Commercial Bank Examination Manual

On June 23, 2025, the Board announced that reputational risk will no longer be a component of examination programs in its supervision of banks.

Inquiries or comments relating to the contents of this manual should be addressed to:
Director, Division of Supervision and Regulation
Board of Governors of the Federal Reserve System
Washington, D.C. 20551

The manual is updated periodically, and is available at https://www.federalreserve.gov/publications/supmanual.htm. For more information on manual updates, please call 202-452-3244.

Table of Contents
Commercial Bank Examination Manual

This general table of contents lists the major section heads for each part of the manual:

SUMMARY OF CHANGES

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the May 2022 supplement.

Section 1000.1

Minor updates were made to section 1000.1, "Examination Strategy and Risk-Focused Examinations." This section includes updated references to

- the handling of confidential supervisory information as set forth in the Board's regulation on *Nonpublic Information Made Available to Supervised Financial Institutions, Governmental Agencies, and Others in Certain Circumstances* (12 CFR pt. 261, subpart C);
- the Board's *Statement Clarifying the Role of Supervisory Guidance* (12 CFR pt. 262, Appendix A); and
- the Federal Reserve System's process for material supervisory determinations and policy statement regarding the Ombuds (SR-20-28/CA-20-14, "Internal Appeals Process for Material Supervisory Determinations and Policy Statement Regarding the Ombudsman for the Federal Reserve System").

Section 1001.1

Section 1001.1, "Community Bank Supervision Process," includes revisions to the community bank report of examination and instructions, specifically:

- indicating that a community state member bank's (SMB) risk assessment matrix can be included in the "Management/Risk Management" content heading or the "Confidential" section of the of the report of examination.
- updating a reference to the handling of confidential supervisory information as addressed in the Board's *Nonpublic Information Made Available to Supervised Financial Institutions, Governmental Agencies, and Others in Certain Circumstances* regulation (12 CFR pt. 261, subpart C).
- revising required language about the ability of a community SMB to appeal material supervisory determinations that Federal Reserve examiners include in the report of examination.
- reducing the required text for a footnote in the report of examination about supervisory findings and substituting the text with a hyperlink to the source guidance on the matter, SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings."
- updating a reference to the Board's *Statement Clarifying the Role of Supervisory Guidance* (12 CFR pt. 262, Appendix A).

Section 1002.1

This new section, "Supervision of State Member Banks in the Regional Banking Organization Portfolio," summarizes the Federal Reserve's approach to supervising SMBs that are in the regional banking organization (RBO) portfolio. The RBO supervisory portfolio generally includes domestic holding companies and SMBs with total consolidated assets greater than or equal to $10 billion and less than $100 billion. The section provides information on the following topics related to the supervision of SMBs in the RBO portfolio.

- Examination scope and frequency
- Supervisory planning process
- Continuous monitoring activities
- Coordination of supervisory activities with other regulators
- Completion of examination procedures
- Instructions for the completion of the report of examination
- Information about how the supervision of SMBs in the RBO portfolio differs from the supervision of institutions in the community banking organization portfolio and the large and foreign banking organization supervisory portfolio

Section 1005.1

This section, "Large Institution Supervision Coordinating Committee," was previously titled, "Consolidated Supervision Framework for Large Financial Institutions." Most of the content in the section was eliminated as the information pertained to the supervision of large holding companies, which is addressed in the *Bank Holding Company Supervision Manual.* The revised section provides a reference to the guidance explaining which firms are in the Large Institution Supervision Coordinating Committee or LISCC supervisory portfolio. Furthermore, the section provides a reference to the *Large Institution Supervision Coordinating Committee Program Manual*, which is publicly available and describes key concepts related to the supervisory oversight structure, process, ratings framework, and communication methods for firms in the LISCC supervisory portfolio.

Section 1007.1

This section, "Other Types of Examinations," was revised to include information about the supervision of representative offices of foreign banking organizations (FBOs). U.S. representative offices of FBOs engage in diverse activities ranging from liaison, marketing, and research functions to operational activities such as loan production, administrative, and certain trading functions. For more information on U.S. representative offices of FBOs, see SR-19-15, "Revised Examination Guidelines for Representative Offices of Foreign Banks." Furthermore, the section was revised to include information about supervised insurance organizations. A "supervised insurance organization" is a depository institution holding company that is an insurance underwriting company that has over 25 percent of its consolidated assets held by insurance underwriting subsidiaries, or that has been otherwise designated as a supervised insurance organization by Federal Reserve staff. For more information on the Federal Reserve's supervision of these institutions, see SR-22-8, "Framework for the Supervision of Insurance Organizations."

Section 1015.1

This section, "Conflict-of-Interest Rules for Examiners," was revised to provide updated information about special post-employment restrictions for Federal Reserve senior examiners. Most of the information about the administrative procedures for implementing the "senior examiner" restrictions were replaced with a reference to SR-21-13/CA-21-10, "Revised Special Post-Employment Restriction for Senior Examiners and Work Paper Reviews for Departing Examiners," which provides more information on this topic.

Section 1200.1

This section, "Uniform Financial Institutions Rating System and the Federal Reserve's Risk Management Rating," was updated to reflect the Federal Reserve's guidance for boards of directors in SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness." Specifically, the section was revised to better reflect the roles and responsibilities of a supervised institution's board of directors and senior management.

Section 2003.1

This section, "Supervisory Loan Sampling at Regional Banking Organizations," was renamed. The section was previously titled, "Examiner Loan Sampling Requirements for State Member Bank and Credit-Extending Nonbank Subsidiaries of Banking Organizations with \$10–\$50 Billion in Total Consolidated Assets." The section was revised to reflect that the underlying guidance on loan sampling now applies to the supervision of SMB and credit extending nonbank subsidiaries of bank holding companies with greater than or equal to \$10 billion and less than \$100 billion in total consolidated assets. In addition, references to the allowance for credit losses (ACL) replaced references to the allowance for loan and lease losses (ALLL). For more information, see SR-14-4, "Examiner Loan Sampling Requirements for State Member Bank and Credit Extending Nonbank Subsidiaries of Bank Holding Companies in the Regional Banking Organization Supervisory Portfolio."

Section 2011.1

This section, “Credit Risk Review Systems,” was updated to remove an outdated SR letter reference. A reference to SR-13-19/CA-13-21, “Guidance on Managing Outsourcing Risk,” was replaced with a reference to SR-23-4, “Interagency Guidance on Third-Party Relationships: Risk Management.”

Section 2013.1

This section, “Allowance for Credit Losses,” was updated to reflect revisions to the “Interagency Policy Statement on Allowances for Credit Losses,” which was issued by the federal banking agencies on April 21, 2023. The “Interagency Policy Statement on Allowances for Credit Losses” was revised to remove references to troubled debt restructurings to conform with U.S. generally accepted accounting principles (GAAP). For additional details, refer to the March 2022 Financial Accounting Standards Board (FASB) issuances of “Accounting Standards Update 2022-02 (ASU 2022-02)” and “Financial Instruments—Credit Losses (Topic 326): Troubled Debt Restructurings (TDRs) and Vintage Disclosures.” ASU 2022-02 eliminated the recognition and measurement accounting guidance for TDRs by creditors upon adoption of FASB Accounting Standards Codification (ASC) Topic 326. For more information, see SR-20-12, “Interagency Policy Statement on Allowances for Credit Losses.”

Section 2110.1

This section, “Floor-Plan Loans,” was updated to remove an outdated SR letter reference. A reference to SR-13-19/CA-13-21, “Guidance on Managing Outsourcing Risk,” was replaced with a reference to SR-23-4, “Interagency Guidance on Third-Party Relationships: Risk Management.”

Section 2142.1

This section, “Agricultural Credit-Risk Management,” was updated to reflect the Federal Reserve’s guidance for a supervised institution’s boards of directors in SR-21-3/CA-21-1, “Supervisory Guidance on Board of Directors’ Effectiveness.” Specifically, the section was revised to better reflect the roles and responsibilities of a supervised institution’s the board of directors and senior management. In addition, the section was revised to include information on assessing risk mitigation strategies of a supervised institution’s borrowers who employ risk mitigation strategies such as commodities derivatives to control the price of feed or feedstock and the sales price for agricultural production or crops.

Sections 2330.1, 2330.2, 2330.3, and 2330.4

Section 2330.1, “Deposit Accounts” was significantly revised and reorganized. The section describes a supervised institution’s risks associated with deposits, various types of deposit programs, and key regulations related to a bank’s deposits, as well as the supervisory expectations for assessing deposit activity at a bank. The content of the section was revised to provide

- a general discussion on insured versus uninsured deposits;
- an explanation of core deposits versus non-core deposits;
- an updated description of brokered and high-rate deposits, including brokered deposit limitations and interest rate restrictions for certain depository institutions;
- a background description of reciprocal deposit programs; and
- a new discussion on the supervisory assessment of deposit activity vis-à-vis a bank’s liquidity position.

The examination procedures (section 2330.3) were removed from the manual and a note was added to the section indicating that the Examination Documentation Modules (ED Modules) contain the most relevant examination procedures on assessing deposit accounts. The examination objectives (section 2330.2) and internal control questionnaire (section 2330.4) were removed from the manual.

Section 3210.1

This section, “The Discount Window and Liquidity Risk Management,” was previously titled, “Short-Term Liquidity Management (Federal Reserve’s Primary Credit Program).” This section now includes an overview of the discount window. The section outlines the three Federal Reserve credit programs that are available to depository institutions under Regulation A: (1) primary credit, (2) secondary credit, and (3) seasonal credit programs. Revisions were made to the discussion on appropriate liquidity risk management practices for a supervised institution as well as contingency funding planning practices for institutions that use the discount window. For more information, see the *Addendum to the Interagency Policy Statement on Funding and Liquidity Risk Management: Importance of Contingency Funding Plans.*

Sections 3220.1, 3220.2, 3220.3, and 3220.4

Section 3220.1, "Borrowed Funds," was primarily revised to remove content about the Federal Reserve's discount window that has been moved to Section 3210.1, "The Discount Window and Liquidity Risk Management." Outdated information about reserve requirements, as discussed in Regulation D, was also removed from the section.

The examination procedures (section 3220.3) were removed from the manual and a note was added to the section indicating that the ED Modules contain the most relevant examination procedures on assessing borrowed funds. The examination objectives (section 3220.2) and internal control questionnaire (section 3220.4) were removed from the manual.

Section 4011.1

This section, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion," was revised to cover the supervision of institutions having less than $100 billion in total consolidated assets. Previously, the guidance in the section applied to the supervision of institutions with less than $50 billion in total consolidated assets. In addition, a reference was included highlighting the risk committee requirements for bank holding companies (BHCs) with total consolidated assets of $50 billion or more and less than $100 billion in the Board's Regulation YY (12 CFR pt. 252, subpart C).

Section 4012.1

The section, "Risk-Management Processes and Internal Controls of Firms Having $100 Billion or More in Total Assets," was revised to cover the supervision of SMBs and BHCs having $100 billion or more in total consolidated assets, rather than SMBs and BHCs having $50 billion or more in total consolidated assets. Further, this section was updated to reflect the Federal Reserve's guidance for a supervised institution's boards of directors in SR-21-3/CA-21-1, "Supervisory Guidance on Board of Directors' Effectiveness." Specifically, the section was revised to better reflect the roles and responsibilities of a supervised institution's the board of directors and senior management.

Section 4030.1

Section 4030.1, "Asset Securitization," was significantly revised. Lengthy descriptions of outdated risk-based capital provisions affecting a supervised institution's asset securitizations were removed. Several examples about the capital treatment of asset securitizations were removed as they no longer reflect the Board's current capital regulations. Outdated accounting references and descriptions were removed from the section. Discussions on asset-backed commercial paper programs were also removed as this topic is covered in section 3030.1, "Overview of Asset-Backed Commercial Paper Programs." The section provides a primer on asset securitization activities and provides an overview on a supervised institution's risk management considerations for conducting asset securitization activities. The section was revised to consolidate supervisory considerations for assessing a supervised institution's asset securitizations into a single subsection.

Section 4062.1

This section, "Risk Management of Third-Party Relationships," was previously called "Managing Outsourcing Risk." This section provides a summary of *Interagency Guidance on Third-Party Relationships* issued by the Federal Reserve, Federal Deposit Insurance Corporation, and Office of the Comptroller of the Currency on sound risk-management principles that a supervised institution should consider in managing the risks associated with third-party relationships. For the complete guidance see SR-23-4, “Interagency Guidance on Third-Party Relationships: Risk Management.”

Sections 5300.1, 5300.2, 5300.3, and 5300.4

Section 5300.1, “Information Technology,” was revised primarily to remove content that is explained in other sections of the manual. Guidance in section 5300.1 that addressed Regulation V (12 CFR pt. 222), *Fair Credit Reporting*, and the identity theft red flags rule was removed. This guidance was updated and moved to section 6068.1 of the manual. Guidance on the outsourcing of information technology services was removed from section 5300.1 as more relevant guidance can be found in section 4062.1, “Risk Management of Third-Party Relationships.” This section also was updated to reflect the Federal Reserve’s guidance for a supervised institution’s boards of directors in SR-21-3/CA-21-1, “Supervisory Guidance on Board of Directors’ Effectiveness.” Specifically, the section was revised to better reflect the roles and responsibilities of a supervised institution’s board of directors and senior management. Hyperlinks were added to guidance issuances that are still active. Inactive guidance references in the section were removed or updated, as deemed appropriate. The examination procedures (section 5300.3) were removed from the manual and a note was added to the section indicating that the Federal Financial Institutions Examination Council manuals contain the most relevant examination procedures on conducting information technology examinations. The examination objectives (section 5300.2) and internal control questionnaire (section 5300.4) were removed from the manual.

Section 5320.1

Section 5320.1, “Payment System Risk and Electronic Funds Transfer Activities,” was significantly revised. Most of the content related to payment system risk and the Board’s Policy on Payment System Risk (PSR policy) was removed from the section as the material was outdated. The latest and most comprehensive information about the PSR policy can be found on the Board’s public website. Therefore, this section provides an overview of the PSR policy and references with hyperlinks to the Board’s public website where the latest PSR policy and other related policy documents can be found. Except for removing a brief subsection on Telex systems, the other content in the section related to electronic funds transfer activities was not revised.

Section 5330.1

This new section, “Crypto-Asset-Related Activities and Exposures,” provides an overview on the crypto-asset-related activities of SMBs. Crypto-asset-related activities may include, but are not limited to, crypto-asset safekeeping and traditional custody services; ancillary custody services; loans collateralized by crypto-assets; and issuance and distribution of dollar tokens. The section clarifies supervisory expectations regarding the requirements for SMBs to notify the Federal Reserve about the intent to engage in crypto-asset-related activities and describes the supervisory nonobjection process for SMBs seeking to engage in certain activities involving dollar tokens. The section also highlights key Federal Reserve guidance on crypto-asset-related risks to banking organizations and supervisory considerations in assessing SMBs engaged in crypto-asset-related activities and discusses the legal permissibility of crypto-asset-related activities.

Section 6068.1

This new section, “Regulation V: Fair Credit Reporting (Identity Theft Red Flags),” contains information about Board’s Regulation V—Fair Credit Reporting (12 CFR pt. 222), specifically, the identity theft red flag rule. The goal of the identity theft red flags rule and its guidelines (12 CFR pt. 222, Appendix J) is to ensure that financial institutions and creditors are alert for signs or indicators that an identity thief is misusing another individual’s sensitive data, typically to obtain products or services from an institution or creditor. Previously, guidance on this subject was in section 5300.1, “Information Technology.” Most of the information on Regulation V and the identity theft red flags rule has been removed from section 5300.1.

Section 6080.1

Minor technical edits were made to section 6068.1, "Regulation Y: Prohibitions Against Tying Arrangements." The section's content covers section 106 of the Bank Holding Company Act Amendments of 1970 (section 106), which prohibits a bank from conditioning the availability or price of one product on a requirement that the customer also obtain another product from the bank or an affiliate of the bank. In addition to the statutory exceptions set forth in section 106, additional regulatory exceptions can be found in the Board's Regulation Y (12 CFR 225.7). This section was edited to more closely with information presented in the *Bank Holding Company Supervision Manual*, Section 3500.0, "Prohibitions Against Tying Arrangements."

Commercial Bank Examination Manual
Supplement 54—May 2022

SUMMARY OF CHANGES

This supplement reflects Board of Governors actions, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation have issued since the publication of the May 2021 supplement.

ELIMINATION OF CERTAIN SECTIONS COVERING EXAMINATION OBJECTIVES, EXAMINATION PROCEDURES, AND INTERNAL CONTROL QUESTIONNAIRES

The Examination Documentation modules (ED modules) define common objectives for the review of key bank activities at state chartered banks, which are supervised by the Federal Reserve, Federal Deposit Insurance Corporation, and state banking agencies. At the Federal Reserve, supervisory staff use examination procedures in the ED modules to document examination work at state member banks in the community and regional supervisory portfolios. The ED modules are available on the Board's website. To reduce the publication of duplicative and outdated material, the sections listed in the table below have been eliminated from the *Commercial Bank Examination Manual*. The relevant examination procedures sections (i.e., section number ending with ".3") will contain a link to the ED modules page on the Board's website and a listing of ED module titles related to the section.

FOREWORD

This manual's Foreword was updated to explain that relevant examination procedures sections will contain a link to the ED modules page on the Board's website.

Sections Removed	*Relevant ED Modules*
• 2010.2, "Loan Portfolio Management, Examination Objectives" • 2010.3, "Loan Portfolio Management, Examination Procedures"	• Loan Portfolio Review • Loan Operations Review
• 2138.3, "Mortgage Banking, Examination Procedures"	• Mortgage Banking
• 2300.2, "Other Assets and Other Liabilities, Examination Objectives" • 2300.3, "Other Assets and Other Liabilities, Examination Procedures" • 2300.4, "Other Assets and Other Liabilities, Internal Control Questionnaire"	• Other Assets and Liabilities
• 2500.2, "Investment Securities and End-User Activities, Examination Objectives" • 2500.3, "Investment Securities and End-User Activities, Examination Procedures" • 2500.4, "Investment Securities and End-User Activities, Internal Control Questionnaire"	• Securities and Derivatives
• 3000.2, "Assessment of Capital Adequacy, Examination Procedures" • 3000.3, "Assessment of Capital Adequacy, Examination Procedures"	• Capital

Sections Removed	*Relevant ED Modules*
• 3100.2, “Earnings—Analytical Review of Income and Expense, Examination Objectives” • 3100.3, “Earnings—Analytical Review of Income and Expense, Examination Procedures” • 3100.4, “Earnings—Analytical Review and Income and Expense, Internal Control Questionnaire”	• Earnings
• 3200.2, “Liquidity Risk, Examination Objectives” • 3200.3, “Liquidity Risk, Examination Procedures” • 3200.4, “Liquidity Risk, Internal Control Questionnaire”	• Liquidity
• 3300.2, “Interest Rate Risk Management, Examination Objectives” • 3300.3, “Interest Rate Risk Management, Examination Procedures”	• Rate Sensitivity
• 4030.2, “Asset Securitization, Examination Objectives” • 4030.3, “Asset Securitization, Examination Procedures” • 4030.4, “Asset Securitization, Internal Control Questionnaire”	• Securitization
• 4500.2, “Internal Control and Audit Function, Oversight, and Outsourcing, Examination Objectives” • 4500.3, “Internal Control and Audit Function, Oversight, and Outsourcing, Examination Procedures” • 4500.4, “Internal Control and Audit Function, Oversight, and Outsourcing, Internal Control Questionnaire”	• Management and Internal Control Evaluation • Internal and External Audit Evaluation
• 5200.3, “Fiduciary Activities, Examination Procedures” *(New section)*	• Trust
• 5320.2, “Payment System Risk and Electronic Funds Transfer Activities, Examination Objectives” • 5320.3, “Payment System Risk and Electronic Funds Transfer Activities, Examination Procedures” • 5320.4, “Payment System Risk and Electronic Funds Transfer Activities, Internal Control Questionnaire”	• Electronic Funds Transfer Risk Assessment
• 6072.2, “Regulation W: Bank-Related Organizations, Examination Objectives” • 6072.3, “Regulation W: Bank-Related Organizations, Examination Procedures”	• Related Organizations

SUMMARY OF CHANGES

This supplement reflects Board of Governors actions, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation have issued since the publication of the November 2020 supplement.

REORGANIZATION OF THE *COMMERCIAL BANK EXAMINATION MANUAL*

The manual has been reorganized to align its content to follow the components of the Uniform Financial Institutions Rating System or CAMELS rating system. The CAMELS components are Capital Adequacy, Asset Quality, Management, Earnings, Liquidity, and Sensitivity to Market Risk. Prior to this May 2021 reorganization, the manual was structured around a bank's balance sheet (such as assets, liabilities, retained earnings, and capital). This reorganization is intended to better align the manual sections with the examination process. The Table of Contents displays the new organization in greater detail.

Other than the changes to the sections described below, there were no substantive changes to the manual content. In most instances, the revision date in the footer of a manual page did not change as a result of the reorganization. As the content in sections is revised, cross references to manual sections will be revised to reflect the reorganization. Other technical edits that were made in this update as a result of the content reorganization include

- *Removal of section point pages.* Point pages were used when the manual was available in hard copy form. The point pages provided an easy way to add pages to the manual binder without having to re-print the entire section. These point pages are no longer necessary as the Board ended the option of ordering print versions for the *Commercial Bank Examination Manual* in 2017. Therefore, the point pages were removed from sections and the pagination of a section was sequenced.
- *Resequencing footnotes in sections.* Footnotes that were inserted into sections and numbered 1a, 1b, 1c, etc. were revised to be in sequential order: 1, 2, 3, and so forth.
- *Removal of "What's New in this Revised Section" verbiage.* Several sections contained a summary of modifications on the first page of the section. In most instances, these descriptions were several years old. Further, the Summary of Changes for each manual update describes the changes to the manual sections. Therefore, the "What's New in this Revised Section" text has been removed.
- *Active hyperlinks.* If a section contains a web address as a reference, the web address has been enabled to allow users to access content by clicking on the link.

Foreword

The Foreword was revised to remove outdated information on the banking environment and historical information on the development of the risk-focused examination process. The Foreword now describes the differences between supervision and regulation. It highlights the Federal Reserve's supervisory and regulatory authority over certain insured depository institutions, namely, state member banks. The Foreword notes that the Federal Reserve is required by statute to complete a full-scope examination for each state member bank. Section 10(d) of the Federal Deposit Insurance Act generally requires the appropriate federal banking agency for an insured depository institution to conduct a full scope examination at least once every 12 months, but permits a longer cycle—at least once every 18 months—for insured depository institutions that meet certain criteria. Lastly, the Foreword's "How to Use This Manual" subsection was revised to describe the new organization of the manual.

Complex Wholesale Borrowings

The sections covering "Complex Wholesale Borrowings" (formerly sections 3012.1, 3012.2, 3012.3, and 3012.4) were removed from the manual. The information in these sections was based entirely on SR-01-8, "Supervisory Guidance on Complex Wholesale Borrowings." SR-01-8 was made inactive by SR-21-4/ CA 21-2, “Inactive or Revised SR Letters Related to the Federal Reserve’s Supervisory Expectations for a Firm’s Boards of Directors.” For more information on complex wholesale borrowings, refer to the *Trading and Capital Markets Activities Manual* sections on Liquidity Risk and Interest-Rate Risk Management; SR-10-6, “Interagency Policy Statement on Funding and Liquidity Risk Management”; and Regulation YY (12 CFR 252).

International—Purchases, Sales, Trading, Swaps, Rentals, and Options of LDC Assets

Former section 7110.4 was removed from the manual. This section provided a sample first day letter request list for examiners conducting an examination of a bank’s lesser developed country asset sales, purchases, swaps, options, and rental programs. The guidance was outdated. Further, as noted in the Foreword, “.4” sections (e.g., section 7110.4) in the manual should contain internal control questionnaires. As section 7110.4 did not contain an internal control questionnaire per the manual’s design format, the section was deleted until such time as the need for an internal control questionnaire is identified for this type of bank activity.

Commercial Bank Examination Manual
Supplement 52—November 2020

Summary of Changes

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the April 2020 supplement.

Section 1000.1

Section 1000.1, "Examination Strategy and Risk-Focused Examinations," was revised to update the subsection on de novo bank examination frequency and scope. A de novo bank is a bank that has been in operation for three years or less. The section provides information on supervisory expectations for de novo subsidiaries of bank holding companies with assets greater than $3 billion. In addition, the section explains that de novo state member banks are ineligible for the alternate examination program for the first three years of their operations. *See* SR-20-16, "Supervision of De Novo State Member Banks."

Section 1001.1

Section 1001.1, "Community Bank Supervision Process," was updated to explain the updated template for the report of examination for state member banks with less than $10 billion in total assets. Significant updates to this template are as follows.

- The former *Matters Requiring Board Attention* page was renamed to the *Matters Requiring Attention* page. The updated page also includes a reference to SR-18-5/CA-18-7, "Interagency Statement Clarifying the Role of Supervisory Guidance."
- The *Directorate Responsibility* page was updated to include standard language informing the bank of its right to appeal material supervisory determinations. *See* 85 *Federal Register* 15,175 (March 17, 2020) for more information on the Federal Reserve's appeals process.
- The former *Summary of Examination Ratings and Conclusions* page was broken into two distinct sections entitled *Summary of Examination Ratings* and *Examiner Conclusions.* The *Summary of Examination Ratings* section contains the numerical ratings of the bank. The *Examiner Conclusions* section contains a qualitative summary of examiners' supervisory activity.
- The *Concentrations of Credit* page instructions were updated to note that the "Concentrations of Credit" section to the manual and SR-20-8, "Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach," provide more information on the calculation of the denominator of concentration ratios.

Sections 2024.1, 2024.2, and 2024.3

Section 2024.1, "Private Placements," is a new section. This section is based on material from section 4130, which was reorganized to differentiate content explaining risk-management practices at a supervised institution from examination practices and considerations in reviewing private placement activities. Section 2024.1 provides more background information concerning the Securities and Exchange Commission's rules related to private placements. Sections 2024.2, "Examination Objectives," and 2024.3, "Examination Procedures," were also revised.

Sections 2040.1, 2040.2, 2040.3, and 2040.4

Section 2040.1, "Loan Portfolio Management," was updated to remove material on tying arrangements as this topic is addressed in section 6080.1, "Regulation Y: Prohibitions Against Tying Arrangements." The discussion of credit risk review systems was also removed. See the explanation of changes to section 2041.1 for more information. The material related to mortgage banking was removed and converted into a new standalone manual section (2044.1). Sections 2040.2, "Examination Objectives," and 2040.3, "Examination Procedures," were also revised to align with the interagency examination documentation (ED) modules. Section 2040.4, "Loan Portfolio Management: Internal Control Questionnaire," was removed from the manual.

Section 2041.1

This new section, "Credit Risk Review Systems," describes the "Interagency Guidance on Credit Risk Review Systems" issued by the Federal Reserve, Federal Deposit Insurance Corporation (FDIC), Office of the Comptroller of the Currency (OCC), and National Credit Union Administration (NCUA). The guidance discusses sound management of credit risk, a system of independent, ongoing credit review, and appropriate communication regarding the performance of an institution's loan portfolio to its management and board of directors. This interagency guidance replaces attachment 1 of the 2006 "Interagency Policy Statement on the Allowance for Loan and Lease Losses." *See* 85 *Federal Register* 33,278 (June 1, 2020) and SR-20-13.

Sections 2044.1 and 2044.3

These new sections address "Mortgage Banking" and contain relevant information that was previously in section 2040.1, "Loan Portfolio Management." While the information pertaining to the risk management of mortgage banking remains relevant, the accounting references are outdated and will be revised in a future update to the manual. In addition, the examination procedures that were previously located in section A.2040.3, "Loan Portfolio Management: Comprehensive Mortgage Banking Examination Procedures," were moved to section 2044.3, "Mortgage Banking: Examination Procedures."

Sections 2050.1, 2050.2, 2050.3, and 2050.4

Section 2050.1, "Concentrations of Credit," incorporates guidance issued by the Federal Reserve, FDIC, and OCC (agencies) on a common approach for defining credit concentration ratios. As of March 31, 2020, for banks that have adopted the Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) Topic 326, Financial Instruments—Credit Losses that implements the current expected credit losses (CECL) methodology, the agencies' examiners will calculate credit concentration ratios using tier 1 capital plus the allowance for credit losses attributed to loans and leases as the denominator. For institutions that have not adopted CECL, the agencies' examiners calculate credit concentration ratios using tier 1 capital plus the entire allowance for loan and lease losses as the denominator. Further, section 2050.1 was reorganized and a new subsection on supervisory considerations for assessing concentrations was added. Section 2050.2, "Concentrations of Credit: Examination Objectives," section 2050.3, "Concentrations of Credit: Examination Procedures," and section 2050.4, "Concentrations of Credit: Internal Control Questionnaire," were removed from the manual.

Sections 2070.1, 2070.2, 2070.3, and 2070.4

Section 2070.1, "Allowance for Loan and Lease Losses," which contains the 2006 "Interagency Policy Statement on the Allowance for Loan and Lease Losses," (SR-06-17) was revised to remove the attachment to the policy statement on loan review systems. This guidance on loan review systems was superseded by SR-20-13 and is available in section 2041.1, "Credit Risk Review Systems." Section 2070.3, "Examination Procedures," has been revised to align with the interagency ED modules. Sections 2070.2, "Examination Objectives," and section 2070.4, "Internal Control Questionnaire, were removed from the manual. See the explanatory note on SR-06-17 for more information.

Sections 2071.1 and 2071.3

Section 2071.1, "Allowance for Credit Losses," is a new section that incorporates the "Interagency Policy Statement on Allowances for Credit Losses." (*See* SR-20-12.) The Federal Reserve, OCC, FDIC, and NCUA issued this statement to address the changes to U.S. generally accepted accounting principles as promulgated by the FASB in Accounting Standards Update (ASU) 2016-13, Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments and subsequent amendments issued since June 2016. The May 2020 statement describes the measurement of expected credit losses under the CECL methodology and the accounting for impairment on available-for-sale debt securities in accordance with FASB ASC Topic 326; the design, documentation, and validation of expected credit loss estimation processes, including the internal controls over these processes; the maintenance of appropriate allowances for credit losses (ACLs); the responsibilities of boards of directors and management; and examiners' review of a bank's ACLs. With the issuance of the May 2020 statement, the 2006 "Interagency Policy Statement on the Allowance for Loan and Lease Losses" is partially superseded for institutions that have adopted the CECL methodology. The 2006 statement will be made inactive after all institutions have adopted the CECL methodology in 2023. Section 2071.3, "Allowance for Credit Losses: Examination Procedures," was added to the manual.

Sections 2072.2 and 2072.3

Section 2072.2, "ALLL Methodologies and Documentation: Examination Objectives" and 2072.3, "ALLL Methodologies and Documentation: Examination Procedures" were removed from the manual. The examination objectives and procedures for assessing an institution's ALLL methodology are fully incorporated into sections 2070.2 and 2070.3. In addition, procedures for assessing an institution's allowance for credit losses methodology are found in section 2071.3.

Sections 2080.1 and 2080.4

Section 2080.1, "Commercial and Industrial Loans," was revised to remove the discussion on the shared national credits program, which is now a standalone section to the manual. *See* section 2089.1. Much of the content in the subsection on "Tie-In Arrangements," was removed because this topic is covered in this manual's section 6080.1, "Regulation Y: Prohibitions Against Tying Arrangements." Section 2080.4, "Commercial and Industrial Loans: Internal Control Questionnaire," was removed from the manual.

Section 2088.1

This section, "Off-site Review of Loan Files," was revised to modify the applicability of the guidance in the section. The guidance applies to the assessment of state member banks with less than $100 billion in total assets that are in the community banking organization (CBO) and regional banking organization (RBO) supervisory portfolios. Previously, the guidance applied to the assessment of state member banks with less than $50 billion in the CBO and RBO supervisory portfolios. The section also notes that Reserve Banks and the state member bank should discuss the technical procedures and security practices for conducting off-site loan reviews when contingency operating circumstances necessitate a full-time telework environment.

Section 2089.1

This new section, "Shared National Credits," provides a high-level description of the Shared National Credits (SNC) supervisory program. The Federal Reserve, OCC, and FDIC established the SNC program to evaluate large and complex syndicated credits. The program provides for uniform treatment and increased efficiency in shared-credit risk analysis and classification of the largest and most complex credits shared by multiple financial institutions.

Section 3020.1

This section, "Assessment of Capital Adequacy," was revised to include

- A revised definition to high volatility commercial real estate (HVCRE). Section 214 of the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA) modified the capital treatment of HVCRE by adding section 51 to the Federal Deposit Insurance Act (FDIA).
- A discussion on the community bank leverage ratio (CBLR) framework. The CBLR framework provides for a simple measure of capital adequacy for certain community banking organizations, consistent with section 201 of the EGRRCPA.
- Updated information regarding supervisory leverage ratio expectations for de novo banks. In general, the Federal Reserve expects each de novo bank to maintain a tier 1 leverage ratio of at least 8 percent for the first three years of its existence. *See* SR-20-16.
- Updates to the stress capital buffer and the countercyclical capital buffer requirements.

- References to adjusted allowances for credit losses, which applies to institutions that have adopted the CECL methodology.

Sections 3035.1 and 3035.3

The material in these new sections on "Prompt Corrective Action" was previously in section 4133. These sections were created so that the material would be closer to other sections in the manual related to capital. Section 3035.1 was revised to describe the prompt corrective action (PCA) implications for institutions that qualify for and opt in to the CBLR framework. A depository institution or depository institution holding company that qualifies for and opts in to the CBLR framework will be considered to have met the "well capitalized" ratio requirements for PCA purposes. For more information on the CBLR framework, *see* 84 *Federal Register* 61,797 (November 13, 2019). The section was also revised to describe how the supplementary leverage ratio factors into the PCA ratios for an advanced approaches bank or bank that is a Category III Board-regulated institution (as defined in 12 CFR 217.2). Section 3035.3, "Examination Procedures," was revised to include several minor technical edits.

Section 4060.1

This section, "Information Technology," was revised to remove the section's Appendix A—Risk Management of Outsources Technology Services that was rescinded by the Federal Financial Institutions Examination Council (FFIEC). *See* the FFIEC's July 15, 2004, press release. With the release of the Outsourcing Technology Services Booklet, the FFIEC decided to rescind the November 2000 guidance on "Risk Management of Outsourced Technology Services." Refer to the FFIEC Outsourcing Technology Services Booklet on the FFIEC website for current information on this topic.

Sections 4090.1, 4090.2, 4090.3, and 4090.4

Significant organizational revisions were made to section 4090.1, "Interest Rate Risk Management." This section continues to align with existing guidance on interest rate risk management. *See* SR-96-13, "Joint Policy Statement on Interest Rate Risk," and SR-10-1, "Interagency Advisory on Interest Rate Risk." Section 4090.1 was reorganized to differentiate content explaining effective interest rate risk management practices at a supervised institution from examination practices and considerations in assessing the effectiveness of an institution's interest rate risk management. Sections 4090.2, "Examination Objectives," and 4090.3, "Examination Procedures," were also revised to align with the interagency ED modules. Section 4090.4, "Interest Rate Risk Management: Internal Control Questionnaire," was removed from the manual.

Sections 4130.1, 4130.2, 4130.3, and 4130.4

The material in section 4130.1, "Private Placements," section 4130.2, "Examination Objectives," and section 4130.3, "Examination Procedures," was updated and moved to sections 2024.1, 2024.2, and 2024.3, respectively. Section 4130.4, "Private Placements: Internal Control Questionnaire," was removed from the manual.

Sections 4133.1, 4133.2, and 4133.3

Section 4133.1, "Prompt Corrective Action," and section 4133.3, "Prompt Corrective Action: Examination Procedures" were updated and moved to sections 3035.1 and 3035.3, respectively. Section 4133.2, "Prompt Corrective Action: Examination Objectives," was moved to section 3035.2 without revision.

Sections 4180.1, 4180.2, 4180.3, and 4180.4

The content of sections 4180.1, 4180.2, 4180.3, and 4180.4, collectively describing "Investment-Funds Support," was moved to section 6074 and renamed "Regulation W: Investment-Funds Support."

Sections 6074.1, 6074.2, 6074.3, and 6074.4

Section 6074.1 on “Regulation W: Investment-Funds Support,” section 6074.2, “Examination Objectives,” section 6074.3, “Examination Procedures,” and section 6074.4, “Internal Control Questionnaire,” are based on material previously in section 4180. No substantive edits were made to these sections.

Section 6080.1

This new section, “Regulation Y: Prohibitions Against Tying Arrangements” provides an overview of Section 106 of the Bank Holding Company Act Amendments of 1970 (section 106). Section 106, as implemented by the Federal Reserve Board’s Regulation Y (12 CFR 225), prohibits a bank from conditioning the availability or price of one product on a requirement that the customer also obtain another product from the bank or an affiliate of the bank. The statute is intended to prevent banks from using their ability to offer bank products in a coercive manner to gain a competitive advantage in markets for other products and services. The outdated content related to section 106 was removed from other manual sections, namely section 2040.1, “Loan Portfolio Management,” and section 2080.1, “Commercial and Industrial Loans.”

Section A.2040.3

This section, “Loan Portfolio Management: Comprehensive Mortgage Banking: Examination Procedures” was incorporated into section 2044.3, “Mortgage Banking: Examination Procedures.” As a result, section A.2040.3 was removed from the manual.

Commercial Bank Examination Manual
Supplement 51—April 2020

Summary of Changes

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, supervisory guidance, and instructions that the Division of Supervision and Regulation has issued since the publication of the May 2019 supplement.

Table of Contents

The Table of Contents was updated to reflect the changes described below. In addition, the 6000 series major section heading was updated to remove the commercial bank report of examination template and instructions, which are in section 1001.1 of the manual. Going forward, the 6000 series major section heading will contain sections on key regulations that pertain to safety and soundness examinations of state member banks. These sections summarize and explain the rules, as amended, but are not substitutes for the rules themselves.

Section 1000.1

This section, "Examination Strategy and Risk-Focused Examinations," was updated to note that examiners should convey, if evident, both the root cause of a supervisory finding and the potential effect of a finding on the organization. The section also describes key factors examiners should consider in determining whether to recommend additional formal or informal investigation or enforcement action for an organization. Lastly, the section also includes a reference to SR-18-5/CA-18-7, "Interagency Statement Clarifying the Role of Supervisory Guidance," which examiners should also consider when communicating supervisory findings.

Section 1001.1

Minor updates were made to section 1001.1, "Community Bank Supervision Process." This section includes references to SR-20-8, "Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach," and SR-19-9, "Bank Exams Tailored to Risk (BETR)." Minor typographical errors were corrected.

Sections 1020.1, 1020.2, and 1020.3

Section 1020.1, "Federal Reserve System Bank Surveillance Program," was updated to include information on the Federal Reserve's use of outlier metrics to assist examiners and other supervisory staff in determining the scope of safety-and-soundness examinations. The role of outlier metrics is particularly important in pre-examination planning at community and regional state member banks. Combined with examiner judgment, outlier metrics are used to classify the levels of risk at a state member bank within individual risk dimensions, such as credit, liquidity, and operational risk. Federal Reserve examiners then tailor the bank examination to reflect the levels of risk present. See SR-19-9, "Bank Exams Tailored to Risk (BETR)," for more information. The examination objectives (section 1020.2) and examination procedures (section 1020.3) also were revised.

Section 2040.1

This section, "Loan Portfolio Management," was updated to remove the discussion related to Regulation O, which is now covered in section 6050.1 of the manual.

Sections 2110.1, 2110.2, 2110.3, and 2110.4

This section, "Floor Plan Loans," was revised to improve its clarity and to add additional guidance references. For instance, material in the section was revised to consolidate supervisory considerations in the review of a bank's floor plan loans into one part of the section. The examination procedures in section 2120.3 were also revised to align with the interagency examination documentation (ED) modules. Section 2120.2, "Floor Plan Loans: Examination Objectives" and section 2120.4, "Floor Plan Loans: Internal Control Questionnaire," were removed from the manual.

Sections 2120.1, 2120.2, 2120.3, and 2120.4

Section 2120.1, "Direct Financing Leases," was revised to provide updated accounting references for lease accounting. The section states that leases should be accounted for in accordance with accounting standards issued by the Financial Accounting Standards Board (FASB). The lease accounting standard currently applied by public business entities, "Leases (Topic 842)," was issued by FASB in February 2016, and supersede ASC Topic 840, Leases, by 2021. The examination procedures in section 2120.3 were revised to align with the interagency ED modules. Section 2120.2, "Direct Financing Leases: Examination Objectives" and section 2120.4, "Direct Financing Leases: Internal Control Questionnaire," were removed from the manual.

Sections 3025.1 and 3025.3

This new section, "Dividends," was previously section 4070.1. In addition to moving the section closer to the other sections in the manual related to capital, this section was revised to include references to guidance on capital planning processes, including the issuance of dividends, for bank subsidiaries of large holding companies. The section also includes a new discussion on the capital conservation buffer, which limits capital distributions and discretionary bonus payments for banking organizations that do not hold a specified amount of common equity tier 1 capital in addition to the amount of regulatory capital necessary to meet the minimum risk-based capital requirements. (See 12 CFR 217.) The examination procedures in section 3025.3 were also revised.

Sections 4050.1, 4050.2, 4050.3, and 4050.4

The contents of "Transactions Between Member Banks and Their Affiliates" (sections 4050.1, 4050.2, and 4050.3), were moved to section 6070 and renamed "Regulation W: Transactions Between Member Banks and Their Affiliates." Section 4050.4 was removed from the manual.

Sections 4052.1, 4052.2, 4052.3, and 4052.4

The contents of "Bank-Related Organizations" (sections 4052.1, 4052.2, and 4052.3), were moved to section 6072 and renamed "Regulation W: Bank-Related Organizations." Section 4052.4 was removed from the manual.

Sections 4070.1, 4070.2, 4070.3, and 4070.4

The contents of sections 4070.1, "Dividends," and 4070.3, "Dividends: Examination Procedures," were updated and moved to sections 3025.1 and 3025.3 of the manual, respectively. Section 4070.2, "Dividends: Examination Objectives," and section 4070.4, "Dividends: Internal Control Questionnaire," were removed from the manual.

Section 5000.1

This section, "Duties and Responsibilities of Directors," was updated to remove contents related to the Depository Institution Management Interlocks Act as implemented by Regulation L. The relevant content on Regulation L was moved to section 6040.1, "Regulation L: Depository Institution Management Interlocks Act."

Section 5020.1

This section, "Overall Conclusions Regarding Condition of the Bank," was updated to remove the contents related to the review of Bank Secrecy Act (BSA) and anti-money-laundering (AML) compliance at state member banks. Section 6010.1, "Regulation H: Bank Secrecy Act and Anti-Money-Laundering," was developed to provide a brief description of supervisory activities related to the review of BSA and AML compliance programs at state member banks.

Section 6000.1

Section 6000.1, "Commercial Bank Report of Examination," was removed from the manual. The primary report of examination template is located in section 1001.1, "Community Bank

Supervision Process." The 6000 series major section heading will contain sections on key regulations that pertain to safety-and-soundness examinations of state member banks.

Section 6010.1

This new section, "Regulation H: Bank Secrecy Act and Anti-Money-Laundering," was developed to provide a brief introduction of the BSA and AML compliance program and suspicious activity reporting requirements for banks under Regulation H. The section notes that additional details on the BSA/AML program, suspicious activity reporting requirements, and all other laws, regulations, and examination procedures pertaining to the BSA, are described in the *Federal Financial Institutions Examination Council (FFIEC) BSA/AML Examination Manual.*

Section 6040.1

This new section, "Regulation L: Depository Institution Management Interlocks Act," provides an overview of the Depository Institution Management Interlocks Act, as implemented by Regulation L (12 CFR 212) and subpart J of Regulation LL (12 CFR 238.91-.99). These regulations prohibit a management official of a depository institution or depository institution holding company from serving simultaneously as a management official of another depository organization if the organizations are not affiliated and both either are very large or are located in the same local area.

Sections 6050.1 and 6050.3

This new section, "Regulation O: Loans to Executive Officers, Directors, And Principal Shareholders of Member Banks," provides an overview of the Federal Reserve Board's Regulation O (12 CFR 215), which implements many of the laws pertaining to extensions of credit by banks to their insiders. Regulation O is designed to mitigate the potential for conflicts of interest and self-dealing by individuals who may be in a position to influence a bank's lending decisions. The section outlines Board staff legal opinions on Regulation O and supervisory considerations for assessing compliance with Regulation O. The content in section 2040.1 related to Regulation O was removed from the manual. Examination procedures (refer to section 6050.3) were developed.

Sections 6070.1, 6070.2, and 6070.3

This new section, "Regulation W: Transactions Between Member Banks and Their Affiliates," contains the content that was previously in section 4050. No substantive edits were made to this content. As a result, section 4050 was removed from the manual.

Sections 6072.1, 6072.2, and 6072.3

This new section, "Regulation W: Bank-Related Organizations," contains the content that was previously in section 4052. No substantive edits were made to this content. As a result, section 4052 was removed from the manual.

Commercial Bank Examination Manual
Supplement 50—May 2019

Summary of Changes

Section 1000.1

Section 1000.1, "Examination Strategy and Risk-Focused Examinations," was significantly revised and reorganized. This section addresses key aspects of the Federal Reserve's supervisory process for safety and soundness examinations for state member banks. Some of the most significant topics covered in this section include examination authority, compliance with laws and the role of guidance, applications under Regulation H (12 CFR part 208), state member bank examination frequency, coordinating supervisory activities, and communicating supervisory findings. Subsequent sections in the manual further describe the examination and supervisory practices that apply to particular supervisory portfolios of state member banks.

Section 1001.1

This new section, "Community Bank Supervision Process," discusses some of the most significant aspects in the preparation and execution of an examination of a state member bank with $10 billion or less in total assets. The section explains the risk-focused process for examining community banks and describes the written products that facilitate this process. In addition, the section provides an updated description of the community bank report of examination and a revised illustrative template of the community bank report of examination. Relevant report of examination content that was previously in sections 6003.1 and 6005.1 has been incorporated into section 1001.1.

Section 1007.1

This section, "Other Types of Examinations," was previously Section 6010.1. In addition to the reorganization of the material in this new section, section 1007.1 addresses the Board's final rules that expanded the examination cycle for certain small state member banks and U.S. branches and agencies of foreign banks. The final rules (83 *Fed. Reg.* 67,033 (December 28, 2018)) adopted the interim final rules (83 *Fed. Reg.* 43,961 (August 29, 2018)) without change. The final rules amended Regulation H (12 CFR part 208) and Regulation K (12 CFR part 211), which raised the total asset threshold (from less than $1 billion to less than $3 billion in assets) for certain qualifying state member banks and U.S. branches and agencies of foreign banks to be eligible for an 18-month examination cycle. See SR-18-7, "Updates to the Expanded Examination Cycle for Certain State Member Banks and U.S. Branches and Agencies of Foreign Banking Organizations," for more information.

Section 1011.1

The contents of this new section, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion," were previously part of section 1000.1, "Examination Strategy and Risk-Focused Examinations." A new section was developed to improve the organization and presentation of manual content. The new section also provides more information on the applicability of the guidance to supervised institutions as well as updates for several references.

Section 1012.1

The contents of this new section, "Risk Management Processes and Internal Controls of Firms Having $50 Billion or More in Total Assets," were previously part of section 1000.1, "Examination Strategy and Risk-Focused Examinations." A new section was developed to improve the organization and presentation of manual content. In addition to the content being moved, the section provides more information on the applicability of the guidance to supervised institutions and contains minor editorial edits.

Section 2190.1

Section 2190.1, "Bank Premises and Equipment," was revised to provide updated accounting standards about leases. In February 2016, the Financial Accounting Standards Board (FASB) issued a new accounting standard on leases, Accounting Standards Update No. 2016-02, Leases (Topic 842), which revises the accounting for lease transactions. The section also was revised to provide guidance on the treatment of operating leases as an investment in bank premises under Regulation H upon the implementation of the new lease accounting standard. See SR-19-7, "Statement on the Implications of the New Lease Accounting Standard on Regulation H," for more information. The examination objectives (section 2190.2), examination procedures (section 2190.3), and internal control questionnaire (section 2190.4) also were revised.

Section 3050.1

Section 3050.1, "Dodd-Frank Act Company-Run Stress Testing for Banking Organizations with Total Consolidated Assets $10–50 Billion," has been removed from the *Commercial Bank Examination Manual*. Eighteen months after the Economic Growth, Regulatory Relief, and Consumer Protection Act's (EGRRCPA) enactment (May 24, 2018), financial companies with total consolidated assets of less than $250 billion that are not bank holding companies (BHCs) will no longer be subject to the company-run stress testing requirements in section 165(i)(2) of the Dodd-Frank Act. On EGRRCPA's date of enactment, BHCs under $100 billion in total consolidated assets were no longer subject to section 165(i)(2). The agencies' regulations implementing company-run stress testing provide that the agencies may extend any deadline relating to company-run stress testing. In order to avoid unnecessary burden for depository institutions (including state member banks) and to maintain consistency between BHCs and depository institutions, the agencies are extending the deadlines for all regulatory requirements related to company-run stress testing for depository institutions with average total consolidated assets of less than $100 billion until November 25, 2019 (at which time both statutory exemptions will be in effect). For more information, see the interagency statement regarding the impact of the Economic Growth, Regulatory Relief, and Consumer Protection Act issued on July 6, 2018.

Sections 4140.1, 4140.2, 4140.3, and 4140.4

Section 4140.1, "Real Estate Appraisals and Evaluations," has been revised significantly. This section provides a brief summary of the Board's appraisal regulations and directs readers to the key pieces of guidance that the Board and other banking agencies have issued relating to real estate appraisals and evaluations. Previously, section 4140.1 contained the entire contents of the December 2010 "Interagency Appraisal and Evaluation Guidelines." The revised manual section includes a brief summary of the December 2010 Interagency Appraisal and Evaluation Guidelines, as well as a hyperlink to the guidelines. (See SR-10-16.) The examination objectives (section 4040.2), examination procedures (section 4140.3), and internal control questionnaire (section 4140.4) also were revised.

Section 6000.1

This section, "Commercial Bank Report of Examination," has been revised to remove much of the content related to the communication of supervisory findings. This content on the communication of supervisory findings has been incorporated into the revised section 1000.1, "Examination Strategy and Risk-Focused Examinations," to improve manual content organization.

Sections 6003.1 and 6005.1

The relevant content from section 6003.1, "Community Bank Examination Report," and content of 6005.1, "Community State Member Banks and Holding Companies Rated Composite "4" or "5" (Examination and Inspection Report Format)," have been incorporated into section 1001.1, "Community Bank Supervision Process." As a result, sections 6003.1 and 6005.1 were removed from the *Commercial Bank Examination Manual*.

Section 6010.1

The relevant content in this section, "Other Types of Examinations," was moved to section 1007.1 of this manual to consolidate high-level supervisory process information into the 1000 sections of the manual. Accordingly, section 6010.1 was removed from the *Commercial Bank Examination Manual*.

Section A.2000.1

This section, “Cash Accounts: Financial Recordkeeping and Reporting Regulations-Examination Procedures,” was removed from the *Commercial Bank Examination Manual*. This section was a placeholder and did not contain background information or examination procedures. For more information and examination procedures on monetary instrument recordkeeping requirements under the Bank Secrecy Act, see the Federal Financial Institutions Examination Council *Bank Secrecy Act/Anti-Money Laundering Examination Manual*.

Section A.4140.1

Real Estate Appraisals and Evaluations: Appendixes A-D was removed from the *Commercial Bank Examination Manual*. The appendix provided a commentary on the 12 exemptions from the agencies’ appraisal regulations and explanation of the agencies’ statutory authority to provide for appraisal regulatory exemptions and the application of these exemptions. This information is provided in the 2010 Interagency Appraisal and Evaluation Guidelines. (See SR-10-16). Section 4140.1 was revised to include hyperlinks to these appendixes and include brief summaries of the appendixes. As a result of the revisions to section 4140.1, the information in section A.4140.1 was determined to be duplicative and, therefore, was removed from the manual.

Foreword

INTRODUCTION

The Federal Reserve shares supervisory and regulatory responsibility for federally insured banks with the Office of the Comptroller of the Currency and the Federal Deposit Insurance Corporation at the federal level, and with individual state banking departments at the state level. The Federal Reserve is the primary federal supervisor of state-chartered banks that have chosen to join the Federal Reserve System (which are referred to as "state member banks").

Regulation and supervision are distinct, but complementary, activities. Regulation entails establishing the rules within which banks must operate—in other words, regulations govern the formation, operations, activities, and acquisitions of banks. Once the Federal Reserve Board or another government entity adopts a regulation, the Federal Reserve's supervision process includes monitoring, inspecting, and examining banks to assess whether a bank is in compliance with banking laws and regulations, and whether it is operating in a safe and sound manner. Further, through the supervision process, examiners evaluate a bank's risk profile as well as the adequacy of a bank's risk management to identify, manage, and control the risks arising from the bank's business operations and activities.

New laws, regulations, supervisory policies, guidance, and interpretations result from emerging conditions and trends in the banking industry or are tied to specific risks and industry events. With the enactment of new laws and regulations and the issuance of additional guidance, the scope of supervisory activities and examinations are revised to promote the safety and soundness of banks and to assess compliance with laws and regulations.

Section 10(d) of the Federal Deposit Insurance Act generally requires the appropriate federal banking agency for an insured depository institution (which includes state member banks) to conduct a full-scope examination at least once every 12 months. The Act does permit a longer cycle—at least once every 18 months—for insured depository institutions that meet certain criteria. Examiners use the Uniform Financial Institutions Rating System (UFIRS), which is commonly referred to as the CAMELS rating system, to structure their assessment of a bank's condition and to communicate their conclusions about the assessment of a bank's condition.

PURPOSE OF THIS MANUAL

One of the main goals of the *Commercial Bank Examination Manual* is to explain the Federal Reserve's examination process for state member banks. The state member bank examination process is the Federal Reserve's fact-finding arm in carrying out its regulatory and supervisory responsibilities. Further, the Federal Reserve supplements the information from examination activities with information from its off-site surveillance process that is based on banks' financial regulatory reports (referred to as the "Call Reports").

Objectives of an Examination

The essential objectives of an examination are to (1) provide an objective evaluation of a bank's soundness; (2) determine the level of risk involved in the bank's transactions and activities; (3) ascertain the extent of compliance with banking statutes and regulations; (4) evaluate the adequacy of corporate governance and to appraise the quality of the board of directors and management; and (5) identify the activities and business operations where a bank needs to take corrective action to improve its risk management, the quality of its performance, and to promote and demonstrate compliance with applicable statutes and regulations.

The *Commercial Bank Examination Manual* organizes and formalizes examination objectives and procedures that provide guidance to examiners on conducting their work, and enhances the quality of examinations and consistent application of procedures across the Federal Reserve System. The manual provides specific guidelines for

- determining the scope of an examination;
- determining the procedures to be used in examining a bank, including those procedures that may lead to the early detection of trends and risks that, if continued, might result in a deterioration in the condition of a bank;
- evaluating the adequacy of a bank's policies and procedures, the degree of compliance with them, and the adequacy of its internal controls;
- evaluating the work performed by a bank's internal and external auditors;

- evaluating the performance and activities of a bank's board of directors and management;
- preparing workpapers that support examination reports and aid in evaluating the work of examiners; and
- using objective criteria as a basis for the overall supervisory conclusion, comments, and criticism, regarding the condition of a bank, compliance with banking laws and regulations, and the quality of a bank's risk management.

This manual also provides background information on common banking activities and describes risk management practices for banks to support their safe and sound operations. More specifically, this manual describes loan and investment portfolio management as well as capital adequacy and liquidity analysis.

Although this manual is designed to provide guidance to examiners in planning and conducting bank examinations, it should not be considered a legal reference. Questions concerning the applicability of, and compliance with, banking laws and regulations should be referred to appropriate legal counsel at the Reserve Banks or the Board of Governors of the Federal Reserve System. As this manual provides background and references to regulations, a bank should refer to the Code of Federal Regulation for the Federal Reserve Board's regulations.

Further, this manual should not be viewed as a comprehensive training guide for examiners. Examiners should view this manual as a working tool and guide. The Federal Reserve has separate training and continuing professional development programs for its examiners and has examination modules that provide more detailed instructions than this manual to assist examiners in conducting an examination.

HOW TO USE THIS MANUAL

Organization

The *Commercial Bank Examination Manual* is divided into the following major parts, which are generally organized based on the components of the CAMELS rating system:

- Part 1000—Supervisory Process
- Part 2000—Assets
- Part 3000—Capital, Earnings, Liquidity, and Sensitivity to Market Risk
- Part 4000—Management Activities and Internal Controls
- Part 5000—Other Examination Areas
- Part 6000—Bank Regulations
- Part 7000—International
- Part 8000—Statutes Administered by the Federal Reserve

Sections in each part are made up of four subsections, where applicable:

- *Supervisory policy and guidance by topic* (e.g., section xxxx.1): These sections provide details on the respective topics. This information is expanded upon and reinforced through the Federal Reserve's educational and training programs and the examiner's experience on the job.
- *Examination objectives* (e.g., section xxxx.2): These sections describe the goals that examiners should achieve in performing the examination for a particular bank activity or risk. In some instances, the examination objectives are incorporated into the examination procedures or are part of the Examination Documentation (ED) modules, which define common examination objectives and procedures for the review of state member banks in the community and regional bank supervision portfolios. Therefore, a manual section may not have an examination objectives section.
- *Examination procedures* (e.g., section xxxx.3): These sections list procedures that examiners may scope into the review of a bank's activity or risk. If there are corresponding ED modules for the topic, the section will provide a link to the ED modules page on the Board's public website and a listing of module titles related to the section.
- *Internal control questionnaires* (e.g., section xxxx.4): These sections set forth standards for a bank's operational controls. The assessment of a bank's internal controls is typically incorporated into the examination procedures and, therefore, a manual section may not have an internal control questionnaire (ICQ). An ICQ can be used in evaluating a bank's operational audit techniques where the scope of internal audit includes such considerations. The ICQ steps marked with an asterisk require substantiation by observation or testing.

UPDATES

Effective December 31, 2017, the Board ended the option of ordering print versions for the *Commercial Bank Examination Manual*. The manual is updated periodically. The most recent version of the entire manual and major sections, as well as the ED modules, are available on the Board's website at https://www.federalreserve.gov/publications/supmanual.htm.

1000—SUPERVISORY PROCESS

The 1000 series of sections explain the Federal Reserve's methodology for supervising state member banks of various asset sizes. These sections describe how examiners assess the safety and soundness of state member banks using the Uniform Financial Institution Rating System or CAMELS (**C**apital, **A**sset Quality, **M**anagement, **E**arnings, **L**iquidity, and **S**ensitivity to Market Risk) rating system.

INTRODUCTION

The Federal Reserve shares supervisory and regulatory responsibility for domestic banks with the Office of the Comptroller of the Currency (OCC) and the Federal Deposit Insurance Corporation (FDIC) at the federal level, and with individual state banking departments at the state level. The Federal Reserve is the primary federal supervisor of state-chartered banks that have chosen to join the Federal Reserve System. Such domestically operating banks are called state member banks (SMBs).

Regulation and supervision are distinct, but complementary, activities. Regulation entails establishing the rules within which financial institutions must operate—in other words, issuing specific regulations governing the formation, operations, activities, and acquisitions of financial institutions. Once the rules and regulations are established, supervision—which involves monitoring, inspecting, and examining financial institutions—seeks to ensure that an institution complies with those rules and regulations, and that it operates in a safe-and-sound manner.

Section 39 of the Federal Deposit Insurance Act[1] (FDI Act) requires each federal banking agency to establish certain safety-and-soundness standards by regulation or by guideline for all insured depository institutions. In accordance with section 39, the agencies' guidelines cover three types of standards: (1) operational and managerial standards; (2) compensation standards; and (3) such standards relating to asset quality, earnings, and stock valuation as they determine to be appropriate.[2] The safety-and-soundness standards that the agencies use to identify and address problems at insured depository institutions before capital becomes impaired. The agencies believe that the interagency standards for safety and soundness serve this end without dictating how institutions must be managed and operated. These standards are designed to identify potential safety-and-soundness concerns and ensure that action is taken to address those concerns before they pose a risk to the deposit insurance funds.

As the primary federal supervisor for SMBs (as well as bank holding companies, savings and loan holding companies, intermediate holding companies, and other banking entities), the Federal Reserve can take formal enforcement actions against these institutions for violations of laws, rules, or regulations, unsafe or unsound practices, breaches of fiduciary duty, and violations of final orders.

The purpose of this section is to describe key aspects of the Federal Reserve's supervisory program for safety-and-soundness examinations that are relevant to SMBs. Subsequent sections in this manual will further describe the examination and supervisory process of SMBs by supervisory portfolio, which is based on the banks' complexity, activities, asset size, and financial and operational risk factors.

1. 12 U.S.C. 1831p-1.
2. See 12 CFR 208, appendix D-1.

EXAMINATION AND SUPERVISORY AUTHORITY

The Federal Reserve System's statutory examination authority permits examiners to review all books and records maintained by a financial institution that is subject to the Federal Reserve's supervision. This authority extends to all documents.[3] Section 11(a)(1) of the Federal Reserve Act provides that the Board has the authority to examine, at its discretion, the accounts, books, and affairs of each member bank and to require such statements and reports as it may deem necessary. Therefore, Federal Reserve supervisory staff (including examination staff), may review *all* books and records of a banking organization that is subject to Federal Reserve supervision.[4]

CONFIDENTIALITY PROVISIONS

The complete definition of confidential supervisory information (CSI) is in 12 CFR pt. 261, subpart C. Generally, CSI consists of any documents prepared by Federal Reserve staff that

3. Supervision and Regulation SR-97-17, "Access to Books and Records of Financial Institutions During Examinations and Inspections," details the procedure supervisory staff should follow if a banking organization declines to provide information asserting a claim of legal privilege.
4. Supervisory staff include Federal Reserve staff who are conducting supervisory activities during the on-site examination and in connection with examination preparation, monitoring, and surveillance activities that are conducted off-site from a supervised institution's offices.

contains supervisory views regarding a supervised institution, or confidential information obtained from a supervised institution. These include examination reports, operating and condition reports (from continuous monitoring, for example), and information related to, derived for, or contained in such reports. Information gathered in the course of investigations related to enforcement actions is also CSI.

Importantly, CSI does not include "documents prepared by a supervised firm for its own business purposes and that are in its possession." (Refer to 12 CFR 261.2(b)(2)(i).) This means that a supervised firm may share information that was submitted to the Federal Reserve with third parties so long as that information was not produced specifically for the Federal Reserve and does not contain any information that suggests supervisory views or supervisory actions communicated to the supervised firm by the Federal Reserve.

Under the Board's Rules Regarding the Availability of Information (12 CFR 261), banking organizations are prohibited from disclosing confidential supervisory information without prior written permission of the Board's General Counsel.[5] Board staff have taken the position that identification of information requested by, or provided to, supervisory staff—including the fact that an examination has taken or will take place—is related to an examination and falls within the definition of confidential supervisory information.

Confidentiality Provisions in Agreements that Prevent or Restrict Notification to the Federal Reserve

The Federal Reserve has stated and clarified its expectations regarding confidentiality provisions that are contained in agreements between a banking organization and its counterparties (for example, mutual funds, hedge funds, and other trading counterparties) or other third parties. It is contrary to Federal Reserve regulation and policy for agreements to contain confidentiality provisions that (1) restrict the banking organization from providing information to Federal Reserve supervisory staff (refer to 12 U.S.C. 1820(d)); (2) require or permit, without the prior approval of the Federal Reserve, the banking organization to disclose to a counterparty that any information will be or was provided to Federal Reserve supervisory staff; or (3) require or permit, without the prior approval of the Federal Reserve, the banking organization to inform a counterparty of a current or upcoming Federal Reserve examination or any nonpublic Federal Reserve supervisory initiative or action. Banking organizations that have entered into agreements containing such confidentiality provisions are subject to legal risk. See SR-07-19, "Confidentiality Provisions in Third-Party Agreements," and SR-97-17, "Access to Books and Records of Financial Institutions During Examinations and Inspections," for more information. For information on the restrictions pertaining to the very limited disclosure of confidential supervisory ratings and other nonpublic supervisory information, see SR-05-4, "Interagency Advisory on the Confidentiality of Nonpublic Supervisory Information," and SR-96-26, "Provision of Individual Components of Supervisory Rating Systems to Management and Boards of Directors."[6]

OBJECTIVES OF THE SUPERVISORY PROCESS

The Federal Reserve is committed to ensuring that the supervisory process for all institutions under its purview meets the following objectives:

- *Provides flexible and responsive supervision.* The supervisory process is dynamic and forward-looking, so it responds to technological advances, product innovation, and new risk-management systems and techniques as well as to changes in the condition of an individual financial institution and to market developments.
- *Fosters consistency, coordination, and communication among the appropriate supervisors.* Seamless supervision, which reduces regulatory burden and duplication, is promoted. Examiners review the institution's risk assessments, key control functions, and monitoring systems. Federal Reserve examiners conduct joint examinations with other federal banking agencies and alternate examinations with state bank supervisors. Examiners tailor

5. 12 CFR 261.20(a).

6. See also this manual's section, "Overall Conclusions Regarding Condition of the Bank."

supervisory activities to an institution's condition, risk profile, and unique characteristics.

- *Promotes the safety and soundness of financial institutions.* The supervisory process effectively evaluates the safety and soundness of banking institutions, including assessing risk-management systems and financial condition as well as determining compliance with laws and regulations.
- *Provides a comprehensive assessment of the institution.* The supervisory process integrates "specialty" areas (for example, information technology, trust, Bank Secrecy Act (BSA)/anti-money laundering (AML), and consumer compliance) and functional risk assessments and reviews, in cooperation with interested supervisors, into a comprehensive assessment of the institution.

RISK-FOCUSED EXAMINATIONS

The Federal Reserve began to further emphasize the importance of sound risk-management processes and strong internal controls in the mid-1990s when evaluating the activities of SMBs. (See SR-96-14, "Risk-focused Safety and Soundness Examinations and Inspections," and SR-95-51, "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies.") To ensure that institutions have in place the processes necessary to identify, measure, monitor, and control their risk exposures, Federal Reserve supervisory activities focus on evaluating the appropriateness of a bank's risk management practices and processes. Under a risk-focused examination approach, examiner resources are focused on a bank's highest risk areas. However, when examiners find weakness in a bank's risk-management processes or internal controls, such as an inadequate loan review function, examiners would increase the sample of loans to review or will perform additional loan transaction testing. In addition, if an examiner believes that a banking organization's management is being less than candid, has provided false or misleading information, or has omitted material information, then examiners will expand the scope of their on-site transaction testing.

The Federal Reserve recognizes that transaction testing by itself is not sufficient for ensuring the continued safe-and-sound operation of a banking organization. Evolving financial instruments and markets have enabled banking organizations to rapidly reposition their risk exposures. Therefore, periodic assessments of the condition of a financial institution that are based on transaction testing alone cannot keep pace with the moment-to-moment changes occurring in a bank's risk profile.

The examination approaches for both community banks and large banks are risk-focused processes that rely on an understanding of the institution, the performance of risk assessments, the development of a supervisory plan or examination scope, and examination procedures tailored to the institution's risk profile. However, the Federal Reserve has tailored its supervisory approach for a large bank versus a community bank. The process for large institutions relies more heavily on a dedicated supervisory team with central points of contact and supervisory plans consisting of various activities such as continuous monitoring activities, target reviews, or horizontal supervisory activities. In comparison, for community banks, the Federal Reserve conducts a point in time examination, which is supplemented by off-site surveillance monitoring. The Federal Reserve's supervisory approach differs for community banks versus larger more complex banks to address differences in banks' activities, operations, and risk profiles. In comparison to community banks, large complex banks typically have more financial products, sophisticated risk-management systems (including audit and internal controls), greater management structure, and a wider geographic dispersion of operations.

COMPLIANCE WITH LAWS AND REGULATIONS

Compliance with relevant laws and regulations should be assessed during the examination process. The steps taken to complete these assessments will vary depending on the circumstances of the institution subject to review. When an institution has a history of satisfactory compliance with relevant laws and regulations or has an effective compliance function, only a relatively limited degree of transaction testing need be conducted to assess compliance. At institutions with a less satisfactory compliance record or that lack a compliance function, more extensive review will be necessary.

Role of Supervisory Guidance

The Federal Reserve and the other agencies issue various types of supervisory guidance, including interagency statements, advisories, bulletins, policy statements, questions and answers, and frequently asked questions, to their respective supervised institutions. A statute or regulation has the force and effect of law.[7] Unlike a law or regulation, supervisory guidance does not have the force and effect of law, and the agencies do not take enforcement actions based solely on supervisory guidance. Rather, supervisory guidance outlines the agencies' supervisory expectations or priorities and articulates the agencies' general views regarding appropriate practices for a given subject area. Supervisory guidance often provides examples of practices that the agencies generally consider consistent with safety-and-soundness standards or other applicable laws and regulations, including those designed to protect consumers. See 12 CFR 262, Appendix A, "Statement Clarifying the Role of Supervisory Guidance."

APPLICATIONS UNDER REGULATION H: 12 CFR 208

Regulation H (12 CFR 208) defines the membership requirements for SMBs; describes membership privileges and conditions imposed on these banks; sets out procedures for requesting approval to establish branches and for requesting voluntary withdrawal from membership; provides information for registering and filing financial statements; sets out procedures for dealing with banks that are less than adequately capitalized; and establishes real estate lending standards. Below is description of various applications SMBs file under Regulation H.

Bank Merger

A bank must file an application for prior Federal Reserve approval under section 18(c) or section 5(d)(3) of the FDI Act to merge with another bank or thrift institution, respectively, or to acquire the assets, or assume the liabilities, of another bank or thrift institution, if the resulting institution is to be an SMB.

7. Government agencies issue regulations that generally have the force and effect of law. Such regulations generally take effect only after the agency proposes the regulation to the public and responds to comments on the proposal in a final rulemaking document.

Bank Service Company

An SMB must file an application for prior Federal Reserve approval under section 5(a) of the Bank Service Company Act (BSC Act) to invest in or establish a bank service company if the company would engage in activities under sections 4(c), 4(d), or 4(e) of the BSC Act. A bank (regardless of its charter) must file an application for prior Federal Reserve approval under section 5(b) of the BSC Act to invest in or establish a bank service company if the company would engage in activities under sections 4(b) or 4(f) of the BSC Act.

Change in Control

A person or a group acting in concert, as defined in Regulation Y (12 CFR 225.2), proposing to acquire voting shares of an SMB may be required to provide prior notice to the Federal Reserve in accordance with Regulation Y (12 CFR 225.43).

Domestic Branches

An SMB must file an application for prior Federal Reserve approval under Regulation H (12 CFR 208.6) to establish a new branch facility. An application must be filed, whether the branch is located in the state where the bank is headquartered (intrastate branch) or whether the branch is located in another state (interstate branch). In addition, applications for de novo interstate branches are subject to state filing requirements and to capital, management, and community reinvestment standards. See SR-11-3, "De Novo Interstate Branching by State Member Banks." See also, SR-13-7/CA-13-4, "State Member Bank Branching Considerations."

Section 109 of the Riegle-Neal Interstate Banking and Branching Efficiency Act of 1994 (the Interstate Act) (12 U.S.C. 1835a) prohibits any bank from establishing or acquiring a branch or branches outside of its home state primarily for the purpose of deposit production. In 1997, the banking agencies published a joint final rule implementing section 109. (See 62 *Fed. Reg.*

47728, September 10, 1997.) Section 106 of the Gramm-Leach-Bliley Act of 1999 expanded the coverage of section 109 of the Interstate Act to include any branch of a bank controlled by an out-of-state bank holding company. On June 6, 2002, the Board and the other banking agencies published an amendment to their joint final rule (effective October 1, 2002) to conform the uniform rule to section 109. (See 67 *Fed. Reg.* 38844.) The amendment expands the regulatory prohibition against interstate branches being used as deposit-production offices to include any bank or branch of a bank controlled by an out-of-state bank holding company, including a bank consisting only of a main office. See Regulation H, 12 CFR 208.7(b)(2).

The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) modified the federal statute governing de novo interstate branching by SMBs. As a result, as of July 22, 2010, an SMB is authorized to open its initial branch in a host state[8] by establishing a de novo branch at any location at which a bank chartered by the host state could establish a branch.[9]

An SMB that desires to establish a new branch facility may be eligible for expedited processing of its application by the Reserve Bank if it is an eligible bank, as defined in Regulation H (12 CFR 208.2(e)).

A member bank also may choose to submit an application that encompasses multiple branches that it proposes to establish within one year of the approval date. Unless notification is waived, the bank must notify the appropriate Reserve Bank within 30 days of opening any branch approved under a consolidated application. The approval to open a branch is valid for one year. During this period, the Board or the appropriate Reserve Bank may notify the bank that in its judgment, based on reports of condition, examinations, or other information, there has been a change in the bank's condition, financial or otherwise, that warrants reconsideration of the approval. (See Regulation H, 12 CFR 208.6(d).)

Insured depository institutions that intend to close branches must comply with the requirements detailed in section 42 of the FDI Act (12 U.S.C. 1831r-1). Section 42(e) requires that banks provide 90 days' notice to both customers and, in the case of insured SMBs, the Federal Reserve Board before the date of the proposed branch closings. The notice must include a detailed statement of the reasons for the decision to close the branch, and statistical and other information in support of those stated reasons. A similar notice to customers must be posted in a conspicuous manner on the premises of the branch to be closed at least 30 days before the proposed closing. There are additional notice, meeting, and consultation requirements for proposed branch closings by interstate banks in low and moderate income areas. Finally, the law requires each insured depository institution to adopt policies for branch closings. (See the revised joint policy statement concerning insured depository institutions' branch closing notices and policies, effective June 29, 1999. See also 64 *Fed. Reg.* 34844.) Examiners and supervisors need to be mindful of the section 42 statutory requirements and this joint policy.

Regulation H (12 CFR 208.6(f)) states that a branch relocation, defined as a movement that occurs within the immediate neighborhood and does not substantially affect the nature of the branch's business or customers served, is not considered a branch closing. Further, Regulation H (12 CFR 208.2(c)(2)(ii)) states (in one of six exclusions) that a branch does not include an office of an affiliated or unaffiliated institution that provides services to customers of the member bank on behalf of the member bank, so long as the institution is not "established or operated" by the bank. For example, a bank could contract with an unaffiliated or affiliated institution to receive deposits; cash and issue checks, drafts, and money orders; change money; and receive payments of existing indebtedness without becoming a branch of that bank. The bank could also (1) have no ownership or leasehold interest in the institution's offices, (2) have no employees who work for the institution, and (3) not exercise any authority or control over the institution's employees or methods of operation.

Emergency Applications

Emergency conditions associated with a problem or failing banking organization may allow for processing of an application under the streamlined procedures of the Bank Holding Company

8. "Host state" means a state, other than a bank's home state, in which the bank seeks to establish and maintain a branch. 12 U.S.C. 36(g)(3)(C).

9. 12 U.S.C. 36(g)(1)(A), as amended by section 613(a) of the Dodd-Frank Act; 12 U.S.C. 321. Initial entry into a host state by way of an interstate bank merger is governed by 12 U.S.C. 1831u.

Act, the FDI Act, the Change in Bank Control Act, or the Federal Reserve Act.[10] The two types of emergency procedures are expeditious action and immediate action. Under the expeditious action procedures, the Federal Reserve allows the public up to 10 days to comment on a proposal. Under the immediate action procedures, the Federal Reserve would act on a proposal as soon as possible. Potential filers are encouraged to contact the Federal Reserve as early as possible to discuss emergency procedures.

Membership

A state-chartered bank proposing to become a member of the Federal Reserve System or a national bank converting to a state-charter and desiring to remain a member of the Federal Reserve System must file an application for prior Federal Reserve approval under of Regulation H (12 CFR 208.3).[11] A bank seeking membership should contact the Federal Reserve prior to submitting a final application to allow for the completion of a pre-membership examination, if needed.

Notice of Addition or Change in Directors or Senior Executive Officers

An SMB must provide prior notice to the Federal Reserve to add a director or a senior executive officer if the bank meets the criteria in Regulation Y (12 CFR 225.72). An institution may request a waiver of the prior notice requirement if the individual's services are needed immediately.

Premises Acquisition

An SMB must provide prior notice to the Federal Reserve under Regulation H (12 CFR 208.21) to increase its investment in bank premises if the aggregate of all such investments and loans, together with the amount of any indebtedness incurred by any corporation that is an affiliate of the bank, will be more than the bank's perpetual preferred stock and related surplus plus common stock and surplus. The filing threshold is raised to 150 percent of the bank's perpetual preferred stock and related surplus plus common stock and surplus if the proposal meets the conditions in Regulation H (12 CFR 208.21(a)(3)). See also this manual's section entitled, "Bank Premises and Equipment," for more information.

Changes in the General Character of a Bank's Business

In conjunction with assessing overall compliance with relevant laws and regulations, examiners should review for compliance with the requirements of Regulation H, which sets forth the requirements for membership of state-chartered banks in the Federal Reserve System and imposes certain conditions of membership on applicant banks. Under the regulation, a member bank must "at all times conduct its business and exercise its powers with due regard to safety and soundness" and "may not, without the permission of the Board, cause or permit any change in the general character of its business or in the scope of the corporate powers it exercises at the time of admission to membership." (See SR-02-9, "Guidance Regarding Significant Changes in the General Character of a State Member Bank's Business and Compliance with Regulation H," and Regulation H (12 CFR 208.3(d)(1) and (2)).)

SMBs must receive the prior approval of the Board before making any significant change in business plans. The trend toward more diverse, more complex, and, at times, riskier activities at some banks has raised the importance of this prior-approval requirement. Changes in the general character of a bank's business would include, for example, becoming a primarily financial technology-based operation, or concentrating solely on subprime lending, mortgage lending, or leasing activities. Depending on how they are conducted and managed, these activities can present novel risks for banking organizations and may also present risks to the deposit insurance fund. In many cases, these activities in-

10. Emergency procedures cannot be used without a letter from the chartering authority of the failing financial institution.

11. A newly organized bank must apply directly to the FDIC for deposit insurance. The bank also should have received at least preliminary approval for a state banking charter prior to filing a final membership application with the Federal Reserve. A draft application may be submitted prior to state action on the charter.

volve aggressive growth plans and may give rise to significant financial, managerial, and other supervisory issues.

In applications for membership in the Federal Reserve System, the Federal Reserve considers a bank's proposed business plan to ensure, at a minimum, that appropriate financial and managerial standards are met. Likewise, the other federal banking agencies consider a bank's business plan when they review applications for federal deposit insurance, in the case of the FDIC, or applications for a national bank or federal thrift charter, in the case of the OCC. The OCC and the FDIC may condition their approvals of applications on a requirement that, during the first three years of operations, the bank or thrift provides prior notice or obtains prior approval of any proposed significant deviations or changes from its original operating plan. Rather than use similar commitments, the Federal Reserve has relied on the provisions of Regulation H to address situations in which an SMB proposes to materially change its core business plan.

Federal Reserve supervisors should monitor changes in the general character of an SMB's business as part of the Federal Reserve's normal supervisory process to ensure compliance with the requirements of Regulation H and with safe-and-sound banking practices. This review should be conducted by the Reserve Bank during the on-site examination of the bank. A significant change in a bank's business plan without the Board's prior approval would be considered a violation of Regulation H and would be addressed through follow-up supervisory action.

Minimum Statewide Loan-to-Deposit Ratios

Section 109 of the Interstate Act sets forth a process to test compliance with the statutory requirements. First, a bank's statewide loan-to-deposit ratio[12] is compared with the host-state loan-to-deposit ratio[13] for banks in a particular state. If the bank's statewide loan-to-deposit ratio is at least one-half of the published host-state loan-to-deposit ratio, then it has complied with section 109 of the Interstate Act. A second step is conducted if a bank's statewide loan-to-deposit ratio is less than one-half of the published ratio for that state or if data are not available at the bank to conduct the first step. The second step involves determining whether the bank is reasonably helping to meet the credit needs of the communities served by its interstate branches. If a bank fails both of these steps, it has violated section 109 of the Interstate Act and is subject to sanctions.

RATING THE BANK

Uniform Financial Institutions Rating System

All of the federal banking agencies use the Uniform Financial Institutions Rating System (UFIRS), commonly referred to as the "CAMELS" rating system, as the criteria for rating a bank or thrift. The agencies under the auspices of the Federal Financial Institutions Examination Council (FFIEC) last revised this rating system in 1996. Under the UFIRS, each financial institution, more specifically an insured depository institution whose primary federal supervisory agency is represented on the FFIEC, is assigned a composite rating based on an evaluation and rating of six essential components of an institution's financial condition and operations. These component factors address the "C"—adequacy of capital; "A"—the quality of assets; "M"—the capability of management; "E"—the quality and level of earnings; "L"—the adequacy of liquidity; and "S"—the sensitivity to market risk.[14]

Evaluations of the components take into consideration the institution's asset size and sophistication, the nature and complexity of its activities, and its risk profile. Composite and component ratings are assigned based on a "1 to 5" numerical scale. A "1" indicates the highest rating, strongest performance and risk management practices, and least degree of supervisory concern, while a "5" indicates the

12. The statewide loan-to-deposit ratio relates to an individual bank and is the ratio of a bank's loans to its deposits in a particular state where the bank has interstate branches.

13. The host-state loan-to-deposit ratio is the ratio of total loans in a state to total deposits from the state for all banks that have that state as their home state. For state-chartered banks, the home state is the state where the bank was chartered.

14. For a full description of the CAMELS component, see the manual section entitled, "Overall Conclusions Regarding Condition of the Bank: Uniform Financial Institutions Rating System and the Federal Reserve's Risk Management Rating."

lowest rating, weakest performance, inadequate risk management practices and, therefore, the highest degree of supervisory concern.

The composite rating generally bears a close relationship to the component ratings assigned. However, the composite rating is not derived by computing an arithmetic average of the component ratings. Each component rating is based on a qualitative analysis of the factors comprising that component and its interrelationship with the other components. When assigning a composite rating, some components may be given more weight than others depending on the situation at the institution. In general, assignment of a composite rating may incorporate any factor that bears significantly on the overall condition and soundness of the financial institution. Assigned composite and component ratings are disclosed to the institution's board of directors and senior management.

The ability of management to respond to changing circumstances and to address the risks that may arise from changing business conditions, or the initiation of new activities or products, is an important factor in evaluating a financial institution's overall risk profile and the level of supervisory attention warranted. For this reason, the management component is given special consideration when assigning a composite rating. The ability of management to identify, measure, monitor, and control the risks of its operations is also taken into account when assigning each component rating. It is recognized, however, that appropriate management practices vary considerably among financial institutions, depending on their size, complexity, and risk profile. For less complex institutions engaged solely in traditional banking activities and whose directors and senior managers, in their respective roles, are actively involved in the oversight and management of day-to-day operations, relatively basic management systems and controls may be adequate. At more complex institutions, on the other hand, detailed and formal management systems and controls are needed to address their broader range of financial activities and to provide senior managers and directors, in their respective roles, with the information they need to monitor and direct day-today activities. All institutions are expected to properly manage their risks. For less complex institutions engaging in less sophisticated risk taking activities, detailed or highly formalized management systems and controls are not required to receive strong or satisfactory component or composite ratings.

Risk Management Rating

The Federal Reserve instituted an explicit risk management rating requirement to be assigned for examinations and inspections commencing on or after January 2, 1996. The risk management rating applies to all SMBs, regardless of their size.[15]

The rating for risk management is based on a scale of one through five in ascending order of supervisory concern. Examiners should assign this rating to reflect findings within all four elements of sound risk management:

- active board and senior management oversight
- adequate policies, procedures, and limits
- adequate risk measurement, monitoring, and management information systems
- comprehensive internal controls

The risk management rating should be reflected in the overall "Management" rating of the institution and should be consistent with the ratings criteria discussed in the section entitled, "Condition of the Bank: Uniform Financial Institutions Rating System."

Definition of a Full-Scope Examination

The definition of a full-scope examination includes the safety-and-soundness components of the Interagency Uniform Rating System for CAMELS, the safety-and-soundness mandates of the Federal Deposit Insurance Corporation Improvement Act of 1991 and other regulatory priorities. A full-scope examination involves the collection and analysis of data sufficient to allow the examiner-in-charge (EIC) to determine a rating for each of the CAMELS components. To make this determination the EIC should ensure various financial and managerial factors are considered during the full-scope examination. It is expected that a full-scope examination would

15. This rating requirement was introduced by SR-95-51. See also SR-16-11 and the manual section entitled, "Overall Conclusions Regarding Condition of the Bank: Uniform Financial Institutions Rating System" and the Federal Reserve's Risk Management Rating.

be conducted on a consolidated basis, meaning that all subsidiaries of the bank would be evaluated. The scope of analysis of subsidiaries and the necessity for on-site presence in such subsidiaries and branches of the banking institution should be determined by the EIC after an analysis of the materiality and operational risk inherent in each. In most cases, an on-site examination of material credit extending (issuing) subsidiaries should be conducted. For more information on the minimum expectations for full-scope examinations see SR-94-12, "The Federal Reserve System's Definition of a Full Scope, On-Site Examination for Safety and Soundness."

Target Examinations

Target examinations focus intensively on one or two activities rather than assessing all of the safety-and-soundness components of the CAMELS rating system. There are multiple circumstances when the Federal Reserve would conduct a target examination. For instance, if the bank is under a formal enforcement action, compliance with the formal action may be validated, in part, through a target examination. In addition, the Federal Reserve may conduct a target examination of a particular activity, such as the bank's loan review, between full-scope examinations if off-site monitoring noted deteriorating asset quality at the bank. For more information, see discussion below on SMB examination frequency and coordination.

OTHER EXAMINATION AREAS

Foreign branch and specialty examination findings and the ratings assigned to those areas are taken into consideration, as appropriate, when assigning component and composite ratings under UFIRS. Several specialty examination areas include Compliance, Community Reinvestment, Government Security Dealers, Information Systems, Municipal Security Dealers, Transfer Agent, and Trust.[16]

16. See the manual section entitled "Other Examination Areas" for more information on the specialty examination areas.

EXAMINATION-FREQUENCY EXPECTATIONS FOR STATE MEMBER BANKS

The Federal Reserve is required to conduct a full-scope, on-site examination of every insured SMB at least once during each 12-month period, with the exception that certain small institutions can be examined once during each 18-month period. The 18-month examination period can be applied to those banks that

- have total assets of less than $3 billion;
- are well capitalized;
- the Federal Reserve assigned a management component rating of "1" or "2" at the most recent Federal Reserve or applicable state banking agency examination;[17]
- were assigned a CAMELS composite rating of "1" or "2" as part of the bank's rating;[18]
- are not subject to a formal enforcement proceeding or action by the Federal Reserve or the FDIC; and
- no person acquired control of the bank during the preceding 12-month period in which a full-scope examination would have been required but for the 18-month examination cycle eligibility provision.[19]

The exceptions do not limit the authority of the Federal Reserve to examine any insured member bank as frequently as deemed necessary. The examination cycle was also expanded from 12 months to 18 months for U.S. branches and agencies of foreign banks, subject to specified qualifying criteria. (Refer also to SR-18-7, "Updates to the Expanded Examination Cycle for Certain State Member Banks and U.S. Branches and Agencies of Foreign Banking Organizations."

17. The Board is permitted to conduct on-site examinations of SMBs on alternating 12-month or 18-month periods with the institution's state supervisor, if the Board determines that the alternating examination conducted by the state carries out the purposes of section 10(d) of the FDI Act. 12 U.S.C. 1820(d)(3). Refer to the discussion below on the Alternate-Year Examination Program.

18. The ratings were assigned under the Uniform Financial Institutions Rating System (UFIRS). Refer to SR-96-38, "Uniform Financial Institutions Rating System," and this manual's section entitled, "Overall Conclusions Regarding Condition of the Bank: Uniform Financial Institutions Rating System and the Federal Reserve's Risk Management Rating."

19. 12 CFR 208.64.

Bank Secrecy Act/Anti-Money Laundering Examination Frequency

The Federal Reserve is required to complete a BSA/AML compliance program review at each safety-and-soundness examination conducted at an SMB or U.S. branch or agency of a foreign bank, which is typically every 12 months.[20] However, Reserve Banks should conduct a BSA/AML compliance program review every 18 months if the SMB or U.S. branch or agency of a foreign bank is eligible for and is examined on the 18-month examination cycle. See SR-18-7 for more information.

20. 12 U.S.C. 1818(s)(2) and 12 U.S.C. 1818(b)(4).

Table 1. Overview of State Member Bank Examination Frequency and Coordination[1]

Total Asset Size of the State Member Bank (SMB)[2]	*Composite CAMELS rating of "1" or "2" from the last examination*	*Composite CAMELS rating of "3" from the last examination*	*Composite CAMELS rating of "4" or "5" from the last examination*
$0 to less than $3 billion	Full-scope on-site exam every 18 months, provided: • SMB is well capitalized; • SMB received a CAMELS composite rating of "1" or "2" and a management component rating of "1" or "2" at the most recent Federal Reserve or applicable state banking agency examination; • SMB not subject to a formal enforcement proceeding or order by Federal Reserve or FDIC; and • No person acquired control of the SMB during the preceding 12-month period in which a full-scope exam would have been required but for the 18-month exam cycle. Otherwise, full-scope on-site exam every 12 months. May be eligible for alternate-year examination program (AEP).[3]	Full-scope on-site exam every 12 months conducted by the Federal Reserve or jointly with the relevant state banking agency. A targeted exam conducted by the Federal Reserve or jointly with the state banking agency is also required annually for deteriorating institutions.[4]	Two exams are required every 12 months. One of the two exams must be a full-scope exam. Both exams must be conducted by the Federal Reserve or jointly with the relevant state banking agency.
$3–$10 billion	Full-scope on-site exam every 12 months. May be eligible for AEP.		
$10 billion or more and less than $100 billion	Full-scope on-site exam every 12 months. Some SMBs rated CAMELS composite "1" and "2" may be eligible for an AEP. The SMB is subject to continuous monitoring, and exam activities are intensified based on the severity of issues at the bank.		
$100 billion and above	Full-scope on-site exam every 12 months. The full-scope exam must be led by the Federal Reserve and may be joint with the relevant state banking agency. The SMB is subject to continuous monitoring, and exam activities are intensified based on the severity of issues at the bank.		

1. This table provides a brief summary of examination (exam) frequency requirements for SMBs. See the Federal Reserve Board's Regulation H, (12 CFR 208.64(b)).
2. Examinations of SMBs with $10 billion or more in total assets are typically integrated into the consolidated supervision program at the bank holding company.
3. AEPs generally allow exams conducted in alternating years or alternating 18-month periods, as appropriate, to be conducted by the state banking agency. For those SMBs with total assets over $3 billion, there must be a Federal Reserve examiner presence at state-led AEP exams. AEPs are implemented on a state-by-state basis. Consult the appropriate Reserve Bank for further information regarding eligibility and availability of an AEP in a particular state.
4. The Federal Reserve typically identifies deteriorating banks through off-site surveillance information. See this manual's section entitled, "Federal Reserve System Bank Surveillance Program," for more information.

De Novo Bank Examination Frequency and Scope

A de novo bank is a bank that has been in operation for three years or less. A de novo bank or a recently converted SMB has a different examination frequency from the required 12-month or 18-month examination schedule. The examination frequency for these banks is found in SR-20-16, "Supervision of De Novo State Member Banks."[21]

Within the first six months following a de novo's formation or conversion to a state member bank, the responsible Reserve Bank should conduct a targeted examination. In a written report provided to the bank's board of directors and senior management, the Reserve Bank should summarize the scope of review and supervisory findings but should generally not assign a CAMELS rating.

The responsible Reserve Bank should conduct a full-scope examination, independently, jointly, or concurrently with the state banking department within 12 months of the de novo's formation or its conversion to a state member bank. Thereafter, the bank should remain on a 12-month cycle until two full-scope, on-site examinations have been conducted. After the bank (1) has had three full-scope examinations, and (2) has been in operation for three years, the Reserve Bank may transition to the statutorily required full-scope examination schedule.

After the initial target examination, the next three examinations of the de novo, either led by the Federal Reserve or conducted jointly with the state banking department, should be full-scope. In addition to the supervisory expectations for a full-scope examination, the Reserve Bank should review the de novo for certain capital and managerial related items, which are outlined in SR-20-16.

De Novo Subsidiaries of Bank Holding Companies with Assets Greater than $3 Billion

A Reserve Bank may elect to make a risk-based determination that a de novo that is a subsidiary of a bank holding company with consolidated assets of greater than $3 billion should be examined less frequently than otherwise suggested in SR-20-16 if, in the opinion of the Reserve Bank, the parent company and its subsidiary banks are in satisfactory condition and the parent is considered to be a source of strength to its insured depository institution subsidiaries. Such subsidiary de novos would be expected to maintain capital levels that align with the de novo policy guideline outlined in SR-20-16.

EXAMINATION OF INSURED DEPOSITORY INSTITUTIONS PRIOR TO MEMBERSHIP OR MERGER INTO STATE MEMBER BANKS

A safety-and-soundness or consumer compliance examination of a state nonmember bank, national bank, or savings association seeking to *convert its status to a state member* will not generally be required prior to the conversion if the institution seeking membership meets the criteria for "eligible bank," as set forth in the Board's Regulation H,[22] plus the additional safety-and-soundness and consumer compliance criteria listed below (together referred to as "eligibility criteria").[23] To meet the Regulation H "eligible bank" criteria, an insured depository institution must

1. be well capitalized under Regulation H, subpart D, Prompt Corrective Action;
2. have a composite CAMELS rating of "1" or "2";
3. have a Community Reinvestment Act (CRA) rating of "outstanding" or "satisfactory";

21. SR-20-16 applies to any commercial bank, thrift, Edge Act corporation, or industrial bank that has been in existence for less than three years and is converting to become a state member bank. Insured depository institutions that are in operation for longer than three years and apply to become a state member bank are not covered in SR-20-16 but may be subject to a pre-membership examination as outlined in SR-15-11/CA-15-9, "Examinations of Insured Depository Institutions Prior to Membership or Merger into a State Member Bank."

22. 12 CFR 208.2(e).

23. Note that a bank may be subject to a consumer compliance pre-membership or pre-merger examination or CRA review even if it meets all waiver eligibility criteria for safety-and-soundness examination. Similarly, a pre-membership or pre-merger safety-and-soundness examination may be warranted even though the bank meets all of the waiver criteria for consumer compliance and/or CRA.

4. have a consumer compliance rating of "1" or "2"; and
5. have no major unresolved supervisory issues outstanding (as determined by the Board or appropriate Federal Reserve Bank in its discretion), including adverse supervisory findings or ratings by the current primary regulator or Consumer Financial Protection Bureau (CFPB).[24]

In addition, the insured depository institution seeking membership must meet the following additional safety-and-soundness criteria:

- the management component of CAMELS is rated "1" or "2"
- the on-site "close date" of the most recent full-scope safety-and-soundness examination is less than nine months from the date of the application for membership[25]
- there have been no material changes to the bank's business model since the most recent report of examination and no material changes are planned for the next four quarters[26]
- the annual growth in total assets, measured as of the most recent quarter end on the institution's Consolidated Reports of Condition and Income, is under 25 percent and planned growth over the next year is less than 25 percent

In cases where a state nonmember bank, national bank, or savings association is *merging with an SMB* and the surviving institution is an SMB, a safety-and-soundness or consumer compliance examination of the state nonmember bank, national bank, or savings association will not be required so long as the SMB meets all of the eligibility criteria on an existing and pro-forma basis. For example, the SMB would not meet all of the eligibility criteria if its total assets were to increase by 25 percent or more on a pro-forma basis considering both organic growth and assets from the merging institution. Other examples of situations that may cause the merging SMB to not meet the eligibility criteria include, but would not be limited to, a change in senior leadership, a change in strategy, and a situation where the institution with which it is merging is rated less than satisfactory, has major unresolved supervisory issues, or brings new business lines or products to the SMB. (See SR-15-11/CA-15-9, "Examinations of Insured Depository Institutions Prior to Membership or Merger into a State Member Bank.")

Process for Determining Whether to Waive a Safety-and-Soundness Examination

In all cases, the Reserve Bank must consult with Board supervisory staff when determining whether to waive a safety-and-soundness examination under this policy. Under certain circumstances, a pre-merger or pre-membership examination may be waived even when an institution fails to meet one or more of the safety-and-soundness related eligibility criteria. This can occur if the Reserve Bank, in consultation with Board supervisory staff, determines that conducting a safety-and-soundness examination would be unlikely to provide information that would assist in evaluating the statutory and regulatory factors that the Federal Reserve is required to consider in acting on the membership or merger application.

Process for Determining Whether to Waive a Consumer Compliance Examination or CRA Review

For consumer compliance and CRA, the Reserve Bank should review the most recent supervisory information, including consumer compliance examinations, reviews, and risk assessments, from the appropriate primary banking regulatory agency and the CFPB, if applicable, and consult with applications staff and supervisory staff in the Board's Division of Consumer and Community Affairs (DCCA) when determining whether to waive a consumer compliance examination

24. In general, if significant trust or fiduciary activities were found to be conducted in a less-than-satisfactory manner, an insured depository institution would typically not meet this requirement.

25. The close date of an on-site examination is defined as the last date that the examination team is physically on-site at the institution. For examinations for which all or a portion of the work is performed off-site, the close date is defined as the earlier of the following dates: (1) the date when the analysis (including loan file review) is completed and ready for the examiner-in-charge review; or (2) the date when the preliminary exit meeting is held with management, which can be conducted either on-site or off-site by conference call.

26. A "material change" would be an event that would materially affect the institution's balance sheet and income statement, such as a sizeable growth, sale, or wind-down of a major business line or assets, or change in senior leadership positions, such as the chief executive officer, the chief financial officer, or the chairman of the board.

under this policy. However, if the institution seeking to convert to an SMB is rated less-than-satisfactory for consumer compliance, a pre-membership or pre-merger examination should be conducted.

In addition, if the review of supervisory information from the appropriate primary banking regulatory agency and the CFPB, if applicable, identifies significant weaknesses, a pre-membership or pre-merger consumer compliance examination may be warranted, with a focus on the particular area of concern, even if a bank has a consumer compliance examination rating of "1" or "2."[27] In such cases, the Reserve Bank should also consult with applications and supervisory staff in DCCA.

Because membership in the Federal Reserve System does not confer deposit insurance, CRA does not, by its terms, apply to membership applications. Nevertheless, a less-than-satisfactory CRA rating, especially if it reflects a chronic record of weak CRA performance, would presumably reflect unfavorably upon the abilities of management of the institution. In these situations, it is appropriate for the Reserve Bank to include in the pre-membership examination a review of the institution's CRA performance as well as management's plans and programs to ensure that the organization meets its CRA obligations going forward.

Documentation Requirement for a Waived Safety-and-Soundness or Consumer Compliance Examination

The Reserve Bank must prepare and maintain documentation supporting its decision not to conduct a pre-membership or pre-merger safety-and-soundness or consumer compliance examination. Documentation should include a memorandum summarizing how the institution meets each of the eligibility criteria or a justification for the waiver for cases where the institution does not meet one or more of the eligibility criteria. The supporting memorandum should summarize the Reserve Bank's review of the two most recent full-scope safety-and-soundness and consumer compliance examinations conducted by the appropriate primary banking regulatory agency and, when applicable, the CFPB.

Scope and Documentation of the Safety-and-Soundness or Consumer Compliance Examination

All pre-membership or pre-merger safety-and-soundness or consumer compliance examinations can be risk focused and targeted, as appropriate, to the identified area(s) of weakness. Furthermore, the Reserve Bank is not required to issue a report to the institution; however, the review should be documented in a memorandum that is maintained together with the application documents.

To fulfill the examination requirement for an insured depository institution or savings association that is a subsidiary of a bank holding company or savings and loan holding company (hereafter referred to as holding company) with consolidated assets equal to or greater than $100 billion, the supervisory team will generally rely on information gathered through the existing continuous monitoring program. The team is also expected to consider findings from recent examinations that assessed specific risks, lines of business, or control functions, and from reviews such as the Comprehensive Capital Analysis and Review, the mid-cycle supervisory stress test for banks and holding companies, the holding company resolution plans, and the insured depository institution resolution plan. In the event the results of continuous monitoring and prior examinations do not provide the information necessary to assess specific areas of weakness, the supervisory team will conduct a targeted examination.

Supervisory Expectations Post-Merger or Charter Conversion

In all cases, the Reserve Bank remains responsible for adhering to the required frequency timeframes established by Federal Reserve policies and regulations for both safety-and-soundness and consumer compliance examinations. When the statutory deadline for the examination of an insured depository institution

27. Supervisory matters not captured in the examination rating could raise significant concerns that may warrant a pre-membership or pre-merger examination. Examples of such events that could raise serious concerns about consumer compliance include (1) a continuous monitoring event; (2) litigation; (3) investigations by other agencies, such as the Department of Justice, or the Department of Housing and Urban Development; and (4) other information—such as a spike in consumer complaints.

seeking membership is approaching, or has passed, a Reserve Bank should conduct an examination of the institution as soon as is practical after it becomes an SMB. The Reserve Bank should notify Board supervisory staff if the examination mandate will be missed for whatever reason.

In addition, for institutions with $10 billion or more in total consolidated assets, the Reserve Bank should complete the risk assessments and supervisory strategies required for safety-and-soundness no later than 30 days after the conversion or merger, regardless of whether the institution met the eligibility criteria. In preparing the risk assessment and supervisory strategy for an SMB that was formerly a savings association or that acquired a savings association, the Reserve Bank should pay particular attention to activities conducted by any service corporation subsidiary that may not be permissible for an SMB, where such activities have not yet been conformed.[28]

COORDINATION OF SUPERVISORY ACTIVITIES: COORDINATION WITH OTHER BANKING AGENCIES

Alternate-Year Examination Program

The frequency of examination also may be affected by the AEP. Under the AEP, those banks that qualify are examined in alternate examination cycles by the Reserve Bank and the state. Thus, a particular bank would be examined by the Reserve Bank in one examination cycle, the state in the next, and so on. Any bank may be removed from the program and examined at any time by either agency, and either agency can meet with a bank's management or board of directors or initiate supervisory action whenever deemed necessary. In general, banks with assets in excess of $10 billion and banks that are rated a composite 3 or worse are ineligible for an alternate-year examination. De novo state member banks are also ineligible for the AEP for the first three years of operations. (See SR-20-16.) For an SMB that has undergone a change in control and the state is scheduled to conduct the next examination, a Federal Reserve examiner should participate on the state-led AEP examination.

Guidelines for Relying on State Examinations

In 1995, the Federal Financial Institutions Examination Council (FFIEC) announced the adoption of Guidelines for Relying on State Examinations pursuant to section 349 of the Riegle Community Development and Regulatory Improvement Act of 1994.[29] One of the main reasons for issuing this guidance was to establish standards for the purpose of determining the acceptability of state reports of examination under section 10(d)(3) of the FDI Act, 12 U.S.C. 1820(d)(3).

The Federal banking agencies will accept and rely on state reports of examination in all cases in which it is determined that state examinations enable the federal banking agencies to effectively carry out their supervisory responsibilities. The following criteria may be considered, in whole or in part, by a federal banking agency when determining the acceptability of a state report of examination under section 10(d) of the FDI Act:

- The completeness of the state examination report. The state report of examination of a state-chartered, insured depository institution or a state-chartered branch or agency of a foreign bank should contain sufficient information to permit a reviewer to make an independent determination on the overall condition of the institution as well as each component factor and composite rating assigned under the "Uniform Financial Institutions Rating System" used for insured depository institutions and commonly referred to as the "CAMELS" rating system or the "ROCA" rating system used for branches and agencies of foreign banks.
- The adequacy of documentation maintained routinely by state examiners to support observations made in examination reports.

28. The Board, in acting on a membership application, is required to consider whether the corporate powers to be exercised are consistent with the purposes of the Federal Reserve Act (12 U.S.C. 322). In addition, Regulation H (12 CFR 208.3(d)(2)) requires a state member bank to obtain the Board's permission prior to changing the scope of powers it exercises.

29. 12 U.S.C. 1820(d)(9).

- The ability over time of a state banking department to achieve examination objectives. At a minimum, the federal banking agencies will consider the adequacy of state budgeting, examiner staffing and training, and the overall review and follow-up examination process of a state banking department. Accreditation of a state banking department by the Conference of State Bank Supervisors is among the factors that also will be considered.
- The adequacy of any formal or informal arrangement or working agreement between a state banking department and a federal banking agency.

The Federal banking agencies, as part of their routine review of state examination reports, will assess the quality and scope of the reports to determine whether they continue to meet the above general criteria. The Federal banking agencies retain the option in cases in which a state examination report appears insufficient or the condition of an insured institution, as indicated in the examination report or other sources, appears to be seriously deteriorating, to conduct a follow-up examination.

The appropriate Federal banking agency and state banking department will continue to share, discuss and work to resolve any problems or concerns regarding the acceptability of each other's work or the operation of these guidelines and the alternating examination program as well as other issues of mutual interest.

Ratings Assigned by State Supervisory Agencies under the Alternate Examination Program

Reserve Banks should review all state examination reports on banks included in the AEP. A Reserve Bank should only assign a separate CAMELS rating if there is disagreement with the rating assigned by the state supervisory agency that conducted the examination. In the event that a rating disparity exists, the rating assigned by the Reserve Bank and the rationale for that rating must be communicated to the board of directors of the affected institution and to the appropriate state and federal supervisory agencies.

The rating assigned by the state supervisory agency that conducted the examination should be entered into Federal Reserve systems of record as a full-scope examination. A different rating assigned by the Reserve Bank in connection with the AEP examination should be recorded as an "examination" event with a "supervisory assessment activity" scope. The Federal Reserve rating will serve as the basis for determining compliance with relevant statutes and regulations, and for the conduct of supervisory responsibilities, including supervisory and enforcement activities, the frequency of inspection/examination activity, and general surveillance activity. See SR-99-17, "Supervisory Ratings for State Member Banks, Bank Holding Companies and Foreign Banking Organizations, and Related Requirements for the National Examination Data System," for more information.

Joint Examination Guidelines

The Nationwide State/Federal Supervisory Agreement, dated November 14, 1996, which addresses the supervision of multistate banking organizations, established guidelines for the conduct of joint examinations. Under the terms of the agreement, the participating state and federal supervisory agencies should make every effort to resolve significant differences that arise during a joint examination. If differences cannot be resolved, the agreement permits each supervisory agency to take action, independent of the other, in the fulfillment of its own statutory and supervisory responsibilities.

An examination should be considered a joint examination only if the participating supervisory agencies agree on the component and composite ratings to be assigned. If the Federal Reserve and the state supervisory agency disagree on the ratings to be assigned, the examination should be termed "concurrent," and should be recorded as such in the appropriate Federal Reserve system of record. In these instances, both the Federal Reserve rating and the state supervisory agency rating should be entered into the appropriate Federal Reserve system of record. In the event that an examination changes from "joint" to "concurrent" in the course of the examination, the examining Reserve Bank must assign a separate supervisory rating and issue a separate report of examination. The Federal Reserve rating will serve as the basis for determining compliance with relevant statutes and regulations, and for the conduct of its supervisory responsibilities, including supervisory and enforcement activities, the frequency of inspection/examination activity, and general surveillance activity.

Supervision of State-Chartered Banks

In May 2004, the State-Federal Working Group, an interagency group of state bank commissioners and senior officials from the Federal Reserve and the FDIC, developed a recommended-practices document designed to reiterate and reaffirm the need for a commonsense approach for collaborating with states in the supervision of state-chartered banking organizations.[30] The recommended practices highlight the importance of communication and coordination between state and federal banking agencies in the planning and execution of supervisory activities.

When communicating and coordinating with other agencies, examination and supervisory staff should follow the common courtesies and recommended practices identified in the May 2004 document. The recommended practices reinforce the long-standing commitment of federal and state banking supervisors to provide efficient, effective, and seamless oversight of state banks of all sizes, whether those institutions operate in a single state or more than one state. The recommended practices also minimize, to the fullest extent possible, the regulatory burden placed on state-chartered banks—thus further supporting and fostering a seamless supervisory process. (See SR-04-12, “Supervision of State-Chartered Banks.”)

30. The source for the recommended practices is the November 14, 1996, Nationwide State and Federal Supervisory Agreement to enhance the overall state-federal coordinated supervision program for state-chartered banks. The agreement established a set of core principles to promote coordination in the supervision of all interstate banks, with particular emphasis on complex or larger institutions. (See SR-96-33, “State/Federal Protocol and Nationwide Supervisory Agreement.”) These principles are equally applicable and important when supervisors from federal and state banking agencies are communicating and coordinating the supervision of state-chartered banks operating within a single state.

Recommended Practices for State Banking Departments, the FDIC, and the Federal Reserve

1. State and federal banking agencies should take steps to ensure that all staff responsible for the supervision and examination of state-chartered banks are familiar with the principles contained in the agreement. State and federal banking agencies should ensure that adherence to the principles in the agreement is communicated as a priority within their respective agencies at all levels of staff—ranging from the field examiners to the officers in charge of supervision and to state bank commissioners.
2. Home-state supervisors should make every effort to communicate and coordinate with host-state supervisors as an important part of supervising multistate banks as specified in the Nationwide Cooperative Agreement executed by the state banking departments and recognized by the federal agencies in the agreement.
3. State and federal banking agencies should consider inviting one another to participate in regional examiner training programs and/or seminars to discuss emerging issues and challenges observed in the banking industry.
4. Federal and state banking departments should maintain and share current lists of their staff members designated as primary contact persons (PCPs) for their institutions.
5. PCPs and EICs from the state banking department(s) and federal agencies should discuss and prepare supervisory plans at least once during the examination cycle, and more frequently as appropriate for institutions of greater size or complexity or that are troubled. The agencies should discuss and communicate changes to the plan as they may evolve over the examination cycle. The supervisory plans should be comprehensive, including examination plans, off-site monitoring, follow-up or target reviews, supervisory actions, etc., as applicable.
6. The PCPs from the home-state banking department and federal banking agencies should make every effort to share reports that their individual agencies have produced through their off-site monitoring program or through targeted supervisory activities.

7. State and federal banking agencies should notify one another as early as possible if their agency cannot conduct a supervisory event (e.g., examination) that was previously agreed upon—or if the agency intends to provide fewer examiners/resources than originally planned.
8. Meetings with bank management and directors should involve both the appropriate staff from the home-state banking department and from the responsible federal banking agency, whenever possible. If a joint meeting is not possible or appropriate (for example, the bank arranges the meeting with one agency only), the other agency (the home-state banking department or the responsible federal banking agency, as applicable) should be informed of the meeting.
9. The home-state and responsible federal agency should make every effort to issue a joint exam report in the 45-day time frame identified in the agreement. If circumstances prevent adherence to time frames identified in the agreement, the state and federal agencies should coordinate closely and consider benchmarks or timing requirements that may apply to the other agency.
10. All corrective action plans (for example, memoranda of understanding (MOU), cease-and-desist orders) should be jointly discussed, coordinated, and executed to the fullest extent possible among all examination parties involved. Also, all information on the institution's corrective action plan and progress made toward implementing the plan should be shared.
11. To ensure that messages to management are consistent to the fullest extent possible, supervisory conclusions or proposed actions should only be communicated to bank management, the bank board of directors, or other bank staff after such matters have been fully vetted within and between the federal banking agency and home-state banking department. The vetting process should, to the fullest extent possible, adhere to the exit meeting and examination report issuance time frames specified in the agreement. All parties should make every effort to expedite the process in order to deliver timely exam findings and efficient regulatory oversight.
12. When differences between the agencies arise on important matters, such as examination conclusions or proposed supervisory action, senior management from the home-state banking department and the appropriate federal banking agency should communicate to try to resolve the differences. In the event that the state and federal banking agency cannot reach agreement on important matters affecting the supervised institution, the respective agencies should coordinate the communication of those differences to the management or board of directors of the supervised institution, including the timing thereof and how the differing views will be presented. (See SR-99-17.)

Coordinating Activities with the Consumer Financial Protection Bureau

On May 16, 2012, the CFPB, the Federal Reserve Board, the FDIC, the NCUA, and the OCC entered into an MOU to facilitate the fulfillment of the agencies' responsibilities in a manner consistent with the provisions of sections 1022, 1024, and 1025 of the Dodd-Frank Act. The MOU covers depository institutions with more than $10 billion in total assets. The objectives of the MOU, among other things, are to establish which examination schedules must be coordinated, which examinations must be conducted simultaneously, what it means to conduct an examination simultaneously, and how insured depository institutions may request to opt out of simultaneous examinations.[31]

COORDINATION OF SUPERVISORY ACTIVITIES: COORDINATION ACTIVITIES AMONG THE RESERVE BANKS

Many large banks have interstate operations; therefore, close cooperation with the other federal and state banking agencies is critical. To facilitate coordination between the Federal Reserve and other regulators, District Reserve Banks have been assigned roles and responsibilities that reflect their status as either the

31. For more information, see the Board's June 4, 2012, press release at https://www.federalreserve.gov/newsevents/pressreleases/bcreg20120604a.htm.

responsible Reserve Bank (RRB) with the central point of contact or the local Reserve Bank (LRB).

The RRB is accountable for all aspects of the supervision of a fully consolidated banking organization, which includes the supervision of all the institution's subsidiaries and affiliates (domestic, foreign, and Edge corporations) for which the Federal Reserve has supervisory oversight responsibility. The RRB is generally expected to work with LRBs in conducting examinations and other supervisory activities, particularly where significant banking operations are conducted in a local District. Thus, for SMBs, the LRB has an important role in the supervision of that subsidiary. However, the RRB retains authority and accountability for the results of all examinations and reviews that an LRB may perform on its behalf. See SR-05-27/CA-05-11, "Responsible Reserve Bank and Inter-District Coordination."

Responsible Reserve Bank

In general, the RRB for a banking institution has been the Reserve Bank in the District where the banking operations of the organization are principally conducted. For domestic banking institutions, the RRB typically will be the Reserve Bank District where the head office of the top-tier institution is located and where its overall strategic direction is established and overseen. For foreign banking institutions, the RRB typically will be the Reserve Bank District where the Federal Reserve has the most direct involvement in the day-to-day supervision of the U.S. banking operations of the institution.

When necessary, the Board's Division of Supervision and Regulation (S&R), in consultation with DCCA, may designate an RRB when the general principles set forth above could impede the ability of the Federal Reserve to perform its functions under law, do not result in an efficient allocation of supervisory resources, or are otherwise not appropriate.

Duties of RRBs

The RRB develops the consolidated supervisory plan and ensures that the scope and timing of planned activities conducted by participating Districts and agencies pursuant to the plan are appropriate. The RRB designates the central point of contact or lead examiner and ensures that all safety-and-soundness, information technology, trust, consumer compliance, Community Reinvestment Act (CRA), and other specialty examinations, inspections, and visitations are conducted and appropriately coordinated within the System and with other regulators. In addition, the RRB manages all formal communications with the foreign and domestic supervised entity, including the communication of supervisory assessments, ratings, and remedial actions.[32]

Sharing of RRB Duties

To take advantage of opportunities to enhance supervisory effectiveness or efficiency, an RRB is encouraged to arrange for the LRB to undertake on its behalf certain examinations or other supervisory activities. For example, an LRB may have relationships with local representatives of the institution or local supervisors; leveraging these relationships may facilitate communication and reduce costs. Additionally, LRBs may provide specialty examination resources—in the case of CRA examinations, LRB staff often provide valuable insights into local communities and lending institutions that should be factored into the CRA assessment. When other Reserve Bank Districts conduct examinations and other supervisory activities for the RRB, substantial reliance should be placed on the conclusions and ratings recommended by the participating Reserve Bank(s).

The RRB retains authority and accountability for the results of all examinations and reviews performed on its behalf and, therefore, must work closely with LRB examination teams to ensure that examination scopes and conclusions are consistent with the supervisory approach and message applied across the consolidated organization. If an LRB identifies major issues in the course of directly conducting supervisory activities on behalf of an RRB, those issues should be brought to the attention of the RRB in a timely manner.

If an RRB arranges for an LRB to conduct supervisory activities on its behalf, the LRB is responsible for the costs of performing the activities. If the LRB is unable to fulfill the request from the RRB to perform the specified

32. See SR-96-33.

activities, the RRB should seek System assistance, if needed, by contacting Board staff or using other established procedures for coordinating resources.

In general, LRBs are responsible for the direct supervision of SMBs located in their district. LRBs and host states will not routinely examine branches of SMBs or issue separate ratings and reports of examination. Similar to the relationship between the RRBs and LRBs, home-state supervisors[33] will coordinate the activities of all state banking departments and will be the state's principal source of contact with federal banking agencies and with the bank itself. Also, host states will not unilaterally examine branches of interstate banks. Close coordination among the Reserve Banks and other appropriate regulators for each organization is critical to ensure a consistent, risk-focused approach to supervision.

COMMUNICATION OF SUPERVISORY FINDINGS

This subsection on the "Communication of Supervisory Findings" is based on the guidance in SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings," which applies to all Federal Reserve-supervised banking organizations. In a supervisory finding, examiners should convey, if evident, both the root cause of the finding and the potential effect of the finding on the organization. Examiners should also consider the guidance in 12 CFR 262, Appendix A, "Statement Clarifying the Role of Supervisory Guidance," for more information on the communication of supervisory findings, including the appropriate identification of unsafe or unsound practices or other deficiencies in risk management, including compliance risk management, or other areas that do not constitute violations of law or regulation.

Communication of supervisory findings to the organization's board of directors is an important part of the supervision of a banking organization. While the board itself may not directly undertake the work to remediate supervisory findings as senior management is responsible for the organization's day-to-day operations, it is nevertheless important that the board be made aware of significant supervisory issues and ultimately be accountable for the safety and soundness and assurance of compliance with applicable laws and regulations of the organization.

Depending upon the size and complexity of the organization, supervisory findings are communicated in writing through formal examination or inspection reports, reports summarizing the results of targeted reviews, a roll-up of those reviews into a comprehensive report, any other supervisory communication, or some combination thereof. These written communications (referred to collectively as "reports" in this section) are generally directed to the board of directors, or an executive-level committee of the board[34] as appropriate. In turn, the board of directors (or executive-level committee of the board) typically will direct the organization's management to take corrective action and will provide management with appropriate oversight, including approvals of proposed management actions as necessary.

To be effective, the communication of supervisory findings must be (1) written in clear and concise language, (2) prioritized based upon degree of importance, and (3) focused on any significant matters that require attention.

Reserve Banks must formally communicate Matters Requiring Immediate Attention (MRIAs) and Matters Requiring Attention (MRAs) resulting from any supervisory activity to the organization in these written reports. In order to promote an understanding of these terms, examiners should include definitions of MRIAs and MRAs in all supervisory documents communicating supervisory findings.[35] When included in a safety-and-soundness examination or inspection report, MRIAs and MRAs should be listed in the "Matters Requiring Attention" section. In the case of findings from consumer compliance examinations, MRIAs and MRAs should be reflected in the "Executive Summary and Examination Ratings" section of the consumer

33. The State/Federal Supervisory Protocol and Agreement established definitions for home- and host-states. The home-state supervisor is defined as the state that issued the charter. It will act on behalf of itself and all host-state supervisors (states into which the bank branches) and will be the single state contact for a particular institution.

34. An executive-level committee of the board (such as, the audit committee or risk committee) typically meets regularly, keeps minutes of those meetings, and is accountable to and routinely reports to the board of directors.

35. In a safety-and-soundness report, these definitions could be included on the "Scope" page, in an appendix, or as a footnote on the "Matters Requiring Attention" section. In a consumer compliance report, these definitions could be included on the "Executive Summary and Examination Ratings" section.

affairs report of examination. Only outstanding MRIAs and MRAs are required to be discussed in the report; however, examiners have discretion to discuss closed MRIAs and MRAs in the report if such discussion would be meaningful.

For large banking organizations, an annual roll-up report summarizes the significant findings, based on outstanding MRIAs or MRAs, included in the reports of targeted reviews or other supervisory activities conducted during the supervisory cycle. These findings may be grouped by major supervisory issues, rating components, risks, or themes. This information should enable the banking organization's board of directors and any executive-level committee of the board to understand the substance and status of outstanding MRIAs or MRAs and focus their attention on the most critical and time-sensitive issues.

Communications to banking organizations concerning safety-and-soundness or consumer compliance MRIAs or MRAs must specify a timeframe within which the banking organization must complete the corrective actions. In certain circumstances, examiners may require the banking organization to submit an action plan that identifies remedial actions to be completed within specified timeframes. Action plans with intermediate- and long-term timeframes that span more than one supervisory or examination cycle with regard to safety-and-soundness matters, or a 12-month period with regard to consumer compliance issues, should include interim progress targets. Both safety-and-soundness and consumer protection or compliance considerations will remain a priority in determining whether the organization's timeframes to correct the matter are reasonable.

Matters Requiring Immediate Attention

MRIAs arising from an examination, inspection, or any other supervisory activity are matters of significant importance and urgency that the Federal Reserve requires banking organizations to address immediately and include (1) matters that have the potential to pose significant risk to the safety and soundness of the banking organization; (2) matters that represent significant noncompliance with applicable laws or regulations; (3) repeat criticisms that have escalated in importance due to insufficient attention or inaction by the banking organization; and (4) in the case of consumer compliance examinations, matters that have the potential to cause significant consumer harm. An MRIA will remain an open issue until resolution and examiners confirm the banking organization's corrective actions.

Required language. Federal Reserve examiners are expected to use the following standardized language to communicate MRIAs to the board of directors (or executive-level committee of the board):

"The board of directors (or executive-level committee of the board), or banking organization *is required to immediately...*"

Timeframe. The expected timeframe for a banking organization to address MRIAs is generally short, and may be "immediate," in the case of heightened safety-and-soundness or consumer compliance risk. For MRIAs that are necessary to preserve or restore the viability of a banking organization, the timeframe should take into account any potential losses to the FDIC's Deposit Insurance Fund, including the possibility that a delay in action will increase the potential for loss or the cost of resolution.

Organization response. Following its review of MRIAs discussed in the report, the banking organization's board of directors is required to respond to the Reserve Bank in writing regarding corrective action taken or planned along with a commitment to corresponding timeframes.

Supervisory follow-up. The Reserve Bank must follow up on MRIAs to assess progress and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe specified for the action being required, and should be appropriate for the severity of the matter requiring the corrective action. The means of follow-up may vary depending upon the nature and severity of the matter requiring the action. Follow-up may take the form of a subsequent examination, a targeted review, or any other supervisory activity deemed suitable for evaluating the issue at hand.

In some cases, when follow-up indicates the organization's corrective action has not been satisfactory, the initiation of additional formal or informal investigation or enforcement action may be necessary. In such cases, examiners should consult with enforcement staff.[36] In all instances, examiners are expected to exercise judgment as to the supervisory activities best suited for evaluating a particular issue. Once follow-up is completed, examiners are expected to clearly and fully document the rationale for their decision to close any issue. Examiners are also expected to communicate in writing the results of their work and findings to the banking organization.

Matters Requiring Attention

MRAs constitute matters that are important and that the Federal Reserve is expecting a banking organization to address over a reasonable period of time but when the timing need not be "immediate." While issues giving rise to MRAs must be addressed to ensure the banking organization operates in a safe-and-sound and compliant manner, the threat to safety and soundness is less immediate than with issues giving rise to MRIAs. Likewise, consumer compliance concerns that require less immediate resolution should be communicated as an MRA. An MRA typically will remain an open issue until resolution and confirmation by examiners that the banking organization has taken corrective action. If a banking organization does not adequately address an MRA in a timely manner, examiners may elevate an MRA to an MRIA. Similarly, a change in circumstances, environment, or strategy can also lead to an MRA becoming an MRIA. The key distinction between MRIAs and MRAs is the nature and severity of matters requiring corrective action as well as the immediacy with which the banking organization must begin and complete corrective actions.

Required language. Federal Reserve examiners are expected to use the following standardized language to communicate MRAs to the board of directors (or executive-level committee of the board):

"The board of directors (or executive-level committee of the board), or banking organization *is required to...*"

36. Such consultation should be made in accordance with existing guidance to Reserve Bank supervisory staff on the processing of enforcement actions, which provides that recommendations concerning formal enforcement actions should be submitted to the Board's Legal Division.

Timeframe. Communications to banking organizations about MRAs must specify a timeframe within which the corrective action is expected to be completed. The timeframe, at least initially, may require estimation because the banking organization may first need to complete preliminary planning to establish the timeframe for initiating and completing the corrective action. The timeframes for MRAs are likely to become more precise over time as planning evolves and circumstances make the completion of the MRAs more urgent. Timeframes that span more than one examination cycle for safety-and-soundness issues or that exceed 12 months for consumer compliance issues should include appropriate interim progress reports.

Organization response. Following its review of the report, the banking organization's board of directors is required to provide a written response to the Reserve Bank regarding its plan, progress, and resolution of the MRA.

Supervisory follow-up. The Reserve Bank must follow-up on MRAs to assess progress and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe during which actions are to be completed. For intermediate- or long-term corrective actions for MRAs, Reserve Bank follow-up may consist of assessing the organization's progress to address the MRAs, whether satisfactory or unsatisfactory, and noting whether the initial estimated timeframe continues to be reasonable or warrants adjustment.

The means of supervisory follow-up may vary based upon the nature and severity of the matter for which corrective action is expected. Follow-up may take the form of a subsequent examination, targeted review, continuous monitoring, reliance on validation work conducted by internal audit function, reliance on the results of examinations conducted by other supervisors, or any other supervisory activity deemed suitable for evaluating the issue at hand.[37]

37. Examiners may choose to rely on the work of internal audit when internal audit's overall function and related processes are effective, as discussed in SR-13-1/CA-13-1, "Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing." (See this manual's section entitled "Internal Control and Audit Function, Oversight, and Outsourcing.") When relying on internal audit to follow up on MRAs, examiners are expected to review the relevant work papers and, when necessary, meet with internal audit staff who documented the resolution of the issue.

In some cases, when follow-up indicates the organization's corrective action has not been satisfactory, the initiation of additional formal or informal investigation or enforcement action may be necessary. In all instances, examiners are expected to exercise judgment regarding the supervisory activities best suited for evaluating a particular issue. Once follow-up is complete, examiners are expected to clearly and fully document the rationale for their decision to close any issue. Examiners also are expected to communicate in writing the results of their work and findings to the organization.

Supervisory Considerations

The volume of MRIAs and MRAs should be one of the many considerations in assigning a supervisory rating to a banking organization. The presence of a large number of MRIAs or MRAs may indicate that additional formal or informal investigation may be necessary or that the initiation of a formal or informal enforcement action may be warranted.

Irrespective of the number of MRIAs or MRAs, in some cases, additional formal or informal investigation may be necessary or the initiation of a formal or informal enforcement action may be warranted based on the severity of the issues, the repeat nature of issues, lack of responsiveness of management, violations of law, insider abuse, fraud, or other material deficiency. In any of these cases, examiners should consult with the Board's enforcement staff.

Factors in Escalating Issues into Enforcement Actions

The volume of open MRIAs and MRAs and the materiality of the issues therein to the safety and soundness of the banking organization are important overarching considerations in determining whether examiners need to consult with the Board's enforcement staff in escalating issues into enforcement actions.[38] In addition to the guidance presented in SR-13-13/CA-13-10, examiners should consider the following key factors in determining whether to recommend additional formal or informal investigation or enforcement action:

- the organization's supervisory ratings and financial condition;[39]
- whether the issues involve unsafe or unsound practices, violations of laws, noncompliance with regulations, insider abuse, fraud, or other material deficiencies;[40]
- the severity or repetitive or intentional nature of the issues;
- management's willingness and ability to correct the issues;
- management's history of instituting timely remedial or corrective actions;
- whether management already initiated corrective action or established procedures to prevent future deficiencies;
- whether criminal or other regulatory authorities are taking a formal enforcement or prosecutorial action against the same institution;
- the organization's history of violations of laws, noncompliance with regulations and unsafe and unsound unsatisfactory practices; and
- any other circumstances that warrant use of an enforcement action.

As described in this manual's section, "Formal and Informal Supervisory Actions," it is important for examiners and supervision staff to provide adequate support for all recommendations for both formal and informal actions in the examination report and associated workpapers.

Revising Supervisory Ratings

Supervisory ratings should be revised whenever there is strong evidence of significant changes to the bank's financial or operational condition.[41] It is important that supervisory ratings reflect a current assessment of an institution's financial condition and risk profile, as the ratings can affect risk-based deposit insurance premiums, statutory and regulatory requirements, including applications and the prompt corrective action provisions of the FDI Act, and supervisory

38. Issues are considered closed if the banking organization implements and examiners verify and validate the effectiveness of the corrective action, or if the organization's practices are no longer a concern because of a change in the organization's circumstances.

39. See SR-96-38, "Uniform Financial Institutions Rating System."

40. See 12 U.S.C. 1818(b)(1).

41. See SR-99-17, "Supervisory Ratings for State Member Banks, Bank Holding Companies and Foreign Banking Organizations, and Related Requirements for the National Examination Data System."

reporting and examination requirements as well as other factors. While supervisory ratings are most frequently revised as a result of on-site supervisory activities, other sources of information reviewed off-site may also indicate the need for a rating change.[42]

In addition, when a component of one of the supervisory rating systems is changed, the Reserve Bank must also reaffirm or revise the other component ratings and the composite rating, based upon available information at that time. The factors contributing to a change in the rating of a selected component can affect one or more of the other components in the rating system as well as the composite rating. Accordingly, if there is a compelling reason to change a selected component rating, all of the other components in the supervisory rating system must be either reaffirmed or revised. As applicable for holding companies and SMBs, the risk management rating must also be reaffirmed or revised when a CAMELS or holding company rating is changed.

Any change to a component or composite rating and the rationale for that change must be communicated in writing via a letter or report to the board of directors of the affected institution (or to the senior U.S. management official in the case of a U.S. branch, agency, office, or nonbank subsidiary of a foreign bank) and to the appropriate state and federal supervisory agencies. When ratings are revised between scheduled Federal Reserve examinations and inspections, the revised rating should be entered into the appropriate Federal Reserve system of record.

REPORTS OF EXAMINATION

As mentioned above, depending upon the size and complexity of the organization, supervisory findings are communicated in writing in a number of ways. In general, a community bank receives a comprehensive report based on the findings from its statutorily mandated examination every 12 or 18 months. Historically, the agencies promoted consistency in the communication of examination findings by mandating certain pages in the report of examination. In 2019, the FFIEC members agreed on a set of principles that should apply to the completion of all reports of examination. The FFIEC members determined that a principles-based approach for completing the report of examination would better achieve the objectives of promoting consistency and communication amongst the agencies, while allowing individual supervisors the flexibility to document their assessment of financial institutions of different sizes, activities, risk profiles, and financial and managerial condition. See SR-19-6, “Federal Financial Institutions Examination Council Policy Statement on the Principles for Completing the Report of Examination,” for more information. For more information on the structure of the report of examination and timing expectation for completing reports of examination, see this manual’s section entitled, “Community Bank Supervision Process.”

Larger SMBs with greater than $10 billion in assets are generally examined as part of the continuous monitoring and inspection activities of the parent bank holding company. While the Federal Reserve is required to conduct a full-scope, on-site examination of these larger SMB at least once during each 12-month period, the scale and frequency of monitoring activities that inform this rating differs by institution. As such, the format of supervisory letters or examination reports for larger banks varies depending on the scope and subject matter examiners review. For larger SMBs, the Federal Reserve typically delivers the results of the annual SMB full-scope examination and CAMELS rating in the same letter as the bank holding company annual assessment.

Combined Reports

Reserve Banks may issue a combined report for a bank holding company and its lead SMB subsidiary when (1) a bank holding company’s lead bank subsidiary is an SMB and (2) the holding company’s board formally approves the release of a combined report to its lead SMB subsidiary. In cases where the company has more than one SMB, separate examination reports should be prepared for all other SMB subsidiaries. The Reserve Bank should send a letter to a qualified holding company that ex-

42. For example, significant change in financial condition may be evident from some combination of reports of examination conducted by other agencies, meetings or other communication with management of the institution, published financial reports or press releases, status reports submitted by the institution as required by an enforcement action, and information generated by ongoing surveillance activities.

plains its option of receiving a combined report. If the holding company's board wishes to receive a combined report, it should formally approve the release of the combined report to its lead SMB subsidiary by board resolution. (See SR-94-46, "Combined Examination/Inspection Report For Bank Holding Companies With Lead State Member Banks," and its attachment.)

Timing Standards for Completing Reports

Specific expectations for examination staff to complete the examination report vary depending on factors such as the size of the bank, the condition of the bank, and the level of supervisory coordination for a particular examination. In general, examination staff are expected to complete reports more promptly for SMBs that are poorly rated than SMBs that are in satisfactory condition. The manual sections discussing the supervisory programs of the various portfolios provide more detailed information on timing expectations for completing and sending examination reports to supervised institutions.

ENFORCEMENT ACTIONS

Generally, formal or informal enforcement actions are taken after the completion of an on-site bank examination. These examinations include commercial, trust, electronic data-processing, consumer, or other types of examinations. Formal or informal enforcement actions may also be taken when a Reserve Bank becomes aware of a problem at a bank that warrants immediate attention and correction.

When a bank's deficiencies are severe, uncorrected, repeat, or unsafe or unsound, or negatively affect the bank's condition, the Board may issue a formal action to correct practices. The Board is required to publish and make publicly available any final order issued for any administrative enforcement proceeding it initiates. These orders include cease-and-desist, removal, prohibition, and civil money penalty assessments.

Informal supervisory actions are used when circumstances warrant a less severe form of action than the formal supervisory actions described above. Informal actions are not enforceable and their violation cannot serve as a basis for assessing a civil money penalty or initiating a removal and prohibition action. Informal actions are not published or publicly available. These informal actions include commitments, Board resolutions, and MOUs. For more information, see this manual's section entitled, "Formal and Informal Supervisory Actions."

APPEALS PROCESS

In general, questions about or objections to supervisory determinations made during the course of an inspection or examination are most effectively handled through the longstanding Federal Reserve practice of resolving any problems informally during the course of the inspection or examination process. If problems cannot be resolved through the inspection or examination process, the Board has developed guidelines that implement the intra-agency appeals process required by section 309 of the Riegle Community Development and Regulatory Improvement Act of 1994. One of the key aspects of the appeals process developed under section 309 is the establishment of the Ombuds who

1. acts as a liaison between the agency and any affected person with respect to any problem such party may have in dealing with the agency resulting from the regulatory activities of the agency; and
2. ensures that safeguards exist to encourage complainants to come forward and preserve confidentiality

In March 2020, the Board revised its internal appeals process for institutions wishing to appeal an adverse material supervisory determination and its policy regarding the Ombuds for the Federal Reserve System. See 85 *Federal Register* 15,175 (March 17, 2020) and SR-20-28/CA-20-14, "Internal Appeals Process for Material Supervisory Determinations and Policy Statement Regarding the Ombudsman for the Federal Reserve System," for more information on the appeals process and the Ombuds Policy Statement.

INTRODUCTION

Community banks constitute the largest number of state member banks (SMBs) supervised by the Federal Reserve System. For community banks, the primary purpose of prudential regulation is to ensure the safety and soundness of each individual institution, thereby protecting the deposit insurance fund. The Federal Reserve scales or risk-focuses its supervisory expectations based on the size, risk profile, condition, and complexity of a bank and its activities.

DEFINITION OF A COMMUNITY BANKING ORGANIZATION

For supervisory purposes, the Federal Reserve uses the term "community bank" to generally describe a bank with less than $10 billion in total consolidated assets and "community banking organization" generally to describe an SMB or holding company with less than $10 billion in total consolidated assets.

RISK-FOCUSED SUPERVISION OF COMMUNITY BANKS

The risk-focused methodology for the supervision program for community banks reflects a continuous and dynamic process. The objective of a risk-focused examination is to effectively evaluate the safety and soundness of the bank, including the assessment of its risk management systems, financial condition, and compliance with applicable laws and regulations. In addition, the risk-focused supervision process of community banks aims to align resource requirements for examinations with the risks inherent in the bank's activities. Examiner judgment is another key element in effectively determining the initial scope of state member bank examinations.

The Federal Reserve has developed technological tools for examiners to improve the efficiency of both off-site and on-site supervisory activities. The goal of these measures is to facilitate greater consistency and more efficient, effective, and risk-focused examinations by better enabling staff to tailor the scope of examinations to the activities and risks of individual banks. The automation of various parts of the community bank examination process save examiners and bankers time, as a bank can submit requested pre-examination information electronically. Through these efforts, the Federal Reserve aims to strike an appropriate balance between off-site and on-site supervisory activities to ensure that community banks are subject to supervision that is both high-quality and resource-efficient.

The risk-focused methodology consists of several steps, each of which uses certain written products to facilitate communication and coordination.

Steps	***Products***
Understanding the bank	Institutional Overview
Assessing the bank's risk	Risk tiering or preliminary risk assessment
Defining examination activities	Scope memorandum Entry letter
Performing examination procedures	Risk-focused examination procedures from the Examination Documentation (ED) modules
Reporting the findings	Report of examination

Understanding the Bank

Institutional Overview

The risk-focused supervision process for community banks involves an assessment of the bank that enables examiners to tailor their examination to the bank's risk profile. In addition to examination reports and correspondence files, surveillance reports identify outliers when a bank is compared to its peer group. Review of this information helps examiners identify a bank's strengths and vulnerabilities, and is the foundation for determining the examination activities to be conducted.

The institutional overview should contain a concise executive summary that demonstrates an understanding of the institution's present condition and its current and prospective risk profiles as well as highlights key issues and past supervisory findings. General types of information that may be valuable to present in the overview include

- a brief description of the organizational structure;
- a summary of the organization's business strategies as well as changes in key business lines, growth areas, new products, etc., since the prior review;
- an overview of the board of directors, management, and corporate governance;
- a brief analysis of the consolidated financial condition and trends;
- descriptions of internal and external audit;
- risk assessment matrix;
- overview of risk management including key risk types (credit, market, liquidity, operational, legal, and compliance);
- key issues for the organization, either from external or internal factors;
- a description of the future prospects of the organization;
- a summary of supervisory activity performed since the last review;
- considerations for conducting future examinations; and
- the ability to conduct loan review off-site.

Assessing the Institution's Risks: Risk Tiering, Scoping, and Preliminary Risk Assessment

A bank's business activities present various combinations and concentrations of the noted risks depending on the nature and scope of the particular activity. Therefore, when assessing the bank's risks, consideration must be given to the institution's overall risk environment, the reliability of its internal risk management, the adequacy of its information technology systems, and the risks associated with each of its significant business activities.

The Federal Reserve uses financial metrics to help differentiate the level of risk between banks before examinations.[1] This helps examiners tailor examination expectations and procedures, which are discussed in the scope memorandum. For community SMBs, the scope of an examination work program for a particular risk dimension depends on a bank's risk classification, as follows:

- *High risk.* High risk means that under unfavorable market conditions, the bank's activities for a particular risk dimension often lead to adverse outcomes. Examiners apply the full extent of examination procedures and conduct additional work, as necessary, including independent verification and transaction testing, to reach, support, and document conclusions regarding the level of an SMB's risk exposure and the adequacy of management's efforts to mitigate and manage risk.[2]
- *Moderate risk.* Moderate risk means that in unfavorable markets, the bank's activities for a particular risk dimension occasionally result in adverse outcomes. Examiners apply a subset of examination procedures, with a focus on evaluating an SMB's key risk drivers and financial reports in order to confirm that risk is moderate. Independent examiner verification and transaction testing are applied to specific areas but reduced relative to high-risk areas.
- *Low risk.* Low risk means the expected incidence of adverse outcomes for a particular risk dimension is low, irrespective of market conditions. Examiners apply a smaller subset of examination procedures for low-risk areas than for moderate-risk areas, with a focus on evaluating an SMB's key risk drivers and financial reports in order to confirm that risk is low. Independent examiner assessment of risk management is reduced relative to moderate-risk cases.

Supervisory teams design the risk-aligned work programs for each risk dimension, resulting in procedural templates for general use in the examination process. For a given risk dimension, the degree of differentiation between low-, moderate-, and high-risk work programs directly depends, in part, on the predictive capacity of the risk dimension's surveillance metrics, as confirmed via back testing.

At each examination, the examiner-in-charge (EIC) confirms the risk classifications upon which planned work programs were based and, if needed, adjusts or expands the work pro-

1. See this manual's section entitled, "Federal Reserve System Bank Surveillance Program," for more information, and SR-19-9, "Bank Exams Tailored for Risk (BETR)."

2. The procedures that examiners perform for each examination area should focus on developing appropriate documentation to assess management's ability to identify, measure, monitor, and control risk.

grams. If initial discussions with management or additional information obtained during the examination indicate significant weaknesses in an SMB's risk management or higher than anticipated risk, examiners are expected to alter an examination's scope and associated work programs and appropriately document the modifications in examination work papers.

All work programs should continue to include the review and verification of corrective action taken to address any outstanding Matters Requiring Immediate Attention (MRIA) or Matters Requiring Attention (MRA).

DEFINING EXAMINATION ACTIVITIES

Scheduling the Examination

Contact with the bank is encouraged to improve the examiners' understanding of the institution and the market in which it operates. A pre-examination interview or visit should generally be conducted as a part of each full-scope examination. This meeting gives examiners the opportunity to determine whether there have been any changes in bank management and changes to the bank's policies, strategic direction, management information systems, and other activities. During this meeting, particular emphasis should be placed on learning about the bank's new products or new markets it may have entered. The pre-examination interview or visit also provides examiners with (1) management's view of local economic conditions, (2) an understanding of the bank's regulatory compliance practices, and (3) its management information systems and internal and/or external audit function. In addition, Reserve Banks should contact the state banking supervisor to determine whether it has any special areas of concern where the examiners should focus.

In addition to obtaining an understanding of the institution, Reserve Bank examination staff contacts community bank management prior to an on-site examination in order to provide bank management adequate time to plan for the examination and address logistical issues for the on-site examination team. The EIC, or a designee, should contact bank management 8 to 12 weeks prior to the start date of the examination in order to communicate the proposed examination start and close dates and ensure that bank management and key bank staff are available during the proposed dates. Contacting the bank with the appropriate lead time allows examiners and bank management to reschedule certain supervisory activities if there are conflicts with previously scheduled regulatory, audit, or loan reviews. At that time, bank management may also request that examiners review loan files off-site and make the necessary arrangements for Reserve Bank staff to obtain the technical information necessary to confirm that the bank can support an off-site review. See SR-16-8, "Off-site Review of Loan Files."

Scope Memorandum

As an integral product in the Federal Reserve's risk-focused methodology, the scope memorandum identifies the central objectives of the examination. The memorandum also ensures that the examination strategy is communicated to appropriate examination staff, which is of key importance, as the scope will likely vary from examination to examination. Examination procedures are tailored to the characteristics of each bank, keeping in mind its size, complexity, and risk profile. Procedures should be completed to the degree necessary to determine whether the bank's management understands and adequately controls the levels and types of risk that are assumed. In addition, the scope memorandum should address the general banking environment, economic conditions, and any changes foreseen by bank management that could affect the bank's condition. Some of the key factors that should be addressed in the scope memorandum are described below.

- *Summary of Pre-Examination Meeting.* The results of the pre-examination meeting, which is discussed above, should be summarized. Examiners should appropriately describe meeting results that affect examination coverage. For more information, see SR-19-5, "Communication Expectations for Community Bank Examinations and Inspections."
- *Summary of Risk Categories and Corresponding Examination Procedures.* The scope memorandum should include a preliminary assessment of the bank's condition and major risk areas that will be evaluated through the examination process. This assessment is largely driven through the risk-tiering and scoping

process described above. The scope memorandum should specifically detail the risk category (high, moderate, or low) of each risk type, and provide a description of the expected examination procedures to complete for that area. In addition, any supplemental and reference modules used should be discussed.

- *Summary of Audit and Internal Control Environment.* A summary of the scope and adequacy of the audit environment should be prepared, which may result in a modification of the examination procedures initially expected to be performed. Activities that receive sufficient coverage by the bank's audit system can be tested through the examination process. Certain examination procedures could be eliminated if a bank's audit and internal control areas are deemed satisfactory.
- *Summary of Loan Review.* On the basis of the preliminary risk assessment, the anticipated loan coverage should be detailed in the scope memorandum. In addition to stating the percentage of commercial and commercial real estate loans to be reviewed, the scope memorandum should identify which specialty loan reference modules of the general loan module are to be completed. The memorandum should specify activities within the general loan module to be reviewed as well as the depth of any specialty reviews.
- *Job Staffing.* The staffing for the examination should be detailed. Particular emphasis should be placed on ensuring that appropriate personnel are assigned to the high-risk areas identified in the bank's risk assessment. The institution's organizational structure and complexity are significant considerations when planning the specific supervisory activities to be conducted. In addition, the scope memo should discuss the examination activities that are expected to be performed on-site at the bank as well as the supervision activities that will be performed off-site.

Banks may need additional time to prepare for an examination, particularly for allocating appropriate bank staff to support heavily reviewed areas. Once the scope memo is finalized, Federal Reserve staff should provide bank management with the contact information of key examination personnel. More specifically, the EIC should provide to bank management a verbal overview of the preliminary scope of review and the size and composition of the examination team, including names, roles and responsibilities, workspace needs, and whether staff members will be working on-site or off-site. The EIC also should inform bank management of the approximate number of trainees that will participate in the on-site examination. The EIC should communicate to bank management any subsequent material changes to the scope of review.

Entry Letter

The entry letter or first day letter identifies the information necessary for the successful execution of the examination procedures. The entry letter should be tailored to fit the specific character and profile of the institution to be examined and the scope of the activities to be performed. Thus, effective use of entry letters depends on the planning and scoping of a risk-focused examination. To eliminate duplication and minimize the regulatory burden on an institution, entry letters should not request information that is readily available to Federal Reserve Bank staff. When needed, the entry letter should include requests for information on specialty activities. The specific items selected for inclusion in the entry letter should meet the following guidelines:

- reflect risk-focused supervision objectives and the examination scope
- facilitate efficiency in the examination process and lessen the burden on financial institutions
- limit, to the extent possible, requests for special management reports
- eliminate items used for audit-type procedures (for example, verifications)
- distinguish between information to be sent to the EIC for off-site examination procedures and information to be held at the institution for on-site procedures
- allow management sufficient lead time to prepare the requested information

To allow bank management sufficient time to gather all requested information, examiners should transmit a first day letter to the bank four to eight weeks prior to the examination start date. In addition, when submitting the first day letter, examiners should specify the as-of date for the data requested and note if updated data should be made available on-site. Examiners also should provide contact information for questions regarding the request list and for technical assistance regarding data transmissions.

Performing Examination Procedures

Overview of Examination Documentation (ED) modules. Interagency ED modules form the basis of the examination procedures to be completed during examinations of state member community and regional banks.[3] The ED modules have been developed and designed to define common objectives for the review of important activities within institutions and to assist in the documentation of examination work. The modules are categorized as primary, supplemental, or reference modules. The primary modules contain procedures to assess capital adequacy, asset quality, management and board oversight, earnings, liquidity, and sensitivity to market risk. The supplemental and reference modules address other subject areas, including procedures for conducting a thorough review of a bank's loan and investment portfolio, a comprehensive assessment of funds-management practices, the adequacy of internal controls, the accuracy of regulatory reporting, other assets and other liabilities and asset and wealth management.

The modules establish a three-tiered approach for the review of a bank's activities: The first tier is the core analysis, the second tier is the expanded review, and the final tier is the impact analysis. The core analysis includes a number of decision factors to be considered collectively, as well as individually, when evaluating the potential risk to the bank. To help the examiner determine whether risks are adequately managed, the core analysis section contains a list of procedures that may be considered for completion. When significant deficiencies or weaknesses are noted in the core analysis review, the examiner may reference the expanded and impact analysis for those decision factors that present the greatest degree of risk for the bank.

Use of ED modules. The use of the modules are tailored to the characteristics of each bank based on its size, complexity, and risk profile. As a result, the extent to which each module should be completed will vary from bank to bank. Federal Reserve examiners complete certain ED module procedures based on the bank's risk category for a particular risk type. The risk-tiering process, which is described above, utilizes both qualitative and financial metrics to identify banks that should be subjected to a higher level of examination testing. Much of this information is gathered through the off-site surveillance process. See the manual section entitled, "Federal Reserve System Bank Surveillance Program," for more information.

The quantitative information obtained through the surveillance process is only one consideration, albeit an important one, in setting the examination scope and determining the appropriate procedures to apply at an individual bank. Qualitative considerations, including but not limited to, the nature of the risk, risk management practices, management responsiveness to prior examination findings, the number and significance of prior matters requiring immediate attention or matters requiring attention, also affect an examiner's scoping decision. Examiners should exercise appropriate supervisory judgment when including or excluding examination procedures to complete during an examination.

3. The Federal Reserve, the Federal Deposit Insurance Corporation, and representatives from the state banking agencies maintain and develop the ED modules.

REQUESTING ADDITIONAL INFORMATION AFTER THE START OF THE EXAMINATION

The EIC should have a process for requesting additional documentation from bank staff that avoids duplicative requests. Suggested methods include (1) requiring examiners to first review information already submitted prior to requesting new information, and (2) centralizing information requests through one designated examiner who must verify whether the information has already been provided.

REPORTING THE FINDINGS: REPORT OF EXAMINATION

Community Bank Report of Examination

The format of the community bank report of examination focuses on content rather than specific pages. The format allows examiners to use certain content headings, which follow a continuous-flow reporting format, and to use certain required report pages. The community bank examination report format may, however, continue to consist of specific or individual report pages, depending on the circumstances.

The community bank report of examination instructions distinguish between mandatory content (when the bank's condition or circumstances warrant) versus optional content. The examiner thus has discretion in the arrangement of certain content. For examinations (and inspections) of community banking organizations rated "4" or "5," examiners may use a letter-format report provided all mandatory and any applicable optional information is in the report.

Subject to certain limitations, the examiner may customize and streamline the community bank examination report to focus the examination's findings on matters of risk and importance to the bank's overall financial condition. The format for the community bank examination report and its instructions should strengthen communications with the bank's board of directors and senior management and minimize reporting burden. The report incorporates applicable specialty examination findings with the overall safety-and-soundness findings, thus culminating in a more comprehensive safety-and-soundness assessment.

The scope and depth of matters discussed under a content heading or on an examination report page, whether required or optional, will vary based on the issues and areas of concern presented as well as on their severity. A more abbreviated discussion may be warranted for community banks that are found to be in sound financial condition, with no material concerns or issues. All examination reports should contain sufficient documentation to support findings and supervisory conclusions.

Examiners completing the community bank examination report also should follow the guidance presented in the Interagency Policy Statement on the Report of Examination. Federal Financial Institutions Examination Council members developed a principles-based approach for completing the report of examination to achieve the objectives of promoting consistency and communication amongst the agencies, while allowing individual supervisors the flexibility to document their assessment of financial institutions of different sizes, activities, risk profiles, and financial and managerial conditions. See SR-19-6, "Interagency Policy Statement on the Report of Examination," for more information.

The instructions below list the content headings or report pages of the open and confidential sections of the community bank examination report. The sequence of applicable pages through the Management/Risk Management section are static. The remaining pages should generally follow the sequence of pages outlined in the template. The financial components (CAELS) may be arranged in order of importance and the corresponding ratios/tables associated with each financial component should be adjusted to illustrate the specific circumstances at the institution.

COMMUNITY BANK REPORT OF EXAMINATION INSTRUCTIONS

Open Section[4]

Content Heading or Report Page Title

Cover Page

A separate cover page is *mandatory*. The cover sheet should contain a statement that the contents of the report of examination contain confidential supervisory information.

Table of Contents

A separate table of contents page is *mandatory*. The table of contents indicates the pages included in the report. All mandatory pages are to be included in each examination report. Optional pages are added as necessary. The mandatory Signature of Directors page is the last page in the open section of the report. Additional supplemental pages may be added to the report at the examiner's discretion. Page numbers should be included for completeness.

Scope

The Scope content heading or report page is *mandatory*. This page may be a combined content heading or a separate report page. The scope should include the examiner's comments on

4. An illustrative template of the community bank report of examination is provided at the end of this manual section. The asterisk (*) next to a report page denotes an optional page that is mandatory if circumstances relevant to the page apply.

examination depth, scope, and procedures performed for each area of review, including any specialty areas. The examination's scope should generally address the following:

- the date of examination (commencement and conclusion)
- the type of examination (full-scope, targeted, joint, concurrent, combined (bank and bank holding company))
- the agency or agencies conducting the community bank examination
- areas reviewed and analyzed (If the examination is targeted, the examiner should identify specific areas reviewed.)
- the percentage and type of loans reviewed, if any
- a confirmation that examination results were discussed with the organization, including a list of those who attended the meeting
- identification of the bank's peer group
- if necessary, recognition that the bank is operating under a formal or informal supervisory action (If so, state that the provisions of the action were reviewed and compliance was assessed.)

Summary of Examination Ratings

The Summary of Examination Ratings content heading or report page is *mandatory.* All supervisory ratings assigned during the examination and for the two previous examinations should be provided. The supervisory ratings should be followed by the uniform definition of the assigned composite rating. The uniform definitions of the component ratings assigned need not be included in reports; they should, however, be made available to the board of directors and management on request. Include any specialty or targeted examination ratings assigned or other assessments, including findings from other on-site supervisory events during the recent Federal Reserve examination cycle. In all cases, a concluding statement should be provided that reminds the directorate of its responsibility to review the entire report of examination. The report should instruct each director to sign the Signature of Directors page.

Examination Conclusions

The Examination Conclusions content heading or report page is *mandatory.* This section of the examination report informs the bank's board of directors of the most significant and most important supervisory issues or concerns identified during the examination as well as the examination's findings and general conclusions. This section should contain a footnote noting that any institution about which the Federal Reserve makes a written material supervisory determination is eligible to utilize the appeals process as described in the Appeals Process and Board Ombudsman (Ombuds) Policy Statement. For more information, see 85 Fed. Reg. 15,175 (March 17, 2020) as well as SR-20-28/CA-20-14, "Internal Appeals Process for Material Supervisory Determinations and Policy Statement Regarding the Ombudsman for the Federal Reserve System."

The board of directors and senior management of an institution that is rated a composite "4" or "5" are to be informed that the bank is a problem institution that warrants special supervisory attention.[5] The board of directors and senior management of banks that are rated composite "3" are to be informed that their condition is not satisfactory, that the bank may be subject to more-than-normal supervision, and that the cited supervisory issues and areas of concerns may cause their bank to be considered a problem institution if the weaknesses are not promptly and adequately addressed. This content heading or report page also should discuss significant weaknesses in 1- or 2-rated institutions, and a brief summary of the bank's condition should be provided.

This section should contain an overview of the bank's financial condition. In addition, this section should contain the examiner's most significant recommendations and management's plans for corrective action.

In terms of presenting the information, examiners should include references to additional supporting information elsewhere in the report. The most important comments should be described first. Comments should be provided primarily on areas of the bank's operations and aspects of its financial condition that display weaknesses, deficiencies, or vulnerabilities. While examiners may recognize positive actions taken by management, laudatory or conclusive

5. See the subsection below entitled "Community State Member Banks Rated Composite '4' or '5'," for more information on the use of a letter-format report for communicating the findings of on-site, safety-and-soundness examinations hat result in composite supervisory ratings of "4" or "5."

remarks and endorsements of specific management actions should be avoided.

Significant recommendations presented elsewhere in the report should be mentioned. Significant apparent violations should also be discussed briefly, but they should be presented in greater detail under the content heading or the report page for Apparent Violations of Laws and Regulations.

Apparent Violations of Laws and Regulations

The content heading or report page is optional.* However, when apparent violations of federal or state banking laws and regulations are found, it is *mandatory* that they be listed in detail on this page. Apparent violations of the Bank Secrecy Act should also be listed in detail on the Bank Secrecy Act and Anti-Money-Laundering Compliance report page.

The format for listing apparent violations should be consistent. A heading for each apparent violation listed should name the applicable statute and/or regulation and provide a brief description of what the law covers. This summary should be followed by a brief description of the requirements of the statute and/or regulation and a discussion of how or why the apparent violation occurred. The examiner should describe any plans or recommendations for correction. If a review of the Bank Secrecy Act is conducted separately, or as part of another examination, a statement of this fact should be included under the Bank Secrecy Act and Anti-Money-Laundering Compliance report page.

Matters Requiring Attention

The Matters Requiring Attention content heading or report page is *mandatory*. It is intended to complement the complete findings of the report of examination and is prepared for the use of the board of directors and the bank's management. The focus should be on identified problems, rather than on strengths of the organization. Problems should be presented succinctly and clearly. In all cases, the types of actions to be taken by the directors and management to address these problems should be specifically noted.

Include a brief summary statement regarding the status of prior MRIAs and MRAs. A detailed assessment of each prior MRIA or MRA is not required. For example, verbiage in the section could state that all, most, or none of the required items were addressed. Comments in this section should provide a reference to any section of the report where issues that are repeated or incomplete are discussed, if applicable. Repeated matters requiring attention that were not considered previously addressed should be explained in this section.

The definitions of MRIAs and MRAs should be included as a footnote on this page. When issuing a supervisory finding (including through the issuance of an MRIA or MRA), examiners should not criticize an institution for a "violation" of supervisory guidance (as supervisory guidance is not legally binding). When appropriate, examiners may reference (including in writing) supervisory guidance (such as interagency statements, advisories, bulletins, and policy statements) to provide examples of safe-and-sound conduct, appropriate risk management practices, and other approaches to addressing compliance with laws or regulations.

Compliance with Enforcement Actions

The Compliance with Enforcement Actions content heading or report page is optional.* The heading or page is *mandatory,* however, if the institution is under a formal or informal supervisory action. An assessment that summarizes the institution's overall compliance with the supervisory action should be included in this section of the report. As appropriate, the examiner should describe the level of compliance for each provision; provide detailed analysis explaining how compliance was achieved; or detail what actions have been taken and what actions are necessary to achieve full compliance. A detailed assessment of provisions that have been in full compliance for more than one examination is not required.

Directorate Responsibility

The content heading or report page is *mandatory*. This section, which is located after the presentation of key examination findings, is to inform each member of the board that they are responsible for thoroughly reviewing the report of examination. Each director must sign the Signature of Directors page at the conclusion of this report.

Management/Risk Management

The content heading or report page is *mandatory.* A separate section is required. The reported information under this content heading should always include (1) the risk-management numerical rating; (2) the mandatory discussion of the risk factors—types of risk (discussion of operational risk, legal risk, and compliance risk should be included in this section of the report. Discussion of credit risk, market risk, and liquidity risk, should be included in the Analysis of Financial Factors section for the respective financial component); (3) the adequacy of risk management associated with risk levels and risk trends; and (4) the impact of specialty examination areas on relevant risk areas. The fourth item, for example, might consist of a discussion of the impact of any information technology concerns on operational and other relevant risks, what impact any findings on fiduciary activities have on legal or other risks, or compliance concerns. As applicable, examiners should communicate conclusions/findings of any evaluation of the adequacy of an institution's audit department/program as part of this section. Findings can be communicated as part of the overall Management comments, or as a standalone "Audit" subsection within the Management/Risk Management section.

Within this section of the report, management and the board of directors should be evaluated on how they operate the institution in a safe and sound manner and on their ability to identify, measure, monitor, and control the risks of the institution's activities. Examiners should give consideration to

1. the level, quality, and adequacy of supervisory oversight and support provided by the board of directors and senior management;
2. compliance with banking and other statutes, regulations, and supervisory agreements;
3. the ability to plan for and respond to risks that may arise from changing business conditions or the initiation of a new product or service;
4. the accuracy, timeliness, and effectiveness of management information and risk-monitoring systems used to control risks throughout the bank;
5. the adequacy and level of compliance with the board of directors policies and procedures and the bank's other internal policies and controls that are necessary to operate the bank in a safe and sound manner;
6. the adequacy of internal accounting control systems, the bank's audits and audit function, and the bank's internal control systems (discuss all of these in detail);
7. the responsiveness to recommendations from auditors and supervisory authorities;
8. the reasonableness of compensation policies and avoidance of, or tendency toward, self-dealing;
9. the business strategy and policies and procedures for avoiding conflicts of interests;
10. a demonstrated understanding and willingness to serve the legitimate banking needs of the community;
11. the institution's management depth and succession;
12. the extent that management is affected by or is susceptible to dominant influence or concentration of authority; and
13. the overall risk profile and performance of the institution.

See SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion," and this manual's section on "Overall Conclusions Regarding Condition of the Bank: Uniform Financial Institutions Rating System and the Federal Reserve's Risk Management Rating," for specific guidance on rating the adequacy of risk-management processes and internal controls.

Examiners should provide the risk-management rating and discuss the risk factors and the adequacy of risk management associated with the risk levels and risk trends. In addition, examiners should discuss the impact of specialty areas on relevant risk areas. For example, examiners should discuss the impact of any information technology concerns on operational and other relevant risks as well as what impact any findings on fiduciary activities or compliance concerns have on legal and other risks. The section should discuss the management and risk-management analysis and "R" rating assignment for the bank holding company RFI/C(D) rating as well as the examiner's risk management conclusions about the bank holding company.

Risk Assessment Matrix

The inclusion of a risk assessment matrix is *mandatory* under the Management/Risk Management content heading, or the confidential section of the report of examination.

A risk matrix is used to identify significant activities, the type and level of inherent risks in these activities, and the adequacy of risk management over these activities as well as to determine composite risk assessments for each of these activities and the overall institution. A risk matrix can be developed for the consolidated organization, for a separate affiliate, or along functional business lines. The matrix is a flexible tool that documents the process followed to assess the overall risk of an institution and is a basis for preparation of the narrative risk assessment.

Activities and their significance can be identified by reviewing information from the institution, the Reserve Bank, or other supervisors. After the significant activities are identified, the type and level of risk inherent in them should be determined. Types of risk may be categorized as previously described or by using categories defined either by the institution or other supervisory agencies. If the institution uses risk categories that differ from those defined by the supervisory agencies, the examiner should determine if all relevant types of risk are appropriately captured. If risks are appropriately captured by the institution, the examiner should use the categories identified by the institution.

For the identified functions or activities, the inherent risk involved in that activity should be described as high, moderate, or low for each type of risk associated with that activity. The following definitions apply:

- *High inherent risk* exists where the activity is significant or positions are large in relation to the institution's resources or to its peer group, where there are a substantial number of transactions, or where the nature of the activity is inherently more complex than normal. Thus, the activity potentially could result in a significant and harmful loss to the organization.
- *Moderate inherent risk* exists where positions are average in relation to the institution's resources or to its peer group, where the volume of transactions is average, and where the activity is more typical or traditional. Thus, while the activity potentially could result in a loss to the organization, the loss could be absorbed by the organization in the normal course of business.
- *Low inherent risk* exists where the volume, size, or nature of the activity is such that even if the internal controls have weaknesses, the risk of loss is remote or, if a loss were to occur, it would have little negative impact on the institution's overall financial condition.

This risk assessment is made without considering management processes and controls. Those factors are considered when evaluating the adequacy of the institution's risk-management systems. When assessing the adequacy of an institution's risk management systems for identified functions or activities, the focus should be on findings related to the key elements of a sound risk management system: active board and senior management oversight; adequate policies, procedures, and limits; adequate risk management, monitoring, and management information systems; and comprehensive internal controls.

Taking these key elements into account, the examiner should assess the relative strength of the risk management processes and controls for each identified function or activity. Relative strength should be characterized as strong, acceptable, or weak as defined below:

- *Strong risk management* indicates that management effectively identifies and controls all major types of risk posed by the relevant activity or function. The board and management participate in managing risk and ensure that appropriate policies and limits exist, which the board understands, reviews, and approves. Policies and limits are supported by risk monitoring procedures, reports, and management information systems that provide the necessary information and analysis to make timely and appropriate responses to changing conditions. Internal controls and audit procedures are appropriate to the size and activities of the institution. There are few exceptions to established policies and procedures, and none of these exceptions would likely lead to a significant loss to the organization.
- *Acceptable risk management* indicates that the institution's risk-management systems, although largely effective, may be lacking to some modest degree. It reflects an ability to cope successfully with existing and foresee-

able exposure that may arise in carrying out the institution's business plan. While the institution may have some minor risk management weaknesses, these problems have been recognized and are being addressed. Overall, board and senior management oversight, policies and limits, risk-monitoring procedures, reports, and management information systems are considered effective in maintaining a safe and sound institution. Risks are generally being controlled in a manner that does not require more than normal supervisory attention.

- *Weak risk management* indicates risk management systems that are lacking in important ways and, therefore, are a cause for more than normal supervisory attention. The internal control system may be lacking in important respects, particularly as indicated by continued control exceptions or by the failure to adhere to written policies and procedures. The deficiencies associated in these systems could have adverse effects on the safety and soundness of the institution or could lead to a material misstatement of its financial statements if corrective actions are not taken.

The composite risk for each significant activity is determined by balancing the overall level of inherent risk of the activity with the overall strength of risk management systems for that activity. For example, commercial real estate loans usually will be determined to be inherently high risk. However, the probability and the magnitude of possible loss may be reduced by having very conservative underwriting standards, effective credit administration, strong internal loan review, and a good early warning system. Consequently, after accounting for these mitigating factors, the overall risk profile and level of supervisory concern associated with commercial real estate loans may be moderate. To facilitate consistency in the preparation of the risk matrix, general definitions of the composite level of risk for significant activities are provided as follows:

- A *high composite risk* generally would be assigned to an activity in which the risk management system does not significantly mitigate the high inherent risk of the activity. Thus, the activity could potentially result in a financial loss that would have a significant negative impact on the organization's overall condition, in some cases, even when the systems are considered strong. For an activity with moderate inherent risk, a risk management system that has significant weaknesses could result in a high composite risk assessment because management appears to have an insufficient understanding of the risk and uncertain capacity to anticipate and respond to changing conditions.
- A *moderate composite risk* generally would be assigned to an activity with moderate inherent risk, which the risk management systems appropriately mitigate. For an activity with low inherent risk, significant weaknesses in the risk management system may result in a moderate composite risk assessment. On the other hand, a strong risk management system may reduce the risks of an inherently high-risk activity so that any potential financial loss from the activity would have only a moderate negative impact on the financial condition of the organization.
- A *low composite risk* generally would be assigned to an activity that has low inherent risks. An activity with moderate inherent risk may be assessed a low composite risk when internal controls and risk management systems are strong, and when they effectively mitigate much of the risk.

While support comments for operational, legal, and compliance risks will be included in Risk Assessment Matrix section of the report of examination, supporting comments for credit, market, and liquidity risks, can be found under their respective components in the Analysis of Financial Factors section.

- *Operational Risk* is the risk resulting from inadequate or failed internal processes, people, and systems or from external events (this definition is consistent with the Basel committee's definition of operational risk).
- *Compliance Risk* is the risk of regulatory sanctions, fines, penalties, or losses resulting from failure to comply with laws, rules, regulations, or other supervisory requirements applicable to a financial institution.
- *Legal Risk* is the potential that actions against he institution that result in unenforceable contracts, lawsuits, legal sanctions, or adverse judgments can disrupt or otherwise negatively affect the operations or condition of a financial institution.

The following is an example of the Risk Assessment Matrix:

Risk Assessment Matrix

Type of risk	*Inherent risk*	*Adequacy of risk management*	*Composite risk*	*Trend*
Credit	Moderate	Weak	High	Increasing
Market	Low	Weak	Low	Stable
Liquidity	High	Strong	Moderate	Decreasing
Operational	Low	Acceptable	Low	Stable
Legal	Low	Acceptable	Low	Stable
Compliance	Low	Acceptable	Low	Stable

Analysis of Financial Factors

The content heading or report page is *mandatory.* It is to be included as a separate section and should include all analyses and conclusions for each financial component. Subheadings are to be used to depict the ratings and the analysis of the individual components and other topics of discussion. The order is optional. However, the more significant issues should be addressed at the beginning of this analysis. In addition to the CAELS components—Capital adequacy, Asset quality, Earnings, Liquidity, and Sensitivity to market risk—listed below, the bank holding company RFI/C(D) rating system component analysis should be reported in this section, if applicable. Financial tables and graphs are optional. They may also be included in an appendix.

1. *Capital adequacy.* Capital adequacy should be evaluated in relation to relevant regulations, the nature and extent of risks to the bank, and the ability of management to address and control these risks to the organization. Consideration is to be given to (1) the level of, quality of, and changes in capital and the bank's overall financial condition; (2) the nature, trend, and volume of problem assets and the adequacy of the allowance for loan losses, allowance for credit losses and other valuation reserves; (3) risk exposures, including those presented by off-balance-sheet activities; (4) the quality and strength of earnings; (5) the balance sheet's composition, including the nature and amount of intangible assets, market risk, concentration risk, and non-traditional-activity risk; (6) equity maintenance and any growth experiences, plans, and prospects; (7) the reasonableness of dividends; (8) the access to capital markets and other appropriate sources of financial assistance; and (9) the ability of management to address emerging needs for additional capital.
2. *Asset quality*. Asset quality should be evaluated in relation to (1) the level, distribution, severity, and trend of problem, classified, delinquent, nonaccrual, nonperforming, and restructured assets, both on- and off-balance-sheet; (2) the adequacy of the allowance for loan and lease losses, allowance for credit losses and other valuation reserves (including the adequacy of the bank's methodology and written documentation policies, procedures, and practices); (3) management's awareness of problem loans and their causes and its demonstrated ability to identify, administer, and collect problem assets; (4) the diversification and quality of loan and investment portfolios; (5) the adequacy of loan-administration and lending policies, procedures, and practices; (6) the adequacy of workout procedures for problem credits; (7) the quality of investment securities and the adequacy of investment policies, procedures, and practices; (8) the extent of securities underwriting activities and exposure to

counterparties in trading activities; (9) the credit risk that is arising from, or reduced by, off-balance-sheet transactions;[6] (10) asset concentrations (including those assets, problem credits, and other transfer-risk problems in particular economic sectors); (11) the volume and nature of documentation exceptions; (12) the effectiveness of credit administration procedures, underwriting standards, risk-identification practices, internal controls, internal loan-review and credit-grading systems (including noted significant differences between the internal loan grades and the examination's loan classifications), and management information systems; and (13) the adequacy of policies, procedures, and practices involving financial futures and foreign exchange trading.

3. *Earnings.* The quality and quantity of earnings should be evaluated in relation to (1) the ability to provide for adequate capital through retained earnings; (2) the level, quality (including the strength of net interest margin, the amount of noninterest income and expense, and the extent of reliance on unusual or nonrecurring gains or losses), and stability of earnings; (3) the level of, composition of, reasonableness of assumptions for, and the extent of management's control over any variances between actual results versus the budgeted projections of income and expenses in relation to the size and nature of the bank's operations; (4) the vulnerability of earnings to market-risk exposures; (5) the adequacy of provisions to the allowance for loan and lease losses, allowance for credit losses and other valuation reserves; (6) the impact of extraordinary items, securities transactions, and tax effects on net income; and (7) the adequacy of budgeting systems, forecasting processes (including the reasonableness of assumptions), and management information systems.
4. *Liquidity.*[7] Liquidity and asset-liability management should be evaluated in relation to (1) the trend and stability of deposits; (2) the degree of and reliance on short-term volatile sources of funds, including any undue reliance on borrowings or brokered deposits to fund longer-term assets; (3) the availability of assets that are readily convertible to cash without undue loss; (4) the bank's ability to securitize and sell certain pools of assets; (5) the extent and ease of the bank's access to money markets and other sources of funding; (6) the adequacy of and ease of access to liquidity sources and the bank's ability to meet liquidity needs; (7) the level of securities pledged against liabilities; (8) the bank's ability to obtain borrowed funds from outside sources that are consistent with the bank's funding strategies; (9) the effectiveness of and the extent of compliance with the bank's policies and procedures for funding and managing liquidity, interest-rate risk, management information systems, and contingency funding plans; (10) the capability of management to properly identify, measure, monitor, and control liquidity; (11) the level of diversification of funding sources, both on- and off-balance sheet; (12) the extent of the bank's asset-liability and gap-management practices; and (13) the vulnerability of the bank's funding to adverse publicity, increased reputation risk, and lowered credit ratings.
5. *Sensitivity to market risk.*[8] Sensitivity to market risk reflects (1) the degree to which changes in interest rates, foreign exchange rates, commodity prices, or equity prices can adversely affect earnings or the economic value of capital; (2) the ability of management to identify, measure, monitor, and control exposures to market risk, given the bank's size, complexity, and risk profile; (3) the nature and complexity of interest-rate risk exposure arising from nontrading positions; and (4) where appropriate, the nature and complexity of interest-rate risk arising from trading and foreign operations.

Information Technology Assessment

The inclusion of an information technology (URSIT) assessment as a content heading or report page is optional.* An information tech-

6. Credit risk arises from the potential that a borrower or counterparty will fail to perform on an obligation.

7. Liquidity risk is the potential that a financial institution will be unable to meet its obligations as they come due because of an inability to liquidate assets or obtain adequate funding (referred to as "funding liquidity risk") or that it cannot easily unwind or offset specific exposures without significantly lowering market prices because of inadequate market depth or market disruptions (referred to as "market liquidity risk").

8. Market risk is the risk to a financial institution's condition resulting from adverse movements in market rates or prices, including, but not limited to, interest rates, foreign exchange rates, commodity prices, or equity prices.

nology assessment is *mandatory*, however, if an URSIT rating is assigned or if significant supervisory concerns exist.[9] Information technology activities should be evaluated based on the nature and extent of information technology risks, including management processes, architecture, integrity, security, and availability. The supporting rationale for composite or component IT ratings should be included. Examiners should note whether a list of technical exceptions was provided to management. It may be appropriate to include descriptions of electronic banking activities. The examiner's conclusions should also be reflected in the Analysis of Financial Factors or the Management/Risk Management sections of the report, as appropriate. Any significant supervisory concerns should be reflected in the Matters Requiring Attention and in the Examination Conclusions sections.

Bank Secrecy and Anti-Money-Laundering Compliance

The content heading or report page is optional.* The section is *mandatory* if Bank Secrecy and Anti-Money-Laundering Compliance is assessed and a conclusion is rendered, or if significant supervisory concerns exist. BSA/AML compliance should be evaluated based upon the nature and extent of risk and non-compliance. Note whether a list of apparent violations or exceptions was provided to management. Conclusions should also be reflected in Analysis of Financial Factors and/or the Management/Risk Management sections of the report, as appropriate, and any significant supervisory concerns should be reflected in the Matters Requiring Attention and Examination Conclusions sections.

Fiduciary Activities Assessment

The content heading or report page is optional.* The heading or page is *mandatory*, however, if a trust (UITRS) or transfer-agent rating was assigned during the most recent Federal Reserve examination cycle or if significant supervisory concerns exist in these areas.[10] Fiduciary activities should be evaluated relative to management's oversight of fiduciary activities and the nature and extent of risk that the fiduciary activities or business lines evaluated present to the institution. Management's ability to assess the risk of fiduciary products and services offered, including new products, should be evaluated. Note whether a list of technical exceptions was provided to management. The supporting rationale for any ratings assigned should be included. Conclusions should also be reflected in the Analysis of Financial Factors or the Management/Risk Management sections of the report, as appropriate. Significant supervisory concerns should be reflected in the Matters Requiring Attention and Examination Conclusions sections.

Items Subject to Adverse Classification

The content heading or report page (and the associated content) is *mandatory*. The topic, however, must be discussed in the examination report. The Summary of Items Subject to Adverse Classification content heading or report page summarizes items classified by the examiner as either substandard, doubtful, or loss as of the examination date (for this page, considered the date relevant to the asset-quality review).[11]

- A *Substandard* asset is inadequately protected by the current sound worth and paying capacity of the obligor or by the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected.
- An asset classified *Doubtful* has all the weaknesses inherent in one classified Substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.
- Assets classified *Loss* are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather that it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery

9. See SR-99-8, "Uniform Rating System for Information Technology," and 64 Fed. Reg. 3,109 (January 20, 1999) for more information.

10. See SR-98-37, "Uniform Interagency Trust Rating System," and 63 Fed. Reg. 54,704 (October 13, 1998) for more information.

11. See SR-13-18, "Uniform Agreement on the Classification and Appraisal of Securities Held by Depository Institutions."

may be effected in the future. Amounts classified *Loss* should be promptly charged off.

Total classifications also are presented for the previous examination. Reserve Banks that are engaged in alternate-year examination programs should provide totals contained in the previous examination report prepared by the state when applicable. The examiner also should consider creating a schedule under the Asset Quality content heading or page to detail classifications from additional prior examinations if meaningful trend information is noted. The examiner should also present, in the report narrative, classification trends for certain asset categories if the analysis is meaningful.

For the examinations of banks engaged in international lending, examiners should provide additional information to include categories for other credit-risk problems and value-impaired assets. Adjustments are required to be made for U.S. addressees and non-U.S. addressees.

For banks with foreign activity, the distinction between U.S. and non-U.S. addressees follows the definition set forth in the Call Report instructions: whether a customer is U.S. or non-U.S. is determined by the customer's principal address, that is, by its domicile. A U.S. address would be in the 50 states of the United States, the District of Columbia, Puerto Rico, or U.S. territories and possessions. Non-U.S. addressees include all other geographical areas.

The examiner should list in the appropriate category the amounts of all credits classified due to transfer risk. The value of credits shown as value impaired should be computed after deducting any allocated transfer-risk reserve that is established against an asset. In determining total classified assets, examiners should arrive at net assets classified due to country risk. Examiners should identify any credits classified due to transfer risk that have received the same or a more severe classification due to credit risk and that are listed above in the summary of classified items due to credit risk. The sum of such assets should be listed in the appropriate column and then deducted to arrive at net assets classified due to country risk. For the purpose of this content heading or report page, any credits classified as value impaired for transfer-risk purposes should not be included in the summary of credits classified due to credit risk, unless the credits are classified loss.

For the purpose of arriving at total classified assets, add the amount classified due to credit risk to net assets classified due to transfer risk for each category. When computing weighted classifications, the residual portion of any value-impaired assets should be assigned the same weight as substandard classifications. However, the residual exposure still remains value impaired for examination and classification purposes. Value-impaired assets held in the trading account should also be included in total classified assets but should not be considered classified assets when computing weighted classifications.

This report page also includes "Specific Items Subject to Adverse Classification." A full loan write-up is mandatory for all significant or material classified assets if (1) management disagrees with the disposition accorded by the examiner or (2) the institution will be rated composite "3," "4," or "5."[12]

Items Listed as Special Mention

The content heading or report page (and the associated content) is *mandatory*. The topic must be discussed in the examination report. The Summary of Items Listed for Special Mention content heading or report page presents the total of assets listed for special mention for the current and one previous examination. A special-mention asset is defined as follows:

A *Special Mention* asset has potential weaknesses that deserve management's close attention. If left uncorrected, these potential weaknesses may result in deterioration of the repayment prospects for the asset or in the institution's credit position at some future date. Special-mention assets are not adversely classified and do not expose an institution to sufficient risk to warrant classification.[13]

The summary does not include assets listed for special mention when computing classification ratios. Reserve Banks that are engaged in alternate-year examination programs should rely on the special-mention total from the previous state's examination when applicable.

This report page also includes Specific Items Listed for Special Mention. A full loan write-up

12. SR-99-24, "Loan Write-Up Standards for Assets Criticized During Examinations."

13. See SR-93-30, "Interagency Policy Statements on Supervisory Initiatives Released Today." In particular, see the statement entitled, "Interagency Statement on the Supervisory Definition of Special Mention Assets."

is mandatory for all significant or material criticized assets if (1) management disagrees with the disposition accorded by the examiner or (2) the institution will be rated composite "3," "4," or "5."

Assets with Credit-Data or Collateral-Documentation Exceptions

The content heading or report page is optional.* The content heading is *mandatory* if examiners' ability to assess the loan files or overall asset quality at the bank is compromised because of inadequate information needed for loan line sheets or if the bank's loan administration systems and processes are deficient, particularly with respect to loan and collateral documentation and collateral values. If the credit data or collateral documentation exceptions are materially significant, this content heading or report page should provide support for a discussion of credit documentation practices under the Asset Quality content heading or report page.

Concentrations

The content heading or report page (and its associated content) is optional.* This page is *mandatory* if there are materially deficient practices in managing concentrations. If included, the content heading should include a discussion of the appropriateness of risk management practices regarding any materially significant concentrations of assets, liabilities, specific industries, and other categories, as applicable. This discussion should address the effectiveness of the bank's internal policies, systems, and controls to identify, monitor, and manage the risk associated with the concentrations and address the bank's alternatives or plans for reducing concentrations. Examination staff should comment on their ability to leverage the bank's internal concentration reporting when conducting the review and assessment of concentrations.

The content heading or report page should indicate that a concentration includes obligations, direct or indirect, of the same or affiliated interests that represent 25 percent or more of the bank's capital structure. The reader should also be informed that, for the purposes of this page, the capital structure is defined as tier 1 capital plus the allowance. See also SR-20-8, "Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach" and this manual's section entitled, "Concentrations of Credit."

When determining and calculating concentrations, the amount of loan commitments and other off-balance-sheet risk items should be considered. The listing should include all types of loans, overdrafts, cash items, suspense resources, securities, leases, acceptances, advances, letters of credit, and all other items due to the bank as well as loans endorsed, guaranteed, or cosigned by related individuals and their related interests.

Concentrations by industry, transfer risk, product line, type of collateral, and other characteristics should be detailed when appropriate. The listing should include amounts due from depository institutions, federal funds sold, and other assets in which payment depends on one financial institution or affiliated group and the total represents 25 percent or more of the bank's capital structure. Treasury securities, obligations of U.S. government agencies and corporations, and any assets collateralized by these items should not be included in the listing. The requirements of Regulation F (12 CFR 206), as they relate to concentrations involving correspondent banks, should also be considered.

Capital Calculations

The Capital Calculations page is optional.* Inclusion of capital calculations is mandatory, however, if (1) the bank has a financial subsidiary within the meaning of the Gramm-Leach-Bliley Act, (2) there is a change in the capital category as a result of the examination, or (3) the ratios supporting the capital category in the examination are not derived from the bank's Call Report as of the same date. The third exception could occur if the bank's examination ratios were calculated at a date other than the end of a quarter, or, if calculated at quarter-end, the numbers were adjusted or changed from those filed in the Call Report. It should be noted tier 2 capital and risk-weighted calculations are not required for banks that have opted in to the community bank leverage ratio framework.

Other Matters

This content heading or report page is optional.* If included, discuss issues or other matters of significance not covered elsewhere in the community bank's examination report. Discuss also significant matters mentioned elsewhere that require further explanation, such as the type, scope, and volume of any new activity in which the bank is engaged. If issues or concerns are noted, examiners should provide comments on specific areas, such as the following:

- accounting and internal controls
- affiliate relationships
- criminal referral procedures
- emergency preparedness
- financial recordkeeping and reporting regulations
- insurance
- investment in bank premises
- litigation
- security and controls against external crimes
- payments system risk
- nontraditional banking activities (for example, mortgage warehousing or data processing services)
- supervisory reporting
- nondeposit investment products

Other examination matters also may warrant comments on this report page.

Signature of Directors

The content heading is *mandatory*. A separate report page is required and should be the last page in the open section of the report.

Confidential Section

The "Confidential Section" is *mandatory*. This section of the bank examination report is mandatory. It must include all information that cannot or should not be disclosed or made available to the bank. It should also include internal administrative and supervisory information relevant to the Federal Reserve System and its staff. The order of the following headings or pages is at the examiner's discretion.

Directors and Officers

The content heading or report page is *mandatory* for inclusion in the report. A separate report page is required. All bank directors should be listed in alphabetical order. If the bank elects advisory directors, they should be listed alphabetically under a separate heading. Information requested in the report page header should be supplied for each director. Specific instructions for certain requested information are as follows:

- Under meetings missed, include all meetings a director has not attended between the previous (Reserve Bank or state) and current examination. If a director was elected since the previous examination, list only the number of meetings that they missed since the date of election.
- Under fees paid to each director, indicate whether the compensation is based on attendance.
- Under occupation or principal business affiliation, use concise and descriptive designations (for example, farmer, grocer, or commercial real estate developer).

For banks with active board committees, a code or legend for all committees should be prepared, indicating committee memberships for each director. The Executive Officers portion of the report page uses the Regulation O (12 CFR 215) definition of executive officers, but other significant officers may be included at the examiner's discretion. Information requested by the report page should be supplied. Additional individuals to be reported may include persons without official designation who exercise considerable influence or executive officers excluded from the Regulation O definition by board resolution who actually maintain a high level of responsibility. Officers should be listed in order of title or position of responsibility, with dominant individuals shown first.

Specific instructions for the requested information for the report page are as follows:

- Examples of assigned areas of responsibility may include administration, policy formulation, lending, operations, or branch manager.
- A salary should indicate the current annual salary. The total bonuses should be reported for the previous year.

If executive officers receive any other pertinent forms of compensation beyond their listed salary and bonus (such as commission-based pay, employment contracts, stock options, unusually large benefits, or affiliated bank salaries and fees), these should be discussed in narrative format below the listing of executive officers or on a separate page.

General Information

The content heading is *mandatory*. It includes (1) a discussion of strategic plans, future technology plans, planned bank products or services, or prospects for the bank; (2) significant or sensitive matters regarding the bank's management not previously addressed; (3) applicable comments on the extent that a particular insider controls or dominates the organization and any adverse effect of insiders on operating policies, procedures, or the overall financial condition of the bank; and (4) a discussion of any recommendations for supervisory actions and any additional material matters of a sensitive or confidential nature not previously addressed. To the extent not included on the Directors and Officers page, this discussion should also include a list of each of the major shareholders of the bank (those having 5 percent or more ownership) and their respective percentage of ownership. When the major shareholder is a bank holding company, its major shareholders and the percent controlled by each shareholder also should be listed. A listing of critical turnkey software vendors or information technology service providers as well as any client institutions for which processing services are provided should be included. Include any significant matters of a confidential nature regarding vendors or third-party service providers. Also include a description of any electronic banking activities.

COMMUNITY STATE MEMBER BANKS RATED COMPOSITE "4" OR "5"

The Federal Reserve has adopted a flexible, letter-format report in lieu of the standard, longer-form report for communicating the findings of on-site, safety-and-soundness examinations and inspections of community banking organizations that result in composite supervisory ratings of "4" or "5." Examiners may use a letter-format report for examination and inspections of community banking organizations rated "4" or "5," provided all mandatory and any applicable optional information is in the report.

The option of using a flexible letter-format for such community banking organizations will enable Reserve Banks to focus their reports on key findings and improve the communication of supervisory expectations to companies in need of significant improvement. In addition, given the increased examination frequency of community banking organizations with a "4" or "5" rating (typically every six months), the letter format will also hasten the communication of supervisory expectations.

Examiners are to follow the examination report guidance provided above for full-scope examinations of community banking organizations rated "1," "2," or "3."[14] That guidance provides for some flexibility in the structuring of the examination reports, so long as all mandatory and applicable optional content is covered. Examiners have flexibility in writing the narrative portion of reports.

Content of the Letter Format of Examination

A letter format report of examination for SMBs rated "4" or "5" should be tailored to fit the particular circumstances of the institution under review and should fully address the key areas that are routinely covered in the mandatory pages of the open and confidential sections of the standard report of examination.

These areas in the open section of the examination report include

- scope of the examination,
- summary of examination ratings,
- matters requiring attention,
- conclusions regarding management and risk management (addressing risk factors and the adequacy of risk management associated with risk levels and trends, which includes a risk-assessment matrix),
- analysis of financial factors,
- summary of items subject to classification or listed as special mention,
- signature of directors, and
- any applicable areas that are described as optional pages in the standard report of examination instructions and are necessary to support examiners' findings. Examples of these areas include compliance with enforcement actions and apparent violations of laws or regulations.

14. The flexible letter format may also be used on target examinations of 3-rated community banking organizations, as applicable.

These areas in the confidential section of the examination report include

- directors and officers, which includes information such as duties, length of service, and committee assignments; and
- general information about the institution, including sensitive matters not addressed in the open section of the report such as strategic and information technology plans, planned new products and services, insider influence, and recommended supervisory actions. If it is not included in the open section of the examination report, the risk assessment matrix can also be included in the confidential section of the examination report.

Communication of Supervisory Findings

As with standard reports of examination and inspection, the letter-format reports must notify a banking organization and its board of the organization's supervisory rating and the confidential nature of the letter. The letter-format report should also set forth the deadline by which the organization must reply to the Federal Reserve Bank, including the organization's plans to address any matters requiring immediate attention or matters requiring attention that are noted in the report. For more information, see this manual's section entitled, "Examination Strategy and Risk-Focused Examinations."

COMPLETION STANDARD FOR EXAMINATION AND INSPECTION REPORTS

Community Banks

Safety-and-soundness examination and inspection reports for community banking organizations issued by the Federal Reserve should be completed and sent to the supervised institution within a maximum of 60 calendar days following the "close date" of the examination. These standards apply to formal examination and inspection reports for institutions supervised by the Federal Reserve with less than $10 billion in total consolidated assets, including SMBs, bank holding companies, savings and loan holding companies, Edge Act and agreement corporations, U.S. branches and agencies of foreign banks, and foreign subsidiaries and branches of U.S. banks.[15] For institutions rated composite "3," "4," or "5," Reserve Banks are encouraged to adopt an internal target of 45 calendar days from the close date for sending the reports.

The "close date" of an on-site examination and inspection is defined as the last date that the examination team is physically on-site at the institution. For examinations and inspections for which all or a portion of the work is performed off-site, the "close date" is defined as the earlier of the following dates: (1) the date when the analysis (including loan file review) is completed and ready for the EIC's review or (2) the date when the preliminary exit meeting is held with management, which can be conducted either on-site or off-site by conference call.

Further, to ensure that findings are communicated to a supervised institution in a timely manner, Reserve Banks should ensure that the duration between the start of an examination/inspection to the completion and delivery of an examination/inspection report does not exceed 90 days.[16] In cases when reports are subject to statutory requirements for other state or federal agency review, such as by the Consumer Financial Protection Bureau (CFPB),[17] Reserve Banks may exceed the guidelines included in SR-13-14, "Timing Standards for the Completion of Safety-and-Soundness Examination and Inspection Reports for Community Banking Organizations," at the discretion of senior management. However, deviations from these guidelines are expected to be rare. At the discretion of senior Reserve Bank management, additional exemptions from this 90-day guideline may be considered for examinations that are conducted simultaneously on multiple affiliated banks or examinations of larger complex community banking organizations that require additional

15. Bank and savings and loan holding companies with total consolidated assets of $3 billion or less are subject to a separate program that has different requirements for the issuance of reports of inspection. See SR-13-21, "Inspection Frequency and Scope Expectations for Bank Holding Companies and Savings and Loan Holding Companies that are Community Banking Organizations."

16. The start date is the date that Reserve Bank examiners and supervisory staff commence the examination and inspection work, excluding pre-examination visitations and preparation.

17. See sections 1022, 1024, and 1025 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. For more information on the coordination of supervisory activities with the CFPB, see also the "Memorandum of Understanding on Supervisory Coordination" and the June 4, 2012, press release.

time on-site to review specialized or complex business lines.

In addition, findings and conclusions delivered to a supervised institution at the close date and exit meetings for examinations and inspections must be consistently documented in work papers.[18] At a minimum, documentation should include:

1. a list of attendees at the meetings;
2. a description of significant examination and inspection findings discussed, including preliminary ratings; and
3. a summary of the bank management's views on the findings and, if applicable, the views of the board of directors.

18. In some cases, Reserve Bank examiners or supervisory staff may conduct a pre-exit meeting with the institution's management at the close date of the examination or inspection. Representatives from the on-site examination or inspection team may also hold a final exit meeting with the institution after vetting examination or inspection findings with the responsible Reserve Bank officer(s). An "exit meeting" is defined as an examiner's meeting with the institution's management or management and board of directors to communicate preliminary supervisory findings and conclusions.

To the extent conclusions in the final report differ from those discussed at the close date and exit meetings, Reserve Bank examiners and supervisory staff should communicate the reasons for the differences to the supervised institution and document these discussions in their work papers. (See SR-13-14.)

COMMUNITY BANK REPORT OF EXAMINATION ILLUSTRATIVE TEMPLATE

The following pages provide an illustrative template of the community bank report of examination. Detailed descriptions of the report of examination pages are provided above in the subsection entitled, "Community Bank Report of Examination Instructions." The following template also contains clarifying instructions to examination staff, which are noted by the italicized text.

THIS REPORT OF EXAMINATION IS STRICTLY CONFIDENTIAL

This document has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The document is the property of the Board of Governors and is furnished to directors and management for their confidential use. The document is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 U.S.C. 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR pt. 261 subpart C).

Under no circumstances should the directors, officers, employees, trustees or independent auditors disclose or make public this document or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors.

Any unauthorized disclosure of the document may subject the person or persons disclosing or receiving such information to the penalties of section 641 of the U.S. Criminal Code (18 U.S.C. 641).

Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this document. In making this review, it should be noted that this document is not an audit, and should not be considered as such.

Examination Conclusions[2]

Apparent Violations of Laws and Regulations

2. Any institution about which the Federal Reserve makes a written material supervisory determination is eligible to utilize the appeals process as described in the Appeals Process and Board Ombudsman (Ombuds) Policy Statement (See also 85 Fed. Reg. 15,175 (March 17, 2020)). The Ombuds can provide assistance regarding questions related to the appeals process and claims of retaliation as well as assist in facilitating the informal resolution of a supervised institution's concerns prior to the filing of a formal appeal. For more information about the Ombuds, please visit the Federal Reserve Board's website.

Matters Requiring Attention[3]

Template Instruction: Include material issues that require the attention of the institution's board and/or senior management in order of importance. Include a brief summary statement regarding the status of prior examination Matters Requiring Attention. Status should communicate if all, most, none, etc. of the required items were addressed. Detailed assessment of each of the prior Matters Requiring Attention is not required. An example of text could include, "All previous Reserve Bank findings are considered to be satisfactorily addressed, unless otherwise noted in this Report of Examination." The comment should, however, provide a reference to any section of the report where issues that are repeated or incomplete are discussed, if applicable. Repeat Matters Requiring Attention, that were not previously considered addressed, should be noted as such in the details of this section.

Directorate Responsibilities

Each member of the board is responsible for thoroughly reviewing this Report of Examination. Each director must sign the Signatures of Directors page at the conclusion of this report, which affirms that he or she has reviewed the Report in its entirety.

EIC Name Examiner-in-Charge Federal Reserve Bank of [Insert name of the bank]	(if applicable)

3. Supervisory follow-up may consist of Matters Requiring Immediate Attention (MRIAs) and Matters Requiring Attention (MRAs). The key distinction between MRIAs and MRAs is the nature and severity of matters requiring corrective action, as well as the immediacy with which the banking organization must begin and complete corrective actions. MRIAs and MRAs will remain open until resolution and examiners confirm the banking organization's corrective actions. See SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings," for more information. When issuing a supervisory finding (including through the issuance of an MRIA or MRA), examiners will not criticize an institution for a "violation" of supervisory guidance (as supervisory guidance is not legally binding). When appropriate, examiners may reference (including in writing) supervisory guidance to provide examples of safe-and-sound conduct, appropriate risk-management practices, and other approaches to addressing compliance with applicable statutes or regulations. See 12 CFR pt. 262, Appendix A, "Statement Clarifying the Role of Supervisory Guidance."

Compliance with Enforcement Actions

Template Instruction: The Compliance with Enforcement Actions content heading or report page is optional. The heading or page is mandatory, however, if the institution is under a formal or informal supervisory action. An assessment that summarizes the institution's overall compliance with the action should be included in this section of the report. The examiner should include the level of compliance for each provision and provide detailed analysis that includes how compliance was achieved or detail what actions have been taken and what actions are necessary to achieve full compliance, as appropriate. A detailed assessment of provisions that have been in full compliance for more than one examination is not required.

Management/Risk Management

Template Instruction: Provide the risk management numerical rating and discussion of risk factors and the adequacy of risk management associated with risk levels and risk trends. The impact of specialty examination areas on relevant risk areas should be incorporated. For example, the impact of any information technology concerns on operational and other relevant risks should be discussed as well as the impact on legal or other risks of any findings with respect to fiduciary activities or compliance concerns. As applicable, examiners should communicate conclusions/findings of any evaluation of the adequacy of an institution's audit department/program as part of this section. Findings can be communicated as part of the overall Management comments, or as a standalone "Audit" subsection within the Management/Risk Management section.

Management/Risk Management[4] - [Insert management rating]/[Insert risk management rating]

(Comment is mandatory)

Template Instruction: A risk assessment matrix shall be included in this section of the examination report or in the confidential section, as appropriate.

Risk Assessment Matrix

Risk type	Inherent risk	Adequacy of risk management	Composite risk	Trend
Overall	______	______	______	______
Credit	______	______	______	______
Market	______	______	______	______
Liquidity	______	______	______	______
Operational	______	______	______	______
Legal	______	______	______	______
Compliance	______	______	______	______

Operational Risk *(Comment is mandatory)*

Legal and Compliance Risks *(Comment is mandatory)*

4. Supporting comments for credit, market, and liquidity risks, if not discussed in this section, may be found under their respective components in the Analysis of Financial Factors section.

Analysis of Financial Factors

Template Instruction: Include analysis and conclusions for each financial component in this section using subheadings to depict ratings and analysis of individual components and other topics of discussion. The order is optional; however, the more significant issues should be addressed up front. Narrative comments and support should generally be brief for 1- and 2-rated components and increase in detail and specificity for 3-, 4-, and 5-rated components.

Financial tables below can be customized to match the conclusions, risk, and messages being communicated to institution management. Nonapplicable ratios should be removed or denoted as not applicable with "N/A" in all nonapplicable columns.

Capital Adequacy – [*Insert rating, comment is mandatory*]

Ratios	Bank *Date*	Peer *Date*	Bank *Date*	Bank *Date*
Tier 1 Leverage Capital[5]	________	________	________	________
Common Equity Tier 1 Capital Ratio[6]	________	________	________	________
Tier 1 Risk-Based Capital/Risk-Weighted Assets[7]	________	________	________	________
Total Risk-Based Capital/Risk-Weighted Assets	________	________	________	________
Cash Dividends/Net Income	________	________	________	________

5. Tier 1 Capital/Average Total Assets.
6. Common Equity Tier 1 Capital/Total Risk-Weighted Assets.
7. Risk-Weighted Assets used in the above calculations can be found in the institution's Uniform Bank Performance Report, unless otherwise noted.

Asset Quality – [*Insert rating, comment is mandatory*]

Ratios	Current asset review	Prior asset review *(Date)*	Prior asset review *(Date)*
Total Adversely Classified Assets/ Tier 1 Capital + Allowance[8]	____________	____________	____________
Weighted Adversely Classified Assets[9]/ Tier 1 Capital + Allowance	____________	____________	____________

Ratios	Bank *(Date 1)*	Peer *(Date 1)*	Bank *(Date 2)*	Bank *(Date 3)*
90+ Days Past Due and Nonaccrual Loans and Leases/Loans and Leases	_________	_________	_________	_________
Net Loan Loss/Total Loans	_________	_________	_________	_________
Allowance/Total Loans	_________	_________	_________	_________

Credit risk *(Comment is mandatory)*

8. Allowance refers to allowance for loan and lease losses or allowance for credit losses. For more information on the calculation of the denominator of this ratio, see SR-20-8, "Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach," and the *Commercial Bank Examination Manual.*

9. Weighted Adversely Classified Assets is the summation of each classification category utilizing the following weights: Substandard 20 percent, Doubtful 50 percent, and Loss 100 percent.

Earnings — [*Insert rating, comment is mandatory*]

Ratios	Bank *(Date)*	Peer *(Date)*	Bank *(Date)*	Bank *(Date)*
Return on Average Assets[10] (Subchapter S)	________	________	________	________
Net Interest Margin[11]	________	________	________	________
Noninterest Income/Average Assets	________	________	________	________
Noninterest Expense/Average Assets	________	________	________	________
Provision Expense/Average Assets	________	________	________	________

Liquidity – [*Insert rating, comment is mandatory*]

Ratios	Bank *(Date)*	Peer *(Date)*	Bank *(Date)*	Bank *(Date)*
Net Noncore Funding Dependence[12]	________	________	________	________
Core Deposits/Assets	________	________	________	________
Net Loans and Leases/Deposits	________	________	________	________
Liquid Assets/Total Assets	________	________	________	________

Liquidity Risk *(Comment is mandatory)*

10. Net Income/Average Assets ratio may be adjusted for Subchapter S status, if applicable.
11. Net Interest Income/Average Earning Assets.
12. (Noncore Liabilities *less* Short Term Investments)/Long Term Assets.

Sensitivity to Market Risk — [*Insert rating, comment is mandatory*]

	Model Results as of mm/dd/yyyy						
Market Risk Metrics	-200	-100	Limit	+100	Limit	+200	Limit
Change in EVE %	_______	_______	_______	_______	_______	_______	_______

Change in EAR %	_______	_______	_______	_______	_______	_______	_______
Change in EAR % (prior year)	_______	_______	_______	_______	_______	_______	_______

Market Risk *(Comment is mandatory)*

Information Technology Assessment

Information Technology – [*Insert rating(s)*]

Template Instruction: Section is mandatory if an information technology (URSIT) rating is assigned or if significant supervisory concerns exist. Information technology activities should be evaluated based upon the nature and extent of information technology risks including management processes, architecture, integrity, security and availability. Supporting rationale for composite and/or component IT ratings should be included. Note whether a list of technical exceptions was provided to management. Conclusions should also be reflected in Analysis of Financial Factors and/or the Management/Risk Management sections of the report, as appropriate, and any significant supervisory concerns should be reflected in the Matters Requiring Attention and Examination Conclusions sections.

Bank Secrecy & Anti-Money-Laundering Compliance

Template Instruction: Section is mandatory if Bank Secrecy Act (BSA) and Anti-Money-Laundering (AML) compliance is assessed and a conclusion is rendered, or if significant supervisory concerns exist. BSA/AML compliance should be evaluated based upon the nature and extent of risk and noncompliance. Supporting rationale for the conclusion should be included. Note whether a list of violations or exceptions was provided to management. Conclusions should also be reflected in Analysis of Financial Factors and/or the Management/Risk Management sections of the report, as appropriate, and any significant supervisory concerns should be reflected in the Matters Requiring Attention and Examination Conclusions sections.

Fiduciary Activities Assessment

Fiduciary Activities Assessment – [*Insert rating(s)*]

Template Instruction: Section is mandatory if a trust (UITRS) or transfer agent rating is assigned during the most recent Federal Reserve examination cycle or if significant supervisory concerns exist in these areas. Fiduciary activities should be evaluated relative to management's oversight of fiduciary activities and the nature and extent of risk to the institution represented by the fiduciary activities or business lines evaluated. Management's ability to assess the risk of fiduciary products and services offered, including new products, should be evaluated. Note whether a list of technical exceptions was provided to management. Supporting rationale for any ratings assigned should be included. Conclusions should also be reflected in Analysis of Financial Factors and/or the Management/Risk Management sections of the report, as appropriate, and any significant supervisory concerns should be reflected in the Matters Requiring Attention and Examination Conclusions sections.

Items Subject to Adverse Classification

Includes assets and off-balance-sheet items which are detailed in the following categories:

Substandard Assets—A Substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected.

Doubtful Assets—An asset classified Doubtful has all the weaknesses inherent in one classified Substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.

Loss Assets—An asset classified Loss is considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Amounts classified Loss should be promptly charged off.

Summary of Items Subject to Adverse Classification

		ADVERSELY CLASSIFIED			
CATEGORY		Sub-standard	Doubtful	Loss	Total
Loans and Leases		______	______	______	______
Securities		______	______	______	______
Other Real Estate Owned		______	______	______	______
Other Assets		______	______	______	______

	CATEGORY		
Amount, description, and comments	Substandard	Doubtful	Loss

Items Listed as Special Mention

Includes assets and off-balance sheet items which are detailed as follows:

Special Mention Assets–A Special Mention asset has potential weaknesses that deserve management's close attention. If left uncorrected, these potential weaknesses may result in the deterioration of the repayment prospects for the asset or in the institution's credit position at some future date. Special Mention assets are not adversely classified and do not expose an institution to sufficient risk to warrant adverse classification.

11 – Other

Name or description	Amount	Date of most recent financial statement	Deficiency description

Template Instruction: The content heading or report page is optional. The content heading is mandatory if examiners' ability to assess the loan files or overall asset quality at the bank is compromised because of inadequate information needed for loan line sheets or if the bank's loan administration systems and processes are deficient, particularly with respect to loan and collateral documentation and collateral values. If the credit-data or collateral-documentation exceptions are materially significant, this content heading or report page should provide support for a discussion of credit-documentation practices under the Asset Quality content heading or report page.

Concentrations

Template Instruction: The content heading or report page is optional. This page is mandatory if there are materially deficient practices in managing concentrations. If included, the content heading should include a discussion of the appropriateness of the bank's risk management practices regarding any materially significant concentrations in assets, liabilities, specific industries, and/or other categories, as applicable. Examiners should include the basis criteria for identifying a specific concentrations. In general, the baseline threshold of a concentration is 25 percent or more of the bank's capital structure (capital structure for the purposes of concentrations being tier 1 capital plus the allowance). For more information, see SR-20-8, "Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach," and the Commercial Bank Examination Manual section entitled, "Concentrations of Credits."

Capital Calculations[13]

Template Instruction: The Capital Calculations page is Optional. Inclusion of capital calculations is mandatory, however, if (1) the bank has a financial subsidiary within the meaning of the Gramm-Leach-Bliley Act, (2) there is a change in the capital category as a results of the examination, or (3) the ratios supporting the capital category in the examination are not derived from the bank's Call Report as of the same date. The third exception could occur if the bank's examination ratios were calculated at a date other than the end of a quarter, or, if calculated at quarter-end, the numbers were adjusted or changed from those filed in the Call Report.

Confidential Section – General Information

Include a discussion of strategic plans, future technology plans, planned bank products or services, and/or prospects for the bank; significant or sensitive matters regarding the bank's management not previously addressed; applicable comments on the extent a particular insider controls or dominates the organization and any adverse effect of insiders on operating policies, procedures, or overall financial condition of the bank; and a discussion of any recommendations for supervisory actions and any additional material matters of a sensitive or confidential nature not previously addressed. To the extent not included on the Directors and Officers page, this discussion should also include a list of each major shareholder of the bank (5 percent or more) and the respective percentage of ownership. When the major shareholder is a bank holding company, its major shareholders and the percent controlled should be listed. Include a listing of critical turnkey software vendors, and/or service providers, and any client institutions for which processing services are provided. Include any significant matters of a confidential nature regarding vendors or third-party service providers. In addition, include a listing of e-banking activities. The topics below are provided as examples for examiner consideration.

1. Discuss prospects for the bank including any strategic/technology plans and any new services planned.

2. Discuss any material matters regarding the bank's condition or management that are sensitive or confidential. If applicable, discuss the extent a particular insider controls or dominates the bank and any adverse effect of insiders on operating policies, procedures, or the financial condition of the bank.

3. Discuss any recommendations for supervisory action.

4. List each major (5 percent or more) shareholder or group and their percentage ownership. When the major shareholder is a bank holding company, list its major shareholders and their percent controlled.

Name	Shares Owned	Percent Owned

INTRODUCTION

The Federal Reserve follows a risk-focused supervisory approach for bank holding companies (BHCs), savings and loan holding companies (SLHCs), and state member banks (SMBs) whereby work is scaled to the asset size and complexity of an institution. An important aspect of this approach is the assessment and evaluation of practices across groups of supervised institutions with similar characteristics and risk profiles. This portfolio approach to supervision facilitates greater consistency of supervisory practices and assessments across comparable institutions and enhances the Federal Reserve's ability to identify an outlier institution among its established peer group.

Building on the "Examination Strategy and Risk Focused Examinations" section of this manual, this section summarizes the Federal Reserve's approach to supervising SMBs that are in the regional banking organization (RBO) portfolio. For purposes of this manual section, these institutions are referred to as "regional SMBs." While this section describes key aspects of the supervision process for regional SMBs, the *Bank Holding Company Supervision Manual* (BHCSM) contains additional information on the Federal Reserve's approach to supervising RBO holding companies. See section 1050.2 of the BHCSM.

Key aspects of the regional SMB supervisory approach include

- continuous monitoring and frequent bank-to-supervisor communications through a dedicated Reserve Bank central point of contact (CPC) for each regional SMB.
  - The CPC coordinates the supervision activities at a regional SMB. This includes organizing the supervisory planning process, executing supervisory activities as well as monitoring supervisory concerns, applications issues, meetings with management, and enforcement matters.
- coordinated approach to supervision with other regulators (for example, the state banking agencies and the Consumer Financial Protection Bureau or CFPB). This approach minimizes regulatory burden and ensures a consistent supervisory message among regulators.
- implementation of a customized supervisory plan, which the CPC leads in developing or revising annually based on a bank's risk profile.
- supervisory events or target examinations conducted throughout the year, culminating in an annual roll-up of the supervisory assessment of the BHC, including the bank.

DEFINITION OF REGIONAL BANKING ORGANIZATIONS

The Federal Reserve considers several factors, such as an institution's asset size, complexity of operations, and organizational structure in determining whether a bank or holding company is included in the RBO supervisory portfolio or in another supervisory portfolio. The RBO supervisory portfolio generally includes domestic holding companies and SMBs having total consolidated assets greater than or equal to $10 billion and less than $100 billion.

EXAMINATION AND TARGET EXAMINATION FREQUENCY AND SCOPE

State Member Bank Frequency and Scope

As discussed in the "Examination Strategy and Risk-Focused Examinations" section, the Federal Reserve is required to conduct a full-scope, on-site examination of every insured SMB at least once during each 12-month period, with the exception that small depository institutions meeting certain criteria can be examined once during each 18-month period.[1] A full-scope examination cycle for a regional SMB involves the collection and analysis of information sufficient to allow the CPC to determine a rating for each of the six CAMELS components and the composite rating consistent with the interagency guidance reflected in SR-96-38, "Uniform Finan-

1. See the Federal Reserve Board's Regulation H (12 CFR 208.64).

cial Institutions Rating System." The scope of an examination will increase in intensity when a regional SMB's financial and managerial condition deteriorate or are less than satisfactory.

In addition to the annual full-scope examination, examiners are expected to complete a target examination at each regional SMB during the supervisory cycle. Throughout the annual examination cycle, the Federal Reserve may perform several targeted examinations on a particular activity or risk-management function for all regional SMBs. As an example, targeted-scope examinations at regional SMBs might cover asset quality for a particular lending activity, allowance practices, the internal audit function, information technology, vendor risk management, liquidity risk, sensitivity to market risk, model risk management, Regulation O (12 CFR pt. 215), Regulation W (12 CFR pt. 223), and specific business lines. The use of target examinations is intended to reduce regulatory burden on a regional SMB, which can arise from one point-in-time examination when examiners are reviewing multiple activities and functions at the same time.

Loan Quality Review

A thorough review of a bank's loan and lease portfolios remains a fundamental element of the Federal Reserve's examination program for regional SMBs. As discussed in this manual's section, "Supervisory Loan Sampling at Regional Banking Organizations," Reserve Banks are expected to conduct at least two loan quality reviews during the annual supervisory cycle of a regional SMB.[2]

Regulation O Compliance

The Federal Reserve Board's Regulation O (12 CFR pt. 215) implements many of the laws pertaining to extensions of credit by banks to their insiders. Regulation O is designed to mitigate the potential for conflicts of interest and self-dealing by individuals who may be in a position to influence a bank's lending decisions. Examiners are expected to complete an annual assessment of a regional SMB's Regulation O compliance program. For more information, see this manual's section entitled, "Regulation O: Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks."

Review of Internal Audit

Every three years, Reserve Bank examiners are expected to conduct testing activities at RBOs as part of the audit infrastructure review. The review can be an independent supervisory event or conducted jointly or concurrently with a state banking agency. The purpose of the internal audit review is to conduct an overall assessment of the bank's internal audit function and to determine whether the audit function and processes are effective or ineffective. If the audit function and its processes are effective, examiners can rely on the work of the bank's internal audit function as part of the supervisory review process. For regional SMBs, Reserve Bank examiners should review internal audit documentation throughout the year as well as meet with the bank's internal and external auditor to determine whether examiners can continue to the rely on the work of the bank's internal audit function. The following SR letters provide more guidance on the assessment of a bank's internal audit function:

- SR-03-5, "Amended Interagency Guidance on the Internal Audit Function and Its Outsourcing"
- SR-13-1/CA-13-1, "Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing"

Specialty Areas: Bank Secrecy Act, Information Technology, and Trust

Each annual safety-and-soundness examination cycle of a regional SMB includes an assessment and evaluation of the Bank Secrecy Act (BSA)/ anti-money-laundering (AML) compliance program. This assessment is required by statute at SMBs and U.S. branches or agencies of foreign banking organizations (12 U.S.C. 1818(s)(2) and 12 U.S.C. 1818(b)(4)).[3] For more

2. SR-14-4, "Examiner Loan Sampling Requirements for State Member Bank and Credit Extending Nonbank Subsidiaries of Bank Holding Companies in the Regional Banking Organization Supervisory Portfolio."

3. Some SMBs are on an alternate examination program with state supervisory agencies where the Federal Reserve and a state banking agency alternate which supervisor will lead the

information, see the section of this manual entitled, “Regulation H: Bank Secrecy Act and Anti-Money-Laundering.”

The Federal Reserve integrates information technology (IT) supervision within the overall risk-focused supervisory process. Each annual safety-and-soundness examination cycle of a regional SMB includes an assessment and evaluation of IT risks and risk management. See SR-00-3, “Information Technology Examination Frequency,” for more information. The scope of the IT assessment should generally be sufficient for Reserve Bank examiners to assign a bank with a composite rating under the Uniform Rating System for Information Technology (URSIT). See SR-99-8, “Uniform Rating System for Information Technology,” and 64 *Federal Register* 3109 (January 20, 1999).

Much like IT examinations, the Federal Reserve integrates trust examinations into the safety-and-soundness examinations at regional SMBs. Trust examination frequency varies based on the effect of fiduciary activities on the bank’s overall risk profile (table 1). At a minimum, examiners should review fiduciary activities no less frequently than during every other routine safety-and-soundness examination. At complex fiduciary institutions, examiners should update the composite Uniform Interagency Trust Rating System (UITRS) rating and transfer agent ratings (as applicable) annually. Any material findings related to these areas should be included in the annual summary supervisory report and any significant concerns should be reflected in the safety and soundness examination ratings. See SR-01-5, “Examination of Fiduciary Activities.”

examination. If the state banking agency does not include a BSA/AML compliance review in the regional SMB examination scope, Reserve Banks should undertake a BSA/AML compliance review, either as part of the state examination or as a separate targeted review within the same examination cycle.

CONTINUOUS MONITORING

Compared to the point-in-time supervision of community banks, the supervision program for regional banks emphasizes ongoing supervision through increased planning and continuous monitoring. By emphasizing planning and monitor-

Table 1. Key examination activities and frequency for regional state member banks

Functional area	Frequency	Source document/guidance
Safety and soundness examination of the state member bank	12 months	12 CFR 208.64 and SR-18-7
Regulation O compliance assessment	12 months	SR-14-4
Loan quality review	Two reviews every 12 months[1]	SR-14-4
Bank Secrecy Act/Anti-Money-Laundering compliance program assessment	12 months	12 U.S.C. 1818(s)(2) and SR-18-7
Information technology ratings assignment	12 months[2]	SR-00-3
Trust and transfer agent	In general, every other routine safety-and-soundness examination (2 years)	SR-01-5

1. One of the loan quality reviews can be completed during the full-scope safety and soundness examination.

2. Depending on where the IT function resides within the RBO and supervisory resources at the Reserve Bank, the IT examination can be conducted as a target supervisory event, part of the safety-and-soundness examination of the SMB, or part of the annual roll-up assessment of the holding company. In general, the Federal Reserve generally assigns IT ratings for the depository institution; however, an IT rating is assigned to the holding company or non-bank subsidiary when the IT function is managed at the consolidated organization level.

ing, examiners can focus supervisory activities on significant risks and issues.

The continuous monitoring framework is a foundational component of the overall supervisory strategy among regional SMBs. Continuous monitoring activities are supervisory activities designed to develop and maintain an understanding of the institution, its risk profile, and associated policies and practices. These activities also provide information that is used to assess inherent risks and internal control processes. Furthermore, continuous monitoring activities facilitate regular communication between CPCs and bank management and support the timely identification of risk trends, key developments, and strategic initiatives of the supervised institutions. Specifically, continuous monitoring activities aim to assess

- material developments at the bank, including significant changes or new strategic initiatives;
- new or emerging risks, risk trends, or areas of regulatory concern;
- the Capital, Asset Quality, Earnings, Liquidity, and Sensitivity to Market Risk (CAELS) ratings components of the CAMELS rating system with a focus on material changes and trends;
- the bank's risk profile, strategic initiatives, financial condition, emerging risk profile, or areas of supervisory concern;[4]
- whether any changes are necessary to the bank's supervisory ratings, supervisory actions, or the supervisory plan; and
- other relevant matters related to the bank's overall condition, operations, or geographic footprint.

To support the ongoing supervision through continuous monitoring, CPCs will regularly ask management at regional SMBs for information and reports that enable supervisory staff to assess the condition of the bank and set supervisory priorities for each regional SMB during the annual supervisory planning process. As part of the continuous monitoring process, CPCs will typically request various internal documents from the banks, such as risk-management reports, board and risk committee packets, meeting minutes—as well as scheduled discussions with key personnel, and financial performance reporting.

RBO SUPERVISIORY PLANNING PROCESS

Examiners develop several internal work products to organize and execute the supervision of regional SMBs. Complete and current Institution Overview (IO), Risk Matrix and Assessment (RA), and Supervisory Plan (SP) documents, collectively called the "IORASP," are critical to execute effective consolidated supervision of RBOs and regional SMBs. Reserve Bank staff generally complete and update the IORASP annually for RBOs, as these documents provide a comprehensive assessment of the firm and document the supervision plan. Furthermore, Reserve Bank staff should update IORASP documents when there are significant changes at the SMB RBO.

Institution Overview. Examiners start the supervisory process by developing an understanding of the institution and summarizing this information into the "Institution Overview." The Institution Overview provides the foundation for the annual supervisory plan, which sets forth the key areas of supervisory focus for the bank. The Institution Overview highlights the bank's riskiest and most material activities and business lines.[5] Among other things, the Institution Overview conveys the bank's present condition and its current and prospective risk profiles, organizational changes, an overview of material business lines as well as a summary of capital planning and the bank's IT profile.

Risk Assessment and Matrix. The Risk Assessment identifies significant risks and supervisory concerns at the regional SMB and provides a foundation for determining the supervisory activities to be conducted. Further, the Risk Assessment provides a commentary and analysis of the bank's risk profile, which covers six risk categories (credit, market, liquidity, operational, legal, and compliance).[6] A Risk Matrix is used to identify significant activities,

4. See SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion," as well as this manual's section entitled similarly.

5. Material business lines are considered the primary drivers of the institution's revenue generation, profitability, and franchise value.

6. SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion."

the type and level of inherent risks in these activities, and the adequacy of risk management over these activities. This information also aids examiners in determining composite risk assessments for each of these activities and the overall bank and promotes consistency in the review of a bank's risk-management practices.

Supervisory Plan. The Supervisory Plan represents a bridge between the Risk Assessment and the supervisory activities to be conducted at the regional SMB. In the Supervisory Plan, examiners organize information about a bank's key risk areas, revenue drivers, and emerging risk areas. The Supervisory Plan for regional SMBs also generally covers the scope of the Reserve Bank's loan file review;[7] reviews of information technology, trust, consumer compliance; and the BSA/AML compliance program.[8] The Supervisory Plan will also describe the reviews and anticipated work products at other entities or areas within the consolidated organization.

Lastly, Federal Reserve CPCs should also make an overall assessment as to whether the internal audit function and its processes are effective or ineffective and whether examiners can potentially rely upon internal audit's work as part of the supervisory review process. Examiners should refer to SR-03-5, and SR-13-1/CA-13-1. Likewise, Federal Reserve examiners should also make an overall assessment on the effectiveness of the internal/external loan review function and the level of reliance that it can be given.

COORDINATION OF SUPERVISORY OBJECTIVES WITH OTHER REGULATORS

Another aspect of the supervisory planning process is the coordination of supervisory activities. The CPC should coordinate the supervisory planning process and examination/inspection program with the appropriate primary state regulators and functional regulators for affiliated subsidiaries in order to ensure that high-risk areas are appropriately reviewed and duplicative efforts are avoided.[9] CPCs should regularly communicate and coordinate with the state regulators to remain informed about examination findings and changes to the state regulators' supervisory assessments or strategies at the regional SMB. These coordination efforts extend to interactions with the CFPB, which is the primary regulator with respect to a number of federal consumer financial laws of depository institutions with total assets over $10 billion and their affiliates. More information on the Board's coordination activities with other regulators can be found in section 1050.2 of the BHCSM.

EXAMINATION PROCEDURES

RBO CPCs and examiners are expected to document their analysis in assigning CAMELS ratings at full-scope examinations and targeted reviews of regional SMBs. Examiners document their work by completing the relevant Examination Documentation (ED) modules.[10] In general, examiners complete the Core Analysis Decision Factors of the ED module procedures that directly address the six components of the CAMELS rating system. In addition, for a regional SMB's business or product lines[11] that represent 25 percent or more of its annual revenues,[12] Federal Reserve CPCs and examiners are expected to perform business and product line analysis to fully understand the bank's significant sources of revenues and expenses.

Federal Reserve examiners apply streamlined work programs to low-risk activities at regional SMBs. For more information on the assignment of risk at a bank and completion of examination procedures based on the bank's risk level, see SR-19-9, "Bank Exams Tailored to Risk (BETR)" and this manual's section entitled, "Federal Reserve System Bank Surveillance Program."

7. See section "Supervisory Loan Sampling at Regional Banking Organizations," of this manual and SR-14-4 for more information.

8. See SR-18-7, "Updates to the Expanded Examination Cycle for Certain State Member Banks and U.S. Branches and Agencies of Foreign Banking Organizations."

9. See SR-16-4, "Relying on the Work of the Regulators of the Subsidiary Insured Depository Institution(s) of Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $100 Billion" and SR-96-33, "State/Federal Protocol and Nationwide Supervisory Agreement."

10. For more information on the ED modules, see this manual's section, "Community Bank Supervision Process," and the Board's ED modules website.

11. Business or product lines should be defined by the institution through internal management information systems or filings, such as the Securities and Exchange Commission's Form 10-K.

12. Annual revenue equals net interest income plus noninterest income.

Depending on the specific activities and characteristics of the regional SMB, Federal Reserve examiners may complete examination procedures over specialty areas or relevant lines of business. In these instances, examiners often use the relevant reference ED modules to guide their analysis and review of the bank.

REPORTS OF EXAMINATION

Reserve Banks are expected to communicate the CAMELS ratings to regional SMBs via a report of examination or supervisory letter every 12 months, and whenever a rating changes during the examination cycle.[13] As previously discussed, the supervision of regional SMBs can encompass a limited number of targeted reviews and off-site monitoring conducted throughout an annual examination cycle. After completing a targeted examination or supervisory event, examiners communicate supervisory findings in writing through a formal examination report, supervisory letter, or any other supervisory communication, which is generally directed to the bank's board of directors, or an executive-level committee of the board.[14] The presentation of the report of examination for a regional SMB subsidiary can vary based on the unique characteristics of the bank and the supervisory activities completed over the course of a year at the bank and its parent holding company. Other factors that contribute to the variability of the presentation of the report of examination for a regional SMB include

- the asset size and complexity of the consolidated holding company,
- the percent of the consolidated holding company's assets at the lead SMB subsidiary,
- the extent of intercompany transactions between the SMB subsidiary and the holding company,
- the number of target examinations completed over the course of the examination cycle, and
- the nature of the examination or supervisory event(s) the Reserve Bank conducts with the relevant state banking agency.

13. SR-99-17, "Supervisory Ratings for State Member Banks, Bank Holding Companies and Foreign Banking Organizations, and Related Requirements for the National Examination Data System."

14. SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings."

While a standalone examination report can be prepared and delivered to a regional SMB, in most cases, the CPC delivers a "combined roll-up" report to the board of directors of the consolidated organization. This combined roll-up includes a report of examination for the regional SMB, inspection ratings for the BHC as well as summarized supervisory findings, including the status of prior supervisory findings and conclusions of target assessments conducted during the annual supervisory cycle. The combined roll-up report should be used to the greatest extent possible for all regional SMB roll-up supervisory events where the Reserve Bank is the lead.

In 2019, the Federal Financial Institutions Examination Council (FFIEC) members agreed on a set of principles that should apply to the completion of reports of examination. The FFIEC members established a principles-based approach for completing the report of examination to promote consistency and communication among the agencies. These principles allow individual supervisors with the flexibility to document their assessment of the condition of supervised financial institutions based on their asset size, activities, risk profiles, and financial and managerial condition. See SR-19-6, "Federal Financial Institutions Examination Council Policy Statement on the Principles for Completing the Report of Examination."

Examination Report Instructions for State Member Banks in the Regional Banking Organization Supervisory Portfolio

This subsection provides detailed instructions for examiners completing examination reports resulting from full-scope examinations of regional SMBs.

The overall content of the examination report may differ based on the activities at the bank as well as the scope of examination activities. Examiners have some flexibility concerning the formatting of the report. For example, a cover page with the Reserve Bank's seal and the state banking agency's seal may be included. A sample cover page is provided in the section entitled, "Community Bank Supervision Process." Furthermore, examiners may include organizational information, such as a table of contents and a separate page, which defines acronyms that are used throughout the report.

In all instances, the examination report should explain that the contents of the report of examination contain confidential supervisory information and that the Board has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 U.S.C. 1817(a) and 1831m) and implementing regulations (12 CFR pt. 261, subpart C). This information may be conveyed on report cover sheet or in a footnote reference in the report of examination.

A transmittal letter should accompany the report of examination. Examiners should tailor the contents of the transmittal letter based on the bank and the results of the examination. Examiners should not repeat information that is in other sections of the examination report and should not comment on individual ratings components in the transmittal letter. Information that is generally conveyed in the transmittal letter includes

- regulatory agencies (Reserve Bank and state banking agency, as applicable) that participated on the examination or supervisory event;
- start date and end date of the examination. Consider including the timeframe of examination activities that were conducted off site;
- financial as-of date and asset quality date;
- brief description of related reviews or events within the supervisory cycle that have contributed to the assignment of ratings for the bank, including the appropriate timeframe;
- a brief summary of key supervisory messages, ratings changes, and outlook for supervisory activity in the upcoming cycle; and
- contact information of the central point of contact at the Reserve Bank and state banking agency, as appropriate.

Below is an outline of the report of examination. Sections or subsections marked with an asterisk (*) should be omitted if not applicable.

- Directorate Responsibility
- Scope
- Overall Risk Profile, Conclusions, and Key Supervisory Themes
  - — Overall Risk Profile*
  - — Overall Conclusions
  - — Bank Rating
  - — Key Supervisory Themes*
- Summary of Ratings
- Apparent Violations of Law*
- Supervisory Issues*
- Compliance with Enforcement Action*
- Management and Risk Management
- Financial Condition
  - — Assessment of Asset Quality, including Summary of Items Subject to Adverse Classification
  - — Assessment of Capital, Earnings, Liquidity, and Sensitivity to Market Risk
- Information Technology Assessment*
- Fiduciary Activities Assessment*
- Consumer Compliance Assessment
- Additional Supervisory Assessments
  - — Bank Secrecy Act and Anti-Money Laundering Compliance Program
  - — Audit Program*
  - — Other Matters*
- Signature of Directors

Report of Examination Instructions by Section

Directorate Responsibility

The Directorate Responsibility section is *mandatory*. This section informs board members that they are responsible for thoroughly reviewing the report of examination. Each director must sign the Signature of Directors page at the conclusion of this report. This section also includes standard language informing the institution of its right to appeal material supervisory determinations. See 85 *Federal Register* 15,175 (March 17, 2020) for more information on the Federal Reserve's appeals process.

Scope

The Scope section is *mandatory*. This section describes the scope of work performed during the examination and typically contains two concise paragraphs describing the following:

- financial information date,
- asset quality review date,
- the scope of the loan and commitments sampled and reviewed,
- management information systems (MIS) reviewed, and
- meetings conducted (such as the exit meeting).

Overall Risk Profile, Conclusions, and Key Supervisory Themes

This overall section is *mandatory*. However, certain subsections may be omitted if they are not applicable. Information about the applicability of the subsections is described below. One of the primary objectives of this section of the report of examination is to inform the bank's board of directors of overarching supervisory concerns that examination staff have identified during the examination or supervisory cycle.

Overall Risk Profile. For banks rated a composite "1" or "2," this subsection is optional. However, this subsection is *mandatory* if the bank is rated a composite "3," "4," or "5." In either case, the Overall Risk Profile should be one paragraph in length and provide context to the analysis in the Overall Conclusions subsection. This subsection should describe key drivers for the risk profile of the bank, which could include a description of specific risk stripes. The Overall Risk Profile subsection should not include the risk matrix, nor should the subsection repeat information that is discussed elsewhere in the report, particularly the Management and Risk Management section and the Financial Condition section.

Overall Conclusions. This subsection is *mandatory*. In approximately two paragraphs, examiners should describe

- overall bank ratings,
- justification for the ratings,
- assessment of the financial condition and risk management, and
- key supervisory messages for the institution.

If key supervisory messages require more detail, examiners should include the Key Supervisory Themes subsection, which is described below.

Bank Rating. Describing the bank's composite Uniform Financial Institutions Rating System (UFIRS) rating is *mandatory*. The rating description should include a qualitative description of the condition of the bank as well as the numeric rating. Examiners should include a reference to the appropriate ratings guidance in a footnote. If the bank is rated a composite "3," "4," or "5," examiners also should provide a definition of the composite rating in the footnote. The italicized text below and supporting footnote text provides an example of communicating a composite "3" CAMELS rating in the report of examination:

> *The Bank remains in less than satisfactory condition and is rated a composite "3" according to the Uniform Financial Institutions Rating System.*[15] *Ratings are assigned on a scale from 1 to 5 in ascending order of supervisory concern.*

Key Supervisory Themes. This subsection is optional. The purpose of this subsection is to describe overarching issues at the bank and areas of supervisory focus. Each supervisory theme should be significant to the financial or operating condition of the organization and/or its strategic direction. In determining whether to include this subsection in the report of examination, examiners should consider the bank's condition, severity of findings, risk profile, and other significant factors. For example, a Supervisory Themes subsection may be appropriate for a bank with a risk profile that raises more than normal supervisory concern, or any other material items or findings that examiners want to communicate to the board and senior management. Key supervisory themes may include a discussion of the root causes for findings or apparent violations, particularly if there is a large volume of findings or severe findings/apparent violations that were uncovered during the examination. Examiners can also use Key Supervisory Themes to communicate focus areas for the upcoming supervisory cycle. If there are multiple supervisory themes, examiners should describe each theme in concise paragraphs separating each theme with a header.

15. See SR-96-38, "Uniform Financial Institutions Rating System," the *Commercial Bank Examination Manual* and 61 Fed. Reg. 67,021 (December 19, 1996). *Rating 3.* Financial institutions with a composite "3" rating exhibit some degree of supervisory concern in one or more of the component areas. These institutions have a combination of moderate to severe weaknesses; however, the magnitude of the deficiencies generally will not cause a component to be rated more severely than 4. Management may lack the ability or willingness to effectively address weaknesses within appropriate time frames. Financial institutions in this group generally are less capable of withstanding business fluctuations and are more vulnerable to outside influences than those institutions rated composite "1" or "2." Additionally, these financial institutions may be in significant noncompliance with laws and regulations. Risk-management practices may be less than satisfactory relative to the institution's size, complexity, and risk profile. These financial institutions require more than normal supervision, which may include formal or informal enforcement actions. Failure of the institution appears unlikely, however, given its overall strength and financial capacity.

Summary of Ratings

The Summary of Examination Ratings section is *mandatory*. All supervisory ratings assigned during the examination and for the two previous examinations should be provided (table 2). Include any specialty or targeted examination ratings assigned or other assessments during the recent Federal Reserve examination cycle.

Table 2. Summary of ratings

	Current examination [Insert start date] [Insert lead agency]	**Prior examination [Insert start date] [Insert lead agency]**	**Prior examination [Insert start date] [Insert lead agency]**

Audit	#	#	
Bank Secrecy Act/ Anti-Money-Laundering	#	#	
Consumer Compliance	#	#	
Community Reinvestment Act	#	#	

Apparent Violations of Law

The Apparent Violations of Law section is optional. However, when examiners identify apparent violations of federal or state banking statutes and regulations, it is *mandatory* to include this section in the report of examination. A heading for each apparent violation listed should name the applicable statute and/or regulation and provide a brief description of what the law covers. This summary should be followed by a brief description of the requirements of the statute and/or regulation and a discussion of how or why the apparent violation occurred. Examiners should indicate whether the apparent violation is isolated (e.g., management generally understands the statute or regulation but missed one instance) or systemic (e.g., management was not aware of or did not understand fully the statute or regulation). Furthermore, examiners should describe the bank's completed corrected actions as well as planned corrective actions, including proposed timelines for resolution.

Supervisory Issues

The Supervisory Issues section can be omitted if there are no new or outstanding issues. However, the section is *mandatory* if the bank has any supervisory findings, such as Matters Requiring Immediate Attention (MRIAs) or Matters Requiring Attention (MRAs).[16] This section is intended to highlight the supervisory issues for the use of the board of directors and the bank's management. Supervisory issues should be presented succinctly and clearly. In all cases, the types of actions to be taken by the directors and management to address these problems should be specifically noted.

The definitions of MRIAs and MRAs, or references to the guidance defining MRIAs and MRAs, should be included as a footnote on this page. When issuing a supervisory finding (including through the issuance of an MRIA or MRA), examiners should not criticize an institution for a "violation" of supervisory guidance (as supervisory guidance is not legally binding).[17] When appropriate, examiners may reference (including in writing) supervisory guidance (such as interagency statements, advisories, bulletins, and policy statements) to provide examples of safe-and-sound conduct, appropriate risk-management practices, and other approaches to addressing compliance with laws or regulations.

This section should include newly identified MRIAs and/or MRAs, as well as the status of all prior MRIAs/MRAs that were either opened at the beginning of the examination cycle or have been issued in previous supervisory cycles. A detailed assessment of each prior MRIA or MRA is not required, however, examiners should reference previously issued reports where supervisory issues are discussed in greater detail.

In terms of organizing the findings in this section, examiners generally should list MRIAs and MRAs under separate subheadings. To convey the status of all findings that were open at the start of the supervisory cycle as well as findings opened during the supervisory cycle, examiners should include a table that provides the following information:

- The type of finding (MRIA/MRA) as well as the exact title of the finding that was previously communicated under separate cover.
- The entity of the institution to which the finding applies (typically, this would be the bank, but could be a subsidiary of the bank).
- The date which the finding was issued.
- The status of the issue.
- The expected timeline for completion.

Table 3 is a sample table to include in the Supervisory Issues section of the report. Examiners should explain the how the information is organized in the table (e.g., the severity of the finding, or date the finding was issued).

Compliance with Enforcement Action

The Compliance with Enforcement Actions section is optional. However, the section is *mandatory* if the institution is under a formal or informal enforcement action. If the compliance with enforcement action assessment was completed under separate cover, a concise paragraph describing overall compliance should be completed in the examination report and reference the initial correspondence for additional information. If not communicated under separate cover, this section should include a concise paragraph of the overall compliance with enforcement action. Additionally, this section

16. SR-13-13/CA-13-10, "Supervisory Considerations for the Communication of Supervisory Findings."

17. 12 CFR pt. 262, Appendix A.

Table 3. Summary of supervisory issues

Supervisory issue	Entity	Date issued	Status	Expected timeline for completion or closed date
Example text: BSA MRA — Customer Due Diligence	*Bank*	*May 6, 2019*	*Closed*	*November 30, 2020*
Example text: BSA MRIA — Higher-Risk Customer Monitoring	*Bank*	*May 6, 2019*	*Open*	*December 31, 2020*

should include all provisions of the enforcement action and a status and concise description of compliance with each provision. Examiners should follow the format of the enforcement action for this section. Status options for overall compliance and each provision of the enforcement action are as follows: in process, partial compliance, full compliance, noncompliance.

Management and Risk Management

This section is *mandatory*. Examiners should provide the management rating under the UFIRS as well as the Federal Reserve's risk-management rating.[18] Each component should include a concise paragraph to support the rating assigned. The Management assessment also should include commentary on the composition and qualifications of the bank's board and senior management. Examiners may also provide an assessment of the bank's governance structure in this section. Furthermore, examiners should discuss the risk factors and the adequacy of risk management associated with the risk levels and risk trends as well as the impact of specialty areas on relevant risk areas.

Financial Condition

This section is *mandatory*. This section communicates the ratings for each financial ratings (CAELS) components—Capital adequacy, Asset quality, Earnings, Liquidity, and Sensitivity to market risk. Subheadings are to be used to depict the ratings and describe analysis of the individual components. For each financial ratings component, examiners should include a concise paragraph to support each component rating assigned. Reserve Bank supervisory staff may add ratio tables, as necessary. If tables are used, financial information should not be repeated in the supporting paragraph.

Examiners have some flexibility in organizing the component ratings. However, more significant issues should be addressed at the beginning of this analysis. For example, in situations where any components are rated "3" or worse, or otherwise require emphasis, examiners may include information on the deficiencies in the introductory comment, with more detailed comments reserved for discussion under separate subheadings, or in the applicable supplemental report page.

Summary of Items Subject to Adverse Classification. Under the "Asset Quality" title of this section, examiners should convey a summary of items subject to adverse classification subsection, which summarizes items classified by the examiner as either substandard, doubtful, or loss as of the asset-quality review date of the examination.[19] The following table is *mandatory* (table 4).

18. See this manual's section on "Overall Conclusions Regarding Condition of the Bank: Uniform Financial Institutions Rating System and the Federal Reserve's Risk Management Rating," for specific guidance on rating the adequacy of risk-management processes and internal controls. See also SR-16-11, "Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $100 Billion."

19. See SR-13-18, "Uniform Agreement on the Classification and Appraisal of Securities Held by Depository Institutions."

Table 4. Summary of items subject to adverse classification

Organization	Substandard	Doubtful	Loss	Total
Parent				
Bank subsidiaries				
Nonbank subsidiaries				
Totals at current event *[Date]*				
Totals at previous event *[Date]*				
Totals at previous event *[Date]*				

Information Technology Assessment

The inclusion of an information technology assessment section is optional. This section is *mandatory* if the information technology assessment was completed and URSIT ratings were assigned during the examination or roll-up event.[20] The supporting rationale for the assigned URSIT ratings should be included. The examiner's conclusions should also be reflected in the Financial Condition or the Management and Risk Management sections of the report, as appropriate. Any significant supervisory concerns should be reflected in the Supervisory Issues section.

If the information technology assessment was completed under separate cover, a concise summary paragraph should be completed under Additional Supervisory Assessments section, which is described below.

Fiduciary Activities Assessment

The Fiduciary Activities Assessment section is optional. The section is *mandatory*, however, if a fiduciary activities assessment was completed during the roll-up event and a trust (UITRS) or transfer-agent rating was assigned.[21] The supporting rationale for any ratings assigned should be included. Conclusions should also be reflected in the Analysis of Financial Factors or the Management/Risk Management sections of the report, as appropriate. Significant supervisory concerns should be reflected in the Supervisory Issues section.

If the fiduciary activities assessment was completed under separate cover, a concise paragraph should be completed under Additional Supervisory Assessments section below. Exclude this section on years where fiduciary activities were not examined.

Consumer Compliance Assessment

This section is *mandatory*. This section is typically provided by Federal Reserve examiners in consumer affairs. Safety and soundness examiners should include high level supervisory conclusions, provided the consumer compliance assessment was conducted during the supervisory cycle. While this section is typically brief, examiners should include additional information, particularly if the bank's consumer compliance deficiencies compromise the safety and soundness of the bank or impact the adequacy of risk management. More information about the Federal Reserve's consumer compliance supervision program can be found in the *Consumer Compliance Handbook*.

Additional Supervisory Assessments

This section is *mandatory*. The information technology assessment and fiduciary activities assessment should be included in this section if the examination was performed and issued under separate cover during the supervisory cycle. The assessments of each area should be included in the text. Examiners should limit assessment descriptions for each area to a concise paragraph. In situations where areas require emphasis, examiners may include information on the deficiencies into the introductory comment, with more detailed comments reserved for discussion under separate subheadings, or in the applicable

20. See SR-99-8, "Uniform Rating System for Information Technology," and 64 Fed. Reg. 3109 (January 20, 1999) for more information.

21. See SR-98-37, "Uniform Interagency Trust Rating System," and 63 Fed. Reg. 54,704 (October 13, 1998) for more information.

supplemental report page. Discussion in this section should complement previous comments made in this report without being redundant.

Bank Secrecy Act/Anti-Money-Laundering Compliance Program. This subsection is *mandatory*. This subsection should describe the outcome of the BSA and AML compliance assessment from the examination or roll-up event. If the BSA/AML assessment was completed under separate cover, a concise paragraph should be included in this subsection describing the outcome or conclusions of the assessment. Conclusions should also be reflected in the Analysis of Financial Factors or the Management/ Risk Management sections of the report, as appropriate. Significant supervisory concerns should be reflected in the Supervisory Issues section.

Audit Program. This subsection is *mandatory* if an audit assessment was performed during the annual supervisory cycle. If the audit assessment was not performed during the supervisory cycle, examiners should comment on the bank's audit program in the "Management/Risk Management" section.

Other Matters. This subsection is optional and should only be included if matters of supervisory importance are not described elsewhere in the report. Discuss also significant matters mentioned elsewhere that require further explanation, such as the type, scope, and volume of any new activity in which the organization is engaged. If issues or concerns are noted, examiners should provide comments on specific areas, such as nontraditional banking activities, affiliate relationships, and significant litigation.

Signature of Directors

This section is *mandatory*. This section should indicate that the signature page should be attached to the report of examination and be retained at the bank. The signature of committee members will suffice only if the committee includes outside directors and a resolution has been passed by the full board delegating the review to such committee.

Expectations for the Completion of the Report of Examination

Standards for completing examination and inspection reports for RBOs are outlined in SR-17-12, "Timing Expectations for the Completion of Safety-and-Soundness Examination and Inspection Reports for Regional Banking Organizations." SR-17-12 applies to the completion of safety-and-soundness examination and inspection reports issued by the Federal Reserve for SMBs, BHCs, and their subsidiary Edge Act and agreement corporations, and SLHCs.[22]

Federal Reserve supervisory staff should complete and send the report of examination or inspection to the institution within the following timeframes:

- 90 calendar days from the start date for all reports issued to noncomplex holding companies;[23] and,
- 100 calendar days from the start date for all reports issued to SMBs, complex holding companies, and their nonbank and Edge Act subsidiaries.

In cases when reports are subject to statutory requirements for review by the CFPB, Reserve Banks may add up to 30 calendar days to the above timeframes.[24] Reserve Banks may exceed the timing requirements included in this letter at the discretion of Reserve Bank senior management; however, deviations from these standards are expected to be rare, and should be appropriately documented in workpapers. At the discretion of senior Reserve Bank management, additional exemptions from these timeframe guidelines may be considered for Federal Reserve led examinations that are conducted jointly or concurrently with another insured depository institution regulator.

22. Examples of safety-and-soundness examination and inspection reports include, but are not limited to, full-scope examination and inspection reports, target letters, roll-up examination and inspection letters, and specialty examination reports.

23. The start date is the date that Reserve Bank examiners and supervisory staff commence the commercial examination and inspection work, either off site or on site, excluding pre-exam visitations and examination preparation.

24. See sections 1022, 1024, and 1025 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. For more information on the coordination of supervisory activities with the CFPB, see also the "Memorandum of Understanding on Supervisory Coordination" attached to the June 4, 2012 joint press release.

The Federal Reserve is committed to ensuring timely communication of supervisory findings. As part of each Reserve Bank's continuous supervision process, Reserve Banks should maintain open communication with institution management particularly during examinations and inspections. Open communication allows an opportunity for the institution's management to respond to preliminary supervisory findings prior to a Reserve Bank finalizing such findings.

SUMMARY AND PORTFOLIO TRANSITIONING

The Federal Reserve conducts tailored, risk-focused safety-and-soundness supervision of SMBs commensurate with their size and risk profile. As firms in the CBO and RBO portfolios grow, merge, or enter into new markets or activities, supervisors pay close attention to ensuring that risk-management processes keep pace with their complexity and risk.

The supervision of community SMBs is primarily driven by statutory mandates, and the Federal Reserve conducts a full-scope examination each supervisory cycle. Because regional SMBs are larger and more complex than community banks, there are several key differences in the Federal Reserve's supervisory approach for RBOs versus that of community banks. Regional SMBs are supervised under a continuous supervisory approach that relies on information extracted from continuous monitoring and several targeted supervisory events, which are summarized in an annual roll-up report. The level of communication between bank management and the Reserve Bank is intensified, which necessitates the assignment of a dedicated CPC for a regional SMB.

While not an exhaustive list, several regulations apply to regional SMBs and regional holding companies that do not apply to community banks in the same way:

- Regulation II (12 CFR pt. 235), "Debit Card Interchange Fees and Routing"[25]
- Regulation VV (12 CFR pt. 248) "Proprietary Trading and Certain Interests in and Relationships with Covered Funds" [26]
- Risk committee requirements of the Board's Regulation YY (12 CFR 252 subpart C)[27]
- Coordinated supervisory efforts with the CFPB[28]

As RBOs grow in size and complexity, the Federal Reserve categorizes certain firms as large and foreign banking organizations (LFBOs). LFBOs generally include U.S. firms with assets of $100 billion or more and foreign banking organizations with combined U.S. assets of $100 billion or more.[29] However, there are other considerations when assigning firms to the LFBO and other supervisory portfolios. Supervisory processes and procedures at RBOs and LCBOs are different. The Federal Reserve assigns dedicated supervisory teams to LFBOs. The size of the Federal Reserve supervisory team varies depending on the size, complexity, and risk profile of the firm as well as the level of assistance from the Reserve Bank's risk experts. Another key difference in the supervisory approach of LFBOs is the use of horizontal or multi-firm reviews. Horizontal reviews are a core component of the LFBO oversight program and are conducted based on an assessment of high-risk topics. While the supervision of SMBs is still relevant and important, the supervisory focus at LFBOs generally is at the consolidated holding company.

There are numerous supervisory policies, regulations, and reporting requirements that apply to LFBOs, which do not apply to RBOs. For example, there is a unique rating system for large financial institutions, which is composed of three components (1) Capital Planning and Positions; (2) Liquidity Risk Management and Positions; and (3) Governance and Controls.[30]

25. See the Regulation II compliance guide for more information.

26. The 2018 enactment of the Economic Growth, Regulatory Relief, and Consumer Protection Act modified the scope of the statutory definition of "banking entity" in section 13 of the Bank Holding Company Act (also referred to as the Volcker Rule) to exclude certain community banks and their affiliates, and in 2019, the regulations implementing the Volcker Rule were updated to reflect the statutory change. See 84 Fed. Reg. 35,008 (July 22, 2019).

27. Applies to BHCs with $50 billion or more in total consolidated assets.

28. Section 1025 of the Dodd-Frank Act requires that the CFPB and the prudential regulators, including the Board of Governors of the Federal Reserve System, coordinate important aspects of their supervision of insured depository institutions with more than $10 billion in assets and their affiliates.

29. See the Board's website for more information.

30. See SR-19-3/CA19-2, "Large Financial Institution (LFI) Rating System."

See the BHCSM section entitled, "Large Financial Institution Rating System," for more information.

Further, there are additional legal requirements for SMBs and holding companies that are in the LFBO portfolio. Below are some key examples:

- Capital plan rules for BHCs and SLHCs, which are outlined in Regulation Y (12 CFR 225.8) and Regulation LL (12 CFR 238.170).
- Enhanced prudential standards, which include liquidity requirements and capital stress testing requirements for BHCs (including U.S. intermediate holding companies of foreign banking organizations) and covered SLHCs, as described in Regulation YY (12 CFR pt. 252) and Regulation LL (12 CFR pt. 238),
- Liquidity coverage ratio (LCR) requirement and net stable funding ratio (NSFR) requirement for certain large firms on a consolidated basis as described in Regulation WW (12 CFR pt. 249)

The capital and liquidity requirements that are applicable for LFBOs result in additional regulatory reporting requirements. For example,

- FR 2052a, "Complex Institution Liquidity Monitoring Report" is filed by banking organizations subject to Category I, II, III, or IV standards under the Board's Regulation YY and Regulation LL. The 2052a collects quantitative information on selected assets, liabilities, funding activities, and contingent liabilities on a consolidated basis and by material entity subsidiary.
- FR Y-14A, "Capital Assessments and Stress Testing" report collects detailed data on BHCs', SLHCs', and intermediate holding companies' quantitative projections of balance sheet assets and liabilities, income, losses, and capital across a range of macroeconomic scenarios and qualitative information on methodologies used to develop internal projections of capital across scenarios. The data are used to assess the capital adequacy of large firms and inform the Federal Reserve's operational decision making as it continues to implement the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010.

Prior to a firm's transition to another Federal Reserve supervisory portfolio, Reserve Bank staff will meet with bank management to explain any differences in the supervisory approach. More information about the supervision of LFBOs is in the BHCSM.

Important aspects of the Federal Reserve's supervision programs are the assessment and evaluation of supervisory practices across groups of organizations with similar characteristics and risk profiles. The Federal Reserve organizes its supervisory programs by asset size of institutions, complexity, and activities.

State member banks, the holding companies of which are subject to Category I standards under the Federal Reserve Board's tailoring framework, are supervised as part of the Federal Reserve's Large Institution Supervision Coordinating Committee (LISCC) supervisory portfolio.[1]

For information on the supervision of LISCC firms, see

- *Large Institution Supervision Coordinating Committee Program Manual*, which sets forth key concepts related to the supervisory oversight structure, process, ratings framework, and communication methods directly related to LISCC firms.

For more information on the firms in the LISCC supervisory program, see

- SR-20-30, "Financial Institutions Subject to the LISCC Supervisory Program," and
- The Board's website for the list of firms subject to the LISCC supervisory program.

For more comprehensive information on supervisory practices, processes, and guidance, see relevant sections in this manual as well as the *Bank Holding Company Supervision Manual.*

1. For more information on the tailoring framework, see the Board's Regulation YY (12 CFR pt. 252).

INTRODUCTION

This section provides a brief overview of the Federal Reserve's policies, practices, and procedures relating to the examination of domestic and international banking activities of state-chartered commercial banks that are members of the Federal Reserve (state member banks or SMBs). The Federal Reserve also has certain supervisory and oversight responsibilities in other areas of banking, both domestic and international, for which it has developed specialized examination procedures, conducts on-site examinations, and generally completes separate examination reports.[1] These other areas of banking, such as information technology, Bank Secrecy Act (BSA) and anti-money-laundering (AML) compliance, and consumer compliance are not covered in depth in this manual. Federal Reserve policies and examination procedures relating to each of these areas are covered in either separate manuals, such as the *Federal Financial Institution Examination Council (FFIEC) Information Technology Examination Handbook*, *FFIEC BSA/AML Examination Manual*, and the *Consumer Compliance Handbook*, or supervisory letters (SR letters) issued by the Federal Reserve. Table 1 at the end of this section provides a list of key guidance references related to the examination of entities supervised by the Federal Reserve.

HOLDING COMPANIES

The Federal Reserve has the responsibility for supervising bank holding companies (BHCs) and savings and loan holding companies (SLHCs). These organizations control commercial banks and thrifts that hold most of the insured commercial banking assets in the United States. Most BHCs and SLHCs are subject to an examination or inspection by Federal Reserve examiners.

Since 2004, the Federal Reserve has used the "RFI/C(D)" rating system (RFI rating system) to communicate its supervisory assessment of BHCs regardless of their asset size, complexity, or systemic importance. In 2018, the Board adopted the RFI rating system for non-insurance and noncommercial SLHCs with less than $100 billion in total consolidated assets.[2] At the same time, the Board also adopted a rating system for BHCs and non-insurance and non-commercial SLHCs with total consolidated assets of $100 billion or more (referred to as the LFI rating system).[3] The LFI rating system also applies to U.S. intermediate holding companies of foreign banking organizations with combined U.S. assets of $50 billion or more established pursuant to the Federal Reserve's Regulation YY.

SUPERVISED INSURANCE ORGANIZATIONS

Certain holding companies are considered "supervised insurance organizations" (SIO), which have a unique supervisory framework. An SIO is a depository institution holding company that is an insurance underwriting company, that has over 25 percent of its consolidated assets held by insurance underwriting subsidiaries, or that has been otherwise designated as a supervised insurance organization by Federal Reserve staff. The supervisory framework for an SIO consists of the following:

- a risk-based approach to supervisory expectations, assigning supervisory resources, and conducting supervisory activities;
- a unique supervisory ratings system; and
- reliance, to the fullest extent possible, on the work performed by other relevant supervisors, including the state insurance regulators.

For more information see SR-22-8, "Framework for the Supervision of Insurance Organizations."

1. The Federal Reserve generally refers to supervisory activities of holding companies as inspections, rather than examinations.

2. See SR-19-4/CA-19-3, "Supervisory Rating System for Holding Companies with Total Consolidated Assets Less Than $100 billion," and SR-13-21, "Inspection Frequency and Scope Expectations for Bank Holding Companies and Savings and Loan Holding Companies that Are Community Banking Organizations," for more information on the inspection scope and frequency of holding companies with less than $100 billion in assets.

3. See SR-19-3/CA-19-2, "Large Financial Institution (LFI) Rating System."

INTERNATIONAL

Overseas Operations of U.S. Banking Organizations

The Federal Reserve has broad discretionary powers to regulate the foreign activities of member banks and BHCs so that, in financing U.S. trade and investments abroad, these U.S. banking organizations can be competitive with institutions of the host country without compromising the safety and soundness of their U.S. operations.[4] Under provisions of the Federal Reserve Act and the Board's Regulation K, SMBs may establish branches in foreign countries subject to, in most cases, the Board's prior approval. Furthermore, Section 25 of the Federal Reserve Act permits the Board to order special examinations of foreign branches, banks, or corporations as it may deem best. However, the Federal Reserve's examinations of a SMB's overseas operations and activities are usually conducted at the head office in the United States, where the ultimate responsibility for the overseas activities and facilities may lie. To adequately supervise international operations, examiners and supervisory staff should continuously monitor the bank's international activities to understand and assess the extent of its international strategy, trends, operations, and legal-entity structure as well as related governance, risk management, and internal controls.

Edge Act and Agreement Corporations

Under Sections 25 and 25A of the Federal Reserve Act, Edge Act and agreement corporations may engage in international banking and foreign financial transactions, and the Federal Reserve is responsible for conducting examinations of these entities and their branches. (See Regulation K, 12 CFR 211.) Edge corporations are chartered by the Board to conduct an international banking business. Agreement corporations are state-chartered companies that enter into an agreement with the Board to limit their operations to international banking. These corporations, which are usually subsidiaries of SMBs, provide their owner organizations with additional powers in two areas: (1) they may conduct a deposit and loan business in states other than that of the parent, provided that the business is strictly related to international transactions and (2) they have somewhat broader foreign-investment powers than SMBs, being able to invest in foreign financial organizations, such as finance companies and leasing companies, as well as in foreign banks.

U.S. Activities of Foreign Banking Organizations

Foreign entities have operations in the United States and are a significant element in the U.S. banking system. The Federal Reserve has significant authority over foreign banking organizations (FBOs). Its role was enhanced by the Foreign Bank Supervision Enhancement Act of 1991 (FBSEA). The Federal Reserve has broad oversight authority for the supervision and regulation of FBOs that engage in banking in the United States through branches, agencies, commercial lending companies, and subsidiary banks. In fulfilling this responsibility, the Federal Reserve conducts its own examinations and relies, to the fullest extent possible, on the reports of examination made by the primary federal or state supervisor of the branch or agency of the foreign bank.

Section 10(d) of the Federal Deposit Insurance Act (FDI Act) generally requires the appropriate federal banking agency for an insured depository institution (IDI) to conduct a full-scope, on-site examination at least once every 12 months, but permits a longer examination cycle—at least once every 18 months—for IDIs that meet certain criteria, including the requirement that the IDI must have total assets below a specified amount. Section 210 of the Economic Growth, Regulatory Relief, and Consumer Protection Act amended section 10(d) of the FDI Act to increase from $1 billion to $3 billion the total asset threshold below which an IDI may qualify for the 18-month examination cycle.[5]

Consistent with the requirements in Regulation H, Regulation K states that a U.S. branch or agency of a foreign bank with less than $3 billion in total assets may be eligible for an 18-month on-site examination cycle if it re-

4. For more information, see the "International Banking Activities," section in the *Bank Holding Company Supervision Manual*.

5. For more information, see the Board's Regulation K (12 CFR 211.26(c)).

ceived, at its most recent examination, a composite condition rating of "1" or "2" under the supervisory rating system (see SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations")[6] and if it satisfies the following criteria:

1) Either: (a) the foreign bank's most recently reported capital adequacy position consists of, or is equivalent to, tier 1 and total risk-based capital ratios of at least 6 percent and 10 percent, respectively, on a consolidated basis; *or* (b) the branch or agency has maintained on a daily basis, over the past three quarters, eligible assets in an amount not less than 108 percent of the preceding quarter's average third-party liabilities (determined consistent with applicable federal and state law) and sufficient liquidity is currently available to meet its obligations to third parties;
2) The branch or agency is not subject to a formal enforcement action or order by the Board, Federal Deposit Insurance Corporation, or Office of the Comptroller of the Currency; and
3) The branch or agency has not experienced a change in control during the preceding 12-month period in which a full-scope, on-site examination would have been required but for the 18-month examination cycle eligibility provision.[7]

The Federal Reserve may consider additional factors when determining the eligibility of a U.S. branch or agency of a foreign bank for an 18-month examination cycle, including whether (1) any of the individual components of the ROCA rating system of a branch or agency of a foreign bank is rated "3" or worse; (2) the results of any off-site surveillance indicate a deterioration in the condition of the branch or agency; (3) the size, relative importance, and role of a particular branch or agency in the context of the foreign bank's entire U.S. operations otherwise necessitate an annual examination; and (4) the condition of the foreign bank gives rise to such a need.[8] Refer to SR-18-7, "Updates to the Expanded Examination Cycle for Certain State Member Banks and U.S. Branches and Agencies of Foreign Banking Organizations."

The FBSEA also requires Federal Reserve approval for establishment of new FBO offices in the United States, and it gives the Federal Reserve the authority to terminate such offices.

Representative Offices of FBOs

U.S. representative offices of FBOs engage in diverse activities ranging from liaison, marketing, and research functions to operational activities such as loan production, administrative, and certain trading functions. Responsible Reserve Banks should incorporate the supervision of representative offices of FBOs into the overall supervisory strategy for the entire U.S. operations of the FBO. The extent of activities at the U.S. representative office directly affects of the level of supervision by the responsible Reserve Bank. For more information, see SR-19-15, "Revised Examination Guidelines for Representative Offices of Foreign Banks."

INFORMATION TECHNOLOGY ACTIVITIES

The Federal Reserve is responsible for conducting information technology (IT) examinations of SMBs, FBOs, and Edge Act corporations. Section 3 of the Bank Service Corporation Act (12 USC 1863, re-designated as the Bank Service Company Act) generally authorizes bank service companies to perform significant clerical, bookkeeping, or accounting functions, such as demand-deposit accounting and loan processing. Section 7 of the Bank Service Company Act (12 USC 1867) empowers the appropriate federal regulatory agency to examine banking services and operations regardless of whether these services are performed on or off the premises of a particular financial institution. When a financial institution contracts with an external company to provide data processing services, the third-party technology service provider's activities that pertain to financial institutions are subject to examination. Larger companies that operate in more than one regulatory district or region are examined pursuant to the Significant Service Provider examination program. IT ex-

6. SR-00-14 describes the ROCA rating system. The ROCA system represents a rating of the risk management, operational controls, compliance, and asset quality of an FBO's U.S. activities.
7. 12 CFR 211.26(c).
8. 12 CFR 211.26(c)(2)(ii).

aminations are based on a risk evaluation of four critical components: Audit, Management, Development and Acquisition, and Support and Delivery. Examiners evaluate the functions identified within each component to assess the institution's ability to identify, measure, monitor and control information technology risks.

TRUST DEPARTMENTS AND TRANSFER AGENT ACTIVITIES

The Federal Reserve examines trust departments of SMBs, state-chartered trust companies that are members of the Federal Reserve System, and certain nondepository trust company subsidiaries of holding companies. The Federal Reserve also has a program of examinations for those trust companies not supervised by any other federal banking agency. In addition, examinations are conducted of Edge Act corporations that conduct foreign trust or fiduciary services, in accordance with Regulation K (12 CFR 211). These examinations determine whether the trust functions are conducted in accordance with applicable fiduciary principles and with other appropriate laws and regulations. The federal banking agencies originally adopted the Uniform Interagency Trust Rating System (UITRS) in 1978 to evaluate the fiduciary activities of financial institutions on a uniform basis. The FFIEC issued modifications to the UITRS in 1998, in part, to align the UITRS rating definitions with existing safety-and-soundness ratings definitions and to emphasize the importance of sound risk-management processes.

To engage in providing trust or fiduciary services, a bank must have proper authorization under state or federal law. Under the laws of most states, this requires a specific approval of the state financial supervision agency. Similarly, pursuant to the Board's Regulation H (12 CFR 208.3(d)(2)), the Board's permission must be obtained before changing the general character of a bank's business.

Transfer agents record changes of owners of a security, maintain the issuer's security holder records, cancel and issue certificates, and distribute dividends. An SMB, a subsidiary thereof or a holding company conducting transfer agent activities, is required to register as a transfer agent with the Federal Reserve. Federal Reserve examiners conduct separate examinations of, and complete separate reports for, the transfer-agency activities of those SMBs and BHCs that are registered with the Federal Reserve as transfer agents.

MUNICIPAL SECURITIES DEALERS, GOVERNMENT SECURITIES DEALERS, AND CLEARING AGENCIES

As a result of the Securities Act Amendments of 1975, the Board is responsible for supervising SMBs and BHCs that act as municipal securities dealers or clearing agencies. Federal Reserve examiners conduct separate examinations of and complete separate reports for both of these activities. A bank, a separate department or division of a bank, or a holding company is required to register as a municipal securities dealer if it deals in municipal securities for its own account other than in a fiduciary capacity.

The Government Securities Act of 1986 (GSA), as amended, gives the Federal Reserve responsibility for examining the government securities activities of an SMB, foreign bank, state branch or state agency of a foreign bank, or commercial lending company owned or controlled by an FBO, or Edge Act or agreement corporation. The GSA requires all government securities brokers or dealers to register with the U.S. Securities and Exchange Commission. Government securities brokers and dealers receive specialized examinations to determine compliance with the GSA. For banks that have a lower level of government securities activities, compliance with the GSA is determined as part of the commercial examination.

The responsible Federal Reserve staff conducting the examination need to fully consider their supervisory responsibilities under the GSA in formulating their supervisory plans and conducting risk-focused examinations. In this regard, two key factors should be considered concerning government securities custodial activities. First, all depository institutions that hold government securities for customers, including securities under repurchase agreements, are subject to the U.S. Department of Treasury's GSA custody rules. Second, certain financial institutions that are exempt from the definition of a government securities broker or dealer are, nevertheless, subject to the U.S. Department of Treasury's government securities broker or dealer custody rules when they engage in hold-in-custody repurchase agreements. Under such agreements, the financial institution retains custody of securities that are the subject of a repurchase agreement between the financial institution and a counterparty.[9] These issues are more fully described in the examination procedures pertaining to government securities activities.

Reserve Bank staff are to separately report to Board staff only the results of reviews of government securities broker-dealer activities (and such broker-dealer's related custodial activities). See SR-06-8, "Reports of Examinations of Government Securities Activities," and its attachment. When preparing these reports, Reserve Banks have the option of either using the Summary Report of Examination of Government Securities Broker-Dealer Activities and Custodial Activities (GSB-D report) or forwarding a copy of the relevant section of the examination report that contains the same information as required in the GSB-D report.

A clearing agency acts as a custodian of securities for the settlement of securities transactions by bookkeeping entries. Separate reporting on the GSB-D form is not required for a government securities custodian that engages in hold-in-custody repurchase agreements but which is otherwise exempt from filing notice as a government securities broker or dealer. See the U.S. Department of Treasury's regulation on Protection of Customer Securities and Balances (17 CFR 403.5(a) and (d)), and SR-93-40, "Department of the Treasury Interpretation Regarding Allocation of Securities to Customer Accounts in Hold-in-Custody Repurchase Transactions."

9. See the U.S. Department of Treasury's regulation on Custodial Holdings of Government Securities by Depository Institutions, which governs holdings of government securities for customers, except those held in a fiduciary capacity (17 CFR 450.3).

CONSUMER EXAMINATIONS

Some banking laws, such as the Truth in Lending Act and the Truth in Savings Act, require banks to disclose information that helps consumers evaluate product options open to them. Other laws (for example, the Community Reinvestment Act and the Equal Credit Opportunity Act) require banks to help meet the credit needs in their communities and promote the availability of credit to all creditworthy applicants. Finally, laws such as the Fair Credit Reporting Act and the Fair Debt Collection Act provide consumer safeguards for the extension, collection, and reporting of consumer credit. At the Federal Reserve, specialized examiners conduct examinations to determine banks' compliance with these laws and their implementing regulations.

In 2010, Congress enacted the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act), which established the Consumer Financial Protection Bureau (CFPB). Under the Dodd-Frank Act, the CFPB has authority to examine IDIs and insured credit unions with consolidated assets of more than $10 billion and their affiliates, to assess compliance with the requirements of 18 enumerated federal consumer financial laws, and to assess risks to consumers and financial markets from consumer financial products and services. The Federal Reserve has consumer compliance supervisory responsibility for (1) SMBs with consolidated assets of more than $10 billion for their compliance with consumer protection laws not specifically assigned to the CFPB, and (2) SMBs with consolidated assets of $10 billion or less for their compliance with all consumer protection laws. The Federal Reserve is also responsible for conducting Community Reinvestment Act examinations for SMBs, regardless of asset size.

GENERAL CONFLICT-OF-INTEREST RULES

Federal Reserve System (System) employees, including examiners, are subject to conflict-of-interest rules designed to ensure compliance with criminal statutory prohibitions as well as to avoid any actual or apparent conflicts that may affect the objectivity and integrity of bank examinations and supervisory activities.

The conflict-of-interest rules are set forth in the federal statutes, section 5 of the Federal Reserve Administrative Manual (FRAM), and in each Reserve Bank's uniform code of conduct. The FRAM is a compilation of current Federal Reserve System operating policies and procedures issued by the Board of Governors that provides comprehensive ethics-related guidelines pertaining to System supervisory staff such as

- recusal from certain supervisory matters,
- borrowing prohibitions,
- prohibiting political communications with insured depository institutions or their affiliates, and
- post-employment restrictions.

System employees are also prohibited from any actual or apparent misuse of their official positions, including

- using one's Federal Reserve position for private gain,
- giving preferential treatment to any person or institution,
- losing independence or impartiality, or
- making decisions outside of official channels.

EXAMINER BORROWING RESTRICTIONS

A bank examiner is prohibited from accepting a loan or gratuity from any bank that they examined (18 U.S.C. 213). This restriction may also be applicable to a loan obtained by a System employee who has been issued a special, temporary, or ad hoc examiner credential.

A bank examiner found in violation of the borrowing prohibition can be—

- fined, imprisoned for no more than one year, or both;
- further fined a sum equal to the money loaned or gratuity given; and
- disqualified from holding office as an examiner.

In addition to the federal criminal restrictions, FRAM 5-041 prohibits examiners from directly or indirectly borrowing from (including having a line of credit or a credit card issued by) an institution for which the Federal Reserve is the primary supervisor other than through certain credit cards or home mortgage loans. In its discretion, a Reserve Bank also may prohibit examiners from borrowing from any subsidiary of an in-District bank holding company if such borrowing would hinder the Reserve Bank's ability to carry out its supervisory responsibilities by limiting staffing resources.

POST-EMPLOYMENT RESTRICTIONS FOR "SENIOR EXAMINERS"

In 2005, the federal bank regulatory agencies[1] issued rules to implement the post-employment restriction of section 10(k) of the Federal Deposit Insurance Act (FDI Act) as amended by the Intelligence Reform and Terrorism Prevention Act of 2004 (see 12 U.S.C. 1820).[2]

Post-Employment Compensation Restriction

The restriction prohibits a System employee who served as a "senior examiner" for a depository institution or depository institution holding company for two or more months during the examiner's final 12 months of employment with a Reserve Bank from knowingly accepting compensation for service as an employee, an officer,

1. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation.

2. Pub. L. 108-458, 118 Stat. 3638, 3751–53 (December 17, 2004). See also 12 CFR pt. 264a as well as SR-21-13/CA-21-10, "Revised Special Post-Employment Restriction for Senior Examiners and Work Paper Reviews for Departing Examiners," and its attachments.

a director, or a consultant from that depository institution or holding company, or from certain related entities. This prohibition applies for one year after an examiner leaves System employment. SR-21-13/CA-21-10 summarizes how the restriction applies to "senior examiners" based on the legal entity of the supervised institution at which the individual served as a senior examiner.

Definition of "Senior Examiner"

For purposes of this rule, an officer or employee (employee) of the System is considered to be a "senior examiner" for a particular depository institution or depository institution holding company[3] if the individual meets all of the following critheria:

- The employee has been authorized by the Board to conduct examinations or inspections on behalf of the Board.
- The employee has been assigned *continuing, broad, and lead* responsibility for examining or inspecting that the depository institution or the depository institution's holding company.
- The employee's responsibilities for examining, inspecting, and supervising the depository institution or the depository institution's holding company—
  - represent a *substantial portion* of the officer's or employee's assigned responsibilities, and
  - require the employee to interact routinely with officers or employees of the depository institution or depository institution holding company.
- The depository institution or the depository institution's holding company to which the employee has been assigned is not considered to be a "community banking organization." (See the "Community Bank Supervision Process" section of this manual for more information.)

This rule applies only to an individual serving in a leadership role who is dedicated to supervising a *single* depository institution (or group of affiliated depository institutions) or the depository institution's holding company.[4] Specifically, the restriction applies to examiners serving in principal roles requiring meaningful engagement with an institution, such as senior supervisory officers (SSOs), deputy SSOs, enterprise risk officers (EROs),[5] central points of contact (CPCs), deputy CPCs, and supervisory team leaders.[6]

The rule does not cover an individual who

- is dedicated to supervising a single depository institution (or group of affiliated depository institutiosns) or depository institution's holding company, but does not have leadership responsibilities in conjunction with this role;
- serves in a leadership role for *multiple* unaffiliated depository institutions or depository institutions' holding companies at the same time; or
- performs only periodic, short-term examinations of a depository institution or a depository institution's holding company, dedicating less than two months in a year to that institution or only longer-term examinations related to specific, unplanned events (e.g., fraud investigations) outside the normal supervisory cycle.

Penalties for Violating "Senior Examiner" Restriction

The restriction applies to a covered individual for one year after the individual terminates their employment with the Reserve Bank. If an ex-

3. This is applicable to financial market utilities, and nonbank financial companies that are designated by the Financial Stability Oversight Council for supervision by the Federal Reserve, only to the extent that they are depository institutions or depository institution holding companies.

4. An employee may be considered a "senior examiner" for only one institution or group of affiliated institutions at a time.

5. SSOs, Deputy SSOs, and EROs are job titles used by the Federal Reserve Bank of New York for senior officers serving on dedicated teams for large financial institutions. For comparative purposes, the SSO job title is considered equivalent to the CPC job title, while the ERO job title is equivalent to the deputy SSO/CPC job title.

6. A supervisory team leader is defined as any Reserve Bank officer or employee who serves in a leadership role as part of a dedicated supervisory team. Examples of supervisory team leaders may include risk team leaders, business line team leaders, and the chief operating officers assigned to or supporting a dedicated supervisory team. As discussed in SR-21-13/CA-21-10, these titles should be treated solely as examples of roles that could be considered a senior examiner. The application of 12 CFR pt. 264a is determined based on the roles and responsibilities of individuals rather than their specific job title. Questions regarding applicability and interpretation of this guidance and 12 CFR pt. 264a should be directed to a Reserve Bank's conflicts-of-interest staff.

aminer violates the one-year restriction, the statute requires the appropriate federal banking agency to seek an order of removal and industry-wide employment prohibition for up to five years, a civil money penalty of up to $250,000, or both.[7]

ADMINISTRATIVE PROCEDURES FOR IMPLEMENTING THE "SENIOR EXAMINER" RESTRICTION AND ADDITIONAL GUIDELINES

Reserve Banks must adopt the specific procedures to ensure that the "senior examiner" rule is properly implemented. SR-21-13/CA-21-10 was issued to promote consistency across the Federal Reserve System in identifying examiners subject to the post-employment ethics restrictions of section 10(k) of the FDI Act. Reserve Bank staff should review SR-21-13/CA-21-10, as well as its attachments, for more information on implementing the post-employment restriction on senior examiners.

7. In special circumstances, the Chair of the Board of Governors may waive the restriction for the "senior examiner" of the Federal Reserve by certifying in writing that granting the individual a waiver of the restriction would not affect the integrity of the Federal Reserve's supervisory program.

INTRODUCTION

The Federal Reserve System (the System) deploys algorithms in regular monitoring to identify state member banks that (1) take on positions or pursue strategies that could lead to problem situations, (2) have a weak or declining financial condition, or (3) fail to comply with regulations. The surveillance systems rely on the Call Report, other regulatory reports, and examination data, as well as external data sources, to identify institutions exhibiting increased risk profiles, financial deterioration, or compliance shortfalls. The surveillance process promotes timely supervisory attention to these cases and directs examination resources to them.

System bank surveillance algorithms focus on many areas evaluated in the supervisory process, such as capital adequacy, liquidity, credit risk, market risk, and overall safety and soundness. In addition, screens flag banks engaging in new or complex activities. The algorithmic system's main components are the Outlier List, Watch List, State Member Bank Monitoring Screen, and Intercompany Transactions Exception List, as implemented in SR-15-16, "Enhancements to the Federal Reserve System's Surveillance Program," December 10, 2015, and described below. The surveillance information helps identify weak or deteriorating banks and those with changing risk profiles or deviations from supervisory expectations.

In addition to regular monitoring, supervisory staff also use surveillance results in pre-examination planning. Before an on-site review, the examiner will determine a bank's status on the System's Outlier List, Watch List, State Member Bank Monitoring Screen, and Intercompany Transactions Exception List. This information is useful in determining the type of examination to be performed (full or targeted), its scope and intensity, and the staff resources needed. The surveillance results are used to identify bank activities that may warrant a higher degree of review or focus during an on-site examination. In this manner, surveillance information helps examiners and other supervisory staff plan and schedule more forward-looking, risk-focused examinations.

Bank Surveillance Program activities generally consist of the following three phases:

1. In the first phase, data are processed by the algorithms, ranging from simple rules to financial models and machine learning results. When the algorithms detect departures from expected patterns involving banks, the results are transmitted via Performance Report Information and Surveillance Monitoring (PRISM), a web application available to Federal Reserve examiners and other supervisory staff for interactive data analysis.
2. The second phase begins as supervisory staff use additional tools and data to solidify the initial impressions presented by first-phase surveillance results. Key examples are the Focus Report—a web application available to Federal Reserve examiners and other supervisory staff for interactive risk assessment—and the Uniform Bank Performance Report. In addition, aggregate data views and reports of financial condition at the supervisory portfolio and industry levels can help place a particular bank's status in context.
3. The third phase involves the development of supervisory responses to the information generated in the first two steps. A primary goal is to focus supervisory resources on excessive risk-taking, the risk of emerging financial difficulties, and potential compliance shortcomings. Possible actions include intensification of an on-site review or acceleration of its scheduling. When problems are identified, follow-up by examiners promotes correction and resolution. By also identifying low-risk situations, the Bank Surveillance Program promotes the application of more streamlined supervisory approaches for such cases.

OUTLIER LIST

An Outlier List highlights state member banks with elevated risk-taking and identifies those with expanded or new areas of risk-taking. It is supported by "Outlier Metrics" in the form of algorithms generating risk classifications of low, moderate, or high for individual risk and performance dimensions. The Outlier List includes banks categorized as high risk within at least one risk or performance dimension. The risk identification algorithms can be based on a broad range of approaches and may evolve over time.

Examiners and other supervisory staff should use the Outlier List to monitor risk-taking and promote adequate risk management and mitigation, with the goal of bolstering banks' capacity to prevent or buffer financial losses. However, no regular write-up or documentation requirement is tied to the Outlier List.

The Outlier Metrics also assist examiners and other supervisory staff in determining the scope of a safety-and-soundness examination. The Outlier Metrics' role in pre-examination planning is particularly strong at community and regional state member banks, where a subset of the Outlier Metrics is implemented as in SR-19-9, "Bank Exams Tailored to Risk (BETR)," June 3, 2019. BETR's Outlier Metrics combine with examiner judgment to classify the levels of risk at a state member bank within individual risk dimensions, such as credit, liquidity, and operational risk. The bank's examination is then tailored to reflect the levels of risk present and minimize regulatory burden for the bank.

BETR's primary objectives are the following:

1. Identify a state member bank's activities that are low risk and apply appropriately streamlined examination work programs to those areas, thereby conserving supervisory staff resources.
2. Identify a state member bank's high-risk activities and target them for enhanced supervisory attention, thereby directing supervisory resources to where they are most needed.
3. For the remaining moderate-risk activities, implement examination work programs of average intensity.

BETR's Outlier Metrics gauge the potential for a state member bank to experience adverse outcomes, such as highly unfavorable financial trends, significant performance shortfalls, severe losses, or supervisory rating downgrades, over a 12- to 24-month timeframe, and under unfavorable market conditions. As such, the metrics assist examiners in classifying the levels of risk related to a bank's activities.

For each risk dimension considered by BETR, the Outlier Metrics classify the corresponding activity of a state member bank. Low-risk activities pose the least potential for adverse outcomes to a bank, while high-risk activities entail the greatest chance of unfavorable results. The following definitions generally apply:

- *High risk:* Under unfavorable market conditions, such activities often lead to adverse outcomes.
- *Moderate risk:* In unfavorable markets, these activities occasionally result in adverse outcomes.
- *Low risk:* The expected incidence of adverse outcomes is low, irrespective of market conditions.

The design features of the Outlier Metrics used in BETR are as follows:

1. *Data-driven:* The information content, or predictive capacity, of the metrics is confirmed via data analysis. This feature involves the estimation and back-testing of the metrics using data from previous banking cycles.
2. *Forward-looking:* The metrics gauge the risk posture of a state member bank and its susceptibility to severe losses or substantial underperformance. This feature is supported by estimating the relationship between risk indicators at a given point in time and bank performance a year or two later, particularly under unfavorable market conditions.
3. *Granular:* The metrics provide insight into individual risk dimensions. This feature is incorporated by developing the metrics separately for each risk dimension considered.

Outlier Metrics provide examiners with a data-driven starting point for determining the scope of a state member bank's examination. In cases where examiners are aware of factors indicating that an alternative risk classification for a particular risk dimension would be more appropriate, they should exercise supervisory judgment and adjust the risk tier during the scoping process. Examiners should then record their rationale in appropriate work papers and plan the examination work program accordingly.

BETR's Outlier Metrics should be used to allocate more examiner resources to review high-risk situations, while conserving resources in lower risk cases. The examiner should exercise prudent supervisory judgment and consider an institution's Outlier List status and all other applicable information, including the Watch List, State Member Bank Monitoring Screen, Intercompany Transactions Exception List, and previous examination results, when determining the scope and nature of the examination work required.

When the Outlier Metrics and other applicable information indicate a specific risk is high, the examiner generally should apply the fullest force of supervisory resources. Conversely, when the Outlier Metrics and other applicable information indicate a specific risk is moderate, and especially when risk is low, the examiner may be able to complete a smaller set of procedures. However, if during the course of an examination indications point to higher risk than anticipated or significant weaknesses in risk management, the examiner is expected to increase the examination's intensity or expand its scope, as needed.

WATCH LIST

The Watch List is a primary means for monitoring state member bank performance and condition between on-site examinations. It identifies the risk of emerging financial weaknesses among banks and includes all state member banks with composite safety-and-soundness ratings consistent with financial viability, but surveillance grades of "D" or "F," pointing to the possibility of deterioration in examination findings going forward.

To generate the surveillance grades, the Supervision and Regulation Statistical Assessment of Bank Risk (SR-SABR) early-warning model is applied to financial and supervisory information for each bank. The SR-SABR rating consists of the composite rating most recently assigned to a bank via the examination process, coupled with a surveillance letter grade (A, B, C, D, or F) reflecting the bank's estimated financial condition relative to others in the same rating class.[1]

SR-SABR ratings are designed for use both in monitoring and in determining the scope of an examination. An accompanying Schedule of Risk Factors (SRF) highlights specific indicators leading the model to flag a particular bank as strong or weak. Through ongoing monitoring, examiners and other supervisory staff review each state member bank on the Watch List to assess its financial condition and discern whether substantial deterioration is evident or impending. In such cases, they determine whether an examination or other supervisory initiative might be needed. The Watch List, much like the Outlier List and its metrics, can also be used in pre-examination planning to target potentially deteriorating situations for the most extensive reviews.

At times, Reserve Bank staff may need to produce supporting documentation to explain the reasons for a bank's placement on the Watch List and outline the appropriate supervisory response. For banks other than community banks, this type of information is often already contained in quarterly supervisory write-ups outside of the Watch List process. Separate surveillance write-ups are required for community banks on the Watch List when any of the following criteria are met:

1. The current SR-SABR rating is worse than the prior quarter; or
2. The SR-SABR rating is the same as the prior quarter, but the SRF identifies one or more new contributing factors; or
3. The most recent requirement for a write-up occurred four quarters earlier.

The assessments and conclusions comprising a write-up should be brief and supported by analysis. A Watch List write-up should

1. Summarize the factors leading to Watch List placement;
2. Describe any response from the bank to those factors;
3. Assess the likelihood of further financial deterioration;
4. Judge whether assigned safety-and-soundness ratings are accurate; and
5. Determine whether the timing of the next examination should be accelerated.

Corrective action associated with newly identified problems must be initiated promptly by Reserve Banks. Follow-up action may include correspondence or meetings with a bank's management or an on-site examination. Problem situations should be closely monitored by supervisory staff until they have been corrected or otherwise resolved.

1. In the model, banks with satisfactory composite ratings are grouped together into a single rating class. An SR-SABR grade of "A" denotes a bank with strong indicators relative to others in the same rating class, while an "F" indicates major weaknesses. Two grades are assigned to each bank, one reflecting the estimated probability of a downgrade to a worse rating class (Adverse Change grade) and another reflecting the estimated probability of critical undercapitalization or failure (Viability grade). The overall SR-SABR rating is based on the worse of the two grades.

STATE MEMBER BANK MONITORING SCREEN

The State Member Bank Monitoring Screen identifies complex activities, monitors compliance with regulations, and more generally can be used to detect novelties or departures from expected patterns. The monitoring screen identifies banks that have failed key screening criteria. The screening criteria are updated periodically and change over time. Examiners and other supervisory staff review State Member Bank Monitoring Screen results quarterly and follow up with supervisory initiatives when appropriate.

INTERCOMPANY TRANSACTIONS EXCEPTION LIST

The Intercompany Transactions Exception List helps track compliance with section 23A of the Federal Reserve Act;[2] it is a specialized monitoring process utilizing data from the FR Y-8, together with information from the Call Report.

For each depository institution possibly exceeding section 23A limits, supervisory staff perform the following: (1) follow up with the holding company submitting the FR Y-8 to verify the data are accurate; (2) if an error caused the exception, require an amended report; and (3) if the data are correct, and a depository institution appears to have had covered transactions exceeding section 23A limits, determine the nature and extent of the apparent violation. Reserve Bank staff produce a written review of their findings for each depository institution on the list. The review addresses any apparent violations or reporting errors, along with any corrective action taken.

2. See also the Board's Regulation W at 12 CFR 223.

1. To identify major changes in the risk posture of the bank between examinations.
2. To identify major changes in the financial condition of the bank between examinations.
3. To assist in determining the scope of the examination and the priority of work to be performed.
4. To check the validity of the data being reported by the bank.
5. To investigate areas where attention or an in-depth review is indicated.

1. Obtain any surveillance results, such as the Outlier List, Watch List, State Member Bank Monitoring Screen, and Intercompany Transactions Exception List, together with any other reports or analyses prepared by the Reserve Bank or Board, that have been generated for the bank.
2. Review the information obtained in step 1, and if necessary for clarification discuss those findings with surveillance staff.
3. Conduct a pre-examination analysis using the information from steps 1 and 2, together with the current Call Report, Uniform Bank Performance Report, prior examination report, and any other applicable information. This analysis should be considered when determining the scope of the examination and when making staffing decisions.
4. Follow up on any unusual aspects of the surveillance information, other reports and analyses, and newly obtained data.
5. Perform validity checks necessary to ensure the quality of reported data. This would include such normal examination procedures as validating Call Report information and confirming the accuracy and soundness of accounting practices.

INTRODUCTION

Workpapers are the written documentation of the procedures followed and the conclusions reached during the examination of a bank. Accordingly, they include, but are not necessarily limited to, examination procedures and verifications, memoranda, schedules, questionnaires, checklists, abstracts of bank documents and analyses prepared or obtained by examiners.

The definition of workpapers, their purpose, and their quality and organization are important because the workpapers as a whole should support the information and conclusions contained in the related report of examination. The primary purposes of workpapers are to—

- organize the material assembled during an examination to facilitate review and future reference.
- aid the examiner in efficiently conducting the examination.
- document the policies, practices, procedures and internal controls of the bank.
- provide written support of the examination and audit procedures performed during the examination.
- document the results of testing and formalize the examiner's conclusions.
- substantiate the assertions of fact or opinion contained in the report of examination.

They also are useful as—

- a tool for the examiner-in-charge to use in planning, directing, and coordinating the work of the assistants.
- a means of evaluating the quality of the work performed.
- a guide in estimating future personnel and time requirements.
- a record of the procedures used by the bank to assemble data for reports to the Board of Governors of the Federal Reserve System.
- a guide to assist in the direction of subsequent examinations, inquiries and studies.

The initial step in preparing workpapers is to review, where available, the applicable sections of supporting data prepared during the prior examination. When reviewing prior workpapers, the examiner should consider the data prepared in each area for—

- information that is of a continuing or permanent nature.
- guidance in preparation of workpapers for the current examination.
- an indication of changes or inconsistencies in accounting procedures or methods of their application since the last examination.

Accumulation of relevant documentation consistent with prior examinations, however, is often insufficient. Workpapers should be prepared in a manner designed to facilitate an objective review, should be organized to support an examiner's current findings and should document the scope of the current examination. Minimum content necessary for each section of workpapers includes:

Source of Information—This is important, not only in identifying the bank, but also in identifying the preparer. In subsequent examinations, the preparer should be able to readily determine the bank personnel from whom the information was obtained during the previous examination as well as the examiner who prepared the workpapers. Accordingly, each workpaper should include—

- bank name and subdivision thereof, either functional or financial.
- statement of title or purpose of the specific analysis or schedule.
- specific identification of dates, examination date and work performance date.
- initials of preparer and initials indicating review by the examiner designated to perform that function. Although appropriate use may be made of initials, the full names and initials of all examiners should appear on a time and planning summary or on an attachment to the file to facilitate future identification.
- name and title of person, or description of records, that provided the information needed to complete the workpaper.
- an index number identifying the workpaper and facilitating organization of the workpaper files.

Scope of Work—This includes an indication of the nature, timing and extent of testing in application of examination and audit procedures. It also includes the examiner's evaluation of and reliance on internal and external audit procedures and compliance testing of internal controls. To the extent that this information is contained in other workpapers, such as an examination procedure or a questionnaire, a reference to the appropriate workpaper will be sufficient.

Conclusions—The examiner should develop conclusions, in accordance with the examination objectives, with respect to the information obtained, documentation provided and the results of the examination and audit procedures performed. Such conclusions provide the basis for information contained in the report of examination.

To develop workpapers that have the qualities of clarity, completeness and conciseness, adequate planning and organization of content are essential. Therefore, before the workpaper is prepared, the examiner should determine the following:

- What examination objective will be satisfied by preparing the analysis or workpaper?
- Can preparation of the analysis be avoided by testing the bank's records and indicating the nature and extent of testing in an examination or an audit procedure or by comment on a related schedule or another supporting document?
- Is the analysis necessary to support the information in the report of examination?

Subsequent to the determination that an analysis is required, but before initiating preparation, the examiner should decide if—

- previous examination analyses can be adapted and carried forward to the current examination.
- the analysis can be prepared by an internal auditor or other bank personnel.
- the format of the analysis may be designed in a manner to facilitate its use in future examinations.

Once it has been determined that preparation of an analysis is required, the examiner should consider the following techniques that promote clarity of workpaper preparation:

- Restrict writing to only one side of the paper.
- Use a standard size sheet of paper large enough to avoid overcrowding.
- Condense information for simplicity.

Frequently, time can be saved by carrying forward workpapers from one examination to the next. Thus, when laying out an analysis that might be repeated in future examinations, the examiner should arrange it in a manner to facilitate future use. For example, extra columns may be left blank within an account analysis displaying little activity for insertion of transaction information during future examinations. In such a situation, appropriate space (boxes and column headings) should be provided for the signature or initials of the preparer and reviewer during each examination. When a workpaper is removed from one examination file and carried forward, a notation should be made in the file from which the paper is extracted. This is important in the event workpapers applicable to a particular examination are needed several years after the completion of the examination.

INITIAL PREPARATION BY OTHERS

Although all items included in the report of examination should be supported by workpapers, their preparation may not always require original work by the examiner. Frequently, arrangements can be made for bank personnel, including internal auditors, to prepare workpapers for examination use or to make available papers prepared by them as part of their regular duties. Examples include outstanding checklists, lists of outstanding certificates of deposit, schedules of employee borrowings, and debt maturity schedules. The extent to which examiners can utilize analyses and data prepared by bank personnel increases the efficiency with which examination procedures are completed.

As part of the initial examination planning process, arrangements should be made with appropriate bank management for the timely completion of bank-prepared data and information. The coordinating bank officer(s) must understand what information is being requested and why it is being requested, in order to avoid confusion and unnecessary regulatory burden. Arrangements, however, may have to be made for the bank to supply supporting details or other schedules or items to comply with the requests.

Upon receipt of bank-prepared analyses, an examiner should review the documents for overall completeness and note the date of receipt. This facilitates future planning and provides a ready reference as to which analyses have been received from the bank at any given point during the examination. Also, all bank-prepared workpapers should be tested and the nature and extent of testing performed by the examiner should be indicated on the papers.

INITIAL APPROACH IN WORKPAPER PREPARATION

The initial approach in preparing workpapers that support balances in the statement of condition is quantitative. In using this approach, the examiner obtains an analysis of the composition of the account balance as of the examination date. This inventory of the composition may be represented by a trial balance of loans, a listing of outstanding official checks, a listing of individual deposit accounts, or other similar items. Only after determining the composition and insuring that the total agrees with the bank's records is the examiner in a position to perform examination procedures and to arrive at a conclusion about the overall quality of the items comprising the balance.

For certain analyses, however, it is preferable to include account activity (transactions) in the workpapers. Typical examples of such analyses are those of bank premises and equipment and of reserve for possible loan losses. The format for reserve for possible loan losses should include beginning balances (prior examination ending balances), provisions for loan losses, collections, charge-offs, other transactions (transfers to/from undivided profits) and ending balances as of the examination date.

CONTROL AND REVIEW

All examiners assigned to an examination should insure that workpapers are controlled at all times while the examination is in progress. For example, when in the bank's offices, the workpapers should be secured at night and safeguarded during the lunch hour or at other times when no examining personnel are present in the immediate vicinity. It is essential to completely control confidential information provided by the bank. In addition, information relating to the extent of tests and similar details of examination procedures should not be made available to bank employees.

In cases where customary examination practices are not practical, alternative procedures and the extent to which they are applied should be documented. The need for completeness requires that there be no open items, unfinished operations or unanswered questions in the workpapers at the conclusion of the examination.

The clarity of workpapers should be such that an examiner or Federal Reserve official unfamiliar with the work could readily understand it. Handwritten commentaries should be legible, concise and should support the examiner's conclusions. Descriptions of work done, notations of conferences with bankers, conclusions reached and explanations of symbols used should be free from ambiguity or obscurity. Excessive use of symbols usually can be avoided by expanding a comment to include the nature and extent of work performed instead of using separate symbols for each portion of the work performed. In addition, instructions to assisting personnel concerning standards or workpaper content are necessary to ensure that they will meet the quality standards of the Federal Reserve. When workpapers have the necessary qualities of completeness, clarity, conciseness and neatness, a qualified reviewer may easily determine their relative value in support of conclusions and objectives reached. Incomplete, unclear or vague workpapers should, and usually will, lead a reviewer to the conclusion that the examination has not been adequately performed.

REVIEW PROCEDURES

Experienced personnel must review all workpapers prepared during an examination. Usually that review is performed by the examiner-in-charge, although in some cases, the examiner-in-charge may designate other experienced personnel to perform an initial review. An overall review is then performed by the examiner-in-charge. The two primary purposes of a review of workpapers by senior personnel are to determine that the work is adequate given the circumstances, and to ensure that the record is sufficient to support the conclusions reached in the report of examination. The timely review of workpapers and subsequent discussion of them with the individual who prepared them also is one of the more effective procedures for on-the-job training.

Normally, the review should be performed as soon as practicable after the completion of each work area. This review ideally occurs at the bank's office so that if the need for obtaining additional information arises or additional work is required the matter can be promptly attended to with minimum loss of efficiency.

When the review of workpapers is completed, the reviewer should sign or initial the applicable documents. Although all workpapers should be reviewed, the depth and degree of detail depends on factors such as:

- The nature of the work and its relative importance to the overall examination objectives.
- The extent to which the reviewer has been associated with the area during the examination.
- The experience of the examiners who have carried out the various operations.

Professional judgment must be exercised throughout the review process.

ORGANIZATION OF WORKPAPER FILES

Administration of an examination includes—

- organizing the workpaper files.
- delegating authority for completion of all applicable workpaper sections.
- reviewing and assembling the completed workpapers.

To ensure efficiency in locating information contained in the workpapers and completion of all necessary procedures, workpapers should be filed and indexed in a standard manner.

FILES

The file provides the organizational vehicle to assemble workpapers applicable to specific areas of the examination. Files might include detailed workpapers related to—

- management appraisal.
- overall conclusions about the condition of the bank.
- cash accounts.
- investments.
- loans.
- reserve for possible loan losses.
- bank premises and equipment.
- other assets.
- deposits.
- other liabilities.
- capital accounts and dividends.

Each individual file would normally include—

- related examination and audit procedures.
- detailed information and other documentation necessary to indicate the specific procedures performed, the extent of such procedures and the examiner's conclusions for the specific area.
- a summary, in comparative form, of the supporting general ledger balances with appropriate cross-references.

Judgment is required as to what the file should include on any specific examination. Lengthy documents should be summarized or highlighted (underlined) so that the examiner who is performing the work in the related area can readily locate the important provisions, without having to read the entire document. It also may be desirable to have a complete copy of the document in the file to support the summaries or answer questions of a specific legal nature.

Examples of documents that might be contained in the files are—

- a brief history and organization of the bank.
- organization charts of applicable departments within the bank.
- copies of, or excerpts from, the charter and bylaws.
- copies of capital stock certificates, debentures agreements and lease agreements.
- excerpts from minutes or contracts that are of interest beyond the current year.
- a chart of accounts and an accounting manual, if available, supplemented by descriptions of unique accounts and unusual accounting methods.
- lists of names and titles of the board of directors, important committees and relevant departmental personnel.

Indexing and Cross-Referencing

To promote efficiency and help ensure that all applicable areas of an examination have been considered and documented, the use of an indexing system aids in the organization of workpaper files. A general outline or index including all examination areas provides a basis for organization to which a numbering or other sequential system can be assigned and applied to each workpaper file.

When all workpapers pertinent to a specific area of the examination have been completed, a cover sheet listing the contents of each file should be attached to the front to provide a permanent record for reference. This permits not only efficient location of a set of workpapers pertinent to a specific area of the examination (for example, cash or commercial loans), but also facilitates the location of a specific analysis (or other document) within the set.

Amounts or other pertinent information appearing in more than one place in the workpapers should be cross-referenced between the analyses. A notation on the index, including appropriate cross-referencing of those items removed or filed elsewhere, facilitates location of specific data and records and also helps to prevent inadvertent loss of documents. An example is the cross-referencing of net charge-offs obtained in the review of the reserve for possible loan losses to the amount approved in the board of director's minutes. Proper cross-referencing is important because it—

- serves as a means of locating work performed for a particular account or group of accounts.
- identifies the source of supporting amounts in a particular analysis.
- facilitates the review of the workpapers.
- helps in following the workpapers during the succeeding examination.

WORKPAPER RETENTION

Examiners should retain on a readily available basis those workpapers from—

- the most recent full-scope Federal Reserve examination.
- the most recent general EDP examination.
- examinations of banks requiring or recommended for more than normal or special supervisory attention (composite rating of 3, 4 or 5; consumer compliance rating of 3, 4 or 5; EDP departments rated 4 or 5; or those subject to administrative action such as civil money penalties) until such banks are no longer the subject of such scrutiny.
- examinations disclosing conditions that may lead eventually to more than normal or special supervisory attention, as described above, until the supporting workpapers are no longer appropriate.
- examinations disclosing conditions that lead, or may eventually lead, to a criminal referral or criminal investigation.

These guidelines are the minimum required retention period for workpapers; longer retention periods may be set by individual Reserve Banks.

INTRODUCTION

The board of directors plays an essential role in the management of a bank's operations and is directly responsible for the soundness of the bank. As a result, in some cases, it is useful for Federal Reserve examiners and/or officers to meet with boards of directors. These meetings provide examiners with the opportunity to inform directors of examination findings, discuss the bank's plans and prospects with the board, and highlight important supervisory issues, particularly in cases that may require initiation of informal or formal supervisory actions. Meetings with boards of directors also provide examiners with a limited opportunity to ascertain the directors' knowledge of and interest in the bank's operations.

If Federal Reserve examiners believe it is necessary or desirable, they may conduct meetings with directors immediately after the on-site portion of an examination and before an examination report is completed and distributed. Such meetings are particularly encouraged when they can be conducted as part of regularly scheduled board meetings that coincide with the on-site examination.

When a bank is determined to be a problem or has exhibited significant deterioration, Federal Reserve examiners must conduct meetings with the directors. Such meetings require the participation of Federal Reserve officers and are typically conducted after the report of examination has been distributed.

GENERAL GUIDELINES

Meetings with boards of directors must be tailored to the individual circumstances of each bank, as well as to the Reserve Bank's supervisory objectives. As a result, uniform procedures for the conduct of these meetings cannot be specified. Nonetheless, the following guidelines should be considered when planning and conducting meetings with bank directors.

Content of Meetings

When participating in meetings with bank boards, examiners should present only information needed by, or relevant to, the directorate. This information varies depending on the bank's circumstances; however, examiners should inform the board of the examiner's assessment of the bank's condition; highlight any deficiencies requiring the board's attention; and solicit the board's views on the bank's condition, operations, and prospects. In addition, examiners should obtain the board's commitment to address promptly the deficiencies identified in the examination. Examiners should encourage inquiries and discussions with the directors to learn more about the directors' roles and performance and to foster a good working relationship with them.

Data supporting the examiner's conclusions and comments should be prepared and presented to board members in a professional manner. Slides, handouts, and other visual aids are encouraged. Comparative figures and ratios from previous and present examinations should be reviewed prior to the meeting, with handouts and visual aids highlighting adverse trends.

Outlines for Meetings

Examiners should prepare detailed outlines of each meeting's discussion points and goals. Following is a sample outline that examiners may use as a guide to prepare for meetings with directors. It is not all-inclusive, and examiners should not be limited by its content in developing their own presentations. Generally, comments on these items are warranted when concerns have arisen during the current examination, or when significant changes—positive or negative—have occurred since the last examination.

I. Introductory remarks by Federal Reserve Bank official or examiner
   A. Federal Reserve Bank policy regarding board meeting
   B. Purpose of the meeting
II. Examiner's presentation
   A. Duties and responsibilities of directors
      1. Effectively supervise the bank's affairs
      2. Select competent management
      3. Adopt and follow sound, written policies and objectives
      4. Avoid self-serving practices

5. Be informed of the bank's financial condition and management policies
6. Maintain reasonable capitalization
7. Observe banking laws and regulations

B. Adequacy and effectiveness of policies and procedures
1. Lending
2. Investments
3. Asset/liability management
4. Personnel
5. Operations

C. Adequacy and accuracy of bank's reporting systems
1. Reports of the board and committees
2. Management reports to the board
3. Management information systems
4. Regulatory reports

D. Condition of the bank/results of the examination
1. Asset quality
2. Violations of law, evidence of self-dealing
3. Capital
4. Management
5. Liquidity
6. Earnings
7. Internal controls and audit coverage
8. Future prospects
9. Relationships with bank holding company

E. Required corrective action on problems and board commitment

III. Summary of overall conclusions

IV. Questions from the board

Procedural Issues

In general, meetings with the full board are preferable. In certain cases, however, a Reserve Bank may determine that meeting with a board committee, such as the executive or audit committee, will fulfill the Reserve Bank's supervisory objectives. Any person connected with the bank, such as an attorney, auditor, or holding company representative, may attend the board of directors meeting at which the overall findings and conclusions of the examination are discussed. The attendance of any such party should be noted in the minutes of the meeting. However, the examiner may excuse such persons during any portion of his or her presentation if deemed appropriate. Attendance by honorary directors to participate in discussions and review the examination report is also permitted.

Generally, at least one member of a Reserve Bank's official staff is expected to represent the Federal Reserve at meetings with directors of banks. However, for meetings with the directors of banks that have less than $500 million in assets, Reserve Banks are granted the discretion to have senior examination staff represent the Reserve Bank. The participation of Reserve Bank presidents in meetings with directors is left to the discretion of the Reserve Bank.

To the extent possible, meetings with the boards of directors of state member banks should include representatives of the relevant state banking authority. A meeting with the directors of a bank that is owned by a holding company may be held at the same time as a meeting with the directors of the holding company, when appropriate.

Whenever a meeting is held between an examiner and a board, the examiner should prepare written comments on the meeting for examination workpapers.

MEETINGS WITH BOARDS OF PROBLEM BANKS AND BANKS EXHIBITING SIGNIFICANT DETERIORATION

When an examination reveals that a bank has significant problems, Federal Reserve policy requires that a meeting be held with its board of directors. The policy further requires that a written summary of examination findings—separate from the complete examination report—be distributed to each director in such cases. A senior Reserve Bank official also must participate in communicating and presenting examination findings on problem banks to their boards of directors. This policy's objective is to ensure that each director of a state member bank considered to be a problem or to have a significant weakness clearly understands the nature and dimension of the problems, as well as the joint and several responsibility of the directors to effect correction.

Criteria Requiring Meetings with Problem Banks

A meeting with the board of directors is to be held after any full-scope examination in which a state member bank is assigned a CAMELS composite rating of 4 or 5. A meeting is also required if a bank is rated composite 3 and its condition appears to be deteriorating or has shown little improvement since a previous examination in which it received a composite 3 rating. Furthermore, a meeting should be held after a targeted examination if deemed appropriate and desirable by the Reserve Bank. An official of the Reserve Bank and the examiner-in-charge should also meet with a board if any of the following conditions exist:

- The bank is entering into a formal written agreement with the Federal Reserve, a cease-and-desist order is being issued, or the bank is being placed under a memorandum of understanding.
- The bank is already operating under a supervisory action but is in noncompliance with significant provisions or has experienced significant deterioration since the action was initiated.
- Self-serving activities or other unsafe and unsound practices exist in the bank.
- Any other condition or practice that places, or could place, the bank in a seriously weakened or extended condition has been identified during the examination.

Additional Guidelines

Senior Reserve Bank officials are expected to participate in meetings with the directors of problem banks, with the seniority of the participating official determined by the condition and size of the bank. The larger the organization or the more serious its problems, the more senior the Federal Reserve official should be.

A meeting with the board of directors of a problem or deteriorating bank should include a formal, structured presentation with a clear statement that the bank is considered a "problem institution" or is about to become a problem institution if existing conditions deteriorate. The presentation should further make clear the nature of problems confronting the bank, citing examination findings such as the following:

- deficiencies in capital, asset quality, earnings, or liquidity
- violations of law
- inadequacies in policies, practices, and reporting systems necessary for proper risk management and organizational administration
- lack of well-documented lending, collection, investment, asset/liability management, and risk-management policies or the failure to ensure that such policies are being followed
- failure of management to address previously discussed deficiencies
- lack of reporting systems sufficient to keep senior management and the board of directors fully informed
- failure of the board of directors to ensure the active management of the organization

MEETINGS WITH BOARDS OF MULTINATIONAL AND MAJOR REGIONAL BANKS

A meeting with the board of directors is required after every full-scope examination of a multinational organization or major regional organization with assets in excess of $5 billion. Reserve Banks also are encouraged to conduct such meetings after every full-scope examination of a regional bank with assets in excess of $1 billion.

MEETINGS WITH BOARDS OF DE NOVO BANKS

After the approval of a membership application, but before a de novo bank is opened, Reserve Bank staff should meet with the full board of directors to discuss applicable statutes, regulations, policies, and supervisory procedures. As with all meetings with directors, the agenda for this meeting should be tailored to the individual circumstances of the bank. At a minimum, the Reserve Bank should apprise the directors of their responsibilities and emphasize their need to adhere to sound operating policies.

DIRECTOR'S SUMMARY OF EXAMINATION FINDINGS

In addition to the report of examination, Federal Reserve Banks must provide written reports to directors summarizing the examination findings for all banks rated composite 3, 4, or 5, and for those rated composite 1 or 2 that show signs of significant deterioration in condition or apparent violations of law. The summary reports should focus on identified problems—rather than on the strength of the organization—and present the bank's deficiencies succinctly and clearly. In all cases, the types of actions directors and management should take to address identified problems should be specifically stated. Directors of institutions rated 4 or 5 are to be told their banks are ''problem'' institutions that warrant ''special supervisory attention.'' Directors of banks rated 3 are to be informed that the bank's condition is ''not satisfactory,'' that the bank is subject to ''more-than-normal supervision,'' and that the bank may become a ''problem'' if weaknesses are not addressed adequately.

Summary reports should emphasize the responsibilities of the directors to ensure that corrective actions are taken to address all deficiencies noted in the pages of the full bank examination report entitled ''Matters Requiring Board Attention'' and ''Examination Conclusions and Comments.'' In addition, the organization, style, and content of the summary report should be similar, if not identical, to the text of these report pages.

Summary reports should be sent directly to the bank's management for distribution to each director. The transmittal letter to the bank should state the report is a summary of identified problems and contemplated supervisory actions and direct bank management to distribute the summary report to each director. The letter should further instruct each director to read the report, sign the introductory statement attesting to having read the report, and return the report to management. Management should keep copies of the directors' signed statements on file, but should destroy all but one file copy of the summary report itself.

The summary report must be completed and distributed before any meeting between Reserve Bank officials and the bank's board of directors, to provide the directors with prior notice of deficiencies to be discussed. Reserve Banks should also make every effort to distribute the complete examination report to management before meeting with a board of directors.

Meetings with Board of Directors
Examination Objectives
Effective date March 1984

Section 1040.2

1. To foster a better understanding of the respective roles of directors and examiners.
2. To inform the directors of the examination scope and the bank's condition.
3. To obtain information concerning future plans and proposed changes in bank policies that may have significant impact on the future condition of the bank.
4. To reach an agreement on any significant problems.
5. To obtain a commitment to initiate appropriate corrective action.

1. Inform management that a meeting will be held with the board of directors. State the Federal Reserve Bank's policy and the purpose of the meeting and establish a tentative date.
2. Finalize the time and place of the meeting when confident that a thorough understanding of the condition of the bank will be developed. If the meeting is to be a "special meeting" resulting from serious areas of concern, perform procedure 7.
3. Develop an outline of matters to be covered at the meeting by reviewing results of the examination.
4. Prepare supportive data for the meeting by:
   a. Compiling a list of comments and criticisms.
   b. Preparing schedules of comparative figures for discussion.
   c. Affirming that the bank has responded adequately to Reserve Bank requests.
   d. Preparing questions to elicit opinions and attitudes of individual board members.
5. Prepare a brief formal agenda for the meeting and reproduce enough copies to distribute to participants.
6. If it is decided that a meeting will be held:
   a. Communicate with Reserve Bank office to:
      - Notify office staff of the proposed date and place of the meeting. (Confirm time and place when final.)
      - Determine whether a Reserve Bank official will attend.
      - Determine whether the Reserve Bank official has suggestions for the agenda.
   b. Submit a copy of the agenda and outline in advance to the Reserve Bank official.
   c. Inform directors that the following must be submitted to the Reserve Bank office:
      - A copy of a board resolution stating corrective action.
      - A written plan for corrective action to be forwarded within a specified time period.
      - Periodic progress reports.
7. For "special meetings" resulting from serious problems:
   a. Communicate with the Reserve Bank to:
      - Notify office staff of the proposed date and place of the meeting.
      - Determine whether a Reserve Bank official will attend.
      - Determine whether the Reserve Bank official has suggestions for the agenda.
   b. Confirm the final time and place of the meeting with the Reserve Bank office.
   c. Prepare any special supporting data for the meeting, such as areas of noncompliance with memorandums of understanding or cease and desist agreements or orders.
8. Conduct the board meeting in accordance with the agenda and previously prepared outline, being certain to discuss:
   a. Major criticisms noted during the examination.
   b. Conclusions reached about the bank in general.
   c. Expected future conditions.
   d. Potential problems.
   e. Planned corrective action:
      - Examiner's recommendations.
      - Management's commitments.
      - Director's commitments.
9. Obtain a definite agreement or commitment from the board that appropriate corrective action will be taken.
10. Prepare a memorandum covering the meeting with the board to include, as a minimum:
    a. The time and place of the meeting.
    b. The directors and guests in attendance.
    c. The matters subject to criticism that were reviewed.
    d. A summary of the general discussion on the matters presented to the board.
    e. A summary of the director's reaction to the situation and any commitments obtained from them.
11. Request that copies of the minutes of the board meeting be forwarded to the Reserve Bank and the examiner-in-charge.

The Federal Reserve Board has a broad range of enforcement powers over both domestic and foreign financial institutions and over the individuals associated with them. Generally, formal or informal enforcement actions are taken after the completion of an onsite bank examination. These examinations include commercial, trust, electronic data-processing, consumer, or other types of examinations. Formal or informal enforcement actions may also be taken when a Reserve Bank becomes aware of a problem at a bank that warrants immediate attention and correction.

In addition to the Board's jurisdiction over financial institutions, the Board also has jurisdiction over individuals associated with financial institutions. The term "institution-affiliated party" includes any officer, director, employee, controlling shareholder, or agent of a financial institution, and any other person who has filed or is required to file a change-in-control notice. It also includes any shareholder, consultant, joint-venture partner, or any other person who participates in the conduct of the affairs of the financial institution as well as any independent contractors, including attorneys, appraisers, and accountants, who knowingly or recklessly participate in any violation of law or regulation, breach of fiduciary duty, or unsafe or unsound practice that causes (or is likely to cause) more than a minimal financial loss to, or a significant adverse effect on, a financial institution.[1] The Board's jurisdiction over an institution-affiliated party extends for up to six years after the party's resignation, termination of employment, or separation caused by the closing of a financial institution, provided that any notice (such as a notice of intent to remove from office and of prohibition) is served on the party before the end of a six-year period.

FORMAL SUPERVISORY ACTIONS

The following statutory tools are available to the Board in the event formal supervisory action is warranted against a state member bank or any institution-affiliated party. The objective of formal action is to correct practices that the regulators believe to be unlawful, unsafe, or unsound.[2] The initial consideration and determination of whether formal action is required usually results from examination findings. It is important to provide adequate support for all recommendations for both formal and informal actions in the examination report and associated workpapers.

Types of Supervisory Actions

Generally, under section 8 of the Federal Deposit Insurance Act (FDI Act) (12 USC 1818(b), the Board may use its cease-and-desist authority and civil money penalty authority against any state member bank and any institution-affiliated party that meets the statutory criteria for issuing such an order. Prohibition and removal actions may be taken against any institution-affiliated party who meets the statutory criteria to bring such an action.

Cease-and-Desist Orders

Generally, under 12 USC 1818(b), the Board may use its cease-and-desist authority against a state member bank and any institution-affiliated party when it finds that a bank or party is engaging, has engaged, or is about to engage in (1) a violation of law, rule, or regulation; (2) a violation of a condition imposed in writing by the Board in connection with the granting of any application or any written agreement; or (3) an unsafe or unsound practice in conducting the business of the institution. Separately, under 12 USC 1818(s), the Board must initiate a cease-and-desist action against a bank when it has failed to establish and maintain the Bank Secrecy Act procedures required by the Board's Regulation H or has failed to correct any previously noted deficiencies related to these procedures.

A cease-and-desist order may require the bank or person subject to the order to (1) cease

1. The Board is authorized to issue regulations further defining which individuals should be considered institution-affiliated parties. Similarly, the Board may determine whether an individual is an institution-affiliated party on a case-by-case basis. (See 12 USC 1813(u).)

2. An unsafe or unsound practice is defined as any action that is contrary to generally accepted standards of prudent operation, the possible consequences of which, if continued, would be abnormal risk or loss or damage to an institution, its shareholders, or the agencies administering the insurance fund.

and desist from the practices or violations or (2) take affirmative action to correct the violations or practices. Affirmative actions include actions necessary to restore the bank to a safe and sound condition, such as measures to improve asset quality. The order may also include restrictions on growth, debt, and dividends; require the disposition of any loan or asset; require the employment of qualified officers or employees; require restitution, reimbursement, indemnification, or guarantee against loss if the bank or person was unjustly enriched by the violation or practice or if the violation or practice involved a reckless disregard for the law or applicable regulations or a prior order; and any other action the Board determines to be appropriate.

Most cease-and-desist orders are issued by consent. When Board staff, in conjunction with the appropriate Reserve Bank, determines that a cease-and-desist action is necessary, the bank or person is generally given an opportunity to consent to the issuance of the order without the need for the issuance of a notice of charges and a contested administrative hearing. Board staff drafts the proposed cease-and-desist order and, with Reserve Bank staff, presents it to the bank or individual for consent. Banks or individuals are advised that they may have legal counsel present at all meetings with Board or Reserve Bank staff concerning formal supervisory actions. If the parties voluntarily agree to settle the case by the issuance of a consent cease-and-desist order, the proposed consent order will be presented to senior Board officials for approval, at which time the order will be final and binding.

When a bank or person fails to consent to a cease-and-desist order, the Board may issue a notice of charges and of hearing to the bank or party. The notice of charges contains a detailed statement describing the facts constituting the alleged violations or unsafe or unsound practices. The issuance of the notice of charges and of hearing starts a formal process that includes the convening of a public administrative hearing[3] conducted before an administrative law judge, appointed by the Board. After the hearing, the judge makes a recommended decision to the Board. A hearing must be held within 30 to 60 days of service of the notice of charges, unless a later date is set by the administrative law judge. After the Board considers the record of the proceeding, including the administrative law judge's recommended decision, it determines whether to issue a final cease-and-desist order. Banks and individuals who are subject to cease-and-desist orders that were issued as a result of contested proceedings may appeal the order to the appropriate federal court of appeals.

3. A private hearing may be held if the Board determines that holding a public hearing would be contrary to the public interest.

Temporary Cease-and-Desist Orders

If a violation or threatened violation of law, rule, or regulation, or if engaging in an unsafe or unsound practice that is specified in the notice of charges, is likely to cause the bank's insolvency, cause significant dissipation of the bank's assets or earnings, weaken the bank's condition, or otherwise prejudice the interests of depositors before the completion of the proceedings (initiated by the issuance of the notice of charges), the Board may, in conjunction with issuing a notice of charges, issue a temporary cease-and-desist order against the bank to effect immediate correction (pursuant to 12 USC 1818(c)).

The Board may also issue a temporary order if it determines that the bank's books and records are so incomplete or inaccurate that the Board is unable to determine, through the normal supervisory process, the bank's financial condition or the details or purpose of any transaction that may have a material effect on the bank's condition. The temporary order may require the bank to take the same corrective actions as a cease-and-desist order. The advantage of issuing a temporary cease-and-desist order is that it becomes effective immediately after it is served on the bank or individual. Within 10 days after being served with a temporary order, however, the entity or individual may appeal to a U.S. district court for relief from the order. Unless set aside by the district court, the temporary order stays in effect until the Board issues a final cease-and-desist order or dismisses the action.

Written Agreements

When circumstances warrant a less severe form of formal supervisory action, a written agreement may be used. A written agreement is generally with the Reserve Bank under delegated authority (12 CFR 265.11(a)(15)). Written agreements are drafted by Board staff, in consultation with Reserve Bank staff, and must be approved by the Board's Director of the Division of Banking Supervision and Regulation and the General Counsel before issuance. The provisions of a written agreement may relate to any of the problems found at the bank or to any problems involving institution-affiliated parties.

Prompt-Corrective-Action Directives

Please see section 4133.1 for a discussion of prompt-corrective-action directives, which are a type of formal supervisory action issued when a bank's capital ratios fall below certain specified levels.

Prohibition and Removal Authority

The Board is authorized by 12 USC 1818(e) to remove any current institution-affiliated party of a bank for certain violations and misconduct and to prohibit permanently from the banking industry any current or former institution-affiliated party from future involvement with any insured depository institution, bank or thrift holding company, and nonbank subsidiary.[4]

The Board is authorized to initiate removal or prohibition actions when

- the institution-affiliated party has directly or indirectly—
  - — violated any law, regulation, cease-and-desist order, condition imposed in writing, or written agreement;
  - — engaged in any unsafe or unsound practice; or
  - — breached a fiduciary duty;
- the Board determines that, because of the violation, unsafe or unsound practice, or breach—
  - — the institution has suffered or will probably suffer financial loss or other damage;
  - — the interests of depositors have been or could be prejudiced by the violation, practice, or breach; or
  - — the institution-affiliated party has received financial gain or other benefit from the violation, practice, or breach; and
- the violation, practice, or breach—
  - — involves personal dishonesty or
  - — demonstrates a willful or continuing disregard for the safety or soundness of the institution.

The statute also authorizes the Board to initiate removal or prohibition actions against (1) any institution-affiliated party who has committed a violation of any provision of the Bank Secrecy Act that was not inadvertent or unintentional, (2) any officer or director of a bank who has knowledge that an institution-affiliated party has violated the money-laundering statutes and did not take appropriate action to stop or prevent the reoccurrence of such a violation, or (3) any officer or director of a bank who violates the prohibitions on management interlocks. These removal or prohibition actions for these violations do not require a finding of gain to the individual, loss to the institution, personal dishonesty, or willful or continuing disregard for the safety or soundness of the institution.[5]

If an institution-affiliated party's actions warrant immediate removal from a state member bank, the Board is authorized to suspend the person temporarily from that bank pending the outcome of the complete administrative process. An institution-affiliated party presently associated with a bank may also be suspended or removed for cause based on actions taken while formerly associated with a different insured depository institution, bank holding company, or "business institution." Business institution is not specifically defined in the statute so that it may be interpreted to include any other business interests of the institution-affiliated party.

Under 12 USC 1818(g), the Board is authorized to suspend from office or prohibit from further participation any institution-affiliated party charged or indicted for the commission of a crime involving personal dishonesty or breach of trust that is punishable by imprisonment for a term exceeding one year under state or federal law, if the continued participation might threaten either the interests of depositors or public confidence in the bank. The Board may also suspend or prohibit any individual charged with a violation of the money-laundering statutes. The suspension can remain in effect until the criminal action is disposed of or until the suspension is terminated by the Board. The Board may also initiate a removal or prohibition action against

4. This authority is distinct from the Board's authority under prompt corrective action to dismiss senior officers from a particular bank.

5. See 12 USC 1818(e)(2).

an institution-affiliated party who has been convicted of, or pleaded to, a crime involving personal dishonesty or breach of trust if his or her continued service would threaten the interests of the depositor or impair public confidence in the institution. The Board is required to issue such an order against any institution-affiliated party who has been convicted of, or pleaded to, a violation of the money-laundering statutes.

Furthermore, 12 USC 1829 prohibits any individual who has been convicted of a crime involving dishonesty, breach of trust, or money laundering from (1) serving as an institution-affiliated party of, (2) directly or indirectly participating in the affairs of, and (3) owning or controlling, directly or indirectly, an insured depository institution without the Federal Deposit Insurance Corporation's (FDIC's) prior approval. The statute also prohibits a convicted person from holding a position at a bank holding company or nonbank affiliate of a bank without the prior approval of the Board of Governors of the Federal Reserve System. The penalty for violation of this law is a potential fine for a knowing violation of up to $1 million per day, imprisonment for up to five years, or both. The criminal penalty applies to both the individual and the employing institution.

Violations of Final Orders and Written Agreements

When any final order or temporary cease-and-desist order has been violated, the Board may apply to a U.S. district court for enforcement of the action. The court may order and require compliance.

Violations of final orders and written agreements may also give rise to the assessment of civil money penalties against the offending bank or institution-affiliated party, as circumstances warrant. The civil money penalty is assessed in the same manner as described in the "Civil Money Penalties" subsection below. Any institution-affiliated party who violates a suspension or removal order is subject to a criminal fine of up to $1 million, imprisonment for up to five years, or both.

Civil Money Penalties

The Board may assess civil money penalties of up to $7,500 per day against any institution or institution-affiliated party for any violation of (1) law or regulation; (2) a final cease-and-desist, temporary cease-and-desist, suspension, removal, or prohibition order or for failure to comply with a prompt-corrective-action directive; (3) a condition imposed in writing by the Board in connection with the granting of an application or other request; and (4) a written agreement.

A fine of up to $37,500 per day can be assessed for a violation, an unsafe or unsound practice recklessly engaged in, or a breach of fiduciary duty when the violation, practice, or breach is part of a pattern of misconduct, causes or is likely to cause more than a minimal loss to the bank, or results in pecuniary gain or other benefit for the offender. A civil money penalty of up to $1.375 million per day can be assessed for any knowing violation, unsafe or unsound practice, or breach of any fiduciary duty when the offender knowingly or recklessly caused a substantial loss to the financial institution or received a substantial pecuniary gain or other benefit. Civil money penalties may also be assessed, under the three-tier penalty framework described above, for any violation of the Change in Bank Control Act and for violations of the anti-tying provisions of federal banking law, among other provisions.[6]

The Board may also assess civil money penalties for the submission of any late, false, or misleading call reports. If a financial institution maintains procedures that are reasonably adapted to avoid inadvertent errors, but unintentionally fails to publish any report, submits any false or misleading report or information, or is minimally late with the report, it can be assessed a fine of up to $2,200 per day. The financial institution has the burden of proving that the error was inadvertent under these circumstances. If the error was not inadvertent or the bank lacked the appropriate procedures, a penalty of up to $32,000 per day can be assessed for all false or misleading reports or information submitted to the Board. If the submission was done in a knowing manner or with reckless disregard for the law, a fine of up to $1.375 million or 1 percent of the institution's assets, whichever is less, can be assessed for each day

6. See 12 USC 1972.

of the violation. Under its general civil money penalty authority, the Board may also assess civil money penalties against any institution-affiliated party who participates in a bank's filing of late, false, or misleading call reports.

Administration of Formal Actions

Publication of Final Orders

Under 12 USC 1818(u), the Board is required to publish and make publicly available any final order issued for any administrative enforcement proceeding it initiates. These orders include cease-and-desist, removal, prohibition, and civil money penalty assessments. The Board is also required to publish and make publicly available any written agreement or other written statement that it may enforce, unless the Board determines that publication of the order or agreement would be contrary to the public interest.

Public Hearings

Under 12 USC 1818(u), all formal hearings, including contested cease-and-desist, removal, and civil money penalty proceedings, are open to the public unless the Board determines that a public hearing would be contrary to the public interest. Transcripts of all testimony; copies of all documents submitted as evidence in the hearing, which could include examination or inspection reports and supporting documents (except those filed under seal); and all other documents, such as the notice and the administrative law judge's recommended decision, are available to the public. These documents could include examiners' workpapers, file memorandums, reports of examination and inspection, and correspondence between a problem institution or wrongdoer and the Federal Reserve Bank. Appropriate actions should always be taken to ensure that all written material prepared in connection with any supervisory matter be accurate and free of insupportable conclusions or opinions.

Appointment of Directors and Senior Executive Officers

Under section 32 of the FDI Act (12 USC 1831i) and subpart H of Regulation Y (12 CFR 225.71 et seq.), any state member bank or bank holding company that is in a troubled condition[7] or does not meet minimum capital standards must provide 30 days' written notice to the Board of Governors before appointing any new director or senior executive officer.[8] This requirement also applies to any change in the responsibilities of any current senior executive officer who is proposing to assume a different senior officer position. Subpart H of Regulation Y details the procedures for filing and the content of the notice. The Board may disapprove a notice if it finds that the competence, experience, character, or integrity of the proposed individual indicates that his or her service would not be in the best interest of the institution's depositors or the public. A disapproved individual or the institution that filed the notice may appeal the Federal Reserve's notice of disapproval under the procedures detailed in Regulation Y. The individual may not serve as a director or senior executive officer while the appeal is pending. In the event that a state member bank or bank holding company that is in a troubled condition appoints a director or senior officer without the required 30 days' prior written notice, appropriate follow-up supervisory action should be taken.

INFORMAL SUPERVISORY ACTIONS

Informal supervisory tools are used when circumstances warrant a less severe form of action than the formal supervisory actions described above. Informal actions are not enforceable and their violation cannot serve as a basis for assessing a civil money penalty or initiating a removal and prohibition action. Informal actions are not published or publicly available. These informal actions include commitments, Board resolutions, and memoranda of understanding.

---

7. As defined in section 225.71 of the Board's Regulation Y, a state member bank or holding company is in troubled condition if it (1) has a composite rating, determined at its most recent examination, of 4 or 5; (2) is subject to a cease-and-desist order or formal written agreement that requires action to improve the bank's financial condition; or (3) is expressly informed by the Board or Reserve Bank that it is in troubled condition.

8. The Board or Reserve Bank may permit, under extraordinary circumstances, an individual to serve as a director or senior executive officer before a notice is provided; however, this permission does not affect the Federal Reserve's authority to disapprove a notice within 30 days of its filing. The Board may extend the review period to a maximum of 90 days if needed to process the notice.

- *Commitments* are generally used to correct minor problems or to request periodic reports addressing certain aspects of a bank's operations. Commitments may be used when there are no significant violations of law or unsafe or unsound practices and when the bank and its officers and directors are expected to cooperate and comply.[9] Commitments are generally obtained by the Reserve Bank's sending a letter to the bank outlining the request and asking for a response and an indication that the commitments are accepted.
- *Board resolutions* generally represent a number of commitments made by the bank's directors and are incorporated into the bank's corporate minutes. The Reserve Bank may request board resolutions in the examination transmittal letter, which asks the bank to provide it with a signed copy of the corporate resolution.
- *Memoranda of understanding (MOU)* are highly structured written, but informal, agreements that are signed by both the Reserve Bank and the bank's board of directors. An MOU is generally used when a bank has multiple deficiencies that the Reserve Bank believes can be corrected by the present management.

INDEMNIFICATION PAYMENTS AND GOLDEN PARACHUTE PAYMENTS

In general, an indemnification payment is a payment that reimburses an insider for a specified liability or cost that the person incurred in connection with a Federal Reserve investigation or enforcement action. Golden parachute payments are severance payments or agreements to make severance payments that are paid or entered into at a time when the bank or holding company is in a troubled condition. These payments require the prior written approval of the institution's primary federal regulator and the concurrence of the FDIC. Although both types of payments fall under the same statute—section 18(k) of the FDI Act (12 USC 1828(k)) and the FDIC's accompanying regulations[10]—the two types of payments are quite different and distinct. However, some of the restrictions on these payments are the same or similar.

Indemnification Agreements and Payments

State member banks may seek to indemnify their officers, directors, and employees from any judgments, fines, claims, or settlements, whether civil, criminal, or administrative. The bylaws of some state member banks may have broadly worded indemnification provisions, or the bank may have entered into separate indemnification agreements that cover the ongoing activities of its own institution-affiliated parties. Such indemnification provisions may be inconsistent with federal banking law and regulations, as well as with safe and sound banking practices.

Supervisory and examiner staff should be alert to the limitations and prohibitions on indemnification imposed by section 18(k) of the FDI Act and the regulations issued thereunder by the FDIC. The law and regulations apply to indemnification agreements and payments made by any bank to any institution-affiliated party, regardless of the condition of the financial institution. The purpose of the law and regulations is to preserve the deterrent effects of administrative enforcement actions (by ensuring that individuals subject to final enforcement actions bear the costs of any judgments, fines, and associated legal expenses) and to safeguard the assets of financial institutions.

A prohibited indemnification payment includes any payment (or agreement to make a payment) by a state member bank to an institution-affiliated party to pay or reimburse such person for any liability or legal expense incurred in any Board administrative proceeding that results in a final order or settlement in which the institution-affiliated party is assessed a civil money penalty, is removed or prohibited from banking, or is required to cease an action or take any affirmative action, including making restitution, with respect to the bank.

The FDIC's regulations provide criteria for making permissible indemnification payments. A bank may make or agree to make a reasonable indemnification payment if all of the following conditions are met: (1) the institution's board of directors determines in writing that the institution-affiliated party acted in good faith and the best

9. Informal commitments are distinct from conditions imposed in writing in connection with the grant of an application or other request by an institution, which may be enforced through the imposition of a civil money penalty.

10. See 12 CFR 359.

interests of the institution; (2) the board of directors determines that the payment will not materially affect the institution's safety and soundness; (3) the payment does not fall within the definition of a prohibited indemnification payment; and (4) the institution-affiliated party agrees in writing to reimburse the institution, to the extent not covered by permissible insurance, for payments made in the event that the institution-affiliated party does not prevail.

The law and the FDIC's regulations apply to all state member banks. They reinforce the Federal Reserve's longstanding policy that an institution-affiliated party who engages in misconduct should not be insulated from the consequences of his or her misconduct. From a safety and soundness perspective, a state member bank should not divert its assets to pay a fine or other final judgment issued against an institution-affiliated party for misconduct that presumably violates the bank's policy of compliance with applicable law, especially in cases where the individual's misconduct has already harmed the bank.

State member banks should review their bylaws and any outstanding indemnification agreements, as well as insurance policies, to ensure that they conform with the requirements of federal law and regulations. If a state member bank fails to take appropriate action to bring its indemnification provisions into compliance with federal laws and regulations, appropriate follow-up supervisory action may be taken. As part of the supervisory process, which will include merger and acquisition applications, the Federal Reserve's supervisory and examiner staff will review identified agreements having indemnification-related issues for compliance with federal law and regulations. (See SR-02-17.)

Golden Parachute Payments

The FDIC's golden parachute regulations apply to an insured depository institution that is in a troubled condition as defined in Regulation Y. The purposes of the law and regulations are to safeguard the assets of financial institutions and limit rewards to institution-affiliated parties who contributed to the institution's troubled condition.

In general, the FDIC's regulations (12 CFR 359) prohibit insured depository institutions and their holding companies from making golden parachute payments except in certain circumstances. A golden parachute payment means any payment in the nature of compensation (or an agreement to make such a payment) for the benefit of any current or former institution-affiliated party of an insured depository institution or its holding company that meets three criteria. First, the payment or agreement must be contingent on the termination of the institution-affiliated party's employment or association. Second, the payment or agreement is received on or after, or made in contemplation of, among other things, a determination that the institution or holding company is in a troubled condition under the regulations of the applicable banking agency. Third, the payment or agreement must be payable to an institution-affiliated party who is terminated when the institution or holding company meets certain specific conditions, including being subject to a determination that it is in a troubled condition.

The definition of a golden parachute payment also covers a payment made by a bank holding company that is not in a troubled condition to an institution-affiliated party of an insured depository institution subsidiary that is in a troubled condition, if the other criteria in the definition are met. This circumstance may arise when a bank holding company, as part of an agreement to acquire a troubled bank or savings association, proposes to make payments to the troubled institution's institution-affiliated parties that are conditioned on their termination of employment.[11]

A state member bank or bank holding company may make or enter into an agreement to make a golden parachute payment only (1) if the Federal Reserve, with the written concurrence of the FDIC, determines that the payment or agreement is permissible; (2) as part of an agreement to hire competent management in certain conditions, with the consent of the Federal Reserve and the FDIC as to the amount and terms of the proposed payment; or (3) pursuant to an agreement to provide a reasonable severance not to exceed 12 months' salary in the event of an unassisted change in control of the depository

11. The FDIC's regulations exclude from the definition of a golden parachute payment several types of payments, such as payments made pursuant to a qualified pension or retirement plan; a benefit plan or bona fide deferred compensation plan (which are further defined in the FDIC's regulations); or a severance plan that provides benefits to all eligible employees, does not exceed the base compensation paid over the preceding 12 months, and otherwise meets the regulatory definition of nondiscriminatory and other conditions in the FDIC's regulations.

institution, with the consent of the Federal Reserve. In determining the permissibility of the payment, the Federal Reserve may consider a variety of factors, including the individual's degree of managerial responsibilities and length of service, the reasonableness of the payment, and any other factors or circumstances that would indicate that the proposed payment would be contrary to the purposes of the statute or regulations.

A state member bank or bank holding company requesting approval to make a golden parachute payment or enter into an agreement to make such a payment should submit its request simultaneously to the appropriate FDIC regional office and the Reserve Bank. The request must detail the proposed payments and demonstrate that the state member bank or bank holding company does not possess and is not aware of any evidence that there is reasonable basis to believe, at the time that the payment is proposed to be made, that (1) the institution-affiliated party receiving such a payment has committed any fraud, breach of fiduciary duty, or insider abuse or has materially violated any applicable banking law or regulation that had or is likely to have a material adverse effect on the bank or company; (2) that the individual is substantially responsible for the institution's insolvency or troubled condition; (3) and that the individual has violated specified banking or criminal laws.

Requests regarding golden parachute payments or agreements should be forwarded by the Reserve Bank to the appropriate Board staff for a final determination on the permissibility of the payment. Golden parachute payments or agreements must be approved by the Board's Director of the Division of Banking Supervision and Regulation and the General Counsel. Denials are not delegated by the Board of Governors to Board or Reserve Bank staffs.

If a state member bank or bank holding company makes or enters into an agreement to make a golden parachute payment without prior regulatory approval when such an approval is required, appropriate follow-up supervisory action should be taken. This follow-up could include an enforcement action requiring the offending institution-affiliated party to reimburse the institution for the amount of the prohibited payment. When state member banks or bank holding companies are identified as having golden parachute-related issues in the supervisory process, those issues should be carefully reviewed for compliance with the law and the FDIC's regulations. The appropriate Reserve Bank supervisory staff and the appropriate staff of the Board's Division of Banking Supervision and Regulation and Legal Division should be notified and consulted on the golden parachute-related issues.

The examiner is encouraged to use objective criteria in evaluating various areas of the bank. However, there will always be a need for subjective judgment in an examination. Formulating an overall conclusion regarding the present and future condition of the bank requires the use of both objective criteria and subjective judgment. As experience is essential in evaluating information in areas requiring subjective judgment, the procedures in this section should be performed by the Central Point of Contact (CPC) or the examiner-in-charge (EIC) (EIC is meant to include the CPC). When performing these procedures, the examiner's primary concerns are—

- to make the ultimate determination as to—
  - the solvency of the bank and its ability to meet maturing and unusual demands in the ordinary course of business,
  - adherence to safe and sound banking practice,
  - adherence to the law, and
  - the continued viability of the institution, and
- to communicate the results of the examination to the Federal Reserve System and the directors of the bank.

The evaluation of the overall condition of the bank is based on conditions found throughout the institution. Considerations include internal control and policy exceptions, violations of law and regulations, quality of management, adequacy of earnings and capital, quantities of classified assets, and other identified deficiencies or irregularities. An evaluation of the future condition of the bank is based on the analysis of—

- management's plans as expressed by operating plans, the capital plan, and other projections,
- factors such as competition and economic conditions, and
- the overall present condition of the bank.

The primary information for evaluating the present condition of a bank is the findings and conclusions of the examination staff. The EIC should weigh the importance and significance of all criticisms, exceptions, and deficiencies in attempting to discover any unfavorable trends or situations. Through review of the examination process, insight can be gained into such central issues as—

- present asset quality;
- current liquidity position;
- present capital adequacy position;
- quality and performance of management, including the management of the bank's risk;
- earnings performance, both past and present; and
- sources and applications of funds.

The EIC usually will include remarks regarding those areas in the examination report. Although procedural areas of this manual deal specifically with each of those key items, the EIC should use information from all phases of the examination. For example, when reviewing the bank's present capital position, the EIC may use knowledge of the bank's asset and management quality to modify the conclusions of assisting personnel. The important point is that the EIC is in the best position to assess all information provided by the examination process.

Factors affecting the future condition of the bank can generally be categorized as internal or external. The examiner's review of the current condition flows naturally into an evaluation of internal factors affecting the institution's future prospects and condition. Among the items providing insight into future conditions are—

- earnings trends,
- successor-management plans,
- the budget or profit plan,
- the capital plan, and
- any other internally generated projections or forecasts.

Many banks will not have formal written plans or projections. In such cases, the EIC must obtain from senior management or the board of directors information on their plans for matters such as—

- growth and expansion,
- capital,
- changes in the size and mix of assets and liabilities, and
- changes in sources of funding.

In addition, examiners should remind senior management that any change in the general character of a bank's business or the scope of the corporate powers it exercises requires the prior approval of the Board under Regulation H.

The examiner should recommend that banks that do not have formal plans or projections take advantage of any externally available tools to aid them in formulating these plans. In today's competitive market, strategic planning is a necessity for almost all banks, but especially for banks that are losing their market share or in which inefficiencies are depressing profitability.

If banks prepare budgets or profit plans, insight can be gained into the accuracy of balance-sheet and earnings projections by comparing actual and projected account balances. It also is beneficial to compare original projections with current projections to determine that adjustments are made on a timely basis. When four- or five-year projections are made, banks often formulate several forecasts based on different sets of assumptions. In such a situation, the examiner should attempt to determine the bank's most likely future course.

The examiner should attempt to gain access to any official material or internal workpapers that document or illustrate the bank's rationale in planning its future. The goal is to review the institution's decision-making process.

Banks are increasingly engaging in off-balance- sheet activities to deliver services, effect payments, generate income, and to hedge interest-rate risks. Banks have introduced a wide variety of new products and services to complement their more traditional activities. Although these new activities are useful and profitable, they contain elements of risk. Many of these new activities involve a contingent liability or other risk that is not reflected on the bank's balance sheet and, indeed, may not even be fully recognized by the bank. The examiner should be aware of how the bank manages and controls its risks. Examples of off-balance-sheet activities include—

- guarantee contracts, retained or contingent interests, and variable interests,
- commitments and innovative applications for standby letters of credit, and
- a wide variety of financial instruments and investment-security activities (including futures and forwards, warrants, puts, and calls).

Risk can be distinguished primarily as credit risk, liquidity, market (price, interest rate, foreign exchange), operational, reputational, and legal risk. Risk can also result from internal control deficiencies. Examiners must also be aware of the nature and extent of off-balance-sheet risks. The risks that affect capital, liquidity, and compliance with laws should be evaluated for their potential effect on the safety and soundness of the bank.

In judging such controversial areas as capital adequacy and liquidity, the examiner should remember that, under ideal circumstances, management should be the expert on the bank's capitalization and liquidity position. Judgments on such matters should be generated internally, based on insight only management can possess. It is management that should know the bank's competitive situation, the economics of the service area, and the anticipated impact of those and other factors on its plans for growth and expansion. It is also management that has the greatest interest in the success of the bank. Accordingly, management and the directorate should choose a level of capitalization and liquidity consistent with their perception of the bank's situation rather than reacting to competitors or relying on pressures from regulators. However, specific judgments by the examiner are required, particularly in situations where a capital or liquidity position has fallen below what examiners consider to be acceptable norms. Objective justification for lower levels of capital or liquidity must be obtained and analyzed.

To properly evaluate the future prospects of a bank, the examiner must review external factors affecting the institution. Significant among those factors are the characteristics of a bank's primary service area. The bank's primary service area is defined as that area from which the bank receives approximately 75 percent of its deposits. Demographics of the area generally are available, and every bank should accumulate such information to aid in analyzing its current operations and planning for future operations. The absence of such information in an up-to-date form should be considered a deficiency. Included under examination procedures for this section is a listing of minimum information required to ascertain the demographics of a service area. The EIC should make sure that information is compiled and should analyze it to determine whether management expectations appear justifiable in the circumstances.

In dealing with competitive factors, the examiner should review or compute the share of market for the bank under examination. Continuing records in that area establish an analyzable trend. Consideration also should be given to changes in the bank's statutory and regulatory environment, such as—

- changes in branching laws,
- changes in tax structure, and
- changes in laws affecting competition with other financial institutions.

Once the examiner has reached specific conclusions about the present condition and future prospects of the bank, or has noted serious deficiencies or detrimental trends, his or her conclusions and suggestions should be communicated to the bank's senior management, the board of directors, and the Federal Reserve Bank on a timely basis. In formulating discussion and written comments, the examiner should avoid the appearance of second-guessing management. Therefore, conclusions, judgments, and recommendations should be based on objective information generated throughout the entire examination process.

Before preparing examination report comments regarding the overall condition of the bank, the EIC should consider the reporting objective. Once it is determined that problems exist in a bank, the underlying causes must be identified. Those underlying causes as well as specific problems or deficiencies should be covered in the comments. For example, if deficiencies in written lending objectives or policies or noncompliance with sound policies has resulted in the acquisition of sub-quality assets, the examiner's comments must address both cause and effect. The total of classified assets should be cited as evidence of the underlying problem, and appropriate remedies, such as changing objectives or policies, should be suggested.

Examiners should remember that their ability to reach accurate conclusions regarding the overall present condition and future prospects of the bank and their skill in communicating the conclusions to management orally and in reports will, to a great extent, determine the effectiveness of the entire examination process.

The examiner's conclusions regarding the overall condition of the bank are summarized in a composite rating assigned in accordance with guidelines provided under the Uniform Financial Institution Rating System (CAMELS). The composite rating represents an overall appraisal of six key assessment areas (components) covered under the CAMELS rating system: Capital, Asset quality, Management, Earnings, Liquidity, and Sensitivity to market risk. Additionally, and separate from the interagency UFIRS, the Federal Reserve assigns a Risk Management Rating to all state member banks. The summary, or composite, rating, as well as each of the assessment areas, including risk management, is delineated on a numerical scale of one to five, one being the highest or best possible score. Thus, a bank with a composite rating of one requires the lowest level of supervisory attention, while a five-rated bank has the most critically deficient level of performance and therefore requires the highest degree of supervisory attention. When appraising the six key assessment areas and assigning a composite rating, the examiner weighs and evaluates all relevant factors for downgrades and upgrades of supervisory ratings. (For more information regarding composite rating considerations, see SR-96-38, SR-95-51, SR-16-11, and the appendix section A.5020.1 and also SR-12-4 with regard to CAMELS rating upgrades.) In general, these factors include the adequacy of the capital base, net worth, and reserves for supporting present operations and future growth plans; the quality of loans, investments, and other assets; the ability to generate earnings to maintain public confidence, cover losses, and provide adequate security and return to depositors; the ability to manage liquidity and funding (in particular, during periods of increased financial stress); the ability to meet the community's legitimate needs for financial services and cover all maturing deposit obligations; and the ability of management to properly administer all aspects of the financial business and plan for future needs and changing circumstances. The assessment of management and administration includes the quality of internal controls, operating procedures, and all lending, investment and operating policies; compliance with relevant laws and regulations; and the involvement of the directors, shareholders, and officials.

In addition to the factors discussed above, the EIC should also consider whether risk-management capabilities have improved to address identified principal weaknesses that contributed to the institution's prior ratings, and whether any policies and practices had been implemented that focused on sustainability commensurate with the bank's risk profile. The EIC should also make a determination as to whether the board provided strategic review and oversight of the bank's core financial factors and risk management and if the board actively engaged in the process of correcting deficiencies.

Although the composite rating is based loosely on the average of the six component scores, the examiner's judgment can and should play a major role in its determination. Thus, the examiner must assess the severity, particularly the potential impact, of individual weaknesses on the present and future viability of the bank. Significant problems will provide sufficient basis for deviating from the numerical-average approach to assigning the composite rating. However, whenever deviation from the numerical standards for the composite rating is necessary to accurately reflect the overall condition of the bank, the examiner must provide a full explanation of the reasons for such deviation. See the appendix section A.5020.1 for a complete discussion of the uniform rating system and considerations to be taken into account when using it to evaluate the condition of a bank.

SUPERVISORY RATINGS UPGRADES

When in a period of stabilized or generally improving economic conditions, there may be some consideration given to ratings upgrades. (See SR-12-4 "Upgrades of Supervisory Ratings for Banking Organizations with $10 Billion or Less in Total Consolidated Assets.") (See also SR-96-38, SR-95-51, and SR-16-11.)

SUBSIDIARIES OF BANK HOLDING COMPANIES

The composite rating of an individual subsidiary bank should be based on the condition of that single entity. The quality of management and the financial condition of the consolidated organization will be useful in assessing the prospects and understanding the operations of the bank being examined. However, banks with weaknesses requiring corrective action should be identified as such. Then, appropriate supervisory focus can also be made at the consolidated level. Also, banks should be identified by type on an individual basis rather than by applying the consolidated organization's characteristic to each bank. For example, the capital and condition of a community bank should be judged by community bank standards, not by multinational or regional standards, even if the bank is owned by such an organization. This approach recognizes that two consolidated organizations of similar size may be composed of entirely different types of banks. Proper evaluation of each bank component should lead a bank holding company examiner to the most appropriate conclusion on the condition of the consolidated entity.

CONFIDENTIALITY OF THE SUPERVISORY RATING AND OTHER NONPUBLIC SUPERVISORY INFORMATION

A February 28, 2005, interagency advisory reminds banking organizations of the statutory prohibitions on the disclosure of supervisory ratings and other confidential supervisory information to third parties. The agencies[1] learned that some insurers had requested or required banks and savings associations (financial institutions) to disclose their CAMELS rating during the underwriting process when those institutions had sought directors' and officers' liability (D&O) coverage.[2] The agencies responded by issuing the advisory specifically to remind all banking organizations that, except in very limited circumstances, they are prohibited by law from disclosing their CAMELS rating and other nonpublic confidential supervisory information to insurers as well as other nonrelated third parties without permission from their appropriate federal banking agency. (See SR-07-19, SR-05-4, and SR-96-26.)

Federal banking regulations provide that the report of examination, which contains the CAMELS rating, is nonpublic information and is the property of the agency issuing the report.[3] These regulations specifically provide that, except in very limited circumstances, banks and other financial institutions may not disclose a report of examination or any portion of the report, nor make any representations concerning the report or the report's findings, without the

1. The Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), and the Federal Deposit Insurance Corporation (FDIC).

2. As part of the examination process, a confidential supervisory rating, called a CAMELS rating, is assigned to each depository institution regulated by the agencies. See the appendix section A.5020.1 for a complete description of the Uniform Financial Institutions Rating System or CAMELS rating system.

3. For the Federal Reserve, see 12 CFR 261.2(c)(1), 261.20(g), and 261.22(e).

prior written permission of the appropriate federal banking agency.[4] The circumstances for release of nonpublic supervisory information may include disclosure to a parent holding company, a director, an officer, an attorney, an auditor, or another specified third party, as indicated in the regulations of the appropriate federal banking agency.[5] Any person who discloses or uses nonpublic information except as expressly permitted by one of the appropriate federal banking agencies or as provided by the agency's regulations may be subject to the criminal penalties provided in 18 USC 641.

The legal prohibition on the release of nonpublic supervisory information applies to all financial institutions supervised by the agencies, including bank, savings and loan, or other holding companies; Edge corporations; and the U.S. branches or agencies of foreign banking organizations, which receive confidential supervisory ratings, including the RFI/C(D) rating, ROCA rating, and CAMEO rating.[6] As with the CAMELS rating, these ratings are transmitted to the regulated institutions in reports of inspection or examination, which are the property of the agencies.

Financial institutions that receive requests for confidential supervisory ratings should refer all requesters to the following publicly available information in lieu of disclosing any confidential regulatory information, including the CAMELS rating. (See the National Information Center, on the Federal Financial Institutions Examination Council (FFIEC) website, https://www.ffiec.gov.)

- for banks, an institution's quarterly reports of condition and income (Call Reports) (see 12 USC 1817)
- for holding companies or foreign banks with U.S. operations, an institution's quarterly and annual FR Y or H-(b)11 reports (see 12 USC 1844, 3106, 3108, 601–604a, and 611–631)
- for national banks, the annual disclosure statement (see 12 CFR 18.3)
- for banks, the institution's Uniform Bank Performance Report (UBPR), which is available to all interested parties at the website https://www.ffiec.gov and is designed for summary and in-depth analysis of banks
- an institution's publicly available filings, if any, filed with the appropriate federal banking agency (15 USC 78(*l*)(i)) or with the U.S. Securities and Exchange Commission
- any reports or ratings on the institution compiled by private companies that track the performance of financial institutions[7]
- any reports or ratings issued by private rating services on public debt issued by an institution
- any publicly available cease-and-desist order or enforcement proceeding against an institution[8]
- any reports or other sources of information on institution performance or internal matters created by the institution that does not contain information prohibited from release by law or regulation

FORMAL AND INFORMAL SUPERVISORY ACTIONS

In general, supervisory action should be considered when other more routine measures, such as formal discussions with a bank's principals or directors and normal follow-up procedures, have failed to resolve supervisory concerns. The Uniform Financial Institution Rating System clearly identifies the more serious problem banks and distinguishes them from banks whose weaknesses or deficiencies are such as to warrant a lower degree of supervisory concern.

For example, the application of prompt and effective remedial action may keep the condition of a composite 3-rated bank from deteriorating and the bank from becoming a problem institu-

4. See 12 CFR 261.22.

5. See 12 USC 326 and 12 CFR 261.20(b) (exceptions).

6. RFI/C(D), ROCA, and CAMEO ratings are assigned by the FRB as a result of an examination or inspection. As of January 1, 2005, the FRB adopted a new rating system, RFI/C(D) ratings, for bank holding companies. RFI/C(D) ratings components are Risk management, Financial condition, potential Impact of the parent and nondepository subsidiaries on the subsidiary depository institutions, Composite, and Depository institution. For noncomplex bank holding companies with assets of $1 billion or less, only risk-management and composite ratings are assigned. ROCA ratings are assigned to the U.S. branches, agencies, and commercial lending companies of foreign banking organizations. The ROCA rating components are Risk management, Operational controls, Compliance, and Asset quality. CAMEO ratings are assigned to Edge corporations and the overseas branches and subsidiaries of U.S. banks. The CAMEO ratings components are Capital, Asset quality, Management, Earnings, and Operations and internal controls.

7. For bank rating services, see the guidance at https://www.fdic.gov/bank/index.html.

8. Information on enforcement actions taken by the Federal Reserve may be found on the Board's public website. Information on enforcement actions taken by other federal agencies, such as the Securities and Exchange Commission, the Financial Crimes Enforcement Network (FinCEN), and the Department of Justice, as well as foreign authorities, may also be publicly available.

tion. To ensure problem areas receive adequate attention, all weaknesses should be clearly defined and corrective measures should be properly structured. This objective may best be achieved through the execution of a memorandum of understanding (MOU) between the bank's board of directors and Reserve Bank officials. In instances where there are only a few minor issues, an informal action such as a commitment letter or a board resolution could be issued. A MOU is not a formal written agreement as prescribed in the Financial Institutions Supervisory Act of 1966 (as amended); it is a good faith understanding between the bank's directorate and the Reserve Bank concerning the principal problems and the bank's proposed remedies. MOUs, commitment letters, and, i.e., Board resolutions, are all normal actions.

Banks rated composite 4 or 5 are clearly problem institutions that require close and constant supervisory attention. Unless specific circumstances argue strongly to the contrary, such banks will be presumed to warrant formal supervisory action, that is, a written agreement or a cease-and-desist order, as provided for in the Financial Institutions Supervisory Act of 1966. In addition, the Board of Governors is authorized to suspend and remove offending officers and directors of banks for certain violations and activities.

Although the decision to pursue formal or informal supervisory actions belongs to the Board of Governors or the Reserve Bank, the initial consideration and determination of whether action is necessary usually results from the examination process. Accurate and complete examination report comments that carefully delineate both the bank's weaknesses and deficiencies, as well as management's existing or planned corrective measures, will allow the Reserve Bank to make the most informed decision concerning appropriate supervisory action In addition to the results of the examination process leading to an enforcement action, sometimes an enforcement action is the result of an investigation or reporting of a violation of law or regulation.

CIVIL MONEY PENALTIES

Under provisions of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (P.L. 95–630), the Board of Governors is authorized to assess civil money penalties for violation of the terms of a final cease-and-desist order and violations of—

- sections 19, 22, and 23A of the Federal Reserve Act (respectively, reserve requirements and interest-rate limitations; limitations on loans by insured banks to their executive officers, directors, and principal shareholders; and limits on loans by insured banks to their affiliates);
- the prohibitions of title VIII of FIRA against preferential lending to bank executive officers, directors, and principal shareholders based on a correspondent-account relationship; and
- a willful violation of the change in Bank Control Act of 1978 (12 USC 1817(j)).

In determining the appropriateness of initiating a civil money penalty assessment proceeding, the Board has identified a number of relevant factors (see the June 3, 1998, FFIEC "Interagency Policy Regarding Assessment of Civil Money Penalties" found in the *Federal Reserve Regulatory Service*, 3–1605). In assessing a civil money penalty, the Board is required to consider the size of the financial resources and good faith of the respondent, the gravity of the violation, the history of previous violations, and such other matters as justice may require.

Examiners are responsible for the initial analyses on potential civil money penalties. Civil money penalties should be proposed for serious violations and for violations which, because of their frequency or recurring nature, show a general disregard for the law. After the examiner has reviewed the facts and decided to recommend a civil money penalty, he or she should contact the Reserve Bank for advice on proper documentation and any other assistance.

Overall Conclusions Regarding Condition of the Bank

Examination Objectives

Effective date March 1984

Section 1100.2

1. To reach conclusions regarding the present condition of the bank.
2. To reach conclusions regarding the future prospects of the bank.
3. To determine the bank's ability to meet demands in the ordinary course of business or reasonably unusual circumstances.
4. To determine the bank's adherence to safe and sound banking practices.
5. To formulate recommended action, when appropriate, based on those conclusions.
6. To communicate conclusions and recommendations both orally and in the examination report.

Inasmuch as the following procedures are largely dependent on information generated from all phases of the examination, the examiner-in-charge should complete this program during the final stages of the examination. The completion of this program generally can be best accomplished during the review of the workpapers.

1. Analyze any available information concerning the characteristics of the area in which the bank operates to determine the existence of any unusual situations, any significant trends, the potential impact on the bank of any expected changes or any other significant information which could be detrimental to the bank. The bank should be consulted for sources of information which might include the most recent census data or data generated by organizations, such as the Chamber of Commerce. In analyzing the bank's trade area:
   a. Consider density, income levels, general age group of the residents. Determine if there are significant changes in any of the above factors.
   b. Determine the predominant living accommodations in the area (owner occupied vs. rental), price/rent levels and availability of residential units. Determine whether there are any major residential construction projects, re-zoning or conversions of single to multiple units which will have a significant effect on the bank.
   c. Consider the types of industry and the number of firms in the area with emphasis on determining concentrations or seasonality. Investigate any major labor contract expirations, competitive factors or other significant factors which could have a negative effect on the community.
   d. Consider the types of major products, available markets and present and projected prices for the products.
   e. Consider any expected changes in street facilities which will significantly affect bank's accessibility/convenience. Determine the availability of public transportation.
   f. Review the number and types of institutions that provide similar financial services in the community. Consider the aggressiveness, hours of business and additional services offered by competitor institutions.
   g. Determine the effect of government employment or dependence on government contracts on the community.
   h. Consider the condition of the national economy with particular attention to the rate of inflation, national vs. local unemployment, current interest rates and government fiscal and monetary policy. Specific problems, peculiar to a particular area should be investigated more thoroughly.
2. Review comments and conclusions contained in the workpapers which were generated throughout the examination and perform the following:
   a. Compile all criticisms, exceptions and deficiencies.
   b. Determine the existence of contradictory conclusions.
   c. Consider the relative significance of criticisms, exceptions, deficiencies and conclusions and segregate important criticisms for the final review with management and for incorporation into the report of examination.
3. Based on procedures performed and conclusions contained in the workpapers, answer the following specific questions. These questions are intended as guidelines to the examiner-in-charge in formulating overall conclusions regarding the condition of the bank and should be augmented by the examiner's knowledge of the bank. "Yes" answers, in many instances, evidence the existence of a "leading" indicator of deterioration of bank soundness. For any question with a "yes" answer, specify any mitigating circumstances in the comments column. Sub-question answers are for information purposes.

   a. *Asset Quality*

      - Is there an increasing ratio of criticized assets to total capital?

- — If so, is it indicative of adverse economic conditions, poor credit judgment, or other factors (specify)?
- Has there been a material increase in the quantity of non-earning assets?
- Is there any abnormally increasing trend of past-due loans and/or interest earned but not collected?
  - — If so, is it indicative of general economic conditions in the bank's trade area
  - — Is the trend indicative of a weakening of collection policies and procedures, a slackening of credit standards, the bank's failure to recognize an asset which should be in a non-earning category, or is it caused by some other factor?
- Has a trend developed wherein the bank assumes increased risk without receiving increased rewards?
- Do the portfolios exhibit high concentrations in specific industries?
  - — If so, do the concentrations represent a significant actual or contingent problem?
- Has the overall quality of assets deteriorated since the last examination?
  - — If so, is the deterioration recognized by management and the board of directors? Can the deterioration be attributed to factors beyond the control of management or the board of directors, such as a change in the general economic conditions of the bank's service area?
  - — If deterioration results from internal factors, such as lowering of credit standards or poor credit judgment, have steps been taken by management to effectively reverse negative trends?

b. *Quality of Management*

- Has the executive management changed since the last examination?
  - — If so, is the change detrimental to the bank?
- Has there been any change in the general banking philosophy of executive management?
  - — If so, is that detrimental to the bank?
- Do key bank officers have educational and/or experience levels below that considered minimal in the circumstances?
- Is there any tendency toward over reliance on essentially untrained and unskilled clerical staffs?
- Is there a large disparity between the compensation level of the chief executive officer and other members of executive management?
  - — If so, is that disparity an objective indication of disproportional domination of the bank's affairs?
- Has the bank instituted any systems which directly reward managers for increasing bank income from assets or services subject to their control?
  - — If so, has the bank failed to institute necessary control and audit procedures to prevent abuses?
- Has the bank failed to institute any programs which would give officers a vested interest in remaining with the bank?
  - — If so, would the institution of such a program offer a workable solution to an actual or potential officer turnover problem?
- Is the bank's strategic and operational planning inadequate?
- Is the board of directors unresponsive to internal or external suggestions for improvement in the bank?
- Are the following conditions present?
  - — Infrequent meetings of board of directors.
  - — Infrequent meetings of committees of the board.
  - — Infrequent management committee meetings.
  - — A directorate which is split into distinct voting groups.
  - — If so, are directors viewed as failing to perform their functions adequately?
- Is the quality of management deemed inadequate to conduct the affairs of the bank in a reasonable and safe manner?
- Are training programs and compensation increments deemed inadequate to attract and retain a staff capable of providing management succession?

c. *Earnings*

- Are earnings static or moving downward as a percentage of total resources?
- Is there a trend of decreasing income before security gains and losses as a percentage of total revenues?
  - — If so, is such a trend expected to continue?
  - — If so, has management determined causes for any deterioration and taken action to reverse the negative trend?
- Has the ratio of operating expenses to operating revenues been increasing?
- Are earnings trends consistent?
- Has a decreasing spread between interest earned and interest paid developed?
- Are the bank's earnings significantly vulnerable to changes in interest rate levels?
  - — If so, what are management's plans and prospects for altering the vulnerability?
- Are there any significant structural changes in the balance sheet which may impact earnings?
- Has the bank experienced increasing actual loan losses and/or loan loss provisions?
- Is there any evidence that sources of interest and other revenues have changed since that last examination?
  - — If so, is that attributed to an unsound emphasis for increased earnings?
- Are earnings deemed inadequate to provide increased capitalization commensurate with the bank's growth?

d. *Capital*

- Has the bank been unable to maintain a normal growth rate for capital?
- Do the ratios of loans to capital, deposits to capital or total assets to capital exhibit a trend to abnormal increases?
- Is capital deemed inadequate to support the present volume of business, including the volume of off-balance-sheet activities, in view of the amount of criticized assets, the competency of management, etc.?

e. *Liquidity*

- Is there a trend toward decreasing bank liquidity?
- Has the bank been forced to increase abnormally dependence on borrowed funds to support existing assets?
- Does the bank depend excessively on purchased funds?
- Is there a trend toward investing interest sensitive liabilities in non-interest sensitive assets?
- Do the present quantity and maturity of non-interest sensitive assets represent a dangerous or potentially dangerous situation?

f. *Off-Balance-Sheet Risk*

Loans Sold or Serviced

- Is the bank involved as the lead or agent in loan participations, syndications, or servicing activities to the extent that management expertise is inadequate, or to the extent that the volume exceeds the level which management can capably handle?
- Does the bank's record of pending or threatened litigation indicate any instances where the bank, as lead or agent in a loan participation or syndication, has willfully misrepresented the credit to the other participants, or otherwise acted with gross negligence in handling the credit?
  - — If so, is there any indication that the participants intend to hold the bank liable for any loss incurred on the credit?
- Did the examination reveal a practice of improper origination and packaging of loans sold or serviced which could cause:
  - — The bank being compelled to repurchase the package, or
  - — In the case of government guaranteed loans, the complete or partial dishonor of the guaranty?
- Has the bank previously repurchased participations when a loss was incurred, although it was not legally required to do so?

Letters of Credit

- Is there a trend toward increasing the issuance of standby letters of credit or other similar credit instruments?
  - If so, has the bank failed to consider the full impact of funding a significant percentage of those instruments?
- Are letters of credit excluded from the bank's internal loan review program?
- Does the internal evaluation of letters of credit include consideration of country and currency risk as well as credit risk?
- Is there a declining trend in the credit quality of letters of credit?
- Are standby letters of credit issued for purposes not covered in the bank's lending policy, or for which management does not have the expertise to handle?
- If not authorized in the bank's lending policy, were proper approvals obtained prior to issuance?

Wire Transfer Department

- Do internal control deficiencies in the wire transfer department pose a threat for large potential losses through fraud or error?
- Are there internal control deficiencies in the receiving and conveying of messages for other parties which may expose the bank to litigation for improper handling of the messages?

Data Processing Department

- Are internal controls inadequate in the bank's data processing area?
  - Are control deficiencies such that the accuracy and/or timeliness of data is questionable?
  - Are deficiencies such that the bank, in performing data processing services for others, could be liable for misplacement or other improper handling of source data?
- Are the bank's computer hardware and software systems inadequate to support the present and anticipated level of operations?
  - Are deficiencies such that hardware and systems will require replacement or upgrading in the short term?

Settlement Procedures

- If the bank is a member of CHIPS, Fedwire or other clearinghouse system, are procedures inadequate for the proper monitoring of incoming and outgoing wire transfers so that the bank is occasionally unprepared for settlement?
  - Would earnings be significantly affected if the immediate acquisition of funds is required to meet settlement?
  - Is the bank aware of the creditworthiness and ability of the other clearinghouse participants to make settlement?
- Are customers' daylight overdrafts allowed to exceed established credit limits or are they otherwise being improperly monitored?
- Is there a history of daylight overdrafts which have not been covered before the close of business?

Investment Securities

- Are there significant internal control deficiencies associated with the bank's handling of "when issued" trades, futures contracts and forward placements?
  - Is management's knowledge of interest rate hedging techniques insufficient to support such activity?
- Does the bank act as agent on securities or repurchase agreement transactions?
  - If so, does the customer agreement specifically designate liability for failure or performance?

Miscellaneous

- Did the analytical review of income and expenses disclose any additional off balance sheet activities for which management does not exhibit the necessary expertise and does not have

adequate internal controls to handle the service?
- Does a review of legal actions against the bank indicate any pattern of practices which are caused by deficient internal controls?
  — If so, have the deficiencies been corrected?
- Is the potential liability arising from pending litigation considered significant in terms of capital adequacy and liquidity, considering the level of other contingent liabilities?
- Are any of the bank's affiliates or subsidiaries experiencing unprofitability or liquidity problems which may affect the soundness of the bank?
- Are operating lease liabilities and annual lease payments significant in terms of the bank's other funding requirements?
- Is potential restitution resulting from Truth in Lending Act violations significant relative to capital and liquidity?
- Is the bank's level of loan commitments, standby letters of credit, commitments to purchase securities and futures/forward contracts imprudent in light of overall circumstances within the bank?

g. *Internal Controls and Audit Procedures*

- Have internal controls deteriorated since the last examination?
- Do any of the following exist at the bank?
  — Low compensation level of internal auditors.
  — Internal or external auditor who reports directly to other than the board of directors or a committee thereof.
  — Internal auditors who perform original work versus monitoring the efforts of others.
  — Abnormally low percentage of internal auditors to total personnel.
  — Inadequate training or supervision of internal auditors.
  — Questionable independence of external auditors.
  — Inadequate management response to deficiencies cited by auditors.

  If so, do these or other pertinent factors indicate a less than adequate situation in internal or external audit?
- Are internal controls and audit programs deemed inadequate?

h. *Ownership*

- Have there been significant changes in ownership since the last examination?
  — If so, could the change be detrimental to the soundness of the bank?
- Does any situation exist wherein one individual is capable of controlling the bank?
  — If so, is that detrimental to the bank's soundness?
- Is there any evidence of an impending proxy fight?
- Are ownership interests using borrowed funds to carry the bank's stock?
  — If so, is there an indication that undue pressure for increased earnings is being applied by the owners?
  — If such pressure is being applied, does that have a detrimental impact on the general characteristics of asset composition, as it exists, and asset composition, as it is expected to develop?

i. *Miscellaneous*

- Does the bank exhibit a high dependence on purchasing or participating in loans originated and managed by others?
  — If so, is that attributable to a lack of local loan demand or to a failure of the bank to service its trade area?
- Is there an increasing trend toward making loans and/or accepting deposits from outside of areas in which the bank maintains offices?
  — If so, does management and the board fully understand the risks inherent in such activity?
- Has a trend toward increasing advances to affiliated companies developed?

  - — If so, does that presently represent a dangerous situation?
- Has the bank experienced an abnormally fast rate of growth?
  - — If so, is that growth reasonable and does it therefore, have no significant impact on future soundness, based on:
    - Economic conditions within the trade area?
    - The bank's increased marketing efforts?
    - Offering improved services to the community?
    - Other factors?
  - — If so, is the bank's management team capable of adequately administering the growth?
- Does the bank have an imprudent investment in fixed assets?
- Does the bank depend to an excessive degree on a small, local economy, which is subject to cyclical swings due to local conditions and industries, as opposed to mirroring national economic trends?
  - — If so, is that a source of criticism or does it represent a potentially dangerous situation?
- Are there large fluctuations in the stock price of the bank or its parent?
  - — If so, is management unable to discern a cause for such fluctuations?
- Is management giving inadequate attention to compliance with laws and regulations?

4. Have all questions raised by the UBPR specialist been explored?
5. Complete workpapers.
6. Organize general conclusions regarding the present condition of the bank and:
   a. Correlate plans, projections, forecasts, and budgets with present conditional aspects, area characteristics, and management capability to determine which of the goals the bank has set you believe to be unattainable.
   b. Project the future condition of the bank based on its present financial condition, the economic expectations of the bank, the quality of management, director supervision and any other relevant factors.
   c. Formulate recommendations for management to consider when they initiate corrective or preventative action.
7. Conduct a final summary discussion with management to include:
   a. Criticisms noted during the examination.
   b. Conclusions reached about the bank in general.
   c. Expected future condition:
      - Management's view.
      - Examiner's view.
   d. Review of other potential problems.
   e. Planned corrective action:
      - Examiner recommendations.
      - Management commitments.
8. Update "Management Assessment" conclusion to add any relevant information obtained as a result of procedures performed in this program.
9. Prepare recommendations for any necessary supervisory action.
10. Perform the following steps for suspected violations of criminal statutes:
    a. Determine that a Criminal Referral Form, FR 2230, has been filed, if appropriate.
    b. Notify the Reserve Bank by telephone immediately if warranted by the type and seriousness of the suspected violation.
    c. Prepare a separate memorandum to the Reserve Bank containing sufficient detail to be fully informative.
    d. Prepare brief comments for the confidential section of the report of examination citing the date of the memorandum to the Reserve Bank.
    e. Segregate, identify, initial and date all appropriate workpapers and transmit them to the Reserve Bank making certain that the workpapers are factual, complete and do not contain expressions of examiner opinion.
11. Write, in appropriate report form, all comments and conclusions to be included in the confidential section of the examination report.
12. Update the workpapers with any information that will facilitate future examinations.

OVERVIEW

Since 1979, state member banks have been rated using the interagency Uniform Financial Institutions Ratings System (UFIRS), which was recommended by the Federal Reserve and other banking agencies. This rating system, referred to industry-wide by the acronym CAMEL, evaluated five components: capital adequacy, asset quality, management and administration, earnings, and liquidity.

Over the years, the UFIRS has proven to be an effective internal supervisory tool for uniformly evaluating the soundness of financial institutions and for identifying those institutions requiring special attention or concern. The UFIRS was revised and updated to address changes in the financial services industry and in supervisory policies and procedures. The revisions include the addition of a sixth component addressing sensitivity to market risks, explicit reference to the quality of risk-management processes in the management component, and identification of risk elements within the composite and component rating descriptions.[1]

The revisions to UFIRS are not intended to add to the regulatory burden of institutions nor require additional policies or processes. Instead, they are intended to promote and complement efficient examination processes. The revisions have been made to update the rating system, while retaining the basic framework of the original system.

The UFIRS considers certain financial, managerial, and compliance factors that are common to all institutions. Under this system, the supervisory agencies endeavor to ensure that all financial institutions are evaluated comprehensively and uniformly and that supervisory attention is appropriately focused on the financial institutions exhibiting financial and operational weaknesses or adverse trends.

The UFIRS is a useful vehicle for identifying problem or deteriorating financial institutions, as well as for categorizing institutions with deficiencies in particular component areas. Further, the rating system helps Congress follow safety-and-soundness trends and assess the aggregate strength and soundness of the financial industry, which helps the federal banking agencies in fulfilling their collective mission of maintaining stability and public confidence in the nation's financial system.

1. See 61 Fed. Reg. 67,021 (Dec. 19, 1996) and SR-96-38, "Uniform Financial Institutions Rating System."

COMPOSITE RATINGS

Under the UFIRS, each financial institution is assigned a composite rating based on an evaluation and rating of six essential components of its financial condition and operations. These component factors address the adequacy of capital, quality of assets, capability of management, quality and level of earnings, adequacy of liquidity, and sensitivity to market risk. Evaluations of the components take into consideration the institution's size and sophistication, the nature and complexity of its activities, and its risk profile.

Composite and component ratings are assigned based on a 1-to-5 numerical scale. A "1" is the highest rating, indicating the strongest performance and risk-management practices and the least degree of supervisory concern. A "5" is the lowest rating, indicating the weakest performance, inadequate risk-management practices, and the highest degree of supervisory concern.

The composite rating generally bears a close relationship to the component ratings assigned. However, the composite rating is not derived by computing an arithmetic average of the component ratings. Each component rating is based on a qualitative analysis of the factors that make up that component and its interrelationship with the other components. When assigning a composite rating, some components may be given more weight than others depending on the situation at the institution. In general, assignment of a composite rating may incorporate any factor that bears significantly on the overall condition and soundness of the financial institution. Assigned composite and component ratings are disclosed to the institution's board of directors and senior management.

The ability of management to respond to changing circumstances and address the risks that may arise from changing business conditions or the initiation of new activities or products is an important factor in evaluating a financial institution's overall risk profile, as well as the level of supervisory attention warranted. For this reason, the management component is given special consideration when assigning a composite rating.

Furthermore, the ability of management to identify, measure, monitor, and control the risks of its operations is taken into account when assigning each component rating. Examiners should recognize, however, that appropriate management practices vary considerably among financial institutions, depending on their size, complexity, and risk profile. For less complex institutions engaged solely in traditional banking activities and whose directors and senior managers, in their respective roles, are actively involved in the oversight and management of day-to-day operations, relatively basic management systems and controls may be adequate. At more complex institutions, detailed and formal management systems and controls are needed to address their broader range of financial activities and to provide senior managers and directors, in their respective roles, with the information they need to monitor and direct day-to-day activities. All institutions are expected to properly manage their risks. For less complex institutions engaging in less sophisticated risk-taking activities, detailed or highly formalized management systems and controls are not required to receive strong or satisfactory component or composite ratings.

Examiners consider foreign branch and specialty examination findings and the ratings assigned to those areas, as appropriate, when assigning component and composite ratings under UFIRS. The specialty examination areas include Compliance, Community Reinvestment, Government Security Dealers, Information Systems, Municipal Security Dealers, Transfer Agent, and Trust.

Composite ratings are based on a careful evaluation of an institution's managerial, operational, financial, and compliance performance. The six key components used to assess an institution's financial condition and operations are capital adequacy, asset quality, management capability, earnings quantity and quality, the adequacy of liquidity, and sensitivity to market risk. The rating scale ranges from 1 to 5, with a rating of 1 indicating the strongest performance and risk-management practices, relative to the institution's size, complexity, and risk profile, and the level of least supervisory concern. A rating of 5 indicates the most critically deficient level of performance; inadequate risk-management practices relative to the institution's size, complexity, and risk profile; and the level of greatest supervisory concern. The composite ratings are defined below.

Composite 1

Financial institutions with a composite 1 rating are sound in every respect and generally have components rated 1 or 2. Any identified weaknesses are minor and can be handled routinely by the board of directors and management. These financial institutions are the most capable of withstanding fluctuating business conditions and are resistant to outside influences, such as economic instability in their trade area. These institutions are in substantial compliance with laws and regulations. As a result, they exhibit the strongest performance and risk-management practices relative to their size, complexity, and risk profile, and give no cause for supervisory concern.

Composite 2

Financial institutions with a composite 2 rating are fundamentally sound. For a financial institution to receive this rating, generally none of its component ratings should be more severe than 3. Only moderate weaknesses are present, and the board of directors and management are capable of and willing to correct them. These financial institutions are stable, can withstand business fluctuations, and are in substantial compliance with laws and regulations. Overall risk-management practices are satisfactory relative to the institution's size, complexity, and risk profile. There are no material supervisory concerns and, as a result, the supervisory response is informal and limited.

Composite 3

Financial institutions with a composite 3 rating exhibit some degree of supervisory concern in one or more of the component areas. These institutions have a combination of moderate to severe weaknesses; however, the magnitude of the deficiencies generally will not cause a component to be rated more severely than 4. Management may lack the ability or willingness to effectively address weaknesses within appropriate timeframes. Financial institutions in this group generally are less capable of withstanding business fluctuations and are more vulnerable to outside influences than those institutions rated a composite 1 or 2. Additionally, these financial institutions may be in significant noncompliance with laws and regulations. Risk-management practices may be less than satisfactory relative to the institution's size, complexity, and risk profile. These financial institutions require more than normal supervision, which may include formal or informal enforcement actions. Failure of the institution appears unlikely, however, given its overall strength and financial capacity.

Composite 4

Financial institutions with a composite 4 rating generally exhibit unsafe and unsound practices or conditions. They have serious financial or managerial deficiencies that result in unsatisfactory performance. The institution's problems range from severe to critically deficient, and weaknesses and problems are not being satisfactorily addressed or resolved by the board of directors and management. Financial institutions in this group generally are not capable of withstanding business fluctuations. There may be significant noncompliance with laws and regulations. Risk-management practices are generally unacceptable relative to the institution's size, complexity, and risk profile. Close supervisory attention is required, which means formal enforcement action is necessary in most cases to address the problems. Institutions in this group pose a risk to the deposit insurance fund. Failure of the institution is a distinct possibility if the problems and weaknesses are not satisfactorily addressed and resolved.

Composite 5

Financial institutions with a composite 5 rating exhibit extremely unsafe and unsound practices or conditions. Their performance is critically deficient and risk-management practices are inadequate relative to the institution's size, complexity, and risk profile. These institutions are of the greatest supervisory concern. The volume and severity of problems are beyond management's ability or willingness to control or correct. Immediate outside financial or other assistance is needed for the financial institution to be viable. Ongoing supervisory attention is necessary. Institutions in this group pose a significant risk to the deposit insurance fund and their failure is highly probable.

COMPONENT RATINGS

Each of the component rating descriptions below lists the principal evaluation factors that relate to that component and briefly describes each numerical rating for that component. Some of the evaluation factors appear under one or more of the other components to illustrate the interrelationship among the components. The evaluation factors for each component are not listed in any particular order.

Capital Adequacy

A financial institution is expected to maintain capital commensurate with its risks and the ability of management to identify, measure, monitor, and control these risks. The effect of credit, market, and other risks on the institution's financial condition should be considered when evaluating the adequacy of capital. The types and quantity of risk inherent in an institution's activities will determine the need to maintain capital at levels above required regulatory minimums to properly reflect the potentially adverse consequences of these risks on the institution's capital.

The capital adequacy of an institution is rated based on, but not limited to, an assessment of the following evaluation factors:

- the level and quality of capital and the overall financial condition of the institution
- the ability of management to address emerging needs for additional capital
- the nature, trend, and volume of problem assets, and the adequacy of allowances for loan and lease losses and other valuation reserves
- balance-sheet composition, including the nature and amount of intangible assets, market risk, concentration risk, and risks associated with nontraditional activities

- risk exposure represented by off-balance-sheet activities
- the quality and strength of earnings, and the reasonableness of dividends
- prospects and plans for growth, as well as past experience in managing growth
- access to capital markets and other sources of capital, including support provided by a parent holding company

Ratings

1—A rating of 1 indicates a strong capital level relative to the institution's risk profile.

2—A rating of 2 indicates a satisfactory capital level relative to the institution's risk profile.

3—A rating of 3 indicates a less than satisfactory level of capital that does not fully support the institution's risk profile. The rating indicates a need for improvement, even if the institution's capital level exceeds minimum regulatory and statutory requirements.

4—A rating of 4 indicates a deficient level of capital. In light of the institution's risk profile, viability of the institution may be threatened. Assistance from shareholders or other external sources of financial support may be required.

5—A rating of 5 indicates a critically deficient level of capital. The institution's viability is threatened, and immediate assistance from shareholders or other external sources of financial support is required.

Asset Quality

The asset-quality rating reflects the quantity of existing and potential credit risk associated with the loan and investment portfolios, other real estate owned, other assets, and off-balance-sheet transactions. The ability of management to identify, measure, monitor, and control credit risk is also reflected here. The evaluation of asset quality should consider the adequacy of the allowance for loan and lease losses and weigh the institution's exposure to counterparty, issuer, or borrower default under actual or implied contractual agreements. All other risks that may affect the value or marketability of an institution's assets, including but not limited to operating, market, reputation, strategic, or compliance risks, should be considered.

The asset quality of a financial institution is rated based on, but not limited to, an assessment of the following evaluation factors:

- the adequacy of underwriting standards, soundness of credit-administration practices, and appropriateness of risk-identification practices
- the level, distribution, severity, and trend of problem, classified, nonaccrual, restructured, delinquent, and nonperforming assets for both on- and off-balance-sheet transactions
- the adequacy of the allowance for loan and lease losses and other asset valuation reserves
- the credit risk arising from or reduced by off-balance-sheet transactions, such as unfunded commitments, credit derivatives, commercial and standby letters of credit, and lines of credit
- the diversification and quality of the loan and investment portfolios
- the extent of securities underwriting activities and exposure to counterparties in trading activities
- the existence of asset concentrations
- the adequacy of loan and investment policies, procedures, and practices
- the ability of management to properly administer its assets, including the timely identification and collection of problem assets
- the adequacy of internal controls and management information systems
- the volume and nature of credit-documentation exceptions

Ratings

1—A rating of 1 indicates strong asset-quality and credit-administration practices. Identified weaknesses are minor and risk exposure is modest in relation to capital protection and management's abilities. Asset quality is of minimal supervisory concern.

2—A rating of 2 indicates satisfactory asset-quality and credit-administration practices. The level and severity of classifications and other weaknesses warrant a limited level of supervisory attention. Risk exposure is commensurate with capital protection and management's abilities.

3—A rating of 3 is assigned when asset-quality or credit-administration practices are less than satisfactory. Trends may be stable or indicate deterioration in asset quality or an increase in risk exposure. The level and severity of classified assets, other weaknesses, and risks require an elevated level of supervisory concern. There is generally a need to improve credit-administration and risk-management practices.

4—A rating of 4 is assigned to financial institutions with deficient asset-quality or credit-administration practices. The levels of risk and problem assets are significant and inadequately controlled, and they subject the financial institution to potential losses that, if left unchecked, may threaten its viability.

5—A rating of 5 represents critically deficient asset-quality or credit-administration practices that present an imminent threat to the institution's viability.

Management

The capability of the board of directors and management, in their respective roles, to identify, measure, monitor, and control the risks of an institution's activities, and to ensure a financial institution's safe, sound, and efficient operation in compliance with applicable laws and regulations is reflected in this rating. Generally, directors need not be actively involved in day-to-day operations; however, they must provide clear guidance regarding acceptable risk-exposure levels and ensure that appropriate policies, procedures, and practices have been established. Senior management is responsible for developing and implementing policies, procedures, and practices that translate the board's goals, objectives, and risk limits into prudent operating standards.

Depending on the nature and scope of an institution's activities, management practices may need to address some or all of the following risks: credit, market, operating or transaction, reputation, strategic, compliance, legal, liquidity, and other risks. Sound management practices are demonstrated by active oversight by the board of directors and management; competent personnel; adequate policies, processes, and controls taking into consideration the size and sophistication of the institution; maintenance of an appropriate audit program and internal control environment; and effective risk-monitoring and management information systems. This rating should reflect the board's and management's ability in relation to all aspects of banking operations as well as other financial-service activities the institution is involved in.

The capability and performance of management and the board of directors is rated based on, but not limited to, an assessment of the following evaluation factors:

- the level and quality of oversight and support of all institution activities by the board of directors and management
- the ability of the board of directors and management, in their respective roles, to plan for and respond to risks that may arise from changing business conditions or the initiation of new activities or products
- the adequacy of and conformance with appropriate internal policies and controls addressing the operations and risks of significant activities
- the accuracy, timeliness, and effectiveness of management information and risk-monitoring systems appropriate for the institution's size, complexity, and risk profile
- the adequacy of audits and internal controls to promote effective operations and reliable financial and regulatory reporting; safeguard assets; and ensure compliance with laws, regulations, and internal policies
- compliance with laws and regulations
- responsiveness to recommendations from auditors and supervisory authorities
- management depth and succession
- the extent that the board of directors and management are affected by or susceptible to dominant influence or concentration of authority
- reasonableness of compensation policies and avoidance of self-dealing
- demonstrated willingness to serve the legitimate banking needs of the community
- the overall performance of the institution and its risk profile

Ratings

1—A rating of 1 indicates strong performance by management and the board of directors and strong risk-management practices relative to the institution's size, complexity, and risk profile. All significant risks are consistently and effectively identified, measured, monitored, and controlled. Management and the board have demonstrated the ability to promptly and successfully address existing and potential problems and risks.

2—A rating of 2 indicates satisfactory management and board performance and risk-management practices relative to the institution's size, complexity, and risk profile. Minor weaknesses may exist, but they are not material to the safety and soundness of the institution and are being addressed. In general, significant risks and problems are effectively identified, measured, monitored, and controlled.

3—A rating of 3 indicates management and board performance that needs improvement or risk-management practices that are less than satisfactory given the nature of the institution's activities. The capabilities of management or the board of directors may be insufficient for the type, size, or condition of the institution. Problems and significant risks may be inadequately identified, measured, monitored, or controlled.

4—A rating of 4 indicates deficient management and board performance or risk-management practices that are inadequate considering the nature of an institution's activities. The level of problems and risk exposure is excessive. Problems and significant risks are inadequately identified, measured, monitored, or controlled and require immediate action by the board and management to preserve the soundness of the institution. Replacing or strengthening management or the board may be necessary.

5—A rating of 5 indicates critically deficient management and board performance or risk-management practices. Management and the board of directors have not demonstrated the ability to correct problems and implement appropriate risk-management practices. Problems and significant risks are inadequately identified, measured, monitored, or controlled and now threaten the continued viability of the institution. Replacing or strengthening management or the board of directors is necessary.

Earnings

The earnings rating reflects not only the quantity and trend of earnings, but also factors that may affect the sustainability or quality of earnings. The quantity as well as the quality of earnings can be affected by excessive or inadequately managed credit risk that may result in loan losses and require additions to the allowance for loan and lease losses. High levels of market risk may unduly expose the institution's earnings to volatility in interest rates. The quality of earnings may also be diminished by undue reliance on extraordinary gains, nonrecurring events, or favorable tax effects. Future earnings may be adversely affected by an inability to forecast or control funding and operating expenses, improperly executed or ill-advised business strategies, or poorly managed or uncontrolled exposure to other risks.

The rating of an institution's earnings is based on, but not limited to, an assessment of the following evaluation factors:

- the level of earnings, including trends and stability
- the ability to provide for adequate capital through retained earnings
- the quality and sources of earnings
- the level of expenses in relation to operations
- the adequacy of the budgeting systems, forecasting processes, and management information systems in general
- the adequacy of provisions to maintain the allowance for loan and lease losses and other valuation allowance accounts
- the exposure of earnings to market risk such as interest-rate, foreign-exchange, and price risks

Ratings

1—A rating of 1 indicates earnings that are strong. Earnings are more than sufficient to support operations and maintain adequate capital and allowance levels after consideration is given to asset quality, growth, and other factors affecting the quality, quantity, and trend of earnings.

2—A rating of 2 indicates earnings that are satisfactory. Earnings are sufficient to support operations and maintain adequate capital and allowance levels after consideration is given to asset quality, growth, and other factors affecting the quality, quantity, and trend of earnings. Earnings that are relatively static, or even experiencing a slight decline, may receive a 2 rating provided the institution's level of earnings is adequate in view of the assessment factors listed above.

3—A rating of 3 indicates earnings that need to be improved. Earnings may not fully support operations and provide for the accretion of capital and allowance levels in relation to the institution's overall condition, growth, and other factors affecting the quality, quantity, and trend of earnings.

4—A rating of 4 indicates earnings that are deficient. Earnings are insufficient to support operations and maintain appropriate capital and allowance levels. These institutions may be characterized by erratic fluctuations in net income or net interest margin, the development of significant negative trends, nominal or unsustainable earnings, intermittent losses, or a substantive drop in earnings from the previous years.

5—A rating of 5 indicates earnings that are critically deficient. A financial institution with earnings rated 5 is experiencing losses that represent a distinct threat to its viability through the erosion of capital.

Liquidity

In evaluating the adequacy of a financial institution's liquidity position, consideration should be given to the current level and prospective sources of liquidity compared to funding needs, as well as to the adequacy of funds-management practices relative to the institution's size, complexity, and risk profile. In general, funds-management practices should ensure that an institution is able to maintain a level of liquidity sufficient to meet its financial obligations in a timely manner and to fulfill the legitimate banking needs of its community. Practices should reflect the ability of the institution to manage unplanned changes in funding sources, as well as react to changes in market conditions that affect the ability to quickly liquidate assets with minimal loss. In addition, funds-management practices should ensure that liquidity is not maintained at a high cost or through undue reliance on funding sources that may not be available in times of financial stress or adverse changes in market conditions.

Liquidity is rated based on, but not limited to, an assessment of the following evaluation factors:

- the adequacy of liquidity sources compared with present and future needs and the ability of the institution to meet liquidity needs without adversely affecting its operations or condition
- the availability of assets readily convertible to cash without undue loss
- access to money markets and other sources of funding
- the level of diversification of funding sources, both on- and off-balance-sheet
- the degree of reliance on short-term, volatile sources of funds, including borrowings and brokered deposits, to fund longer-term assets
- the trend and stability of deposits
- the ability to securitize and sell certain pools of assets
- the capability of management to properly identify, measure, monitor, and control the institution's liquidity position, including the effectiveness of funds-management strategies, liquidity policies, management information systems, and contingency funding plans

Ratings

1—A rating of 1 indicates strong liquidity levels and well-developed funds-management practices. The institution has reliable access to sufficient sources of funds on favorable terms to meet present and anticipated liquidity needs.

2—A rating of 2 indicates satisfactory liquidity levels and funds-management practices. The institution has access to sufficient sources of funds on acceptable terms to meet present and anticipated liquidity needs. Modest weaknesses may be evident in funds-management practices.

3—A rating of 3 indicates liquidity levels or funds-management practices in need of improvement. Institutions rated 3 may lack ready access to funds on reasonable terms or may show significant weaknesses in funds-management practices.

4—A rating of 4 indicates deficient liquidity levels or inadequate funds-management practices. Institutions rated 4 may not have or be able to obtain a sufficient volume of funds on reasonable terms to meet liquidity needs.

5—A rating of 5 indicates liquidity levels or funds-management practices so critically deficient that the continued viability of the institution is threatened. Institutions rated 5 require immediate external financial assistance to meet maturing obligations or other liquidity needs.

Sensitivity to Market Risk

The sensitivity to market risk component reflects the degree to which changes in interest rates, foreign-exchange rates, commodity prices, or equity prices can adversely affect a financial institution's earnings or economic capital. When evaluating this component, consideration should be given to management's ability to identify, measure, monitor, and control market risk; the institution's size; the nature and complexity of its activities; and the adequacy of its capital and earnings in relation to the level of market-risk exposure.

For many institutions, the primary source of market risk arises from nontrading positions and their sensitivity to changes in interest rates. In some larger institutions, foreign operations can be a significant source of market risk. For other institutions, trading activities are a major source of market risk.

Market risk is rated based on, but not limited to, an assessment of the following evaluation factors:

- the sensitivity of the financial institution's earnings or the economic value of its capital to adverse changes in interest rates, foreign-exchange rates, commodity prices, or equity prices
- the ability of management to identify, measure, monitor, and control exposure to market risk given the institution's size, complexity, and risk profile
- the nature and complexity of interest-rate risk exposure arising from nontrading positions
- where appropriate, the nature and complexity of market-risk exposure arising from trading and foreign operations

Ratings

1—A rating of 1 indicates that market-risk sensitivity is well controlled and that there is minimal potential that the earnings performance or capital position will be adversely affected. Risk-management practices are strong for the size, sophistication, and market risk accepted by the institution. The level of earnings and capital provide substantial support for the degree of market risk taken by the institution.

2—A rating of 2 indicates that market-risk sensitivity is adequately controlled and that there is only moderate potential that the earnings performance or capital position will be adversely affected. Risk-management practices are satisfactory for the size, sophistication, and market risk accepted by the institution. The level of earnings and capital provide adequate support for the degree of market risk taken by the institution.

3—A rating of 3 indicates that control of market-risk sensitivity needs improvement or that there is significant potential that the earnings performance or capital position will be adversely affected. Risk-management practices need to be improved given the size, sophistication, and level of market risk accepted by the institution. The level of earnings and capital may not adequately support the degree of market risk taken by the institution.

4—A rating of 4 indicates that control of market-risk sensitivity is unacceptable or that there is high potential that the earnings performance or capital position will be adversely affected. Risk-management practices are deficient for the size, sophistication, and level of market risk accepted by the institution. The level of earnings and capital provide inadequate support for the degree of market risk taken by the institution.

5—A rating of 5 indicates that control of market-risk sensitivity is unacceptable or that the level of market risk taken by the institution is an imminent threat to its viability. Risk-management practices are wholly inadequate for the size, sophistication, and level of market risk accepted by the institution.

Risk Management Rating

The Federal Reserve instituted an explicit risk management rating to be assigned for examinations and inspections commencing on or after January 2, 1996. The risk management rating applies to all state member banks, regardless of their size.[2]

The rating for risk management is based on a scale of one through five in ascending order of supervisory concern. Examiners should assign this rating to reflect findings within all four elements of sound risk management described above. The risk management rating should be reflected in the overall "Management" rating of the institution and should be consistent with the following criteria:

1—(Strong). A rating of 1 indicates that management effectively identifies and controls all major types of risk posed by the institution's activities, including those from new products and changing market conditions. The board and management are active participants in overseeing and managing risk, respectively, and ensure that significant policies and limits exist, and the board understands, reviews, and approves them. Policies and limits are supported by risk monitoring procedures, reports, and management information systems that provide management and the board with the necessary information and analysis to make timely and appropriate responses to changing conditions.

Internal controls and audit procedures are sufficiently comprehensive and appropriate to the size and activities of the institution. There are few noted exceptions to the institution's established policies and procedures, and none is material. Management effectively and accurately monitors the condition of the institution consistent with standards of safety and soundness and in accordance with internal and supervisory policies and practices. Risk management is considered fully effective to identify, monitor, and control risks to the institution.

2—(Satisfactory). A rating of 2 indicates that the institution's management of risk is largely effective, but lacking to some modest degree. It reflects a responsiveness and ability to cope successfully with existing and foreseeable exposures that may arise in carrying out the institution's business plan. While the institution may have some minor risk management weaknesses, these problems have been recognized and are being addressed. Overall, board and senior management oversight, policies and limits, risk monitoring procedures, reports, and management information systems are considered satisfactory and effective in maintaining a safe and sound institution. Generally, risks are being controlled in a manner that does not require additional or more than normal supervisory attention.

Internal controls may display modest weaknesses or deficiencies, but they are correctable in the normal course of business. The examiner may have recommendations for improvement, but the weaknesses noted should not have a significant effect on the safety and soundness of the institution.

3—(Fair). A rating of 3 signifies risk management practices that are lacking in some important ways and, therefore, are a cause for more than normal supervisory attention. One or more of the four elements of sound risk management are considered fair, and have precluded the institution from fully addressing a significant risk to its operations. Certain risk management practices are in need of improvement to ensure that management and the board, in their respective roles, are able to identify, monitor, and control adequately all significant risks to the institution. Weaknesses may include continued control exceptions or failures to adhere to written policies and procedures that could have adverse effects on the institution.

The internal control system may be lacking in some important respects, particularly as indicated by continued control exceptions or by the

1. This rating was introduced by SR-95-51, "Rating the Adequacy of Risk Management and Internal Controls at State Member Banks and Bank Holding Companies."

failure to adhere to written policies and procedures. The risks associated with the internal control system could have adverse effects on the safety and soundness of the institution if corrective actions are not taken by management.

4—(Marginal). A rating of 4 represents marginal risk management practices that generally fail to identify, monitor, and control significant risk exposures in many material respects. Generally, such a situation reflects a lack of adequate guidance and supervision by management or oversight by the board. One or more of the four elements of sound risk management are considered marginal and require immediate and concerted corrective action by the board and management. A number of significant risks to the institution have not been adequately addressed, and the risk management deficiencies warrant a high degree of supervisory attention.

The institution may have serious identified weaknesses, such as an inadequate separation of duties, that require substantial improvement in its internal control or accounting procedures or in its ability to adhere to supervisory standards or requirements. Unless properly addressed, these conditions may result in unreliable financial records or reports or operating losses that could seriously affect the safety and soundness of the institution.

5—(Unsatisfactory). A rating of 5 indicates a critical absence of effective risk management practices to identify, monitor, or control significant risk exposures. One or more of the four elements of sound risk management are considered wholly deficient and management and the board have not demonstrated the capability to address deficiencies.

Internal controls may be sufficiently weak as to jeopardize seriously the continued viability of the institution. If not already evident, there is an immediate concern as to the reliability of accounting records and regulatory reports and about potential losses that could result if corrective measures are not taken immediately. Deficiencies in the institution's risk management procedures and internal controls require immediate and close supervisory attention.

2000—ASSETS

The 2000 series of sections cover various themes related to a bank's assets. The sections explain the Federal Reserve's approach in assessing the loan portfolio management practices at a state member bank as well as the supervisory assessment of a bank's asset quality. There are sections that provide background information on the different lending activities that are common among state member banks and on a bank's off-balance-sheet and investment activities.

A statistically based sampling approach to loan reviews can serve as an alternative to the traditional ‘‘top-down’’ loan-coverage approach when scoping certain bank examinations. In some cases, sampling requires fewer loans[1] to be reviewed than would be required using the minimum-coverage approach, while in other cases it requires more. The results depend heavily on the number of commercial and industrial loans (C&I) and commercial real estate (CRE) loans and the structure of the loan portfolio. Asset size and the level of tier 1 capital also affect the sample methodology. Additionally, sampling may require fewer loans to be reviewed than under the traditional method in well-managed institutions whose portfolios are not dominated by a small number of relatively large exposures.

Significantly, sampling may provide examiners with a broader perspective on the accuracy of the bank’s classification process than is typically provided by the traditional minimum-coverage target approach. The sampling approach should be directed towards banks currently having a CAMELS composite and asset-quality rating of 1 or 2 and also assets of $10 billion or less. (See section 2086.1.) The statistical sampling approach is not recommended, however, for use at de novo banks or other banks with unusually high or low capital ratios. Reserve Banks wishing to experiment with the sampling program at organizations with CAMELS or asset-quality ratings of 3 or above or at larger organizations should contact Board staff so that the examiner’s experience that is gained in this area may be used to develop alternative sampling procedures for these other types of institutions.

See this manual’s section 2084.1 for the examiner loan-sampling requirements for state member bank and credit-extending nonbank subsidiaries of banking organizations with $10–$50 billion in total consolidated assets.

1. The term ‘‘loans’’ encompasses all sources of credit exposure arising from loans and leases, including guarantees, letters of credit, and other loan commitments. The sampling methods described in this section select ‘‘loans’’ for review by obligor or related group of obligors (where identifiable). Thus, in the sampling procedures, the term ‘‘loan’’ refers to total credit exposure to an individual obligor or related group of obligors. As this implies, loan amounts referred to in this section should be determined on an exposure basis, including all outstanding notes and commitments.

CONCEPT AND STRUCTURE OF THE SAMPLING TECHNIQUE

The sampling approach builds on procedures examiners currently use to evaluate loan portfolios, which require coverage of a similar “core” group of exposures. The principal difference relates to the manner in which loans outside the core group are selected for review. Under the traditional approach, the largest remaining loans are selected until a desired coverage ratio is achieved. Using sampling, the remaining noncore loans are grouped into several strata, or buckets, based on the size of the borrowing relationship. Loans are randomly selected from each of these buckets proportionate to the dollar value of each bucket relative to the total noncore portfolio. The total number of sampled loans required is determined by the number and size distribution of loans in the bank’s portfolio.

The sampling approach is an effective means to determine if the examiner can rely on the bank’s classification process or whether the examiner must determine the level of classifications by traditional means. Although sampling may, in some cases, require examiners to review more loans than required by the traditional loan-coverage approach, sampling is more likely to detect problems among smaller loans and will provide a broader perspective of the bank’s classifications across the entire portfolio.

In most cases, examiners should expect to find very few misclassifications within the sampled buckets, since those segments would exclude any credits that the bank’s internal procedures have identified as weak and those that the examiner has otherwise identified for specific review (the ‘‘core’’ loans). When the examiner’s classifications agree with the bank’s internal loan classifications, then internal classification totals can be relied upon in calculating the total and weighted asset-classification ratios. However, if misclassifications are found within the sample, internal classifications may underestimate the true extent of problem loans, and the examiner must make adjustments to estimate the actual extent of problems. To make that estimate, the rate of misclassification is applied to the remaining loans in the sampled bucket to derive an estimate of other problems that the examiners would likely find if all the loans were read. This extrapolated amount of problem loans is then added to the total of specifically identified problems to evaluate the significance of credit weaknesses at the institution. Depending on the severity of misclassifications and the magnitude of problems specifically identified, expansion of the examination scope will probably be necessary to better assess the accuracy of loan grading.

Specific Procedures

Using electronic loan files provided by the bank (for example, those loan files available in the Automated Loan Examination Review Tool (ALERT) format) and the System's loan-sampling software, examiners are able to construct a variety of core and noncore borrower groups. (See table 1.) The "core" group—bucket 1—consists of several categories of loans that examiners have traditionally reviewed and would continue to review using sampling. These core borrowers include, for instance, the largest exposures and certain large problem or insider loans. The sampling program also permits examiners to select any additional borrower (or borrowers) for review based on the examiner's experience and judgment. These individually selected loans would be placed in the "examiner-selected" group—bucket 2. All loans contained in buckets 1 and 2 would be individually reviewed, not sampled, and examiners would not extrapolate their findings to other loans. All remaining internally identified problem borrowers are included in a separate "problem" group—bucket 3—designated as "discuss only"; these borrowers are not incorporated into the commercial-loan-coverage ratio nor are their findings extrapolated to other loans within the same bucket. However, any borrower in the "problem" group—bucket 3—may be individually selected for review by the examiner. Additionally, if the number of "discuss-only" borrowers in the "problem" group—bucket 3—is large, the examiner may select a number of borrowers to be randomly sampled.

The remaining noncore categories represent "pass" or creditworthy loans, grouped by the size of the borrowing relationship. Buckets 4 through 8 are composed of loans to be randomly sampled. The number of loans selected from buckets 4 through 8 is proportional to its total dollar value relative to the total noncore portfolio. Thus, if loans in a particular category represent 30 percent of the bank's total noncore exposures, then approximately 30 percent of the number of sampled credits will be drawn from that category. A "custom" group—bucket 4—is available for examiners to target specific borrowers meeting a variety of selection criteria. Buckets 5 through 8 represent all remaining loans in the commercial loan portfolio, segregated by size relative to the bank's tier 1 capital and loan-loss reserve. The results of examiners' findings for these sampled buckets would be extrapolated to the entire group of borrowers not reviewed.

Determination of Reliance on a Bank's Internal Classifications

Once the commercial loans have been selected for review, examiners are expected to use existing credit-analysis techniques as described in this manual to evaluate the borrower's creditworthiness, determine the level of adverse classifications, and identify any discrepancies with the bank's internal classifications.

In performing their analysis of the accuracy of classified credits, examiners should start with the assets internally classified by the bank's rating system and add any pass credits that were misclassified by the bank and downgraded to a classified status during the examiner's credit review. These classified assets are the key component for a "base" weighted asset-classification ratio.

Under the sampling program, the "base" weighted asset-classification ratio must be adjusted upward (extrapolated) to the extent misclassifications were uncovered within the randomly sampled loan buckets. The resulting extrapolated weighted asset-classification ratio is necessary to account for the likelihood that misclassifications uncovered from the sampled loans represent only a small portion of the total misclassified loans throughout the rest of the portfolio that was not reviewed. The extrapolated value provides examiners with a more comprehensive picture of the magnitude of the institution's credit problems.

In many cases, there will be no disagreements between the examiner's credit analysis and the bank's internal classifications. Consequently, there will be no difference between the weighted asset-classification ratio and the extrapolated ratio. Generally, no additional sampling would be necessary. However, other types of credit-administration weaknesses may be discovered

Table 1—Groups of Loans Available for Review

Bucket	*Description*
	Nonsampled Buckets
Bucket 1 Core*	1A: largest non-insider non-problem-borrower exposures* 1B: largest non-insider non-problem-borrower exposures underwritten in the previous 12 months* 1C: largest non-insider problem-borrower exposures* 1D: largest insider borrower exposures*
Bucket 2 Examiner-selected	Examiner optional group. Examiners may manually select any borrower to review.
Bucket 3 Problem	Problem loans (Watch list, >59 days past due, internal ratings, and previously classified). Discuss-only borrowers.
	Sampled Buckets
Bucket 4 Custom	Examiners may select to target specific borrowers meeting a variety of criteria.
Bucket 5 >3% T1	Remaining borrower exposures greater than 3 percent of tier 1 capital plus the ALLL.
Bucket 6 2%–3% T1	Remaining borrower exposures between 2 percent and 3 percent of tier 1 capital plus the ALLL.
Bucket 7 1%–2% T1	Remaining borrower exposures between 1 percent and 2 percent of tier 1 capital plus the ALLL.
Bucket 8 0.1%–1% T1	Remaining borrower exposures between 0.1 percent and 1 percent of tier 1 capital plus the ALLL.
Bucket 9 <0.1% T1	Remaining borrower exposures less than 0.1 percent of tier 1 capital plus the ALLL. These loans are not included in the sample.
Bucket 10 Noncommercial	All noncommercial borrowers. Examiners may scope into Bucket 2.

*Up to (i.e., a maximum of) 25 borrower exposures can be included in Bucket 1 (Core). Bucket 1 is comprised of a configuration of the borrower exposures in buckets 1A, 1B, 1C, and 1D, which must include appropriate representation of the largest, largest new, largest problem, and largest insider borrower exposures, respectfully. The number of borrower exposures in each of these sub-buckets should be based on the examiner's judgment and appropriately risk-focused.

that warrant additional review and, as a result, an additional sample of loans may be selected. In this case, the number of loans selected is left to the examiner's judgment.

In other cases, either minor or significant disagreements will require examiners to more fully investigate the reliance that can be placed on the internal classifications. When there are only a minor number of disagreements within the sampled loans, examiners should be aware that those seemingly minor disagreements may translate into fairly large differences between the base and extrapolated problem-loan figures. When those differences are significant enough that they would alter an examiner's overall conclusion regarding the accuracy of the bank's loan-grading system, follow-up work is required. In particular, significant differences between the "base" and extrapolated weighted classification ratios should raise concerns as to whether the institution is systematically misreporting credit problems.

For example, a disagreement may arise between an examiner's analysis and the bank's internal classification of a single credit that was drawn from the sample buckets. Assuming a "base" weighted asset-classification ratio of 4 percent, the disagreed-upon sample loan, when extrapolated, could increase the weighted asset-classification ratio to 7 percent. When the difference between the "base" and extrapolated ratios is not material, it would not be necessary to select additional loans if the ratio difference would not alter the examiner's conclusions regarding the condition of the loan portfolio.

In another situation, there may be disagreement between the examiner's analysis and the bank's internal rating on two small-dollar loans sampled from bucket 8 (borrower exposures between 0.1 percent and 1 percent of tier 1 capital plus the allowance for loan and lease losses (ALLL)). In this example, the bank's "base" weighted asset-classification ratio is calculated to be 3 percent. Individually, these loans do not play a significant role in the level of the "base" ratio. However, when these same disagreed-upon classifications are extrapolated, the result is a significant difference between the "base" ratio and the extrapolated classification ratio of 18.5 percent. This can occur when there are only four loans that are sampled from bucket 8, and the two loans in disagreement account for 40 percent of the dollar volume of the sampled loans. Through extrapolation, 40 percent of the remaining bucket 8 loans would be considered classified, thereby increasing the extrapolated ratio to a level that may cause an examiner to question the reliability of the bank's classification system.

In the preceding example, to rule out the possibility that misclassifications were identified as a matter of chance, examiners should expand their loan coverage by pulling an additional sample from the bucket in which the misclassifications were identified. If the examiner selected four additional borrowers from bucket 8 to review and no new misclassifications were found, the extrapolated ratio would decline to 11 percent. As the base and extrapolated ratios move much closer together, the examiner may have greater confidence in the bank's internal loan-rating system and place greater reliance on bank-identified problems in evaluating the bank's asset quality. However, when reviewing the additional four back-up loans, if the examiner found one new misclassification, then the extrapolated ratio would be 15 percent. In these cases, it is highly unlikely that the misclassifications were caused by chance, and it is probable that a systematic problem exists in the ability of bank management to correctly risk-rate their commercial loans. Consequently, examiners should closely review the misclassifications and determine if any pattern exists, such as loans generated from a specific originating office or loan officer, or by type of credit extension. In these cases, internal classifications should be deemed unreliable and further credit review should be performed to evaluate the full extent of problem assets. That expanded review should be consistent with the minimum loan coverage of 55 percent to 65 percent or more, as required for banks posing supervisory concerns. (See SR-94-13, which is partially superseded by SR-14-4 and section 2086.1.)

Factoring Sampling Results into Examination Findings

An evaluation of a bank's asset-quality rating within CAMELS should take into account both financial and managerial factors as detailed in SR-96-38. When using the sampling approach, the extrapolated weighted classification ratio is to be used as a tool for assessing the extent to which examiners may rely on the bank's internal classifications. To the extent loan sampling indicates that the bank's internal classifications are not reliable, the severity of that fundamental risk-management weakness should be factored into the asset-quality rating as well as the management and the risk-management rating. Results of the statistical loan sampling should be documented in the examination report. As for needed documentation, the traditional weighted classified asset ratio should appear in the open section of the examination report, and the extrapolated ratio should appear in the confidential section of the report. In cases where an expanded review was called for, the initial "base" classified asset ratio should also be noted, along with the final classified asset ratio resulting from the expanded review. (See the examination procedures, section 2082.3, for a detailed description of the required information.)

Discussions with Management Regarding the Sampling Procedures

The sampling procedure produces an extrapolated estimate of weighted classified assets. The principal use of extrapolation is to provide an *estimate* of what the weighted asset-classification ratio would be for the entire loan portfolio. The extrapolated ratio will differ significantly from the traditional weighted asset-classification ratio when errors in the bank's internal classification system are detected through random sampling. Examiners may want to discuss (1) how the errors led to a widening of the loan-review scope and (2) the degree of errors found in the loans pulled beyond the initial sample. Any uncertainties regarding the integrity of the institution's classification system or the extent of its asset-quality problems uncovered from the use of sampling (that resulted from rating errors) should be discussed with management and included in the examination report, along with any necessary follow-up work required to gain more certainty. Those discussions may center on the number of errors uncovered in sampled and core loans.

1. To evaluate and improve, using statistical sampling, the comprehensiveness and effectiveness of the examination's credit review of a bank's loan portfolio.
2. To better evaluate, using statistical sampling, a bank's internal credit-review process and also the effectiveness of its credit risk-management practices.
3. To assess the accuracy of the bank's internal credit classifications.

1. Using the Federal Reserve System's loan-sampling software and the electronic files provided by the bank under examination (for example, those in the Automated Loan Examination Review Tool (ALERT) format), develop the bank's core and sampled borrower groups. (See table 1 in section 2082.1.) Follow the "Specific Procedures" of section 2082.1 for selecting loans for review, including those that are to be randomly sampled.
2. Use the bank examination credit-analysis techniques in this manual to—
   a. evaluate the borrower's creditworthiness,
   b. determine the level of adverse classifications, and
   c. identify any discrepancies within the bank's internal classifications.
3. Continue to follow the "Specific Procedures."
   a. Be especially alert when reviewing loan misclassifications to detect patterns of misclassifications (for example, whether the misclassified loans were generated by a specific originating office or loan officer).
   b. When misclassifications are identified, be prepared to expand the scope of the loan review.
   c. Ascertain whether the bank is systematically misreporting credit problems.
4. When it is determined that the bank's internal classifications are unreliable, factor the severity of this risk-management weakness into the asset-quality, management, and risk-management ratings.
5. Include the following information in the examination report (for instance, the information illustrated below):
   a. Report the traditional weighted asset-classification ratio in the open section of the examination report.
   b. Report the extrapolated weighted asset-classification ratio, the traditional asset-classification ratio, and the number of errors found in the sampled buckets in the confidential section of the report.
   c. If an expanded sample was undertaken because of misclassification errors, report in the confidential section the number of additional loans selected, any errors from the expanded sample, and the adjusted weighted and extrapolated asset-classification ratios.

The illustration below is a sample table format that may be used to highlight the sampling findings within the indicated sections of the examination report.

Loan-Sampling Results—Items to Be Reported in the Examination Report

Open section	
Traditional weighted asset-classification ratio	%
Confidential section	
Extrapolated weighted asset-classification ratio	%
Number of borrowers sampled	
Number of errors in sampled buckets	
Expanded-sample information	
Number of sampled borrowers in expanded review	
Number of errors in expanded review	
Adjusted weighted asset-classification ratio	%
Adjusted extrapolated weighted asset-classification ratio	%

Loan Coverage Examination Requirements for Community State Member Banks with $10 Billion or Less in Total Consolidated Assets

Effective date October 2015

Section 2002.1

This guidance sets forth the loan- sampling expectations for Federal Reserve led examinations of community state member banks and clarifies when statistical sampling is expected to be used.[1] In addition, the guidance establishes minimum coverage[2] expectations for judgmental samples for full-scope and asset-quality target examinations. Examiners are expected to select for review a sample of loans[3] that is of sufficient size and scope to enable them to reach sound and well-supported conclusions about the quality of, and risk management over, a community state member bank's lending portfolio. In selecting a sample of loans for review, examiners should be guided by the following requirements.

COMMERCIAL AND INDUSTRIAL AND COMMERCIAL REAL ESTATE LOANS

For community state member banks with CAMELS composite and Asset Quality ratings of "1" or "2" that have not materially changed the composition of their loan portfolios or their credit administration practices since the prior examination, and whose most recent overall SR-SABR rating is not "1D," "1F," "2D," or "2F,"[4] examiners are expected to use the statistical loan-sampling procedures outlined in section 2082.1.[5] Examiners are not expected to supplement statistical samples with additional loans to reach the specified minimum coverage ratios discussed below for judgmental samples.[6]

For all other community state member banks, examiners should draw a judgmental sample that includes a selection of large, insider, problem,[7] watch, renewed, and new credits.[8] The sample should mainly be drawn from the bank's primary lending business lines, new business lines, and out-of-area loans or highly specialized lending or leasing portfolios. Coverage targets should factor in the bank's current asset quality rating and credit risk management assessment. More specifically, for community state member banks with "weak" credit risk management practices, with asset quality component ratings of "3 or worse," or where SR-SABR ratings of "D" or "F" raise questions about loan quality, coverage should be 40 percent or more. Community state member banks with strong or acceptable credit-risk management practices and asset quality component ratings of "1" or "2" should have 20 to 30 percent coverage. This is illustrated further in the table below.

It may be necessary to expand the sample when using either statistical or judgmental sampling in situations where there are several differences in credit ratings between those assigned by examiners and bank management. To expand the sample when using the statistical sampling methodology, examiners should follow the guidance discussed in section 2082.1. When using judgmental sampling, examiners should generally consider a community state member bank's internal risk-rating system to be unreliable when examiner downgrades[9] are 10 percent or more of

1. With the issuance of this guidance, SR-94-13, "Loan Review Requirements for On-site Examinations," is superseded only for Federal Reserve led examinations of community state member banks.

2. A loan review coverage ratio, or "coverage," should be calculated by dividing the dollar volume of commercial and industrial and commercial real estate loans reviewed during the examination by a bank's total dollar volume of such loans in the bank's loan portfolio. Credit exposures arising from trading and derivatives activities should not be included in the coverage ratio.

3. For the purposes of this section 2086.1, the term "loans" includes all sources of credit exposure arising from loans and leases. Such exposure includes guarantees, letters of credit, and other loan commitments. Both funded and unfunded commitments should be considered when assessing loan exposure.

4. For additional information on SR-SABR, see SR-06-2, "Enhancements to the System's Off-Site Bank Surveillance Program," this manual's section 1020.1.

5. For section 2086.1, "Commercial and Industrial and Commercial Real Estate Loans" include all non-consumer related loan categories.

6. Footnote reserved.

7. Problem loans are comprised of past due loans, nonaccrual loans, impaired loans, renegotiated or restructured loans, loans internally criticized or classified by the bank, and loans that were classified at the previous examination.

8. Together, these credits constitute the "core" loan categories.

9. A credit risk grading difference is considered a downgrade when: 1) a risk rating is changed by the examiner from an internal Pass rating to Special Mention or classified category, 2) a risk rating is changed by the examiner from Special Mention to a classified category, or 3) a risk rating is lowered by the examiner within the classified categories, including a split classification.

<tr><td>2</td></tr>
<tr><td>3</td><td colspan="3" rowspan="3">40 percent or more coverage</td></tr>
<tr><td>4</td></tr>
<tr><td>5</td></tr>
</table>

*Where SR-SABR ratings of "D" or "F" raise questions about loan quality, coverage should be 40 percent or more.

the total number of credit facilities reviewed, and 5 percent or more of the total dollar amount of loans reviewed. When a bank's risk-rating system is determined to be unreliable, examiners may need to expand sampling to better evaluate the effect of rating differences on the bank's allowance for loan and lease losses (ALLL) and capital. In such situations, examiners should direct the bank to promptly take corrective action to validate its internal ratings and to evaluate whether the ALLL or capital should be increased. The Reserve Bank should follow up with the bank to assess progress on corrective action and verify satisfactory completion. The timeframe for follow-up will depend on the nature and severity of problems identified and typically should be no more than six months after the Reserve Bank notifies the bank of the deficiencies.

RETAIL CONSUMER LENDING

Retail consumer lending involves a large number of relatively homogenous, small-balance loans such as installment loans, credit card receivables, home equity lines of credit (HELOCs), and residential mortgages. The supervisory review and classification of retail consumer loans should be carried out in accordance with the procedures set forth in the *Commercial Bank Examination Manual* and SR-00-8, "Revised Uniform Retail Credit Classification and Account Management Policy" (see section 2130.1, "Consumer Credit") and will generally be limited to past due and nonperforming assets.[10]

When a bank has a concentration (defined as more than 25 percent of the bank's tier 1 capital plus ALLL) in retail consumer loans, examiners should include in their examination scope a review of the retail lending program, its underwriting standards and policies, and related risks and controls. Examiners should also consider sampling a portion of credits in those segments (for instance, residential mortgages or HELOCs) of the bank's retail loan portfolio with a high concentration in order to assess risks and the adequacy of underwriting, internal controls, and credit risk management practices. A judgmental sample size should be used that is commensurate with concentration and credit risks and sufficient for the examiner to assess the quality and risks of the portfolio.

Loan Coverage of Commercial and Industrial and Commercial Real Estate Loans in a Target Examination

The Federal Reserve may deem it necessary to conduct a target examination prior to the next statutorily required full-scope examination.[11] Such target examinations should be risk-focused in accordance with existing guidance, including SR-97-25, "Risk-Focused Framework for the Supervision of Community Banks" (see section 1000.1, "Examination Strategy and Risk-Focused Examinations"). Any loan coverage goals should be determined using the judgment and discretion of the supervision staff involved in establishing the scope of the examination. For banks with a "3" composite rating, loan coverage of 30 percent or more should be achieved at a target examination that includes a review of asset quality. For banks with a "4" or "5" composite rating, loan coverage of 40 percent or more should be achieved at the target examination.

Loan coverage may consist of updates to credits reviewed and classified or downgraded at the previous examination and any credit originated or extended since the previous examination. The examination results should be used to update the asset quality and credit-risk manage-

10. See section 2130.3, "Consumer Credit (Examination Procedures)."

11. SR-85-28, "Examination Frequency and Communicating with Directors," indicates targeted examinations will be conducted when deemed necessary by the Reserve Bank between statutorily required examinations (refer to section 1000.1). The Federal Reserve's examination frequency requirements for state member banks are in Regulation H (12 CFR 208.64).

ment assessment and inform the level of coverage needed at the next full-scope examination. Deteriorating asset quality or uncorrected credit-risk management deficiencies noted at the target examination would generally necessitate expanded coverage for the next full-scope examination.

Documentation of Loan Review Coverage

The scope of loan coverage and the loan-sampling procedures used in the examination process should be documented within examination workpapers and the examination report.[12] In particular, examiners should ensure that the composition and volume of the reviewed loans are documented within the examination report. This documentation should include the core loan categories that were included in the sample, the loan portfolio segments that were the focus of the review, and cutoff values that were used in deciding which loans are included in the sample. Documentation supporting the establishment of the sample should be included in the workpapers.

12. See section 1030.1, "Workpapers."

This manual section sets forth loan sampling expectations for the Federal Reserve's examination of state member bank (SMB) and credit-extending nonbank subsidiaries of bank holding companies with greater than or equal to $10 billion and less than $100 billion in total consolidated assets. Refer to SR-14-4, "Examiner Loan Sampling Requirements for State Member Bank and Credit Extending Nonbank Subsidiaries of Bank Holding Companies in the Regional Banking Organization Supervisory Portfolio," for more information about revisions to the guidance and implementation information. Examiners have the flexibility, depending upon the structure and size of subsidiary SMBs, to utilize the guidance applicable to smaller SMBs when the SMB subsidiary's total assets are below $10 billion. The guidance clarifies expectations for the assessment of material retail-credit portfolios for these institutions.[1]

A thorough review of a bank's loan and lease portfolio remains a fundamental element of the Federal Reserve's examination program for SMBs. Such credit reviews are a primary means for examiners to (1) evaluate the effectiveness of a bank's internal loan review program and internal grading systems for determining the reliability of internal reporting of classified and Special Mention credits, (2) assess compliance with applicable regulations, and (3) determine the efficacy of credit-risk management and credit-administration processes. Further, examiners use the findings from their credit review to identify the overall thematic credit-risk management issues, to assess asset quality, to assist in the assessment of the adequacy of the allowance for credit losses (ACL), and to inform their analysis of capital adequacy.

1. A loan portfolio or portfolio segment is considered material when the portfolio or segment exceeds 25 percent of total risk-based capital or contributes 25 percent or more to annual revenues. When calculating a concentration of credit in a loan portfolio or portfolio segment, total risk-based capital refers to tier 1 capital plus the plus the portion of the allowance for credit losses (ACL) attributed to loans and leases. See SR-20-8, "Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach," for additional information.

LOAN SAMPLING METHODOLOGY

Reserve Banks will establish the annual loan sampling objective during the supervisory planning process. The annual sampling objective should provide coverage of material exposures, including those in the retail segments.[2] Reserve Banks should plan on conducting at least two loan quality reviews during the annual supervisory cycle of SMBs with greater than or equal to $10 billion and less than $100 billion in total consolidated assets.

Each review should focus on one or more material commercial loan segment exposures by Call Report loan type and, in total over the annual cycle, should cover the four highest concentrations for commercial credits in terms of total risk-based capital for any Call Report loan type from Schedule RC-C. Loan segments that generate substantial revenues are generally likely to entail higher risk. To the extent that examiners can determine that a loan category contributes 25 percent or more to annual revenues, examiners should sample these segments.[3] Examiners should also sample other loan segments that they or the bank's internal loan review have identified as exhibiting high-risk characteristics. Such risk characteristics include liberal underwriting, high levels of policy exceptions, high delinquency trends, rapid growth, new lending products, concentrations and concentrations to industry, significant levels of classified credits, or significant levels of Special Mention credits. In addition to these risk-focused samples, a sample of loans to insiders must be reviewed.[4] Annual loan-sampling coverage by examiners should take into consideration the severity of the asset quality component rating, the effectiveness of the internal loan review program, the results of

2. Commercial loan segments include commercial and industrial (C&I) loans, 1–4 family construction, other construction loans, multifamily loans, farm loans, non-farm non-residential owner occupied, and non-farm non-residential other loans. Retail loan segments include first-lien mortgages, closed-end junior liens, home equity lines of credit (HELOCs), credit cards, automobile loans, and other consumer loans.

3. The 25 percent threshold should be based on internal management information systems and may not be applicable or available in all instances. For the purposes of this guidance, annual revenue equals net interest income plus noninterest income.

4. Federal Reserve examiners must test and evaluate Regulation O (12 CFR pt. 215) compliance annually.

internal loan portfolio stress testing, and current asset quality financial trends.

During the examination scoping phase, Reserve Bank staff should analyze the results of recent loan review reports or audits prepared for an institution's internal use and the Reserve Bank's most current assessment of credit-risk management to help establish the size and composition of loans to be selected for review. An institution's internal loan review program should achieve substantial coverage beyond the examiners' annual judgmental sample of material loan portfolios. Examiners should review the findings and recommendations of the institution's internal loan review program to help identify areas of risk. In selecting loans from each segment of the loan portfolio to review, examiners should include a selection of the largest loans, problem loans (past due 90 days or more, nonaccrual, restructured, Special Mention, watch list, or internally classified loans), and newly originated loans. Examiners should ensure the sample selection includes robust coverage of classified, Special Mention, and watch credits. At a minimum, loans selected for review from commercial loan segments should represent 10 percent of the committed dollar amount of credit exposure within the loan segment.

Sample sizes should be increased beyond the 10 percent minimum, based on examiner judgment, for segments when the examination-scoping process or the internal loan review program has identified

1) deficiencies with credit-risk management and administration practices,
2) loan growth that has been unusually high,
3) credit quality or collateral values that have been adversely affected since the prior review by volatile local or national economic conditions, or
4) unreliable internal credit-risk grading.

Conversely, sample sizes should be based on the 10 percent minimum if

1) previous examinations concluded that internal loan review and credit-risk identification is effective,
2) internal loan review has reviewed a loan segment within the last 12 months and noted no material weaknesses, and
3) the examination-scoping process reveals no significant credit-risk management issues.

In general, the lower range of a 10 percent sampling of each segment or the entire commercial portfolio would be acceptable when all aspects of credit risk indicate low and stable risk.

Examiners should determine classification amounts for retail credits using the Uniform Retail Classification Guidance (SR-00-8, "Revised Uniform Retail Credit Classification and Account Management Policy"). Annually, examiners should focus on one or more material retail loan segment exposures by Call Report loan type. Examiners should determine the appropriate sample of retail loans from material segments based on risk to be tested for compliance with internal credit-administration policies and underwriting standards. While there is no minimum coverage expectation for retail portfolios or segments, the goal of sampling is to assist examiners in making an informed assessment of all aspects of retail credit-risk management. If applicable, examiners should evaluate and test secondary market origination and servicing practices and quality assurance programs. Examiners should also sample other retail loan segments, as needed, from segments the examiners or internal loan review identify as exhibiting high-risk characteristics such as liberal underwriting, high delinquency trends, rapid growth, new lending products, or significant levels of classified credits.

DOCUMENTATION OF LOAN SAMPLING ANALYSIS AND METHODOLOGY

Examiners should discuss their analysis and objectives for achieving loan sampling coverage with Board staff during the annual supervisory planning process. Upon reaching a consensus with Board staff, the analysis and methodology should be retained in workpapers and documented in the supervisory plan. Further, examiners should document their loan sample selection methods in scoping memoranda and in the confidential section of the report of examination. The required workpaper documentation of the commercial loan coverage calculation should be based on total loan commitments and should generally exclude loans reviewed outside of the Reserve Bank's supervisory plan when a detailed analysis of the loans by an examiner and an assessment of credit-risk management were not performed. Review of syndicated loans and participations, such as those from the Shared National Credits (SNCs) annual review, should only be included in the coverage ratio if Reserve Bank staff reviewed the credit-risk management aspects of the credit (for example, adherence to underwriting policies) and these findings are included in the examiner's assessment of overall credit-risk management practices. Examiners should continue to follow the SNC grading guidance.[5]

FOLLOW-UP EXPECTATIONS FOR EXAMINATIONS WITH ADVERSE FINDINGS

Examiners should generally consider a bank's internal risk-rating system to be less reliable when examiner downgrades or internal loan review downgrades equal 10 percent of the total number of loans reviewed, or 5 percent of the total dollar amount of loans and commitments reviewed.[6] When a bank's risk rating system is determined to be unreliable, examiners may need to expand sampling to better evaluate the effect of rating differences on the bank's ACL and capital. In such situations, examiners should direct the bank to take corrective action to validate its internal ratings and to evaluate whether the ACL or capital should be increased. The Reserve Bank will follow-up with the bank to assess progress on corrective action and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe during which actions are to be completed.[7] All follow-up actions on adverse findings should be discussed with Board staff.

5. Refer to SR-77-377, "Shared National Credit Program."

6. A credit-risk grading difference is considered a downgrade when a) a risk rating is changed by the examiner from an internal Pass rating to Special Mention or classified category, b) a risk rating is changed by the examiner from Special Mention to a classified category, or c) a risk rating is changed by the examiner within the classified categories.

7. Refer to this manual's section, "Examination Strategy and Risk-Focused Examinations."

State member banks with less than $100 billion in total assets, in the community banking organization and regional banking organization supervision portfolios, have the option to have Federal Reserve examiners review loan files off site during full-scope or target examinations. Federal Reserve examiners may conduct an off-site loan review provided the state member bank is amenable to such an arrangement, and the bank is able to securely send legible and sufficiently comprehensive loan information to the Reserve Bank.[1]

In the past, the Federal Reserve's off-site examination work focused on financial performance analyses and the review of bank policies, procedures, and certain bank internal reports.[2] With technological advancements, such as secure data transmission and electronic file imaging, examiners have the ability to collect and review loan file information off site without compromising the effectiveness of the examination process. Therefore, Federal Reserve examiners may use the off-site loan review program when a state member bank has communicated its willingness to participate in the program and can appropriately image and send its loan documents to the Reserve Bank in a secure manner.

PROCESS FOR DETERMINING WHETHER A STATE MEMBER BANK MAY PARTICIPATE IN THE OFF-SITE LOAN REVIEW PROGRAM

A Reserve Bank will contact a state member bank prior to the start of an examination to confirm whether the institution has an interest in participating in the off-site loan review program.[3] A bank interested in participating in the program needs to be able to demonstrate its ability to appropriately image and send loan documents to the Reserve Bank. In assessing a bank's ability to participate in the off-site loan review program, a Reserve Bank will consider the bank's answers to the following questions:

- Will the institution submit the loan file data using a secure transmission method such as cloud-based collaboration products, secure email services, encrypted removable media, virtual private networks, or remote desktop control services?
- Is the institution able to provide loan data and imaged loan documents that are legible, easily viewable, and properly organized to allow for timely review by examiners?
- Are the loan files comprehensive to allow an examiner to come to a conclusion as to the appropriate rating of a credit without having to request additional information from the institution?

For state member banks that have demonstrated these technological capabilities, the Reserve Bank should make all efforts to accommodate the request for an off-site loan review. However, a Reserve Bank may decline a request if the Reserve Bank has justifiable reasons to believe that an off-site review would impede the examiners from efficiently and effectively assessing the institution's asset quality and credit risk management process.

SECURITY OF LOAN FILE DATA SUBMITTED TO THE RESERVE BANKS

Reserve Bank examiners must handle a state member bank's loan file data in accordance with existing Federal Reserve information security requirements. A Reserve Bank should explain its procedures and practices for safeguarding loan file data to a state member bank as part of the discussion as to whether or not to participate in the off-site loan review program. This includes an explanation about the Reserve Bank's procedures for coordinating off-site loan reviews with state banking agencies. Further, Reserve Banks and the state member bank should discuss the technical procedures and security practices for conducting off-site loan reviews when contin-

1. Refer to SR-16-8, "Off-Site Review of Loan Files." The guidance in SR-16-8 also is relevant to the supervision of U.S. branches and agencies of foreign banking organizations with combined U.S. assets of $50 billion or less.

2. Refer to SR-95-13, "Recommendations to Increase the Portion of Examinations and Inspections Conducted in Reserve Bank Offices."

3. In order for a Reserve Bank to be able to complete an off-site loan review, a state member bank will need to submit all requested information in a timely manner, including confirming its interest in being considered for the off-site review program and providing all the necessary information for a Reserve Bank to confirm the institution's technological preparedness.

gency operating circumstances necessitate a full-time telework environment for Reserve Bank examiners.

ADJUSTMENTS TO THE EXAMINATION PROCESS

Reserve Banks need to adjust their examination process in order to execute an off-site loan review. For example, examiners allocate time prior to the start of the examination to confirm that a state member bank has successfully transmitted its loan file data to the Reserve Bank. Further, examiners are expected to maintain ongoing communication with the institution's management during the examination process. Prior to the start of the examination, examiners establish a schedule with the institution's management for status calls during the off-site portion of the examination. Typically, examiners will conduct regular calls with management to discuss loan file review and the status of other examination work.

SCOPE OF THE OFF-SITE EXAMINATION WORK

Reserve Banks will try to conduct as much of the examination work off site as feasible without compromising the effectiveness of the examination process. Specific to loan review, examiners typically conduct the following portions of examination work off site regardless of whether the state member bank is participating in the off-site loan review program. This examination work includes

- determination of the scope of the loan review;
- risk assessment to determine the areas to be emphasized (for example, management of credit concentrations and the loan approval process);
- review of the bank's loan policies;
- review of financial performance reports and management reports;
- preliminary review of the loan loss reserve methodology;
- determination of the loans to be reviewed, and the selection of individual credits;
- grouping of loans to related obligors; and
- preparation of loan line sheets.

In addition, for a state member bank participating in the off-site loan review program, examiners will perform an off-site the review of credit files for quality, documentation, and compliance with bank policy and laws and regulations. Further, at the discretion of the examiners, Reserve Banks may hold either off-site or on-site discussions with the institution's management regarding preliminary loan review findings such as the appropriateness of individual credit ratings assigned by the state member bank and the completeness of credit file documentation.

SCOPE OF ON-SITE EXAMINATION WORK

On-site examination work remains an indispensable component of bank supervision that plays a critical role in the ability of the Federal Reserve to fulfill its supervisory responsibilities. Reserve Banks are expected to continue to perform on site those activities that require physical observation such as transaction testing and direct monitoring of an institution's operations and internal controls. While on site, examiners will also review documents such as meeting minute books of the board of directors that would be inappropriate or impractical for the state member bank to send to the Reserve Bank. Further, unless contingency operating circumstances necessitate teleworking arrangements, Federal Reserve examiners will conduct exit meetings in person with the institution's management to communicate final supervisory findings and conclusions, including the final supervisory findings from any off-site loan review examination work. (Refer to SR-16-8.)

INTRODUCTION TO THE SHARED NATIONAL CREDIT PROGRAM

In 1977, the Federal Reserve, the Federal Deposit Insurance Corporation (FDIC), and the Office of the Comptroller of the Currency (OCC) (collectively "the agencies") established the Shared National Credit (SNC) program to evaluate large and complex syndicated credits. The program provides for uniform treatment and increased efficiency in shared-credit risk analysis and classification of the largest and most complex credits shared by multiple financial institutions. The SNC program facilitates the collection and analysis of data on the largest and most complex credits and gives examiners from the agencies a medium to assess the risk-management practices associated with such credits. The SNC program is governed by an interagency agreement among the agencies.

DEFINITION OF A SHARED NATIONAL CREDIT

An SNC is any loan or formal loan commitment, and any asset such as real estate, stocks, notes, bonds, and debentures taken as debts previously contracted, extended to borrowers by a federally supervised institution (explained in the subtopic below entitled, "Shared National Credit Reporting"), its subsidiaries, and affiliates, that aggregates to $100 million or more and is shared by three or more unaffiliated federally supervised institutions, or a portion of which is sold to two or more unaffiliated federally supervised institutions.[1] The agencies may designate any other large credit as meeting the general intent or purpose of the SNC program. Other examples of SNCs include

- all international credits to borrowers in the private sector regardless of currency denomination that are administered by a U.S. domestic office of the institution.
- two or more credits to the same borrower for the same origination date where the aggregate commitment amount of the credits is greater than or equal to $100 million and is shared by three or more unaffiliated, supervised participant lenders. All unaffiliated supervised participant lenders should be lenders in each credit.
- any credit facility or tranche of a syndicated loan agreement that equals $100 million or more and includes three or more federally supervised institutions as well as all the other credit facilities or tranches subject to that credit agreement, regardless of the dollar amount or the number of federally supervised institutions participating in them.[2]

SHARED NATIONAL CREDIT REPORTING

The agent or administrative agent of the SNC is responsible for submitting credit data to the agencies. The agent is the federally supervised institution that originates an SNC or administers the credit for the syndication or participating lenders. For the purposes of the SNC program, a federally supervised institution is any financial institution, including subsidiaries, subject to supervision by one of the agencies. More specifically, federally supervised institutions that are part of the SNC program include

- FDIC-insured banks (for example, state member banks, nonmember banks, and national banks) and thrifts, their branches and subsidiaries;
- bank holding companies, and their non-bank subsidiaries subject to examination by the Federal Reserve System;
- savings and loan holding companies;
- federally and state-licensed branches and agencies of foreign banks (including non-U.S. branches managed by a U.S. branch); and
- U.S. subsidiaries of foreign banking organizations.

U.S. representative or loan production offices of foreign banks are not required to report to the agencies for SNC purposes.

1. Effective January 1, 2018, the aggregate loan commitment threshold for inclusion in the SNC program increased from $20 million to $100 million to adjust for inflation and changes in average loan size. The 2018 increase in the dollar threshold to $100 million for inclusion as an SNC was the first since the program's inception in 1977.

2. Each tranche/facility is reported as a separate credit when a credit agreement has tranches/facilities with different terms or participant groups.

The agencies divide SNC reporters into two categories: "basic" and "expanded" filers. Basic filers report SNCs and submit an agent file to the agencies. Basic filers do not submit a participant file.

Expanded filers are typically larger institutions and are subject to more comprehensive reporting expectations than basic reporters. In comparison to basic filers, expanded filers are required to submit all syndicated credits (SNC and non-SNC alike) to the agencies. Syndicated credits include all credits that are arranged and extended by two or more financial entities regardless of the number of participants that are considered regulated entities. While SNCs must have a commitment amount of at least $100 million, there is no minimum commitment amount with syndicated credits. Expanded filers are also required to report participant files, which include structure and ratings information for all credits purchased. Expanded filers also report Basel-related data to the agencies.

SHARED NATIONAL CREDIT EXAMINATIONS

Historically, the agencies conducted annual SNC reviews. Starting in 2016, the agencies initiated a semiannual SNC examination schedule and now conduct SNC reviews in the first and third calendar quarters, with some banks receiving two reviews and others receiving a single review each year. The first quarter SNC review uses data collected from federally supervised institutions in the third quarter of the prior year, and the third quarter SNC review uses first quarter data of the same year. The reported data is analyzed and a sample of credits is selected for review by the agencies and participating state banking supervisors during the examination phase of the program.

The SNC program is governed by agreements among agencies, which include information sharing and program administration procedures for completing reviews of SNCs.[3] In general, teams of three examiners analyze each SNC and assign a disposition to the credit. The credit quality rating assigned by the examination team is reported to each supervised institution that participated in the credit as of the examination date. The assigned ratings are used by the agencies during other examinations of supervised institutions to avoid duplicate reviews and ensure consistent treatment of these credits. After the SNC examination phase is completed, the appropriate agency or agencies compile and distribute the results to the federally supervised institutions that are agents or participants in an SNC.

The agencies issue a single statement annually that includes combined findings from the previous 12 months. This practice presents a complete view of the entire SNC portfolio, which can be compared with prior years' reports. These reports are available on the Board's website.

3. For example, see SR-94-62, "Shared National Credit Program—Interagency Agreement."

The criteria used to assign quality ratings to extensions of credit that exhibit potential problems or well-defined weaknesses are primarily based upon the degree of risk and the likelihood of orderly repayment, and their effect on a bank's safety and soundness. Extensions of credit that exhibit potential weaknesses are categorized as ''special mention,'' while those that exhibit well-defined weaknesses and a distinct possibility of loss are assigned to the more general category of ''classified.'' The term ''classified'' is subdivided into more specific subcategories ranging from least to most severe: ''substandard,'' ''doubtful,'' and ''loss.'' The amount of classified extensions of credit as a percent of capital represents the standard measure of expressing the overall quality of a bank's loan portfolio.

These classification guidelines are only applied to individual credits, even if entire portions or segments of the industry to which the borrower belongs are experiencing financial difficulties. The evaluation of each extension of credit should be based upon the fundamental characteristics affecting the collectibility of that particular credit. The problems broadly associated with some sectors or segments of an industry, such as certain commercial real estate markets, should not lead to overly pessimistic assessments of particular credits in the same industry that are not affected by the problems of the troubled sector(s).

ASSESSMENT OF CREDIT QUALITY

The evaluation of each credit should be based upon the fundamentals of the particular credit, including, at a minimum—

- the overall financial condition and resources of the borrower, including the current and stabilized cash flow (capacity);
- the credit history of the borrower;
- the borrower's or principal's character;
- the purpose of the credit relative to the source of repayment; and
- the types of secondary sources of repayment available, such as guarantor support and the collateral's value and cash flow, when they are not a primary source of repayment. (Undue reliance on secondary sources of repayment should be questioned, and the bank's policy about permitting such a practice should be reviewed.)

The longer the tenure of the borrower's extension of credit or contractual right to obtain funds, the greater the risk of some adverse development in the borrower's ability to repay the funds. This is because confidence in the borrower's repayment ability is based upon the borrower's past financial performance as well as projections of future performance. Failure of the borrower to meet its financial projections is a credit weakness, but does not necessarily mean the extension of credit should be considered as special mention or be classified. On the other hand, the inability to generate sufficient cash flow to service the debt is a well-defined weakness that jeopardizes the repayment of the debt and, in most cases, merits classification. When determining which credit-quality rating category is appropriate, the examiner should consider the extent of the shortfall in the operating figures, the support provided by any pledged collateral, and/or the support provided by cosigners, endorsers, or guarantors.

Delinquent Extensions of Credit

One of the key indicators of a problem credit is a borrower's inability to meet the contractual repayment terms of an extension of credit. When this occurs, the extension of credit is identified as past due or delinquent. An extension of credit that is *not* delinquent may be identified as special mention or classified. Nondelinquent extensions of credit (also referred to as ''performing'' or ''current'') should be classified when well-defined weaknesses exist that jeopardize repayment. Examples of well-defined weaknesses include the lack of credible support for full repayment from reliable sources, or a significant departure from the intended source of repayment. This latter weakness warrants concern because a delinquent credit may have been brought current through loan or credit modifications, refinancing, or additional advances.

SPECIAL MENTION CATEGORY

A special mention extension of credit is defined as having potential weaknesses that deserve management's close attention. If left uncorrected, these potential weaknesses may, *at some future date*, result in the deterioration of the repayment prospects for the credit or the institution's credit position. Special mention credits are not considered as part of the classified extensions of credit category and do not expose an institution to sufficient risk to warrant classification.

Extensions of credit that might be detailed in this category include those in which—

- the lending officer may be unable to properly supervise the credit because of an inadequate loan or credit agreement;
- questions exist regarding the condition of and/or control over collateral;
- economic or market conditions may unfavorably affect the obligor in the future;
- a declining trend in the obligor's operations or an imbalanced position in the balance sheet exists, but not to the point that repayment is jeopardized; and
- other deviations from prudent lending practices are present.

The special mention category should not be used to identify an extension of credit that has as its sole weakness credit-data or documentation exceptions not material to the repayment of the credit. It should also not be used to list extensions of credit that contain risks usually associated with that particular type of lending. Any extension of credit involves certain risks, regardless of the collateral or the borrower's capacity and willingness to repay the debt.

For example, an extension of credit secured by accounts receivable has a certain degree of risk, but the risk must have increased beyond that which existed at origination to categorize the credit as special mention. Other characteristics of accounts receivable warranting identification as special mention include a rapid increase in receivables without bank knowledge of the causative factors, concentrations in receivables lacking proper credit support, or lack of on-site audits of the bank's borrower.

CLASSIFICATION CATEGORIES

Split Classifications

When classifying a particular credit, it may not be appropriate to list the entire balance under one credit-quality category. This situation is commonly referred to as a "split classification" and may be appropriate in certain instances, especially when there is more certainty regarding the collectibility of one portion of an extension of credit than another. Split classifications may also involve special mention as well as "pass" credits, those that are neither special mention nor classified. Extensions of credit that exhibit well-defined credit weaknesses may warrant classification based on the description of the following three classification categories.[1]

Substandard Extensions of Credit

A "substandard" extension of credit is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Extensions of credit so classified must have a well-defined weakness orweaknesses that jeopardize the liquidation[2] of the debt. They are characterized by the distinct possibility that the bank will sustain some loss if the deficiencies are not corrected. Loss potential, while existing in the aggregate amount of substandard credits, does not have to exist in individual extensions of credit classified substandard.

Doubtful Extensions of Credit

An extension of credit classified "doubtful" has all the weaknesses inherent in one classified substandard, with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and

1. Guidelines for the uniform classification of consumer-installment extensions of credit and credit card plans, as well as classification guidelines for troubled commercial real estate credits, are discussed in detail in sections 2130.1 and 2090.1, respectively.

2. This terminology is used in the original classification definitions as set forth in the 1938 accord and its amendments. The term "liquidation" refers to the orderly repayment of the debt and not to a forced sale of the loan or its underlying collateral.

improbable. The possibility of loss is extremely high, but because of certain important and reasonably specific pending factors that may work to the advantage of and strengthen the credit, its classification as an estimated loss is deferred until its more exact status may be determined. Pending factors may include a proposed merger or acquisition, liquidation proceedings, capital injection, perfecting liens on additional collateral, or refinancing plans.

Examiners should avoid classifying an entire credit as doubtful when collection of a specific portion appears highly probable. An example of proper use of the doubtful category is the case of a company being liquidated, with the trustee-in-bankruptcy indicating a minimum disbursement of 40 percent and a maximum of 65 percent to unsecured creditors, including the bank. In this situation, estimates are based on liquidation-value appraisals with actual values yet to be realized. By definition, the only portion of the credit that is doubtful is the 25 percent difference between 40 and 65 percent. A proper classification of such a credit would show 40 percent substandard, 25 percent doubtful, and 35 percent loss.

Examiners should generally avoid repeating a doubtful classification at subsequent examinations, as the time between examinations should be sufficient to resolve pending factors. This is not to say that situations do not occur when continuation of the doubtful classification is warranted. However, the examiner should avoid undue continuation if repeatedly, over the course of time, pending events do not occur and repayment is again deferred awaiting new developments.

Loss Extensions of Credit

Extensions of credit classified "loss" are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the credit has absolutely no recovery or salvage value, but rather that it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Amounts classified loss should be promptly charged off. (See SR-04-9 and its attachment.)

Banks should not be allowed to attempt long-term recoveries while the credit remains on the bank's books. Losses should be taken in the period in which they surface as uncollectible.

In some cases, examiners should determine a reasonable carrying value for a distressed extension of credit and require a write-down through a charge to the allowance for loan and lease losses, or to other operating expenses in the case of an "other asset." Such a determination should be based on tangible facts recorded in the bank's credit file and contained in reports on problem credits submitted to the board of directors or its committee, and not solely on verbal assurances from a bank officer.

SITUATIONS NOT REQUIRING CLASSIFICATION

It is generally not necessary to classify extensions of credit and contingent liabilities that are adequately protected by the current sound worth and debt-service capacity of the borrower, guarantor, or the underlying collateral. Further, a performing extension of credit should not automatically be identified as special mention, classified, or charged off solely because the value of the underlying collateral has declined to an amount that is less than the balance outstanding. Extensions of credit to sound borrowers that are refinanced or renewed in accordance with prudent underwriting standards should not be categorized as special mention unless a potential weakness exists, or classified unless a well-defined weakness exists that jeopardizes repayment. The existence of special mention or classified extensions of credit should not be identified as an imprudent banking practice, as long as the institution has a well-conceived and effective workout plan for such borrowers, and effective internal controls to manage the level of these extensions of credit.

Partially Charged-Off Extensions of Credit

When an institution has charged off a portion of a credit and the remaining recorded balance of the credit (1) is being serviced (based upon reliable sources) and (2) is reasonably assured of collection, categorization of the remaining recorded balance as special mention or classified may not be appropriate.[3] For example, when the remaining recorded balance of an extension of credit is secured by readily marketable collateral, the portion that is secured by this collateral would generally not be identified as special mention or classified. This would be appropriate, however, if potential or well-defined weaknesses, respectively, continue to be present in the remaining recorded balance. In such cases, the remaining recorded balance would generally receive a credit rating no more severe than substandard.

A more severe credit rating than substandard for the remaining recorded balance would be appropriate if the loss exposure cannot be reasonably determined, for example, when significant risk exposures are perceived, such as might be the case in bankruptcy or for credits collateralized by properties subject to environmental hazards. In addition, classification of the remaining recorded balance would be appropriate when sources of repayment are considered unreliable.

Formally Restructured Extensions of Credit

Restructured troubled debt should be identified in the institution's internal credit-review system and closely monitored by management. When analyzing a formally restructured extension of credit, the examiner should focus on the ability of the borrower to repay the credit in accordance with its *modified terms*.[4] With formally restructured credits, it is frequently necessary to charge off a portion of the principal, due to the borrower's difficulties in meeting the contractual payments. In these circumstances, the same credit-risk assessment given to nonrestructured credits with partial charge-offs (see the previous subsection) would also generally be appropriate for a formally restructured credit. This includes *not* identifying the remaining recorded balance as special mention or classified if unwarranted. The assignment of special mention status to a formally restructured credit would be appropriate, if, after the restructuring, potential weaknesses remained. It would also be appropriate to classify a formally restructured extension of credit when well-defined weaknesses exist that jeopardize the orderly repayment of the credit, based upon its reasonable modified terms. For a further discussion of troubled debt restructurings, see the glossary section of the Instructions for the Consolidated Reports of Condition and Income and "Loan Portfolio Management," section 2040.1.

ROLE OF GUARANTEES

The primary focus of a review of an extension of credit's quality is the original source of repayment and the borrower's ability and intent to fulfill the obligation without reliance on guarantors.[5] In situations involving troubled credits, however, the assessment of credit quality should also be based upon the support provided by guarantees. As a result, the lending institution must have sufficient information concerning the guarantor's financial condition, income, liquidity, cash flow, contingent liabilities, and other relevant factors (including credit ratings, when available) to demonstrate the guarantor's financial capacity to fulfill the obligation.

Examiner Treatment of Guarantees

A guarantee should provide support for repayment of indebtedness, in whole or in part, and be legally enforceable. It is predicated upon both the guarantor's financial capacity and willingness to provide support for a credit.

To assess the financial capacity of a guarantor and determine whether the guarantor can honor its contingent liabilities in the event required, examiners normally rely on their own analysis of a guarantor's financial strength. This includes an evaluation of the financial statements and the number and amount of guarantees currently committed to.

3. The accrual/nonaccrual status of the credit must continue to be determined in accordance with the glossary section of the Instructions for the Consolidated Reports of Condition and Income (Call Report). Thus, while these partially charged-off credits may qualify for nonaccrual treatment, cash-basis recognition of income will be appropriate when the criteria specified in the Call Report guidance are met.

4. An example of a restructured commercial real estate credit that does *not* have reasonable modified terms would be a mortgage that requires interest payments *only*, but no principal payments, despite the fact that the underlying collateral generates sufficient cash flow to pay both.

5. Some credits are originated based primarily upon the financial strength of the guarantor, who is, in substance, the primary source of repayment. In such circumstances, examiners generally assess the collectibility of the credit based upon the guarantor's ability to repay the credit.

A guarantor's willingness to perform is assumed, unless there is evidence to the contrary. Since a guarantee is obtained with the intent of improving the repayment prospects of a credit, a guarantor may add sufficient strength to preclude or reduce the severity of the risk assessment.

Examiners should consider and analyze the following guarantee-related factors during the course of their review of extensions of credit:

- The degree to which the guarantors have demonstrated their ability and willingness to fulfill previous guarantees.
- Whether previously required performance under guarantees was voluntary or was the result of legal or other actions by the lender. Examiners should give limited credence, if any, to guarantees from obligors who have reneged on obligations in the past, unless there is clear evidence that the guarantor has the ability and intent to honor the specific guarantee under review.
- The economic incentives for performance by guarantors. This includes—
  - — guarantors who have already partially performed under the guarantee;
  - — guarantors who have other significant investments in the project;
  - — guarantors whose other sound projects are cross-collateralized or otherwise intertwined with the credit; or
  - — guarantees collateralized by readily marketable assets that are under the control of a third party.
- The extent to which guarantees are legally enforceable, although in general this is the only type of guarantee that should be relied upon.
  - — Collection of funds under a guarantee should not be subject to significant delays or undue complexities or uncertainties that might render legal enforceability questionable.
  - — Although the bank may have a legally enforceable guarantee, it may decide not to enforce it. The examiner's judgment should be favorably affected by previous extensions of credit evidencing the timely enforcement and successful collection of guarantees.
- The type of the guarantee. Some guarantees for real estate projects are limited in that they only pertain to the development and construction phases of a project. As such, these limited guarantees cannot be relied upon to support a troubled credit after the completion of these phases.

OFF-BALANCE-SHEET ITEMS

The principal off-balance-sheet credit-related transactions likely to be encountered during loan reviews are loan commitments, commercial letters of credit, and standby letters of credit. When evaluating off-balance-sheet credit transactions for the purpose of assigning a credit-quality rating, the examiner should carefully consider whether the bank is irrevocably committed to advance additional funds under the credit agreement. If the bank must continue to fund the commitment and a potential weakness exists that, if left uncorrected, may at some future date result in the deterioration of repayment prospects or the bank's credit position, the amount of the commitment may be categorized as special mention. If there is a well-defined weakness that jeopardizes repayment of a commitment, classification may be warranted. If an amount is classified, it should be separated into two components: the direct amount (the amount that has already been advanced) and the indirect amount(the amount that must be advanced in the future).

Loan Commitments

Loan commitments are defined as legally binding obligations to extend credit (other than in the form of retail credit cards, check credit, and related plans) for which a fee or other compensation is typically received. Different types of loan commitments vary based upon the nature of the credit granted. Loan-commitment credit risk stems from the possibility that the creditworthiness of the customer will deteriorate between the time the commitment is made and the funds are advanced. (See "Contingent Claims from Off-Balance-Sheet Activities," section 4110.1.)

Commercial Letters of Credit

Commercial letters of credit involve a buyer of goods and a seller of goods and are instruments issued by a bank serving as an intermediary between the two for the resultant payment for the goods. Commercial letters of credit are customarily used to facilitate international trade due to the distances involved, as well as differences in legal, political, and business practices. Additionally, there may be a lack of familiarity between the buyer and seller. As a result, the bank substitutes its credit in place of the buyer's credit and promises on behalf of its customer to pay predetermined amounts of money to the seller against the delivery of documents indicating shipment of goods and representing title to those goods. If the shipping documents are in order, the bank is obligated to pay the seller through the issuance of a sight or time draft. The bank is then reimbursed by its customer for the amount of the shipment plus a fee for conducting the transaction.

Given the nature of the bank's commitment to pay for the goods on behalf of its customer, a commercial letter of credit is typically irrevocable. This means that it cannot be cancelled or revoked without the consent of all parties concerned. As a result, there is added credit risk for the issuing bank since it cannot cancel its commitment in the event the credit standing of its customer deteriorates, even if the deterioration occurs before the shipment of the goods.

Standby Letters of Credit

Most standby letters of credit (SLCs) are unsecured and involve substituting the bank's credit standing for that of the bank's customer on behalf of a beneficiary. This occurs when the beneficiary needs to ensure that the bank's customer is able to honor its commitment to deliver the goods or services by the agreed-upon time and with the agreed-upon quality. For credit-analysis purposes, SLCs are to be treated like loans and represent just one type of extension of credit relative to the overall exposure extended by the bank to the borrower. SLCs can be divided into two main groups: "financial SLCs" and "nonfinancial SLCs." Financial SLCs essentially guarantee repayment of financial instruments and are commonly used to "guarantee" payment on behalf of customers, issuers of commercial paper, or municipalities (relative to tax-exempt securities). Nonfinancial SLCs are essentially used as bid and performance bonds to "guarantee" completion of projects, such as building or road construction, or to guarantee penalty payment in case a supplier is unable to deliver goods or services under a contract.

REQUIRED LOAN WRITE-UPS

A full loan write-up (see criteria below) is required for all significant or material classified or specially mentioned assets if (1) management disagrees with the disposition accorded by the examiner, or (2) the institution will be rated composite 3, 4, or 5. The write-ups will be used to support the classifications to management and, in the case of problem banks, to support any necessary follow-up supervisory actions.

An abbreviated write-up may be appropriate for other loans to illustrate a credit-administration weakness or to formalize certain decisions, document agreements, and clarify action plans for management. For example, bank management may have agreed to either collect or charge off a loan classified doubtful by the next call report date or to reverse interest accruals and place the loan on nonaccrual status. These agreements may be expressed in the report through a brief comment under the classification write-up.

The examiner may find it beneficial to list extensions of credit alphabetically by department and/or branch. When more than one borrower is relevant to a single write-up, the alphabetization of the prime borrower or the parent corporation should determine the credit's position in the list. All other parties to the credit, including cosigners, endorsers, and guarantors, should be indicated directly under the maker of the notes or embodied within the write-up.

Although classifications and items listed for special mention may be listed alphabetically on the report page, examiners may elect to format the listing or write-ups in other ways to illustrate examination findings or conclusions. For example, examiners may wish to group classifications into categories of weakness and to use these listings to support loan-administration comments without providing a write-up for each classified item.

Notwithstanding this guidance, examiners have the flexibility of writing up more than the criticized assets, including any special mention credits, if deemed necessary. The decision to increase the number of write-ups should be based on factors such as the overall financial condition of the bank, quality of the loan portfolio, or adequacy of loan portfolio administration.

It is important that a sufficient number of write-ups with appropriate content be provided to support the examiner's assessment of the bank's problem loans, leases, and other extensions of credit. The write-ups should also support any comments pertaining to credit-administration policies and practices as they relate to this component of the bank's loan portfolio.

General Guidelines for Write-Ups of Special Mention and Classified Extensions of Credit

Extension of credit write-ups may be in a narrative or bullet format, similar to the write-ups of shared national credits, where appropriate. When the special mention or classified credit consists of numerous extensions of credit to one borrower, or when multiple borrowers are discussed in one write-up, the write-up should be structured to clearly identify the credit facilities being discussed. For example, each extension of credit could be numbered when multiple credits are involved.

Before a write-up is prepared, the examiner should recheck central information files or other sources in the bank to determine that all of the obligor's debt, including related debt,[6] has been noted and included. The examiner should consider identifying accrued interest receivable as special mention or classified, especially when the cumulative effect on classified percentages is significant or the accrued interest is appropriately classified loss.

Even though the length of a write-up may be limited, the information and observations contained in the write-up must substantiate the credit's treatment as a special mention or classified credit. To prepare a write-up that brings out pertinent and fundamental facts, an examiner needs to have a thorough understanding of all the factors relative to the extension of credit. An ineffective presentation of the facts weakens a write-up and frequently casts doubt on the accuracy of the risk assessment. The examiner might consider emphasizing deviations from prudent banking practices as well as loan policy and procedure deficiencies that are pertinent to the credit's problems. When portions of a borrower's indebtedness are assigned to different risk categories, including portions identified as "pass," the examiner's comments should clearly set forth the reason for the split-rating treatment. A full write-up on items adversely classified or listed as special mention must provide sufficient detail to support the examiner's judgment concerning the rating assigned. To ensure that the write-ups provide a clear, concise, and logical discussion of material credit weaknesses, the following minimum categories of information should be presented, preferably in the order listed (see SR-99-24):

1. *A general description of the obligation.*
   - *Amount of exposure (both outstanding and contingent or undrawn) as follows:*
     - — Summarize total related and contingent borrowings, including amounts previously charged off and recovered.
     - — List the borrower's total related liabilities outstanding. Amounts making up this total refer to credits in which the borrower may have a related interest and is directly or indirectly obligated to repay, such as partnerships and joint ventures. The rule for determining what is included in related debt (aggregating debt), which ultimately has to do with ascertaining compliance with legal lending limits, is governed by state law.
     - — List and identify the obligor's contingent liabilities to the bank under examination. Contingent liabilities include items such as unadvanced portions of a line of credit or extension of credit (commitments), guarantees or endorsements, and commercial and standby letters of credit. Although contingent liabilities to other lenders represent an important component of the financial analysis of the obligor, they should not be listed in the write-up unless they are particularly relevant to the situation, or are portions of both related and contingent liabilities that represent participations purchased from and sold to other lenders. The latter example should be listed even though the entire relationship may not have been identified as special mention or classified. Additionally, only the clas-

6. The term "related" refers to direct and indirect obligations.

sified portion of extensions of credit or contingent liabilities of the bank under examination should be listed in the appropriate column(s) of the classified asset page.

- *The obligor and the obligor's location and type of business or occupation.* For the type of business or occupation of the obligor, indicate whether the business is a proprietorship, partnership, joint venture, or corporation. This information can be used to compare the purpose of the credit with the source(s) of repayment, and to compare the credit's structure with the obligor's repayment ability. The general identification of occupation, such as professional or wage earner, may not be definitive enough, so it may be necessary to indicate that, for example, the extension of credit is to a medical doctor.

  Types of businesses may be clearly indicated in the borrower's business name and may not require additional comment. For example, Apex Supermarket and Ajax Sporting Goods Store imply a retail supermarket and a retail sporting goods store. However, examiners should not be misled in their analysis of the credit; likewise, the write-up reviewer should not be misled by assuming that a borrower is necessarily in the same line of business indicated by the borrower's business name. In the preceding example, if the borrower is primarily a wholesale grocery or sporting goods supplier, or if it radically deviates from the type of business indicated in its business name, the situation should be clarified. It is important to state the borrower's position in the marketing process—manufacturer, wholesaler, or retailer—and to indicate the types of goods or services.
- *Description and value of collateral.* The type of lien, collateral description and its condition and marketability, as well as the collateral's current value, date of valuation, and basis for the valuation, should be included. If values are estimated, the write-up should indicate the source of the valuation, such as the obligor's recent financial statement, an independent appraisal, or an internal management report. If valuations are not available, a statement to that effect should be included. A bank's failure to obtain collateral valuations, when available, is cause for criticism. Also include any other pertinent information that might impede or facilitate the possible sale of the collateral to repay the extension of credit.

  When problem borrowers are involved, the sale of the collateral often becomes the sole or primary source of repayment. As a result, the valuation of the collateral becomes especially important when describing the credit, as described in the specific examples below.

  If real estate is pledged to secure the credit, the write-up should provide a description of the property, the lien status, the amount of any prior lien, and the appraised value. If multiple parcels are securing the credit, appraised values should be listed for each parcel, including the date of the appraisal and the basis for the value. When bank staff or examiners' challenges to appraisal assumptions are supported, the resulting adjustment in value for credit-analysis purposes should be indicated. If the property held as collateral has tenants, its cash flow should be noted and the financial strength of the major lessees commented upon, if appropriate.

  If the collateral represents shares of or an interest in a closely held company, the shares or ownership interest held should be indicated in relation to the total shares outstanding, and the financial condition of the closely held company should be summarized in the write-up. Additionally, the approximate value of the closely held company, as indicated by its financial statements, should be compared for consistency with the value of the company as indicated on the principal's or partner's personal financial statement. The values often do not correlate to the extent they should, which typically indicates overvaluation of the asset on the balance sheet of the entity owning the shares or ownership interest.

  If a blanket lien on assets, such as receivables, inventory, or equipment, is pledged as collateral, the current estimated value of each asset type should be shown separately. The basis for these values can come from various sources, which should be indicated:

  — If receivables are pledged as collateral for an asset-based extension of credit, a current aging report and an assessment of the appropriateness of the advance ratio is usually necessary to determine their collectibility and value.

— If inventory is pledged as collateral for an asset-based extension of credit, an assessment of the appropriateness of the advance ratio is necessary. Additionally, the value varies with the condition and marketability of the inventory.

— If listed securities or commodities are pledged as collateral, the market value and date of valuation should be noted.

- *Notation if borrower is an insider or a related interest of an insider.*
- *Guarantors and a brief description of their ability to act as a source of repayment.* If the financial strength of guarantors has changed significantly since the initial guarantee of the credit facility, this should be noted. The relationship of the guarantors to the borrower should be identified, including a brief description of the guarantors' ability (financial strength) to serve as a source of repayment independent of the borrower. Any collateral supporting the guarantees should also be stated. See the previous subsection, "Role of Guarantees," for further guidance on considering guarantees for credit-analysis purposes.
- *Amounts previously classified.*
- *Repayment terms and historical performance, including prior charge-offs, and current delinquency status (with notation if the credit is currently on nonaccrual status).* Any changes to the original repayment terms, whether initiated by bank management or the obligor, should be detailed with an appropriate analysis of the changes included in the write-up. Renewals, extensions, and rewritten notes that deviate from the stated purpose and repayment expectations, as approved by management, should be discussed in light of their effect on the quality of the credit. Restructurings should be discussed in terms of their reasonable objectives, focusing on the prospects for full repayment in accordance with the modified terms.

It may be prudent to state the purpose of the credit. The purpose can be compared with the intended source of repayment for appropriateness. For example, a working capital extension of credit generally should not depend on the sale of real estate for repayment. Additionally, the obligor's prior business experience should correlate to the credit's purpose.

2. *A summary listing of weaknesses resulting in classification or special mention treatment.*
3. *A reference to any identified deficiencies in the item that will support loan-administration or violation comments elsewhere in the report.* This information may consist of deficiencies in credit and collateral documentation or violations of law that have a material impact on credit quality. Loan-portfolio-administration performance includes, but is not limited to—
   - changes in asset quality since the last examination;
   - the appropriateness of loan-underwriting standards;
   - the adequacy of—
     - — loan documentation;
     - — management information systems;
     - — internal control systems; and
     - — loan-loss reserves;
   - the accuracy of internal loan-rating systems;
   - the ability and experience of lending officers, as well as other personnel managing the lending function; and
   - changes in lending policies or procedures since the last examination.
4. *If management disagrees with the classification, a statement to that effect along with management's rationale.* Information could include selected data from the most recent fiscal and interim financial statements (discussion of items such as leverage, liquidity, and cash flow) when the primary reason for the write-up relates to the borrower's financial condition or operating performance. Cost of goods sold, nonrecurring expenses, dividends, or other items indicating deterioration in the credit quality may also be highlighted. Any stated value of the borrower's encumbered assets should be set off against specific debt to arrive at the unprotected balance, if applicable. In addition, the examiner should identify encumbered assets that are pledged elsewhere.
5. *A concise description of any management action taken or planned to address the weakness in the asset.* The action plan should focus on a concise description of management's workout or action plan to improve the credit's collectibility or to liquidate the debt. Review of the bank's documented workout plan should give an examiner a clear idea of past efforts to improve the prospect of col-

lectibility and management's current efforts and future strategy. The plan should clearly state the bank's goals and corresponding timetable as they appear at that point, including items such as the degree of repayment envisioned and the proceeds anticipated from the sale of the collateral. Based on this information, the examiner should succinctly summarize in the write-up the bank's collection efforts to date and its ongoing plans to address the situation.

Optional Information for Write-ups

At the examiner's discretion, other information may be included in loan write-ups. For example the examiner may want to include current financial information on the borrower, cosigners, and guarantors. The additional information may consist of discussions regarding current balance sheets and operating statements. If discussed, the examiner should indicate whether the financial statements have been audited, reviewed, compiled, or prepared by the borrower, and whether they are fiscal or interim statements. If the statements are audited, the examiner should indicate the type of opinion expressed—unqualified, qualified, disclaimer, or adverse—and whether the auditor is a certified public accountant. If the opinion is qualified, note the reason(s) given by the auditor.

When the examiner includes comments regarding the borrower's financial condition, the comments should always highlight credit weaknesses in a manner that supports the risk assessment. It is important that sufficient detail is provided to identify unfavorable factors. A trend analysis or details of balance-sheet, income-statement, or cash-flow items can be included. The examiner may also include comments when special mention or classified credits may exhibit favorable as well as unfavorable financial characteristics. Both types of pertinent factors may be included in the write-up as long as they are placed in the proper perspective to demonstrate the credit's inherent weaknesses.

OVERVIEW

This section will help the examiner perform two separate, but related, functions:

- evaluate the depth and scope of the formalized policies and procedures the bank uses to manage and control its loan portfolio
- form an overview of the performance of the entire lending operation by consolidating the results of the examination programs from the various lending departments

BANK LOAN POLICY

The purpose of a bank's lending policy is to establish the authority, rules, and framework to operate and administer its loan portfolio effectively, that is, to ensure profitability while managing risk. The policy serves as a framework to set basic standards and procedures in a clear and concise manner. The policy's guidelines should be derived from a careful review of internal and external factors that affect the institution, such as the bank's market position, historical experience, present and prospective trade area, probable future loan and funding trends, facilities, staff capabilities, and technology. Such guidelines, however, must be void of any discriminatory policies or practices.

The complexity and scope of the lending policy and procedures should be appropriate to the size of the institution and the nature of its activities and should be consistent with prudent banking practices and relevant regulatory requirements. Examiners should keep in mind that a loan policy that is appropriate for one bank is not necessarily suitable for another bank. Each bank's policy will differ, given the institution's strategic goals and objectives, coupled with factors such as economic conditions, the experience and ability of the lending personnel, and competition. The policy should be reviewed at least annually to ensure that it is not outdated or ineffective, remains flexible, and continues to meet the needs of the community. Changes in federal and other regulatory requirements, including limitations involving insider transactions, also must be incorporated into the policy.

The policy should be broad and not overly restrictive. If carefully formulated and administered by senior management, and clearly communicated and understood through each level of the organization, it greatly helps bank management (1) maintain sound credit-underwriting standards; (2) control and manage risk; (3) evaluate new business opportunities; and (4) identify, administer, and collect problem loans.

The lending policy must clearly state the philosophies and principles that govern safe and sound banking practices and procedures, as well as the mission and objectives of the particular institution. Throughout this manual, considerable emphasis is placed on formal written policies established by the board of directors that management can implement, administer, and amplify. The board of directors, in discharging its duty to both depositors and shareholders, must ensure that loans in the bank's portfolio are made based on the following three objectives:

- to grant loans on a sound and collectible basis
- to invest the bank's funds profitably for the benefit of shareholders and the protection of depositors
- to serve the legitimate credit needs of the bank's community

The written loan policy is the cornerstone for sound lending and loan administration. An adequate loan policy promotes—

- a bank's business and lending philosophy, despite changes in management;
- stability, as it provides a reference for lenders;
- clarity, to minimize confusion concerning lending guidelines; and
- sound objectives for evaluating new business opportunities.

The loan policy should define who will receive credit, what type, and at what price, as well as what credit documentation will be permitted or required. Other internal factors to be addressed include who will grant the credit and in what amount, as well as what organizational structure will ensure compliance with the bank's guidelines and procedures. Because loan authority is spread throughout the organization, the bank must have an efficient internal review and reporting system to monitor adherence to established guidelines. This system should adequately inform the directorate and senior management of how policies are being carried out and should provide them with sufficient information to evaluate the performance of lending officers and the condition of the loan portfolio.

The loan policy should establish (1) what information will be required from the borrower during the application process, (2) what information the borrower will be required to submit while the credit remains outstanding, and (3) which bank personnel are responsible for obtaining the information. In addition, the policy should specify who is responsible for reviewing the adequacy of loan documentation and for citing and correcting documentation exceptions. A high level of documentation exceptions indicates a deficiency in the bank's policy, procedures, monitoring, or enforcement.

A loan policy will differ from loan procedures. A policy represents a plan, guiding principle, or course of action designed to establish a framework for handling decisions, actions, and other matters, thereby influencing them. A procedure is a set of established methods or steps for performing a task. The lending policy should include issues relevant to all departments of the bank. Written procedures approved and enforced in various departments should be referenced in the bank's general lending policy. The policy must be flexible enough to allow for fast adaptation to changing conditions in the bank's earning assets mix and trade area.

Components of a Sound Lending Policy

As mentioned previously, a bank's loan policy should be appropriate to its size and complexity. Sound loan policy generally is based on the components described below.

Allowance for loan and lease losses. A sound lending policy establishes a systematic loan-review program to detect and identify problem loans and other portfolio weaknesses. (See the "Credit Risk Review" subsection for more information.) Guidelines and methodologies need to be established to determine the adequacy of the bank's allowance for loan and lease losses (ALLL), and they should be based on a conservative analysis of the risk in the loan portfolio. This analysis should ensure that an appropriate ALLL is maintained. The 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses[1] stipulates that federally insured depository institutions (IDIs) must maintain an ALLL at an appropriate level to absorb estimated credit losses associated with the loan and lease portfolio.

Examiners must evaluate management's estimate of losses existing in the bank's loan portfolio as well as the methodologies and procedures used in making and documenting the estimate. That evaluation provides the basis for determining the appropriateness and reasonableness of a bank's ALLL.

Collections and charge-offs. The lending policy should define the criteria and procedures for reporting relevant information concerning delinquent obligations to the board of directors. The policy should establish the mechanism for presenting problem loans to the directorate. Reports submitted to the board of directors should include sufficient detail for it to determine the risk factor, loss potential, and alternative courses of action. The policy should outline a follow-up collection notice procedure that is systematic and progressively stronger. Guidelines should be established to ensure that all accounts are presented to and reviewed by the board of directors or a board committee for charge-off.

Concentrations of credit. The lending policy should encourage both diversification within the portfolio and a balance between maximum yield and minimum risk. Concentrations of credit depend heavily on a key factor, and when weaknesses develop in that key factor, every individual loan within the concentration is affected. The directorate should evaluate the additional risk involved in various concentrations and determine which concentrations should be avoided or limited. The lending policy also should establish thresholds for acceptable concentrations of credit and require that all concentrations be reviewed and reported to the board on a periodic basis.

Institutions that have effective controls to manage and reduce undue concentrations over time need not refuse credit to sound borrowers simply because of the borrower's industry or geographic location. This principle applies to prudent loan renewals and rollovers, as well as

1. See SR-06-17 and SR-01-17. *See also,* SR-20-12, for more information on the allowance for credit losses.

to new extensions of credit that are underwritten in a sound manner. (See the "Concentrations of Credit" section for further details.)

Consumer and equal credit opportunity laws. Compliance with the many consumer-related statutes and regulations requires complex and detailed policies and procedures that should be addressed in a separate policy. However, the loan policy should require adherence to the Federal Reserve's Regulation B, 12 CFR 202, which implements the Equal Credit Opportunity Act. This regulation prohibits creditors from discriminating against loan applicants on the basis of age, race, color, religion, national origin, sex, marital status, or receipt of income from public assistance programs. As additional prohibitions are added under the regulation, they should be incorporated into the policy. Also, the loan policy should include a requirement that the bank give applicants a written notification of rejection of a loan application, a statement of the applicant's rights under the Equal Credit Opportunity Act, and a statement either of the reasons for rejection or of the applicant's right to such information.

Credit files. Obtaining and maintaining complete and accurate information on every relevant detail of a borrower's financial condition is essential to approving credit in a safe and sound manner. The loan policy should establish what information will be required from the borrower during the application process and what information the borrower will be required to submit while the credit remains outstanding. Credit files should be maintained on all borrowing relationships, regardless of size, with the exception of the latitude provided by the Interagency Policy Statement on Documentation of Loans. A current credit file should provide the loan officer, loan committee, and internal and external reviewers with all information necessary to analyze the credit before it is granted and to monitor and evaluate the credit during its life. Such information should (1) identify the borrower's business or occupation; (2) document the borrower's past and current financial condition; (3) state the purposes of all loans granted to the borrower, the sources of repayment, and the repayment programs; and (4) identify the collateral and state its value and the source of the valuation.

Credit files should include all financial statements, credit reports, collateral-inspection documents, reference letters, past loan applications, memoranda, correspondence, and appraisals. In many cases, particularly those involving real estate loans, appraisals and other collateral documentation may be maintained in a separate collateral file.

Documentation requirements will vary according to the type of loan, borrower, and collateral. For example, a bank may not require financial statements from borrowers whose loans are fully secured by certificates of deposit it issues. In a more general sense, information requirements between amortizing consumer loans and commercial or real estate loans vary greatly. More specific examples of the types and frequency of financial information often obtained for various types of credit are detailed in the following paragraphs.

For many consumer installment and residential mortgage loan borrowers, the borrowers' financial information generally is collected only at the time of loan application. The underwriting process for these types of loans emphasizes factors such as the borrower's income and job stability, credit history, and debt load, as well as the loan-to-value requirements for obtained collateral.

In factoring and other asset-backed lending activities, while financial information is a significant part of the underwriting process, collateral is the key component of the lending decision. Close monitoring of the collateral's existence, value, and marketability are essential to sound underwriting of these types of loans.

For typical commercial, commercial real estate, and agricultural loans, significant emphasis is placed on the financial strength, profitability, and cash flow of the core business for loan repayment. Close monitoring of the business's financial condition and profitability throughout the life of the loan is key to the sound administration of these types of credits. Other pertinent information requirements, such as collateral-inspection documentation for agricultural credits or lease/rental information for income-producing commercial real estate credits, may also be necessary to properly administer these loans. As part of the sound underwriting process for these loans, a bank may include loan covenants requiring the business to maintain financial soundness, submit periodic financial statements, and provide other needed information.

As a practice, a bank should not ask for information it does not need to adequately underwrite and monitor the quality of its loans. With proper use of loan covenants, a bank can protect its right to receive additional or more frequent information if a borrower's financial condition deteriorates or collateral values decline. When determining the financial and other information to request from the borrower, bankers should consider the requirements of the underwriting process for particular types of loans and the repayment risks. A bank's loan policy should clearly delineate the type and frequency of such information requirements.

The lending policy also should define the financial-statement requirements for businesses and individuals at various borrowing levels. Specifically, requirements for audited, unaudited, annual, or interim balance sheets; income and cash-flow statements; statements of changes in capital accounts; and supporting notes and schedules should be included, as appropriate. In addition, the lending policy should require external credit checks as appropriate, at the inception of the loan and during periodic updates. The loan policy should be written so that credit-data exceptions would be a violation of the policy.

Distribution by category. Limitations based on aggregate percentages of total loans in commercial, real estate, consumer, or other categories are common. Aggregate percentages for loans to deposits, assets, and capital (with regard to concentrations of credit) would provide guidance for effective portfolio management. Such policies are beneficial but should allow for deviations, with the approval by the board or a board committee. This allows credit to be distributed in response to the community's changing needs. During times of heavy loan demand in one category, an inflexible loan-distribution policy would cause that category to be slighted in favor of another.

Exceptions to the loan policy. A lending policy should require loan officers to present credits they believe are fundamentally sound and worthy of consideration, even though they may not conform with the bank's written lending policy or procedures. The reason for the exception should be detailed in writing and submitted for approval to a designated authority. The directors' loan committee or a similar body should review and approve all exceptions at reasonable intervals. The frequency of exceptions granted may indicate a lessening of underwriting standards on the one hand, or a need to adjust the policy to allow flexibility within safe and sound parameters on the other. The underlying reasons behind frequently granted exceptions should be assessed, and appropriate recommendations should be made accordingly.

Financing other real estate. If the bank wants to finance a parcel of other real estate that it owns, special accounting rules may apply. Consequently, the lending policy should include an outline of certain provisions of Financial Accounting Standards Board (FASB) Statement No. 66, "Accounting for Sales of Other Real Estate."

Geographic limits. A bank's trade area should be clearly delineated and consistent with defined Community Reinvestment Act (CRA) criteria. Loan officers and directors should be fully aware of specific geographic limitations for lending purposes. The bank's defined trade area should not be so large that, given its resources, the bank cannot properly and adequately monitor and administer its credits. A sound loan policy restricts or discourages loan approval for customers outside the trade area. The bank's primary trade area should be distinguished from any secondary trade area, which is especially important for new banks. Specific restrictions or exceptions should be listed separately.

Lender liability. Banking organizations must be careful that their actions to make, administer, and collect loans—including assessing and controlling environmental liability—cannot be construed as taking an active role in the management or day-to-day operations of the borrower's business. Such actions could lead to potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). (See the "Environmental Liability" subsection.)

Limitation on aggregate outstanding loans. Banks should establish guidelines limiting the total amount of loans outstanding in relation to other balance-sheet accounts. This type of control over the loan portfolio usually is expressed relative to deposits and total assets. In setting such limitations, various factors, such as the credit demands of the community, the volatility of deposits, and the credit risks involved, must be considered.

Loan authority. The lending policy should establish limits for all lending officers and ensure controls are in place to monitor compliance with the bank's legal lending limit. An individual officer's lending limit is usually based on his or her experience, tenure, and past adherence to the bank's loan policy. Lending limits also should be set for group authority, thereby allowing a combination of officers or a committee to approve larger loans than the members would be permitted to approve individually. The loan policy should describe the manner in which loans will be approved and ultimately reported to the board of directors, as well as the frequency of any loan committee meetings, as applicable.

Loan pricing. Interest rates on loans should be sufficient to cover (1) the cost of the funds loaned, (2) the bank's loan services (including general overhead), and (3) probable losses—while providing for a reasonable profit margin. In setting interest rates a bank considers the costs for its various loan products. Periodic review allows rates to be adjusted in response to changes in costs, competitive factors, or risks of a particular type of extension of credit. Specific guidelines for other relevant factors, such as compensating-
balance requirements and fees on commitments, are also germane to pricing credit.

Loan purchases and sales. If sufficient loan demand exists, lending within the bank's trade area is safer and less expensive than purchasing paper from a dealer or a correspondent bank. Direct lending promotes customer relationships, serves the credit needs of customers, and develops additional business. Occasionally, a bank may not be able to advance a loan to a customer for the full amount requested because of individual state lending limitations or other reasons. In such situations, the bank may extend credit to a customer up to its internal or legal lending limit and sell a participation to a correspondent bank for the amount exceeding the bank's lending limit or the amount it wishes to extend on its own. Generally, such sales arrangements are established before the credit is ultimately approved. These sales should be on a nonrecourse basis by the bank, and the originating and purchasing banks should share in the risks and contractual payments on a pro rata basis. Selling or participating out portions of loans to accommodate the credit needs of customers promotes goodwill and enables a bank to retain customers who might otherwise seek credit elsewhere.

Conversely, many banks purchase loans or participate in loans originated by others. In some cases, such transactions are conducted with affiliates or members of a chain-banking organization, with the goal of benefiting the whole organization. A purchasing bank may also wish to supplement its loan portfolio when loan demand is weak. In still other cases, a bank may purchase or participate in a loan to accommodate an unrelated originating bank with which it has an ongoing business relationship.

Purchasing or selling loans, if done properly, can have a legitimate role in a bank's overall asset and liability management and can contribute to the efficient functioning of the financial system. In addition, these activities help a bank diversify its risks and improve its liquidity.

Banks should avoid purchases of loans that generate unacceptable concentrations of credit. Such concentrations may arise solely from the bank's purchases, or they may arise when loans or participations purchased are aggregated with loans originated and retained by the purchasing bank. The policy should state the limits (1) for the aggregate amount of loans purchased from and sold to any one outside source and (2) of all loans purchased and sold. It should also establish limits for the aggregate amount of loans to particular types of industries. The extent of contingent liability, holdback and reserve requirements, and the manner in which loans will be handled and serviced should be clearly defined. In addition, the policy should require that loans purchased from another source be evaluated in the same manner as loans originated by the bank itself. Guidelines should be established for the type and frequency of credit and other information the bank needs to obtain from the originating institution to keep itself continually updated on the status of the credit. Guidelines should also be established for supplying complete and regularly updated credit information to the purchasers of loans originated and sold by the bank.

Prohibition on asset purchases or sales. The Dodd-Frank Act amended the Federal Deposit Insurance Act (FDIA) to impose a prohibition on asset purchases and between an IDI and an executive officer, director, or principal shareholder of the IDI, and any related interest of such person, unless the transaction is on market terms. In addition, if the asset purchase or sale represents more than 10 percent of the IDI's capital stock and surplus, the transaction must be approved in advance by a majority of the members of the board of directors of the IDI who do not have an interest in the transaction. See section 18(z) of the FDIA, as amended by the Dodd-Frank Act, section 615(a).

Loans to employees, officers, directors, principal shareholders, and their related interests. Loans to insiders are strictly defined in federal statutes and require close supervision to ensure compliance. Federal and state statutes provide the basis for defining insider loans, and they specify requirements and limitations that should be incorporated in the policy. (See the Federal Reserve's Regulation O, 12 CFR 215.)

The policy should ensure, through a system of controls over authority and funding, that transactions and extensions of credit to insiders are legally permissible and that they are made on substantially the same terms and conditions as those prevailing at the time for comparable transactions with other borrowers. Furthermore, the policy should contain guidelines for loans to employees who are not subject to the provisions of Regulation O.

Maximum maturities. Loans should be granted with realistic repayment plans, with the maturity related to the anticipated source of repayment, the purpose of the loan, and the useful life of the collateral. For term loans, a lending policy should state the maximum number of months over which loans may be amortized. Specific procedures should be developed for situations requiring balloon payments and modification of original loan terms. If the bank requires a cleanup (out-of-debt) period for lines of credit, it should be stated explicitly.

Maximum ratio of loan amount to collateral value. The loan policy should set forth procedures for ordering, preparing, and reviewing appraisals for real or personal property pledged as collateral. The bank's lending policy should outline guidelines for appraisals or internal evaluations, including regulatory requirements, and, in the case of renewals or extensions, procedures for possible reappraisals or re-evaluations. Acceptable types of appraisals or evaluations should be outlined. Circumstances requiring the use of in-house staff appraisers instead of fee appraisers should be identified. Maximum loan-to-value ratios and the methods of valuation to be used for various types of collateral should be detailed. (See the "Real Estate Loans" and "Real Estate Construction Loans" sections for further details.)

The maximum ratio of loan amount to the market value of pledged securities is restricted by the Federal Reserve's Regulation U, 12 CFR 221. The lending policy should set forth margin requirements for all types of securities acceptable as collateral. Margin requirements should be related to the marketability of the security, that is, whether it is actively traded, over the counter, or closely held. The policy also should assign responsibility and set a frequency for periodic pricing of the collateral.

Prohibitions against tying arrangements. The most common types of tying arrangements are those where a bank product or consideration for a bank product is conditioned upon obtaining another product from the bank or an affiliate. Section 106 of the Bank Holding Company Act Amendments of 1970 generally prohibits a bank from tying a product or service to any of its other products or services, including those offered by its affiliates.[2] Examiners should ascertain that member banks have not extended credit voluntarily or involuntarily based on impermissible tying arrangements.

Types of loans. The lending policy should state the types of loans management considers desirable or prohibited. It also should set forth guidelines for extensions-of-credit types such as commercial loans; real estate loans; secured and unsecured loans; and off-balance-sheet activities, such as letters of credit and loan commitments. The decision about the types of loans granted should be based on the expertise of the lending officers, the deposit structure of the bank, and the community's anticipated credit demands. Credits involving complex structures or repayment arrangements, or loans secured by collateral that requires more-than-normal monitoring, should be avoided unless the bank has the personnel, policies, controls, and systems necessary to administer such advances properly. Types of credits that have caused an abnormal loss to the bank should be identified, scrutinized, and controlled within the framework of stated policy. A bank also should consider its overall

2. For more information, see this manual's section entitled, "Regulation Y: Prohibitions Against Tying Arrangements."

exposure to term lending relative to its stable funds.

Continued rigorous credit-risk assessment during favorable economic conditions. Internal processes and requirements for loan-underwriting decisions should be consistent with the nature, size, and complexity of the banking organization's activities and with the institution's lending policies. Any departures therefrom can have serious consequences for institutions of all sizes. Departures can be evident in three pivotal and related areas:

1. *An undue reliance on optimistic outlooks for prospective borrowers and for continued favorable economic and financial market conditions.* A long and continuing economic expansion can lead banks to more frequently base their decision to lend on a very optimistic assessment of the borrower's operating prospects. Timely principal repayment may often be based on the assumption that the borrower will have ready access to financial markets in the future. Such reliance, especially if across a significant volume of loans, is not consistent with sound credit-risk management. Undue reliance on continued favorable economic conditions can be demonstrated by—

   - dependence on very rapid growth in a borrower's revenue as the "most likely" case;
   - heavy reliance on favorable collateral appraisals and valuations that may not be sustainable over the longer term;
   - greater willingness to make loans without scheduled amortization before the loan's final maturity; or
   - ready willingness to waive violations of key covenants, release collateral, or guarantee requirements, or even to restructure loan agreements, without corresponding concessions on the part of the borrower on the assumption that a favorable environment will allow the borrower to recover quickly.

   Among the adverse effects of undue reliance on a favorable economy is the possibility of delay in properly identifying problem loans. Timely identification of problem loans is critical for providing a full awareness of the institution's risk position, informing management and directors of that position, taking steps to mitigate risk, and properly assessing the adequacy of the allowance for credit losses and capital.[3]

   Underlying a banking organization's (BO) overly optimistic assessment of a borrower's prospects may be an overreliance on its continued ready access to financial markets on favorable terms. Examples of overreliance include the following:

   - explicit reliance on future, public market debt or equity offerings or on other sources of refinancing as the ultimate source of principal repayment, which presumes that market liquidity and the appetite for such instruments will be favorable at the time that the facility is to be repaid
   - ambiguous or poorly supported BO analysis of the repayment sources of the loan's principal (This results in an implicit reliance, for repayment, on some realization of the implied market valuation of the borrower (for example, through refinancing, asset sales, or some form of equity infusion) and presumes, as above, that markets will be receptive to such transactions at the time that the facility is to be repaid.)
   - measuring a borrower's leverage (for example, debt-to-equity) based solely on the market capitalization of the firm without regard to "book" equity, and thereby implicitly assuming that currently unrealized appreciation in the value of the firm can be readily realized if needed
   - more generally, extending bank loans with a risk profile that more closely resembles that of an equity investment and under circumstances in which additional bank credit or default are the borrower's only resort if favorable expectations are not met

   As a result of this overreliance, some banking organizations may find themselves with a potentially significant concentration of credit exposure that is at risk to a possible reversal in financial markets. Turmoil in financial markets, however, may contribute to signifi-

3. With respect to these issues, see SR-98-25, "Sound Credit Risk Management and the Use of Internal Credit Risk Rating Systems at Large Banking Organizations." As discussed therein, the Federal Reserve's guidance on credit-risk management and mitigation covers both loans and other forms of on- and off-balance-sheet credit exposure.

cant liquidity pressures in some sectors of the economy and prevent ready access to financial markets by certain borrowers. Moreover, there is no assurance that any such market turmoil will quickly resolve itself. Under these circumstances, a borrower's ability to raise new funds in public debt or equity markets to repay maturing bank loans is far from guaranteed.

2. *Insufficient consideration of stress testing.* An institution's lending policies should prescribe meaningful stress testing of the prospective borrower's ability to meet its obligations. Failure to recognize the potential for adverse events—whether specific to the borrower or its industry (for example, a change in the regulatory climate or the emergence of new competitors) or to the economy as a whole (for example, a recession)—can prove costly to a banking organization.

   Mechanical reliance on threshold financial ratios (and the "cushion" they imply) is generally not sufficient, particularly for complex loans and loans to leveraged borrowers or others that must perform exceptionally well to meet their financial obligations successfully. Scenario analysis specific to the borrower, its industry, and its business plan is critical to identify the key risks of a loan. Such analysis should have a significant influence on both the decision to extend credit at all and, if credit is extended, on decisions on appropriate loan size, repayment terms, collateral or guarantee requirements, financial covenants, and other elements of the loan's structure.

   When properly conducted, meaningful stress testing includes assessing the effect on the borrower when the following situations or events occur:

   - unexpected reductions or reversals in revenue growth, including shocks to revenue of the type (or types) and magnitude that would normally be experienced during a recession
   - unfavorable movements in market interest rates, especially for firms with high debt burdens
   - unplanned increases in capital expenditures due to technological obsolescence or competitive factors
   - deterioration in the value of collateral, guarantees, or other potential sources of principal repayment
   - adverse developments in key product or input markets
   - reversals in or reduced access by the borrower to public debt and equity markets

   Proper stress testing typically incorporates an evaluation of the borrower's alternatives for meeting its financial obligations under each scenario, including asset sales, access to alternative funding or refinancing, or ability to raise new equity. In particular, the evaluation should focus not only on the borrower's ability to meet near-term interest obligations, but also on its ability to repay the principal of the obligation.

3. *Weakening of key internal controls in the lending process.* An institution's lending policy should require the use of adequate internal controls within the lending process. Internal controls such as loan review or credit audit are critical for maintaining proper incentives for bank staff to be rigorous and disciplined in their credit analysis and lending decisions. A bank's credit analyses, loan terms and structures, credit decisions, and internal rating assignments should be reviewed in detail by experienced and independent loan-review staff. These reviews provide both motivation for better credit discipline within an institution and greater comfort for examiners—and management—that internal policies are being followed and the institution continues to adhere to sound lending practice.

   Economic prosperity and relatively low levels of problem loans and credit losses should not encourage institutions to dramatically or suddenly reduce staff resources or portfolio coverage for the loan-review function. Likewise, thorough reviews of individual loans should continue. When economic prosperity and relatively low levels of problem loans and credit losses exist, there may be increasing internal pressure within the institution to reduce loan-review staff, to conduct more limited loan portfolio reviews, and to perform less thorough reviews of individual loans. Although some useful efficiencies may be desired, the danger is that the scope and depth of loan-review activities may be reduced beyond prudent levels over a longer horizon. If reduced too far, the integrity of the lending process and the discipline of identifying unrealistic assumptions and discerning problem loans in a timely fashion may deteriorate, particularly as a result of a downturn in a credit cycle.

Other. Management should establish appropriate policies, procedures, and information systems to ensure that the impact of the bank's lending activities on its interest-rate exposure is carefully analyzed, monitored, and managed. In this regard, consideration should also be given to off-balance-sheet instruments that may be associated with lending arrangements, including commitments, letters of credit, or swaps. (See this manual's section on "Contingent Claims from Off-Balance-Sheet Credit Activities" for further details.)

Under the provisions of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) and the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), a financial institution is required to develop, adopt, and maintain policies, procedures, and guidelines consistent with safe and sound banking practices. The federal banking agencies have issued interagency guidelines based on the provisions. Taken together, these guidelines should strengthen supervision of financial institutions and provide guidance in developing and maintaining policies:

- Regulation H—subpart E, 12 CFR 208.50–51
- Regulation Y—subpart G, 12 CFR 225.61–67
- Uniform Standards of Professional Appraisal Practice promulgated by the Appraisal Standards Board of the Appraisal Foundation
- Interagency Appraisal and Evaluation Guidelines (See SR-10-16.)
- Interagency Policy Statement for Loan and Lease Losses (See SR-06-17.)
- Interagency Policy Statement on Supervisory Initiatives/Credit Availability (See SR-93-30.)
- Interagency Policy Statement on Documentation of Loans (See SR-93-26.)
- Regulation Y, section 225.7 "Tying Restrictions" (12 CFR 225.7.)

An institution's policies and procedures as they relate to interagency statements should be reviewed as part of the examination of the institution's overall lending activities.

GUIDANCE ON PRIVATE STUDENT LOANS WITH GRADUATED REPAYMENT TERMS AT ORIGINATION

Interagency[4] guidance[5] was issued on January 29, 2015, to provide financial institutions with principles applicable to private student loans that have graduated repayment terms. Financial institutions that originate private student loans may offer borrowers graduated repayment terms in addition to fixed amortizing terms at the time of loan origination. Graduated repayment terms are structured to provide for lower initial monthly payments that gradually increase. Refer to SR-15-2/CA-15-1 and its attachment.

Loan agreements include a grace period[6] to help with the post-education transition, the agencies and the State Liaison Committee recognize that students leaving higher education programs may prefer more flexibility to transition into the labor market because of a number of factors, such as competitive job markets, traditionally low entry-level salaries, and higher student debt loads. Graduated repayment terms may align borrowers' income levels with loan repayment requirements, provide flexibility to repay the debt sooner if borrowers' incomes increase more quickly than projected, and help long-term probability of full repayment.

Financial institutions that originate private student loans with graduated repayment terms should prudently underwrite the loans in a manner consistent with safe and sound lending practices. Financial institutions should provide disclosures that clearly communicate the timing and the amount of payments to facilitate a borrower's understanding of the loan's terms and features.

4. The agencies consist of the Board of Governors of the Federal Reserve System, Consumer Financial Protection Bureau, Federal Deposit Insurance Corporation, National Credit Union Administration, and Office of the Comptroller of the Currency.

5. In implementing this guidance, the agencies will examine financial institutions consistent with their respective authorities.

6. A grace period is the allotted amount of time during which borrowers are not expected to make payments on student loans after initially leaving higher education programs or dropping below half-time enrollment status.

PROHIBITIONS AGAINST TYING ARRANGEMENTS

Among other things, section 106 of the Bank Holding Company Act Amendments of 1970 (section 106) prohibits a bank from conditioning the availability or price of one product on a requirement that the customer also obtain another product from the bank or an affiliate of the bank.[7] The statute is intended to prevent banks from using their ability to offer bank products in a coercive manner to gain a competitive advantage in markets for other products and services. Although section 106 prohibits banks from imposing certain types of tying arrangements on their customers, the statute also expressly permits banks to engage in other forms of tying and authorizes the Board to grant additional exceptions to the statute's prohibitions by regulation or order. For more information on section 106, see this manual's section, "Regulation Y: Prohibitions Against Tying Arrangements."

LOAN ADMINISTRATION

Loan administration is a term that refers to several aspects of lending. It can be used to describe the entire credit-granting process, as well as the monitoring of various lending activities, such as ensuring that loans remain adequately collateralized, properly graded, and appropriately serviced (administered). The servicing of an extension of credit involves tasks ranging from obtaining current financial information to sending out renewal notices and preparing loan agreements. In addition to facilitating the entire lending process, the individual tasks also serve as controls (checks and balances) over the lending activities. Given the wide breadth of responsibilities that the loan-administration function encompasses, its organizational structure varies with the size and sophistication of the bank. In larger banks, responsibilities for the various components of loan administration are usually assigned to different departments, while in smaller institutions, a few individuals might handle several of the functional areas. For example, a large bank's independent credit department may be responsible for analyzing borrowers' financial information, making a determination or recommendation as to the quality of the loan (its risk rating or grade), or obtaining/following up on credit-related information and documentation. On the other hand, smaller banks may assign each of these tasks to individual loan officers.

Examiners will encounter many different organizational structures for loan administration. Therefore, when considering the safety and soundness of a bank, they should determine whether it has effective and appropriate internal controls in place. The assessment of loan administration and related internal controls involves evaluating the bank's operations by reviewing the—

- efficiency and effectiveness of loan-administration operations;
- ability of the different components to safeguard assets, primarily loans and leases;
- adequacy of the management information systems and the accuracy of their reporting;
- adequacy and accuracy of its loan-review function (discussed in the next subsection); and
- compliance with prescribed management policies and procedures as well as applicable statutes and regulations.

For the components of loan administration to function appropriately, management must understand and demonstrate that it recognizes the importance of controls. This includes not only establishing appropriate policies and procedures but also enforcing them and ensuring that the bank's organizational structure is suitable for its size and complexity. Managers should emphasize integrity and ethical values, as well as hire competent staff. In addition, the following factors positively influence loan-administration control:

- a board of directors and/or senior management that takes an active role in monitoring lending policies and practices
- a reporting system that provides the bank with the information needed to manage the lending function and make sound credit decisions
- a well-defined lending-approval and -review system that includes established credit limits; limits and controls over the types of loans made and their minimum collateral requirements (for example, loan-to-collateral-value ratios); limits on maturities of loans; and policies on interest rates, pricing, and fee charges

7. 12 U.S.C. 1972.

- an independent loan-review function that identifies and evaluates existing and potential problem loans in a timely manner
- an independent reporting system that notifies appropriate personnel when financial information, insurance policies, or other loan documentation needs to be obtained
- a system of procedures that correct documentation exceptions

Loan administration is responsible for mitigating the operational risks associated with loan-related transactions, such as approving credit, disbursing loan proceeds, receiving loan payments, recording accrued interest and fee income, posting to subsidiary ledgers, and reconciling subsidiary and general ledgers. Typically, employees working with these types of activities have the capability to transfer funds between accounts on the bank's and the customer's behalf, which opens up an area of potential abuse. Additional potential areas for unethical employee behavior include the maintenance of loan notes and related documentation, as well as the credit and collateral files on borrowers. The bank must ensure it has adequate controls in place to avoid any improprieties; controls might include having separate departments for loan activities within a large organizational structure or rotating and/or segregating loan duties in smaller community banks. Some specific issues related to these responsibilities are described below.

Applications and Loan-Approval Process

The bank should have written policies and procedures for obtaining and reviewing loan applications and for ensuring sufficient borrower information (both financial and collateral-related) is required and analyzed in support of the loan approval. Approvals should be made in accordance with the bank's written guidelines and should also address the disbursal of loan proceeds. Additional issues that bank policies and procedures should address include—

- the requirement that loan commitments be in writing;
- requirements for letters of credit;
- the requirement for an annual review of borrowers, including a reassessment of the appropriateness of credit lines; and
- the requirement for a process for extending or renewing loans and credit lines.

Exceptions to the bank's written policies and procedures should reflect the appropriate level of approval and should be documented in writing.

Account Records

Bank staff should compare the approved terms for new and renewed extensions of credit (amount, maturity, interest rate, payment schedule) to the note or loan agreement for accuracy. The former should then be compared with the trial balance, if it is automated. If a manual system is used, the approved amount of the extension of credit should be checked against deposit tickets to ensure the correct amount was transferred to the borrower's account. Adjustments to loan accounts or accrued interest receivable accounts should be checked and tested by an individual independent of the loan-processing area. Subsidiary records should be routinely reconciled with the appropriate general ledger accounts.

Payments

Regardless of the type of payment, principal, interest, or fee, certain controls are necessary to ensure the effectiveness of operations, as well as the safeguarding of bank assets. An individual who cannot originate loan entries should perform an independent test of interest, commissions, and fee computations to confirm their accuracy. Payment notices should be prepared by someone other than a loan teller. In addition, loan officers should be prohibited from processing loan payments. Payments received by mail, tellers, or other departments should be separate from the loan-recording function. Supervisory approvals should be required for processing payments that are less than the amount contractually due, pertain to delinquent loans, are received irregularly, or involve waiving late fees. Collection notices should also be handled by someone not associated with loan processing.

Credit File Documentation

The bank should establish and maintain credit files for all borrowers. The bank's written loan policy should detail the minimum acceptable amount of information to be included in a borrower's credit file. The credit file should contain information on the extension of credit that identifies its purpose, source of repayment, repayment terms, and disposition of loan proceeds. Additionally, information should be on file relating to and/or analyzing the borrower's financial condition, including tax returns as appropriate; collateral, its valuation and related hazard insurance; the loan officer's contact with the borrower; and other pertinent documents, such as guarantor information, loan agreements, and loan covenant check sheets. Banks should maintain this information to support their evaluation of the borrower's creditworthiness and to leave a paper trail for auditors. The bank should also implement a file documentation tickler system to help bank personnel obtain updated information on borrowers, thereby facilitating continuous assessment and monitoring of credit risk.

Collateral Records

Banks should maintain appropriate documentation on collateral received from and released to borrowers, which should be consistent with the underlying loan agreements. Negotiable collateral, such as stock certificates, should be maintained under dual control in a fireproof vault. The receiving and releasing of collateral to customers should be handled by individuals other than those who make entries in the collateral register. The bank should issue a receipt to customers for each item of collateral it is holding in safekeeping. Signed customer receipts should be obtained and filed after the collateral is released.

Management Information Systems

Management information systems, an increasingly important component of the loan administration function, allow a bank to manage its lending decisions more efficiently and effectively. Whether the bank uses a computerized or manual system to manage its loan portfolio, the following types of information should be readily available and routinely reviewed by management:

- total loans and commitments
- loans in excess of existing credit limits
- new extensions of credit, credit renewals, and restructured credits
- a listing of all delinquent and/or nonaccrual loans
- credits adversely graded or requiring special attention
- credits to insiders and their related interests
- credits not in compliance with bank policies as well as applicable statutes and regulations
- specific lending activity aspects, including automated financial statement spreads of borrowers and analyses of the bank's credit exposure by type, geographic areas, collateral, and large employers

CREDIT RISK REVIEW SYSTEMS

An effective credit risk review function is integral to the safe and sound operation of every insured depository institution. The internal credit risk review function should not be merely an after-the-fact, loan-by-loan review, but a process to detect weaknesses in the various levels of an institution's credit approval and monitoring system. This manual's section, "Credit Risk Review Systems," provides more information on practices and principles for developing and maintaining a credit risk review function consistent with safe and sound credit risk management practice. See also SR-20-13.

Examination Scope Guidance

An effective loan review function can greatly assist examiners in their review of the bank's loan portfolio. The examination process should evaluate the internal loan-review function by assessing the scope and depth of the review and the quality of the output. While examiners should not rely entirely on the bank's findings, they can limit the scope of their loan examination by developing a comfort level with the bank's internal loan-review function. To determine the reliability, if any, of the internal loan-review function, examiners should assess the adequacy of management's ability to identify problem loans. Two issues should be evaluated in this regard: timeliness and accuracy. The first issue deals with the ability of loan review to distinguish a problem loan and/or borrower from a nonproblem one when it initially becomes a problem. The second issue deals with the accuracy of loan review in identifying the severity of the problem. The Extent that examiners rely on an internal loan-review function depends upon their comfort level with the bank in the aforementioned regard.

The examiner will be able to determine the degree to which the bank's loan review function can be relied upon by reviewing prior examination criticisms, as well as management's response to them, and a sufficient sample of the bank's portfolio. Whether the borrower being reviewed as a part of the sampling process is a pass or nonpass credit, examiners should consider narrowing the scope of the pass credits included in the loan examination if they concur with the bank's risk ratings. However, examiners still should continue their analysis of all "nonpass" credits due to their importance to the adequacy of the ALLL.

NONACCRUAL LOANS

Loans and lease-financing receivables are to be placed on nonaccrual status if (1) principal or interest has been in default for 90 days or more, unless the loan is both well secured and in the process of collection; (2) payment in full of principal or interest is not expected; or (3) they are maintained on a cash basis because the financial condition of the borrower has deteriorated.

Definition of "well secured" and "in the process of collection"—An asset is "well secured" if it is secured (1) by collateral in the form of liens on or pledges of real or personal property, including securities, that have a realizable value sufficient to discharge the debt (including accrued interest) in full or (2) by the guarantee of a financially responsible party. An asset is "in the process of collection" if collection of the asset is proceeding in due course either (1) through legal action, including judgment enforcement procedures, or (2) in appropriate circumstances, through collection efforts not involving legal action, which are reasonably expected to result in repayment of the debt or in its restoration to a current status in the near future. For the purposes of applying the above third test for nonaccrual status, the date on which an asset reaches nonaccrual status is determined by its contractual terms that principal or interest has been in default for a period of 90 days or more, unless the asset is both well secured and in the process of collection. If the principal or interest on an asset becomes due and remains unpaid for 90 days or more on a date that falls between report dates, the asset should be placed in nonaccrual status as of the date it becomes 90 days past due. It should remain in nonaccrual status until it meets the following exception criteria for restoration to accrual status described below. (Any state statute, regulation, or rule that imposes more stringent standards for nonaccrual of interest should take precedence over this instruction.)

Exceptions—A loan does *not* need to be placed on nonaccrual status if (1) the criteria for accrual of income under the interest method specified in Accounting Standards Council (ASC) Subtopic 310-30, Receivables—Loans and Debt Securities Acquired with Deteriorated Credit Quality (formerly AICPA Statement of Position 03-3, "Accounting for Certain Loans or Debt Securities Acquired in a Transfer"), are met for a purchased impaired loan or debt security accounted for in accordance with that subtopic, regardless of whether the loan or debt security had been maintained in nonaccrual status by its seller; (2) the criteria for amortization specified in AICPA Practice Bulletin No. 6 are met with respect to a loan or other debt instrument accounted for in accordance with that Practice Bulletin that was acquired at a discount from an unaffiliated third party, including those that the seller has maintained on nonaccrual status; or (3) the loan is a consumer loan or secured by a one- to four-family residential property. However, the bank may elect to carry these loans on a nonaccrual status. Also, if a bank has a significant consumer or residential mortgage loan portfolio in relation to its total loans and tier 1 capital, a thorough review of the delinquency status should be performed to ensure that the bank has not materially misstated its financial condition and earnings.

Treatment of Cash Payments and Criteria for the Cash-Basis Treatment of Income—When a bank places a loan on nonaccrual status, it must consider how to account for subsequent payments. When the collectibility of the remaining book balance of a loan on nonaccrual status is uncertain, any payments received must be applied to reduce the recorded investment in the asset or principal to the extent necessary to eliminate such doubt. Placing an asset on nonaccrual status does not require a charge-off, in whole or in part, of the asset's principal. However, *any identified losses* must be charged off.

When a loan is on nonaccrual status, some or all of the cash interest payments received may be treated as interest income on a cash basis, as long as the remaining recorded balance of the asset after the charge-off, if any, is deemed fully collectible.[8] A bank's determination of the collectibility of an asset's remaining book balance must be supported by a current, well-documented credit evaluation of the borrower's financial condition and repayment prospects.

When recognition of interest income on a cash basis is appropriate, the amount of income recognized should be limited to what would have been accrued on the loan's remaining book balance at the contractual rate. Any cash interest payments received over this limit (and not applied to reduce the loan's remaining book balance) should be recorded as recoveries of prior charge-offs until these charge-offs have been fully recovered. (A bank should have a well-defined policy governing the treatment of interest income and the charge-off of accrued interest receivables.)

Treatment of Previously Accrued But Uncollected Interest—When a bank places a loan on nonaccrual status, its policy should address an appropriate treatment of previously accrued but uncollected interest. One method is to reverse all previously accrued but uncollected interest against appropriate income and balance-sheet accounts. For interest accrued in the current accounting period, the entry is made directly against the interest income account. For prior accounting periods, if accrued-interest provisions to the ALLL were not made, the amount of accrued but uncollected interest should be charged against current earnings. Also for prior accounting periods when provisions to the ALLL for possible loss of interest had been made, the bank generally reverses the accrued but uncollected interest by charging the ALLL to the extent of those specific provisions. Generally accepted accounting principles do not require the write-off of previously accrued interest if principal and interest are ultimately protected by sound collateral values. A bank is expected to have a well-defined policy, subject to examiner review, governing the write-off of accrued interest.

Treatment of Multiple Extensions of Credit to One Borrower—As a general rule, nonaccrual status for an asset should be determined by assessing its collectibility, repayment ability, and performance. Thus, when one loan to a borrower is placed in nonaccrual status, a bank does not automatically have to place all of that borrower's other extensions of credit in nonaccrual status. The bank should evaluate its other extensions of credit to that borrower to determine if one or more of them also should be placed in nonaccrual status.

Restoration to Accrual Status—As a general rule, a nonaccrual loan may be restored to accrual status when (1) its principal and interest are no longer past due and unpaid, and the bank expects repayment of the remaining principal and interest, or (2) when it otherwise becomes well secured and in the process of collection. Before restoring a loan to accrual status, the bank should consider the borrower's prospects for continuing future contractual payments. If reasonable doubt exists, reinstatement may not be appropriate.

To meet the first test, the bank must have received payment of the past-due principal and interest, unless (1) the loan has been formally restructured and qualifies for accrual status under the restructured terms; (2) the asset is a purchased impaired loan or debt security accounted for in accordance with ASC Subtopic 310-30 and it meets the criteria for accrual of income under the interest method specified therein; or (3) the asset has been acquired at a discount (due to uncertainty about the amounts or timing of future cash flows) from an unaffiliated third party and meets the amortization criteria (that is, accretion of discount) specified in AICPA Practice Bulletin No. 6 or the borrower has resumed

8. An asset in nonaccrual status that is subject to the cost recovery method required by former AICPA Practice Bulletin No. 6 or ASC Subtopic 325-40, Investments–Other—Beneficial Interests in Securitized Financial Assets (formerly Emerging Issues Task Force Issue No. 99-20, "Recognition of Interest Income and Impairment on Purchased Beneficial Interests and Beneficial Interests That Continue to Be Held by a Transferor in Securitized Financial Assets"), should follow that method for reporting purposes. In addition, when a purchased impaired loan or debt security that is accounted for in accordance with ASC Subtopic 310-30 has been placed on nonaccrual status, the cost recovery method should be used, when appropriate.

paying contractual interest and principal payments on the loan, even if the past-due amount has not been brought fully current. These loans may be returned to accrual status provided two criteria are met: (1) all principal and interest amounts contractually due (including arrearages) are reasonably assured of repayment within a reasonable period, and (2) the borrower has a sustained period of repayment performance (generally a minimum of six months) in accordance with the contractual terms.

Until the loan is restored to accrual status, cash payments received must be treated according to the criteria stated above. In addition, after a formal restructuring, if the loan that has been returned to accrual status later meets the criteria for placement in nonaccrual status (as a result of past-due status based on its modified terms or for any other reason), the asset must be placed on nonaccrual status.

Treatment of Nonaccrual Loans with Partial Charge-Offs—GAAP and regulatory reporting requirements do not explicitly address whether partial charge-offs associated with a nonaccrual loan (that has not been formally restructured) must be fully recovered before a loan can be restored to accrual status.

According to Call Report instructions, restoration to accrual status is permitted when (1) the loan has been brought fully current with respect to principal and interest and (2) the bank expects the loan's full contractual balance (including any amounts charged off), plus interest, will be fully collectible under the terms of the loan. Thus, to return a partially charged-off loan that has been brought fully current to accrual status, the bank should determine if it expects to receive the full amount of principal and interest called for by the loan's terms.

When the contractual principal and interest of a loan have been brought fully current, and the borrower's financial condition and repayment prospects have improved so that the full contractual principal (including any amounts charged off) and interest is expected to be repaid, the loan may be restored to accrual status *without* having to first recover the charge-off. Conversely, this treatment would be inappropriate when the charge-off indicates continuing doubt about the collectibility of principal or interest.

The reasons for restoring a partially charged-off loan to accrual status must be documented. These actions should be supported by a current, well-documented credit evaluation of the borrower's financial condition and prospects for full repayment of contractual principal (including any amounts charged off) and interest. This documentation will be subject to review by examiners.

Examiner Review—Some states have promulgated regulations or adopted policies for nonaccrual of interest on delinquent loans that may differ from the above procedures. In these cases, the bank should comply with the more restrictive policy. The examiner should ensure that the bank is complying with such guidelines. In all cases, each bank should formulate its own policies to ensure that net income is not being overstated. These policies are subject to examiner review.

RESTRUCTURED OR RENEGOTIATED "TROUBLED" DEBT

In a "troubled-debt restructuring," a bank grants a borrower concessions for economic or legal reasons related to a borrower's financial difficulties that it would not otherwise consider. Renegotiated "troubled" debt includes (1) the transfer from the borrower to the bank of real estate, receivables from third parties, other assets, or an equity interest in the borrower in full or partial satisfaction of the loan; (2) modification of loan terms, such as a reduction of the stated interest rate, principal, or accrued interest, or an extension of the maturity date for new debt with similar risk; or (3) a combination of the above. A loan extended or renewed at a stated rate equal to the current interest rate for new debt with similar risk is not considered renegotiated debt. For further information, see the instructions for the Reports of Condition and Income; and ASC Subtopic 310-40, Receivables—Troubled Debt Restructurings by Creditors (formerly FASB Statement No. 15, "Accounting by Debtors and Creditors for Troubled Debt Restructurings," as amended by FASB Statement No. 114, "Accounting by Creditors for Impairment of a Loan"). All loans whose terms have been modified in a troubled debt restructuring must be evaluated for impairment under ASC topic 310, "Receivables." Under ASC Topic 310, a measuring of impairment on a troubled loan using the present value of future cash flows should be discounted at the effective interest rate of the original loan (that is, before the restructuring).[9]

A bank should develop a policy for renegotiated troubled debt to ensure that such items are identified, monitored, and properly accounted for and controlled. These restructurings should occur infrequently. If not, the bank is probably experiencing significant problems. Before troubled-debt concessions are made to a borrower, it is a good practice to have the transactions receive prior approval of the board of directors or a board committee. All these transactions should be reported to the board of directors upon enactment.

Bankers may be involved in formally restructuring loans when borrowers experience financial difficulties or in light of the borrower's condition and repayment prospects.[10] These actions, if consistent with prudent lending principles and supervisory practices, can improve a bank's collection prospects. GAAP and regulatory reporting requirements provide a reporting framework that may alleviate some of the lender's concerns about working constructively with borrowers experiencing financial difficulties.

The interagency policy statement on credit availability, issued March 1, 1991, clarifies a number of supervisory policies on restructured-loan issues. Two of these clarifications indicate that when certain criteria are met, (1) nonaccrual assets can be restored to accrual status when subject to formal restructurings in accordance with ASC Subtopic 310-40 and (2) restructurings that yield a market rate of interest would not have to be included in restructured loan amounts reported in the years following the restructuring. These clarifications, which are consistent with GAAP, have been fully incorporated into the instructions for the Reports of Condition and Income (Call Reports).

Restructurings

A loan or other debt instrument that has been formally restructured to ensure repayment and performance need not be maintained in nonaccrual status. In deciding whether to return an asset to accruing status, payment performance that had been sustained for a reasonable time before the restructuring may be considered. For example, a loan may have been restructured, in part, to reduce the amount of the borrower's contractual payments. It may be that the amount and frequency of payments under the restructured terms do not exceed those of the payments that the borrower had made over a sustained period within a reasonable time before the restructuring. In this situation, if the lender is reasonably assured of repayment and performance according to the modified terms, the loan can be immediately restored to accrual status.

A period of sustained performance, whether before or after the date of the restructuring, is very important in determining whether there is reasonable assurance of repayment and performance. In certain circumstances, other information may be sufficient to demonstrate an improvement in the borrower's condition or in economic conditions that may affect the borrower's ability to repay. This information may reduce the need to rely on the borrower's performance to date in assessing repayment prospects. For example, if the borrower has obtained substantial and reliable sales, lease, or rental contracts or if other important developments are expected to significantly increase the borrower's cash flow and debt-service capacity and strength, then the borrower's commitment to repay may be sufficient. A preponderance of such evidence may be sufficient to warrant returning a restructured loan to accrual status. The restructured terms must reasonably ensure performance and full repayment.

It is imperative that the reasons for restoring restructured debt to accrual status be documented. A restoration should be supported by a current, well-documented evaluation of the bor-

9. FASB 118 amended FASB 114 to allow creditors to use existing methods for recognizing interest income on impaired loans. This statement also clarifies the existing accounting for in-substance foreclosure. Under the impairment standard and related amendments to FASB 15, a collateral-dependent real estate loan (that is, a loan for which repayment is expected to be provided solely by the underlying collateral) would be reported as OREO only if the lender has taken possession of the collateral. For other collateral-dependent real estate loans, loss recognition would be based on the fair value of the collateral if foreclosure is probable. However, these loans would no longer be reported as OREO. Rather, they would remain in the loan category. In light of the significance of these changes to accounting standards, the Federal Reserve is reevaluating regulatory disclosure and nonaccrual requirements and expects to issue revised policies at a later date. (See SR-93-30 (FIS).) FASB 15 is also amended by FASB statements 71, 111, 121, 141, 145, and 149. (See FASB's current text.)

10. For further guidance on loan restructuring and workout arrangements, refer to the Statement on Working with Mortgage Borrowers that was issued by the Federal Reserve and the other federal financial institution regulatory agencies (see SR-07-6).

rower's financial condition and prospects for repayment. This documentation will be reviewed by examiners.

The formal restructuring of a loan or other debt instrument should be undertaken in ways that will improve the likelihood that the credit will be repaid in full in accordance with reasonably restructured repayment terms. A restructured loan may not be restored to accrual status unless there is reasonable assurance of repayment and performance under its modified terms in accordance with a reasonable repayment schedule. Regulatory reporting requirements and GAAP do *not* require a banking organization that restructures a loan to grant excessive concessions, forgive principle, or take other steps not commensurate with the borrower's ability to repay to use the reporting treatment specified in ASC Subtopic 310-40 (formerly FASB Statement No. 15). Furthermore, the restructured terms may include prudent contingent payment provisions that permit an institution to obtain appropriate recovery of concessions granted in the restructuring, if the borrower's condition substantially improves.

Moreover, while restructured debt that qualifies for accrual status and yields a market rate of interest must be disclosed as a troubled debt in the year of the restructuring, it need not be disclosed in subsequent years.

Reporting Guidance on Loan Fees and Interest

The accounting standards for nonrefundable fees and costs associated with lending, committing to lend, and purchasing a loan or group of loans are set forth in ASC Subtopic 310-20, Receivables—Nonrefundable Fees and Other Costs (formerly FASB Statement No. 91, "Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Cost of Leases"). In general, this statement says loan-origination fees should be deferred and recognized over the life of the related loan as an adjustment of yield. The statement applies to all types of loans, as well as to debt securities (but not to loans or securities carried at fair value if the changes in fair value are included in earnings), and to all types of lenders. For further information, see the instructions for preparing the Call Report.

PROBLEM ASSET DISPOSAL THROUGH EXCHANGES

Financial institutions explore strategies to dispose of or reduce nonperforming assets and other real estate owned (OREO). Some of these strategies include so-called "asset exchanges," whereby third parties or marketing agents have offered to purchase problem assets from institutions and replace them with performing assets. Such transactions, if properly executed with reputable counterparties and when they are subjected to the appropriate level of due diligence, may achieve the objective of reducing nonperforming assets on financial institutions' balance sheets. Other less structured transactions may present significant risk to institutions and could compromise their safety and soundness.

The guidance in this section highlights the potential risks associated specifically with transactions which may reduce problem assets in the short term, but where a lack of appropriate, up-front due diligence may result in heightened risks over the longer term. In addition, inappropriate assumptions used in determining the fair value of the purchased assets may result in institutions being required to recognize losses shortly after inception of the transaction.

Third parties or marketing agents may offer to purchase problem assets from institutions and replace them with performing assets to help institutions diversify their loan portfolios. Institutions may perceive that asset exchange transactions offer the potential to increase interest income, reduce the level of real estate concentrations, enhance liquidity, and reduce the stress on capital. Nevertheless, these transactions may pose significant risks. Sellers could be exchanging problem assets for purportedly performing assets (acquired assets) that were recorded at values in excess of fair value. See SR-11-15.

Risk-Management Considerations

Asset exchanges may expose institutions to significant risks, which management should assess before entering into such transactions. Management should focus not only on the immediate or short-term benefits of a transaction, but should determine its long-term effect on the institution's balance sheet and loss exposure. Management should also determine how these risks align with the institution's overall risk-management strategy.

In undertaking due diligence on these types of transactions, management should assess the risks and provide evidence of its analysis, taking into account—

- the reported benefits to the institution from the transfer. This assessment should address whether the transaction would actually enable the institution to transfer significant risk associated with the problem assets.
- the economic costs and benefits of the transaction. This should include the economic benefits accruing to the marketing agent; the marketing agent's responsibilities and liabilities; and the loss position, including recourse, of each participant if either the ceded assets or acquired assets do not perform as anticipated.
- the servicing responsibilities attached to the acquired assets. If the institution assumes servicing responsibilities for the acquired assets, the institution should evaluate and show evidence that it has the capacity and infrastructure in place, as well as appropriate risk controls, to service the acquired assets.
- the transaction's compliance with the risk-tolerance and risk-mitigation policies established by the institution's board of directors, including the overall strategy for managing or reducing problem assets.
- the appropriate accounting treatment in accordance with U.S. generally accepted accounting principles (GAAP). Specific issues with regard to the appropriate accounting treatment include, but are not limited to, the following:
  - — When specific loans are identified for inclusion in exchange transactions and the institution decides to sell the loans, they should be transferred to a "held-for-sale" account at the lower of cost or fair value with losses recognized through earnings. Any reduction in value should be reflected as a write-down of the recorded investment resulting in a new cost basis. The sale of these loans should occur at an appropriate fair value.
  - — Newly acquired assets should be recorded at an appropriate fair value.
- a review of the marketing agent. This should include, but not be limited to, an assessment of the agent's financial strength, including its ability to provide credit enhancement if it is required in the transaction.
- the relationship between the marketing agent and any entity providing services for the transaction, with particular attention paid to possible cross-ownership or other related-party relationships.
- an independent valuation by a reputable and experienced third-party valuation expert of the assets being acquired. The party that performs the valuation should be independent of the marketing agent and the institution selling the performing assets. The use of outside resources does not relieve management of its responsibility to ensure that fair-value estimates are measured in accordance with GAAP.[11] Management should sufficiently understand the bases for the measurement and valuation techniques used by outside parties to determine the appropriateness of these techniques, the underlying inputs and assumptions, and the resulting fair-value measurements.[12]
- the acquiring institution's experience, skills, personnel, and risk-management capabilities to manage the newly acquired assets, especially if the assets are in business segments or geographical areas that are different from the institution's own.

Supervisory Responsibilities

It is not necessary to scope a specific review of these transactions into routine examination activities, particularly when there is no evidence that a bank has engaged in such transactions. Reserve Banks nevertheless should be aware of indications of possible asset exchange transactions as part of their routine monitoring of financial institutions between examinations. Examiners should hold ongoing discussions with an institution's management as part of the supervision process if examiners become aware that the institution is considering these types of transactions. Monitoring activities should focus on financial statement changes commonly associated with asset exchanges, internal risk-management reports, and other documents received on a routine basis. Indicators that asset

11. Fair-value measurements are determined based on assumptions that market participants would use in valuing the assets. This should include a risk premium reflecting the amount market participants would demand because of the risk (uncertainty) in the cash flows.

12. Examples of significant inputs and assumptions include, but are not limited to, default probabilities, current loan-to-value ratios, loss severities, and prepayment speeds.

exchanges might have taken place include—

- asset sales at (or very near) book values, with either no loss recognized or a gain on recovery of a prior write-down recognized. It is unusual for a third party to buy problem assets at higher than the selling institution's book value at the time of the sale.
- board minutes showing discussion of strategies designed to achieve material reductions in problem assets.
- material loan sales and purchases involving the same counterparty, on or around the same date.
- significant reductions in the institution's nonperforming loan totals without attendant losses. The motivation for asset exchanges is to reduce problem assets, but this may be difficult to do in the current economic environment without realizing significant losses.
- purchase of a large portfolio of loans that are outside the institution's traditional markets and/or are inconsistent with the institution's business strategies or lending and investment policies.
- purchase at (or near) par of a large portfolio of loans that, while currently performing, have high-risk characteristics (e.g., are outside generally accepted underwriting standards for this type of credit) that indicate they may not continue to perform in accordance with their contractual terms.
- large net loan or asset growth during a short period. Because asset exchanges nearly always involve an institution purchasing more assets than it is selling, it is common for the balance sheet to grow rapidly as a result of the asset exchange transaction.

Supervisory Actions

If examiners observe an institution engaging in asset exchanges, they should determine whether the appropriate risk-management measures have been considered and if management has used appropriate valuations in accordance with GAAP. Important findings should be noted in the examination report and, as appropriate, plans for remedial action discussed with management. Given the concern regarding both safety-and-soundness issues as well as the appropriate valuation practices, Reserve Banks should contact the appropriate Board staff analyst to discuss the asset exchange transaction.

TRANSFER OF LOW-QUALITY LOANS OR OTHER ASSETS

Section 23A of the Federal Reserve Act (FRA), 12 U.S.C. 371c, prohibits bank purchases of low-quality assets from an affiliate. In addition to the statutory provisions of section 23A, the Board approved the issuance of Regulation W, which became effective April 1, 2003, implementing changes to sections 23A and 23B of the FRA.

Low-quality loans include those classified or specially mentioned at the most recent examination or loans that would most likely be classified or specially mentioned if subjected to a review. In addition, low-quality loans include 30-day past-due loans, nonaccrual loans, loans on which the terms have been renegotiated because of a borrower's poor financial condition, and any other loans the examiner believes are questionable. Other assets of questionable quality include depreciated or subinvestment-grade securities and other real estate. A low-quality asset shall not be acceptable as collateral for a loan or extension of credit to, or guarantee, acceptance, or letter of credit issued on behalf of an affiliate. Furthermore, a low-quality asset cannot be involved in a loan participation or an asset swap.

The transfer of low-quality loans or other assets from one depository institution to another may raise supervisory concerns. These transfers may be made to avoid detection and classification during regulatory examinations and may be accomplished through participation, purchases/sales, and asset swaps with other affiliated or nonaffiliated financial institutions. Examiners should be alert to situations in which an institution's intention appears to be concealing low-quality assets to avoid examiners' scrutiny and possible classification.

During bank examinations, examiners are requested to identify situations when low-quality assets have been transferred between the institution being examined and another depository institution. The transfer of assets to avoid supervisory review is a highly improper and unsound banking practice and, if an affiliate is involved, is a violation of section 23A of the Federal Reserve Act. If necessary, it should be addressed through formal supervisory enforcement action.

Any transfers of low-quality or questionable assets should be brought to the attention of

Reserve Bank supervisory personnel. In turn, these individuals should notify the local offices of primary federal and state regulators (if applicable) of the other depository institutions involved in the transaction. For example, Reserve Banks should notify the primary federal and state regulators (if applicable) of any depository institution to which a state member bank or holding company is transferring or has transferred low-quality loans. Reserve Banks should also notify the primary federal and state regulators (if applicable) of any depository institution from which a state member bank or holding company is acquiring or has acquired low-quality loans. This procedure applies to transfers involving savings and loan associations, savings banks, and commercial banking organizations.

If the examiner determines a permissible transfer of assets was undertaken, he or she should ensure the assets have been properly recorded at fair market value on the books of the acquiring institution. If the transfer involved the parent holding company or a nonbank affiliate, the examiner should determine if the transaction also was recorded properly on the affiliate's books.[13]

Whenever asset transfers occur, examiners should determine whether the assets in question were independently and completely evaluated for conformance with bank policy and procedures. Examiners should be guided by the inspection procedures outlined in section 2020.7.2 of the *Bank Holding Company Supervision Manual* and the examination procedures in section 6070.3 of this manual.

ENVIRONMENTAL LIABILITY

Banks may be liable for cleaning up hazardous substance contamination under both federal and state environmental liability statutes. This liability can arise through a bank's ownership or acquisition of real estate, in its role as a creditor, or in a fiduciary role. Banks may also be exposed to environmental liability indirectly through the increased possibility that a borrower's creditworthiness may be impaired by a liability to pay for cleanup of contaminated property, even if the property does not secure bank debt.

The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), the federal superfund statute, authorizes the Environmental Protection Agency (EPA) to clean up hazardous waste sites and to recover costs associated with the cleanup from entities specified in the statute. While the superfund statute is the primary federal law dealing with hazardous substance contamination, numerous other federal and state statutes establish environmental liability that could place banks at risk.

CERCLA defines who is subject to liability for the costs of cleaning up hazardous substance contamination. The definition includes ". . . the owner and operator of a vessel or a facility, (or) any person who at the time of disposal of any hazardous substance owned or operated any facility at which such hazardous substances were disposed of. . . ."[14] Under the statute, a person or entity that transports or arranges to transport hazardous substances can also be held liable for cleaning up contamination.

The superfund statute imposes a standard of strict liability, which means the government does not have to prove that the owners or operators knew about or caused the hazardous substance contamination in order for them to be liable for the cleanup costs. Moreover, liability under the statute is joint and several, which allows the government to seek recovery of the entire cost from any individual party that is liable for those costs under CERCLA.

CERCLA provides an exemption for secured creditors in the definition of "owner and operator" by stating that these terms do not include ". . . a person, who, without participating in the management of a vessel or facility, holds indicia of ownership primarily to protect his security interest in the vessel or facility."[15] However, this exception has not provided banks with an effective defense from liability because courts have limited its applicability. Specifically, courts have held that some lenders' actions to protect their security interests have resulted in the bank "participating in the management of a vessel or facility," thereby voiding the exemption. Additionally, once the title to a foreclosed property passes to the bank, some courts have held that the exemption no longer applies and that the bank is liable under the superfund statute as an "owner" of the property. Under some circumstances, CERCLA may exempt landowners who acquire property without knowing about existing conditions (the "innocent landowner

13. See section 6070.1 of this manual.

14. CERCLA, section 107(a).

15. CERCLA, section 101(20)(A).

defense"). However, the courts have applied a stringent standard to qualify for this defense. Since the statute provides little guidance as to what constitutes the appropriate timing and degree of due diligence to successfully employ this exemption, banks should exercise caution before relying on it.

Overview of Environmental Hazards

Environmental risk can be characterized as adverse consequences that result from generating or handling hazardous substances or from being associated with the aftermath of contamination.

Hazardous substance contamination is most often associated with industrial or manufacturing processes that involve chemicals as ingredients or waste products. For years, these types of hazardous substances were frequently disposed of in landfills or dumped on industrial sites. However, hazardous substances are also found in many other lines of business. The following examples demonstrate the diverse sources of hazardous substances, but by no means cover them all:

- farmers and ranchers (fuel, fertilizers, herbicides, insecticides, and feedlot runoff)
- dry cleaners (various cleaning solvents)
- service station and convenience store operators (underground storage tanks)
- fertilizer and chemical dealers and applicators (storage and transportation of chemicals)
- lawn care businesses (application of lawn chemicals)
- trucking firms (transportation of substances such as fuel or chemicals)

Environmental liability has had the greatest impact on the real estate industry. Not only has land itself been contaminated with toxic substances, construction methods for projects such as commercial buildings have used materials that have been subsequently determined to be hazardous—resulting in significant declines in project values. For example, asbestos was commonly used in commercial construction from the 1950s to the late 1970s. Asbestos has since been found to be a health hazard and now, in many cases, must be removed or its effects abated by enclosing or otherwise sealing off the contaminated areas.

Another common source of hazardous substance contamination is underground storage tanks. Leaks from these tanks not only contaminate the surrounding ground, but often flow into ground water and travel a significant distance from the original contamination site. As contamination spreads to other sites, cleanup costs escalate.

Effect on Banks—A bank may encounter losses from environmental liability through direct ownership, lending and trust activities, or mergers or acquisitions of borrowers. The greatest risk to a bank is the possibility of being held solely liable for costly environmental cleanups. Under the doctrine of joint and several liability, a bank may find itself solely responsible for cleaning up a contaminated site at a cost that exceeds any outstanding loan balance or property value.

Direct Ownership

A bank may be held liable for the cleanup of hazardous substance contamination in situations when it—

- takes title to property through foreclosure or acquires property to satisfy debts previously contracted;
- owns or acquires for future expansion premises that have been contaminated by hazardous substances; or
- owns, acquires, or merges with another entity involved in activities that might result in a finding of environmental liability.

Lending Activity—While real estate loans present the greatest risk, almost any type of loan, unsecured or secured, can expose a bank to the effects of environmental liability. A borrower who is required to pay for the cleanup of a contaminated property may be unable to provide the necessary funds both to remove contaminated materials and to service the debt. Even if the bank does not have a security interest in the borrower's real estate, it must be aware that significant cleanup costs could threaten the borrower's solvency and net worth (and jeopardize the collection of working-capital or equipment loans). If the loan is secured by the contaminated real estate, the bank may find that the property value has declined dramatically, depending on the degree of contamination. In determining whether to foreclose, the bank must compare the estimated cleanup costs against the value of the collateral. In many cases, this estimated cost has been well in excess of the outstanding loan balance, and the bank has elected to abandon its security interest in the property and charge off the loan. This situation occurs because some courts have not allowed banks that have foreclosed on a property to avail themselves of the secured-creditor exemption. These rulings have been based on a strict reading of the superfund statute that provides the exemption to "security interests" only.

A bank may also expose itself to environmental liability in its role as a secured or unsecured creditor if it involves bank personnel or contractors engaged by the bank in day-to-day management of the facility or takes actions designed to make the contaminated property salable, possibly resulting in further contamination.

Bank Premises—Banks may also be exposed to environmental liability for property held as bank premises. A review of historical uses of properties to be acquired for relocation or future expansion should provide insight into the likelihood that contamination may have occurred and whether additional steps may be warranted.

Mergers and Acquisitions of Borrowers—Borrowers may face environmental risk through the activities of subsidiaries or by merging with or acquiring other companies whose activities result in environmental liability. Some courts have held that for the purposes of determining liability under the superfund statute, the corporate veil may not protect parent companies that participate in the day-to-day operations of their subsidiaries from environmental liability and court-imposed cleanup costs. Additionally, borrowers and, ultimately, banks can be held liable for contamination that occurred before they owned or used the real estate.

Protection Against Environmental Liability

Banks may avoid or mitigate potential environmental liability by having sound policies and procedures designed to identify, assess, and control environmental liability. The following discussion briefly describes methods that banks may employ to minimize potential environmental liability.

Loan policies and procedures should address methods for identifying potential environmental problems relating to credit requests. The loan policy should describe an appropriate degree of due diligence investigation required for credit requests. Borrowers in high-risk industries or localities should be investigated more stringently than borrowers in low-risk industries or localities.

After a loan is granted, periodic credit analysis of the borrower's ability to repay should include an assessment of environmental risk. If the credit is secured by real property collateral, the bank should remain aware of the property's uses and the potential environmental risk associated with those uses. Even if the credit is not secured by real property, periodic credit reviews should determine whether repayment prospects may be jeopardized by any activities that might expose the borrower to environmental liability.

The first step in identifying environmental risk is an environmental review. These reviews may be performed by loan officers or others. They typically identify past uses of the property; evaluate regulatory compliance, if applicable; and identify potential problems. The reviewer should interview persons familiar with present and past uses of the facility and property, review relevant records and documents, and inspect the site.

When the environmental review reveals possible hazardous substance contamination, an environmental assessment or audit may be required. Environmental assessments are made by personnel trained in identifying potential environmental hazards and provide a more thorough inspection of the facility and property. Environmental audits differ markedly from environmental assessments because independent environmental engineers are employed to investigate the property in great detail. Engineers test for hazardous substance contamination, which might require collecting and analyzing air samples, surface soil samples, or subsurface soil samples or drilling wells to sample ground water.

Other measures some banks use to help identify and minimize environmental liability to the bank include obtaining indemnities from borrowers for any cleanup costs incurred by the bank and writing affirmative covenants into loan agreements (and attendant default provisions) that require the borrower to comply with all applicable environmental regulations. Although these measures may provide some aid in identifying and minimizing potential environmental liability, their effectiveness depends on the financial strength of the borrower and does not represent a substitute for environmental reviews, assessments, and audits.

Banks must be careful that any policies and procedures undertaken to assess and control environmental liability cannot be construed as taking an active role in the management or day-to-day operations of the borrower's business. Some activities that courts could consider active participation in the management of the borrower's business and that could subject the bank to potential liability include—

- having bank employees serve as members of the borrower's board of directors or actively participate in board decisions,
- assisting in day-to-day management and operating decisions, and
- actively determining management changes.

These considerations are especially important when the bank is actively involved in loan workouts or debt restructuring.

LOAN PROBLEMS

The failure of directors to establish a sound lending policy, require management to establish adequate written procedures, and monitor and administer the lending function within established guidelines has resulted in substantial problems for many institutions. Loan problems may be caused by a number of factors affecting the bank or its borrowers. For a discussion of the indicators of troubled commercial real estate loans, see the real estate loan sections of this manual. The major sources and causes of problem credits are explained below.

Competition—Competition among banks for size and community influence may result in compromising credit principles and making or acquiring unsound loans. The ultimate cost of unsound loans always outweighs temporary gains in growth and influence.

Complacency—The following items manifest complacency and should always be guarded against:

- lack of adequate supervision of long-term and familiar borrowers
- dependence on oral information the borrower furnished in lieu of reliable and verifiable financial data
- optimistic interpretation of known credit weaknesses based on past survival of recurrent hazards and distress
- ignorance or disregard of warning signs about the borrower, economy, region, industry, or other related factors

Compromise of credit principles. For various reasons, bank management may grant loans carrying undue risks or unsatisfactory terms, with full knowledge of the violation of sound credit principles. The reasons management may compromise basic credit principles include timidity in dealing with individuals with dominating personalities or influential connections, friendships, or personal conflicts of interest. Self-dealing, salary incentives, and bonuses based on loan portfolio growth, as well as competitive pressures, may also lead to a compromise of credit principles.

Failure to obtain or enforce repayment agreements. Loans granted without a clear repayment agreement are, at the very least, a departure from fundamental banking principles. These loans are likely to become significant problems. A more common problem, but just as undesirable, occurs when the bank and borrower agree on repayment or progressive liquidation of a loan, but the bank fails to collect the principal payments when and how it should. A study of loan losses will show that, in many cases, amortization never equaled the principal payments the borrower agreed to make. Good lending and good borrowing both require consistent liquidation.

Incomplete credit information. Complete credit information is necessary to make a reasonable and accurate determination of a borrower's financial condition and repayment capacity. Adequate and comparative financial statements, operating statements, and other pertinent statistical data should be available. Other essential information, such as the purpose of the borrowing and the intended plan and repayment source, progress reports, inspections, and memoranda of outside information and loan conferences, should be contained in the bank's credit files. The lack of adequate credit information can limit management's ability to react quickly and effectively when problems develop.

Lack of supervision. Many loans that are sound at their inception develop into problems and losses because of ineffective supervision. This lack of supervision usually results from a lack of knowledge about the borrower's affairs over the lifetime of the loan.

Overlending. In one sense, overlending could come under the heading of technical incompetence. However, overlending is a weakness found in some lenders that are otherwise competent. Loans beyond the borrower's reasonable capacity to repay are unsound. Nowhere are technical competence and credit judgment more important than in determining a sound borrower's safe, maximum loan level.

Poor selection of risks. When banks are willing to assume more-than-normal risk levels, they often experience serious loan problems. The following general loan types may fall within the category of poor risk selection:

- loans in which the bank advances an excessive proportion of the required capital relative to the borrower's equity investment
- loans based more on the expectation of successfully completing a business transaction than on the existing net worth and repayment capacity
- loans for the speculative purchase of securities or goods
- loans collateralized by marketable assets carried without adequate margins of security
- loans made for other benefits, such as control of large deposit balances in the bank, instead of sound net worth, collateral, or repayment capacity
- loans secured solely by the nonmarketable stock of a local corporation, made in conjunction with loans directly to that corporation (The bank may consider itself forced to finance the corporation far beyond warranted limits to avoid loss on a loan that relies on the corporation's stock.)
- loans predicated on collateral of uncertain liquidation value (A moderate amount of these loans, when recognized by bank management as subject to inherent weakness, may cause few problems. However, the bank can encounter trouble if this practice becomes the rule.)

Revenue-driven lending. The loan portfolio is usually a bank's most important revenue-producing asset. The earnings factor, however, must never compromise sound credit judgment and allow credits carrying undue risks or unsatisfactory repayment terms to be granted. Unsound loans usually cost far more than the revenue they produce.

Self-Dealing. Self-dealing is found in many serious problem banks. Self-dealing often takes the form of an overextension of credit on an unsound basis to directors or principal shareholders, or to their related interests, who have improperly used their positions to obtain funds in the form of unjustified loans (or sometimes as fees, salaries, or payments for goods or services). Officers, who hold their positions at the pleasure of the board, may be pressured to approve loan requests by insiders that, coming from customers, would have been rejected. In that situation, management may attempt to defend unsound loans or other self-dealing practices by bank insiders.

Technical incompetence. All able and experienced bankers should possess the technical ability to analyze financial statements and to obtain and evaluate other credit information. When this ability is absent, unwarranted losses are certain to develop. Credit incompetence of management should be discussed promptly with the board of directors.

INSIDER LENDING

The Federal Reserve Board's Regulation O (12 CFR 215) implements many of the laws pertaining to extensions of credit by banks to their insiders. Regulation O was issued pursuant to sections 22(g) and 22(h) of the Federal Reserve Act. Regulation O is designed to mitigate the potential for conflicts of interest and self-dealing by individuals who may be in a position to influence a bank's lending decisions. For more information, see this manual's section, "Regulation O: Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks."

EXAMINATION OF THE LENDING FUNCTION

Banks are expected to clearly delineate their lending objectives, policies, and procedures in writing. Lending practices are then expected to adhere to policies and procedures, with exceptions properly justified and documented. The complexity and scope of a bank's lending policy and procedures should be appropriate to the bank's size and the nature of its activities, and they should be consistent with prudent banking practices and relevant regulatory requirements.

Historically, examiners have primarily identified loan-portfolio-management concerns through a detailed review of credits and credit documentation. This approach remains valid, but it must be combined with a full evaluation of a bank's lending objectives, policy, and procedures. Therefore, the scope of each examination should encompass a review of the bank's lending policy and procedures and an assessment of how lending practices adhere to the policy and procedures.

When conducting a review of loan portfolio management, examiners should pay particular attention to management's approach to and handling of the following:

- monitoring of lending practices by individual lending officers
- identification of concentrations of credit
- documentation of credit and collateral exceptions
- identification of problem credits
- accounting for nonaccrual loans and for renegotiated and restructured loans
- collection of past-due loans

In addition, examiners should be aware of any evidence of self-dealing in lending transactions.

An examiner's final assessment of a bank's lending function should consider the adequacy of internal policy and procedures, the effectiveness of management oversight and control, and the overall quality of the loan portfolio. Moreover, consideration should be given to all pertinent internal and external factors, including the continuity of management; bank's historical lending experience; and current and projected economic condition for the bank's market area, particularly for any industries in which the bank has concentrations of credit.

Supervisors and examiners should watch for indications of insufficiently rigorous risk assessment. In particular, examiners should be alert to circumstances indicating excessive reliance on strong economic conditions and robust financial markets, such as (1) borrowers whose financial capacity is inadequate to service their debts or (2) inadequate stress testing. Examiners also should be attentive when reviewing an institution's assessment and monitoring of credit risk to ensure that undue reliance on favorable conditions does not lead the institution to delay recognition of emerging weaknesses in some loans.[16]

If examiners observe significant and undue reliance on favorable assumptions about borrowers or the economy and about financial markets more generally—or observe that this reliance has slowed the institution's recognition of loan problems—they should carefully consider downgrading, under the applicable supervisory rating framework, an institution's risk-management, management, or asset-quality ratings (or all three). If those assumptions are deemed sufficiently significant to the institution, examiners should also consider downgrading its capital adequacy rating. Similarly, if supervisors or examiners find that loan-review activities or other internal-control and risk-management processes have been weakened by staff turnover, failure to commit sufficient resources, or inadequate training, such findings should be considered in supervisory ratings as well.

When developing their findings, examiners should review internal risk-management loan-review systems, conduct sufficient loan reviews, and perform transaction testing of the lending function to determine accurately the quality of bank loan portfolios and other credit exposures. If deficiencies in lending practices or credit discipline are indicated as a result of the pre-examination risk assessment or of performing the examination, sufficient supervisory resources should be committed to in-depth reviews, including transaction testing. Adequate, in-depth reviews and transaction testing should be performed to ensure that the Reserve Bank achieves a full understanding of the nature, scope, and implications of the deficiencies.

Important findings should be noted in the examination or report. Plans for remedial actions should be discussed with bank management and the boards of directors, as appropriate. In addition, any identified weaknesses or deficiencies that could adversely affect affiliated insured depository institutions should be conveyed to the insured institution's primary federal or state supervisor.

16. Examiners should recognize that an increase in classified or special-mention loans is not per se an indication of lax lending standards. Examiners should review and consider the nature of such increases and surrounding circumstances as they reach their conclusions about the asset quality and risk management of an institution.

Examination procedures are available on the Examination Documentation (ED) modules page on the Board's website. See the following ED modules for examination procedures:

- Loan Portfolio Review
- Loan Operations Review

An effective credit risk review function is integral to the safe and sound operation of every insured depository institution. In May 2020, the Office of the Comptroller of the Currency, the Federal Reserve Board, the Federal Deposit Insurance Corporation, and the National Credit Union Administration (collectively, the agencies) issued guidance for credit risk review. See 85 *Federal Register* 33,278 (June 1, 2020) and SR-20-13, "Interagency Guidance on Credit Risk Review Systems." To assist institutions in the creation and operation of such functions, the guidance for credit risk review describes a broad set of practices and principles for developing and maintaining a credit risk review function consistent with safe and sound credit risk-management practices and the *Interagency Guidelines Establishing Standards for Safety and Soundness* (safety and soundness guidelines).[1] However, the guidance for credit risk review does not establish any requirements or rules, nor does it mandate implementation of a specific system or prescribe specific actions with which institutions must comply.

The guidance discusses sound management of credit risk, a system of independent, ongoing credit review, and appropriate communication regarding the performance of the institution's loan portfolio to its management and board of directors. This guidance for credit risk review is relevant to all institutions supervised by the agencies and replaces attachment 1 of the 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses. The nature of credit risk review systems typically varies based on an institution's size, complexity, loan types, risk profile, and risk-management practices. The remainder of this section conveys the Interagency Guidance on Credit Risk Review Systems with the exception of some references that were removed because they do not pertain to institutions for which the Federal Reserve is the primary regulator.

1. For state member banks, see 12 CFR part 208, appendix D-1.

INTERAGENCY GUIDANCE ON CREDIT RISK REVIEW SYSTEMS

Introduction

The safety and soundness guidelines underscore the critical importance of credit risk review and set safety and soundness standards for insured depository institutions to establish a system for independent, ongoing credit risk review, and for appropriate communication to their management and boards of directors.[2] The credit review guidance, which aligns with the safety and soundness guidelines, is appropriate for all institutions and describes a broad set of practices that can be used either within a dedicated unit or across multiple units throughout an institution to form a credit risk review system that is consistent with safe and sound lending practices.[3] This manual section presents guidance which outlines principles that an institution should consider in developing and maintaining an effective credit risk review system.

Overview of Credit Risk Review Systems

The nature of credit risk review systems varies based on an institution's size, complexity, loan types, risk profile, and risk-management practices.[4] For example, in smaller or less complex

2. For foreign banking organization branches, agencies, or subsidiaries not operating under single governance in the United States, the U.S. risk committee would serve in the role of the board of directors for purposes of this guidance.

3. For purposes of this guidance, regulated institutions are those supervised by the following agencies: The Board of Governors of the Federal Reserve System (Board), the Federal Deposit Insurance Corporation (FDIC), the National Credit Union Administration (NCUA), and the Office of the Comptroller of the Currency (OCC).

4. The credit risk review function is not intended to be performed by an institution's internal audit function. However, as discussed in the agencies' March 2003 *Interagency Policy Statement on the Internal Audit Function and its Outsourcing* (2003 policy statement), some institutions coordinate the internal audit function with several risk monitoring functions, such as the credit risk review function. The 2003 policy statement states that coordination of credit risk review with the internal audit function can facilitate the reporting of material risk and control issues to the audit committee, increase the overall effectiveness of these monitoring functions, better utilize available resources, and enhance the

institutions, a credit risk review system may include qualified members of the staff, including loan officers, other officers, or directors, who are independent of the credits being assessed. In larger or more complex institutions, a credit risk review system may include components of a dedicated credit risk review function that are independent of the institution's lending function.[5] A credit risk review system may also include various responsibilities assigned to credit underwriting, loan administration, a problem loan workout group, or other organizational units of an institution. Among other responsibilities, these groups may administer the internal problem loan reporting process, maintain the integrity of the credit risk rating process, confirm that timely and appropriate changes are made to risk ratings, and support the quality of information used to estimate the allowance for credit losses (ACL) or the allowance for loan and lease losses (ALLL), as applicable. Additionally, some or all of the credit risk review function may be performed by a qualified third party.

Regardless of the structure, an effective credit risk review system accomplishes the following objectives:

- Promptly identifies loans with actual and potential credit weaknesses so that timely action can be taken to strengthen credit quality and minimize losses.
- Appropriately validates and, if necessary, adjusts risk ratings, especially for those loans with potential or well-defined credit weaknesses that may jeopardize repayment.
- Identifies relevant trends that affect the quality of the loan portfolio and highlights segments of those portfolios that are potential problem areas.
- Assesses the adequacy of and adherence to internal credit policies and loan administration procedures and monitors compliance with applicable laws and regulations.
- Evaluates the activities of lending personnel and management, including compliance with lending policies and the quality of their loan approval, monitoring, and risk assessment.
- Provides management and the board of directors with an objective, independent, and timely assessment of the overall quality of the loan portfolio.
- Provides management with accurate and timely credit quality information for financial and regulatory reporting purposes, including the determination of an appropriate ACL or ALLL, as applicable.

Credit Risk Rating (or Grading) Framework

The foundation for any effective credit risk review system is accurate and timely risk ratings to assess credit quality and identify or confirm problem loans. An effective credit risk rating framework includes the monitoring of individual loans and retail credit portfolios, or segments thereof, with similar risk characteristics. An effective framework also provides important information on the collectability of each portfolio for use in the determination of an appropriate ACL or ALLL, as applicable. Further, an effective framework generally places primary reliance on the lending staff to assign accurate and timely risk ratings and identify emerging loan problems. However, given the importance of the credit risk rating framework, the lending personnel's assignment of risk ratings is typically subject to review by qualified and independent: (1) peers, managers, or loan committee(s); (2) part-time or full-time employee(s); (3) internal departments staffed with credit review specialists; or (4) external credit review consultants. A risk rating review that is independent of the lending function and approval pro-

institution's ability to comprehensively manage risk. However, an effective internal audit function maintains the ability to independently audit the credit risk review function. (The NCUA was not an issuing agency of the 2003 policy statement.)

5. Credit risk review may be referred to as loan review, credit review, asset quality review, or another name as chosen by an institution. The role of, expectations for, and scope of credit risk review as discussed in this guidance are distinct from the roles, expectations, and scope of work performed by other groups within an institution that are also responsible for monitoring, managing, and reporting credit risk. Examples may be those involved with lending functions, independent risk management, loan work outs, and accounting. Each institution indicates in its own policies and procedures the specific roles and responsibilities of these different groups, including separation of duties. A credit risk review unit, or individuals serving in that role, can rely on information provided by other units in developing its own independent assessment of credit risk in loan portfolios, but the credit risk review unit critically evaluates such information to maintain its own view, as opposed to relying exclusively on such information.

cess can provide a more objective assessment of credit quality.[6]

An effective credit risk rating framework includes the following attributes:

- a formal credit risk rating system in which the ratings reflect the risk of default and credit losses, and for which a written description of the credit risk framework is maintained, including a discussion of the factors used to assign appropriate risk ratings to individual loans and retail credit portfolios, or segments thereof, with similar risk characteristics;[7]
- identification or grouping of loans that warrant the special attention of management or other designated "watch lists" of loans that management is more closely monitoring;[8]
- clear explanation of why particular loans warrant the special attention of management or have received an adverse risk rating;
- evaluation of the effectiveness of approved workout plans;
- a method for communicating direct, periodic, and timely information to the institution's senior management and the board of directors or appropriate board committee on the status of loans identified as warranting special attention or adverse classification, and the actions taken by management to strengthen the credit quality of those loans; and
- evaluation of the institution's historical loss experience for each of the groups of loans with similar risk characteristics into which it has segmented its loan portfolio.[9]

Elements of an Effective Credit Risk Review System

An effective credit risk review system starts with a written credit risk review policy that is reviewed and typically approved at least annually by the institution's board of directors or appropriate board committee to evidence its support of, and commitment to, maintaining an effective system.[10] Effective policies include a description of the overall risk rating framework and establish responsibilities for loan review based on the portfolio being assessed. An effective credit risk review policy addresses the following elements, described in more detail below: the qualifications and independence of credit risk review personnel; the frequency, scope, and depth of reviews; the review of findings and follow-up; and communication and distribution of results.

Qualifications of Credit Risk Review Personnel

An effective credit risk review function is staffed with personnel who are qualified based on their level of education, experience, and extent of formal credit training. Qualified personnel are knowledgeable in both sound lending practices and the institution's lending guidelines for the types of loans offered by the institution. The level of experience and expertise for all personnel involved in the credit risk review process is expected to be commensurate with the nature of the risk and complexity of the portfolios. In addition, qualified credit risk review personnel possess knowledge of relevant laws, regulations, and supervisory guidance.

6. Small or rural institutions that have few resources or employees may adopt modified credit risk review procedures and methods to achieve a proper degree of independence. For example, in the review process, such an institution may use qualified members of the staff, including loan officers, other officers, or directors, who are not involved with originating or approving the specific credits being assessed and whose compensation is not influenced by the assigned risk ratings. It is appropriate to employ such modified procedures when more robust procedures and methods are impractical. Institution management and the board, or a board committee, should have reasonable confidence that the personnel chosen will be able to conduct reviews with the needed independence despite their position within the loan function.

7. A bank or savings association may have a credit risk rating framework that differs from the framework for loan classifications used by the federal banking agencies. Such banks and savings associations should maintain documentation that translates their risk ratings into the regulatory classification framework used by the federal banking agencies. This documentation will enable examiners to reconcile the totals for the various loan classifications or risk ratings under the institution's system to the federal banking agencies' categories contained in the Uniform Agreement on the Classification and Appraisal of Securities Held by Depository Institutions Attachment 1 - Classification Definitions (SR-13-18).

8. In addition to loans designated as "watch list," this identification typically includes loans rated special mention, substandard, doubtful, or loss.

9. In particular, institutions with large and complex loan portfolios typically maintain records of their historical loss experience for credits in each of the categories in their risk rating framework. For banks and savings associations, these categories are either those used by, or those that can be translated into those used by, the federal banking agencies.

10. See 12 CFR part 208, appendix D-1 (Board).

Independence of Credit Risk Review Personnel

An effective credit risk review system incorporates both the initial identification of emerging problem loans by loan officers and other line staff, and an assessment of loans by personnel independent of the credit approval process. Placing primary responsibility on loan officers, risk officers, and line staff is important for continuous portfolio analysis and prompt identification and reporting of problem loans. Because of frequent contact with borrowers, loan officers and line staff can usually identify potential problems before they become apparent to others. However, institutions should be careful to avoid over-reliance on loan officers and line staff for identification of problem loans. An independent assessment of risk is achieved when personnel who perform the loan review do not have control over the loan and are not part of or influenced by individuals associated with the loan approval process.

While a larger institution may establish a separate department staffed with credit review specialists, cost and volume considerations may not justify such a system in a smaller institution. For example, in the review process, smaller institutions may use an independent committee of outside directors or qualified members of the staff, including loan officers, other officers, or directors, who are not involved with originating or approving the specific credits being assessed and whose compensation is not influenced by the assigned risk ratings. Whether or not the institution has a dedicated credit risk review department, it is prudent for the credit risk review function to report directly to the institution's board of directors or a committee thereof, consistent with safety and soundness standards. Senior management may be responsible for appropriate administrative functions provided such an arrangement does not compromise the independence of the credit risk review function.

The institution's board of directors, or a committee thereof, may outsource the credit risk review function to an independent third party.[11] However, the responsibility for maintaining a sound credit risk review system remains with the institution's board of directors. In any case, institution personnel who are independent from the lending function typically assess risks, develop the credit risk review plan, and verify appropriate follow-up of findings. Outsourcing of the credit risk review function to the institution's external auditor may raise additional independence considerations.[12]

Frequency of Reviews

An effective credit risk review system provides for review and evaluation of an institution's significant loans, loan products, or groups of loans typically annually, on renewal, or more frequently when internal or external factors indicate a potential for deteriorating credit quality or the existence of one or more other risk factors. The credit risk review function can also provide useful continual feedback on the effectiveness of the lending process in order to identify any emerging problems. Ongoing or periodic review of an institution's loan portfolio is particularly important to the estimation of ACLs or the ALLL because loss expectations may change as the credit quality of a loan changes. Use of key risk indicators or performance metrics by credit risk review management can support adjustments to the frequency and scope of reviews.

Scope of Reviews

Comprehensive and effective reviews cover all segments of the loan portfolio that pose significant credit risk or concentrations, and other loans that meet certain institution-specific criteria. A properly designed scope considers the current market conditions or other external factors that may affect a borrower's current or future ability to repay the loan. Establishment of an appropriate review scope also helps ensure that the sample of loans selected for review, or portfolio segments selected for review, is representative of the portfolio as a whole and provides reasonable assurance that any credit quality deterioration or unfavorable trends are identified. An effective credit risk review function also considers industry standards for credit risk review coverage consistent with the institution's size, complexity, loan types, risk profile, and risk-management practices and helps to verify whether the review scope is appropriate.

11. For supervisory guidance related to outside service providers, refer to SR-23-4, "Interagency Guidance on Third-Party Relationships: Risk Management."

12. See note 4.

The institution's board of directors or appropriate board committee typically approves the scope of the credit risk review on an annual basis or whenever significant interim changes are made in order to adequately assess the quality of the current portfolio. An effective scope of credit risk review is risk-based and typically includes

- loans over a predetermined size;
- a sufficient sample of smaller loans, new loans, and new loan products;
- loans with higher risk indicators, such as low credit scores, high credit lines, or those credits approved as exceptions to policy;
- segments of loan portfolios, including retail, with similar risk characteristics, such as those related to borrower risk (e.g., credit history), transaction risk (e.g., product and/or collateral type), or other risk factors as appropriate;
- segments of the loan portfolio experiencing rapid growth;
- exposures from non-lending activities that also pose credit risk;
- past due, nonaccrual, renewed, and restructured loans;
- loans previously adversely classified and loans designated as warranting the special attention of the institution's management;[13]
- loans to insiders or related parties (for more information see Regulation O, 12 CFR 215 and this manual's section on Regulation O);
- loans to affiliates (for more information see Regulation W, 12 CFR 223 and this manual's sections on Regulation W); and
- loans constituting concentrations of credit risk and other loans affected by common repayment factors.

Depth of Transaction or Portfolio Reviews

Loans and portfolio segments selected for review are typically evaluated for

- credit quality, soundness of underwriting and risk identification, borrower performance, and adequacy of the sources of repayment;
  — when applicable, this evaluation includes the appropriateness of automated underwriting and credit scoring, including prudent use of overrides as well as the effectiveness of account management strategies, collections, and portfolio management activities in managing credit risk;
- reasonableness of assumptions;
- creditworthiness of guarantors or sponsors;
- sufficiency of credit and collateral documentation;
- proper lien perfection;
- proper approvals consistent with internal policies;
- adherence to loan agreement covenants;
- adequacy of, and compliance with, internal policies and procedures (such as those related to nonaccrual and classification or risk rating policies), laws, and regulations;
- the appropriateness of credit loss estimation for those credits with significant weaknesses including the reasonableness of assumptions used, and the timeliness of charge-offs; and
- the accuracy of risk ratings and the appropriateness and timeliness of the identification of problem loans by loan officers.

Review of Findings and Follow-Up

An important activity of an effective credit risk review system is the discussion of the review findings, including all noted deficiencies, identified weaknesses, and any existing or planned corrective actions (including time frames for correction) with appropriate loan officers, department managers, and senior management. An effective system includes processes for all noted deficiencies and weaknesses that remain unresolved beyond the scheduled time frames for correction to be promptly reported to senior management and the board of directors or appropriate board committee.

It is important to resolve risk rating differences between loan officers and loan review personnel according to a pre-arranged process. That process may include formal appeals procedures and arbitration by an independent party or may require default to the assigned classification or risk rating that indicates lower credit quality. If credit risk review personnel conclude that a loan or loan portfolio is of a lower credit quality than is perceived by the portfolio management staff, the lower classification or risk rating typically prevails unless internal parties identify additional information sufficient to obtain the concurrence of the independent reviewer or arbiter on the higher credit quality classification or risk rating.

13. See note 8.

Communication and Distribution of Results

Personnel involved in the credit risk review process typically prepare a list of all loans (and portfolio segments) reviewed, the date of review, and a summary analysis that substantiates the risk ratings assigned to the loans reviewed. Effective communication also typically involves providing results of the credit risk reviews to the board of directors or appropriate board committee quarterly.[14] Comprehensive reporting includes comparative trends that identify significant changes in the overall quality of the loan portfolio, the adequacy of, and adherence to, internal policies and procedures, the quality of underwriting and risk identification, compliance with laws and regulations, and management's response to substantive criticisms or recommendations. Such comprehensive reporting provides the board of directors or appropriate board committee with insight into the portfolio and the responsiveness of management and facilitates timely corrective action of deficiencies.

14. An effective credit risk review system provides for informing the board of directors or appropriate board committee more frequently than quarterly when material adverse trends are noted. When an institution conducts loan file reviews less frequently than quarterly, the board or appropriate board committee will typically receive results on other credit risk review activities quarterly.

The allowance for loan and lease losses (ALLL) is presented on the balance sheet as a contra-asset account that reduces the amount of the loan portfolio reported on the balance sheet. The purpose of the ALLL is to reflect *estimated credit losses* within a bank's portfolio of loans and leases. Estimated credit losses are estimates of the current amount of loans that are probable that the bank will be unable to collect given the facts and circumstances since the evaluation date (generally the balance sheet date). That is, estimated credit losses represent net charge-offs that are likely to be realized for a loan or group of loans as of the evaluation date.

All federally insured depository institutions must maintain an ALLL, except for federally insured branches and agencies of foreign banks. A bank determines the appropriate balance or level of the ALLL at least each quarter, periodically validating its methodology for estimating the ALLL (see SR-11-7), and by evaluating the collectibility of its loan and lease portfolio, including any accrued and unpaid interest. Increases or decreases to the ALLL are to be made through charges (debits) or credits to the "provision for loan and lease losses" (provision), an expense account on the bank's Consolidated Report of Income or income statement, and not through transfers from retained earnings or any segregation of retained earnings or other components of equity capital.

When there is information available to confirm that specific loans, or portions thereof, are uncollectible, these amounts should be promptly charged off against the ALLL. Under no circumstances can loan or lease losses be charged directly to "retained earnings" and capital. Any subsequent recoveries on loans or leases previously charged off must be credited to the ALLL, provided, however, that the total amount credited to the allowance as recoveries of an individual loan (which may include amounts representing principal, interest, and fees) is limited to the amount previously charged off against the ALLL on that loan. Any amounts collected in excess of this limit should be recognized as income.

To illustrate these concepts, assume that Bank A has a loan and lease portfolio totaling $100 million at the end of year 1 and an ALLL of $1.25 million; thus, its net carrying amount for the loan portfolio on the balance sheet is $98.75 million. Based on its most recent analysis, Bank A has determined that an ALLL of $1.5 million is necessary to cover its estimated credit losses as of the end of the fourth quarter. Therefore, in the fourth quarter of year 1, Bank A should record a provision for $250,000, debiting this expense and crediting the ALLL for this amount to bring the ALLL to the appropriate level of $1.5 million. Assume further that during the first quarter of year 2, Bank A identifies $750,000 in uncollectible loans. It must charge off this amount against the ALLL by debiting the ALLL and crediting the individual loans for a total of $750,000. Also assume that in the same first quarter of year 2, Bank A receives $100,000 in cash recoveries on previously charged-off loans. These recoveries must be credited to the ALLL in that quarter. Thus, in the first quarter of year 2, Bank A's ALLL, which began the year at $1.5 million, will have been reduced $850,000 ($1,500,000 − $750,000 + $100,000 = $850,000). However, management's ALLL analysis for the first quarter of year 2 indicates that an ALLL of $1.2 million is appropriate. To bring the recorded ALLL to this level, Bank A must make a debit to the provision for loan and lease losses of $350,000 ($850,000 + $350,000 = $1.2 million).

While the overall responsibility for maintaining the ALLL at an appropriate level rests with the bank's senior management and board of directors, the appropriateness of the ALLL and management's analysis of it are subject to examiner review. The examiner should make every effort to fully understand a bank's methods for determining the needed balance of its ALLL. During the process of conducting the examination, the examiner should take these methods into account when making a final determination on the appropriateness (adequacy) of the balance of the ALLL. The examiner may confer with bank management and any outside accountant or auditor that has advised management on its ALLL-review policies or practices.

If the examiner concludes that the reported ALLL level is not appropriate or determines that the ALLL evaluation process is based on the results of an unreliable loan review system or is otherwise deficient, recommendations for correcting these deficiencies, including any examiner concerns regarding an appropriate level for the ALLL, should be noted in the report of examination. The examiner's comments should cite any departures from generally accepted accounting principles (GAAP) and any contraventions of the following 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses as well as the 2001 policy statement (see "ALLL Methodologies and Documentation"). Additional supervisory action may also be taken based on the magnitude of the observed shortcomings in the ALLL process, including the materiality of any error in the reported amount of the ALLL.

INTERAGENCY POLICY STATEMENT ON THE ALLOWANCE FOR LOAN AND LEASE LOSSES

This 2006 policy statement[1] revises and replaces the 1993 policy statement on the ALLL. It reiterates key concepts and requirements included in generally accepted accounting principles (GAAP) and existing ALLL supervisory guidance.[2] The principal sources of guidance on accounting for impairment in a loan portfolio under GAAP are Statement of Financial Accounting Standards No. 5, "Accounting for Contingencies" (FAS 5), and Statement of Financial Accounting Standards No. 114, "Accounting by Creditors for Impairment of a Loan" (FAS 114). In addition, the Financial Accounting Standards Board Viewpoints article that is included in Emerging Issues Task Force Topic D-80 (EITF D-80), "Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio," presents questions and answers that provide specific guidance on the interaction between these two FASB statements and may be helpful in applying them.

In July 1999, the banking agencies and the Securities and Exchange Commission (SEC) issued a Joint Interagency Letter to Financial Institutions. The letter stated that the banking agencies and the SEC agreed on the following important aspects of loan loss allowance practices:

- Arriving at an appropriate allowance involves a high degree of management judgment and results in a range of estimated losses.
- Prudent, conservative—but not excessive—loan loss allowances that fall within an acceptable range of estimated losses are appropriate. In accordance with GAAP, an institution should record its best estimate within the range of credit losses, including when management's best estimate is at the high end of the range.
- Determining the allowance for loan losses is inevitably imprecise, and an appropriate allowance falls within a range of estimated losses.
- An "unallocated" loan loss allowance is appropriate when it reflects an estimate of probable losses, determined in accordance with GAAP, and is properly supported.
- Allowance estimates should be based on a comprehensive, well-documented, and consistently applied analysis of the loan portfolio.
- The loan loss allowance should take into consideration all available information existing as of the financial statement date, including environmental factors such as industry, geographical, economic, and political factors.

In July 2001, the banking agencies issued the Policy Statement on Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions (2001 Policy Statement). The policy statement is designed to assist institutions in establishing a sound process for determining an appropriate ALLL and documenting that process in accordance with GAAP.[3] (See "ALLL Methodologies and Documentation.")

In March 2004, the agencies also issued the Update on Accounting for Loan and Lease Losses. This guidance provided reminders of longstanding supervisory guidance as well as a

1. This policy statement was adopted on December 13, 2006, by, and applies to, all depository institutions (institutions), except U.S. branches and agencies of foreign banks, that are supervised by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation (the banking agencies). U.S. branches and agencies of foreign banks continue to be subject to any separate guidance that has been issued by their primary supervisory agency.

2. As discussed more fully below in the "Nature and Purpose of the ALLL" section, this policy statement and the ALLL generally do not address loans carried at fair value or loans held for sale. In addition, this policy statement provides only limited guidance on "purchased impaired loans."

3. See "ALLL Methodologies and Documentation" for the 2001 Policy Statement. The SEC staff issued parallel guidance in July 2001, which is found in Staff Accounting Bulletin No. 102, "Selected Loan Loss Allowance Methodology and Documentation Issues" (SAB 102), which has been codified as Topic 6.L. in the SEC's Codification of Staff Accounting Bulletins. Both SAB 102 and the codification are available on the SEC's website.

listing of the existing allowance guidance that institutions should continue to apply.

Nature and Purpose of the ALLL

The ALLL represents one of the most significant estimates in an institution's financial statements and regulatory reports. Because of its significance, each institution has a responsibility for developing, maintaining, and documenting a comprehensive, systematic, and consistently applied process for determining the amounts of the ALLL and the provision for loan and lease losses (PLLL). To fulfill this responsibility, each institution should ensure controls are in place to consistently determine the ALLL in accordance with GAAP, the institution's stated policies and procedures, management's best judgment, and relevant supervisory guidance. As of the end of each quarter, or more frequently if warranted, each institution must analyze the collectibility of its loans and leases held for investment[4] (hereafter referred to as "loans") and maintain an ALLL at a level that is appropriate and determined in accordance with GAAP. An appropriate ALLL covers estimated credit losses on individually evaluated loans that are determined to be impaired as well as estimated credit losses inherent in the remainder of the loan and lease portfolio. The ALLL does not apply, however, to loans carried at fair value, loans held for sale,[5] off-balance-sheet credit exposures[6] (for example, financial instruments such as off-balance-sheet loan commitments, standby letters of credit, and guarantees), or general or unspecified business risks.

For purposes of this policy statement, the term *estimated credit losses* means an estimate of the current amount of loans that it is probable the institution will be unable to collect given facts and circumstances since the evaluation date. Thus, estimated credit losses represent net charge-offs that are likely to be realized for a loan or group of loans. These estimated credit losses should meet the criteria for accrual of a loss contingency (that is, through a provision to the ALLL) set forth in GAAP.[7] When available information confirms that specific loans, or portions thereof, are uncollectible, these amounts should be promptly charged off against the ALLL. For "purchased impaired loans,"[8] GAAP prohibits "carrying over" or creating an ALLL in the initial recording of these loans. However, if, upon evaluation subsequent to acquisition, it is probable that the institution will be unable to collect all cash flows expected at acquisition on a purchased impaired loan (an estimate that considers both timing and amount), the loan

4. Consistent with the American Institute of Certified Public Accountants' (AICPA) Statement of Position 01-6, "Accounting by Certain Entities (Including Entities With Trade Receivables) That Lend to or Finance the Activities of Others," loans and leases held for investment are those loans and leases that the institution has the intent and ability to hold for the foreseeable future or until maturity or payoff.

5. See "Interagency Guidance on Certain Loans Held for Sale" (March 26, 2001) for the appropriate accounting and reporting treatment for certain loans that are sold directly from the loan portfolio or transferred to a held-for-sale account. Loans held for sale are reported at the lower of cost or fair value. Declines in value occurring after the transfer of a loan to the held-for-sale portfolio are accounted for as adjustments to a valuation allowance for held-for-sale loans and not as adjustments to the ALLL.

6. Credit losses on off-balance-sheet credit exposures should be estimated in accordance with FAS 5. Any allowance for credit losses on off-balance-sheet exposures should be reported on the balance sheet as an "other liability," and not as part of the ALLL.

7. FAS 5 requires the accrual of a loss contingency when information available prior to the issuance of the financial statements indicates it is probable that an asset has been impaired at the date of the financial statements and the amount of loss can be reasonably estimated. These conditions may be considered in relation to individual loans or in relation to groups of similar types of loans. If the conditions are met, accrual should be made even though the particular loans that are uncollectible may not be identifiable. Under FAS 114, an individual loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due according to the contractual terms of the loan agreement. It is implicit in these conditions that it must be probable that one or more future events will occur confirming the fact of the loss. Thus, under GAAP, the purpose of the ALLL is not to absorb all of the risk in the loan portfolio, but to cover probable credit losses that have already been incurred.

8. A *purchased impaired loan* is defined as a loan that an institution has purchased, including a loan acquired in a purchase business combination, that has evidence of deterioration of credit quality since its origination and for which it is probable, at the purchase date, that the institution will be unable to collect all contractually required payments. When reviewing the appropriateness of the reported ALLL of an institution with purchased impaired loans, examiners should consider the credit losses factored into the initial investment in these loans when determining whether further deterioration—for example, decreases in cash flows expected to be collected—has occurred since the loans were purchased. The bank's consolidated reports of condition and income and the disclosures in the bank's financial statements may provide useful information for examiners in reviewing these loans. Refer to the AICPA's Statement of Position 03-3, "Accounting for Certain Loans or Debt Securities Acquired in a Transfer," for further guidance on the appropriate accounting.

should be considered impaired for purposes of applying the measurement and other provisions of FAS 5 or, if applicable, FAS 114.

Estimates of credit losses should reflect consideration of all significant factors that affect the collectibility of the portfolio as of the evaluation date. For loans within the scope of FAS 114 that are individually evaluated and determined to be impaired,[9] these estimates should reflect consideration of one of the standard's three impairment measurement methods as of the evaluation date: (1) the present value of expected future cash flows discounted at the loan's effective interest rate,[10] (2) the loan's observable market price, or (3) the fair value of the collateral if the loan is collateral dependent.

An institution may choose the appropriate FAS 114 measurement method on a loan-by-loan basis for an individually impaired loan, except for an impaired collateral-dependent loan. The agencies require impairment of a collateral-dependent loan to be measured using the fair value of collateral method. As defined in FAS 114, a loan is collateral dependent if repayment of the loan is expected to be provided solely by the underlying collateral. In general, any portion of the recorded investment in a collateral-dependent loan (including any capitalized accrued interest, net deferred loan fees or costs, and unamortized premium or discount) in excess of the fair value of the collateral that can be identified as uncollectible, and is therefore deemed a confirmed loss, should be promptly charged off against the ALLL.[11]

All other loans, including individually evaluated loans determined not to be impaired under FAS 114, should be included in a group of loans that is evaluated for impairment under FAS 5.[12] While an institution may segment its loan portfolio into groups of loans based on a variety of factors, the loans within each group should have similar risk characteristics. For example, a loan that is fully collateralized with risk-free assets should not be grouped with uncollateralized loans. When estimating credit losses on each group of loans with similar risk characteristics, an institution should consider its historical loss experience on the group, *adjusted for changes in trends, conditions, and other relevant factors* that affect repayment of the loans as of the evaluation date.

For analytical purposes, an institution should attribute portions of the ALLL to loans that it evaluates and determines to be impaired under FAS 114 and to groups of loans that it evaluates collectively under FAS 5. However, the ALLL is available to cover all charge-offs that arise from the loan portfolio.

Responsibilities of the Board of Directors and Management

Appropriate ALLL Level

Each institution's management is responsible for maintaining the ALLL at an appropriate level and for documenting its analysis according to the standards set forth in the 2001 policy statement. Thus, management should evaluate the ALLL reported on the balance sheet as of the end of each quarter or more frequently if warranted, and charge or credit the PLLL to bring the ALLL to an appropriate level as of each evaluation date. The determination of the amounts of the ALLL and the PLLL should be based on management's current judgments about the credit quality of the loan portfolio, and should consider all known relevant internal and external factors that affect loan collectibility as of the evaluation date. Management's evaluation is subject to review by examiners. An institution's failure to analyze the collectibility of the loan portfolio and maintain and support an appropriate ALLL in accordance with GAAP and supervisory guidance is generally an unsafe and unsound practice.

In carrying out its responsibility for maintaining an appropriate ALLL, management is expected to adopt and adhere to written policies

9. FAS 114 does not specify how an institution should identify loans that are to be evaluated for collectibility nor does it specify how an institution should determine that a loan is impaired. An institution should apply its normal loan review procedures in making those judgments. Refer to the ALLL interpretations for further guidance.

10. The "effective interest rate" on a loan is the rate of return implicit in the loan (that is, the contractual interest rate adjusted for any net deferred loan fees or costs and any premium or discount existing at the origination or acquisition of the loan).

11. For further information, refer to the illustration in Appendix B of the 2001 Policy Statement in the section "ALLL Methodologies and Documentation."

12. An individually evaluated loan that is determined not to be impaired under FAS 114 should be evaluated under FAS 5 when specific characteristics of the loan indicate that it is probable there would be estimated credit losses in a group of loans with those characteristics. For further guidance, refer to the frequently asked questions (FAQs) that were distributed with this policy statement.

and procedures that are appropriate to the size of the institution and the nature, scope, and risk of its lending activities. At a minimum, these policies and procedures should ensure that—

- the institution's process for determining an appropriate level for the ALLL is based on a comprehensive, well-documented, and consistently applied analysis of its loan portfolio.[13] The analysis should consider all significant factors that affect the collectibility of the portfolio and should support the credit losses estimated by this process.
- the institution has an effective loan review system and controls (including an effective loan classification or credit grading system) that identify, monitor, and address asset quality problems in an accurate and timely manner.[14] To be effective, the institution's loan review system and controls must be responsive to changes in internal and external factors affecting the level of credit risk in the portfolio.
- the institution has adequate data capture and reporting systems to supply the information necessary to support and document its estimate of an appropriate ALLL.
- the institution evaluates any loss estimation models before they are employed and modifies the models' assumptions, as needed, to ensure that the resulting loss estimates are consistent with GAAP. To demonstrate this consistency, the institution should document its evaluations and conclusions regarding the appropriateness of estimating credit losses with the models or other estimation tools. The institution should also document and support any adjustments made to the models or to the output of the models in determining the estimated credit losses.
- the institution promptly charges off loans, or portions of loans, that available information confirms to be uncollectible.
- the institution periodically validates the ALLL methodology. This validation process should be done by a party who is independent of the institution's credit approval and ALLL estimation processes, of the ALLL methodology and its application in order to confirm its effectiveness. See SR 11-7 for more information. A party who is independent of these processes could be the internal audit staff, a risk management unit of the institution, an external auditor (subject to applicable auditor independence standards), or another contracted third party from outside the institution. One party need not perform the entire analysis as the validation can be divided among various independent parties.

The board of directors is responsible for overseeing management's significant judgments and estimates pertaining to the determination of an appropriate ALLL. This oversight should include but is not limited to—

- reviewing and approving the institution's written ALLL policies and procedures at least annually;
- reviewing management's assessment and justification that the loan review system is sound and appropriate for the size and complexity of the institution;
- reviewing management's assessment and justification for the amounts estimated and reported each period for the PLLL and the ALLL; and
- requiring management to periodically validate and, when appropriate, revise the ALLL methodology.

For purposes of the Consolidated Reports of Condition and Income for a Bank (Call Report), an appropriate ALLL (after deducting all loans and portions of loans confirmed loss) should consist only of the following components (as applicable),[15] the amounts of which take into account *all relevant facts and circumstances as of the evaluation date:*

13. As noted in the 2001 Policy Statement, an institution with less complex lending activities and products may find it more efficient to combine a number of procedures while continuing to ensure that the institution has a consistent and appropriate ALLL methodology. Thus, much of the supporting documentation required for an institution with more complex products or portfolios may be combined into fewer supporting documents in an institution with less complex products or portfolios.

14. Loan review and loan classification or credit grading systems are discussed in this manual's section, "Credit Risk Review Systems." In addition, state member banks should refer to the asset quality standards in the Interagency Guidelines Establishing Standards for Safety and Soundness, which were adopted by the Federal Reserve Board (see Appendix D-1, 12 CFR 208).

15. A component of the ALLL that is labeled "unallocated" is appropriate when it reflects estimated credit losses determined in accordance with GAAP and is properly supported and documented.

- For loans within the scope of ASC Topic 310, Receivables (formerly FAS 114, "Accounting by Creditors for Impairment of a Loan") that are individually evaluated and found to be impaired, the associated ALLL should be based upon one of the three impairment measurement methods specified in FAS 114.[16]
- For all other loans, including individually evaluated loans determined not to be impaired under FAS 114,[17] the associated ALLL should be measured under ASC Subtopic 450-20, Contingencies—Loss Contingencies (formerly FAS 5, "Accounting for Contingencies") and should provide for all estimated credit losses that have been incurred on groups of loans with similar risk characteristics.
- For estimated credit losses from transfer risk on cross-border loans, the impact to the ALLL should be evaluated individually for impaired loans under FAS 114 or evaluated on a group basis under FAS 5. See this policy statement's attachment for further guidance on considerations of transfer risk on cross-border loans.
- For estimated credit losses on accrued interest and fees on loans that have been reported as part of the respective loan balances on the institution's balance sheet, the associated ALLL should be evaluated under FAS 114 or FAS 5 as appropriate, if not already included in one of the preceding components.

Because deposit accounts that are overdrawn (that is, overdrafts) must be reclassified as loans on the balance sheet, overdrawn accounts should be included in one of the first two components above, as appropriate, and evaluated for estimated credit losses.

Determining the appropriate level for the ALLL is inevitably imprecise and requires a high degree of management judgment. Management's analysis should reflect a prudent, conservative, but not excessive ALLL that falls within an acceptable range of estimated credit losses. When a range of losses is determined, institutions should maintain appropriate documentation to support the identified range and the rationale used for determining the best estimate from within the range of loan losses.

It is essential that institutions maintain effective loan review systems. An effective loan review system should work to ensure the accuracy of internal credit classification or grading systems and, thus, the quality of the information used to assess the appropriateness of the ALLL. The complexity and scope of an institution's ALLL evaluation process, loan review system, and other relevant controls should be appropriate for the size of the institution and the nature of its lending activities. The evaluation process should also provide for sufficient flexibility to respond to changes in the factors that affect the collectibility of the portfolio.

Credit losses that arise from the transfer risk associated with an institution's cross-border lending activities require special consideration. In particular, for banks with cross-border lending exposure, management should determine that the ALLL is appropriate to cover estimated losses from transfer risk associated with this exposure over and above any minimum amount that the Interagency Country Exposure Review Committee requires to be provided in the Allocated Transfer Risk Reserve (or charged off against the ALLL). These estimated losses should meet the criteria for accrual of a loss contingency set forth in GAAP. (See the attachment for factors to consider.)

Factors to Consider in the Estimation of Credit Losses

Estimated credit losses should reflect consideration of all significant factors that affect the collectibility of the portfolio as of the evaluation date. Normally, an institution should determine the historical loss rate for each group of loans with similar risk characteristics in its portfolio based on its own loss experience for loans in that group. While historical loss experience provides a reasonable starting point for the institution's analysis, historical losses—or even recent trends in losses—do not by themselves form a sufficient basis to determine the appropriate level for the ALLL. Management also should consider those qualitative or environmental factors that are likely to cause estimated credit losses associated with the institution's existing portfolio to differ from historical loss experience, including but not limited to—

- changes in lending policies and procedures, including changes in underwriting standards and collection, charge-off, and recovery prac-

16. As previously noted, the use of the fair value of collateral method is required for an individually evaluated loan that is impaired if the loan is collateral dependent.
17. See note 12.

tices not considered elsewhere in estimating credit losses;
- changes in international, national, regional, and local economic and business conditions and developments that affect the collectibility of the portfolio, including the condition of various market segments;[18]
- changes in the nature and volume of the portfolio and in the terms of loans;
- changes in the experience, ability, and depth of lending management and other relevant staff;
- changes in the volume and severity of past due loans, the volume of nonaccrual loans, and the volume and severity of adversely classified or graded loans;[19]
- changes in the quality of the institution's loan review system;
- changes in the value of underlying collateral for collateral-dependent loans;
- the existence and effect of any concentrations of credit, and changes in the level of such concentrations; and
- the effect of other external factors such as competition and legal and regulatory requirements on the level of estimated credit losses in the institution's existing portfolio.

In addition, changes in the level of the ALLL should be directionally consistent with changes in the factors, taken as a whole, that evidence credit losses, keeping in mind the characteristics of an institution's loan portfolio. For example, if declining credit quality trends relevant to the types of loans in an institution's portfolio are evident, the ALLL level as a percentage of the portfolio should generally increase, barring unusual charge-off activity. Similarly, if improving credit quality trends are evident, the ALLL level as a percentage of the portfolio should generally decrease.

Measurement of Estimated Credit Losses

FAS 5. When measuring estimated credit losses on groups of loans with similar risk characteristics in accordance with FAS 5, a widely used method is based on each group's historical net charge-off rate adjusted for the effects of the qualitative or environmental factors discussed previously. As the first step in applying this method, management generally bases the historical net charge-off rates on the "annualized" historical gross loan charge-offs, less recoveries, recorded by the institution on loans in each group.

Methodologies for determining the historical net charge-off rate on a group of loans with similar risk characteristics under FAS 5 can range from the simple average of, or a determination of the range of, an institution's annual net charge-off experience to more complex techniques, such as migration analysis and models that estimate credit losses.[20] Generally, institutions should use at least an "annualized" or twelve-month average net charge-off rate that will be applied to the groups of loans when estimating credit losses. However, this rate could vary. For example, loans with effective lives longer than twelve months often have workout periods over an extended period of time, which may indicate that the estimated credit losses should be greater than that calculated based solely on the annualized net charge-off rate for such loans. These groups may include certain commercial loans as well as groups of adversely classified loans. Other groups of loans may have effective lives shorter than twelve months, which may indicate that the estimated credit losses should be less than that calculated based on the annualized net charge-off rate.

Regardless of the method used, institutions should maintain supporting documentation for the techniques used to develop the historical loss rate for each group of loans. If a range of

18. Credit loss and recovery experience may vary significantly depending upon the stage of the business cycle. For example, an over reliance on credit loss experience during a period of economic growth will not result in realistic estimates of credit losses during a period of economic downturn.

19. For banks, adversely classified or graded loans are loans rated "Substandard" (or its equivalent) or worse under its loan classification system.

20. Annual charge-off rates are calculated over a specified time period (for example, three years or five years), which can vary based on a number of factors including the relevance of past periods' experience to the current period or point in the credit cycle. Also, some institutions remove loans that become adversely classified or graded from a group of nonclassified or nongraded loans with similar risk characteristics in order to evaluate the removed loans individually under FAS 114 (if deemed impaired) or collectively in a group of adversely classified or graded loans with similar risk characteristics under FAS 5. In this situation, the net charge-off experience on the adversely classified or graded loans that have been removed from the group of nonclassified or nongraded loans should be included in the historical loss rates for that group of loans. Even though the net charge-off experience on adversely classified or graded loans is included in the estimation of the historical loss rates that will be applied to the group of nonclassified or nongraded loans, the adversely classified or graded loans themselves are no longer included in that group for purposes of estimating credit losses on the group.

historical loss rates is developed instead for a group of loans, institutions should maintain documentation to support the identified range and the rationale for determining which rate is the best estimate within the range of loss rates. The rationale should be based on management's assessment of which rate is most reflective of the estimated credit losses in the current loan portfolio.

After determining the appropriate historical loss rate for each group of loans with similar risk characteristics, management should consider those current qualitative or environmental factors that are likely to cause estimated credit losses as of the evaluation date to differ from the group's historical loss experience. Institutions typically reflect the overall effect of these factors on a loan group as an adjustment that, as appropriate, increases or decreases the historical loss rate applied to the loan group. Alternatively, the effect of these factors may be reflected through separate standalone adjustments within the FAS 5 component of the ALLL.[21] Both methods are consistent with GAAP, provided the adjustments for qualitative or environmental factors are reasonably and consistently determined, are adequately documented, and represent estimated credit losses. For each group of loans, an institution should apply its adjusted historical loss rate, or its historical loss rate and separate standalone adjustments, to the recorded investment in the group when determining its estimated credit losses.

Management must exercise significant judgment when evaluating the effect of qualitative factors on the amount of the ALLL because data may not be reasonably available or directly applicable for management to determine the precise impact of a factor on the collectibility of the institution's loan portfolio as of the evaluation date. Accordingly, institutions should support adjustments to historical loss rates and explain how the adjustments reflect current information, events, circumstances, and conditions in the loss measurements. Management should maintain reasonable documentation to support which factors affected the analysis and the impact of those factors on the loss measurement. Support and documentation includes descriptions of each factor, management's analysis of how each factor has changed over time, which loan groups' loss rates have been adjusted, the amount by which loss estimates have been adjusted for changes in conditions, an explanation of how management estimated the impact, and other available data that supports the reasonableness of the adjustments. Examples of underlying supporting evidence could include, but are not limited to, relevant articles from newspapers and other publications that describe economic events affecting a particular geographic area, economic reports and data, and notes from discussions with borrowers.

There may be times when an institution does not have its own historical loss experience upon which to base its estimate of the credit losses in a group of loans with similar risk characteristics. This may occur when an institution offers a new loan product or when it is a newly established (that is, de novo) institution. If an institution has no experience of its own for a loan group, reference to the experience of other enterprises in the same lending business may be appropriate, provided the institution demonstrates that the attributes of the group of loans in its portfolio are similar to those of the loan group in the portfolio providing the loss experience. An institution should only use another enterprise's experience on a short-term basis until it has developed its own loss experience for a particular group of loans.

FAS 114. When determining the FAS 114 component of the ALLL for an individually impaired loan,[22] an institution should consider estimated costs to sell the loan's collateral, if any, on a discounted basis, in the measurement of impairment if those costs are expected to reduce the cash flows available to repay or otherwise satisfy the loan. If the institution bases its measure of loan impairment on the present value of expected future cash flows discounted at the loan's effective interest rate, the estimates of these cash flows should be the institu-

21. An overall adjustment to a portion of the ALLL that is not attributed to specific segments of the loan portfolio is often labeled "unallocated." Regardless of what a component of the ALLL is labeled, it is appropriate when it reflects estimated credit losses determined in accordance with GAAP and is properly supported.

22. As noted in FAS 114, some individually impaired loans have risk characteristics that are unique to an individual borrower and the institution will apply the measurement methods on a loan-by-loan basis. However, some impaired loans may have risk characteristics in common with other impaired loans. An institution may aggregate those loans and may use historical statistics, such as average recovery period and average amount recovered, along with a composite effective interest rate as a means of measuring impairment of those loans.

tion's best estimate based on reasonable and supportable assumptions and projections. All available evidence should be considered in developing the estimate of expected future cash flows. The weight given to the evidence should be commensurate with the extent to which the evidence can be verified objectively. The likelihood of the possible outcomes should be considered in determining the best estimate of expected future cash flows.

Analyzing the Overall Measurement of the ALLL

Institutions also are encouraged to use ratio analysis as a supplemental tool for evaluating the overall reasonableness of the ALLL. Ratio analysis can be useful in identifying divergent trends (compared with an institution's peer group and its own historical experience) in the relationship of the ALLL to adversely classified or graded loans, past due and nonaccrual loans, total loans, and historical gross and net charge-offs. Based on such analysis, an institution may identify additional issues or factors that previously had not been considered in the ALLL estimation process, which may warrant adjustments to estimated credit losses. Such adjustments should be appropriately supported and documented.

While ratio analysis, when used prudently, can be helpful as a supplemental check on the reasonableness of management's assumptions and analyses, it is not a sufficient basis for determining the appropriate amount for the ALLL. In particular, because an appropriate ALLL is an institution-specific amount, such comparisons do not obviate the need for a comprehensive analysis of the loan portfolio and the factors affecting its collectibility. Furthermore, it is inappropriate for the board of directors or management to make adjustments to the ALLL when it has been properly computed and supported under the institution's methodology for the sole purpose of reporting an ALLL that corresponds to the peer group median, a target ratio, or a budgeted amount. Institutions that have high levels of risk in the loan portfolio or are uncertain about the effect of possible future events on the collectibility of the portfolio should address these concerns by maintaining higher equity capital and not by arbitrarily increasing the ALLL in excess of amounts supported under GAAP.[23]

Estimated Credit Losses in Credit Related Accounts

Typically, institutions evaluate and estimate credit losses for off-balance-sheet credit exposures at the same time that they estimate credit losses for loans. While a similar process should be followed to support loss estimates related to off-balance-sheet exposures, these estimated credit losses are not recorded as part of the ALLL. When the conditions for accrual of a loss under FAS 5 are met, an institution should maintain and report as a separate liability account, an allowance that is appropriate to cover estimated credit losses on off-balance-sheet loan commitments, standby letters of credit, and guarantees. In addition, recourse liability accounts (that arise from recourse obligations on any transfers of loans that are reported as sales in accordance with GAAP) should be reported in regulatory reports as liabilities that are separate and distinct from both the ALLL and the allowance for credit losses on off-balance-sheet credit exposures.

When accrued interest and fees are reported separately on an institution's balance sheet from the related loan balances (that is, as other assets), the institution should maintain an appropriate valuation allowance, determined in accordance with GAAP, for amounts that are not likely to be collected unless management has placed the underlying loans in nonaccrual status and reversed previously accrued interest and fees.[24]

---

23. It is inappropriate to use a "standard percentage" as the sole determinant for the amount to be reported as the ALLL on the balance sheet. Moreover, an institution should not simply default to a peer ratio or a "standard percentage" after determining an appropriate level of ALLL under its methodology. However, there may be circumstances when an institution's ALLL methodology and credit risk identification systems are not reliable. Absent reliable data of its own, management may seek data that could be used as a short-term proxy for the unavailable information (for example, an industry average loss rate for loans with similar risk characteristics). This is only appropriate as a short-term remedy until the institution creates a viable system for estimating credit losses within its loan portfolio.

24. See the Call Report instructions for further guidance on placing a loan in nonaccrual status.

Responsibilities of Examiners

Examiners should assess the credit quality of an institution's loan portfolio, the appropriateness of its ALLL methodology and documentation, and the appropriateness of the reported ALLL in the institution's regulatory reports. In their review and classification or grading of the loan portfolio, examiners should consider all significant factors that affect the collectibility of the portfolio, including the value of any collateral. In reviewing the appropriateness of the ALLL, examiners should do the following:

- Consider the effectiveness of board oversight as well as the quality of the institution's loan review system and management in identifying, monitoring, and addressing asset quality problems. This will include a review of the institution's loan review function and credit grading system. Typically, this will involve testing a sample of the institution's loans. The sample size generally varies and will depend on the nature or purpose of the examination.[25]
- Evaluate the institution's ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL, including whether management's assumptions, valuations, and judgments appear reasonable and are properly supported. If a range of credit losses has been estimated by management, evaluate the reasonableness of the range and management's best estimate within the range. In making these evaluations, examiners should ensure that the institution's historical loss experience and all significant qualitative or environmental factors that affect the collectibility of the portfolio (including changes in the quality of the institution's loan review function and the other factors previously discussed) have been appropriately considered and that management has appropriately applied GAAP, including FAS 114 and FAS 5.
- Review management's use of loss estimation models or other loss estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.
- Review the appropriateness and reasonableness of the overall level of the ALLL. In some instances this may include a quantitative analysis (for example, using the types of ratio analysis previously discussed) as a preliminary check on the reasonableness of the ALLL. This quantitative analysis should demonstrate whether changes in the key ratios from prior periods are reasonable based on the examiner's knowledge of the collectibility of loans at the institution and its current environment.
- Review the ALLL amount reported in the institution's regulatory reports and financial statements and ensure these amounts reconcile to its ALLL analyses. There should be no material differences between the consolidated loss estimate, as determined by the ALLL methodology, and the final ALLL balance reported in the financial statements. Inquire about reasons for any material differences between the results of the institution's ALLL analyses and the institution's reported ALLL to determine whether the differences can be satisfactorily explained.
- Review the adequacy of the documentation and controls maintained by management to support the appropriateness of the ALLL.
- Review the interest and fee income accounts associated with the lending process to ensure that the institution's net income is not materially misstated.[26]

As noted in the "Responsibilities of the Board of Directors and Management" section of this policy statement, when assessing the appropriateness of the ALLL, it is important to recognize that the related process, methodology, and underlying assumptions require a substantial degree of management judgment. Even when an institution maintains sound loan administration and collection procedures and an effective loan review system and controls, its estimate of credit losses is not a single precise amount due to the

25. In an examiner's review of an institution's loan review system, the examiner's loan classifications or credit grades may differ from those of the institution's loan review system. If the examiner's evaluation of these differences indicates problems with the loan review system, especially when the loan classification or credit grades assigned by the institution are more liberal than those assigned by the examiner, the institution would be expected to make appropriate adjustments to the assignment of its loan classifications or credit grades to the loan portfolio and to its estimated credit losses. Furthermore, the institution would be expected to improve its loan review system.

26. As noted previously, accrued interest and fees on loans that have been reported as part of the respective loan balances on the institution's balance sheet should be evaluated for estimated credit losses. The accrual of the interest and fee income should also be considered. Refer to GAAP and the Call Report instructions for further guidance on income recognition.

wide range of qualitative or environmental factors that must be considered.

An institution's ability to estimate credit losses on specific loans and groups of loans should improve over time as substantive information accumulates regarding the factors affecting repayment prospects. Therefore, examiners should generally accept management's estimates when assessing the appropriateness of the institution's reported ALLL, and not seek adjustments to the ALLL, when management has—

- maintained effective loan review systems and controls for identifying, monitoring, and addressing asset quality problems in a timely manner;
- analyzed all significant qualitative or environmental factors that affect the collectibility of the portfolio as of the evaluation date in a reasonable manner;
- established an acceptable ALLL evaluation process for both individual loans and groups of loans that meets the GAAP requirements for an appropriate ALLL; and
- incorporated reasonable and properly supported assumptions, valuations, and judgments into the evaluation process.

If the examiner concludes that the reported ALLL level is not appropriate or determines that the ALLL evaluation process is based on the results of an unreliable loan review system or is otherwise deficient, recommendations for correcting these deficiencies, including any examiner concerns regarding an appropriate level for the ALLL, should be noted in the report of examination. The examiner's comments should cite any departures from GAAP and any contraventions of this policy statement and the 2001 policy statement, as applicable. Additional supervisory action may also be taken based on the magnitude of the observed shortcomings in the ALLL process, including the materiality of any error in the reported amount of the ALLL.

ALLL Level Reflected in Regulatory Reports

The agencies believe that an ALLL established in accordance with this policy statement and the 2001 policy statement, as applicable, falls within the range of acceptable estimates determined in accordance with GAAP. When the reported amount of an institution's ALLL is not appropriate, the institution will be required to adjust its ALLL by an amount sufficient to bring the ALLL reported on its Call Report to an appropriate level as of the evaluation date. This adjustment should be reflected in the current period provision or through the restatement of prior period provisions, as appropriate in the circumstances.

Attachment to the Policy Statement—International Transfer Risk Considerations

With respect to international transfer risk, an institution with cross-border exposures should support its determination of the appropriateness of its ALLL by performing an analysis of the transfer risk, commensurate with the size and composition of the institution's exposure to each country. Such analyses should take into consideration the following factors, as appropriate:

- the institution's loan portfolio mix for each country (for example, types of borrowers, loan maturities, collateral, guarantees, special credit facilities, and other distinguishing factors);
- the institution's business strategy and its debt management plans for each country;
- each country's balance of payments position;
- each country's level of international reserves;
- each country's established payment performance record and its future debt servicing prospects;
- each country's socio-political situation and its effect on the adoption or implementation of economic reforms, in particular those affecting debt servicing capacity;
- each country's current standing with multilateral and official creditors;
- the status of each country's relationships with other creditors, including institutions; and
- the most recent evaluations distributed by the banking agencies' Interagency Country Exposure Review Committee.

METHODOLOGY

1. Assess the methodology used in determining the appropriate allowance for loan and lease losses (ALLL) and consider whether it includes portfolio segmentation and impairment analysis for individually evaluated loans. (Refer to ASC Subtopic 450-20 and ASC Topic 310.) Determine whether the complexity and scope of the ALLL evaluation process and loan review system are appropriate given the institution's risk profile and complexity of lending activities. Consider the following:
   - the effectiveness of the loan review system and controls
   - the ability of internal data-capture and loan-reporting systems to provide robust and meaningful information regarding portfolio risks
   - management's ability to evaluate loss-estimation models before they are implemented (when applicable) and to modify model assumptions as needed
   - the methodology is based on a comprehensive, adequately documented, and consistently applied analysis of the loan and lease portfolio
   - management promptly charges off loans, or portions of loans, that are uncollectible
   - an independent third party periodically reviews and validates the ALLL methodology
2. Evaluate the criteria management uses to select loans for individual evaluation under ASC Topic 310, such as
   - loans or relationships above a dollar threshold. If management uses a dollar threshold, assess the threshold in relation to average loan balances, concentrations, or other factors that would cause the loans to be more significant to the institution;
   - loans or relationships on the Watch List or adversely classified Substandard or Doubtful. If selection criteria do not include loans rated Substandard or Doubtful, assess the rationale for the decision; and
   - loans or relationships past due or on nonaccrual status.
3. Determine the methodology used by management to measure impairment on loans (within the scope of ASC Topic 310) that are individually evaluated and determined to be impaired, and consider whether management maintains supporting documentation for the assumptions and estimates used. Consider whether the methodology used is based on
   - the present value of expected future cash flows for individually evaluated impaired loans that are not collateral dependent;
   - observable market price for individually evaluated impaired loans that are not collateral dependent; or
   - the fair value of collateral method.[1]
4. Evaluate the reasonableness of and support for management's assumptions, valuations, and judgments used in the analysis of those loans individually evaluated for impairment under ASC Topic 310 and determined to be impaired.
5. Determine how management treats[2]
   - loans individually evaluated for impairment under ASC Topic 310 that are determined not to be impaired; and
   - individually evaluated loans determined to be impaired that are measured with zero impairment (i.e., no allowance is established when measured for impairment under ASC Topic 310).
6. Determine the basis for evaluating groups of loans under ASC Subtopic 450-20.[3]

---

1. For Call Report purposes, the impairment of an impaired collateral-dependent loan must be measured using the fair value of collateral method.

2. Examiners should determine that management is appropriately defining impaired loans (i.e., where collection of the full principal and interest is not expected per original contractual terms). If a loan is evaluated under ASC Topic 310 but is not impaired by definition, it should be included in the ASC Subtopic 450-20 evaluation. Once a loan is determined to be impaired and is measured for impairment under ASC Topic 310, it cannot be included in a group of loans collectively assessed for impairment under ASC Subtopic 450-20, even if no ASC Topic 310 allowance is established.

3. Adjustments for qualitative or environmental factors, which may be positive or negative, are typically made to reflect current conditions and expectations as of the balance sheet date if not otherwise captured in historical loss analysis. The granularity of segmentation and the method used to calculate loss rates would affect the amount of adjustment, if any, necessary to appropriately estimate credit losses in a

- Ensure that assets are adequately stratified into groups based on one or more risk characteristics.
- Evaluate the historical loss-rate calculation for each segment.
- Review the time period and the calculation method (e.g., simple average, weighted average) for reasonableness and consistency.
- Consider the effect of new loan products or newly expanded markets.[4]
- Consider how segmentation methods and historical loss-rate calculations reflect qualitative or environmental factors necessary to reflect current conditions and expectations.

7. Determine whether management considers relevant qualitative and environmental factors and maintains documentation sufficient to support material adjustments. Appropriate documentation generally addresses material factors that are likely to cause estimated losses to differ from historical losses. Qualitative or environmental factors may include, but are not limited to
   - changes in lending policies and procedures, such as underwriting standards and collection, charge-off, and recovery practices;
   - changes in national and local economic business conditions and developments, including the condition of various market segments;[5]
   - changes in the nature and volume of the portfolio and in the terms of loans;
   - changes in the experience, ability, and depth of lending management and staff;
   - changes in the volume and severity of past due and adversely classified loans and in the volume of nonaccrual loans;
   - changes in the quality of the loan review system;
   - changes in the value of underlying collateral for collateral-dependent loans;
   - the existence, level, and effect of concentrations of credit; and
   - the effect of external factors, such as competition or legal and regulatory requirements.
8. Determine how management estimates credit losses on a group of loans with similar risk characteristics when the institution does not have any loss experience of its own for such a loan group.[6]
9. Confirm that management does not include loans measured for impairment under ASC 310 in the estimated credit losses under ASC Subtopic 450-20, even if the ASC Topic 310 impairment measurement was zero.
10. If the ALLL includes an *unallocated* amount, determine whether it conforms to generally accepted accounting principles and is properly documented and supported.
11. Where appropriate, determine whether the assessment of an appropriate level for the ALLL includes an estimate of losses from transfer risk associated with cross-border lending activities.
12. Determine whether the ALLL evaluation process is completed at least quarterly and evaluate the documentation maintained to support management's assumptions, valuations, and judgments.[7]

LEVEL OF THE ALLL

13. Evaluate the level of the ALLL or allowances for credit loss (ACL) for loans and leases.
14. Determine whether the ALLL or ACL for loans and leases is appropriate based on a review of the institution's methodology coupled with examination findings as they relate to
    - loan classifications and internal watch list ratings;
    - effectiveness and reliability of the loan review system;
    - level and trend of past due and nonaccrual loans;
    - historical recovery of loan charge-offs;

---

segment as of the evaluation date. For example, a loss rate calculated using a simple five-year average may require a larger adjustment in response to changes in the credit cycle than would a loss rate calculated using a recently weighted quarterly average.

4. Historical loss rates for a general segment may not be accurate for new products or loans in a new market that are included in the general segment.

5. Credit loss and recovery experience may vary significantly depending on the business cycle.

6. An institution may not have a loss history if the product is new or the institution is a de novo organization.

7. Refer to the 2001 Final Interagency Policy Statement on ALLL Methodologies and Documentation for Banks and Savings Institutions; and the 2006 Interagency Policy Statement on ALLL.

- lending policies and procedures, such as underwriting, collection, and charge-off and recovery practices; and
- changes in the business cycle that necessitate qualitative or environmental factor adjustments to historical loss rates.

15. Consider reviewing applicable ratios as a preliminary check on the reasonableness of the ALLL or ACL for loans and leases.[8]
    - Evaluate trends compared to historical experience (e.g., the relationship of the ALLL or ACL) for loans and leases to adversely classified or graded loans, past due and nonaccrual loans, total loans, and historical gross and net charge-offs.
    - Analyze changes in key ratios from prior periods, assess the directional consistency of the ALLL or ACL for loans and leases in relation to these changes, and assess the appropriateness and reasonableness of the ALLL or ACL for loans and leases based on the collectability of the institution's loan portfolio in the current environment.
16. If the institution's loan review system is effective and the methodology for determining an appropriate ALLL or ACL for loans and leases is acceptable, compare the result of the institution's methodology to the actual ALLL or ACL for loans and leases balance. Ensure that the ALLL or ACL amount for loans and leases reported in the institution's regulatory reports and financial statements reconciles to the ALLL or ACL analysis for loans and leases. Assess the reasons for material differences.
17. Assess management's estimated credit losses, and, if necessary, consider the need for additional provision expenses based on examination findings. Consider whether
    - the loan review system is substantially inaccurate;
    - the institution is lending in stressed market conditions;
    - credit administration and underwriting weaknesses have not been timely identified or addressed; or
    - examination results reflect significant loan quality deterioration.

8. Ratio analysis can be a supplemental check on the reasonableness of management's assumptions and analysis. However, sole use of ratio analysis is insufficient for determining an appropriate level for the ALLL or ACL for loans and leases.

OVERVIEW AND APPLICABILITY

In June 2020, the Office of the Comptroller of the Currency, the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, and the National Credit Union Administration (collectively, the agencies) issued an interagency policy statement on allowances for credit losses (ACLs) (hereafter “policy statement”).[1] The agencies issued the policy statement in response to changes to U.S. generally accepted accounting principles (GAAP) as promulgated by the Financial Accounting Standards Board (FASB) in Accounting Standards Update (ASU) 2016-13, *Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments* and subsequent amendments issued since June 2016. These updates are codified in Accounting Standards Codification (ASC) Topic 326, *Financial Instruments—Credit Losses* (FASB ASC Topic 326).

The policy statement on ACLs describes the measurement of expected credit losses under the current expected credit losses (CECL) methodology and the accounting for impairment on available-for-sale debt securities in accordance with FASB ASC Topic 326; the design, documentation, and validation of expected credit loss estimation processes, including the internal controls over these processes; the maintenance of appropriate ACLs; the responsibilities of boards of directors and management; and examiner reviews of ACLs.

FASB ASC Topic 326 replaces the incurred loss methodology for financial assets measured at amortized cost, net investments in leases, and certain off-balance-sheet credit exposures, and modifies the accounting for impairment on available-for-sale debt securities. FASB ASC Topic 326 applies to all banks, savings associations, credit unions, and financial institution holding companies (collectively, institutions), regardless of size, that file regulatory reports for which the reporting requirements conform to GAAP.[2] The agencies are maintaining conformance with GAAP and consistency with FASB ASC Topic 326 through the issuance of the policy statement on ACLs.[3]

The agencies have issued guidelines establishing standards for safety and soundness, including operational and managerial standards that address such matters as internal controls and information systems, an internal audit system, loan documentation, credit underwriting, asset quality, and earnings that should be appropriate for an institution’s size, complexity, and risk profile.[4] The principles described in the policy statement are consistent with these guidelines.

The policy statement becomes applicable to an institution upon that institution’s adoption of FASB ASC Topic 326.[5] The following policy statements are no longer effective for an institution upon its adoption of FASB ASC Topic 326: the December 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses;[6] the July 2001 Policy Statement on Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions.[7] The agencies will rescind the

1. See 88 Fed. Reg. 25,479 (April 27, 2023) and SR-20-12, “Interagency Policy Statement on Allowances for Credit Losses.”

2. See section 37(a) of the Federal Deposit Insurance Act. Under these statutory provisions, the accounting principles applicable to reports or statements required to be filed by all insured depository institutions with the federal banking agencies (the Office of the Comptroller of the Currency (OCC), the Board of Governors of the Federal Reserve System (Board), and the Federal Deposit Insurance Corporation (FDIC)).

3. If the agencies determine that a particular accounting principle within GAAP, including a private company accounting alternative, is inconsistent with the statutorily specified supervisory objectives, those agencies may prescribe an accounting principle for regulatory reporting purposes that is no less stringent than GAAP. In such a situation, an institution would not be permitted to use that particular private company accounting alternative or other accounting principle within GAAP for regulatory reporting purposes.

4. See Appendix D to 12 CFR pt. 208 which was adopted by the Board for depository institutions pursuant to section 39 of the Federal Deposit Insurance Act. *See* 12 U.S.C. 1831p-1.

5. As noted in ASU 2019-10, FASB ASC Topic 326 is effective for fiscal years beginning after December 15, 2019, including interim periods within those fiscal years, for public business entities that meet the definition of a Securities Exchange Commission (SEC) filer, excluding entities eligible to be small reporting companies as defined by the SEC. FASB ASC Topic 326 is effective for all other entities for fiscal years beginning after December 15, 2022, including interim periods within those fiscal years. For all entities, early application of FASB ASC Topic 326 is permitted as set forth in ASU 2016-13.

6. See SR-06-17. The final policy statement does not affect Attachment 1 to the December 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses. Attachment 1 has been revised through a separate interagency notice published in 85 Fed. Reg. 33,278 (June 1, 2020). *See also* SR-20-13, “Interagency Guidance on Credit Risk Review Systems.”

7. See SR-01-17.

ALLL Policy Statements once FASB ASC Topic 326 is effective for all institutions.

The agencies issued this Interagency Policy Statement on Allowances for Credit Losses to promote consistency in the interpretation and application of FASB Accounting Standards Update 2016-13, *Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments* as well as the amendments issued since June 2016.[8] These updates are codified in ASC Topic 326, *Financial Instruments—Credit Losses* (FASB ASC Topic 326). FASB ASC Topic 326 applies to all institutions, regardless of size, that file regulatory reports for which the reporting requirements conform to U.S. GAAP.[9]

INTERAGENCY POLICY STATEMENT ON ALLOWANCES FOR CREDIT LOSSES

Purpose

The principles described in this policy statement are consistent with GAAP, applicable regulatory reporting requirements,[10] safe and sound banking practices, and the agencies' codified guidelines establishing standards for safety and soundness.[11]

The operational and managerial standards included in those guidelines, which address such matters as internal controls and information systems, an internal audit system, loan documentation, credit underwriting, asset quality, and earnings, should be appropriate for an institution's size and the nature, scope, and risk of its activities.

SCOPE

This policy statement describes the CECL methodology for determining the ACLs applicable to loans held-for-investment, net investments in leases, and held-to-maturity debt securities accounted for at amortized cost.[12] It also describes the estimation of the ACL for an available-for-sale debt security in accordance with FASB ASC Subtopic 326-30. This policy statement does not address or supersede existing agency requirements or guidance regarding appropriate due diligence in connection with the purchase or sale of assets or determining whether assets are permissible to be purchased or held by institutions.[13]

8. The FASB issued Accounting Standards Update (ASU) 2016-13 on June 16, 2016. The following updates were published after the issuance of ASU 2016-13: ASU 2018-19—*Codification Improvements to Topic 326, Financial Instruments—Credit Losses;* ASU 2019-04—*Codification Improvements to Topic 326, Financial Instruments—Credit Losses, Topic 815, Derivatives and Hedging, and Topic 825, Financial Instruments;* ASU 2019-05—*Financial Instruments—Credit Losses (Topic 326): Targeted Transition Relief;* ASU 2019-10—*Financial Instruments—Credit Losses (Topic 326), Derivatives and Hedging (Topic 815), and Leases (Topic 842): Effective Dates;* ASU 2019-11—*Codification Improvements to Topic 326, Financial Instruments—Credit Losses and ASU 2022-02—Financial Institutions—Credit Losses (Topic 326): Troubled Debt Restructurings and Vintage Disclosures.* Additionally, institutions may refer to FASB Staff Q&A-Topic 326, No. 1, *Whether the Weighted-Average Remaining Maturity Method is an Acceptable Method to Estimate Expected Credit Losses,* and FASB Staff Q&A-Topic 326, No. 2, *Developing an Estimate of Expected Credit Losses on Financial Assets.*

9. U.S. branches and agencies of foreign banking organizations may choose to, but are not required to, maintain ACLs on a branch or agency level. These institutions should refer to the instructions for the FFIEC 002, *Report of Assets and Liabilities of U. S. Branches and Agencies of Foreign Banks;* SR-95-4, "Allowance for Loan and Lease Losses for U.S. Branches and Agencies of Foreign Banking Organizations"; and SR-95-42, "Allowance for Loan and Lease Losses for U.S. Branches and Agencies of Foreign Banking Organizations."

10. For FDIC-insured depository institutions, section 37(a) of the Federal Deposit Insurance Act (12 U.S.C. 1831n(a)) states that, in general, the accounting principles applicable to the Consolidated Reports of Condition and Income (Call Report) "shall be uniform and consistent with generally accepted accounting principles."

11. FDIC-insured depository institutions should refer to the *Interagency Guidelines Establishing Standards for Safety and Soundness* adopted by their primary federal regulator pursuant to section 39 of the Federal Deposit Insurance Act (12 U.S.C. 1831p-1): For state member banks, see Appendix D to 12 CFR pt. 208.

12. FASB ASC Topic 326 defines the amortized cost basis as the amount at which a financing receivable or investment is originated or acquired, adjusted for applicable accrued interest, accretion, or amortization of premium, discount, and net deferred fees or costs, collection of cash, write-offs, foreign exchange, and fair value hedge accounting adjustments.

13. See the final guidance attached to SR-12-15, "Investing in Securities without Reliance on Nationally Recognized Statistical Rating Organization Ratings." Under the Federal Reserve Act (12 U.S.C. 335) and the Federal Reserve's Regulation H (12 CFR 208.21), state member banks are subject to the same limitations and conditions with respect to the purchasing, selling, underwriting, and holding of investment securities and stock as national banks under the National Banking Act (12 U.S.C. 24 (Seventh)). Therefore, when investing in securities, state member banks must comply with the provisions of the National Banking Act and the OCC regulations in 12 CFR pt. 1.

The CECL methodology described in FASB ASC Topic 326 applies to financial assets measured at amortized cost, net investments in leases, and off-balance-sheet credit exposures (collectively, financial assets) including

- financing receivables, such as loans held-for-investment;
- overdrawn deposit accounts (i.e., overdrafts) that are reclassified as held-for-investment loans;
- held-to-maturity debt securities;
- receivables that result from revenue transactions within the scope of Topic 606 on revenue from contracts with customers and Topic 610 on other income, which applies, for example, to the sale of foreclosed real estate;
- reinsurance recoverables that result from insurance transactions within the scope of Topic 944 on insurance;
- receivables related to repurchase agreements and securities lending agreements within the scope of Topic 860 on transfers and servicing;
- net investments in leases recognized by a lessor in accordance with Topic 842 on leases; and
- off-balance-sheet credit exposures, including off-balance-sheet loan commitments, standby letters of credit, and financial guarantees not accounted for as insurance, and other similar instruments except for those within the scope of Topic 815 on derivatives and hedging.

The CECL methodology does not apply to the following financial assets:

- financial assets measured at fair value through net income, including those assets for which the fair value option has been elected;
- available-for-sale debt securities;[14]
- loans held-for-sale;
- policy loan receivables of an insurance entity;
- loans and receivables between entities under common control; and
- receivables arising from operating leases.

14. Refer to FASB ASC Subtopic 326-30, Financial Instruments—Credit Losses—Available-for-Sale Debt Securities (FASB ASC Subtopic 326-30).

MEASUREMENT OF ACLs FOR LOANS, LEASES, HELD-TO-MATURITY DEBT SECURITIES, AND OFF-BALANCE-SHEET CREDIT EXPOSURES

Overview of ACLs

An ACL is a valuation account that is deducted from, or added to, the amortized cost basis of financial assets to present the net amount expected to be collected over the contractual term of the assets.[15] In estimating the net amount expected to be collected, management should consider the effects of past events, current conditions, and reasonable and supportable forecasts on the collectibility of the institution's financial assets.[16] FASB ASC Topic 326 requires management to use relevant forward-looking information and expectations drawn from reasonable and supportable forecasts when estimating expected credit losses.

ACLs are evaluated as of the end of each reporting period. The methods used to determine ACLs generally should be applied consistently over time and reflect management's current expectations of credit losses. Changes to ACLs resulting from these periodic evaluations are recorded through increases or decreases to the related provisions for credit losses (PCLs). When available information confirms that specific loans, securities, other assets, or portions thereof, are uncollectible, these amounts should be promptly written off against the related ACLs.[17]

15. Consistent with FASB ASC Topic 326, an institution's determination of the contractual term should reflect the financial asset's contractual life adjusted for prepayments, and renewal and extension options that are not unconditionally cancellable by the institution. For more information, see the "Contractual Term of a Financial Asset" section in this policy statement.

16. Recoveries are a component of management's estimation of the net amount expected to be collected for a financial asset. Expected recoveries of amounts previously written off or expected to be written off that are included in ACLs may not exceed the aggregate amounts previously written off or expected to be written off. In some circumstances, the ACL for a specific portfolio or loan may be negative because the amount expected to be collected, including expected recoveries, exceeds the financial asset's amortized cost basis.

17. Consistent with FASB ASC Topic 326, this policy statement uses the verbs "write off" and "written off" and the noun "write-off." These terms are used interchangeably with "charge off," "charged off," and "charge-off," respectively, in the agencies' regulations, guidance, and regulatory reporting instructions.

Estimating appropriate ACLs involves a high degree of management judgment and is inherently imprecise. An institution's process for determining appropriate ACLs may result in a range of estimates for expected credit losses. An institution should support and record its best estimate within the range of expected credit losses.

Collective Evaluation of Expected Losses

FASB ASC Topic 326 requires expected losses to be evaluated on a collective, or pool, basis when financial assets share similar risk characteristics. Financial assets may be segmented based on one characteristic, or a combination of characteristics.

Examples of risk characteristics relevant to this evaluation include, but are not limited to

- internal or external credit scores or credit ratings;
- risk ratings or classifications;
- financial asset type;
- collateral type;
- size;
- effective interest rate;
- term;
- geographical location;
- industry of the borrower; and
- vintage.

Other risk characteristics that may be relevant for segmenting held-to-maturity debt securities include issuer, maturity, coupon rate, yield, payment frequency, source of repayment, bond payment structure, and embedded options.

FASB ASC Topic 326 does not prescribe a process for segmenting financial assets for collective evaluation. Therefore, management should exercise judgment when establishing appropriate segments or pools. Management should evaluate financial asset segmentation on an ongoing basis to determine whether the financial assets in the pool continue to share similar risk characteristics. If a financial asset ceases to share risk characteristics with other assets in its segment, it should be moved to a different segment with assets sharing similar risk characteristics if such a segment exists.

If a financial asset does not share similar risk characteristics with other assets, expected credit losses for that asset should be evaluated individually. Individually evaluated assets should not be included in a collective assessment of expected credit losses.

Estimation Methods for Expected Credit Losses

FASB ASC Topic 326 does not require the use of a specific loss estimation method for purposes of determining ACLs. Various methods may be used to estimate the expected collectibility of financial assets, with those methods generally applied consistently over time. The same loss estimation method does not need to be applied to all financial assets. Management is not precluded from selecting a different method when it determines the method will result in a better estimate of ACLs.

Management may use a loss-rate method,[18] probability of default/loss given default (PD/LGD) method, roll-rate method, discounted cash flow method, a method that uses aging schedules, or another reasonable method to estimate expected credit losses. The selected method(s) should be appropriate for the financial assets being evaluated, consistent with the institution's size and complexity.

Contractual Term of a Financial Asset

FASB ASC Topic 326 requires an institution to measure estimated expected credit losses over the contractual term of its financial assets, considering expected prepayments. Renewals, extensions, and modifications are excluded from the contractual term of a financial asset for purposes of estimating the ACL unless the renewal and extension options are part of the original or modified contract and are not unconditionally cancellable by the institution. If such renewal or extension options are present, management must evaluate the likelihood of a borrower exercising those options when determining the contractual term.

18. Various loss-rate methods may be used to estimate expected credit losses under the current expected credit loss methodology. These include the weighted-average-remaining-maturity method, vintage analysis, and the snapshot or open pool method.

Historical Loss Information

Historical loss information generally provides a basis for an institution's assessment of expected credit losses. Historical loss information may be based on internal information, external information, or a combination of both. Management should consider whether the historical loss information may need to be adjusted for differences in current asset specific characteristics such as differences in underwriting standards, portfolio mix, or when historical asset terms do not reflect the contractual terms of the financial assets being evaluated as of the reporting date.

Management should then consider whether further adjustments to historical loss information are needed to reflect the extent to which current conditions and reasonable and supportable forecasts differ from the conditions that existed during the historical loss period. Adjustments to historical loss information may be quantitative or qualitative in nature and should reflect changes to relevant data (such as changes in unemployment rates, delinquency, or other factors associated with the financial assets).

Reasonable and Supportable Forecasts

When estimating expected credit losses, FASB ASC Topic 326 requires management to consider forward-looking information that is both reasonable and supportable and relevant to assessing the collectibility of cash flows. Reasonable and supportable forecasts may extend over the entire contractual term of a financial asset or a period shorter than the contractual term. FASB ASC Topic 326 does not prescribe a specific method for determining reasonable and supportable forecasts nor does it include bright lines for establishing a minimum or maximum length of time for reasonable and supportable forecast period(s). Judgment is necessary in determining an appropriate period(s) for each institution. Reasonable and supportable forecasts may vary by portfolio segment or individual forecast input. These forecasts may include data from internal sources, external sources, or a combination of both. Management is not required to search for all possible information nor incur undue cost and effort to collect data for its forecasts. However, reasonably available and relevant information should not be ignored in assessing the collectibility of cash flows. Management should evaluate the appropriateness of the reasonable and supportable forecast period(s) each reporting period, consistent with other inputs used in the estimation of expected credit losses.

Institutions may develop reasonable and supportable forecasts by using one or more economic scenarios. FASB ASC Topic 326 does not require the use of multiple economic scenarios; however, institutions are not precluded from considering multiple economic scenarios when estimating expected credit losses.

Reversion

When the contractual term of a financial asset extends beyond the reasonable and supportable period, FASB ASC Topic 326 requires reverting to historical loss information, or an appropriate proxy, for those periods beyond the reasonable and supportable forecast period (often referred to as the reversion period). Management may revert to historical loss information for each individual forecast input or based on the entire estimate of loss.

FASB ASC Topic 326 does not require the application of a specific reversion technique or use of a specific reversion period. Reversion to historical loss information may be immediate, occur on a straight-line basis, or use any systematic, rational method. Management may apply different reversion techniques depending on the economic environment or the financial asset portfolio. Reversion techniques are not accounting policy elections and should be evaluated for appropriateness each reporting period, consistent with other inputs used in the estimation of expected credit losses.

FASB ASC Topic 326 does not specify the historical loss information that is used in the reversion period. This historical loss information may be based on long-term average losses or on losses that occurred during a particular historical period(s). Management may use multiple historical periods that are not sequential. Management should not adjust historical loss information for existing economic conditions or expectations of future economic conditions for periods beyond the reasonable and supportable period. However, management should consider whether the historical loss information may need to be adjusted for differences in current asset specific characteristics, such as differences in underwriting standards, portfolio mix, or when historical asset terms do not reflect the contractual terms of the financial assets being evaluated as of the reporting date.

Qualitative Factor Adjustments

The estimation of ACLs should reflect consideration of all significant factors relevant to the expected collectibility of the institution's financial assets as of the reporting date. Management may begin the expected credit loss estimation process by determining its historical loss information or obtaining reliable and relevant historical loss proxy data for each segment of financial assets with similar risk characteristics. Historical credit losses (or even recent trends in losses) generally do not, by themselves, form a sufficient basis to determine the appropriate levels for ACLs.

Management should consider the need to qualitatively adjust expected credit loss estimates for information not already captured in the loss estimation process. These qualitative factor adjustments may increase or decrease management's estimate of expected credit losses. Adjustments should not be made for information that has already been considered and included in the loss estimation process.

Management should consider the qualitative factors that are relevant to the institution as of the reporting date, which may include, but are not limited to

- the nature and volume of the institution's financial assets;
- the existence, growth, and effect of any concentrations of credit;
- the volume and severity of past due financial assets, the volume of nonaccrual assets, and the volume and severity of adversely classified or graded assets;[19]
- the value of the underlying collateral for loans that are not collateral-dependent;[20]
- the institution's lending policies and procedures, including changes in underwriting standards and practices for collections, write-offs, and recoveries;
- the quality of the institution's credit review function;
- the experience, ability, and depth of the institution's lending, investment, collection, and other relevant management and staff;
- the effect of other external factors, such as the regulatory, legal, and technological environments; competition; and events, such as natural disasters; and
- actual and expected changes in international, national, regional, and local economic and business conditions and developments in which the institution operates that affect the collectibility of financial assets.[21]

Management may consider the following additional qualitative factors specific to held-to-maturity debt securities as of the reporting date:[22]

- the effect of recent changes in investment strategies and policies;
- the existence and effect of loss allocation methods, the definition of default, the impact of performance and market value triggers, and credit and liquidity enhancements associated with debt securities;
- the effect of structural subordination and collateral deterioration on tranche performance of debt securities;
- the quality of underwriting for any collateral backing debt securities; and
- the effect of legal covenants associated with debt securities.

19. For banks and savings associations, adversely classified or graded loans are loans rated "substandard" (or its equivalent) or worse under the institution's loan classification system. For credit unions, adversely graded loans are loans included in the more severely graded categories under the institution's credit grading system, i.e., those loans that tend to be included in the credit union's "watch lists." Criteria related to the classification of an investment security may be found in the interagency policy statement *Uniform Agreement on the Classification and Appraisal of Securities Held by Depository Institutions* issued by the FDIC, Board, and OCC in October 2013. *See* SR-13-18.

20. See the "Collateral-Dependent Financial Assets" section of this policy statement for more information on collateral-dependent loans.

21. Changes in economic and business conditions and developments included in qualitative factor adjustments are limited to those that affect the collectibility of an institution's financial assets and are relevant to the institution's financial asset portfolios. For example, an economic factor for current or forecasted unemployment at the national or state level may indicate a strong job market based on low national or state unemployment rates, but a local unemployment rate, which may be significantly higher, for example, because of the actual or forecasted loss of a major local employer may be more relevant to the collectibility of an institution's financial assets.

22. This list is not all-inclusive, and all of the factors listed may not be relevant to all institutions.

Changes in the level of an institution's ACLs may not always be directionally consistent with changes in the level of qualitative factor adjustments due to the incorporation of reasonable and supportable forecasts in estimating expected losses. For example, if improving credit quality trends are evident throughout an institution's portfolio in recent years, but management's evaluation of reasonable and supportable forecasts indicates expected deterioration in credit quality of the institution's financial assets during the forecast period, the ACL as a percentage of the portfolio may increase.

Collateral-Dependent Financial Assets

FASB ASC Topic 326 describes a collateral-dependent asset as a financial asset for which the repayment is expected to be provided substantially through the operation or sale of the collateral when the borrower, based on management's assessment, is experiencing financial difficulty as of the reporting date. For regulatory reporting purposes, the ACL for a collateral-dependent loan is measured using the fair value of collateral, regardless of whether foreclosure is probable.[23]

When estimating the ACL for a collateral-dependent loan, FASB ASC Topic 326 requires the fair value of collateral to be adjusted to consider estimated costs to sell if repayment or satisfaction of the loan depends on the sale of the collateral. ACL adjustments for estimated costs to sell are not appropriate when the repayment of a collateral-dependent loan is expected from the operation of the collateral.

The fair value of collateral securing a collateral-dependent loan may change over time. If the fair value of the collateral as of the ACL evaluation date has decreased since the previous ACL evaluation date, the ACL should be increased to reflect the additional decrease in the fair value of the collateral. Likewise, if the fair value of the collateral has increased as of the ACL evaluation date, the increase in the fair value of the collateral is reflected through a reduction in the ACL. Any negative ACL that results is capped at the amount previously written off. Changes in the fair value of collateral described herein should be supported and documented through recent appraisals or evaluations.[24]

Purchased Credit-Deteriorated Assets

FASB ASC Topic 326 introduces the concept of purchased credit-deteriorated (PCD) assets. PCD assets are acquired financial assets that, at acquisition, have experienced more-than-insignificant deterioration in credit quality since origination. FASB ASC Topic 326 does not provide a prescriptive definition of more-than-insignificant credit deterioration. The acquiring institution's management should establish and document a reasonable process to consistently determine what constitutes a more-than-insignificant deterioration in credit quality.

When recording the acquisition of PCD assets, the amount of expected credit losses as of the acquisition date is added to the purchase price of the financial assets rather than recording these losses through PCLs. This establishes the amortized cost basis of the PCD assets. Any difference between the unpaid principal balance of the PCD assets and the amortized cost basis of the assets as of the acquisition date is the non-credit discount or premium. The initial ACL and non-credit discount or premium determined on a collective basis at the acquisition date are allocated to the individual PCD assets.

After acquisition, ACLs for PCD assets should be adjusted at each reporting date with a corresponding debit or credit to the PCLs to reflect management's current estimate of expected credit losses. The non-credit discount recorded at acquisition will be accreted into interest income over

23. The agencies, at times, prescribe specific regulatory reporting requirements that fall within a range of acceptable practice under GAAP. These specific reporting requirements, such as the requirement for institutions to apply the practical expedient in ASC 326-20-35-5 for collateral-dependent loans, regardless of whether foreclosure is probable, have been adopted to achieve safety and soundness and other public policy objectives and to ensure comparability among institutions. The regulatory reporting requirement to apply the practical expedient for collateral-dependent financial assets is consistent with the agencies' long-standing practice for collateral-dependent loans, and it continues to be limited to collateral-dependent loans. It does not apply to other financial assets such as held-to-maturity debt securities that are collateral-dependent.

24. For more information on regulatory expectations related to the use of appraisals and evaluations, see the "Interagency Appraisal and Evaluation Guidelines" (SR-10-16) published on December 10, 2010. Insured depository institutions should also refer to the interagency regulations on appraisals adopted by their primary federal regulator. For state member banks, see 12 CFR pts. 208 and 225.

the remaining life of the PCD assets on a level-yield basis.

Financial Assets with Collateral Maintenance Agreements

Institutions may have financial assets that are secured by collateral (such as debt securities) and are subject to collateral maintenance agreements requiring the borrower to continuously replenish the amount of collateral securing the asset. If the fair value of the collateral declines, the borrower is required to provide additional collateral as specified by the agreement.

FASB ASC Topic 326 includes a practical expedient for financial assets with collateral maintenance agreements where the borrower is required to provide collateral greater than or equal to the amortized cost basis of the asset and is expected to continuously replenish the collateral. In those cases, management may elect the collateral maintenance practical expedient and measure expected credit losses for these qualifying assets based on the fair value of the collateral.[25] If the fair value of the collateral is greater than the amortized cost basis of the financial asset and management expects the borrower to replenish collateral as needed, management may record an ACL of zero for the financial asset when the collateral maintenance practical expedient is applied. Similarly, if the fair value of the collateral is less than the amortized cost basis of the financial asset and management expects the borrower to replenish collateral as needed, the ACL is limited to the difference between the fair value of the collateral and the amortized cost basis of the asset as of the reporting date when applying the collateral maintenance practical expedient.

Accrued Interest Receivable

FASB ASC Topic 326 includes accrued interest receivable in the amortized cost basis of a financial asset. As a result, accrued interest receivable is included in the amounts for which ACLs are estimated. Generally, any accrued interest receivable that is not collectible is written off against the related ACL.

FASB ASC Topic 326 permits a series of independent accounting policy elections related to accrued interest receivable that alter the accounting treatment described in the preceding paragraph. These elections are made upon adoption of FASB ASC Topic 326 and may differ by class of financing receivable or major security-type level. The available accounting policy elections[26] are

- management may elect not to measure ACLs for accrued interest receivable if uncollectible accrued interest is written off in a timely manner. Management should define and document its definition of a timely write-off.
- management may elect to write off accrued interest receivable by either reversing interest income, recognizing the loss through PCLs, or through a combination of both methods.
- management may elect to separately present accrued interest receivable from the associated financial asset in its regulatory reports and financial statements, if applicable. The accrued interest receivable is presented net of ACLs (if any).

Financial Assets with Zero Credit Loss Expectations

There may be certain financial assets for which the expectation of credit loss is zero after evaluating historical loss information, making necessary adjustments for current conditions and reasonable and supportable forecasts, and considering any collateral or guarantee arrangements that are not free-standing contracts. Factors to consider when evaluating whether expectations of zero credit loss are appropriate may include, but are not limited to

- a long history of zero credit loss;
- a financial asset that is fully secured by cash or cash equivalents;

25. For example, an institution enters into a reverse repurchase agreement with a collateral maintenance agreement. Management may not need to record the expected credit losses at each reporting date as long as the fair value of the security collateral is greater than the amortized cost basis of the reverse repurchase agreement. Refer to ASC 326-20-55-46 for more information.

26. The accounting policy elections related to accrued interest receivable that are described in this paragraph also apply to accrued interest receivable for an available-for-sale debt security that, for purposes of identifying and measuring an impairment, exclude the applicable accrued interest from both the fair value and amortized cost basis of the securities.

- high credit ratings from rating agencies with no expected future downgrade;[27]
- principal and interest payments that are guaranteed by the U.S. government;
- The issuer, guarantor, or sponsor can print its own currency and the currency is held by other central banks as reserve currency; and
- The interest rate on the security is recognized as a risk-free rate.

A loan that is fully secured by cash or cash equivalents, such as certificates of deposit issued by the lending institution, would likely have zero credit loss expectations. Similarly, the guaranteed portion of a U.S. Small Business Administration (SBA) loan or security purchased on the secondary market through the SBA's fiscal and transfer agent would likely have zero credit loss expectations if these financial assets are unconditionally guaranteed by the U.S. government. Examples of held-to-maturity debt securities that may result in expectations of zero credit loss include U.S. Treasury securities as well as mortgage-backed securities issued and guaranteed by the Government National Mortgage Association, the Federal Home Loan Mortgage Corporation, and the Federal National Mortgage Association. Assumptions related to zero credit loss expectations should be included in the institution's ACL documentation.

Estimated Credit Losses for Off-Balance-Sheet Credit Exposures

FASB ASC Topic 326 requires that an institution estimate expected credit losses for off-balance-sheet credit exposures within the scope of FASB ASC Topic 326 over the contractual period during which the institution is exposed to credit risk. The estimate of expected credit losses should take into consideration the likelihood that funding will occur as well as the amount expected to be funded over the estimated remaining contractual term of the off-balance-sheet credit exposures. Management should not record an estimate of expected credit losses for off-balance-sheet exposures that are unconditionally cancellable by the issuer.

Management must evaluate expected credit losses for off-balance-sheet credit exposures as of each reporting date. While the process for estimating expected credit losses for these exposures is similar to the one used for on-balance-sheet financial assets, these estimated credit losses are not recorded as part of the ACLs because cash has not yet been disbursed to fund the contractual obligation to extend credit. Instead, these loss estimates are recorded as a liability, separate and distinct from the ACLs.[28] The amount needed to adjust the liability for expected credit losses for off-balance-sheet credit exposures as of each reporting date is reported in net income.

MEASUREMENT OF THE ACL FOR AVAILABLE-FOR-SALE DEBT SECURITIES

FASB ASC Subtopic 326-30, *Financial Instruments—Credit Losses—Available-for-Sale Debt Securities* (FASB ASC Subtopic 326-30) describes the accounting for expected credit losses associated with available-for-sale debt securities. Credit losses for available-for-sale debt securities are evaluated as of each reporting date when the fair value is less than amortized cost. FASB ASC Subtopic 326-30 requires credit losses to be calculated individually, rather than collectively, using a discounted cash flow method, through which management compares the present value of expected cash flows with the amortized cost basis of the security. An ACL is established, with a charge to the PCL, to reflect the credit loss component of the decline in fair value below amortized cost. If the fair value of the security increases over time, any ACL that has not been written off may be reversed through a credit to the PCL. The ACL for an available-for-sale debt security is limited by the amount that the fair value is less than the amortized cost, which is referred to as the fair value floor.

If management intends to sell an available-for-sale debt security or will more likely than not be required to sell the security before recovery of the amortized cost basis, the security's ACL should be written off and the amortized

27. Management should not rely solely on credit rating agencies but should also make its own assessment based on third party research, default statistics, and other data that may indicate a decline in credit rating.

28. The ACL associated with off-balance-sheet credit exposures is included in the "Allowance for credit losses on off-balance-sheet credit exposures" in *Schedule RC-G—Other Liabilities* in the Call Report.

cost basis of the security should be written down to its fair value at the reporting date with any incremental impairment reported in income.

A change during the reporting period in the non-credit component of any decline in fair value below amortized cost on an available-for-sale debt security is reported in other comprehensive income, net of applicable income taxes.[29]

When evaluating impairment for available-for-sale debt securities, management may evaluate the amortized cost basis including accrued interest receivable, or may evaluate the accrued interest receivable separately from the remaining amortized cost basis. If evaluated separately, accrued interest receivable is excluded from both the fair value of the available-for-sale debt security and its amortized cost basis.[30]

DOCUMENTATION STANDARDS

For financial and regulatory reporting purposes, ACLs and PCLs must be determined in accordance with GAAP. ACLs and PCLs should be well documented, with clear explanations of the supporting analyses and rationale. Sound policies, procedures, and control systems should be appropriately tailored to an institution's size and complexity, organizational structure, business environment and strategy, risk appetite, financial asset characteristics, loan administration procedures, investment strategy, and management information systems.[31] Maintaining, analyzing, supporting, and documenting appropriate ACLs and PCLs in accordance with GAAP is consistent with safe and sound banking practices.

The policies and procedures governing an institution's ACL processes and the controls over these processes should be designed, implemented, and maintained to reasonably estimate expected credit losses for financial assets and off-balance-sheet credit exposures as of the reporting date. The policies and procedures should describe management's processes for evaluating the credit quality and collectibility of financial asset portfolios, including reasonable and supportable forecasts about changes in the credit quality of these portfolios, through a disciplined and consistently applied process that results in an appropriate estimate of the ACLs. Management should review and, as needed, revise the institution's ACL policies and procedures at least annually, or more frequently if necessary.

An institution's policies and procedures for the systems, processes, and controls necessary to maintain appropriate ACLs should address, but not be limited to

- processes that support the determination and maintenance of appropriate levels for ACLs that are based on a comprehensive, well-documented, and consistently applied analysis of an institution's financial asset portfolios and off-balance-sheet credit exposures. The analyses and loss estimation processes used should consider all significant factors that affect the credit risk and collectibility of the financial asset portfolios;
- the roles, responsibilities, and segregation of duties of the institution's senior management and other personnel who provide input into ACL processes, determine ACLs, or review ACLs. These departments and individuals may include accounting, financial reporting, treasury, investment management, lending, special asset or problem loan workout teams, retail collections and foreclosure groups, credit review, model risk management, internal audit, and others, as applicable. Individuals with responsibilities related to the estimation of ACLs should be competent and well-trained, with the ability to escalate material issues;
- processes for determining the appropriate historical period(s) to use as the basis for estimating expected credit losses and approaches for adjusting historical credit loss information to reflect differences in asset specific characteristics as well as current conditions and reasonable and supportable forecasts that are different from conditions existing in the historical period(s);
- processes for determining and revising the appropriate techniques and periods to revert to historical credit loss information when the contractual term of a financial asset or off-

29. Non-credit impairment on an available-for-sale debt security that is not required to be recorded through the ACL should be reported in other comprehensive income as described in ASC 326-30-35-2.

30. The accounting policy elections described in the "Accrued Interest Receivable" section of this policy statement apply to accrued interest receivable recorded for an available-for-sale debt security if an institution excludes applicable accrued interest receivable from both the fair value and amortized cost basis of the security for purposes of identifying and measuring impairment.

31. Management often documents policies, procedures, and controls related to ACLs in accounting or credit risk management policies, or a combination thereof.

balance-sheet credit exposure extends beyond the reasonable and supportable forecast period(s);
- processes for segmenting financial assets for estimating expected credit losses and periodically evaluating the segments to determine whether the assets continue to share similar risk characteristics;
- data capture and reporting systems that supply the quality and breadth of relevant and reliable information necessary, whether obtained internally or externally, to support and document the estimates of appropriate ACLs for regulatory reporting requirements and, if applicable, financial statement and disclosure requirements;
- the description of the institution's systematic and logical loss estimation process(es) for determining and consolidating expected credit losses to ensure that the ACLs are recorded in accordance with GAAP and regulatory reporting requirements. This may include, but is not limited to
  - — management's judgments, accounting policy elections, and application of practical expedients in determining the amount of expected credit losses;
  - — the process for determining when a loan is collateral-dependent;
  - — the process for determining the fair value of collateral, if any, used as an input when estimating the ACL, including the basis for making any adjustments to the market value conclusion and how costs to sell, if applicable, are calculated;
  - — the process for determining when a financial asset has zero credit loss expectations;
  - — the process for determining expected credit losses when a financial asset has a collateral maintenance provision; and
  - — a description of and support for qualitative factors that affect collectibility of financial assets;
- procedures for validating and independently reviewing the loss estimation process as well as any changes to the process from prior periods;
- policies and procedures for the prompt write-off of financial assets, or portions of financial assets, when available information confirms the assets to be uncollectible, consistent with regulatory reporting requirements; and
- the systems of internal controls used to confirm that the ACL processes are maintained and periodically adjusted in accordance with GAAP and interagency guidelines establishing standards for safety and soundness.

Internal control systems for the ACL estimation processes should

- provide reasonable assurance regarding the relevance, reliability, and integrity of data and other information used in estimating expected credit losses;
- provide reasonable assurance of compliance with laws, regulations, and the institution's policies and procedures;
- provide reasonable assurance that the institution's financial statements are prepared in accordance with GAAP, and the institution's regulatory reports are prepared in accordance with the applicable instructions;
- include a well-defined and effective loan review and grading process that is consistently applied and identifies, measures, monitors, and reports asset quality problems in an accurate, sound and timely manner. The loan review process should respond to changes in internal and external factors affecting the level of credit risk in the portfolio; and
- include a well-defined and effective process for monitoring credit quality in the debt securities portfolio.

ANALYZING AND VALIDATING THE OVERALL MEASUREMENT OF ACLs

To ensure that ACLs are presented fairly, in accordance with GAAP and regulatory reporting requirements, and are transparent for regulatory examinations, management should document its measurements of the amounts of ACLs reported in regulatory reports and financial statements, if applicable, for each type of financial asset (e.g., loans, held-to-maturity debt securities, and available-for-sale debt securities) and for off-balance-sheet credit exposures. This documentation should include ACL calculations, qualitative adjustments, and any adjustments to the ACLs that are required as part of the internal review and challenge process. The board of directors, or a committee thereof, should review management's assessments of and justifications for the reported amounts of ACLs.

Various techniques are available to assist management in analyzing and evaluating the ACLs. For example, comparing estimates of expected credit losses to actual write-offs in aggregate, and by portfolio, may enable management to assess whether the institution's loss estimation process is sufficiently designed.[32] Further, comparing the estimate of ACLs to actual write-offs at the financial asset portfolio level allows management to analyze changing portfolio characteristics, such as the volume of assets or increases in write-off rates, which may affect future forecast adjustments. Techniques applied in these instances do not have to be complex to be effective but, if used, should be commensurate with the institution's size and complexity.

Ratio analysis may also be useful for evaluating the overall reasonableness of ACLs. Ratio analysis assists in identifying divergent or emerging trends in the relationship of ACLs to other factors, such as adversely classified or graded loans, past due and nonaccrual loans, total loans, historical gross write-offs, net write-offs, and historic delinquency and default trends for securities.

Comparing the institution's ACLs to those of peer institutions may provide management with limited insight into management's own ACL estimates. Management should apply caution when performing peer comparisons as there may be significant differences among peer institutions in the mix of financial asset portfolios, reasonable and supportable forecast period assumptions, reversion techniques, the data used for historical loss information, and other factors.

When used prudently, comparisons of estimated expected losses to actual write-offs, ratio analysis, and peer comparisons can be helpful as a supplemental check on the reasonableness of management's assumptions and analyses. Because appropriate ACLs are institution-specific estimates, the use of comparisons does not eliminate the need for a comprehensive analysis of financial asset portfolios and the factors affecting their collectibility.

When an appropriate expected credit loss framework has been used to estimate expected credit losses, it is inappropriate for the board of directors or management to make further adjustments to ACLs for the sole purpose of reporting ACLs that correspond to a peer group median, a target ratio, or a budgeted amount. Additionally, neither the board of directors nor management should further adjust ACLs beyond what has been appropriately measured and documented in accordance with FASB ASC Topic 326.

After analyzing ACLs, management should periodically validate the loss estimation process, and any changes to the process, to confirm that the process remains appropriate for the institution's size, complexity, and risk profile. The validation process should include procedures for review by a party with appropriate knowledge, technical expertise, and experience who is independent of the institution's credit approval and ACL estimation processes. A party who is independent of these processes could be from internal audit staff, a risk management unit of the institution independent of management supervising these processes, or a contracted third-party. One party need not perform the entire analysis as the validation may be divided among various independent parties.[33]

RESPONSIBILITIES OF THE BOARD OF DIRECTORS

The board of directors, or a committee thereof, is responsible for overseeing management's significant judgments and estimates used in determining appropriate ACLs. Evidence of the board of directors' oversight activities is subject to review by examiners. These activities should include, but are not limited to

- retaining experienced and qualified management to oversee all ACL and PCL activities;
- reviewing and approving the institution's written loss estimation policies, including any revisions thereto, at least annually;
- reviewing management's assessment of the loan review system and management's conclusion and support for whether the system is sound and appropriate for the institution's size and complexity;

32. Institutions using models in the loss estimation process may incorporate a qualitative factor adjustment in the estimate of expected credit losses to capture the variance between modeled credit loss expectations and actual historical losses when the model is still considered predictive and fit for use. Institutions should monitor this variance, as well as changes to the variance, to determine if the variance is significant or material enough to warrant further changes to the model.

33. Engaging the institution's external auditor to perform the validation process described in this paragraph when the external auditor also conducts the institution's independent financial statement audit, may impair the auditor's independence under applicable auditor independence standards and prevent the auditor from performing an independent audit of the institution's financial statements.

- reviewing management's assessment of the effectiveness of processes and controls for monitoring the credit quality of the investment portfolio;
- reviewing management's assessments of and justifications for the estimated amounts reported each period for the ACLs and the PCLs;
- requiring management to validate, and, when appropriate, revise loss estimation methods periodically;
- approving the internal and external audit plans for the ACLs, as applicable; and
- reviewing any identified audit findings and monitoring resolution of those items.

RESPONSIBILITIES OF MANAGEMENT

Management is responsible for maintaining ACLs at appropriate levels and for documenting its analyses in accordance with the concepts and requirements set forth in GAAP, regulatory reporting requirements, and this policy statement. Management should evaluate the ACLs reported on the balance sheet as of the end of each period, and debit or credit the related PCLs to bring the ACLs to an appropriate level as of each reporting date. The determination of the amounts of the ACLs and the PCLs should be based on management's current judgments about the credit quality of the institution's financial assets and should consider known and expected relevant internal and external factors that significantly affect collectibility over reasonable and supportable forecast periods for the institution's financial assets as well as appropriate reversion techniques applied to periods beyond the reasonable and supportable forecast periods. Management's evaluations are subject to review by examiners.

In carrying out its responsibility for maintaining appropriate ACLs, management should adopt and adhere to written policies and procedures that are appropriate to the institution's size and the nature, scope, and risk of its lending and investing activities. These policies and procedures should address the processes and activities described in the "Documentation Standards" section of this policy statement.

Management fulfills other responsibilities that aid in the maintenance of appropriate ACLs. These activities include, but are not limited to

- establishing and maintaining appropriate governance activities for the loss estimation process(es). These activities may include reviewing and challenging the assumptions used in estimating expected credit losses and designing and executing effective internal controls over the credit loss estimation method(s);
- periodically performing procedures that compare credit loss estimates to actual write-offs, at the portfolio level and in aggregate, to confirm that amounts recorded in the ACLs were sufficient to cover actual credit losses. This analysis supports that appropriate ACLs were recorded and provides insight into the loss estimation process's ability to estimate expected credit losses. This analysis is not intended to reflect the accuracy of management's economic forecasts;
- periodically validating the loss estimation process(es), including changes, if any, to confirm it is appropriate for the institution; and
- engaging in sound risk management of third parties involved in ACL estimation process(es), if applicable, to ensure that the loss estimation processes are commensurate with the level of risk, the complexity of the third-party relationship and the institution's organizational structure.[34]

Additionally, if an institution uses loss estimation models in determining expected credit losses, management should evaluate the models before they are employed and modify the model logic and assumptions, as needed, to help ensure that the resulting loss estimates are consistent with GAAP and regulatory reporting requirements.[35] To demonstrate such consistency, management should document its evaluations and conclusions regarding the appropriateness of estimating credit losses with models. When used for multiple purposes within an institution, models should be specifically adjusted and validated for use in ACL loss estimation processes. Management should document and support any adjustments made to the models, the outputs of

34. Guidance on third party service providers may be found in SR-23-4, "Interagency Guidance on Third-Party Relationships: Risk Management."

35. See the interagency statement titled, "Guidance on Model Risk Management," (SR-11-7). The statement also addresses the incorporation of vendor products into an institution's model risk management framework following the same principles relevant to in-house models.

the models, and compensating controls applied in determining the estimated expected credit losses.

EXAMINER REVIEW OF ACLs

Examiners are expected to assess the appropriateness of management's loss estimation processes and the appropriateness of the institution's ACL balances as part of their supervisory activities. The review of ACLs, including the depth of the examiner's assessment, should be commensurate with the institution's size, complexity, and risk profile. As part of their supervisory activities, examiners generally assess the credit quality and credit risk of an institution's financial asset portfolios, the adequacy of the institution's credit loss estimation processes, the adequacy of supporting documentation, and the appropriateness of the reported ACLs and PCLs in the institution's regulatory reports and financial statements, if applicable. Examiners may consider the significant factors that affect collectibility, including the value of collateral securing financial assets and any other repayment sources. Supervisory activities may include evaluating management's effectiveness in assessing credit risk for debt securities (both prior to purchase and on an on-going basis). In reviewing the appropriateness of an institution's ACLs, examiners may

- evaluate the institution's ACL policies and procedures and assess the loss estimation method(s) used to arrive at overall estimates of ACLs, including the documentation supporting the reasonableness of management's assumptions, valuations, and judgments. Supporting activities may include, but, are not limited to
  - — evaluating whether management has appropriately considered historical loss information, current conditions, and reasonable and supportable forecasts, including significant qualitative factors that affect the collectibility of the financial asset portfolios;
  - — assessing loss estimation techniques, including loss estimation models, if applicable, as well as the incorporation of qualitative adjustments to determine whether the resulting estimates of expected credit losses are in conformity with GAAP and regulatory reporting requirements; and
  - — evaluating the adequacy of the documentation and the effectiveness of the controls used to support the measurement of the ACLs;
- assess the effectiveness of board oversight as well as management's effectiveness in identifying, measuring, monitoring, and controlling credit risk. This may include, but is not limited to, a review of underwriting standards and practices, portfolio composition and trends, credit risk review functions, risk rating systems, credit administration practices, investment securities management practices, and related management information systems and reports;
- review the appropriateness and reasonableness of the overall level of the ACLs relative to the level of credit risk, the complexity of the institution's financial asset portfolios, and available information relevant to assessing collectibility, including consideration of current conditions and reasonable and supportable forecasts. Examiners may include a quantitative analysis (e.g., using management's results comparing expected write-offs to actual write-offs as well as ratio analysis) to assess the appropriateness of the ACLs. This quantitative analysis may be used to determine the reasonableness of management's assumptions, valuations, and judgments and understand variances between actual and estimated credit losses. Loss estimates that are consistently and materially over or under predicting actual losses may indicate a weakness in the loss forecasting process;
- review the ACLs reported in the institution's regulatory reports and in any financial statements and other key financial reports to determine whether the reported amounts reconcile to the institution's estimate of the ACLs. The consolidated loss estimates determined by the institution's loss estimation method(s) should be consistent with the final ACLs reported in its regulatory reports and financial statements, if applicable;
- verify that models used in the loss estimation process, if any, are subject to initial and ongoing validation activities. Validation activities include evaluating and concluding on the conceptual soundness of the model, including developmental evidence, performing ongoing monitoring activities, including process verification and benchmarking, and analyzing

model output.[36] Examiners may review model validation findings, management's response to those findings, and applicable action plans to remediate any concerns, if applicable. Examiners may also assess the adequacy of the institution's processes to implement changes in a timely manner; and

- review the effectiveness of the institution's third-party risk management framework associated with the estimation of ACLs, if applicable, to assess whether the processes are commensurate with the level of risk, the complexity and nature of the relationship, and the institution's organizational structure. Examiners may determine whether management monitors material risks and deficiencies in third-party relationships, and takes appropriate action as needed.[37]

When assessing the appropriateness of ACLs, examiners should recognize that the processes, loss estimation methods, and underlying assumptions an institution uses to calculate ACLs require the exercise of a substantial degree of management judgment. Even when an institution maintains sound procedures, controls, and monitoring activities, an estimate of expected credit losses is not a single precise amount and may result in a range of acceptable outcomes for these estimates. This is a result of the flexibility FASB ASC Topic 326 provides institutions in selecting loss estimation methods and the wide range of qualitative and forecasting factors that are considered.

36. See SR-11-7.
37. See SR-23-4.

Management's ability to estimate expected credit losses should improve over the contractual term of financial assets as substantive information accumulates regarding the factors affecting repayment prospects. Examiners generally should accept an institution's ACL estimates and not seek adjustments to the ACLs, when management has provided adequate support for the loss estimation process employed, and the ACL balances and the assumptions used in the ACL estimates are in accordance with GAAP and regulatory reporting requirements. It is inappropriate for examiners to seek adjustments to ACLs for the sole purpose of achieving ACL levels that correspond to a peer group median, a target ratio, or a benchmark amount when management has used an appropriate expected credit loss framework to estimate expected credit losses.

If the examiner concludes that an institution's reported ACLs are not appropriate or determines that its ACL evaluation processes or loss estimation method(s) are otherwise deficient, these concerns should be noted in the report of examination and communicated to the board of directors and senior management.[38] Additional supervisory action may be taken based on the magnitude of the shortcomings in ACLs, including the materiality of any errors in the reported amounts of ACLs.

38. Each agency has formal and informal communication channels for sharing supervisory information with the board of directors and management depending on agency practices and the nature of the information being shared. These channels may include, but are not limited to, institution specific supervisory letters, letters to the industry, transmittal letters, visitation findings summary letters, targeted review conclusion letters, or official examination or inspection reports.

METHODOLOGY

1. Determine the methodology or methodologies used to measure the expected collectability of loans, and consider whether management maintains supporting documentation for the assumptions and estimates used. Methodologies include
   - loss-rate;
   - weighted-average-remaining-maturity (WARM);
   - probability of default/loss given default (PD/LGD);
   - roll-rate;
   - discounted cash flow;
   - a method that uses aging schedules;
   - fair value of the collateral (required for all collateral-dependent loans); and
   - another reasonable method to estimate expected credit losses.
2. Assess the methodology or methodologies used in determining an appropriate allowance for credit loss (ACL) for loans and leases. Determine whether the complexity and scope of the ACL evaluation process for loans and leases and the loan review system are appropriate given the institution's risk profile and complexity of lending activities. Consider whether management provides for the following:
   - an effective loan review system and controls;
   - data-capture and loan-reporting systems that provide meaningful information regarding portfolio risks to support and document the estimates of an appropriate ACL for loans and leases for regulatory reporting requirements and, if applicable, financial statement and disclosure requirements;
   - resources to appropriately evaluate loss-estimation models before they are implemented (when applicable) and to modify model assumptions as needed;
   - processes that support the determination and maintenance of an appropriate level for the ACL for loans and leases that are based on a comprehensive, well-documented, and consistently applied analysis of the loan and lease portfolio and off-balance-sheet credit exposures;
   - procedures for an independent third party to review and validate the ACL methodology for loans and leases;
   - processes for determining the appropriate historical period(s) to use as the basis for estimating expected credit losses and approaches for adjusting historical credit loss information to reflect differences in loan specific characteristics, as well as current conditions and reasonable and supportable forecasts that are different from conditions existing in the historical period(s);
   - procedures to incorporate relevant internal and external factors that significantly affect collectability over reasonable and supportable forecast periods as well as to apply appropriate reversion techniques to periods beyond reasonable and supportable forecast periods;
   - processes for determining and revising the appropriate techniques and periods to revert to historical credit loss information when the contractual term of loans and leases or off-balance-sheet credit exposures extends beyond the reasonable and supportable forecast period(s);
   - processes for segmenting the loan and lease portfolio for estimating expected credit losses and periodically evaluating the segments to determine whether the loans and leases continue to share similar risk characteristics; and
   - policies and procedures for the prompt write-off of loans and leases, or portions of loans and leases, when available information confirms the loans and leases to be uncollectible, consistent with regulatory reporting requirements.
3. Evaluate the criteria management uses to segment loans by similar risk characteristics. Generally accepted accounting principles (GAAP) require expected losses to be evaluated collectively when loans share similar risk characteristics. If a loan does not share similar risk characteristics with other loans, expected credit losses for that loan should be evaluated individually. Examples of risk characteristics include but are not limited to

   - internal or external credit scores or credit ratings;
   - risk ratings or classifications;
   - loan type;
   - collateral type;
   - size;
   - effective interest rate;
   - term;
   - geographical location;
   - borrower industry; and
   - vintage.
4. Evaluate the policies and procedures for the ACL for loans and leases, and assess the loss estimation method(s) used to arrive at estimates of the ACL for loans and leases, including the documentation supporting management's assumptions, valuations, and judgments. Determine whether management appropriately considers historical loss information, current conditions, and reasonable and supportable forecasts that are relevant to assessing the collectability of cash flows, including significant qualitative factors that affect the collectability of the loan and lease portfolio.
5. Determine the basis for evaluating groups of loans under ASC Subtopic 326-20 (CECL).[1]
   - Evaluate the calculation of historical loss rates for each segment.[2]
   - Review the time period and the method of calculation (e.g., simple average, weighted average) for reasonableness and consistency.[3]
   - Consider whether the historical loss information may need to be adjusted for differences in current loan specific characteristics, such as differences in underwriting standards, portfolio mix, or when historical credit terms do not reflect the contractual terms of the loans being evaluated as of the reporting date.
   - Consider the effect of new loan products or newly expanded markets.[4]
   - Consider how segmentation methods and historical loss-rate calculations reflect the extent to which current conditions and reasonable and supportable forecasts differ from the conditions that existed during the historical loss period.
   - Consider management's process for evaluating contractual terms of loans, considering expected prepayments.[5]
6. Determine whether management considered all significant factors relevant to the expected collectability of the loan and lease portfolio as of the reporting date and maintains documentation sufficient to support all material adjustments. Appropriate documentation generally addresses all material factors that are relevant to the institution at the reporting date.[6] Qualitative or environmental factors may include
   - the nature and volume of the loans and leases;
   - the existence, growth, and effect of concentrations of credit;
   - the volume and severity of past due loans, the volume of nonaccrual loans, and the volume and severity of adversely classified or graded loans;
   - the value of the underlying collateral for loans that are not collateral-dependent;
   - the institution's lending policies and procedures, including changes in underwriting standards and collections, charge-off, and recovery practices;
   - the quality of the institution's credit review system;

1. Adjustments to historical loss information may be positive or negative, quantitative or qualitative, and are supported by relevant data (e.g., changes in unemployment rates, delinquency, or other factors associated with the loans).

2. The granularity of segmentation and the method used to calculate loss rates affects the amount of adjustment, if any, necessary to appropriately estimate credit losses in a segment as of the evaluation date. For example, a loss rate calculated using a simple five-year average may require a larger adjustment in response to changes in the credit cycle than would a loss rate calculated using a recently weighted quarterly average.

3. Historical loss information may be based on internal information, external information, or a combination of both.

4. Historical loss rates for new products or loans in a new market may not be reliable given lack of seasoning or market awareness.

5. Renewals, extensions, and modifications are excluded from the contractual term of a loan for purposes of estimating the ACL for loans and leases unless there is a reasonable expectation of executing a troubled debt restructuring or the renewal and extension options are part of the original or modified contract and are not unconditionally cancellable by the institution.

6. Historical credit losses (or even recent trends in losses) generally do not, by themselves, form a sufficient basis to determine the appropriate level of the ACL for loans and leases. Management should consider the need to qualitatively adjust expected credit loss estimates for information not already captured in the loss estimation process. These qualitative factor adjustments may increase or decrease management's estimate of expected credit losses. Adjustments should not be made for information that has already been considered and included in the loss estimation process.

- the experience, ability, and depth of the lending, collection, and other relevant management and staff;
- the effect of other external factors, such as the regulatory, legal, and technological environments; competition; and events, such as natural disasters; and
- actual and expected changes in international, national, regional, and local economic and business conditions and developments in which the institution operates that affect the collectability of the loan and lease portfolio.

7. Determine how management estimates credit losses on a group of loans with similar risk characteristics when the institution does not have loss experience of its own for such a loan group.[7]
8. Confirm that loans evaluated individually are not included in a collective assessment of expected credit losses.
9. When the contractual term of a loan or lease extends beyond the reasonable and supportable period, determine whether management reverts to historical loss information, or an appropriate proxy, for those periods beyond the reasonable and supportable forecast period (often referred to as the reversion period).
10. If the ACL for loans and leases includes an *unallocated* amount, determine whether it conforms to GAAP and is properly documented and supported.
11. Where appropriate, determine whether the assessment of an appropriate level for the ACL for loans and leases includes an estimate of losses from transfer risk associated with cross-border lending activities.
12. Determine whether the ACL evaluation process for loans and leases is completed at least quarterly, and evaluate the documentation maintained to support management's assumptions, valuations, and judgments.

LEVEL OF THE ACL

13. Evaluate the level of the ALLL or ACL for loans and leases.
14. Determine whether the ALLL or ACL for loans and leases is appropriate based on a review of the institution's methodology coupled with examination findings as they relate to
    - loan classifications and internal watch list ratings;
    - effectiveness and reliability of the loan review system;
    - level and trend of past due and nonaccrual loans;
    - historical recovery of loan charge-offs;
    - lending policies and procedures, such as underwriting, collection, and charge-off and recovery practices; and
    - changes in the business cycle that necessitate qualitative or environmental factor adjustments to historical loss rates.
15. Consider reviewing applicable ratios as a preliminary check on the reasonableness of the ALLL or ACL for loans and leases.[8]
    - Evaluate trends compared to historical experience (e.g., the relationship of the ALLL or ACL) for loans and leases to adversely classified or graded loans, past due and nonaccrual loans, total loans, and historical gross and net charge-offs.
    - Analyze changes in key ratios from prior periods, assess the directional consistency of the ALLL or ACL for loans and leases in relation to these changes, and assess the appropriateness and reasonableness of the ALLL or ACL for loans and leases based on the collectability of the institution's loan portfolio in the current environment.
16. If the institution's loan review system is effective and the methodology for determining an appropriate ALLL or ACL for loans and leases is acceptable, compare the result of the institution's methodology to the actual ALLL or ACL for loans and leases balance. Ensure that the ALLL or ACL amount for loans and leases reported in the institution's regulatory reports and financial statements reconciles to the ALLL or ACL analysis for loans and leases. Assess the reasons for material differences.
17. Assess management's estimated credit losses, and, if necessary, consider the need for additional provision expenses based on examination findings. Consider whether

7. An institution may not have a loss history if the product is new or the institution is a de novo organization.

8. Ratio analysis can be a supplemental check on the reasonableness of management's assumptions and analysis. However, sole use of ratio analysis is insufficient for determining an appropriate level for the ALLL or ACL for loans and leases.

- the loan review system is substantially inaccurate;
- the bank is lending in stressed market conditions;
- credit administration and underwriting weaknesses have not been timely identified or addressed; or
- examination results reflect significant loan quality deterioration.

OVERVIEW

A supplemental interagency Policy Statement on Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions[1] was issued by the Federal Financial Institutions Examination Council (FFIEC) on July 2, 2001.[2] The policy statement clarifies the agencies' expectations for documentation that supports the ALLL methodology. Additionally, the statement emphasizes the need for appropriate ALLL policies and procedures, which should include an effective loan-review system. The guidance also provides examples of appropriate supporting documentation, as well as illustrations on how to implement this guidance. The policy statement, by its terms, applies only to depository institutions insured by the Federal Deposit Insurance Corporation. Examiners should apply the policy during the examination of state member banks and their subsidiaries. (See SR-01-17.)

The guidance requires that a financial institution's ALLL methodology be in accordance with generally accepted accounting principles (GAAP) and all outstanding supervisory guidance. An ALLL methodology should be systematic, consistently applied, and auditable. The methodology should be validated periodically and modified to incorporate new events or findings, as needed. The guidance specifies that management, under the direction of the board of directors, should implement appropriate procedures and controls to ensure compliance with the institution's ALLL policies and procedures. Institution management should (1) segment the portfolio to evaluate credit risks; (2) select loss rates that best reflect the probable loss; and (3) be responsive to changes in the organization, the economy, or the lending environment by changing the methodology, when appropriate. Furthermore, supporting information should be included on summary schedules, whenever feasible. Under this policy, institutions with less complex loan products or portfolios, such as community banks, may use a more streamlined approach to implement this guidance.

The policy statement is consistent with the Federal Reserve's long-standing policy to promote strong internal controls over an institution's ALLL process. In this regard, the new policy statement recognizes that determining an appropriate allowance involves a high degree of management judgment and is inevitably imprecise. Accordingly, an institution may determine that the amount of loss falls within a range. In accordance with GAAP, an institution should record its best estimate within the range of credit losses.

The policy statement is provided below. Some wording has been slightly modified for this manual, as indicated by asterisks or text enclosed in brackets. Some footnotes have also been renumbered.

2001 POLICY STATEMENT ON ALLL METHODOLOGIES AND DOCUMENTATION

Boards of directors of banks * * * are responsible for ensuring that their institutions have controls in place to consistently determine the allowance for loan and lease losses (ALLL) in accordance with the institutions' stated policies and procedures, generally accepted accounting principles (GAAP), and ALLL supervisory guidance.[3] To fulfill this responsibility, boards of directors instruct management to develop and maintain an appropriate, systematic, and consistently applied process to determine the amounts of the ALLL and provisions for loan losses. Management should create and implement suitable policies and procedures to communicate the ALLL process internally to all applicable personnel. Regardless of who develops and implements these policies, procedures, and underlying controls, the board of directors should assure themselves that the policies specifically address the institution's unique goals, systems, risk profile, personnel, and other resources before approving them. Additionally, by creating an environment that encourages personnel to fol-

1. See 66 *Fed. Reg.* 35629–35639 (July 6, 2001).
2. The guidance was developed in consultation with Securities and Exchange Commission staff, who are issuing parallel guidance in the form of Staff Accounting Bulletin No. 102.
3. The actual policy statement includes a bibliography that lists applicable ALLL GAAP guidance, interagency statements, and other reference materials that may assist in understanding and implementing an ALLL in accordance with GAAP. See the appendix for additional information on applying GAAP to determine the ALLL.

low these policies and procedures, management improves procedural discipline and compliance.

The determination of the amounts of the ALLL and provisions for loan and lease losses should be based on management's current judgments about the credit quality of the loan portfolio, and should consider all known relevant internal and external factors that affect loan collectibility as of the reporting date. The amounts reported each period for the provision for loan and lease losses and the ALLL should be reviewed and approved by the board of directors. To ensure the methodology remains appropriate for the institution, the board of directors should have the methodology periodically validated and, if appropriate, revised. Further, the audit committee[4] should oversee and monitor the internal controls over the ALLL-determination process.[5]

The [Federal Reserve and other] banking agencies[6] have long-standing examination policies that call for examiners to review an institution's lending and loan-review functions and recommend improvements, if needed. Additionally, in 1995 and 1996, the banking agencies adopted interagency guidelines establishing standards for safety and soundness, pursuant to section 39 of the Federal Deposit Insurance Act (FDI Act).[7] The interagency asset-quality guidelines and [this guidance will assist] an institution in estimating and establishing a sufficient ALLL supported by adequate documentation, as required under the FDI Act. Additionally, the guidelines require operational and managerial standards that are appropriate for an institution's size and the nature and scope of its activities.

For financial-reporting purposes, including regulatory reporting, the provision for loan and lease losses and the ALLL must be determined in accordance with GAAP. GAAP requires that allowances be well documented, with clear explanations of the supporting analyses and rationale.[8] This [2001] policy statement describes but does not increase the documentation requirements already existing within GAAP. Failure to maintain, analyze, or support an adequate ALLL in accordance with GAAP and supervisory guidance is generally an unsafe and unsound banking practice.[9]

This guidance [the 2001 policy statement] applies equally to all institutions, regardless of the size. However, institutions with less complex lending activities and products may find it more efficient to combine a number of procedures (e.g., information gathering, documentation, and internal-approval processes) while continuing to ensure the institution has a consistent and appropriate methodology. Thus, much of the supporting documentation required for an institution with more complex products or portfolios may be combined into fewer supporting documents in an institution with less complex products or portfolios. For example, simplified documentation can include spreadsheets, checklists, and other summary documents that many institutions currently use. Illustrations A and C provide specific examples of how less complex institutions may determine and document portions of their loan-loss allowance.

Documentation Standards

Appropriate written supporting documentation for the loan-loss provision and allowance facilitates review of the ALLL process and reported amounts, builds discipline and consistency into the ALLL-determination process, and improves

4. All institutions are encouraged to establish audit committees; however, at small institutions without audit committees, the board of directors retains this responsibility.

5. Institutions and their auditors should refer to Statement on Auditing Standards No. 61, "Communication with Audit Committees" (as amended by Statement on Auditing Standards No. 90, "Audit Committee Communications"), which requires certain discussions between the auditor and the audit committee. These discussions should include items, such as accounting policies and estimates, judgments, and uncertainties that have a significant impact on the accounting information included in the financial statements.

6. The [other] banking agencies are the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

7. Institutions should refer to the guidelines for state member banks, appendix D to part 208.

8. The documentation guidance within this [2001] policy statement is predominantly based upon the GAAP guidance from Financial Accounting Standards Board (FASB) Statement No. 5 and No. 114 (FAS 5 and FAS 114, respectively); Emerging Issues Task Force Topic No. D-80 (EITF Topic D-80 and attachments), "Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio" (which includes the *Viewpoints* article—an article issued in 1999 by FASB staff providing guidance on certain issues regarding the ALLL, particularly on the application of FAS 5 and FAS 114 and how these statements interrelate); Chapter 7, "Credit Losses," the American Institute of Certified Public Accountants' (AICPA) Audit and Accounting Guide, *Banks and Savings Institutions,* 2000 edition (AICPA Audit Guide); and the Securities and Exchange Commission's (SEC) Financial Reporting Release No. 28 (FRR 28).

9. Failure to maintain adequate supporting documentation does not relieve an institution of its obligation to record an appropriate ALLL.

the process for estimating loan and lease losses by helping to ensure that all relevant factors are appropriately considered in the ALLL analysis. An institution should document the relationship between the findings of its detailed review of the loan portfolio and the amount of the ALLL and the provision for loan and lease losses reported in each period.[10]

At a minimum, institutions should maintain written supporting documentation for the following decisions, strategies, and processes:

- policies and procedures—
  - — over the systems and controls that maintain an appropriate ALLL and
  - — over the ALLL methodology
- loan-grading system or process
- summary or consolidation of the ALLL balance
- validation of the ALLL methodology
- periodic adjustments to the ALLL process

Policies and Procedures

Financial institutions utilize a wide range of policies, procedures, and control systems in their ALLL process. Sound policies should be appropriately tailored to the size and complexity of the institution and its loan portfolio.

In order for an institution's ALLL methodology to be effective, the institution's written policies and procedures for the systems and controls that maintain an appropriate ALLL should address but not be limited to—

- the roles and responsibilities of the institution's departments and personnel (including the lending function, credit review, financial reporting, internal audit, senior management, audit committee, board of directors, and others, as applicable) who determine, or review, as applicable, the ALLL to be reported in the financial statements;
- the institution's accounting policies for loans, [leases, and their loan losses], including the policies for charge-offs and recoveries and for estimating the fair value of collateral, where applicable;
- the description of the institution's systematic methodology, which should be consistent with the institution's accounting policies for determining its ALLL;[11] and
- the system of internal controls used to ensure that the ALLL process is maintained in accordance with GAAP and supervisory guidance.

An internal-control system for the ALLL-estimation process should—

- include measures to provide assurance regarding the reliability and integrity of information and compliance with laws, regulations, and internal policies and procedures;
- reasonably assure that the institution's financial statements (including regulatory reports) are prepared in accordance with GAAP and ALLL supervisory guidance;[12] and
- include a well-defined loan-review process containing—
  - — an effective loan-grading system that is consistently applied, identifies differing risk characteristics and loan-quality problems accurately and in a timely manner, and prompts appropriate administrative actions;
  - — sufficient internal controls to ensure that all relevant loan-review information is appropriately considered in estimating losses. This includes maintaining appropriate reports, details of reviews performed, and identification of personnel involved; and
  - — clear formal communication and coordination between an institution's credit-administration function, financial-reporting group, management, board of directors, and others who are involved in the ALLL-determination or -review process, as applicable (e.g., written policies and proce-

10. This position is fully described in the SEC's FRR 28, in which the SEC indicates that the books and records of public companies engaged in lending activities should include documentation of the rationale supporting each period's determination that the ALLL and provision amounts reported were adequate.

11. Further explanation is presented in the "Methodology" section that appears below.

12. In addition to the supporting documentation requirements for financial institutions, as described in interagency asset-quality guidelines, public companies are required to comply with the books and records provisions of the Securities Exchange Act of 1934 (Exchange Act). Under sections 13(b)(2)–(7) of the Exchange Act, registrants must make and keep books, records, and accounts, which, in reasonable detail, accurately and fairly reflect the transactions and dispositions of assets of the registrant. Registrants also must maintain internal accounting controls that are sufficient to provide reasonable assurances that, among other things, transactions are recorded as necessary to permit the preparation of financial statements in conformity with GAAP. See also SEC Staff Accounting Bulletin No. 99, *Materiality.*

dures, management reports, audit programs, and committee minutes).

Methodology

An ALLL methodology is a system that an institution designs and implements to reasonably estimate loan and lease losses as of the financial statement date. It is critical that ALLL methodologies incorporate management's current judgments about the credit quality of the loan portfolio through a disciplined and consistently applied process.

An institution's ALLL methodology is influenced by institution-specific factors, such as an institution's size, organizational structure, business environment and strategy, management style, loan-portfolio characteristics, loan-administration procedures, and management information systems. However, there are certain common elements an institution should incorporate in its ALLL methodology. A summary of common elements is provided in [the appendix].[13]

Documentation of ALLL Methodology in Written Policies and Procedures

An institution's written policies and procedures should describe the primary elements of the institution's ALLL methodology, including portfolio segmentation and impairment measurement. In order for an institution's ALLL methodology to be effective, the institution's written policies and procedures should describe the methodology—

- for segmenting the portfolio:
  - — how the segmentation process is performed (i.e., by loan type, industry, risk rates, etc.),
  - — when a loan-grading system is used to segment the portfolio:
    - the definitions of each loan grade,
    - a reconciliation of the internal loan grades to supervisory loan grades, and
    - the delineation of responsibilities for the loan-grading system.
- for determining and measuring impairment under FAS 114:
  - — the methods used to identify loans to be analyzed individually;
  - — for individually reviewed loans that are impaired, how the amount of any impairment is determined and measured, including—
    - procedures describing the impairment-measurement techniques available and
    - steps performed to determine which technique is most appropriate in a given situation.
  - — the methods used to determine whether and how loans individually evaluated under FAS 114, but not considered to be individually impaired, should be grouped with other loans that share common characteristics for impairment evaluation under FAS 5.
- for determining and measuring impairment under FAS 5—
  - — how loans with similar characteristics are grouped to be evaluated for loan collectibility (such as loan type, past-due status, and risk);
  - — how loss rates are determined (e.g., historical loss rates adjusted for environmental factors or migration analysis) and what factors are considered when establishing appropriate time frames over which to evaluate loss experience; and
  - — descriptions of qualitative factors (e.g., industry, geographical, economic, and political factors) that may affect loss rates or other loss measurements.

The supporting documents for the ALLL may be integrated in an institution's credit files, loan-review reports or worksheets, board of directors' and committee meeting minutes, computer reports, or other appropriate documents and files.

ALLL Under FAS 114

An institution's ALLL methodology related to FAS 114 loans begins with the use of its normal loan-review procedures to identify whether a loan is impaired as defined by the accounting standard. Institutions should document—

- the method and process for identifying loans to be evaluated under FAS 114 and
- the analysis that resulted in an impairment decision for each loan and the determination

13. Also, refer to paragraph 7.05 of the AICPA Audit Guide.

of the impairment-measurement method to be used (i.e., present value of expected future cash flows, fair value of collateral less costs to sell, or the loan's observable market price).

Once an institution has determined which of the three available measurement methods to use for an impaired loan under FAS 114, it should maintain supporting documentation as follows:

- When using the present-value-of-expected-future-cash-flows method—
  - — the amount and timing of cash flows,
  - — the effective interest rate used to discount the cash flows, and
  - — the basis for the determination of cash flows, including consideration of current environmental factors and other information reflecting past events and current conditions.
- When using the fair-value-of-collateral method—
  - — how fair value was determined, including the use of appraisals, valuation assumptions, and calculations,
  - — the supporting rationale for adjustments to appraised values, if any,
  - — the determination of costs to sell, if applicable, and
  - — appraisal quality, and the expertise and independence of the appraiser.
- When using the observable-market-price-of-a-loan method—
  - — the amount, source, and date of the observable market price.

Illustration A describes a practice used by a small financial institution to document its FAS 114 measurement of impairment using a comprehensive worksheet.[14] [Examples 1 and 2 provide examples of applying and documenting impairment-measurement methods under FAS 114. Some loans that are evauluated individually for impairment under FAS 114 may be fully collateralized and therefore require no ALLL. Example 3 presents an institution whose loan portfolio includes fully collateralized loans. It describes the documentation maintained by that institution to support its conclusion that no ALLL was needed for those loans.]

14. The [referenced] illustrations are presented to assist institutions in evaluating how to implement the guidance provided in this document. The methods described in the illustrations may not be suitable for all institutions and are not considered required processes or actions. For additional descriptions of key aspects of ALLL guidance, a series of [numbered examples is provided. These examples were included in appendix A of the policy statement as questions and answers. The wording of the examples has been slightly modified for this format.]

Illustration A

Documenting an ALLL Under FAS 114

Comprehensive worksheet for the impairment-measurement process

A small institution utilizes a comprehensive worksheet for each loan being reviewed individually under FAS 114. Each worksheet includes a description of why the loan was selected for individual review, the impairment-measurement technique used, the measurement calculation, a comparison to the current loan balance, and the amount of the ALLL for that loan. The rationale for the impairment-measurement technique used (e.g., present value of expected future cash flows, observable market price of the loan, fair value of the collateral) is also described on the worksheet.

Example 1: ALLL Under FAS 114—Measuring and Documenting Impairment

Facts. Approximately one-third of Institution A's commercial loan portfolio consists of large-balance, nonhomogeneous loans. Due to their large individual balances, these loans meet the criteria under Institution A's policies and procedures for individual review for impairment under FAS 114. Upon review of the large-balance loans, Institution A determines that certain of the loans are impaired as defined by FAS 114.

Analysis. For the commercial loans reviewed under FAS 114 that are individually impaired, Institution A should measure and document the impairment on those loans. For those loans that are reviewed individually under FAS 114 and considered individually impaired, Institution A must use one of the methods for measuring impairment that is specified by FAS 114 (that is, the present value of expected future cash flows, the loan's observable market price, or the fair value of collateral).

An impairment-measurement method other than the methods allowed by FAS 114 cannot be used. For the loans considered individually impaired under FAS 114, under the circumstances described above, it would not be appropriate for Institution A to choose a measurement method not prescribed by FAS 114. For example, it would not be appropriate to measure loan impairment by applying a loss rate to each loan based on the average historical loss percentage for all of its commercial loans for the past five years.

Institution A should maintain, as sufficient, objective evidence, written documentation to support its measurement of loan impairment under FAS 114. If it uses the present value of expected future cash flows to measure impairment of a loan, it should document (1) the amount and timing of cash flows, (2) the effective interest rate used to discount the cash flows, and (3) the basis for the determination of cash flows, including consideration of current environmental factors[15] and other information reflecting past events and current conditions. If Institution A uses the fair value of collateral to measure impairment, it should document (1) how it determined the fair value, including the use of appraisals, valuation assumptions and calculations; (2) the supporting rationale for adjustments to appraised values, if any, and the determination of costs to sell, if applicable; (3) appraisal quality; and (4) the expertise and independence of the appraiser. Similarly, Institution A should document the amount, source, and date of the observable market price of a loan, if that method of measuring loan impairment is used.

Example 2: ALLL Under FAS 114—Measuring Impairment for a Collateral-Dependent Loan

Facts. Institution B has a $10 million loan outstanding to Company X that is secured by real estate, which Institution B individually evaluates under FAS 114 due to the loan's size. Company X is delinquent in its loan payments under the terms of the loan agreement. Accordingly, Institution B determines that its loan to Company X is impaired, as defined by FAS 114. Because the loan is collateral dependent, Institution B measures impairment of the loan based on the fair value of the collateral. Institution B determines that the most recent valuation of the collateral was performed by an appraiser 18 months ago and, at that time, the estimated value of the collateral (fair value less costs to sell) was $12 million.

Institution B believes that certain of the assumptions that were used to value the collateral 18 months ago do not reflect current market conditions and, therefore, the appraiser's valuation does not approximate current fair value of the collateral. Several buildings, which are comparable to the real estate collateral, were recently completed in the area, increasing vacancy rates, decreasing lease rates, and attracting several tenants away from the borrower. Accordingly, credit-review personnel at Institution B adjust certain of the valuation assumptions to better reflect the current market conditions as they relate to the loan's collateral.[16] After adjusting the collateral-valuation assumptions, the credit-review department determines that the current estimated fair value of the collateral, less costs to sell, is $8 million. Given that the recorded investment in the loan is $10 million, Institution B concludes that the loan is impaired by $2 million and records an allowance for loan losses of $2 million.

Analysis. Institution B should maintain documentation to support its determination of the allowance for loan losses of $2 million for the loan to Company X. It should document that it measured impairment of the loan to Company X by using the fair value of the loan's collateral, less costs to sell, which it estimated to be $8 million. This documentation should include (1) the institution's rationale and basis for the $8 million valuation, including the revised valuation assumptions it used; (2) the valuation calculation; and (3) the determination of costs to sell, if applicable. Because Institution B arrived at the valuation of $8 million by modifying an earlier appraisal, it should document its rationale and basis for the changes it made to the valuation assumptions that resulted in the col-

15. Question 16 in Exhibit D-80A of EITF Topic D-80 and [its] attachments indicates that environmental factors include existing industry, geographical, economic, and political factors.

16. When reviewing collateral-dependent loans, Institution B may often find it more appropriate to obtain an updated appraisal to estimate the effect of current market conditions on the appraised value instead of internally estimating an adjustment.

lateral value declining from $12 million 18months ago to $8 million in the current period.[17]

Example 3: ALLL Under FAS 114—Fully Collateralized Loans

Facts. Institution C has $10 million in loans that are fully collateralized by highly rated debt securities with readily determinable market values. The loan agreement for each of these loans requires the borrower to provide qualifying collateral sufficient to maintain a loan-to-value ratio with sufficient margin to absorb volatility in the securities' market prices. Institution C's collateral department has physical control of the debt securities through safekeeping arrangements. In addition, Institution C perfected its security interest in the collateral when the funds were originally distributed. On a quarterly basis, Institution C's credit-administration function determines the market value of the collateral for each loan using two independent market quotes and compares the collateral value to the loan carrying value. If there are any collateral deficiencies, Institution C notifies the borrower and requests that the borrower immediately remedy the deficiency. Due in part to its efficient operation, Institution C has historically not incurred any material losses on these loans. Institution C believes these loans are fully collateralized and therefore does not maintain any ALLL balance for these loans.

Analysis. To adequately support its determination that no allowance is needed for this group of loans, Institution C must maintain the following documentation:

- The management summary of the ALLL must include documentation indicating that, in accordance with the institution's ALLL policy, (1) Institution C has verified the collateral protection on these loans, (2) no probable loss has been incurred, and (3) no ALLL is necessary.
- The documentation in Institution C's loan files must include (1) the two independent market quotes obtained each quarter for each loan's collateral amount, (2) the documents evidencing the perfection of the security interest in the collateral and other relevant supporting documents, and (3) Institution C's ALLL policy, including guidance for determining when a loan is considered "fully collateralized," which would not require an ALLL. Institution C's policy should require the following factors to be considered and fully documented:
  - — volatility of the market value of the collateral
  - — recency and reliability of the appraisal or other valuation
  - — recency of the institution's or third party's inspection of the collateral
  - — historical losses on similar loans
  - — confidence in the institution's lien or security position including appropriate—
    - type of security perfection (e.g., physical possession of collateral or secured filing);
    - filing of security perfection (i.e., correct documents and with the appropriate officials);
    - relationship to other liens; and
    - other factors as appropriate for the loan type.

17. In accordance with the FFIEC's *Federal Register* notice, Implementation Issues Arising from FASB No. 114, "Accounting by Creditors for Impairment of a Loan," published February 10, 1995 (60 *Fed. Reg.* 7966, February 10, 1995), impaired, collateral-dependent loans must be reported at the fair value of collateral, less costs to sell, in regulatory reports. This treatment is to be applied to all collateral-dependent loans, regardless of type of collateral.

ALLL Under FAS 5

Segmenting the Portfolio

For loans evaluated on a group basis under FAS 5, management should segment the loan portfolio by identifying risk characteristics that are common to groups of loans. Institutions typically decide how to segment their loan portfolios based on many factors, which vary with their business strategies as well as their information system capabilities. Smaller institutions that are involved in less complex activities often segment the portfolio into broad loan categories. This method of segmenting the portfolio is likely to be appropriate in only small institutions offering a narrow range of loan products. Larger institutions typically offer a more diverse and complex mix of loan products. Such institutions may start by segmenting the portfolio into major loan types but typically have more detailed information available that allows them to further segregate the portfolio into product-line segments based on the risk characteristics of each portfolio segment. Regardless of the segmentation method used, an institution should maintain documentation to support its conclusion that the loans in each segment have similar attributes or characteristics.

As economic and other business conditions change, institutions often modify their business strategies, which may result in adjustments to the way in which they segment their loan portfolio for purposes of estimating loan losses. Illustration B presents an example in which an institution refined its segmentation method to more effectively consider risk factors and maintains documentation to support this change.

Illustration B

Documenting Segmenting Practices

Documenting a refinement in a segmentation method

An institution with a significant portfolio of consumer loans performed a review of its ALLL methodology. The institution had determined its ALLL based upon historical loss rates in the overall consumer portfolio. The ALLL methodology was validated by comparing actual loss rates (charge-offs) for the past two years to the estimated loss rates. During this process, the institution decided to evaluate loss rates on an individual-product basis (e.g., auto loans, unsecured loans, or home equity loans). This analysis disclosed significant differences in the loss rates on different products. With this additional information, the methodology was amended in the current period to segment the portfolio by product, resulting in a better estimation of the loan losses associated with the portfolio. To support this change in segmentation practice, the credit-review committee records contain the analysis that was used as a basis for the change and the written report describing the need for the change.

Institutions use a variety of documents to support the segmentation of their portfolios. Some of these documents include—

- loan trial balances by categories and types of loans,
- management reports about the mix of loans in the portfolio,
- delinquency and nonaccrual reports, and
- a summary presentation of the results of an internal or external loan-grading review.

Reports generated to assess the profitability of a loan-product line may be useful in identifying areas in which to further segment the portfolio.

Estimating Loss on Groups of Loans

Based on the segmentation of the loan portfolio, an institution should estimate the FAS 5 portion of its ALLL. For those segments that require an ALLL, [18] the institution should estimate the loan and lease losses, on at least a quarterly basis, based upon its ongoing loan-review process and analysis of loan performance. The institution should follow a systematic and consistently applied approach to select the most appropriate loss-measurement methods and support its conclusions and rationale with written documentation. Regardless of the methods used to measure losses, an institution should demonstrate and document that the loss-measurement methods used to estimate the ALLL for each segment are determined in accordance with GAAP as of the financial statement date.[19]

One method of estimating loan losses for groups of loans is through the application of loss rates to the groups' aggregate loan balances. Such loss rates typically reflect the institution's historical loan-loss experience for each group of loans, adjusted for relevant environmental factors (e.g., industry, geographical, economic, and political factors) over a defined period of time. If an institution does not have loss experience of

18. An example of a loan segment that does not generally require an ALLL is loans that are fully secured by deposits maintained at the lending institution.

19. Refer to paragraph 8(b) of FAS 5.

its own, it may be appropriate to reference the loss experience of other institutions, provided that the institution demonstrates that the attributes of the loans in its portfolio segment are similar to those of the loans included in the portfolio of the institution providing the loss experience.[20] Institutions should maintain supporting documentation for the technique used to develop their loss rates, including the period of time over which the losses were incurred. If a range of loss is determined, institutions should maintain documentation to support the identified range and the rationale used for determining which estimate is the best estimate within the range of loan losses. An example of how a small institution performs a comprehensive historical loss analysis is provided as the first item in Illustration C.

Before employing a loss-estimation model, an institution should evaluate and modify, as needed, the model's assumptions to ensure that the resulting loss estimate is consistent with GAAP. In order to demonstrate consistency with GAAP, institutions that use loss-estimation models typically document the evaluation, the conclusions regarding the appropriateness of estimating loan losses with a model or other loss-estimation tool, and the support for adjustments to the model or its results.

In developing loss measurements, institutions should consider the impact of current environmental factors and then document which factors were used in the analysis and how those factors affected the loss measurements. Factors that should be considered in developing loss measurements include the following:[21]

- levels of and trends in delinquencies and impaired loans
- levels of and trends in charge-offs and recoveries
- trends in volume and terms of loans
- effects of any changes in risk-selection and underwriting standards, and other changes in lending policies, procedures, and practices
- experience, ability, and depth of lending management and other relevant staff
- national and local economic trends and conditions
- industry conditions
- effects of changes in credit concentrations

For any adjustment of loss measurements for environmental factors, the institution should maintain sufficient, objective evidence to support the amount of the adjustment and to explain why the adjustment is necessary to reflect current information, events, circumstances, and conditions in the loss measurements.

The second item in illustration C provides an example of how an institution adjusts its commercial real estate historical loss rates for changes in local economic conditions. Example 4 provides an example of maintaining sup-

20. Refer to paragraph 23 of FAS 5.

21. Refer to paragraph 7.13 in the AICPA Audit Guide.

Illustration C

Documenting the Setting of Loss Rates

Comprehensive loss analysis in a small institution

A small institution determines its loss rates based on loss rates over a three-year historical period. The analysis is conducted by type of loan and is further segmented by originating branch office. The analysis considers charge-offs and recoveries in determining the loss rate. The institution also considers the loss rates for each loan grade and compares them to historical losses on similarly rated loans in arriving at the historical loss factor. The institution maintains supporting documentation for its loss-factor analysis, including historical losses by type of loan, originating branch office, and loan grade for the three-year period.

Adjustment of loss rates for changes in local economic conditions

An institution develops a factor to adjust loss rates for its assessment of the impact of changes in the local economy. For example, when analyzing the loss rate on commercial real estate loans, the assessment identifies changes in recent commercial building occupancy rates. The institution generally finds the occupancy statistics to be a good indicator of probable losses on these types of loans. The institution maintains documentation that summarizes the relationship between current occupancy rates and its loss experience.

porting documentation for adjustments to portfolio-segment loss rates for an environmental factor related to an economic downturn in the borrower's primary industry. Example 5 describes one institution's process for determining and documenting an ALLL for loans that are not individually impaired but have characteristics indicating there are loan losses on a group basis.

Example 4: ALLL Under FAS 5—Adjusting Loss Rates

Facts. Institution D's lending area includes a metropolitan area that is financially dependent upon the profitability of a number of manufacturing businesses. These businesses use highly specialized equipment and significant quantities of rare metals in the manufacturing process. Due to increased low-cost foreign competition, several of the parts suppliers servicing these manufacturing firms declared bankruptcy. The foreign suppliers have subsequently increased prices, and the manufacturing firms have suffered from increased equipment maintenance costs and smaller profit margins. Additionally, the cost of the rare metals used in the manufacturing process increased and has now stabilized at double last year's price. Due to these events, the manufacturing businesses are experiencing financial difficulties and have recently announced downsizing plans.

Although Institution D has yet to confirm an increase in its loss experience as a result of these events, management knows that it lends to a significant number of businesses and individuals whose repayment ability depends upon the long-term viability of the manufacturing businesses. Institution D's management has identified particular segments of its commercial and consumer customer bases that include borrowers highly dependent upon sales or salary from the manufacturing businesses. Institution D's management performs an analysis of the affected portfolio segments to adjust its historical loss rates used to determine the ALLL. In this particular case, Institution D has experienced similar business and lending conditions in the past that it can compare to current conditions.

Analysis. Institution D should document its support for the loss-rate adjustments that result from considering these manufacturing firms' financial downturns. It should document its identification of the particular segments of its commercial and consumer loan portfolio for which it is probable that the manufacturing business' financial downturn has resulted in loan losses. In addition, it should document its analysis that resulted in the adjustments to the loss rates for the affected portfolio segments. As part of its documentation, Institution D should maintain copies of the documents supporting the analysis, including relevant newspaper articles, economic reports, economic data, and notes from discussions with individual borrowers.

Since Institution D has had similar situations in the past, its supporting documentation should also include an analysis of how the current conditions compare to its previous loss experiences in similar circumstances. As part of its effective ALLL methodology, a summary should be created of the amount and rationale for the adjustment factor, which management presents to the audit committee and board for their review and approval prior to the issuance of the financial statements.

Example 5: ALLL Under FAS 5—Estimating Losses on Loans Individually Reviewed for Impairment but Not Considered Individually Impaired

Facts. Institution E has outstanding loans of \$2 million to Company Y and \$1 million to Company Z, both of which are paying as agreed upon in the loan documents. The institution's ALLL policy specifies that all loans greater than \$750,000 must be individually reviewed for impairment under FAS 114. Company Y's financial statements reflect a strong net worth, good profits, and ongoing ability to meet debt-service requirements. In contrast, recent information indicates Company Z's profitability is declining and its cash flow is tight. Accordingly, this loan is rated substandard under the institution's loan-grading system. Despite its concern, management believes Company Z will resolve its problems and determines that neither loan is individually impaired as defined by FAS 114.

Institution E segments its loan portfolio to estimate loan losses under FAS 5. Two of its loan portfolio segments are Segment 1 and Segment 2. The loan to Company Y has risk characteristics similar to the loans included in Segment 1, and the loan to Company Z has risk characteristics similar to the loans included in Segment 2.[22]

In its determination of the ALLL under FAS 5, Institution E includes its loans to Company Y and Company Z in the groups of loans with similar characteristics (i.e., Segment 1 for Company Y's loan and Segment 2 for Company Z's loan). Management's analyses of Segment 1 and Segment 2 indicate that it is probable that each segment includes some losses, even though the losses cannot be identified to one or more specific loans. Management estimates that the use of its historical loss rates for these two segments, with adjustments for changes in environmental factors, provides a reasonable estimate of the institution's probable loan losses in these segments.

22. These groups of loans do not include any loans that have been individually reviewed for impairment under FAS 114 and determined to be impaired as defined by FAS 114.

Analysis. Institution E should adequately document an ALLL under FAS 5 for these loans that were individually reviewed for impairment but are not considered individually impaired. As part of its effective ALLL methodology, Institution E documents the decision to include its loans to Company Y and Company Z in its determination of its ALLL under FAS 5. It should also document the specific characteristics of the loans that were the basis for grouping these loans with other loans in Segment 1 and Segment 2, respectively. Institution E maintains documentation to support its method of estimating loan losses for Segment 1 and Segment 2, including the average loss rate used, the analysis of historical losses by loan type and by internal risk rating, and support for any adjustments to its historical loss rates. The institution also maintains copies of the economic and other reports that provided source data.

Consolidating the Loss Estimates

To verify that ALLL balances are presented fairly in accordance with GAAP and are auditable, management should prepare a document that summarizes the amount to be reported in the financial statements for the ALLL. The board of directors should review and approve this summary.

Common elements in such summaries include—

- the estimate of the probable loss or range of loss incurred for each category evaluated (e.g., individually evaluated impaired loans, homogeneous pools, and other groups of loans that are collectively evaluated for impairment);
- the aggregate probable loss estimated using the institution's methodology;
- a summary of the current ALLL balance;
- the amount, if any, by which the ALLL is to be adjusted;[23] and
- depending on the level of detail that supports the ALLL analysis, detailed subschedules of loss estimates that reconcile to the summary schedule.

23. Subsequent to adjustments, there should be no material differences between the consolidated loss estimate, as determined by the methodology, and the final ALLL balance reported in the financial statements.

Illustration D describes how an institution documents its estimated ALLL by adding comprehensive explanations to its summary schedule.

Generally, an institution's review and approval process for the ALLL relies upon the data provided in these consolidated summaries. There may be instances in which individuals or committees that review the ALLL methodology and resulting allowance balance identify adjustments that need to be made to the loss estimates to provide a better estimate of loan losses. These changes may be due to information not known at the time of the initial loss estimate (e.g., information that surfaces after determining and adjusting, as necessary, historical loss rates, or a recent decline in the marketability of property after conducting a FAS 114 valuation based upon the fair value of collateral). It is important that these adjustments are consistent with GAAP and are reviewed and approved by appropriate personnel. Additionally, the summary should provide each subsequent reviewer with an understanding of the support behind these adjustments. Therefore, management should document the nature of any adjustments and the underlying rationale for making the changes. This documentation should be provided to those making the final determination of the ALLL amount. Example 6 addresses the documentation of the final amount of the ALLL.

Illustration D

Summarizing Loss Estimates

Descriptive comments added to the consolidated ALLL summary schedule

To simplify the supporting documentation process and to eliminate redundancy, an institution adds detailed supporting information to its summary schedule. For example, this institution's board of directors receives, within the body of the ALLL summary schedule, a brief description of the institution's policy for selecting loans for evaluation under FAS 114. Additionally, the institution identifies which FAS 114 impairment-measurement method was used for each individually reviewed impaired loan. Other items on the schedule include a brief description of the loss factors for each segment of the loan portfolio, the basis for adjustments to loss rates, and explanations of changes in ALLL amounts from period to period, including cross-references to more detailed supporting documents.

Example 6: Consolidating the Loss Estimates—Documenting the Reported ALLL

Facts. Institution F determines its ALLL using an established systematic process. At the end of each period, the accounting department prepares a summary schedule that includes the amount of each of the components of the ALLL, as well as the total ALLL amount, for review by senior management, the credit committee, and, ultimately, the board of directors. Members of senior management and the credit committee meet to discuss the ALLL. During these discussions, they identify changes that are required by GAAP to be made to certain of the ALLL estimates. As a result of the adjustments made by senior management, the total amount of the ALLL changes. However, senior management (or its designee) does not update the ALLL summary schedule to reflect the adjustments or reasons for the adjustments. When performing their audit of the financial statements, the independent accountants are provided with the original ALLL summary schedule that was reviewed by senior management and the credit committee, as well as a verbal explanation of the changes made by senior management and the credit committee when they met to discuss the loan-loss allowance.

Analysis. Institution F's documentation practices supporting the balance of its loan-loss allowance, as reported in its financial statements, are not in compliance with existing documentation guidance. An institution must maintain supporting documentation for the loan-loss allowance amount reported in its financial statements. As illustrated above, there may be instances in which ALLL reviewers identify adjustments that need to be made to the loan-loss estimates. The nature of the adjustments, how they were measured or determined, and the underlying rationale for making the changes to the ALLL balance should be documented. Appropriate documentation of the adjustments should be provided to the board of directors (or its designee) for review of the final ALLL amount to be reported in the financial statements. For institutions subject to external audit, this documentation should also be made available to the independent accountants. If changes frequently occur during management or credit committee reviews of the ALLL, management may find it appropriate to analyze the reasons for the frequent changes and to reassess the methodology the institution uses.

Validating the ALLL Methodology

An institution's ALLL methodology is considered valid when it accurately estimates the amount of loss contained in the portfolio. Thus, the institution's methodology should include procedures that adjust loss-estimation methods to reduce differences between estimated losses and actual subsequent charge-offs, as necessary.

To verify that the ALLL methodology is valid and conforms to GAAP and supervisory guid ance, an institution's directors should establish internal-control policies, appropriate for the size of the institution and the type and complexity of its loan products. These policies should include procedures for a review, by a party who is independent of the ALLL-estimation process, of the ALLL methodology and its application in order to confirm its effectiveness.

In practice, financial institutions employ numerous procedures when validating the reasonableness of their ALLL methodology and determining whether there may be deficiencies in their overall methodology or loan-grading process. Examples are—

- a review of trends in loan volume, delinquencies, restructurings, and concentrations;
- a review of previous charge-off and recovery history, including an evaluation of the timeliness of the entries to record both the charge-offs and the recoveries;
- a review by a party that is independent of the ALLL-estimation process (this often involves the independent party reviewing, on a test basis, source documents and underlying assumptions to determine that the established methodology develops reasonable loss estimates); and
- an evaluation of the appraisal process of the underlying collateral. (This may be accomplished by periodically comparing the appraised value to the actual sales price on selected properties sold.)

Supporting Documentation for the Validation Process

Management usually supports the validation process with the workpapers from the ALLL-review function. Additional documentation often includes the summary findings of the independent reviewer. The institution's board of directors, or its designee, reviews the findings and acknowledges its review in its meeting minutes. If the methodology is changed based upon the findings of the validation process, documentation that describes and supports the changes should be maintained.

Appendix—Application of GAAP

[This appendix was designated appendix B in the policy statement.] An ALLL recorded pursuant to GAAP is an institution's best estimate of the probable amount of loans and lease-financing receivables that it will be unable to collect based on current information and events.[24] A creditor should record an ALLL when the criteria for accrual of a loss contingency as set forth in GAAP have been met. Estimating the amount of an ALLL involves a high degree of management judgment and is inevitably imprecise. Accordingly, an institution may determine that the amount of loss falls within a range. An institution should record its best estimate within the range of loan losses.[25]

Under GAAP, Statement of Financial Accounting Standards No. 5, "Accounting for Contingencies" (FAS 5), provides the basic guidance for recognition of a loss contingency, such as the collectibility of loans (receivables), when it is probable that a loss has been incurred and the amount can be reasonably estimated. Statement of Financial Accounting Standards No. 114, "Accounting by Creditors for Impairment of a Loan" (FAS 114) provides more specific guidance about the measurement and disclosure of impairment for certain types of loans.[26] Specifically, FAS 114 applies to loans that are identified for evaluation on an individual basis. Loans are considered impaired when, based on current information and events, it is probable that the creditor will be unable to collect all interest and principal payments due according to the contractual terms of the loan agreement.

For individually impaired loans, FAS 114 provides guidance on the acceptable methods to measure impairment. Specifically, FAS 114 states that when a loan is impaired, a creditor should measure impairment based on the present value of expected future principal and interest cash flows discounted at the loan's effective interest

24. This appendix provides guidance on the ALLL and does not address allowances for credit losses for off-balance-sheet instruments (e.g., loan commitments, guarantees, and standby letters of credit). Institutions should record liabilities for these exposures in accordance with GAAP. Further guidance on this topic is presented in the American Institute of Certified Public Accountants' Audit and Accounting Guide, *Banks and Savings Institutions,* 2000 edition (AICPA Audit Guide). Additionally, this appendix does not address allowances or accounting for assets or portions of assets sold with recourse, which is described in Statement of Financial Accounting Standards No. 140, "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities—a Replacement of FASB Statement No. 125" (FAS 140).

25. Refer to FASB Interpretation No. 14, "Reasonable Estimation of the Amount of a Loss," and Emerging Issues Task Force Topic No. D-80, "Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio" (EITF Topic D-80).

26. EITF Topic D-80 includes additional guidance on the requirements of FAS 5 and FAS 114 and how they relate to each other.***

rate, except that as a practical expedient, a creditor may measure impairment based on a loan's observable market price or the fair value of collateral, if the loan is collateral dependent. When developing the estimate of expected future cash flows for a loan, an institution should consider all available information reflecting past events and current conditions, including the effect of existing environmental factors. The following illustration provides an example of an institution estimating a loan's impairment when the loan has been partially charged off.

Illustration

Interaction of FAS 114 with an Adversely Classified Loan, Partial Charge-Off, and the Overall ALLL

An institution determined that a collateral-dependent loan, which it identified for evaluation, was impaired. In accordance with FAS 114, the institution established an ALLL for the amount that the recorded investment in the loan exceeded the fair value of the underlying collateral, less costs to sell.

Consistent with relevant regulatory guidance, the institution classified as "Loss," the portion of the recorded investment deemed to be the confirmed loss and classified the remaining recorded investment as "Substandard." For this loan, the amount classified "Loss" was less than the impairment amount (as determined under FAS 114). The institution charged off the "Loss" portion of the loan. After the charge-off, the portion of the ALLL related to this "Substandard" loan (1) reflects an appropriate measure of impairment under FAS 114, and (2) is included in the aggregate FAS 114 ALLL for all loans that were identified for evaluation and individually considered impaired. The aggregate FAS 114 ALLL is included in the institution's overall ALLL.

Large groups of smaller-balance homogeneous loans that are collectively evaluated for impairment are not included in the scope of FAS 114.[27] Such groups of loans may include, but are not limited to, credit card, residential mortgage, and consumer installment loans. FAS 5 addresses the accounting for impairment of these loans. Also, FAS 5 provides the accounting guidance for impairment of loans that are not identified for evaluation on an individual basis and loans that are individually evaluated but are not individually considered impaired. Institutions should ensure that they do not layer their loan-loss allowances. Layering is the inappropriate practice of recording in the ALLL more than one amount for the same probable loan loss. Layering can happen when an institution includes a loan in one segment, determines its best estimate of loss for that loan either individually or on a group basis (after taking into account all appropriate environmental factors, conditions, and events), and then includes the loan in another group, which receives an additional ALLL amount.[28]

While different institutions may use different methods, there are certain common elements that should be included in any loan-loss allowance methodology. Generally, an institution's methodology should—

- include a detailed analysis of the loan portfolio, performed on a regular basis;
- consider all loans (whether on an individual or group basis);
- identify loans to be evaluated for impairment on an individual basis under FAS 114 and segment the remainder of the portfolio into groups of loans with similar risk characteristics for evaluation and analysis under FAS 5;
- consider all known relevant internal and external factors that may affect loan collectibility;
- be applied consistently but, when appropriate, be modified for new factors affecting collectibility;
- consider the particular risks inherent in different kinds of lending;

27. In addition, FAS 114 does not apply to loans measured at fair value or at the lower of cost or fair value, leases, or debt securities.

28. According to the Federal Financial Institutions Examination Council's *Federal Register* notice, Implementation Issues Arising from FASB Statement No. 114, "Accounting by Creditors for Impairment of a Loan," published February 10, 1995, institution-specific issues should be reviewed when estimating loan losses under FAS 114. This analysis should be conducted as part of the evaluation of each individual loan reviewed under FAS 114 to avoid potential ALLL layering.

- consider current collateral values (less costs to sell), where applicable;
- require that analyses, estimates, reviews, and other ALLL methodology functions be performed by competent and well-trained personnel;
- be based on current and reliable data;
- be well documented, in writing, with clear explanations of the supporting analyses and rationale; and
- include a systematic and logical method to consolidate the loss estimates and ensure the ALLL balance is recorded in accordance with GAAP.[29]

29. Refer to paragraph 7.05 of the AICPA Audit Guide.

A systematic methodology that is properly designed and implemented should result in an institution's best estimate of the ALLL. Accordingly, institutions should adjust their ALLL balance, either upward or downward, in each period for differences between the results of the systematic determination process and the unadjusted ALLL balance in the general ledger.[30]

30. Institutions should refer to the guidance on materiality in SEC Staff Accounting Bulletin No. 99, *Materiality*.

The federal banking agencies[1] issued, in January 2012, "Interagency Supervisory Guidance on Allowance for Loan and Lease Losses Estimation Practices for Loans and Lines of Credit Secured by Junior Liens on 1–4 Family Residential Properties." The guidance was issued to address the allowance for loan and lease losses (ALLL) estimation practices for junior-lien loans and lines of credit (collectively, junior liens). (See SR-12-3.)

Domestic banking organizations that are supervised by the Federal Reserve are reminded to consider all credit quality indicators relevant to their junior liens. Generally, this information should include the delinquency status of senior liens associated with the institution's junior liens and whether the senior lien has been modified. Institutions should ensure that during the ALLL estimation process, sufficient information is gathered to adequately assess the probable loss incurred within junior-lien portfolios.

Based on the rapid growth in home equity lending during the 2003–2007 timeframe, a significant volume of home equity lines of credit (HELOCs) will be approaching the end of their draw periods within the next several years and will either convert to amortized loans or will start having principal due as a balloon payment. An institution with a significant number of HELOCs should ensure that its ALLL methodology appropriately captures the elevated borrower default risk associated with any upcoming payment shocks.

This 2012 ALLL guidance applies to institutions of all sizes. The guidance states that an institution should use reasonably available tools to determine the payment status of senior liens associated with its junior liens, such as credit reports, third-party services, or, in certain cases, a proxy. It is expected that large, complex institutions would find most tools reasonably available and would use proxies in limited circumstances.

The guidance does not add or modify existing regulatory reporting requirements issued by the agencies or current generally accepted accounting principles (GAAP). This guidance reiterates key concepts included in GAAP and existing supervisory guidance related to the ALLL. (See, for example, SR-01-17 and SR-06-17 and their attachments. See also sections 2070.1 and 2072.1.)

Institutions also are reminded to follow appropriate risk-management principles in managing junior-lien loans and lines of credit, including the May 2005 "Interagency Credit Risk Management Guidance for Home Equity Lending." (See SR-05-11 and section 2090.1.)

ALLL ESTIMATION PRACTICES FOR LOANS AND LINES OF CREDIT SECURED BY JUNIOR LIENS ON 1–4 FAMILY RESIDENTIAL PROPERTIES

Amidst continued uncertainty in the economy and the housing market, federally regulated financial institutions are reminded to monitor all credit quality indicators relevant to credit portfolios, including junior liens. While the following guidance specifically addresses junior liens, it contains principles that apply to estimating the ALLL for all types of loans. Institutions also are reminded to follow appropriate risk-management principles in managing junior-lien loans and lines of credit, including those in the May 2005 "Interagency Credit Risk Management Guidance for Home Equity Lending."

The December 2006 "Interagency Policy Statement on the Allowance for Loan and Lease Losses" (IPS) states: "Estimates of credit losses should reflect consideration of the significant factors that affect the collectibility of the portfolio as of the evaluation date."

The "Interagency Credit Risk Management Guidance for Home Equity Lending" states: "Financial institutions should establish an appropriate ALLL and hold capital commensurate with the riskiness of portfolios. In determining the ALLL adequacy, an institution should consider how the interest-only and draw features of HELOCs during the lines' revolving period could affect the loss curves for the HELOC portfolio. Those institutions engaging in programmatic subprime home equity lending or institutions that have higher risk products are expected to recognize the elevated risk of the activity when assessing capital and ALLL adequacy."

1. The federal banking agencies are the Board of Governors of the Federal Reserve System (Federal Reserve Board), the Federal Deposit Insurance Corporation (FDIC), the Office of the Comptroller of the Currency (OCC), and the National Credit Union Administration (NCUA).

While the 2012 ALLL guidance specifically addresses junior liens, it contains principles that apply to estimating the ALLL for *all types* of loans.

Responsibilities of Management

Consideration of All Significant Factors

Institutions should ensure that during the ALLL estimation process sufficient information is gathered to adequately assess the probable loss incurred within junior-lien portfolios. Generally, this information should include the delinquency status of senior liens associated with the institution's junior liens and whether the senior lien loan has been modified. Institutions with significant holdings of junior liens should gather and analyze data on the associated senior-lien loans it owns or services. When an institution does not own or service the associated senior-lien loans, it should use reasonably available tools to determine the payment status of the senior-lien loans. Such tools include obtaining credit reports or data from third-party services to assist in matching an institution's junior liens with its associated senior liens. Additionally, an institution may, as a proxy, use the relevant performance data on similar senior liens it owns or services. An institution with an insignificant volume of junior-lien loans and lines of credit may use judgment when determining what information about associated senior liens not owned or serviced is reasonably available.

Institutions with significant holdings of junior liens should also periodically refresh other credit quality indicators the organization has deemed relevant about the collectibility of its junior liens, such as borrower credit scores and combined loan-to-value ratios (CLTVs), which include both the senior and junior liens. An institution should refresh relevant credit quality indicators as often as necessary considering economic and housing market conditions that affect the institution's junior-lien portfolio. As noted in SR-06-17, "changes in the level of the ALLL should be directionally consistent with changes in the factors, taken as a whole, that evidence credit losses." For example, if declining credit quality trends in the factors relevant to either junior liens or their associated senior-lien loans are evident, the ALLL level as a percentage of the junior-lien portfolio should generally increase, barring unusual charge-off activity. Similarly, if improving credit quality trends are evident, the ALLL level as a percentage of the junior-lien portfolio should generally decrease.

Institutions routinely gather information for credit-risk management purposes, but some may not fully use that information in the allowance estimation process. Institutions should consider all reasonably available and relevant information in the allowance estimation process, including information obtained for credit-risk management purposes. Financial Accounting Standards Board Accounting Standards Codification (ASC) Topic 450 states that losses should be accrued by a charge to income if information available prior to issuance of the financial statements indicates that it is probable that an asset has been impaired. The 2006 IPS states, "...estimates of credit losses should reflect consideration of all significant factors." (See SR-06-17 and its attachment.) Consequently, it is considered inconsistent with both GAAP and supervisory guidance to fail to gather and consider reasonably available and relevant information that would significantly affect management's judgment about the collectibility of the portfolio.[2]

Adequate Segmentation

Institutions normally segment their loan portfolio into groups of loans based on risk characteristics as part of the ALLL estimation process. Institutions with significant holdings of junior liens should ensure adequate segmentation within their junior-lien portfolio to appropriately estimate the allowance for high-risk segments within this portfolio. A lack of segmentation can result in an allowance established for the entire junior-lien portfolio that is lower than what the allowance would be if high-risk loans were segregated and grouped together for evaluation in one or more separate segments. The following credit quality indicators may be appropriate for use in identifying high-risk junior-lien portfolio segments:

2. "Portfolio" refers to loans collectively evaluated for impairment under ASC Topic 450; this supervisory guidance may also be applicable to junior-lien loans that are subject to measurement for impairment under ASC Subtopic 310-10, Receivables - Overall (formerly Statement of Financial Accounting Standards No. 114, *Accounting by Creditors for Impairment of a Loan*) and ASC Subtopic 310-30, Loans and Debt Securities Acquired with Deteriorated Credit Quality (formerly AICPA Statement of Position 03-3, *Accounting for Certain Loans or Debt Securities Acquired in a Transfer*).

- delinquency and modification status of an institution's junior liens
- delinquency and modification status of senior-lien loans associated with an institution's junior liens
- current borrower credit score
- current CLTV
- origination channel
- documentation type
- property type (for example, investor owned or owner-occupied)
- geographic location of property
- origination vintage
- HELOCs where the borrower is making only the minimum payment due
- HELOCs where current information and conditions indicate that the borrower will be subject to payment shock

In particular, institutions should ensure their ALLL methodology adequately incorporates the elevated borrower default risk associated with payment shocks due to (1) rising interest rates for adjustable rate junior liens, including HELOCs,[3] or (2) HELOCs converting from interest-only to amortizing loans. If the default rate of junior liens that have experienced payment shock is higher than the default rate of junior liens that have not experienced payment shock, an institution should determine whether it has a significant number of junior liens approaching their conversion to amortizing loans or approaching an interest rate adjustment date. If so, to ensure the institution's estimate of credit losses is not understated, it would be necessary to adjust historical default rates on these junior liens to incorporate the effect of payment shocks that, based on current information and conditions, are likely to occur.

Adequate segmentation of the junior-lien portfolio by risk factors should facilitate an institution's ability to track default rates and loss severity for high-risk segments and its ability to appropriately incorporate these data into the allowance estimation process.

3. Forecasts of future interest rate increases should not be included in the determination of the ALLL. However, if rates have risen since the last rate adjustment, the effect of the increase on the amount of the payment at the next rate adjustment should be considered.

Qualitative or Environmental Factor Adjustments

As noted in SR-06-17, institutions should adjust a loan group's historical loss rate for the effect of qualitative or environmental factors that are likely to cause estimated credit losses as of the evaluation date to differ from the group's historical loss experience. Institutions typically reflect the overall effect of these factors on a loan group as an adjustment that, as appropriate, increases or decreases the historical loss rate applied to the loan group. Alternatively, the effect of these factors may be reflected through separate standalone adjustments within the ASC Subtopic 450-20 component of the ALLL.

When an institution uses qualitative or environmental factors to estimate probable losses related to individual high-risk segments within the junior-lien portfolio, any adjustment to the historical loss rate or any separate standalone adjustment should be supported by an analysis that relates the adjustment to the characteristics of and trends in the individual risk segments. In addition, changes in the allowance allocation for junior liens should be directionally consistent with changes in the factors taken as a whole that evidence credit losses on junior liens, keeping in mind the characteristics of the institution's junior-lien portfolio.

Charge-Off and Nonaccrual Policies

Banking institutions should ensure that their charge-off policy on junior liens is in accordance with the June 2000 Uniform Retail Credit Classification and Account Management Policy. (See SR-00-8 and the appendix of section 2130.1.) As stated in SR-06-17, "when available information confirms that specific loans, or portions thereof, are uncollectible, these amounts should be promptly charged off against the ALLL."

Institutions also should ensure that income-recognition practices related to junior liens are appropriate. Consistent with GAAP and regulatory guidance, institutions are expected to have revenue recognition practices that do not result in overstating income. Placing a junior lien on nonaccrual, including a current junior lien, when payment of principal or interest in full is not expected is one appropriate method to ensure that income is not overstated. An institution's income-recognition policy should incorporate management's consideration of all reasonably available information including, for junior liens, the performance of the associated senior liens as well as trends in other credit quality indicators. The policy should require that consideration of these factors takes place before foreclosure on the senior lien or delinquency of the junior lien. The policy should also explain how management's consideration of these factors affects income recognition prior to foreclosure on the senior lien or delinquency of the junior lien to ensure income is not overstated.

Responsibilities of Examiners

To the extent an institution has significant holdings of junior liens, examiners should assess the appropriateness of the institution's ALLL methodology and documentation related to these loans, and the appropriateness of the level of the ALLL established for this portfolio. As noted in SR-06-17, for analytical purposes, an institution should attribute portions of the ALLL to loans that it individually evaluates and determines to be impaired under ASC Subtopic 310-10 and to groups of loans that it evaluates collectively under ASC Subtopic 450-20. However, the ALLL is available to cover all charge-offs that arise from the loan portfolio.

Consistent with SR-06-17, in their review of the junior-lien portfolio, examiners should consider all significant factors that affect the collectibility of the portfolio. Examiners should take the following steps when reviewing the appropriateness of an institution's allowance that is established for junior liens:

- Evaluate the institution's ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL for junior liens. This should include whether all significant qualitative or environmental factors that affect the collectibility of the portfolio (including those factors previously discussed) have been appropriately considered in accordance with GAAP.
- Review management's use of loss estimation models or other loss estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.
- Review management's support for any qualitative or environmental factor adjustments to the allowance related to junior liens. Examiners should ensure that all relevant qualitative or environmental factors were considered and adjustments to historical loss rates for specific risk segments within the junior-lien portfolio are supported by an analysis that relates the adjustment to the characteristics of and trends in the individual risk segments.
- Review the interest income accounts associated with junior liens to ensure that the institution's net income is not overstated.

If the examiner concludes that the reported ALLL for junior liens is not appropriate or determines that the ALLL evaluation process is deficient, recommendations for correcting these deficiencies, including any examiner concerns regarding an appropriate level for the ALLL, should be noted in the report of examination. Examiners should cite any departures from GAAP and regulatory guidance, as applicable. Additional supervisory action may also be taken based on the magnitude of the observed shortcomings in the ALLL process.

ALLL Estimation Practices for Loans Secured by Junior Liens
Examination Objectives
Effective date April 2012

Section 2015.2

The examination objectives for an institution that has significant holdings of loans secured by junior liens are as follows:

1. To evaluate the appropriateness of the institution's methodology and documentation of the allowance for loan and lease losses (ALLL) related to these loans.
2. To ascertain whether the institution's policies, practices, procedures, and internal controls regarding the ALLL estimation practices for loans secured by junior liens are sufficient.
3. To determine whether the level of the ALLL is reasonable and adequate for the institution's volume of such loans outstanding.
4. To evaluate if the institution has fully considered and accounted for all significant qualitative or environmental factors that affect the collectability of such loans.
5. To ascertain whether the portfolio has been properly accounted in accordance with generally accepted accounting principles and whether all applicable supervisory and regulatory guidance, as well as statutory and regulatory requirements, have been adhered to.

1. To the extent an institution has significant holdings of loans secured by junior liens, assess the appropriateness of the institution's
   a. allowance for loan and lease loss (ALLL) methodology and documentation related to these loans, and
   b. ALLL level established for this portfolio.
2. During the examination's review of the of the junior-lien portfolio, consider all significant qualitative or environmental factors that affect the collectibility of the junior-lien portfolio and whether they have been appropriately considered in accordance with generally accepted accounting principles (GAAP).
3. Perform the following steps when reviewing the appropriateness of the institution's ALLL that is established for junior liens:
   a. Evaluate the institution's ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL for junior liens.
   b. Review management's use of loss-estimation models or other loss-estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.
   c. Review management's support for any qualitative or environmental factor adjustments to the ALLL related to junior liens. Ensure that all relevant qualitative or environmental factors were considered and adjustments to historical loss rates for specific risk segments within the junior-lien portfolio are supported by an analysis that relates the adjustment to the characteristics of and trends in the individual risk segments.
   d. Review the interest income accounts associated with junior liens to ensure that the institution's net income is not overstated.
4. Provide comments in the examination report when the ALLL for junior liens is not appropriate or if the ALLL evaluation process is deficient. Include recommendations for correcting these deficiencies and any concerns regarding an appropriate level for the ALLL.
5. Cite in the examination report any departures from GAAP and regulatory guidance, as applicable.

This section sets forth the June 29, 2011, ''Interagency Supervisory Guidance of Counterparty Credit Risk Management'' issued by the federal banking agencies.[1] The guidance discusses the critical aspects of effective management of counterparty credit risk (CCR), and it sets forth sound practices and supervisory expectations for the development of an effective CCR-management framework. CCR is the risk that the counterparty to a transaction could default or deteriorate in creditworthiness before the final settlement of a transaction's cash flows. Unlike the credit risk for a loan, when only the lending banking organization faces the risk of loss, CCR creates a bilateral risk of loss because the market value of a transaction can be positive or negative to either counterparty. The future market value of the exposure and the counterparty's credit quality are uncertain and may vary over time as underlying market factors change.

This CCR guidance is intended for use by banking organizations,[2] especially those with large derivatives portfolios, in setting their risk-management practices as well as by supervisors as they assess and examine such institutions' management of CCR. For other banking organizations without large derivatives portfolios, risk managers and supervisors should apply this guidance as appropriate, given the size, nature, and complexity of the CCR risk profile of the banking organization, although this guidance would generally not apply to community banking organizations.

CCR is a multidimensional form of risk, affected by both the exposure to a counterparty and the credit quality of the counterparty, both of which are sensitive to market-induced changes. It is also affected by the interaction of these risks—for example, the correlation[3] between an exposure and the credit spread of the counterparty, or the correlation of exposures among the banking organization's counterparties. Constructing an effective CCR-management framework requires a combination of risk-management techniques from the credit-, market-, and operational-risk disciplines.

This guidance reinforces sound governance of CCR-management practices, through prudent board and senior management oversight, management reporting, and risk-management functions. The guidance also elaborates on the sound practices for an effective CCR-management framework and associated characteristics of adequate systems infrastructure. It also covers risk-control functions, such as counterparty limits, margin practices, validating and backtesting models and systems, managing close-outs,[4] managing central counterparty exposures, and controlling legal and operational risks arising from derivatives activities.

CCR-management guidelines and supervisory expectations are delineated in various individual and interagency policy statements and guidance,[5] which remain relevant and applicable. This guidance offers further explanation and clarification, particularly in light of developments in CCR management. However, this guidance is not all-inclusive, and banking organizations should reference sound practices for CCR management, such as those advanced by industry, policymaking, and supervisory forums.[6] (See SR 11-10.)

1. The Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC). The former Office of Thrift Supervision (OTS) also participated in developing this guidance.

2. For the purposes of this CCR guidance, unless otherwise indicated, the term *banking organizations* is intended to refer to state member banks, state nonmember banks, national banks, federal savings associations, state-chartered savings associations, bank holding companies, and savings and loan holding companies. The U.S. branches and agencies of foreign banks are also considered to be banking organizations for purposes of this guidance.

3. In this guidance, ''correlation'' refers to any form of linear or nonlinear interrelationship or dependence between factors.

4. A close-out is the process undertaken by a banking organization following default of a counterparty to fully collect on all items due from that counterparty.

5. See, for example, the FFIEC ''Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities,'' 63 *Fed. Reg.* 20191, April 23, 1998. Federal Reserve examination guidance on CCR is contained in SR-99-3, section 2126.3 of the *Bank Holding Company Supervision Manual* and section 2020.1 of the *Trading and Capital-Markets Activities Manual.*

6. Industry, policymaking, and supervisory groups include, but are not limited to, the Counterparty Risk Management Policy Group (CRMPG), Committee on Payment and Settlement Systems (CPSS), International Swaps and Derivatives Association (ISDA), Institute of International Finance (IIF), Group of Thirty (G30), Group of Twenty Finance Ministers and Central Bank Governors (G-20), International Organization of Securities Commissions (IOSCO), Senior Supervisors Group (SSG), and Basel Committee on Banking Supervision (BCBS). Documents produced by all of these groups were drawn upon in developing this guidance.

GOVERNANCE

Board and Senior Management Responsibilities

The board of directors or a designated board-level committee (board) should clearly articulate the banking organization's risk tolerance for CCR by approving relevant policies, including a framework for establishing limits on individual counterparty exposures and concentrations of exposures. Senior management should establish and implement a comprehensive risk-measurement and management framework consistent with this risk tolerance that provides for the ongoing monitoring, reporting, and control of CCR exposures.

Senior management should adhere to the board's established risk tolerance and should establish policies and risk-management guidelines appropriately. At a minimum, policies should outline CCR-management standards that are in conformance with this guidance. More specifically, they should address the subjects discussed in this document, such as risk measurement and reporting, risk-management tools, and processes to manage legal and operational risk. Policies should be detailed and contain a clear escalation process for review and approval of policy exceptions, especially those pertaining to transaction terms and limits.

Management Reporting

Banking organizations should report counterparty exposures to the board and senior management at a frequency commensurate with the materiality of exposures and the complexity of transactions. Reporting should include concentration analysis and CCR stress-testing results to allow for an understanding of exposures and potential losses under severe market conditions. Reports should also include an explanation of any measurement weaknesses or limitations that may influence the accuracy and reliability of the CCR risk measures.

Senior management should have access to timely, accurate, and comprehensive CCR reporting metrics, including an assessment of significant issues related to the risk-management aspects discussed in this guidance. They should review CCR reports at least monthly, with data that are no more than three weeks old. It is general practice for institutions to report the following:

- total counterparty credit risk aggregated on a firm-wide basis and at significant legal entities
- counterparties with the largest exposures, along with detail on their exposure amounts
- exposures to central counterparties (CCPs)
- significant concentrations, as outlined in this guidance
- exposures to weak or problem counterparties
- growth in exposures over time; as a sound practice, metrics should capture quarterly or monthly changes, supplemented (where relevant) by year-over-year trend data
- exposures from over-the-counter (OTC) derivatives; when they are material, additional product-class breakouts (for example, traditional lending, securities lending) should be included
- a sufficiently comprehensive range of CCR metrics, as discussed in the CCR metrics section
- a qualitative discussion of key risk drivers of exposures or conditions or factors that would fundamentally change the risk profile of CCR; an example would be assessment of changes in credit underwriting terms and whether they remain prudent

Risk-Management Function and Internal Audit

Risk Management

A banking organization's board and senior management should clearly delineate the respective roles of business lines versus risk management, both in terms of initiating transactions that have CCR and of ongoing CCR management. The board and senior management should ensure that the risk-management functions have adequate resources, are fully independent from CCR-related trading operations (in both activity and reporting), and have sufficient authority to enforce policies and to escalate issues to senior management and the board (independent of the business line).

Internal Audit

The board should direct internal audit to regularly assess the adequacy of the CCR-management framework as part of the regular audit plan. Such assessments should include credit-line approval processes, credit ratings, and credit monitoring. Such an assessment should opine on the adequacy of the CCR infrastructure and processes, drawing where appropriate from individual business line reviews or other internal and external audit work. (See the relevant section of this guidance regarding the role of CCR model validation or review.) The board should review annual reports from internal audit and model validation or review, assessing the findings and confirming that management has taken appropriate corrective actions.

RISK MEASUREMENT

CCR Metrics

Given the complexity of CCR exposures (particularly regarding OTC derivatives), banking organizations should employ a range of risk-measurement metrics to promote a comprehensive understanding of CCR and how it changes in varying environments. Metrics should be commensurate with the size, complexity, liquidity, and risk profile of the CCR portfolio. Banking organizations typically rely on certain metrics as a primary means of monitoring, with secondary metrics used to create a more robust view of CCR exposures. Banking organizations should apply these metrics to single counterparty exposures, groups of counterparties (for example, by internal rating, industry, geographical region), and the consolidated CCR portfolio. Banking organizations should assess their largest exposures, for instance their top 20 exposures, using each primary metric.

Major dealers and large, sophisticated banking organizations with substantial CCR exposure should measure and assess

- current exposure (both gross and net of collateral);
- forward-looking exposure (that is, potential exposure);
- stressed exposure (broken out by market-risk factors and/or by scenario);
- aggregate and stressed credit valuation adjustment (CVA) as well as CVA factor sensitivities;
- additional relevant risk measures, such as (for credit derivatives) jump-to-default risk on the reference obligor, and economic capital usage;
- the largest exposures by individual business line and product types; and
- correlation risks, such as wrong-way risk, as well as the credit quality of collateral.

Refer to this section's Appendix A for definitions of basic metrics and descriptions of their purposes.

Aggregation of Exposures

Banking organizations should have the capacity to measure their exposure at various levels of aggregation (for example, by business line, legal entity, or consolidated by industry). Systems should be sufficiently flexible to allow for timely aggregation of all CCR exposures (that is, OTC derivatives, securities financing transactions (SFTs), and other presettlement exposures), as well as aggregation of other forms of credit risk to the same counterparty (for example, loans, bonds, and other credit risks). The following are sound CCR-aggregation principles:

- Counterparty-level current exposure and potential exposure should be calculated daily, based on the previous day's position data and any exchange of collateral.
- For each organizational level of aggregation, all trades should be included.
- There should be sufficient flexibility to aggregate exposure at varying levels of granularity, including industries, regions, families of products (for example, OTC derivatives, SFTs), or other groupings to identify concentrations.
- While banking organizations are not required to express all forms of risk in a common metric or basis, management should be able to view the various forms of exposures to a given counterparty in a single report and/or system. Specifically, this could include current outstanding exposure across different categories (e.g., current exposure for OTC derivatives and drawn-down lines of commitment for loans). Exposure reports should also include the size of settlement and clearing lines.
- Banking organizations should be consistent in their choice of currency and exchange rate, and take into account the validity and legal enforceability of any netting agreements they may have with a counterparty.
- Management should understand the specific approach used to aggregate exposures for any given risk measure, in order to properly assess

the results. For instance, some measures of risk (such as current exposure) may be readily added together, while others (such as potential exposure) are less meaningful when they are added to form an aggregate view of risk.
- Internal capital adequacy models should incorporate CCR.

Concentrations

Concentrated exposures are a significant concern, as CCR can contribute to sudden increases in credit exposure, which in turn can result in unexpectedly large losses in the event of counterparty default. Accordingly, banking organizations should have enterprise-wide processes to effectively identify, measure, monitor, and control concentrated exposures on both a legal entity and enterprise-wide basis.

Concentrations should be identified using both quantitative and qualitative means. An exposure or group of related exposures (for example, firms in the same industry), should be considered a concentration in the following circumstances: exposures (individually or collectively) exceed risk-tolerance levels established to ensure appropriate diversification; deterioration of the exposure could result in material loss; or deterioration could result in circumstances that are detrimental to the banking organization's reputation. All credit exposures should be considered as part of concentration management, including loans, OTC derivatives, names in bespoke and index CDO credit tranches, securities settlements, and money market transactions such as fed funds sold. Total credit exposures should include the size of settlement and clearing lines or other committed lines.

CCR-concentration management should identify, quantify, and monitor the following:

- Individual counterparties with large potential exposures, when those exposures are driven by a single market factor or transaction type. In these circumstances, banking organizations should supplement statistical measures of potential exposure with other measures, such as stress tests, that identify such concentrations and provide an alternative view of risks associated with close-outs.
- Concentrations of exposures to individual legal entities, as well as concentrations across affiliated legal entities at the parent entity level, or in the aggregate for all related entities.
- Concentrations of exposures to industries or other obligor groupings.
- Concentrations of exposures to geographic regions or country-specific groupings sensitive to similar macroeconomic shocks.
- Concentrations across counterparties when potential exposure is driven by the same or similar risk factors. For both derivatives and SFTs, banking organizations should understand the risks associated with crowded trades,[7] where close-out risk may be heightened under stressed market conditions.
- Collateral concentrations, including both risk concentrations with a single counterparty and risks associated with portfolios of counterparties. Banking organizations should consider concentrations of noncash collateral for all product lines covered by collateral agreements,[8] including collateral that covers a single counterparty exposure and portfolios of counterparties.[9]
- Collateral concentrations involving special purpose entities (SPEs). Collateral-concentration risk is particularly important for SPEs, because the collateral typically represents an SPE's paying capacity.
- Banking organizations should consider the full range of credit risks in combination with CCR to manage concentration risk, including risks from on- and off-balance-sheet activities, contractual and noncontractual risks, contingent and noncontingent risks, as well as underwriting and pipeline risks.

Stress Testing

Banking organizations with significant CCR exposures should maintain a comprehensive stress-testing framework, which is integrated into the banking organization's CCR manage-

7. For purposes of this guidance, a "crowded trade" is a large balance of open trading positions in a given asset or group of assets relative to its daily trading volume, when other market participants have similar positions that would need to be liquidated should any adverse price change occur. Coincident sale of these assets by a large number of market participants could lead to significant price declines and dramatic increases in uncollateralized exposures.

8. Banking organizations should also track concentrations in volatile currencies.

9. This analysis is particularly important with repo-style transactions and other forms of SFTs for which the ability of market participants to liquidate large collateral positions may be difficult during periods of market turbulence.

ment. The framework should inform the banking organization's day-to-day exposure and concentration management, and it should identify extreme market conditions that could excessively strain the financial resources of the banking organization. Regularly, but no less than quarterly, senior management should evaluate stress-test results for evidence of potentially excessive risk and take risk-reduction strategies as appropriate.

The severity of factor shocks should be consistent with the purpose of the stress test. When evaluating solvency under stress, factor shocks should be severe enough to capture historical extreme market environments and/or extreme-but-plausible stressed market conditions. The impact of such shocks on capital resources and earnings should be evaluated. For day-to-day portfolio monitoring, hedging, and management of concentrations, banking organizations should also consider scenarios of lesser severity and higher probability. When conducting stress testing, risk managers should challenge the strength of assumptions made about the legal enforceability of netting and the ability to collect and liquidate collateral.

A sound stress-testing framework should include the following:

- Measurement of the largest counterparty-level impacts across portfolios, material concentrations within segments of a portfolio (such as industries or regions), and relevant portfolio- and counterparty-specific trends.
- Complete trade capture and exposure aggregation across all forms of trading (not just OTC derivatives) at the counterparty-specific level, including transactions that fall outside of the main credit system. The time frame selected for trade capture should be commensurate with the frequency with which stress tests are conducted.
- Stress tests, at least quarterly, of principal market-risk factors on an individual basis (for example, interest rates, foreign exchange, equities, credit spreads, and commodity prices) for all material counterparties. Banking organizations should be aware that some counterparties may be material on a consolidated basis, even though they may not be material on an individual legal-entity basis.
- Assessment of nondirectional risks (for example, yield-curve exposures and basis risks) from multifactor stress-testing scenarios. Multifactor stress tests should, at a minimum, aim to address separate scenarios: severe economic or market events; significant decrease in broad market liquidity; and the liquidation of a large financial intermediary of the banking organization, factoring in direct and indirect consequences.
- Consideration, at least quarterly, of stressed exposures resulting from the joint movement of exposures and related counterparty creditworthiness. This should be done at the counterparty-specific and counterparty-group (for example, industry and region) level, and in aggregate for the banking organization. When CVA methodologies are used, banking organizations should ensure that stress testing sufficiently captures additional losses from potential defaults.[10]
- Basic stress testing of CVA to assess performance under adverse scenarios, incorporating any hedging mismatches.
- Concurrent stress testing of exposure and noncash collateral for assessing wrong-way risk.
- Identification and assessment of exposure levels for certain counterparties (for example, sovereigns and municipalities), above which the banking organization may be concerned about willingness to pay.
- Integration of CCR stress tests into firm-wide stress tests.[11]

Credit Valuation Adjustments

CVA refers to adjustments to transaction valuation to reflect the counterparty's credit quality. CVA is the fair-value adjustment to reflect CCR in valuation of derivatives. As such, CVA is the market value of CCR and provides a market-based framework for understanding and valuing the counterparty credit risk embedded in derivative contracts. CVA may include only the adjustment to reflect the counterparty's credit quality (a one-sided CVA or just CVA), or it may include an adjustment to reflect the banking organization's own credit quality. The latter is a two-sided CVA, or CVA plus a debt valuation adjustment (DVA). For the evaluation of the

10. Exposure testing should include single-factor, multifactor, and material nondirectional risks.

11. CCR stress testing should be consistent with overall banking-organization-wide stress testing and follow the principles set forth in the "Principles for Sound Stress Testing Practices and Supervision" issued by the Risk Management and Modeling Group of the Basel Committee in May 2009.

credit risk due to probability of default of counterparties, a one-sided CVA is typically used. For the evaluation of the value of derivatives transactions with a counterparty or the market risk of derivatives transactions, a two-sided CVA should be used.

Although CVA is not a new concept, its importance has grown, partly because of a change in accounting rules that requires banking organizations to recognize the earnings impact of changes in CVA.[12] During the 2007–2009 financial crisis, a large portion of CCR losses were because of CVA losses rather than actual counterparty defaults.[13] As such, CVA has become more important in risk management, as a mechanism to value, manage, and make appropriate hedging decisions, to mitigate banking organizations' exposure to the mark-to-market (MTM) impact of CCR.[14] The following are general standards for CVA measurement and use of CVA for risk-management purposes:

- CVA calculations should include all products and counterparties, including margined counterparties.
- The method for incorporating counterparty credit quality into CVA should be reasonable and subject to ongoing evaluation. CVA should reflect the fair value of the counterparty credit risk for OTC derivatives, and inputs should be based on current market prices when possible.
  - — Credit spreads should be reflected in the calculation where available, and banking organizations should not overly rely on non-market-based probability of default estimates when calculating CVA.
  - — Banking organizations should attempt to map credit quality to name-specific spreads rather than spreads associated with broad credit categories.
  - — Any proxy spreads should reasonably capture the idiosyncratic nature of the counterparty and the liquidity profile.
  - — The term structure of credit spreads should be reflected in the CVA calculation.
- The CVA calculation should incorporate counterparty-specific master netting agreements and margin terms; for example, the CVA calculation should reflect margin thresholds or minimum transfer amounts stated in legal documents.
- Banking organizations should identify the correlation between a counterparty's creditworthiness and its exposure to the counterparty, and seek to incorporate the correlation into their respective CVA calculation.

Management of CVA

CVA management should be consistent with sound risk-management practices for other material MTM risks. These practices should include the following:

- Business units engaged in trades related to CVA management should have independent risk-management functions overseeing their activities.
- Systems that produce CVA risk metrics should be subject to the same controls as used for other MTM risks, including independent validation or review of all risk models, including alternative methodologies.[15]
- Upon transaction execution, CVA costs should be allocated to the business unit that originates the transaction.
  - — As a sound practice, the risk of CVA should be incorporated into the risk-adjusted return calculation of a given business.
  - — CVA cost allocation provides incentive for certain parties to make prudent risk-taking decisions and motivates risk-takers to support risk mitigation, such as requiring strong collateral terms.
- Banking organizations should measure sensitivities to changes in credit- and market-risk factors to determine the material drivers of MTM changes. On a regular basis, but no less frequently than quarterly, banking organizations should ensure that CVA MTM changes

12. See the Financial Accounting Standards Board's accounting literature pertinent to CVA in Accounting Standards Codification (ASC) Topic 820 (formerly FAS Statement 157). In addition, other transaction fair-value adjustments should be conducted—for example, those involving a banking organization's own credit risk or differences in funding costs based on whether transactions are collateralized or not.

13. Basel Committee on Banking Supervision, "Strengthening the Resilience of the Banking Sector—-Consultative Document," December 2009.

14. An accurate measure of CVA is critical to prudent risk-taking, as part of effectively understanding the risk-reward tradeoff in a given derivatives transaction. The more comprehensively CVA is measured, the more transparent the economics of a given transaction.

15. Liquidity in credit markets has varied significantly over time. As liquidity conditions change, banking organizations should calculate CVA using methodologies appropriate to the market pricing information available for each counterparty and transaction type.

are sufficiently explained by these risk factors (for example, through profit and loss attribution for sensitivities and backtesting for value at risk (VaR)).
- Banking organizations hedging CVA MTM should gauge the effectiveness of hedges through measurements of basis risk or other types of mismatches. In this regard, it is particularly important to capture nonlinearities, such as the correlation between market and credit risk, and other residual risks that may not be fully offset by hedging.

CVA VaR

Banking organizations with material CVA should measure the risk of associated loss on an ongoing basis. In addition to stress tests of the CVA, banking organizations may develop VaR models that include CVA to measure potential losses. While these models are currently in the early stages of development, they may prove to be effective tools for risk-management purposes. An advantage of CVA VaR over more traditional CCR risk measures is that it captures the variability of the CCR exposure, the variability of the counterparty's credit spread, and the dependency between them.

Developing VaR models for CVA is significantly more complicated than developing VaR models for a banking organization's market-risk positions. In developing a CVA VaR model, a banking organization should match the percentile and time horizon for the VaR model to those appropriate for the management of this risk, and include all significant risks associated with changes in the CVA. For example, banking organizations may use the same percentile for CVA VaR as they use for market-risk VaR (for example, the 95th or 99th percentile). However, the time horizon for CVA VaR may need to be longer than for market risk (for example, one quarter or one year) because of the potentially illiquid nature of CVA. The following are important considerations in developing a CVA VaR model:

- All material counterparties covered by CVA valuation should be included in the VaR model.
- A CVA VaR calculation that keeps the exposure or the counterparty probability of default static is not adequate. It will not only omit the dependence between the two variables, but also the risk arising from the uncertainty of the fixed variable.
- CVA VaR should incorporate all forms of CVA hedging. Banking organizations and examiners should assess the ability of the VaR measure to accurately capture the types of hedging used by the banking organization.

Wrong-Way Risk

Wrong-way risk occurs when the exposure to a particular counterparty is positively correlated with the probability of default of the counterparty itself. Specific wrong-way risk arises when the exposure to a particular counterparty is positively correlated with the probability of default of the counterparty itself because of the nature of the transactions with the counterparty. General wrong-way risk arises when the probability of default of counterparties is positively correlated with general market-risk factors. Wrong-way risk is an important aspect of CCR that has caused major losses at banking organizations. Accordingly, a banking organization should have a process to systematically identify, quantify, and control both specific and general wrong-way risk across its OTC derivative and SFT portfolios.[16] To prudently manage wrong-way risk, banking organizations should

- maintain policies that formally articulate tolerance limits for both specific and general wrong-way risk, an ongoing wrong-way risk identification process, and the requirements for escalation of wrong-way risk analysis to senior management;
- maintain policies for identifying, approving, and otherwise managing situations when there is a legal connection between the counterparty and the underlying exposure or the associated collateral[17] (banking organizations should generally avoid such transactions because of their increased risk);

16. A standard way of quantifying general wrong-way risk is to design and apply stress scenarios that detect wrong-way risk in the portfolio, record counterparty exposures most affected by the scenarios, and assess whether the creditworthiness of such counterparties is also negatively affected by the scenario.

17. Examples of this situation are single-name credit derivatives when there is a legal relationship between the counterparty and the reference entity underlying the transaction, and financing transactions when the counterparty pledges an affiliate's security as collateral.

- perform wrong-way risk analysis for OTC derivatives, at least at the industry and regional levels; and
- conduct wrong-way risk analysis for SFTs on broad asset classes of securities (for example, government bonds, and corporate bonds).

SYSTEMS INFRASTRUCTURE CONSIDERATIONS

Banking organizations should ensure that systems infrastructure keeps up with changes in the size and complexity of their CCR exposures, and the OTC derivatives market in general. Systems should capture and measure the risk of transactions that may be subject to CCR as a fundamental part of the CCR-management framework.

Banking organizations should have strong operational processes across all derivatives markets, consistent with supervisory and industry recommendations.[18] Management should strive for a single comprehensive CCR-exposure measurement platform.[19] If not currently possible, banking organizations should minimize the number of system platforms and methodologies, as well as manual adjustments to exposure calculations. When using multiple exposure measurement systems, management should ensure that transactions whose future values are measured by different systems are aggregated conservatively.

To maintain a systems infrastructure that supports adequate CCR management, banking organizations should take the following actions:

Data Integrity and Reconciliation

- Deploy adequate operational resources to support reconciliations and related analytical and remediation processes.
- Reconcile positions and valuations with counterparties.
  - — Large counterparties should perform frequent reconciliations of positions and valuations (daily if appropriate).[20]
  - — For smaller portfolios with nondealer counterparties where there are infrequent trades, large dealers should ensure the data integrity of trade and collateral information on a regular (but not necessarily daily) basis, reconciling their portfolios according to prevailing industry standards.
- Reconcile exposure data in CCR systems with the official books and records of the financial institution.
- Maintain controls around obligor names at the point of trade entry, as well as reviews of warehoused credit data, to ensure that all exposures to an obligor are captured under the proper name and can be aggregated accordingly.
- Maintain quality control over transfer of transaction information between trade capture systems and exposure measurement systems.
- Harmonize netting and collateral data across systems to ensure accurate collateral calls and reflection of collateral in all internal systems. Banking organizations should maintain a robust reconciliation process to ensure that internal systems have terms that are consistent with those formally documented in agreements and credit files.
- Remediate promptly any systems weaknesses that raise questions about the appropriateness of the limits structure. If there are a significant number of limit excesses, this may be a symptom of system weaknesses, which should be identified and promptly remediated.
- Eliminate or minimize backlogs of unconfirmed trades.

Automation and Tracking

- Automate legal and operational information, such as netting and collateral terms. Banking organizations should be able to adjust exposure measurements, taking into account the enforceability of legal agreements.
- Automate processes to track and manage legal documentation, especially when there is a large volume of legal agreements.

---

18. Examples are recommendations made by the Senior Supervisors Group (a group comprised of senior financial supervisors from ten countries) and the Counterparty Risk Management Policy Group (a group that consists of major, internationally active commercial and investment banks, which works to promote enhanced practices in counterparty credit and market-risk management).

19. A single platform may, in practice, contain a number of separate systems and models. These would be considered a cohesive framework if they are operationally stable and accurate in risk estimation, particularly with regard to proper reflection of collateral and netting. A common programming language for these systems facilitates an effective measurement framework.

20. Large dealer counterparties should perform portfolio reconciliation on a daily basis, as set forth in relevant industry standards, such as the ISDA's "Collateralised Portfolio Reconciliation Best Operational Practices" (January 2010).

- Increase automation of margin processes[21] and continue efforts to expand automation of OTC derivatives post-trade processing. This should include automation of trade confirmations to reduce the lag between trade execution and legal execution.
- Maintain systems that track and monitor changes in credit terms and have triggers for relevant factors, such as net asset value, credit rating, and cross-default.
- Maintain default monitoring processes and systems.

Add-Ons

For large derivatives market participants, certain trades may be difficult to capture in exposure-measurement systems, and are therefore modeled outside of the main measurement system(s). The resulting exposures, commonly referred to as add-ons, are then added to the portfolio potential-exposure measure. In limited cases, the use of conservative add-on methodologies may be suitable, if the central system cannot reflect the risk of complex financial products. However, overreliance on add-on methodologies may distort exposure measures. To mitigate measurement distortions, banking organizations should take the following steps:

- Review the use of add-on methodologies at least annually. Current or planned significant trading activity should trigger efforts to develop appropriate modeling and systems, prior to or concurrent with these growth plans.
- Establish growth limits for products with material activities that continue to rely on add-ons. Once systems are improved to meet a generally accepted industry standard of trade capture, these limits can be removed.

21. Banking organizations should consider the recommendations in the "Standards of Electronic Exchange of OTC Derivative Margin Calls," issued by the ISDA's Collateral Committee on November 12, 2009.

RISK MANAGEMENT

Counterparty Limits

Meaningful limits on exposures are an integral part of a CCR-management framework, and these limits should be formalized in CCR policies and procedures. For limits to be effective, a banking organization should incorporate these limits into an exposure monitoring system independent of relevant business lines. It should perform ongoing monitoring of exposures against such limits, to ascertain conformance with these limits, and have adequate risk controls that require action to mitigate limit exceptions. Review of exceptions should include escalation to a managerial level that is commensurate with the size of the excess or nature of mitigation required. A sound limit system should include the following:

- Establishment and regular review of counterparty limits by a designated committee. Further, a banking organization should have a process to escalate limit approvals to higher levels of authority, depending on the size of counterparty exposures, credit quality, and tenor.
- Establishment of potential future exposure limits, as well as limits based on other metrics. It is a sound practice to limit the market risk arising through CVA, with a limit on CVA or CVA VaR. However, such limits do not eliminate the need to limit counterparty credit exposure with a measure of potential future exposure.
- Individual CCR limits should be based on peak exposures rather than expected exposures.
  - — Peak exposures are appropriate for individual counterparty limit monitoring purposes because they represent the risk tolerance for exposure to a single counterparty.
  - — Expected exposure is an appropriate measure for aggregating exposures across counterparties in a portfolio credit model, or for use within CVA.
- Consideration of risk factors such as the credit quality of the counterparty, tenor of the transactions, and the liquidity of the positions or hedges.
- Sufficiently automated monitoring processes to provide updated exposure measures at least daily.
- Monitoring of intraday trading activity for conformance with exposure limits and excep-

tion policies. Such controls and procedures can include intraday-limit monitoring, trade procedures and systems that assess a trade's impact on limit utilization prior to execution, limit warning triggers at specific utilization levels, and restrictions by credit-risk management on allocation of full limits to the business lines.

Margin Policies and Practices

Collateral is a fundamental CCR mitigant. Indeed, significant stress events have highlighted the importance of sound margining practices. With this in mind, banking organizations should ensure that they have adequate margin and collateral "haircut"[22] guidelines for all products with CCR.[23] Accordingly, banking organizations should take the following actions:

- Maintain CCR policies that address margin practices and collateral terms, including, but not limited to
  - — processes to establish and periodically review minimum haircuts;
  - — processes to evaluate the volatility and liquidity of the underlying collateral. Banks should strive to ensure that haircuts on collateral do not decline during periods of low volatility; and
  - — controls to mitigate the potential for a weakening of credit standards from competitive pressure.
- Set guidelines for cross-product margining. Banking organizations offer cross-product-margining arrangements to clients to reduce required margin amounts. Guidelines to control risks associated with cross-product margining would include limiting the set of eligible transactions to liquid exposures and having procedures to resolve margin disputes.
- Maintain collateral-management policies and procedures to control, monitor, and report
  - — the extent to which collateral agreements expose a banking organization to collateral risks, such as the volatility and liquidity of the securities held as collateral;
  - — concentrations of less liquid or less marketable collateral asset classes;
  - — the risks of re-hypothecation or other reinvestment of collateral (both cash and non-cash) received from counterparties, including the potential liquidity shortfalls resulting from the reuse of such collateral; and
  - — the CCR associated with the decision whether to require posted margin to be segregated. Organizations should perform a legal analysis concerning the risks of agreeing to allow cash to be commingled with a counterparty's own cash and of allowing a counterparty to rehypothecate securities pledged as margin.
- Maintain policies and processes for monitoring margin agreements involving third-party custodians. As with bilateral counterparties, banking organizations should
  - — identify the location of the account to which collateral is posted or from which it is received;
  - — obtain periodic account statements or other assurances that confirm the custodian is holding the collateral in conformance with the agreement; and
  - — understand the characteristics of the account where the collateral is held (for example, whether it is in a segregated account) and the legal rights of the counterparty or any third-party custodian regarding this collateral.

Validation of Models and Systems

A banking organization should validate its CCR models initially and on an ongoing basis. Validation of models should include an evaluation of the conceptual soundness and developmental evidence supporting a given model; an ongoing monitoring process that includes verification of processes and benchmarking; and an outcomes-analysis process that includes backtesting. Validation should identify key assumptions and potential limitations, and it should assess their possible impact on risk metrics. All components of models should be subject to validation along with their combination in the CCR system.

Evaluating the conceptual soundness involves

22. A *haircut* is the difference between the market value of an asset being used as collateral for a loan and the amount of money that a lender will advance against the asset.

23. See the guidelines issued by ISDA, the Securities Industry and Financial Markets Association (SIFMA), and the Managed Funds Association (MFA), including the "Market Review of OTC Derivative Bilateral Collateralization Practices (Release 2.0)" (March 2010), and "Best Practices for Collateral Management" (June 30, 2010).

assessing the quality of the design and construction of the CCR models and systems, including documentation and empirical evidence that supports the theory, data, and methods used.

Ongoing monitoring confirms that CCR systems continue to perform as intended. This generally involves process verification, an assessment of model data integrity and systems operation, and benchmarking to assess the quality of a given model. Benchmarking is a valuable diagnostic tool in identifying potential weaknesses. Specifically, it is the comparison of a banking organization's CCR model estimates with those derived using alternative data, methods, or techniques. Benchmarking can also be applied to particular CCR model components, such as parameter-estimation methods or pricing models. Management should investigate the source of any differences in output, and determine whether benchmarking gaps indicate weakness in the banking organization's models.

Outcomes analysis compares model outputs to actual results during a sample period not used in model development. This is generally accomplished using backtesting. It should be applied to components of CCR models (for example, the risk-factor distribution and pricing model), the risk measures, and projected exposures. While there are limitations to backtesting, especially for testing the longer time-horizon predictions of a given CCR model, it is an essential component of model validation. Banking organizations should have a process for the resolution of observed model deficiencies detected by backtesting. This should include further investigation to determine the problem and appropriate course of action, including changing a given CCR model.

If the validation of CCR models and infrastructure systems is not performed by staff that is independent from the developers of the models, then an independent review should be conducted by technically competent personnel to ensure the adequacy and effectiveness of the validation. The scope of the independent review should include validation procedures for all components, the role of relevant parties, and documentation of the model and validation processes. This review should document its results, what action was taken to resolve findings, and its relative timeliness.

Senior management should be notified of validation and review results and should take appropriate and timely corrective actions to address deficiencies. The board should be apprised of summary results, especially unresolved deficiencies. In support of validation activities, internal audit should review and test models and systems validation as well as overall systems infrastructure as part of their regular audit cycle.

For more information on validation, please see this section's Appendix B.

Close-Out Policies and Practices

Banking organizations should have the ability to effectively manage counterparties in distress, including execution of a close-out. Policies and procedures outlining sound practices for managing a close-out should include the following:

- Requirements for hypothetical close-out simulations at least once every two years for one of the banking organization's most complex counterparties.
- Standards for the speed and accuracy with which the banking organization can compile comprehensive counterparty exposure data and net cash outflows. Operational capacity to aggregate exposures within four hours is a reasonable standard.
- The sequence of critical tasks, and decision-making responsibilities, needed to execute a close-out.
- Requirements for periodic review of documentation related to counterparty terminations, and confirmation that appropriate and current agreements that specify the definition of events of default and the termination methodology that will be used are in place.
  - Banking organizations should take corrective action if documents are not current, active, and enforceable.
  - Management should document their decision to trade with counterparties that are either unwilling or unable to maintain appropriate and current documentation.
- Established close-out methodologies that are practical to implement, particularly with large and potentially illiquid portfolios. Dealers should consider using the "close-out amount" approach for early termination upon default in interdealer relationships.[24]

24. Only for a definition of *close-out amount approach*, see the Counterparty Risk Management Policy Group III's report, "Containing Systemic Risk: Road to Reform" (August 6, 2008), pp. 122–125. Also, ISDA has published a closeout

- A requirement that the banking organization transmit immediate instructions to its appropriate transfer agent(s) to deactivate collateral transfers, contractual payments, or other automated transfers contained in "standard settlement instructions" for counterparties or prime brokers that have defaulted on the contract or for counterparties or prime brokers that have declared bankruptcy.

MANAGING CENTRAL COUNTERPARTY EXPOSURES

A central credit counterparty (CCP) facilitates trades between counterparties in one or more financial markets by either guaranteeing trades or novating contracts, and typically requires all participants to be fully collateralized on a daily basis. The CCP thus effectively bears most of the counterparty credit risk in transactions, becoming the buyer for every seller and the seller to every buyer. Well-regulated and soundly managed CCPs can be an important means of reducing bilateral counterparty exposure in the OTC derivatives market. However, CCPs also concentrate risk within a single entity. Therefore, it is important that banking organizations centrally clear through regulated CCPs with sound risk-management processes and strong financial resources sufficient to meet their obligations under extreme stress conditions.

To manage CCP exposures, banking organizations should regularly, but no less frequently than annually, review the individual CCPs to which they have exposures. This review should include performing and documenting due diligence on each CCP, applying current supervisory or industry standards[25] (and any subsequent standards) as a baseline to assess the CCP's risk-management practices.

- For each CCP, an evaluation of its risk-management framework should, at a minimum, include membership requirements, guarantee fund contributions, margining practices, default-sharing protocols, and limits of liability.
- Banking organizations should also consider the soundness of the CCP's policies and procedures, including procedures for handling the default of a clearing member, obligations at post-default auctions, and post-default assignment of positions.
- Banking organizations should also maintain compliance with applicable regulatory requirements, such as ensuring contingent loss exposure remains within a banking organization's legal lending limit.

LEGAL AND OPERATIONAL RISK MANAGEMENT

Banking organizations should ensure proper control of, and access to, legal documentation and agreements. In addition, it is important that systems used to measure CCR incorporate accurate legal terms and provisions. The accessibility and accuracy of legal terms is particularly critical in close-outs, when there is limited time to review the collateral and netting agreements. Accordingly, banking organizations should

- Have a formal process for negotiating legal agreements. As a best practice, the process would include approval steps and responsibilities of applicable departments.
- At least annually, conduct a review of the legal enforceability of collateral and netting agreements for all relevant jurisdictions.
- Maintain policies on when it is acceptable to trade without a master agreement,[26] using metrics such as trading volume or the counterparty's risk profile.
  - — Trading without a master agreement may be acceptable in cases of minimal volume or when trading in jurisdictions where master agreements are unenforceable. As applicable, policies should outline required actions to undertake and monitor transactions without an executed master agreement.
- Use commonly recognized dispute-resolution

amount protocol to aid in the adoption of the close-out amount approach.

25. For instance, see "Recommendations for Central Counterparties," a consultative report issued by the Committee on Payment and Settlement Systems and the Technical Committee of the International Organization of Securities Commissions under the auspices of the Bank for International Settlements (March 2004).

26. The capital rules in the United States refer to master agreements. These include the Federal Reserve's "Risk-Based Capital Standards: Advanced Capital Adequacy Framework—Basel II," 12 CFR 208, Appendix F, and 12 CFR 225, Appendix G. For the FDIC, it is 12 CFR 325, Appendix D. For the OCC, see 12 CFR Part 3, Appendix C.

procedures.[27]

- — Banking organizations should seek to resolve collateral disputes within recommended time frames.
- — Senior management should receive reports listing material and aged disputes, as these pose significant risk.

- Include netting of positions in risk-management systems, only if there is a written legal review (either internally or externally) that expresses a high level of confidence that netting agreements are legally enforceable.
- Maintain ongoing participation in both bilateral and multilateral portfolio-compression efforts. Where feasible, banking organizations are encouraged to elect compression tolerances (such as post-termination factor sensitivity changes and cash payments) that allow the widest possible portfolio of trades to be terminated.
- Adopt and implement appropriate novation protocols.[28]

Legal Risk Arising from Counterparty Appropriateness[29]

While a counterparty's ability to pay should be evaluated when assessing credit risk, credit losses can also occur when a counterparty is unwilling to pay, which most commonly occurs when a counterparty questions the appropriateness of a contract. These types of disputes pose not only risk of a direct credit loss, but also risk of litigation costs and/or reputational damage. Banking organizations should maintain policies and procedures to assess client and deal appropriateness. In addition, banking organizations should

- Conduct initial and ongoing due diligence, evaluating whether a client is able to understand and utilize transactions with CCR as part of assessing the client's sophistication, investment objectives, and financial condition.
  - — For example, although some clients may be sophisticated enough to enter into a standardized swap, they may lack the sophistication to fully analyze the risks of a complex OTC deal.
  - — Banking organizations should be particularly careful to assess appropriateness of complex, long-dated, off-market, illiquid, or other transactions with higher reputational risk.
- Include appropriateness assessments in the new-product approval process. Such assessments should determine the types of counterparties acceptable for a new product, and what level of counterparty sophistication is required for any given product.
- Maintain disclosure policies for OTC derivative and other complex transactions to ensure that risks are accurately and completely communicated to counterparties.
- Maintain guidelines for determination of acceptable counterparties for complex derivatives transactions.

CONCLUSION ON COUNTERPARTY CREDIT-RISK MANAGEMENT

For relevant banking organizations, CCR management should be an integral component of the risk-management framework. When considering the applicability of specific guidelines and best practices set forth in this guidance, a banking organization's senior management and supervisors should consider the size and complexity of its securities and trading activities. Banking organizations should comprehensively evaluate existing practices against the standards in this guidance and implement remedial action as appropriate. A banking organization's CCR exposure levels and the effectiveness of its CCR management are important factors for a supervisor to consider when evaluating a banking organization's overall management, risk management, and credit- and market-risk profile.

APPENDIX A: GLOSSARY

This glossary describes commonly used CCR metrics. As discussed above, banking organizations should employ a suite of metrics commensurate with the size, complexity, liquidity, and risk profile of the organization's CCR portfolio.

27. An example of such procedures would be the ISDA's "2009 Dispute Resolution Protocol" (September 2009).

28. An example would be the ISDA's novation protocol.

29. For guidance on counterparty appropriateness, see section 4033.1 of this manual; section 2128.09 in the *Bank Holding Company Supervision Manual*; section 2070 of the *Trading and Capital-Markets Activities Manual*; and SR-07-5, "Interagency Statement on Sound Practices Concerning Elevated Risk Complex Structured Finance Activities" (January 11, 2007).

Major broker-dealer banking organizations should employ the full range of risk-measurement metrics to enable a comprehensive understanding of CCR and how it changes in varying environments. Banking organizations of lesser size and complexity should carefully consider which of these metrics they need to track as part of their exposure risk-management processes. At a minimum, all banking organizations should calculate current exposure and stress test their CCR exposures. Definitions marked with an asterisk (*) are from the Bank for International Settlements.

Exposure Metrics

Current exposure is the larger of zero, or the market value of a transaction or a portfolio of transactions within a netting set with a counterparty that would be lost upon the default of the counterparty, assuming no recovery on the value of those transactions in bankruptcy. Current exposure is often also called replacement cost. Current exposure may be reported gross or net of collateral. Current exposure allows banking organizations to assess their CCR exposure at any given time—that is, the amount currently at risk.

Jump-to-default (JTD) exposure is the change in the value of counterparty transactions upon the default of a reference name in CDS positions. This allows banking organizations to assess the risk of a sudden, unanticipated default before the market can adjust.

Expected exposure is calculated as average exposure to a counterparty at a date in the future. This is often an intermediate calculation for expected positive exposure or CVA. It can also be used as a measure of exposure at a common time in the future.

Expected positive exposure (EPE) is the weighted average over time of expected exposures when the weights are the proportion that an individual expected exposure represents of the entire time interval. Expected positive exposure is an appropriate measure of CCR exposure when measured in a portfolio credit-risk model.*

Peak exposure is a high percentile (typically 95 percent or 99 percent) of the distribution of exposures at any particular future date before the maturity date of the longest transaction in the netting set. A peak exposure value is typically generated for many future dates up until the longest maturity date of transactions in the netting set. Peak exposure allows banking organizations to estimate their maximum potential exposure at a specified future date, or over a given time horizon, with a high level of confidence. For collateralized counterparties, this metric should be based on a realistic close-out period, considering both the size and liquidity of the portfolio. Banking organizations should consider peak potential exposure when setting counterparty credit limits.*

Expected shortfall exposure is similar to peak exposure, but is the expected exposure conditional on the exposure being greater than some specified peak percentile. For transactions with very low probability of high exposure, the expected shortfall accounts for large losses that may be associated with transactions with high-tail risk.

Sensitivity to market risk factors is the change in exposure because of a given market-risk-factor change (for example, a position's change in price resulting from a 1 basis point change in interest rates). It provides information on the key drivers of exposure to specific counterparties and on hedging.

Stressed exposure is a forward-looking measure of exposure based on predefined market-factor movements (nonstatistically generated). These can include single-factor market shocks, historical scenarios, and hypothetical scenarios. Stressed exposure allows banking organizations to consider their counterparty exposure under a severe or stressed scenario. This serves as a supplemental view of potential exposure, and provides banking organizations with additional information on risk drivers. The best practice is to compare stressed exposure to counterparty credit limits.

CVA-Related Metrics

Credit valuation adjustment (CVA) is an adjustment to the mid-market valuation (average of the bid and asked price) of the portfolio of trades with a counterparty. This adjustment reflects the market value of the credit risk resulting from any failure to perform on contractual agreements with a counterparty. This adjustment may reflect the market value of the credit risk of the counterparty or the market value of the credit risk of both the banking organization and the counterparty. CVA is a measure of the market value of CCR, incorporating both counterparty creditworthiness and the variability of exposure.*

CVA VaR is a measure of the variability of the CVA mark-to-market value and is based on the projected distributions of both exposures and counterparty creditworthiness. CVA VaR provides banking organizations with an estimate of the potential CVA mark-to-market loss, at a certain confidence interval and over a given time horizon.

CVA factor sensitivities is the mark-to-market change in CVA resulting from a given market-risk-factor change (for example, a position's change in price resulting from a 1 basis point change in credit spreads). CVA factor sensitivities allow banking organizations to assess and hedge the market value of the credit or market risks to single names and portfolios and permit banking organizations to monitor excessive build ups in counterparty concentrations.

Stressed CVA is a forward-looking measure of CVA mark-to-market value based on predefined credit- or market-factor movements (nonstatistically generated). These can include single-market-factor shocks, historical scenarios, and hypothetical scenarios. Stressed CVA serves as an informational tool and allows banking organizations to assess the sensitivity of their CVA to a potential mark-to-market loss under defined scenarios.

APPENDIX B: DETAIL ON MODEL VALIDATION AND SYSTEMS EVALUATION

A banking organization should validate its CCR models, initially and on an ongoing basis. Validation should include three components: (1) an evaluation of the conceptual soundness of relevant models (including developmental evidence); (2) an ongoing monitoring process that includes verification of processes and benchmarking; and (3) an outcomes-analysis process that includes backtesting. The validation should either be independent or subject to independent review.

Validation is the set of activities designed to give the greatest possible assurances of CCR models' accuracy and systems' integrity. Validation should also identify key assumptions and potential limitations and assess their possible impact on risk metrics. CCR models have several components:

- statistical models to estimate parameters, including the volatility of risk factors and their correlations
- simulation models to convert those parameters into future distributions of risk factors
- pricing models that estimate value in simulated scenarios
- calculations that summarize the simulation results into various risk metrics

All components of each model should be subject to validation, along with analysis of their interaction in the CCR system. Validation should be performed initially when a model first goes into production. Ongoing validation is a means of addressing situations where models have known weaknesses and ensuring that changes in markets, products, or counterparties do not create new weaknesses. Senior management should be notified of the validation results and should take corrective actions in a timely manner when appropriate.

A banking organization's validation process should be independent of the CCR model and systems development, implementation, and operation. Alternately, the validation should be subject to independent review, whereby the individuals who perform the review are not biased in their assessment because of involvement in the development, implementation, or operation of the processes or products. Individuals performing the reviews should possess the requisite technical skills and expertise to provide critical analysis, effective challenge, and appropriate recommendations. The extent of such reviews should be fully documented, sufficiently thorough to cover all significant model elements, and include additional testing of models or systems as appropriate. In addition, reviewers should have the authority to effectively challenge developers and model users, elevate concerns or findings as necessary, and either have issues addressed in a prompt and substantial manner or reject a model for use by the banking organization.

Conceptual Soundness and Developmental Evidence

The first component of validation is evaluating conceptual soundness, which involves assessing the quality of the design and construction of CCR models. The evaluation of conceptual soundness includes documentation and empirical evidence supporting the theory, data, and methods used. The documentation should also identify key assumptions and potential limitations and assess their possible impact. A comparison to industry practice should be done to identify areas where substantial and warranted improvements can be made. All model components are subject to evaluation, including simplifying assumptions, parameter calibrations, risk-factor diffusion processes, pricing models, and risk metrics. Developmental evidence should be reviewed whenever the banking organization makes material changes in CCR models. Evaluating conceptual soundness includes independent evaluation of whether a model is appropriate for its purpose and whether all underlying assumptions, limitations, and shortcomings have been identified and their potential impact assessed.

Ongoing Monitoring, Process Verification, and Benchmarking

The second component of model validation is ongoing monitoring to confirm that the models were implemented appropriately and continue to perform as intended. This involves process verification, an assessment of models, and benchmarking to assess the quality of the model. Deficiencies uncovered through these activities should be remediated promptly.

Process verification includes evaluating data integrity and operational performance of the systems supporting CCR measurement and reporting. This should be performed on an ongoing basis and includes

- the completeness and accuracy of the transaction and counterparty data flowing through the counterparty exposure systems;
- reliance on up-to-date reviews of the legal enforceability of contracts and master netting agreements that govern the use of netting and collateral in systems measuring net exposures and the accuracy of their representations in the banking organization's systems;
- the integrity of the market data used within the banking organization's models, both as current values for risk factors and as sources for parameter calibrations; and
- the operational performance of the banking organization's counterparty exposure calculation systems, including the timeliness of the batch-run calculations, the consistent integration of data coming from different internal or external sources, and the synchronization of exposure, collateral management, and finance systems.

"Benchmarking" means comparing a banking organization's CCR measures with those derived using alternative data, methods, or techniques. It can also be applied to particular model components, such as parameter estimation methods or pricing models. It is an important complement to backtesting and is a valuable diagnostic tool in identifying potential weaknesses. Differences between the model and the benchmark do not necessarily indicate that the model is in error because the benchmark itself is an alternative prediction. It is important that a banking organization use appropriate benchmarks, or the exercise will be compromised. As part of the benchmarking exercise, the banking organization should investigate the source of the differences and whether the extent of the differences is appropriate.

Outcomes Analysis Including Backtesting

The third component of validation is outcomes analysis, which is the comparison of model outputs to actual results during a sample period not used in model development. Backtesting is one form of out-of-sample testing. Backtesting should be applied to components of a CCR model, for example the risk factor distribution and pricing model, as well as the risk measures and projected exposures. Outcomes analysis includes an independent evaluation of the design and results of backtesting to determine whether all material risk factors are captured and to assess the accuracy of the diffusion of risk factors and the projection of exposures. While there are limitations to backtesting, especially for testing the longer horizon predictions of a CCR model, banking organizations should incorporate it as an essential component of model validation.

Typical examples of CCR models that require backtesting are expected exposure, peak exposure, and CVA VaR models. Backtesting of models used for measurement of CCR is substantially different than backtesting VaR models for market risk. Notably, CCR models are applied to each counterparty facing the banking organization, rather than an aggregate portfolio. Furthermore, CCR models should project the distribution over multiple dates and over long time horizons for each counterparty. These complications make the interpretation of CCR backtesting results more difficult than that for market risk. Because backtesting is critical to providing feedback on the accuracy of CCR models, it is particularly important that banking organizations exert considerable effort to ensure that backtesting provides effective feedback on the accuracy of these models.

Key elements of backtesting include the following activities:

- Backtesting programs should be designed to evaluate the effectiveness of the models for typical counterparties, key risk factors, key correlations, and pricing models. Backtesting results should be evaluated for reasonableness as well as for statistical significance. This may serve as a useful check for programming errors or cases in which models have been incorrectly calibrated.
- Backtesting should be performed over different time horizons. For instance, the inclusion of mean reversion parameters or similar time varying features of a model can cause a model to perform adequately over one time horizon, but perform very differently over a different time horizon. A typical large dealer should, at a minimum, perform backtesting over one day, one week, two weeks, one month, and every quarter out to a year. Shorter time periods may be appropriate for transactions under a collateral agreement when variation margin is exchanged frequently, even daily, or for portfolios that contain transactions that expire or mature in a short time frame.
- Backtesting should be conducted on both real counterparty portfolios and hypothetical portfolios. Backtesting on fixed hypothetical portfolios provides the opportunity to tailor backtesting portfolios to identify whether particular risk factors or correlations are modeled correctly. In addition, the use of hypothetical portfolios is an effective way to meaningfully test the predictive abilities of the counterparty exposure models over long time horizons. Banking organizations should have criteria for their hypothetical portfolios. The use of real counterparty portfolios evaluates whether the models perform on actual counterparty exposures, taking into account portfolio changes over time.

It may be appropriate to use backtesting methods that compare forecast distributions of exposures with actual distributions. Some CCR measures depend on the whole distribution of future exposures rather than a single exposure percentile—for example, expected exposure (EE) and expected positive exposure (EPE). For this reason, sole reliance on backtesting methods that count the number of times an exposure exceeds a unique percentile threshold may not be appropriate.

Exception counting remains useful, especially for evaluating peak or percentile measures of CCR, but these measures will not provide sufficient insight for expected exposure measures. Hence, banking organizations should test the entire distribution of future exposure estimates and not just a single percentile prediction.

Banking organizations should have policies and procedures in place that describe when backtesting results will generate an investigation into the source of observed backtesting deficiencies and when model changes should be initiated as a result of backtesting.

Documentation

Adequate validation and review are contingent on complete documentation of all material aspects of CCR models and systems. This should include all model components and parameter estimation or calibration processes. Documentation should also include the rationale for all material assumptions underpinning its chosen analytical frameworks, including the choice of inputs; distributional assumptions; and weighting of quantitative and qualitative elements. Any subsequent changes to these assumptions should also be documented and justified.

The validation or independent review should be fully documented. Specifically, this would include results, the scope of work, conclusions and recommendations, and responses to those recommendations. This includes documentation of each of the three components of model validation, discussed above. Complete documentation should be done initially and updated over time to reflect ongoing changes and model performance. Ability of the validation (or review) to provide effective challenge should also be documented.

Internal Audit

A banking organization should have an internal audit function, independent of business-line management, which assesses the effectiveness of the model validation process. This assessment should ensure the following: proper validation procedures were followed for all components of the CCR model and infrastructure systems; required independence was maintained by validators or reviewers; documentation was adequate for the model and validation processes; and results of validation procedures are elevated, with timely responses to findings. Internal audit should also evaluate systems and operations that support CCR. While internal audit may not have the same level of expertise as quantitative experts involved in the development and validation of the model, they are particularly well suited to evaluate process verification procedures. If any validation or review work is outsourced, internal audit should evaluate whether that work meets the standards discussed in this section.

INTRODUCTION

Off-balance-sheet credit activities have been one of the fastest growing areas of banking activity. Although these activities may not be reflected on the balance sheet, they must be thoroughly reviewed because they can expose the bank to contingent liabilities. Contingent liabilities are financial obligations of a bank that are dependent on future events or actions of another party.

The purpose of this section is to provide a concise reference for contingent liabilities that arise from off-balance-sheet credit activities (for example, loan commitments and letters of credit). This section will also include some discussion of other contingent liabilities, which arise from asset sales and other off-balance-sheet activities. Activities such as trusts, securities clearance, securities brokerage, and corporate management advisory services involve significant operational and fiduciary risks and require specialized examination procedures. Consult section 6010, ‘‘Other Types of Examinations,’’ in this manual for further information about these activities.

Derivatives are also not covered in this section. The acquisition and management of derivatives for the bank's own account are covered in detail in sections 2020 and 4090, ‘‘Acquisition and Management of Nontrading Securities and Derivative Instruments’’ and ‘‘Interest-Rate Risk Management’’ of this manual. The *Trading Activities Manual* provides more specific guidance for the examination of banks that are involved in derivatives trading and customer accommodation activities.

Risks associated with contingent liabilities may ultimately result in charges against capital. As a result, full-scope examinations will include an analysis of these risks. Each of the major components of the examination—capital, asset quality, management, liquidity, and earnings—incorporates an assessment of the risks associated with off-balance-sheet credit activities. While it is impossible to enumerate all of the types and characteristics of contingent liabilities here, some of the more common ones are discussed in this section. In all cases, the examiner's overall objectives are to assess the potential impact of these contingent liabilities on the financial condition of the bank, to ascertain the likelihood that such contingencies may ultimately result in losses to the bank, to ensure that management has appropriate systems to identify and control contingent liabilities, and to ensure compliance with all applicable laws, regulations, and statements of regulatory policy.

OFF-BALANCE-SHEET LENDING ACTIVITIES

In reviewing individual credit lines, all of a customer's borrowing arrangements with the bank (for example, direct loans, letters of credit, and loan commitments) should be considered. The factors analyzed in evaluating a direct loan (financial performance, ability and willingness to pay, collateral protection, and future prospects) are applicable to the review of off-balance-sheet lending arrangements. When analyzing these activities, however, examiners should evaluate the probability of draws under the bank's off-balance-sheet lending arrangements with its customers and should evaluate whether the allowance for loan and lease losses adequately reflects the associated risks. Consideration should also be given to compliance with laws and regulations. Refer to section 2040, ‘‘Loan Portfolio Management,’’ of this manual for further details.

Loan Commitments

A formal loan commitment is a written agreement signed by the borrower and the lender that details the terms and conditions under which a loan, up to a specified amount, will be made. Unlike a standby letter of credit, which commits the bank to satisfying its customer's obligation to a third party, a loan commitment involves only the bank and its customer. The commitment will have an expiration date and, in exchange for agreeing to make the accommodation, the bank often requires the customer to pay a fee and/or maintain a stipulated compensating balance.

Some commitments, such as a working capital line, revolving credit facility, or a term loan facility, are expected to be used. Other commitments, such as back-up lines of credit for commercial paper issuance, involve usage that is not anticipated unless the customer is unable to retire or roll over the issue at maturity.

Lines of Credit

A line of credit expresses to the customer, usually by letter, a bank's willingness to lend up to a certain amount over a specified timeframe. These lines of credit are disclosed to the customer and are referred to as "advised" or "confirmed" lines. In contrast, "guidance" lines (also referred to as internal guidance lines) are not disclosed to the customer. "Guidance" lines of credit are formally approved like any other loans or commitments and are established to aid the loan officer who is servicing an account act quickly to an unexpected request for funds. Many lines of credit may be cancelled if the customer's financial condition deteriorates; others are simply subject to cancellation at the option of the issuer, such as "guidance" lines and other nonbinding agreements. Lines of credit usually require periodic or annual borrowing cleanups. Not adhering to cleanup provisions is a well-defined weakness.

Disagreements may arise as to what constitutes a legally binding commitment. A bank's own descriptive terminology alone may not always be the best guideline. For example, a credit arrangement could be referred to as a revocable line of credit but, at the same time, it may be a legally binding commitment to lend—especially if consideration has been given by the customer for the bank's promise to lend and if the terms of the agreement between the parties result in a contract. Therefore, management of the bank should properly distinguish its legally binding loan commitments from its revocable loan commitments. Proper documentation will help ensure that the bank's position is defensible if legal action becomes necessary to cancel a loan commitment.

Some lending agreements contain a "material adverse change" (MAC) clause, which is intended to allow the bank to terminate the commitment or line of credit if the customer's financial condition deteriorates. This clause may apply to the continuing financial condition of guarantors. The extent to which MAC clauses are enforceable depends on several factors, including whether a legally binding relationship remains despite specific financial covenants that are violated. Some documents make only a vague reference to a borrower's responsibility for maintaining a satisfactory financial condition. Although the enforceability of MAC clauses may be subject to some uncertainty, such clauses may provide the bank with leverage in negotiations with the customer over such issues as requests for additional collateral and/or personal guarantees.

A bank cannot always routinely determine whether funding of a commitment or line of credit will be required; therefore, the examiner must always subject the line of credit to careful analysis. A MAC clause could allow the bank to refuse funding to a financially troubled borrower; a default in other contract covenants could cause the termination of the commitment or line of credit. Some banks might strictly enforce the terms of a credit arrangement and refuse funding if any of the covenants are broken. Other banks take a more accommodating approach and will continue to make advances unless the customer files for bankruptcy. In the final analysis, the procedures normally followed by the bank in honoring or terminating a contingent lending agreement are important in the examiner's overall evaluation of the credit risk.

Risk Management for Loan Commitments and Lines of Credit

The primary risk inherent in any future extension of credit is that the condition of the borrower may change between the issuing of the commitment and its funding. However, commitments may also entail liquidity and interest-rate risk.

Examiners should evaluate anticipated drawdowns of an issuing bank's loan commitments and lines of credit relative to the bank's anticipated funding sources. A draw under lines of credit may be in the form of a letter of credit issued on the borrower's behalf. Such letters of credit share the same collateral as the line of credit, and the issuance of the letter of credit uses availability under the line. At each examination, the draws that are anticipated for unused commitments and advised lines of credit should be estimated. If the amount of unfunded commitments is large relative to the bank's liquidity position, further analysis is suggested to determine whether borrowed funds will have to be used and, if so, the amount and sources of such funds. Concerns and comments should be noted on the Liquidity/Funds Management page in the report of examination. Also, loan commitments are to be reported on the commitments and contingencies schedule in the report of examination. For further information, refer to sections 4020, 4090, and 6000, "Asset/Liability Management," "Interest-Rate Risk Management," and "Instructions for the Report of Examination," in this manual.

LETTERS OF CREDIT

A letter of credit substitutes the credit capacity of a financial institution for that of an individual or a corporation. The concept of substituting one obligor's financial standing for another party's financial standing has been used in financing the international shipment of merchandise for centuries (imports and exports). Today, letters of credit are also used in a wide variety of other commercial financing transactions, such as guaranteeing obligations involving the private placement of securities and ensuring payment in the event of nonperformance of an obligated party. In addition, letters of credit are used to secure the guarantees of principals in real estate development loans. For additional information on letters of credit, see section 7080, "International—Letters of Credit," in this manual.

Elements of a Letter of Credit

A letter of credit should contain the following elements:

- a conspicuous statement that the document is a letter of credit
- a specified expiration date or a definite term and an amount
- an obligation of the issuer to pay that is solely dependent on the presentation of conforming documents as specified in the letter of credit and not on the factual performance or nonperformance by the parties to the underlying transaction
- an unqualified obligation of the account party to reimburse the issuer for payments made under the letter of credit

A letter of credit involves at least three parties and is three separate and distinct contracts:

- a contract between the account party and the beneficiary under which the account party has an obligation of payment or performance
- a contract between the account party and the issuer of the letter of credit (The issuer is the party obligated to pay when the terms of the letter of credit are satisfied. The account party agrees to reimburse the issuer for any payments made.)
- a contract between the issuer and the beneficiary, whereby the issuer agrees to pay the beneficiary in compliance with the terms and conditions of the letter

Policies and Procedures

Maintaining adequate written policies and procedures and monitoring letters of credit activities are part of the fiduciary and oversight responsibilities of the board of directors. Generally, policies and procedures governing the institution's issuance of letters of credit are contained in a section of the loan policy manual.

The letter of credit policy should thoroughly explain the institution's procedures in issuing both commercial letters of credit and standby letters of credit. The policy should outline desirable and undesirable issuances, designate persons authorized to issue letters of credit and their corresponding loan authority, and define the recordkeeping and documentation requirements including the need to establish separate files for each issuance.

If several lending departments issue letters of credit, the policy should explicitly assign responsibility for file maintenance and recordkeeping. A separate file containing an exact copy of each outstanding letter of credit and all the supporting documentation that the underwriter used in deciding to issue the letter should be included in the file. This documentation should be the same as the financial documentation used for originating any other form of credit, which includes current financial statements, current income statements, purpose of the letter of credit, collateral-security documentation, proof-of-lien position, borrowing authorization, all correspondence, and officers' memoranda.

Documentation

In addition, the file must contain the documentation associated with any disbursements or payments made. For a commercial letter of credit, these documents may include—

- the draft (sometimes called the bill of exchange), which is the demand for payment;
- the commercial invoice, a document describing the goods being shipped (prepared by the seller and signed by the buyer);
- the bill of lading, which documents that shipment of the goods has taken place and gives the issuer an interest in the goods in the event the account party defaults;
- customs documentation that verifies that all required duties have been paid;
- the insurance certificate, which provides evidence that the seller has procured insurance;
- the consular documents, which state that the shipment of goods satisfies the import/export regulations; and
- the certificates of origin and inspection, which state that the goods originated in a specified country to guard against the substitution of second-quality merchandise.

The documents associated with standby letters of credit are far less complicated than those for commercial letters of credit. Often no document is necessary to support the beneficiary's draw upon a standby letter of credit. This is what is referred to as a clean standby letter of credit and should be discouraged due to the possible legal expense of defending any action taken in honoring or dishonoring a draw without specific documentary requirements. At a minimum, standby letters of credit should require a beneficiary's certificate asserting that the account party has not performed according to the contract or has defaulted on the obligation, as well as a copy of the contract between the account party and beneficiary.

Accounting Issues

Since letters of credit represent a contingent liability to the issuing institution, they must be disclosed in the financial statements in accordance with generally accepted accounting principles (GAAP). The Financial Accounting Standards Board has stipulated in its Statement of Financial Accounting Standard No. 5 that the nature and the amount of a standby letter of credit must be disclosed in the institution's financial statement. Commercial letters of credit and standby letters of credit should be accounted for on the balance sheet as liabilities if it is probable that the bank will disburse funds, and if the amount of the funding is determinable. Most standby letters of credit will not be recorded as a liability. However, their existence will be disclosed in the footnotes to the financial statements.

Benefits of Letters of Credit

Both the customer and the financial institution can benefit from letters of credit. Through the use of a letter of credit, a customer can often obtain a less expensive source of funds than would be possible through direct financing from the institution. For example, the customer may be able to take advantage of a seller's credit terms with the backing of a letter of credit to substantiate the customer's credit capacity. The institution receives a fee for providing the service. In addition, the institution hopes to build a better working relationship with its customers, who may generate or refer other profitable business.

Revocable or Irrevocable

Letters of credit can be issued as either revocable or irrevocable. The revocable letter of credit is rarely used because it may be amended or canceled by the issuer without the consent of the other parties. Most letters of credit are issued as irrevocable with a stipulation that no changes may be made to the original terms without the full consent of all parties.

Risks in Issuing Letters of Credit

A financial institution must be aware of the credit risks that are associated with letters of credit and must issue letters of credit only when its resources are adequate. Although letters of credit are not originally made as loans, they may lead to loans if the account party cannot meet its obligations. Therefore, the institution must implement the same prudent underwriting guidelines for letters of credit as for other extensions of commercial credit. Refer to section 2080, "Commercial Loans," in this manual for further details.

The importance of adequate documentation cannot be overemphasized. Commercial letters of credit are part of a continuous flow of transactions evolving from letters of credit to sight drafts to acceptances. Repayment may depend on the eventual sale of the goods involved; however, the goods may not provide any collateral protection. Thus, proper handling and accuracy of the required documents are of primary concern. Letters of credit are frequently issued via tested telex, which verifies the authenticity of the sender (usually another bank). No institution should honor a letter of credit presented by a beneficiary without first confirming its authenticity.

Commercial letters of credit involving imports must be considered unsecured until the goods have passed customs, the security documents specified in the letter of credit have been presented, and the goods have been verified and controlled.

Letters of credit are subject to the risk of fraud perpetrated by customers, beneficiaries, or insiders of the issuing institution. Moreover, standby letters of credit can be used by officers or directors as a vehicle for obtaining credit at another institution. It is important to note that Regulation O requirements apply to standby letters of credit.

Consequently, letters of credit should be issued under the same strict internal controls as any other extension of credit. Such controls include a requirement of dual or multilevel authorizations and the segregation of the issuing, recordkeeping, acceptance, and payment functions.

Risks in Honoring Letters of Credit

The honoring of another institution's letter of credit or acceptance requires strict verification procedures as well as dual authorization by the honoring financial institution. Reasons for strict procedures and authorizations are numerous. The issuer may be unable or unwilling to honor a letter of credit or standby letter of credit, claiming that the document is fraudulent or a forgery or that the signer was unauthorized. Before honoring any other institution's letter of credit, a bank should confirm in writing that the letter of credit is valid and will be honored under specified conditions. Agreements with issuers for accepting letters of credit issued by tested telex should provide specific conditions under which they will be honored.

To minimize risks of loss, compliance with the conditions outlined within the letter of credit must be strict—not merely substantial. Testing of LOCs should involve two or more persons through dual authorization or segregation of duties to prevent fraud by employees in this process.

Uniform Commercial Code

Both the issuer and the beneficiary of letters of credit are obligated to conform to a uniform set of rules governed by article 5 of the Uniform Commercial Code (UCC). These rules are referenced in the Uniform Customs and Practice for Documentary Credits (UCP). The UCC is a set of articles governing commercial transactions adopted by various states, whereas the UCP encompasses all of the international guidelines for trading goods and services. Local laws and customs vary and must be followed under advice of counsel.

TYPES OF LETTERS OF CREDIT

There are two major types of letters of credit: the commercial letter of credit, also referred to as a trade letter of credit, and the standby letter of credit. Banks have significantly increased their issuances of letters of credit, particularly standby letters. A contributing factor to this significant increase is that by issuing letters of credit, an institution can increase its earnings without disbursing funds and increasing total assets. The institution charges a fee for the risk of default or nonperformance by the customer, thereby increasing the bank's return on average assets. It is important for examiners to be concerned with the elements of risk that are present in the institution's practices regarding the issuance of letters of credit. Examiners should then assess the institution's system of controls that can mitigate the risks (including staff experience, proper documentation, and the quality of underwriting). The standards for issuing letters of credit should be no less stringent than the standards for making a loan. Likewise, the letter-of-credit portfolio requires a review as thorough as the lending review. A default or nonperformance by the account party of a letter of credit will have the same impact as a default on a loan.

Commercial Letters of Credit

The commercial letter of credit (LOC) is commonly used as a means of financing the sale of goods between a buyer and seller. Generally, a seller will contract with a buyer on an open-account basis, whereby the seller ships the goods to the buyer and submits an invoice. To avoid the risk of nonpayment, the seller may require the buyer to provide a commercial letter of credit. To satisfy the requirement, the buyer applies for a letter of credit at a financial institution. If approved, the letter of credit would contain specified terms and conditions in favor of the seller (beneficiary), and the buyer (account party) would agree to reimburse the financial institution for payments drawn against the letter. The commercial letter of credit can be used to finance one shipment or multiple shipments of goods. Once documents that provide evidence that the goods have been shipped in accordance with the terms of the letter of credit are received, the seller can draw against the issued letter of credit through a documentary draft or a documentary demand for payment. The institution honors the draft, and the buyer incurs an obligation to reimburse the institution.

Letters of credit can be secured by cash deposits, a lien on the shipped goods or other inventory, accounts receivable, or other forms of collateral. Commercial letters of credit "sold for cash" (that is, secured by cash deposits) pose very little risk to a bank as long as the bank, before making payment on the draft, ensures that the beneficiary provides the proper documents. If credit is extended to pay for the goods, the subsequent loan presents the same credit risks associated with any other similar loan.

Standby Letters of Credit

The standby letter of credit (SBLOC) is an irrevocable commitment on the part of the issuing institution to make payment to a designated beneficiary if the institution's customer, the account party, defaults on an obligation. The SBLOC differs from the commercial letter of credit because it is not dependent on the movement of goods. While the commercial letter of credit eliminates the beneficiary's risk of nonpayment under the contract of sale, the SBLOC eliminates the financial risks resulting from nonperformance under a contract. The SBLOC, in effect, enhances the credit standing of the bank's customer.

SBLOCs may be financially oriented (financial SBLOCs), whereby an account party agrees to make payment to the beneficiary, or SBLOCs may be service-oriented (performance SBLOCs), whereby the financial institution guarantees to make payment if its customer fails to perform a nonfinancial contractual obligation.

Financial SBLOCs

Financial SBLOCs are often used to back direct financial obligations such as commercial paper, tax-exempt securities, or the margin requirements of exchanges. For example, if the bank's customer issues commercial paper supported by an SBLOC, and the bank's customer is unable to repay the commercial paper at maturity, the holder of the commercial paper may request the bank to make payment. Upon receipt of the request, the bank would repay the holders of the commercial paper and account for the payment as a loan to the customer under the letter of credit. Because of this irrevocable commitment, the bank has, in effect, directly substituted its credit for that of its customer upon the issuance of the SBLOC; consequently, the SBLOC has become a credit enhancement for the customer.

Performance SBLOCs

Performance SBLOCs are generally transaction-specific commitments that the issuer will make payment if the bank's customer fails to perform a nonfinancial contractual obligation, such as to ship a product or provide a service. Performance SBLOCs are often used to guarantee bid or performance bonds. Through a performance SBLOC, the bank provides a guaranty of funds to complete a project if the account party does not perform under the contract. In contrast to the financial SBLOC, the bank's irrevocable commitment provides liquidity to the obligor and not directly to a third-party beneficiary.

Unlike a commercial letter of credit, a demand for payment against an SBLOC is generally an indication that something is wrong. The nonperformance or default that triggers payment under the SBLOC often signals the financial weakness of the customer, whereas payment under a commercial letter of credit suggests that the account party is conducting its business as usual. Standby letters of credit can be either unsecured or secured by a deposit or other form of collateral.

Uses

The uses of standby letters of credit are practically unlimited. The more common areas of use include the following.

Financing Real Estate Development. A mortgagee will condition its loan commitment upon a cash contribution to a project by the developers. Although the lender insists that the developers have some equity in the project, the developer may not have funds available as they are tied up in other projects. The parties often use the letter of credit to satisfy the requirement for equity without the need for a cash deposit.

Fulfilling Municipal Regulations. Most municipalities require some form of a performance bond to ensure that infrastructure improvements, such as buildings, roads, and utility services, are completed. Because the bonding companies generally required a letter of credit as collateral for their bond, developers began offering the SBLOC to the municipality as a substitute. The SBLOC is probably more common than the performance bond. The SBLOC provides the municipality the guaranty of funds to complete necessary improvements if the developer does not perform as required.

Securing Notes. A lender will sometimes ask its obligor to secure the balance of a promissory note with an SBLOC issued by another bank.

Ensuring Performance. The standby letter of credit is similar to a performance bond. Often the seller of goods will have the borrower obtain a commercial letter of credit to ensure payment; simultaneously, the buyer will have the seller obtain a standby letter of credit to ensure that the goods are delivered when agreed and in acceptable condition.

Guaranteeing Securities. The standby letter of credit guarantees obligations involving the private placement of securities, such as revenue and development bonds. If an SBLOC secures against default, such paper will generally have a higher rating and bear a lower rate of interest. An SBLOC could also be used as a credit enhancer for packaging retail loans for public sale. The use of an SBLOC in this situation typically carries minimal overall risk because the packaging institution normally sets aside a contingent reserve for losses. However, if the reserve is inadequate, the SBLOC should be reviewed for possible classification.

SBLOCs Issued as Surety for Revenue Bonds

SBLOCs may be issued in conjunction with the development of a property that is financed with tax-free or general revenue bonds. In these transactions, a municipal agency—typically, a local housing authority or regional development authority—sells bonds to investors in order to finance the development of a specific project. Once the bonds are issued, the proceeds are placed with a trustee and then loaned at less than market rates to the developer of the project. The below-market-rate loan that is granted to the developer enables the municipal agency to encourage development without expending tax dollars. The municipal agency has no liability; the bond investors only have recourse against the specific project. If the bonds are exempt from federal taxation, they will generally carry a below-market interest rate. If the bonds are not tax free—and some municipal bonds are not tax free—they will carry a market rate of interest.

Because the bonds are secured only by the project, an SBLOC is typically obtained by the beneficiary (in this example, the municipal agency) from a financial institution to provide additional security to the bondholders. The SBLOC is usually for an amount greater than the face amount of the bonds, so the bondholders' accrued interest between interest payment dates is usually secured. The bank generally secures its SBLOC with a lien that is subordinate to the authority's or trustees' lien against the property and the personal guarantees of the principal. Underwriting standards and credit analysis for SBLOCs should mirror those employed for direct loans.

The trustee receives periodic payments from the developer and then pays the bondholders their periodic interest payments and also pays the financial institution its letter-of-credit fee. In the event of a default by the developer, the trustee will draw upon the SBLOC to repay the bondholders. If such a default occurs, the issuing financial institution assumes the role of the lender for the project.

The structure of the transaction requires the bank issuing the SBLOC to assume virtually all of the risk. Because the purpose of these bonds is to encourage development, financially marginal projects, which would not be feasible under conventional financing, are often financed in this manner. The primary underwriting consideration is the ability of the securing property to service the debt. The debt-service-coverage calculations should include both the tax-free rate, if applicable, obtained through the revenue bonds and market interest rates. The operations of the securing property should also be monitored on an ongoing basis. If new construction is involved, the progress should be monitored and any cost overruns should be identified and addressed.

Renewal of SBLOCs

Although most SBLOCs contain periodic renewal features, the examiner must be aware that the bank cannot relieve itself from liability simply by choosing not to renew the SBLOC. Virtually all of the bond issues require a notice of nonrenewal before the expiration of the SBLOC. If such notice is received by the trustee, the trustee normally considers the notice an event of default and draws against the existing SBLOC. The bank should protect itself, therefore, by continuously monitoring both the project and the status of the bonds. Documentation should be maintained in the bank's file to substantiate the property's occupancy, its cashflow position, and the status of the bonds. In addition to the current status of interest payments, any requirements for a sinking fund that are contained in the bond indenture should also be monitored.

Some letters of credit are automatically renewable unless the issuing bank gives the beneficiary prior notice (usually 30 days). These letters of credit represent some additional risk because of the notification requirement placed on the bank. As noted above, proper monitoring and timely follow-up are imperative to minimize risk.

Without the benefit of a substantial guarantor or equity in the collateral, these SBLOCs present more than normal risk of loss. If the SBLOC is converted into an extension of credit, the loan will likely be classified substandard or worse. Protection against loss may be provided by a long-term lease from a major tenant of an industrial property or a lease from a housing authority with a governmental funding commitment or guaranty.

Classification of SBLOCs

It may be appropriate to adversely classify an SBLOC if draws under the SBLOC are probable and a well-defined credit weakness exists. For example, deterioration of the financial standing of the account party could jeopardize performance under the letter of credit and result in the requirement of payment to the beneficiary. Such a payment would result in a loan to the account party and could result in a collection problem, especially if the SBLOC was unsecured. If payment is probable and the account party does not have the ability to repay the institution, an adverse classification is warranted. FASB 5 requires that if a loss contingency is probable and can be reasonably estimated, a charge to income must be accrued. Refer to section 2060, "Classification of Credits," in this manual for procedures on SBLOC classification.

BANKER'S ACCEPTANCES

When the beneficiary presents a draft to the issuer in compliance with the terms of a commercial letter of credit, the method of honoring the draft is acceptance. The issuer will stamp the word "accepted" across the face of the draft, which makes the instrument negotiable. Thus, the institution upon which the draft is drawn converts what was originally an order to pay into an unconditional promise to pay. Depending on the terms specified in the letter of credit, payment of the draft can vary from sight to 180 days. There is a ready market for these instruments, because payment must be made at maturity by the accepting institution, whether or not it is reimbursed by its customer. These acceptances are readily negotiable, and a beneficiary may sell accepted time drafts to other financial institutions at a discount. Acceptances are governed by article 3 of the UCC, and any rights the parties have under acceptance are subject to the rules of that article. For further discussion of banker's acceptances, see section 7060, "International—Banker's Acceptances," and the Instructions for the Preparation of the Report of Condition and Income.

Participations in Banker's Acceptances

The following discussion refers to the roles of accepting and endorsing banks in banker's acceptances. It does not apply to banks purchasing other banks' acceptances for investment purposes. Banker's acceptances may represent either a direct or contingent liability of the bank. If the acceptance is created by the bank, it constitutes a direct liability that must be paid on a specified future date. The acceptance is also an on-balance-sheet, recognized liability. If a bank participates in the funding risk of an acceptance created by another bank, the liability is contingent and the item is carried off-balance-sheet. The financial strength and repayment ability of the accepting bank should be considered in analyzing the amount of risk associated with these contingent liabilities.

Participations in acceptances conveyed to others by the accepting bank include transactions that provide for the other party to the participation to pay the amount of its participated share to the accepting bank at the maturity of the acceptance, whether or not the account party defaults. Participations in acceptances acquired by the nonaccepting bank include transactions that provide for the nonaccepting bank to pay the amount of its participated share to the accepting bank at the maturity of the acceptance, whether or not the account party defaults.

Call Report Treatment

For regulatory reporting purposes, the existence of such participations is not to be recorded on the balance sheet. Rather, both the accepting bank conveying the participation to others and the bank acquiring the participation from the accepting bank must report the amounts of such participations in the appropriate item in Schedule RC-L, Commitments and Contingencies. (The amount of participations in acceptances reported in Schedule RC-L by a member bank may differ from the amount of such participations that enter into the calculation of the bank's acceptances to be counted toward its acceptance limit imposed by section 13 of the Federal Reserve Act (12 USC 372). These differences are mainly attributable to participations in ineligible acceptances, to participations with ''uncovered'' institutions, and to participations that do not conform to the minimum requirements set forth in 12 CFR 250.163.)

NOTE-ISSUANCE AND REVOLVING UNDERWRITING CREDIT FACILITIES

The first note-issuance facility (NIF) was introduced in 1981. A NIF is a medium-term (five- to seven-year) arrangement under which a borrower can issue short-term paper. The paper is issued on a revolving basis, with maturities ranging from as low as seven days to up to one year. Underwriters are committed either to purchasing any unsold notes or to providing standby credit. Bank borrowing usually involves commercial paper consisting of short-term certificates of deposit and, for nonbank borrowers, generally promissory notes (Euronotes). Although NIF is the most common term used for this type of arrangement, other terms include the revolving underwriting facility (RUF) and the standby note-issuance facility (SNIF).

Another type of facility, a RUF, was introduced in 1982. A RUF is a medium-term revolving commitment to guarantee the overseas sale of short-term negotiable promissory notes (usually a fixed-spread over LIBOR) issued by the borrower at or below a predetermined interest rate. RUFs separate the roles of the medium-term risk-taker from the funding institutions (the short-term investors). RUFs and NIFs allow access to capital sources at interest rates considerably below conventional financing rates. The savings in interest cost are derived because the borrower obtains the lower interest costs prevailing in the short-term markets, while still retaining the security of longer term financing commitments. The notes issued under RUFs are attractive for institutional investors since they permit greater diversification of risk than the certificates of deposit of only one bank. Underwriters favor them because their commitments do not appear on the statement of financial condition. RUFs are usually structured for periods of four to seven years.

A RUF differs from a NIF in that it separates the functions of underwriting and distribution. With a RUF, the lead bank (manager or arranger) acts as the only placing agent. The arranger retains total control over the placing of the notes.

NIFs and RUFs are discussed further in the *Bank Holding Company Supervision Manual*.

GUARANTEES ISSUED

State member banks and foreign branches of U.S. banks are allowed to issue guarantees or sureties under certain circumstances. Such guarantees are to be reported as contingent liabilities in Schedule RC-L. Refer to section 7090, ‘‘International—Guarantees Issued,’’ of this manual and to the call report instructions for further information.

ASSET SALES

The term ‘‘asset sales,’’ in the following context, encompasses the range of activities from the sale of whole loans to the sale of securities representing interests in pools of loans. Asset-sales programs entail establishing both a portfolio of assets that are structured to be easily salable and a distribution network to sell the assets. Most large banks have expended great effort in developing structures and standard procedures to streamline asset-sale transactions and continue to do so.

Asset sales, if done properly, can have a legitimate role in a bank's overall asset and liability management, and can contribute to the efficient functioning of the financial system. In addition, these activities can assist a bank in diversifying its risks and improving its liquidity.

The benefits of a qualifying sale transaction are numerous. In particular, the sale of a loan reduces capital requirements. The treatment also enhances net income, assuming that the loan was sold for a profit.

Banks' involvement in commercial loan sales and in public issuance of mortgage and asset-backed securities has grown tremendously over the last decade. Banks are important both as buyers and sellers of whole loans, loan participations, and asset-backed securities. Banks also play important roles in servicing consumer receivables and mortgages backing securities and in providing credit enhancement to originators of primarily asset-backed securities.

Both whole loans and portions of loans are sold. Banks sell portions of loans through participation arrangements and syndication agreements.

Participations

A loan participation is a sharing or selling of ownership interests in a loan between two or more financial institutions. Normally, a lead bank originates the loan and sells ownership interests to one or more participating banks at the time the loan is closed. The lead bank (originating bank) normally retains a partial interest in the loan, holds all loan documentation in its own name, services the loan, and deals directly with the customer for the benefit of all participants. Properly structured, loan participations allow selling banks to accommodate large loan requests that would otherwise exceed lending limits, to diversify risk, and to improve liquidity by obtaining additional loanable funds. Participating banks are able to compensate for low local demand for loans or invest in large loans without their servicing burdens and origination costs. If not appropriately structured and documented, however, a loan participation can present unwarranted risks to both the seller and purchaser of the loan. Examiners should determine the nature and adequacy of the participation arrangement and should analyze the credit quality of the loan. For further information on participations, refer to section 2040, ‘‘Loan Portfolio Management,’’ in this manual.

Syndication

A syndication is an arrangement in which two or more banks lend directly to the same borrower pursuant to one loan agreement. Each bank in the syndicate is a party to the loan agreement and receives a note from the borrower evidencing the borrower's debt to that bank. Each participant in the syndicate, including the lead bank, records its own share of the participated loan. Consequently, the recourse issues and contingent liabilities encountered in a loan participation involving syndication are not normally an issue. However, many banks involved in syndicated transactions will sell some of their allotment of the facility through subparticipations. These subparticipations should be reviewed in the same manner as any other participation arrangement.

Asset Securitization

Banks have long been involved with asset-backed securities, both as investors in these securities and as sellers of assets within the context of the securitization process. In recent years, banks have increased their participation in the long-established market for those securities that are backed by residential mortgage loans. They have also expanded their securitizing activities to other types of assets, including credit card receivables, automobile loans, boat loans, commercial real estate loans, student loans, nonperforming loans, and lease receivables. See section 4030, “Asset Securitization,” for a detailed discussion of the securitization process.

Risks

Assets sold without recourse are generally not a contingent liability, and the bank should reflect on its books only that portion of the assets it has retained. In some instances, however, participations must be repurchased to facilitate ultimate collection. For example, a bank may sell the portion of a loan that is guaranteed by the Small Business Administration (SBA) and retain the unguaranteed portion and the responsibility for servicing the loan. In the event of a default, the holder of the guaranteed portion has the option to request the originating bank to repurchase its portion before presenting the loan to the SBA for ultimate disposition and collection. In addition, some banks may repurchase assets and absorb any loss even when no legal responsibility exists. It is necessary to determine management’s practice in order to evaluate the degree of risk involved. If management routinely repurchases assets that were sold without recourse, a contingency liability should be recognized. The amount of the liability should be based on historical data.

Contingent liabilities may also result if the bank, as the seller of a loan without recourse, does not comply with provisions of the agreement. Noncompliance may result from a number of factors, including failure on the part of the selling institution to receive collateral and/or security agreements, obtain required guarantees, or notify the purchasing party of default or adverse financial performance by the borrower. The purchaser of a loan may also assert claims that the financial information, which the purchaser relied on when acquiring the loan, was inaccurate, misleading, or fraudulent and that the selling bank was aware of the deficiencies. Therefore, a certain degree of risk may in fact be evident in assets allegedly sold without recourse. Examiners need to be mindful of this possibility and its possible financial consequences on the bank under examination.

Banks also face credit, liquidity, and interest-rate risk in the period in which they accumulate the assets for sale. Especially in mortgage banking activities, the need to carefully monitor interest-rate risk in the “pipeline” represents one of the significant risks of the business. Sellers of participations also face counterparty risk similar to that of a funding desk, because the loan-sales operation depends on the ongoing willingness of purchasers to roll over existing participations and to buy new ones. In addition, many banks sell loans in the secondary market but retain the responsibility for servicing the loans.

Accounting Issues

For regulatory reporting purposes, some transactions involving the “sale” of assets must be reported as financing transactions (that is, as borrowings secured by the assets “sold”), and others must be reported as sales of the assets involved. The treatment required for any particular transfer of assets depends on whether the “seller” retains risk in connection with the transfer of the assets. In general, to report the transfer of assets as a sale, the selling institution must retain no risk of loss or obligation for payment of principal or interest.

All recourse arrangements should be documented in writing. If a loan is sold with recourse back to the seller, the selling bank has, in effect, retained the full credit risk of the loan, and its lending limit to the borrower is not reduced by the amount sold. Loans sold with recourse are to be treated as borrowings of the selling bank from the purchasing bank. Examiners should consider asset sales subject to formal or informal repurchase agreements (or understandings) to be sales "with recourse" regardless of other wording in the agreement to the contrary.

In determining the true recourse nature of an asset sale, examiners must determine the extent to which the credit risk has been transferred from the seller to the purchaser. In general, if the risk of loss or obligation for payments of principal or interest is retained by, or may ultimately fall back upon, the seller or lead bank, the transaction must be reported by the seller as a borrowing from the purchaser and by the purchaser as a loan to the seller. Complete details on the treatment of asset sales for purposes of the report of condition and income are found in the glossary of the Instructions for the Preparation of the Report of Condition and Income under the entry "sales of assets."

OTHER OFF-BALANCE-SHEET ACTIVITIES AND CONTINGENT LIABILITIES

Banks often provide a large number of customer services, which normally do not result in transactions subject to entry on the general ledger. These customer services include safekeeping, the rental of safe deposit boxes, the purchase and sale of investments for customers, the sale of traveler's checks, the sale of U.S. Savings Bonds, collection services, federal funds sold as agent, operating leases, and correspondent bank services. It is the bank's responsibility to ensure that collateral and other nonledger items are properly recorded and protected by effective custodial controls. Proper insurance must also be obtained to protect against claims arising from mishandling, negligence, mysterious disappearance, or other unforeseen occurrences. Failure to take these protective steps may lead to contingent liabilities. In addition, pending litigation in which the bank is a defendant could expose the bank to substantial risk of loss. Refer to section 4000, "Other Examination Areas," in this manual for further information.

Banks often enter into operating leases as lessees of buildings and equipment. The arrangements should be governed by a written lease. For a material lease, the examiner must determine whether the lease is truly an operating lease or if it is a capitalized lease pursuant to FASB 13. Capitalized leases and associated obligations must be recorded on the books of the bank in accordance with FASB 13 and the instructions for the preparation of the Report of Condition and Income. Refer to the instructions for the call report and to section 2190, "Bank Premises and Equipment," in this manual for further information about capitalized leases.

While operating leases do not affect the bank's capital ratios, the costs of an operating lease may have a material effect upon the earnings of the bank. Moreover, operating leases may involve other responsibilities for the bank, and the bank's failure to perform these responsibilities may ultimately result in litigation and loss to the bank. The examiner must be cognizant of the requirements imposed on the bank by its leasing arrangements.

Some banks purchase federal funds from smaller correspondent banks as agent. This off-balance-sheet activity is more fully discussed in section 2030, "Bank Dealer Activities," in this manual.

Examination Objectives

Effective date November 1995

1. To determine if policies, practices, procedures, and internal controls regarding contingent claims from off-balance-sheet credit activities are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the off-balance-sheet credit activities for credit quality and collectibility.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

This section provides supervisory and accounting guidance for examiners to use in their examination and review of a bank's creation and use of loan participation agreements. Additional guidance, research, and information on loan participations and loan participation agreements will be developed and considered for future issuance and implementation.

A loan participation is an agreement that transfers a stated ownership interest in a loan to one or more other banks, groups of banks, or other entities. The transfer represents an ownership interest in an individual financial asset. The lead bank retains a partial interest in the loan, holds all loan documentation in its own name, services the loan, and deals directly with the customer for the benefit of all participants. Banks should ensure that comprehensive participation agreements with originating institutions are in place for each loan facility before they consider purchasing any participating interest.

Many banks purchase loans or participate in loans originated by others. In some cases, such transactions are conducted with affiliates, groups of banks, or members of a chain-banking organization. Alternatively, a purchasing bank may also wish to supplement its loan portfolio when loan demand is weak. In still other cases, a bank may purchase or participate in a loan to accommodate another unrelated bank with which it has established an ongoing business relationship.

Purchasing or selling loans, if done properly, can have a legitimate role in a bank's overall asset and liability management and can contribute to the efficient functioning of the financial system. In addition, these activities help a bank diversify its risks and improve its liquidity.

BOARD POLICIES ON LOAN PARTICIPATIONS

Banks should have sufficient board-approved policies in place that govern their loan participation activities. At a minimum, the policy should include (1) the requirements for entering into a loan participation agreement, (2) limits for the aggregate amount of loans purchased from and sold to an outside source, (3) limits of all loans purchased and sold, (4) limits for the aggregate amount of loans to particular industries, (5) comprehensive participation agreements with originating banks, (6) complete analysis and documentation of the credit quality of obligations purchased, (7) an analysis of the value and lien status of the collateral, (8) appraisal guidelines, (9) the maintenance of full independent credit information on the borrower throughout the term of the loan, (10) guidelines for the timely transfer of all financial and nonfinancial credit information to participant banks, and (11) collection procedures.

LOAN PARTICIPATION AGREEMENT

A loan participation agreement may enable a smaller bank (the lead bank or transferor) to originate a large loan in excess of its legal lending limit. Participating banks that have an ownership interest are able to offset low local loan demand or invest in large loans without the burden of servicing the loan or incurring origination costs. A loan participation agreement may also allow the originating bank to facilitate and grant a larger loan without causing it to have a concentration of credit (i.e., enabling risk diversification) or an impairment of its liquidity position. The participation agreement should contain provisions that require the originating bank to transfer, in a timely manner, all financial and nonfinancial credit information to the participant banks upon the loan's origination and throughout the term of the loan. The agreement should specify the allocation of payments, losses, and expenses. It should also state that a participating bank has the right to perform its own independent review of the transaction. The agreement should contain no language indicating that the lead bank is a "lender" or that a participating bank is a "borrower." The purchase of loan participations without a comprehensive agreement could be viewed as an unsafe and unsound banking practice.

ACCOUNTING FOR LOAN PARTICIPATIONS

A loan participation agreement is usually structured to allow the participation transaction to receive sale treatment of a portion of the loan by the originating bank even though the participation agreement may restrict the purchaser when reselling its interest in the loan, subject to certain conditions.[1] Sale treatment is achieved by structuring the loan participation agreement so that interests sold to a purchaser meet the definition of a "participating interest" and the transaction satisfies all conditions for transfer of control over the interests. In general, FAS 166 (paragraph 8B) briefly defines a participating interest as a portion of a financial asset that

1. conveys proportionate ownership rights with equal priority to each participating interest holder.
2. involves no recourse (other than standard representations and warranties) to, or subordination by, any participating interest holder.
3. does not entitle any participating interest holder to receive cash before any other participating interest holder.

A transfer of a participating interest in an entire financial asset in which the transferor surrenders control over those interests is to be accounted for as a sale if and only if *all the following conditions* are met:

1. The transferred financial assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership.[2]
2. Each purchaser has the right to pledge or exchange the interests it received, and no condition both constrains the purchaser from taking advantage of its right to pledge or exchange and provides more than a trivial benefit to the transferor.
3. The transferor does *not* maintain effective control over the interests.[3]

STRUCTURING THE LOAN PARTICIPATION AGREEMENT

The written participation agreement should consider contingent events such as a defaulting borrower, the lead bank becoming insolvent, or a party to the participant arrangement that is not performing as expected. The agreement should clearly state the limitations the originator or participants impose on each other and any rights that the parties retain. The participation agreement should clearly include

- the obligation of the lead bank to furnish timely credit information and to notify the parties of significant changes in the borrower's status;
- a requirement that the lead bank consult with the participants prior to any proposed change to the loan, guarantee, or security agreements, or taking any action when the borrower defaults;
- the lead bank's and participants' specific rights if the borrower defaults;
- the resolution procedures to be followed when the lead bank or participants
  - do not agree on the procedures to be taken when the borrower defaults and/or;
  - have potential conflicts when the borrower defaults on more than one loan;
- provisions for terminating the agency relationship between the lead bank and the participants upon events such as insolvency, breach of duty, negligence, or misappropriation by one of the parties to the agreement.

1. Three sale recognition conditions denote the transferor's surrender of control under Financial Accounting Standards (FAS) 166, "Accounting for Transfers of Financial Assets" (an amendment of FAS 140). Those conditions must be met in order for the originator (transferor) to account for the transfer of the financial assets to the participating transferee as a sale. When a loan participation is accounted for as a sale, the seller (transferor) removes the participated interest in the loan from its financial statements. FAS 166 applies to both the transferor (seller) of the participated assets and the transferee (purchaser). (See the complete text of FAS 166 (paragraphs 8B and 9) that defines a "participating interest" and the conditions for sale recognition). See also the reporting instructions for the FFIEC Consolidated Reports of Condition and Income (FFIEC 031) (bank Call Report).

2. Transferred financial assets are isolated in bankruptcy or other receivership only if the transferred financial assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor or any of its consolidated affiliates included in the financial statements being presented.

3. Examples of a transferor's effective control over the transferred financial assets include (a) an agreement that both entitles and obligates the transferor to repurchase or redeem the financial asset (or its third-party beneficial interests) before its maturity, (b) an agreement that provides the transferor with both the unilateral ability to cause the holder to return specific financial assets and a more-than-trivial benefit attributable to that ability, other than through a cleanup call, or (c) an agreement that permits the transferee to require the transferor to repurchase the transferred financial assets at a price that is so favorable to the transferee that it is probable that the transferee will require the transferor to repurchase them.

Some participation agreements may allocate payments using a method other than a pro rata sharing based on each participant's ownership interest. The first principal payment could be applied based on the participant's ownership interest while the remaining payments would be applied according to the lead bank's ownership interest. In this situation, the participation agreement should specify that if a borrower defaults, the participants would share subsequent payments and collections in proportion to their ownership interest at the time of default.[4]

A participation agreement may provide that the lead bank, as the originating lender, allow a participating bank to resell, but the lead bank reserves the right to call at any time from whoever holds the ownership interest. The lead bank can then enforce the call option by cutting off or restricting the flow of interest at the call date.[5] In this situation, the lead bank, as originating lender, has retained effective control over the participation; such a call option precludes sale accounting treatment by the transferor. The transaction, therefore, should be accounted for as a secured borrowing.

INDEPENDENT CREDIT ANALYSIS

A bank that acquires a loan participation should regularly perform a rigorous credit analysis on its loan participation as if it had originated the loan. Due to the indirect relationship that a participating bank has with a borrower, it may be difficult for the participating bank to receive timely credit information to allow it to conduct a comprehensive credit analysis of the transaction. However, the participating bank should not rely solely on the lead bank's credit analysis. It should gather all available relevant credit information, including the details on the collateral's value (for example, values determined by an independent appraisal or an evaluation), lien status, loan agreements, and the loan's other participation agreements that existed prior to making its commitment to acquire the loan participation. A participating bank also should reach an agreement with the loan originator (transferor) that it will provide ongoing, complete, and timely credit information about the borrower. It is important for the participating banks to maintain current and complete records on their loan participations. The absence of such information may indicate that the bank did not perform the necessary due diligence prior to making its decision to acquire the loan participation. During the life of the loan participation, the bank should monitor the loan's servicing and repayment status.

4. This is *not* a participating interest—no sale.

5. The cash flows from a loan participation agreement, except servicing fees, should be divided in proportion to the third parties' participating interests.

SALES OF LOAN PARTICIPATIONS IN THE SECONDARY MARKET

If a bank has a concentration in loan participations, it may be possible for it to sell its participating interests in the secondary market to reduce its dependence on an asset group. If the bank is not large enough to participate in the secondary market, an alternative might be to sell loans without recourse to a correspondent bank that also desires to diversify its loan portfolio.

SALE OF LOAN PARTICIPATIONS WITH OR WITHOUT THE RIGHT OF RECOURSE

The parties to a participation agreement (those having a participating ownership interest) generally may have *no recourse* to the transferor or to each other even though the transferor (e.g., the originating lender) continues to service the loan. No participant's interest should be subordinate to another. Some loan participation agreements, however, may give the seller a contractual right to repurchase the participated loan interest for purposes of working out or modifying the sale. When the seller has the right to repurchase the participation, it may provide the seller with a call option on a specific loan participation asset. If the seller's right to repurchase precludes the seller from recognizing the transaction as a sale, the transaction should be accounted for as a secured borrowing.

SALES OF 100 PERCENT PARTICIPATIONS

Some loan participation agreements may be structured so that the transferor (lead bank) sells the entire underlying loan amount (100 percent) to the agreement's participants. If participation agreements are not structured properly they can pose unnecessary and increased risks (for example, legal, compliance, or reputational risks) to the originator and the participants. The lead bank, as originator, would have no ownership in the loan. Such agreements should therefore clearly state that the loan participants are participating in the loan and that they are not investing in a business enterprise. The policies of a bank engaged in such loan participation agreements should focus on safety and soundness concerns that include

- the program's objectives
- the plan of distribution
- the credit requirements that pertain to the borrower—the originating bank should structure 100 percent loan participation programs only for borrowers who meet the originating institution's credit requirements
- the program participant's accessibility to the borrower's financial information (as authorized by the borrower)—the originating bank should allow potential loan participants to obtain and review appropriate credit and other information that would enable them to make an informed credit decision.

PARTICIPATION TRANSACTIONS BETWEEN AFFILIATES

Banks should not relax their credit standards when participation agreements involve affiliated insured depository institutions. Such agreements must be structured to comply with sections 23A and 23B of the Federal Reserve Act (FRA) and the Board's Regulation W. The Federal Reserve has determined that in certain very limited circumstances the purchase or sale of a participation agreement may be exempt from these provisions.

Transfer of Low-Quality Assets

In general, a bank cannot purchase a low-quality asset, including a loan participation from an affiliate. Section 23A of the FRA provides a limited exception to the general rule prohibiting purchase of low-quality assets if the bank performs an independent credit evaluation and commits to the purchase of the asset before the affiliate acquires the asset.[6] Section 223.15 of the Board's Regulation W provides an exception from the prohibition on the purchase of a low-quality asset by a member bank from an affiliate for certain loan renewals. The rule allows a member bank that purchased a loan participation from an affiliate to renew its participation in the loan, or provide additional funding under the existing participation, even if the underlying loan had become a low-quality asset, so long as certain criteria were met. These renewals or additional credit extensions may enable both the affiliate and the participating member bank to avoid or minimize potential losses. The exception is available only if (1) the underlying loan was not a low-quality asset at the time the member bank purchased its participation and (2) the proposed transaction would not increase the member bank's proportional share of the credit facility. The member bank must also obtain the prior approval of its entire board of directors (or its delegees) and it must give a 20-day post-consummation notice to its appropriate federal banking agency. A member bank is permitted to increase its proportionate share in a restructured loan by 5 percent (or by a higher percentage with the prior approval of the bank's appropriate federal banking agency). The scope of the exemption includes renewals of participations in loans originated by any affiliate of the member bank (not just affiliated depository institutions).

CONCENTRATIONS OF CREDIT INVOLVING LOAN PARTICIPATIONS

Banks should avoid purchasing loans that generate unacceptable credit concentrations. Such concentrations may arise solely from the bank's purchases, or they may arise when loans or purchased participations are aggregated with loans originated and retained by the purchasing bank. The extent of contingent liabilities, holdbacks, reserve requirements, and the manner in which loans will be handled and serviced should be clearly defined. In addition, loans purchased from another source should be evaluated in the same manner as loans originated by the bank itself. Guidelines should be established for the type and frequency of credit and other information the bank needs to obtain from the originat-

6. 12 USC 371c(a)(3).

ing institution to keep itself continually updated on the status of the credit. Guidelines should also be established for supplying complete and regularly updated credit information to the purchasers of loans originated and sold by the bank.

LOAN PARTICIPATIONS AND ENVIRONMENTAL LIABILITY

Environmental risk represents the adverse consequences that result from generating or handling hazardous substances or from being associated with the aftermath of contamination. Banks may be indirectly liable via their lending activities for the costs resulting from cleaning up hazardous substance contamination. Banks need to be careful that their actions making, administering, and collecting loans—including assessing and controlling environmental liability—cannot be construed as taking an active role in the management or day-to-day operations of a borrower's business. Such actions could lead to potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Banks that originate loans to borrowers through loan participation agreements could be transferring environmental risk and liability to the holders of participations, thus making them susceptible to such losses. The originating banks should establish and follow policies and procedures designed to control environmental risks. See section 2140.1 (the "Environmental Liability" subsection) for a more detailed discussion on ways banks can protect themselves as lenders, and their loan participation agreement holders, from environmental liability.

RED FLAG WARNING SIGNALS

The following conditions may indicate that there are significant problems with the management of the bank's loan participation portfolio:

1. the absence of formal loan participation policies.
2. the absence of any formal participation agreement.
3. the absence of credit evaluations and independent credit analysis.
4. the absence of complete loan documentation.
5. a higher volume of loan participations when compared to the volume of other loans in the bank's loan portfolio.
6. missing loan participation agreements and documentation which should denote the rights and responsibilities of all participants.
7. the existence of numerous disputes or disagreements among the participants regarding
   a. the receipt of payment(s) in accordance with the participation agreements,
   b. documentation requirements, or
   c. any other significant aspects of the bank's loan participation transactions.
8. the originating bank is making loan payments to loan participation acquirers without receiving reimbursement by the original borrower.

1. To ascertain if the bank engages in the purchase or sale of loans via loan participation agreements.
2. To determine if the bank's lending policy
   a. places limits on the amount of loan participations originated, purchased, or sold based on any one source or in the aggregate;
   b. has set credit standards for the bank's borrowers requesting loans as well as third parties acquiring loan participations from the bank as originator;
   c. requires the same credit standards for loan participations as it does for other loans;
   d. sets the amount of contingent liability, holdback (retained ownership), and the manner in which the loan should be serviced; or
   e. requires complete loan documentation for loan participations.
3. To assess the impact of any concentrations of credit to a borrower, or in the aggregate, that arise from loans involved in loan participation agreements.
4. To determine if there are any informal repurchase agreements that exist between loan participation acquirers that are designed to circumvent the originating bank's legal lending limits, disguise delinquencies, and avoid adverse classifications.
5. To determine whether the bank's financial condition is compromised by assessing the impact of the bank's loan participations with its affiliates.
6. To ascertain whether the bank's loan participation transactions with affiliates are in compliance with sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W.
7. To determine if there are disputes between the bank as originator of loan participations and its participants. To determine, if possible, if any loan participations have been adversely classified by examiners, including examiners from other supervisory agencies (includes loan participations held by the other institutions).

These examination procedures are designed to ensure that originated loans that were transferred via loan participation agreements or certificates to state member banks, bank holding companies, nonbank affiliates, or other third parties were carefully evaluated. The examination procedures also instruct examiners to determine if the asset transfers were carried out to avoid or circumvent classification and to determine the effect of the transfers on the bank's financial condition. In addition, the procedures are designed to ensure that the primary regulator of another financial institution involved in the asset transfer is notified.

1. Review the board of directors' or their designated committees' policies and procedures governing how loan participation agreements and activities are created, transacted, and administered. Refer to section 2045.1 for the minimum items that should be included in board-approved policies on loan participation activities.
2. Determine if managerial reports provide sufficient information relative to the size and risk profile of the loan participation portfolio and evaluate the accuracy and timeliness of reports produced for the board and senior management.
3. For loan participations held (either in whole or in part) with another lending institution, review, if applicable,
   - participation certificates and agreements, on a test basis, to determine if the contractual terms are being adhered to;
   - loan documentation to determine if it meets the bank's underwriting procedures (that is, the documentation for loan participations should meet the same standards as the documentation for other loans the bank originates);
   - the transfer of loans immediately before the date of the examination to determine if the loan was either nonperforming or classified and if the transfer was made to avoid possible criticism during the current examination; and
   - losses to determine if they are shared on a pro rata or other basis according to the terms of the participation agreement.
4. Check participation certificates or agreements and records to determine whether the parties share in the risks and contractual payments on a pro rata or other basis.
5. Determine if loans are purchased on a recourse basis and that loans are sold on a nonrecourse basis.
6. Ascertain that the bank does not buy back or pay interest on defaulted loans in contradiction of the underlying participation agreement.
7. Compare the volume of outstanding originated or purchased loans that were issued in the form of loan participations with the total outstanding loan portfolio.
8. Determine if the bank has sufficient expertise to properly evaluate the volume of loans originated or purchased and sold as loan participations.
9. Based on the terms of the loan participation agreements, review the originator's distribution of the borrower's payments received to those entities or persons owning interests in the loan participations. Ascertain if the agreement's recourse provisions may require accounting for the transactions as a secured borrowing rather than as a sale.
10. Determine if loans are sold primarily to accommodate credit overline needs of customers or to generate fee income.
11. Determine if loans are purchased or sold to affiliates or other companies in a chain-banking organization or a commonly owned group of banks; if so, determine whether the purchasing companies are given sufficient information to properly evaluate the credit. (Section 23A of the Federal Reserve Act and the Board's Regulation W prohibit transfers of low-quality assets between affiliates. See section 4050.1, "Bank-Related Organizations.")
12. Investigate any situations in which assets were transferred before the date of examination:
    a. Determine if any were transferred to avoid possible criticism during the examination.
    b. Determine whether any of the loan participations transferred were nonperforming at the time of transfer, classified during the previous examination, or transferred for any other reason that may

cause the loans to be considered of questionable quality.

13. Review the bank's policies and procedures to determine whether loan participations purchased by the bank are required to be given an independent, complete, and adequate credit evaluation. If the bank is a holding company subsidiary or a member of a chain-banking organization or commonly owned group of banks, review asset participations sold to affiliates or other known members of the chain or group of banks to determine if the asset purchases were supported by an *arm's-length* and *independent* credit evaluation.
14. Determine that any assets purchased by the bank were properly reflected on its books at fair market value at the time of purchase.
15. Determine that transactions involving transfers of low-quality assets to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and the holding company affiliate.
16. If poor-quality assets were transferred to another financial institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank's appropriate staff will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable,
    - name of originating and receiving institutions;
    - type of assets involved;
    - date (or dates) of transfer;
    - total number and dollar amount of assets transferred;
    - status of the assets when transferred (e.g., nonperforming, classified, etc.); and
    - any other information that would be helpful to the other regulator. Ascertain whether the bank manages not only the risk from individual participation loans but also portfolio risk.
17. Find out if management develops appropriate strategies for managing concentration levels, including the development of a contingency plan to reduce or mitigate concentrations during adverse market conditions (such a plan may include strategies involving not only loan participations, but also whole loan sales). Find out if the bank's contingency plan includes selling loans as loan participations.
18. Ascertain if management periodically assesses the marketability of its loan participation portfolio and evaluates the bank's ability to access the secondary market.
19. Verify whether the bank compares its underwriting standards for loan participations with those that exist in the secondary market.

1. Under what circumstances are loans participated?
2. Who determines the type of loans that may be participated? Does the bank have policies in that regard? Are credit standards included in the lending policy for purchased loan participations, and does the policy require complete loan documentation and independent credit and collateral evaluation or appraisal?
3. Does the lending policy place lending limits on the amount of loan participations purchased from any one source, and does it place an aggregate limit on such loans?
4. Are low-quality loans allowed to be participated?
5. What is the volume and frequency of inter-institution transactions involving loan participations?
6. Does the bank have accounting policies to ensure the appropriate treatment of loan participations as either sales or secured borrowings?

INTRODUCTION

A concentration exists when extensions of credit or other obligations possess similar risk characteristics. Typically, loans to related groups of borrowers, loans collateralized by a single security or securities with common characteristics, and loans to borrowers with common characteristics within an industry have been included in homogeneous risk groupings when assessing asset concentrations. Furthermore, a concentration may include the aggregate of all types of credit (e.g., loan product) to or investment in a particular homogeneous risk grouping.

While the size of a concentration does not necessarily determine the risk, a bank's asset quality, earnings, or capital can be disproportionally affected by a single or localized economic event or market conditions if the bank holds significant asset concentrations. Therefore, a bank's risk-management system needs to identify, measure, monitor, and control concentrations in a bank's loan portfolios and investments.

LEGAL LENDING LIMITS AND REGULATORY CONSIDERATIONS

Limitations imposed by the various state and federal legal lending limits are intended to prevent an individual or a relatively small group from borrowing an undue amount of the bank's resources and to safeguard the bank's depositors by spreading the loans among a relatively large number of persons engaged in different businesses. However, lending limits alone are not sufficient to prevent and control concentrations of credit.

The Interagency Guidelines Establishing Standards for Safety and Soundness (12 CFR 208 appendix D-1 for state member banks) state that a depository institution should establish and maintain prudent credit underwriting practices that take adequate account of concentration of credit risk. Further, an insured depository institution should establish and maintain a risk-management system that is commensurate with the institution's size and the nature and scope of its operations to identify problem assets and prevent deterioration in those assets. In establishing and maintaining its risk-management system, the institution should, among other things, consider the size and potential risks of material asset concentrations.

The real estate lending standards in the Board's Regulation H require each state member bank to adopt and maintain a written policy that establishes appropriate limits and standards for all extensions of credit that are secured by liens on or interests in real estate.[1] In terms of governance, a bank's real estate lending policies must be consistent with safe and sound banking practices; appropriate to the size of the institution and the nature and scope of its operations; and reviewed and approved by the bank's board of directors at least annually. The real estate lending policies outlined in 12 CFR 208.51 should consider the Interagency Guidelines for Real Estate Lending Policies (12 CFR 208, appendix C). The Interagency Guidelines for Real Estate Lending Policies state that in managing its loan portfolio, the institution should consider both internal and external factors in the formulation of its loan policies and strategic plan. This includes the need to avoid undue concentrations in risk.

In addition, the Board's Regulation F (12 (12 CFR 206) addresses exposure that may arise from a bank's relationship with its correspondents. Regulation F states that a bank must establish policies and procedures that take into account credit and liquidity risks, including operational risks, in selecting correspondents and in terminating those relationships. At least annually, these policies and procedures should be reviewed and approved by the bank's board of directors. For more information, see this manual's sections on "Interbank Liabilities" and "Correspondent Concentration Risks."

TYPES OF CREDIT CONCENTRATIONS

There are numerous approaches for determining concentrations within a loan portfolio. In evaluating a potential concentration, a bank needs to determine the key factors germane to the credit portfolios.

1. 12 CFR 208.51.

Commercial Real Estate (CRE) Credit Concentrations

Concentrations in commercial real estate (CRE) loans are particularly noteworthy given its historical volatility and role in bank failures.[2] Banks may view a CRE loan as a product, which would include all transactions secured by commercial real estate. Alternatively, banks may also take an "industry" view, which would include only those CRE loans where the primary source of repayment is sale or refinancing of commercial real estate or collection of lease and rental payments of the property. A CRE loan pool may be further segmented by other factors such as geography, property use, tenant concentrations, risk rating, or credit structure (for instance, fixed or variable interest rate).

Banks with weak risk management and high CRE credit concentrations are exposed to a greater risk of loss and failure. Therefore, banks with CRE credit concentration should have appropriate risk-management practices in place to manage their risk exposure.[3]

Other Common Loan Portfolio Concentrations

Other concentrations that are commonly identified in a loan portfolio include the following:

- Loans to a group of borrowers, perhaps unrelated, predicated on the collateral support afforded by a debt or equity issue of a corporation. Regardless of whether the issuing entity is a publicly traded company or a closely held enterprise, a concentration may exist in the underlying collateral.
- Loans that are dependent on a particular agricultural crop or livestock herd. Banking institutions located in farming, dairying, or livestock areas may grant substantially all their loans to individuals or concerns engaged in and dependent on the agricultural industry. Concentrations of agricultural lending activity are commonplace and may be necessary if these banks are to adequately serve the needs of their communities.[4]
- Reserve-based lending, which is a type of financing where a loan is secured by the reserves of oil and gas of a borrower and repaid primarily using the proceeds from the future sale of encumbered oil or gas reserves. Concentrations can occur in any one well, reservoir, field, or producing area. For more information on the management of concentrations in energy lending, see this manual's section, "Energy Lending—Reserve-Based Loans"
- The aggregate amount of interim construction loans that do not have firm, permanent takeout commitments. In the event that permanent financing is not obtainable, the bank will have to continue financing the real estate property until the borrower sells the property or obtains permanent financing from another lender. This longer term financing subjects the bank to additional liquidity and possibly interest rate risks as well as to market and economic risks associated with the real estate property.
- Loans to groups of borrowers who handle a product from the same industry or economic sector. Although the borrowers may appear to be independent from one another, their financial conditions may be affected similarly if a slowdown occurs in their economic sector.
- Loans that are originated in geographic areas that are economically driven by a certain industry or dominated by one or only a few business enterprises. In these situations, banks may extend a substantial amount of credit to these companies and to a large percentage of the companies' employees. If economic or other events cause the enterprise's operations to slow down or stop, heavy unemployment may result as there may be limited job opportunities in the area.
- Loans that are extended to other financial institutions, including, but not limited to, due from accounts, federal funds sold, investments, net current exposure of derivatives contracts, and direct or indirect loans. For more information, see SR-10-10, "Interagency Guidance on Correspondent Concentration Risk," and this manual's section, "Correspondent Concentration Risks."
- Retail loan products, including, but not limited to, credit cards, home equity lines of credit, home equity loans, residential first mortgages, auto loans, boat loans, and manu-

3. See also this manual's section, "Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices."

4. See also this manual's section, "Agricultural Loans."

factured housing loans. In these cases, loan product features (e.g., target market, purpose, documentation, underwriting criteria, or repayment expectations) constitute the common characteristics and sensitivities of the loans. These pools may be further segmented by other factors, such as direct or indirect loans, vintage, credit scores, or loan-to-value ratios.

RISK MANAGEMENT OF ASSET CONCENTRATIONS

The key risk-management objective for credit concentrations is to identify pools of transactions that may act like a single, correlated exposure. The sophistication of a bank's risk-management processes should be appropriate to the size as well as the level and nature of concentrations and the associated risk to the bank. A bank's risk-management framework should effectively identify, monitor, and control concentration risk.

The board of directors is responsible for establishing the bank's strategic plan, including the level of assumed risk. If the bank has significant credit concentration risk, its strategic plan should address the rationale for such a concentration in relation to its overall growth objectives, financial targets, and capital plan. A bank's lending policies should reflect the level of risk that is acceptable to its board of directors and should provide clear and measurable underwriting standards that enable the institution's lending staff to evaluate relevant credit factors. When a bank has a credit concentration, the establishment of sound lending policies becomes even more critical to promote credit quality in its credit portfolio.

A strong management information system (MIS) is key to effective portfolio management. The sophistication of MIS will necessarily vary with the size and complexity of the credit portfolio and level and nature of existing or planned concentrations. Effective MIS produces timely, comprehensive, and accurate data. MIS should provide management with sufficient information to identify, measure, monitor, and manage concentration risk. This includes meaningful information on portfolio characteristics that is relevant to the bank's lending strategy, underwriting standards, and risk tolerances. A bank should assess periodically the adequacy of MIS in light of changes in its credit portfolio's size, risk profile, and complexity.

Banks that have effective internal controls to manage and reduce excessive concentrations over a reasonable period of time need not automatically refuse credit to sound borrowers because of their particular industry or geographic location. Banks should appropriately incorporate analytical information (such as scenario analysis results, if conducted) in establishing concentration limits and managing concentration risks.

Furthermore, a bank may be able to reduce the risks associated with concentrations through strengthening the loan terms in an individual credit. For example, the bank may be able to obtain additional collateral, government guarantees, crop insurance backed by government agencies, or private insurance arrangements for loans or asset pledging. In the event of deterioration, the bank's position would be strengthened because the additional collateral or guarantees provide a cushion against any losses.

When concentration levels have been built up over an extended period, a bank needs time, in some cases several years, to achieve a more balanced and diversified portfolio mix. Given the bank's trade area, lack of economic diversity, or geographic location, reducing the existing concentration in the near term may be impossible. If a concentration does exist, the bank should have adequate systems and controls for reducing undue or excessive concentrations in accordance with a prudent plan. Strong credit policies and loan administration standards should provide adequate control for the risks associated with new loans in a loan portfolio with a high risk concentration. The bank should also maintain adequate capital to protect the bank while its portfolio is being restructured. For identified asset concentrations, bank management should be aware of not only the current market and economic trends for a particular asset concentration as well as future prospects.

Concentrations that involve excessive or undue risks require close scrutiny by the bank and should be reduced over a reasonable period of time. If the concentrations compromise the safety and soundness of the institution, management is normally expected to develop a plan to reduce the asset concentration that is realistic, prudent, and achievable in view of the particular circumstances and market conditions.

Alternatives for Reducing Credit or Asset Concentrations

As noted above, sometimes credit concentration can become so significant that, if the common factor influencing the credit portfolio deteriorates sufficiently, even a portfolio of well underwritten loans can suffer losses and reduce an institution's capital. This possibility underscores why the control and management of concentration risk is so important. To manage a credit or asset concentration, a bank may consider the following actions.

Increased holdings of capital. To compensate for the additional risk that may be associated with an asset concentration, a bank may elect to maintain a higher capital ratio than would be required under the appropriate capital regulations. This additional capital would provide support in the event the concentration adversely affects the organization's financial position.

Increased allowance for credit losses. The bank may choose to factor credit concentrations into its determination of an adequate allowance for credit losses. Management should consider the need to qualitatively adjust expected credit loss estimates for information not already captured in the loss estimation process. As part of the loss estimation process, management should consider, among other things, the existence, growth, and effect of any concentrations of credit.

Loan participations. If a bank has a concentration, the bank may sell a portion of its loan portfolio in the secondary market to reduce its dependency on an asset group. If the bank is not large enough to participate in the secondary market, the bank might be able to sell loans, without recourse, to a correspondent bank that is also attempting to diversify its loan portfolio. For more information on loan participations, see this manual's section entitled, "Loan Participations, the Agreements and Participants."

Government guarantee programs. Another possible solution to reduce the risk associated with a loan concentration is for the bank to participate in loan programs that provide a government guarantee or insurance in the event the borrower defaults on a loan. Such programs provide the bank with the ability to offset a portion of its credit risk.

Modifying underwriting standards. Modifying underwriting standards to increase exposure to higher quality transactions or to diminish exposure to weaker borrowers. Concurrently, management can increase the level of oversight over credit underwriting while executing exit strategies from lower-quality relationships (e.g., increasing pricing or tightening terms and conditions).

Diversification of the loan portfolio. Banks can engage in activities or markets that are not likely to perform in a similar manner with its existing loan portfolios, considering its expertise in a market and loan products.

Modifying exposure limits or credit risk benchmarks. This can be accomplished by adjusting limits on loan commitments or outstanding balance on a line of credit, or tightening constraints on distribution by the bank's internal loan ratings/grades.

Buying credit derivative protection. For some banks, it may be appropriate to engage in default or total return swaps on an individual credit transaction or a loan pool.

SUPERVISORY CONSIDERATIONS FOR ASSESSING CONCENTRATIONS

Quantitative Considerations

Examiners should determine the existence of any credit concentrations at the bank and assess whether any concentrations of credit represent a hazard to the safety and soundness of the bank or violate applicable laws and regulations. Examiners should understand the activities that may heighten concentration risk, such as acute asset growth; increases in nonperforming assets; or changes to the bank's loan portfolio. As described in the this manual's section, "Earnings—Analytical Review of Income and Expense," examiners should reference the Uniform Bank Performance Report (UBPR) as well as the most recent financial statements and other related financial information in performing the analytical review of a bank. UBPR page 7B entitled, "Analysis of Concentrations of Credit" and provides percentages of certain bank assets by its capital. More specifically, the UBPR provides concentration information on residential and commercial real estate loans, construction and development lending, agricultural loans, commercial and industrial loans, and different types of leases.

For supervisory processes, examiners should evaluate a bank's credit concentration ratios to assess the size and potential risks of material credit concentrations posed to the bank's capital. In March 2020, the Federal Reserve, Federal Deposit Insurance Corporation, and Office of the Comptroller of the Currency (agencies) adopted a common approach for defining credit concentration ratios.[5] As of March 31, 2020, for banks that have adopted the Financial Accounting Standards Board's Accounting Standards Codification Topic 326, *Financial Instruments—Credit Losses* that implements the current expected credit losses (CECL) methodology, the agencies' examiners will calculate credit concentration ratios using

- tier 1 capital plus the allowance for credit losses attributed to loans and leases as the denominator.[6]

For institutions that have not adopted CECL, the agencies' examiners calculate credit concentration ratios using

- tier 1 capital plus the entire allowance for loan and lease losses as the denominator.

When determining and calculating concentrations, the amount of loan commitments and other off-balance-sheet risk items should be considered. This includes all types of loans, overdrafts, cash items, suspense resources, securities, leases, acceptances, advances, letters of credit, and all other items due to the bank as well as loans endorsed, guaranteed, or cosigned by related individuals and their related interests. A concentration of credit generally exists when an institution advances or commits economically related direct or indirect extensions of credit and contingent obligations to a person, entity, or affiliated group that, when aggregated, exceed 25 percent of the bank's capital, as defined above.

Qualitative Considerations

In addition to the quantitative assessment of bank concentration ratios, examiners should understand and evaluate the effectiveness of the internal policies, systems, and controls that a bank uses to monitor and manage the risk associated with asset concentrations. Examiners should determine whether the bank's MIS reports on credit concentrations are adequate and allow management to make informed decisions. Further, examiners should determine whether management followed established guidelines for concentrations, and if those guidelines align with the bank's risk appetite or strategic plan. If the

5. The agencies adopted this approach in response to changes in the regulatory capital requirements for some banking organizations after the implementation of the community bank leverage ratio (CBLR) rule (84 Fed. Reg. 61,776 (November 19, 2019)). As of March 31, 2020, qualifying community banking organizations (generally, depository institutions and depository institution holding companies with less than $10 billion in total consolidated assets that meet other qualifying criteria, including a leverage ratio of greater than 9 percent) that elect the CBLR framework are no longer required to report tier 2 capital. Tier 2 capital is a component of total capital, which has generally been the denominator in credit concentration ratios used for supervisory processes. See SR-20-8, "Joint Statement on Adjustment to the Calculation for Credit Concentration Ratios Used in the Supervisory Approach."

6. The agencies have adopted final rules providing banks the option to phase in the day-one adverse effects on regulatory capital that may result from the adoption of the CECL accounting standard. See 84 Fed. Reg. 4222, February 14, 2019 and 85 Fed. Reg. 17,723, March 31, 2020. For banks that are phasing in the capital impact of implementing the CECL accounting standard, the denominator for concentration calculations is tier 1 capital plus allowance for loan and lease losses or allowance for credit losses adjusted for the amount of CECL phase in capital included in both allowance and tier 1 capital. As noted in 84 Fed. Reg. 4222, for purposes of determining whether a bank phasing in the capital impact of implementing the CECL methodology is in compliance with its regulatory capital requirements (including capital buffer and prompt corrective action requirements), the agencies will use the bank's regulatory capital ratios as adjusted by the CECL transition provision. Through the supervisory process, the agencies will continue to examine banks' credit loss estimates and allowance balances regardless of whether the bank has elected to use the CECL transition provision. In addition, the agencies may examine whether electing bank will have adequate amounts of capital at the expiration of their CECL transition provision period. After all banks have adopted the CECL methodology and have exited their CECL transition provision periods, it will no longer be necessary to adjust for the amount of CECL phase in capital included in both the allowance and tier 1 capital.

For the purposes of measuring concentrations at banks that are phasing in the adoption of the CECL accounting standard, examiners should evaluate the appropriateness of the amounts included in the denominator for the tier 1 capital calculation and confirm that the CECL transitioned amounts, if elected, plus the allowance for credit losses related to loans and leases have been excluded. To calculate the amount to be excluded from tier 1 capital, examiners should use the difference between "retained earnings" as reported on item 26.a of Schedule RC to the Call Report and "retained earnings" as reported on item 2 Schedule RC-R, Part I, to the Call Report. This resulting difference is the amount of retained earnings that should have been used to calculate tier 1 capital for purposes of measuring lending-related concentrations and should equal the retained earnings on the institution's balance sheet.

bank modified its strategic plans in a way that could increase concentration risk at the bank, examiners should assess whether the bank made the necessary modifications to concentration risk-management systems.

A bank should maintain adequate records that may be used to identify asset concentrations. The degree of sophistication of the reporting records will vary by the asset size of a bank. Regardless of the identification system used by the bank, examiners should verify the accuracy of listed concentrations in such reporting records, as well as the appropriateness of concentrations, during the examination.

Reporting Concentrations in the Report of Examination

As noted in the "Community Bank Supervision Process" section of this manual, examiners are to include a discussion on concentrations in the report of examination if the bank has materially deficient practices in managing concentrations. The report of examination should include a discussion of the appropriateness of risk-management practices regarding any materially significant concentrations of assets, liabilities, specific industries, and other categories, as applicable. If the bank has materially deficient practices in managing concentrations or has concentrations that compromise safety and soundness, the report of examination should address the bank's alternatives or plans for reducing concentrations. Further, examiners should comment on the ability to leverage the bank's internal concentration reporting when conducting the review and assessment of concentrations.

INTRODUCTION

This section will provide examiners with a fundamental understanding of secured and unsecured commercial and industrial loans, loan evaluation and coverage techniques, the key principles for assessing credit quality, minimum documentation standards for loan line sheets, and basic bankruptcy law, as well as an overview of sections 23A and 23B of the Federal Reserve Act and tie-in arrangements. Other sections of this manual discuss more specific types of lending.

The term "commercial and industrial loan" is commonly used to designate loans to a corporation, commercial enterprise, or joint venture that are not ordinarily maintained in either the real estate or consumer installment loan portfolios. Generally, commercial loans are the largest asset concentration of a state member bank, offer the most complexity, and require the greatest commitment from bank management to monitor and control risks. Proper management of these assets requires a clearly articulated credit-policy that imposes discipline and sound loan administration. Since lenders are subject to pressures related to productivity and competition, they may be tempted to relax prudent credit-underwriting standards to remain competitive in the marketplace, thus increasing the potential for risk. Examiners need to understand the unique characteristics of the varying types of commercial and industrial loans, as well as how to properly analyze their quality.

Commercial loans are extended on a secured or unsecured basis with a wide range of purposes, terms, and maturities. While the types of commercial and industrial loans can vary widely depending on the purpose of loans made and market characteristics where the bank operates, most commercial and industrial loans will primarily be made in the form of a seasonal or working-capital loan, term business loan, or loan to an individual for a business purpose.

PRIMARY TYPES OF COMMERCIAL AND INDUSTRIAL LOANS

Seasonal or Working-Capital Loans

Seasonal or working-capital loans provide a business with short-term financing for inventory, receivables, the purchase of supplies, or other operating needs during the business cycle. These types of loans are often appropriate for businesses that experience seasonal or short-term peaks in current assets and current liabilities, such as a retailer who relies heavily on a holiday season for sales or a manufacturing company that specializes in summer clothing. These types of loans are often structured in the form of an advised line of credit or a revolving credit. An advised revocable line of credit is a revocable commitment by the bank to lend funds up to a specified period of time, usually one year. Lines of credit are generally reviewed annually by the bank, do not have a fixed repayment schedule, and may not require fees or compensating balances. In the case of unadvised lines of credit, the bank has more control over advances and may terminate the facility at any time, depending on state law or legal precedents. A revolving credit is valid for a stated period of time and does not have a fixed repayment schedule, but usually it has a required fee. The lender has less control over a revolving credit since there is an embedded guarantee to make advances within the prescribed limits of the loan agreement. The borrower may receive periodic advances under the line of credit or the revolving credit. Repayment of the loans is generally accomplished through conversion or turnover of short-term assets. Interest payments on seasonal loans are usually paid throughout the term of the loan, such as monthly or quarterly.

Seasonal or working-capital loans are intended to be repaid through the cash flow derived from converting the financed assets to cash. The structure of the loans can vary, but they should be closely tied to the timing of the conversion of the financed assets. In most cases, seasonal or working-capital facilities are renewable at maturity, are for a one-year term, and include a clean-up requirement for a period sometime during the low point or contraction phase of the business cycle. The clean-up period is a specified period (usually 30 days) during the term of the loan in which the borrower is required to pay off the loan. While this requirement is becoming less common, it provides the bank with proof that the borrower is not dependent on the lender for permanent financing. It is important to note, however, that an expanding business may not be able to clean up its facility since it may be increasing its current assets.

Analysis of Seasonal and Working-Capital Loans

The analysis of a seasonal loan is best accomplished by a monthly or quarterly review of a company's balance sheet and income statements to identify the peak and contraction phases of the business cycle. The lender should know when the peak and contraction phases are, and the loan should be structured accordingly. The lender's primary objective is to determine whether the advances are being used for the intended purposes (inventories or payables) and not for the acquisition of fixed assets or payments on other debts. Repayments on the facility should also be consistent with the conversion of assets. If the borrower has other loan facilities at the bank, all credit facilities should be reviewed at the same time to ensure that the activity with the seasonal or working-capital facility is not linked to other loans in the bank. Projections of sources and uses of funds are also a valuable tool for reviewing a seasonal or working-capital line of credit and determining the sales cycle.

Quarterly balance-sheet and income statements are very helpful when a comparison is made with the original projections. Other helpful information can be obtained from a review of an aging of accounts receivable for delinquencies and concentrations, a current list of inventory, an accounts-payable aging, and accruals made during the quarter. This information can be compared with the outstanding balance of the facility to ensure that the loan is not overextended and that the collateral margins are consistent with borrowing-base parameters. A borrowing base is the amount the lender is willing to advance against a dollar value of pledged collateral; for example, a bank will only lend up to a predetermined specified percentage of total outstanding receivables less all past-due accounts more than a certain number of days delinquent. A borrowing-base certificate should be compiled at least monthly or more often during peak activity in the facility. When reviewing seasonal loans, examiners should remember that a bank relies heavily on inventory as collateral in the beginning of a company's business cycle and on receivables toward the end of the business cycle. However, in traditional working-capital loans, greater emphasis is usually placed on accounts receivable as collateral throughout the loan's tenure.

Normally, a bank is secured by a perfected blanket security interest on accounts receivable, inventory, and equipment and on the proceeds from the turnover of these assets. Well-capitalized companies with a good history of seasonal payout or cleanup may be exceptions. An annual lien search, however, would be prudent under this type of lending relationship to detect any purchase-money security interest that may have occurred during the business cycle.

The following are potential problems associated with working-capital and seasonal loans:

- *Working-capital advances used for funding losses.* A business uses advances from a revolving line of credit to fund business losses, including the funding of wages, business expenses, debt service, or any other cost not specifically associated with the intended purpose of the facility.
- *Working-capital advances funding long-term assets.* A business will use working-capital funds to purchase capital assets that are normally associated with term business loans.
- *Trade creditors not paid out at end of business cycle.* While the bank may be paid out, some trade creditors may not get full repayment. This can cause a strained relationship as unpaid trade creditors may be less willing to provide financing or offer favorable credit terms in the future. In turn, the business will become more reliant on the bank to support funding needs that were previously financed by trade creditors.
- *Overextension of collateral.* The business does not have the collateral to support the extension of credit, causing an out-of-borrowing-base situation. Examiners should review borrowing-base certificates to verify that coverage meets the prescribed limitations established by the bank's credit policy for the specific asset being financed.
- *Value of inventory declines.* If a business does not pay back the bank after inventory is

converted to cash or accounts receivable, the value of the inventory declines. Other causes of inventory devaluation include obsolescence; a general economic downturn; or, in the case of a commodity, market volatility. Declines in inventory value will commonly put a working-capital facility in an out-of-borrowing-base situation and require the excess debt to be amortized and repaid through future profits of the business.

- *Collectibility of accounts receivable declines.* The increasingly past-due status of accounts receivable or deteriorating credit quality of account customers both result in the noncollection of receivables. This can also cause an out-of-borrowing-base situation for the lending institution.
- *Working-capital advances used to fund long-term capital.* Funds may be inappropriately used to repurchase company stock, pay off subordinated debt holders, or even pay dividends on capital stock.

These situations may cause a loan balance to be remaining at the end of the business cycle. If this should occur, the bank generally has one of three options: (1) Require the unpaid balance to be amortized. This option is, however, dependent on the ability of the business to repay the debt through future profits. (2) Request the borrower to find another lender or require an infusion of capital by the borrower. This is not always a feasible option because of the probable weakened financial condition of the business and ownership under these circumstances. (3) Liquidate the collateral. Foreclosing on the collateral should only be executed when it becomes obvious that the business can no longer function as a going concern. The problem with this option is that once the bank discovers that the business is no longer a viable concern, realizing the full value of the collateral is in jeopardy. The need to resort to any of these options may prompt criticism of the credit.

Term Business Loans

Term business loans are generally granted at a fixed or variable rate of interest, have a maturity in excess of one year, and are intended to provide an organization with the funds needed to acquire long-term assets, such as physical plants and equipment, or finance the residual balance on lines of credit or long-term working capital. Term loans are repaid through the business's cash flow, according to a fixed-amortization schedule, which can vary based on the cash-flow expectations of the underlying asset financed or the anticipated profitability or cash flow of the business. Term business loans involve greater risk than short-term advances because of the length of time the credit is extended. As a result of this greater risk, term loans are often secured. Loan interest may be payable monthly, quarterly, semiannually, or annually.

In most cases, the terms of these loans are detailed in formal loan agreements with affirmative and negative covenants that place certain conditions on the borrower throughout the term of the loan. Generally, loan agreements substantially enhance a borrower/banker relationship because they encourage and promote more frequent communication between the parties. In affirmative covenants, the borrower pledges to fulfill certain requirements, such as maintain adequate insurance coverage, make timely loan repayments, or ensure the financial stability of the business. Negative or restrictive covenants prohibit or require the borrower to refrain from certain practices, such as selling or transferring assets, defaulting, falling below a minimum debt coverage ratio, exceeding a maximum debt-to-equity ratio, or taking any action that may diminish the value of collateral or impair the collectibility of the loan. Covenants should not be written so restrictively that the borrower is constantly in default over trivial issues; however, violations should be dealt with immediately to give credibility to the agreement. Violations of these covenants can often result in acceleration of the debt maturity. A formal loan agreement is most often associated with longer-term loans. If a formal agreement does not exist, the term loans should be written with shorter maturities and balloon payments to allow more frequent review by bank management.

Analysis of Term Business Loans

While a seasonal or working-capital loan analysis emphasizes the balance sheet, the analysis of term loans will focus on both the balance sheet and the income statement. Because a term loan is repaid from excess cash flow, the long-term viability of the business is critical in determining the overall quality of the credit. In evaluating long-term earnings, the examiner must develop a fundamental understanding of the company's industry and competitive position in the marketplace. Most of the analysis will be conducted based on the historical performance of the business and its history of making payments on its debt. Any historical record of inconsistencies or inability to perform on existing debt should prompt an in-depth review to determine the ability of the borrower to meet the loan's contractual agreements. One of the most critical determinations that should be made when evaluating term debt is whether the term of the debt exceeds the useful life of the underlying asset being financed.

While cash flow of the business is the primary source of repayment for a term loan, a secondary source would be the sale of the underlying collateral. Often, if circumstances warrant a collateral sale, the bank may face steep discounts and significant expenses related to the sale. Examiners should carefully consider these issues when evaluating the underlying value of collateral under a liquidation scenario.

The following are potential problems associated with term business loans:

- The term of the loan is not consistent with the useful life of collateral.
- Cash flow from operations does not allow for adequate debt amortization, a fundamental problem that can only be solved by improved performance.
- The gross margin of the business is narrowing, which requires the business to sell more product to produce the same gross profit. Higher sales volume could require more cash for expansion of current assets, leaving less cash for debt amortization. This situation is a common by-product of increased competition.
- Sales are lower than expected. In the face of lower sales, management is unable or unwilling to cut overhead expenses, straining cash flow and resulting in diminished debt-servicing ability.
- Fixed assets that are financed by term loans become obsolete before the loans are retired, likely causing the value of underlying collateral to deteriorate.
- The business's excess cash is spent on higher salaries or other unnecessary expenses.
- The payments on term debt have put a strain on cash flow, and the business is unable to adequately operate or allow natural expansion.
- The balance sheet of the business is weakening. The overall financial condition of the business is deteriorating because of poor performance or unforeseen occurrences in the industry.

SECURED AND UNSECURED TRANSACTIONS

This subsection is intended to be a general reference for an examiner's review of a credit file to determine whether the bank's collateral position is properly documented. Examiners should be aware that secured transactions encompass an extensive body of law that is rather technical in nature. The following discussion contains general information for examiners on the basic laws that govern a bank's security interest in property and on the documentation that needs to be in a loan file to properly document a perfected security interest in a borrower's assets.

Secured Transactions

Most secured transactions in personal property and fixtures are governed by article 9 of the Uniform Commercial Code (UCC). The UCC has been adopted by all 50 states, the District of Columbia, and the Virgin Islands. Timing differences as well as filing locations differ from state to state. Failure to file a financing statement in a timely manner or in the proper location will compromise a lender's security interest in the collateral.

Article 9 of the UCC applies to any transaction that is intended to create a security interest in personal property. Mortgage transactions are not covered, marine mortgages are filed with the Coast Guard, and aircraft liens are filed with the Federal Aviation Administration. A "security interest" is defined in the UCC as "an interest in personal property or fixtures which secures payment or performance of an obligation." A secured transaction requires that there be an *agreement* between the parties indicating the parties' intention to create a security interest for the benefit of the creditor or secured party. This agreement is commonly referred to as a security agreement.

Article 9 of the UCC refers to two different concepts related to security interests: attachment and perfection. Attachment is the point in time at which the security interest is created and becomes enforceable against the debtor. Perfection refers to the steps that must be taken in order for the security interest to be enforceable against third parties who have claims against collateral.

Attachment of Security Interest

The three requirements for the creation of a security interest are stated in UCC section 9-203(1). Once the following requirements are met, the security interest attaches:

- The collateral is in the possession of the secured party pursuant to agreement, or the debtor has signed a security agreement that contains a description of the collateral and, when the security interest covers crops now growing or to be grown or timber to be cut, a description of the land concerned.
- Value has been given to the debtor.
- The debtor has rights in the collateral.

Thus, unless the collateral is in the possession of the secured party, there must be a written security agreement that describes the collateral. The description does not have to be very specific or detailed—“any description of personal property…is sufficient whether or not it is specific if it reasonably identifies what is described” (see section 9-110). The agreement must also be signed by the debtor. The creditor may sign it, but its failure to do so does not affect the agreement’s enforceability against the debtor.

“Giving value” is any consideration that supports a contract. Value can be given by a direct loan, a commitment to grant a loan in the future, the release of an existing security interest, or the sale of goods on contract.

While the debtor must have “rights” in the collateral, he or she does not necessarily have to have title to the property. For example, the debtor may be the beneficiary of a trust (the trustee has title of trust assets) or may lease the collateral. The debtor, in such cases, has rights in the collateral, but does not hold the title to the collateral. The secured party, however, only obtains the debtor’s limited interest in the collateral on default if the debtor does not have full title to the collateral.

Perfection of Security Interest in Property

Perfection represents the legal process by which a bank secures an interest in property. Perfection provides the bank assurance that it has an interest in the collateral. The category of collateral will dictate the method of perfection to be used. The most common methods of perfection are (1) automatic perfection when the security interest attaches (such as in the case of purchase-money security interests applicable to consumer goods other than vehicles); (2) perfection by possession; (3) the filing of a financing statement in one or more public filing offices (The financing statement is good for five years, and the lender must file for a continuation within the six-month period before expiration of the original statement.) and (4) compliance with a state certificate of title law or central filing under a state statute other than the UCC, such as registration of vehicles.

The most common method of perfecting a security interest is public filing. Public filing serves as a constructive notice to the rest of the world that the bank claims a security interest in certain property of the debtor described in both the security agreement and the financing statement. Public filing is accomplished by filing a financing statement (UCC-1) in a public office, usually the county recorder or secretary of state. The system of filing required by the UCC provides for a notice filing whereby potential creditors can determine the existence of any outstanding liens against the debtor’s property.

The form of the financing statement and where to file it varies from state to state. While the filing of a nonstandard form will generally be accepted, the failure to file in the proper public office can jeopardize the priority of the lender’s security interest. The UCC provides three alternative filing systems:

- *Alternative System One.* Liens on minerals, timber to be cut, and fixtures are filed in the county land records. All other liens are filed in the office of the secretary of state.
- *Alternative System Two.* The majority of states have adopted this version. It is the same as system one, except liens on consumer goods, farm equipment, and farm products are filed in the county where the debtor resides or in the county where the collateral is located if it is owned by a nonresident.
- *Alternative System Three.* In a minority of states, filings made with the secretary of state must

also be filed in the county of the borrower's business (or residence if there is no place of business in that state). Otherwise, the requirement in these states is the same as system two.

As each state may select any of the above three alternatives or a modified version of them, it is important that the examiner ascertain the filing requirements of the state(s) where the bank's customer operates. Most importantly, it is the location of the borrower, not the bank, that determines where the financing statement must be filed.

Evaluation of Security Interest in Property

Key items to look for in evaluating a security interest in property include the following:

- *Security agreement.* There should be a proper security agreement, signed and dated by the borrower, that identifies the appropriate collateral to be secured. It should include a description of the collateral and its location in sufficient detail so the lender can identify it, and should assign to the lender the right to sell or dispose of the collateral if the borrower is unable to pay the obligation.
- *Collateral possession.* If the institution has taken possession of the collateral to perfect its security interest, management of the institution should have an adequate record-keeping system and proper dual control over the property.
- *Financing statement.* If the institution has filed a financing statement with the state or local authority to perfect its security interest in the collateral, in general, it should contain the following information:
  — names of the secured party and debtor
  — the debtor's signature
  — the debtor's mailing address
  — the address of the secured party from which information about the security interest may be obtained
  — the types of the collateral and description of the collateral (Substantial compliance with the requirements of UCC section 9-402 is sufficient if errors are only minor and not seriously misleading. Some states require the debtor's tax ID number on the financing statement.)
- *Amendments.* Not all amendments require the borrower's signature, and banks may file an amendment for the following reasons:
  — borrower's change of address
  — creditor's change of address
  — borrower's name change
  — creditor's name change
  — correction of an inaccurate collateral description
  — addition of a trade name for the borrower that was subsequently adopted
- *Where to file a financing statement.* In general, financing statements filed in good faith or financing statements not filed in all of the required places are effective with respect to any collateral covered by the financing statement against any person with knowledge of the statement's contents. If a local filing is required, the office of the recorder in the county of the debtor's residence is the place to file. If state filing is required, the office of the secretary of state is the place to file.
- *Duration of effectiveness of a financing statement.* Generally, effectiveness lapses five years after filing date. If a continuation statement is filed within six months before the lapse, effectiveness is extended five years after the last date on which the filing was effective. Succeeding continuation statements may be filed to further extend the period of effectiveness.

Perfection of Security Interest in Real Estate

As previously mentioned, real estate is expressly excluded from coverage under the UCC. A separate body of state law covers such interests. However, for a real estate mortgage to be enforceable, the mortgage must be recorded in the county where the real estate covered by the mortgage is located.

Real estate mortgage or deed of trust. When obtaining a valid lien on real estate, only one document is used, the mortgage or deed of trust. The difference between a mortgage and a deed of trust varies from state to state; however, the primary difference relates to the process of foreclosure. A mortgage generally requires a judicial foreclosure, whereas, in some states, a foreclosure on a deed of trust may not. Nearly all matters affecting the title to the real estate, including the ownership thereof, are recorded in the recorder's office.

When determining the enforceability of a real estate mortgage or deed of trust, the examiner should be aware of the following requirements:

- The mortgage must be in writing.
- To be recordable, the mortgage must be acknowledged. There are different forms of acknowledgments for various situations depending on whether individuals, corporations, partnerships, or other entities are executing the mortgage. Make sure that the form of the acknowledgment used is in accordance with the type of individual or entity executing the mortgage.
- If a corporation is the mortgagor, its articles of incorporation or bylaws often will specifically state which officers have authority to sign an instrument affecting real estate. In these instances, the designated officer should be required to sign. If the corporation has a seal, that also must be affixed. If the corporation does not have a seal, this fact must be shown in the acknowledgment.
- As soon as possible after the mortgage is executed, it should be recorded in the office of the recorder for each county in which the property described in the mortgage is located. In most cases, the borrower signs an affidavit that indicates, in part, that he or she will not attempt to encumber the property while the lender is waiting for the mortgage to be recorded. In smaller community banks, common practice may be not to advance any of the money under the loan until the mortgage has been recorded and the later search completed. In larger banks or cities, however, this practice is often not practical.
- If the mortgagor is married, the spouse must join in the execution of the mortgage to subject his or her interest to the lien of the mortgage. If the mortgagor is single, the mortgage should indicate that no spouse exists who might have a dower interest or homestead interest in the property.
- If the mortgagor is a partnership, it must be determined whether the title is in the name of the partnership or in the names of the individual partners. If the title is in the names of the individual partners, their spouses should join in executing the mortgage. If the title is in the name of the partnership, those partners who are required to sign under the partnership agreement should sign.

Unsecured Transactions

Unsecured transactions are granted based on the borrower's financial capacity, credit history, earnings potential, and liquidity. Assignment of the borrower's collateral is not required, and repayment is based on the terms and conditions of the loan agreement. While unsecured loans often represent the bank's strongest borrowers, the unsecured loan portfolio can represent its most significant risk. One of the primary concerns related to unsecured credit is that if the borrower's financial condition deteriorates, the lender's options to work out of the lending relationship deteriorate as well. In general, if a credit is unsecured, the file should contain reliable and current financial information that is sufficient to indicate that the borrower has the capacity and can be reasonably expected to repay the debt.

Problem Loans

The following are key signals of an emerging problem loan:

- *Outdated or inaccurate financial information on the borrower.* The borrower is unwilling to provide the financial institution with a current, complete, and accurate financial statement at least annually. Management should also be requesting a personal tax return (and all related schedules) on the borrower. While borrowers will usually present their personal financial statements in the most favorable light, their income tax return provides a more conservative picture.
- *The crisis borrower.* The borrower needed the money yesterday, so the bank advanced unsecured credit.
- *No specific terms for repayment.* The unsecured loan has no structure for repayment, and it is commonly renewed or extended at maturity.
- *Undefined source of repayment.* These types of loans are often repaid through excess cash flow of the borrower, sale of an asset(s), or loan proceeds from another financial institution. These repayment sources are often not identified and are unpredictable.

Commercial Loan-Sampling Techniques

Sampling techniques are a valid and efficient method for reviewing the commercial loan portfolios at banks during on-site examinations. Sampling enables the examiner to draw conclusions regarding the condition of the entire loan portfolio by reviewing only a selected portion. These techniques make more efficient use of examination resources and allow examiners to devote more of their time and efforts to other areas of the examination.

Generally, a judgmental sampling technique is used for reviewing commercial loans. This technique enables examiners to evaluate the portfolio by reviewing a desired percentage of all the loans over a preselected cutoff amount. In addition to the judgmental sampling approach, statistical sampling techniques can also be valid methods for evaluating loan portfolios. Two statistical sampling techniques that may be selectively implemented during on-site examinations are attributes sampling and proportional sampling. Attributes sampling is especially well-suited for large banks that have formal loan review programs; proportional sampling may be better suited for smaller or regional banks without internal loan-review programs.

In statistical sampling, the examiner uses the concepts of probability to apply sampling techniques to the design, selection, and evaluation of loan samples. Statistical sampling eliminates (or at least minimizes) potential selection biases because each item in the sample-loan population must have an equal or otherwise determinable probability of being included in the examined portion. This probability provides the examiner with a quantitative, controllable measure of risk.

Generally, statistical sampling techniques may be implemented only in those banks (1) that were found to be in financially sound condition, (2) that were without any undue loan portfolio problems at the latest examination, and (3) where it was determined that the systems and controls were appropriate for implementing such techniques. Moreover, if during an examination, the examiner determines that the statistical sampling results are unsatisfactory, the traditional judgmental sampling technique should be implemented.

The two recommended statistical sampling techniques are described below:

- *Attributes Sampling.* The objective of attributes sampling is to determine from a sample, within specified reliability limits, the validity of the bank's internal loan-review program. The reliability limits are determined by the examiner, who formulates a hypothesis about the bank's loan-review program when evaluating its policies, practices, and procedures for loan extensions. The population to be sampled consists of all loans between certain dollar parameters, except for loans reviewed under the shared national credit program and loans to identified problem industries (the latter are reviewed separately during the examination). The lower dollar parameter is an amount that the examiner deems sufficient to achieve the desired coverage of the loan portfolio and is selected in much the same manner as a cutoff line is chosen in judgmental sampling. The upper dollar parameter is an amount over which all loans must be reviewed because of the significant effect each could have on the bank's capital. Loans are selected from the sample population by using a random digit table.

  When the selected loans are reviewed, the examiner compares his or her grading with those of the bank's loan-review program. An "error" generally exists if the examiner's grading of a particular loan is significantly more severe than the bank's grading. If the error rate in the sample is beyond the preestablished reliability limits the examiner is able to accept, all loans over the cutoff amount should be reviewed. If the examiner is satisfied with the sample results, the bank's internal grading will be accepted for all criticized loans that have not been independently reviewed within the sample population. Even when the bank's internal grading is deemed acceptable by the examiner, any loans reviewed and found to be in error will be appropriately classified in the report.
- *Proportional Sampling.* The procedures for proportional sampling are similar to those followed for attributes sampling. The objective of this sampling technique is to determine whether bank management can identify all the criticizable loans in the portfolio. The examiner formulates a hypothesis about the quality of the examined bank's loan administration, based on an analysis of loan policies, practices, and procedures for loan extensions. In proportional sampling, every loan in the sample population is given an equal chance of

selection in proportion to its size, so the larger the loan, the more likely it will be selected for review. Examiners grade the loans in the sample and compare these gradings with the bank's problem-loan list.

As in attributes sampling, the examiner specifies the desired precision of the sample, that is, that the true error rate in the bank's problem-loan list should be within a certain range of values. A statistical error occurs whenever the examiner criticizes a loan that is not criticized by the bank. If the error rate is higher than expected, the examiner will review all loans over a cutoff line, which is determined using the same criteria as line selection in judgmental sampling. If the sample results indicate an error rate within expectations, then the examiner will accept the bank's problem-loan list as a reliable list of the nonpass loans in the population from which the sample was taken. The examiner will then review and grade each loan on the problem-loan list over the cutoff amount.

For detailed procedures on how to implement both attributes and proportional sampling, examiners should contact either Reserve Bank supervision staff or Federal Reserve Board supervision staff.

REVIEWING CREDIT QUALITY

Importance of Cash Flow

Evaluating cash flow is the single most important element in determining whether a business has the ability to repay debt. Two principal methods of calculating the cash flow available in a business to service debt are presented in this subsection. The results of these methods should be used to determine the adequacy of cash flow in each credit evaluated at an institution. The accrual conversion method is the preferred method because it is the most reliable. The second and less reliable method is the supplemental or traditional cash-flow analysis; however, the information needed for this analysis is usually more obtainable and easier to calculate. The traditional method can be used when circumstances warrant, for example, when the borrower's financial statements are not sufficiently detailed for the information requested in the accrual conversion analysis or when historical information is inadequate.

Analysis and Limitations of Cash Flow

Cash-flow analysis uses the income statement and balance sheet to determine a borrower's operational cash flow. Careful analysis of all investment and financing (borrowing) activities must be made for an accurate assessment of cash flow. In reality, examiners face time constraints that often prevent them from performing the complex mathematical calculations involved in sophisticated cash-flow analysis. Therefore, the cash-flow methods presented below were designed to be reasonable and practical for examiner use. *However, examiners should be careful of conclusions reached using the traditional cash-flow analysis, without consideration to balance-sheet changes or other activities that affect cash flow. The traditional cash-flow analysis does not recognize growth in accounts receivable or inventory, a slow-down in accounts payable, capital expenditures, or additional borrowings.* If the credit file contains a CPA-prepared statement of cash flow or a statement prepared using the accrual conversion method, the examiner should concentrate efforts on reviewing and analyzing these statements rather than on preparing a traditional cash-flow statement.

One critical issue to remember is that deficit cash flow does not always mean that the borrower is encountering serious financial difficulties. In some cases, deficit cash flow is caused by a business's experiencing significant growth, and there is a pronounced need for external financing to accommodate this growth and eliminate the deficit cash-flow position. In this case, an adequate working-capital facility may not be in place to accommodate the need for additional inventory. A comprehensive analysis of changes in the balance sheet from period to period should be made before the loan is criticized.[1]

1. Examiners should make sure that they are using financial data from consistent periods, that is, year-to-date financial information. Mixing annual financial data with interim financial information can cause misinterpretation of cash flow for a given business cycle or annual period.

Components of the Accrual Conversion Method of Cash Flow

Category	*Basis for Amount*
Sales:	Dollar amount of sales in period
+/−change in A/R, INV., A/P:	Represents the absolute difference of the current period from the corresponding period of the previous year in accounts receivable, inventory, and accounts payable.
Formula:	(a) An increase in any current asset is a use of cash and is subtracted from the calculation. Conversely, a decrease in any current asset is a source of cash and is added to the calculation. (b) An increase in any current liability is a source of cash and is added to the calculation. Conversely, a decrease in any current liability is a use of cash and is subtracted from the calculation.
SGA:	Subtract selling, general, and administrative expenses.
Interest Expense:	Add interest expense to the calculation if SGA "expense" includes interest expense.
Excess (Deficit) Cash Flow:	Represents cash available before debt service.

Calculation of Supplemental/Traditional Cash Flow

Net Income:	Amount of net income reported on most recent annual income statement before taxes.
Interest Expense:	Add the total amount of interest expense for the period.
Depreciation/ Amortization:	Add all noncash depreciation and principal amortization on outstanding debt.
Cash Flow before Debt Service:	Indicates net Earnings Before Interest, Taxes, Depreciation, and Amortization (EBITDA). Amortization should include both principal and interest payments required on debt.
Debt Service:	Subtract scheduled principal and interest payments.
Capital Expenditures:	Subtract all capital expenditures for the period.
EQUALS— Excess (Deficit) Cash Flow:	Total amount of excess or deficit cash flow for the period after debt service.
Coverage Ratio:	Cash flow before debt service divided by debt service (principal and interest).

Importance of Financial Analysis

While cash-flow analysis is critical in reviewing whether a borrower has the ability to repay individual debt, a review of the borrower's other financial statements can offer information about other sources of repayment, as well as the borrower's overall financial condition and future prospects. The availability of historical balance-sheet and income information, which allow declining trends to be identified, is critical. Also, it may be appropriate to compare the borrower's financial ratios with the average for the industry overall. Much of the financial information that examiners will review will not be audited; therefore, considerable understanding of general accounting principles is necessary to competently review an unaudited financial statement. The bank should obtain at least annual financial statements from a borrower.

When reviewing a credit file of a borrowing customer of a bank, the following financial information should be available for review: income statement, balance sheet, reconciliation of equity, cash-flow statements, and applicable notes to financial statements. The components for a financial review can be segregated into three areas: operations management, asset management, and liability management. Operations management is derived from the income statement and can be used to assess company sales, cost control, and profitability. Asset management involves the analysis of the quality and liquidity of assets, as well as the asset mix. Liability management covers the analysis of the company's record of matching liabilities to the asset conversion cycle, such as long-term assets being funded by long-term liabilities.

In studying the above forms of management, various ratios will help the examiner form an informed and educated conclusion about the quality of the credit being reviewed. The ratios can be divided into four main categories:

- *Profitability ratios.* These ratios measure management's efficiency in achieving a given level of sales revenue and profits, as well as management's ability to control expenses and generate return on investment. Examples of these ratios include gross margin, operating profit margin, net profit margin, profit to sales ratio, profit to total assets ratio, and direct cost and expense ratios.
- *Efficiency ratios.* These ratios, which measure management's ability to manage and control assets, include sales to assets, inventory days on hand, accounts receivable days on hand, accounts payable days on hand, sales to net fixed assets, return on assets, and return on equity.
- *Leverage ratios.* These ratios compare the funds supplied by business owners with the financing supplied by creditors, and measure debt capacity and ability to meet obligations. These ratios may include debt to assets, debt to net worth, debt to tangible net worth, and interest coverage.
- *Liquidity ratios.* Include ratios such as the current ratio and quick ratio, which measure the borrower's ability to meet current obligations.

Common "Red Flags"

The symptoms listed below are included to provide an understanding of the common problems or weaknesses examiners encounter in their review of financial information. While one symptom may not justify criticizing a loan, when symptoms are considered in the aggregate, they may help the examiner detect near-term trouble. This list is only a sampling of "red flags" that should prompt further review; examiners should also be able to identify issues that may require further investigation from their cursory review of a borrower's financial statement.

- *A slowdown in the receivables collection period.* This symptom often reveals that the borrower has become more liberal in establishing credit policies, has softened collection practices, or is encountering an increase in uncollected accounts.
- *Noticeably rising inventory levels in both dollar amount and percentage of total assets.* Increases in inventory levels are usually supported by trade suppliers, and financing these increases can be extremely risky, particularly if turnover ratios are declining. The increase in inventory levels or lower turnover ratios may also be related to the borrower's natural reluctance to liquidate excessive or obsolete goods at a reduced price. Many businesses are willing to sacrifice liquidity to maintain profit margins.
- *Slowdown in inventory turnover.* This symptom may indicate overbuying or some other imbalance in the company's purchasing policies, and it may indicate that inventory is slow-moving. If the inventory is undervalued, the actual turnover is even slower than the calculated results.
- *Existence of heavy liens on assets.* Evidence of second and third mortgage holders is a sign of greater-than-average risk. The cost of junior money is high. Most borrowers are reluctant to use this source of funds unless conventional sources are unavailable.
- *Concentrations of noncurrent assets other than fixed assets.* A company may put funds into affiliates or subsidiaries for which the bank may not have a ready source of information on operations.
- *High levels of intangible assets.* Intangible assets, which shrink or vanish much more quickly than hard assets, usually have very uncertain values in the marketplace. In some cases, however, intangible assets such as patents or trademarks have significant value and should be given considerable credit.
- *Substantial increases in long-term debt.* This symptom causes increasing dependence on cash flow and long-term profits to support debt repayment.

- *A major gap between gross and net sales.* This gap represents a rising level of returns and allowances, which could indicate lower quality or inferior product lines. Customer dissatisfaction can seriously affect future profitability.
- *Rising cost percentages.* These percentages can indicate the business's inability or unwillingness to pass higher costs to the customer or its inability to control overhead expenses.
- *A rising level of total assets in relation to sales.* If a company does more business, it will take more current assets in the form of inventory, receivables, and fixed assets. Examiners should be concerned when assets are increasing faster than sales growth.
- *Significant changes in the balance-sheet structure.* These changes may not be the customary changes mentioned previously, but they are represented by marked changes spread across many balance-sheet items and may not be consistent with changes in the marketplace, profits or sales, product lines, or the general nature of the business.

REQUIRED MINIMUM DOCUMENTATION STANDARDS FOR LOAN LINE SHEETS

Certain minimum documentation must appear on all line examination sheets to leave an acceptable audit trail and to support the classification of designated loans. Currently, much of this information is often placed on the line ticket automatically by using computer-based loan-review systems. However, the disposition of the loan and the reasons for that disposition are the most crucial entries on the line ticket. Examiners must document their entries and decide how much of the documentation is required to support the loan-review decision. That decision and a summary of the reasons a loan is passed, listed for special mention, or adversely classified should be provided (preferably in bullet form) on the loan line ticket. Beyond that, the documentation will vary depending on the complexity and profile of the credit. The examiner may provide more detailed information on the collateral, cash flow, and repayment history. This additional information is not mandatory if the rationale for the disposition of the credit is otherwise clear.

The extension of credit line sheets and workpapers should document loan discussion comments, identify the examiner who reviewed the credit, and identify the officer(s) with whom the credit was discussed. Line sheets should also include the examiner's conclusion on the specific credit and the reasons for that conclusion.

As part of a review of examination and supervisory policies and procedures and to promote consistency, the items described below have been implemented as required minimum documentation standards for loan line sheets. These standards recognize a transactional approach in examinations and reflect the efficiencies inherent in a risk-focused approach to examinations. The amount of information that should be documented or included as part of a line sheet may vary depending on the type, complexity, and materiality of the credit. However, all line sheets should include the following information to satisfy the required minimum documentation standards, as set forth by SR-99-25 ("Minimum Documentation Standards for Loan Line Sheets," September 29, 1999). The first seven items are frequently provided through computer-based loan-review systems.

- *Name and location of borrower.* Document the name of the individual or company responsible for repayment of the debt.
- *Notation if the borrower is an insider or a related interest of an insider.* If the borrower is an insider or a related interest of the insider as defined by Regulation O, reflect this association on the line sheet.
- *Business or occupation.* Briefly describe the legal entity and the type of business in which the company is engaged, according to the following definitions:
  - — *Corporation.* A business organization that is owned by shareholders who have no inherent right to manage the business. The organization is generally managed by a board of directors that is elected by the shareholders. The file should contain the borrowing resolution indicating which officers from the corporation are authorized to sign on its behalf. Indicate if the corporation is closely held.
  - — *Partnership.* A business organization, specifically, an association of two or more persons to carry on as co-owners of a business for profit. Indicate if it is a general partnership (GP) or limited partnership (LP). If GP, each partner is fully liable for the firm's debts and actions. If LP, at least one general partner is fully

liable, but there will also be a number of partners whose liability is limited to that enumerated by the partnership agreement. Indicate each partner's proportionate interest (such as 25 or 50 percent).
   — *Proprietorship.* A form of business organization that is owned and operated by an individual. If the borrower is an individual, include his or her primary occupation.
- *Loan terms.* Include the following loan information[2]:
   — date of origination (note subsequent renewals and/or extensions)
   — repayment terms (for example, maturity, periodic payments, revolving)
   — maturity (restructured loans should be noted as such)
   — interest rate (fixed or variable) (If variable, state the basis (index) upon which the interest rate is determined.)
   — originated amount of the loan
- *Purpose of loan.* Note the purpose of each credit facility.
- *Repayment source.* Indicate the primary and secondary sources of repayment for each credit facility.
- *Collateral summary and value.* Describe collateral and assess the value of the collateral in which the bank maintains a perfected security interest. Values should be supported by some type of document, such as a recent financial statement, formal appraisal, management estimate, or any publication that maintains a current market value of collateral. At a minimum, the collateral assessment should include the following information:
   — collateral value
   — basis for valuation
   — date of valuation
   — control of collateral
   — current lien status
- *Loan officer assigned to the credit and the internal rating of the credit.* Note the name of the loan officer responsible for the loan. Also document the bank's internal risk-rating. The date of the most recent update of the rating should also be noted. Particular attention should be given to the consistency between the loan classification at the current examination and the assessment provided by the bank's internal loan-review department. Significant disparities should be noted in the asset-quality assessment.
- *Total commitment and total outstanding balances.* Indicate the total amount of the bank's legal commitment or line of credit available to the borrower. Note the total outstanding debt to the borrower as of the date of examination.
- *Examination date.* Indicate the as-of date of the examination.
- *Past-due or nonaccrual status.* Indicate the past-due status (current, nonaccrual, and days past due).
- *Amounts previously classified.* Note the loan amount and how the loan was previously classified at the most recent examination (Federal Reserve Bank or state).
- *Loan disposition (pass, special mention, or adverse classification).* Note the credit amount and how the credit is being classified, such as pass, special mention, substandard, doubtful, or loss.
- *Rationale for examiner's conclusions (preferably in bullet form).* Indicate the reasons for passing the credit or extending it for criticism, which should be consistent with the classification descriptions noted in the "Classification of Credits" section.
- *Name or initials of the examiner reviewing the credit.* Indicate the name or initials of the examiner who reviewed and assigned the classification to the credit.
- *Any significant comments by, or commitments from, management.* Clearly and specifically indicate relevant comments (including management's disagreement with the disposition of the loan, if applicable) that may be considered when determining whether or not to criticize the credit. Comments can include officer's comments noted in the credit file, information derived from discussions with management, questions the examiner may have about the borrower, or any other item deemed appropriate. If management plans to get out of the credit relationship, a workout strategy should be included in this section. Comments should be included as to why management disagrees with any loan classification or how any loan was classified.
- *Any noted documentation exceptions or loan-administration policy or procedural weaknesses, and any contravention of law, regulation, or policy.* Indicate any documentation exception or violation of law, regulation, or

2. If the loan is a shared national credit (SNC), this should be noted on the line sheet. A copy of the SNC write-up should be attached to the line sheet, and it is not necessary to provide any additional data.

policy that would be appropriate to include as part of the report of examination. The examiner may include any technical exception noted from the credit file that would inhibit the ability of the loan officer or the examiner to make an informed and/or competent judgment about the quality of the credit relationship.

When needed, loan line sheets should briefly note that information is not available or that certain information is not reliable due to deficient loan-administration systems and processes, particularly with respect to loan and collateral documentation and collateral values. If such deficiencies are material, a listing of the exceptions should be noted in the examination report. In addition, the effect of these loan-administration weaknesses should be discussed and factored into the risk-management rating.

Optional Information for Loan Line Sheets

In addition to the above information, additional items should be listed when needed to describe the terms of the credit and/or the disposition accorded to it by the examiners, for example, guarantors, amount of any specific reserve, or amounts previously charged off, as described below:

- *Related debt/tie-ins.* The name, total debt outstanding, and type of borrowings (such as real estate, commercial, installment debt) of the related party might be indicated.
- *Guarantor(s).* If a guarantor exists, the name, amount of the guaranty, and date the guaranty was signed can be noted. A summary and an assessment of data supporting a guaranty may also be included, along with current financial information from the guarantor(s) which the bank should obtain at least annually. Tax returns and supporting schedules, income statements, and other pertinent information on the guarantor(s) may be appropriate under certain circumstances. If a troubled credit, indicate whether the guarantor has exhibited any willingness to financially support the credit.
- *Summary of financial data.* The following information may be appropriate, based on the type and complexity of the loan:
  - — key balance-sheet information (current ratio, D/E ratio)
  - — key income items (EBITDA—earnings before income taxes, depreciation, and amortization; net income; profit margin)
  - — cash-flow coverage (debt-service coverage, interest coverage)
  - — source of financial data (company-prepared balance sheet, audited financial statement)
- *Dates and amounts of previous charge-offs.*
- *Specific reserves.* The examiner may indicate whether an amount (allocated reserve) was specifically set aside to absorb any loss from the credit. When evaluating the overall adequacy of the loan-loss reserve, subtract the aggregate of allocated reserves from the total reserve balance, and subtract the aggregate amount of loans for which allocated reserves exist from the total loan balance.
- *The name of the loan officer who may have offered the most pertinent discussion items that affected the classification decision.*

BANKRUPTCY LAW AND COMMERCIAL LOANS

This section provides examiners with an overview of the United States Bankruptcy Code (the code) chapters that affect commercial and industrial loans. Bankruptcy law is a significant body of law; it would be difficult in this manual to discuss all the issues necessary for comprehensive understanding of the code. This subsection will focus on basic issues that an examiner needs to be familiar with relative to three principal sections of the code: chapters 7, 11, and 13.

Creditors of a Bankrupt Business

A creditor in bankruptcy is anyone with a claim against a bankrupt business, even if a formal claim is not filed in the bankruptcy case. In bankruptcy court, a claim is defined very broadly. A claim may include a right to payment from a bankrupt business, a promise to perform work, or a right to a disputed payment from the debtor that is contingent on some other event. The two basic types of creditors are secured and unsecured. Secured creditors are those with perfected security interest in specific property, such as equipment, accounts receivable, or any other asset pledged as collateral on a loan. Unsecured creditors are generally trade creditors and others who have not taken a specific interest in property supplied to the bankrupt debtor.

Voluntary Versus Involuntary Bankruptcy

When a debtor files a bankruptcy petition, it is described as a voluntary bankruptcy filing. The individual or organization does not have to be insolvent to file a voluntary case. Creditors may also file a bankruptcy petition, in which case the proceeding is known as an involuntary bankruptcy. This form of petition can occur in chapters 7 and 11 bankruptcy cases, and the debtor generally must be insolvent. To be deemed insolvent, the debtor must be unable to pay debts as they mature. However, the code does limit who an involuntary action can be sought against.

Chapter 7—Liquidation Bankruptcy

A chapter 7 action may be filed by virtually any person or business organization that is eligible to file bankruptcy. Chapter 7 bankruptcy can be filed by a sole proprietorship, partnership, corporation, joint stock company, or any other business organization. Restrictions apply to only a few highly regulated businesses, such as railroads, insurance companies, banks, municipalities, and other financial institutions. This chapter is often referred to as "straight liquidation," or the orderly liquidation of all assets of the entity. Generally, a debtor in a chapter 7 bankruptcy case is released from obligations to pay all dischargeable prebankruptcy debts in exchange for surrendering all nonexempt assets to a bankruptcy trustee. The trustee liquidates all assets and distributes the net proceeds on a pro rata basis against the allowed claims of unsecured creditors. Secured creditor claims are generally satisfied by possession or sale of the debtor's assets. Depending on the circumstances, a secured creditor may receive the collateral, the proceeds from the sale of the collateral, or a reaffirmation of the debt from the debtor. The reaffirmed debts are generally secured by property that the debtor can exempt from the bankruptcy estate, such as a home or vehicle. The amount of the reaffirmation is limited to the value of the asset at the time of the bankruptcy filing. Some characteristics of a chapter 7 bankruptcy are described below:

- A trustee is appointed in all chapter 7 bankruptcies and acts as an administrator of the bankruptcy estate. The bankruptcy estate that is established when the petition is filed becomes the legal owner of the property. The trustee acts to protect the interest of all parties affected by the bankruptcy.
- The trustee has control of all nonexempt assets of the bankrupt debtor.
- The trustee is required to liquidate the estate quickly without jeopardizing the interests of the affected parties.
- The proceeds from the sale pay trustee's fees and other creditors. Trustee fees are determined according to the amount disbursed to the creditors and are a priority claim.
- A chapter 7 bankruptcy is typically completed in 90 days, depending on the time needed to liquidate collateral. Some chapter 7 bankruptcies take years to complete.
- The court may allow the trustee to continue to operate a business, if this is consistent with the orderly liquidation of the estate.

Chapter 11—Reorganization

Most major or large businesses filing bankruptcy file a chapter 11 reorganization. As in chapter 7, virtually any business can file a chapter 11 reorganization. There are specialized chapter 11 reorganization procedures for certain businesses such as railroads, and chapter 11 is not available to stockbrokers, commodity brokers, or a municipality. The basic concept behind chapter 11 is that a business gets temporary relief or a reprieve from paying all debts owed to creditors. This temporary relief gives the business time to reorganize, reschedule its debts (at least partially), and successfully emerge from bankruptcy as a viable business. The basic assumption underlying a chapter 11 bankruptcy is that the value of the enterprise as a going concern will usually exceed the liquidation value of its assets.

Reorganization Plan

Generally, the debtor has an exclusive 120-day period to prepare and file a reorganization plan. If the debtor's plan has not been confirmed within 180 days of the bankruptcy filing, a creditor may file a plan. A plan can provide for any treatment of creditor claims and equity interest, as long as it meets the requirements set out in the code. For example, a plan must designate substantially similar creditor claims and equity interest into classes and provide for equal treatment of such class members. A plan must also identify those classes with impaired claims and their proposed treatment. Finally, a method of implementation must be provided. Although plans do not have to be filed by a deadline, the bankruptcy judge will generally place a deadline on the debtor or creditor authorized to prepare the plan.

Some characteristics of a chapter 11 bankruptcy are described below.

- The bankrupt debtor usually controls the business during the bankruptcy proceedings. This arrangement is referred to as "debtor in possession."
- The business continues to operate while in bankruptcy.
- The debtor is charged with the duty of developing a reorganization plan within the first 120 days of the filing. After this period expires, the court may grant this authority to a creditors' committee.
- Once the plan is approved by the bankruptcy court, the debtor's payment of debts is generally limited to the schedule and amounts that are detailed in the reorganization plan.
- A chapter 11 proceeding can be complex and lengthy, depending on the number of creditors, amount of the debts, amount of the assets, and other factors that complicate the proceedings.

Chapter 13—Wage-Earner Bankruptcy

A chapter 13 bankruptcy is available to any individual whose income is sufficiently stable and regular to enable him or her to make payments under the plan. As long as the individual has regular wages or takes a regular draw from his or her business, the individual may qualify under chapter 13 of the code. Under chapter 13, an individual or married couple can pay their debts over time without selling their property. As a protection to creditors, the money paid to a creditor must equal or exceed the amount that the creditor would get in a liquidation or chapter 7 bankruptcy. Chapter 13 may be used for a business bankruptcy, but only if the business is a proprietorship. In most cases, the business needs to be fairly small to qualify.

Some characteristics of a chapter 13 bankruptcy are described below:

- In most cases, only an individual can file a chapter 13 bankruptcy.
- Secured debt may not exceed $350,000.
- Unsecured debt may not exceed $100,000.
- The debtor must propose a good-faith plan to repay as many debts as possible from available income.
- A debtor makes regular payments to a trustee, who disburses the funds to creditors under the terms of the plan.
- The trustee does not control the debtor's assets.
- A chapter 13 bankruptcy may include the debts of a sole proprietorship. The business may continue to operate during the bankruptcy.
- After all payments are made under the plan, general discharge is granted.

SECTIONS 23A AND 23B OF THE FEDERAL RESERVE ACT

The intent of this subsection is to provide examiners with general guidance on how to identify potential violations of sections 23A and 23B of the Federal Reserve Act as they pertain to the commercial-lending function. More specific guidance on sections 23A and 23B of the Federal Reserve Act can be obtained from the Board's Regulation W (12 CFR part 223) as well as the sections of this manual on Regulation W.

Section 23A

Section 23A of the Federal Reserve Act was designed to prevent misuse of a bank's resources stemming from non-arm's-length transactions with affiliates. Examiners will first need to determine if the bank and counterparty involved in a transaction are affiliates. Once this relationship is determined, the examiner will need to decide if the transaction is included in the statute as a "covered transaction." Generally, covered transactions within the lending function of the institution would include any loan or extension of credit to an affiliate, as defined by Regulation W, which defines extensions of credit to mean any similar transaction as a result of which an affiliate becomes obligated to pay money or its equivalent to the bank. Any transaction by a bank with any person is deemed to be a transaction with an affiliate to the extent that the proceeds of the transaction are used for the benefit of, or transferred to an affiliate. A key element of section 23A is that covered transactions between a bank and its affiliate must be on terms and conditions consistent with safe and sound banking practices.

Once the examiner has determined that the counterparty is an affiliate and that the transaction is a covered transaction, there are quantitative limitations that apply. Section 23A limits the amount of covered transactions between a bank and its subsidiary and a single affiliate to no more than 10 percent of the bank's capital and surplus (as defined in 12 CFR 223(d)). In addition, an institution and its subsidiaries may only engage in a covered transaction with an affiliate if, in the case of all affiliates, the aggregate amount of the covered transactions of the institution and its subsidiaries will not exceed 20 percent of the capital stock and surplus of the institution.

When the transaction involves an extension of credit to an affiliate, certain collateral requirements must also be met. Generally, extensions of credit require certain collateral margins that are tied to the type of collateral. For example, extensions of credit that are secured by U.S. Treasury securities or certain agency securities require a collateral margin of 100 percent of the transaction amount, whereas collateral consisting of stock, leases, or other real or personal property requires a margin of 130 percent. Some collateral, such as the obligations of an affiliate, are not eligible as collateral for transactions between a bank and its affiliates. Certain exemptions to the specific collateral requirements of section 23A were included to permit transactions that posed little risk to the bank and to prevent undue hardship among the affiliated organizations in carrying out customary transactions with related entities. These exemptions include various transactions that are related to sister-bank relationships, correspondent relationships, and uncollected items in the process of collection.

Section 23B

Section 23B defines affiliates in the same manner as section 23A, except that all banks are excluded from section 23B as affiliates. The principal requirements of section 23B state that any transaction between a bank and a defined affiliate under the act must be (1) on terms and under circumstances, including credit standards, that are substantially the same, or at least as favorable to the bank or its subsidiary, as those prevailing at the time for comparable transactions with or involving other nonaffiliated companies, or (2) in the absence of comparable transactions, on terms and under circumstances, including credit standards, that in good faith would be offered or would apply to nonaffiliated companies. In short, the terms and conditions of an extension of credit to an affiliate under section 23B should be no more favorable than those that would be extended to any other borrowing customer of the bank. For covered transactions, all transactions that are covered under section 23A are covered under section 23B; however, section 23B expanded the list to include other transactions such as the sale of securities or other assets to an affiliate, the payment of money or furnishing of services to an affiliate, or any transaction if the affiliate has a financial interest or participates in the transaction.

The focus of section 23B is different from that of section 23A. Section 23A contains quantitative and collateral restrictions to protect the bank; section 23B focuses on whether transactions with nonbank affiliates are arm's length and not injurious to the bank. Essentially, examiners need to keep one basic principal in mind: If money or assets flow from the bank to an affiliate other than through a dividend, the transaction is probably a covered transaction and would be subject to sections 23A and 23B. In addition, if a bank assumes the liabilities of an affiliate, the transaction is subject to sections 23A and 23B.

TYING ARRANGEMENTS

Among other things, section 106 of the Bank Holding Company Act Amendments of 1970 (section 106) prohibits a bank from conditioning the availability or price of one product on a requirement that the customer also obtain another product from the bank or an affiliate of the bank.[3] The statute is intended to prevent banks from using their ability to offer bank products in a coercive manner to gain a competitive advantage in markets for other products and services. Although section 106 prohibits banks from imposing certain types of tying arrangements on their customers, the statute also expressly permits banks to engage in other forms of tying and authorizes the Board to grant additional exceptions to the statute's prohibitions by regulation or order. For more information on section 106, see this manual's section, "Regulation Y: Prohibitions Against Tying Arrangements."

3. 12 U.S.C. 1972.

1. To determine if lending policies, practices, procedures, and internal controls for commercial and industrial loans are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the portfolio for credit quality, performance, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, objectives, or internal controls are deficient or when violations of laws or regulations have been noted.

1. If selected for implementation, complete or update the commercial loan section of the internal control questionnaire.
2. On the basis of the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal or external auditors, and determine if corrections have been accomplished.
4. Obtain a trial balance of the customer liability records.
   a. Agree or reconcile balances to department controls and the general ledger.
   b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select borrowers for examination. Prepare credit line cards.
6. Obtain the following information from the bank or other examination areas, if applicable:
   a. past-due loans
   b. loans in a nonaccrual status
   c. loans on which interest is not being collected in accordance with the terms of the loan (Particular attention should be given to loans that have been renewed with interest being rolled into principal.)
   d. loans whose terms have been modified by a reduction of interest-rate or principal payment, by a deferral of interest or principal, or by other restructuring of repayment terms
   e. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
   f. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
   g. loan commitments and other contingent liabilities
   h. loans secured by stock of other depository institutions
   i. extensions of credit to employees, officers, directors, and principal shareholders and their interests, specifying which officers are considered executive officers
   j. extensions of credit to executive officers, directors, and principal shareholders and their interests of correspondent banks
   k. a list of correspondent banks
   l. miscellaneous loan-debit and credit-suspense accounts
   m. Shared National Credits
   n. loans considered "problem loans" by management
   o. specific guidelines in the lending policy
   p. each officer's current lending authority
   q. any useful information resulting from the review of the minutes of the loan and discount committee or any similar committee
   r. reports furnished to the loan and discount committee or any similar committee
   s. reports furnished to the board of directors
   t. loans classified during the previous examination
   u. the extent and nature of loans serviced
7. Review the information received, and perform the following procedures.
   a. *Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap.*
      • Participations only:
        — Test participation certificates and records, and determine that the parties share in the risks and contractual payments on a pro rata basis.
        — Determine that the bank exercises similar controls and procedures over loans serviced for others as for loans in its own portfolio.
        — Determine that the bank, as lead or agent in a credit, exercises similar controls and procedures over syndications and participations sold as for loans in its own portfolio.
      • Procedures pertaining to all transfers:
        — Investigate any situations in which loans were transferred immediately before the date of examination to determine if any were trans-

ferred to avoid possible criticism during the examination.

— Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.

— Determine that the consideration received for low-quality loans transferred from the bank to an affiliate is properly reflected on the bank's books and is equal to the fair market value of the transferred loans. (While fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such loans as well as an appropriate risk premium.) Section 23A of the Federal Reserve Act generally prohibits a state member bank from purchasing a low-quality asset.

— Determine that low-quality loans transferred to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and its affiliate.

— If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
(1) name of originating institution
(2) name of receiving institution
(3) type of transfer (i.e., participation, purchase or sale, swap)
(4) date of transfer
(5) total number of loans transferred
(6) total dollar amount of loans transferred
(7) status of the loans when transferred (e.g., nonperforming, classified, etc.)
(8) any other information that would be helpful to the other regulator

b. *Miscellaneous loan-debit and credit-suspense accounts.*
- Discuss with management any large or old items.
- Perform additional procedures as deemed appropriate.

c. *Loan commitments and other contingent liabilities.* Analyze the commitment or contingent liability if the borrower has been advised of the commitment and the combined amount of the current loan balance (if any) and the commitment or other contingent liability exceeds the cutoff.

d. *Loans classified during the previous examination.*
- current balance and payment status, or
- date the loan was repaid and the source of payment

Investigate any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank, or as a result of a participation, sale, or swap with another lending institution. If repayment was a result of a participation, sale, or swap, refer to step 7a of this section for the appropriate examination procedures.

e. *Review of leveraged buyouts.*
- In evaluating individual loans and credit files, pay particular attention to the reasonableness of interest-rate assumptions and earnings projections relied on by the bank in extending the loan; the trend of the borrowing company's and the industry's performance over time and the history and stability of the company's earnings and cash flow, particularly over the most recent business cycle; the relationship between the company's cash-flow and debt-service requirements and the resulting margin of debt-service coverage; and the reliability and stability of collateral values and the adequacy of collateral coverage.
- In reviewing the performance of individual credits, attempt to determine if debt-service requirements are being covered by cash flow generated by the company's operations or whether the debt-service requirements are being met out of the proceeds of additional or ancillary loans from the bank designed to cover interest changes.

- Review policies and procedures pertaining to leveraged buyout financing to ensure that they incorporate prudent and reasonable limits on the total *amount* and *type* (by industry) of exposure that the bank can assume through these financing arrangements.
- Review the bank's pricing, credit policies, and approval procedures to ensure that rates are reasonable in light of the risks involved and that credit standards are not compromised in order to increase market share. Credit standards and internal review and approval standards should reflect the degree of risk and leverage inherent in these transactions.
- Total loans to finance leveraged buyouts should be treated as a potential concentration of credit. If, in the aggregate, these loans are sufficiently large in relation to capital, the loans should be listed on the concentrations page in the examination report.
- Discuss significant deficiencies or risks regarding a bank's leveraged buyout financing on page 1 of the examination report, and bring them to the attention of the board of directors.

f. *Uniform review of Shared National Credits.*
- Compare the schedule of commercial credits included in the uniform review of the Shared National Credit Program with the loans being reviewed to determine which loans are portions of Shared National Credits.
- For each loan so identified, transcribe appropriate information from the schedule to line cards. (No further examination procedures are necessary for these credits.)

8. Consult with the examiner responsible for the asset/liability management analysis to determine the appropriate maturity breakdown of loans needed for the analysis. If requested, compile the information using bank records or other appropriate sources.
9. Transcribe or compare information from the schedules to commercial line cards, where appropriate.
10. Prepare commercial line cards for any loan not in the sample that, based on information derived from the above schedules, requires in-depth review.
11. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, lease financing, and other loan areas, and together decide who will review the borrowing relationship.
12. Add collateral data to line cards selected in the preceding steps.
13. Obtain credit files for all borrowers for whom commercial line cards were prepared, and complete line cards. To analyze the loans, perform the following procedures:

    a. Analyze balance-sheet and profit-and-loss items as reflected in current and preceding financial statements, and determine the existence of any favorable or adverse trends.

    b. Review components of the balance sheet as reflected in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure.

    c. Review supporting information for the major balance-sheet items and the techniques used in consolidation, if applicable, and determine the primary sources of repayment and evaluate their adequacy.

    d. Ascertain compliance with provisions of loan agreements.

    e. Review digests of officers' memoranda, mercantile reports, credit checks, and correspondence to determine the existence of any problems that might deter the contractual liquidation program.

    f. Relate collateral values to outstanding debt.

    g. Compare interest rates charged with the interest-rate schedule, and determine that the terms are within established guidelines.

    h. Compare the original amount of loan with the lending officer's authority.

    i. Analyze secondary support afforded by guarantors and endorsers.

    j. Ascertain compliance with the bank's established commercial loan policy.

    k. Determine whether public officials are receiving preferential treatment and whether there is any correlation between loans to public officials and deposits they may control or influence.

14. For selected loans, check the central liability file on borrowers indebted above the cutoff or borrowers displaying credit weakness or suspected of having additional liability in other loan areas.
15. Transcribe significant liability and other information on officers, principals, and affiliations of appropriate borrowers contained in the sample. Cross-reference line cards to borrowers, where appropriate.
16. Prepare "Report of Loans Supported by Bank Stock," if appropriate. Determine if a concentration of any bank's stock has been pledged.
17. Determine compliance with laws, rulings, and regulations pertaining to commercial lending by performing the following steps.
    a. *Lending limits.*
        - Determine the bank's lending limits as prescribed by state law.
        - Determine advances or combinations of advances with aggregate balances above the limit, if any.
    b. *Section 23A, Relations with Affiliates (12 U.S.C. 371c), and section 23B, Restrictions on Transactions with Affiliates (12 U.S.C. 371c-1), of the Federal Reserve Act, and Regulation W.*
        - Obtain a listing of loans to affiliates.
        - Test-check the listing against the bank's customer liability records to determine its accuracy and completeness.
        - Obtain a listing of other covered transactions with affiliates (i.e., purchase of loans from affiliates or acceptance of affiliates' securities as collateral for loan to any person).
        - Ensure that covered transactions with affiliates do not exceed the limits of section 23A and Regulation W.
        - Ensure that covered transactions with affiliates meet the appropriate collateral requirements of section 23A and Regulation W.
        - Determine that low-quality loans have not been purchased from an affiliate.
        - Determine that all covered transactions with affiliates are on terms and conditions that are consistent with safe and sound banking practices.
        - Determine that all transactions with affiliates comply with the market-terms requirement of section 23B and Regulation W.
    c. *18 U.S.C. 215, Receipt of Commission or Gift for Procuring Loans.*
        - While examining the commercial loan area, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
        - Investigate any such suspected situation.
    d. *Federal Election Campaign Act (2 U.S.C. 441b), Political Contributions.*
        - While examining the commercial loan area, determine the existence of any loans in connection with any political campaigns.
        - Review each such credit to determine whether it is made in accordance with applicable banking laws and in the ordinary course of business.
    e. *12 U.S.C. 1972, Tie-In Provisions.* While reviewing credit and collateral files (especially loan agreements), determine whether any extension of credit is conditioned upon—
        - obtaining or providing an additional credit, property, or service to or from the bank or its holding company (or a subsidiary of its holding company), other than a loan, discount, deposit, or trust service;
        - the customer not obtaining a credit, property, or service from a competitor of the bank or its holding company (or a subsidiary of its holding company), other than a reasonable condition to ensure the soundness of the credit. (See "Tie-In Considerations of the BHC Act," section 3500.0 of the *Bank Holding Company Supervision Manual*.)
    f. *Insider lending activities.* The examination procedures for checking compliance with the relevant law and regulation covering insider lending activities and reporting requirements are as follows (the examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment):

- *Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders and Their Related Interests.* While reviewing information relating to insiders that is received from the bank or appropriate examiner (including loan participations, loans purchased and sold, and loan swaps)—
  - — test the accuracy and completeness of information about commercial loans by comparing it with the trial balance or loans sampled;
  - — review credit files on insider loans to determine that required information is available;
  - — determine that loans to insiders do not contain terms more favorable than those afforded other borrowers;
  - — determine that loans to insiders do not involve more than normal risk of repayment or present other unfavorable features;
  - — determine that loans to insiders, as defined by the various sections of Regulation O, do not exceed the lending limits imposed by those sections;
  - — if prior approval by the bank's board was required for a loan to an insider, determine that such approval was obtained;
  - — determine compliance with the various reporting requirements for insider loans;
  - — determine that the bank has made provisions to comply with the public disclosure requirements of Regulation O; and
  - — determine that the bank maintains records of such public requests and the disposition of the requests for a period of two years after the dates of the requests.
- *Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 U.S.C. 1972(2)), Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.*
  - — Obtain from or request that the examiners reviewing due from banks and deposit accounts verify a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.
  - — Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.

g. *12 U.S.C. 1828(v), Loans Secured by Bank Stock.*
- While examining the commercial loan area, determine the existence of any loans or discounts that are secured by the insured financial institution's own stock.
- In each case, determine that the chief executive officer has promptly reported such fact to the proper regulatory authority.

h. *12 U.S.C. 83 (Rev. Stat. 5201), made applicable to state member banks by section 9, para. 6, of the Federal Reserve Act (12 U.S.C. 324), Loans Secured by Own Stock (see also 3-1505 in the* Federal Reserve Regulatory Service).
- While examining the commercial loan area, determine the existence of any loans secured by the bank's own shares or capital notes and debentures.
- Confer with the examiner assigned to investment securities to determine whether the bank owns any of its own shares or its own notes and debentures.
- In each case in which such collateral or ownership exists, determine whether the collateral or ownership was taken to prevent loss on a debt previously contracted (DPC) transaction.

i. *Regulation U (12 CFR 221).* While reviewing credit files, check the following for all loans that are secured directly or indirectly by margin stock and that were extended for the purpose of buying or carrying margin stock:
- Except for credits specifically exempted under Regulation U, determine that the required Form FR U-1 has been executed for each credit by the customer and that it has been signed and accepted by a duly authorized officer of the bank acting in good faith.
- Determine that the bank has not extended more than the maximum loan value of the collateral securing such credits, as set by section 221.7 of Regulation U, and that the margin requirements are being maintained.

j. *Financial Recordkeeping and Reporting of Currency and Foreign Transactions (31 CFR 1010), Retention of Credit Files.*
   - Determine compliance with other specific exceptions and restrictions of the regulation as they relate to the credits reviewed.
   - Review the operating procedures and credit file documentation, and determine if the bank retains records of each extension of credit over $10,000, specifying the name and address of the borrower, the amount of credit, the nature and purpose of the loan, and the date thereof. (See 31 CFR 1010.410.) (Loans secured by an interest in real property are exempt.)

18. Determine whether the consumer compliance examination uncovered any violations of law or regulation in this department. If violations were noted, determine whether corrective action was taken. Test for subsequent compliance with any law or regulation so noted.
19. Perform the appropriate procedural steps in "Concentration of Credits" section.
20. Discuss with appropriate officers, and prepare summaries in appropriate report form of—
    a. delinquent loans
    b. violations of laws and regulations
    c. loans not supported by current and complete financial information
    d. loans on which collateral documentation is deficient
    e. concentrations of credits
    f. criticized loans
    g. inadequately collateralized loans
    h. Small Business Administration or other government-guaranteed delinquent or criticized loans
    i. transfers of low-quality loans to or from another lending institution
    j. extensions of credit to principal shareholders, employees, officers, directors, and related interests
    k. other matters regarding the condition of the department
21. Inform the Reserve Bank of all criticized participation loans that are not covered by the Shared National Credit Program. Include the names and addresses of all participating state member banks and copies of loan classification comments. (This step deals with loans that deteriorated subsequent to participation and does not duplicate step 7a, which deals with transfers of loans that were of low quality when transferred).
22. Inform the Reserve Bank of those loans eligible for the Shared National Credit Program that were not previously reviewed. Include the names and addresses of all participants and the amounts of their credit. (This step applies only to credits for which the bank under examination is the lead bank.)
23. Evaluate the function for—
    a. the adequacy of written policies relating to commercial loans,
    b. the manner in which bank officers are operating in conformance with established policy,
    c. adverse trends within the commercial loan department,
    d. the accuracy and completeness of the schedules obtained from the bank,
    e. internal control deficiencies or exceptions,
    f. recommended corrective action when policies, practices, or procedures are deficient,
    g. the competency of departmental management, and
    h. other matters of significance.
24. Update the workpapers with any information that will facilitate future examinations.

Real estate lending is a major function of most banks. However, the composition of banks' real estate loan portfolios will vary because of differences in the banks' asset size, investment objectives, lending experience, market competition, and location. Additionally, state member banks' lending activity is subject to supervision by state banking regulatory agencies, which may impose limitations, including restrictions on lending territory, types of lending, percentage of assets in real estate loans, loan limits, loan-to-value ratios, and loan terms.

Because of the differences in state banking laws, this section of the manual is only an overview of the Federal Reserve's supervisory and regulatory requirements for a safe and sound real estate lending program. This section also briefly discusses automated valuation models (see SR-11-7) and other collateral-evaluation tools or methods. For specific information on lending limitations and restrictions, refer to the applicable state banking laws. In addition, information related to real estate construction lending is discussed in section 2100.1 of this manual.

REAL ESTATE LENDING POLICY MANDATED BY FDICIA

A bank's real estate lending policy is a broad statement of its standards, guidelines, and limitations that senior bank management and lending officers are expected to adhere to when making a real estate loan. The maintenance of prudent written lending policies, effective internal systems and controls, and thorough loan documentation is essential to the bank's management of the lending function.

The policies governing a bank's real estate lending activities must include prudent underwriting standards that are clearly communicated to the institution's management and lending staff. The bank should also have credit-risk control procedures that include, for example, an effective credit-review and -classification process and a methodology for ensuring that the allowance for loan and lease losses is maintained at an adequate level. As part of the analysis of a bank's real estate loan portfolio, examiners should review lending policies, loan-administration procedures, and credit-risk control procedures, as well as the bank's compliance with its own policies.

As mandated by the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) (12 USC 1828(c)), the Federal Reserve Board, along with the other banking agencies, adopted in December 1992 uniform regulations prescribing standards for real estate lending. FDICIA defines real estate lending as extensions of credit secured by liens on or interests in real estate that are made for the purpose of financing the construction of a building or other improvements to real estate, regardless of whether a lien has been taken on the property.

The Federal Reserve's Regulation H requires an institution to adopt real estate lending policies that are—

- consistent with safe and sound banking practices,
- appropriate to the size of the institution and the nature and scope of its operations, and
- reviewed and approved by the bank's board of directors at least annually.

These lending policies must establish—

- loan portfolio diversification standards;
- prudent underwriting standards that are clear and measurable, including loan-to-value limits;
- loan-administration procedures for the institution's real estate portfolio; and
- documentation, approval, and reporting requirements to monitor compliance with the bank's real estate lending policies.

Furthermore, the bank is expected to monitor conditions in the real estate market in its lending area to ensure that its policies continue to be appropriate for current market conditions.

GUIDELINES ESTABLISHED PURSUANT TO FDICIA

The criteria and specific factors that a bank should consider in establishing its real estate lending policies are set forth in the Interagency Guidelines for Real Estate Lending Policies (Regulation H, part 208, appendix C (12

CFR 208, appendix C)). These guidelines apply to transactions (including legally binding, but unfunded, lending commitments) originated on or after March 19, 1993.

Loan Portfolio Management

The bank's lending policies should contain a general outline of its market area; a targeted loan portfolio distribution; and the manner in which real estate loans are made, serviced, and collected. Lending policies should include—

- identification of the geographic areas in which the bank will consider lending;
- establishment of a loan portfolio diversification policy and limits for real estate loans by type and geographic market (for example, limits on higher-risk loans);
- identification of the appropriate terms and conditions, by type of real estate loan;
- establishment of loan-origination and -approval procedures, both generally and by size and type of loan;
- establishment of prudent underwriting standards, including loan-to-value (LTV) limits, that are clear and measurable and consistent with the supervisory LTV limits contained in the interagency guidelines;
- establishment of review and approval procedures for exception loans, including loans with LTV ratios in excess of the interagency guidelines' supervisory limits;
- establishment of loan-administration procedures, including documentation, disbursement, collateral inspection, collection, and loan review;
- establishment of real estate appraisal and evaluation programs consistent with the Federal Reserve's appraisal regulation and guidelines; and
- a requirement that management monitor the loan portfolio and provide timely and adequate reports to the bank's board of directors.

The complexity and scope of these policies and procedures should be appropriate for the market, size, and financial condition of the institution and should reflect the expertise and size of the lending staff. The bank's policies should also consider the need to avoid undue concentrations of risk and compliance with all real estate–related laws and regulations (such as the Community Reinvestment Act, the Truth in Lending Act, the Real Estate Settlement Procedures Act, and antidiscrimination laws).

On December 13, 2013, the "Interagency Statement on Supervisory Approach for Qualified and Non-Qualified Mortgage Loans" was issued to clarify the safety-and-soundness expectations and Community Reinvestment Act considerations for regulated institutions engaged in residential mortgage lending. The Consumer Financial Protection Bureau's (CFPB's) Ability-to-Repay and Qualified Mortgage Standards Rule[1] was issued on January 10, 2013 (effective on January 10, 2014). Institutions may issue qualified mortgages or non-qualified mortgages, based on their business strategies and risk appetites. Residential mortgage loans will not be subject to safety-and-soundness criticism based on their status as either qualified mortgages or non-qualified mortgages. As for safety-and-soundness expectations, the agencies[2] continue to expect institutions to underwrite residential mortgage loans in a prudent fashion and to address key risk areas in their residential mortgage lending, including loan terms, borrower qualification standards, loan-to-value limits, documentation requirements, and appropriate portfolio and risk-management practices. Refer to SR-13-20 and its attachment.

The bank should monitor the conditions in the real estate markets in its lending area so that it can react quickly to changes in market conditions that are relevant to the lending decision. This should include monitoring market supply-and-demand factors, such as employment trends; economic indicators; current and projected vacancy, construction, and absorption rates; and current and projected lease terms, rental rates, and sales prices.

1. See the Ability-to-Repay and Qualified Mortgage Standards Rule (the Ability-to-Repay Rule) under the Truth in Lending Act (Regulation Z), *78 Fed. Reg.* 6408 (January 30, 2013), as amended. The Ability-to-Repay Rule requires institutions to make reasonable, good faith determinations that consumers have the ability to repay mortgage loans before extending such loans. In accordance with the rule, a "qualified mortgage" may not have certain features, such as negative amortization, interest-only payments, or certain balloon structures, and must meet limits on points and fees and other underwriting requirements.

2. The federal financial institutions regulatory agencies (the Federal Reserve, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the National Credit Union Administration).

Underwriting Standards

The bank's lending policies should reflect the level of risk that is acceptable to its board of directors and should provide clear and measurable underwriting standards that enable the bank's lending staff to evaluate all relevant credit factors. These factors include—

- the capacity of the borrower or income from the underlying property to adequately service the debt;
- the market value of the underlying real estate collateral;
- the overall creditworthiness of the borrower,
- the level of the borrower's equity invested in the property;
- any secondary sources of repayment; and
- any additional collateral or credit enhancements, such as guarantees, mortgage insurance, or takeout commitments.

While there is no one lending policy appropriate for all banks, there are certain standards that a bank should address in its policies, such as—

- the maximum loan amount by type of property,
- the maximum loan maturities by type of property,
- amortization schedules,
- the pricing structure for each type of real estate loan, and
- loan-to-value limits by type of property.

For development and construction projects and completed commercial properties, the bank's policy should also establish appropriate standards for the unique risks associated with these types of real estate loans by addressing the size, type, and complexity of the project. Such standards should include the acceptability of and limits for nonamortizing loans and interest reserves; requirements for pre-leasing and presale; limits on partial recourse or nonrecourse loans; requirements for guarantor support; requirements for takeout commitments; and minimum covenants for loan agreements. Furthermore, the bank's policy should set minimum requirements for initial investment by the borrower; maintenance of hard equity throughout the life of the project; and net worth, cash flow, and debt-service coverage of the borrower or underlying property.

Exceptions to Underwriting Standards

The bank should have procedures for handling loan requests from creditworthy borrowers whose credit needs do not conform with the bank's general lending policy. As a part of the permanent loan file, the bank should document justification for approving such loans. Moreover, in the course of monitoring compliance with its own real estate lending policy, bank management should report to its board of directors loans of a significant size that are exceptions to bank policy. An excessive volume of exceptions to the institution's own policies may signal weaknesses in its underwriting practices or a need to revise its policy.

Supervisory Loan-to-Value Limits

The bank should establish its own internal loan-to-value (LTV) limits for each type of real estate loan that is permitted by its loan policy. The LTV ratio is derived at the time of loan origination by dividing the extension of credit, including the amount of all senior liens on, or other senior interests in, the property, by the total value of the property or properties securing or being improved by the extension of credit, plus the amount of any other acceptable collateral and readily marketable collateral securing the credit.

In accordance with the Federal Reserve's appraisal regulation and guidelines, the value of the real estate collateral should be set forth in an appraisal or evaluation (whichever is appropriate) and should be expressed in terms of market value. However, for loans to purchase an existing property, the term "value" means the lesser of the actual acquisition cost to the borrower or the estimate of value as presented in the appraisal or evaluation. See "Real Estate Appraisals and Evaluations," section 4140.1 of this manual for further discussion of the Federal Reserve's appraisal regulation and guidelines.

"Other acceptable collateral" refers to any collateral in which the lender has a perfected security interest, that has a quantifiable value, and that is accepted by the lender in accordance with safe and sound lending practices. This includes inventory, accounts receivables, equipment, and unconditional irrevocable standby letters of credit.

Readily marketable collateral means insured deposits, financial instruments, and bullion in which the lender has a perfected interest. Financial instruments and bullion must be readily salable under ordinary circumstances at a market value determined by quotations based on actual transactions, on an auction, or similarly available daily bid and asking price.

Other acceptable collateral and readily marketable collateral should be appropriately discounted by the lender consistent with the bank's usual practices for making loans secured by such collateral. The lender may not consider the general net worth of the borrower, which might be a determining factor for an unsecured loan, as equivalent to other acceptable collateral for determining the LTV on a secured real estate loan. Furthermore, if an institution attempts to circumvent the supervisory LTV limits by lending a portion of the funds on a secured basis and a portion on an unsecured basis, examiners are instructed to consider the two loans as one if certain similarities are found. These similarities are based upon facts such as common origination dates or loan purposes, and should be used to determine compliance with the supervisory LTV limits. The bank's policy should reflect the supervisory limits set forth in the Interagency Guidelines for Real Estate Lending Policies, which are shown in the following table.

Table 1—Supervisory Loan-to-Value Limits

Loan Category	*Loan-to-Value Limit*
Raw land	65%
Land development, including improved land loans	75%
Construction:	
Commercial, multifamily, and other nonresidential	80%
One- to four-family residential	85%
Improved property	85%
Owner-occupied one- to four-family and home equity	**

** A loan-to-value limit has not been established for permanent mortgage or home equity loans on owner-occupied one- to four-family residential property. However, for any such loan with a loan-to-value ratio that equals or exceeds 90 percent at origination, an institution should require appropriate credit enhancement in the form of either mortgage insurance or readily marketable collateral.

For purposes of these supervisory limits, the loan categories are defined as follows:

Raw land loan means an extension of credit in which the funds are used to acquire and/or hold raw land.

Land development loan means an extension of credit for the purpose of improving unimproved real property before the erection of any structures. Such improvements include the laying or placement of sewers, water pipes, utility cables, streets, and other infrastructure necessary for future development. This loan category also includes an extension of credit for the acquisition of improved land, such as residential lots in an established development. If there are minimal improvements to the land, and the time-frame for construction of the dwelling or building has not been scheduled to commence in the foreseeable future, the loan generally should be considered a raw land loan.

Construction loan means an extension of credit for the purpose of erecting or rehabilitating buildings or other structures, including any infrastructure necessary for development.

One- to four-family residential loan means an extension of credit for a property containing fewer than five individual dwelling units, including manufactured homes permanently affixed to the underlying property.

Multifamily construction loan means an extension of credit for a residential property containing five or more individual units, including condominiums and cooperatives.

Improved property loan refers to (1) farmland, ranchland, or timberland committed to ongoing management and agricultural production; (2) one- to four-family residential property that is not owner-occupied; (3) residential property containing five or more individual dwelling units; (4) completed commercial property; or (5) other income-producing property that has been completed and is available for occupancy and use, except income-producing owner-occupied one- to four-family residential property.

Owner-occupied one- to four-family residential property means that the owner of the underlying real property occupies at least one unit of the real property as a principal residence.

For loans that fund multiple phases of the same real estate project, the appropriate LTV limit is the supervisory LTV limit applicable to the final phase of the project. For example, when the loan is for the acquisition and development of land and the construction of an office building in continuous phases of development, the appropriate supervisory LTV limit for the project loan would be 80 percent (the supervisory LTV limit for commercial construction). However, this does not imply that the lender can finance the total acquisition cost of the land at the time the raw land is acquired by assuming that this financing would be less than 80 percent of the project's final value. The lender is expected to fund the loan according to prudent disbursement procedures that set appropriate levels for the borrower's hard equity contributions throughout the disbursement period and term of the loan. As a general guideline, the funding of the initial acquisition of the raw land should not exceed the 65 percent supervisory LTV limit; likewise, the project cost to fund the land development phase of the project should not exceed the 75 percent supervisory LTV limit.

For a multiple-phase one- to four-family residential loan in which the lender is funding both the construction of the house and the permanent mortgage to a borrower who will be the owner-occupant, there is no supervisory LTV limit. However, if the LTV ratio equals or exceeds 90 percent, the bank should require an appropriate credit enhancement in the form of either mortgage insurance or readily marketable collateral.

When a loan is fully cross-collateralized by two or more properties, the maximum loan amount is determined by first multiplying each property's collateral value by the LTV ratio appropriate to that property and then deducting from that product any existing senior liens on that property. The resulting sum is the maximum loan amount that may be extended under cross-collateralization. To ensure that collateral margins remain within the supervisory limits, the bank should redetermine conformity whenever collateral substitutions are made to the collateral pool.

Loans in Excess of Supervisory LTV Limits

The Federal Reserve believes that it may be appropriate for a bank, in certain circumstances, to originate or purchase loans with LTV ratios in excess of supervisory limits, based on the support provided by other credit factors that the bank documented in its permanent credit files. While high LTV lending poses higher risk for lenders than traditional mortgage lending, high LTV lending can be profitable when these risks are effectively managed and loans are priced based on risk. Therefore, institutions involved in high LTV lending should implement risk-management programs that identify, measure, monitor, and control the inherent risks (see SR-99-26 and the attached "Interagency Guidance on High LTV Residential Real Estate Lending," October 8, 1998). The primary credit risks associated with this type of lending are increased default risk and losses, inadequate collateral, longer term and thus longer exposure, and limited default remedies.

Capital limits. A bank's nonconforming loans—those in excess of the supervisory LTV limits—should be identified in bank records, and the aggregate amount, along with the performace experience of the portfolio, should be reported at least quarterly to the bank's board of directors. There should be increased supervisory scrutiny of a bank as its level of loans in excess of supervisory LTV limits approaches the capital limitations. Nevertheless, a nonconforming loan should not be criticized solely because it does not adhere to supervisory limits.

The aggregate amount of nonconforming loans may not exceed 100 percent of a bank's total risk-based capital (referred to as the nonconforming basket). Within this limit, the aggregate amount of non–one- to four-family residential loans (for example, raw land, commercial, multifamily, and agricultural loans) that do not conform to supervisory LTV limits may not exceed 30 percent of total risk-based capital. The remaining portion of the nonconforming basket includes the aggregate amount of one- to four-family residential development and construction loans, non-owner-occupied one- to four-family residential loans with an LTV ratio greater than 85 percent, and owner-occupied one- to four-family residential loans with an LTV ratio equal to or exceeding 90 percent without mortgage insurance or readily marketable collateral.

For the purpose of determining the loans subject to the 100 percent of risk-based capital limitation, and for the purposes of determining the aggregate amount of such loans, institutions should include loans that are secured by the *same* property, when the combined loan amount equals or exceeds 90 percent LTV and there is no additional credit support. In addition, institutions should include the recourse obligation of any such loan sold with recourse. If there is a reduction in principal or senior liens or if the borrower contributes additional collateral or equity that brings the LTV ratio into supervisory compliance, the loan is no longer considered nonconforming and may be deleted from the quarterly nonconforming loan report to the directors.

The following guidance is provided for calculating the LTV when multiple loans and more than one lender are involved. The institution should include its loan and all senior liens on or interests in the property in the total loan amount when calculating the LTV ratio. The following examples are provided:

- Bank A holds a first-lien mortgage on a property and subsequently grants the borrower a home equity loan secured by the same property. In this case, the bank would combine both loans to determine if the total amount outstanding equaled or exceeded 90 percent of the property's market value. If the LTV ratio equals or exceeds 90 percent and there is no other appropriate credit support, the entire amount of both loans is an exception to the supervisory LTV limits and is included in the aggregate capital limitation.
- Bank A grants a borrower a home equity loan secured by a second lien. Bank B holds a first-lien mortgage for the same borrower and on the same property. Bank A would combine the committed amount of its home equity loan with the amount outstanding on Bank B's first-lien mortgage to determine if the LTV ratio equaled or exceeded 90 percent of the property's market value. If the LTV ratio equals or exceeds 90 percent and there is no other appropriate credit support, Bank A's entire home equity loan is an exception to the supervisory LTV limits and is included in the aggregate capital limitation. Bank A does not report Bank B's first-lien mortgage loan as an exception, but must use it to calculate the LTV ratio.

When a loan's LTV ratio is reduced below 90 percent by amortization or additional credit support, it is no longer an exception to the guidelines and may be excluded from the institution's 100 percent of capital limitation.

Institutions will come under increased supervisory scrutiny as the total of all loans in excess of the supervisory LTV limits, including high-LTV residential real estate loan exceptions, approaches 100 percent of total capital. If an institution exceeds the 100 percent of capital limit, a supervisory assessment may be needed to determine whether there is any concern that warrants taking appropriate supervisory action. Such action may include directing the institution (1) to reduce its loans in excess of the supervisory LTV limits to an appropriate level, (2) to raise additional capital, or (3) to submit a plan to achieve compliance. The institution's capital level and overall risk profile, and the adequacy of its controls and operations, as well as other factors will be the basis for determining whether such actions are necessary.

Transactions Excluded from Supervisory LTV Limits

There are a number of lending situations in which other factors significantly outweigh the need to apply supervisory LTV limits, thereby excluding such transactions from the application of the supervisory LTV and capital limits. This includes loans—

- guaranteed or insured by the U.S. government or its agencies, provided the amount of the guaranty or insurance is at least equal to the portion of the loan that exceeds the supervisory LTV limit.
- backed by the full faith and credit of a state government, provided the amount of the guaranty or insurance is at least equal to the portion of the loan that exceeds the supervisory LTV limit.
- guaranteed or insured by a state, municipal, or local government or agency, provided the amount of the guaranty or insurance is at least equal to the portion of the loan that exceeds the supervisory LTV limit and that the guarantor or insurer has the financial capacity and willingness to perform.
- sold promptly (within 90 days) after origination. A supervisory determination may be made that this exclusion is not available for an institution that has consistently demonstrated significant weaknesses in its mortgage banking operations. (If a loan is sold with recourse and the LTV is in excess of supervisory limits, the recourse portion of the loan counts toward the bank's limit for nonconforming loans.)
- renewed, refinanced, or restructured—
  - without the advancement of new monies (except reasonable closing costs); or
  - in conjunction with a clearly defined and documented workout, either with or without the advancement of new funds.
- facilitating the sale of real estate acquired by the lender in the course of collecting a debt previously contracted in good faith.
- in which a lien on real property is taken through an abundance of caution; for example, the value of the real estate collateral is relatively low compared with the aggregate value of other collateral, or a blanket lien is taken on all or substantially all of the borrower's assets.[3]
- for working-capital purposes in which the lender does not rely principally on real estate as security. The proceeds of the loan are not used to acquire, develop, or construct real property.
- financing permanent improvements to real property, but in which no security interest is taken or required by prudent underwriting standards. For example, a manufacturing company obtains a loan to build an addition to its plant. The bank does not take a lien on the plant because the bank is relying on the company's operating income and financial strength to repay the debt.

3. Any residential mortgage or home equity loan with an LTV ratio that equals or exceeds 90 percent and that does not have the additional credit support should be considered an exception to the guidelines and included in the calculation of loans subject to the 100 percent of capital limit.

Risk Management for Supervisory Loan-to-Value Limits

Loan review and monitoring. Institutions should perform periodic quality analyses through loan review and portfolio monitoring. These periodic reviews should include an evaluation of various risk factors, such as credit scores, debt-to-income ratios, loan types, location, and concentrations. At a minimum, the high-LTV loan portfolios should be segmented by their vintage (that is, age) and the performance of the portfolios should be analyzed for profitability, growth, delinquencies, classifications and losses, and the adequacy of the allowance for loan and lease losses based on the various risk factors. The ongoing performance of the high-LTV loans should be monitored by a periodic re-scoring of the accounts, or by periodically obtaining updated credit bureau reports or financial information on borrowers. In addition, institutions involved in high-LTV lending should adopt, as part of their loan-review program, the standards in the FFIEC's Uniform Retail-Credit Classification and Account-Management Policy. (See section 2130.1.)

Sales of high-LTV loans. When institutions securitize and sell high-LTV loans, all the risks inherent in such lending may not be transferred to the purchasers. Institutions that actively securitize and sell high-LTV loans must implement procedures to control the risks inherent in that activity. Only written counterparty agreements that specify the duties and responsibilities of each party and that include a regular schedule for loan sales should be entered into. A contingency plan should be developed that designates backup purchasers and servicers in the event that either party is unable to meet its contractual obligations. To manage liquidity risk, commitment limits should be established for the amount of pipeline and warehoused loans, and alternate funding sources should be identified.

Institutions should refer to the Financial Accounting Standards Board's Statement of Financial Accounting Standards No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (a replacement of FASB statement 125)," for guidance on accounting for these types of transactions. If a securitization transaction meets FAS 140 sale or servicing criteria, the seller must recognize any gain or loss on the sale of the pool immediately and carry any retained interests in the assets sold (including servicing rights or obligations and interest-only strips) at fair value. Management should ensure that the key assumptions used to value these retained interests are reasonable and well supported, both for the initial valuation and for subsequent quarterly revaluations.

Compliance risk. Institutions that originate or purchase high-LTV real estate loans must take special care to avoid violating fair lending and consumer protection laws and regulations. Higher fees and interest rates combined with compensation incentives can foster predatory pricing or discriminatory "steering" of borrowers to high-LTV products for reasons other than the borrower's creditworthiness. An adequate compliance-management program must identify, monitor, and control the compliance risks associated with high-LTV real estate lending.

REAL ESTATE LENDING ACTIVITY AND RISKS

Real estate lending falls into two broad categories: short-term financing (primarily construction loans) and permanent financing (for example, a 30-year residential mortgage or a 10-year mortgage loan with payments based on a 25-year amortization schedule and a balloon payment due at the end of the 10 years on an existing commercial office building). Each type of lending carries with it unique underwriting risks as well as common risks associated with any type of lending. In all cases, the bank should understand the credit risks and structure of the proposed transaction, even if it is not the originating bank. This includes, at a minimum, understanding the borrower's ability to repay the debt and the value of the underlying real estate collateral.

Permanent financing, as the name implies, is long term and presents a funding risk since a bank's source of funds is generally of a shorter maturity. Accordingly, bank management should be aware of the source for funding this lending activity. While matching the maturity structures of assets to liabilities is particularly important for a bank's overall loan portfolio management, the importance of this task is even more evident in real estate lending activity. Many banks reduce their funding risk by entering into loan participations and sales with other institutions as well as asset securitization transactions.[4] For a detailed discussion on short-term financing, see section 2100.1, "Real Estate Construction Loans."

Unsound Lending Practices

Some banks have adversely affected their financial condition and performance by granting loans based on ill-conceived real estate projects. Apart from losses due to unforeseen economic downturns, these losses have generally been the result of poor or lax underwriting standards and improper management of the bank's overall real estate loan portfolio.

A principal indication of an unsound lending practice is an improper relationship between the loan amount and the market value of the property; for example, a high loan-to-value ratio in relationship to normal lending practice for a similar type of property. Another indication of unsound lending practices is the failure of the bank to examine the borrower's debt-service ability. For a commercial real estate loan, sound underwriting practices are critical to the detection of problems in the project's plans, such as unrealistic income assumptions, substandard project design, potential construction problems, and a poor marketing plan, that will affect the feasibility of the project.

Real Estate Loan Portfolio Concentration Risk

A bank should have in place effective internal policies, systems, and controls to monitor and manage its real estate loan portfolio risk. An

4. See section 4030.1, "Asset Securitization," for additional information, including information on mortgage-backed securities (MBSs), collateralized mortgage obligations (CMOs), and real estate mortgage investment conduits (REMICs).

indication of improper management of a bank's portfolio is an excessive concentration in loans to one borrower or related borrowers, in one type of real estate loan, or in a geographic location outside the bank's designated trade area.

In identifying loan concentrations, commercial real estate loans and residential real estate loans should be viewed separately when their performance is not subject to similar economic or financial risks. However, groups or classes of real estate loans should be viewed as concentrations when there are significant common characteristics and the loans are affected by similar adverse economic, financial, or business developments. Banks with asset concentrations should have in place effective internal policies, systems, and controls to monitor and manage this risk.

Concentrations that involve excessive or undue risks require close scrutiny by the bank and should be reduced over a reasonable period of time. To reduce this risk, the bank should develop a prudent plan and institute strong underwriting standards and loan administration to control the risks associated with new loans. At the same time, the bank should maintain adequate capital to protect it from the excessive risk while restructuring its portfolio.

Loan Administration and Servicing

Real estate loan administration is responsible for certain aspects of loan monitoring. While the administration may be segregated by property type, such as residential or commercial real estate loans, the functions of the servicing department may be divided into the following categories (although the organization will vary among institutions):

- *Loan closing and disbursement*—preparing the legal documents verifying the transaction, recording the appropriate documents in the public land records, and disbursing funds in accordance with the loan agreement.
- *Payment processing*—collecting and applying the loan payments.
- *Escrow administration*—collecting insurance premiums and property taxes from the borrower and remitting the funds to the insurance company and taxing authority.
- *Collateral administration*—maintaining documents to reflect the status of the bank's lien on the collateral (i.e., mortgage/deed of trust and title policy/attorney's opinion), the value of the collateral (i.e., real estate appraisal or evaluation and verification of senior lien, if in existence), and the protection of the collateral (i.e., hazard/liability insurance and tax payments).
- *Loan payoffs*—determining the pay-off amount, preparing the borrower release or assumption documents, confirming the receipt of funds, and recording the appropriate lien-release documents in the public land records.
- *Collections and foreclosure*—monitoring the payment performance of the borrower and pursuing collection of past-due amounts in accordance with bank policy on delinquencies.
- *Claims processing*—seeking recoveries on defaulted loans that are covered by a government guarantee or insurance program or a private mortgage insurance company.

The bank should have adequate procedures to ensure segregation of duties for disbursal and receipt of funds control purposes. Additionally, the procedures should address the need for document control because of the importance of the timely recording of the bank's security interests in the public land records.

Some institutions provide various levels of loan services for other institutions, which may range from solely the distribution of payments received to the ultimate collection of the debt through foreclosure. In such cases, the bank will have the additional responsibility of remitting funds on a timely basis to the other institutions in accordance with a servicing agreement. The servicing agreement sets forth the servicer's duties, reporting requirements, timeframe for remitting funds, and fee structure. If a bank relies on another institution for servicing, the bank should have adequate control and audit procedures to verify the performance of the servicer (also see section 4030.1, "Asset Securitization"). For residential loans sold into the secondary mortgage market for which the bank has retained servicing, Fannie Mae, Freddie Mac, and the Government National Mortgage Corporation (Ginnie Mae) have specific standards the bank (that is, seller/servicer) must adhere to. Failure to meet these standards can result in the termination of the servicing agreement.

BANK ASSESSMENT OF THE BORROWER

Although the value of the real estate collateral is an important component of the loan-approval process, the bank should not place undue reliance on the collateral value in lieu of an adequate assessment of the borrower's ability to repay the loan. These assessment factors differ depending upon the purpose of the loan, such as single-family residential loans as compared with income-producing commercial property loans and commercial or residential development loans (referred to as "commercial real estate lending"). The loan documentation must adequately support the bank's assessment of the borrower and contain the appropriate legal documentation to protect the bank's interests.

Single-Family Residential Loans

For single-family residential loans, the bank should evaluate the loan applicant's creditworthiness and whether the individual has the ability to meet monthly mortgage payments as well as all other obligations and expenses associated with home ownership. This includes an assessment of the borrower's income, liquid assets, employment history, credit history, and existing obligations.[5] The bank should also consider the availability of private mortgage insurance; a government guarantee; or a government insurance program, such as loans through the FHA-insured or VA-guaranteed programs, in assessing the credit risk of a loan applicant.

If a bank delegates the loan-origination function to a third party, the bank should have adequate controls to ensure that its loan policies and procedures are being followed. The controls should include a review of the third party's qualifications; a written agreement between the bank and the third-party originator to set forth the responsibilities of the third party as an agent for the bank; a periodic review of the third party's operations to ensure that the bank's policies and procedures are being adhered to; and development of quality controls to ensure that loans originated by the third party meet the bank's lending standards, as well as those of the secondary mortgage market if the bank expects to sell the mortgages.

5. There are restrictions on the information a bank can request. The Federal Reserve's Regulation B, Equal Credit Opportunity (12 CFR 202), details the information that may and may not be requested on a loan application and provides a model form for a residential mortgage transaction. The Federal Reserve's Regulation Z, Truth in Lending (12 CFR 226), describes the bank-disclosure requirements to the potential borrower on the cost of financing.

Abandoned Residential Real Estate Foreclosures

Banking organizations with residential mortgage-servicing operations should ensure that the following key concepts are addressed in their policies and practices governing the decision not to complete foreclosure proceedings after they have been initiated (abandoned foreclosures):

- *Notification to borrowers.* Supervised banking organizations should notify the borrower(s) when a decision is made not to pursue a foreclosure action, and should inform the applicable borrower(s) of their (1) rights to occupy their property until a sale or other title transfer action occurs, (2) financial obligations regarding the outstanding loan balance and the payment of applicable taxes and insurance premiums, and (3) property maintenance responsibilities.
- *Communications.* Supervised banking organizations should use all means possible to provide the notification described above to affected borrowers, particularly those who prematurely vacated their homes based on the servicers' initial communications regarding foreclosure actions. In particular, when attempting to provide the notification, supervised organizations should employ the same extensive methods they use to contact borrowers in connection with payment collection activities.
- *Notification to local authorities.* Supervised banking organizations should ensure that their procedures include reasonable efforts to notify appropriate state or local government authorities of the organization's decision to not pursue a foreclosure, including complying with applicable state or local government notification requirements. These local entities may include tax authorities, courts, or code enforcement departments.
- *Obtaining and monitoring collateral values.* Supervised banking organizations should have a process for obtaining the best practicable information on the collateral value of a residential property that may be subject to fore-

closure; updating this information on a regular basis; and using current information in their assessment as to whether to initiate, continue, or abandon a foreclosure proceeding.[6]

Supervisory Process

The objective of the supervisory process related to abandoned foreclosures is to confirm that a banking organization manages its decisions to initiate and/or discontinue foreclosure proceedings in a prudent manner. Examiners are to determine if an organization's policies and procedures include regular monitoring of property values. This review may be done as part of the regular assessments of banking organizations' appraisal and evaluation programs. (See SR-12-11/CA-12-10.)

Secondary Residential Mortgage Market

In the secondary market, a bank (the primary mortgage originator) sells all or a portion of its interest in residential mortgages to other financial institutions (investors). Thus, the secondary mortgage market provides an avenue for a bank to liquidate a long-term asset as the need for funds arises. The majority of the secondary mortgage market activity is supported by three government-related or -controlled institutions: Fannie Mae,[7] Freddie Mac,[8] and Ginnie Mae.[9] These entities were created or sponsored by the federal government to encourage the financing and construction of residential housing. Fannie Mae, Freddie Mac, and Ginnie Mae have specific underwriting standards and loan-documentation requirements for mortgages purchased or guaranteed by them. Generally, financial institutions enter into either a mandatory or a standby commitment agreement with these entities wherein the financial institution agrees to sell loans according to certain delivery schedules, terms, and performance penalties.

Commercial Real Estate Loans

As with other types of lending activities, the extent of commercial real estate lending activity should be contingent upon the lender's expertise and the bank's experience. In considering an application for a commercial real estate loan, a bank should understand the relationship of the actual borrower to the project being financed. The form of business ownership varies for commercial real estate projects and can affect the management, financial resources available for the completion of the project, and repayment of the loan.

Information on past and current projects constructed, rented, or managed by the potential borrower can help the bank assess the borrower's experience and the likelihood of the proposed project's success. For development and construction projects, the bank should closely review the project's feasibility study. The study should provide sensitivity and risk analyses of the potential impact of changes in key economic variables, such as interest rates, vacancy rates, or operating expenses. The bank should also conduct credit checks of the borrower and of all principals involved in the transaction to verify relationships with contractors, suppliers, and business associates.

Finally, the bank should assess the borrower's financial strength to determine if the principals of the project have the necessary working capital and financial resources to support the project until it reaches stabilization. As with any type of lending on income-producing properties,[10] the bank should quantify the degree of protection from the borrower's (or collateral's) cash flow, the value of the underlying collateral, and any

6. Refer to section 4140.1 or SR-10-16, "Interagency Appraisal and Evaluation Guidelines," for supervisory expectations as to a regulated banking organization's policies and procedures on collateral monitoring in support of its loan modification or workout activity.

7. Although Fannie Mae was originally created in 1938 as an organization within the federal government, it became a federally chartered, stockholder corporation in 1968 when some of its functions were placed under the newly created Ginnie Mae. Financial institutions can either sell mortgages directly to Fannie Mae or pool mortgages for placement in a Fannie Mae–guaranteed mortgage-backed security.

8. Freddie Mac was sponsored by the Federal Home Loan Bank Board and its members in 1970. Its primary purpose is to provide a secondary market for conventional mortgages originated by thrifts.

9. Ginnie Mae, a government agency under the Department of Housing and Urban Development (HUD), was created in 1968 when Fannie Mae became a private corporation. It has several functions to assist in government housing programs, such as managing and liquidating loans acquired by the government. In the secondary market, Ginnie Mae acts as a guarantor of mortgage-backed securities for pools of loans originated and securitized by financial institutions.

10. Income-producing commercial properties include rental apartments, retail properties, office buildings, warehouses, and hotels.

guarantees or other collateral that may be available as a source of loan repayment.

BANK ASSESSMENT OF REAL ESTATE COLLATERAL

Banks should obtain an appraisal or evaluation, as appropriate, for all real estate–related financial transactions before making the final credit or other decision. The Federal Reserve's appraisal regulation requires institutions to obtain appraisals when certain criteria are met. See "Real Estate Appraisals and Evaluations" section 4140.1, for a description of the related requirements a bank must follow for real estate–related financial transactions. The appraisal section explains the standards for appraisals, indicates which transactions require an appraisal or an evaluation, states qualifications for an appraiser and evaluator, provides guidance on evaluations, and describes the three appraisal approaches.

Management is responsible for reviewing the reasonableness of the appraisal's or evaluation's assumptions and conclusions. Also, management's rationale for accepting and relying upon the appraisal or evaluation should be documented in writing. In assessing the underwriting risks, management should reconsider any assumptions used by an appraiser that reflect overly optimistic or pessimistic values. If management, after its review of the appraisal or evaluation, determines that there are unsubstantiated assumptions, the bank may request the appraiser or evaluator to provide a more detailed justification of the assumptions or obtain a new appraisal or evaluation.

Single-Family Residential Loans

The assessment of a residential property's market value is critical to the bank's estimate of loan-to-value ratio. This assessment provides the bank with an estimate of the borrower's equity in the property and the bank's potential credit risk if the borrower should default on the loan. For mortgages over $250,000, a bank is required to obtain an appraisal in conformance with the Federal Reserve's appraisal regulation. As of January 1, 1993, the appraisal must be performed by a state-certified or -licensed appraiser, as specified in the regulation. While transactions under $250,000 do not require an appraisal, a bank is expected to perform an appropriate evaluation of the underlying real estate collateral. Loans that are wholly or partially insured or guaranteed by a U.S. government agency or government-sponsored agency are exempt from the Federal Reserve's appraisal regulation, so long as the loan meets the underwriting requirements of the federal insurer or guarantor. Additionally, state laws for appraisals may differ from the Federal Reserve's requirements.

Loans qualifying for sale to any U.S. government agency or government-sponsored agency or conforming to the appraisal standards of Fannie Mae and Freddie Mac are also exempt from the Federal Reserve's appraisal regulation. Fannie Mae and Freddie Mac jointly developed and adopted the Uniform Residential Appraisal Report (URAR) as the standard form for residential loans sold to them. As a result, a properly completed URAR form is considered the industry standard for appraising one- to four-family residential properties.

Commercial Real Estate Loans

Due to the variety of uses and the complexity of most commercial projects, there is not a uniformly accepted format for valuing commercial properties like there is for valuing one- to four-family residential properties. A bank relies on outside appraisers, or in some instances in-house expertise, to prepare appraisals. For the most part, appraisals on commercial real estate projects are presented in a narrative format with supporting schedules. As the complexity of a commercial project increases, the detail of the appraisal report or evaluation should also increase to fully support the analysis.

When estimating the value of income-producing real estate, the appraiser generally relies to a greater degree on the income approach to valuation than on the comparable-sales approach or the cost approach. The income approach converts all expected future net operating income into present-value terms, using different analytical methods. One method, known as the direct capitalization method, estimates the present value of a property by discounting its stabilized net operating income at an appropriate capitalization rate (commonly referred to as a cap rate). Stabilized net operating income is the net cash flow derived from a property when market conditions are stable and no unusual patterns of future rents and occupancy are expected. To approximate stabilized net operating income, the appraiser or bank may need to adjust the current net operating income of a property either up or down to reflect current market conditions. The direct capitalization method is appropriate only for use in valuing stabilized properties.

Another method, known as the discounted cash-flow method, requires the discounting of expected future cash flows at an appropriate discount rate to ascertain the net present value of a property. This method is appropriate for use in estimating the values of new properties that have not yet stabilized, or for troubled properties that are experiencing fluctuations in income.

The discount rates and cap rates, used in estimating property values, should reflect reasonable expectations about the rate of return that investors and lenders require under normal, orderly, and sustainable market conditions. The appraiser's analysis and assumptions should support the discount and cap rates used in the appraisal. The appraiser should not use exaggerated, imprudent, or unsustainably high or low discount rates, cap rates, or income projections.

In assessing the reasonableness of the facts and assumptions associated with the valuation of commercial real estate, the bank should consider—

- current and projected vacancy and absorption rates;
- lease-renewal trends and anticipated rents;
- volume and trends in past-due leases;
- the project's feasibility study and market survey to determine support for the assumptions concerning future supply-and-demand factors;
- effective rental rates or sale prices (taking into account all concessions);
- net operating income of the property as compared with budget projections; and
- discount rates and direct capitalization rates.

Because the income approach is generally relied on to a greater degree than the other methods, with specific emphasis on arriving at stabilized values, the bank must use judgment in determining the time it will take for a property to achieve stabilized occupancy and rental rates. The analysis of collateral values should not be based on a simple projection of current levels of net operating income if markets are depressed or reflect speculative pressures but can be expected over a reasonable period of time to return to normal (stabilized) conditions.

The capacity of a property to generate cash flow to service a loan is evaluated on the basis of rents (or sales), expenses, and rates of occupancy that are reasonably estimated to be achieved over time. The determination of the level of stabilized occupancy, rental rates, and net operating income should be based on an analysis of current and reasonably expected market conditions, taking into consideration historical levels when appropriate.

EARLY INDICATIONS OF TROUBLED COMMERCIAL REAL ESTATE LOANS

Market-Related

To evaluate the collectibility of their commercial real estate portfolio, banks should be alert for economic indicators of weakness in their real estate markets as well as for indicators of actual or potential problems in the individual commercial real estate projects. Available indicators useful in evaluating the condition of the local real estate market include permits for and the value of new construction, absorption rates, employment trends, vacancy rates, and tenant lease incentives. Weaknesses disclosed by these types of statistics may signify that a real estate market is experiencing difficulties that may cause cash-flow problems for individual real estate projects, declining real estate values, and ultimately, troubled real estate loans.

Project-Related

Characteristics of potential or actual difficulties in commercial real estate projects may include—

- an excess supply of similar projects under construction in the same trade area.
- the lack of a sound feasibility study or analysis that reflects current and reasonably anticipated market conditions.
- changes in concept or plan (for example, a condominium project converted to an apartment project because of unfavorable market conditions).

- rent concessions or sales discounts, resulting in cash flow below the level projected in the original feasibility study, appraisal, or evaluation.
- concessions on finishing tenant space, moving expenses, and lease buyouts.
- slow leasing or lack of sustained sales activity and increasing sales cancellations that may reduce the project's income potential, resulting in protracted repayment or default on the loan.
- delinquent lease payments from major tenants.
- land values that assume future rezoning.
- tax arrearages.
- environmental hazards and liability for cleanup.

As the problems associated with a commercial real estate loan become more pronounced, the borrower/guarantor may experience a reduction in cash flow to service-related debts, which could result in delinquent interest and principal payments.

While some real estate loans become troubled because of a general downturn in the market, others become troubled because the loans were originated on an unsound or a liberal basis. Common examples of unsound loans include—

- loans with no or minimal borrower equity
- loans on speculative undeveloped property in which the borrower's only source of repayment is the sale of the property
- loans based on land values that have been driven up by rapid turnover of ownership, but without any corresponding improvements to the property or supportable income projections to justify an increase in value
- additional advances to service an existing loan without evidence that the loan will be repaid in full
- loans to borrowers with no development plans or noncurrent development plans
- renewals, extensions, and refinancings that lack credible support for full repayment from reliable sources and that do not have a reasonable repayment schedule[11]

EXAMINER REVIEW OF COMMERCIAL REAL ESTATE LOANS

The focus of an examiner's review of a real estate loan is on the ability of the loan to be repaid. The principal factors that bear on this review are the income-producing potential of the underlying collateral and the borrower's willingness and ability to repay the loan from other resources, if necessary, and according to existing loan terms. In evaluating the overall risk associated with a real estate loan, examiners should consider a number of factors, including the borrower's character, overall financial condition and resources, and payment history; the prospects for support from any financially responsible guarantors; and the nature and degree of protection provided by the cash flow and value of the underlying collateral.[12] As the borrower's and guarantor's ability to repay a troubled real estate loan decreases, the importance of the collateral value of the loan increases commensurately.

Examiner Review of the Real Estate Collateral

An examiner's analysis of the collateral value is based on the bank's most recent appraisal or evaluation and includes a review of the major facts, assumptions, and approaches used by the appraiser or person performing the evaluation (including any comments made by management relative to the reasonableness of the appraisal or evaluation assumptions and conclusions). While the examiner may make adjustments to the assessment of value, these adjustments should be made solely for purposes of an examiner's analysis and assessment of credit quality and should not involve an adjustment to the actual appraisal or evaluation.

Furthermore, examiners should not make adjustments to appraisal or evaluation assumptions for credit-analysis purposes based on worst-

11. As discussed more fully in the section on classification guidelines, the refinancing or renewing of loans to sound borrowers would not result in a supervisory classification or criticism unless well-defined weaknesses exist that jeopardize repayment of the loans. As consistent with sound banking practices, institutions should work appropriately and constructively with borrowers who may be experiencing temporary difficulties.

12. The primary basis for the review and classification of the loan should be the original source of repayment and the borrower's intent and ability to fulfill the obligation without relying on third-party guarantees. However, the examiner should also consider the support provided by any guarantees when determining the appropriate classification treatment for a troubled loan. The treatment of guarantees in the classification process is discussed in "Classification of Credits," section 2060.1.

case scenarios that are unlikely to occur. For example, an examiner should not necessarily assume that a building will become vacant just because an existing tenant who is renting at a rate above today's market rate may vacate the property when the current lease expires. On the other hand, an adjustment to value may be appropriate for credit-analysis purposes when the valuation assumes renewal at the above-market rate, unless that rate is a reasonable estimate of the expected market rate at the time of renewal.

Assumptions, when recently made by qualified appraisers or persons performing the evaluation and when consistent with the discussion above, should be given a reasonable amount of deference. Examiners should not challenge the underlying assumptions, including discount rates and cap rates used in appraisals or evaluations, that differ only in a limited way from norms that would generally be associated with the property under review. However, the estimated value of the underlying collateral may be adjusted for credit-analysis purposes when the examiner can establish that underlying facts or assumptions are inappropriate and can support alternative assumptions.

CLASSIFICATION GUIDELINES

As with other types of loans, real estate loans that are adequately protected by the current sound worth and debt-service capacity of the borrower, guarantor, or the underlying collateral generally are not classified. The examiner should focus on the ability of the borrower, guarantor, or the collateral to provide the necessary cash flow to adequately service the loan. The loan's record of performance is also important and must be taken into consideration. As a general principle, a performing real estate loan should not be automatically classified or charged off solely because the value of the underlying collateral has declined to an amount that is less than the loan balance. Conversely, the fact that the underlying collateral value equals or exceeds the current loan balance, or that the loan is performing, does not preclude the loan from classification if well-defined weaknesses jeopardize the repayment ability of the borrower, such as the lack of credible financial support for full repayment from reliable sources.[13]

Similarly, loans to sound borrowers that are refinanced or renewed according to prudent underwriting standards, including loans to creditworthy commercial or residential real estate developers, should not be categorized as special mention unless potential weaknesses exist or should not be classified unless well-defined weaknesses exist that jeopardize repayment. An institution should not be criticized for working with borrowers whose loans are classified or categorized as special mention as long as the institution has a well-conceived and effective workout plan for such borrowers, along with effective internal controls to manage the level of these loans.

In evaluating real estate credits for special-mention categorization or classification, examiners should apply the standard definitions as set forth in "Classification of Credits," section 2060.1. In assessing credit quality, examiners should consider all important information regarding repayment prospects, including information on the borrower's creditworthiness, the value of and cash flow provided by all collateral supporting the loan, and any support provided by financially responsible guarantors.

These guidelines apply to individual credits, even if portions or segments of the industry to which the borrower belongs are experiencing financial difficulties. The evaluation of each credit should be based upon the fundamental characteristics affecting the collectibility of the particular credit. The problems broadly associated with some sectors or segments of an industry, such as certain commercial real estate markets, should not lead to overly pessimistic assessments of particular credits in the same industry that are not affected by the problems of the troubled sectors.

13. Another issue that arises in the review of a commercial real estate loan is its accrual or nonaccrual treatment for reporting purposes. The federal banking agencies, under the auspices of the FFIEC, have provided guidance on nonaccrual status in the instructions for the Reports of Condition and Income (call reports) and in related supervisory guidance of the agencies. This guidance is summarized in "Loan Portfolio Management," section 2040.1.

Troubled Project-Dependent Commercial Real Estate Loans

The following guidelines for classifying a troubled commercial real estate loan apply when the repayment of the debt will be provided solely by the underlying real estate collateral, and there are no other available and reliable sources of repayment. As a general principle, for a troubled project-dependent commercial real estate loan, any portion of the loan balance that exceeds the amount that is adequately secured by the value of the collateral, and that can be clearly identified as uncollectible, should be classified loss. The portion of the loan balance that is adequately secured by the value of the collateral should generally be classified no worse than substandard. The amount of the loan balance in excess of the value of the collateral, or portions thereof, should be classified doubtful when the potential for full loss may be mitigated by the outcome of certain pending events, or when loss is expected but the amount of the loss cannot be reasonably determined. If warranted by the underlying circumstances, an examiner may use a doubtful classification on the entire loan balance. However, such a classification should occur infrequently.

Partially Charged-Off Loans

An evaluation based upon consideration of all relevant factors may indicate that a credit has well-defined weaknesses that jeopardize collection in full, although a portion of the loan may be reasonably assured of collection. When a charge-off has been taken in an amount sufficient to ensure that the remaining recorded balance of the loan (1) is being serviced (based upon reliable sources) and (2) is reasonably assured of collection, classification of the remaining recorded balance may not be appropriate. Classification would be appropriate when well-defined weaknesses continue to be present in the remaining recorded balance. In such cases, the remaining recorded balance would generally be classified no more severely than substandard.

A more severe classification than substandard for the remaining recorded balance would be appropriate, however, if the loss exposure cannot be reasonably determined—for example, when significant risk exposures are perceived, such as in the case of bankruptcy or loans collateralized by properties subject to environmental hazards. In addition, classifying the remaining recorded balance more severely than substandard would be appropriate when sources of repayment are considered unreliable.

Formally Restructured Loans

The classification treatment previously discussed for a partially charged-off loan would also generally be appropriate for a formally restructured loan when partial charge-offs have been taken. For a formally restructured loan, the focus of the examiner's analysis is on the ability of the borrower to repay the loan in accordance with its modified terms. Classification of a formally restructured loan would be appropriate if, after the restructuring, well-defined weaknesses exist that jeopardize the orderly repayment of the loan in accordance with reasonable modified terms.[14] Troubled commercial real estate loans whose terms have been restructured should be identified in the institution's internal credit-review system and closely monitored by management.

Home Equity Loans

Home equity loans (HELs) are defined as loans that are usually collateralized by a second mortgage or deed of trust on the borrower's principal residence or second residence; however, the collateral may be a first mortgage or deed of trust. The borrower's equity in the residence, pledged as collateral, provides protection for the loan and determines the maximum amount of credit that may be advanced. Traditionally, HELs were used to fund home improvements or to consolidate debt, and they were usually amortized without a revolving feature. Because of these characteristics, home equity loans were commonly maintained and administered in a bank's consumer or installment loan department and were monitored based on delinquency status. However, since enactment of the Tax Reform Act of 1986, which allows the deduction of home equity loan interest on debt of up to $100,000, the popularity and usage of HELs

14. An example of a restructured commercial real estate loan that does not have reasonable modified terms would be a cash-flow mortgage, which requires interest payments only when the underlying collateral generates cash flow but provides no substantive benefits to the lending institution.

have expanded considerably. The proceeds of home equity loans are now used for increasingly diverse purposes, such as to make consumer purchases or personal investments, to provide working capital for small businesses, and to supplement personal income.

The structure and repayment terms of home equity loans have become more varied. Amortization periods may be as long as 15 years, with possible balloon maturities of three to five years. In some instances, the payment requirement is only interest due for an initial period. Revolving lines of credit have also gained popularity as a way to accommodate the many different uses of loan proceeds. Lines of credit to individuals with high incomes or high net worths may substantially exceed $100,000. These loans are often housed in the bank's private-bankingdivision or within the commercial loan portfolio, rather than in the consumer loan department.

In addition to the increasingly varied purposes of HELs, there has also been an upsurge in loans in which the combined first and second mortgages result in very high LTV ratios. To remain competitive with other residential lenders, some banks have relaxed their underwriting standards by permitting higher LTV ratios. In addition, some banks may have offset declines in residential mortgage refinancing during periods of higher interest rates by competing more aggressively for home equity loan business. Consumer demand for HELs may also increase during periods of higher interest rates because they provide an alternative source of financing for consumer purchases.

Examiners must ensure that a bank's policies for originating and acquiring HELs comply with the real estate lending standards and guidelines stipulated in the Board's Regulation H, subpart E. (See Regulation H, subpart E, 12 CFR 208.50–51.) While the guidelines permit banks to make residential real estate loans with LTV ratios in excess of 90 percent without the appropriate credit enhancements, these loans are treated as exceptions to the guidelines and are subject to the aggregate limitation of 100 percent of the bank's total capital.

For all types of lending, banks should have strong underwriting standards for HELs. In assessing these standards, the examiner should determine whether the bank primarily emphasizes the borrower's ability and willingness to repay the loan from income or cash flow versus the amount of equity in the real estate. Extended repayment terms and liberal loan structures can increase the risk of default on HELs. Normally, longer repayment terms increase the likelihood of events that could jeopardize the borrower's ability to repay, for example, the loss of a job, a change in marital status, a prolonged spike in prevailing interest rates, or a deflationary economic environment. Additionally, the examiner should review the bank's policy (or practice) for obtaining appraisals or evaluations to determine the lendable equity in the borrower's residence. The examiner should determine that the bank has not relaxed its appraisal and evaluation requirements to accommodate the growth of its HEL portfolio.

Economic periods of increasing unemployment, rising interest rates, or other recessionary factors can negatively affect the repayment ability of borrowers and erode the value and marketability of residential real estate. Moreover, most HELs are collateralized by junior lien positions. Therefore, if the bank forecloses, it must pay off or service the senior mortgage lender, further increasing its exposure. Foreclosure proceedings may entail lengthy and costly litigation, and real estate law commonly protects the home owner.

Examiners should ensure that banks have proper controls to manage HEL exposure, particularly those banks that have a high concentration of home equity loans with excessively high combined LTV ratios. (See the following subsection for interagency guidance on credit-risk management in home equity lending.) Banks with concentrations that lack proper controls and monitoring procedures should be criticized for these credit deficiencies. If the examiner judges the deficiencies to be severe, the bank should be cited for unsafe and unsound banking practices.

Interagency Credit-Risk Management Guidance for Home Equity Lending

The Federal Reserve and the other federal financial institutions regulatory agencies[15] collec-

15. The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration. Also, the interagency guidance frequently uses the term *financial institutions.* As used in this section, *financial institutions* means commercial banks and any of their various credit-extending nonbanking subsidiaries.

tively issued this interagency guidance on May 16, 2005. The guidance is intended to promote sound credit-risk management practices at financial institutionsthat have home equity lending programs, including open-end home equity lines of credit (HELOCs) and closed-end home equity loans (HELs). Home equity lending can be an attractive product for many homeowners and lenders. The quality of these portfolios, however, is subject to increased risk if interest rates rise and home values decline. Sound underwriting practices and effective risk-management systems are essential to mitigate this risk. Therefore, financial institutions' credit-risk management practices for home equity lending need to keep pace with any rapid growth in home equity lending and should emphasize compliance with sound underwriting standards and practices.

The risk factors listed below, combined with an inherent vulnerability to rising interest rates, suggest that financial institutions need to fully recognize the risk embedded in their home equity portfolios. Following are the specific product, risk-management, and underwriting risk factors and trends that deserve scrutiny:

- interest-only features that require no amortization of principal for a protracted period
- limited or no documentation of a borrower's assets, employment, and income (known as "low doc" or "no doc" lending)
- higher loan-to-value (LTV) and debt-to-income (DTI) ratios
- lower credit-risk scores for underwriting home equity loans
- greater use of automated valuation models (AVMs) and other collateral-evaluation tools for the development of appraisals and evaluations
- an increase in the number of transactions generated through a loan broker or other third party

Home equity lending can be conducted in a safe and sound manner if pursued with the appropriate risk-management structure, including adequate allowances for loan and lease losses and appropriate capital levels. Sound practices call for fully articulated policies that address marketing, underwriting standards, collateral-valuation management, individual-account and portfolio management, and servicing.

Financial institutions should ensure that risk-management practices keep pace with the growth and changing risk profile of home equity portfolios. Management should actively assess a portfolio's vulnerability to changes in consumers' ability to pay and the potential for declines in home values. Active portfolio management is especially important for financial institutions that project or have already experienced significant growth or concentrations, particularly in higher-risk products such as high-LTV, "low doc" or "no doc," interest-only, or third-party-generated loans. (See SR-05-11.)

Credit-Risk Management Systems

Product Development and Marketing

In the development of any new product offering, product change, or marketing initiative, management should have a review and approval process that is sufficiently broad to ensure compliance with the financial institution's internal policies and applicable laws and regulations[16] and to evaluate the credit, interest-rate, operational, compliance, reputation, and legal risks. In particular, risk-management personnel should be involved in product development, including an evaluation of the targeted population and the product(s) being offered. For example, material changes in the targeted market, origination source, or pricing could have a significant impact on credit quality and should receive senior management approval.

When HELOCs or HELs are marketed or closed by a third party, financial institutions should have standards that provide assurance that the third party also complies with applicable laws and regulations, including those on marketing materials, loan documentation, and closing procedures. (For further details on agent relationships, see "Third-Party Originations.") Finally, management should have appropriate monitoring tools and management information systems (MIS) to measure the performance of various marketing initiatives, including offers to

16. Applicable laws include the Federal Trade Commission Act; the Equal Credit Opportunity Act (ECOA); the Truth in Lending Act (TILA), including the Home Ownership and Equity Protection Act (HOEPA); the Fair Housing Act; the Real Estate Settlement Procedures Act (RESPA); and the Home Mortgage Disclosure Act (HMDA), as well as applicable state consumer protection laws.

increase a line, extend the interest-only period, or adjust the interest rate or term.

Origination and Underwriting

All relevant risk factors should be considered when establishing product offerings and underwriting guidelines. Generally, these factors should include a borrower's income and debt levels, credit score (if obtained), and credit history, as well as the loan size, collateral value (including valuation methodology), lien position, and property type and location.

Consistent with the Federal Reserve's regulations on real estate lending standards,[17] prudently underwritten home equity loans should include an evaluation of a borrower's capacity to adequately service the debt.[18] Given the home equity products' long-term nature and the large credit amount typically extended to a consumer, an evaluation of repayment capacity should consider a borrower's income and debt levels and not just a credit score.[19] Credit scores are based upon a borrower's historical financial performance. While past performance is a good indicator of future performance, a significant change in a borrower's income or debt levels can adversely alter the borrower's ability to pay. How much verification these underwriting factors require will depend upon the individual loan's credit risk.

HELOCs generally do not have interest-rate caps that limit rate increases.[20] Rising interest rates could subject a borrower to significant payment increases, particularly in a low-interest-rate environment. Therefore, underwriting standards for interest-only and variable-rate HELOCs should include an assessment of the borrower's ability to amortize the fully drawn line over the loan term and to absorb potential increases in interest rates.

17. On December 23, 1992, the Federal Reserve announced the adoption of uniform rules on real estate lending standards and issued the Interagency Guidelines for Real Estate Lending Policies. See 12 CFR 208.51 and 12 CFR 208, appendix C.

18. See also section 226.34(a)(4) of Regulation Z, Truth in Lending (12 CFR 226.34(a)(4)).

19. The Interagency Guidelines Establishing Standards for Safety and Soundness also call for documenting the source of repayment and assessing the ability of the borrower to repay the debt in a timely manner. See 12 CFR 208, appendix D-1.

20. While there may be periodic rate increases, the lender must state in the consumer credit contract the maximum interest rate that may be imposed during the term of the obligation. See 12 CFR 226.30(b).

Third-Party Originations

Financial institutions often use third parties, such as mortgage brokers or correspondents, to originate loans. When doing so, institutions should have strong control systems to ensure the quality of originations and compliance with all applicable laws and regulations, and to help prevent fraud.

Brokers are firms or individuals, acting on behalf of either the financial institution or the borrower, who match the borrower's needs with institutions' mortgage-origination programs. Brokers take applications from consumers. Although they sometimes process the application and underwrite the loan to qualify the application for a particular lender, they generally do not use their own funds to close loans. Whether brokers are allowed to process and perform any underwriting will depend on the relationship between the financial institution and the broker. For control purposes, the financial institution should retain appropriate oversight of all critical loan-processing activities, such as verification of income and employment and independence in the appraisal and evaluation function.

Correspondents are financial companies that usually close and fund loans in their own name and subsequently sell them to a lender. Financial institutions commonly obtain loans through correspondents and, in some cases, delegate the underwriting function to the correspondent. In delegated underwriting relationships, a financial institution grants approval to a correspondent financial company to process, underwrite, and close loans according to the delegator's processing and underwriting requirements and is committed to purchase those loans. The delegating financial institution should have systems and controls to provide assurance that the correspondent is appropriately managed, is financially sound, and provides mortgages that meet the financial institution's prescribed underwriting guidelines and that comply with applicable consumer protection laws and regulations. A quality-control unit or function in the delegating financial institution should closely monitor the quality of loans that the correspondent underwrites. Monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities.

Both brokers and correspondents are compensated based upon mortgage-origination volume and, accordingly, have an incentive to produce and close as many loans as possible. Therefore, financial institutions should perform comprehensive due diligence on third-party originators prior to entering a relationship. In addition, once a relationship is established, the financial institution should have adequate audit procedures and controls to verify that the third parties are not being paid to generate incomplete or fraudulent mortgage applications or are not otherwise receiving referral or unearned income or fees contrary to RESPA prohibitions.[21] Monitoring the quality of loans by origination source, and uncovering such problems as early payment defaults and incomplete packages, enables management to know if third-party originators are producing quality loans. If ongoing credit or documentation problems are discovered, the financial institution should take appropriate action against the third party, which could include terminating its relationship with the third party.

Collateral-Valuation Management

Competition, cost pressures, and advancements in technology have prompted financial institutions to streamline their appraisal and evaluation processes. These changes, coupled with financial institutions underwriting to higher LTVs, have heightened the importance of strong collateral-valuation management policies, procedures, and processes.

Financial institutions should have appropriate collateral-valuation policies and procedures that ensure compliance with the Federal Reserve's appraisal regulations[22] and the Interagency Appraisal and Evaluation Guidelines (the guidelines).[23] In addition, the financial institution should—

- establish criteria for determining the appropriate valuation methodology for a particular transaction, based on the risk in the transaction and loan portfolio (For example, higher-risk transactions or nonhomogeneous property types should be supported by more-thorough valuations. The financial institution should also set criteria for determining the extent to which an inspection of the collateral is necessary.)
- ensure that an expected or estimated value of the property is not communicated to an appraiser or individual performing an evaluation
- implement policies and controls to preclude "value shopping" (Use of several valuation tools may return different values for the same property. These differences can result in systematic overvaluation of properties if the valuation choice becomes driven by the highest property value. If several different valuation tools or AVMs are used for the same property, the financial institution should adhere to a policy for selecting the most reliable method, rather than the highest value.)
- require sufficient documentation to support the collateral valuation in the appraisal or evaluation

AVMs

When AVMs are used to support evaluations or appraisals, the financial institution should validate the models on a periodic basis to mitigate the potential valuation uncertainty in the model. This validation work should be in conformance with SR-11-7. In particular, the financial institution should document the validation's analysis, assumptions, and conclusions. The validation process includes back-testing a representative sample of the valuations against market data on actual sales (where sufficient information is available). The validation process should cover properties representative of the geographic area and property type for which the tool is used.

Many AVM vendors, when providing a value, will also provide a "confidence score," which usually relates to the accuracy of the value provided. Confidence scores, however, come in many different formats and are calculated based on differing scoring systems. Financial institutions that use AVMs should have an understanding of how the model works as well as what the confidence scores mean. Institutions should also establish the confidence levels that are appropri-

21. In addition, a financial institution that purchases loans subject to TILA's rules for HELs with high rates or high closing costs (loans covered by HOEPA) can incur assignee liability unless the financial institution can reasonably show that it could not determine the transaction was a loan covered by HOEPA. Also, the nature of its relationship with brokers and correspondents may have implications for liability under ECOA, and for reporting responsibilities under HMDA.

22. 12 CFR 208, subpart E, and 12 CFR 225, subpart G.

23. See SR-10-16, December 2, 2010, and its attachment.

ate for the risk in a given transaction or group of transactions.

When tax-assessment valuations are used as a basis for the collateral valuation, the financial institution should be able to demonstrate and document the correlation between the assessment value of the taxing authority and the property's market value as part of the validation process.

Account Management

Since HELOCs often have long-term, interest-only payment features, financial institutions should have risk-management techniques that identify higher-risk accounts and adverse changes in account risk profiles, thereby enabling management to implement timely preventive action (e.g., freezing or reducing lines). Further, a financial institution should have risk-management procedures to evaluate and approve additional credit on an existing line or extending the interest-only period. Account-management practices should be appropriate for the size of the portfolio and the risks associated with the types of home equity lending.

Effective account-management practices for large portfolios or portfolios with high-risk characteristics include—

- periodically refreshing credit-risk scores on all customers;
- using behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts;
- periodically assessing utilization rates;
- periodically assessing payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the line to keep payments current;
- monitoring home values by geographic area; and
- obtaining updated information on the collateral's value when significant market factors indicate a potential decline in home values, or when the borrower's payment performance deteriorates and greater reliance is placed on the collateral.

The frequency of these actions should be commensurate with the risk in the portfolio. Financial institutions should conduct annual credit reviews of HELOC accounts to determine whether the line of credit should be continued, based on the borrower's current financial condition.[24]

When appropriate, financial institutions should refuse to extend additional credit or reduce the credit limit of a HELOC, bearing in mind that under Regulation Z such steps can be taken only in limited circumstances. These include, for example, when the value of the collateral declines significantly below the appraised value for purposes of the HELOC, default of a material obligation under the loan agreement, or deterioration in the borrower's financial circumstances.[25] In order to freeze or reduce credit lines due to deterioration in a borrower's financial circumstances, two conditions must be met: (1) there must be a "material" change in the borrower's financial circumstances and (2) as a result of this change, the financial institution must have a reasonable belief that the borrower will be unable to fulfill the plan's payment obligations.

Account-management practices that do not adequately control authorizations and provide for timely repayment of over-limit amounts may significantly increase a portfolio's credit risk. Authorizations of over-limit home equity lines of credit should be restricted and subject to appropriate policies and controls. A financial institution's practices should require over-limit borrowers to repay in a timely manner the amount that exceeds established credit limits. Management information systems should be sufficient to enable management to identify, measure, monitor, and control the unique risks associated with over-limit accounts.

Portfolio Management

Financial institutions should implement an effective portfolio credit-risk management process for their home equity portfolios that includes the following.

---

24. Under the Federal Reserve's risk-based capital guidelines, an unused HELOC commitment with an original maturity of one year or more may be allocated a zero percent conversion factor if the institution conducts at least an annual credit review and is able to unconditionally cancel the commitment (i.e., prohibit additional extensions of credit, reduce the credit line, and terminate the line) to the full extent permitted by relevant federal law. See 12 CFR 208, appendix A, III.D.4.

25. Regulation Z does not permit these actions to be taken in circumstances other than those specified in the regulation. See 12 CFR 226.5b(f)(3)(vi)(A)–(F).

Policies. The Federal Reserve's real estate lending standards regulations require that a financial institution's real estate lending policies be consistent with safe and sound banking practices and that the financial institution's board of directors review and approve these policies at least annually. Before implementing any changes to policies or underwriting standards, management should assess the potential effect on the financial institution's overall risk profile, which would include the effect on concentrations, profitability, and delinquency and loss rates. The accuracy of these estimates should be tested by comparing them with actual experience.

Portfolio objectives and risk diversification. Effective portfolio management should clearly communicate portfolio objectives such as growth targets, utilization, rate-of-return hurdles, and default and loss expectations. For financial institutions with significant concentrations of HELs or HELOCs, limits should be established and monitored for key portfolio segments, such as geographic area, loan type, and higher-risk products. When appropriate, consideration should be given to the use of risk mitigants, such as private mortgage insurance, pool insurance, or securitization. As the portfolio approaches concentration limits, the financial institution should analyze the situation sufficiently to enable the financial institution's board of directors and senior management to make a well-informed decision to either raise concentration limits or pursue a different course of action.

Effective portfolio management requires an understanding of the various risk characteristics of the home equity portfolio. To gain this understanding, a financial institution should analyze the portfolio by segment, using criteria such as product type, credit-risk score, DTI, LTV, property type, geographic area, collateral-valuation method, lien position, size of credit relative to prior liens, and documentation type (such as "no doc" or "low doc").

Management information systems. By maintaining adequate credit MIS, a financial institution can segment loan portfolios and accurately assess key risk characteristics. The MIS should also provide management with sufficient information to identify, monitor, measure, and control home equity concentrations. Financial institutions should periodically assess the adequacy of their MIS in light of growth and changes in their appetite for risk. For institutions with significant concentrations of HELs or HELOCs, MIS should include, at a minimum, reports and analysis of the following:

- production and portfolio trends by product, loan structure, originator channel, credit score, LTV, DTI, lien position, documentation type, market, and property type
- delinquency and loss-distribution trends by product and originator channel with some accompanying analysis of significant underwriting characteristics (such as credit score, LTV, DTI)
- vintage tracking
- the performance of third-party originators (brokers and correspondents)
- market trends by geographic area and property type to identify areas of rapidly appreciating or depreciating housing values

Policy- and underwriting-exception systems. Financial institutions should have a process for identifying, approving, tracking, and analyzing underwriting exceptions. Reporting systems that capture and track information on exceptions, both by transaction and by relevant portfolio segments, facilitate the management of a portfolio's credit risk. The aggregate data is useful to management in assessing portfolio risk profiles and monitoring the level of adherence to policy and underwriting standards by various origination channels. Analysis of the information may also be helpful in identifying correlations between certain types of exceptions and delinquencies and losses.

High-LTV monitoring. To clarify the real estate lending standards regulations and interagency guidelines, the agencies issued Guidance on High Loan-To-Value LTV Residential Real Estate Lending (the HLTV guidance) in October 1999. The HLTV guidance clarified the Interagency Real Estate Lending Guidelines and the supervisory loan-to-value limits for loans on one- to four-family residential properties. Financial institutions are expected to ensure compliance with the supervisory loan-to-value limits of the Interagency Real Estate Lending Guidelines. The HLTV guidance places emphasis on certain controls that financial institutions should have in place when engaging in HLTV lending. Financial institutions should accurately track the volume of HLTV loans, including HLTV home equity and residential mortgages, and report the aggregate of such loans to the financial institution's board of directors. Specifically, financial institutions are reminded that:

- Loans in excess of the supervisory LTV limits should be identified in the financial institution's records. The aggregate of high-LTV one- to four-family residential loans should not exceed 100 percent of the financial institution's total capital.[26] Within that limit, high-LTV loans for properties other than one- to four-family residential properties should not exceed 30 percent of capital.
- In calculating the LTV and determining compliance with the supervisory LTVs, the financial institution should consider all senior liens. All loans secured by the property and held by the financial institution are reported as an exception if the combined LTV of a loan and all senior liens on an owner-occupied one- to four-family residential property equals or exceeds 90 percent and if there is no additional credit enhancement in the form of either mortgage insurance or readily marketable collateral.
- For the LTV calculation, the loan amount is the legally binding commitment (that is, the entire amount that the financial institution is legally committed to lend over the life of the loan).
- All real estate secured loans in excess of supervisory LTV limits should be aggregated and included in a quarterly report for the financial institution's board of directors.

Certain insurance products have been developed to help financial institutions mitigate the credit risks of HLTV residential loans. Insurance policies that cover a "pool" of loans can be an efficient and effective credit-risk management tool. But if a policy has a coverage limit, the coverage may be exhausted before all loans in the pool mature or pay off. The Federal Reserve will consider pool insurance to be a sufficient credit enhancement to remove the HLTV designation in the following circumstances: (1) the policy is issued by an acceptable mortgage insurance company, (2) it reduces the LTV for each loan to less than 90 percent, and (3) it is effective over the life of each loan in the pool.

Stress testing for portfolios. Financial institutions with home equity concentrations as well as higher-risk portfolios are encouraged to perform sensitivity analyses on key portfolio segments. This type of analysis identifies possible events that could increase risk within a portfolio segment or for the portfolio as a whole. Institutions should consider stress tests that incorporate interest-rate increases and declines in home values. Since these events often occur simultaneously, the testing should be performed for these events together. Institutions should also periodically analyze markets in key geographic areas, including identified "soft" markets. Management should consider developing contingency strategies for scenarios and outcomes that extend credit risk beyond internally established risk tolerances. These contingency plans might include increased monitoring, tightening underwriting, limiting growth, and selling loans or portfolio segments.

Operations, Servicing, and Collections

Effective procedures and controls should be maintained for such support functions as perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes. Credit-risk management should oversee these support functions to ensure that operational risks are properly controlled.

Lien recording. Financial institutions should take appropriate measures to safeguard their lien position. They should verify the amount and priority of any senior liens prior to closing the loan. This information is necessary to determine the loan's LTV ratio and to assess the credit support of the collateral. Senior liens include first mortgages, outstanding liens for unpaid taxes, outstanding mechanic's liens, and recorded judgments on the borrower.

Problem-loan workouts and loss-mitigation strategies. Financial institutions should have established policies and procedures for problem-

26. For purposes of the Interagency Real Estate Lending Standards Guidelines, high-LTV one- to four-family residential property loans include (1) a loan for raw land zoned for one- to four-family residential use with an LTV ratio greater than 65 percent; (2) a residential land development loan or improved lot loan with an LTV greater than 75 percent; (3) a residential construction loan with an LTV ratio greater than 85 percent; (4) a loan on non-owner occupied one- to four-family residential property with an LTV greater than 85 percent; and (5) a permanent mortgage or home equity loan on an owner-occupied residential property with an LTV equal to or exceeding 90 percent without mortgage insurance, readily marketable collateral, or other acceptable collateral.

loan workouts and loss-mitigation strategies. Policies should be in accordance with the requirements of the FFIEC's Uniform Retail Credit Classification and Account Management Policy, issued June 2000 (see SR-00-8 and the appendix to section 2130.1) and should, at a minimum, address the following:

- circumstances and qualifying requirements for various workout programs including extensions, re-ages, modifications, and re-writes (Qualifying criteria should include an analysis of a borrower's financial capacity to service the debt under the new terms.)
- circumstances and qualifying criteria for loss-mitigating strategies, including foreclosure
- appropriate MIS to track and monitor the effectiveness of workout programs, including tracking the performance of all categories of workout loans (For large portfolios, vintage delinquency and loss tracking also should be included.)

While financial institutions are encouraged to work with borrowers on a case-by-case basis, a financial institution should *not* use workout strategies to defer losses. Financial institutions should ensure that credits in workout programs are evaluated separately for the allowance for loan and lease losses (ALLL), because such credits tend to have higher loss rates than other portfolio segments.

Secondary-Market Activities

More financial institutions are issuing HELOC mortgage-backed securities (i.e., securitizing HELOCs). Although such secondary-market activities can enhance credit availability and a financial institution's profitability, they also pose certain risk-management challenges. An institution's risk-management systems should address the risks of HELOC securitizations.[27]

27. See SR-02,16, "Interagency Questions and Answers on Capital Treatment of Recourse, Direct Credit Substitutes, and Residual Interests in Asset Securitizations," (see also section 3020.1) and the risk management and capital adequacy of exposures arising from secondary-market credit activities discussion in SR-97-21.

Portfolio Classifications, Allowance for Loan and Lease Losses, and Capital

The FFIEC's Uniform Retail Credit Classification and Account Management Policy governs the classification of consumer loans and establishes general classification thresholds that are based on delinquency. Financial institutions and the Federal Reserve's examiners have the discretion to classify entire retail portfolios, or segments thereof, when underwriting weaknesses or delinquencies are pervasive and present an excessive level of credit risk. Portfolios of high-LTV loans to borrowers who exhibit inadequate capacity to repay the debt within a reasonable time may be subject to classification.

Financial institutions should establish appropriate ALLL and hold capital commensurate with the riskiness of their portfolios. In determining the ALLL adequacy, a financial institution should consider how the interest-only and draw features of HELOCs during the lines' revolving period could affect the loss curves for its HELOC portfolio. Those institutions engaging in programmatic subprime home equity lending or institutions that have higher-risk products are expected to recognize the elevated risk of the activity when assessing capital and ALLL adequacy.[28]

ALLOWANCE FOR LOAN AND LEASE LOSSES

A bank bases the adequacy of its allowance for loan and lease losses (ALLL), including amounts resulting from an analysis of the real estate portfolio, on a careful, well-documented, and consistently applied analysis of its loan and lease portfolio.[29] Guidance related to the ALLL is primarily addressed in section 2070.1. The

28. Section 2133.1 incorporates the January 2001 Interagency Expanded Guidance for Subprime Lending Programs. That guidance sets forth the supervisory expectations regarding risk-management processes, the ALLL, and capital adequacy for institutions engaging in subprime-lending programs.

29. The estimation process described in this section permits a more accurate estimate of anticipated losses than could be achieved by assessing the loan portfolio solely on an aggregate basis. However, it is only an estimation process and does not imply that any part of the ALLL is segregated for, or allocated to, any particular asset or group of assets. The ALLL is available to absorb all credit losses originating from the loan and lease portfolio.

following discussion summarizes general principles for assessing the adequacy of the ALLL.

Examiners should evaluate the methodology, documentation, and process that management has followed in arriving at an overall estimate of the ALLL to ensure that all of the relevant factors affecting the collectibility of the portfolio have been appropriately considered. In addition, the examiner should review the reasonableness of management's overall estimate of the ALLL, as well as the range of possible credit losses, by taking into account these factors. The examiner's analysis should also consider the quality of the bank's systems and management's ability to identify, monitor, and address asset-quality problems.

As discussed in the earlier subsection on classification guidelines, examiners should consider the value of the collateral when reviewing and classifying a loan. For a performing commercial real estate loan, however, the supervisory policy does not require automatic increases to the ALLL solely because the value of the collateral has declined to an amount that is less than the loan balance.

In assessing the ALLL during examinations, it is important that the examiner recognize that management's process, methodology, and underlying assumptions require a substantial degree of judgment. Even when an institution maintains sound loan-administration and collection procedures and effective internal systems and controls, the estimation of anticipated losses may not be precise because of the wide range of factors that must be considered. Furthermore, the ability to estimate anticipated losses on specific loans and categories of loans improves over time as substantive information accumulates regarding the factors affecting repayment prospects. The examiner should give considerable weight to management's estimates in assessing the adequacy of the ALLL when management has (1) maintained effective systems and controls for identifying, monitoring, and addressing asset-quality problems and (2) analyzed all significant factors affecting the collectibility of the portfolio.

REGULATORY COMPLIANCE

Banks are expected to comply with laws, regulations, and Federal Reserve policy in all aspects of their real estate lending programs. Moreover, banks should establish adequate internal controls to detect deficiencies or exceptions to their lending policy that result in unsafe and unsound lending practices. In regard to lending limits, the examiner should review the bank's lending practices in accordance with the applicable state laws in the following areas, which prescribe limits on aggregate advances to a single borrower and related borrowers:

Transactions with affiliates. All transactions with affiliates should be on terms and conditions that are consistent with safe and sound banking practices. The bank is expected to comply with the limits and collateral requirements of sections 23A and 23B of the Federal Reserve Act (12 USC 371c and 371c-1) and Regulation W (12 CFR 223).

Tie-in provisions. Section 106 of the Bank Holding Company Act Amendments of 1970 states that a bank is prohibited from fixing or varying the consideration for extending credit, leasing or selling property of any kind, or furnishing any product or service on the condition or requirement that a customer—

- obtain additional credit, property, or service from the bank, other than a loan, discount, deposit, or trust service (a "traditional bank product");
- obtain additional credit, property, or service from the bank's parent holding company or the parent's other subsidiaries;
- provide additional credit, property, or service to the bank, other than those related to and usually provided in connection with a loan, discount, deposit, or trust service;
- provide additional credit, property, or service to the bank's parent holding company or any of the parent's other subsidiaries; or
- not obtain other credit, property, or service from the competitors of the bank, the bank's parent holding company, or the parent's other subsidiaries, except that the lending bank may impose conditions and requirements in a credit transaction to ensure the soundness of the credit.

See the statutory exceptions in section 106(b) of the Bank Holding Company Act Amendments and the exceptions in the Federal Reserve's Regulation Y (12 CFR 225.7).

Insider lending activities. Loans to insiders should not contain more-favorable terms than those afforded to other borrowers nor should these loans pose a more-than-normal risk of repayment. The bank is expected to maintain adequate loan documentation of insider loans showing that proper approval for the loan was obtained. Such loans should comply with the Federal Reserve's Regulation O, Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks (12 CFR 215, subpart A).

Loans to executives, officers, directors, and principal shareholders of correspondent banks. There should be no preferential treatment on loans to insiders of correspondent banks nor should there be the appearance of a conflict of interest. The bank should comply with title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 USC 1972(2)). (See also 12 CFR 215, subpart B.)

Appraisals and evaluations. Banks should obtain an appraisal or evaluation for all real estate-related financial transactions before making the final credit decision in conformance with title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) (12 USC 3310, 3331–3351) and the Federal Reserve's Regulation H, Mem-bership of State Banking Institutions in the Federal Reserve System (12 CFR 208), as set forth in subpart G of Regulation Y (12 CFR 225). The Federal Reserve's appraisal and evaluation requirements are separately discussed in section 4140.1, "Real Estate Appraisals and Evaluations."

Consumer compliance. The bank's residential lending program should ensure that the loan applicant is adequately informed of the annual interest rate, finance charges, amount financed, total payments, and repayment schedule as mandated in the Federal Reserve's Regulation Z, Truth in Lending (12 CFR 226). The bank's process for taking, evaluating, and accepting or rejecting a credit application is subject to the Federal Reserve's Regulation B, Equal Credit Opportunity (12 CFR 202).

1. To determine if policies, practices, procedures, and internal controls for real estate loans are adequate to identify and manage the risks the bank is exposed to.
2. To ascertain if the institution has implemented risk-management programs that identify, measure, monitor, and control the inherent risks involved in real estate lending.
3. To determine if bank officers and staff are operating in conformance with the bank's established guidelines.
4. To evaluate the portfolio for collateral sufficiency, performance, credit quality, and collectibility.
5. With respect to residential mortgage servicing, to review risk-management practices and controls in connection with a decision not to complete foreclosure proceedings after they have been initiated.
6. To determine compliance with applicable laws and regulations.
7. To initiate corrective action when policies, practices, procedures, objectives, or internal controls are deficient or when violations of laws or regulations have been noted.

Home Equity Lending

1. To determine if the financial institution has an appropriate review and approval process for new product offerings, product changes, and marketing initiatives.
2. To ascertain whether the financial institution has appropriate control procedures for third parties that generate loans on its behalf and if the control procedures comply with the laws and regulations that are applicable to the organization.
3. To determine if the financial institution has given full recognition to the risks embedded in its home equity lending.
4. To determine whether the financial institution's risk-management practices have kept pace with the growth and changing risk profile of its home equity portfolios and whether underwriting standards have eased.
5. To determine whether the financial institution's loan policy—
   a. ensures prudent underwriting standards for home equity lending, including standards to ensure that a thorough evaluation of a borrower's capacity to service the debt is conducted (that is, the institution is not relying solely on the borrower's credit score);
   b. provides risk-management safeguards for potential declines in home values;
   c. ensures that the standards for interest-only and variable-rate home equity lines of credit (HELOCs) include an assessment of a borrower's ability to (1) amortize the fully drawn line of credit over the loan term and (2) absorb potential increases in interest rates; and
   d. provides appropriate collateral-valuation policies and procedures and provides for the use and validation of automated valuation models.

1. Determine the scope of the examination, based on the evaluation of internal controls and the work performed by internal or external auditors.
2. Review the board of directors minutes to ensure that real estate loan policies are reviewed and approved at least annually.
3. Test real estate loans for compliance with policies, practices, and procedures by performing the remaining examination procedures in this section. Obtain a listing of any deficiencies noted in the latest internal or external audit report, and determine if appropriate corrections have been made. Additionally, obtain a list of personnel changes. Determine if these changes are significant enough to influence the scope of the examination.
4. Obtain a trial balance and delinquency listing for all real estate loans.
   a. Reconcile the real estate department's trial balance totals to the bank's general ledger accounts.
   b. Review reconciling items for reasonableness.
   c. Obtain information (for example, paid-to dates, last date paid, and date of nonaccrual status) on past-due loans and loans on nonaccrual status.
5. Evaluate the bank with respect to—
   a. the adequacy of written policies and procedures relating to real estate loans;
   b. the operating compliance with established bank policy;
   c. favorable or adverse trends in the overall real estate lending activity;
   d. the accuracy and completeness of the bank's records;
   e. the adequacy of internal controls;
   f. adherence to lending policies, procedures, and authority by all appropriate personnel;
   g. compliance with laws, regulations, and Federal Reserve policy on real estate lending activity, including lending limits and restrictions; loans to officers, directors, and shareholders; appraisal and evaluation of real estate collateral; and lending practices;
   h. compliance with the Interagency Guidelines for Real Estate Lending Policies, including whether the bank is adequately documenting exceptions to supervisory loan-to-value (LTV) limits, whether the volume of nonconforming loans exceeds the capital limitations, and whether risk-management programs have been established and maintained to identify, measure, monitor, and control the inherent risks associated with high-LTV lending;
   i. compliance with the Interagency Credit-Risk Management Guidance for Home Equity Lending; and
   j. other matters of significance, including mortgage servicing, warehousing operations, and the loan-origination/resale process.
6. Select loans for examination, using an appropriate sampling technique drawn from judgmental (cutoff-amount approach) or statistical sampling. Analyze the performance of the loans selected for review by transcribing the appropriate information from the following list onto the real estate loan line cards, when applicable:
   a. collateral records and credit files
   b. loan agreements relative to any purchases, transfers, participations, or sales that have been entered into since the last examination
   c. loan commitments and other contingent liabilities
   d. loan-modification agreements or restructuring terms to identify a reduction in interest rate or principal payments, deferral of interest or principal payments, or other restructurings of terms
   e. past-due/nonaccrual-related information
   f. loan-specific internal information from problem credit analyses
   g. escrow-analysis reports, including the status of property tax payments and escrow advances by the bank to cover delinquent property taxes
   h. the status of mortgage insurance claims either for government insurance or guarantee programs or for private mortgage insurance, including procedures for ensuring coverage and reporting procedures for filing claims and contested claims, if any

   i. loans to insiders and their interests
7. In analyzing the selected real estate loans, consider the following procedures, taking appropriate action if necessary:
   a. Determine the primary source of repayment and evaluate its adequacy.
   b. Assess the quality of any secondary collateral afforded by the loan guarantors or partners.
   c. Compare collateral values with outstanding debt. Determine whether the loan's LTV ratio is in excess of the supervisory LTV limits. If so, ascertain whether the loan has been properly reported as a nonconforming loan.
   d. Assess the adequacy of the appraisal or evaluation.
   e. Ascertain whether the loan complies with established bank policy.
   f. Identify any deficiencies in the loan's documentation in the credit files, the collateral records, or both.
   g. Has the bank decided not to complete any foreclosures after the foreclosure process was initiated? If yes, continue with these examination procedures.
      1) Review the bank's policies and procedures for regular monitoring of property values to support the analysis to continue or abandon the foreclosure. Collateral valuation information should be sufficient to support a decision to initiate, continue, or abandon a foreclosure proceeding. Refer to the *Interagency Appraisal and Evaluation Guidelines* in section 4140.1 or see SR-10-16.
      2) Discuss findings with the organization's management and obtain any necessary commitment for corrective action. Assess whether these actions will address the noted deficiencies and weaknesses and, if not, determine whether supervisory action is necessary.
   h. Identify whether the loan is to an officer, a director, or a shareholder of the bank or to a correspondent bank. Determine whether an officer, a director, or a shareholder of the bank is a guarantor on the loan.
   i. Review the borrower's compliance with provisions of the loan agreement. Review the borrower's payment performance, indicating whether the loan is past due.
   j. Determine if there are any problems that may jeopardize the repayment of the real estate loan.
   k. Determine whether the loan was classified during the preceding examination, and, if the loan has been paid off, whether all or part of the funds for repayment came from another loan at the bank, from a participation or sale with another institution, or from the repossession of the property.
   l. Identify whether the loan is to a firm or to individuals who are principals of a firm that provided professional services to the bank, including attorneys, accountants, and appraisers. If so, determine if the loan has received preferential treatment.
8. For loan participations, either in whole or in part, to or with another lending institution, review, if applicable—
   a. participation certificates and agreements, on a test basis, to determine if the contractual terms are being adhered to;
   b. loan documentation to see if it meets the bank's underwriting procedures (that is, the documentation for loan participations should meet the same standards as the documentation for loans the bank originates);
   c. the transfer of loans immediately before the date of the examination to determine if the loan was either nonperforming or classified and if the transfer was made to avoid possible criticism during the current examination; and
   d. losses to determine if such losses are shared on a pro rata basis.
9. For participations between an institution that has a different primary regulator and loans in the Shared National Credit program—
   a. identify loans to be included in the Shared National Credit review;
   b. inform the Reserve Bank of any classified participation loans that were not covered by the Shared National Credit program and in which the participant(s) had a different primary regulator; and
   c. inform the Reserve Bank of those loans eligible for the Shared National Credit program that were not previously reviewed.
10. In connection with the examination of other lending activity in the bank—

a. check the central liability file on the borrower(s) and determine whether the total indebtedness of the borrower exceeds the lending limit to a single borrower; and
b. obtain information and related performance status on common borrowers and their interests from examiners assigned to other examination areas (such as non–real estate loans, leasing, overdrafts, and cash items). Determine the total indebtedness of these borrowers to the bank. Additionally, one examiner should be assigned to review the borrower's overall borrowing relationship with the bank.

11. Consult with the examiner responsible for the asset-liability management analysis portion of the examination to determine the appropriate maturity breakdown of real estate loans needed for the analysis. Prepare the necessary schedules.
12. Summarize the findings of the real estate loan portfolio review and address the following:
    a. the scope of the examination
    b. the quality of the policies, procedures, and controls
    c. the general level of adherence to policies and procedures
    d. the competency of management and loan officers, including the identification of individuals with an excessively high level of problem loans or documentation exceptions
    e. the quality of the loan portfolio
    f. loans not supported by current and complete financial information
    g. loans with incomplete documentation, addressing deficiencies related to items such as appraisals or evaluations, title policy, proof of insurance, deeds of trust, and mortgage notes
    h. loans to officers, directors, shareholders, or their interests
    i. causes of existing problems
    j. delinquent loans
    k. concentrations of credits
    l. classified loans
    m. violations of laws, regulations, and Federal Reserve policy
    n. action taken by management to correct previously noted deficiencies, and corrective actions recommended to management at this examination, with the bank's response to them

Home Equity Lending

1. Review the credit policies for home equity lending to determine if the underwriting standards address all relevant risk factors (that is, an analysis of a borrower's income and debt levels, credit score, and credit history versus the loan's size, the collateral value (including valuation methodology), the lien position, and the property type and location).
2. Determine whether the financial institution's underwriting standards include—
    a. a properly documented evaluation of the borrower's financial capacity to adequately service the debt;
    b. an adequately documented evaluation of the borrower's ability to (1) amortize the fully drawn line of credit over the loan term and (2) absorb potential increases in interest rates for interest-only and variable-rate home equity lines of credit (HELOCs).
3. Assess the reasonableness and adequacy of the analyses and methodologies underlying the financial institution's evaluation of borrowers.
4. If the financial institution uses third parties to originate home equity loans, find out—
    a. if the institution delegates the underwriting function to a broker or correspondent;
    b. if the institution's internal controls for delegated underwriting are adequate;
    c. whether the institution retains appropriate oversight of all critical loan-processing activities, such as verification of income and employment and the independence of the appraisal and evaluation function;
    d. if there are adequate systems and controls to ensure that a third-party originator is appropriately managed, is financially sound, provides mortgages that meet the institution's prescribed underwriting guidelines, and adheres to applicable consumer protection laws and regulations;
    e. if the institution has a quality-control unit or function that closely monitors (monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities) the quality of

loans that the third party underwrites; and
f. whether the institution has adequate audit procedures and controls to verify that third parties are not being paid to generate incomplete or fraudulent mortgage applications or are not otherwise receiving referral or unearned income or fees contrary to Real Estate Settlement Procedures Act (RESPA) prohibitions.

5. Evaluate the adequacy of the financial institution's collateral-valuation policies and procedures. Ascertain whether the institution—
   a. establishes criteria for determining the appropriate valuation methodology for a particular transaction (based on the risk in the transaction and loan portfolio);
   b. sets criteria for determining when a physical inspection of the collateral is necessary;
   c. ensures that an expected or estimated value of the property is not communicated to an appraiser or individual performing an evaluation;
   d. implements policies and controls to preclude "value shopping"; and
   e. requires sufficient documentation to support the collateral valuation in the appraisal or evaluation.
6. If the financial institution uses automated valuation models (AVMs) to support evaluations or appraisals, find out if the institution—
   a. implements policies and controls to preclude "value shopping" in its use of AVMs;
   b. periodically validates the models, to mitigate the potential valuation uncertainty in the model;
   c. adequately documents the validation's analysis, assumptions, and conclusions;
   d. back-tests a representative sample of evaluations and appraisals supporting loans outstanding; and
   e. evaluates the reasonableness and adequacy of its procedures for validating AVMs.
7. If tax-assessment valuations are used as a basis for collateral valuation, ascertain whether the financial institution is able to demonstrate and document the correlation between the assessment value of the taxing authority and the property's market value, as part of the validation process.
8. Review the risk- and account-management procedures. Verify that the procedures are appropriate for the size of the financial institution's loan portfolio, as well as for the risks associated with the types of home equity lending conducted by the institution.
9. If the financial institution has large home equity loan portfolios or portfolios with high-risk characteristics, determine if the institution—
   a. periodically refreshes credit-risk scores on all customers;
   b. uses behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts;
   c. periodically assesses utilization rates;
   d. periodically assesses payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the credit line to keep payments current;
   e. monitors home values by geographic area; and
   f. obtains updated information on the collateral's value when significant market factors indicate a potential decline in home values, or when the borrower's payment performance deteriorates and greater reliance is placed on the collateral.

   Determine if the frequency of the above actions is commensurate with the risk in the portfolio.
10. Verify that annual credit reviews of HELOC accounts are conducted. Verify if the reviews of HELOC accounts determine whether the line of credit should be continued, based on the borrower's current financial condition.
11. Determine that authorizations of over-limit home equity lines of credit are restricted and subject to appropriate policies and controls.
    a. Verify that the financial institution requires over-limit borrowers to repay, in a timely manner, the amount that exceeds established credit limits.
    b. Evaluate the sufficiency of management information systems (MIS) that enable management to identify, measure, monitor, and control the risks associated with over-limit accounts.
12. Verify that the financial institution's real estate lending policies are consistent with safe and sound banking practices and that its board of directors reviews and approves the policies at least annually.
13. Determine whether the MIS—

a. allows for the segmentation of the loan portfolios;
b. accurately assesses key risk characteristics; and
c. provides management with sufficient information to identify, monitor, measure, and control home equity concentrations.

14. Determine whether management periodically assesses the adequacy of its MIS, in light of growth and changes in the financial institution's risk appetite.
15. If the financial institution has significant concentrations of HELs or HELOCs, determine if the MIS includes, at a minimum, reports and analysis of the following:
    a. production and portfolio trends by product, loan structure, originator channel, credit score, loan to value (LTV), debt to income (DTI), lien position, documentation type, market, and property type
    b. the delinquency and loss-distribution trends by product and originator channel, with some accompanying analysis of significant underwriting characteristics (such as credit score, LTV, DTI)
    c. vintage tracking
    d. the performance of third-party originators (brokers and correspondents)
    e. market trends by geographic area and property type, to identify areas of rapidly appreciating or depreciating housing values.
16. Determine whether the financial institution accurately tracks the volume of high-LTV (HLTV) loans, including HLTV home equity and residential mortgages, and if the financial institution reports the aggregate of these loans to its board of directors.
17. Determine whether loans in excess of the supervisory LTV limits are identified as high-LTV loans in the financial institution's records. Determine whether the institution reports, on a quarterly basis, the dollar value of such loans to its board of directors.
18. Find out whether the financial institution has purchased insurance products to help mitigate the credit risks of its HLTV residential loans. If a policy has a coverage limit, determine whether the coverage may be exhausted before all loans in the pool mature or pay off.
19. Determine whether the financial institution's credit risk-management function oversees the support function(s). Evaluate the effectiveness of controls and procedures over staff who are responsible for perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes.
20. Determine whether policies and procedures have been established for home equity problem-loan workouts and loss-mitigation strategies.
21. Summarize the findings of the home equity loan portfolio review.

Review the bank's internal controls, policies, practices, and procedures for making and servicing real estate loans. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Negative responses to the questions in this section should be explained, and additional procedures deemed necessary should be discussed with the examiner-in-charge. Items marked with an asterisk require substantiation by observation or testing.

LOAN POLICIES

1. Has the board of directors and management, consistent with their duties and responsibilities, adopted and, at least annually, reviewed and approved written real estate loan policies that define—
   a. the institution's target market?
   b. loan portfolio diversification standards?
   c. acceptable collateral types?
   d. prudent, clear, and measurable underwriting standards, including relevant credit factors such as—
      - maximum loan amount by type of property?
      - maximum loan maturity by type of property?
      - repayment terms?
      - pricing structure for each type of real estate loan?
      - loan-to-value (LTV) limits by type of property?
   e. procedures for reviewing real estate loan applications?
   f. loan-origination and -approval procedures (including loan-authority limits) by size and type of loan?
   g. review and approval procedures for exception loans?
   h. loan-administration procedures that include documentation, disbursement, collateral inspection, collection, and loan review?
   i. minimum loan-documentation standards, such as minimum frequency and type of financial information required for each category of real estate loan?
   j. LTV limits that are consistent with regulatory supervisory limits?
   k. real estate appraisal and evaluation programs consistent with the Federal Reserve's appraisal regulation (12 CFR 208.50–51), the Interagency Appraisal and Evaluation Guidelines (see section 4140.1), and the October 27, 2003, interagency statement on Independent Appraisal and Evaluation Functions (see SR-03-18)?
   l. reporting requirements to the board of directors relative to loan portfolio monitoring, including items such as compliance with lending policies and procedures, delinquency trends, and problem loans?
2. Are real estate policies and objectives appropriate to the size and sophistication of the bank, and are they compatible with changing market conditions?

LOAN RECORDS

*1. Are the preparation and posting of subsidiary real estate loan records performed or adequately reviewed by persons who do not also—
   a. issue official checks and drafts?
   b. handle cash receipts?
   c. reconcile subsidiary records to general ledger controls?

*2. Are the subsidiary real estate loan records reconciled at least monthly to the appropriate general ledger accounts? Are reconciling items adequately investigated by persons who do not also handle cash or prepare/post subsidiary controls?

3. Are loans in excess of supervisory LTV limits identified in the bank's records, and are the aggregate amounts of such loans reported at least quarterly to the board of directors, along with the experience of the high-LTV loan portfolio?

4. Are loan statements, delinquent-account-collection requests, and past-due notices reconciled to the real estate loan subsidiary records? Are the notices and reconcili-

ations handled by persons who do not also handle cash?
5. Are inquiries about loan balances received and investigated by persons who do not also handle cash?
*6. Are documents supporting recorded credit adjustments subsequently checked or tested by persons who do not also handle cash?
7. Does the bank maintain a daily record summarizing note-transaction details (loans made, payments received, and interest collected) to support applicable general ledger account entries?
8. Are note and liability trial balances frequently reconciled to the general ledger by employees who do not process or record loan transactions?
9. Are subsidiary payment records and files pertaining to serviced loans segregated and identifiable?
10. Are past-due-loan reports generated daily?

LOAN INTEREST AND COMMITMENT FEES

*1. Are the preparation and posting of loan interest and fee records performed or adequately reviewed by persons who do not also—
   a. issue official checks or drafts?
   b. handle cash?
2. Are any independent interest and fee computations made and compared with or adequately tested to loan interest records by persons who do not also—
   a. issue official checks or drafts?
   b. handle cash?

PROCESSING AND DOCUMENT CONTROL

*1. Are all real estate loan commitments issued in written form?
2. Are loan officers prohibited from processing loan payments?
*3. Are loan payments received by mail recorded upon receipt independently before being sent to and processed by a note teller?
*4. Regarding mortgage documents—
   a. Has the responsibility for the document files been established?
   b. Does the bank use a check sheet to ensure that required documents are received and on file?
   c. Are safeguards in effect to protect notes and other documents?
   d. Does the bank obtain a signed application form for all real estate mortgage loan requests?
   e. Are separate credit files maintained?
   f. Is there a program of systematic follow-up to determine that all required documents are received after the loan closing and from public recording offices?
   g. Does a designated employee conduct a review after loan closing to determine if all documents are properly drawn, executed, recorded, and filed within the loan files?
   h. Are all notes and other instruments pertaining to paid-off loans returned promptly to the borrower, canceled, and marked paid, where appropriate?
   i. Are charged-off notes and related files segregated and adequately controlled?

LOAN ORIGINATION

1. Does the bank have a written schedule of fees, rates, terms, and types of collateral for all new loans?
2. Does the bank have a mortgage errors and omission policy?
3. Are procedures in effect to ensure compliance with the requirements of governmental agencies that insure or guarantee loans or with the requirements of private mortgage insurance companies?

ESCROW PROCESSING

1. Regarding insurance and property taxes coverage—
   a. Is there a procedure for determining that private mortgage insurance premiums are current on insured loans?
   b. Is there a procedure for determining that property and hazard insurance premiums are current on properties securing loans?

c. Does the bank require that the hazard insurance policies include a loss-payable clause to the bank?
d. Are escrow accounts reviewed at least annually to determine if monthly deposits will cover anticipated disbursements?
e. Are disbursements for taxes and insurance supported by records showing the nature and purpose of the disbursement?
f. If advance deposits for taxes and insurance are not required, does the bank have a system to determine that taxes and insurance are being paid?

LOAN ADMINISTRATION

*1. Are approvals of real estate advances reviewed, before disbursement, to determine that such advances do not increase the borrower's total liability to an amount in excess of the bank's legal lending limit?
2. Are detailed statements of account balances and activity mailed to mortgagors at least annually?

COLLECTIONS AND FORECLOSURES

1. Does the bank have adequate collection procedures to monitor delinquencies and, as necessary, have procedures to pursue foreclosure?
2. Are properties under foreclosure proceedings segregated?
   a. Has the bank decided not to complete any foreclosures after the foreclosure process was initiated? If yes,
      1) Are there policies and procedures for regularly monitoring the property values to support the analysis—to continue or abandon the foreclosure? Is the collateral valuation information sufficient to support a decision to initiate, continue, or abandon a foreclosure proceeding?
      2) After discussing the examination findings with the organization's management, were the necessary commitments obtained for corrective action? Will these actions address the noted deficiencies and weaknesses? If not, is supervisory action is necessary?
3. Are properties to which the bank has obtained title appropriately transferred to other real estate owned (OREO)? See "Other Real Estate Owned," section 2200.1, for requirements.
4. Does the bank have an adequate management and sales disposition program for timely liquidation of OREO? Does the program take into account the maximum retention period for OREO allowed under state law?
5. Does the bank have adequate procedures for filing and monitoring its mortgage insurance claims for government-insured or -secured programs and for private mortgage insurance?

HOME EQUITY LENDING

Policies

1. Do the credit policies for home equity lending address the underwriting standards for all relevant risk factors, such as—
   a. an analysis of a borrower's income and debt levels?
   b. an analysis of a borrower's credit score and credit history versus the loan's size?
   c, the collateral value (including valuation methodology)?
   d. the lien position?
   e. the property type and location?
2. Are the financial institution's risk-and account-management procedures appropriate for the size of the institution's loan portfolio, as well as for the risks associated with the types of home equity lending conducted by the institution?
3. Does the financial institution have reasonable and adequate policies and procedures for home equity problem-loan workouts and loss-mitigation strategies?

Underwriting

4. Has the financial institution purchased insurance products to mitigate the credit risks of its high-LTV (HLTV) residential loans?

   a. If so, do any of those insurance policies have a coverage limit?
   b. Has the institution conducted reasonable and adequate analyses to determine whether the coverage may be exhausted before all loans in the pool covered by the insurance product mature or pay off?
5. Does the financial institution's credit-risk management function oversee the support function(s) for its real estate lending? Does the institution have effective controls and procedures over staff who are responsible for perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes?
6. Do the financial institution's underwriting standards include—
   a. a properly documented evaluation of the borrower's financial capacity to adequately service the debt?
   b. an adequately documented evaluation of the borrower's ability to—
      - amortize the fully drawn line of credit over the loan term?
      - absorb potential increases in interest rates for interest-only and variable-rate home equity lines of credit (HELOCs)?
7. Are the analyses and methodologies underlying the institution's evaluation of borrowers reasonable and adequate?
8. Does the financial institution use third parties to originate home equity loans? If so, does the institution—
   a. delegate the underwriting function to a broker or correspondent?
   b. have adequate internal controls for its delegated underwriting?
   c. retain appropriate oversight of all critical loan-processing activities, such as verification of income and employment and the independence of the appraisal and evaluation function?
   d. have adequate systems and controls to ensure that a third-party originator is appropriately managed, is financially sound, provides mortgages that meet the institution's prescribed underwriting guidelines, and adheres to applicable consumer protection laws and regulations?
   e. have a quality-control unit or function that closely monitors (monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities) the quality of loans that the third party underwrites?
   f. have adequate audit procedures and controls to verify that third parties are not being paid to generate incomplete or fraudulent mortgage applications and are not otherwise receiving referral or unearned income or fees contrary to Real Estate Settlement Procedures Act (RESPA) prohibitions?

Collateral Valuation

9. Does the financial institution have adequate collateral-valuation policies and procedures that—
   a. establish criteria for determining the appropriate valuation methodology for a particular transaction (based on the risk in the transaction and loan portfolio)?
   b. set criteria for determining when a physical inspection of the collateral is necessary?
   c. ensure that an expected or estimated value of the property is not communicated to an appraiser or individual performing an evaluation?
   d implement controls to preclude "value shopping?"
   e. require sufficient documentation to support the collateral valuation in the appraisal or evaluation?
10. Does the financial institution use automated valuation models (AVMs) to support evaluations or appraisals? If so, does the institution—
   a. periodically validate the models, to mitigate the potential valuation uncertainty in the model?
   b. adequately document the validation's analysis, assumptions, and conclusions?
   c. implement controls to preclude "value shopping" in its use of AVMs?
   d. back-test a representative sample of evaluations and appraisals supporting loans outstanding?
   e. evaluate the reasonableness and adequacy of its procedures for validating AVMs?

11. Are tax-assessment valuations used as a basis for collateral valuation? If so, is the financial institution able to demonstrate and document the correlation between the assessment value of the taxing authority and the property's market value, as part of the validation process?

Risk Concentrations

12. Does the financial institution have large home equity loan portfolios or portfolios with high-risk characteristics? If so, does the institution—
    a. periodically refresh credit-risk scores on all customers?
    b. use behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts?
    c. periodically assess utilization rates?
    d. periodically assess payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the credit line to keep payments current?
    e. monitor home values by geographic area?
    f. obtain updated information on the collateral's value when significant market factors indicate a potential decline in home values, or when the borrower's payment performance deteriorates and greater reliance is placed on the collateral?

    Are the frequency of these actions commensurate with the risk in the portfolio?

Management Information Systems

13. Are the financial institution's real estate lending policies consistent with safe and sound banking practices, and does its board of directors review and approve the policies at least annually?
14. Do the financial institution's management information systems (MIS) for real estate lending—
    a. allow for the segmentation of the loan portfolios?
    b. accurately assess key risk characteristics?
    c. provide management with sufficient information to identify, monitor, measure, and control home equity concentrations?
15. Does the financial institution's management periodically assess the adequacy of its MIS, in light of growth and changes in the institution's risk appetite?
16. Does the financial institution have significant concentrations of HELs or HELOCs? If so, does the MIS include, at a minimum, reports and analysis of—
    a. production and portfolio trends by product, loan structure, originator channel, credit score, loan to value (LTV), debt to income (DTI), lien position, documentation type, market, and property type?
    b. the delinquency and loss-distribution trends, by product and originator channel, with some accompanying analysis of significant underwriting characteristics (such as credit score, LTV, or DTI)?
    c. vintage tracking?
    d. the performance of third-party originators (brokers and correspondents)?
    e. market trends by geographic area and property type, to identify areas of rapidly appreciating or depreciating housing values?
17. Do the financial institution's records identify loans in excess of the supervisory LTV limits as high-LTV (HLTV) loans? Is the aggregate dollar value of such loans reported quarterly to the instution's board of directors? Does the volume of HLTV loans exceed 100 percent of the institution's capital?

Internal Loan Review

18. Does the financial institution conduct annual credit reviews of HELOC accounts? Does the review of HELOC accounts determine whether the line of credit should be continued, based on the borrower's current financial condition?
19. Are the financial institution's authorizations of over-limit home equity lines of credit restricted? Are they subject to appropriate policies and controls?
    a. Does the institution require over-limit borrowers to repay, in a timely manner, the amount that exceeds established credit limits?

b. Is MIS sufficient to enable management to identify, measure, monitor, and control the risks associated with over-limit accounts?

CONCLUSION

1. Does the foregoing information provide an adequate basis for evaluating internal control in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

2. On the basis of a composite evaluation, are internal controls adequate, as evidenced by answers to the foregoing questions?

A construction loan is used to finance the construction of a particular project within a specified period of time and is funded by supervised disbursements of a predetermined amount over the construction period. When properly controlled, a bank can promote commercial or residential development through its construction lending as well as receive significant profits over a relatively short time frame. However, the higher rate of return demanded by construction lenders is indicative of the higher risks assumed.

Inasmuch as construction lending is a form of interim financing, loan repayment is contingent on whether the borrower either obtains permanent financing or finds a buyer with sufficient funds to purchase the completed project. Because many borrowers anticipate retaining ownership after construction, the cost and availability of funds from permanent financing is a primary factor to be considered by the bank in assessing the risk of a construction loan.

A construction loan is generally secured by a first mortgage or deed of trust on the land and improvements, which is often backed by a purchase agreement from a financially sound investor or by a takeout financing agreement from a responsible permanent lender. A long-term mortgage loan (permanent financing) is typically obtained before or simultaneously with the construction loan and is made to refinance the short-term construction loan. Additionally, the bank may require a borrower to provide secondary collateral in the form of a junior interest in another real estate project or a personal guarantee.

BANK LENDING POLICY

Banks can limit the risk inherent in construction lending by establishing policies that specify the type and extent of bank involvement. The bank's lending policies should reflect prudent lending standards and set forth pricing guidelines, limits on loan-to-value ratios and debt-coverage ratios, and yield requirements. Such policies should also address procedures relative to controlling disbursements in a manner that is commensurate with the progress of construction.

Lending Limits

A bank should have established and well-controlled construction lending limits that are within the acceptable standards of state banking regulations. State banking statutes governing construction lending may contain minimum standards of prudence without specifying actual loan terms.

The bank's internal limits should not exceed the supervisory loan-to-value (LTV) limits set forth in the Interagency Guidelines for Real Estate Lending Policies, as required by the Federal Deposit Insurance Corporation Improvement Act of 1991 (12 USC 1828(c)) and included as appendix C of the Federal Reserve's Regulation H. These guidelines and the accompanying LTV limits are discussed in "Real Estate Loans," section 2090.1. Generally, the LTV ratio should not exceed the following supervisory limits:

- 65 percent for raw-land loans
- 75 percent for land-development and improved-land loans
- 80 percent for commercial, multifamily, and other nonresidential construction loans
- 85 percent for one- to four-family residential construction loans

For loans that fund multiple phases of the same real estate project, the appropriate LTV limit is the supervisory LTV limit applicable to the final phase of the project.

Lending Risks

Construction loans are vulnerable to a wide variety of risks. Critical to the evaluation of any construction loan is the analysis of the project's feasibility study to ascertain the developer's risk, which affects the lender's risk. The major portion of the risk is attributable to the need to complete a project within specified cost and time limits. Examples of difficulties that may arise include—

- completion of a project after takeout dates, which voids permanent funding commitments;

- cost overruns, which may exceed takeout commitments or sale prices;
- the possibility that the completed project will be an economic failure;
- the diversion of progress payments, resulting in nonpayment of material bills or subcontractors;
- a financial collapse or the failure of the contractors, subcontractors, or suppliers to perform before the completion date;
- increased material or labor costs;
- the destruction of improvements from unexpected natural causes; and
- an improper or lax monitoring of funds advanced by the bank.

TYPES OF CONSTRUCTION LOANS

The basic types of construction lending are unsecured front-money, land-development, residential construction, and commercial construction loans. It is not uncommon for a bank to provide the acquisition, development, and construction loans for a particular project.

Unsecured Front-Money Loans

Front-money loans are considered very risky and should not be undertaken unless the bank has the expertise to evaluate the credit risk. These loans may represent working-capital advances to a borrower who may be engaged in a new and unproven venture. The funds may be used to acquire or develop a building site, eliminate title impediments, pay architect or standby fees, and meet minimum working-capital requirements established by construction lenders. Because repayment often comes from the first draw against construction financing, many construction loan agreements prohibit the use of the first advance to repay nonconstruction costs. Unsecured front-money loans used as a developer's equity investment in a project or to cover initial cost overruns are symptomatic of an undercapitalized or possibly an inexperienced or inept builder.

Land-Development Loans

Land-development or off-site-improvement loans are intended to be secured-purchase loans or unsecured advances to creditworthy borrowers. A development loan involves the purchase of land and lot development in anticipation of further construction or sale of the property. In addition to funding the acquisition of the land, a development loan may be used to fund the preparation of the land for future construction, including the grading of land, installation of utilities, and construction of streets.

Effective administration of a land-development loan begins with a plan defining each step of the development. The development plan should incorporate cost budgets, including legal expenses for building and zoning permits, environmental impact statements, costs of installing utilities, and all other projected costs of the development. Bank management's review of the plan and related cost breakdowns should provide the basis for determining the size, terms, and restrictions for the development loan. Refer to the subsection below on the assessment of real estate collateral for further discussion.

The LTV ratio should provide for sufficient margin to protect the bank from unforeseen events (such as unplanned expenses) that would otherwise jeopardize the bank's collateral position or repayment prospects. If the loan involves the periodic development and sale of portions of the property under lien, each separately identifiable section of the project should be independently appraised, and any collateral should be released in a manner that maintains a reasonable margin. The repayment program should be structured to follow the sales or development program. Control over development loans can be best established when the bank finances both the development and the construction or sale phases of the project.

In the case of an unsecured land-development loan, it is essential to analyze the borrower's financial statements to determine the source of loan repayment. In establishing the repayment program, the bank should review sales projections to ensure that they are not overly optimistic. Additionally, banks should avoid granting loans to illiquid borrowers or guarantors who provide the primary support for a borrower (project).

Residential Construction Loans

Residential construction loans are made either on a speculative basis, where homes are built to be sold later in the general market, or for a specific buyer with prearranged permanent financing. Loans financing residential projects that do not have prearranged homebuyer financing are usually limited to a predetermined number of speculative homes, which are permitted to get the project started. However, smaller banks are often engaged in this type of financing, and the aggregate total of individual speculative construction loans may equal a significant portion of their capital funds. It is important to ensure that the homebuyer has arranged permanent financing before the bank finances the construction; otherwise, the bank may find itself without a source of repayment. Construction loans without takeout commitments generally should be aggregated to determine whether a concentration of credit exists, that is, in those situations when the amount exceeds 25 percent of the bank's capital structure (tier 1 capital plus loan loss reserves).

Proposals to finance speculative construction should be evaluated according to predetermined policies that are compatible with the institution's size, the technical competence of its management, and the housing needs of its service area. The prospective borrower's reputation, experience, and financial condition should also be reviewed to assess the likelihood of completing the proposed project. Until the project is completed, the actual value of the real estate is questionable. Thus, the marketability of the project should be substantiated in a feasibility study, reflecting a realistic assessment of current favorable and unfavorable local housing market conditions. As in any real estate loan, the bank must also obtain an appraisal or evaluation for the project. The appraisal or evaluation and the feasibility study are important tools to be used by lenders in evaluating project risks. For projects located out of area, the lender may lack market expertise, which makes evaluating the reasonableness of the marketing plan and feasibility study more difficult, and therefore makes the loan inherently riskier.

A bank dealing with speculative builders should have control procedures tailored to the individual project. A predetermined limit on the number of unsold units to be financed at any one time should be included in the loan agreement to avoid overextending the builder's capacity. The construction lender should receive current inspection reports indicating the project's progress. In some instances, the construction lender is also the permanent mortgagor. Loans on larger residential construction projects are usually negotiated with prearranged permanent financing as part of the construction loan.

Commercial Construction Loans

A bank's commercial construction lending activity can encompass a wide range of projects—apartments, condominiums, office buildings, shopping centers, and hotels—with each requiring a special set of skills and expertise to successfully manage, construct, and market.

Commercial construction loan agreements should normally require the borrower to have a precommitted extended-term loan to "take out" the construction lender. Takeout-financing agreements, however, are usually voidable if construction is not completed by the final funding date, if the project does not receive occupancy permits, or if the preleasing or occupancy rate does not meet an agreed-upon level. A bank can also enter into an open-end construction loan where there is no precommitted source to repay the construction loan. Such loans pose an added risk because the bank may be forced into providing permanent financing, oftentimes in distressed situations. In evaluating this risk, the bank should consider whether the completed project will be able to attract extended-term financing, supportable by the projected net operating income.

The risk of commercial construction requires a complete assessment of the real estate collateral, borrower's financial resources, source of the extended-term financing, and construction plans. As it does any real estate loan, the bank must obtain an appraisal or evaluation of the real estate in accordance with the Federal Reserve's appraisal regulation. Additionally, the borrower should provide a feasibility study for the project that details the project's marketing plan, as well as an analysis of the supply-and-demand factors affecting the projected absorption rate. For an open-end construction loan, the feasibility study is particularly important to the bank's assessment of the credit because the repayment of the loan becomes increasingly dependent on the sales program or leasing of the project.

The bank also needs to assess the borrower's development expertise, that is, whether the borrower can complete the project within budget and according to the construction plans. The financial risk of the project is contingent on the borrower's development expertise because the source of the extended-term loan may be predicated upon a set date for project completion. Until the project is completed, the actual value of the real estate is questionable.

A bank may reduce its financial risk by funding the construction loan after the borrower has funded its share of the project equity (for example, by paying for the feasibility study and land-acquisition and -development costs). An alternative approach would require the borrower to inject its own funds into the project at agreed-upon intervals during the project's management, construction, and marketing phases to coincide with the construction lender's contributions. In larger projects, equity injections can be provided by equity partners or joint ventures. These can take the form of equity syndications,[1] whose contributions are injected in the project in phases. A bank should assess the likelihood of the syndication being able to raise the necessary equity.

BANK ASSESSMENT OF THE BORROWER

The term *borrower* can refer to different types of entities. These forms can range from an entity whose sole asset is the project being financed to an entity that has other assets available to support the debt in addition to the project being financed (a multi-asset entity).

Although the value of the real estate collateral is an important component of the loan approval process, the bank should not place undue reliance on the collateral value in lieu of an adequate analysis of the borrower's ability to repay the loan. The analytical factors differ depending on the purpose of the loan, such as residential construction versus the various types of commercial construction loans.

The bank's analysis is contained in its documentation files, which should include background information on the borrower and partner/guarantor concerning their character and credit history, expertise, and financial statements (preferably audited) for the most recent fiscal years. Background information regarding a borrower's and partner's/guarantor's character and credit history is based upon their work experience and previous repayment practices, both relative to trade creditors and financial institutions. The documentation files should indicate whether the borrower has demonstrated it can successfully complete the type of project to be undertaken. The financial statements should be analyzed to ensure that the loan can be repaid in the event that a takeout does not occur.

The degree of analysis depends on whether the borrower is in reality a single-asset entity or a multi-asset entity. A loan to a single-asset entity is often predicated upon the strength of the partners/guarantors. Accordingly, understanding their financial strength, which frequently is made up of various partnership interests, is key to assessing the project's strength. In this example, it would be necessary to obtain financial information on the partner's/guarantor's other projects, even those not financed by the bank, to understand their overall financial condition. This is necessary because other unsuccessful projects may cause financial trouble for the partner/guarantor, despite a successful sales program by the bank's borrower. Issues to be considered, in addition to those raised in the preceding paragraph, include the vacancy rates of the various projects, break-even points, and rent rolls.

A loan to a multi-asset entity has similar characteristics to those found in the single-asset entity, in that it is necessary to evaluate all of the assets contained therein to ascertain the actual financial strength. In both cases, assessment of the project under construction would include pre-leasing requirements. For a loan with a takeout commitment, the financial strength and reputation of the permanent lender should be analyzed. For a loan without a takeout commitment, or one in which the construction lender provides the permanent financing for its construction loan, the long-term risks also need to be evaluated. See the "Real Estate Loans" section in this manual, on the bank's assessment of the borrower, for additional factors to be considered.

In instances where approval for the loan is predicated upon the strength of entities other than the borrower (partner/guarantor), the bank should obtain information on their financial condition, income, liquidity, cash flow, contingent liabilities, and any other relevant factors that exist to demonstrate their financial capacity

1. *Syndication* generally refers to the act of bringing together a group of individuals or entities to invest in a real estate project and does not refer to any particular legal form of ownership. The legal form varies depending on the investors' investment objectives, division of tax benefits, responsibility for project management, and desire to limit personal liability. The investment vehicle may be a general partnership, limited partnership, joint venture, tenancy in common, corporation, real estate investment trust, or common law trust.

to fulfill the obligation in the event that the borrower defaults.

Partners/guarantors generally have investments in other projects included as assets on their financial statements. The value of these investments frequently represents the partner's/guarantor's own estimate of the investment's worth, as opposed to a value based upon the investment's financial statements. As a result, it is necessary to obtain detailed financial statements for each investment to understand the partner's/guarantor's complete financial picture and capacity to support the loan. The statements should include detailed current and accurate cash-flow information since cash flow is often the source of repayment.

It is also important to consider the number and amount of the guarantees currently extended by a partner/guarantor to determine if they have the financial capacity to fulfill the contingent claims that exist. Furthermore, the bank should review the prior performance of the partner/guarantor to voluntarily honor the guarantee as well as the marketability of the assets collateralizing the guarantee. Since the guarantee can be limited to development and construction phases of a project, the bank should closely monitor the project before issuing a release to the partner/guarantor.

BANK ASSESSMENT OF REAL ESTATE COLLATERAL

Banks should obtain an appraisal or evaluation, as appropriate, for all real estate–related financial transactions before making the final credit or other decision. See "Real Estate Appraisals and Evaluations," section 4140.1, for a description of the related requirements a bank must follow for real estate–related financial transactions. The appraisal section explains the standards for appraisals, indicates which transactions require an appraisal or an evaluation, states qualifications for an appraiser and evaluator, provides guidance on evaluations, and describes the three appraisal approaches.

The appraisal or evaluation techniques used to value a proposed construction project are essentially the same as those used for other types of real estate. The aggregate principal amount of the loan should be based on an appraisal or evaluation that provides, at a minimum, the "as is" market value of the property.[2] Additionally, the bank will normally request the appraiser to report the "as completed" value.[3] Projections should be accompanied by a feasibility study explaining the effect of projected property improvements on the market value of the land. The feasibility study may be a separate report or incorporated into the appraisal report. If the appraiser uses the feasibility study, the appraiser's acceptance or rejection of the study and its effect on the value should be fully explained in the appraisal. An institution's board of directors is responsible for reviewing and adopting policies and procedures that establish and maintain an effective, independent real estate appraisal and evaluation program (the program) for all of its lending functions. The real estate lending functions include commercial real estate mortgage departments, capital-market groups, and asset-securitization and -sales units. Concerns about the independence of real estate appraisal and evaluation programs include the risk that improperly prepared appraisals and evaluations may undermine the integrity of credit-underwriting processes. More broadly, an institution's lending functions should not have undue influence that might compromise the program's independence. See the October 27, 2003, interagency statement on Independent Appraisal and Evaluation Functions (SR-03-18).

Management is responsible for reviewing the reasonableness of the appraisal's or evaluation's assumptions and conclusions. Also, management's rationale in accepting and relying upon the appraisal or evaluation should be in writing and made a part of loan documentation. In assessing the underwriting risks, management should reconsider any assumptions used by an appraiser that reflect overly optimistic or pessimistic values. If management, after its review of the appraisal or evaluation, determines that there

2. The "as is" value is the value of the property in its current physical condition and subject to the zoning in effect as of the date of appraisal.

3. The "as completed" value reflects the value of the land and the projected improvements. A bank may also request a value based on stabilized occupancy or a value based on the sum of retail sales. However, the sum of retail sales for a proposed development is not the market value of the development. For proposed residential developments that involve the sale of individual houses, units, or lots, the appraisal should reflect deductions and discounts for holding costs, marketing costs, and entrepreneurial profit. For proposed and rehabilitated income-producing properties, the appraisal should reflect appropriate deductions and discounts for leasing commissions, rent losses, and tenant improvements from the estimated value based on stabilized occupancy.

are unsubstantiated assumptions, the bank may request the appraiser or evaluator to provide a more detailed justification of the assumptions or a new appraisal or evaluation. The approval of the loan is based upon the value of the project after the construction is completed. Insofar as the value component of the loan-to-value ratio is concerned, it is important for the bank to closely monitor the project's progress (value) during the construction period. See "Real Estate Loans," section 2090.1, for additional information relative to the real estate collateral assessment.

LOAN DOCUMENTATION

The loan documentation should provide information on the essential details of the loan transaction, the security interest in the real estate collateral, and the takeout loan commitment, if any. The necessary documentation before the start of construction generally includes:

- Financial and background information on the borrower to substantiate the borrower's expertise and financial strength to complete the project.
- The construction loan agreement, which sets forth the rights and obligations of the lender and borrower, conditions for advancing funds, and events of default. In some states, the agreement must be cited in either the deed of trust or the mortgage.
- A recorded mortgage or deed of trust, which can be used to foreclose and obtain title to the collateral.
- A title insurance binder or policy, usually issued by a recognized title insurance company or, in some states, an attorney's opinion. The title should be updated with each advance of funds to provide additional collateral protection.
- Insurance policies and proof of payment as evidence that the builder has adequate and enforceable coverage for liability, fire and other hazards, and vandalism and malicious mischief losses.
- An appropriate appraisal or evaluation showing the value of the land and improvements to date or, possibly, a master appraisal based on specifications for a multiphase development.
- Project plans, a feasibility study, and a construction budget showing the development plans, project costs, marketing plans, and equity contributions. A detailed cost breakdown of land, "hard" construction costs, and indirect or "soft" construction costs (such as construction loan interest; organizational and administration costs; and architectural, engineering, and legal fees) should be included.
- Property surveys, easements, an environmental impact report, and soil reports that indicate construction is feasible on the selected development site. The bank should also obtain the architect's certification of the plan's compliance with all applicable building codes and zoning, environmental protection, and other government regulations, as well as the engineer's report on compliance with building codes and standards. If internal expertise is not available, a bank may need to retain an independent construction expert to review these documents to assess the reasonableness and appropriateness of the construction plans and costs.
- The takeout commitment from the permanent lender, if applicable, and the terms of the loan. The bank should verify the financial strength of the permanent lender to fund the takeout commitment.
- A completion or performance bond signed by the borrower that guarantees the borrower will apply the loan proceeds to the project being financed.
- An owners' affidavit or a borrowing resolution empowering the borrower or its representative to enter into the loan agreement.
- Evidence that property taxes have been paid to date.

These documents furnish evidence that the lending officer is obtaining the information necessary for processing and servicing the loan and protect the bank in the event of default.

Documentation for Residential Construction Loans on Subdivisions

The documents mentioned above are usually available for residential construction loans on subdivisions (tracts). Documentation of tract loans frequently includes a master note in the gross amount of the entire project, and a master deed of trust covering all of the land involved in the project. In addition to an appraisal or evaluation for each type of house to be constructed, the bank should also obtain a master appraisal including a feasibility study for the entire development. The feasibility study compares the projected demand for housing against the anticipated supply of housing in the market area of the proposed tract development. This analysis should indicate whether there will be sufficient demand for the developer's homes given the project's location, type of homes, and unit sales price.

Documentation for the Takeout Commitment

Most construction lenders require the developer to have an arrangement for permanent financing for each house to be constructed. Exceptions include model homes, typically one for each style of home offered, and a limited numberof housing starts ahead of sales (speculative houses). The starts ahead of sales, however, contain additional risk. If the bank finances too many houses without purchase contracts, and housing sales decline rapidly, it may have to foreclose on the unsold houses and sell them for less than their loan value. A takeout of this type is usually an arrangement between the developer and a permanent mortgage lender, but construction lenders may also finance the permanent mortgages.

The essential information required for a commercial real estate takeout to proceed includes the floor and ceiling rental rates and minimum occupancy requirements; details of the project being financed; expiration date; standby fee requirement; assignment of rents; and, generally, a requirement that the construction loan be fully disbursed and not in any way in default at the time settlement occurs.

The commitment agreement, referred to as the buy/sell contract or the tri-party agreement, is signed by the borrower, the construction lender, and the permanent lender. The purpose of this agreement is to permit the permanent lender to buy the loan directly from the construction lender upon completion of the construction, with the stipulation that all contingencies have been satisfied. Examples of contingencies include project completion by the required date, clear title to the property, and minimum lease-up requirements. A commitment agreement also protects the construction lender against unforeseen possibilities, such as the death of a principal, before the permanent loan documents are signed.

ADMINISTERING THE LOAN

The bank and the borrower[4] must effectively cooperate as partners if controls relative to construction progress are to be maintained. The loan agreement specifies the performance of each party during the entire course of construction. Any changes in construction plans should be approved by both the construction lender and the takeout lender. Construction changes can result in increased costs, which may not necessarily increase the sale value of the completed project. On the other hand, a decrease in costs may not indicate a savings but may suggest the use of lesser quality materials or workmanship, which could affect the marketability of the project.

Disbursement of Loan Funds

Loan funds are generally disbursed through either a stage payment plan or a progress payment plan. Regardless of the method of disbursement, the amount of each construction draw should be commensurate with the improvements made to date. Funds should not be advanced unless they are used in the project being financed and as stipulated in the draw request. Therefore, the construction lender must monitor the funds being disbursed and must be assured, at every stage of construction, that sufficient funds are available to complete the project.

Stage Payment Plan

The stage payment plan, which is normally applied to residential and smaller commercial construction loans, uses a preestablished schedule for fixed disbursements to the borrower at the end of each specified stage of construction. The amount of the draw is usually based upon the stage of development because residential housing projects normally consist of houses in various stages of construction. Nevertheless, loan agreements involving tract financing

4. The borrower may not be the entity responsible for the actual construction of the project. Depending on the size, type, and complexity of the project, the borrower may strictly be a developer who assembles the land, designs the project, and contracts with a construction company to handle the actual construction of the building. If this is the case, the bank should obtain financial and project history information on the builder/contractor.

typically restrict further advances in the event of an accumulation of completed and unsold houses. Disbursements are made when construction has reached the agreed-upon stages, verified by an actual inspection of the property. These typically include advances at the conclusion of various stages of construction, such as the foundation, exterior framing, the roof, interior finishing, and completion of the house. The final payment is made after the legally stipulated lien period for mechanic's liens has lapsed.

Disbursement programs of this type are usually required for each house constructed within a tract development. As each house is completed and sold, the bank makes a partial release relative to that particular house covered by its master deed of trust. The amount of the release is set forth in the loan agreement, which specifies the agreed-upon release price for each house sold with any excess over the net sales proceeds remitted to the borrower.

Progress Payment Plan

The progress payment plan is normally used for commercial projects.[5] Under a progress payment system, funds are released as the borrower completes certain phases of construction as agreed upon in the loan agreement. Normally, the bank retains a percentage of the funds as a hold back (or retainage) to cover project cost overruns or outstanding bills from suppliers or subcontractors. Hold backs occur when a developer/contractor uses a number of subcontractors and maintains possession of a portion of the amounts owed to the subcontractors during the construction period. This is done to ensure that the subcontractors finish their work before receiving the final amount owed. Accordingly, the construction lender holds back the same funds from the developer/contractor to avert the risk of their misapplication or misappropriation.

The borrower presents a request for payment from the bank in the form of a "construction draw" request or "certification for payment," which sets forth the funding request by construction phase and cost category for work that has been completed. This request should be accompanied by receipts for the completed work (material and labor) for which payment is being requested. The borrower also certifies that the conditions of the loan agreement have been met—that all requested funds have been used in the subject project and that suppliers and subcontractors have been paid. Additionally, the subcontractors and suppliers should provide the bank with lien waivers covering the work completed for which payment has been received. Upon review of the draw request and independent confirmation on the progress of work, the bank will disburse funds for construction costs incurred, less the hold back. The percentage of the loan funds retained are released when a notice of the project's completion has been filed, and after the stipulated period has elapsed under which subcontractors or suppliers can file a lien.

Monitoring Progress of Construction and Loan Draws

It is critical that a bank has appropriate procedures and an adequate tracking system to monitor payments to ensure that the funds requested are appropriate for the given stage of development. The monitoring occurs through physical inspections of the project once it has started. The results of the inspections are then documented in the inspection reports, which are kept in the appropriate file. Depending on the complexity of the project, the inspection reports can be completed either by the lender or by an independent construction consulting firm, the latter generally staffed by architects and engineers. The reports address both the quantity and the quality of the work for which funds are being requested. They also verify that the plans are being followed and that the construction is proceeding on schedule and within budget.

The bank must be accurately informed of the progress to date in order to monitor the loan. It is also important that the bank ascertain whether draws are being taken in accordance with the predetermined disbursement schedule. Before any draw amount is disbursed, however, the bank must obtain verification of continued title insurance. Generally, this means verifying that

5. Other methods for disbursing commercial construction loans include the voucher system and the monthly draw method. The voucher system is similar to the progress system except that borrower prepares a voucher of all invoices to be paid with signatures of the subcontractors attesting to the invoiced amount. The bank then issues checks directly to the subcontractors or suppliers. The monthly draw method is used in long-term projects wherein the borrower makes a draw request each month for the previous month's work. In turn, the bank determines the amount of work completed to date and releases funds based on the value of work completed versus the value of the work remaining.

no liens have been filed against the title of the project since the previous draw. The title insurance insuring the construction lender's mortgage or lien is then increased to include the new draw, which results in an increase in the title insurance commensurate with the disbursement of funds. The lender frequently examines title to the property securing the construction loan to also be certain that the borrower is not pledging it for other borrowings and to be sure that mechanic's liens are not being filed for unpaid bills. When the project is not proceeding as anticipated, that fact should be reflected in the inspection reports.

Another important component in the process is the ongoing monitoring of general economic factors that will affect the marketing and selling of the residential or commercial properties and affect their success upon completion of the project.

Monitoring Residential Projects

An inventory list is maintained for each tract or phase of the project. The inventory list should show each lot number, the style of house, the release price, the sale price, and the loan balance. The list should be posted daily with advances and payments indicating the balance advanced for each house, date completed, date sold, and date paid, and should age the builder's inventory by listing the older houses completed and unsold.

Inspections (usually monthly) during the course of construction of each house should be documented in progress reports. The progress report should indicate the project's activity during the previous month, reflecting the number of homes under construction, the number completed, and the number sold. The monthly report should indicate whether advances are being made in compliance with the loan agreement.

Monitoring Commercial Projects

To have an effective control over its commercial construction loan program, the bank must have an established loan administration process that continually monitors each project. The process should include monthly reporting on the work completed, the cost to date, the cost to complete, construction deadlines, and loan funds remaining. Any changes in construction plans should be documented and reviewed by the construction consulting firm and should be approved by the bank and takeout lender. A significant number of change orders may indicate poor planning or project design, or problems in construction, and should be tracked and reflected in the project's budget. Soft costs such as advertising and promotional expenses normally are not funded until the marketing of the project has started.

Final Repayment

Before the final draw is made, the construction loan should be in a condition to be converted to a permanent loan. Usually the final draw includes payment of the hold back stipulated in the loan agreement and is used to pay all remaining bills. The bank should obtain full waivers of liens (releases) from all contractors, subcontractors, and suppliers before the loan is released and the hold back is disbursed. The bank should also obtain a final inspection report to confirm the project is completed and meets the building specifications, including confirmation of the certificate of occupancy from the governing building authority.

Sources of permanent funding for commercial projects vary greatly, depending upon the type of project. For condominium projects, the construction lender may also be providing the funding for marketing the individual units and would be releasing the loan on a unit-by-unit basis similar to a residential development construction loan. If there is a precommitted takeout lender, the new lender could purchase the construction loan documents and assume the security interest from the construction lender. If the project is being purchased for cash, the bank would release its lien and cancel the note.

Additionally, as the commercial project is leased, the lender should ensure that the bank's position is protected in the event that extended-term funding is not obtained. The bank may require tenants to enter into subordination, attornment, and nondisturbance agreements, which protect the bank's interests in the lease by providing for the assumption of the landlord's position by the bank in the event the borrower declares bankruptcy. Furthermore, to ensure that the bank has full knowledge of all provisions of the lease agreements, tenants should be required to sign an estoppel certification.

In some cases, the takeout lender may only pay off a portion of the construction loan because a conditional requirement for full funding has not been met, such as the project not attaining a certain level of occupancy. The construction lender would then have a second mortgage on the remaining balance of the construction loan. When the conditions of the takeout loan are met, the construction lender is repaid in full and the lien is released.

Interest Reserves

A construction loan is generally an interest-only loan because of the fact that cash flow is not available from most projects until they are completed. The borrower's interest expense is therefore borrowed from the construction lender as part of the construction loan for the purpose of "paying" the lender interest on the "portion" of the loan used for actual construction. The funds advanced to pay the interest are included as part of the typical monthly draw. As a result, the balance due to the lender increases with each draw by the full amount of construction costs, plus the interest that is borrowed.

The borrower's interest cost is determined by the amount of credit extended and the length of time needed to complete the project. This interest cost is referred to as an interest reserve. This period of time should be evaluated for reasonableness relative to the project being financed. In larger projects cash flow may be generated prior to the project's completion. In such cases, any income from the project should be applied to debt service before there is a draw on the interest reserve. The lender should closely monitor the lease-up of the project to ensure that the project's net income is being applied to debt service and not diverted to the borrower as a return of the developer's capital or for use in the developer's other projects.

Loan Default

The inherent exposure in construction financing is that the full value of the collateral is not realized until the project is completed. In default situations the bank must consider the alternatives available to recover its advances. For uncompleted projects, the bank must decide whether it is more advantageous to complete the project or to sell on an "as is" basis. The various mechanic's and materialmen's liens, tax liens, and other judgments that arise in such cases are distressing to even the most seasoned lender. Due to these factors, the construction lender may not be in the preferred position indicated by documents in the file. Therefore, the lender should take every precaution to minimize any third-party claim on the collateral. Because laws regarding the priority of certain liens may vary among states, the bank should take the necessary steps to ensure that its lien is recorded prior to the commencement of work or the delivery of materials and supplies.

Signs of Problems

To detect signs of a borrower's financial problems, the bank should review the borrower's financial statements on a periodic (quarterly) basis, assessing the liquidity, debt level, and cash flow. The degree of information the financial statements provide the bank, insofar as understanding the borrower's financial condition is concerned, depends primarily on whether the borrower is a single-asset entity or a multi-asset entity.

The financial statements of a single-asset entity only reflect the project being constructed; therefore, they are of a more limited use than statements of multi-asset entities. Nevertheless, one issue that is of importance to financial statements of both entities relates to monitoring changes in accounts and trade payables. Monitoring these payables in a detailed manner helps the bank to determine if trade payables are paid late or if there are any unpaid bills. In the event of problems, a bank might choose to either contact the payables directly or request an additional credit check on the borrower. Another source of information indicating borrower problems is local publications that list lawsuits or judgments that have been filed or entered against the borrower. Additionally, the bank should also verify that the borrower is making its tax payments on time.

In a multi-asset entity, on the other hand, more potential problems could arise due to the greater number of assets (projects/properties) that make up the borrower. As a result, it is necessary to obtain detailed financial statements of each of the assets (projects/properties) and the consolidating financial statements, as well as the consolidated financial statements. This is important because each kind of statement can provide significant insight into problems that could adversely affect the borrower's overall financial condition.

Assessing the financial condition of the multi-asset entity includes evaluating the major sources of cash and determining whether cash flow is dependent on income generated from completed projects, the sale of real estate, or infusion of outside capital. Additionally, the bank should also review the borrower's account receivables for the appropriateness of intercompany transactions and to guard against diversion of funds.

Depending upon the structure of the loan, it may also be desirable to obtain a partner's/guarantor's financial statements on a periodic basis. In such cases it is important to obtain detailed current and accurate financial statements that include cash flow information on a project-by-project basis.

Slow unit sales, or excessive inventory relative to sales, indicate the borrower may have difficulty repaying the loan. Although sometimes there are mitigating factors beyond the control of the borrower, such as delays in obtaining materials and supplies, adverse weather conditions, or unanticipated site work, the borrower may be unable to overcome these problems. Such delays usually increase project costs and could hamper the loan's repayment.

The construction lender should be aware of funds being misused—for example, rebuilding to meet specification changes not previously disclosed, starting a new project, or possibly paying subcontractors for work performed elsewhere. The practice of "front loading," whereby a builder deliberately overstates the cost of the work to be completed in the early stages of construction, is not uncommon and, if not detected early on, will almost certainly result in insufficient loan funds with which to complete construction in the event of a default.

Loan Workouts

Sound workout programs begin with a full disclosure of all relevant information based on a realistic evaluation of the borrower's ability to manage the business entity (business, technical, and financial capabilities), and the bank's ability to assist the borrower in developing and monitoring a feasible workout/repayment plan. Management should then decide on a course of action to resolve the problems with the terms of the workout in writing and formally agreed to by the borrower. If additional collateral is accepted or substituted, the bank should ensure that the necessary legal documents are filed to protect the bank's collateral position.

In those cases where the borrower is permitted to finish the project, additional extensions of credit for completing the project, due to cost overruns or an insufficient interest reserve, may represent the best alternative for a workout plan. At the same time, the bank should evaluate the cause of the problem(s), such as mismanagement, and determine whether it is in its best interest to allow the borrower to complete the project.

SUPERVISORY POLICY

As a result of competitive pressures, many banks in the early 1980s made construction loans on an open-end basis, wherein the borrower did not have a commitment for longer-term or takeout financing before construction was started. Although there was sufficient demand for commercial real estate space when this practice commenced, the supply of space began to exceed demand. One symptom of the excess supply was an increase in vacancy rates, which led to declining rental income caused by the ever greater need for rent concessions. The commensurate declining cash flow from income-producing properties, and the uncertainty regarding future income, reduced the market value of many properties to levels considered undesirable by permanent mortgage lenders. As a result of the subsequent void created by the permanent lenders, banks in the mid- and late 1980s began to extend medium-term loans with maturities for up to seven years (also referred to as mini-perms). These mini-perms were granted with the expectation by banks that as the excess supply of space declined, the return on investment would improve, and permanent lenders would return.

As these loans mature in the 1990s, borrowers may continue to find it difficult to obtain adequate sources of long-term credit. In some cases, banks may determine that the most desirable and prudent course is to roll over or renew loans to those borrowers who have demonstrated an ability to pay interest on their debts, but who presently may not be in a position to obtain long-term financing for the loan balance.

The act of refinancing or renewing loans to sound borrowers, including creditworthy commercial or residential real estate developers, generally should not be subject to supervisory criticism in the absence of well-defined weaknesses that jeopardize repayment of the loans. Refinancings or renewals should be structured in a manner that is consistent with sound banking, supervisory, and accounting practices, and that protects the bank and improves its prospects for collecting or recovering on the asset.

1. To determine if policies, practices, procedures, and internal controls regarding real estate construction loans are adequate.
2. To determine if bank officers are operating in conformance with the bank's established guidelines.
3. To evaluate the portfolio for collateral sufficiency, performance, credit quality, and collectibility.
4. To determine compliance with applicable laws and regulations.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulations have been noted.

1. Refer to the Real Estate Loan Examination Procedures section of this manual for examination procedures related to all types of real estate lending activity, and incorporate into this checklist those procedures applicable to the review of the real estate construction loans. The procedures in this checklist are unique to the review of a bank's construction lending activity.
2. Determine the scope of the examination based on the evaluation of internal controls and the work performed by internal/external auditors.
3. Test real estate construction loans for compliance with policies, practices, procedures, and internal controls by performing the remaining examination procedures in this section. Also, obtain a listing of any deficiencies noted in the latest internal/external audit reviews and determine if appropriate corrections have been made.
4. Review management reports on the status of construction lending activity, economic developments in the market, and problem loan reports.
5. Evaluate the bank with respect to—
   a. the adequacy of written policies and procedures relating to construction lending.
   b. operating compliance with established bank policy.
   c. favorable or adverse trends in construction lending activity.
   d. the accuracy and completeness of the bank's records.
   e. the adequacy of internal controls, including control of construction draws.
   f. the adherence of lending staff to lending policies, procedures, and authority as well as the bank's adherence to the holding company's loan limits, if applicable.
   g. compliance with laws, regulations, and Federal Reserve policy on construction lending activity, including supervisory loan-to-value (LTV) limits and restrictions; loans to officers, directors, and shareholders; appraisal and evaluation of real estate collateral; and prudent lending practices.
6. Select loans for examination, using an appropriate sampling technique drawn from judgmental (cut-off line) or statistical sampling. Analyze the performance of the loans selected for examination by transcribing the following kinds of information onto the real estate construction loan line cards, when applicable:
   a. Collateral records and credit files, including the borrower's financial statements, review of related projects, credit report of the borrower and guarantors, appraisal or evaluation of collateral, feasibility studies, economic impact studies, and loan agreement and terms.
   b. Loan modification or restructuring agreements to identify loans where interest or principal is not being collected according to the terms of the original loan. Examples include reduction of interest rate or principal payments, deferral of interest or principal payments, or renewal of a loan with accrued interest rolled into the principal.
   c. The commitment agreement—a buy/sell contract or the tri-party agreement—from the extended-term or permanent lender for the takeout loan.
   d. Cash-flow projections and any revisions to projections based on cost estimates from change orders.
   e. Estimates of the time and cost to complete construction.
   f. Inspection reports and evaluations of the cost to complete, construction deadlines, and quality of construction.
   g. Construction draw schedules and audits for compliance with the schedules.
   h. Documentation on payment of insurance and property taxes.
   i. Terms of a completion or performance bond.
   j. Past-due/nonaccrual–related information.
   k. Loan-specific internal problem credit analyses information.
   l. Loans to insiders and their interests.
   m. Loans classified during the preceding examination.
7. In analyzing the selected construction loans, the examiner should consider the following procedures, taking appropriate action if necessary:

a. Determine the primary source of repayment and evaluate its adequacy, including whether—
   - the permanent lender has the financial resources to meet its commitment.
   - the amount of the construction loan and its estimated completion date correspond to the amount and expiration date of the takeout commitment and/or completion bond.
   - the permanent lender and/or the bonding company have approved any modifications to the original agreement.
   - properties securing construction loans that are not supported by a takeout commitment will be marketable upon completion.

b. Analyze secondary support afforded by guarantors and partners.

c. Relate collateral values to outstanding debt by—
   assessing the adequacy of the appraisal and evaluation.
   - ascertaining whether inspection reports support disbursements to date.
   - determining whether the amount of undisbursed loan funds is sufficient to complete the project.
   - establishing whether title records assure the primacy of the bank's liens.
   - determining if adequate hazard, builder's risks, and worker's compensation insurance is maintained.

d. Determine whether the loan's loan-to-value (LTV) ratio is in excess of the supervisory LTV limits. If so, ascertain whether the loan has been properly reported as a nonconforming loan.

e. Ascertain whether the loan complies with established bank policy.

f. Identify any deficiencies in the loan's documentation in both the credit files and the collateral records.

g. Identify whether the loan is to an officer, director, or shareholder of the bank or a correspondent bank and whether an officer, director, or shareholder of the bank is a guarantor on the loan.

h. Review the borrower's compliance with the provisions of the loan agreement, indicating whether the loan is in default or in past-due status.

i. Determine if there are any problems that may jeopardize the repayment of the construction loan.

j. Determine whether the loan was classified during the preceding examination, and, if the loan has been paid off, whether all or part of the funds for repayment came from another loan at the bank or from the repossession of the property.

8. In connection with the examination of other lending activity in the bank, the examiner should—
   a. check the central liability file on the borrower(s) and determine whether the total construction lending activity exceeds the lending limit to a single borrower.
   b. obtain information and related performance status on common borrowers and their interests from examiners assigned to other examination areas (such as non–real estate loans, leasing, overdrafts, and cash items) and determine the total indebtedness of the borrower to the bank. Additionally, one examiner should be assigned to review the borrower's overall borrowing relationship with the bank.
   c. perform appropriate procedural steps as outlined in the Concentration of Credits section of this manual. Interim construction loans that do not have firm permanent takeout commitments are to be treated as concentrations of credit.

9. Consult with the examiner responsible for the asset/liability management analysis portion of the examination to determine the appropriate maturity breakdown of construction loans needed for the analysis and prepare the necessary schedules.

10. Summarize the findings of the construction loan portfolio review and address—
    a. the scope of the examination.
    b. the quality of the policies, procedures, and controls.
    c. the general level of adherence to policies and procedures.
    d. the competency of management.
    e. the quality of the loan portfolio.
    f. loans not supported by current and complete financial information.
    g. loans with incomplete documentation, addressing deficiencies related to items such as appraisals or evaluations, feasibility studies, the environmental impact study, takeout commitment, title policy, construction plans, inspection reports, change orders, proof of payment for

insurance and taxes, deeds of trust, and mortgage notes.

h. the adequacy of control over construction draws and advances.
i. loans to officers, directors, shareholders, or their interests.
j. causes of existing problems.
k. delinquent loans and the aggregate amount of statutory bad debts. Refer to the manual section on classification of credits for a discussion on statutory bad debts or A Paper.
l. concentrations of credits.
m. classified loans.
n. violations of laws, regulations, and Federal Reserve policy.
o. action taken by management to correct previously noted deficiencies and corrective actions recommended to management at this examination, with the bank's response to such recommendations.

Review the bank's internal controls, policies, practices, and procedures for making and servicing real estate construction loans. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Negative responses to the questions in this section should be explained, and additional procedures deemed necessary should be discussed with the examiner-in-charge. Items marked with an asterisk require substantiation by observation or testing.

POLICIES AND OBJECTIVES

*1. Has the board of directors and management, consistent with their duties and responsibilities, adopted and, at least annually, reviewed and approved written construction lending policies that—
   a. outline construction lending objectives regarding—
      - the aggregate limit for construction loans?
      - concentrations of credit in particular types of construction projects?
   b. establish minimum standards for documentation?
   c. define qualified collateral and minimum margin requirements?
   d. define the minimum equity requirement for a project?
   e. define loan-to-value (LTV) limits that are consistent with supervisory LTV limits?
   f. require an appraisal or evaluation that complies with the Federal Reserve real estate appraisal regulation and guidelines?
   g. delineate standards for takeout commitments?
   h. indicate completion bonding requirements?
   i. establish procedures for reviewing construction loan applications?
   j. detail methods for disbursing loan proceeds?
   k. detail project-inspection requirements and progress-reporting procedures?
   l. require agreements by borrowers for completion of improvements according to approved construction specifications, and cost and time limitations?
2. Are construction lending policies and objectives appropriate to the size and sophistication of the bank, and are they compatible with changing market conditions?
3. Has the board of directors adopted, and does it periodically review, policies and procedures that establish and maintain an effective, independent real estate appraisal and evaluation program for the entire bank's lending functions? (The real estate lending functions include commercial real estate mortgage departments, capital-market groups, and asset-securitization and -sales units.)

REVIEWING LOAN APPLICATIONS

1. Does bank policy require a personal guarantee from the borrower on construction loans?
2. Does bank policy require personal completion guarantees by the property owner and/or the contractor?
3. Does the bank require a construction borrower to contribute equity to a proposed project in the form of money or real estate? If so, indicate which form of equity.
4. Does the project budget include the amount and source of the builder's and/or owner's equity contribution?
5. Does the bank require—
   a. background information on the borrower's, contractor's, and major subcontractors' development and construction experience, as well as other projects currently under construction?
   b. payment-history information from suppliers and trade creditors on the aforementioned's previous projects?
   c. credit reports?
   d. detailed current and historical financial statements, including cash flow–related information?

6. Do the borrower's project-cost estimates include—
   a. land and construction costs?
   b. off-site improvement expenses?
   c. soft costs, such as organizational and administrative costs, and architectural, engineering, and legal fees?
   d. interest, taxes, and insurance expenses?
7. Does the bank require an estimated cost breakdown for each stage of construction?
8. Does the bank require that cost estimates of more complicated projects be reviewed by qualified personnel: experienced in-house staff, an architect, a construction engineer, or an independent estimator?
9. Are commitment fees required on approved construction loans?

CONSTRUCTION LOAN AGREEMENTS

1. Is the construction loan agreement signed before an actual loan disbursement is made?

*2. Is the construction loan agreement reviewed by counsel and other experts to determine that improvement specifications conform to—
   a. building codes?
   b. subdivision regulations?
   c. zoning and ordinances?
   d. title and/or ground lease restrictions?
   e. health and handicap access regulations?
   f. known or projected environmental protection considerations?
   g. specifications required under the National Flood Insurance Program?
   h. provisions in tenant leases?
   i. specifications approved by the permanent lender?
   j. specifications required by the completion or performance bonding company and/or guarantors?

*3. Does the bank require all change orders to be approved in writing by the—
   a. bank?
   b. bank's counsel?
   c. permanent lender?
   d. architect or supervising engineer?
   e. prime tenants bound by firm leases or letters of intent to lease?
   f. completion bonding company?

4. Does the construction loan agreement set a date for project completion?
5. Does the construction loan agreement require that—
   a. the contractor not start work until authorized to do so by the bank?
   b. on-site inspections be permitted by the lending officer or an agent of the bank without prior notice?
   c. disbursement of funds be made as work progresses, supported by documentation that the subcontractors are receiving payment and that the appropriate liens are being released?
   d. the bank be allowed to withhold disbursements if work is not performed according to approved specifications?
   e. a percentage of the loan proceeds be retained pending satisfactory completion of the construction?
   f. the lender be allowed to assume prompt and complete control of the project in the event of default? If a commercial project, are the leases assignable to the bank?
   g. the contractor carry builder's risk and workers' compensation insurance? If so, has the bank been named as mortgagee or loss payee on the builder's risk policy?
   h. periodic increases in the project's value be reported to the builder's risk and title insurance companies?
6. Does the construction loan agreement for residential tract construction loans require—
   a. bank authorization for individual tract-housing starts?
   b. that periodic sales reports be submitted to the bank?
   c. that periodic reports on tract houses occupied under a rental, lease, or purchase-option agreement be submitted to the bank?
   d. limitations on the number of speculative houses and the completion of one tract before beginning another?

COLLATERAL

1. Are liens filed on non–real estate construction improvements, i.e., personal property that is movable from the project?
2. When entering into construction loans, does the bank, consistent with supervisory loan-to-value limits—

   a. limit the loan amount to a reasonable percentage of the appraised value of the project when there is no prearranged permanent financing?
   b. limit the loan amount to a percentage of the appraised value of the completed project when subject to the bank's own takeout commitment?
   c. limit the loan amount to the floor of a takeout commitment that is based upon achieving a certain level of rents or lease occupancy?
3. Are unsecured credit lines to contractors or developers, who are also being financed by secured construction loans, supervised by the construction loan department or the officer supervising the construction loan?
4. Does the bank have adequate procedures to determine whether construction appraisal or evaluation policies and procedures are consistently being followed in conformance with regulatory requirements, and that the appraisal or evaluation documentation supports the value indicated in the conclusions?

INSPECTIONS

1. Are inspection authorities noted in the—
   a. construction loan commitment?
   b. construction loan agreement?
   c. tri-party buy-and-sell agreement?
   d. takeout commitment?
2. Are inspections conducted on an irregular basis?
3. Are inspection reports sufficiently detailed to support disbursements?
4. Are inspectors rotated from project to project?
5. Are spot checks made of the inspectors' work?
6. Do inspectors determine compliance with plans and specifications as well as the progress of the work? If so, are the inspectors competent to make the determination?

DISBURSEMENTS

*1. Are disbursements—
   a. advanced on a prearranged disbursement plan?
   b. made only after reviewing written inspection reports?
   c. authorized in writing by the contractor, borrower, inspector, subcontractors, and/or lending officer?
   d. reviewed by a bank employee who had no part in granting the loan?
   e. compared with original cost estimates?
   f. checked against previous disbursements?
   g. made directly to subcontractors and suppliers?
   h. supported by invoices describing the work performed and the materials furnished?
2. Does the bank obtain waivers of subcontractor's and mechanic's liens as work is completed and disbursements are made?
3. Does the bank obtain sworn and notarized releases of mechanic's liens from the general contractor at the time construction is completed and before final disbursement is made?
4. Does the bank periodically review undisbursed loan proceeds to determine their adequacy to complete the projects?
5. Are the borrower's undisbursed loan proceeds and contingency or escrow accounts independently verified at least monthly by someone other than the individuals responsible for loan disbursements?

TAKEOUT COMMITMENTS

1. Does counsel review takeout agreements for acceptability?
2. Does the bank obtain and review the permanent lender's financial statements to determine the adequacy of its financial resources to fulfill the takeout commitment?
3. Is a tri-party buy-and-sell agreement signed before the construction loan is closed?
4. Does the bank require takeout agreements to include a force majeure—an act-of-God clause—that provides for an automatic extension of the completion date in the event that construction delays occur for reasons beyond the builder's control?

COMPLETION BONDING REQUIREMENTS

1. Does the bank require completion insurance for all construction loans?

2. Has the bank established minimum financial standards for borrowers who are not required to obtain completion bonding? Are these standards observed in all cases?
3. Does counsel review completion insurance bonds for acceptability?

DOCUMENTATION

1. Does the bank require and maintain documentary evidence of—
   a. the contractor's payment of—
      - employee withholding taxes?
      - builder's risk insurance?
      - workers' compensation insurance?
      - public liability insurance?
      - completion insurance?
   b. the property owner's payment of real estate taxes?
2. Does the bank require that documentation files include—
   a. loan applications?
   b. financial statements for the—
      - borrower?
      - builder?
      - proposed prime tenant?
      - takeout lender?
      - guarantors/partners?
   c. credit and trade checks on the—
      - borrower?
      - builder?
      - major subcontractor?
      - proposed tenants?
   d. a copy of plans and specifications?
   e. a copy of the building permit?
   f. a survey of the property?
   g. the construction loan agreement?
   h. an appraisal or evaluation and feasibility study?
   i. an up-to-date title search?
   j. the mortgage?
   k. ground leases?
   l. assigned tenant leases or letters of intent to lease?
   m. a copy of the takeout commitment?
   n. a copy of the borrower's application to the takeout lender?
   o. the tri-party buy-and-sell agreement?
   p. inspection reports?
   q. disbursement authorizations?
   r. undisbursed loan proceeds and contingency or escrow account reconcilements?
   s. insurance policies?
3. Does the bank employ standardized checklists to control documentation for individual files, and does it perform audit reviews for adequacy?
4. Does the documentation file indicate all of the borrower's other loans and deposit account relationships with the bank, and include a summary of other construction projects being financed by other banks? Does the bank analyze the status of these projects and the potential effect on the borrower's financial position?
5. Does the bank use tickler files that—
   a. control scheduling of inspections and disbursements?
   b. ensure prompt administrative follow-up on items sent for—
      - recording?
      - an attorney's opinion?
      - an expert review?
6. Does the bank maintain tickler files that provide advance notice (such as 30 days' prior notice) to staff of the expiration dates for—
   a. the takeout commitment?
   b. hazard insurance?
   c. workers' compensation insurance?
   d. public liability insurance?

LOAN RECORDS

*1. Are the preparation, addition, and posting of subsidiary real estate construction loan records performed or adequately reviewed by persons who do not also—
   a. issue official checks or drafts?
   b. handle cash?
   c. reconcile subsidiary records to general ledger controls?

*2. Are the subsidiary real estate construction loan records reconciled at least monthly to the appropriate general ledger accounts? Are reconciling items adequately investigated by persons who do not also handle cash or prepare/post subsidiary controls?

*3. Are loan statements, delinquent account-collection requests, and past-due notices reconciled to the real estate construction loan subsidiary records? Are the reconciliations handled by a person who does not also handle cash?

4. Are inquiries about construction loan balances received and investigated by persons who do not also handle cash?

*5. Are documents supporting recorded credit adjustments subsequently checked or tested by persons who do not also handle cash?
6. Is a delinquent-accounts report generated daily?
7. Are loans in excess of supervisory LTV limits identified in the bank's records, and are the aggregate amounts of such loans reported at least quarterly to the board of directors?
8. Does the bank maintain a daily record summarizing note transaction details (loans made, payments received, and interest collected) to support applicable general ledger account entries?
9. Are note and liability trial balances frequently reconciled to the general ledger by employees who do not process or record loan transactions?

LOAN INTEREST AND COMMITMENT FEES

*1. Are the preparation and posting of loan interest and fee records performed or adequately reviewed by persons who do not also—
   a. issue official checks or drafts?
   b. handle cash?
2. Are any independent interest and fee computations made and compared with or adequately tested to loan interest by persons who do not also—
   a. issue official checks or drafts?
   b. handle cash?

CONCLUSION

1. Does the foregoing information provide an adequate basis for evaluating internal control in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
2. On the basis of a composite evaluation, are internal controls adequate as evidenced by answers to the foregoing questions?

INTRODUCTION

This manual section provides a brief summary of the Board's appraisal regulations and directs readers to the key pieces of guidance that the Board and other banking agencies have issued relating to real estate appraisals and evaluations. The Board's real estate appraisal regulation is found in Regulation Y, subpart G (12 CFR 225.61–67). For state member banks, there is a cross reference to the Board's appraisal regulations in Regulation H (12 CFR 208.50–51). Appraisals are also discussed in the Interagency Guidelines for Real Estate Lending Policies, which are found in Appendix C to Regulation H, (Appendix C to 12 CFR 208). The Board's real estate lending standards (12 CFR 208 Subpart E) direct federally regulated institutions to adopt and maintain written real estate lending policies that are consistent with safe and sound lending practices. Such policies should reflect consideration of applicable regulations and guidance pertaining to real estate appraisals when developing a loan-to-value estimate.[1]

REGULATORY BACKGROUND FOR APPRAISALS

The Board's policy on real estate appraisals emphasizes the importance of sound appraisal policies and collateral-valuation procedures as part of a bank's real estate lending activity. The Board and other federal financial regulatory agencies adopted regulations in August 1990 on the performance and use of appraisals by federally regulated financial institutions to implement statutory changes due to the passage of title XI (title XI) of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) (12 USC 3331 et seq.).[2]

The Board's appraisal regulation requires, at a minimum, that real estate appraisals for federally related transactions be performed in accordance with the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board (ASB) of the Appraisal Foundation, and that appraisals be in writing.[3] The regulation also sets forth additional appraisal standards including that the appraisal contain sufficient information and analysis to support the bank's decision to engage in the transaction, provide the real property's market value, be performed by state certified or licensed appraisers as required by the regulations and analyze deductions and discounts for proposed construction projects, partially leased buildings, nonmarket lease terms, and tract developments with unsold units.

The intent of title XI and the Board's appraisal regulation is to protect federal, financial, and public policy interests in federally related transactions.[4] Federally related transactions are defined as those real estate-related financial transactions that an agency engages in, contracts for, or regulates and that require the services of an appraiser.[5]

Appraisals are required under the appraisal regulation for all real estate-related financial transactions unless an exemption applies. The regulation contains a set of exemptions, including dollar value thresholds at or below which an appraisal is not required. The exemptions are identified as categories of real estate-related financial transactions that do not require the services of an appraiser in order to protect federal financial and public policy interests or to satisfy principles of safe and sound banking. As such, the exempted transactions are not federally related transactions under the statutory and regulatory definitions. Exempted transactions are not subject to title XI nor the provisions of the agencies' regulations governing appraisals. Certain exemptions, however, require the use of an evaluation consistent with safe and sound banking practices. Interagency guidance has been issued to assist financial institutions in performing evaluations consistent with such practices.

In addition to federal regulations, each state has established a program for certifying and licensing real estate appraisers who are qualified to perform appraisals in connection with federally related transactions. Title XI designated the Appraiser Qualifications Board and the ASB of

1. 12 CFR 208, appendix C defines "value" when used to refer to "loan-to-value" as an opinion or estimate set forth in an appraisal or evaluation, whichever may be appropriate, of the market value of real property, prepared in accordance with the agency's appraisal regulations and guidance.

2. In June 1994, the agencies' appraisal regulations were materially revised to clarify, amend, and add several exemptions to the appraisal requirement of regulation.

3. See 12 CFR 225.64.

4. See 12 USC 3331.

5. See 12 USC 3350(4).

the Appraisal Foundation, a nonprofit appraisal industry group, as the authority for establishing qualifications criteria for appraiser certification and licensing and the standards for the preparation of an appraisal. Title XI established the Appraisal Subcommittee (ASC) of the Federal Financial Institutions Examination Council (FFIEC). The ASC monitors state requirements for certifying and licensing appraisers who can perform appraisals for federally related transactions, state supervision, and registration of appraisal management companies, and certain title XI-related requirements established by the federal financial regulatory agencies. The ASC also monitors the Appraisal Foundation and its entities. If the ASC issues a finding that the policies, practices, or procedures of a state appraiser certifying and licensing agency are inconsistent with title XI, the services of licensed or certified appraisers from that state may not be used in connection with federally related transactions. The ASC also maintains the national registry of appraisers and appraisal management companies.[6]

THE APPRAISAL REGULATION

Regulation Y, 12 CFR 225, Subpart G, Appraisal Standards for Federally Related Transactions

The appraisal regulation sets standards for appraisals in connection with federally related transactions and also contains a lists of transactions that do not require the services of an appraiser and, therefore, are exempt from the appraisal requirement of the regulation. In reviewing a real estate loan, examiners assess whether the appraisal supports the real estate value used by the bank in its credit decision and whether the appraisal complies with the appraisal regulation. Further, examiners assess the adequacy of an institution's appraisal program to support its real estate lending activity. There are several key sections in the appraisal regulation, which are described in greater detail below.

6. Several provisions in title XI of FIRREA were amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act), providing additional authority to the ASC in its oversight of states' appraiser regulatory programs. (See sections 1471-1473 of Pub. L. 111-203, 124 Stat. 1376 (2010).)

The regulation contains the following:

- Minimum appraisal standards, Section 225.64
  The regulation establishes minimum standards necessary for all appraisals that are prepared for federally related transactions. Those appraisals must
  - conform to generally accepted appraisal standards in USPAP.
  - be written and contain sufficient information and analysis to support the credit decision.
  - analyze and report deductions and discounts for proposed construction or renovation, partially leased buildings, nonmarket lease terms and tract developments with unsold units.
  - be based upon the definition of market value set forth in the definition section of the regulation.
  - be performed by state-licensed or state-certified appraisers in accordance with the regulation.

- Independence standards for staff appraisers and fee appraisers, Section 225.65
  - Staff appraisers must be independent of the lending, investment, and collection functions of the institution and not involved, except as an appraiser, in the federally related transaction and have no direct or indirect interest, financial or otherwise, in the property.
  - Fee appraisers must be engaged directly by the institution or its agent and have no direct or indirect interest, financial or otherwise, in the property or the transaction.
  - The regulation allows an institution to accept an appraisal prepared by an appraiser engaged by another financial services institution if the appraiser has no direct or indirect interest, financial or otherwise, in the property or transaction, and the appraisal complies with the requirements of the regulation.

- Exemptions from the Regulation, Section 225.63
  - The regulation provides a list of transactions that do not require appraisals. These transactions do not require the services of an appraiser and are, therefore, not federally related transactions. Certain of these

exceptions require an evaluation in lieu of an appraisal.

- Standards for professional association membership and competency, Section 225.66
  - — A state-certified or state-licensed appraiser may not be excluded from consideration of an assignment based on membership or lack of membership in a particular appraisal organization.
  - — All staff and fee appraisers performing appraisals in connection with federally related transactions must be state-certified or state-licensed as appropriate. However any determination of competency shall be based on the individual's experience and educational background as they relate to a particular appraisal assignment.
- Enforcement actions, Section 225.67
  - — Institutions and their affiliates, including staff and fee appraisers, may be subject to removal and/or prohibition orders, cease and desist orders, and the imposition of civil money penalties.

SUPERVISORY EXPECTATIONS AND FINDINGS

In conjunction with assessing the overall adequacy of a bank's appraisal and evaluation program to support safe-and-sound real estate lending, examiners may cite a bank with the following possible findings.

1. Examiners may make a finding regarding the bank's compliance with the Board's appraisal regulation. When citing a violation of the appraisal regulation for a state member bank, an examiner should note the matter as a violation of Regulation H (12 CFR 208, subpart E) citing the provision as codified in Regulation Y.
2. In some instances, the finding may indicate that the bank has failed to comply with the Board's real estate lending standards regulation. Examiners may refer to 12 CFR 208, Appendix C, "Interagency Guidelines for Real Estate Lending Policies," for guidance related to the use of appraisals in developing loan-to-value estimates according to the real estate lending standards.
3. Examiners should consider the supervisory expectations in the Interagency Appraisal and Evaluation Guidelines for guidance on safe-and-sound valuation policies and practices. If the institution's valuation policies and practices pose safety and soundness concerns for the institution, examiners could refer to 12 CFR 208, Appendix D-1, "Interagency Guidelines Establishing Standards for Safety and Soundness," for guidance on consideration of the value of underlying collateral.

The following provides examples of possible examination findings and references to the applicable provisions in the Board's regulations.

- Examples of violations of the appraisal regulation, 12 CFR 208.50 as set forth in 12 CFR 225.61–67, include
  - — failure to obtain an appraisal (12 CFR 225.63);
    - ○ not obtaining an appraisal as required by the regulation
    - ○ using an outdated appraisal for an existing transaction without meeting the regulatory criteria
    - ○ not obtaining an appraisal due to the misapplication of an exemption, or when the transaction does not meet the specific requirements of the exemption
    - ○ Remedy: Examiners should require the bank to obtain a new appraisal.
  - — appraisal fails to comply with the minimum appraisal standards in the appraisal regulation;
    - ○ violation of 12 CFR 208.50, subpart E as set forth in 12 CFR 225.64 (minimum appraisal standards) or 12 CFR 225.65 (appraiser independence)
    - ○ Remedy: Examiners should require the bank to obtain a new appraisal.
  - — failure to use a state-licensed or state-certified appraiser (12 CFR 225.63);
    - ○ engaging an appraiser with an expired license or certification
    - ○ engaging a state-licensed appraiser when a state-certified appraiser is required
    - ○ Remedy: Examiners should require the bank to obtain a new appraisal.
  - — failure to maintain appraiser independence (12 CFR 225.65); and
    - ○ using a staff appraiser that is not independent of the lending function
    - ○ allowing the borrower to hire the appraiser (the regulation requires that

fee appraisers be engaged directly by the institution or its agent)
  - ○ using an appraisal prepared by an appraiser that has an interest in the real estate
  - ○ Remedy: Examiners should require the bank to obtain a new appraisal.
- — failure to obtain an evaluation for certain exempt transactions (12 CFR 225.63(b)).
  - ○ not obtaining an evaluation for a renewed loan
  - ○ not obtaining an evaluation for a commercial or residential transaction at or under the appropriate threshold
  - ○ not obtaining an evaluation for a business loan at or under $1 million
  - ○ For further background, refer to the Interagency Guidelines and the section on "Transactions That Require Evaluations" as well as Appendix A—Appraisal Exemptions.
  - ○ Remedy: Examiners should require the bank to obtain an evaluation.

• Examples of violations of the real estate lending regulation 12 CFR 208, subpart E that pertain to appraisals or evaluations:
  - — The bank does not have adequate procedures for monitoring market conditions for its commercial real estate lending.
    - ○ A bank must monitor real estate market conditions in its lending area and have credit administration policies that address the type and frequency of collateral valuations. Violation of 12 CFR 208, subpart E (real estate lending standards regulation).
  - — Bank does not have appropriate policies establishing loan-to-value limits for real estate collateral. Violation of 12 CFR 208, subpart E (real estate lending standards regulation).
  - — Remedy: Examiners should require the bank to implement policies and procedures to promote compliance with the real estate lending regulation.

• Examples of possible safety and soundness violations:
  - — The bank's overall appraisal function is weak.
    - ○ The bank has failed to satisfy supervisory expectations for appraisal and evaluation programs. Guidance on developing appraisal and evaluation programs in a safe-and-sound manner is provided in the Interagency Appraisal and Evaluation Guidelines.
    - ○ The bank's approach to monitoring collateral values raises concerns for the safety and soundness of the institution. For guidance, see in the section of the safety and soundness guidelines, 12 CFR 208, Appendix D-1, which pertains to collateral value.
  - — The evaluation is inadequate.
    - ○ The bank has failed to satisfy supervisory expectations for evaluations.
    - ○ For further guidance, refer to the Interagency Guidelines, the "Evaluation Development" and "Evaluation Content" subsections, and Appendix B —Evaluations Based on Analytical Methods or Technological Tools.
    - ○ Remedy: Depending upon the noted deficiencies, examiners should require the bank to perform a new evaluation.
  - — The bank has failed to maintain independence expectations for its appraisal and evaluation program. Guidance for doing so is set forth in the section on the Independence of the Appraisal and Evaluation Program in the Interagency Guidelines.
    - ○ Evaluations are prepared by persons who are not independent of loan production.
    - ○ Reporting lines of valuation program staff are not independent of loan production.

INTERAGENCY APPRAISAL AND EVALUATION GUIDELINES

Over the years, the Board and the other federal banking regulatory agencies (the Office of the Comptroller of the Currency and the Federal Deposit Insurance Corporation (the agencies)) have issued several appraisal-related guidance documents to assist institutions in implementing and complying with the appraisal regulation.[7] In December 2010, the agencies issued the Interagency Appraisal and Evaluation Guidelines (Interagency Guidelines) to clarify their appraisal regulations and to promote best practices in institutions' appraisal and evaluation programs.

7. For more information, see the "Real Estate" supervisory policy and guidance topic page.

(See SR 10-16.) The Interagency Guidelines pertain to all real estate-related financial transactions originated or purchased by a regulated institution or its operating subsidiary for its own portfolio or as assets held for sale, including activities of commercial and residential real estate mortgage operations, capital markets groups, and asset securitization and sales units. The Interagency Guidelines provide a comprehensive discussion of the Board's supervisory expectations for a bank's appraisal and evaluation program as well as background information on the technical aspects of appraisals.

The Interagency Guidelines more fully explain and clarify the requirements of the appraisal regulation. The Interagency Guidelines also contain supervisory guidance for developing and maintaining a safe-and-sound appraisal and evaluation program. Expectations for evaluations are addressed in the guidelines to clarify the requirement in the regulation that evaluations be performed in a safe-and-sound manner. For example, the appraisal regulation allows for the substitution of an "appropriate evaluation" for an appraisal under certain transactions; however, the regulation does not define what is an appropriate evaluation. The Interagency Guidelines provide guidance to assist regulated institutions in determining what an "appropriate evaluation" is. A violation of the appraisal regulation should be cited if the bank failed to obtain an evaluation, where one was required. The Interagency Guidelines may be used as guidance, for example, in determining the appropriate type of content in an evaluation. However, in making determinations about the adequacy of an institution's evaluation content, an assessment of the impact on the safety and soundness of the institution should be made and if it is determined that safety and soundness of the institution was negatively impacted, the safety and soundness guidelines should be cited. The Interagency Guidelines serve two main purposes:

1. Provides guidance regarding supervisory expectations for a bank's appraisal and evaluation program including that
   - the institution's board of directors should provide for an effective appraisal and evaluation program;
   - the program should be independent;
   - the program should have a criteria for selection of appraisers and evaluators;
   - appraisals and evaluations should be appropriately reviewed;
   - there should be appropriate oversight of third party arrangements;
   - the lender should have an appropriate compliance program; and
   - the lender should report appraisers that are involved in USPAP violations to state appraisal regulatory agencies.

2. Clarifies and provides guidance to assist firms in complying with the appraisal regulation, such as
   - the content expectations of an evaluation;
   - independence expectations for evaluations;
   - transactions that are exempt from the appraisal requirement;
   - situations where a real estate loan does not qualify for an exemption;
   - assessing the validity of existing appraisals and evaluations;
   - the importance of a scope of work and valuation approach in appraisal development; and
   - appraisal report options.

The Interagency Guidelines also discuss other uses for appraisals and evaluations. For example, a bank's collateral-valuation program should consider when an appraisal or evaluation should be obtained to monitor ongoing collateral risk and to support credit analysis, including for purposes of updating risk ratings or classifying the credit. Also, when a credit becomes troubled, the primary source of repayment often shifts from the borrower's cash flow and income to the expected proceeds from the sale of the real estate collateral. Therefore, it is important that banks have a sound and independent basis for determining the ongoing value of the real estate collateral. (See SR letter 09-7, "Prudent Commercial Real Estate Loan Workouts.")

Appendixes of Interagency Appraisal and Evaluation Guidelines

Below are summaries of the four appendixes included with the guidelines found in the attachment to SR 10-16.

Appendix A—Appraisal Exemptions. A commentary on the 12 exemptions from the agencies' appraisal regulations. The appendix provides an explanation of the agencies' statutory authority to provide for appraisal regulatory exemptions and the application of these exemptions.

Appendix B—Evaluations Based on Analytical Methods and Technological Tools. A discussion of the agencies' expectations for evaluations that are based on analytical methods and technological tools, including the use of automated valuation models and tax assessment valuations.

Appendix C—Deductions and Discounts Minimum. A discussion on appraisal standards for determining the market value of a residential tract development, including an explanation of the requirement to analyze and report appropriate deductions and discounts for proposed construction or renovation, partially leased buildings, nonmarket lease terms, and tract developments with unsold units.

Appendix D—Glossary. Definitions of terms related to real estate lending, appraisals, and regulations to aid in reading the guidelines.

ASSESSING THE ADEQUACY OF AN APPRAISAL

When assessing the adequacy of an appraisal and its compliance with the minimum appraisal standards, examiners should assess whether the appraisal conforms to USPAP Standard Rule 1—Real Property Appraisal Development, and USPAP Standard Rule 2—Real Property Appraisal Reporting. The Interagency Guidelines discuss the importance of the appraiser developing an appropriate "scope of work" consistent with USPAP's Scope of Work rule. An appraisal's scope of work should be clearly developed and explained in the appraisal report. Further, the appraisal report should include a copy of the bank's engagement letter with the appraiser for the appraisal assignment.

It is important to note that some of the USPAP standards differ from aspects of the appraisal regulation, and, in such cases, the appraisal regulation should be followed with respect to appraisals for federally related transactions. For example, USPAP does not require appraiser independence and allows for appraisals to address different definitions of value other than market value.

In reviewing a real estate loan and the related appraisal, examiners should consider whether the type of appraisal report is acceptable, the valuation approach is appropriate for the transaction, and the appraisal contains an estimate based on the market value definition. The appraisal should contain a clear development of the market value of the collateral and should contain sufficient information to support the real estate's market value and the bank's credit decision. The USPAP standards discuss all of the basic components of an appraisal. Residential appraisals are commonly completed in a report format that conforms to the Uniform Residential Appraisal Report, which was developed by Fannie Mae and Freddie Mac.

Examiners should also confirm that the bank has procedures for reviewing appraisals and evaluations to determine that an appraisal or evaluation complies with the appraisal regulation and provides sufficient information to support the bank's credit decision. The Interagency Guidelines provide further guidance on appropriate reviews. Not all appraisal reviews need to include the content of a USPAP Standard 3—Appraisal Review, Development, and Reporting. The depth of the appraisal review performed by the bank should consider the complexity and risk of the transaction. If deficiencies are noted in the bank's review process, a bank should obtain a USPAP compliant review completed by an appraiser or obtain a new compliant appraisal. Banks are encouraged to report to the state appraiser regulatory agency any appraiser that violates USPAP standards.

APPRAISAL VALUATION APPROACHES

An appraiser typically utilizes three market-value approaches to analyze the value of property:[8]

- *cost approach*
- *sales comparison approach*
- *income approach*

Appraisers should consider all three approaches to value when completing an appraisal assignment. All three approaches have particular merits depending upon the type of real estate being appraised. For example, for single-family resi-

8. The standards and application of valuation approaches are contained in the USPAP published by the Appraisal Standards Board of the Appraisal Foundation.

dential property, the cost and comparable sales approaches are most frequently used since the common use of the property is the personal residence of the owner. However, if a single-family residential property were intended to be used as a rental property, the appraiser would have to consider the income approach as well. Commercial properties are typically valued using all three approaches to value, however the income approach is heavily favored for property whose primary source of income is derived from rents. The appraiser then correlates the results of the value considerations to determine a market value for the subject real estate. For special-use commercial properties, the appraiser may have difficulty obtaining sales data on comparable properties and may have to base the value estimate on the cost and income approaches.

If an approach is not used in the appraisal, the appraiser should disclose the reason the approach was not used and whether this affects the value estimate.

Cost Approach

The cost approach is commonly used to value construction or improvements to an existing building. In the cost approach to value estimation, the appraiser obtains a preliminary indication of value by adding the estimated depreciated reproduction cost of the improvements to the estimated land value. This approach is based on the assumption that the reproduction cost is the upper limit of value and that a newly constructed building would have functional and mechanical advantages over an existing building. The appraiser would evaluate any functional depreciation (disadvantages or deficiencies) of the existing building in relation to a new structure.

The cost approach consists of four basic steps: (1) estimate the value of the land as though vacant, (2) estimate the current cost of reproducing the existing improvements, (3) estimate depreciation and deduct from the reproduction cost estimate, and (4) add the estimate of land value and the depreciated reproduction cost of improvements to determine the value estimate.

SALES COMPARISON APPROACH

The essence of the sales comparison approach is to determine the price at which similar properties have recently sold on the local market. Through an appropriate adjustment for differences in the subject property and the selected comparable properties, the appraiser estimates the market value of the subject property based on the sales price of the comparable properties. The process used in determining the degree of comparability of two or more properties involves judgment about their similarity with respect to age, location, condition, construction, layout, and equipment. The sales price or list price of those properties deemed most comparable tends to set the range for the value of the subject property.

Income Approach

The income approach estimates the real estate project's expected income over time converted to an estimate of its present value. The income approach is typically used to determine the market value of income-producing properties that receive rent, such as office buildings, apartment complexes, hotels, and shopping centers. In the income approach, the appraiser can apply several different capitalization or discounted cash-flow techniques to arrive at a market value. These techniques include the band-of-investments method, mortgage-equity method, annuity method, and land-residual method. Which method is used depends on whether there is project financing, whether there are long-term leases with fixed-level payments, and whether the value is being rendered for a component of the project, such as land or buildings.

The accuracy of the income-approach method depends on the appraiser's skill in estimating the anticipated future net income of the property and in selecting the appropriate capitalization rate and discounted cash flow. The following data are assembled and analyzed to determine potential net income and value:

- Rent schedules and the percentage of occupancy for the subject property and for comparable properties for the current year and several preceding years. This provides gross rental data and shows the trend of rentals and occupancy, which are then analyzed by the appraiser to estimate the gross income the property should produce.

- Expense data, such as taxes, insurance, and operating costs paid from revenues derived from the subject property and by comparable properties. Historical trends in these expense items are also determined.
- A time frame for achieving stabilized, or normal, occupancy and rent levels (also referred to as a holding period).

Basically, the income approach converts all expected future net operating income into present-value terms. When market conditions are stable and no unusual patterns of future rents and occupancy rates are expected, the direct capitalization method is used to value income properties. This method calculates the value of a property by dividing an estimate of its stabilized annual income by a factor called a capitalization rate or "cap rate." Stabilized income is generally defined as the yearly net operating income produced by the property at normal occupancy and rental rates; it may be adjusted upward or downward from today's actual market conditions. The cap rate—usually defined for each property type in a market area—is viewed by some analysts as the required rate of return stated as a percentage of current income.

The use of this technique assumes that the use of either the stabilized income or the cap rate accurately captures all relevant characteristics of the property relating to its risk and income potential. If the same risk factors, required rate of return, financing arrangements, and income projections are used, explicit discounting and direct capitalization should yield the same results. For special-use properties, new projects, or troubled properties, the discounted cash flow (net present value) method is the more typical approach to analyzing a property's value. In this method, a time frame for achieving a stabilized, or normal, occupancy and rent level is projected. Each year's net operating income during that period is discounted to arrive at the present value of expected future cash flows. The property's anticipated sales value at the end of the period until stabilization (its terminal or reversion value) is then estimated. The reversion value represents the capitalization of all future income streams of the property after the projected occupancy level is achieved. The terminal or reversion value is then discounted to its present value and added to the discounted income stream to arrive at the total present market value of the property.

Most importantly, the analysis should be based on the ability of the project to generate income over time based upon reasonable and supportable assumptions. Additionally, the discount rate should reflect reasonable expectations about the rate of return that investors require under normal, orderly, and sustainable market conditions.

Value Correlation

The three value estimates—cost, sales comparison, and income—must be evaluated by the appraiser and correlated into a final value estimate based on the appraiser's judgment. Correlation does not imply averaging the value estimates obtained by using the three different approaches. Where these value estimates are relatively close together, correlating them and setting the final market value estimate presents no special problem. It is in situations where widely divergent values are obtained by using the three appraisal approaches that the examiner must exercise judgment in analyzing the results and determining the estimate of market value.

Other Definitions of Value

While the Board's appraisal regulation requires that the appraisal contain the market value of the real estate collateral, there are other definitions of value that are encountered in appraising and evaluating real estate transactions. These include the following:

Fair value. This is an accounting term that is generally defined as the amount in cash or cash-equivalent value of other consideration that a real estate parcel would yield in a current sale between a willing buyer and a willing seller (the selling price), that is, other than in a forced or liquidation sale.[9] According to accounting litera-

9. See Accounting Standards Codification (ASC) Topic 820, "Fair Value Measurements and Disclosures" (formerly FASB Statement No. 157, "Fair Value Measurements"). It defines fair value and establishes a framework for measuring fair value. ASC Topic 820 should be applied when other accounting topics require or permit fair value measurements. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants in the asset's or liability's principal (or most advantageous) market at the measurement date. This value is often referred to as an "exit" price. An orderly transaction is a transaction that assumes exposure to the market for a period prior to the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities; it is not a forced

ture, fair value is generally used in valuing assets in nonmonetary transactions, troubled debt restructuring, quasi-reorganizations, and business combinations accounted for by the purchase method. An accountant generally defines fair value as market value; however, depending on the circumstances, these values may not be the same for a particular property.

Investment value. This is based on the data and assumptions that meet the criteria and objectives of a particular investor for a specific property or project. The investor's criteria and objectives are often substantially different from participants' criteria and objectives in a broader market. Thus, investment value can be significantly higher than market value in certain circumstances and should not be used in credit analysis decisions.

Liquidation value. This assumes that there is little or no current demand for the property but the property needs to be disposed of quickly, resulting in the owner sacrificing potential property appreciation for an immediate sale.

Going-concern value. This is based on the value of a business entity rather than the value of just the real estate. The valuation is based on the existing operations of the business that has a proven operating record, with the assumption that the business will continue to operate.

Tax-assessed value. This represents the value on which a taxing authority bases its assessment. The assessed value and market value may differ considerably due to tax assessment laws, timing of reassessments, and tax exemptions allowed on properties or portions of a property.

Net realizable value (NRV). This is recognized under generally accepted accounting principles as the estimated selling price in the ordinary course of business less estimated costs of completion (to the stage of completion assumed in determining the selling price), holding, and disposal. The NRV is generally used to evaluate the carrying amount of assets being held for disposition and properties representing collateral. While the market value or future selling price are generally used as the basis for the NRV calculation, the NRV also reflects the current owner's costs to complete the project and to hold and dispose of the property. For this reason, the NRV will generally be less than the market value.

liquidation or distressed sale.

1. Is the appraisal and evaluation program adequate for the size, complexity, and nature of the bank's real estate related activities?
2. Is the appraisal and evaluation program independent from the loan production process?
3. Do the bank's policies ensure that appraisals and evaluations meet minimum standards?
4. Does the bank have appropriate procedures for updating appraisals as needed?
5. Does the bank have an appropriate appraisal review program?
6. Does the bank take appropriate actions to ensure compliance with the appraisal program expectations?
7. Does the bank appropriately oversee third parties involved in the appraisal process?
8. Does the bank have policies and procedures to ensure the independence of staff and fee appraisers?
9. Does the bank have policies to ensure that appraisers meet licensing and competency standards?

PRELIMINARY REVIEW

1. Review the following documents:

   - Prior examination reports, prior examination work papers, pre-examination memorandum, and file correspondence (for an overview of previously identified program deficiencies, violations, and concerns);
   - Internal and external loan reviews (look for individual real estate appraisal issues);
   - Appraisal and evaluation policies and procedures;
   - Internal and external reviews of the adequacy of the real estate appraisal and evaluation program;
   - List of board-approved appraisers;
   - Log of all appraisal engagements for each appraiser for the current and prior year; and
   - Organizational charts and reporting structures with respect to the institution's appraisal and evaluation program. (Note: Review the institution's organizational structure to understand better whether its program is isolated from influence by the loan production staff or if mitigating controls are in place for institutions with a small staff size.)

SUPERVISORY POLICY

2. Determine whether the institution's appraisal and evaluation program is adequate for the size, complexity, and nature of its real estate related activities.

APPRAISAL AND EVALUATION PROGRAM

3. Determine whether the institution's board of directors established policies and procedures to review and revise its program as necessary.

INDEPENDENCE OF THE APPRAISAL AND EVALUATION PROGRAM

4. Determine whether the institution's appraisal and evaluation program is independent from loan production and collection. Consider whether policies and procedures address the following:

   - Individuals providing evaluation services should be prohibited from having an interest, financial or otherwise, in the property or the transaction.
   - Reporting lines for staff who administer the appraisal and evaluation program (including the ordering, reviewing, and acceptance of appraisals and evaluations) should be independent of loan production.
   - Management should establish safeguards (if absolute lines of independence cannot be achieved) to isolate its program from influence from the loan production process and to ensure that any person who ordered or reviewed the appraisal or evaluation abstains from decisions on loan approvals.

SELECTION OF APPRAISERS OR PERSONS WHO PERFORM EVALUATIONS

5. Determine whether the appraisal and evaluation program has criteria for selecting, evaluating, and monitoring the performance of appraisers and persons who perform evaluations. Determine whether policies and procedures appropriately address

   - the documented assessment of whether the appraiser or person performing an evaluation is competent, independent, and has adequate experience and knowledge of the market, location, and type of property being valued;
   - the development and administration of the approved appraiser list that include a process for
     — qualifying an appraiser for initial placement on the list, and
     — monitoring the appraiser's perfor-

mance and credentials to assess whether to retain the appraiser on the list;

- safeguards for developing and administering the approved appraiser list independent of the loan production process;
- the use of written engagement letters when ordering appraisals, particularly for large, complex, or out-of-area commercial real estate properties; and
- the acceptance of appraisal reports performed for another financial institution.

TRANSACTIONS THAT REQUIRE APPRAISALS

6. Determine whether an appraisal or evaluation that supports the lending decision, or an explanation why a new appraisal or evaluation was not required, is contained in the credit files or is available.

MINIMUM APPRAISAL STANDARDS

7. Determine whether the institution has procedures and internal controls that ensure appraisals for federally related transactions

   - conform to generally accepted appraisal standards as evidenced by the USPAP promulgated by the Appraisal Standards Board of the Appraisal Foundation;
   - contain sufficient information and analysis to support the institution's decision to engage in the transaction;
   - analyze and report appropriate deductions and discounts for proposed construction or renovation, partially leased buildings, nonmarket lease terms, and tract developments with unsold units;
   - use definitions of market value set forth in the appraisal regulation; and
   - are performed by state-licensed or state-certified appraisers in accordance with the requirements set forth in the appraisal regulation.

8. Determine whether the program prohibits the use of a broker price opinion in connection with consumer transactions.

APPRAISAL DEVELOPMENT

9. Determine whether the institution considers the risk, size, and complexity of the transaction and real estate collateral when analyzing an appraisal. Consider whether policies and procedures ensure appraisals have an appropriate scope that provides for credible assignment results. Appraisals should reflect

   - the extent to which the property is identified and inspected,
   - the type and extent of data researched, and
   - the analyses applied to arrive at opinions or conclusions.

APPRAISAL REPORTS

10. Determine whether the institution considers the risk, size, and complexity of the transaction and the real estate collateral when requesting the appraisal report format. Appraisal reports should contain sufficient information and analysis to support the institution's decision to engage in the transaction.

TRANSACTIONS THAT REQUIRE EVALUATIONS

11. Determine whether the institution established criteria for when the appraisal regulations permit the use of an evaluation in lieu of an appraisal for transactions that qualify for certain exemptions.

    - Although appraisal regulations permit the use of evaluations for certain transactions, ensure the institution has policies and procedures for determining when to obtain an appraisal for high-risk transactions.

EVALUATION DEVELOPMENT

12. Determine whether evaluations provide credible estimates of collateral market values as of a specific date and are completed prior to the decision to enter into a transaction. Consider

- the institution's documentation requirements for ensuring the sufficiency of information and analysis to support the estimate of value for a given transaction.
- the institution's criteria for determining the level and extent of research or inspection necessary to ascertain the property's physical condition and the economic and market factors that should be considered in developing an evaluation.

EVALUATION CONTENT

13. Consider whether evaluations

- identify the location of the property;
- provide a description of the property and its current and projected use;
- provide an estimate of the property's market value in its actual physical condition, use, and zoning designation as of the effective date of the evaluation, with any limiting conditions;
- describe the method(s) the institution used to confirm the property's actual physical condition and the extent to which an inspection was performed;
- describe the analysis that was performed and the supporting information that was used in valuing the property;
- describe the supplemental information that was considered when using an analytical method or technological tool;
- indicate all source(s) of information used in the analysis, as applicable, to value the property; and
- include information on the preparer when an evaluation is performed by a person, such as the name and contact information, and signature (electronic or other legally permissible signature) of the preparer.

VALIDITY OF APPRAISALS AND EVALUATIONS

14. Determine whether the program establishes criteria for assessing whether existing appraisals or evaluations continue to reflect current market values.

- Documentation in the credit files should provide the facts and analysis to support the institution's conclusion that the existing appraisal or evaluation may be used in a subsequent transaction.
- Criteria should be in place for obtaining a new appraisal or evaluation when an existing appraisal or evaluation is no longer valid for a subsequent transaction.

REVIEWING APPRAISALS AND EVALUATIONS

15. Determine whether an institution's policies and procedures for reviewing appraisals and evaluations

- require the receipt and review of appraisal reports and evaluations prior to making the final credit decision;
- address the independence, education, training and qualifications, and role of the reviewer;
- reflect a risk-focused approach for determining the depth of the review;
- establish a process for resolving any deficiencies in appraisals or evaluations; and
- set forth documentation standards for the review and the resolution of noted deficiencies.

THIRD-PARTY ARRANGEMENTS

16. Determine whether the institution has adequate procedures governing the selection, use, and oversight of a third party that performs appraisal management services. Consider the following:

- procedures for governing the due diligence for selecting and entering into an arrangement with a third party;
- internal controls for identifying, monitoring, and managing the risks associated with using a third party arrangement for valuation services;
- documentation of the results of monitoring and periodic assessments of the third party's compliance with applicable regulations and consistency with supervisory guidance;
- timeliness of remedial actions taken when deficiencies are discovered;

- the institution's requirements for the third party to select a competent, qualified, and independent individual or appraiser to perform an evaluation;
- the institution's requirements for the third party to select a state-licensed or state-certified appraiser for a given appraisal; and
- the institution's requirements for the third party to notify the appraiser or the person who performs the evaluation that the institution is the client.

PROGRAM COMPLIANCE

17. Determine whether the institution's appraisal and evaluation policies establish internal controls to promote an effective appraisal and evaluation program. Consider the following:
    - policies and procedures address the need for obtaining current collateral valuation information for monitoring the collateral position over the life of a credit and managing the risk in the real estate credit portfolios;
    - criteria for determining when to obtain a new appraisal or evaluation when there is deterioration in the credit since origination or changes in market conditions;
    - current collateral valuation information to assess collateral risk and facilitate an informed decision on whether to engage in a modification or workout of an existing real estate credit;
    - periodic and independent review of the institution's appraisal and evaluation program and its corresponding internal controls; and
    - procedures to ensure appraisers receive a customary and reasonable fee when the assignment is for a transaction secured by a consumer's principal dwelling, as required by 12 CFR 1026.42.
18. Determine whether management takes action to correct prior deficiencies noted in examination, audit, and loan review reports.
19. Determine whether there is a significant correlation between classified assets and unsubstantiated appraisals and evaluations.

REFERRALS

20. Determine whether the institution has policies, procedures, and internal controls governing the filing of complaints with the appropriate state appraiser regulatory agency or suspicious activity reports (SARs) with the Financial Crimes Enforcement Network (FinCEN) of the Department of the Treasury. Consider the following:
    - Complaints are filed with the appropriate state appraiser regulatory officials when it suspected that a state-certified or state-licensed appraiser failed to comply with USPAP, applicable state laws, or engaged in other unethical or unprofessional conduct; and
    - SARs are filed with FinCEN when suspecting fraud or identifying other transactions meeting the SAR filing criteria.

AUTOMATED VALUATION MODELS (COMPLETE IF THE BANK USES AN AUTOMATED VALUATION MODEL)

21. Evaluate the institution's policies, procedures, and internal controls governing the selection, use, and validation of the valuation method or tool used in the development of an evaluation. Determine whether policies and procedures governing the selection of automated valuation models (AVM) include
    - performing an adequate level of due diligence in selecting an AVM vendor and its models, considering how model developers conducted performance testing as well as the sample size used and the geographic level tested (such as county level or zip code);
    - establishing an acceptable minimum performance criteria for a model prior to and independent of the validation process;
    - validating the model(s) during the selection process and documentation of the validation process;
    - evaluating the underlying data used in the model(s), including the data sources and types, frequency of updates, quality control performed on the data, and the sources

of the data in states where public real estate sales data are not disclosed;
- assessing modeling techniques and the inherent strengths and weaknesses of different model types as well as how a model(s) performs for different property types; and
- evaluating the AVM vendor's scoring system and methodology for the model(s), including a determination that the scoring system provides an appropriate indicator of model reliability by property type and geographic location.

22. Evaluate management's implementation and oversight of AVMs. Consider the following:

    - procedures for monitoring the use of an AVM(s), including an ongoing validation process;
    - established AVM performance criteria for accuracy and reliability in a given transaction, lending activity, and geographic location;
    - established criteria for deciding whether a particular valuation method or tool is appropriate for a given transaction or lending activity, considering associated risks, including transaction size and purpose, credit quality, and leverage tolerance (loan-to-value);
    - appropriate controls to ensure that the selected method or tool produce a reliable estimate of market value that supports its decision to engage in a transaction;
    - established criteria to determine when market events or risk factors would preclude the use of a particular method or tool;
    - policies governing the use of multiple methods or tools, if applicable, for valuing the same property or to support a particular lending activity;
    - internal controls to preclude *value shopping* when more than one AVM is used for the same property; and
    - policies and procedures that address the extent to which an inspection or research should be performed to ascertain the property's actual physical condition, and supplemental information should be obtained to assess the effect of market conditions or other factors on the estimate of market value.

SAMPLE TESTING

23. Determine whether the institution's program ensures that appraisals for federally related transactions

    - disclose the purpose and use of the appraisal;
    - provide an opinion of the collateral's market value as defined in the appraisal regulation and clarified in supervisory guidance;
    - provide an effective date for the opinion of market value;
    - provide the sales history of the subject property for the prior three years;
    - provide the valuation approaches (that is cost, income, and sales comparison approaches) that are applicable for the property type and market;
    - include an analysis and reporting of appropriate deductions and discounts when the appraisal provides a market value estimate based on the future demand of the real estate (such as proposed construction, partially leased buildings, nonmarket lease terms, and unsold units in a residential tract development);
    - evaluate and reconcile the valuation approaches into an opinion of market value estimate based on the appraiser's judgment, if multiple approaches were used;
    - explain why a valuation approach is inappropriate and not used in the appraisal;
    - support the assumptions and the value conclusion rendered through adequate documentation and information on market conditions and trends;
    - evaluate key assumptions and potential ramifications to the opinion of market value if these assumptions are not realized;
    - present an opinion of the real property's market value in an appraisal report
    - option that addresses the property's type, market, and risk and type of transaction;
    - provide a level of detail in the appraisal report sufficient to explain and support the appraiser's opinion of market value; and
    - disclose and define other value opinions (such as disposal value of the property or

the value of non-real property), if the institution requests such information.

24. Verify that the

    - institution selects appraisers who are qualified, independent, and appropriately state-licensed or certified; and
    - appraiser's expertise and qualifications demonstrate that the appraiser was competent for the market and property type.

25. Determine the following for appraisals that include the cost approach to value:

    - The values for land and improvements are presented separately,
    - Cost estimates appear to be reasonable,
    - The value allocated to land component of the property is supported by comparable land sales, and
    - Estimates for depreciation appear reasonable and consistent with estimates of effective age of the improvement.

26. Determine the following for appraisals that include the income approach to value:

    - Potential income projections appear reasonable;
    - Adjustments for vacancy and credit loss appear adequate;
    - Operating expenses appear reasonable;
    - Capitalization rates appear reasonable and are supported by market data;
    - Terms and conditions of existing leases reflect market;
    - For an income-producing property subject to existing leases, the value reflects the value of leased fee estate; and
    - For a property to be developed or constructed, assumptions on the construction period, time frame for achieving stabilized occupancy, and expectations for sales absorption rate or lease-up period are reasonable and reflective of market conditions.

27. Determine the following for appraisals that include the sales comparison approach to value:

    - Comparable properties are physically similar;
    - Comparable properties are economically similar;
    - Comparable sales are sufficiently recent (that is, substantial changes in the market have not occurred since the time of the comparable sale); and
    - Adjustments to comparable values are made for any sales concessions, including favorable financing or seller concessions that are not typical in the market.

28. Determine the following for a residential tract development (five or more residential units in the same development):

    - The appraisal includes a market value of the property that reflects deductions and discounts for holding costs, marketing costs, and entrepreneurial profit supported by market data.

Review the bank's internal controls, policies, practices, and procedures for real estate appraisals and evaluations. The bank's system should be accurately and fully documented and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written appraisal and evaluation policies that define the following:
   a. bank management's responsibility for selecting, evaluating, monitoring, and ensuring the independence of the individual who is performing the appraisal or evaluation?
   b. the basis for selecting staff appraisers and engaging fee appraisers for a particular appraisal assignment and for ensuring that the individual is independent of the transaction; possesses the requisite qualifications, expertise, and educational background; demonstrates competency for the market and property type; and has the required state certification or license if applicable?
   c. procedures for when to obtain appraisals and evaluations?
   d. procedures for prohibiting the use of a borrower-ordered or borrower-provided appraisal?
   e. procedures for monitoring collateral risk on a loan and portfolio basis as to when to obtain a new appraisal or new evaluation, including the frequency, triggering events, scope of appraisal work, valuation methods, and report option?
   f. appraisal and evaluation compliance procedures to determine that appraisals and evaluations are reviewed by qualified and adequately trained individuals who are not involved in the loan-production process?
   g. appraisal and evaluation review procedures to ensure that the bank's appraisals and evaluations are consistent with the standards of USPAP and the Board's regulation and guidelines?
   h. appraisal and evaluation review procedures that require the performance of the review prior to the credit decision, resolution of noted deficiencies, and documentation of the review in the credit file, and, if necessary, obtaining a second appraisal or relying on USPAP's Standard Rule 3 in performing a review or performing another evaluation?
   i. an appropriate level of review for appraisals and evaluations ordered by the bank's agents or obtained from another financial services institution?
   j. adequate level of oversight when the bank uses a third party for appraisal management services?
   k. use of analytical methods and technological tools (such as automated valuation models or tax assessment valuations) in the development of evaluations that is appropriate for the risk and type of transaction and property?
   l. internal controls to prevent officers, loan officers, or directors who order or review appraisals and evaluations from having the sole authority for approving the requested loans?
   m. procedures for promoting compliance with the appraisal independence provisions of Regulation Z (Truth in Lending) for open- and closed-end consumer credit transactions secured by a consumer's principal dwelling?
2. Does the board of directors annually review these policies and procedures to ensure that the appraisal and evaluation policies and procedures meet the needs of the bank's real estate lending activity and remains compliant with the Board's regulation and supervisory guidance?

APPRAISALS

*1. Are appraisals in writing, dated, and signed by the appraiser?

*2. Does the appraisal meet the minimum standards of the Board's regulation and USPAP, and contain sufficient information and analysis to support the bank's decision to engage in the transaction? Does the appraisal

a. reflect an appropriate scope of work that will provide for credible results, including the extent to which the property is identified and inspected, the type and extent of data research performed, and the analyses applied to arrive at an opinion of market value?
b. disclose the purpose and use of the appraisal?
c. provide an opinion of the collateral market value as defined in the Board's appraisal regulation and further clarified in supervisory guidance?
d. provide an effective date for the opinion of market value?
e. provide the sales history of the subject property for the prior three years?
f. reflect valuation approaches (that is, cost, income, and sales comparison approaches) that are applicable for the property type and market?
g. include an analysis and reporting of appropriate deductions and discounts when the appraisal provides a market value estimate based on the future demand of the real estate (such as proposed construction, partially leased buildings, nonmarket lease terms, and unsold units in a residential tract development)?
h. evaluate and reconcile the three approaches into an opinion of market value estimate based on the appraiser's judgment?
i. explain why an approach is inappropriate and not used in the appraisal?
j. fully support the assumptions and the value rendered through adequate documentation and information on market conditions and trends?
k. evaluate key assumptions and potential ramifications to the opinion of market value if these assumptions are not realized?
l. present an opinion of the collateral's market value in an appraisal report option that addresses the property type, market, risk, and type of transaction?
m. disclose and define other value opinions (such as disposal value of the property or the value of non-real property), if the bank requests such information?

*3. Are appraisals received before the bank makes its final credit or other credit decision or was the loan granted a conditional approval? When loans have conditional approvals pending receipt of an appraisal, confirm that appraisals are received, reviewed, and accepted for the transaction.

*4. If the bank is depending on an appraisal obtained for another financial services institution as support for its transaction, does the bank have appraisal review procedures to ensure that the appraisal meets the standards of the appraisal regulation, including independence? (These types of transactions would include loan participations, loan purchases, and mortgage-backed securities.)

*5. If an appraisal for one transaction is used for a subsequent transaction, does the bank sufficiently document its determination that the appraiser is independent, the appraisal complies with the appraisal regulations, and the appraisal is still valid?

APPRAISERS

1. Are appraisers fairly considered for assignments regardless of their membership or lack of membership in a particular appraisal organization?
2. Before the bank selects an appraiser for an assignment, does the bank confirm that the appraiser has the requisite qualifications, education, experience, and competency for both the property type and market to complete the appraisal?
3. If a bank pre-screens appraisers and uses an approved appraiser list, does the bank have procedures for assessing an appraiser's qualifications, selecting an appraiser for a particular assignment, and evaluating the appraiser's work for retention on the list?
4. The following items apply for large, complex, or out-of-area commercial real estate properties:
   a. Are written engagement letters used when ordering appraisals, and are copies of the letters retained or included in the appraisal report?
   b. Does the bank have procedures for resolving deficiencies in appraisals, including determining when such

appraisals should be reviewed by another appraiser (that is, a USPAP Standard Rule 3—Appraisal Review)?

5. Are appraisers independent of the transaction?
   a. Are staff appraisers independent of the lending, investment, and collection functions and not involved, except as an appraiser, in the federally related transaction? Has a determination been made that they have no direct or indirect interest, financial or otherwise, in the property?
   b. Are fee appraisers engaged directly by the bank or its agent? Has a determination been made that they have no direct or indirect interest, financial or otherwise, in the property or transaction?
   c. Are any appraisers recommended or selected by the borrower (applicant)?
6. If the bank has staff appraisers to perform appraisals or appraisal reviews, does the bank periodically have independent appraisers evaluate their work for quality and confirm that they have the knowledge and competency to perform their work and continue to hold the appropriate state license or certification?
7. If fee appraisers are used by the bank, does the bank investigate their qualifications, experience, education, background, and reputations?
8. Is the status of an appraiser's state certification or license verified with the state appraiser regulatory authority to ensure that the appraiser is in good standing?
9. Does the bank have procedures for filing complaints with the appropriate state appraiser regulatory officials when it suspects the fee appraiser failed to comply with USPAP, applicable state laws, or engaged in other unethical or unprofessional conduct?
10. Are fee appraisers paid the same fee whether or not the loan is granted?
11. Does the bank pay a customary and reasonable fee for appraisal services in the market where the property is located when the appraisal is for an open- and closed-end consumer credit transaction secured by a consumer's principal dwelling as required under Regulation Z?

EVALUATIONS

1. Are the individuals performing evaluations independent of the transaction?

*2. Are the evaluations required to be in writing, dated, and signed?

*3. Does the bank require sufficient information and documentation to support the estimate of value and the individual's analysis?

*4. Are the development and content of the evaluation reflective of transaction risk and appropriate for the property type?

*5. Are the valuation methods used, and does the supporting information in the evaluation provide a reliable estimate of the property's market value as of a stated effective date prior to the credit decision?

*6. If analytical methods or technological tools are used in the development of an evaluation, is the use of the method or tool consistent with safe and sound banking practices?

*7. If an evaluation obtained for one transaction is used for a subsequent transaction, does the bank sufficiently document its determination that the evaluation is still valid?

*8. Are evaluations received before the bank enters into a loan commitment?

*9. Does the bank have evaluation review procedures to ensure that the evaluation meets safe-and-sound banking practices?

*10. If a tax assessment valuation is used in the development of an evaluation, has the bank demonstrated that there is a valid correlation between the tax assessment data and the property's market value?

EVALUATORS

1. Are individuals who perform evaluations competent to complete the assignment?
2. Do the individuals who perform evaluations possess the appropriate collateral valuation training, expertise, and experience relevant to the type of property being valued?
3. Are evaluations prepared by individuals who are independent of the transaction?

MONITORING COLLATERAL VALUES

1. Does the bank have policies to monitor collateral risk on a portfolio and on an individual credit basis?
2. Does the policy address the need to obtain current valuation information for collateral supporting an existing credit that may be modified or considered for a loan workout?
3. Does the criteria for determining when to obtain a new appraisal or new evaluation address deterioration in the credit; material changes in market conditions; and revisions to, or delays in, the project's development and construction?
4. Does the bank sufficiently document and follow its criteria for obtaining reappraisals or reevaluations?

THIRD-PARTY ARRANGEMENTS

1. Did the bank exercise appropriate due diligence in the selection of a third party to perform appraisal management services for the bank?
2. Does the bank have the resources and expertise necessary for performing ongoing oversight of such third party arrangements?
3. Does the bank have the internal controls for identifying, monitoring, and managing the risks associated with the use of the third party?
4. Does the bank adequately document the results of its ongoing monitoring and periodic assessments of the third party's compliance with applicable regulations and with supervisory expectations?
5. Does the bank take timely remedial actions when deficiencies are discovered?
6. Does the bank ensure that the third party selects an appraiser or a person to perform an evaluation who is competent, qualified, independent, and appropriately licensed or certified for a given assignment?
7. Does the bank ensure that the third party conveys to the appraiser or the person who performs the evaluation that the bank is the client?

ANALYTICAL METHODS AND TECHNOLOGICAL TOOLS

1. Does the bank have staff, or if necessary engage a third party, with the requisite expertise and training to manage the selection, use, and validation of an analytical method or technological tool?
2. Does the bank have adequate policies, procedures, and internal controls governing the selection, use, and validation of the valuation method or tool for the development of an evaluation?
3. Does the bank have appropriate policies and procedures governing the selection of automated valuation model (AVM)? For instance, did the bank:
   - Perform the necessary level of due diligence in selecting an AVM vendor and its models, considering how model developers conducted performance testing as well as the sample size used and the geographic level tested (such as county level or zip code).
   - Establish acceptable minimum performance criteria for a model prior to, and independent of, the validation process.
   - Perform validation of the model(s) during the selection process and document the validation process.
   - Evaluate underlying data used in the model(s), including the data sources and types, frequency of updates, quality control performed on the data, and the sources of the data in states where public real estate sales data are not disclosed.
   - Assess modeling techniques and the inherent strengths and weaknesses of different model types as well as how a model(s) performs for different property types.
   - Evaluate the AVM vendor's scoring system and methodology for the model(s).
   - Determine whether the scoring system provides an appropriate indicator of model reliability by property types and geographic locations.
4. Does the bank have procedures for monitoring the use of an AVM(s), including an ongoing validation process?
5. Does the bank maintain AVM performance criteria for accuracy and reliability in a given transaction, lending activity, and geographic location?

6. Has the bank established a criteria for determining whether a particular valuation method or tool is appropriate for a given transaction or lending activity, considering associated risks, including transaction size and purpose, credit quality, and leverage tolerance (loan-to-value)?
7. Does the criteria consider when market events or risk factors would preclude the use of a particular method or tool?
8. Does the bank have internal controls to preclude "value shopping" when more than one AVM is used for the same property?
9. Do the bank's policies include standards governing the use of multiple methods or tools, if applicable, for valuing the same property or to support a particular lending activity?
10. Does the bank have appropriate controls to ensure that the selected method or tool produces a reliable estimate of market value that supports the bank's decision to engage in a transaction?
11. Do the bank's policies and procedures adequately address the extent to which
    - An inspection or research should be performed to ascertain the property's actual physical condition, and
    - Supplemental information should be obtained to assess the effect of market conditions or other factors on the estimate of market value.

Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices

Effective date October 2013

Section 2103.1

This interagency supervisory guidance was developed to reinforce sound risk-management practices for institutions with high and increasing concentrations of commercial real estate loans on their balance sheets. The guidance, Concentrations in Commercial Real Estate (CRE) Lending, Sound Risk-Management Practices (the guidance), was issued on December 6, 2006 (effective on December 12, 2006).[1] However, institutions needing to improve their risk-management processes may have been provided the opportunity for some flexibility on the time frame for complying with the guidance. This time frame will be commensurate with the level and nature of CRE concentration risk, the quality of the institution's existing risk-management practices, and its levels of capital. (See 71 *Fed. Reg.* 74,580 [December 12, 2006], the Federal Reserve Board's press release dated December 6, 2006, and SR-07-01 and its attachments.)

SCOPE OF THE CRE CONCENTRATION GUIDANCE

The guidance focuses on those CRE loans for which the cash flow from the real estate is the primary source of repayment rather than loans to a borrower for which real estate collateral is taken as a secondary source of repayment or through an abundance of caution. For the purposes of this guidance, CRE loans include those loans with risk profiles sensitive to the condition of the general CRE market (for example, market demand, changes in capitalization rates, vacancy rates, or rents). CRE loans are land development and construction loans (including one- to four-family residential and commercial construction loans) and other land loans. CRE loans also include loans secured by multifamily property, and nonfarm nonresidential property where the primary source of repayment is derived from rental income associated with the property (that is, loans for which 50 percent or more of the source of repayment comes from third-party, nonaffiliated, rental income) or the proceeds of the sale, refinancing, or permanent financing of the property. Loans to real estate investment trusts and unsecured loans to developers also should be considered CRE loans for purposes of this guidance if their performance is closely linked to performance of the CRE markets. The scope of the guidance does *not* include loans secured by owner-occupied nonfarm nonresidential properties where the primary source of repayment is the cash flow from the ongoing operations and activities conducted by the party, or affiliate of the party, who owns the property. Rather than defining a CRE concentration, the guidance's "Supervisory Oversight" section describes the criteria that the Federal Reserve will use as high-level indicators to identify banks potentially exposed to CRE concentration risk.

1. The guidance was jointly adopted by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation.

CRE CONCENTRATION ASSESSMENTS

Banks that are actively involved in CRE lending should perform ongoing risk assessments to identify CRE concentrations. The risk assessment should identify potential concentrations by stratifying the CRE portfolio into segments that have common risk characteristics or sensitivities to economic, financial, or business developments. A bank's CRE portfolio stratification should be reasonable and supportable. The CRE portfolio should not be divided into multiple segments simply to avoid the appearance of concentration risk.

The Federal Reserve recognizes that risk characteristics vary among CRE loans secured by different property types. A manageable level of CRE concentration risk will vary by bank depending on the portfolio risk characteristics, the quality of risk-management processes, and capital levels. Therefore, the guidance does not establish a CRE concentration limit that applies to all banks. Rather, banks are encouraged to identify and monitor credit concentrations and to establish internal concentration limits, and all concentrations should be reported to senior management and the board of directors on a periodic basis. Depending on the results of the risk assessment, the bank may need to enhance its risk-management systems.

CRE RISK MANAGEMENT

The sophistication of a bank's CRE risk-management processes should be appropriate to the size of the portfolio, as well as the level and nature of concentrations and the associated risk to the bank. Banks should address the following key elements in establishing a risk-management framework that effectively identifies, monitors, and controls CRE concentration risk:

1. board and management oversight
2. portfolio management
3. management information systems
4. market analysis
5. credit underwriting standards
6. portfolio stress testing and sensitivity analysis
7. credit risk review function

Board and Management Oversight of CRE Concentration Risk

A bank's board of directors has ultimate responsibility for the level of risk assumed by the bank. If the bank has significant CRE concentration risk, its strategic plan should address the rationale for its CRE levels in relation to its overall growth objectives, financial targets, and capital plan. In addition, the Federal Reserve's real estate lending regulations require that each bank adopt and maintain a written policy that establishes appropriate limits and standards for all extensions of credit that are secured by liens on or interests in real estate, including CRE loans. Therefore, the board of directors or a designated committee thereof should—

1. establish policy guidelines and approve an overall CRE lending strategy regarding the level and nature of CRE exposures acceptable to the bank, including any specific commitments to particular borrowers or property types, such as multifamily housing;
2. ensure that management implements procedures and controls to effectively adhere to and monitor compliance with the bank's lending policies and strategies;
3. review information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including reports that describe changes in CRE market conditions in which the bank lends; and
4. periodically review and approve CRE risk exposure limits and appropriate sublimits (for example, by nature of concentration) to conform to any changes in the bank's strategies and to respond to changes in market conditions.

CRE Portfolio Management

Banks with CRE concentrations should manage not only the risk of individual loans but also portfolio risk. Even when individual CRE loans are prudently underwritten, concentrations of loans that are similarly affected by cyclical changes in the CRE market can expose a bank to an unacceptable level of risk if not properly managed. Management regularly should evaluate the degree of correlation between related real estate sectors and establish internal lending guidelines and concentration limits that control the bank's overall risk exposure.

Management should develop appropriate strategies for managing CRE concentration levels, including a contingency plan to reduce or mitigate concentrations in the event of adverse CRE market conditions. Loan participations, whole loan sales, and securitizations are a few examples of strategies for actively managing concentration levels without curtailing new originations. If the contingency plan includes selling or securitizing CRE loans, management should assess periodically the marketability of the portfolio. This should include an evaluation of the bank's ability to access the secondary market and a comparison of its underwriting standards with those that exist in the secondary market.

CRE Management Information Systems

A strong management information system (MIS) is key to effective portfolio management. The sophistication of the MIS will necessarily vary with the size and complexity of the CRE portfolio and level and nature of concentration risk. The MIS should provide management with sufficient information to identify, measure, monitor, and manage CRE concentration risk. This includes meaningful information on CRE portfolio characteristics that is relevant to the bank's lending strategy, underwriting standards, and risk tolerances. A bank should assess periodically the adequacy of the MIS in light of growth in CRE loans and changes in the CRE portfolio's size, risk profile, and complexity.

Banks are encouraged to stratify the CRE portfolio by property type, geographic market, tenant concentrations, tenant industries, developer concentrations, and risk rating. Other useful stratifications may include loan structure (for example, fixed-rate or adjustable), loan purpose (for example, construction, short-term, or permanent), loan-to-value (LTV) limits, debt service coverage, policy exceptions on newly underwritten credit facilities, and affiliated loans (for example, loans to tenants). A bank should also be able to identify and aggregate exposures to a borrower, including its credit exposure relating to derivatives.

Management reporting should be timely and in a format that clearly indicates changes in the portfolio's risk profile, including risk-rating migrations. In addition, management reporting should include a well-defined process through which management reviews and evaluates concentration and risk-management reports, as well as special ad hoc analyses in response to potential market events that could affect the CRE loan portfolio.

Market Analysis

Market analysis should provide the bank's management and board of directors with information to assess whether its CRE lending strategy and policies continue to be appropriate in light of changes in CRE market conditions. A bank should perform periodic market analyses for the various property types and geographic markets represented in its portfolio.

Market analysis is particularly important as a bank considers decisions about entering new markets, pursuing new lending activities, or expanding in existing markets. Market information also may be useful for developing sensitivity analysis or stress tests to assess portfolio risk.

Sources of market information may include published research data, real estate appraisers and agents, information maintained by the property taxing authority, local contractors, builders, investors, and community development groups. The sophistication of a bank's analysis will vary by its market share and exposure, as well as the availability of market data. While a bank operating in nonmetropolitan markets may have access to fewer sources of detailed market data than a bank operating in large, metropolitan markets, a bank should be able to demonstrate that it has an understanding of the economic and business factors influencing its lending markets.

Credit Underwriting Standards

A bank's lending policies should reflect the level of risk that is acceptable to its board of directors and should provide clear and measurable underwriting standards that enable the bank's lending staff to evaluate all relevant credit factors. When a bank has a CRE concentration, the establishment of sound lending policies becomes even more critical. In establishing its policies, a bank should consider both internal and external factors, such as its market position, historical experience, present and prospective trade area, probable future loan and funding trends, staff capabilities, and technology resources. Consistent with the Federal Reserve's real estate lending guidelines, CRE lending policies should address the following underwriting standards:

1. maximum loan amount by type of property
2. loan terms
3. pricing structures
4. collateral valuation[2]
5. LTV limits by property type
6. requirements for feasibility studies and sensitivity analysis or stress testing
7. minimum requirements for initial investment and maintenance of hard equity by the borrower
8. minimum standards for borrower net worth, property cash flow, and debt service coverage for the property

A bank's lending policies should permit exceptions to underwriting standards only on a limited basis. When a bank does permit an exception, it should document how the transaction does not conform to the bank's policy or underwriting standards, obtain appropriate management approvals, and provide reports to the board of directors or designated committee detailing the number, nature, justifications, and trends for exceptions. Exceptions to both the bank's internal lending standards and the Fed-

2. Refer to the Federal Reserve's appraisal regulations: 12 CFR 208 subpart E and 12 CFR 225, subpart G.

eral Reserve's supervisory LTV limits[3] should be monitored and reported on a regular basis. Further, banks would analyze trends in exceptions to ensure that risk remains within the bank's established risk tolerance limits.

Credit analysis should reflect both the borrower's overall creditworthiness and project-specific considerations as appropriate. In addition, for development and construction loans, the bank should have policies and procedures governing loan disbursements to ensure that the bank's minimum borrower equity requirements are maintained throughout the development and construction periods. Prudent controls should include an inspection process, documentation on construction progress, tracking pre-sold units, pre-leasing activity, and exception monitoring and reporting.

CRE Portfolio Stress Testing and Sensitivity Analysis

A bank with CRE concentrations should perform portfolio-level stress tests or sensitivity analysis to quantify the impact of changing economic conditions on asset quality, earnings, and capital. Further, a bank should consider the sensitivity of portfolio segments with common risk characteristics to potential market conditions. The sophistication of stress testing practices and sensitivity analysis should be consistent with the size, complexity, and risk characteristics of the CRE loan portfolio. For example, well-margined and seasoned performing loans on multifamily housing normally would require significantly less robust stress testing than most acquisition, development, and construction loans.

Portfolio stress testing and sensitivity analysis may not necessarily require the use of a sophisticated portfolio model. Depending on the risk characteristics of the CRE portfolio, stress testing may be as simple as analyzing the potential effect of stressed loss rates on the CRE portfolio, capital, and earnings. The analysis should focus on the more vulnerable segments of a bank's CRE portfolio, taking into consideration the prevailing market environment and the bank's business strategy.

3. The Interagency Guidelines for Real Estate Lending state that loans exceeding the supervisory LTV guidelines should be recorded in the bank's records and reported to the board at least quarterly.

Credit Risk Review Function

A strong credit risk review function is critical for a bank's self-assessment of emerging risks. An effective, accurate, and timely risk-rating system provides a foundation for the bank's credit risk review function to assess credit quality and, ultimately, to identify problem loans. Risk ratings should be risk sensitive, objective, and appropriate for the types of CRE loans underwritten by the bank. Further, risk ratings should be reviewed regularly for appropriateness.

SUPERVISORY OVERSIGHT OF CRE CONCENTRATION RISK

As part of its ongoing supervisory monitoring processes, the Federal Reserve will use certain criteria to identify banks that are potentially exposed to significant CRE concentration risk. A bank that has experienced rapid growth in CRE lending, has notable exposure to a specific type of CRE, or is approaching or exceeds the following supervisory criteria may be identified for further supervisory analysis of the level and nature of its CRE concentration risk:

1. total reported loans for construction, land development, and other land[4] represent 100 percent or more of the bank's total capital[5] or
2. total commercial real estate loans as defined in this guidance[6] represent 300 percent or

4. For commercial banks as reported in the Call Report FFIEC 031 and 041, schedule RC-C, item 1a(1) and 1a(2).

5. For purposes of this guidance, the term *total capital* means the total risk-based capital as reported for commercial banks in the Call Report FFIEC 031 and 041 schedule RC-R—Regulatory Capital, line 21.

6. For commercial banks as reported in the Call Report FFIEC 031 and 041 schedule RC-C, items 1a(1), 1a(2), 1d, 1e(2), and memorandum item 3. Effective with the March 31, 2008, Call Report revision, item 1a on Schedule RC-C was split into two components. Item 1a(1) reports 1–4 family residential construction loans, and item 1a(2) reports other construction loans and all land development and other land loans. Both items 1a(1) and 1a(2) are used to calculate total reported loans for construction, land development, and other land. Also effective with the March 31, 2008, Call Report, item 1e on Schedule RC-C was split into two components. Item 1e(1) reports the amount of owner-occupied CRE loans, and item 1e(2) reports the amount of non-owner-occupied CRE loans. The amendment enables the exclusion of owner-occupied CRE loans in the total CRE loan ratio in accordance with the scope of the 2006 CRE Guidance. The supervisory

more of the bank's total capital, and the outstanding balance of the bank's commercial real estate loan portfolio has increased by 50 percent or more during the prior 36 months.

The Federal Reserve will use the criteria as a preliminary step to identify banks that may have CRE concentration risk. Because regulatory reports capture a broad range of CRE loans with varying risk characteristics, the supervisory monitoring criteria do not constitute limits on a bank's lending activity but rather serve as high-level indicators to identify banks potentially exposed to CRE concentration risk. Nor do the criteria constitute a "safe harbor" for banks if other risk indicators are present, regardless of their measurements under (1) and (2).

Evaluation of CRE Concentrations

The effectiveness of a bank's risk-management practices will be a key component of the supervisory evaluation of the bank's CRE concentrations. Examiners will engage in a dialogue with the bank's management to assess CRE exposure levels and risk-management practices. Banks that have experienced recent, significant growth in CRE lending will receive closer supervisory review than those that have demonstrated a successful track record of managing the risks in CRE concentrations.

In evaluating CRE concentrations, the Federal Reserve will consider the bank's own analysis of its CRE portfolio, including consideration of factors such as—

1. portfolio diversification across property types
2. geographic dispersion of CRE loans
3. underwriting standards
4. level of pre-sold units or other types of take-out commitments on construction loans
5. portfolio liquidity (ability to sell or securitize exposures on the secondary market)

While consideration of these factors should not change the method of identifying a credit concentration, these factors may mitigate the risk posed by the concentration.

Assessment of Capital Adequacy for CRE Concentration Risk

The Federal Reserve's existing capital adequacy guidelines note that a bank should hold capital commensurate with the level and nature of the risks to which it is exposed. Accordingly, banks with CRE concentrations are reminded that their capital levels should be commensurate with the risk profile of their CRE portfolios. In assessing the adequacy of a bank's capital, the Federal Reserve will consider the level and nature of inherent risk in the CRE portfolio as well as management expertise, historical performance, underwriting standards, risk-management practices, market conditions, and any loan loss reserves allocated for CRE concentration risk. A bank with inadequate capital to serve as a buffer against unexpected losses from a CRE concentration should develop a plan for reducing its CRE concentrations or for maintaining capital appropriate to the level and nature of its CRE concentration risk.

screening criteria are not intended to limit an institution's CRE lending activity. The intent of these indicators is to encourage a dialogue between the supervisory staff and an institution's management about the level and nature of CRE concentration risk.

Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices

Examination Objectives

Effective date October 2007

Section 2103.2

When a bank has significant commercial real estate (CRE) credit concentrations, the inspection objectives are as follows:

1. To determine if the bank's risk-management practices and capital levels are commensurate with the level and nature of its CRE concentration risk.
2. To ascertain if the bank performs ongoing risk assessments to identify its CRE concentrations.
3. To evaluate whether the bank's CRE risk-management processes are appropriate for the size of its CRE loan portfolio, as well as for the level and nature of its concentrations and their associated risks to the bank.
   a. To determine whether the bank's strategic plan addresses the rationale for its CRE credit concentration levels in relation to its overall growth objectives, financial targets, and capital plan.
   b. To evaluate whether the bank manages not only the risk of individual loans but also its loan portfolio risks.
   c. To find out if the bank's management information system provides management with sufficient information that can be used to identify, measure, and manage the bank's CRE concentration risk.
   d. To verify whether the bank's market analyses provide the bank's management and board of directors with sufficient information to assess whether the bank's CRE lending strategy and policies continue to be appropriate in light of its changing CRE market conditions.
4. To determine if the bank's CRE lending policies reflect the level of credit risk that is acceptable to its board of directors.
   a. To evaluate whether the lending policies provide clear and measurable underwriting standards.
   b. To assess whether the bank's lending policies enable the bank's lending staff to evaluate all relevant credit factors.
5. To find out if the bank performs portfolio-level stress tests or sensitivity analyses in order to quantify the impact of changing economic conditions on asset quality, earnings, and capital.
6. To determine if the bank has a strong credit-review function that includes a self-assessment of its emerging credit and other risks.

RISK MANAGEMENT

Board and Senior Management Oversight

1. Determine if the board of directors or its designated committee has—
   a. established policy guidelines and approved an overall commercial real estate (CRE) lending strategy on the level and nature of the bank's CRE exposures, including any specific commitments to particular borrowers or property types, such as multifamily housing;
   b. ensured that management implements procedures and controls to effectively adhere to and monitor compliance with the bank's lending policies and strategies;
   c. reviewed information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including a review of reports that describe changes in the CRE market conditions in which the bank lends; and
   d. periodically reviewed and approved CRE risk exposure limits and appropriate sublimits (for example, by nature of concentration) to ensure they conform to any changes in the bank's strategies and respond to changes in market conditions.

Supervisory Oversight

2. Determine if the bank is (or is potentially) exposed to significant CRE credit concentration risk.
3. If the bank has experienced rapid growth in CRE lending or has notable exposure to a specific type of CRE, or if the bank is approaching or exceeds one or both of the following criteria, perform a preliminary analysis of the bank's CRE concentration risk:
   a. Total loans for construction, land development, and other land represent 100 percent or more of the bank's total capital.
   b. Total CRE loans represent 300 percent or more of the bank's total capital, and the outstanding balance of the bank's CRE loan portfolio has increased by 50 percent or more during the prior 36 months.

Portfolio Management

4. Ascertain whether the bank manages not only the risk from individual loans but also portfolio risk. Find out if management—
   a. regularly (1) evaluates the degree of correlation between related real estate sectors and (2) establishes internal lending guidelines and concentration limits that control the bank's overall risk exposure; and
   b. develops appropriate strategies for managing CRE concentration levels, including the development of a contingency plan to reduce or mitigate concentrations during adverse CRE market conditions (such a plan may include strategies involving loan participations, whole loan sales, and securitizations).
      - Find out if the bank's contingency plan includes selling or securitizing CRE loans.
      - Ascertain if management periodically assesses the marketability of the CRE portfolio and evaluates the bank's ability to access the secondary market.
      - Verify whether the bank compares its underwriting standards with those that exist in the secondary market.

Management Information Systems

5. Evaluate whether management information systems (MIS) provide sufficient information to identify, measure, monitor, and manage CRE concentration risk (MIS should include information on CRE portfolio characteristics that are consistent with and relevant to the bank's lending strategy, underwriting standards, and risk tolerances).
6. Verify that management reporting is timely and in a format that clearly indicates changes in the portfolio's risk profile, including risk-rating migrations.

Market Analysis

7. Determine if management reporting includes a well-defined process through which management reviews and evaluates concentration and risk-management reports, as well as special ad hoc analyses that are prepared in response to potential market events that could affect the CRE loan portfolio.
8. Find out if the bank's market analysis provides management and the board of directors with sufficient information to assess (1) the bank's CRE lending strategy and policies and (2) whether they continue to be appropriate in light of changes in CRE market conditions.

Credit-Underwriting Standards

9. Determine if CRE lending policies include the following underwriting standards:
   a. maximum loan amount by type of property
   b. loan terms
   c. pricing structures
   d. collateral valuation
   e. loan-to-value (LTV) limits by property type
   f. requirements for feasibility studies and sensitivity analyses or stress testing
   g. minimum requirements for initial investment and maintenance of hard equity by the borrower
   h. minimum standards for borrower net worth, property cash flow, and debt-service coverage for the property
10. Review the bank's permitted exceptions to its underwriting standards. Ascertain if the exceptions—
    a. have been granted on a limited basis only; and
    b. are supported by documentation and reports to management and the board of directors or a designated committee. The documentation and reports should indicate—
       - how the transactions did not conform to the bank's policy or underwriting standards;
       - whether appropriate management approvals were obtained; and
       - the details of the number and nature of and the justifications and trends for the exceptions.
11. Verify that exceptions to both the bank's internal lending standards and the Federal Reserve's supervisory LTV limits are monitored and reported on a regular basis.
12. Find out if the bank analyzes trends in its CRE lending exceptions in order to ensure that credit-underwriting risk remains within its established risk-tolerance limits.
13. Evaluate whether the bank's credit analyses reflect both the borrowers' overall creditworthiness and project-specific considerations, as appropriate.
14. For the bank's development and construction loans, determine if—
    a. the bank has policies and procedures governing loan disbursements in order to ensure that the bank's requirements for minimum borrower equity are maintained throughout the development and construction periods; and
    b. prudent controls, including the following, are in place:
       - an inspection process
       - documentation of construction progress
       - tracking of pre-sold units
       - pre-leasing activity
       - exception monitoring and reporting

Portfolio Stress Testing and Sensitivity Analysis

15. When the bank has CRE concentrations, determine if it performs portfolio-level stress tests or sensitivity analyses in order to quantify the impact of changing economic conditions on asset quality, earnings, and capital.
    a. Ascertain if the bank considers the sensitivity of portfolio segments with common risk characteristics to potential market conditions.
    b. Determine whether the sophistication of the bank's stress-testing practices and sensitivity analyses are consistent with the size, complexity, and risk characteristics of its CRE loan portfolio.
    c. Evaluate whether the bank's sensitivity analyses focus on the more vulnerable segments of its CRE portfolio, considering its prevailing market environment and business strategy.

Credit-Review Function

16. Find out if the bank has a credit-review function, and if it is supported by a credit-risk rating system that is used to assess credit quality and identify problem loans.
17. Determine if (1) the bank's risk ratings are risk-sensitive, objective, and appropriate for the types of CRE loans underwritten and (2) the risk ratings are regularly reviewed.

EVALUATION OF CRE CONCENTRATIONS

1. Engage in a dialogue with bank management in order to assess the bank's CRE exposure levels and risk-management practices. If the bank has experienced recent, significant growth in CRE lending, perform an expanded review of the bank's risk in CRE concentrations, including a review of the bank's analysis of its CRE concentrations. Consider factors such as—
   a. portfolio diversification across property types
   b. the geographic dispersion of CRE loans
   c. underwriting standards
   d. the level of pre-sold units or other types of take-out commitments on construction loans
   e. portfolio liquidity (the ability to sell or securitize exposures on the secondary market)

Assessment of Capital Adequacy

2. Evaluate whether the bank's holds capital commensurate with the risk profile of its CRE portfolios. Consider the level and nature of inherent risk in the bank's CRE portfolio, as well as management expertise, historical performance, underwriting standards, risk-management practices, market conditions, and any loan-loss reserves allocated for CRE concentration risk.
3. If a bank has inadequate capital to serve as a buffer against unexpected losses from its CRE concentration, reach agreement with the bank's senior management and board of directors on the development of a plan to reduce the bank's CRE concentrations or to maintain capital that is appropriate and commensurate with the level and nature of the bank's CRE concentration risk.

CRE CONCENTRATION ASSESSMENTS

1. Are ongoing risk assessments performed to identify commercial real estate (CRE) concentrations?
2. Are CRE concentration limits established and monitored?
3. Is the CRE portfolio stratified into reasonable and supportable segments that have common risk characteristics or sensitivities to economic, financial, or business developments?
4. Are all CRE concentrations reported to senior management and the board of directors on a periodic basis?

RISK MANAGEMENT

1. Has a risk-management framework been established that effectively identifies, monitors, and controls CRE concentration risk? If such a framework has been established, does it address—
   a. board and management oversight?
   b. portfolio management?
   c. management information systems?
   d. market analysis?
   e. credit-underwriting standards?
   f. portfolio stress testing and sensitivity analysis?
   g. the credit-risk review function?

Board and Management Oversight

2. If the bank has significant CRE concentration risk, does it have a strategic plan that addresses the rationale for its CRE concentration levels in relation to the bank's overall growth objectives, financial targets, and capital plan?
3. Has the board of directors or its designated committee—
   a. established policy guidelines and approved an overall CRE lending strategy for the level and nature of CRE exposures, including any specific commitments to particular borrowers or property types, such as multifamily housing?
   b. ensured that the bank's management implements procedures and controls to effectively adhere to and monitor compliance with the bank's lending policies and strategies?
   c. reviewed information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including a review of reports that describe changes in the conditions of the CRE market in which the bank lends?
   d. periodically reviewed and approved CRE risk exposure limits and appropriate sublimits (for example, by nature of concentration) in order to conform to any changes in the bank's strategies and respond to changes in market conditions?

Portfolio Management

4. Does the bank's management regularly perform an analysis of its CRE portfolio, considering factors such as—
   a. portfolio diversification across property types?
   b. the geographic dispersion of CRE loans?
   c. underwriting standards?
   d. the level of pre-sold units or other types of take-out commitments on construction loans?
   e. portfolio liquidity (the ability to sell or securitize exposures on the secondary market)?
5. Has the bank's board of directors and senior management—
   a. (1) regularly evaluated the degree of correlation between related real estate sectors and (2) established internal lending guidelines?
   b. established internal lending guidelines and concentration limits in order to control the bank's overall risk exposure?
   c. developed appropriate strategies to manage CRE concentration levels?
6. Has the bank's management developed a

contingency plan to reduce or mitigate CRE loan concentrations during adverse market conditions? If the bank's contingency plan includes selling or securitizing CRE loans, has management periodically assessed the marketability of the portfolio?

Management Information System

7. Does the bank's management information system (MIS) provide sufficient information to identify, monitor, and manage CRE concentration risk?
8. Is the bank's CRE portfolio stratified by property type, geographic market, tenant concentrations, tenant industries, developer concentrations, and risk rating?
9. Does the bank's MIS identify and aggregate exposures to a borrower, including its credit exposure relating to derivatives?
10. Are the bank's management reports timely and in a format that clearly indicates changes in the portfolio's risk profile?
11. Does the bank's management reporting include a well-defined process whereby management reviews and evaluates CRE concentrations, risk-management reports, and special ad hoc analyses prepared in response to potential market events that could affect the concentration risk in the bank's CRE portfolio?

Credit-Underwriting Standards

12. Are underwriting standards clear and measurable, and do they enable the bank's lending staff to evaluate relevant credit factors?
13. Do the bank's CRE lending policies address the following underwriting standards—
    a. maximum loan amount by type of property?
    b. loan terms?
    c. pricing structures?
    d. collateral valuation?
    e. loan-to-value (LTV) limits by property type?
    f. requirements for feasibility studies and sensitivity analyses or stress testing?
    g. minimum requirements for initial investment and maintenance of hard equity by the borrower?
    h. minimum standards for borrower net worth, property cash flow, and debt-service coverage for the property?
14. Do the bank's lending policies permit exceptions to its underwriting standards for CRE concentrations on a limited basis only?
15. Are permitted exceptions documented; that is, do the documented exceptions describe how the loan transaction does not conform to the bank's lending policy or underwriting standards?
16. Does management analyze trends in exceptions to ensure that the bank's CRE concentration risk remains within established risk-tolerance limits?
17. Does the bank have policies and procedures governing loan disbursements in order to ensure that its minimum requirements for borrower equity are maintained throughout development and construction periods?
18. Do the bank's internal controls consist of an inspection process, documentation on construction progress, tracking of pre-sold units, tracking of pre-leasing activity, and exception monitoring and reporting?

Portfolio Stress Testing and Sensitivity Analysis

19. Are portfolio stress tests or sensitivity analyses performed in order to quantify the impact of changing economic conditions on asset quality, earnings, and capital?
20. If performed, are portfolio stress tests or sensitivity analyses required to focus on the more vulnerable segments of the bank's CRE portfolio? Do they take into consideration the prevailing market environment and the bank's business strategy?

Credit-Review Function

21. Does the bank have an effective, accurate, and timely risk-rating system that supports its credit-review function?
22. Are credit-risk ratings reviewed regularly for appropriateness?

INTRODUCTION

Floor-plan lending is a form of credit extended to a dealer of consumer or commercial goods to finance inventory that is subsequently sold to the public. The facility is generally in the form of a revolving line of credit used to purchase inventory, which usually is comprised of durable goods, and serves as the bank's collateral. Banks often provide floor-plan loans to dealers of items that are sold under a sales-finance type of contract, such as automobiles, trucks, boats, and mobile homes.

As each unit of inventory is sold, the borrower/dealer repays the loan advancements. The basic risks inherent to inventory financing are the high loan-to-value ratio (that is the outstanding loan amount to the value of the collateral) and the potential for rapid depreciation in value of the collateral. When inventory does not sell as expected, the borrower/dealer may be required by the loan agreement to repay the debt from other cash sources. For this reason, the exposure to loss is generally higher for floor-plan lending (for example, a floor-plan loan to automobile dealer) than other types of inventory financing. See "Collateral" later in this section for more information.

In some cases, the bank providing the floor-plan loan may also provide the financing to the consumer purchasing the item, referred to as dealer financing. Under dealer financing, the dealer sells the goods to the consumer with financing and the bank provides the financing for the purchase, resulting in the bank financing both the dealer floor-plan and the consumer purchase. As a result, a bank expands its borrower base beyond the floor-plan loan by providing financing to the consumer who purchases an inventory item. See "Indirect Lending" later in this section for more information.

BANK/DEALER RELATIONSHIP

Two important facets of the bank's relationship with a dealer are (1) the quality of the consumer financing contracts and (2) the nature or extent of the overall banking relationship with the dealer, which may include deposit products, cash management services, and trust activities. The income derived from a floor-plan loan may not be sufficient for the bank to justify the credit risk assumed as a result of the floor-plan loan alone. However, income derived from the overall banking relationship with the dealer may support the credit risk associated with the floor-plan loan.

Examiners should review the flow of funds into and out of the dealer's account. The flow of funds may indicate that inventory has been sold without debt reduction; that the dealer is incurring abnormal expenses; or that unreported diversification, expansion, or other financial activity has occurred, warranting a reassessment of the credit arrangement. Examiners should also pay particular attention to persistent overdrawn balances of the dealer, as this could be an indicator of financial difficulties.

LOAN POLICY

In general, the bank's loan policy should address its floor-plan lending program. Examiners should determine whether the bank has established prudent standards to control the credit and operational risks associated with floor-plan lending. Refer to the examination procedures for more information on loan policy expectations.

COLLATERAL

The primary collateral for a floor-plan loan is the inventory financed by the dealer. As with all inventory financing, collateral value is fundamental to assessing the secondary source of payment as protection to the bank. In assessing the bank's management over the inventory, examiners should consider whether the bank (1) determines the value of collateral at the time the loan is being underwritten; (2) periodically inspects the collateral by reviewing the condition of the collateral, performing physical counts, and reconciling inventory to bank records; and (3) ensures timely payments by the dealer to the bank when inventory is sold. When the pace of sales is slower than anticipated when the loan was originated, the collateral remains in inventory longer, resulting in "dated" or "stale" inventory. In these cases, the bank's loan agreement may require the dealer to make additional payments (known as "curtailment") to reflect any depreciation in the value of the dated inventory. In addition, the loan agreement may address periodic curtailment payments that are expected to commence on a set schedule and at a predetermined percentage of the amount financed. Curtailment payments are usually not required until the end of one model year and the start of the new model year. The introduction of new models may reduce the value of dealer's existing inventory and, in turn, the value of the bank's collateral.

SECURITY INTEREST

A new floor-plan loan agreement generally involves three parties: (1) the supplier of the goods being sold to the dealer, (2) the dealer (the borrower), and (3) the bank (the floor-plan lender). When a dealer enters into a financing arrangement with a bank, the dealer executes a master loan agreement that sets forth the basic conditions of the relationship among the three parties. This agreement grants the bank a continuing security interest in the dealer's inventory, receipts, and accounts receivable. The security interest to floor-plan inventory is evidenced by a trust receipt. A bank prepares a trust receipt document for the dealer receiving the floor-plan financing to execute when inventory is received. The trust receipt provides evidence that the dealer possesses the inventory being financed. This document establishes the bank's rights to the inventory collateral and the proceeds from the sale of the inventory and refers to other loan documents that set forth the rights of the bank.

Generally, banks create trust receipts in two ways. First, the bank may enter into a drafting agreement with the manufacturer, which is similar to a letter of credit. In this situation, the bank agrees to pay the manufacturer's drafting agreements when shipments of merchandise are sent to the dealer. The bank pays the manufacturer (that is, pays the draft) when the dealer receives the merchandise or, if the manufacturer permits, after a grace period. This grace period allows the dealer to prepare the inventory for sale. The drafting agreement usually provides limits on the number of units, the per-unit cost, and the aggregate cost that can be shipped at any one time. Drafting agreements are frequently used in conjunction with repurchase agreements when the manufacturer agrees to repurchase inventory from the dealer when inventory items remain unsold after a specified period of time. The inventory and ownership documents (that is, title to the collateral) remain with the dealer until inventory items are sold and are evidenced by a trust receipt. A bank's periodic physical inspection of the collateral should confirm that the bank has perfected its security interest in the collateral and that the dealer/borrower has not pledged the bank's collateral to another lender.

A second way a bank creates a trust receipt is when merchandise is shipped under an invoice system. The dealer receives the inventory accompanied by the manufacturer's invoice and title to the collateral, where appropriate. The dealer then presents the documents to the bank and the bank pays the manufacturer, attaching duplicates of the documents to a trust receipt that is signed by the borrower. Depending on the type of inventory and the dealer, the title to the collateral may remain with the bank until the collateral is sold by the dealer and the dealer makes a loan repayment to the bank. For example, used car inventories are usually financed with trust receipts listing each item of the inventory and a specific loan amount for each item.

A floor-plan facility often includes an agreement from the manufacturer to repurchase unsold inventory within specified time limits. The bank and manufacturer could execute other agreements on matters, such as loss sharing and recourse against the dealer. The method of perfecting a security interest varies from state to state, which may diverge from the Uniform Commercial Code (UCC). For information on UCC requirements regarding secured transactions, refer to section 2080.1, "Commercial and Industrial Loans."

INVENTORY INSPECTIONS

As with all inventory financing, collateral control and valuation are critical. Examiners should determine whether the bank's scope and frequency of collateral inspections are adequate and align with the floor-plan loan agreement. Examiners should review the bank's scope of the collateral inspection, and determine whether inspection is sufficiently comprehensive to detect irregularities and to support the value of the collateral. Floor-plan collateral inspections may be completed by internal bank staff, or delegated to a third-party inspector. When inspections are delegated to a third party, examiners should consider whether bank management has included the vendor in its approved vendor risk management program. For more information, see SR-23-4, "Interagency Guidance on Third-Party Relationships: Risk Management."

Where practical, inspection duties should be rotated among the bank's staff or third-party providers. Inspectors can verify the floor-planned inventory by comparing product serial numbers, manufacturers' certificates of origin, or title information against bank collateral records. In addition, inspection reports typically reflect whether the floor-planned inventory is available for sale. See "Control Systems" later in this section for additional information.

DEALER FINANCIAL ANALYSIS

Many dealers have minimal liquidity and capital relative to total debt, therefore, examiners may consider the frequency with which the bank obtains and reviews the dealer's financial statements. Typically, dealer financial statements are reviewed at least annually, or more frequently as needed. The bank may request that the dealer provide copies of the periodic financial reports that the dealer sends to its franchiser. In addition, dealership financial statements prepared by the manufacturer may contain summary and detailed information on the dealer's financial condition and performance. In analyzing the data, the bank may review the number of units sold, the profitability of the sales, and compare the number of units sold with the number of units financed to determine whether inventory levels are reasonable.

A dealer's primary asset is the inventory. Therefore, the risk to the bank is that floor-plan loan exceeds the value of the dealer's inventory. The dealer's financial statement should show an inventory figure at least equal to the outstanding balance of related floor-plan loan. Unless the difference is represented by short-term sales receivables, including contracts in transit, a floor-plan liability that is greater than the amount of inventory is an indication that the dealer has sold inventory and has not made the appropriate loan payment. To assess credit quality of a bank's floor-plan loan, examiners should closely evaluate the level of the dealer's floor-plan debt relative to value of the inventory.

A bank that relies on sponsor or manufacturer support as a source of repayment should establish guidelines for evaluating the qualifications of the sponsor and the manufacturer and should implement a process to monitor their financial conditions regularly. A bank may consider sponsor and manufacturer supports in assigning a risk rating when the bank can document the history of demonstrated supports and their economic incentives, capacities, and stated intent to continue to support the transaction.

IDENTIFYING PROBLEMS

Missing inventory, reportedly sold and unpaid, is usually verified to related contracts-in-process. Examiners should ascertain whether the time to collect on contracts-in-process is reasonable and conforms to the floor-plan agreement. Floor-planned inventory sold and not in the process of payment is termed "sold out of trust" (banks may use the acronym SOT) and represents a breach of trust by the dealer—and a significant exposure to the bank as the floor-planned inventory sold and not in the process of payment is now an unsecured credit. If inventory has been SOT, the bank generally will require the dealer to repay immediately he loan associated with the SOT inventory. Inventory that has been SOT may indicate a potential fraud issue, and the bank may need to file a suspicious activity report (SAR). Examiners should request and review information (e.g., the bank's internal management reports and investigations) related to SOT situations that have occurred and determine whether management is dealing with such situations appropriately.

Recurring SOT positions that are not cleared by the dealer in a reasonable time should be a red flag to the bank to take further action. If a dealer is deliberately withholding funds or diverting funds received from the sale of pledged inventory, the bank management will generally meet with the borrower to discuss this situation and, if appropriate, consider appropriate action to minimize loss exposure. Bank lending staff should be aware that some large dealerships simultaneously finance inventory with multiple lenders based on the incentives offered to them. In underwriting and approving a floor-plan loan, a bank should consider whether or not the bank is financing only part of the dealer's total floor-plan debt that originates from one particular manufacturer or distributor. When assessing borrower quality, examiners should consider interest and curtailment payment delinquencies; extensions of maturities beyond reasonable expectations; slow turnover of inventory; and lack of financial statements from the borrower.

INDIRECT LENDING

Indirect lending involves a bank funding consumer purchases from the dealer. Indirect lending typically takes one of two forms: (1) the dealer may originate loans to customers, which the bank purchases ("dealer paper") or (2) the dealer may forward the loan application to the bank, which then originates the loan to the consumer.

Banks purchase loans from dealers through two basic arrangements: recourse and nonrecourse. With recourse agreements, the bank purchases the contract from the dealer and may exercise recourse by requiring the dealer to repurchase the contract or pay deficiencies in the event of nonperformance by the consumer. Conversely, with nonrecourse purchases, the bank assumes full responsibility for underwriting the loan and carries all the risk, even though the dealer handles the loan application and customer contact.

Examiners should determine whether banks engaged in indirect lending have established appropriate policies to govern such activities. The approval of a dealer for indirect lending is an expression of willingness to accept those loans that meet the bank's underwriting standards, and that there is no obligation on the part of the bank to buy these loans.

Examiners should review the bank's policy for indirect lending and assess whether the policy conforms to the bank's underwriting standards, regardless of whether the bank or the dealer underwrites the loan. See section 2130.1, "Consumer Credit" for additional details on indirect lending.

CONTROL SYSTEMS

Management Information Systems

Examiners should assess the accuracy and comprehensiveness of the bank's management information systems (MIS) to identify, measure, monitor, and control risks associated with floor-plan lending. Effective MIS monitors include inventory shipments, loan repayment status, inventory levels, inventory conditions, turnover rates, loan collection efforts, manufacturer/dealer recourse, loan curtailments, and credit concentrations within the floor-plan lending portfolio. Other portfolio management reports may typically include a summary risk rating profile of the dealers financed, composition of new versus used inventory, over-line accounts, past-due floor-plan inspections, and the level of exceptions to policy or underwriting guidelines.

Internal Loan Review

The bank's internal loan review system and risk management processes are essential to effective portfolio management and internal controls. Similar to any lending product, examiners should consider whether floor-plan loans are subject to regular credit reviews and compliance control processes. Internal loan review staff performing the review of floor-plan loans should ensure that bank lending staff have performed all procedures related to verifying the existence and value of the related collateral. Internal loan review staff should also assess compliance with the bank's policies and procedures; determine the effectiveness of collateral reviews and controls; and report any deficiencies in the floor-plan lending activity to senior management and the board of directors.

Internal Audit

The bank's internal audit program should include regular reviews of the floor-plan lending activities. Examiners should consider whether internal audit staff assess the adequacy of controls and adherence to policies and procedures. In addition, examiners should consider whether audit staff accompany the bank's floor-plan inspector during inventory inspections as an additional quality control measure and to deter bank staff collusion with the dealer. Appropriate audit staff should verify the inventory subject to each floor-plan loan during the regularly conducted audits. External audit services may be contracted by the dealer or the bank to provide independent assessments of the dealer's business processes and controls. The bank may hire inventory audit servicers to assist on inspections of floor-plan loan inventory, however, bank management is still responsible for providing appropriate oversight of these third-party services.

Supervisory Considerations for Assessing the Risk Rating Floor-Plan Loans

Examiners should understand the primary and secondary sources of repayment when assessing the risk rating of floor-plan loans. A floor-plan loan's primary source of repayment is cash received from the sale of the assigned collateral. The secondary source of repayment is the dealer's cash flow from operations. Examiners should consider the following factors when assessing the appropriate regulatory risk rating of a floor-plan loan:

- quality and liquidity of inventory as demonstrated through the dealer's sales, inventory turnover, and payment history;
- strength of the credit's structure and controls;
- borrower's financial condition, including liquidity and capital;
- actual operating performance of the dealer versus planned operating performance;
- quality and performance of the indirect loans generated by the dealer under the floor-plan facility; and
- strength and reliability of the dealership's cash flow from operations.

In assessing the strength and reliability of a dealership's operating cash flow, examiners should consider whether the dealership can service the interest on the floor-plan facility, consistent with the expectation for a short-term working capital line of credit. A dealership's operating cash flow also should be able to meet the principal curtailment requirements and pay any residual amounts under the floor-plan facility, in case the dealer liquidates the inventory below the original loan amount. A dealership's operating cash flow becomes more important when the floor-plan lender does not exclusively finance all of the dealer's inventory or when the dealer has a broad range of income sources not directly related to the inventory under the floor-plan facility. Operating cash flow is also important because a floor-plan facility typically finances up to 100 percent of the cost of collateral and does not have the excess collateral protection typically seen with an asset-based loan with a strong borrowing base limit.

Examiners should review sources of repayment or other mitigating factors in assessing the credit rating of a poorly performing floor-plan facility. Examples of other sources of repayment and mitigating factors include other liquidity sources, guarantors, and manufacturer support programs.

1. Determine whether the floor-plan loan policy is adequate. An appropriate policy generally
   - defines qualified borrowers;
   - defines permissible types of merchandise to be financed;
   - establishes guidelines for granting and monitoring floor-plan loans;
   - establishes individual and aggregate limits based on relevant risk factors (such as product category, vehicle type, market) relative to capital and total loans;
   - establishes loan-to-value collateral requirements;
   - establishes collateral documentation standards and lien perfection procedures;
   - establishes guidelines for holding titles and other ownership documents;
   - establishes collateral inspection guidelines;
   - defines curtailment requirements;
   - details guidelines for obtaining and evaluating borrower financial statements at origination and periodically thereafter;
   - establishes guidelines for obtaining manufacturer repurchase agreements;
   - defines requirements for obtaining intercreditor agreements; and
   - establishes guidelines for tri-party (manufacturer, dealer, and bank) floor-plan agreements.
2. Determine whether underwriting and administration procedures are appropriate. Appropriate procedures generally address expectations for bank staff to perform the following tasks (with adequate segregation of duties):
   - conduct floor-plan inspections (generally conducted monthly based on inventory turnover);
   - follow procedures for the reviewing and retaining inspection reports;
   - resolve discrepancies identified during floor-plan inspections;
   - evaluate dealers' financial statements (for new vehicle dealers, these are the statements submitted to the manufacturer that contain details regarding dealership operations and compliance with manufacturer standards); and
   - review floor-plan agreements and borrowers' compliance with the agreements.
3. Review a sample of floor-plan arrangements. Determine whether the files contain, as necessary, appropriate documentation. Appropriate documentation generally includes
   - periodic analysis of the creditworthiness and performance of the relationship;
   - floor-plan agreements;
   - hazard insurance with the bank named as loss payee;
   - collateral valuations, such as National Automobile Dealers Association used car guide;
   - manufacturer's invoices for new units;
   - drafting agreements with manufacturers;
   - floor-plan inspections;
   - financing statement (and related searches) filed with the applicable state agency;
     — Ideally, there are at least two Uniform Commercial Code searches with the Secretary of State or applicable state agency. The first search should be completed before filing to determine the existence of prior secured creditors. The second search should be after filing—and before disbursement—to determine whether the bank's security interest was appropriately recorded.
   - inter-creditor agreements, if the borrower has more than one floor-plan creditor;
   - Manufacturer's Statement of Origin (MSO), titles, and trust receipts;
     — Titles and MSOs may be retained by the borrower to facilitate the sales process, for example to get a new title issued for a sold vehicle. If the borrower is in weak financial condition, banks often hold these documents. In most banks, the security interest to floor-plan inventory is evidenced by a trust receipt. This document is issued to the lender by the dealer. It establishes the bank's rights to the inventory collateral.
   - wholesale letter of credit and drafting authority; and

- limited power of attorney giving the bank the authority to prepare and sign lien documents for the dealer.

4. Determine whether floor-plan agreements contain the following information:
   - maximum advances for each unit;
     — For new units, advance rates are usually expressed as a percentage of cost. For used units, the advance rate may be expressed as a maximum percentage of value from a defined valuation source, e.g., Kelley Blue Book.
   - method used to advance funds;
     — Methods may include advancing funds directly to the manufacturer or dealer. Drafts advanced directly to a dealer elevate risk to the bank.
   - method used to perfect the security interest (vary by state);
   - location of collateral;
   - frequency of floor-plan inspections;
   - repayment schedule, including the timing of payments following the sale of units;
     — The timing of payments is commonly referred to as the release period. The greater the release period, the more risk assumed by the bank.
   - insurance requirements;
   - repurchase agreement with the manufacturer for new units;
   - periodic curtailment program for unsold units (may not be necessary if there is a repurchase agreement); and
   - loan covenants relating to liquidity levels, working capital, and tangible equity.
     — Examiners should compare bank covenants with any manufacturer-required minimums.
5. Review changes in floor-plan lending activities since the previous examination and determine whether policy guidelines, credit administration practices, and staffing levels are appropriate for current and planned lending strategies.
6. Review dealers' financial statements and assess the ability to service the debt. (Debt and inventory levels should move in the same direction. Be aware that floor-planned items might be shifted between dealers.)
   - Compare the number of units sold as shown on the statement with floor-plan payoff activity.
   - Evaluate the mix of units/vehicles sold (new, used, full-size, compact, etc.).
   - Review the inventory reconcilement. Reconcilements for new and used inventory contain different elements, as shown in the following tables.

For New Inventory

New Unit Inventory (Before LIFO Adj.)	$X,XXXM
Plus New Unit Contracts in Transit*	$X,XXXM
Total New Assets	$X,XXXM
Less New Units Floor-plan Liability	($X,XXXM)
New Unit Equity (Deficit)	$X,XXXM

* Inventory sold through retail installment contracts for which the dealership has not yet been paid

Note: When there is a deficit balance, management typically assesses the deficit relative to the cost of vehicles expected to be sold during the dealership's release period (cost of average day's new vehicle sales times the number of days in the release period). A deficit that significantly exceeds the amount expected based on the release period may indicate a default of the floor-plan agreement. Management's assessment of whether the dealership maintains sufficient cash to offset a deficit should be reviewed in these cases.

For Used Inventory

Used Unit Inventory (Before LIFO Adj.)	$X,XXXM
Plus Used Unit Contracts in Transit	$X,XXXM
Total Used Assets	$X,XXXM
Less Lien Payoff Liability*	($X,XXXM)
Less Used Units Floor-plan Liability	($X,XXXM)
Used Unit Equity (Deficit)	$X,XXXM

* Units taken as trade-ins where the customer's existing loan has not yet been paid-off by the dealership

Because used units are not typically financed at full value, used inventory reconcilements normally show significant used equity. A reconcilement with an equity deficit may indicate a default in the floor-plan agreement and a lack of working capital at the dealership. Well-capitalized dealerships often maintain significant amounts of used-unit equity as a source of working capital, as these units can be quickly converted into cash.

- Evaluate the revenue mix to identify trends in new and used vehicle sales, parts and service revenue, and income from finance and insurance activities (i.e., fee income from financing the loan or the sale of credit life insurance).
- Review accounts payable. Determine whether the dealer owes other dealers for inventory purchases.
- If the dealer has more than one floor-plan creditor, determine how management ensures the dealer is not double pledging the collateral, such as use of an inter-creditor agreement governing collateral allocation in the event of default.
- Review account receivable/payable agings.
- Review all inventory turnover reports.
- Evaluate overdraft activity and returned items for dealers.
- Determine that drafting agreements are not abused by the dealer.
- Assess dealerships' global cash flow to determine its sufficiency to cover fixed and variable expenses, as well as service all debt (including dealership related debt personally owed by dealership principals). (A common reason for floor-plan defaults is the diversion of sale proceeds.)

7. Determine whether the bank is over-advancing funds compared to collateral values. Generally, new and used automobiles are financed at a maximum of 100 percent of invoice cost and 90 percent of wholesale value, respectively. Advance rates for other items (manufactured homes, boats, etc.) are typically capped at 100 percent of the invoice for new units and some percentage of market value for used items.
8. Determine whether the lending staff is familiar with the dollar fluctuations in floor-plan loans and periodically evaluate the level of floor-plan debt relative to inventory values.
9. Determine whether the lending staff is aware of risks associated with inventory financing. The following items may indicate problems with floor-plan arrangements:
   - delinquent notes, unpaid interest, lack of required curtailments, and maturities extended beyond reasonable expectation;
   - dealer errors are increasing (wrong vehicles paid off, wrong vehicles added to floor-plan, sold inventory not paid off, wrong retail draft submitted, etc.);
   - increased number of reversed sales;
   - transfer of vehicles between multiple business locations;
   - errors are predominantly in favor of the dealer;
   - an unusual number of follow-ups are required to resolve errors;
   - previously detected errors continue to occur;
   - employee turnover at the dealership is increasing;
   - the amount of missing information on retail sales is increasing (i.e., folders are missing copies of the sales contract, purchaser's insurance information, forms to register/title the vehicle, etc.);
   - floor-plan activity is not consistent with special promotions at the dealership;
   - vehicles added to demonstrator service occur right before or during a floor-plan inspection (which could indicate misuse of the units); and
   - changes in external factors, such as competition or the national, regional, and local economy.
10. Review floor-plan lending reports generated for senior management and the board of directors.
    - determine the adequacy of the bank's accounting system for floored units (i.e., identified by make, model, vehicle identification number, dealer control number, date floored, and curtailment history).
    - determine whether there are well-developed monitoring systems and risk management practices in place commensurate to the size and complexity of the institution's exposure. Reports for the floor-plan lending portfolio generally should include the following items:
      — overall portfolio exposures;
      — concentrations (i.e., dealers, vehicle types, geographic, risk ratings);
      — policy exceptions, including discrepancies that indicate out-of-trust activity; and

— covenant compliance.

11. Assess the adequacy of the collateral inspections. Consideration should be given to the following:
    - scope and frequency of collateral inspections should match risk profiles and include an element of surprise;
    - expertise and independence of collateral inspectors, including sufficient rotation of inspectors to avert collusion;
    - completeness and accuracy of the inventory reconcilement;
      — Inspections should evidence that the dealer's floored inventory list reconciles to the dealer's general ledger and to the bank's listing of floored units.
    - timely reporting of, and responsiveness to, adverse inspection findings (such as payments outside of the dealership's release period, or use of units not designated as demonstrators);
    - adequacy of the floor-plan inspection template (i.e., serial number, condition, location of unit, and date inspection performed); and
    - independent review of the collateral inspection process.
12. Determine whether designated staff perform the following procedures during floor-plan inspections:
    - check financed units to confirm the accuracy of inventories, physical conditions, locations (if other than normal place of business) and odometer or hour-meter readings, as applicable;
    - investigate discrepancies;
    - promptly notify bank management of inventory not found on the dealer's premises during inspections;
    - maintain written documentation on all inspections, including follow-up on units not found on the dealer's premises;
    - verify that units reported as sold and unpaid are documented by related finance contracts in transit or payments-in-process, and that such processing is reasonable;
    - ensure the dealer immediately pays off units that are reported as sold, but are not in the process of payment and are outside of the established release period; and
    - report inspection results to senior management.
13. If the bank uses a third-party provider for collateral inspections, determine whether the bank has adequate processes and controls to evaluate, establish, maintain, and monitor the relationships.
14. If the situation warrants, examiners should perform a floor-plan inspection or direct management to obtain an independent third-party inspection given conditions, such as
    - infrequent or nonexistent floor-plan inspections;
    - items are consistently found missing during floor-plan inspections;
    - dealer is experiencing financial difficulties;
    - a significant out-of-trust situation was discovered during the bank's most recent inspection of units or reconciliation of the financial statement; and
    - inventory reconcilements reflect an equity deficit that significantly exceeds the amount expected based on the release period.

Leveraged lending has been a financing vehicle for transactions involving mergers and acquisitions, business recapitalizations, and business expansions.[1] It is an important type of financing for national and global economies, and the U.S. financial industry plays an integral role in making credit available and syndicating that credit to investors. Leveraged transactions are characterized by a degree of financial leverage that may significantly exceed industry norms as measured by ratios such as debt-to-assets, debt-to-equity, cash flow-to-total debt, or other ratios and standards that are unique to a particular industry. Leveraged borrowers, however, can have a diminished ability to respond to changing economic conditions or unexpected events, creating significant implications for an institution's overall credit-risk exposure and challenges for bank risk-management systems.

Leveraged lending activities can be conducted in a safe-and-sound fashion if pursued with a risk-management structure that provides for the appropriate underwriting, pricing, monitoring, and controls. Comprehensive credit analysis processes, frequent monitoring, and detailed portfolio reports are needed to better understand and manage the inherent risk in leveraged portfolios. Sound valuation methodologies must be used in addition to ongoing stress testing and monitoring.

Financial institutions should ensure they do not unnecessarily heighten risks by originating and then distributing poorly underwritten loans.[2] For example, a poorly underwritten leveraged loan that is pooled with other loans or is participated with other institutions may generate risks for the financial system. The leveraged lending guidance that follows is designed to assist financial institutions in providing leveraged lending to creditworthy borrowers in a safe-and-sound manner.

On March 21, 2013, the Federal Reserve Board, along with the Office of the Comptroller of the Currency (OCC) and the Federal Deposit Insurance Corporation (FDIC), issued ''Interagency Guidance on Leveraged Lending.''[3] The statement provides guidance about risk rating leveraged-financed loans. See SR-13-3 and its attachment.

INTERAGENCY GUIDANCE ON LEVERAGED LENDING

The vast majority of community banks should not be affected by this guidance, as they have limited involvement in leveraged lending. Community and smaller institutions that are involved in leveraged lending activities should discuss with their primary regulator the implementation of cost-effective controls appropriate for the complexity of their exposures and activities.[4]

Risk-Management Framework

Given the high-risk profile of leveraged transactions, financial institutions engaged in leveraged lending should adopt a risk-management framework that has an intensive and frequent review and monitoring process. The framework should have as its foundation written risk objectives, risk-acceptance criteria, and risk controls. A lack of robust risk-management processes and controls at a financial institution with significant leveraged lending activities could contribute to supervisory findings that the financial institution

1. For the purpose of this guidance, references to leveraged finance, or leveraged transactions encompass the entire debt structure of a leveraged obligor (including loans and letters of credit, mezzanine tranches, senior and subordinated bonds) held by both bank and nonbank investors. References to leveraged lending and leveraged loan transactions and credit agreements refer to all debt with the exception of bond and high-yield debt held by both bank and nonbank investors.

2. For purposes of this guidance, the term ''financial institution'' or ''institution'' includes national banks, federal savings associations, and federal branches and agencies supervised by the OCC; state member banks, bank holding companies, savings and loan holding companies, and all other institutions for which the Federal Reserve is the primary federal supervisor; and state nonmember banks, foreign banks having an insured branch, state savings associations, and all other institutions for which the FDIC is the primary federal supervisor.

3. This guidance augments previously issued supervisory statements on sound credit-risk management. Refer to SR-98-18, ''Lending Standards for Commercial Loans'' (see also sections 2040.1, ''Loan Portfolio Management,'' and 2040.3, ''Loan Portfolio Management—Examination Procedures,'' in this manual).

4. The agencies do not intend that a financial institution that originates a small number of less complex, leveraged loans should have policies and procedures commensurate with a larger, more complex leveraged loan origination business. However, any financial institution that participates in leveraged lending transactions should follow applicable supervisory guidance provided in ''Participations Purchased'' of this section.

is engaged in unsafe and unsound banking practices. This guidance outlines the agencies' minimum expectations on the following topics:

- Leveraged Lending Definition
- General Policy Expectations
- Participations Purchased
- Underwriting Standards
- Valuation Standards
- Pipeline Management
- Reporting and Analytics
- Risk Rating Leveraged Loans
- Credit Analysis
- Problem-Credit Management
- Deal Sponsors
- Credit Review
- Stress Testing
- Conflicts of Interest
- Reputational Risk
- Compliance

Leveraged Lending Definition

The policies of financial institutions should include criteria to define leveraged lending that are appropriate to the institution.[5] For example, numerous definitions of leveraged lending exist throughout the financial services industry and commonly contain some combination of the following:

- proceeds used for buyouts, acquisitions, or capital distributions
- transactions where the borrower's Total Debt divided by EBITDA (earnings before interest, taxes, depreciation, and amortization) or Senior Debt divided by EBITDA exceed 4.0 * EBITDA or 3.0 * EBITDA, respectively, or other defined levels appropriate to the industry or sector[6]
- a borrower recognized in the debt markets as a highly leveraged firm, which is characterized by a high debt-to-net-worth ratio
- transactions when the borrower's post-financing leverage, as measured by its leverage ratios (for example, debt-to-assets, debt-to-net-worth, debt-to-cash flow, or other similar standards common to particular industries or sectors), significantly exceeds industry norms or historical levels[7]

A financial institution engaging in leveraged lending should define it within the institution's policies and procedures in a manner sufficiently detailed to ensure consistent application across all business lines. A financial institution's definition should describe clearly the purposes and financial characteristics common to these transactions, and should cover risk to the institution from both direct exposure and indirect exposure via limited-recourse financing secured by leveraged loans, or financing extended to financial intermediaries (such as conduits and special purpose entities (SPEs)) that hold leveraged loans.

General Policy Expectations

A financial institution's credit policies and procedures for leveraged lending should address the following:

- Identification of the financial institution's risk appetite, including clearly defined amounts of leveraged lending that the institution is willing to underwrite (for example, pipeline limits) and is willing to retain (for example, transaction and aggregate hold levels). The institution's designated risk appetite should be supported by an analysis of the potential effect on earnings, capital, liquidity, and other risks that result from these positions, and should be approved by its board of directors.
- A limit framework that includes limits or guidelines for single obligors and transactions, aggregate hold portfolio, aggregate pipeline exposure, and industry and geographic concentrations. The limit framework should identify the related management-approval authorities and exception-tracking provisions. In addition to notional pipeline limits, the agencies expect that financial institutions with significant leveraged transactions will imple-

5. This guidance is not meant to include asset-based loans unless such loans are part of the entire debt structure of a leveraged obligor. Asset-based lending is a distinct segment of the loan market that is tightly controlled or fully monitored, secured by specific assets, and usually governed by a borrowing formula (or ''borrowing base'').

6. Cash should not be netted against debt for purposes of this calculation.

7. The designation of a financing as ''leveraged lending'' is typically made at loan origination, modification, extension, or refinancing. ''Fallen angels'' or borrowers that have exhibited a significant deterioration in financial performance after loan inception and subsequently become highly leveraged would not be included within the scope of this guidance, unless the credit is modified, extended, or refinanced.

ment underwriting-limit frameworks that assess stress losses, flex terms, economic capital usage, and earnings at risk or that otherwise provide a more nuanced view of potential risk.[8]
- Procedures for ensuring the risks of leveraged lending activities are appropriately reflected in an institution's allowance for loan and lease losses (ALLL) and capital adequacy analyses.
- Credit and underwriting approval authorities, including the procedures for approving and documenting changes to approved transaction structures and terms.
- Guidelines for appropriate oversight by senior management, including adequate and timely reporting to the board of directors.
- Expected risk-adjusted returns for leveraged transactions.
- Minimum underwriting standards (see the "Underwriting Standards" section below).
- Effective underwriting practices for primary loan origination and secondary loan acquisition.

Participations Purchased

Financial institutions purchasing participations and assignments in leveraged lending transactions should make a thorough, independent evaluation of the transaction and the risks involved before committing any funds.[9] They should apply the same standards of prudence, credit assessment and approval criteria, and in-house limits that would be employed if the purchasing organization were originating the loan. At a minimum, policies should include requirements for

- obtaining and independently analyzing full credit information both before the participation is purchased and on a timely basis thereafter;
- obtaining from the lead lender copies of all executed and proposed loan documents, legal opinions, title insurance policies, Uniform Commercial Code (UCC) searches, and other relevant documents;
- carefully monitoring the borrower's performance throughout the life of the loan; and
- establishing appropriate risk-management guidelines as described in this document.

Underwriting Standards

A financial institution's underwriting standards should be clear, written, and measurable, and should accurately reflect the institution's risk appetite for leveraged lending transactions. A financial institution should have clear underwriting limits regarding leveraged transactions, including the size that the institution will arrange both individually and in the aggregate for distribution. The originating institution should be mindful of reputational risks associated with poorly underwritten transactions, as these risks may find their way into a wide variety of investment instruments and exacerbate systemic risks within the general economy. At a minimum, an institution's underwriting standards should consider the following:

- Whether the business premise for each transaction is sound and the borrower's capital structure is sustainable regardless of whether the transaction is underwritten for the institution's own portfolio or with the intent to distribute. The entirety of a borrower's capital structure should reflect the application of sound financial analysis and underwriting principles.
- A borrower's capacity to repay and the ability to de-lever to a sustainable level over a reasonable period. As a general guide, institutions also should consider whether base-case cash-flow projections show the ability to fully amortize senior secured debt or repay a significant portion of total debt over the medium term.[10] Also, projections should

8. Flex terms allow the arranger to change interest-rate spreads during the syndication process to adjust pricing to current liquidity levels.

9. Refer to other joint agency guidance regarding purchased participations: OCC *Loan Portfolio Management Handbook*, www.occ.gov/publications/publications-by-type/comptrollers-handbook/lpm.pdf, "Loan Participations"; Board *Commercial Bank Examination Manual*, section 2045.1, "Loan Participations, the Agreements and Participants"; and FDIC *Risk Management Manual of Examination Policies*, "Section 3.2—Loans," www.fdic.gov/regulations/safety/manual/section3-2.html#otherCredit, Loan Participations (last updated Feb. 2, 2005).

10. In general, the base-case cash-flow projection is the borrower or deal sponsor's expected estimate of financial performance using the assumptions that are deemed most likely to occur. The financial results for the base case should be better than those for the conservative case but worse than those for the aggressive or upside case. A financial institution may adjust the base-case financial projections, if necessary. The most realistic financial projections should be used when

include one or more realistic downside scenarios that reflect key risks identified in the transaction.
- Expectations for the depth and breadth of due diligence on leveraged transactions. This should include standards for evaluating various types of collateral, with a clear definition of credit-risk-management's role in such due diligence.
- Standards for evaluating expected risk-adjusted returns. The standards should include identification of expected distribution strategies, including alternative strategies for funding and disposing of positions during market disruptions, and the potential for losses during such periods.
- The degree of reliance on enterprise value and other intangible assets for loan repayment, along with acceptable valuation methodologies, and guidelines for the frequency of periodic reviews of those values.
- Expectations for the degree of support provided by the sponsor (if any), taking into consideration the sponsor's financial capacity, the extent of its capital contribution at inception, and other motivating factors. Institutions looking to rely on sponsor support as a secondary source of repayment for the loan should be able to provide documentation, including, but not limited to, financial or liquidity statements, showing recently documented evidence of the sponsor's willingness and ability to support the credit extension.
- Whether credit-agreement terms allow for the material dilution, sale, or exchange of collateral or cash-flow-producing assets without lender approval.
- Credit-agreement covenant protections, including financial performance (such as debt-to-cash flow, interest coverage, or fixed-charge coverage), reporting requirements, and compliance monitoring. Generally, a leverage level after planned asset sales (that is, the amount of debt that must be serviced from operating cash flow) in excess of 6* Total Debt/EBITDA raises concerns for most industries.
- Collateral requirements in credit agreements that specify acceptable collateral and risk-appropriate measures and controls, including acceptable collateral types, loan-to-value guidelines, and appropriate collateral-valuation methodologies. Standards for asset-based loans that are part of the entire debt structure also should outline expectations for the use of collateral controls (for example, inspections, independent valuations, and payment lockbox), other types of collateral and account maintenance agreements, and periodic reporting requirements.
- Whether loan agreements provide for distribution of ongoing financial and other relevant credit information to all participants and investors.

Nothing in the preceding standards should be considered to discourage providing financing to borrowers engaged in workout negotiations, or as part of a pre-packaged financing under the bankruptcy code. Neither are they meant to discourage well-structured, standalone asset-based credit facilities to borrowers with strong lender monitoring and controls, for which a financial institution should consider separate underwriting and risk-rating guidance.

Valuation Standards

Institutions often rely on enterprise value and other intangibles when (1) evaluating the feasibility of a loan request; (2) determining the debt reduction potential of planned asset sales; (3) assessing a borrower's ability to access the capital markets; and (4) estimating the strength of a secondary source of repayment. Institutions may also view enterprise value as a useful benchmark for assessing a sponsor's economic incentive to provide financial support. Given the specialized knowledge needed for the development of a credible enterprise valuation and the importance of enterprise valuations in the underwriting and ongoing risk-assessment processes, enterprise valuations should be performed by qualified persons independent of an institution's origination function.

There are several methods used for valuing businesses. The most common valuation methods are assets, income, and market. Asset valuation methods consider an enterprise's underlying assets in terms of its net going-concern or liquidation value. Income valuation methods consider an enterprise's ongoing cash flows or earnings and apply appropriate capitalization or discounting techniques. Market valuation methods derive value multiples from comparable company data or sales transactions. However, final value estimates should be based on the

measuring a borrower's capacity to repay and de-lever.

method or methods that give supportable and credible results. In many cases, the income method is generally considered the most reliable.

There are two common approaches employed when using the income method. The ‘‘capitalized cash flow’’ method determines the value of a company as the present value of all future cash flows the business can generate in perpetuity. An appropriate cash flow is determined and then divided by a risk-adjusted capitalization rate, most commonly the weighted average cost of capital. This method is most appropriate when cash flows are predictable and stable. The ‘‘discounted cash flow’’ method is a multiple-period valuation model that converts a future series of cash flows into current value by discounting those cash flows at a rate of return (referred to as the ‘‘discount rate’’) that reflects the risk inherent therein. This method is most appropriate when future cash flows are cyclical or variable over time. Both income methods involve numerous assumptions, and therefore, supporting documentation should fully explain the evaluator’s reasoning and conclusions.

When a borrower is experiencing a financial downturn or facing adverse market conditions, a lender should reflect those adverse conditions in its assumptions for key variables such as cash flow, earnings, and sales multiples when assessing enterprise value as a potential source of repayment. Changes in the value of a borrower’s assets should be tested under a range of stress scenarios, including business conditions more adverse than the base-case scenario. Stress tests of enterprise values and their underlying assumptions should be conducted and documented at origination of the transaction and periodically thereafter, incorporating the actual performance of the borrower and any adjustments to projections. The institution should perform its own discounted cash-flow analysis to validate the enterprise value implied by proxy measures such as multiples of cash flow, earnings, or sales.

Enterprise value estimates derived from even the most rigorous procedures are imprecise and ultimately may not be realized. Therefore, institutions relying on enterprise value or illiquid and hard-to-value collateral should have policies that provide for appropriate loan-to-value ratios, discount rates, and collateral margins. Based on the nature of an institution’s leveraged lending activities, the institution should establish limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value. Regardless of the methodology used, the assumptions underlying enterprise value estimates should be clearly documented, well supported, and understood by the institution’s appropriate decisionmakers and risk-oversight units. Further, an institution’s valuation methods should be appropriate for the borrower’s industry and condition.

Pipeline Management

Market disruptions can substantially impede the ability of an underwriter to consummate syndications or otherwise sell down exposures, which may result in material losses. Accordingly, financial institutions should have strong risk management and controls over transactions in the pipeline, including amounts to be held and those to be distributed. A financial institution should be able to differentiate transactions according to tenor, investor class (for example, pro-rata and institutional), structure, and key borrower characteristics (for example, industry).

In addition, an institution should develop and maintain the following:

- A clearly articulated and documented appetite for underwriting risk that considers the potential effects on earnings, capital, liquidity, and other risks that result from pipeline exposures.
- Written policies and procedures for defining and managing distribution failures and ‘‘hung’’ deals, which are identified by an inability to sell down the exposure within a reasonable period (generally 90 days from transaction closing). The financial institution’s board of directors and management should establish clear expectations for the disposition of pipeline transactions that are not sold according to their original distribution plan. Such transactions that are subsequently reclassified as hold-to-maturity should also be reported to management and the board of directors.
- Guidelines for conducting periodic stress tests on pipeline exposures to quantify the potential impact of changing economic and market conditions on the institution’s asset quality, earnings, liquidity, and capital.
- Controls to monitor performance of the pipeline against original expectations, and regular reports of variances to management, including the amount and timing of syndication and

distribution variances and reporting of recourse sales to achieve distribution.
- Reports that include individual and aggregate transaction information that accurately risk rates credits and portrays risk and concentrations in the pipeline.
- Limits on aggregate pipeline commitments.
- Limits on the amount of loans that an institution is willing to retain on its own books (that is, borrower, counterparty, and aggregate hold levels), and limits on the underwriting risk that will be undertaken for amounts intended for distribution.
- Policies and procedures that identify acceptable accounting methodologies and controls in both functional as well as dysfunctional markets, and that direct prompt recognition of losses in accordance with generally accepted accounting principles.
- Policies and procedures addressing the use of hedging to reduce pipeline and hold exposures, which should address acceptable types of hedges and the terms considered necessary for providing a net credit exposure after hedging.
- Plans and provisions addressing contingent liquidity and compliance with the Board's Regulation W (12 CFR part 223) when market illiquidity or credit conditions change, interrupting normal distribution channels.

Reporting and Analytics

The agencies expect financial institutions to diligently monitor higher-risk credits, including leveraged loans. A financial institution's management should receive comprehensive reports about the characteristics and trends in such exposures at least quarterly, and summaries should be provided to the institution's board of directors. Policies and procedures should identify the fields to be populated and captured by a financial institution's Management Information Systems, which should yield accurate and timely reporting to management and the board of directors that may include the following:

- Individual and portfolio exposures within and across all business lines and legal vehicles, including the pipeline.
- Risk rating distribution and migration analysis, including maintenance of a list of those borrowers who have been removed from the leveraged portfolio due to improvements in their financial characteristics and overall risk profile.
- Industry mix and maturity profile.
- Metrics derived from probabilities of default and loss given default.
- Portfolio performance measures, including noncompliance with covenants, restructurings, delinquencies, non-performing amounts, and charge-offs.
- Amount of impaired assets and the nature of impairment (that is, permanent, or temporary), and the amount of the ALLL attributable to leveraged lending.
- The aggregate level of policy exceptions and the performance of that portfolio.
- Exposures by collateral type, including unsecured transactions and those where enterprise value will be the source of repayment for leveraged loans. Reporting should also consider the implications of defaults that trigger pari passu (in a fair way) treatment for all lenders and, thus, dilute the secondary support from the sale of collateral.
- Secondary-market-pricing data and trading volume, when available.
- Exposures and performance by deal sponsors. Deals introduced by sponsors may, in some cases, be considered exposure to related borrowers. An institution should identify, aggregate, and monitor potential related exposures.
- Gross and net exposures, hedge counterparty concentrations, and policy exceptions.
- Actual versus projected distribution of the syndicated pipeline, with regular reports of excess levels over the hold targets for the syndication inventory. Pipeline definitions should clearly identify the type of exposure. This includes committed exposures that have not been accepted by the borrower, commitments accepted but not closed, and funded and unfunded commitments that have closed but have not been distributed.
- Total and segmented leveraged lending exposures, including subordinated debt and equity holdings, alongside established limits. Reports should provide a detailed and comprehensive view of global exposures, including situations when an institution has indirect exposure to an obligor or is holding a previously sold position as collateral or as a reference asset in a derivative.
- Borrower and counterparty leveraged lending reporting should consider exposures booked in other business units throughout the institu-

tion, including indirect exposures such as default swaps and total return swaps, naming the distributed paper as a covered or referenced asset or collateral exposure through repo transactions. Additionally, the institution should consider positions held in available-for-sale or traded portfolios or through structured investment vehicles owned or sponsored by the originating institution or its subsidiaries or affiliates.

Risk Rating Leveraged Loans

Previously, the agencies issued guidance on rating credit exposures and credit-rating systems, which applies to all credit transactions, including those in the leveraged lending category.[11]

The risk rating of leveraged loans involves the use of realistic repayment assumptions to determine a borrower's ability to de-lever to a sustainable level within a reasonable period. For example, supervisors commonly assume that the ability to fully amortize senior secured debt or the ability to repay at least 50 percent of total debt over a five- to seven-year period provides evidence of adequate repayment capacity. If the projected capacity to pay down debt from cash flow is nominal with refinancing the only viable option, the credit will usually be adversely rated even if it has been recently underwritten. In cases when leveraged loan transactions have no reasonable or realistic prospects to de-lever, a substandard rating is likely. Furthermore, when assessing debt service capacity, extensions and restructures should be scrutinized to ensure that the institution is not merely masking repayment capacity problems by extending or restructuring the loan.

If the primary source of repayment becomes inadequate, the agencies believe that it would generally be inappropriate for an institution to consider enterprise value as a secondary source of repayment unless that value is well supported. Evidence of well-supported value may include binding purchase and sale agreements with qualified third parties or thorough asset valuations that fully consider the effect of the borrower's distressed circumstances and potential changes in business and market conditions. For such borrowers, when a portion of the loan may not be protected by pledged assets or a well-supported enterprise value, examiners generally will rate that portion doubtful or loss and place the loan on nonaccrual status.

11. Board SR Letter 98-25, "Sound Credit Risk Management and the Use of Internal Credit Risk Ratings at Large Banking Organizations"; OCC *Comptroller's Handbooks* "Rating Credit Risk" and "Leveraged Lending"; and FDIC *Risk Management Manual of Examination Policies*, "Loan Appraisal and Classification."

Credit Analysis

Effective underwriting and management of leveraged lending risk is highly dependent on the quality of analysis employed during the approval process as well as ongoing monitoring. A financial institution's policies should address the need for a comprehensive assessment of financial, business, industry, and management risks including, whether

- cash-flow analyses rely on overly optimistic or unsubstantiated projections of sales, margins, and merger and acquisition synergies;
- liquidity analyses include performance metrics appropriate for the borrower's industry, predictability of the borrower's cash flow, measurement of the borrower's operating cash needs, and ability to meet debt maturities;
- projections exhibit an adequate margin for unanticipated merger-related integration costs;
- projections are stress tested for one or more downside scenarios, including a covenant breach;
- transactions are reviewed at least quarterly to determine variance from plan, the related risk implications, and the accuracy of risk ratings and accrual status. From inception, the credit file should contain a chronological rationale for and analysis of all substantive changes to the borrower's operating plan and variance from expected financial performance;
- enterprise and collateral valuations are independently derived or validated outside of the origination function, are timely, and consider potential value erosion;
- collateral liquidation and asset sale estimates are based on current market conditions and trends;
- potential collateral shortfalls are identified and factored into risk rating and accrual decisions;
- contingency plans anticipate changing conditions in debt or equity markets when expo-

sures rely on refinancing or the issuance of new equity; and
- the borrower is adequately protected from interest rate and foreign exchange risk.

Problem-Credit Management

A financial institution should formulate individual action plans when working with borrowers experiencing diminished operating cash flows, depreciated collateral values, or other significant plan variances. Weak initial underwriting of transactions, coupled with poor structure and limited covenants, may make problem-credit discussions and eventual restructurings more difficult for an institution as well as result in less favorable outcomes.

A financial institution should formulate credit policies that define expectations for the management of adversely rated and other high-risk borrowers whose performance departs significantly from planned cash flows, asset sales, collateral values, or other important targets. These policies should stress the need for workout plans that contain quantifiable objectives and measureable time frames. Actions may include working with the borrower for an orderly resolution while preserving the institution's interests, sale of the credit in the secondary market, or liquidation of collateral. Problem credits should be reviewed regularly for risk rating accuracy, accrual status, recognition of impairment through specific allocations, and charge-offs.

Deal Sponsors

A financial institution that relies on sponsor support as a secondary source of repayment should develop guidelines for evaluating the qualifications of financial sponsors and should implement processes to regularly monitor a sponsor's financial condition. Deal sponsors may provide valuable support to borrowers such as strategic planning, management, and other tangible and intangible benefits. Sponsors may also provide sources of financial support for borrowers that fail to achieve projections. Generally, a financial institution rates a borrower based on an analysis of the borrower's standalone financial condition. However, a financial institution may consider support from a sponsor in assigning internal risk ratings when the institution can document the sponsor's history of demonstrated support as well as the economic incentive, capacity, and stated intent to continue to support the transaction. However, even with documented capacity and a history of support, the sponsor's potential contributions may not mitigate supervisory concerns absent a documented commitment of continued support. An evaluation of a sponsor's financial support should include the following:

- the sponsor's historical performance in supporting its investments, financially and otherwise
- the sponsor's economic incentive to support, including the nature and amount of capital contributed at inception
- documentation of degree of support (for example, a guarantee, comfort letter, or verbal assurance)
- consideration of the sponsor's contractual investment limitations
- to the extent feasible, a periodic review of the sponsor's financial statements and trends, and an analysis of its liquidity, including the ability to fund multiple deals
- consideration of the sponsor's dividend and capital contribution practices
- the likelihood of the sponsor supporting a particular borrower compared to other deals in the sponsor's portfolio
- guidelines for evaluating the qualifications of a sponsor and a process to regularly monitor the sponsor's performance

Credit Review

A financial institution should have a strong and independent credit-review function that demonstrates the ability to identify portfolio risks and documented authority to escalate inappropriate risks and other findings to its senior management. Due to the elevated risks inherent in leveraged lending, and depending on the relative size of a financial institution's leveraged lending business, the institution's credit-review function should assess the performance of the leveraged portfolio more frequently and in greater depth than other segments in the loan portfolio. Such assessments should be performed by individuals with the expertise and experience for these types of loans and the borrower's industry. Portfolio reviews should generally be conducted at least annually. For many financial institutions, the risk characteristics of leveraged portfolios, such as high reliance on enterprise value, concentrations, adverse risk rating trends, or portfolio performance, may dictate reviews that are more frequent.

A financial institution should staff its internal credit-review function appropriately and ensure that the function has sufficient resources to ensure timely, independent, and accurate assessments of leveraged lending transactions. Reviews should evaluate the level of risk, risk rating integrity, valuation methodologies, and the quality of risk management. Internal credit reviews should include the review of the institution's leveraged lending practices, policies, and procedures to ensure that they are consistent with regulatory guidance.

Stress Testing

A financial institution should develop and implement guidelines for conducting periodic portfolio stress tests on loans originated to hold as well as loans originated to distribute, and sensitivity analyses to quantify the potential impact of changing economic and market conditions on its asset quality, earnings, liquidity, and capital.[12] The sophistication of stress testing practices and sensitivity analyses should be consistent with the size, complexity, and risk characteristics of the institution's leveraged loan portfolio. To the extent a financial institution is required to conduct enterprise-wide stress tests, the leveraged portfolio should be included in any such tests.

12. See interagency guidance "Supervisory Guidance on Stress Testing for Banking Organizations with More Than $10 Billion in Total Consolidated Assets" (see Board SR Letter 12-7 and its attachment), 77 *Fed. Reg.* 29458 (May 17, 2012), at www.gpo.gov/fdsys/pkg/FR-2012-05-17/html/2012-11989.htm, and the joint "Statement to Clarify Supervisory Expectations for Stress Testing by Community Banks," May 14, 2012, by the OCC at www.occ.gov/news-issuances/news-releases/2012/nr-ia-2012-76a.pdf; the Board at www.federalreserve.gov/newsevents/press/bcreg/bcreg20120514b1.pdf; and the FDIC at www.fdic.gov/news/news/press/2012/pr12054a.pdf. See also FDIC final rule, Annual Stress Test, 77 *Fed. Reg.* 62417 (Oct. 15, 2012) (to be codified at 12 CFR part 325, subpart C).

Conflicts of Interest

A financial institution should develop appropriate policies and procedures to address and to prevent potential conflicts of interest when it has equity and lending positions. For example, an institution may be reluctant to use an aggressive collection strategy with a problem borrower because of the potential impact on the value of an institution's equity interest. A financial institution may encounter pressure to provide financial or other privileged client information that could benefit an affiliated equity investor. Such conflicts also may occur when the underwriting financial institution serves as financial advisor to the seller and simultaneously offers financing to multiple buyers (that is, stapled financing). Similarly, there may be conflicting interests among the different lines of business within a financial institution or between the financial institution and its affiliates. When these situations occur, potential conflicts of interest arise between the financial institution and its customers. Policies and procedures should clearly define potential conflicts of interest, identify appropriate risk-management controls and procedures, enable employees to report potential conflicts of interest to management for action without fear of retribution, and ensure compliance with applicable laws. Further, management should have an established training program for employees on appropriate practices to follow to avoid conflicts of interest and provide for reporting, tracking, and resolution of any conflicts of interest that occur.

Reputational Risk

Leveraged lending transactions are often syndicated through the financial and institutional markets. A financial institution's apparent failure to meet its legal responsibilities in underwriting and distributing transactions can damage its market reputation and impair its ability to compete. Similarly, a financial institution that distributes transactions, which over time have significantly higher default or loss rates and performance issues, may also see its reputation damaged.

Compliance

The legal and regulatory issues raised by leveraged transactions are numerous and complex. To ensure potential conflicts are avoided and laws and regulations are adhered to, an institution's independent compliance function should periodically review the institution's leveraged lending activity. This guidance is consistent with the principles of safety and soundness and other agency guidance related to commercial lending.

In particular, because leveraged transactions often involve a variety of types of debt and bank products, a financial institution should ensure that its policies incorporate safeguards to prevent violations of anti-tying regulations. Section 106(b) of the Bank Holding Company Act Amendments of 1970[13] prohibits certain forms of product tying by financial institutions and their affiliates. The intent behind Section 106(b) is to prevent financial institutions from using their market power over certain products to obtain an unfair competitive advantage in other products.

In addition, equity interests and certain debt instruments used in leveraged transactions may constitute "securities" for the purposes of federal securities laws. When securities are involved, an institution should ensure compliance with applicable securities laws, including disclosure and other regulatory requirements. An institution should also establish policies and procedures to appropriately manage the internal dissemination of material, nonpublic information about transactions in which it plays a role.

13. 12 USC 1972.

1. *Risk-Management Framework, Definition, and Policy Expectations.* To determine
   a. whether the institution has established a sound definition of leveraged lending that is appropriate for the types of leveraged loans that are underwritten and if it can be applied across all business lines;
   b. whether it has adjusted (if necessary) its risk appetite and limit structure (including pipeline limits and overall portfolio limits) to conform with the institution's definition of leveraged lending and whether it has the necessary reporting in place to assess conformance with limits.
   c. if there are appropriate policies and procedures limits in place and if the institution maintains sound leveraged lending standards both for transactions that it intends to hold as well as transactions that are underwritten to distribute.
   d. if the institution's risk-management structure has strong and effective processes and controls and if they are appropriate based on its leveraged lending activity.
2. *Participations Purchased.* To ensure that the institution applies the same standards of prudence and credit assessment techniques and in-house limits that would apply as if it had originated the loan(s).
3. *Underwriting Standards.* To assess the effectiveness of the institution's underwriting policy standards for leveraged lending to determine whether they
   a. are clear, written, and measurable;
   b. contain underwriting limits that reflect the institution's definition and risk appetite for leveraged lending;
   c. are applied equally to loans that are originated to be held and to loans that are originated to distribute; and
   d. fully reflect the underwriting standards listed in the guidance, including
      i. sound business premise and sustainable capital structure for each transaction
      ii. capacity to repay and ability to de-lever to a sustainable level over a reasonable period
      iii. appropriate depth and breadth of due diligence
      iv. standards for valuating expected risk-adjusted returns
      v. appropriate credit agreement covenant protections
      vi. acceptable collateral agreements.
4. *Valuation Standards.* To determine
   a. whether enterprise valuation methodologies are appropriate to the borrower's industry and condition;
   b. whether the assumptions are clearly documented, well supported, and understood by the institution's appropriate decision makers and risk-oversight units;
   c. whether enterprise valuations are performed by qualified persons independent of an institution's origination function;
   d. whether an institution has policies and provides for appropriate loan-to-value ratios, discount rates and collateral margins for loans dependent on enterprise value or illiquid and hard-to-value collateral.
5. *Pipeline Management.* To find out if there are strong risk-management standards and controls over transactions in and to the pipeline and if those standards are applied uniformly to transactions held in the portfolio and those that are distributed.
6. *Reporting and Analytics.*
   a. To determine if individual and portfolio exposures within and across all business lines and legal vehicles are captured and reported in the appropriate amount of detail to senior management and the board.
   b. To determine if the necessary risk information (as outlined in the guidance) about leveraged lending exposures (portfolio holds and pipeline exposures) are captured in reports that are distributed timely and that adequate information is distributed to senior management and the institution's board of directors at least quarterly.
7. *Risk Rating.* To verify that leveraged loans are risk rated based on the borrower's ability to repay and de-lever to a sustainable level.

8. *Credit Analysis.*
   a. To test transactions to determine if underwriting practices are effective and comprehensive.
   b. To determine if individual leveraged lending exposures contain a comprehensive assessment of financial, business, industry, and management risks based on the elements of the guidance.
9. *Problem Credit Management.*
   a. To ascertain whether the institution formulates individual action plans and expectations.
   b. To evaluate workout plans to confirm that they contain quantifiable objectives and measureable time frames.
   c. To determine if problem credits are regularly reviewed for risk-rating accuracy, accrual status, impairment status, and charge off.
10. *Deal Sponsors.*
    a. To determine if the institution has guidelines for evaluating deal sponsors that are based on the sponsor's ability and willingness to support the transaction where sponsors are viewed as a source of repayment.
11. *Credit Review.*
    a. To ensure that the institution regularly conducts an independent credit review of the leveraged lending portfolio more frequently and in greater depth than other segments of the portfolio generally at least annually. For firms making significant changes to policies, underwriting standards, procedures, etc., ensure that a credit review is scheduled to test compliance with changes.
    b. To ensure that credit review personnel have the expertise and experience to evaluate leveraged loans.
12. *Stress Testing.*
    a. To determine if the institution is conducting periodic loan- and portfolio stress tests on leveraged loan portfolios or if the portfolio has been incorporated into enterprise-wide stress testing practices.
    b. To verify the effectiveness of the institution's periodic portfolio stress tests (in accordance with stress testing guidance) in identifying what effect economic and market events could have on the institution's financial condition and leveraged lending transactions.
13. *Conflict of Interest.* To determine
    a. if policies identify and if there are procedures to address transactions in which the institution holds both an equity and lending positions;
    b. the adequacy and effectiveness of controls and training programs that aim to curb any potential conflicts of interests that result from leveraged lending.
14. *Reputational Risk.*
    a. To determine if the institution has suffered reputational damage by failing to meet its legal responsibilities in underwriting and syndicating leveraged loan transactions into the wider financial market.

Complete or update the Leveraged Lending Internal Control Questionnaire if selected for implementation.

1. Based on an evaluation of internal controls, determine the scope of the examination. The scope should include exposures related through common ownership, guarantors, or sponsors. Also include direct and indirect leveraged lending exposure found in financial intermediaries formed to house or distribute leveraged loans (for example, CLOs, SPEs, conduits, etc.).
2. Examination procedures should include both a policy review and transaction testing approach to determine the effectiveness of the institution's leveraged lending control process.

If the institution is found to lack robust risk-management processes and controls around leveraged lending that reinforces the institution's risk profile, a supervisory finding of unsafe and unsound banking practices should be considered.

3. Applicability/Risk-Management Framework
   a. At the start of the examination, ascertain whether the institution has adopted an appropriate risk-management framework for leveraged lending that includes robust policies, procedures, and risk limits that have been approved by the board of directors.
   b. Implementation of this guidance should be consistent with the size and risk profile of the institution.
   c. All aspects of the guidance should be applied to institutions that originate and distribute leveraged loans.
   d. The section on Participations Purchased should be applied to banking organizations that have limited involvement in leveraged lending; community banks overall may not be materially affected by the guidance.
4. Definition of Leveraged Lending
   a. Determine if the institution has a written policy for leveraged lending and if that policy contains criteria for defining leveraged lending that are appropriate for the institution and consistent with the guidance standards.
   b. Determine if the institution's definition includes related exposures and direct and indirect exposures.
5. General Policy Expectations
   a. Review the policy for the key risk elements referred to in the guidance (See the section on General Policy Expectations in the guidance and in the Internal Control Questionnaire). Determine if the policy includes the following elements:
      - Risk Appetite that clearly defines the amount of leveraged lending the institution is willing to underwrite and is willing to retain.
      - Limit Framework for aggregate portfolio held on balance sheet, single obligors and transactions, aggregate pipeline exposure, industry and geographic concentrations. For institutions with significant underwriting exposure, determine if limits have been established for stress losses, flex terms, economic capital, or earnings at risk associated with leveraged loans.
      - Allowance for loan and lease losses (ALLL) and capital adequacy analysis that reflect the risk of leveraged lending activities.
      - Credit approval and underwriting authorities.
      - Guidelines for senior management oversight and timely reporting to senior management and the board of directors.
      - Expected risk adjusted returns.
      - Minimum underwriting standards.
      - Underwriting practices for origination and secondary loan acquisition.
6. Participations Purchased
   a. Ascertain if the institution participating or purchasing into a leveraged loan has a clear understanding of the credit and the risks involved and also has a clear understanding of its rights and responsibilities under the participation agreement.
   b. Determine if the institution has conducted its own independent underwriting of participations and has applied the same standards of prudence, credit assessment techniques, and in-house limits as if the institution had originated the loan(s).

   c. Verify that the institution has received copies of all participation documents and any other documents relevant to the credit transaction(s).
7. Underwriting Standards
   a. Determine if the institution employs similar and consistent underwriting standards for leveraged loans it plans to hold or it plans to distribute.
      - Confirm that the institution's underwriting standards are clear, written, measurable, and reflect the institution's policy-based risk appetite for leveraged lending.
      - Evaluate the underwriting policies and standards and determine if they contain the elements found in guidance. (Refer to the section on Underwriting Standards in the guidance and in the Internal Control Questionnaire.)
8. Valuation Standards
   a. Confirm that the institution has policies and procedures in place for estimating enterprise value or for valuing other illiquid collateral. If enterprise value is relied on as a secondary source of repayment, determine the following:
      - If one or a combination of the three methods referred to in the guidance is used (asset, income, or market valuation).
      - If the underlying assumptions and the resulting values are well documented, supportable, and credible. (Refer to the Valuations Standards section of the guidance and the Internal Control Questionnaire.)
      - If enterprise value was calculated by qualified persons independent of the origination function.
      - If stress tests of key enterprise value variables and assumptions (such as cash flow earnings and sales multiples) are conducted.
      - That firms have policies that provide for appropriate loan-to-value ratios, discount rates and collateral margins.
      - If the institution has established limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value.
9. Pipeline Management
   a. Determine if the institution has strong risk management and controls that are extended to deals in the pipeline, whether those deals are intended for hold, or if they are intended for distribution.
      - Determine if the institution has policies and procedures for handling distribution failures.
      - Determine if there are procedures for stress testing pipeline deals.
      - Ascertain if management reports show that transactions can be differentiated based on their key characteristics, tenor, and investor class (pro-rata and institutional), structure, and key borrower characteristics (for example, industry).
      - Determine if there are clearly articulated rationales for the effectiveness of hedging methods and if there is appropriate measurement and monitoring.
      - Confirm that the institution has developed and maintained the pipeline procedures referred to in the guidance (see the section on Pipeline Management in the guidance and in the Internal Control Questionnaire).
10. Reporting and Analytics
   a. Ascertain if the institution's risk-management framework includes an intensive and frequent review and monitoring process.
   b. Establish whether management receives comprehensive reports about the characteristics and trends of the institution's leveraged lending portfolio at least quarterly and if summaries are provided to the board of directors.
   c. Find out if internal reports provide a detailed and comprehensive view of global exposures, including situations when an institution has an indirect exposure to an obligor or is holding a previously sold position as collateral or as a reference asset in a derivative. Borrower and counterparty leveraged lending reporting should aggregate total exposure and consider exposures booked across business lines or legal entities.
   d. Verify that internal policies identify the data fields to be populated and captured by the institution's MIS and whether the reports are accurate, timely, and if the information is provided to management and the board of directors.
   e. Confirm that MIS reporting on the leveraged lending portfolio contains the applicable measures listed in the guidance. (Refer to the section on Reporting and

Analytics in the guidance and in the Internal Control Questionnaire.)

11. Credit Analysis
    a. Conduct transaction testing on individual leveraged lending credits to determine if the credit analysis contains a comprehensive assessment of financial, business, and industry and management risks.
    b. Evaluate individual credits to determine if they fit the institutions definition of a leveraged loan.
    c. Determine if individual credits were analyzed in conjunction with the parameters in the guidance. (Refer to the section on Credit Analysis in the guidance and in the Internal Control Questionnaire.)
    d. Verify that there are guidelines for evaluating deal sponsors and their willingness and ability to support the credit.
    e. Confirm that sponsors are used as a secondary and not a primary source of repayment.
    f. Assess the credit agreement to determine if it contains language for:
       - Material dilution, sale, or exchange of collateral or cash flow producing assets without lender approval.
       - Financial performance covenants; covenant-lite, and payment-in-kind (PIK) toggle loan structures.
       - Reporting requirements and compliance monitoring.
       - The distribution of reporting and other credit information to participants and investors.
       - Acceptable collateral types, loan to value guidelines and appropriate collateral valuation methodologies.
12. Internal Risk Rating
    a. Determine if individual loans are risk rated based on the borrower's demonstrated ability to repay the loan and de-lever over a reasonable period of time.
       - Confirm that the institution has evidence of adequate repayment capacity, for example borrowers demonstrate the ability to fully amortize senior debt or repay at least 50 percent of total debt over a 5–7 year period. Ensure that extensions or other restructuring are not masking an inability to repay.
       - Consider adversely rating credits that do not show the capacity to pay down debt from cash flow or if refinancing is the only option for repayment.
       - Consider a substandard rating if there are no reasonable or realistic prospects for repayment or de-levering.
13. Deal Sponsors
    a. If a deal sponsor is relied on as a secondary source of repayment, determine if management has developed guidelines for evaluating the sponsor's creditworthiness.
    b. Evaluate the sponsor based on the criteria listed in the guidance. (See the section on Deal Sponsors in the guidance and in the Internal Control Questionnaire).
14. Credit Review/Problem Credit Management
    a. Assess credit review staff's expertise relative to leveraged lending.
    b. Verify that the institution conducts frequent internal credit review of leveraged lending portfolio that is done independently of the origination function. Portfolio reviews should generally be conducted no less than annually.
    c. Evaluate the institution's procedures for dealing with problem credits including if work out plans contain quantifiable objectives and measurable time frames.
15. Stress Testing
    a. Determine if the institution has developed stress tests for leveraged loans or if the loans are included in the existing stress testing protocol.
16. Conflicts of Interest/Reputational Risk/Compliance
    a. Confirm that the institution is meeting its legal responsibilities by underwriting and distributing transactions that do not result in undue reputational risk.
    b. Determine if potential conflicts of interest exist if the institution has both equity and lending positions in a particular transaction. Confirm that policies and procedures are in place to handle conflicts of interest.
    c. Ascertain whether the institution's compliance function periodically reviews the institution's leveraged lending activity.
    d. Ascertain whether the institution's policies incorporate safeguards to prevent violations of anti-tying regulations.
    e. When securities are involved, determine how the institution ensures compliance

with applicable securities laws, including disclosure and other regulatory requirements.

f. Ascertain what plans and provisions have been developed to ensure compliance with the Board's Regulation W (12 CFR part 223).

Applicability/Risk-Management Framework

1. Has the institution adopted a risk-management framework around leveraged lending that includes:
   a. A leveraged lending policy that is based on risk objectives, risk acceptance criteria, and risk controls?
   b. Structuring transactions that reflect a sound business premise, have an appropriate capital structure, reasonable cash flow, and balance sheet leverage?
   c. A definition of leveraged lending that can be applied across all business lines?
   d. Well-defined underwriting standards that define acceptable leverage levels and amortization expectations?
   e. A limit framework?
   f. Sound MIS?
   g. Pipeline management procedures, hold limits, and expected timing for distributions?
   h. Guidelines for stress testing?
2. Is the institution able to identify leveraged exposures to related borrowers or guarantors?
3. Is the institution able to identify leveraged loans that are managed in non-lending portfolios (for example collateralized loan obligations (CLOs), special purpose entities (SPEs), or other indirect exposures)?
4. Is the institution originating leveraged loans, participating in leveraged loans, or both?

Definition of Leveraged Lending

1. Has the institution developed an appropriate written definition for leveraged lending and incorporated it into the leveraged lending policy?
2. Is the policy definition consistent with the amounts and types of leveraged loans that the institution is engaged in?

General Policy Expectations

1. Has the institution's leveraged lending policy been approved by the board of directors?
2. Does the leveraged lending policy contain the following elements:
   a. A clear statement of the amounts of leveraged lending that it is willing to underwrite and the amount(s) it is willing to hold in its own portfolio?
   b. A limit framework that establishes limits or guidelines around the following as applicable:
      1) Single obligors and transactions?
      2) Aggregate hold portfolio?
      3) Total pipeline exposure?
      4) Industry and geographic concentration?
      5) Notional pipeline limits?
      6) Stress losses, flex terms, economic capital usage, and earnings at risk?
      7) Other parameters particular to the portfolio?
      8) The required management approval authorities and exception tracking provisions?
   c. Procedures for insuring that leveraged lending risks are appropriately reflected in the institution's level of allowance for loan and lease losses (ALLL) and capital adequacy analysis?
   d. Credit and underwriting approval authorities, including the procedures for approving and documenting changes to approved transaction structures and terms?
   e. Guidelines for appropriate oversight by senior management, including adequate and timely reporting to the board of directors?
   f. Expected risk-adjusted returns for leveraged transactions?
   g. Minimum underwriting standards and underwriting practices for primary loan origination and secondary loan acquisition?

Participations Purchased

1. Has the institution, with respect to participations purchased, done its own independent underwriting of its portion of the transaction and has it adequately identified its risks?

2. Has the institution received copies of all documentation relevant to the transaction?
3. Is there evidence that the institution has reviewed the participation agreement and has a clear understanding of its rights and responsibilities under the agreement?

Underwriting Standards

1. Is the institution using similar underwriting standards for leveraged loans it plans to hold as well as for leveraged loans it plans to distribute?
2. Are the institution's underwriting standards clear, written, and measurable?
3. Do underwriting standards require:
   - A sound business premise for each transaction and that the borrower's capital structure is sustainable?
   - A determination and documentation of the borrower's capacity to repay and ability to de-lever to a sustainable level over a reasonable period?
   - Standards for evaluating various types of collateral?
   - Standards for evaluating risk-adjusted returns?
   - The acceptable degree of reliance on enterprise value and other intangible assets for loan repayment?
   - Expectations for the degree of support expected to be provided by sponsors?
   - A prohibition on material dilution, sale, or exchange of collateral or cash flow producing assets without lender approval?
   - A credit agreement that contains financial covenants, reporting covenants, and compliance monitoring? Does the loan contain covenant-lite and PIK toggle loan structures? If so, does the borrower have the ability to repay the loan under the contractual terms?
   - Guidelines for acceptable collateral types, loan-to value-guidelines, and acceptable collateral valuation methodologies?
   - Loan agreements that provide for the distribution of financial information to participants and investors?

Valuation Standards

1. Does the institution have policies for valuing illiquid, intangible, or hard to value collateral that include appropriate LTV ratios, discount rates, and collateral margins?
2. Is the institution relying on enterprise value to confirm a secondary source of repayment?
   a. Has the institution documented its valuation approach to calculating enterprise value?
   b. Has the valuation been performed by qualified persons independent of the origination function?
   c. Has one or a combination of three methods been used for determining enterprise value, asset valuation, income valuation, or market valuation?
   d. If the income method is used, is it based on capitalized cash flow or discounted cash flow?
   e. Has the institution confirmed proxy measures such as multiples of cash flow earnings or sales by performing its own discounted cash flow analysis?
   f. Are stress tests of key variables and assumptions used in determining enterprise value (such as cash flow earnings and sales multiples) conducted at origination and periodically thereafter?
   g. Does the institution have established limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value?

Pipeline Management

1. Do strong risk-management controls cover all transactions in the pipeline, including amounts planned for hold and those marked for distribution?
2. Does the institution have the capability to differentiate transactions based on their key characteristics, tenor, and investor class (pro-rata and institutional), structure, and key borrower characteristics (for example, industry)?
3. Does the institution have the following controls for pipeline exposure:
   - A documented appetite for underwriting pipeline risk that considers the potential effects on earnings, capital, and liquidity?
   - Written policies and procedures for "hung deals" or deals that are not sold

down within a reasonable or 90-day period?
  – Have transactions reclassified as hold-to-maturity been reported to management and the board of directors?
- Guidelines for conducting periodic stress tests of pipeline exposures?
- Controls to monitor expected vs. actual performance?
- Reports that show individual and aggregate transaction information, risk ratings and concentrations?
- Limits on hold levels per borrower, counterparty, and aggregate hold levels?
- Limits on the amounts intended for distribution?
- Policies and procedures for acceptable accounting methods, including prompt recognition of losses?
- Policies and procedures around acceptable hedging practices if applicable?
- Plans to address contingent liabilities and compliance with Sections 23A and 23B of the Federal Reserve Act and Regulation W?

Reporting and Analytics

1. Does management receive quarterly comprehensive reports about the characteristics and trends of the institution's leveraged lending portfolio? Are summaries provided to the board of directors?
2. Do internal policies identify the data fields to be populated and captured by the institution's MIS? Are the reports accurate and timely?
3. As dictated by the size and complexity of the leveraged lending portfolio, does MIS reporting on the leveraged lending portfolio include the following:
   a. Individual and portfolio exposures within and across all business lines and legal vehicles including the pipeline?
   b. Risk-rating distribution and migration analysis?
   c. A list of borrowers who have been removed from the leveraged lending portfolio due to improvements in their financial characteristics and risk profile? Is the removal from the profile concurrent with a refinance, restructure or some other modification in the loan agreement?
   d. Industry mix and maturity profile?
   e. Metrics derived from probability of default and loss-given default?
   f. Portfolio performance measures including covenant breaches, restructurings, delinquencies, nonperforming asset amounts, and charge offs?
   g. Amount and nature of impaired assets and the amount of ALLL attributable to leveraged lending?
   h. The level of policy exceptions in the portfolio?
   i. Exposures by collateral type, including unsecured transactions when enterprise values will be the only source of repayment?
   j. Defaults that trigger *pari-passu* treatment for all lenders?
   k. Secondary market pricing data and trading volume (when available)?
   l. An aggregation of exposures by and performance of deal sponsors?
   m. An indication of gross and net exposures, hedge and counterparty concentrations; and indication of policy exceptions?
   n. Actual vs. projected distribution levels of the pipeline with reports of excess levels of exposure over hold targets?
   o. *Types of exposure in the pipeline:* committed exposures not accepted by the borrower; exposures committed and accepted but not closed; funded and unfunded commitments closed but not distributed?
   p. *Total and segmented exposures:* subordinated debt and equity holdings (compared to limits); global exposures; indirect exposure (to an obligor or if the institution is holding a previously sold position as collateral or as a reference asset in a derivative)?
   q. Exposures booked in other business units throughout the institution that are related to a leveraged loan or borrower? (For example, default swaps or total return swaps naming the distributed paper as a covered or referenced asset or as collateral exposure through repo transactions).
   r. Positions held in leveraged loans in available for sale or traded portfolios or held in structured-investment vehicles owned or operated by the originating institution or its subsidiaries or affiliates?

Internal Risk Rating

1. Does the institution have evidence of adequate repayment capacity? For example, do borrowers demonstrate the ability to fully amortize senior debt or repay at least 50 percent of total debt over a five- to seven-year period?
2. Are there extensions or other restructuring that are masking an inability to repay?
3. Has the primary source of repayment become inadequate? Is enterprise value being relied on as a secondary source of repayment? Is enterprise value well supported with binding purchase and sale agreements with qualified third parties? Does enterprise value consider the borrower's distressed circumstances?

Credit Analysis

1. Does transaction testing of individual leveraged lending credits contain the following elements and show that:
   a. *Cash flow analysis*—The analysis does not rely on overly optimistic or unsubstantiated projections of sales, margins, or merger and acquisition synergies?
   b. *Liquidity analysis*—There are measures to determine operating cash needs and cash needed to meet debt maturities? Analyze liquidity based on industry performance metrics?
   c. *Projections*—There is adequate margin for unanticipated merger-related integration costs?
   d. *Stress tests*—Projections are stress tested for one or more downside scenarios, including a covenant breach?
   e. *Variances from plan*—Transactions are reviewed at least quarterly to determine variance from plan; does the credit file contain a chronological rationale for and analysis of all changes to the operating plan and variances from the expected financial performance?
   f. *Enterprise value*—Were enterprise values independently derived and validated outside of the origination function? Were values calculated timely and did they consider value erosion?
   g. *Collateral shortfalls*—Have shortfalls been identified and factored into the risk rating?
   h. *Collateral liquidation and asset sales*—Are any liquidations and sales based on current market conditions and trends?
   i. *Contingency plans*—Are there contingency analyses to anticipate changing conditions in debt or equity markets? Do the exposures rely on refinancing or the issuance of new equity?
   j. *Interest rate risk and foreign exchange risk*—Have these risks been addressed in the analysis? Are mitigants in place?

Problem Credit Management

1. Has the institution formulated and established procedures for dealing with problem credits?
2. Do work out plans contain quantifiable objectives and measurable time frames?
3. Are problem credits regularly reviewed for risk-rating accuracy, accrual status, recognition of impairment through specific allocations and charge-offs.

Deal Sponsors

1. Has the institution developed guidelines for evaluating the willingness and ability of sponsors to support the credit exposure and a process to regularly monitor sponsor performance?
2. Determine if the credit analysis has considered:
   a. If the sponsor is relied on as a secondary source of repayment and not a primary source of repayment?
   b. If the sponsor has a historical pattern of supporting investments, financially or otherwise?
   c. If the degree of support has been documented via a guarantee, comfort level, or verbal assurance?
   d. If there has been a periodic review of the sponsor's financial statements, an analysis of liquidity, and an analysis of the sponsor's ability to support multiple deals?
   e. If consideration has been given to the sponsor's dividend and capital contribution practices and the likelihood that the sponsor will support the borrower as compared to other deals in the sponsor's portfolio?

Credit Review

1. Does the institution conduct an internal credit review of the leveraged lending portfolio regularly, but at least once per year?
2. Does the institution ensure that credit review personnel have the knowledge and ability to identify risks in the leveraged lending portfolio?

Stress Testing

1. Has the institution developed and implemented guidelines for conducting periodic portfolio stress tests on loans originated to hold and on loans originated to distribute?
2. Has the institution conducted periodic loan and leveraged lending portfolio level stress tests?
3. If applicable, has the leveraged lending portfolio been included in enterprise wide stress tests?
4. Does stress testing of leveraged credits include sensitivity analyses to quantify the potential impact of changing economic and market conditions on the institution's asset quality, earnings, liquidity, and capital?

Reputational Risk

1. Does the institution have procedures, safeguards, actions, training, and staff reminders about the potential reputational risk associated with poorly underwritten originated leveraged loans?
2. Has there been any failure or apparent failure by the institution to meet its legal responsibilities in underwriting and distributing transactions that could damage its reputation or its ability to compete?

Conflicts of Interest

1. Has the institution developed appropriate policies and procedures to address and to prevent potential conflicts of interest when it has both equity and lending positions?
2. Do policies and procedures:
   a. Clearly define potential conflicts of interest?
   b. Identify appropriate risk-management controls and procedures?
   c. Enable employees to report potential conflicts of interest to managements without fear of retribution?
   d. Ensure compliance with applicable laws?
3. Has management:
   a. Established a training program for employees on appropriate practices to follow to avoid conflicts of interest?
   b. Provided for reporting, tracking, and resolution of any conflicts?

Compliance

1. Does the institution maintain an independent compliance review function to periodically review its leveraged lending activity?
2. Do the institution's policies include safeguards to prevent violations of anti-tying regulations?
3. How does the institution ensure compliance with applicable securities laws, including disclosure and other regulatory requirements when equity interests and certain debt instruments have been used in leveraged transactions that may constitute "securities" under federal securities laws?
4. Have plans and provisions been developed to ensure compliance with sections 23A and 23B of the Federal Reserve Act and Regulation W?

INTRODUCTION

A direct financing lease is one in which the lessor's only source of revenue is interest. The lessor buys an asset and leases it to the lessee. This transaction is an alternative to the more customary lending arrangement in which a borrower uses the loan proceeds to purchase an asset. A direct financing lease is the functional equivalent of a loan.

Leasing is a recognized form of financing that provides a lessee (the customer) the right to use depreciable assets without tying up working capital. Leasing frequently offers the lessee greater flexibility than traditional bank term-loan financing. Leasing also provides the lessor (the owner of the asset) with a generally higher rate of return than lending, but this is in exchange for assuming greater risk or investing more resources in marketing and deal structuring. The higher risk inherent in a typical lease transaction is due to the higher advance to collateral value; a longer payment period; and, in some cases, the lessor's dependence on the sale of the leased property to recover a portion of the capital investment. In most instances, some or all of the higher rate of return for the lessor is derived from the tax benefits of depreciable asset ownership.

While leases differ from loans in some respects, they are similar from a credit viewpoint because the basic considerations are cash flow, repayment capacity, credit history, management, and projections of future operations. Additional considerations are the type of property being leased and its marketability in the event of default or termination of the lease. However, these latter considerations do not radically alter how an examiner evaluates collateral for a lease. The assumption is that the lessee/borrower will generate sufficient funds to liquidate the lease/debt. Leases are generally structured so that the bank recovers the full cost of the equipment plus an interest factor over the course of the lease term. Sale of the leased property/collateral remains a secondary source of repayment and, except for the estimated residual value at the expiration of the lease, will not, in most cases, become a factor in liquidating the advance.

In general, leasing activities of state member banks are governed by federal tax law and applicable state law. The leasing of personal or real property or acting as agent, broker, or adviser in leasing such property is considered a "closely related nonbanking activity" and is therefore permitted in accordance with the requirements of section 225.28(b)(3) of Regulation Y for a bank holding company (BHC) or subsidiary thereof. While not specifically applicable to banks, these Regulation Y requirements provide useful guidelines for reviewing the appropriateness and prudence of bank leasing activities as well as considering any safety-and-soundness implications.

A BHC can act as an agent, broker, or adviser in leasing personal or real property only if—

- the lease is on a nonoperating basis[1] and
- the initial term of the lease is at least 90 days.

For leases involving real property—

- the effect of the transaction at the inception of the initial lease must be to yield a return that will compensate the lessor for not less than the lessor's full investment in the property plus the estimated total cost of financing the property over the term of the lease, such return to be derived from rental payments, estimated tax benefits, and the estimated residual value of the property at the expiration of the initial lease; and
- the estimated residual value cannot exceed 25 percent of the acquisition cost of the property to the lessor.[2]

1. With respect to the "nonoperating basis" requirement, a BHC may not, directly or indirectly, engage in operating, servicing, maintaining, or repairing leased property during the term of the lease. For automobile leasing, this requirement means that a BHC may not, directly or indirectly, (1) provide servicing, repair, or maintenance of the leased vehicle during the lease term; (2) purchase parts and accessories in bulk or for an individual vehicle after the lessee has taken delivery of the vehicle; (3) provide the loan of an automobile during servicing of the leased vehicle; (4) purchase insurance for the lessee; or (5) provide for the renewal of the vehicle's license merely as a service to the lessee when the lessee could renew the license without authorization from the lessor. The BHC can arrange for a third party to provide these services or products.

2. For more information, see the *Bank Holding Company Supervision Manual* section entitled "Section 4(c)(8) of the BHC Act (Leasing Personal or Real Property)."

ACCOUNTING FOR DIRECT FINANCING LEASES

Leases should be accounted for in accordance with accounting standards issued by the Financial Accounting Standards Board (FASB). The lease accounting standard currently applied by public business entities, "Leases (Topic 842)," was issued by the FASB in February 2016, and will fully supersede ASC Topic 840, "Leases," by 2021.[3] In addition, more specific information on the capitalization of leases is provided in ASC Topic 840, "Accounting for Direct Financing Leases." The Consolidated Reports of Condition and Income (Call Report) and related instructions provide more information on the capitalization of leases and specify regulatory reporting requirements for leases.

Lessors employ a variety of methods to account for their investments in leases. A direct financing lease is a type of capital lease that transfers substantially all the benefits and risks inherent in the ownership of the leased property to the lessee. In addition, collection of the minimum lease payments must be reasonably predictable, and no important uncertainties may exist regarding costs to be incurred by the lessor under the terms of the lease. Although minor variations in accounting methods are still found, most investment-in-leases accounts will be equal to—

- the sum of the minimum lease payments to be received from the lessee, plus
- the unguaranteed residual value (estimated fair market value) of the property at the end of the lease term, reduced by
- the amount of unearned and deferred income to be recognized over the life of the lease.

For the purpose of illustration, assume that property costing $120,000 is leased for a period of 96 months at $1,605 per month, and the estimated residual value (ERV) of the property is $24,000. In this example, income is recognized monthly according to the sum of the months' digits method. The investment in this lease is calculated below, followed by an explanation of each component of the net investment.

Cost	$120,000
Unearned income	34,080
Rentals receivable (96 × $1,605)	154,080
Est. residual value	24,000
Gross investment	178,080
Less:	
Unearned income	34,080
Unearned income (ERV)	24,000
Net investment	120,000

Rentals Receivable

This account is established in the amount of total rental payments to be received from the lessee. The amount by which the rentals receivable ($154,080) exceeds the cost of the property ($120,000) is the functional equivalent of interest and represents a portion of the income to be recognized over the life of the lease. In the example below, the cost of the property is temporarily charged to a fixed-asset account, then transferred to rentals receivable.

Fixed assets	$120,000	
Cash		120,000
To record purchase or property for lease		
Rentals receivable	154,080	
Fixed assets		120,000
Unearned income		34,080
To record amount due from lessee		

3. ASU 2016-02 is effective for fiscal years beginning after December 15, 2018, including interim periods within those fiscal years, for banks that are public business entities (PBEs). For banks that are not PBEs, the guidance is effective for fiscal years beginning after December 15, 2020, including interim periods within those fiscal years. For further information, see the Glossary entries in the Call Report Instructions for "public business entity" and "private company." Early adoption is permitted for all banks. An institution that early adopts these standards must apply them in their entirety. If an institution chooses to early adopt these standards for financial reporting purposes, the institution should implement them in its Call Report for the same quarter-end report date.

Throughout the lease term, the rentals-receivable account is periodically reduced by the full amount of each rental payment received.

Cash	$1,605	
Rentals receivable		1,605
To record receipt of monthly payment		

Estimated Residual Value

The ERV represents the proceeds the lessor expects to realize at the end of the lease term from the sale or re-leasing of the property. Exactly as its title states, this account represents only an estimate of future value and does not represent current market value or depreciated book value. The residual value at the end of the lease term is considered to be income, and the corresponding credit for this asset account is posted to unearned income.

The balance of the ERV account does not normally change significantly during the lease term. The bank (lessor) should review the unguaranteed residual value at least annually to determine whether a decline, other than a temporary one, has occurred in its estimated value. If a decline is not temporary, the accounting for the lease transaction should be revised using the new estimate, and the resulting loss should be recognized in the period that the change is made. Upward adjustments or increases in the residual value are not recognized.

After the end of the term, the residual value account is eliminated from the books upon sale, re-lease, or other disposition of the property. If the amount of proceeds received differs from the recorded residual value, the difference will be recognized as either a gain or loss, whichever is appropriate.

Est. residual value	$24,000	
Unearned income		24,000
To record ERV of leased property		
Cash	26,000	
Est. residual value		24,000
Gain on sale		2,000
To record sale of property		

Any portion of the ERV guaranteed by a party unrelated to the lessor would be deducted from the ERV account and added to rentals receivable.

Unearned Income

This liability account has a credit balance and is netted against the total of rentals receivable and the ERV for balance-sheet presentation. Its component parts are the “interest” income equal to the excess of rentals receivable over the cost of the property and the income to be realized from disposition of the property at the end of the lease term. Each of these components is recognized as income throughout the life of the lease by periodic transfers to earned income. Unearned income is amortized to income over the lease term to produce a constant periodic rate of return on the net investment in the lease. Any other method, such as the sum-of-the-months’-digits method, may be used if the results obtained are not materially different from those that would result from the interest method described in the preceding sentence and if the resulting impact does not overstate income during the current period. Loan-origination fees and initial direct costs, such as commissions and fees that are incurred by the lessor in negotiating and consummating the lease, are offset against each other, and the resulting net amount is deferred and recognized over the lease term. Recognizing a portion of the unearned income at the inception of the lease to offset initial direct costs is not acceptable.

Depreciation

For certain leases, the lessor is entitled to claim depreciation for tax purposes. However, for financial statement purposes, no depreciation for leased property will appear on the income statement and no accumulated depreciation will appear on the balance sheet. If the lessor is entitled to the benefits of depreciation, then, for tax purposes only, depreciation will be calculated and will reduce the lessor’s tax liability.

The lessor’s entitlement to depreciation tax benefits is a function of the type of lease arrangement negotiated. When the lessor retains title to the asset and owns the asset at the expiration of the lease, the lessor may take depreciation into account for tax purposes. These characteristics are typical of a "true," "net," or "capital" lease, terms often used interchangeably in the industry. In a "financing" lease, the lessee rather than the lessor acquires title to the property at the expiration of the lease and is entitled to depreciation tax benefits. Accordingly, the lessor will charge the lessee a higher periodic lease payment (for a higher "rate of return") to offset its loss of depreciation tax benefits.

Balance-Sheet Presentation

Lease receivables are to be reported on the balance sheet as the single amount "net investment" (see below). If the lessor has established an allowance for possible lease losses, this amount is included in the total allowance for loan and lease losses and represents a deduction from the net investment. Footnotes to the balance sheet should disclose the components of the net investment, as follows:

Rentals receivable	$154,080
Est. residual value	24,000
Gross investment	178,080
Less:	
Unearned income	58,080
Net investment	$120,000

For Call Report purposes, lease financing receivables are reported net of unearned income as part of an institution's total loans.

Classification

If it is deemed appropriate to classify a lease, the amount at which the lease would be classified is the net investment. For example, assume that 94 of the 96 payments have been received on the above lease, that income has been recognized monthly according to the sum-of-the-months'-digits method, and that the lease is now considered a loss. Its balance on the books is $27,173, as follows:

Rentals receivable	$ 3,210
Est. residual value	24,000
Gross investment	27,210
Less:	
Unearned income	22
Unearned income (ERV)	15
Net investment	27,173

Classification of the $27,173 balance of this lease involves classifying $3,188 of the unrecovered portion of the cost of the property ($3,210 less $22 unearned income) plus $23,985 of income that has already been recognized in anticipation of receiving the ERV ($24,000 less $15 not yet recognized). In short, the calculation is $3,188 + $23,985 = $27,173.

Charging off the ERV included in the net investment treats the lease as if the underlying property has no value and, in effect, reverses the unearned income that has been recognized in anticipation of selling the leased property at its recorded ERV. Accordingly, if the property does have value, the $27,173 classified should be reduced by the net amount that the lessor could realize by selling the property.

Delinquency

The percentage of delinquency in the lease portfolio is calculated by dividing the aggregate rentals receivable on delinquent leases (less the "interest" components of their unearned income accounts) by the total of rentals receivable on all leases (less the "interest" components of their unearned income accounts). ERVs would not be included in the delinquent amounts since they do not represent obligations of the lessees.[4]

If the lease obligation in the previously described classification example was the only delinquent obligation in a portfolio of leases with component accounts as shown below, the rate of delinquency in the portfolio would be 3.4 percent.

4. For more information on reporting delinquent leases in the report of examination, see section 1001.1, "Community Bank Supervision Process."

Rentals receivable	$ 94,411
Est. residual value	705,882
Gross investment	800,293
Less:	
Unearned income	647
Unearned income (ERV)	441
Net investment	$799,205

$$\frac{\$3{,}210 - 22}{\$94{,}411 - 647} = 3.4\%$$

Termination of a Lease

The termination of a lease is recognized in the income of the period in which the termination occurs by eliminating the remaining net investment from the lessor's account. The lease property is then recorded as an asset using the lower of the original cost, present fair value, or present carrying amount.

LEVERAGED LEASES

Leveraged leasing is a specialized form of direct financing lease that involves at least three parties: a lessee, a long-term creditor (the debt participant), and a lessor (the equity participant). This type of lease transaction is complex because it usually involves a large dollar amount, a significant number of parties, complex legal issues, and the unique advantages to all parties. In a leveraged lease, the lessor purchases and becomes owner of the equipment by providing only a percentage (usually 20 to 40 percent) of the capital needed. The rest of the purchase price is borrowed by the lessor from long-term lenders on a nonrecourse basis. The borrowings are secured by a first lien on the equipment, an assignment of the lease, and an assignment of the lease payments.

Legal expenses and administrative costs associated with leveraged leasing limit its use to financing large capital-equipment projects. Leveraged leases are generally used to take advantage of favorable tax benefits unique to this type of financing for the participants in the transaction. By tailoring the tax effects to the needs of the parties involved, the structure of a leveraged lease permits multiple tax benefits and maximum investment return. The lessor is in search of a tax shelter to offset income generated from other sources, while the lessee bargains for lower rental charges in exchange for the tax advantage the lessor receives. The result of this trade-off ideally produces an attractive rate of return on the lessor's invested dollars, while the lessee conserves working capital and obtains financing at a cost substantially below the lessee's usual borrowing rate.

If the equipment being purchased is costly, such as heavy construction equipment or a fleet of airplanes, there may be several equity owners and debtholders involved. In this case, an owner trustee may be named to hold title to the equipment and to represent the equity owners. An indenture trustee may be named to hold the chattel mortgage on the property for the benefit of the debtholders.

The lessor (equity holder), as the owner, is allowed to take accelerated depreciation based on the total cost of the equipment. The lessor might also receive a small portion of the rental payments, but the desired yield is obtained from the timing of depreciation. The effect gives the lessor a return through the tax benefits and a small amount of rental income and allows the lessor to retain the residual value rights to the equipment at the end of the lease period.

The bank should consider its present and anticipated future tax position, its future money rates, and the residual value of the property. The return on the bank's investment in leveraged leases depends largely on these factors. A slight change can precipitate significant changes in the bank's position. Anticipated proceeds from the sale or re-leasing of the property at the conclusion of the lease term (the residual value) is an important element of the return and should be estimated carefully. It will, in most cases, exceed 25 percent of the purchase price because of certain tax requirements. The bank should continually evaluate the property for misuse, obsolescence, or market decline, all of which can rapidly deteriorate the value of the property before the lease term expires. In these cases, the lessee may default, often with expensive consequences for the lessors.

A portion of the bank's recapture of its investment in leased property is often predicated on the inherent tax benefits. Accordingly, a decline in the bank's ability to use these tax benefits could reduce or eliminate the profitability of the venture.

Given the complexity of leveraged leasing it is important to carefully scrutinize each indenture and all parties involved in the leveraged leasing transaction. It is important to consider each lease from the standpoint of the creditworthiness of the lessee and the assessed value of the leased property. If the lessee defaults, the loan participant is in a position to foreclose and take ownership of the property, which leaves the bank without a way to recapture the carrying value of its investment. Therefore, in assessing the credit risk of a leveraged lease transaction, a bank should evaluate the business risk associated with the lease's operating cash flows.

The lessor's net investment in a leveraged lease is recorded in a manner similar to that for a direct financing lease, but net of the principal and interest on the nonrecourse debt. The components of the net investment, including related deferred taxes, should be fully disclosed in the footnotes to the lessor's financial statements when leveraged leasing is a significant part of a bank's business activities.

ASC 840 provides guidance on how to account for a leveraged lease. In February 2016, the FASB issued ASU 2016-02, "Leases (Topic 842)," which supersedes ASC 840. Leases classified as leveraged leases prior to the adoption of Topic 842 may continue to be accounted for under Topic 840 unless subsequently modified. Topic 842 eliminates leveraged lease accounting for leases that commence after an institution adopts the new accounting standard.

POLICY CONSIDERATIONS

1. Assess the adequacy of leasing policies, procedures, and practices by considering
   - the frequency and timeliness of policy reviews and updates by the board of directors;
   - whether policies address
     - — acceptable product lines and asset acquisition practices;
     - — pre-approval and on-going reviews of equipment vendors and lease brokers;
     - — prudent underwriting standards;
     - — securitization of leases (if applicable);
     - — minimum down payments or deposits for each type of equipment or auto leased;
     - — documentation required for each type of equipment lease;
     - — appraisals of equipment and procedures for selecting appraisers;
     - — the control, maintenance, insurance, and disposition of asset inventories;
     - — the review of completed lease documents by legal counsel, including tax opinions;
     - — the allowable percentage of leasing components (financing amount and recapture of residual value in relation to the total cash flows); and
     - — the methodology for determining the allowance for loan and lease losses on lease receivables and ensuring it is appropriate under ASC Subtopic 450-20, "Contingencies—Loss Contingencies"; and
   - whether management established appropriate guidelines for
     - — establishing estimated residual values, periodic re-evaluations, and periodic portfolio impairment analysis of leased assets;
     - — establishing mark-to-market values and associated accounting procedures if assets leased on operating terms are periodically marked to market to mitigate end-of-lease residual risks;
     - — pre-purchase analysis of assets leased on operating terms. (This is particularly important for long-lived assets, which can have multi-year delays in delivery, underutilization risks, and high carrying costs);
     - — limits on concentration risks by industry, lease broker, and equipment type;
     - — limits on leveraged leases where the bank takes an equity position; and
     - — managing differences in book and tax accounting (deferred tax assets/liabilities). (Note: Banks commonly classify the same lease as a capital lease for regulatory reporting purposes, which requires allowance for loan and lease losses (ALLL) treatment, and as an operating lease for tax reporting purposes, which allows the bank to depreciate the underlying fixed asset according to an accelerated depreciation schedule, thus reducing the overall tax liability.)

DOCUMENTATION

2. Review a sample of lease files to determine if they are properly documented. In addition to the standard documentation required for other types of lending (such as credit applications and credit reports), the following documents unique to lease financing should be in the file, particularly for larger leases:
   - master lease agreement
   - lease schedule
   - lessee's resolution
   - lessee's acceptance form
   - purchase order and purchase order requirement
   - standard UCC-1 filing
   - inspection reports post installation (expected on larger leases)

ADMINISTRATION

3. Determine whether the bank has appropriate insurance on leased assets identified as having potential liability. (Note: As owner of the equipment being leased, the bank may be liable for claims in the event of an accident involving the equipment.)
4. Review asset acquisition and disposition records to ascertain if any conflict of interest or self-dealing is evident involving insid-

ers, sellers, servicers, insurers, or purchasers of equipment.

5. Determine whether property held in inventory, designated as to-be-sold or leased again, is appropriately accounted for, maintained, and controlled. Consider if any assets held in this category warrant classification.
6. Review the bank's methodology for assigning estimated residual values and performing annual re-evaluations. ASC Paragraph 840-30-35-25, "Leases: Capital Leases—Subsequent Measurement – Estimated Residual Value" requires the lessor to review estimated residual values at least annually. If a decline in an estimated residual value is judged to be other than temporary, the bank shall account for the decline as a change in estimate, and charge a period loss in earnings for the reduction in the net investment of the lease. Banks should not make provisions to the ALLL to account for declines in estimated residual values. (Note: Inflated residual values could indicate the bank is aggressively pricing its leases. While the reduced lease payments may be attractive to the lessee, residual losses could increase for the lessor.)
7. Determine whether management has an effective system for tracking residual gains and losses. (Note: Increasing residual losses may be a sign that pricing competition contributed to inflated residual values. Institutions often use a termination report that reflects all the relevant information concerning leases that have or will soon mature. Check appropriate state laws for determining how long leased assets may be held on the bank's books before disposition.)
8. Determine whether leases meet one or more of the criteria for capital leases plus two additional criteria at the inception of the lease. (Note: If a lease is not accounted for as a direct financing lease, sales-type lease, or leveraged lease, refer to the Consolidated Report of Condition and Income (Call Report) instructions concerning operating leases.)
   - A lease is accounted for as a capitalized lease if any one of the following criteria is met:
     - — Ownership of the property is transferred to the lessee by the end of the lease term.
     - — The lease contains a bargain purchase option.
     - — The lease term represents at least 75 percent of the estimated economic life of the leased property.
     - — The present value of the minimum lease payments at the beginning of the lease is at least 90 percent of the fair value of the leased property.
   - Does the lease meet one or more of the capital lease criteria? If the answer is no, the lease is an operating lease. If the answer is yes, does the lease meet both of the following two criteria?
     - — Collectability of minimum lease payments is reasonably predictable.
     - — No important uncertainties surround the amount of un-reimbursable costs yet to be incurred by the lessor under the lease.

     If the answers are yes, the lease is a capital lease and must be classified as either a sales-type lease, direct financing lease, or a leveraged lease.
   - Does the lease give rise to manufacturer's or dealer's profit? If the answer is no, the lease is either a direct financing or leveraged lease. If the answer is yes, the lease is a sales-type lease. (Note: Leveraged leases are a form of direct financing lease that involves at least three parties, a lessee, a long-term creditor, and a lessor or equity participant. The financing provided by the long-term creditor is nonrecourse as to the general credit of the lessor. The lessor's net investment declines during the early years once the investment has been completed and rises during the later years of the lease before its final elimination.)
9. Based on the criteria above, determine if any direct financing leases are leveraged leases. If there are leveraged leases, determine whether prudent limits were established on the percentage of capital that the bank can have as an equity participant. Because of the complexity of leveraged leases, management is expected to exhibit sufficient expertise. (Note: Refer to the definition of lease accounting in the Call Report instructions for additional information.)
10. Review the lease portfolio for any concentrations, and assess the adequacy of leasing policies and practices by considering:

- concentration types, such as by equipment manufacturer, industry, lease broker, and lease product;
- the appropriateness of established risk limits;
- the adequacy of risk analysis on concentrations; and
- the sufficiency of internal reporting and board oversight.

  (Note: Significant lease concentrations should be detailed in the report of examination.)

11. Review compliance with internal lending limits and state legal lending limits. (Note: Sections 23A (12 USC 371c) and 23B (12 USC 371c-1) of the Federal Reserve Act (Regulation W) limit transactions with affiliates.)
12. Determine whether management has an effective system for tracking yields in the leasing portfolio. The yield analysis should include information on contractual lease rates, residual gains and losses, and associated tax implications.
13. Determine whether the bank's procedures require depreciation expenses on operating leases be charged at least quarterly. (Note: Operating leases do not transfer the risks and benefits of ownership to the lessee. The lessor is the owner of the property and is entitled to any tax benefits such as accelerated depreciation.)
14. Assess the appropriateness of management's reporting on delinquent and/or nonaccrual capital leases. Also, when an operating lease is past due 30 days or more, or in nonaccrual status, ensure that reporting includes operating lease payment receivables that have been recorded as other assets in the Call Report, Schedule RC, item 11.

LEASING COMPANY PARTNERSHIPS OR BROKERS—THIRD-PARTY RELATIONSHIPS

Note: Complete this section if leases are acquired through a partnership with a third party. Often banks form partnerships with independent leasing companies and fund the leasing company's originations. Refer to outstanding guidance for discussion of third-party risks (SR 13-19, "Guidance on Managing Outsourcing Risk").

15. Determine whether the bank funds leases originated by third parties. If applicable, assess the method the bank uses to fund leases originated by the third party by considering
    - the level of communication with the lessee prior to and after the lease origination;
    - the adequacy of independent credit analysis and underwriting of the proposed lease transaction; and
    - the method used by the bank to collect payments (lockbox, direct, periodic settlements with lessor, etc.).
16. Review legal agreements between the bank and the leasing company. Assess and document key items, such as lease servicing obligations, recourse provisions, remarketing of equipment at lease-end, and compliance issues.
17. Determine whether funding arrangements result in a concentration of risk for the bank. (Note: Reviewing the leasing company's financial statements may reveal whether the leasing arrangement transferred to the bank or remained with the leasing company. If the leasing arrangement remains with the leasing company, the bank's funding would likely show up as a liability (i.e., a borrowing) on the leasing company's balance sheet and be reported by the bank as a loan(s) to the leasing originator.)
18. Assess the adequacy of the bank's ongoing oversight and reporting of significant third-party funding arrangements. Consider the following:
    - financial reviews and monitoring of portfolio performance;
    - periodic independent reviews;
    - monitoring of, and reporting on, credit support provided by the leasing company (such as when the leasing company advances funds on delinquent leases or pays off the bank if a lessee's financial condition deteriorates); and
    - periodic reports provided by the leasing company on serviced assets (e.g., collection and delinquency reports).
19. Evaluate the bank's controls for and reviews of leasing companies that service assets for the bank by considering
    - the independence and qualifications of reviewers,
    - the scope of reviews,
    - the adequacy of transaction testing, and
    - the adequacy of review documentation.

CLASSIFICATION

20. Classify credits and assign allocations to the ALLL as appropriate. When evaluating the credit quality of a capital lease, consider the following:
    - the lessee's ability to properly amortize the fixed obligation;
    - the lessee's ability to pay any unamortized balance (balloon payment) at lease maturity;
    - the lessee's projected cash flows compared to its achieved operational results;
    - the reasonableness of estimated residual values and exposure to loss at the end of the lease term;
    - whether the estimated residual value was reviewed in the last 12 months;
    - support of the collateral; and
    - support by guarantors, if applicable. (Note: If the collateral is a long-lived, depreciable asset (e.g., commercial aircraft, oil/natural gas tanker, oil drilling/rigging equipment) and value erosion is uneven during the lease term, amortization should likely be accelerated to ensure that loan-to-value ratios (LTVs) remain within policy during the life of the lease. Such leases look much like mortgages on real estate with respect to the size of exposures and term; however, the collateral value is expected to erode. As such, accelerated amortization is usually necessary to keep LTVs within policy limits.)

This section applies to most types of loans found in a consumer loan department. Consumer credit, also referred to as retail credit, is defined as credit extended to individuals for household, family, and other personal expenditures, rather than credit extended for use in a business or for home purchases. Consumer credit loans are loans not ordinarily maintained by either the commercial or real estate loan departments. Consumer loans frequently make up the largest number of loans originated and serviced by the bank, but their dollar volume may be significantly less than for other types of loans. Consumer credit loans may be secured or unsecured and are usually structured with short- or medium-term maturities. Broadly defined, consumer credit includes all forms of *closed-end credit (installment credit)* and *open-end credit (revolving credit),* such as check credit and credit card plans. Consumer credit also includes loans secured by an individual's personal residence, such as home equity and home-improvement loans. Home equity loans are discussed in "Real Estate Loans," section 2090.1.

The examiner should determine the adequacy of the consumer credit department's overall policies, procedures, and credit quality. The examiner's goal should not be limited to identifying current portfolio problems but should also include identifying potential problems that may result from liberal lending policies, unfavorable trends, potentially imprudent concentrations, or nonadherence to established policies. Banks lacking written policies, or failing to implement or follow established policies effectively, should be criticized in the report of examination.

TYPES OF CONSUMER CREDIT

Installment Loans

Many traditional forms of installment credit have standard monthly payments and fixed repayment schedules of one to five years. These loans are made with either fixed or variable interest rates that are based on specific indices. Installment loans fill a variety of needs, such as financing the purchase of an automobile or household appliance, financing home improvement, or consolidating debt. These loans may be unsecured or secured by an assignment of title, as in an automobile loan, or by money in a bank account.

A bank's installment loan portfolio usually consists of a large number of small loans, each scheduled to be amortized over a specific period. Most installment loans are made for consumer purchases; however, amortizing commercial loans are sometimes placed in the installment loan portfolio to facilitate their servicing. In addition, the installment loan portfolio can consist of both loans made by the bank and loans purchased from retail merchants who originated the loans to finance the sale of goods to their customers.

Indirect Installment Loans

Indirect installment loans are also known as dealer loans, sales-finance contracts, or dealer paper. In this type of consumer credit, the bank purchases, sometimes at a discount, loans originated by retailers of consumer goods, such as a car dealer. This type of lending is called indirect lending because the dealer's customer indirectly becomes a customer of the bank.

The sales-finance contracts purchased from dealers of consumer goods are generally closed-end installment loans with a fixed rate of interest. These loans are purchased in one of three ways depending on the dealer and the circumstances of purchase:

- *Without recourse.* The bank is responsible for collecting the account, curing the delinquency, or applying the deficiency against dealer reserves or holdback accounts. The majority of sales-finance contracts with dealers are without recourse.
- *Limited recourse.* The dealer will repurchase the loan, cure the default, or replace the loan only under certain circumstances in accordance with the terms of the agreement between the bank and the dealer.
- *With recourse.* The dealer is required to repurchase the loan from the bank on demand, typically within 90 to 120 days of default.

In the case of recourse and limited-recourse loans, legal lending limitations need to be considered.

Sales-finance contracts purchased without recourse from dealers should be based on the individual's creditworthiness, *not* on the financial strength of the dealership itself. The contracts purchased should comply with the bank's loan policy for similar consumer loans. Exceptions to the bank's policies and procedures should be documented in the credit file and have the appropriate level of approval. For sales-finance contracts purchased with recourse that do not meet the bank's normal credit criteria and are purchased on the basis of the added strength of the dealer, the bank should document the minimum criteria for such loans and the specific bank-approved financial covenants with which the dealer must comply.

Check Credit and Overdraft Protection

Check credit is defined, for the purpose of this manual, as the granting of unsecured, interest-bearing revolving lines of credit to individuals or businesses. Such extensions of credit are subject to the disclosure requirements of the Truth in Lending Act (TILA). Banks provide check-credit services through overdraft protection, cash reserves, and special drafts.

The most common product is overdraft line-of-credit protection, whereby a transfer is made from a preestablished line of credit to a customer's deposit account when a check is presented that would cause the account to be overdrawn. Transfers normally are made in specific increments, up to a maximum line of credit approved by the bank.

In a cash reserve system, the customer must request that the bank transfer funds from a preestablished line of credit to his or her deposit account. To avoid overdrawing the account, the customer must request the transfer before negotiating a check against the account.

In a special draft system, the customer negotiates a special check drawn directly against a preestablished line of credit. In this method, deposit accounts are not affected.

In all three systems, the bank periodically provides its check-credit customers with a statement of account activity. Required minimum payments are computed as a fraction of the balance in the account on the cycle date and may be made by automatic charges to the deposit account.

Banks also provide credit through ad hoc and automated overdraft-protection programs. Typically, ad hoc programs involve insured depository institutions' providing discretionary coverage of customers' overdrafts on a case-by-case basis. Automated overdraft-protection programs, also referred to as *bounced-check protection* or *overdraft protection,* are credit programs increasingly offered by institutions to transaction-account (typically deposit-account) customers as an alternative to traditional check-credit and ad hoc programs for covering overdrafts.

Under both the ad hoc and automated programs, regardless of whether an overdraft is paid, institutions typically impose a fee when an overdraft occurs. This fee is referred to as a nonsufficient-funds, or NSF, fee. Unlike the discretionary ad hoc accommodation typically provided to those lacking a line of credit or other type of overdraft service (such as linked accounts), automated programs are often marketed to consumers and may give consumers the impression that the service is a guaranteed short-term credit facility. These marketed programs typically provide consumers with an express overdraft "limit" that applies to their account.

Neither the ad hoc nor the automated overdraft programs are subject to the annual percentage rate (APR) disclosure requirements of TILA. These programs are, however, subject to the disclosure requirements of the Truth in Savings Act (TISA) and Regulation DD.

The specific details of institutions' overdraft-protection programs have varied over time. The programs currently offered by institutions incorporate some or all of the following characteristics:

- Institutions inform consumers that overdraft protection is a feature of their accounts and promote consumers' use of the service. Institutions may also inform consumers of their aggregate dollar limit under the overdraft-protection program.
- Coverage is automatic for consumers who meet the institution's criteria (for example, the account has been open a certain number of days, and deposits are made regularly). Typically, the institution performs no credit underwriting.
- Overdrafts generally are paid up to the aggregate limit set by the institution for the specific class of accounts. Limits are typically $100 to $500.
- Many program disclosures state that payment of an overdraft is discretionary on the part of

the institution and may disclaim any legal obligation of the institution to pay any overdraft.

- The service may extend to check transactions as well as other transactions, such as withdrawals at automated teller machines (ATMs), transactions using debit cards, preauthorized automatic debits from a consumer's account, telephone-initiated funds transfers, and online banking transactions.
- A flat fee is charged each time the service is triggered and an overdraft item is paid. Commonly, a fee in the same amount would be charged even if the overdraft item was not paid for nonsufficient funds. A daily fee may also apply for each day the account remains overdrawn.
- Some institutions offer closed-end loans to consumers who do not bring their accounts to a positive balance within a specified time period. These repayment plans allow consumers to repay their overdrafts and fees in installments.

To assist insured depository institutions in the responsible disclosure and administration of overdraft-protection services, particularly those that are marketed to consumers (a depository institution's customers), the federal banking and thrift agencies issued Joint Guidance on Overdraft Protection Programs. The interagency guidance, issued on February 18, 2005, addresses the agencies' concerns about the potentially misleading implementation, marketing, disclosure, and operation of these programs. (See the "Best Practices" section of the guidance.) The guidance also discusses the agencies' safety-and-soundness considerations and the legal risks of such programs. Institutions are encouraged to carefully review their programs to ensure that their marketing and other communications concerning the programs (1) do not mislead consumers into believing that their programs are traditional lines of credit (when they are not) or that payment of overdrafts is guaranteed, (2) do not mislead consumers about their account balance or the costs and scope of the overdraft protection offered, and (3) do not encourage irresponsible consumer financial behavior that may potentially increase the institution's risk. See SR-05-3 and the attached interagency guidance for detailed discussions of the agencies' concerns and best practices (for marketing and communication with consumers and program features and operation). See also section 3000.1.

Safety-and-Soundness Considerations

When overdrafts are paid, credit is extended to an institution's customers. To the extent overdraft-protection programs lack individual account underwriting, these programs may expose an institution to more credit risk (higher delinquencies and losses) than overdraft lines of credit and other traditional overdraft-protection options.

Institutions providing overdraft-protection programs should adopt written policies and procedures adequate to address the credit, operational, and other risks associated with these types of programs. Prudent risk-management practices include the establishment of express account-eligibility standards and well-defined and properly documented dollar-limit decision criteria. Institutions should also monitor these accounts on an ongoing basis and be able to identify consumers who may represent an undue credit risk to the institution. Overdraft-protection programs should be administered and adjusted, as needed, to ensure that credit risk remains in line with expectations. Program adjustments may include, as appropriate, disqualification of a consumer from future overdraft protection. Management should regularly receive reports sufficient to enable it to identify, measure, and manage overdraft volume, profitability, and credit performance.

Institutions are also expected to incorporate prudent risk-management practices related to account repayment and suspension of overdraft-protection services. These practices include the establishment of specific time frames for when consumers must pay off their overdraft balances. For example, procedures should be established for the suspension of overdraft services when an account holder no longer meets the eligibility criteria (such as when the account holder has declared bankruptcy or defaulted on another loan at the bank) as well as for when an account holder does not repay an overdraft. In addition, overdraft balances should generally be charged off when considered uncollectible, but no later than 60 days from the date first overdrawn. In some cases, an institution may allow a consumer to cover an overdraft through an extended repayment plan when the consumer is unable to bring the account to a positive balance within the required time frames. The existence of the repayment plan, however, would not extend the charge-off determination period beyond 60 days (or a shorter period if applicable), as measured from the date of the overdraft. Any payments received after the account is charged off (up to the amount charged off against the allowance for loan and lease losses) should be reported as a recovery.

Some overdrafts are rewritten as loan obligations in accordance with an institution's loan policy and are supported by a documented assessment of that consumer's ability to repay. In those instances, the institution should use the charge-off time frames described in the Federal Financial Institutions Examination Council's Uniform Retail Credit Classification and Account Management Policy (revised June 6, 2000; effective December 31, 2000). (See SR-00-8.)

Institutions should follow generally accepted accounting principles and the instructions for the Reports of Condition and Income (Call Reports) to report income and loss recognition on overdraft-protection programs. Overdraft balances should be reported on the Report of Condition of the bank Call Report as loans. Accordingly, overdraft losses should be charged off against the allowance for loan and lease losses. All institutions are expected to adopt rigorous loss-estimation processes to ensure that overdraft-fee income is accurately measured. Such methods may include providing loss allowances for uncollectible fees or, alternatively, only recognizing that portion of earned fees estimated to be collectible.[1] The procedures for estimating an adequate allowance should be documented in accordance with the July 2, 2001, interagency Policy Statement on the Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions.[2] (See SR-01-17.)

If an institution advises account holders of the available amount of overdraft protection, for example, when accounts are opened or on depositors' account statements or automated teller machine (ATM) receipts, the institution should report the available amount of overdraft protection with its other legally binding commitments, for Call Report purposes. These available amounts, therefore, should be reported as "unused commitments."

Risk-Based Capital Treatment of Overdraft Balances

Banks are expected to provide proper risk-based capital treatment of outstanding overdrawn balances and unused commitments. Overdraft balances should be risk-weighted according to the obligor. Under the risk-based capital guidelines, the capital charge on the unused portion of commitments is generally based on an off-balance-sheet credit-conversion factor and the risk weight appropriate to the obligor. (See section 3020.1.) In general, the capital guidelines provide that the unused portion of a commitment is subject to a zero percent credit-conversion factor if the commitment has an original maturity of one year or less, or to a 50 percent credit-conversion factor if the commitment has an original maturity over one year. Under the guidelines, a zero percent conversion factor also applies to the unused portion of a "retail credit card line" or "related plan" if it is unconditionally cancelable by the institution in accordance with applicable law. (See 12 CFR 208, appendix A, section III.D.5.) The phrase "related plans" in the guidelines includes overdraft checking plans. The overdraft-protection programs discussed in the agencies' February 18, 2005, guidance fall within the meaning of "related plans" as a type of "overdraft checking plan" for the purposes of the federal banking agencies' risk-based capital guidelines. Consequently, overdraft-protection programs that are unconditionally cancelable by the institution in accordance with applicable law would qualify for a zero percent credit-conversion factor.

Institutions entering into overdraft-protection contracts with third-party vendors must conduct thorough due-diligence reviews before signing a contract. The November 30, 2000, interagency guidance Risk Management of Outsourced Technology Services outlines the agencies' expectations for prudent practices in this area. (See section 4060.1 and SR-00-17.)

1. Uncollected overdraft fees may be charged off against the allowance for loan and lease losses if such fees are recorded with overdraft balances as loans and if estimated credit losses on the fees are provided for in the allowance for loan and lease losses.

2. The interagency policy statement was issued by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision.

Legal Risks

Overdraft-protection programs must comply with all applicable federal laws and regulations, including the Federal Trade Commission Act (as outlined below). State laws may also be applicable, including usury and criminal laws, as well as laws on unfair or deceptive acts or practices. Before implementing an overdraft-protection program, institutions should have their program reviewed by counsel for compliance with all applicable laws. Further, although the agencies' guidance outlines the applicable federal laws and regulations as of February 2005, such laws and regulations are subject to amendment. Accordingly, institutions should monitor applicable laws and regulations for revisions and ensure that their overdraft-protection programs are fully compliant.

Federal Trade Commission Act. Section 5 of the Federal Trade Commission Act (the FTC Act) prohibits unfair or deceptive acts or practices (15 USC 45). The banking agencies enforce this section pursuant to their authority in section 8 of the Federal Deposit Insurance Act (12 USC 1818).[3] An act or practice is unfair if it causes or is likely to cause substantial injury to consumers that is not reasonably avoidable by consumers themselves and not outweighed by countervailing benefits to consumers or to competition. An act or practice is deceptive if, in general, it is a representation, omission, or practice that is likely to mislead a consumer acting reasonably under the circumstances and if the representation, omission, or practice is material.

Overdraft-protection programs may raise issues under the FTC Act, depending on how the programs are marketed and implemented. Institutions should closely review all aspects of their overdraft-protection programs, especially any materials that inform consumers about the programs, to avoid engaging in deceptive, inaccurate, misrepresentative, or unfair practices.

3. See the March 2002 OCC Advisory Letter 2002-3 and the March 11, 2004, joint Federal Reserve Board and FDIC interagency guidance Unfair or Deceptive Acts or Practices by State-Chartered Banks.

Examiner's Review of Delinquencies Involving Check-Credit (Overdraft-Protection) Plans

Delinquencies are often experienced when an account is at or near the customer's maximum credit line. Examiners should verify that the following reports are generated for and reviewed by bank management, and examiners should also analyze them as part of the examination process:

- aging of delinquent accounts
- accounts on which payments are made (either on this account or other loans) by drawing on reserves
- accounts with steady usage

Many banks offer check-credit plans to small businesses; these plans may have a higher-than-normal degree of risk unless they are offered under very stringent controls. In these situations, the examiner's review should be based on the same factors and criteria used for the review of unsecured commercial loans.

Credit Card Plans

Most bank credit card plans are similar. The bank solicits retail merchants, service organizations, and others who agree to accept a credit card in lieu of cash for sales or services performed. The bank assumes the credit risk and charges the nonrecourse sales draft to the individual customer's credit card account. The bank sends monthly statements to the customer, who may elect to pay the entire amount or to pay in monthly installments, with an additional percentage charge on the outstanding balance each month. A cardholder may also obtain cash advances, which accrue interest from the transaction date, from the bank or automated teller machines.

A bank can be involved in a credit card plan in various ways. Also, the terminology used to describe the manner in which a bank is involved in a credit card plan may vary. The examiner first needs to determine the type of credit card plan that the bank has and then ascertain the degree of risk that the plan poses to the bank.

Both the bank's customers and the bank itself can generate potential risk in the credit card department. On the customer side, the risk is generally divided into two categories: the misuse of credit and the misuse of the credit card. The potential for credit misuse is reduced by careful screening of cardholders before cards are issued and by monitoring individual accounts for abuse. Credit card misuse may be reduced by establishing controls to prevent the following abuses:

- employees or others from intercepting the card before delivery to the cardholder
- merchants from obtaining control of cards
- fraudulent use of lost or stolen cards

Because credit cards may be easily misused by the cardholders and others who may obtain the cards, strict adherence to appropriate internal controls and operating procedures is essential in any credit card department. The examiner should determine if adequate controls and procedures exist.

Account Management, Risk Management, and the Allowance for Loan and Lease Losses

Credit card lending programs can generate risk through inappropriate account-management, risk-management, and loss-allowance practices. Banks should have and follow prudent policies for credit-line management, over-limit practices, minimum payments, negative amortization, workout and forbearance practices, and recovery practices. In addition, banks should follow generally accepted accounting principles (GAAP), existing interagency policies, and Call Report instructions for income-recognition and loss-allowance practices. In arriving at an overall assessment of the adequacy of a bank's account-management practices for its credit card lending business, examiners should incorporate the risk profile of the bank, the quality of management reporting, and the adequacy of the bank's charge-off policies and its allowance for loan and lease losses methodologies and documentation practices. (See SR-03-01 and the FFIEC January 8, 2003, interagency guidance on credit card lending.)

Credit-line management. Banks should carefully consider the repayment capacity of borrowers when assigning initial credit lines or significantly increasing borrowers' existing credit lines. When a bank inadequately analyzes the repayment capacity of a borrower, practices such as liberal line-increase programs and multiple card strategies can increase the risk profile of a borrower quickly and result in rapid and significant portfolio deterioration.

Credit-line assignments should be managed conservatively using proven credit criteria. Support for credit-line management should include documentation and analysis of decision factors such as a borrower's repayment history, risk scores, behavior scores, or other relevant criteria.

Banks can significantly increase their credit exposure by offering customers additional cards, including store-specific private-label cards and affinity-relationship cards, without considering their entire relationship with a customer. In extreme cases, some banks may grant additional cards to borrowers who are already experiencing payment problems on their existing cards. Banks that offer multiple credit lines should have sufficient internal controls and management information systems (MIS) to aggregate related exposures and analyze performance before they offer additional credit lines to customers.

Over-limit practices. Account-management practices that do not adequately control authorization and provide for timely repayment of over-limit amounts may significantly increase the credit-risk profile of a bank's portfolio. While prudent over-limit practices are important for all credit card accounts, such practices are especially important for subprime accounts. Liberal over-limit tolerances and inadequate repayment requirements in subprime accounts can magnify the high risk exposure of the lending bank, and deficient reporting and loss-allowance methodologies can understate the credit risk.

All banks should carefully manage their over-limit practices and focus on reasonable control and timely repayment of amounts that exceed established credit limits. A bank's MIS should be sufficient to enable its management to identify, measure, manage, and control the unique risks associated with over-limit accounts. Over-limit authorization on open-end accounts, particularly those that are subprime, should be restricted and subject to appropriate policies and controls. The bank's objective should be to ensure that the borrower remains within prudent established credit limits that increase the likelihood of responsible credit management.

Minimum payment and negative amortization. Competitive pressures and a desire to preserve outstanding balances can lead to a bank's easing of minimum-payment requirements, which in turn can increase credit risk and mask portfolio quality. These problems are exacerbated when minimum payments consistently fall short of covering all finance charges and fees assessed during the billing cycle and when the outstanding balance continues to build (known as "negative amortization"). In these cases, the lending bank is recording uncollected income by capitalizing the unpaid finance charges and fees into the account balance the customer owes. The pitfalls of negative amortization are magnified when subprime accounts are involved—and are even more damaging when the condition is prolonged by programmatic, recurring overlimit fees and other charges that are primarily intended to increase recorded income for the lending bank rather than enhance the borrowers' performance or their access to credit.

The Federal Reserve expects lending banks to require minimum payments that will amortize the current balance over a reasonable period of time, consistent with the unsecured, consumer-oriented nature of the underlying debt and the borrower's documented creditworthiness. Examiners should criticize prolonged practices involving negative amortization and inappropriate fees, as well as other practices that inordinately compound or protract consumer debt and disguise portfolio performance and quality, all of which raise safety-and-soundness concerns.

Workout and forbearance practices. Banks should properly manage workout programs.[4] Areas of concern involve liberal repayment terms with extended amortizations, high charge-off rates, moving accounts from one workout program to another, multiple re-agings, and poor MIS to monitor program performance. Examiners should criticize management and require appropriate corrective action when workout programs are not managed properly. Such actions may include adversely classifying entire segments of portfolios, placing loans on nonaccrual, increasing loss allowances to adequate levels, and accelerating charge-offs to appropriate time frames.

Workout programs should be designed to maximize principal reduction and should generally strive to have borrowers repay credit card debt within 60 months. Repayment terms for workout programs should be consistent with these time frames; exceptions should be clearly documented and supported by compelling evidence that less conservative terms and conditions are warranted. To meet the appropriate time frames, banks may need to substantially reduce or eliminate interest rates and fees on credit card debt so that more of the payment is applied to reducing the principal.

In lieu of workout programs, banks sometimes negotiate settlement agreements with borrowers who are unable to service their unsecured open-end credit. In a settlement arrangement, the bank forgives a portion of the amount owed. In exchange, the borrower agrees to pay the remaining balance either in a lump-sum payment or by amortizing the balance over several months.

Income-recognition and ALLL methodologies and practices. Most banks use historical net charge-off rates, which are based on a migration analysis of the roll rates[5] to charge-off, as the starting point for determining appropriate loss allowances. Banks then typically adjust the historical charge-offs to reflect current trends and conditions and other factors.

Banks should evaluate the collectibility of accrued interest and fees on credit card accounts because a portion of accrued interest and fees is generally not collectible.[6] Although regulatory reporting instructions do not require consumer credit card loans to be placed on nonaccrual on the basis of their delinquency status, all banks should employ appropriate methods to ensure that income is accurately measured. Such methods may include providing loss allowances for

4. A workout is a former open-end credit card account in which credit availability has been closed and the balance owed has been placed on a fixed (dollar or percentage) repayment schedule in accordance with modified, concessionary terms and conditions. Generally, the repayment terms require amortization or liquidation of the balance owed over a defined payment period. Such arrangements are typically used when a customer is either unwilling or unable to repay the open-end credit card account in accordance with the original terms but shows the willingness and ability to repay the loan in accordance with modified terms and conditions.

Workout programs generally do not include temporary-hardship programs that help borrowers overcome temporary financial difficulties. However, temporary-hardship programs longer than 12 months, including renewals, should be considered workout programs.

5. *Roll rate* is the percentage of balances or accounts that move from one delinquency stage to the next delinquency stage.

6. AICPA Statement of Position 01-6, *Accounting by Certain Entities (Including Entities with Trade Receivables) That Lend to or Finance the Activities of Others,* provides guidance on accounting for delinquency fees.

uncollectible fees and finance charges or placing delinquent and impaired receivables on nonaccrual status. Banks must account for the owned portion of accrued interest and fees, including related estimated losses, separately from the retained interest in accrued interest and fees from credit card receivables that have been securitized.

A bank's allowance for loan and lease losses should be adequate to absorb credit losses that are probable and estimable on all loans. While some banks provide for an ALLL on all loans, others may only provide for an ALLL on loans that are delinquent. This last practice may result in an inadequate ALLL. Banks should ensure that their loan-impairment analysis and ALLL methodology, including the analysis of roll rates, consider the losses inherent in both delinquent and nondelinquent loans.

A bank's allowance methodologies should always fully recognize the losses inherent in over-limit portfolio segments. For example, if a bank requires borrowers to pay monthly over-limit and other fees in addition to the minimum monthly payment amount, roll rates and estimated losses may be higher than indicated in the overall portfolio migration analysis. Accordingly, banks should ensure that their allowance methodology addresses the incremental losses that may be inherent in over-limit accounts.

A bank's allowances should appropriately provide for the inherent probable loss in workout programs, particularly when a program has liberal repayment periods with little progress in reducing principal. Accounts in workout programs should be segregated for performance-measurement, impairment-analysis, and monitoring purposes. When multiple workout programs with different performance characteristics exist, a bank should track each program separately and establish and maintain adequate allowances for each program. Generally, the allowance allocation should equal the estimated loss in each program based on historical experience as adjusted for current conditions and trends. These adjustments should take into account changes in economic conditions, the volume and mix of loans in each program, the terms and conditions of each program, and loan collection activities.

Banks should ensure that they establish and maintain adequate loss allowances for credit card accounts that are subject to settlement arrangements. In addition, the FFIEC Uniform Retail Credit Classification and Account Management Policy states that "actual credit losses on individual retail loans should be recorded when the bank becomes aware of the loss." In general, the amount of debt forgiven in a settlement arrangement should be classified as loss and charged off immediately. Immediate charge-off, in some circumstances, however, may be impractical. In such cases, banks may treat amounts forgiven in settlement arrangements as specific allowances.[7] Upon receipt of the final settlement payment, banks should charge off deficiency balances within 30 days.

Recovery practices. After a credit card loan is charged off, banks must properly report any subsequent collections on the loan.[8] Typically, banks report some or all of such collections on charged-off credit card loans as recoveries to the ALLL. If the total amount a bank credits to the ALLL as the recovery on an individual credit card loan (which may include principal, interest, and fees) exceeds the amount previously charged off against the ALLL on that loan (which may have been limited to principal), then the bank's net charge-off experience—an important indicator of the credit quality and performance of its portfolio—will be understated. Banks must ensure that the total amount credited to the ALLL as recoveries on a loan (which may include amounts representing principal, interest, and fees) is limited to the amount previously charged off against the ALLL on that loan. Any amounts collected in excess of this limit should be recognized as income.

Re-aging of credit card receivables. The examiner should review the bank's credit card receivables to determine if re-aging occurs. Re-aging refers to the removal of a delinquent account from normal collection activity after the borrower has demonstrated over time that he or she is capable of fulfilling contractual obligations without the intervention of the bank's collection department. The bank may use re-aging when a customer makes regular and consecutive payments over a period of time that maintain the account at a consistent delinquency level or reduce the delinquency level with minimal collection effort. Re-aging, in effect, changes the delinquency-payment status of a credit card

7. For regulatory reporting purposes, banks should report the creation of a specific allowance as a charge-off in Schedule RI-B of the call report.

8. AICPA Statement of Position 01-6 provides recognition guidance for recoveries of previously charged-off loans.

receivable from a past-due to a current status. The examiner should determine if the bank re-ages its accounts on an exception basis or as a regular practice. The bank should document those accounts that have been re-aged, obtain appropriate approval, and ensure that re-aging is done in conformance with internal policies and procedures. (See “Bank Classification and Charge-Off Policy” later in this section and SR-00-8 for further guidance.)

Exceptions to examiner guidance. From time to time, banks with well-managed programs may authorize, and provide a basis for granting, limited exceptions to the FFIEC Uniform Retail Credit Classification and Account Management Policy. The basis for granting exceptions to the policy should be identified and described in the bank’s policies and procedures. Such policies and procedures should address the types of exceptions allowed and the circumstances for permitting them. The volume of accounts granted exceptions should be small and well controlled, and the performance of these accounts should be closely monitored. Examiners will evaluate whether a bank uses its exceptions prudently. Examiners should criticize management and require corrective action when exceptions are not used prudently, are not well managed, result in improper reporting, or mask delinquencies and losses.

LOAN POLICY

A written consumer credit policy provides bank management with the framework to underwrite and administer the risk inherent in lending money while establishing a mechanism for the board of directors or senior management to monitor compliance. The policy should establish the authority, rules, and guidelines to operate and administer the bank’s consumer loan portfolio effectively; that is, the policy should help manage risk while ensuring profitability. The policy should set basic standards and procedures clearly and concisely. The policy’s guidelines should be derived from a careful review of internal and external factors that affect the bank. To avoid any discriminatory policies or practices, the policy should include guidelines on the various consumer credit laws and regulations.

The composition of the loan portfolio will differ considerably among banks because lending activities are influenced by many factors, including the type of institution, management’s objectives and philosophies on diversification and risk, the availability of funds, and credit demand. An effective lending policy and commensurate procedures are integral components of the lending process. The bank’s consumer credit policy should accomplish the following:

- define standards, rules, and guidelines for the credit-evaluation process, with the following specific goals:
  - — establish minimum and maximum loan maturities
  - — establish minimum levels of creditworthiness
  - — create consistency within the bank’s underwriting process
  - — ensure uniformity in how the bank’s consumer credit products are offered to borrowers
- provide a degree of flexibility, which allows credit officers and management to use their knowledge, skills, and experience
- provide specific guidelines for determining the creditworthiness of applicants; these guidelines might include the following:
  - — minimum income levels
  - — maximum debt-to-income ratios
  - — job or income stability
  - — payment history on previous obligations
  - — the type and value of collateral
  - — maximum loan-to-value ratios on various types of collateral
  - — a minimum score on a credit scoring system
- provide guidelines for the level and type of documentation to be maintained, including—
  - — a signed application
  - — the identity of the borrower and his or her occupation
  - — documentation of the borrower’s financial capacity
  - — a credit bureau report
  - — the purpose of all loans granted to the borrower, the sources of repayment, and the repayment programs
  - — documentation of the collateral, its value, and the source of the valuation
  - — documents perfecting the lien on the collateral
  - — verification worksheets and supporting documentation

— a credit scoring worksheet, if applicable
— the sales contract and related security agreements, if applicable
— evidence of insurance coverage, if applicable
— any other documentation received or prepared in conjunction with the credit request

• define procedures for handling delinquent consumer credit loans and the subsequent charge-off and possible re-aging of those loans

The consumer credit policy should also provide guidelines for granting loans that do not conform to the bank's written lending policy or procedures. The policy should require that the reason for the exception be detailed in writing, submitted for approval to a designated authority, and documented in the loan file. Credit exceptions should be reviewed by the appropriate bank committee. The frequency of exceptions granted may indicate a lessening of underwriting standards or a need to adjust the policy to allow flexibility within safe and sound parameters. The examiner should assess the exceptions and make recommendations accordingly.

Obtaining and maintaining complete and accurate information on every consumer credit applicant is essential to approving credit in a safe and sound manner. The loan policy should establish what information will be required from the borrower during the application process and what, if any, subsequent information the borrower will be required to submit while the credit remains outstanding. Credit files should be maintained on all borrowers, regardless of the credit amount, with the exception of the latitude provided by the March 30, 1993, Interagency Policy Statement on Documentation of Loans. Each borrower's credit file should include the names of all other borrowers who are part of the same borrowing relationship, or the bank should have some other system for informing the reader of a credit file that the borrower is part of a more extensive credit relationship. A current credit file should provide the loan officer, loan committee, and internal and external reviewers with all information necessary to (1) analyze the credit before it is granted and (2) monitor the credit during its life.

Documentation requirements will vary according to the type of loan, borrower, and collateral. For example, the bank may not require a financial statement from a borrower whose loans are fully secured by certificates of deposit issued by the bank. For most consumer credit loans, the borrower's financial information is collected only at the time of the loan application.

OPERATIONAL RISK

The management of the consumer credit function and the accompanying internal controls is of primary importance to the safe, sound, and profitable operation of a bank. In evaluating controls for consumer credit administration, the examiner should review (1) the bank's adherence to policies and procedures and (2) the operational controls over recordkeeping, payments, and collateral records to ensure that risks are controlled properly. (See "Loan Portfolio Management," section 2040.1, for an overview of the various types of risk that the bank should be aware of and the controls it should implement to effectively manage risk.) Risks that are inherent to the consumer credit function and that require internal controls include, but are not limited to, the following:

• *Insurance.* All insurance policies on file should name the bank as loss payee. The bank should maintain a tickler system to monitor the expiration of insurance policies. In addition, the bank should implement procedures to ensure single-interest insurance coverage is obtained in case the borrower's insurance is canceled or expires.

• *Security agreements.* The bank should implement procedures to ensure that lien searches are performed and that liens are perfected by appropriate filings.

• *Indirect installment loans.* The bank should implement procedures to reduce the risk that can occur in this area. These procedures should ensure the following:
  — payments are made directly to the bank and not through the dealer
  — dealer lines are reaffirmed at least annually
  — selling prices as listed by the dealer are accurate
  — credit checks on the borrowers are performed independently of the dealer
  — overdrafts are prohibited in the dealer reserve and holdback accounts
  — past-due accounts are monitored in aggregate per dealer to assess the quality of loans received from each individual dealer

CREDIT SCORING SYSTEM

Credit scoring is a method for predicting how much repayment risk consumer credit borrowers present. Credit scoring systems are developed using application or credit bureau data on consumers whose performance has already been categorized as creditworthy or noncreditworthy. Items of information that help predict acceptable performance are identified and assigned point values relative to their overall importance. These values are then totaled to calculate an overall credit score.

The credit score is used to approve credit, and frequently allows a bank to avoid the costly and time-consuming process of individual underwriting. Management determines a minimum score, which is sometimes called the cutoff score. Borrowers whose credit scores are not within the approved cutoff-score range for the type of loan requested do not meet the bank's minimum underwriting criteria. However, the bank may override a borrower's unacceptable credit score when other mitigating factors are present that may not have been included in the credit score. Exceptions to the bank's credit scoring system should be documented.

A number of banks have developed and implemented credit scoring systems as part of the approval process for consumer credit; other banks use traditional methods that rely on a credit officer's subjective evaluation of an applicant's creditworthiness. Credit scoring systems are replacing credit officers' subjective evaluation of borrowers' creditworthiness in more and more banks, particularly in larger institutions. Credit scoring systems are divided into two categories: (1) empirically derived, demonstrably and statistically sound credit systems and (2) judgmental systems.

Empirically derived credit scoring systems are generally defined as systems that evaluate creditworthiness by assigning points to various attributes of the applicant and, perhaps, to attributes of the credit requested. The points assigned are derived from a statistical analysis of recent creditworthy and noncreditworthy applicants of the bank. An empirically derived credit scoring system is statistically sound when it meets the following requirements:

- The data used to develop the system are derived from an empirical comparison of sample groups or from the population of creditworthy and noncreditworthy applicants who applied for credit within a reasonably recent period of time.
- The system is developed to evaluate the creditworthiness of applicants in order to serve the legitimate business interests of the bank using the system.
- The system is developed and validated using statistical principles and methodology.
- The bank periodically reevaluates the predictive ability of the system by using statistical principles and methodologies and adjusts the system as necessary.

An empirically derived credit scoring system may take the age of an applicant into account as a predictive variable, provided that the age of an elderly applicant is not assigned a negative factor or value. In a judgmental system, which relies on a credit officer's personal evaluation of a potential borrower's creditworthiness, a creditor may not take age directly into account. However, the applicant's age may be related to other information that the creditor considers in evaluating creditworthiness. For example, a creditor may consider the applicant's occupation and length of time to retirement to ascertain whether the applicant's income (including retirement income) will support the extension of credit to maturity. Consumer credit regulations allow any system of evaluating creditworthiness to favor an applicant who is 62 or older.

If the bank has a credit scoring system, the examiner should review the items or customer attributes that are included in it. In general, credit scoring systems are built on an experiential or historical database. Credit scoring methods analyze the experiences of individuals who have been previously granted credit and divide them into creditworthy and noncreditworthy accounts for purposes of predicting future extensions of consumer credit.

A successful credit scoring system provides a standardized way of measuring the inherent risk of the borrower. An important measure of any credit scoring system is its definition of risk and the care with which explanatory variables are defined, data are collected, and the system is tested. The standardized risk measurement should be fundamentally sound, be based on historical data, measure the risk of default (or loss), and produce consistent results across time for a wide range of borrowers. The bank should further investigate potential borrowers who do not meet the credit scoring criteria.

Some banks may use more than one type of credit scoring methodology in their underwriting and account-management practices. The following are three examples of credit scoring systems:

- *Credit bureau scoring.* The bank uses a consumer's credit bureau information in a scoring formula. The scoring model is developed by the various credit bureaus, using the reported experience of all credit grantors with whom the applicant has or has had a relationship.
- *Custom-application scoring.* The bank uses both a consumer's application and credit bureau data in a scoring formula. This scoring model is developed using only information on the bank's applicants and borrowers.
- *Behavioral scoring.* The bank uses a formula that includes a borrower's repayment history, account utilization, and length of time with the bank to calculate a risk score for revolving accounts.

Applicants who fail the scoring process may still be judgmentally reviewed if additional information exists that may not have been included in the scoring formula. In addition, if an applicant passes the scoring process, but other information indicates that the loan should not be made, the applicant can be denied but the reason for the credit denial should be documented.

BANK CLASSIFICATION AND CHARGE-OFF POLICY

Consumer credit loans, based on their volume and size, are generally classified using criteria that are different from the classification of other types of loans. The examiner should use the Uniform Retail Credit Classification and Account Management Policy[9] when determining consumer credit classifications. (See the appendix to this section.)

A bank should have procedures detailing when consumer credit loans become watch list or problem credits. In addition, the bank should have charge-off procedures for consumer credit loans. The examiner should review the bank's policies and procedures for adequacy and compliance.

Identification of unfavorable trends must include the review of past-due percentages and income and loss trends in the consumer credit department, which management should monitor closely. Unfortunately, in banks that lack a well-enforced charge-off program, loss ratios are often meaningless for periods of less than a year. As a result, bank management may not become aware of downward trends until year-end or examiner-initiated charge-offs are made. Recognition and implementation of any necessary corrective action are thus delayed.

The examiner should determine whether the bank has adopted a well-enforced charge-off procedure. If so, his or her review should be limited to ascertaining that exceptions meet established guidelines. If the bank is properly charging off delinquent consumer credit loans in the normal course of business under a policy that generally conforms to that of the Federal Reserve System, no specific request for charge-off should be necessary. When the bank has not established a program to ensure the timely charge-off of delinquent accounts, such a program should be recommended in the examination report. If material misstatements in the FFIEC Consolidated Reports of Condition and Income (Call Reports) for previous quarters have resulted from management's failure to charge off loans, management should be instructed to amend the Call Reports for each affected quarter. The following loans are subject to the uniform classification policy:

- All loans to individuals for household, family, and other personal expenditures as defined in the Call Reports.
- Mobile home paper, except when applicable state laws define the purchase of a mobile home as the purchase of real property and the loan is secured by the purchased mobile home as evidenced by a mortgage or similar document.
- Federal Housing Authority (FHA) title 1 loans. These loans are also subject to the following classification criteria:

9. The 1980 Federal Financial Institutions Examination Council (FFIEC) policy was revised and issued in February 1999 and June 2000. The June 2000 policy replaces the 1980 policy and its February 1999 revision. Reporting on the FFIEC Call Report, based on the revised policy, is not required until December 31, 2000. In addition to discussing the revised policy statement, SR-00-8 advises examiners to consider the methodology used for aging retail loans. In accordance with the FFIEC Call Report instructions, banks and their consumer finance subsidiaries are required to use the contractual method, which ages loans based on the status of contractual payments.

- — Uninsured portions should be charged off when claims have been filed.
- — When claims have not been filed, uninsured delinquent portions should be classified in accordance with the delinquent-installment-loan classification policy.
- — The portion covered by valid insurance is not subject to classification.

The uniform classification policy includes consumer credit loans. Small, delinquent consumer credit loans may be listed for classification purposes in the report of examination without detailed comments. Larger classified consumer loans might need to be supported with detailed comments. When no specific procedures have been established, or when adherence to the established procedures is not evident, the examiner should make every effort to encourage the bank to adopt and follow acceptable procedures.

REPOSSESSED PROPERTY

Repossessed property should be booked at its fair value, less cost to sell, on the date the bank obtains clear title and possession of the property. Any outstanding loan balance in excess of the fair value of the property, less selling costs, should be charged off. Periodic repricing should be performed, and appropriate accounting entries should be made when necessary. Generally, repossessed property should be disposed of within 90 days of obtaining possession, unless legal requirements stipulate a longer period.

VIOLATIONS OF LAW

The consumer credit department is particularly susceptible to violations of the various consumer credit laws and regulations. These types of violations may result in serious financial penalties and loss of public esteem. Therefore, the examiner must be aware of any violations discovered during the consumer compliance examination and ensure that corrective action has been effected. All examiners should be familiar with the various consumer credit laws and regulations and be alert to potential violations.

APPENDIX—RETAIL-CREDIT CLASSIFICATION POLICY

The revised June 2000 Uniform Retail Credit Classification and Account Management Policy issued by the FFIEC and approved by the Federal Reserve Board is reproduced below. The Board has clarified certain provisions of this policy. In this text, the Board's revisions are in brackets.

The Uniform Retail Credit Classification and Account Management Policy[10] establishes standards for the classification and treatment of retail credit by financial institutions. Retail credit consists of open- and closed-end credit extended to individuals for household, family, and other personal expenditures, and includes consumer loans and credit cards. For purposes of this policy, retail credit also includes loans to individuals secured by their personal residence, including first mortgage, home equity, and home-improvement loans. Because a retail-credit portfolio generally consists of a large number of relatively small-balance loans, evaluating the quality of the retail-credit portfolio on a loan-by-loan basis is inefficient and burdensome for the institution being examined and for examiners.

Actual credit losses on individual retail credits should be recorded when the institution becomes aware of the loss, but in no case should the charge-off exceed the time frames stated in this policy. This policy does not preclude an institution from adopting a more conservative internal policy. Based on collection experience, when a portfolio's history reflects high losses and low recoveries, more conservative standards are appropriate and necessary.

The quality of retail credit is best indicated by the repayment performance of individual borrowers. Therefore, in general, retail credit should be classified based on the following criteria:

- Open- and closed-end retail loans past due 90 cumulative days from the contractual due date should be classified substandard.
- Closed-end retail loans that become past due 120 cumulative days and open-end retail loans that become past due 180 cumulative days from the contractual due date should be classified loss and charged off.[11] In lieu of charg-

10. [For the Federal Reserve's classification guidelines, see section 2060.1, "Classification of Credits."]

11. For operational purposes, whenever a charge-off is

ing off the entire loan balance, loans with non–real estate collateral may be written down to the value of the collateral, less cost to sell, if repossession of collateral is assured and in process.

- One- to four-family residential real estate loans and home equity loans that are past due 90 days or more with loan-to-value ratios greater than 60 percent should be classified substandard. Properly secured residential real estate loans with loan-to-value ratios equal to or less than 60 percent are generally not classified based solely on delinquency status. Home equity loans to the same borrower at the same institution as the senior mortgage loan with a combined loan-to-value ratio equal to or less than 60 percent need not be classified. However, home equity loans where the institution does not hold the senior mortgage, that are past due 90 days or more should be classified substandard, even if the loan-to-value ratio is equal to, or less than, 60 percent.
- For open- and closed-end loans secured by residential real estate, a current assessment of value should be made no later than 180 days past due. Any outstanding loan balance in excess of the value of the property, less cost to sell, should be classified loss and charged off.
- Loans in bankruptcy should be classified loss and charged off within 60 days of receipt of notification of filing from the bankruptcy court or within the time frames specified in this classification policy, whichever is shorter, unless the institution can clearly demonstrate and document that repayment is likely to occur. Loans with collateral may be written down to the value of the collateral, less cost to sell. Any loan balance not charged off should be classified substandard until the borrower re-establishes the ability and willingness to repay for a period of at least six months.
- Fraudulent loans should be classified loss and charged off no later than 90 days of discovery or within the time frames adopted in this classification policy, whichever is shorter.
- Loans of deceased persons should be classified loss and charged off when the loss is determined or within the time frames adopted in this classification policy, whichever is shorter.

Other Considerations for Classification

If an institution can clearly document that a past-due loan is well secured and in the process of collection, such that collection will occur regardless of delinquency status, then the loan need not be classified. A well-secured loan is collateralized by a perfected security interest in, or pledges of, real or personal property, including securities with an estimable value, less cost to sell, sufficient to recover the recorded investment in the loan, as well as a reasonable return on that amount. "In the process of collection" means that either a collection effort or legal action is proceeding and is reasonably expected to result in recovery of the loan balance or its restoration to a current status, generally within the next 90 days.

Partial Payments on Open- and Closed-End Credit

Institutions should use one of two methods to recognize partial payments. A payment equivalent to 90 percent or more of the contractual payment may be considered a full payment in computing past-due status. Alternatively, the institution may aggregate payments and give credit for any partial payment received. For example, if a regular installment payment is $300 and the borrower makes payments of only $150 per month for a six-month period, [the institution could aggregate the payments received ($150 × six payments, or $900). It could then give credit for three full months ($300 × three payments) and thus treat the loan as] three full months past due. An institution may use either or both methods in its portfolio, but may not use both methods simultaneously with a single loan.

necessary under this policy, it should be taken no later than the end of the month in which the applicable time period elapses. Any full payment received after the 120- or 180-day charge-off threshold, but before month-end charge-off, may be considered in determining whether the charge-off remains appropriate.

OTS regulation 12 CFR 560.160(b) allows savings institutions to establish adequate (specific) valuation allowances for assets classified loss in lieu of charge- offs.

Open-end retail accounts that are placed on a fixed repayment schedule should follow the charge-off time frame for closed-end loans.

Re-aging, Extensions, Deferrals, Renewals, and Rewrites

Re-aging of open-end accounts, and extensions, deferrals, renewals, and rewrites of closed-end loans[12] can be used to help borrowers overcome temporary financial difficulties, such as loss of job, medical emergency, or change in family circumstances like loss of a family member. A permissive policy on re-agings, extensions, deferrals, renewals, or rewrites can cloud the true performance and delinquency status of the portfolio. However, prudent use is acceptable when it is based on a renewed willingness and ability to repay the loan, and when it is structured and controlled in accordance with sound internal policies.

Management should ensure that comprehensive and effective risk management and internal controls are established and maintained so that re-ages, extensions, deferrals, renewals, and rewrites can be adequately controlled and monitored by management and verified by examiners. The decision to re-age, extend, defer, renew, or rewrite a loan, like any other modification of contractual terms, should be supported in the institution's management information systems. Adequate management information systems usually identify and document any loan that is re-aged, extended, deferred, renewed, or rewritten, including the number of times such action has been taken. Documentation normally shows that the institution's personnel communicated with the borrower, the borrower agreed to pay the loan in full, and the borrower has the ability to repay the loan. To be effective, management information systems should also monitor and track the volume and performance of loans that have been re-aged, extended, deferred, renewed, or rewritten and/or placed in a workout program.

12. These terms are defined as follows. *Re-age*: Returning a delinquent, open-end account to current status without collecting [at the time of aging] the total amount of principal, interest, and fees that are contractually due. *Extension*: Extending monthly payments on a closed-end loan and rolling back the maturity by the number of months extended. The account is shown current upon granting the extension. If extension fees are assessed, they should be collected at the time of the extension and not added to the balance of the loan. *Deferral*: Deferring a contractually due payment on a closed-end loan without affecting the other terms, including maturity [or the due date for subsequently scheduled payments] of the loan. The account is shown current upon granting the deferral. *Renewal*: Underwriting a matured, closed-end loan generally at its outstanding principal amount and on similar terms. *Rewrite*: Underwriting an existing loan by significantly changing its terms, including payment amounts, interest rates, amortization schedules, or its final maturity.

Open-End Accounts

Institutions that re-age open-end accounts should establish a reasonable written policy and adhere to it. To be considered for re-aging, an account should exhibit the following:

- The borrower has demonstrated a renewed willingness and ability to repay the loan.
- The account has existed for at least nine months.
- The borrower has made at least three consecutive minimum monthly payments or the equivalent cumulative amount. Funds may not be advanced by the institution for this purpose.

Open-end accounts should not be re-aged more than once within any twelve-month period and no more than twice within any five-year period. Institutions may adopt a more conservative re-aging standard; for example, some institutions allow only one re-aging in the lifetime of an open-end account. Additionally, an over-limit account may be re-aged at its outstanding balance (including the over-limit balance, interest, and fees), provided that no new credit is extended to the borrower until the balance falls below the predelinquency credit limit.

Institutions may re-age an account after it enters a workout program, including internal and third-party debt-counseling services, but only after receipt of at least three consecutive minimum monthly payments or the equivalent cumulative amount, as agreed upon under the workout or debt-management program. Re-aging for workout purposes is limited to once in a five-year period and is in addition to the once-in-twelve-months/twice-in-five-years limitation described above. To be effective, management information systems should track the principal reductions and charge-off history of loans in workout programs by type of program.

Closed-End Loans

Institutions should adopt and adhere to explicit standards that control the use of extensions, deferrals, renewals, and rewrites of closed-end loans. The standards should exhibit the following:

- The borrower should show a renewed willingness and ability to repay the loan.
- The standards should limit the number and frequency of extensions, deferrals, renewals, and rewrites.
- Additional advances to finance unpaid interest and fees should be prohibited.

Management should ensure that comprehensive and effective risk management, reporting, and internal controls are established and maintained to support the collection process and to ensure timely recognition of losses. To be effective, management information systems should track the subsequent principal reductions and charge-off history of loans that have been granted an extension, deferral, renewal, or rewrite.

Examination Considerations

Examiners should ensure that institutions adhere to this policy. Nevertheless, there may be instances that warrant exceptions to the general classification policy. Loans need not be classified if the institution can document clearly that repayment will occur irrespective of delinquency status. Examples might include loans well secured by marketable collateral and in the process of collection, loans for which claims are filed against solvent estates, and loans supported by valid insurance claims.

The Uniform Retail Credit Classification and Account Management Policy does not preclude examiners from classifying individual retail-credit loans that exhibit signs of credit weakness regardless of delinquency status. Similarly, an examiner may also classify retail portfolios, or segments thereof, where underwriting standards are weak and present unreasonable credit risk, and may criticize account-management practices that are deficient.

In addition to reviewing loan classifications, the examiner should ensure that the institution's allowance for loan and lease losses provides adequate coverage for probable losses inherent in the portfolio. Sound risk- and account-management systems, including a prudent retail-credit lending policy, measures to ensure and monitor adherence to stated policy, and detailed operating procedures, should also be implemented. Internal controls should be in place to ensure that the policy is followed. Institutions that lack sound policies or fail to implement or effectively adhere to established policies will be subject to criticism.

Issued by the FFIEC on June 12, 2000.

1. To determine the quality and adequacy of operations (including the adequacy of lending policies, practices, procedures, internal controls, and management information systems) for consumer credit and credit card plans.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To evaluate the consumer credit portfolio for credit quality, performance, adequate collateral, and collectibility.
4. To determine the scope and adequacy of the audit and loan-review function.
5. To determine the level of risk inherent in a bank's consumer credit and credit card lending departments and what actions management has taken to identify, measure, control, and monitor the level and types of risks.
6. To determine that the goals and objectives of specific credit card plans are being achieved and that the plans are profitable.
7. To determine compliance with the board of directors' and senior management's policies and procedures and with applicable laws and regulations.
8. To initiate corrective action when policies, procedures, practices, or internal controls are deficient or when violations of law or regulations have been noted.

GENERAL CONSUMER CREDIT

1. If selected for implementation, complete or update the installment loan section of the internal control questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Obtain a listing of any deficiencies noted in the latest review conducted by internal or external auditors. If applicable, also determine if the latest consumer compliance examination disclosed any violation of laws or regulations. Determine if corrective action has been taken.
4. Request that the bank supply the following:
   a. a listing of all dealers who have indirect-paper, fleet-leasing, or discounted-lease lines, along with respective codes
   b. an indirect paper or a fleet-leasing or discounted fleet-leasing report by code, along with the respective delinquency report for all loans past due 30 days or more
   c. a listing of dealer reserves, holdback accounts, or both showing the dealer, account number, and balance
   d. the latest month-end extension and renewal reports
   e. a schedule of all loans with irregular or balloon payments or both
   f. a schedule of all loans with more than five prepaid installments
   g. a listing of loans generated by brokers or finders
   h. a listing of current repossessions, including the name of the borrower, a description of the item, the date of repossession, the date title was acquired, and the balance
   i. a copy of each monthly installment-loan charge-off report since the preceding examination (If the monthly reports do not include all the information necessary to support the charge-off of the installment loans, request a revised listing that includes the missing information for each charge-off.)
   j. management reports that are prepared by department personnel and that are not forwarded in their entirety to the board of directors or its committee
   k. a listing of the amount of recoveries on charged-off installment loans, by month, since the preceding examination
   l. a listing of all outstanding loans that have been assigned to an attorney for collection
   m. an identification of all columns and codes on the computer printout
5. Obtain a trial balance of installment loans. Use of the bank's latest trial balance is acceptable. If exact figures are required, update the trial balance from the daily transaction journals. Using the trial balance—
   a. agree or reconcile balances to department controls and the general ledger and
   b. review reconciling items for reasonableness.
6. Using an appropriate sampling technique, select borrowers' loans to be reviewed during the examination.
7. Using an appropriate technique, select indirect dealers and fleet-leasing and indirect-lease lines from indirect-dealer or leasing reports. Transcribe the following onto consumer finance indirect line cards:
   a. the amount and number of contracts, indicating whether they are with or without recourse
   b. the amount and number of contracts still accruing that are past due 30–89 days and 90 days or more
   c. the balance in dealer reserve or holdback accounts or both
8. Obtain the following schedules from the bank or the appropriate examiner if they are applicable to this area:
   a. past-due loans (obtain separate schedules by branch, if available)
   b. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
   c. loans acquired from another lending institution as a result of a purchase,

participation, or asset swap since the previous examination
- d. loan commitments and other contingent liabilities
- e. extensions of credit to employees, officers, directors, principal shareholders, and their interests, specifying which officers are considered executive officers
- f. correspondent banks' extensions of credit to executive officers, directors, and principal shareholders and their interests
- g. a list of correspondent banks
- h. miscellaneous loan debit-and-credit suspense accounts
- i. loans considered "problem loans" by management
- j. each officer's current lending authority
- k. the current structure of interest rates
- *l.* any useful information obtained from the review of the minutes of the loan and discount committee or any similar committee
- m. reports furnished to the loan and discount committee or any similar committee
- n. reports furnished to the board of directors
- o. loans classified during the preceding examination
- p. the extent and nature of loans serviced

9. Review the information received and perform the following for—
   - a. Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap:
     - Participations only:
       - — Test participation certificates and records and determine that the parties share in the risks and contractual payments on a pro rata basis.
       - — Determine that the bank exercises similar controls and procedures over loans serviced for others as for loans in its own portfolio.
     - Procedures pertaining to *all* transfers:
       - — Investigate any situations in which loans were transferred immediately before the date of examination to determine if any were transferred to avoid possible criticism during the examination.
       - — Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.
       - — Determine that low-quality loans transferred to or from the bank are properly reflected on its books at fair value (while fair value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such loans as well as an appropriate risk premium).
       - — Determine that low-quality loans transferred to the parent holding company or a nonbank affiliate are properly reflected at fair value on the books of both the bank and its affiliate.
       - — If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
         - (1) name of originating institution
         - (2) name of receiving institution
         - (3) type of transfer (i.e., participation, purchase/sale, swap)
         - (4) date of transfer
         - (5) total number of loans transferred
         - (6) total dollar amount of loans transferred
         - (7) status of the loans when transferred (e.g., nonperforming, classified, etc.)
         - (8) any other information that would be helpful to the other regulator
   - b. Miscellaneous loan debit-and-credit suspense accounts:
     - Discuss with management any large or old items.
     - Perform additional procedures as considered appropriate.
   - c. For loan commitments and other contingent liabilities, if the borrower has been advised of the commitment and it exceeds the cutoff alone or in combination with any outstanding debt, prepare a line card for subsequent analysis and review.

d. For loans classified during the previous examination, determine the disposition of loans so classified by—
   - obtaining current balances and their payment status, or the date the loan was repaid and source of payment;
   - investigating any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank or were a result of a participation, sale, or swap with another lending institution; and
   - referring to step 9a of this section for the appropriate examination procedures, determine if repayment was a result of a participation, sale, or swap.

e. Select loans that require in-depth review on the basis of information derived from the above schedules.

10. Consult with the examiner responsible for the asset-liability management analysis to determine the appropriate maturity breakdown of loans needed for the analysis. If requested, compile the information using bank records or other appropriate sources. See section 6000.1, "Instructions for the Report of Examination," for considerations to be taken into account when compiling maturity information for the gap analysis.
11. Obtain liability and other information on common borrowers from examiners assigned to overdrafts, lease financing, and other loan areas. Together decide who will review the borrowing relationship.
12. Obtain the credit files of all direct nonconsumer borrowers, indirect dealers, and fleet-leasing and discounted-leasing lines for which line cards have been developed. Transcribe and analyze the following as appropriate:
    a. the purpose of the loan
    b. collateral information, including its value and the bank's right to hold and negotiate it
    c. the source of repayment
    d. ancillary information, including the type of business, its officers, and its affiliation
    e. fiscal and interim financial exhibits
    f. guarantors and the amount of any guarantee
    g. personal statements of borrowers, endorsers, or guarantors
    h. external credit checks and credit bureau reports
    i. loan officer's credit memoranda
    j. subordination agreements
    k. a corporate resolution to borrow or guarantee
    l. provisions of the loan agreement or master lease agreement
    m. the type of dealer endorsement:
       - full recourse
       - limited recourse
       - nonrecourse
    n. dealer repurchase agreements
    o. reserve and holdback requirements
    p. the amount of insurance coverage
13. Check the central liability file on borrowers indebted above the cutoff or borrowers displaying credit weakness who are suspected of having additional liability in other loan areas.
14. Transcribe significant liability and other information on officers, principals, and affiliations of borrowers for which line cards have been developed. Cross-reference, if appropriate.
15. Review a listing of loans generated by brokers or finders:
    a. Check the quality of the paper being acquired.
    b. Determine that sufficient financial data have been obtained to support the credits.
    c. Evaluate performance.
16. Review the current past-due (delinquent) loan list and determine that loans are aged using the contractual method, which ages a loan on the basis of its contractual repayment terms, as required by the Call Report instructions. Discuss with management selected delinquent loans from the listings of delinquent loans and repossessed collateral.
17. Determine if management has a general policy for the timely classification and charge-off of past-due loans and ascertain whether the policy is adhered to. Determine if loan-classification practices follow the board of directors' respective policies. Ascertain whether those policies comply with the provisions of the FFIEC's Uniform Retail Credit Classification and Account Management Policy and with Federal Reserve policy. Review with management individual accounts that have not been charged off in line with these policies.
18. Review voluntary charge-offs made since the preceding examination and, on a test basis, review files on borrowers and ascertain the correctness of the charge-off.

19. Review any reports being submitted on delinquent and defaulted loans guaranteed by government agencies:
    a. Determine that management is informed accurately and is complying with the reporting requirements.
    b. Determine that claims are being promptly filed after default.

OVERDRAFT-PROTECTION PROGRAMS

1. Determine if the bank has developed and implemented adequate written overdraft-protection-program policies and procedures for its ad hoc, automated, and other overdraft programs. Determine if the policies and procedures comply with the February 18, 2005, interagency Joint Guidance on Overdraft Protection Programs.
2. Ascertain whether the bank's management emphasizes and monitors adherence to its overdraft policies and procedures, applies generally accepted accounting principles to overdraft transactions, and applies the bank Call Report's accounting and reporting instructions and requirements to overdrafts. Evaluate whether the bank maintains and monitors safe and sound overdraft business practices to control the credit, operational, and other risks associated with overdraft programs.
3. Apply the additional examination procedures for overdraft-protection programs (see section 3000.3) when weaknesses are found in (1) the bank's compliance with the February 2005 interagency guidance and (2) the bank's evaluation of the risks associated with overdraft-protection programs.

CREDIT CARD LENDING

The examiner's analysis of operating policies and procedures is key to the examination of credit card banks and credit card operations. Credit card lending is characterized by a high volume of accounts, homogeneous loan pools, and small-dollar balances. A concentrated review of individual accounts, therefore, may not be practical. Examination procedures should focus on evaluating policies, procedures, and internal controls in conjunction with performing other selected functions. The goal is not confined to identifying current portfolio problems. The examination process should include an investigation of potential problems that may result from ineffective policies, unfavorable trends, lending concentrations, or nonadherence to policies. The following examination procedures should be performed.

1. Review UBPR data to determine the volume of credit card activity.
2. Determine if management has recently offered or plans to offer new products or if management plans to enter new market niches or expand the credit card portfolio significantly (new offerings may include affinity cards, co-branded cards, secured cards, or purchasing cards).
3. Determine whether the bank is engaged or plans to engage in subprime credit card lending. If subprime lending exists or is planned, perform the subprime-lending examination procedures in section 2133.3.
4. Review correspondence that the bank has received or exchanged with credit card networks (i.e.,Visa, MasterCard). These agencies perform periodic reviews of their members.

Policy Considerations

1. Review the credit card policy. Policy guidelines should include the following items:
    a. adequate screening of account applicants
    b. standards for approving accounts and determining credit-line size
    c. minimum standards for documentation
    d. internal controls to prevent and detect fraud, such as—
        - review procedures, including frequent review of delinquent accounts;
        - delinquency notification and collection procedures;
        - criteria for freezing accounts and charging off balances;
        - criteria for curing and re-aging delinquent accounts;
        - controls to avoid reissuances of expired cards to obligors who have unsatisfactory credit histories;
        - approvals of and controls over over-limits and overrides; and
        - cardholder information security controls

e. due diligence before engaging the service of a third party, as well as the ongoing management of credit card operations

Audit

1. Review the adequacy of the audit function regarding credit card operations.
   a. Determine if the audit program identifies contraventions of internal policy, credit card network (i.e., Visa, MasterCard) regulations, and written contracts.
   b. Determine if audit procedures include reviewing the accuracy and integrity of the bank's system for reporting the past-due status of credit card loans, over-limit accounts, and other management information systems.
   c. Determine if audit procedures include reviewing computer-driven models.
   d. Determine if independent tests of automated procedures are performed (for example, a sample of automatically re-aged accounts may be independently reviewed to test the integrity of automated systems).
   e. Determine whether audit procedures include a review of credit card processing operations. Ascertain if the product control file governing credit card processing was reviewed and whether it revealed any significant internal control weaknesses, such as a lack of segregation of duties and access controls. Determine whether management is aware of the risks and if the audit staff has the expertise to adequately evaluate procedures and suggest controls commensurate with the risks.
   f. Determine if audit procedures include a review of the services provided by outside vendors (services such as telemarketing, data processing, and direct mail). Ascertain if the audit procedures included a review of the performance of the vendors and documentation of the relationships.
2. Determine if management has reviewed and appropriately responded to audit findings regarding credit card operations.

Fraud

1. Evaluate management's strategy for controlling fraud, including whether the strategies frequently emphasize review of credit card applications to prevent fraudulent accounts from being booked or whether neural networks are used to identify fraudulent transactions. Common controls include the following items:
   a. methods of preventing application fraud, such as name and address verification, duplicate-application detection, Social Security number verification, etc.
   b. physical aspects of cards such as holograms and enriched information on the magnetic stripe
   c. adequate staffing and training of the fraud-detection department
   d. computer systems to identify suspicious activity
   e. procedures for issuing cards to prevent their interception and activation
   f. procedures for handling returned cards, statements, PINs, checks, and lost and stolen cards
   g. investigation and documentation of cases of suspected fraud
   h. freezing of accounts with suspicious activity
   i. procedures for filing a Suspicious Activity Report (See the FFIEC BSA/AML Examination Manual), the requirements for suspicious-activity reporting in section 208.62 of the Board's Regulation H (12 CFR 208.62), and the Bank Secrecy Act compliance program in section 208.63 (12 CFR 208.63).)
   j. procedures for access to and alteration of customer information
   k. controls over cardholder payments, account-balance records, and chargeback administration
   l. account-authorization procedures
2. Determine whether management receives adequate fraud-monitoring reports, such as—
   a. out-of-pattern-purchase or sequence-of-purchase reports that identify suspicious transactions that do not fit an individual cardholder's established purchasing pattern or
   b. suspicious-purchasing-pattern reports that identify certain types of purchases, such

as electronics or jewelry, that can correlate with fraudulent activity.

3. Review consumer complaint correspondence from cardholders that is on file with the bank or primary federal regulator for irregularities or patterns of activity.

Account Solicitation

1. Determine management's general approach to account solicitations (a variety of approaches or a combination of approaches can exist). Solicitations may be for preapproved or non-preapproved accounts. The latter are usually solicited through mass mailings, telemarketing, or counter displays.
2. Determine the extent to which outside contractors are used in marketing programs (for example, outsourced mass-mailing and telemarketing operations).
3. Review management's product and marketing program, including the goals of the program, the basis of the marketing approach, and product pricing. Ascertain whether adequate supporting evidence exists to indicate (1) that management has a marketing program and a product that appeal to the bank's targeted markets and (2) that the projected product and marketing program results will be obtained.
4. Determine how management identifies markets for new solicitations and evaluates expected performance.
   a. Identify the analytical procedures (for example, response rates, usage rates, credit-score distributions, and future delinquency and loss rates) management uses to project the results of a particular solicitation.
   b. Determine how management verifies projections before proceeding with a full-scale solicitation program (test marketing).
5. Determine if management monitors solicitation results for each major account segment and if management incorporates the findings into future solicitations.
6. Determine if management monitors and responds to trends in adverse selection (such as when a disproportionate number of respondents that are poor credit risks answer an offer, which may result in a larger-than-projected percentage of riskier accounts being including in the solicitation-response pool).
7. Review affinity and co-branding relationships. Determine if the bank has control over the approval and acceptance of such accounts. (In co-branding, a third-party relationship exists between a broad base of cardholders and a jointly sponsored credit card. Usually, the sponsors are the bank and a retail merchant for the affinity and co-branding relationships. These cards have some type of value-added feature such as cash rebates or discounts on merchandise.)
8. Review new-product offerings and the adequacy of management's market identification, testing, and ongoing monitoring of new products. Ascertain if management monitored and controlled key new-product concerns, including whether—
   a. the amount of historical and test-sample data available to analyze the product or solicitation was adequate;
   b. the speed at which the new product was introduced was compatible with the internal controls for credit authorizations; and
   c. the size of solicitations introduced was adequately controlled, considering operational and managerial capabilities.
9. Determine if management had any problems with the wording of solicitations or applications and if any imprecise offer terms contributed to asset-quality and earnings problems. Ascertain if there were errors such as the following:
   a. no expiration date on the offer
   b. an absence of wording giving management discretion in setting credit lines
   c. insufficient information requirements on applications
10. Review balance-transfer policies and monitoring practices. Determine if balance transfers generally resulted in higher credit exposures and a tendency to distort financial condition and performance ratios due to the immediate booking of relatively large balances.
11. Review teaser interest-rate practices. Determine if controls are adequate to prevent teaser rates from disguising a borrower's repayment capacity and from resulting in higher attrition when the teaser rates expire.

Predictive Models

1. Review the integrated models management uses to identify and select prospective customers. (Management usually uses two distinct credit card predictive models. The first model, the credit-scoring model, is used in the initial application process. The second model, a behavioral model, is used in the management of existing accounts. These models use a credit scorecard, which is a table of characteristics, attributes, and scores that enable a credit grantor to calculate default risk. Information derived from these models assists management with quantifying and minimizing credit risk and fraud losses.)

Credit Scoring

1. Determine the nature and extent that credit scores are used in the underwriting process.
2. Determine the degree of reliance placed on credit bureau score "good" and "bad" odds charts. Ascertain if management develops and calibrates its own good and bad odds chart with a sufficient quantity and quality of historical account data (a customized odds chart is more predictive than a credit bureau odds chart).
3. Determine if a single- or dual-score model is used. (A single-score model uses credit bureau scores; a dual-score matrix calculates a score based on the combination of a custom score, usually based on credit application data, and a credit bureau score. For the more complex operations, management should be using the more sophisticated dual-scoring model.)

Behavior-Scoring System

1. Determine whether management has implemented a behavior-scoring system to manage existing accounts. (The score is derived from a cardholder's payment and usage behavior with the credit cardholder's issuing bank. A cardholder's historical performance with a particular bank is typically the best indicator of future performance with that bank. Behavior scores are frequently supplemented with credit bureau scores to enhance their predictive value.)
2. Ascertain if management continually refines existing, or if it considers new, predictive models.
   a. Determine whether a champions and challengers system is used. (Such a system involves continual portfolio analysis and identification of predictive characteristics. Based on this analysis, existing models are revised and enhanced. The revised challenger model is then compared with the existing champion model. If the challenger is more predictive, it is adopted. This procedure is an ongoing system of refinement.)
   b. Determine if management has adopted or is considering new predictive models (for example, revenue, revolving, bankruptcy, and payment-predictor models).

Validation

1. If credit scoring is used, determine if management is validating scores by comparing account-quality rankings of accepted applications with those predicted by the system (when the rank orderings remain substantially the same, the scoring system remains valid).
   a. Review the statistical techniques used to validate each model used, and determine whether common statistical techniques are being used, such as the K/S test, the chi square, the goodness-of-fit test, divergence statistics, and the population stability test.
   b. Determine if high and low override controls are in place and if they are detailed on exception reports (overrides can skew a statistical population and distort analysis).

Portfolio Analysis

1. Review and analyze the bank's customized credit card reports, which usually include performance and industry peer-group analysis data (be alert to the possibility that the data may have been distorted by niche marketing, specialized card products, or extensive affiliate support).

2. Determine if management is segmenting portfolios (such as by geographic or demographic distribution, affinity relationship (cardholders belonging to a particular union, corporation, professional association, etc.), product type (premium or standard cards), or credit bureau scores). Consider the particular characteristics of each segment for delinquency, profitability, future marketing programs, ALLL calculations, and other purposes.
3. Determine whether geographic, customer-base, card-type, or other concentrations exist, and identify the unique risks posed by any of these portfolio segments or concentrations. Evaluate their degree of risk and consider mitigating factors.
4. Review how management uses portfolio information to identify developing trends, make strategic decisions, and detect potential problems.
   a. Determine how management reports identify the number and volume of workout and re-aged credits.[1]
   b. Evaluate the portfolio information that management reviews, such as asset-quality ratios and vintage analysis (an analysis of the account performance of homogeneous loans booked at a similar time using the same credit and pricing criteria).
5. Determine if cash advances are monitored and authorization procedures are in place (cardholders with excessive debt may obtain cash advances to pay other debts).
6. Review the level and trend of the following portfolio ratios:
   a. average balance of delinquent accounts (by 30-day time frames) to average balance of nondelinquent accounts
   b. lagged delinquency rate and nine-month net charge-offs to lag rates
   c. net charge-off rate and lagged net charge-off rate
   d. re-aged accounts and partial-payment plans to total active accounts and to average total loans
   e. total past-due loans to gross loans
   f. noncurrent loans to gross loans
7. Consider indicators of possible deterioration in asset quality and criticize prolonged practices that result in negative amortization (that is, when minimum payments consistently fall short of covering all finance charges and fees assessed during the billing cycle and when the outstanding balance continues to increase), inappropriate fees, and other practices that inordinately compound or protract consumer debt and disguise portfolio performance and quality. Be alert to other indicators and practices that can reflect a deterioration of asset quality, such as—
   a. rapid growth that may indicate a lowering of underwriting standards;
   b. lower minimum-payment requirements and extended principal-payment cycles, which may result in negative amortization and may also indicate less creditworthy accounts;
   c. a heightened ratio of total accounts being charged off to the number of accounts or a high average balance of accounts that may indicate a lax policy toward the number and level of credit lines granted to cardholders;
   d. lower payment rates combined with higher average balances, which may indicate that borrowers are having trouble paying their debt;
   e. an inordinately high ratio of income earned not collected on loans to total loans when compared with the percentage of total past-due loans to gross loans, which may indicate frequent re-agings, inadequate collection procedures, or a failure to charge off credit card receivables on a timely basis; and
   f. the average age of accounts, which may indicate that loss rates will rise for unseasoned accounts (loss rates are usually low for new offerings and peak at 18 to 24 months after issue).
8. Evaluate management's practices for cure programs, such as re-aging, loan extensions, deferrals, fixed payment, and forgiveness.

1. A workout is a former open-end credit card account in which credit availability has been closed and in which the balance owed has been placed on a fixed (dollar or percentage) repayment schedule in accordance with modified, concessionary terms and conditions. Generally, the repayment terms require amortization or liquidation of the balance owed over a defined payment period. Such arrangements are typically used when a customer is either unwilling or unable to repay the open-end credit card account in accordance with the original terms but shows the willingness and ability to repay the loan in accordance with modified terms and conditions. In a re-aged credit account, the bank changes the delinquency status of an account without the full collection of its delinquent payments.

9. Develop an overall assessment of the adequacy of a bank's account-management practices for its credit card lending business, incorporating the risk profile of the bank, the quality of management reporting, and the adequacy of the bank's charge-off policies and loss-allowance methodologies.
10. Evaluate whether the bank clearly documents in its policies and procedures the basis for using the exceptions to the FFIEC Uniform Retail Credit Classification and Account Management Policy and whether the bank documents the types of exceptions used and the circumstances giving rise to their use. Determine if the bank prudently limits the use of exceptions. If it does not, criticize the bank's management and require corrective action when the exceptions are not well managed, result in improper reporting, or mask delinquencies and losses.
11. Criticize management and recommend appropriate supervisory corrective action when workout programs are not managed properly (characteristics of improperly managed workout programs include workout programs that do not strive to have the borrowers repay credit card debt within 60 months, the existence of liberal repayment terms with extended amortizations, high charge-off rates, accounts being moved from one workout program to another, multiple re-agings, and poor MIS to monitor program performance).
12. Determine that the bank complies with the FFIEC Uniform Retail Credit Classification and Account Management Policy.
13. Determine whether management monitors and analyzes the performance of each workout program (whether the program achieves the objective of improving the borrower's subsequent performance, the effect of the program on delinquency ratios, etc.)
14. Assess the current and potential impact the workout programs have on reported performance and profitability, including their ALLL implications.
15. Determine if third parties purchase or fund loan payments to cure loan delinquencies and, if so, assess the impact.
16. Determine whether management developed contingent strategies to deal with rising delinquency levels, which are generally the first sign of account deterioration. Strategies could include the following issues:
    a. reviewing accounts more frequently
    b. decreasing the size of credit lines
    c. freezing or closing accounts
    d. increasing collection efforts
17. Ascertain the bank's compliance with its credit card policies and procedures by reviewing a sample of the bank's credit card loans that were originated since the prior examination.
18. Determine the level of classifications for credit card loans:
    a. Review a sample of loans to ascertain the accuracy and integrity of the bank's system for reporting past-due status.
    b. Verify that the bank's classification and charge-off procedures adhere to, at a minimum, the guidance of the FFIEC Uniform Retail Credit Classification and Account Management Policy.

Allowance for Loan and Lease Losses

1. Ascertain whether an allowance for loan and lease losses (ALLL) policy exists for credit card loans and if adequate ALLL analytical procedures are in place. Roll-rate analysis (analysis of the migration of an account from one billing cycle to the next), which is generally performed for each portfolio segment, is the industry standard. However, some banks use the following additional or alternative methods:
    a. delinquency analysis using a set percentage of loans over 60 days delinquent
    b. exposure analysis that projects net charge-off rates to each 30-day period of delinquency
    c. charge-off projections based on vintage analysis
    d. a historical rolling average based on charge-off rates for the last six months
    e. analysis based on external economic forecasting services
2. Review ALLL-calculation techniques for reasonableness (variables such as aggregating seasoned and unseasoned portfolios can significantly distort the calculation of required reserves).
3. Determine if ALLL calculations are comprehensive and if they consider the following factors:
    a. contingent liabilities, or the risk associated with undisbursed funds

b. bankrupt and deceased cardholders (such losses are usually not predicted by a simple roll-rate analysis)
c. economic conditions, such as unemployment and bankruptcy rates, that can significantly affect asset quality
d. the number and volume of workout and re-aged credits

4. Determine if the ALLL methodologies adequately provide for the use of cure programs, settlement arrangements,[2] workout programs, existing over-the limit portfolio segments, any resulting estimable probable losses on those accounts, and any other credit card loan accounts.
5. Review the accounting practices for crediting recoveries on credit card loans. Determine that the total amount credited to the ALLL as recoveries on individual credit card loans is limited to the amounts previously charged off against the ALLL for the credit card loan. Any excess recovery amount must be recognized as income.
6. Verify that fraud losses are not charged to the ALLL or included in ALLL calculations and that the losses are recorded as a noninterest expense.

Asset Securitization

Perform the following examination procedures when the bank has securitized its credit card receivables (removed designated credit card receivables from its balance sheet to a special-purpose vehicle (SPV) while the bank retains its account ownership).

1. Determine if the credit card loan delinquency and loss rates are similar for both the owned portfolio and the securitized portfolio. (Slightly higher delinquency and net charge-off ratios on securitized assets will be prevalent if the bank is experiencing high growth and possesses a significant portion of unseasoned accounts.) When the delinquency and loss rates deviate significantly, determine if management is prioritizing credit card receivables for securitization by selecting credit card accounts that have either a high credit quality or superior past credit history. For example, in the following two ratios, the resulting percentages on a managed and owned basis should approximate one another: (1) noncurrent loans to gross loans and (2) total past-due loans to gross loans.

2. Determine the on- and off-balance-sheet effects of asset securitization. (For example, what is the on- and off-balance-sheet effect of removing seasoned accounts?) (A performance analysis is important because the level of a credit card bank's earnings and capital is largely dependent on the quality of its average total assets under management and not merely on the owned credit card portfolio.)

Third Parties

1. Determine whether any credit card–related activities are outsourced. If so, complete the third parties review located in the Subprime Lending Loan Reference. Third parties may include brokers, marketing firms, collection or servicing firms, correspondents, affinity partners, and information systems firms.

2. Determine whether the bank shares a BIN (bank identification number) with a third party. (Sharing of BINs can create financial liability. A bank sharing a BIN should have a process to identify, monitor, and control the risks associated with BIN sharing. Certain Visa and MasterCard members are assigned BINs (represented by a series of numbers on the credit card) for clearing and settlement of their credit card activities. Members that are licensed specific BINs may allow other members to deposit and receive transactions through those BINs. However, the BIN licensee (holder of the BIN) has primary responsibility for transactions processed through its BIN. In addition, users of a BIN other than the BIN licensee (BIN holder) may share responsibility for transactions processed under that BIN if the licensee fails to meet its membership obligations.)

2. In a settlement arrangement, the bank forgives a portion of the amount owed. In exchange, the borrower agrees to pay the remaining balance either in a lump-sum payment or by amortizing the balance over several months.

BANK POLICIES AND PROCEDURES AND STATUTORY AND REGULATORY REQUIREMENTS

1. Determine compliance with laws, regulations, and Federal Reserve Board policies pertaining to lending by performing the following steps.
   a. *Lending limits:*
      - Determine the bank's lending limits as prescribed by state law.
      - Determine advances or combinations of advances whose aggregate balances are above the limit.

   b. *Sections 23A and 23B of the Federal Reserve Act (12 USC 371c and 371c-1) and the Federal Reserve's Regulation W—Transactions with Affiliates:*
      - Obtain a listing of loans and other extensions of credit to affiliates.
      - Test-check the listing against the bank's customer liability records to determine the list's accuracy and completeness.
      - Obtain a listing of other covered transactions with affiliates (i.e., purchase of an investment or securities issued by an affiliate; purchase of loans or other credit-related assets, including assets subject to an agreement to repurchase from an affiliate; the issuance of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate; or acceptance of affiliate's securities as collateral for a loan to any person).
      - Determine the volume of transactions with third parties when the proceeds were used or transferred for the benefit of any affiliate.
      - Ensure that covered transactions with affiliates do not exceed the limits of section 23A.
      - Ensure that covered transactions with affiliates meet the collateral requirements of section 23A.
      - Determine that low-quality loans or other assets have not been purchased from an affiliate.
      - Determine that all transactions with affiliates are on market terms and conditions that are consistent with safe and sound banking practices.
      - Determine that the transactions were conducted on terms and conditions that reflect pricing that is generally available to unaffiliated parties.

   c. *18 USC 215—Commission or Gift for Procuring Loan:*
      - While examining the installment loan area, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
      - Investigate any such suspected situation.

   d. *Federal Election Campaign Act (2 USC 441b)—Political Contributions:*
      - While examining the installment loan area, determine the existence of any loans in connection with any election to any political office.
      - Review each such credit to determine whether it is made in accordance with applicable banking laws and regulations and in the ordinary course of business.

   e. *12 USC 1972—Tie-In Provisions.* While reviewing credit and collateral files (especially loan agreements), determine whether any extension of credit is conditioned upon the customer's—
      - obtaining additional credit, property, or services from the bank, other than a loan, discount, deposit, or trust service;
      - obtaining additional credit, property, or service from the bank's parent holding company or the parent's other subsidiaries;
      - providing an additional credit, property, or service to the bank, other than those related to and usually provided in connection with a loan, discount, deposit, or trust service;
      - providing additional credit, property, or service to the bank's parent holding company or any of the parent's other subsidiaries; or
      - not obtaining other credit, property, or service from a competitor of the bank, the bank's parent holding company, or the parent's other subsidiaries, except that the lending bank may impose conditions and requirements in a credit transaction to ensure the soundness of the credit.

f. *Insider lending activities.* The examination procedures for checking compliance with the relevant law and regulation covering insider activities and reporting requirements are as follows (the examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment):
   - *Regulation O (12 CFR 215)—Loans to Executive Officers, Directors, and Principal Shareholders and Their Interests.* While reviewing information relating to insiders received from the bank or appropriate examiner (including information on loan participations, loans purchased and sold, and loan swaps)—
     - — Test the accuracy and completeness of information about installment loans by comparing it with the trial balance or loans sampled.
     - — Review credit files on insider loans to determine that required information is available.
     - — Determine that loans to insiders do not contain terms more favorable than those afforded to other borrowers.
     - — Determine that loans to insiders do not involve more than the normal risk of repayment or present other unfavorable features.
     - — Determine that loans to insiders, as defined by the various sections of Regulation O, do not exceed the lending limits imposed by those sections.
     - — If prior approval by the bank's board was required for a loan to an insider, determine that such approval was obtained.
     - — Determine compliance with the various reporting requirements for insider loans.
     - — Determine that the bank has made provisions to comply with the public disclosure requirements for insider loans.
     - — Determine that the bank maintains records of such public requests and the disposition of the requests for a period of two years.
   - *Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 USC 1972(2))—Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.*
     - — Obtain from or request that the examiners reviewing due from banks and deposit accounts verify a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.
     - — Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.

g. *Federal Reserve Board Policy Statement on the Disposition of Credit Life Insurance Income (67* Fed. Res. Bull. *431 (1981), FRRS 3–1556).* Test for compliance with the policy statement by determining—
   - that the income generated from the sale of credit life, health, and accident insurance[3] is—
     - — not distributed directly to employees, officers, directors, or principal shareholders in the form of commissions or other income for their personal profit; however, such individuals may participate in a bonus or incentive plan in an amount not exceeding, in any one year, 5 percent of the recipient's annual salary, and paid not more often than quarterly; and
     - — for accounting purposes, credited to the bank's income account, the income account of an affiliate operating under the Bank Holding Company Act, or in the case of an individual shareholder, to a trust for the benefit of all shareholders.
   - whether an insurance agent or agency acted as an intermediary in arranging the bank's credit life insurance coverage and what the relationship of the agent or agency is to the bank. Is the agent or agency in compliance with the provisions of this policy?

3. This policy also applies to income derived from the sale of mortgage life insurance; therefore, consult with the examiner assigned real estate loans to coordinate work to avoid any duplication of efforts.

- which employees, officers, directors. and principal shareholders are licensed insurance agents.
- whether bank officers have entered into reciprocal arrangements with officers of other banks to act as agent for sale of credit life insurance and to receive commissions.
- if the credit life insurance income is credited to an entity other than the bank and whether the bank is being appropriately reimbursed for the use of its premises, personnel, and goodwill. Compute the percentage compensation paid to the bank (total credit life insurance income). Include that percentage in the confidential section of the commercial report of examination. As a general rule, a reasonable compensation would be an amount equivalent to at least 20 percent of the credited entity's *net* income (if available) attributable to the credit life insurance sales.

h. *Financial Recordkeeping and Reporting of Currency and Foreign Transactions (31 CFR 1010.410)—Records to Be Retained by Financial Institutions.* Review operating procedures and credit life documentation and determine whether the bank retains records of each extension of credit over $10,000, specifying the name and address of the borrower, the amount of the credit, the nature and purpose of the loan, and the date therefor. Loans secured by an interest in real property are exempt.

2. Perform appropriate procedural steps for the separate area, concentration of credits.
3. Discuss with the appropriate officer (or officers) and prepare comments to the examiner-in-charge stating your findings on the following:
   a. delinquent loans, including breakout of "A" paper
   b. violations of laws and regulations
   c. concentration of credits
   d. classified loans
   e. loans not supported by current and complete financial information
   f. loans on which collateral documentation is deficient
   g. inadequately collateralized loans
   h. extensions of credit to major stockholders, employees, officers, directors, and/or their interests
   i. Small Business Administration or other government-guaranteed delinquent or criticized loans
   j. a list of installment loans requested to be charged off
   k. the adequacy of written policies relating to installment loans
   l. the manner in which bank officers are operating in conformance with established policy
   m. adverse trends within the installment area
   n. the accuracy and completeness of the schedules obtained from the bank or other examination areas
   o. internal-control deficiencies or exceptions
   p. recommended corrective action when policies, practices, or procedures are deficient
   q. the quality of departmental management
   r. other matters of significance
4. Update the workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices, and procedures for making and servicing installment loans. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. In the questionnaire below, items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written installment-loan policies that establish—
   a. procedures for reviewing installment-loan applications?
   b. standards for determining credit lines?
   c. minimum standards for documentation?
2. Are installment-loan policies reviewed at least annually to determine if they are compatible with changing market conditions?
3. Does the bank have adequate written overdraft-protection-program policies and procedures that follow the February 28, 2005, interagency Joint Guidance on Overdraft Protection Programs?
4. Does the bank's management emphasize and monitor adherence to its overdraft policies and procedures, apply generally accepted accounting principles, and apply the bank Call Report's accounting and reporting requirements to overdrafts? Does the bank maintain and monitor safe and sound overdraft business practices to control the credit, operational, and other risks associated with overdraft programs?

RECORDS

*1. Is the preparation and posting of subsidiary installment-loan records performed or reviewed by persons who do not also—
   a. issue official checks or drafts?
   b. handle cash?

*2. Are the subsidiary installment-loan records reconciled daily to the appropriate general ledger accounts, and are reconciling items investigated by persons who do not also handle cash?

3. Are delinquent-account collection requests and past-due notices checked to the trial balances that are used in reconciling installment-loan subsidiary records to general ledger accounts, and are requests and notices handled only by persons who do not also handle cash?

4. Are loan-balance inquiries received and investigated by persons who do not also handle cash?

*5. Are documents supporting recorded credit adjustments checked or tested subsequently by persons who do not also handle cash? (If not, explain why briefly.)

6. Is a daily record maintained that summarizes loan-transaction details, i.e., loans made, payments received, and interest collected, to support applicable general ledger account entries?

7. Are frequent note and liability ledger trial balances prepared and reconciled with controlling accounts by employees who do not process or record loan transactions?

8. Are two authorized signatures required to effect a status change in an individual customer's account?

9. Does operating management produce and review an exception report that encompasses extensions, renewals, or any factors that would result in a change in a customer's account status?

10. Do customer account records clearly indicate accounts that have been renewed or extended?

LOAN INTEREST

1. Is the preparation and posting of interest records performed or reviewed by persons who do not also—
   a. issue official checks or drafts?
   b. handle cash?
2. Are any independent tests of loan-interest computations made and compared with initial and subsequent borrowers' interest records by other persons who do not—
   a. issue official checks or drafts?
   b. handle cash?

COLLATERAL

1. Are multicopy, prenumbered records maintained that—
   a. detail the complete description of collateral pledged?
   b. are typed or completed in ink?
   c. are signed by the customer?
2. Are receipts issued to customers for each item of collateral deposited?
3. Are the functions of receiving and releasing collateral to borrowers and of making entries in the collateral register performed by different employees?
4. Is negotiable collateral held under joint custody?
5. Is all collateral for a single loan maintained in a separate file?
6. Are receipts obtained and filed for released collateral?
7. Is a record maintained of entry to the collateral vault?
8. Are the following controls on collateral in effect:
   a. When the bank customers' savings passbooks are held as collateral, the savings department is notified and the account is so noted on the deposit ledger.
   b. Descriptions of motor vehicles, as set forth on the certificate of title and insurance policies, are checked to the chattel mortgages or other appropriate documents granting security interest in the vehicle.
   c. An insurance-maturity tickler file is maintained.
   d. Procedures are in effect to ensure single-interest insurance coverage is obtained in case regular insurance is canceled or expires.
   e. All insurance policies on file include a loss-payable clause in favor of the bank.
   f. Filings are made on all security agreements.
   g. Supporting lien searches and property appraisals are performed when a judgment action is returned involving real property.
9. Are control records maintained that identify loans secured by junior liens on real estate?
10. Do those records indicate the current balance for loans secured by superior liens on the same property?

DEALER LOANS

1. On dealer loans, are—
   a. separate controls maintained or can they be easily generated?
   b. payments made directly to the bank and not through the dealer?
   c. coupon books, if used in connection with loans, mailed to the borrowers, instead of the dealer?
   d. monthly summaries of the total paper discounted and outstanding for each dealer prepared and reviewed?
   e. dealer lines reaffirmed at least annually?
   f. required documents on file in connection with the establishment of each dealer line?
   g. signed extension agreements obtained from dealers before extending accounts originally discounted on a repurchase agreement or other recourse basis?
   h. downpayment amounts checked to ensure they do not misrepresent the sales price?
   i. procedures in effect to prevent the dealer from making late payments?
   j. prohibitions against bringing loans current by charges to the dealer's reserve accounts in effect?
   k. selling prices, as listed by the dealer, verified?
   l. overdrafts prohibited in the dealer reserve and holdback accounts?
   m. procedures in effect to have the title application controlled by someone other than the purchaser?
   n. credit checks on borrowers performed independently of the dealer, or are the dealer's credit checks independently verified?
   o. delinquencies verified directly with the customers?

DISCOUNTED LEASING PAPER

1. If the bank discounts leasing paper—
   a. are separate controls maintained or can they be easily generated?
   b. are payments made directly to the bank?
   c. are controls established or are audits of lessor's books conducted if the lessor is permitted to accept payments (if so, explain why briefly)?
   d. are monthly summaries of total paper

discounted for each lessor prepared and reviewed?
e. are lines for each lessor reaffirmed at least annually?
f. is a master lease required and properly recorded when fleet-leasing or blanket purchase of leasing paper is handled?
g. is the value of leased goods verified to ensure that it is not less than the amount advanced?
h. is lease paper screened for the credit quality of the lessee?
i. are lease terms and payment amounts required to be adequate to liquidate the debt in full?

CREDIT CARD LENDING

1. Has the bank tested, analyzed, and documented line-assignment and line-increase criteria prior to broad implementation of a new credit card plan?
2. Is a borrower's repayment capacity carefully considered when the bank assigns an initial credit line or significantly increases existing credit lines?
   a. Are credit-line assignments managed conservatively using proven credit criteria?
   b. Does the bank have documentation and analyses of decision factors such as repayment history, risk scores, behavior scores, or other relevant criteria?
   c. Does the bank consider its entire relationship with a borrower when making decisions about credit-line assignments?
   d. If the bank offers multiple credit lines to borrowers, does it have sufficient controls and management information systems to aggregate related exposures and analyze borrowers' performance before offering them additional lines of credit?
3. Do the bank's policies and procedures focus on adequate control, authorizations, and the timely repayment of amounts that exceed established credit limits?
   a. Are the bank's management information systems sufficient to enable management to identify, measure, manage, and control the risks associated with over-limit accounts?
   b. Does the bank have appropriate policies and controls for over-limit authorizations on open-end accounts, particularly subprime accounts?
4. Do the bank's policies and procedures require that minimum payments on credit card accounts amortize the current balances over a reasonable period of time, consistent with the nature of the underlying debt and the borrower's documented creditworthiness? Do the bank's policies and practices foster or encourage prolonged negative amortization, inappropriate fees, and other practices that inordinately compound or protract consumer debt?
5. Are workout programs designed to maximize principal reduction, and do they strive to have borrowers repay their credit card debt within 60 months? Has the bank documented and supported, with compelling evidence, any exceptions to the 60-month time frame for workout programs? Has the bank also documented and supported any less conservative loan terms and conditions that may be warranted?
6. Has the bank established and maintained adequate loss allowances for credit card accounts subject to settlement arrangements?
   a. Does the bank classify as a loss and charge off immediately amounts of debt forgiven in settlement arrangements?
   b. Are specific allowances for such settlement accounts reported as a charge-off in Schedule RI-B of the call report?
   c. Does the bank charge off any deficiency balances within 30 days from the receipt of a final settlement payment?
7. Does the bank evaluate the collectibility of accrued interest and fees on credit card accounts and recognize and properly account for the amounts that are uncollectible?
   a. Are appropriate methods employed to ensure that income is accurately measured (such methods include providing loan-loss allowances for uncollectible fees and finance charges or placing delinquent and impaired receivables on nonaccrual status)?
   b. Is the owned portion of accrued interest and fees, including related estimated losses, accounted for separately from the retained interest in accrued interest and fees from securitized credit card receivables?
8. Does the bank's allowance for loan and lease losses (ALLL) methodology fully recognize the incremental losses that may be inherent in over-limit accounts and portfolio segments?

9. Are accounts in workout programs segregated for performance-measurement, impairment-analysis, and monitoring purposes?
   a. Are multiple workout programs with different performance characteristics tracked separately?
   b. Is the allowance allocation for each workout program equal to the estimated loss in each program, based on historical experience adjusted for current conditions and trends?
10. Is the total amount credited to the ALLL as recoveries on a loan limited to the amount previously charged off against the ALLL, and are any amounts that are collected in excess of this limit recognized as income?
11. Do the bank's policies and procedures address the types of allowed exceptions to the FFIEC's Uniform Retail Credit Classification and Account Management Policy and also the circumstances permitting those exceptions?
    a. Is the volume of accounts that are granted exceptions small and well controlled?
    b. Is the performance of accounts that are granted exceptions closely monitored?
    c. Does the bank use exceptions prudently? If not, has management been criticized and has appropriate supervisory corrective action been recommended?

REPOSSESSIONS

1. Are procedures established on repossessions so that—
   a. management takes timely action to receive full advantage of any dealer endorsement or repurchase agreement?
   b. the notice of intention to sell is mailed to all parties who are liable on the account?
   c. bids are required before the sale of the item?
   d. bids are retained in the borrower's credit file?
   e. open repossessions are physically checked monthly?
   f. surplus funds received from the sale of a repossession are mailed back to the borrower in the form of a cashier's check?
   g. any deficiency balance remaining after the sale of repossession is charged off?
   h. the bill of sale is properly completed and signed by an officer?
   i. separate general ledger control is maintained?

DELINQUENT ACCOUNTS AND OPERATING REVIEW SYSTEM

1. Are collection policies established so that—
   a. a delinquent notice is sent before a loan becomes 30 days past due?
   b. collection effort is intensified when a loan becomes two payments past due?
   c. records of collection efforts are maintained in the customer's file?
   d. field or outside collectors are under the supervision of an officer and are required to submit progress reports?
   e. all collections are acknowledged on multicopy prenumbered forms?
   f. all documents that are held outside the regular files and that pertain to installment loans under collection are evidenced by a transmittal sheet and receipt?
   g. delinquency lists are generated on a timely basis (indicate the frequency)?
2. Is an operating review system in place that—
   a. determines that duties are properly segregated and that loan officers are prohibited from processing loan payments?
   b. recomputes the amount of credit life and accident and health insurance on new loans?
   c. recomputes the amount of discount on new loans?
   d. recomputes the rebates on prepaid loans?
   e. test-checks daily transactions to subsequent general ledger postings?
   f. reviews new-loan documentation?
   g. reviews all information in reports being submitted to the board of directors, or any committee thereof, for errors or omissions?
   h. conducts a periodic review of income accruals for accuracy?
   i. reviews entries to unearned discount or income accounts?
   j. reviews all charged-off loans for proper approval?
   k. periodically reconciles charged-off notes to controls?

l. reviews dealer's reserve and holdback agreements and periodically determines the adequacy of the balances in the deposit account?

m. periodically verifies dealer reserve balances?

n. determines that payments are accurately and promptly posted?

o. reviews collection or reversal of late charges?

p. determines that extension fees are collected on all extended loans?

q. determines that discounted dealer paper is properly endorsed?

r. determines that discounted dealer paper is within established guidelines?

s. reviews compliance with laws and regulations?

t. reviews trial balance reconcilements to the general ledger?

CONCLUSION

1. Is the foregoing information an adequate basis for evaluating internal control that is, there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.
2. On the basis of a composite evaluation (as evidenced by answers to the foregoing questions), is internal control considered adequate or inadequate?

Federally insured banks tend to avoid lending to customers with poor credit histories because of the higher risk of default and resulting loan losses. However, some lenders[1] extend their risk-selection standards to attract lower-credit-quality accounts.

Subprime lending involves extending credit to borrowers who exhibit characteristics that indicate a significantly higher risk of default than traditional bank lending customers.[2] The risk of default may be measured by traditional credit-risk measures (such as credit or repayment history or debt-to-income levels) or by alternative measures such as credit scores.

Subprime borrowers represent a broad spectrum of debtors, ranging from those who have repayment problems because of an adverse event, such as job loss or medical emergency, to those who persistently mismanage their finances and debt obligations. Subprime borrowers typically have weakened credit histories that include payment delinquencies and possibly more severe problems, such as charge-offs, judgments, and bankruptcies. They may also display reduced repayment capacity as measured by credit scores, debt-to-income ratios, or other criteria that may encompass borrowers with incomplete credit histories. Generally, subprime borrowers will display a range of one or more credit-risk characteristics, such as—

- two or more 30-day delinquencies in the last 12 months, or one or more 60-day delinquencies in the last 24 months;
- judgment, foreclosure, repossession, or charge-off in the prior 24 months;
- bankruptcy in the last five years;
- relatively high default probability as evidenced by, for example, a credit bureau risk score (FICO) of 660 or below (depending on the product or collateral), or other bureau or proprietary scores with an equivalent default-probability likelihood; or
- debt-service-to-income ratio of 50 percent or greater, or an otherwise limited ability to cover family living expenses after deducting total monthly debt-service requirements from monthly income.

Subprime loans are loans to borrowers displaying one or more of these characteristics at the time of origination or purchase.

SUPERVISORY GUIDANCE FOR SUBPRIME LENDING

The subprime supervisory guidance applies to direct extensions of credit; the purchase of subprime loans from other lenders, including delinquent or credit-impaired loans purchased at a discount; the purchase of subprime automobile or other financing ‘‘paper’’ from lenders or dealers; and the purchase of loan companies that originate subprime loans.

Subprime lending does not include loans to borrowers who have had minor, temporary credit difficulties but are now current. Also, the subprime-lending guidance does not generally apply to prime loans that develop credit problems after acquisition; loans that were initially extended in subprime programs and are later upgraded, as a result of their performance, to programs targeted to prime borrowers; and community development loans, as defined in the Community Reinvestment Act (CRA) regulations, that may have some higher risk characteristics, but are otherwise mitigated by guarantees from government programs, private credit enhancements, or other appropriate risk-mitigation techniques.

Subprime lending poses unique and significant risks to banking institutions engaged in the activity. Market events have raised supervisory issues about how well subprime lenders are prepared to manage and control the risks. Subprime-lending institutions need strong risk-management practices and internal controls, as well as board-approved policies and procedures that appropriately identify, measure, monitor, and control all associated risks. Institutions considering or engaging in this type of lending should recognize the additional risks inherent in this activity and determine if these risks are acceptable and controllable, given their organization’s financial condition, asset size, level of capital support, and staff size. Well-managed subprime lenders should recognize the heightened loss characteristics in their portfolios and internally classify their delinquent accounts well

1. The terms *lenders*, *financial institutions*, and *institutions* refer to federally insured banks and their subsidiaries.
2. For purposes of this section, loans to customers who are not subprime borrowers are referred to as *prime*.

before the time frames in their respective interagency supervisory policy.

Interagency guidance on subprime lending was issued on March 1, 1999, to alert examiners and financial institutions to some of the pitfalls and hazards involved in this type of lending.[3] (See SR-99-06.) Additional interagency examination guidance was issued on January 31, 2001, to further strengthen the supervision of certain institutions, primarily those institutions having subprime-lending programs with an aggregate credit exposure equaling or exceeding 25 percent of their tier 1 capital.[4] (See SR-01-04.) The aggregate exposure includes principal outstanding and committed, accrued and unpaid interest, and any retained residual interests[5] relating to securitized subprime loans. The Federal Reserve may also apply the additional guidelines to certain smaller subprime portfolios, such as those experiencing rapid growth or adverse performance trends, those administered by inexperienced management, and those with inadequate or weak controls.

Subprime loans command higher interest rates and loan fees than those offered to standard-risk borrowers. Subprime loans can be profitable, provided the price charged by the lender is sufficient to cover higher loan-loss rates and overhead costs related to underwriting, servicing, and collecting the loans. The ability to securitize and sell subprime portfolios at a profit while retaining the servicing rights makes subprime lending attractive to a larger number of institutions, further increasing the number of subprime lenders and loans. Some financial institutions have experienced losses attributable to ill-advised or poorly structured subprime-lending programs. These losses have attracted greater supervisory attention to subprime lending and the ability of an insured bank to manage the unique risks associated with this activity.

3. The March 1999 and January 2001 statements were adopted and issued by the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

4. The March 1999 and January 2001 subprime-lending interagency guidance is consolidated within this section. To focus on the supervisory guidance that applies primarily to institutions having subprime-lending programs equaling or exceeding 25 percent of tier 1 capital, see the January 2001 release. The March 1999 interagency supervisory guidance applies to all subprime-lending institutions.

5. Residual interests are on-balance-sheet assets that represent interests (including beneficial interests) in transferred financial assets retained by a seller (or transferor) after a securitization or other transfer of financial assets. They are structured to absorb more than a pro rata share of credit loss related to the transferred assets through subordination provisions or other credit-enhancement techniques.

Risk Management

The following items are essential components of a well-structured risk-management program for subprime lenders.

Planning and Strategy

Before engaging in subprime lending, the board and management should ensure that proposed activities are consistent with the institution's overall business strategy and risk tolerances, and that all involved parties have properly acknowledged and addressed critical business-risk issues. These issues include the costs associated with attracting and retaining qualified personnel, investments in the technology necessary to manage a more complex portfolio, a clear solicitation and origination strategy that allows for after-the-fact assessment of underwriting performance, and the establishment of appropriate feedback and control systems. The risk-assessment process should extend beyond credit risk and appropriately incorporate operating, compliance, and legal risks. Finally, the planning process should set clear objectives for performance, including the identification and segmentation of target markets or customers, as well as set performance expectations and benchmarks for each segment and the portfolio as a whole. Institutions establishing a subprime-lending program should proceed slowly and cautiously into this activity to minimize the impact of unforeseen personnel, technology, or internal-control problems and to determine if favorable initial profitability estimates are realistic and sustainable.

Staff Expertise

Subprime lending requires specialized knowledge and skills that many financial institutions may not possess. Marketing, account-origination, and collections strategies and techniques often differ from those employed for prime credit; thus, it may not be sufficient to have the same lending staff responsible for both subprime loans and other loans. Additionally, servicing and collecting subprime loans can be very labor intensive. If necessary, the institution should implement programs to train staff. The board should ensure that staff possess sufficient expertise to appropriately manage the risks in subprime lending and that staffing levels are adequate for the planned volume of subprime activity. The experience, or seasoning, of staff and loans should be taken into account as performance is assessed over time.

Lending Policy

A subprime-lending policy should be appropriate to the size and complexity of the institution's operations and should clearly state the goals of the subprime-lending program. While not exhaustive, the following lending standards should be addressed in any subprime-lending policy:

- types of products offered as well as those that are not authorized
- portfolio targets and limits for each credit grade or class
- lending and investment authority clearly stated for individual officers, supervisors, and loan committees
- a framework for pricing decisions and profitability analysis that considers all costs associated with the loan, including origination costs, administrative or servicing costs, expected charge-offs, and capital
- evaluation of collateral and appraisal standards
- well-defined and specific underwriting parameters (that is, on acceptable loan term, debt-to-income ratios, and loan-to-collateral-value ratios for each credit grade and a minimum acceptable credit score) that are consistent with any applicable supervisory guidelines[6]
- procedures for the separate tracking and monitoring of loans approved as exceptions to stated policy guidelines
- credit-file documentation requirements, such as applications, offering sheets, loan and collateral documents, financial statements, credit reports, and credit memoranda to support the loan decision
- correspondent/broker/dealer approval process, including measures to ensure that loans originated through this process meet the institution's lending standards

If the institution elects to use credit scoring (including applications scoring) for approvals or pricing, the scoring model should be based on a development population that captures the behavioral and credit characteristics of the subprime population targeted for the products offered. Because of the significant variance in characteristics between the subprime and prime populations, institutions should not rely on models developed solely for products offered to prime borrowers. Further, the model should be reviewed frequently and updated as necessary to ensure that assumptions remain valid.

Purchase Evaluation

As they evaluate expected profits, institutions that purchase subprime loans from other lenders or dealers must give due consideration to the cost of servicing these assets and to the loan losses that may be experienced. For instance, some lenders who sell subprime loans charge borrowers high up-front fees, which are usually financed into the loan. This provides incentive for originators to produce a high volume of loans with little emphasis on quality, to the detriment of a potential purchaser. Further, subprime loans, especially those purchased from outside the institution's lending area, are at special risk for fraud or misrepresentation (that is, the quality of the loan may be less than the loan documents indicate).

Institutions should perform a thorough due-diligence review before committing to purchase subprime loans. Institutions should not accept loans from originators that do not meet their underwriting criteria, and they should regularly review loans offered to ensure that loans purchased continue to meet those criteria. Deterioration in the quality of purchased loans or in the portfolio's actual performance versus expectations requires a thorough reevaluation of the lenders or dealers who originated or sold the loans, as well as a reevaluation of the institution's criteria for underwriting loans and selecting dealers and lenders. Any such deterioration may also highlight the need to modify or termi-

6. Extensions of credit secured by real estate, whether the credit is subprime or otherwise, are subject to the Interagency Guidelines for Real Estate Lending Policies, which establish supervisory loan-to-value (LTV) limits on various types of real estate loans and impose limits on an institution's aggregate investment in loans that exceed the supervisory LTV limits. (See 12 CFR 208, appendix C.)

nate the correspondent relationship or to adjust underwriting and dealer or lender selection criteria.

Loan-Administration Procedures

After the loan is made or purchased, loan-administration procedures should provide for the diligent monitoring of loan performance and establish sound collection efforts. To minimize loan losses, successful subprime lenders have historically employed stronger collection efforts, such as calling delinquent borrowers frequently, investing in technology (for example, using automatic dialing for follow-up telephone calls on delinquent accounts), assigning more experienced collection personnel to seriously delinquent accounts, moving quickly to foreclose or repossess collateral, and allowing few loan extensions. This aspect of subprime lending is very labor intensive but critical to the program's success. To a large extent, the cost of such efforts can be a tradeoff with future loss expectations, when an institution analyzes the profitability of subprime lending and assesses its appetite to expand or continue this line of business. Subprime-loan administration procedures should be in writing and at a minimum should detail—

- billing and statement procedures;
- collection procedures;
- content, format, and frequency of management reports;
- asset-classification criteria;
- methodology to evaluate the adequacy of the allowance for loan and lease losses (ALLL);
- criteria for allowing loan extensions, deferrals, and re-agings;
- foreclosure and repossession policies and procedures; and
- loss-recognition policies and procedures.

Loan Review and Monitoring

Once an institution books the loans, designated staff must perform an ongoing analysis of subprime loans, not only on an aggregate basis but also for subportfolios. Information systems should be in place to segment and stratify the institution's portfolio (for example, by originator, loan-to-value, debt-to-income ratios, or credit scores). Assigned staff should produce reports that management can use to evaluate the performance of subprime loans. The review process should focus on whether performance meets expectations. Institutions then need to consider the source and characteristics of loans that do not meet expectations and make changes in their underwriting policies and loan-administration procedures to restore performance to acceptable levels.

When evaluating actual performance against expectations, it is particularly important that management review credit scoring, pricing, and any ALLL-adequacy models. Models driven by the volume and severity of historical losses experienced during an economic expansion may have little relevance in an economic slowdown, particularly in the subprime market. Management should ensure that models used to estimate credit losses or to set pricing allow for fluctuations in the economic cycle and are adjusted to account for other unexpected events.

Consumer Protection

Institutions that originate or purchase subprime loans must take special care to avoid violating fair lending and consumer protection laws and regulations. Higher fees and interest rates combined with compensation incentives can foster predatory pricing or discriminatory "steering" of borrowers to subprime products for reasons other than the borrower's underlying creditworthiness. An adequate compliance-management program must identify, monitor, and control the consumer protection hazards associated with subprime lending.

Subprime mortgage lending may trigger the special protections of the Home Ownership and Equity Protection Act of 1994, subtitle B of title I of the Riegle Community Development and Regulatory Improvement Act of 1994. This act amended the Truth in Lending Act to provide certain consumer protections in transactions involving a class of nonpurchase, closed-end home mortgage loans. Institutions engaging in this type of lending must also be thoroughly familiar with the obligations set forth in Regulation Z (12 CFR 226.32), Regulation X (24 CFR 3500), and the Real Estate Settlement Procedures Act (RESPA) (12 USC 2601) and should adopt policies and implement practices that ensure compliance.

The Equal Credit Opportunity Act makes it unlawful for a creditor to discriminate against an applicant on a prohibited basis regarding any aspect of a credit transaction. Similarly, the Fair Housing Act prohibits discrimination in connection with residential real estate–related transactions. Loan officers and brokers must treat all similarly situated applicants equally and without regard to any prohibited-basis characteristic (for example, race, sex, or age). This is especially important with respect to how loan officers or brokers assist customers in preparing their applications or otherwise help them to qualify for loan approval.

Securitization and Sale

To increase their loan-production and -servicing income, some subprime lenders originate loans and then securitize and sell them in the asset-backed securities market. Strong demand from investors and favorable accounting rules often allow securitization pools to be sold at a gain, providing further incentive for lenders to expand their subprime-lending program. However, the securitization of subprime loans carries inherent risks, including interim credit risk and liquidity risks, which are potentially greater than those for securitizing prime loans. Accounting for the sale of subprime pools requires assumptions that can be difficult to quantify, and erroneous assumptions could lead to the significant overstatement of an institution's assets. Moreover, the practice of providing support and substituting performing loans for nonperforming loans to maintain the desired level of performance on securitized pools has the effect of masking credit-quality problems.

Institutions should recognize the volatility of the secondary market for subprime loans and the significant liquidity risk incurred when originating a large volume of loans intended for securitization and sale. Investors can quickly lose their appetite for risk in an economic downturn or when financial markets become volatile. As a result, institutions that have originated, but have not yet sold, pools of subprime loans may be forced to sell the pools at deep discounts. If an institution lacks adequate personnel, risk-management procedures, or capital support to hold subprime loans that were originally intended for sale, these loans may strain an institution's liquidity, asset quality, earnings, and capital. Consequently, institutions actively involved in the securitization and sale of subprime loans should develop a contingency plan that addresses backup purchasers of the securities or the attendant servicing functions, alternate funding sources, and measures for raising additional capital.

Institutions should refer to the Statement of Financial Accounting Standards No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities," for guidance on accounting for these transactions. If a securitization transaction meets FAS 140 sale or servicing criteria, the seller must recognize any gain or loss on the sale of the pool immediately and carry any retained interests in the assets sold (including servicing rights or obligations and interest-only strips) at fair value. Management should ensure that the key assumptions used to value these retained interests are reasonable and well supported, both for the initial valuation and for subsequent quarterly revaluations. In particular, management should consider the appropriate discount rates, credit-loss rates, and prepayment rates associated with subprime pools when valuing these assets. Since the relative importance of each assumption varies with the underlying characteristics of the product types, management should segment securitized assets by specific pool, as well as by predominant risk and cash-flow characteristics, when making the underlying valuation assumptions. In all cases, however, institutions should take a conservative approach when developing securitization assumptions and capitalizing expected future income from subprime-lending pools. Institutions should also consult with their auditors as necessary to ensure that their accounting for securitizations is accurate.

Reevaluation

Institutions should periodically evaluate whether the subprime-lending program has met profitability, risk, and performance goals. Whenever the program falls short of original objectives, an analysis should be performed to determine the cause, and the program should be modified appropriately. If the program falls far short of the institution's expectations, management should consider terminating it. Questions that management and the board need to ask may include the following:

- Have cost and profit projections been met?
- Have projected loss estimates been accurate?

- Has the institution been called upon to provide support to enhance the quality and performance of loan pools it has securitized?
- Were the risks inherent in subprime lending properly identified, measured, monitored, and controlled?
- Has the program met the credit needs of the community that it was designed to address?

Examination Review and Analysis

The following supervisory guidance (up to the examination objectives) applies only to banks that have subprime-lending programs equaling or exceeding 25 percent of tier 1 capital and to banks that have other designated subprime programs referenced in SR-01-4.

The heightened risk levels and potential volatility in delinquency and loss rates posed by subprime-lending programs warrant examiners' increased ongoing attention. The risks inherent in subprime-lending programs call for frequent reviews. There are generally two levels of review appropriate for subprime activities:

- *Portfolio-level reviews* include assessments of underwriting standards, marketing practices, pricing, management information and control systems (quality control, audit and loan review, vendor management, compliance), portfolio performance, and the appropriate application of regulatory and internal allowance and capital policies.
- *Transaction-level testing* includes the testing of individual loans for compliance with underwriting and loan-administration guidelines; the appropriate treatment of loans under delinquency, re-aging, and cure programs; and the appropriate application of regulatory and internal allowance and capital policies.

During each regularly scheduled examination cycle, examiners should perform a portfolio-level review and some transaction testing at each institution engaged in subprime lending. The Federal Reserve will perform regular off-site supervisory monitoring and may require subprime lenders to supply supplementary information about their subprime portfolios between examinations. The examiner's findings from transaction-level testing and portfolio-level reviews should be incorporated into the conclusions about overall asset quality, the adequacy of the ALLL and capital, and the adequacy of portfolio risk-management practices.

Transaction-Level Testing

Subprime-loan portfolios contain elevated risks, and actual subprime-lending practices often can deviate from stated policy and procedural guidance. Therefore, examiners should supplement the portfolio-level examination procedures with transaction-level testing to determine whether—

- individual loans adhere to existing policy, underwriting, risk-selection, and pricing standards;
- individual loans and portfolios are classified in accordance with the subprime-lending guidelines described in this section, or in other Federal Reserve credit-extending supervisory guidance;
- management, board, and regulatory reporting is accurate and timely;
- existing loans conform to specified account-management standards (such as over-limits, line increases, reductions, cancellations, re-scoring, or collections);
- key risk controls and control processes are adequate and functioning as intended;
- roll rates and other loss-forecasting methods used to determine ALLL levels are accurate and reliable; and
- lending practices exist that may appear unsafe, unsound, or abusive and unfair.

Adequacy of the ALLL

Examiners should assess the adequacy of the ALLL to ensure that the portion allocated to the subprime portfolio is sufficient to absorb estimated credit losses for this portfolio. Consistent with interagency policy,[7] the term *estimated credit losses* means an estimate of the amount that is not likely to be collected; that is, net charge-offs that are likely to be realized given the facts and circumstances as of the evaluation date.[8] These estimated losses should meet the

7. The 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses was issued December 13, 2006. (See SR-06-17.) The Supplemental Interagency policy statement on the ALLL methodologies and documentation was issued July 2, 2001. (See SR-01-07.)

8. Estimates of credit losses should include accrued interest and other accrued fees (for example, uncollected credit card

criteria for accrual of loss contingency, as set forth under generally accepted accounting principles (GAAP), consistent with supervisory ALLL policy.

New Entrants to the Business

In some instances, an institution (for example, a newly chartered institution or an existing institution entering the subprime-lending business) may not have sufficient previous loss experience to estimate an allowance for subprime-lending activities. In such cases, industry statistics or another institution's loss data for similar loans may be a better starting point to determine the ALLL than the institution's own data for developing loss rates. When an institution uses loss rates developed from industry statistics or from other institutions to determine its ALLL, it should demonstrate and document that the attributes of the loans in its portfolio or portfolio segment are similar to those in the other institution's (or industry's) portfolio.

Pools of Subprime Loans—Not Classified

The ALLL required for subprime loans should be sufficient to absorb at least all estimated credit losses on outstanding balances over the current operating cycle, typically 12 months. The board of directors and management are expected to ensure that the institution's process for determining an adequate level for the ALLL is based on a comprehensive and adequately documented analysis of all significant factors. The consideration factors should include historical loss experience, ratio analysis, peer-group analysis, and other quantitative analysis as a basis for the reasonableness of the ALLL. To the extent that the historical net charge-off rate is used to estimate expected credit losses, it should be adjusted for changes in trends, conditions, and other relevant factors, including business volume, underwriting, risk selection, account-management practices, and current economic or business conditions that may alter such experience. The allowance should represent a prudent, conservative estimate of losses that allows a reasonable margin for imprecision. Institutions should clearly document loss estimates and the allowance methodology in writing. This documentation should describe the analytical process used, including—

- portfolio-segmentation methods applied;
- loss-forecasting techniques and assumptions employed;
- definitions of terms used in ratios and model computations;
- relevance of the baseline loss information used;
- rationale for adjustments to historical experience; and
- a reconciliation of forecasted loss rates to actual loss rates, with significant variances explained.

Classification Guidelines for Subprime Lending

Well-managed subprime lenders should recognize the heightened loss characteristics in their portfolios and internally classify their delinquent accounts well before the time frames outlined in the retail classification policy issued by the Federal Financial Institutions Examination Council (FFIEC) on June 12, 2000. Examiners should classify subprime loans and portfolios in accordance with the guidelines in this section and other applicable Federal Reserve supervisory guidelines. Classified loans are loans that are not protected adequately by the current sound worth and paying capacity of the borrower or the collateral pledged. As such, full liquidation of the debt may be in jeopardy. Pools of classified subprime loans (to include, at a minimum, all loans past due 90 days or more) should be reviewed for impairment, and an adequate allowance should be established consistent with existing interagency policy.

Individual Loans

Examiners should not automatically classify or place loans in special mention merely because they are subprime. Rather, classifications should

---

fees or uncollected late fees) that have been added to the loan balances and, as a result, are reported as part of the institution's loans on the balance sheet. An institution may include these types of estimated losses in either the ALLL or a separate valuation allowance, which would be netted against the aggregated loan balance for regulatory reporting purposes. When accrued interest and other accrued fees are not added to the loan balances and are not reported as part of loans on the balance sheet, the collectibility of these accrued amounts should nevertheless be evaluated to ensure that the institution's income is not overstated.

reflect the borrower's capacity and willingness to repay and the adequacy of collateral pledged.

Loans to borrowers that do not have the capacity to service their loans generally will be classified substandard. When repayment capacity is insufficient to support the orderly liquidation of the debt, and the collateral pledged is insufficient to mitigate risk of loss, then a more severe classification and nonaccrual is warranted. Subprime loans that are past due 90 days or more should be classified at least substandard based on a reasonable presumption that their past-due status indicates an inadequate capacity or unwillingness to repay. A more stringent classification approach may be appropriate based on the historical loss experience of a particular institution. Classification of other subprime loans as doubtful or loss will be based on examiners' analysis of the borrower's capacity to repay, and on the quality of institution underwriting and account-management practices as evidenced in the loan file or by other documentation.

In some cases, the repayment of principal, interest, and fees on some subprime loans may be overly dependent on collateral pledged. This occurs when the risk of default is so high that an abundance of collateral is taken to mitigate risk of loss in the event of default. From a safety-and-soundness perspective, institutions should be discouraged from lending solely on the basis of collateral pledged. Such loans will generally be classified substandard. Further, when the borrower does not demonstrate the capacity to service the loan from sources other than collateral pledged, the loan may be placed on nonaccrual.

Portfolios

When the portfolio review or loan sample indicates serious concerns with credit-risk selection practices, underwriting standards, or loan quality, examiners should consider classifying or criticizing the entire portfolio or segments of the portfolio. Such a decision may be appropriate in cases where risk is inordinately high or delinquency reports reflect performance problems. Some subprime-lending portfolios may pose very high risk. These may include portfolios of unsecured loans or secured, high loan-to-value loans to borrowers who clearly exhibit inadequate capacity to repay the debt in a reasonable time frame. Most such portfolios should be classified at least substandard.

Required Documentation for Cure Programs

Cure programs, including such practices as re-aging, extensions, renewals, rewrites, or other types of account restructuring, are subject to the standards outlined in the retail classification policy. In accordance with that policy, cure programs should be used *only* when the institution has substantiated the customer's renewed willingness and ability to repay. Examiners will expect institutions to maintain documentation supporting their analysis of the customer's renewed ability and willingness to repay the loan at the time it is extended, renewed, or deferred. When the institution cannot demonstrate both the willingness and ability of the customer to repay, the loan should not be renewed, extended, deferred, or rewritten, and the loan should be moved back to its pre-cure delinquency status. Documentation should include one or more of the following:

- a new verification of employment
- a recomputed debt-to-income ratio indicating sufficient improvement in the borrower's financial condition to support orderly repayment
- a refreshed credit score or updated bureau report
- a file memo evidencing discussion with the customer

When documentation of the customer's renewed willingness and ability to repay the loan is absent or deficient, management practices should be criticized.

Predatory or Abusive Lending Practices

The term "subprime" is often misused to refer to certain predatory or abusive lending practices. Lending practices can be designed to responsibly provide service to customers and enhance credit access for borrowers with special credit needs. Subprime lending that is appropriately underwritten, priced, and administered can serve these goals.

Some forms of subprime lending may be abusive or predatory, however. Lending practices may be designed to transfer wealth from the borrower to the lender or loan originator without a commensurate exchange of value.

This is sometimes accomplished when the lender structures a loan to a borrower who has little or no ability to repay the loan from sources other than the collateral pledged. When default occurs, the lender forecloses or otherwise takes possession of the borrower's property (generally the borrower's home or automobile). In other cases, the lender may use the threat of foreclosure or repossession to induce duress on the borrower for payment. Typically, predatory lending involves at least one, and perhaps all three, of the following elements:

- making unaffordable loans based on the assets of the borrower rather than on the borrower's ability to repay an obligation
- inducing a borrower to refinance a loan repeatedly in order to charge high points and fees each time the loan is refinanced (that is, "loan flipping")
- engaging in fraud or deception to conceal the true nature of the loan obligation or ancillary products from an unsuspecting or unsophisticated borrower

Loans to borrowers who do not demonstrate the capacity to repay the loan, as structured, from sources other than the collateral pledged are generally considered unsafe and unsound. Such lending practices should be criticized in the examination report as imprudent. Further, examiners should refer any loans with the aforementioned characteristics to Federal Reserve consumer compliance/fair lending specialists for additional review.

Capitalization

The Federal Reserve's minimum capital requirements generally apply to portfolios that exhibit substantially lower risk profiles than those that exist in subprime-loan programs. Therefore, these requirements may not be sufficient to reflect the risks associated with subprime portfolios. Subprime-lending activities can present a greater-than-normal risk for financial institutions and the deposit insurance funds; therefore, the level of capital institutions need to support this activity should be commensurate with the additional risks incurred. Each subprime lender is responsible for quantifying the amount of capital needed to offset the additional risk in subprime-lending activities, and for *fully documenting* the methodology and analysis supporting the amount specified.

The amount of additional capital necessary will vary according to the volume and type of subprime activities conducted and the adequacy of the institution's risk-management program. An institution's overall capital adequacy will be evaluated on a case-by-case basis through on-site examinations and off-site monitoring procedures, considering, among other factors, the institution's own documented analysis of the capital needed to support subprime lending. Institutions that are determined to have insufficient capital must correct the deficiency within a reasonable time frame or be subject to supervisory action. In light of the higher risks associated with this type of lending, higher minimum-capital requirements may be imposed on institutions engaging in subprime lending.

The sophistication of this analysis should be commensurate with the size, concentration level, and relative risk of the institution's subprime-lending activities and should consider the following elements:

- portfolio-growth rates
- trends in the level and volatility of expected losses
- the level of subprime-loan losses incurred over one or more economic downturns, if such data or analyses are available
- the impact of planned underwriting or marketing changes on the credit characteristics of the portfolio, including the relative levels of risk of default, loss in the event of default, and the level of classified assets
- any deterioration in the average credit quality over time due to adverse selection or retention
- the amount, quality, and liquidity of collateral securing the individual loans
- any asset, income, or funding-source concentrations
- the degree of concentration of subprime credits
- the extent to which current capitalization consists of residual assets or other potentially volatile components
- the degree of legal or reputation risk associated with the subprime business lines pursued
- the amount of capital necessary to support the institution's other risks and activities

Given the higher risk inherent in subprime-lending programs, examiners should reasonably expect, as a starting point, that an institution would hold capital against such portfolios in an amount that is *one and one-half to three times greater* than what is appropriate for non-subprime assets of a similar type. Refinements should depend on the factors analyzed above, with particular emphasis on the trends in the level and volatility of loss rates, and on the amount, quality, and liquidity of collateral securing the loans. Institutions should have capital ratios that are well above the averages for their traditional peer groups or other similarly situated institutions that are not engaged in subprime lending.

Some subprime asset pools warrant increased supervisory scrutiny and monitoring, but not necessarily additional capital. For example, well-secured loans to borrowers who are slightly below what is considered prime quality may entail minimal additional risks compared with prime loans, and they may not require additional capital if adequate controls are in place to address the additional risks. On the other hand, institutions that underwrite higher-risk subprime pools, such as unsecured loans or high loan-to-value second mortgages, may need significantly higher levels of capital, perhaps as high as 100 percent of the loans outstanding, depending on the level and volatility of risk.

Stress Testing

An institution's capital adequacy analysis should include stress testing as a tool for estimating unexpected losses in its subprime-lending pools. Institutions should project the performance of their subprime-loan pools under conservative stress-test scenarios, including an estimation of the portfolio's susceptibility to deteriorating economic, market, and business conditions. Portfolio stress testing should include "shock" testing of basic assumptions, such as delinquency rates, loss rates, and recovery rates on collateral. Stress tests should also consider other potentially adverse scenarios, such as changing attrition or prepayment rates; changing utilization rates for revolving products; changes in credit-score distribution; and changes in the capital-market demand for whole loans or asset-backed securities supported by subprime loans. These are representative examples; actual factors will vary by product, market segment, and the size and complexity of the portfolio relative to the institution's overall operations. Whether stress tests are performed manually, or through automated modeling techniques, it is expected that—

- the process is clearly documented, rational, and easily understood by the institution's board and senior management;
- the inputs are reliable and relate directly to the subject portfolios (for example, baseline loss history or default probabilities should reflect each segment of the institution's portfolio and not just a blend of prime and subprime borrowers);
- assumptions are well documented and conservative; and
- any models are subject to a comprehensive validation process.

The results of the stress-test exercises should be a documented factor in the analysis and determination of capital adequacy for the subprime portfolios.

Institutions that engage in subprime-lending programs without adequate procedures to estimate and document the level of capital necessary to support their activities should be criticized. Where capital is deemed inadequate to support the risk in subprime-lending activities, examiners should consult with their Reserve Bank supervisory official to determine the appropriate course of action. Such actions may include requiring additional capital in accordance with the Federal Reserve's capital adequacy rules, or requiring the institution to submit an acceptable capital plan in accordance with safety-and-soundness guidelines.

Subprime-Lending Examiner Responsibilities

Using the interagency guidance and any supplemental Federal Reserve guidelines, examiners should assess carefully management's ability to administer the higher risk in subprime portfolios. The examiner should judge management's ability to manage the risk involved in the subprime-lending program, in particular, the quality of the risk-management and control processes in place, and more importantly, the extent to which management is adhering to those processes. When examiners determine that risk-management practices are deficient, they should criticize management and initiate corrective action. Such actions may include formal or informal enforcement actions or a plan to achieve adequate capitalization. When a primary supervisor determines that an institution's risk-management practices are materially deficient, the primary supervisor may instruct the institution to discontinue its subprime-lending programs.

APPENDIX—QUESTIONS AND ANSWERS FOR EXAMINERS REGARDING THE EXPANDED GUIDANCE FOR SUBPRIME-LENDING PROGRAMS

To assist examiners who review subprime-lending activities, the following questions and answers were developed to provide additional guidance on the expanded interagency guidance that was issued on January 31, 2001.

Applicability of the Guidance

Question 1: Does the guidance apply to all institutions?

No. The guidance will not affect the vast majority of insured institutions engaged in traditional consumer lending. The guidance applies to institutions that *systematically* target the subprime market through *programs* that employ tailored marketing, underwriting standards, and risk selection.

The guidance does not address traditional consumer lending that has historically been the mainstay of community banking. It does not apply to institutions extending credit to subprime borrowers as part of their standard community-lending process, or making loans to subprime borrowers as an occasional exception to a prime-lending program, even if the aggregate of these loans totals more than 25 percent of tier 1 capital. Such institutions continue to be subject to the normal supervisory process.

Institutions engaging in subprime-lending programs generally have knowingly and purposefully focused on the subprime-lending markets through planned business strategies, tailored products, and explicit borrower targeting. In instances where significant exposures to subprime borrowers are identified, examiners should consider the institution's marketing program, loan products, pricing, underwriting standards and practices, and portfolio performance to determine if the institution has a program that warrants the supervision and safeguards outlined in the guidance.

Question 2: Does the guidance apply when an institution offers a product that attracts a disproportionate number of subprime borrowers, but which the institution does not explicitly identify as subprime?

A subprime program commonly features products specifically tailored to borrowers with weakened credit histories. Such products often differ substantially in pricing and terms from products offered to prime borrowers, and usually have separate and distinctly different underwriting standards. An institution offering a product that attracts a disproportionate number of borrowers with weakened credit histories likely has a subprime program whether or not the activity is called a subprime program. The guidance will apply to these programs when the resultant aggregate credit exposure is at least 25 percent of the institution's tier 1 capital.

Institutions with significant programs are expected to have the necessary risk-management and internal-control systems in place to properly identify, measure, monitor, and control the inherent risks in its subprime portfolio. Risk management and controls for these programs typically involve enhanced performance monitoring, intensive collection activities, and other loss-mitigation strategies. If an institution systematically targets the subprime market but does not segregate these loans from its prime portfolio, it is doubtful that the institution has the necessary risk-management and control systems in place to safely engage in the activity.

Subprime Characteristics

Question 3: Why does the Expanded Guidance for Subprime Lending Programs use a credit bureau risk score (FICO) of 660 as a cutoff point for subprime lending?

The guidance does not use credit scores, or any other single risk factor, as a definitive cutoff point for subprime lending. The characteristics listed are not explicit, bright-line definitions. The range of credit characteristics used to describe subprime borrowers is intended to help examiners identify lenders that are engaged in subprime-lending programs. These characteristics describe borrowers with varying, but significantly higher, probabilities of default than prime borrowers. The guidance states that "this list is illustrative rather than exhaustive and is not meant to define specific parameters for all borrowers."

A credit bureau score of 660 (FICO) is used only as an example to illustrate a credit score that generally indicates a higher default probability. The guidance indicates the probability of default, as evidenced by the credit score, will vary by product and collateral. The subprime guidance lists *several* characteristics that denote a higher probability of default. Examiners are directed to use these characteristics as a starting point to expand their review of lending programs targeting subprime borrowers in accordance with risk-focused examination procedures. The severity of risk may vary significantly for the different characteristics listed, as well as for the type and quality of collateral. Examiners should take this into consideration when reviewing the portfolio and determining the adequacy of loan-loss reserves and capital.

The characteristics used in the guidance are well recognized in the investment and lending industries. A number of public debt rating agencies and financial institutions, including the government-sponsored enterprises (GSEs), use similar credit characteristics to differentiate risk among borrowers. Specific examples include the following:

- Fitch defines a subprime borrower as "...one with a credit profile worse than that of a prime A quality borrower, whose credit report would typically reveal no recent mortgage delinquencies and whose credit profile would yield a [FICO] credit score in the range above 680." Fitch's mortgage credit grade matrix lists the following credit-history elements for A-, the highest subprime grade: one 30-day delinquency in the last 12 months on a mortgage debt; one 30-day delinquency in the last 24 months on installment debt, or two 30-day delinquencies in the last 24 months on revolving debt; bankruptcy in past five years; charge-off or judgments exceeding $500 in the past 24 months; and/or a debt-to-income ratio of 45 percent.[1]
- Standard & Poor's subprime-mortgage underwriting guidelines define subprime A-characteristics as two or more 30-day delinquencies on mortgage and consumer credit, one 60-day delinquency on consumer credit, debt-to-income ratio of 45 percent, and no bankruptcy in the past five years. Standard & Poor's also "...considers subprime borrowers to have a FICO credit score of 659 or below."[2]
- Standard & Poor's has classified nonprime B auto securitization pools as having occasional delinquencies and minor charge-offs on revolving debt, static pool net losses of 3.1 percent to 7.5 percent, and FICO credit scores ranging from 620–679.[3]
- Freddie Mac has used the FICO score of 660 or below to designate higher-risk borrowers requiring more comprehensive review. Freddie Mac views a score in the 620–660 range as an indication that the "borrower's willingness to repay debt as agreed is uncertain." FICO scores below 620 are placed in the "cautious-review category," and Freddie Mac considers scores below 620 "as a strong indication that the borrower's credit reputation is not acceptable..."[4]

Capital Guidance

Question 4: If an institution is engaged in subprime lending as described by the guidance, does the 1.5-to-3 times capital described in the guidance automatically apply?

No. The expanded interagency guidance on subprime lending is flexible examination guidance; the capital range does not automatically apply because the guidance is not a capital rule or regulation. Rather, the guidance describes an expectation that subprime lenders hold sufficient loan-loss reserves and capital to offset the additional risks that may exist in subprime activities. The agencies expect institutions to have methodologies and analyses in place to support and document the level of reserves and capital needed

1. Fitch IBCA, Duff & Phelps, "Rating U.S. Residential Subprime Mortgage Securities, March 16, 2001: 2.

2. Standard & Poor's, "U.S. Residential Subprime Mortgage Criteria," Structured Finance, 1999: 12, 169.

3. Standard & Poor's, "Auto Loan Criteria and Market Overview 1998," Structured Finance Ratings Asset-Backed Securities, 6.

4. Freddie Mac, Single-Family Seller/Servicer Guide, chapter 37, section 37.6, "Using FICO Scores in Underwriting," March 7, 2001.

for the additional risks assumed. The higher the risk, the more reserves and capital needed to support the activity. Institutions with lower-risk subprime portfolios may not need additional reserves and capital. In addition, examiners are reminded that subprime lending is only one element in the evaluation of the institution's overall capital adequacy. If the analysis shows that the institution has adequate capital for all its assets and activities, including subprime lending, there is no additional capital requirement arising from the guidance.

Examiners are instructed not to unilaterally require additional reserves and capital based on the guidance. Any determination made by an examiner that an institution's reserves or capital are deficient will be discussed with the institution's management and with each agency's appropriate supervisory office before a final decision is made.

Question 5: Are the regulatory expectations for higher capital levels consistent with capital levels supporting subprime assets outside the insured banking industry?

Yes. The regulatory expectations of higher capital maintenance are consistent with expectations in the capital markets. The 1.5-to-3-times-capital multiple is risk based, e.g., the level of additional capital varies by relative loan quality and is applied only to the subprime portfolio, not the institution's entire asset structure. This is consistent with the financial marketplace's assessment of relative risk in subprime assets outside the banking industry. For example, the amount of credit enhancement required for subprime securitization structures varies according to the level and volatility of perceived credit risk in the underlying assets. In addition, publicly traded subprime-finance companies (that are not currently suffering from adverse ratings) maintain equity-capital-to-managed-asset ratios that are 1.5 to as much as 6 times (depending on loan type and relative quality) those of finance companies that do not specialize in subprime loans.

1. To assess and evaluate the extent of subprime-lending activities; whether management has adequately planned for this activity; and whether management has developed and maintains board-approved policies and procedures, systems, and internal controls that identify, measure, monitor, and control the additional risks.
2. To ascertain whether management has established adequate subprime-lending standards that are commensurate with the risks associated with the subprime-lending program.
3. To conduct portfolio-level reviews and transaction-level testing of the subprime-lending activities, assessing the quality and performance of the subprime-loan portfolios and subprime-lending program, including its profitability, delinquency, and potential and actual loss experience.
4. To assess the adequacy of the allowance for loan and lease losses (ALLL) for the subprime-loan portfolio.

1. Determine whether the subprime-lending activities are consistent with the bank's overall business strategy and risk tolerances, and that the critical business risks have been identified and considered.
2. Assess whether the bank has the financial capacity, including capital adequacy, to conduct the high-risk activity of subprime lending safely, without any undue concentrations of credit.
3. Ascertain if management has committed the necessary resources, that is, technology and skilled personnel, to manage and control the risks associated with the volume and complexity of the subprime-lending program.
4. Determine whether the banking institution's contingency plans are adequate to address the issues of (1) alternative funding sources, (2) back-up purchasers of the securities or the attendant servicing functions, and (3) methods of raising additional capital during an economic downturn or when financial markets become volatile.
5. Determine if management has established adequate lending standards that are appropriate for the size and complexity of the banking organization's operations, and if management is maintaining proper controls over the program. (See "Risk Management" in section 2133.1 for the lending standards that should be included in the subprime-loan program.)
6. Review and evaluate loan-administration and loan-monitoring procedures for subprime loans originated or purchased, including—
   a. collection, repossession, and disclosure procedures;
   b. the management of the number of staff members, the level and effective use of skilled staffing, and advanced technology;
   c. the adequacy of the allowance for loan and lease losses (ALLL); and
   d. the adequacy and accuracy of models used to estimate credit losses or set pricing, making certain that the models account for economic cycles and other unexpected events.
7. Perform a portfolio-level review and conduct some transaction testing. Incorporate examination findings from the portfolio-level and transaction-level testing reviews into the conclusions about overall asset quality, the adequacy of the ALLL and capital, and the adequacy of portfolio risk-management practices.
8. Review securitization transactions for compliance with Statement of Financial Accounting Standards No. 140 (FAS 140) and this guidance, including whether the banking organization has provided any support to maintain the credit quality of loan pools it has securitized.
9. Evaluate the ALLL and regulatory capital allocated to support subprime-lending programs, including whether the total protection for subprime-asset programs and the levels for each component are adequate. Ascertain that a sound risk-management program exists that includes the ability of management to determine and quantify appropriate levels for each component.
10. Analyze the performance of the program, including its profitability, delinquency, and loss experience.
11. Consider management's response to adverse performance trends, such as higher-than-expected prepayments, delinquencies, charge-offs, customer complaints, and expenses.
12. Determine if the banking institution's subprime-lending program effectively manages the credit, market, liquidity, reputational, operational, and legal risks associated with subprime-lending operations.
13. Evaluate the documented analysis of the institution's capital needed to support its subprime-lending activities. Ascertain whether the capital levels are risk sensitive, that is, does allocated capital reflect the level and variability of loss estimates within reasonably conservative parameters? Determine if there is a direct link between the expected loss rates used to determine the required ALLL and the unexpected loss estimates used to determine capital. Document and reference each institution's subprime capital evaluation in the examination comments and conclusions regarding capital adequacy.

14. Classify loans according to the following criteria:
    a. Classify as substandard loans to borrowers that do not have the capacity to service their loans.
    b. Classify as at least substandard subprime loans that are 90 days or more past due based on a reasonable presumption that their past-due status indicates an inadequate capacity or unwillingness to repay.
    c. Consider classifying or criticizing the entire portfolio or segments of the portfolio when the portfolio review or loan sample indicates serious concerns with credit-risk selection practices, underwriting standards, or loan quality.
    d. Classify as substandard high-risk unsecured loan portfolios or secured high loan-to-value loans to borrowers who clearly exhibit inadequate capacity to repay the debt in a reasonable time frame.
15. Report as unsafe and unsound imprudent loans to borrowers who do not demonstrate the capacity to repay the loan, as structured, from sources other than the pledged collateral. Refer such loans to a consumer compliance/fair lending specialist for review.
16. Carefully assess management's ability to administer the higher risk in subprime portfolios. If risk-management practices are deficient, criticize management and reach specific agreements with senior management and the board of directors to initiate corrective action.

An interagency Statement on Subprime Mortgage Lending (the subprime statement) was issued on July 10, 2007 (72 *Fed. Reg.* 37569) by the agencies[1] (same effective date). The subprime statement address issues and questions related to certain adjustable-rate mortgage (ARM) products marketed to subprime borrowers. The statement clarifies how institutions can offer certain ARM products in a safe and sound manner, and in a way that clearly discloses the risks that a borrower may assume from certain ARMs. The statement applies to all banks and their subsidiaries and bank holding companies and their nonbank subsidiaries. See SR-07-12/CA-07-3 and its attachment (the full text of the interagency statement).

The guidance was developed to address emerging risks associated with certain subprime mortgage products and lending practices. The agencies are particularly concerned about the growing use of ARM products[2] that provide low initial payments based on a fixed introductory rate that expires after a short period, and then adjusts to a variable rate plus a margin for the remaining term of the loan. These products could result in payment shock to the borrower. Also, there is concern that these products, typically offered to subprime borrowers, present heightened risks to lenders and borrowers. Often, these products have additional characteristics that increase risk. These include qualifying borrowers based on limited or no documentation of income or imposing substantial prepayment penalties or prepayment penalty periods that extend beyond the initial fixed-interest-rate period.

ARM products originally were extended to customers primarily as a temporary credit accommodation in anticipation of early sale of the property or in expectation of future earnings growth. However, these loans have been offered to subprime borrowers as "credit repair" or "affordability" products. The agencies had concerns that many of these subprime borrowers may not have sufficient financial capacity to service a higher debt load, especially if they were qualified based on a low introductory payment. Also, there was concern that the subprime borrowers may not fully understand the risks and consequences of obtaining these types of ARM products. Borrowers who obtain these loans may face unaffordable monthly payments after the initial rate adjustment, difficulty in paying real estate taxes and insurance that were not escrowed, or expensive refinancing fees, any of which could cause borrowers to default and potentially lose their homes.

2. See footnote 8.

SCOPE OF THE SUBPRIME STATEMENT

The subprime statement emphasizes the need for prudent underwriting standards and clear and balanced consumer information so that institutions and consumers can assess the risks arising from certain ARM products with discounted or low introductory rates. The statement is focused on these types of ARMs and uses the interagency Expanded Guidance for Subprime Lending (the expanded guidance)[3] issued in 2001 to determine subprime borrower characteristics. While the statement is focused on subprime borrowers, the principles in the statement are also relevant to ARM products offered to nonsubprime borrowers.

RISK-MANAGEMENT PRACTICES

The risk-management practices discussed in the subprime statement are generally consistent with existing interagency guidance regarding real estate lending, subprime lending, and nontraditional mortgage products.[4] Like the nontradi-

3. As discussed in the 2001 interagency Expanded Guidance for Subprime Lending Programs, the term "subprime" refers to the characteristics of individual borrowers. Subprime borrowers typically have weakened credit histories that include payment delinquencies and possibly more severe problems, such as charge-offs, judgments, and bankruptcies. They may also display reduced repayment capacity as measured by credit scores, debt-to-income ratios, or other criteria that may encompass borrowers with incomplete credit histories.

4. The 1993 Interagency Guidelines for Real Estate Lending (see SR-93-1 and sections 2090.1–2090.4); the 1999 Interagency Guidance on Subprime Lending (see SR-99-6 and sections 2133.1–2133.3); the 2001 Expanded Guidance for Subprime Lending Programs (see SR-01-4 and sections 2133.1–2133.3); and the 2006 Interagency Guidance on Nontraditional Mortgage Product Risks (see SR-06-15/CA-06-12 and sections 2043.1–2043.4).

tional mortgage guidance issued in 2006, the subprime statement encourages institutions to evaluate the borrower's repayment capacity and ability to repay the loan by final maturity at the fully indexed rate, assuming a fully amortizing repayment schedule.[5] Further, the subprime statement emphasizes that an institution's assessment of a borrower's repayment capacity should include an evaluation of the borrower's debt-to-income ratio and states that this assessment should include total monthly housing-related payments (i.e., principal, interest, taxes, and insurance).

WORKOUT ARRANGEMENTS

The subprime statement reiterates the principles in the interagency Statement on Working with Borrowers (April 2007) in which the agencies encouraged institutions to work constructively with residential borrowers who are in default or whose default is reasonably foreseeable. Both documents indicate that prudent workout arrangements that are consistent with safe and sound lending practices are generally in the long-term best interest of both the financial institution and the borrower. The Federal Reserve will not criticize institutions that pursue reasonable workout arrangements with borrowers.

SUPERVISORY REVIEW

Federal Reserve examiners are expected to carefully review an institution's risk management, consumer-disclosure practices, and consumer compliance, concerns which are contained in the subprime statement as a part of ongoing examination activities. Examiners will take action against institutions that exhibit predatory lending practices, violate consumer protection or fair lending laws, engage in unfair or deceptive acts or practices, or otherwise engage in unsafe or unsound lending practices.

5. The nontraditional mortgage (NTM) guidance covers mortgage products that allow borrowers to defer payment of principal and sometimes interest, including interest-only mortgages when a borrower pays no loan principal for the first few years of the loan and payment-option ARMs when a borrower has flexible payment options with the potential for negative amortization. Because certain ARM products offered to subprime borrowers are fully amortizing, the NTM guidance does not cover such products.

STATEMENT ON SUBPRIME MORTGAGE LENDING

The Statement on Subprime Mortgage Lending (the subprime statement) was developed by the agencies to address emerging issues and questions relating to certain subprime[6] mortgage lending practices. The agencies stated their concern that borrowers may not fully understand the risks and consequences of obtaining products that can cause payment shock.[7] In particular, they have concerns with certain adjustable-rate mortgage (ARM) products typically offered to subprime borrowers that have one or more of the following characteristics:

- low initial payments based on a fixed introductory rate that expires after a short period and then adjusts to a variable index rate plus a margin for the remaining term of the loan;[8]
- very high or no limits on how much the payment amount or the interest rate may increase ("payment or rate caps") on reset dates;
- limited or no documentation of borrowers' income;
- product features likely to result in frequent refinancing to maintain an affordable monthly payment; and/or
- substantial prepayment penalties and/or prepayment penalties that extend beyond the initial fixed-interest-rate period.

Products with one or more of these features present substantial risks to both consumers and lenders. These risks are increased if borrowers are not adequately informed of the product features and risks, including their responsibility for paying real estate taxes and insurance, which may be separate from their monthly mortgage payments. The consequences to borrowers could

6. The term "subprime" is described in the 2001 Expanded Guidance for Subprime Lending Programs. (See SR-01-4 and sections 2133.1–2133.3)

7. *Payment shock* refers to a significant increase in the amount of the monthly payment that generally occurs as the interest rate adjusts to a fully indexed basis. Products with a wide spread between the initial interest rate and the fully indexed rate that do not have payment caps or periodic interest rate caps, or that contain very high caps, can produce significant payment shock.

8. For example, ARMs known as "2/28" loans feature a fixed rate for two years and then adjust to a variable rate for the remaining 28 years. The spread between the initial fixed interest rate and the fully indexed interest rate in effect at loan origination typically ranges from 300 to 600 basis points.

include being unable to afford the monthly payments after the initial rate adjustment because of payment shock; experiencing difficulty in paying real estate taxes and insurance that were not escrowed; incurring expensive refinancing fees, frequently due to closing costs and prepayment penalties, especially if the prepayment penalty period extends beyond the rate adjustment date; and losing their homes. Consequences to lenders may include unwarranted levels of credit, legal, compliance, reputation, and liquidity risks due to the elevated risks inherent in these products.

Many of these concerns are addressed in existing interagency guidance. The most prominent are the 1993 Interagency Guidelines for Real Estate Lending (real estate guidelines) (see SR-93-1 and sections 2090.1–2090.4), the 1999 Interagency Guidance on Subprime Lending (see SR-99-6 and sections 2133.1–2133.3)) and the 2001 Expanded Guidance for Subprime Lending Programs (expanded subprime guidance) (see SR-01-4 and sections 2133.1–2133.3).

While the 2006 Interagency Guidance on Nontraditional Mortgage Product Risks (NTM guidance)[9] may not explicitly pertain to products with the characteristics addressed in this statement, it outlines prudent underwriting and consumer protection principles that institutions also should consider with regard to subprime mortgage lending. This statement reiterates many of the principles addressed in existing guidance relating to prudent risk-management practices and consumer protection laws.[10]

Risk-Management Practices

Predatory Lending Considerations

Subprime lending is not synonymous with predatory lending, and loans with the features described above are not necessarily predatory in nature. However, institutions should ensure that they do not engage in the types of predatory lending practices discussed in the expanded subprime guidance. Typically, predatory lending involves at least one of the following elements:

- making loans based predominantly on the foreclosure or liquidation value of a borrower's collateral rather than on the borrower's ability to repay the mortgage according to its terms;
- inducing a borrower to repeatedly refinance a loan in order to charge high points and fees each time the loan is refinanced ("loan flipping"); or
- engaging in fraud or deception to conceal the true nature of the mortgage loan obligation, or ancillary products, from an unsuspecting or unsophisticated borrower.

Institutions offering mortgage loans such as these face an elevated risk that their conduct will violate section 5 of the Federal Trade Commission Act (FTC Act), which prohibits unfair or deceptive acts or practices.[11]

Underwriting Standards

Institutions should refer to the real estate guidelines, which provide underwriting standards for all real estate loans.[12] The real estate guidelines state that prudently underwritten real estate loans should reflect all relevant credit factors, including the capacity of the borrower to adequately service the debt. The 2006 NTM guidance details similar criteria for qualifying borrowers for products that may result in payment shock.

Prudent qualifying standards recognize the potential effect of payment shock in evaluating a borrower's ability to service debt. An institution's analysis of a borrower's repayment capacity should include an evaluation of the borrower's ability to repay the debt by its final maturity at the fully indexed rate,[13] assuming a fully

9. See SR-06-1, sections 2043.1–2043.4, and 71 *Fed. Reg.* 58609 (October 4, 2006).

10. As with the NTM guidance, this statement applies to all banks and their subsidiaries as well as to bank holding companies and their nonbank subsidiaries.

11. The Board, the OCC, the OTS, and the FDIC enforce this provision under section 8 of the Federal Deposit Insurance Act. The Board, the OCC, and the FDIC also have issued supervisory guidance to the institutions under their respective jurisdictions concerning unfair or deceptive acts or practices. See OCC Advisory Letter 2002-3, Guidance on Unfair or Deceptive Acts or Practices, March 22, 2002, and 12 CFR 30, appendix C; Joint Board and FDIC Guidance on Unfair or Deceptive Acts or Practices by State-Chartered Banks, March 11, 2004.

12. Refer to 12 CFR 208, subpart C.

13. The fully indexed rate equals the index rate prevailing at origination plus the margin to be added to it after the expiration of an introductory interest rate. For example, assume that a loan with an initial fixed rate of 7 percent will reset to the six-month London Interbank Offered Rate (LIBOR) plus a margin of 6 percent. If the six-month LIBOR rate

amortizing repayment schedule.[14]

One widely accepted approach in the mortgage industry is to quantify a borrower's repayment capacity by a debt-to-income (DTI) ratio. An institution's DTI analysis should include, among other things, an assessment of a borrower's total monthly housing-related payments (e.g., principal, interest, taxes, and insurance, or what is commonly known as PITI) as a percentage of gross monthly income.

This assessment is particularly important if the institution relies upon reduced documentation or allows other forms of risk layering. Risk-layering features in a subprime mortgage loan may significantly increase the risks to both the institution and the borrower. Therefore, an institution should have clear policies governing the use of risk-layering features, such as reduced-documentation loans or simultaneous second-lien mortgages. When risk-layering features are combined with a mortgage loan, an institution should demonstrate the existence of effective mitigating factors that support the underwriting decision and the borrower's repayment capacity.

Recognizing that loans to subprime borrowers present elevated credit risk, institutions should verify and document the borrower's income (both source and amount), assets, and liabilities. Stated-income and reduced-documentation loans to subprime borrowers should be accepted only if there are mitigating factors that clearly minimize the need for direct verification of repayment capacity. Reliance on such factors also should be documented. Typically, mitigating factors arise when a borrower with favorable payment performance seeks to refinance an existing mortgage with a new loan of a similar size and with similar terms, and the borrower's financial condition has not deteriorated. Other mitigating factors might include situations where a borrower has substantial liquid reserves or assets that demonstrate repayment capacity and can be verified and documented by the lender. However, a higher interest rate is not considered an acceptable mitigating factor.

equals 5.5 percent, lenders should qualify the borrower at 11.5 percent (5.5 percent + 6 percent), regardless of any interest rate caps that limit how quickly the fully indexed rate may be reached.

14. The fully amortizing payment schedule should be based on the term of the loan. For example, the amortizing payment for a "2/28" loan would be calculated based on a 30-year amortization schedule. For balloon mortgages that contain a borrower option for an extended amortization period, the fully amortizing payment schedule can be based on the full term the borrower may choose.

Workout Arrangements

As discussed in the April 2007 Interagency Statement on Working with Borrowers (see SR-07-6/CA-07-1), financial institutions are encouraged to work constructively with residential borrowers who are in default or whose default is reasonably foreseeable. Prudent workout arrangements that are consistent with safe and sound lending practices are generally in the long-term best interest of both the financial institution and the borrower.

Financial institutions should follow prudent underwriting practices in determining whether to consider a loan modification or a workout arrangement.[15] Such arrangements can vary widely based on the borrower's financial capacity. For example, an institution might consider modifying loan terms, including converting loans with variable rates into fixed-rate products to provide financially stressed borrowers with predictable payment requirements.

The agencies will not criticize financial institutions that pursue reasonable workout arrangements with borrowers. Further, existing supervisory guidance and applicable accounting standards do not require institutions to immediately foreclose on the collateral underlying a loan when the borrower exhibits repayment difficulties. Institutions should identify and report credit risk, maintain an adequate allowance for loan losses, and recognize credit losses in a timely manner.

Consumer Protection Principles

Fundamental consumer protection principles relevant to the underwriting and marketing of mortgage loans include—

- approving loans based on the borrower's ability to repay the loan according to its terms; and
- providing information that enables consumers to understand material terms, costs, and risks of loan products at a time that will help the consumer select a product.

Communications with consumers, including

15. Institutions may need to account for workout arrangements as troubled-debt restructurings and should follow generally accepted accounting principles in accounting for these transactions.

advertisements, oral statements, and promotional materials, should provide clear and balanced information about the relative benefits and risks of the products. This information should be provided in a timely manner to assist consumers in the product-selection process, not just upon submission of an application or at consummation of the loan. Institutions should not use such communications to steer consumers to these products to the exclusion of other products offered by the institution for which the consumer may qualify.

Information provided to consumers should clearly explain the risk of payment shock and the ramifications of prepayment penalties, balloon payments, and the lack of escrow for taxes and insurance, as necessary. The applicability of prepayment penalties should not exceed the initial reset period. In general, borrowers should be provided a reasonable period of time (typically at least 60 days prior to the reset date) to refinance without penalty.

Similarly, if borrowers do not understand that their monthly mortgage payments do not include taxes and insurance, and they have not budgeted for these essential homeownership expenses, they may be faced with the need for significant additional funds on short notice.[16] Therefore, mortgage-product descriptions and advertisements should provide clear, detailed information about the costs, terms, features, and risks of the loan to the borrower. Consumers should be informed of—

- *payment shock*: potential payment increases, including how the new payment will be calculated when the introductory fixed rate expires;[17]
- *prepayment penalties*: the existence of any prepayment penalty, how it will be calculated, and when it may be imposed;
- *balloon payments*: the existence of any balloon payment;
- *cost of reduced-documentation loans*: whether there is a pricing premium attached to a reduced-documentation or stated-income loan program; and
