3-630 et seq.
Bank Holding Company Act of 1956, sec. 3	12 USC 1842	Requires prior Board approval to become a bank holding company; to acquire more than 5% of another bank; to merge or consolidate bank holding companies. Requires notice of filing of applications to other regulators. Prohibits interstate acquisitions except in the case of failing institutions under 12 USC 1823(f) or where state law permits.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225, subpart B	4-066 et seq. 4-018 et seq.
Bank Holding Company Act of 1956, sec. 4	12 USC 1843	Generally prohibits acquisition of more than 5% of the shares of a nonbank company. Exceptions include shares of kind eligible for investment by national banks; and where Board finds the activities to be so closely related to banking as to be a proper incident thereto. The Board has delineated over 20 activities as closely related to banking.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225, subpart B	4-071 et seq. 4-018 et seq.
Bank Holding Company Act of 1956, sec. 4(a)(2)	12 USC 1843(a)(2)	Provides grandfather rights for nonbanking activities commenced before June 30, 1968.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.22(g)	4-071 4-072 4-037
Bank Holding Company Act of 1956, sec. 4(c)(9)	12 USC 1843(c)(9)	Permits Board to grant further nonbanking exemptions to foreign banks if the exemptions are not substantially at variance with the purposes of the act and are in the public interest.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.22(h); Reg K, International Banking Operations, 12 CFR 211, subpart B	4-078 4-037 et seq. 3-630 et seq.

Statute	*U.S. Code Citation*	*Description*	*FRB Regulation*	*FRRS Locator Number*
Bank Holding Company Act of 1956 sec. 4(c)(13)	12 USC 1843(c) (13)	Permits bank holding companies to acquire foreign companies that do no business in the United States except as an incident to their foreign business.	Reg K, International Banking Operations, 12 CFR 211.5	4-080 3-609 et seq.
Bank Holding Company Act of 1956, sec. 4(c)(14)	12 USC 1843(c) (14)	Permits bank holding companies to invest in export trading companies, i.e., companies exclusively engaged in matters relating to international trade and principally engaged in exporting.	Reg K, International Banking Operations, 12 CFR 211, subpart C	4-080.1 3-649 et seq.
General authority to consider safety and soundness		Prohibits redemption of bank holding company equity securities under certain circumstances without prior notice to Board in order to prevent unsafe or unsound reductions of capital.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.4(b)	4-013 et seq.
Bank Holding Company Act sec. 4(k)–(o)	12 USC 1843(k)–(o)	Permits bank holding companies and foreign banks that qualify as financial holding companies to engage in securities, insurance, and other activities that are financial in nature or incidental to a financial activity and to make merchant banking investments.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225, subparts I and J	4-082.7 et seq. 4-056 et seq.
Bank Holding Company Act of 1956, sec. 5(a)–(d), (f)	12 USC 1844	Requires bank holding companies to register with Board and authorizes Board to issue regulations to carry out the purposes of the act, to require reports and conduct examinations of bank holding companies and their subsidiaries, and to take depositions and subpoena documents.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225; Rules of Practice for Hearings, 12 CFR 263	4-083–4-085 4-088 4-001 et seq. 8-043 et seq.
Bank Holding Company Act of 1956, sec. 5(e)	12 USC 1844(e)	Authorizes Board to require divestiture of nonbank subsidiaries or termination of nonbank activity if the Board determines that the subsidiary or activity constitutes a serious risk to the financial safety and soundness or stability of bank holding company.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.4(a)	4-086 4-087 4-012
Bank Holding Company Act Amendments of 1970, sec. 106(b)	12 USC 1972	Prohibition against tie-in arrangements by banks. The Board has rulemaking and exemptive authority.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.7	4-147 et seq. 4-017.1 4-017.2

Statute	*U.S. Code Citation*	*Description*	*FRB Regulation*	*FRRS Locator Number*
Bank Holding Company Act Amendments of 1970, sec. 106(b)(2)	12 USC 1972(2)	Prohibits preferential extensions of credit by insured banks based on correspondent account relationships.	Reg O, Loans to Executive Officers, Directors and Principal Shareholders of Member Banks, 12 CFR 215, subpart B	3-1018 et seq. 3-987 et seq.
Bank Holding Company Act Amendments of 1970, sec. 106(b)(2)(G)(i)	12 USC 1972(2)(G)(i)	Reporting and public disclosure requirements for executive officers and principal shareholders of insured banks with respect to extensions of credit from correspondent banks.	Reg O, Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks, 12 CFR 215, subpart B	3-1023 3-987 et seq.
Bank Holding Company Act Amendments of 1970, sec. 106(b)(2)(G)(ii)	12 USC 1972(2)(G)(ii)	Reporting and public disclosure requirements for insured banks regarding extensions of credit by correspondent banks to the reporting bank's officers and principal shareholders.	Reg O, Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks, 12 CFR 215, subpart B	3-1024 3-987 et seq.
Bank Service Company Act, sec. 1–7	12 USC 1861–1867	Permits insured banks to invest in a corporation that provides services for depository institutions; and, with the prior approval of the agency, in a bank service company that provides services to others that are authorized for its bank parent(s) only at locations where its bank parent(s) may perform such services.		1-324 et seq.
Bank Service Company Act, sec. 5	12 USC 1865	Requires prior Board approval for a member bank to invest in a bank service company that performs services permissible for bank holding companies under section 4(c)(8) of the BHC Act and at any geographic location other than where its parent could perform the service.		1-327.1

Statute	*U.S. Code Citation*	*Description*	*FRB Regulation*	*FRRS Locator Number*
Bank Protection Act of 1968, sec. 2–5	12 USC 1881–1884	Requires establishment of standards for installation, maintenance, and operation of bank security devices and procedures. Requires annual reports of compliance and appointment of a security officer.	Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208.61	1-472 et seq. 3-371 et seq.
Credit Control Act	12 USC 1901–1909	Permits Board, upon authorization by the president, to regulate and control all extensions of credit, and to require reports regarding any extensions of credit. Authorizes imposition of civil money penalties on any person who violates the regulations or fails to report as required. (Expired June 30, 1982.)		1-535 et seq.
Real Estate Settlement Procedures Act	12 USC 2601–2617	Requires disclosure of all costs associated with purchases of real estate and prohibits payments of kickbacks and unearned fees in any transaction concerning a federally related mortgage.	Real Estate Settlement Procedures, 24 CFR 3500 (HUD reg)	6-1350 et seq. 6-1370 et seq.
Home Mortgage Disclosure Act	12 USC 2801–2811	Requires reports and public disclosure of the number and amount of mortgage loans made by depository institutions within a geographic area by census tract.	Reg C, Home Mortgage Disclosure, 12 CFR 203	6-228 et seq. 6-200 et seq.
Community Reinvestment Act	12 USC 2901–2905	Requires federal financial supervisory agencies to examine depository institutions to determine whether such institutions are meeting the credit needs of their communities; and requires such agencies to consider the records of such institutions in meeting community credit needs in acting on applications by such institutions for additional deposit facilities.	Reg BB, Community Reinvestment, 12 CFR 228	6-1247 et seq. 6-1220 et seq.
International Banking Act of 1978, sec. 1	12 USC 3101	Foreign banks required to designate a home office if they do not have deposit-taking offices. The Riegle-Neal Interstate Banking Act of 1994 removed geographic restrictions on interstate banking by foreign banks.	Reg K, International Banking Operations, 12 CFR 211.22	1-562 et seq. 3-633

Statute	U.S. Code Citation	Description	FRB Regulation	FRRS Locator Number
International Banking Act of 1978, sec. 5	12 USC 3103	Restricts the U.S. expansion of a foreign bank's deposit-taking capabilities across state lines; provides for establishment of limited branches that accept only those deposits permissible for an Edge corporation; and imposes prohibition contained in section 3(d) of the Bank Holding Company Act on acquisition of bank assets or shares outside the foreign bank's home state.	Reg K, International Banking Operations, 12 CFR 211, subpart B	1-565 et seq. 3-630 et seq.
International Banking Act of 1978, sec. 7(a)	12 USC 3105(a)	Subjects U.S. branches and agencies of foreign banks to reserve requirements and prohibition against payment of interest on demand deposits.	Reg D, Reserve Requirements of Depository Institutions, 12 CFR 204; Reg Q, Prohibition Against Payment of Interest on Demand Deposits, 12 CFR 217	1-567 2-122 et seq. 2-380 et seq.
International Banking Act of 1978, sec. 7(c); Federal Reserve Act, sec. 13, para. 14	12 USC 3105(c) 12 USC 347d	Gives Board authority to examine each U.S. branch, agency, or commercial lending company of a foreign bank. Requires each branch or agency to submit quarterly Reports of Condition. Subjects branches and agencies to prohibitions on underwriting and dealing in securities.		1-569 1-123.1
International Banking Act of 1978, sec. 8	12 USC 3106	Subjects foreign bank with a U.S. branch, agency, commercial lending company, or subsidiary bank to the Bank Holding Company Act; grandfathers certain activities and investments of foreign banks; prohibits tie-in arrangements under section 106(b) of the Bank Holding Company Act Amendments of 1970 (12 USC 1972).	Reg K, International Banking Operations, 12 CFR 211, subpart B	1-571 et seq. 3-630 et seq.
		Foreign banks permitted to establish U.S. representative offices without filing a formal application.	Reg K, International Banking Operations, 12 CFR 211.24	3-648.1

Statute	U.S. Code Citation	Description	FRB Regulation	FRRS Locator Number
		Criteria for "well-managed."	Reg K, International Banking Operations, 12 CFR 211.5	3-609 et seq.
		Criteria for evaluating the U.S. operations of foreign banks that the Board determines are not subject to comprehensive consolidated supervision or regulation.	Reg K, International Banking Operations, 12 CFR 211.30	3-648.7 et seq.
International Banking Act of 1978, sec. 9(b)	12 USC 3106a	Prohibits discrimination by U.S. offices of foreign banks and requires disapproval of applications by such foreign banks if banks do not agree to comply with antidiscrimination laws.		1-573.1
Depository Institutions Management Interlocks Act	12 USC 3201–3208	Prohibits management official interlocks between two depository organizations if they are not affiliated and are either very large or located in the same local area.	Reg L, Management Official Interlocks, 12 CFR 212	3-801 et seq. 3-775 et seq.
Federal Financial Institutions Examination Council Act	12 USC 3301–3308	Establishes a council to prescribe uniform principles, standards, and report forms for examination of financial institutions and to promote uniformity in other supervisory matters.	12 CFR 1101 (FFIEC reg)	
Right to Financial Privacy Act	12 USC 3401–3422	Establishes standards under which a federal government agency may obtain, and a financial institution may provide, information contained in financial records of a customer of the financial institution. Provides for cost reimbursement to institution for furnishing records of customers.	Reg S, Reimbursement to Financial Institutions for Assembling or Providing Financial Records, 12 CFR 219	6-1750 et seq. 3-1200 et seq.
Garn–St Germain Depository Institutions Act of 1982, sec. 204	12 USC 3503	Establishes a deposit account directly equivalent to a money market mutual fund and exempts such account from transaction account reserves, section 19(b) of the Federal Reserve Act (12 USC 461).	Reg D, Reserve Requirements of Depository Institutions, 12 CFR 204.2(d)(2)	2-138.1
Truth in Savings Act	12 USC 4301 et seq.	Requires clear and uniform disclosures about deposit accounts.	Reg DD, Truth in Savings, 12 CFR 230	6-1900 et seq.

Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208.36	5-001 et seq. 3-285 et seq.

Statute	*U.S. Code Citation*	*Description*	*FRB Regulation*	*FRRS Locator Number*
Securities Exchange Act of 1934, sec. 7 and 8	15 USC 78g, 78h	Authorizes Board to regulate amount of credit that may be extended to finance securities transactions; makes it unlawful for brokers, dealers, members of exchanges, or other persons to extend credit for the purpose of purchasing or carrying securities without complying with rules issued by the Board. Also makes it unlawful for any person to obtain an extension of credit in the United States or for a U.S. person or a foreign person controlled by or acting on behalf of a U.S. person to purchase various types of securities without complying with rules issued by the Board. Makes it unlawful for any registered broker, dealer, or member of a national securities exchange to (1) borrow on any registered security except from specified classes of banks, (2) arrange for the hypothecation of customer securities in contravention of Board rules, and (3) lend or arrange for the lending of a customer's securities in contravention of Board rules.	Reg T, Credit by Brokers and Dealers, 12 CFR 220; Reg U, Credit by Banks or Persons Other Than Brokers or Dealers for the Purpose of Purchasing or Carrying Margin Stocks, 12 CFR 221; Reg X, Borrowers of Securities Credit, 12 CFR 224	5-049 et seq. 5-392 et seq. 5-745 et seq. 5-970 et seq.
Securities Exchange Act of 1934, sec. 30A and 30B	15 USC 78dd-1, 78dd-2	Prohibits an issuer of securities registered under the Securities Exchange Act from giving anything of value to a foreign official to influence any act or decision of said official. Banking agencies have determined that such actions are considered unsafe and unsound practices.		5-248 et seq.
Public Utility Holding Company Act	15 USC 79q	Prohibits director and officer interlocks between a public utility holding company and a bank without SEC approval.		
Investment Company Act of 1940, sec. 10(c)	15 USC 80a-10	Prohibits a registered investment company from having a majority of its board of directors consist of officers, directors, or employees of any one bank.		5-262
Small Business Act, sec. 6	15 USC 635(a)	Authorizes Federal Reserve Banks to act as fiscal agents for the Small Business Administration.		1-277

Statute	*U.S. Code Citation*	*Description*	*FRB Regulation*	*FRRS Locator Number*
Small Business Investment Act, sec. 302	15 USC 682	Authorizes member banks to invest in Small Business Investment Companies up to 5% of bank's capital and surplus.		1-299
Truth in Lending Act	15 USC 1601–1646	Requires creditors to disclose to consumers the cost and terms of credit; gives consumers the right to cancel certain credit transactions; regulates credit card issuance and liability; prescribes certain requirements for advertising credit.	Reg Z, Truth in Lending, 12 CFR 226 (covers all creditors)	6-1030 et seq. 6-600 et seq.
Fair Credit Billing Act	15 USC 1666–1666j	Provides for fair and timely resolution of credit billing disputes; regulates certain credit card practices.	Reg Z, Truth in Lending, 12 CFR 226 (covers all creditors)	6-1109 et seq. 6-600 et seq.
Consumer Leasing Act	15 USC 1667–1667e	Requires accurate disclosure of consumer leasing terms; limits lessee liability; prescribes certain requirements for advertising consumer leases.	Reg M, Consumer Leasing, 12 CFR 213 (covers all lessors)	6-550 et seq. 6-500 et seq.
Fair Credit Reporting Act	15 USC 1681–1681t	Protects consumers against inaccurate or misleading information in credit files maintained by credit bureaus; requires these bureaus to allow credit applicants to correct erroneous reports.		6-1550 et seq.
Equal Credit Opportunity Act	15 USC 1691–1691f	Prohibits credit discrimination on the basis of race, color, religion, national origin, sex, marital status, or age or because of receipt of public assistance or exercise of rights under the consumer Credit Protection Act; requires creditors to notify applicants of action taken on the application.	Reg B, Equal Credit Opportunity, 12 CFR 202 (covers all creditors)	6-091 et seq. 6-001 et seq.
Equal Credit Opportunity Act, sec. 703(b)	15 USC 1691b	Authorizes Board to establish a Consumer Advisory Council to advise and consult with the Board on the Consumer Credit Protection Act and other consumer-related matters.	Rules of Organization and Procedure of the Consumer Advisory Council, 12 CFR 267	6-100 6-2500 et seq.
Fair Debt Collection Practices Act	15 USC 1692	Prohibits the use of abusive, deceptive, and unfair debt collection practices by third-party debt collectors.		6-1675 et seq.

Statute	*U.S. Code Citation*	*Description*	*FRB Regulation*	*FRRS Locator Number*
Electronic Fund Transfer Act	15 USC 1693–1693r	Prescribes disclosure and documentation requirements for institutions involved in electronic funds transfers; requires prompt resolution of errors on electronic transfer accounts; limits customer liability for unauthorized use of EFT card.	Reg E, Electronic Fund Transfers, 12 CFR 205	6-359 et seq. 6-300 et seq.
Emergency Loan Guarantee Act	15 USC 1841–1852	Creates the Emergency Loan Guarantee Board (composed of the secretary of the Treasury, chairman of the Federal Reserve Board, and chairman of the SEC) to guarantee loans for borrowers whose failure would adversely affect the economy. (Authority to enter into a guarantee ended 12/31/73.)		1-548 et seq.
Emergency Loan Guarantee Act, sec. 10	15 USC 1849	Authorizes Federal Reserve Banks to act as fiscal agents for the Loan Guarantee Board.		1-558
Criminal Code sec. 208	18 USC 208	Establishes standards of conduct for Reserve Bank directors in the exercise of their duties.	Reserve Bank Directors—Actions and Responsibilities, 12 CFR 264a	8-168 et seq.
Act of June 25, 1948	18 USC 212–215, 655, and 1906	Prohibits the offering of or acceptance by a bank examiner of a loan or gratuity, as well as theft or disclosure of confidential banking data by a bank examiner. Also prohibits bank officers, directors, employees, agents, or attorneys from receiving payment for procuring or attempting to procure a loan or extension of a loan for a third party.		1-451 et seq. 1-456 1-465
Bank Bribery Act	18 USC 215	Proscribes corrupt activity within financial institutions. Federal Reserve guidelines issued by the Board on October 21, 1987 (SR-87-36) inform state member banks and bank holding companies to develop codes or policies to alert bank or bank holding company officials about the bank bribery statute, as well as to establish and enforce standards relating to acceptable business practices.		1-454 3-1504
