The stage payment plan, which is normally applied to residential and smaller commercial construction loans, uses a preestablished schedule for fixed disbursements to the borrower at the end of each specified stage of construction. The amount of the draw is usually based upon the stage of development because residential housing projects normally consist of houses in various stages of construction. Nevertheless, loan agreements involving tract financing typically restrict further advances in the event of an accumulation of completed and unsold houses. Disbursements are made when construction has reached the agreed-upon stages, verified by an actual inspection of the property. These typically include advances at the conclusion of various stages of construction, such as the foundation, exterior framing, the roof, interior finishing, and completion of the house. The final payment is made after the legally stipulated lien period for mechanic’s liens has lapsed.

Disbursement programs of this type are usually required for each house constructed within a tract development. As each house is completed and sold, the bank makes a partial release relative to that particular house covered by its

---

4. The borrower may not be the entity responsible for the actual construction of the project. Depending on the size, type, and complexity of the project, the borrower may strictly be a developer who assembles the land, designs the project, and contracts with a construction company to handle the actual construction of the building. If this is the case, the bank should obtain financial and project history information on the builder/contractor.
master deed of trust. The amount of the release is set forth in the loan agreement, which specifies the agreed-upon release price for each house sold with any excess over the net sales proceeds remitted to the borrower.

**Progress Payment Plan**

The progress payment plan is normally used for commercial projects. Under a progress payment system, funds are released as the borrower completes certain phases of construction as agreed upon in the loan agreement. Normally, the bank retains a percentage of the funds as a hold back (or retainage) to cover project cost overruns or outstanding bills from suppliers or subcontractors. Hold backs occur when a developer/contractor uses a number of subcontractors and maintains possession of a portion of the amounts owed to the subcontractors during the construction period. This is done to ensure that the subcontractors finish their work before receiving the final amount owed. Accordingly, the construction lender holds back the same funds from the developer/contractor to avert the risk of their misapplication or misappropriation.

The borrower presents a request for payment from the bank in the form of a “construction draw” request or “certification for payment,” which sets forth the funding request by construction phase and cost category for work that has been completed. This request should be accompanied by receipts for the completed work (material and labor) for which payment is being requested. Additionally, the subcontractors and suppliers should provide the bank with lien waivers covering the work completed for which payment has been received. Upon review of the draw request and independent confirmation on the progress of the work, the bank will disburse funds for construction costs incurred, less the hold back. The percentage of the loan funds retained are released when a notice of the project’s completion has been filed, and after the stipulated period has elapsed under which subcontractors or suppliers can file a lien.

**Monitoring Progress of Construction and Loan Draws**

It is critical that a bank has appropriate procedures and an adequate tracking system to monitor payments to ensure that the funds requested are appropriate for the given stage of development. The monitoring occurs through physical inspections of the project once it has started. The results of the inspections are then documented in the inspection reports, which are kept in the appropriate file. Depending on the complexity of the project, the inspection reports can be completed either by the lender or by an independent construction consulting firm, the latter generally staffed by architects and engineers. The reports address both the quantity and the quality of the work for which funds are being requested. They also verify that the plans are being followed and that the construction is proceeding on schedule and within budget.

The bank must be accurately informed of the progress to date in order to monitor the loan. It is also important that the bank ascertain whether draws are being taken in accordance with the predetermined disbursement schedule. Before any draw amount is disbursed, however, the bank must obtain verification of continued title insurance. Generally, this means verifying that no liens have been filed against the title of the project since the previous draw. The title insurance insuring the construction lender’s mortgage or lien is then increased to include the new draw, which results in an increase in the title insurance commensurate with the disbursement of funds. The lender frequently examines title to the property securing the construction loan to also be certain that the borrower is not pledging it for other borrowings and to be sure that mechanic’s liens are not being filed for unpaid bills. When the project is not proceeding as anticipated, that fact should be reflected in the inspection reports.

---

5. Other methods for disbursing commercial construction loans include the voucher system and the monthly draw method. The voucher system is similar to the progress system except that borrower prepares a voucher of all invoices to be paid with signatures of the subcontractors attesting to the invoiced amount. The bank then issues checks directly to the subcontractors or suppliers. The monthly draw method is used in long-term projects wherein the borrower makes a draw request each month for the previous month’s work. In turn, the bank determines the amount of work completed to date and releases funds based on the value of work completed versus the value of the work remaining.
Another important component in the process is the ongoing monitoring of general economic factors that will affect the marketing and selling of the residential or commercial properties and affect their success upon completion of the project.

**Monitoring Residential Projects**

An inventory list is maintained for each tract or phase of the project. The inventory list should show each lot number, the style of house, the release price, the sale price, and the loan balance. The list should be posted daily with advances and payments indicating the balance advanced for each house, date completed, date sold, and date paid, and should age the builder’s inventory by listing the older houses completed and unsold.

Inspections (usually monthly) during the course of construction of each house should be documented in progress reports. The progress report should indicate the project’s activity during the previous month, reflecting the number of homes under construction, the number completed, and the number sold. The monthly report should indicate whether advances are being made in compliance with the loan agreement.

**Monitoring Commercial Projects**

To have an effective control over its commercial construction loan program, the bank must have an established loan administration process that continually monitors each project. The process should include monthly reporting on the work completed, the cost to date, the cost to complete, construction deadlines, and loan funds remaining. Any changes in construction plans should be documented and reviewed by the construction consulting firm and should be approved by the bank and takeout lender. A significant number of change orders may indicate poor planning or project design, or problems in construction, and should be tracked and reflected in the project’s budget. Soft costs such as advertising and promotional expenses normally are not funded until the marketing of the project has started.

**Final Repayment**

Before the final draw is made, the construction loan should be in a condition to be converted to a permanent loan. Usually the final draw includes payment of the hold back stipulated in the loan agreement and is used to pay all remaining bills. The bank should obtain full waivers of liens (releases) from all contractors, subcontractors, and suppliers before the loan is released and the hold back is disbursed. The bank should also obtain a final inspection report to confirm the project is completed and meets the building specifications, including confirmation of the certificate of occupancy from the governing building authority.

Sources of permanent funding for commercial projects vary greatly, depending upon the type of project. For condominium projects, the construction lender may also be providing the funding for marketing the individual units and would be releasing the loan on a unit-by-unit basis similar to a residential development construction loan. If there is a precommitted takeout lender, the new lender could purchase the construction loan documents and assume the security interest from the construction lender. If the project is being purchased for cash, the bank would release its lien and cancel the note.

Additionally, as the commercial project is leased, the lender should ensure that the bank’s position is protected in the event that extended-term funding is not obtained. The bank may require tenants to enter into subordination, attornment, and nondisturbance agreements, which protect the bank’s interests in the lease by providing for the assumption of the landlord’s position by the bank in the event the borrower declares bankruptcy. Furthermore, to ensure that the bank has full knowledge of all provisions of the lease agreements, tenants should be required to sign an estoppel certification.

In some cases, the takeout lender may only pay off a portion of the construction loan because a conditional requirement for full funding has not been met, such as the project not attaining a certain level of occupancy. The construction lender would then have a second mortgage on the remaining balance of the construction loan. When the conditions of the takeout loan are met, the construction lender is repaid in full and the lien is released.

**Interest Reserves**

A construction loan is generally an interest-only loan because of the fact that cash flow is not
available from most projects until they are completed. The borrower’s interest expense is therefore borrowed from the construction lender as part of the construction loan for the purpose of “paying” the lender interest on the “portion” of the loan used for actual construction. The funds advanced to pay the interest are included as part of the typical monthly draw. As a result, the balance due to the lender increases with each draw by the full amount of construction costs, plus the interest that is borrowed.

The borrower’s interest cost is determined by the amount of credit extended and the length of time needed to complete the project. This interest cost is referred to as an interest reserve. This period of time should be evaluated for reasonableness relative to the project being financed. In larger projects cash flow may be generated prior to the project’s completion. In such cases, any income from the project should be applied to debt service before there is a draw on the interest reserve. The lender should closely monitor the lease-up of the project to ensure that the project’s net income is being applied to debt service and not diverted to the borrower as a return of the developer’s capital or for use in the developer’s other projects.

Signs of Problems

To detect signs of a borrower’s financial problems, the bank should review the borrower’s financial statements on a periodic (quarterly) basis, assessing the liquidity, debt level, and cash flow. The degree of information the financial statements provide the bank, insofar as understanding the borrower’s financial condition is concerned, depends primarily on whether the borrower is a single-asset entity or a multi-asset entity.

The financial statements of a single-asset entity only reflect the project being constructed; therefore, they are of a more limited use than statements of multi-asset entities. Nevertheless, one issue that is of importance to financial statements of both entities relates to monitoring changes in accounts and trade payables. Monitoring these payables in a detailed manner helps the bank to determine if trade payables are paid late or if there are any unpaid bills. In the event of problems, a bank might choose to either contact the payables directly or request an additional credit check on the borrower. Another source of information indicating borrower problems is local publications that list lawsuits or judgments that have been filed or entered against the borrower. Additionally, the bank should also verify that the borrower is making its tax payments on time.

In a multi-asset entity, on the other hand, more potential problems could arise due to the greater number of assets (projects/properties) that make up the borrower. As a result, it is necessary to obtain detailed financial statements of each of the assets (projects/properties) and the consolidating financial statements, as well as the consolidated financial statements. This is important because each kind of statement can provide significant insight into problems that could adversely affect the borrower’s overall financial condition.

Assessing the financial condition of the multi-asset entity includes evaluating the major sources of cash and determining whether cash flow is dependent on income generated from completed projects, the sale of real estate, or infusion of outside capital. Additionally, the bank should also review the borrower’s account receivables for the appropriateness of intercompany transactions and to guard against diversion of funds.

Depending upon the structure of the loan, it may also be desirable to obtain a partner’s/
guarantor’s financial statements on a periodic basis. In such cases it is important to obtain detailed current and accurate financial statements that include cash flow information on a project-by-project basis.

Slow unit sales, or excessive inventory relative to sales, indicate the borrower may have difficulty repaying the loan. Although sometimes there are mitigating factors beyond the control of the borrower, such as delays in obtaining materials and supplies, adverse weather conditions, or unanticipated site work, the borrower may be unable to overcome these problems. Such delays usually increase project costs and could hamper the loan’s repayment.

The construction lender should be aware of funds being misused—for example, rebuilding to meet specification changes not previously disclosed, starting a new project, or possibly paying subcontractors for work performed elsewhere. The practice of “front loading,” whereby a builder deliberately overstates the cost of the work to be completed in the early stages of construction, is not uncommon and, if not detected early on, will almost certainly result in insufficient loan funds with which to complete construction in the event of a default.

Loan Workouts

Sound workout programs begin with a full disclosure of all relevant information based on a realistic evaluation of the borrower’s ability to manage the business entity (business, technical, and financial capabilities), and the bank’s ability to assist the borrower in developing and monitoring a feasible workout/repayment plan. Management should then decide on a course of action to resolve the problems with the terms of the workout in writing and formally agreed to by the borrower. If additional collateral is accepted or substituted, the bank should ensure that the necessary legal documents are filed to protect the bank’s collateral position.

In those cases where the borrower is permitted to finish the project, additional extensions of credit for completing the project, due to cost overruns or an insufficient interest reserve, may represent the best alternative for a workout plan. At the same time, the bank should evaluate the cause of the problem(s), such as mismanagement, and determine whether it is in its best interest to allow the borrower to complete the project.

SUPERVISORY POLICY

As a result of competitive pressures, many banks in the early 1980s made construction loans on an open-end basis, wherein the borrower did not have a commitment for longer-term or takeout financing before construction was started. Although there was sufficient demand for commercial real estate space when this practice commenced, the supply of space began to exceed demand. One symptom of the excess supply was an increase in vacancy rates, which led to declining rental income caused by the ever greater need for rent concessions. The commensurate declining cash flow from income-producing properties, and the uncertainty regarding future income, reduced the market value of many properties to levels considered undesirable by permanent mortgage lenders. As a result of the subsequent void created by the permanent lenders, banks in the mid- and late 1980s began to extend medium-term loans with maturities for up to seven years (also referred to as mini-perms). These mini-perms were granted with the expectation by banks that as the excess supply of space declined, the return on investment would improve, and permanent lenders would return.

As these loans mature in the 1990s, borrowers may continue to find it difficult to obtain adequate sources of long-term credit. In some cases, banks may determine that the most desirable and prudent course is to roll over or renew loans to those borrowers who have demonstrated an ability to pay interest on their debts, but who presently may not be in a position to obtain long-term financing for the loan balance.

The act of refinancing or renewing loans to sound borrowers, including creditworthy commercial or residential real estate developers, generally should not be subject to supervisory criticism in the absence of well-defined weaknesses that jeopardize repayment of the loans. Refinancings or renewals should be structured in a manner that is consistent with sound banking, supervisory, and accounting practices, and that protects the bank and improves its prospects for collecting or recovering on the asset.
Real Estate Construction Loans
Examination Objectives
Effective date November 1993

1. To determine if policies, practices, procedures, and internal controls regarding real estate construction loans are adequate.
2. To determine if bank officers are operating in conformance with the bank’s established guidelines.
3. To evaluate the portfolio for collateral sufficiency, performance, credit quality, and collectibility.
4. To determine compliance with applicable laws and regulations.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulations have been noted.
1. Refer to the Real Estate Loan Examination Procedures section of this manual for examination procedures related to all types of real estate lending activity, and incorporate into this checklist those procedures applicable to the review of the real estate construction loans. The procedures in this checklist are unique to the review of a bank’s construction lending activity.

2. Determine the scope of the examination based on the evaluation of internal controls and the work performed by internal/external auditors.

3. Test real estate construction loans for compliance with policies, practices, procedures, and internal controls by performing the remaining examination procedures in this section. Also, obtain a listing of any deficiencies noted in the latest internal/external audit reviews and determine if appropriate corrections have been made.

4. Review management reports on the status of construction lending activity, economic developments in the market, and problem loan reports.

5. Evaluate the bank with respect to—
   a. the adequacy of written policies and procedures relating to construction lending.
   b. operating compliance with established bank policy.
   c. favorable or adverse trends in construction lending activity.
   d. the accuracy and completeness of the bank’s records.
   e. the adequacy of internal controls, including control of construction draws.
   f. the adherence of lending staff to lending policies, procedures, and authority as well as the bank’s adherence to the holding company’s loan limits, if applicable.
   g. compliance with laws, regulations, and Federal Reserve policy on construction lending activity, including supervisory loan-to-value (LTV) limits and restrictions; loans to officers, directors, and shareholders; appraisal and evaluation of real estate collateral; and prudent lending practices.

6. Select loans for examination, using an appropriate sampling technique drawn from judgmental (cut-off line) or statistical sampling. Analyze the performance of the loans selected for examination by transcribing the following kinds of information onto the real estate construction loan line cards, when applicable:
   a. Collateral records and credit files, including the borrower’s financial statements, review of related projects, credit report of the borrower and guarantors, appraisal or evaluation of collateral, feasibility studies, economic impact studies, and loan agreement and terms.
   b. Loan modification or restructuring agreements to identify loans where interest or principal is not being collected according to the terms of the original loan. Examples include reduction of interest rate or principal payments, deferral of interest or principal payments, or renewal of a loan with accrued interest rolled into the principal.
   c. The commitment agreement—a buy/sell contract or the tri-party agreement—from the extended-term or permanent lender for the takeout loan.
   d. Cash-flow projections and any revisions to projections based on cost estimates from change orders.
   e. Estimates of the time and cost to complete construction.
   f. Inspection reports and evaluations of the cost to complete, construction deadlines, and quality of construction.
   g. Construction draw schedules and audits for compliance with the schedules.
   h. Documentation on payment of insurance and property taxes.
   i. Terms of a completion or performance bond.
   k. Loan-specific internal problem credit analyses information.
   l. Loans to insiders and their interests.
   m. Loans classified during the preceding examination.

7. In analyzing the selected construction loans, the examiner should consider the following procedures, taking appropriate action if necessary:
a. Determine the primary source of repayment and evaluate its adequacy, including whether—
• the permanent lender has the financial resources to meet its commitment.
• the amount of the construction loan and its estimated completion date correspond to the amount and expiration date of the takeout commitment and/or completion bond.
• the permanent lender and/or the bonding company have approved any modifications to the original agreement.
• properties securing construction loans that are not supported by a takeout commitment will be marketable upon completion.
b. Analyze secondary support afforded by guarantors and partners.
c. Relate collateral values to outstanding debt by—
assessing the adequacy of the appraisal and evaluation.
• ascertaining whether inspection reports support disbursements to date.
• determining whether the amount of undisbursed loan funds is sufficient to complete the project.
• establishing whether title records assure the primacy of the bank’s liens.
• determining if adequate hazard, builder’s risks, and worker’s compensation insurance is maintained.
d. Determine whether the loan’s loan-to-value (LTV) ratio is in excess of the supervisory LTV limits. If so, ascertain whether the loan has been properly reported as a nonconforming loan.
e. Ascertain whether the loan complies with established bank policy.
f. Identify any deficiencies in the loan’s documentation in both the credit files and the collateral records.
g. Identify whether the loan is to an officer, director, or shareholder of the bank or a correspondent bank and whether an officer, director, or shareholder of the bank is a guarantor on the loan.
h. Review the borrower’s compliance with the provisions of the loan agreement, indicating whether the loan is in default or in past-due status.
i. Determine if there are any problems that may jeopardize the repayment of the construction loan.
j. Determine whether the loan was classified during the preceding examination, and, if the loan has been paid off, whether all or part of the funds for repayment came from another loan at the bank or from the repossession of the property.
8. In connection with the examination of other lending activity in the bank, the examiner should—
a. check the central liability file on the borrower(s) and determine whether the total construction lending activity exceeds the lending limit to a single borrower.
b. obtain information and related performance status on common borrowers and their interests from examiners assigned to other examination areas (such as non-real estate loans, leasing, overdrafts, and cash items) and determine the total indebtedness of the borrower to the bank.
Additionally, one examiner should be assigned to review the borrower’s overall borrowing relationship with the bank.
c. perform appropriate procedural steps as outlined in the Concentration of Credits section of this manual. Interim construction loans that do not have firm permanent takeout commitments are to be treated as concentrations of credit.
9. Consult with the examiner responsible for the asset/liability management analysis portion of the examination to determine the appropriate maturity breakdown of construction loans needed for the analysis and prepare the necessary schedules.
10. Summarize the findings of the construction loan portfolio review and address—
a. the scope of the examination.
b. the quality of the policies, procedures, and controls.
c. the general level of adherence to policies and procedures.
d. the competency of management.
e. the quality of the loan portfolio.
f. loans not supported by current and complete financial information.
g. loans with incomplete documentation, addressing deficiencies related to items such as appraisals or evaluations, feasibility studies, the environmental impact study, takeout commitment, title policy, construction plans, inspection reports, change orders, proof of payment for
insurance and taxes, deeds of trust, and mortgage notes.
h. the adequacy of control over construction draws and advances.
i. loans to officers, directors, shareholders, or their interests.
j. causes of existing problems.
k. delinquent loans and the aggregate amount of statutory bad debts. Refer to the manual section on classification of credits for a discussion on statutory bad debts or A Paper.
l. concentrations of credits.
m. classified loans.
n. violations of laws, regulations, and Federal Reserve policy.
o. action taken by management to correct previously noted deficiencies and corrective actions recommended to management at this examination, with the bank’s response to such recommendations.
Real Estate Construction Loans
Internal Control Questionnaire
Effective date May 2004

Section 2100.4

Review the bank’s internal controls, policies, practices, and procedures for making and servicing real estate construction loans. The bank’s system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Negative responses to the questions in this section should be explained, and additional procedures deemed necessary should be discussed with the examiner-in-charge. Items marked with an asterisk require substantiation by observation or testing.

POLICIES AND OBJECTIVES

*1. Has the board of directors and management, consistent with their duties and responsibilities, adopted and, at least annually, reviewed and approved written construction lending policies that—
   a. outline construction lending objectives regarding—
      • the aggregate limit for construction loans?
      • concentrations of credit in particular types of construction projects?
   b. establish minimum standards for documentation?
   c. define qualified collateral and minimum margin requirements?
   d. define the minimum equity requirement for a project?
   e. define loan-to-value (LTV) limits that are consistent with supervisory LTV limits?
   f. require an appraisal or evaluation that complies with the Federal Reserve real estate appraisal regulation and guidelines?
   g. delineate standards for takeout commitments?
   h. indicate completion bonding requirements?
   i. establish procedures for reviewing construction loan applications?
   j. detail methods for disbursing loan proceeds?
   k. detail project-inspection requirements and progress-reporting procedures?
   l. require agreements by borrowers for completion of improvements according to approved construction specifications, and cost and time limitations?

2. Are construction lending policies and objectives appropriate to the size and sophistication of the bank, and are they compatible with changing market conditions?

3. Has the board of directors adopted, and does it periodically review, policies and procedures that establish and maintain an effective, independent real estate appraisal and evaluation program for the entire bank’s lending functions? (The real estate lending functions include commercial real estate mortgage departments, capital-market groups, and asset-securitization and -sales units.)

REVIEWING LOAN APPLICATIONS

1. Does bank policy require a personal guarantee from the borrower on construction loans?

2. Does bank policy require personal completion guarantees by the property owner and/or the contractor?

3. Does the bank require a construction borrower to contribute equity to a proposed project in the form of money or real estate? If so, indicate which form of equity.

4. Does the project budget include the amount and source of the builder’s and/or owner’s equity contribution?

5. Does the bank require—
   a. background information on the borrower’s, contractor’s, and major subcontractors’ development and construction experience, as well as other projects currently under construction?
   b. payment-history information from suppliers and trade creditors on the aforementioned’s previous projects?
   c. credit reports?
   d. detailed current and historical financial statements, including cash flow–related information?

Commercial Bank Examination Manual
May 2004
Page 1
6. Do the borrower’s project-cost estimates include—
   a. land and construction costs?
   b. off-site improvement expenses?
   c. soft costs, such as organizational and administrative costs, and architectural, engineering, and legal fees?
   d. interest, taxes, and insurance expenses?
7. Does the bank require an estimated cost breakdown for each stage of construction?
8. Does the bank require that cost estimates of more complicated projects be reviewed by qualified personnel: experienced in-house staff, an architect, a construction engineer, or an independent estimator?
9. Are commitment fees required on approved construction loans?

CONSTRUCTION LOAN AGREEMENTS

1. Is the construction loan agreement signed before an actual loan disbursement is made?
2. Is the construction loan agreement reviewed by counsel and other experts to determine that improvement specifications conform to—
   a. building codes?
   b. subdivision regulations?
   c. zoning and ordinances?
   d. title and/or ground lease restrictions?
   e. health and handicap access regulations?
   f. known or projected environmental protection considerations?
   g. specifications required under the National Flood Insurance Program?
   h. provisions in tenant leases?
   i. specifications approved by the permanent lender?
   j. specifications required by the completion or performance bonding company and/or guarantors?
3. Does the bank require all change orders to be approved in writing by the—
   a. bank?
   b. bank’s counsel?
   c. permanent lender?
   d. architect or supervising engineer?
   e. prime tenants bound by firm leases or letters of intent to lease?
   f. completion bonding company?
4. Does the construction loan agreement set a date for project completion?
5. Does the construction loan agreement require that—
   a. the contractor not start work until authorized to do so by the bank?
   b. on-site inspections be permitted by the lending officer or an agent of the bank without prior notice?
   c. disbursement of funds be made as work progresses, supported by documentation that the subcontractors are receiving payment and that the appropriate liens are being released?
   d. the bank be allowed to withhold disbursements if work is not performed according to approved specifications?
   e. a percentage of the loan proceeds be retained pending satisfactory completion of the construction?
   f. the lender be allowed to assume prompt and complete control of the project in the event of default? If a commercial project, are the leases assignable to the bank?
g. the contractor carry builder’s risk and workers’ compensation insurance? If so, has the bank been named as mortgagee or loss payee on the builder’s risk policy?
h. periodic increases in the project’s value be reported to the builder’s risk and title insurance companies?
6. Does the construction loan agreement for residential tract construction loans require—
   a. bank authorization for individual tract-housing starts?
   b. that periodic sales reports be submitted to the bank?
   c. that periodic reports on tract houses occupied under a rental, lease, or purchase-option agreement be submitted to the bank?
   d. limitations on the number of speculative houses and the completion of one tract before beginning another?

COLLATERAL

1. Are liens filed on non–real estate construction improvements, i.e., personal property that is movable from the project?
2. When entering into construction loans, does the bank, consistent with supervisory loan-to-value limits—
a. limit the loan amount to a reasonable percentage of the appraised value of the project when there is no prearranged permanent financing?
b. limit the loan amount to a percentage of the appraised value of the completed project when subject to the bank’s own takeout commitment?
c. limit the loan amount to the floor of a takeout commitment that is based upon achieving a certain level of rents or lease occupancy?

3. Are unsecured credit lines to contractors or developers, who are also being financed by secured construction loans, supervised by the construction loan department or the officer supervising the construction loan?

4. Does the bank have adequate procedures to determine whether construction appraisal or evaluation policies and procedures are consistently being followed in conformance with regulatory requirements, and that the appraisal or evaluation documentation supports the value indicated in the conclusions?

INSPECTIONS

1. Are inspection authorities noted in the—
a. construction loan commitment?
b. construction loan agreement?
c. tri-party buy-and-sell agreement?
d. takeout commitment?
2. Are inspections conducted on an irregular basis?
3. Are inspection reports sufficiently detailed to support disbursements?
4. Are inspectors rotated from project to project?
5. Are spot checks made of the inspectors’ work?
6. Do inspectors determine compliance with plans and specifications as well as the progress of the work? If so, are the inspectors competent to make the determination?

DISBURSEMENTS

1. Are disbursements—
a. advanced on a prearranged disbursement plan?
b. made only after reviewing written inspection reports?
c. authorized in writing by the contractor, borrower, inspector, subcontractors, and/or lending officer?
d. reviewed by a bank employee who had no part in granting the loan?
e. compared with original cost estimates?
f. checked against previous disbursements?
g. made directly to subcontractors and suppliers?
h. supported by invoices describing the work performed and the materials furnished?

2. Does the bank obtain waivers of subcontractor’s and mechanic’s liens as work is completed and disbursements are made?

3. Does the bank obtain sworn and notarized releases of mechanic’s liens from the general contractor at the time construction is completed and before final disbursement is made?

4. Does the bank periodically review undisbursed loan proceeds to determine their adequacy to complete the projects?

5. Are the borrower’s undisbursed loan proceeds and contingency or escrow accounts independently verified at least monthly by someone other than the individuals responsible for loan disbursements?

TAKEOUT COMMITMENTS

1. Does counsel review takeout agreements for acceptability?

2. Does the bank obtain and review the permanent lender’s financial statements to determine the adequacy of its financial resources to fulfill the takeout commitment?

3. Is a tri-party buy-and-sell agreement signed before the construction loan is closed?

4. Does the bank require takeout agreements to include a force majeure—an act-of-God clause—that provides for an automatic extension of the completion date in the event that construction delays occur for reasons beyond the builder’s control?

COMPLETION BONDING REQUIREMENTS

1. Does the bank require completion insurance for all construction loans?
2. Has the bank established minimum financial standards for borrowers who are not required to obtain completion bonding? Are these standards observed in all cases?

3. Does counsel review completion insurance bonds for acceptability?

**DOCUMENTATION**

1. Does the bank require and maintain documentary evidence of—
   a. the contractor’s payment of—
      • employee withholding taxes?
      • builder’s risk insurance?
      • workers’ compensation insurance?
      • public liability insurance?
      • completion insurance?
   b. the property owner’s payment of real estate taxes?

2. Does the bank require that documentation files include—
   a. loan applications?
   b. financial statements for the—
      • borrower?
      • builder?
      • proposed prime tenant?
      • takeout lender?
      • guarantors/partners?
   c. credit and trade checks on the—
      • borrower?
      • builder?
      • major subcontractor?
      • proposed tenants?
   d. a copy of plans and specifications?
   e. a copy of the building permit?
   f. a survey of the property?
   g. the construction loan agreement?
   h. an appraisal or evaluation and feasibility study?
   i. an up-to-date title search?
   j. the mortgage?
   k. ground leases?
   l. assigned tenant leases or letters of intent to lease?
   m. a copy of the takeout commitment?
   n. a copy of the borrower’s application to the takeout lender?
   o. the tri-party buy-and-sell agreement?
   p. inspection reports?
   q. disbursement authorizations?
   r. undisbursed loan proceeds and contingency or escrow account reconciliations?
   s. insurance policies?

3. Does the bank employ standardized checklists to control documentation for individual files, and does it perform audit reviews for adequacy?

4. Does the documentation file indicate all of the borrower’s other loans and deposit account relationships with the bank, and include a summary of other construction projects being financed by other banks? Does the bank analyze the status of these projects and the potential effect on the borrower’s financial position?

5. Does the bank use tickler files that—
   a. control scheduling of inspections and disbursements?
   b. ensure prompt administrative follow-up on items sent for—
      • recording?
      • an attorney’s opinion?
      • an expert review?

6. Does the bank maintain tickler files that provide advance notice (such as 30 days’ prior notice) to staff of the expiration dates for—
   a. the takeout commitment?
   b. hazard insurance?
   c. workers’ compensation insurance?
   d. public liability insurance?

**LOAN RECORDS**

*1. Are the preparation, addition, and posting of subsidiary real estate construction loan records performed or adequately reviewed by persons who do not also—
   a. issue official checks or drafts?
   b. handle cash?
   c. reconcile subsidiary records to general ledger controls?

*2. Are the subsidiary real estate construction loan records reconciled at least monthly to the appropriate general ledger accounts? Are reconciling items adequately investigated by persons who do not also handle cash or prepare/post subsidiary controls?

*3. Are loan statements, delinquent collection requests, and past-due notices reconciled to the real estate construction loan subsidiary records? Are the reconciliations handled by a person who does not also handle cash?

4. Are inquiries about construction loan balances received and investigated by persons who do not also handle cash?
**5.** Are documents supporting recorded credit adjustments subsequently checked or tested by persons who do not also handle cash?

6. Is a delinquent-accounts report generated daily?

7. Are loans in excess of supervisory LTV limits identified in the bank’s records, and are the aggregate amounts of such loans reported at least quarterly to the board of directors?

8. Does the bank maintain a daily record summarizing note transaction details (loans made, payments received, and interest collected) to support applicable general ledger account entries?

9. Are note and liability trial balances frequently reconciled to the general ledger by employees who do not process or record loan transactions?

**LOAN INTEREST AND COMMITMENT FEES**

*1. Are the preparation and posting of loan interest and fee records performed or adequately reviewed by persons who do not also—
  a. issue official checks or drafts?
  b. handle cash?*

2. Are any independent interest and fee computations made and compared with or adequately tested to loan interest by persons who do not also—
  a. issue official checks or drafts?
  b. handle cash?

**CONCLUSION**

1. Does the foregoing information provide an adequate basis for evaluating internal control in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

2. On the basis of a composite evaluation, are internal controls adequate as evidenced by answers to the foregoing questions?
Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices

Effective date October 2013

This interagency supervisory guidance was developed to reinforce sound risk-management practices for institutions with high and increasing concentrations of commercial real estate loans on their balance sheets. The guidance, Concentrations in Commercial Real Estate (CRE) Lending, Sound Risk-Management Practices (the guidance), was issued on December 6, 2006 (effective on December 12, 2006). However, institutions needing to improve their risk-management processes may have been provided the opportunity for some flexibility on the time frame for complying with the guidance. This time frame will be commensurate with the level and nature of CRE concentration risk, the quality of the institution’s existing risk-management practices, and its levels of capital. (See 71 Fed. Reg. 74,580 [December 12, 2006], the Federal Reserve Board’s press release dated December 6, 2006, and SR-07-01 and its attachments.)

SCOPE OF THE CRE CONCENTRATION GUIDANCE

The guidance focuses on those CRE loans for which the cash flow from the real estate is the primary source of repayment rather than loans to a borrower for which real estate collateral is taken as a secondary source of repayment or through an abundance of caution. For the purposes of this guidance, CRE loans include those loans with risk profiles sensitive to the condition of the general CRE market (for example, market demand, changes in capitalization rates, vacancy rates, or rents). CRE loans are land development and construction loans (including one- to four-family residential and commercial construction loans) and other land loans. CRE loans also include loans secured by multifamily property, and nonfarm nonresidential property where the primary source of repayment is derived from rental income associated with the property (that is, loans for which 50 percent or more of the source of repayment comes from third-party, nonaffiliated, rental income) or the proceeds of the sale, refinancing, or permanent financing of the property. Loans to real estate investment trusts and unsecured loans to developers also should be considered CRE loans for purposes of this guidance if their performance is closely linked to performance of the CRE markets. The scope of the guidance does not include loans secured by owner-occupied nonfarm nonresidential properties where the primary source of repayment is the cash flow from the ongoing operations and activities conducted by the party, or affiliate of the party, who owns the property. Rather than defining a CRE concentration, the guidance’s “Supervisory Oversight” section describes the criteria that the Federal Reserve will use as high-level indicators to identify banks potentially exposed to CRE concentration risk.

CRE CONCENTRATION ASSESSMENTS

Banks that are actively involved in CRE lending should perform ongoing risk assessments to identify CRE concentrations. The risk assessment should identify potential concentrations by stratifying the CRE portfolio into segments that have common risk characteristics or sensitivities to economic, financial, or business developments. A bank’s CRE portfolio stratification should be reasonable and supportable. The CRE portfolio should not be divided into multiple segments simply to avoid the appearance of concentration risk.

The Federal Reserve recognizes that risk characteristics vary among CRE loans secured by different property types. A manageable level of CRE concentration risk will vary by bank depending on the portfolio risk characteristics, the quality of risk-management processes, and capital levels. Therefore, the guidance does not establish a CRE concentration limit that applies to all banks. Rather, banks are encouraged to identify and monitor credit concentrations and to establish internal concentration limits, and all concentrations should be reported to senior management and the board of directors on a periodic basis. Depending on the results of the risk assessment, the bank may need to enhance its risk-management systems.

---

1. The guidance was jointly adopted by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation.
CRE RISK MANAGEMENT

The sophistication of a bank’s CRE risk-management processes should be appropriate to the size of the portfolio, as well as the level and nature of concentrations and the associated risk to the bank. Banks should address the following key elements in establishing a risk-management framework that effectively identifies, monitors, and controls CRE concentration risk:

1. board and management oversight
2. portfolio management
3. management information systems
4. market analysis
5. credit underwriting standards
6. portfolio stress testing and sensitivity analysis
7. credit risk review function

Board and Management Oversight of CRE Concentration Risk

A bank’s board of directors has ultimate responsibility for the level of risk assumed by the bank. If the bank has significant CRE concentration risk, its strategic plan should address the rationale for its CRE levels in relation to its overall growth objectives, financial targets, and capital plan. In addition, the Federal Reserve’s real estate lending regulations require that each bank adopt and maintain a written policy that establishes appropriate limits and standards for all extensions of credit that are secured by liens on or interests in real estate, including CRE loans. Therefore, the board of directors or a designated committee thereof should—

1. establish policy guidelines and approve an overall CRE lending strategy regarding the level and nature of CRE exposures acceptable to the bank, including any specific commitments to particular borrowers or property types, such as multifamily housing;
2. ensure that management implements procedures and controls to effectively adhere to and monitor compliance with the bank’s lending policies and strategies;
3. review information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including reports that describe changes in CRE market conditions in which the bank lends; and
4. periodically review and approve CRE risk exposure limits and appropriate sublimits (for example, by nature of concentration) to conform to any changes in the bank’s strategies and to respond to changes in market conditions.

CRE Portfolio Management

Banks with CRE concentrations should manage not only the risk of individual loans but also portfolio risk. Even when individual CRE loans are prudently underwritten, concentrations of loans that are similarly affected by cyclical changes in the CRE market can expose a bank to an unacceptable level of risk if not properly managed. Management regularly should evaluate the degree of correlation between related real estate sectors and establish internal lending guidelines and concentration limits that control the bank’s overall risk exposure.

Management should develop appropriate strategies for managing CRE concentration levels, including a contingency plan to reduce or mitigate concentrations in the event of adverse CRE market conditions. Loan participations, whole loan sales, and securitizations are a few examples of strategies for actively managing concentration levels without curtailing new originations. If the contingency plan includes selling or securitizing CRE loans, management should assess periodically the marketability of the portfolio. This should include an evaluation of the bank’s ability to access the secondary market and a comparison of its underwriting standards with those that exist in the secondary market.

CRE Management Information Systems

A strong management information system (MIS) is key to effective portfolio management. The sophistication of the MIS will necessarily vary with the size and complexity of the CRE portfolio and level and nature of concentration risk. The MIS should provide management with sufficient information to identify, measure, monitor, and manage CRE concentration risk. This includes meaningful information on CRE portfolio characteristics that is relevant to the bank’s lending strategy, underwriting standards, and risk tolerances. A bank should assess periodi-
ally the adequacy of the MIS in light of growth in CRE loans and changes in the CRE portfolio’s size, risk profile, and complexity.

Banks are encouraged to stratify the CRE portfolio by property type, geographic market, tenant concentrations, tenant industries, developer concentrations, and risk rating. Other useful stratifications may include loan structure (for example, fixed-rate or adjustable), loan purpose (for example, construction, short-term, or permanent), loan-to-value (LTV) limits, debt service coverage, policy exceptions on newly underwritten credit facilities, and affiliated loans (for example, loans to tenants). A bank should also be able to identify and aggregate exposures to a borrower, including its credit exposure relating to derivatives.

Management reporting should be timely and in a format that clearly indicates changes in the portfolio’s risk profile, including risk-rating migrations. In addition, management reporting should include a well-defined process through which management reviews and evaluates concentration and risk-management reports, as well as special ad hoc analyses in response to potential market events that could affect the CRE loan portfolio.

Market Analysis

Market analysis should provide the bank’s management and board of directors with information to assess whether its CRE lending strategy and policies continue to be appropriate in light of changes in CRE market conditions. A bank should perform periodic market analyses for the various property types and geographic markets represented in its portfolio.

Market analysis is particularly important as a bank considers decisions about entering new markets, pursuing new lending activities, or expanding in existing markets. Market information also may be useful for developing sensitivity analysis or stress tests to assess portfolio risk.

Sources of market information may include published research data, real estate appraisers and agents, information maintained by the property taxing authority, local contractors, builders, investors, and community development groups. The sophistication of a bank’s analysis will vary by its market share and exposure, as well as the availability of market data. While a bank operating in nonmetropolitan markets may have access to fewer sources of detailed market data than a bank operating in large, metropolitan markets, a bank should be able to demonstrate that it has an understanding of the economic and business factors influencing its lending markets.

Credit Underwriting Standards

A bank’s lending policies should reflect the level of risk that is acceptable to its board of directors and should provide clear and measurable underwriting standards that enable the bank’s lending staff to evaluate all relevant credit factors. When a bank has a CRE concentration, the establishment of sound lending policies becomes even more critical. In establishing its policies, a bank should consider both internal and external factors, such as its market position, historical experience, present and prospective trade area, probable future loan and funding trends, staff capabilities, and technology resources. Consistent with the Federal Reserve’s real estate lending guidelines, CRE lending policies should address the following underwriting standards:

1. maximum loan amount by type of property
2. loan terms
3. pricing structures
4. collateral valuation
5. LTV limits by property type
6. requirements for feasibility studies and sensitivity analysis or stress testing
7. minimum requirements for initial investment and maintenance of hard equity by the borrower
8. minimum standards for borrower net worth, property cash flow, and debt service coverage for the property

A bank’s lending policies should permit exceptions to underwriting standards only on a limited basis. When a bank does permit an exception, it should document how the transaction does not conform to the bank’s policy or underwriting standards, obtain appropriate management approvals, and provide reports to the board of directors or designated committee detailing the number, nature, justifications, and trends for exceptions. Exceptions to both the bank’s internal lending standards and the Fed-

---

2. Refer to the Federal Reserve’s appraisal regulations: 12 CFR 208 subpart E and 12 CFR 225, subpart G.
eral Reserve’s supervisory LTV limits should be monitored and reported on a regular basis. Further, banks would analyze trends in exceptions to ensure that risk remains within the bank’s established risk tolerance limits.

Credit analysis should reflect both the borrower’s overall creditworthiness and project-specific considerations as appropriate. In addition, for development and construction loans, the bank should have policies and procedures governing loan disbursements to ensure that the bank’s minimum borrower equity requirements are maintained throughout the development and construction periods. Prudent controls should include an inspection process, documentation on construction progress, tracking pre-sold units, pre-leasing activity, and exception monitoring and reporting.

CRE Portfolio Stress Testing and Sensitivity Analysis

A bank with CRE concentrations should perform portfolio-level stress tests or sensitivity analysis to quantify the impact of changing economic conditions on asset quality, earnings, and capital. Further, a bank should consider the sensitivity of portfolio segments with common risk characteristics to potential market conditions. The sophistication of stress testing practices and sensitivity analysis should be consistent with the size, complexity, and risk characteristics of the CRE loan portfolio. For example, well-margined and seasoned performing loans on multifamily housing normally would require significantly less robust stress testing than most acquisition, development, and construction loans.

Portfolio stress testing and sensitivity analysis may not necessarily require the use of a sophisticated portfolio model. Depending on the risk characteristics of the CRE portfolio, stress testing may be as simple as analyzing the potential effect of stressed loss rates on the CRE portfolio, capital, and earnings. The analysis should focus on the more vulnerable segments of a bank’s CRE portfolio, taking into consideration the prevailing market environment and the bank’s business strategy.

Credit Risk Review Function

A strong credit risk review function is critical for a bank’s self-assessment of emerging risks. An effective, accurate, and timely risk-rating system provides a foundation for the bank’s credit risk review function to assess credit quality and, ultimately, to identify problem loans. Risk ratings should be risk sensitive, objective, and appropriate for the types of CRE loans underwritten by the bank. Further, risk ratings should be reviewed regularly for appropriateness.

SUPERVISORY OVERSIGHT OF CRE CONCENTRATION RISK

As part of its ongoing supervisory monitoring processes, the Federal Reserve will use certain criteria to identify banks that are potentially exposed to significant CRE concentration risk. A bank that has experienced rapid growth in CRE lending, has notable exposure to a specific type of CRE, or is approaching or exceeds the following supervisory criteria may be identified for further supervisory analysis of the level and nature of its CRE concentration risk:

1. total reported loans for construction, land development, and other land represent 100 percent or more of the bank’s total capital or
2. total commercial real estate loans as defined in this guidance represent 300 percent or

---

3. The Interagency Guidelines for Real Estate Lending state that loans exceeding the supervisory LTV guidelines should be recorded in the bank’s records and reported to the board at least quarterly.

4. For commercial banks as reported in the Call Report FFIEC 031 and 041, schedule RC-C, item 1a(1) and 1a(2).

5. For purposes of this guidance, the term total capital means the total risk-based capital as reported for commercial banks in the Call Report FFIEC 031 and 041 schedule RC-R—Regulatory Capital, line 21.

6. For commercial banks as reported in the Call Report FFIEC 031 and 041 schedule RC-C, items 1a(1), 1a(2), 1d, 1e(2), and memorandum item 3. Effective with the March 31, 2008, Call Report revision, item 1a on Schedule RC-C was split into two components. Item 1a(1) reports 1–4 family residential construction loans, and item 1a(2) reports other construction loans and all land development and other land loans. Both items 1a(1) and 1a(2) are used to calculate total reported loans for construction, land development, and other land. Also effective with the March 31, 2008, Call Report, item 1e on Schedule RC-C was split into two components. Item 1e(1) reports the amount of owner-occupied CRE loans, and item 1e(2) reports the amount of non-owner-occupied CRE loans. The amendment enables the exclusion of owner-occupied CRE loans in the total CRE loan ratio in accordance with the scope of the 2006 CRE Guidance. The supervisory
more of the bank’s total capital, and the outstanding balance of the bank’s commercial real estate loan portfolio has increased by 50 percent or more during the prior 36 months.

The Federal Reserve will use the criteria as a preliminary step to identify banks that may have CRE concentration risk. Because regulatory reports capture a broad range of CRE loans with varying risk characteristics, the supervisory monitoring criteria do not constitute limits on a bank’s lending activity but rather serve as high-level indicators to identify banks potentially exposed to CRE concentration risk. Nor do the criteria constitute a “safe harbor” for banks if other risk indicators are present, regardless of their measurements under (1) and (2).

Evaluation of CRE Concentrations

The effectiveness of a bank’s risk-management practices will be a key component of the supervisory evaluation of the bank’s CRE concentrations. Examiners will engage in a dialogue with the bank’s management to assess CRE exposure levels and risk-management practices. Banks that have experienced recent, significant growth in CRE lending will receive closer supervisory review than those that have demonstrated a successful track record of managing the risks in CRE concentrations.

In evaluating CRE concentrations, the Federal Reserve will consider the bank’s own analysis of its CRE portfolio, including consideration of factors such as—

1. portfolio diversification across property types
2. geographic dispersion of CRE loans
3. underwriting standards
4. level of pre-sold units or other types of take-out commitments on construction loans
5. portfolio liquidity (ability to sell or securitize exposures on the secondary market)

While consideration of these factors should not change the method of identifying a credit concentration, these factors may mitigate the risk posed by the concentration.

Assessment of Capital Adequacy for CRE Concentration Risk

The Federal Reserve’s existing capital adequacy guidelines note that a bank should hold capital commensurate with the level and nature of the risks to which it is exposed. Accordingly, banks with CRE concentrations are reminded that their capital levels should be commensurate with the risk profile of their CRE portfolios. In assessing the adequacy of a bank’s capital, the Federal Reserve will consider the level and nature of inherent risk in the CRE portfolio as well as management expertise, historical performance, underwriting standards, risk-management practices, market conditions, and any loan loss reserves allocated for CRE concentration risk. A bank with inadequate capital to serve as a buffer against unexpected losses from a CRE concentration should develop a plan for reducing its CRE concentrations or for maintaining capital appropriate to the level and nature of its CRE concentration risk.
Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices

Examination Objectives
Effective date October 2007

Section 2103.2

When a bank has significant commercial real estate (CRE) credit concentrations, the inspection objectives are as follows:

1. To determine if the bank’s risk-management practices and capital levels are commensurate with the level and nature of its CRE concentration risk.
2. To ascertain if the bank performs ongoing risk assessments to identify its CRE concentrations.
3. To evaluate whether the bank’s CRE risk-management processes are appropriate for the size of its CRE loan portfolio, as well as for the level and nature of its concentrations and their associated risks to the bank.
   a. To determine whether the bank’s strategic plan addresses the rationale for its CRE credit concentration levels in relation to its overall growth objectives, financial targets, and capital plan.
   b. To evaluate whether the bank manages not only the risk of individual loans but also its loan portfolio risks.
   c. To find out if the bank’s management information system provides management with sufficient information that can be used to identify, measure, and manage the bank’s CRE concentration risk.
4. To verify whether the bank’s strategic plan and board of directors with sufficient information to assess whether the bank’s CRE risk-management processes are appropriate for the size of its CRE loan portfolio.
   a. To determine whether the bank’s CRE lending strategy and policies continue to be appropriate in light of its changing CRE market conditions.
4. To determine if the bank’s CRE lending policies reflect the level of credit risk that is acceptable to its board of directors.
   a. To evaluate whether the lending policies provide clear and measurable underwriting standards.
   b. To assess whether the bank’s lending policies enable the bank’s lending staff to evaluate all relevant credit factors.
5. To find out if the bank performs portfolio stress tests or sensitivity analyses in order to quantify the impact of changing economic conditions on asset quality, earnings, and capital.
6. To determine if the bank has a strong credit review function that includes a self-assessment of its emerging credit and other risks.
Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices
Examination Procedures
Effective date October 2007

Section 2103.3

RISK MANAGEMENT

Board and Senior Management Oversight

1. Determine if the board of directors or its designated committee has—
   a. established policy guidelines and approved an overall commercial real estate (CRE) lending strategy on the level and nature of the bank’s CRE exposures, including any specific commitments to particular borrowers or property types, such as multifamily housing;
   b. ensured that management implements procedures and controls to effectively adhere to and monitor compliance with the bank’s lending policies and strategies;
   c. reviewed information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including a review of reports that describe changes in the CRE market conditions in which the bank lends; and
   d. periodically reviewed and approved CRE risk exposure limits and appropriate sub-limits (for example, by nature of concentration) to ensure they conform to any changes in the bank’s strategies and respond to changes in market conditions.

Supervisory Oversight

2. Determine if the bank is (or is potentially) exposed to significant CRE credit concentration risk.

3. If the bank has experienced rapid growth in CRE lending or has notable exposure to a specific type of CRE, or if the bank is approaching or exceeds one or both of the following criteria, perform a preliminary analysis of the bank’s CRE concentration risk:
   a. Total loans for construction, land development, and other land represent 100 percent or more of the bank’s total capital.
   b. Total CRE loans represent 300 percent or more of the bank’s total capital, and the outstanding balance of the bank’s CRE loan portfolio has increased by 50 percent or more during the prior 36 months.

Portfolio Management

4. Ascertain whether the bank manages not only the risk from individual loans but also portfolio risk. Find out if management—
   a. regularly (1) evaluates the degree of correlation between related real estate sectors and (2) establishes internal lending guidelines and concentration limits that control the bank’s overall risk exposure; and
   b. develops appropriate strategies for managing CRE concentration levels, including the development of a contingency plan to reduce or mitigate concentrations during adverse CRE market conditions (such a plan may include strategies involving loan participations, whole loan sales, and securitizations).
     • Find out if the bank’s contingency plan includes selling or securitizing CRE loans.
     • Ascertain if management periodically assesses the marketability of the CRE portfolio and evaluates the bank’s ability to access the secondary market.
     • Verify whether the bank compares its underwriting standards with those that exist in the secondary market.

Management Information Systems

5. Evaluate whether management information systems (MIS) provide sufficient information to identify, measure, monitor, and manage CRE concentration risk (MIS should include information on CRE portfolio characteristics that are consistent with and relevant to the bank’s lending strategy, underwriting standards, and risk tolerances).

6. Verify that management reporting is timely and in a format that clearly indicates changes in the portfolio’s risk profile, including risk-rating migrations.
Market Analysis

7. Determine if management reporting includes a well-defined process through which management reviews and evaluates concentration and risk-management reports, as well as special ad hoc analyses that are prepared in response to potential market events that could affect the CRE loan portfolio.

8. Find out if the bank’s market analysis provides management and the board of directors with sufficient information to assess (1) the bank’s CRE lending strategy and policies and (2) whether they continue to be appropriate in light of changes in CRE market conditions.

Credit-Underwriting Standards

9. Determine if CRE lending policies include the following underwriting standards:
   a. maximum loan amount by type of property
   b. loan terms
   c. pricing structures
   d. collateral valuation
   e. loan-to-value (LTV) limits by property type
   f. requirements for feasibility studies and sensitivity analyses or stress testing
   g. minimum requirements for initial investment and maintenance of hard equity by the borrower
   h. minimum standards for borrower net worth, property cash flow, and debt-service coverage for the property

10. Review the bank’s permitted exceptions to its underwriting standards. Ascertain if the exceptions—
   a. have been granted on a limited basis only; and
   b. are supported by documentation and reports to management and the board of directors or a designated committee. The documentation and reports should indicate—
       • how the transactions did not conform to the bank’s policy or underwriting standards;
       • whether appropriate management approvals were obtained; and
       • the details of the number and nature of and the justifications and trends for the exceptions.

11. Verify that exceptions to both the bank’s internal lending standards and the Federal Reserve’s supervisory LTV limits are monitored and reported on a regular basis.

12. Find out if the bank analyzes trends in its CRE lending exceptions in order to ensure that credit-underwriting risk remains within its established risk-tolerance limits.

13. Evaluate whether the bank’s credit analyses reflect both the borrowers’ overall creditworthiness and project-specific considerations, as appropriate.

14. For the bank’s development and construction loans, determine if—
   a. the bank has policies and procedures governing loan disbursements in order to ensure that the bank’s requirements for minimum borrower equity are maintained throughout the development and construction periods; and
   b. prudent controls, including the following, are in place:
      • an inspection process
      • documentation of construction progress
      • tracking of pre-sold units
      • pre-leasing activity
      • exception monitoring and reporting

Portfolio Stress Testing and Sensitivity Analysis

15. When the bank has CRE concentrations, determine if it performs portfolio-level stress tests or sensitivity analyses in order to quantify the impact of changing economic conditions on asset quality, earnings, and capital.

   a.Ascertain if the bank considers the sensitivity of portfolio segments with common risk characteristics to potential market conditions.
   b. Determine whether the sophistication of the bank’s stress-testing practices and sensitivity analyses are consistent with the size, complexity, and risk characteristics of its CRE loan portfolio.
   c. Evaluate whether the bank’s sensitivity analyses focus on the more vulnerable segments of its CRE portfolio, considering its prevailing market environment and business strategy.
Credit-Review Function

16. Find out if the bank has a credit-review function, and if it is supported by a credit-risk rating system that is used to assess credit quality and identify problem loans.

17. Determine if (1) the bank’s risk ratings are risk-sensitive, objective, and appropriate for the types of CRE loans underwritten and (2) the risk ratings are regularly reviewed.

EVALUATION OF CRE CONCENTRATIONS

1. Engage in a dialogue with bank management in order to assess the bank’s CRE exposure levels and risk-management practices. If the bank has experienced recent, significant growth in CRE lending, perform an expanded review of the bank’s risk in CRE concentrations, including a review of the bank’s analysis of its CRE concentrations. Consider factors such as—
   a. portfolio diversification across property types
   b. the geographic dispersion of CRE loans
   c. underwriting standards
   d. the level of pre-sold units or other types of take-out commitments on construction loans
   e. portfolio liquidity (the ability to sell or securitize exposures on the secondary market)

Assessment of Capital Adequacy

2. Evaluate whether the bank’s holds capital commensurate with the risk profile of its CRE portfolios. Consider the level and nature of inherent risk in the bank’s CRE portfolio, as well as management expertise, historical performance, underwriting standards, risk-management practices, market conditions, and any loan-loss reserves allocated for CRE concentration risk.

3. If a bank has inadequate capital to serve as a buffer against unexpected losses from its CRE concentration, reach agreement with the bank’s senior management and board of directors on the development of a plan to reduce the bank’s CRE concentrations or to maintain capital that is appropriate and commensurate with the level and nature of the bank’s CRE concentration risk.
CRE CONCENTRATION ASSESSMENTS

1. Are ongoing risk assessments performed to identify commercial real estate (CRE) concentrations?
2. Are CRE concentration limits established and monitored?
3. Is the CRE portfolio stratified into reasonable and supportable segments that have common risk characteristics or sensitivities to economic, financial, or business developments?
4. Are all CRE concentrations reported to senior management and the board of directors on a periodic basis?

RISK MANAGEMENT

1. Has a risk-management framework been established that effectively identifies, monitors, and controls CRE concentration risk?
   If such a framework has been established, does it address—
   a. board and management oversight?
   b. portfolio management?
   c. management information systems?
   d. market analysis?
   e. credit-underwriting standards?
   f. portfolio stress testing and sensitivity analysis?
   g. the credit-risk review function?

Board and Management Oversight

2. If the bank has significant CRE concentration risk, does it have a strategic plan that addresses the rationale for its CRE concentration levels in relation to the bank’s overall growth objectives, financial targets, and capital plan?
3. Has the board of directors or its designated committee—
   a. established policy guidelines and approved an overall CRE lending strategy for the level and nature of CRE exposures, including any specific commitments to particular borrowers or property types, such as multifamily housing?
   b. ensured that the bank’s management implements procedures and controls to effectively adhere to and monitor compliance with the bank’s lending policies and strategies?
   c. reviewed information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including a review of reports that describe changes in the conditions of the CRE market in which the bank lends?
   d. periodically reviewed and approved CRE risk exposure limits and appropriate sublimits (for example, by nature of concentration) in order to conform to any changes in the bank’s strategies and respond to changes in market conditions?

Portfolio Management

4. Does the bank’s management regularly perform an analysis of its CRE portfolio, considering factors such as—
   a. portfolio diversification across property types?
   b. the geographic dispersion of CRE loans?
   c. underwriting standards?
   d. the level of pre-sold units or other types of take-out commitments on construction loans?
   e. portfolio liquidity (the ability to sell or securitize exposures on the secondary market)?
5. Has the bank’s board of directors and senior management—
   a. (1) regularly evaluated the degree of correlation between related real estate sectors and (2) established internal lending guidelines?
   b. established internal lending guidelines and concentration limits in order to control the bank’s overall risk exposure?
   c. developed appropriate strategies to manage CRE concentration levels?
6. Has the bank’s management developed a
contingency plan to reduce or mitigate CRE loan concentrations during adverse market conditions? If the bank’s contingency plan includes selling or securitizing CRE loans, has management periodically assessed the marketability of the portfolio?

Management Information System

7. Does the bank’s management information system (MIS) provide sufficient information to identify, monitor, and manage CRE concentration risk?
8. Is the bank’s CRE portfolio stratified by property type, geographic market, tenant concentrations, tenant industries, developer concentrations, and risk rating?
9. Does the bank’s MIS identify and aggregate exposures to a borrower, including its credit exposure relating to derivatives?
10. Are the bank’s management reports timely and in a format that clearly indicates changes in the portfolio’s risk profile?
11. Does the bank’s management reporting include a well-defined process whereby management reviews and evaluates CRE concentrations, risk-management reports, and special ad hoc analyses prepared in response to potential market events that could affect the concentration risk in the bank’s CRE portfolio?

Credit-Underwriting Standards

12. Are underwriting standards clear and measurable, and do they enable the bank’s lending staff to evaluate relevant credit factors?
13. Do the bank’s CRE lending policies address the following underwriting standards—
   a. maximum loan amount by type of property?
   b. loan terms?
   c. pricing structures?
   d. collateral valuation?
   e. loan-to-value (LTV) limits by property type?
   f. requirements for feasibility studies and sensitivity analyses or stress testing?
   g. minimum requirements for initial investment and maintenance of hard equity by the borrower?
   h. minimum standards for borrower net worth, property cash flow, and debt-service coverage for the property?
14. Do the bank’s lending policies permit exceptions to its underwriting standards for CRE concentrations on a limited basis only?
15. Are permitted exceptions documented; that is, do the documented exceptions describe how the loan transaction does not conform to the bank’s lending policy or underwriting standards?
16. Does management analyze trends in exceptions to ensure that the bank’s CRE concentration risk remains within established risk-tolerance limits?
17. Does the bank have policies and procedures governing loan disbursements in order to ensure that its minimum requirements for borrower equity are maintained throughout development and construction periods?
18. Do the bank’s internal controls consist of an inspection process, documentation on construction progress, tracking of pre-sold units, tracking of pre-leasing activity, and exception monitoring and reporting?

Portfolio Stress Testing and Sensitivity Analysis

19. Are portfolio stress tests or sensitivity analyses performed in order to quantify the impact of changing economic conditions on asset quality, earnings, and capital?
20. If performed, are portfolio stress tests or sensitivity analyses required to focus on the more vulnerable segments of the bank’s CRE portfolio? Do they take into consideration the prevailing market environment and the bank’s business strategy?

Credit-Review Function

21. Does the bank have an effective, accurate, and timely risk-rating system that supports its credit-review function?
22. Are credit-risk ratings reviewed regularly for appropriateness?
INTRODUCTION

Floor-plan lending is a form of dealer-inventory financing in which each loan advance, which may be as much as 100 percent of the dealer’s invoiced cost, is collateralized by a specific piece of inventory. As each unit of inventory is sold by the dealer, the loan advance against that unit of inventory is repaid. Floor-planned items typically have broad consumer demand. Items commonly subject to floor-plan debt are automobiles, large home appliances, furniture, televisions and stereo equipment, boats, mobile homes, and other types of merchandise usually sold under a sales-finance contract. Floor-plan financing involves all the basic risks inherent in any form of inventory financing. However, because of the high loan-to-value ratios typical of floor-plan financing, the exposure to loss is generally greater than in other types of inventory financing.

COLLATERAL

As with all inventory financing, collateral value is of prime importance. Control over collateral value requires the bank to determine the value at the time the loan is placed on the books, to periodically inspect the collateral to determine its condition and location, and to determine whether any curtailment payments1 are needed to keep the loan balance in line with depreciating collateral values. As a general rule, curtailment payments are not required for new automobile models until the model year is approximately one-half over. Periodic curtailment payments are then expected to commence at some predetermined percentage of the amount financed.

Collateral Inspections

The examiner should determine whether the bank is inspecting the collateral frequently and thoroughly enough to ensure compliance with the floor-plan agreement. Inspections should be conducted on a surprise basis. Floor-plan inspection reports should be reviewed and retained by the bank. Where practical, inspection duties should be rotated among the bank’s staff. Banks should verify the floor-planned inventory by comparing serial numbers with manufacturers’ certificates of origin or titles and to the bank’s records, and the inspection reports should reflect whether the floor-planned inventory is available for sale. Any missing inventory or other exceptions revealed by the inspection, and the dealer’s explanation, should be noted in the inspection report.

SECURITY INTEREST

In most banks, the security interest to floor-planned inventory is evidenced by a trust receipt.2 Generally, trust receipts are created by two methods. First, the bank may enter into a drafting agreement with the manufacturer, which is similar to a letter of credit. In this situation, the bank agrees to pay documentary drafts covering shipments of merchandise to the dealer. The drafts are payable at the time the merchandise is received by the dealer or, if the manufacturer permits, after a grace period, which allows the dealer to prepare the inventory for sale. The drafting agreement usually limits the number of units, the per-unit cost, and the aggregate cost that can be shipped at one time. Drafting agreements are frequently used in conjunction with repurchase agreements when the manufacturer agrees to repurchase inventory that remains unsold after a specified period of time. The inventory and related title documents remain with the dealer until they are sold and are evidenced by a trust receipt. Banks should physically inspect all the documents during the floor-plan inspection to prevent dual financing.

Second, trust receipts are also created when merchandise is shipped under an invoice sys-

---

1. Curtailment payments are payments made by the dealer to the floor-plan lender when an item of floor-planned inventory is not sold during the anticipated time frame. The implicit assumption is that if the floor-planned inventory is not sold as anticipated, the inventory value depreciates over time. Unless a curtailment payment is made, the bank’s loan-to-value ratio would increase and place the bank in a riskier position than desired.

2. A trust receipt is a document issued to the floor-plan lender by the dealer receiving the floor-plan financing. The trust receipt provides evidence that the dealer possesses the floor-planned inventory. It establishes the bank’s rights to the inventory collateral and its proceeds or refers to other documents that set forth the rights of the bank.
The dealer receives the inventory accompanied by invoices and titles, where appropriate. The dealer presents the documents to the bank and the bank pays the invoice, attaching duplicates of the documents to a trust receipt that is signed by the borrower. Depending on the type of inventory and the dealer, the title may remain in the bank or be released. For example, used car inventories are usually financed with trust receipts listing each item of the inventory and its loan value.

The method of perfecting a security interest varies from state to state, and there can be divergences from the Uniform Commercial Code. The examiner should determine that the security interest has been properly perfected. For a detailed discussion of the UCC requirements regarding secured transactions, refer to section 2080.1, “Commercial and Industrial Loans.”

BANK/DEALER RELATIONSHIP

Two important facets of the bank’s relationship with a dealer are (1) the quality of the paper generated and (2) the deposit account maintained. The income derived from a floor-plan loan may not be sufficient to justify the credit risk. However, additional income derived from quality loans to purchasers of the dealer’s inventory may justify the credit risk. If the bank is not receiving an adequate portion of loans generated by the dealer or if the paper is of inferior quality, the relationship is of questionable value to the bank. The dealer’s deposit relationship represents both a compensating balance and a tool by which the loan officer can monitor customer activity. A review of the flow of funds into and out of the dealer’s account may suggest that inventory has been sold without debt reduction, that the dealer is incurring abnormal expenses, or that unreported diversification, expansion, or other financial activity has occurred that might warrant a reconsideration of the credit arrangement. Token or overdrawn balances should also trigger increased attention to the value of the relationship.

DEALER FINANCIAL ANALYSIS

Many dealers have minimal liquidity and capital relative to total debt. Therefore, the bank should closely and frequently review the dealer’s financial information. Annual and interim financial statements are necessary to monitor the dealer’s condition. Interim financial statements are often in the form of monthly financial reports to the dealer’s franchiser. In analyzing the data, the bank should review the number of units sold and the profitability of those sales, as well as compare the number of units sold with the number financed to determine that inventory levels are reasonable.

Inventory will invariably be a dealer’s primary asset, and its acquisition will normally create the dealer’s major liability. The dealer’s financial statement should show an inventory figure at least equal to the related flooring liability. Unless the difference is represented by short-term sales receivables, including contracts in transit, a floor-plan liability that is greater than the amount of inventory is an indication that the dealer has sold inventory and has not made the appropriate loan payment. To assess credit quality, it is essential that the examiner closely evaluate the level of floor-plan debt relative to inventory.

IDENTIFYING PROBLEMS

Missing inventory, reportedly sold and unpaid, should be verified to related contracts-in-process. Time to collect on contracts-in-process should be reasonable and conform to the floor-plan agreement. Floor-planned inventory sold and not in the process of payment is termed “sold out of trust” and represents a breach of trust by the dealer—and a significant exposure to the bank.

During floor-plan inspections, recurring out-of-trust positions that are not cleared in a reasonable time frame (three to five days) should be a red flag. If a bank discovers that a dealer is deliberately withholding funds or diverting funds received from the sale of pledged inventory, bank officials should meet with the borrower to discuss this situation and, if appropriate, consider terminating the lending relationship. Banks should avoid complicated situations in which they finance only part of the dealer’s floor-plan debt that originates from one particular manufacturer or distributor. Other warning signs banks should be aware of include interest or curtailment payment delinquencies, extended maturities beyond reasonable expectations, slow-moving inventory, and the absence of interim financial statements.
LOAN POLICY

The bank’s loan policy should establish sound standards to control the credit and operational risks associated with floor-plan lending. At a minimum, the policy should address the need for detailed tri-party (manufacturer, dealer, and banker) floor-plan agreements, loan-to-value requirements, the percentage amount and timing of curtailment payments, inspection standards, and the frequency for obtaining and evaluating financial statements.
Floor-Plan Loans
Examination Objectives
Effective date May 1996

Section 2110.2

1. To determine if policies, practices, procedures, and internal controls for floor-plan loans are adequate.
2. To determine if bank officers are conforming to established guidelines.
3. To evaluate the quality of the loan portfolio and the sufficiency of its collateral.
4. To determine the scope and effectiveness of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.
Floor-Plan Loans
Examination Procedures
Effective date November 2003

Section 2110.3

1. If selected for implementation, complete or update the floor-plan loans section of the internal control questionnaire.

2. On the basis of the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.

3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal or external auditors from the examiner assigned to internal control, and determine if corrections have been accomplished.

4. Request that the bank supply the following:
   a. schedule of curtailment requirements for each dealer
   b. schedule of approved floor-plan lines for each dealer, including outstanding balances
   c. delinquent curtailment billing report
   d. drafting agreements and amount of outstanding drafts
   e. delinquent interest billings, date billed, and amount of past-due interest

5. Obtain a trial balance of all floor-plan accounts.
   a. Agree balances to department controls and general ledger.
   b. Review reconciling items for reasonableness.

6. Using an appropriate technique, select borrowers for examination.

7. Using the trial balance, transcribe the following information for each borrower selected onto the credit line cards:
   a. total outstanding liability
   b. number of items
   c. status of any outstanding interest or curtailment billings
   d. amount of approved floor-plan line

8. Obtain liability and other information on common borrowers from examiners assigned to overdrafts, lease financing, and other loan areas, and together decide who will review the borrowing relationship.

9. Obtain from the bank or appropriate examiner the following schedules, if applicable to this area:
   a. past-due loans
   b. loans in a nonaccrual status
   c. loans on which interest is not being collected in accordance with the terms of the loan (Particular attention should be given to loans that have been renewed with interest being rolled into principal.)
   d. loans whose terms have been modified by a reduction on interest rate or principal payment, by a deferral of interest or principal, or by other restructuring of repayment terms
   e. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
   f. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
   g. loan commitments and other contingent liabilities
   h. extensions of credit to employees, officers, directors, and principal shareholders and their interests specifying which officers are considered executive officers
   i. extensions of credit to executive officers, directors, and principal shareholders and their interests of correspondent banks
   j. a list of correspondent banks
   k. miscellaneous loan-debit and credit-suspense accounts
   l. loans considered "problem loans" by management
   m. specific guidelines in the lending policy
   n. each officer’s current lending authority
   o. current interest-rate structure
   p. any useful information obtained from the review of the minutes of the loan and discount committee or any similar committee
   q. reports furnished to the loan and discount committee or any similar committee
   r. reports furnished to the board of directors
   s. loans classified during the previous examination

10. Review the information received, and perform the following procedures.
   a. Loans transferred, either in whole or in part, to or from another lending institu-
tion as a result of a participation, sale or purchase, or asset swap.

- Participations only:
  - Test participation certificates and records, and determine that the parties share in the risks and contractual payments on pro rata basis.
  - Determine that the bank, as lead or agent in a credit, exercises similar controls and procedures over syndications and participations sold as for loans in its own portfolio.

- Procedures pertaining to all transfers:
  - Investigate any situations in which loans were transferred immediately before the date of examination to determine if any were transferred to avoid possible criticism during the examination.
  - Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.
  - Determine that low-quality loans transferred to (but not purchased) or from the bank are properly reflected on its books at fair market value (while fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such loans as well as an appropriate risk premium). Section 23A of the Federal Reserve Act prohibits a state member bank from purchasing low-quality assets.
  - Determine that low-quality loans transferred to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and its affiliate.
  - If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
    (1) name of originating institution
    (2) name of receiving institution
    (3) type of transfer (i.e., participation, purchase or sale, swap)
    (4) date of transfer
    (5) total number of loans transferred
    (6) total dollar amount of loans transferred
    (7) status of the loans when transferred (e.g., nonperforming, classified, etc.)
    (8) any other information that would be helpful to the other regulator

b. Miscellaneous loan-debit and credit-suspense accounts.
   - Discuss with management any large or old items.
   - Perform additional procedures as deemed appropriate.

c. Loans classified during the previous examination. Determine the disposition of loans so classified by reviewing—
   - current balances and payment status,
   - date loan was repaid and sources of payment, and
   - any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank, or as a result of a participation, sale, or swap with another lending institution. If repayment was a result of a participation, sale or swap, refer to step 10a of this section for the appropriate examination procedures.

d. Loan commitments and other contingent liabilities. Analyze whether—
   - the borrower has been advised of the contingent liability, and
   - the combined amounts of the current loan balance and the commitment or contingent liability exceeds the cutoff.

e. Select loans that require in-depth review on the basis of the information derived from the above schedules.

11. Consult with the examiner responsible for the asset/liability management analysis to determine the appropriate maturity breakdown of loans needed for the analysis. If requested, compile the information using bank records or other appropriate sources. See “Instructions for the Report of Examina-
nation,” section 6000.1, for considerations to be taken into account when compiling maturity information for the gap analysis.

12. For those loans selected in step 6 and for any other loans selected while performing the above steps—
   a. transcribe the following information from the bank’s collateral record onto the credit line card:
      • a list of items floored, including date of entry, description of property, amount advanced, and curtailment, if any (Similar items and model year should be shown in aggregate, and entry dates should be shown as a range, except on stale or not properly curtailed items.)
      • a summary of the wholesale agreement between the bank and the dealer
      • a summary of the agreement between the manufacturer and the bank
      • a summary of any repurchase agreement
      • evidence that security interest has been perfected
      • details of any guarantees that may be held
      • details of any other collateral held
   b. review the two most recent floor-plan inspection reports and determine—
      • if any items were sold out of trust,
      • that where trust receipts were used, all title documents were physically inspected, and
      • that appropriate follow-up was made on all missing items.

13. Determine compliance with laws and regulations pertaining to floor-plan loans by performing the following steps.
   a. **Lending limits.**
      • Determine the bank’s lending limits as prescribed by state law.
      • Determine advances or combinations of advances with aggregate balances above the limit, if any.
   b. **18 USC 215, Commission or Gift for Procuring Loan.**
      • While examining the floor-plan loan area, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
      • Investigate any such suspected situation.

   c. **12 USC 1972, Tie-In Provisions.** While reviewing credit and collateral files (especially loan agreements), determine whether any extension of credit is conditioned upon—
      • obtaining or providing an additional credit, property, or service to or from the bank or its holding company (or a subsidiary of its holding company), other than a loan, discount, deposit, or trust service, or
      • the customer not obtaining a credit, property, or service from a competitor of the bank or its holding company (or a subsidiary of its holding company), other than a reasonable condition to ensure the soundness of the credit.

   d. **Insider lending activities.** The examination procedures for checking compliance with the relevant law and regulation covering insider lending activities and reporting requirements are as follows (the examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment):
      • **Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders and Their Interests.** While reviewing information relating to insiders that is received from the bank or appropriate examiner (including loan participations, loans purchased and sold, and loan swaps)—
        — test the accuracy and completeness of information about floor-plan loans by comparing it with the trial balance or loans sampled;
        — review credit files on insider loans to determine that required information is available;
        — determine that loans to insiders do not contain terms more favorable than those afforded other borrowers;
        — determine that loans to insiders do not involve more than normal risk of repayment or present other unfavorable features;
        — determine that loans to insiders, as defined by the various sections of Regulation O, do not exceed the
lending limits imposed by those sections;

— if prior approval by the bank’s board was required for a loan to an insider, determine that such approval was obtained;
— determine compliance with the various reporting requirements for insider loans;
— determine that the bank has made provisions to comply with the public disclosure requirements for insider loans; and
— determine that the bank maintains records of public disclosure requests and the disposition of the requests for a period of two years after the date of the requests.

• Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 USC 1972(2)), Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.

— Obtain from or request that the examiners reviewing due from banks and deposit accounts verify a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.
— Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.

14. Perform the appropriate procedural steps in “Concentrations of Credit,” section 2050.3.

15. Discuss with appropriate officers, and prepare summaries in appropriate report form for—

a. delinquent loans;

b. extensions of credit to employees, officers, directors, and/or their interests;
c. loans on which collateral documentation is deficient;
d. transfers of low-quality loans to or from another lending institution;

e. the adequacy of written policies relating to floor-plan loans;
f. the manner in which bank officers are conforming with established policy;
g. schedules applicable to the department that were discovered to be incorrect or incomplete;
h. the performance of departmental management;
i. internal control deficiencies or exceptions;
j. recommended corrective action when policies, practices, or procedures are deficient; and

k. other matters of significance.

16. Update the workpapers with any information that will facilitate future examinations.
Review the bank’s internal controls, policies, practices and procedures for making and servicing floor plan loans. The bank’s system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiations by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written floor plan loan policies that:
   a. Establish procedures for reviewing floor plan applications?
   b. Define qualified borrowers, overall limits, and types of merchandise to be floor planned?
   c. Establish minimum standards for documentation?
   d. Establish curtailment amounts and time limits?
2. Are floor plan loan policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

*3. Is the preparation and posting of subsidiary floor plan loan records performed or reviewed by persons who do not also:
   a. Issue official checks or drafts?
   b. Handle cash?
4. Are the subsidiary floor plan loan records reconciled daily with the appropriate general ledger accounts, and are reconciling items investigated by persons who do not also handle cash?

*5. Are delinquent account collection requests and past-due notices checked to the trial balances used in reconciling floor plan subsidiary records with general ledger accounts, and are they handled only by persons who do not also handle cash?

*6. Are inquiries about loan balances received and investigated by persons who do not also handle cash?

*7. Are documents supporting recorded credit adjustments checked or tested subsequently by persons who do not also handle cash (if so, explain briefly)?
8. Is a daily record maintained summarizing note transaction details, i.e., loans made, payments received and interest collected, to support applicable general ledger account entries?
9. Are frequent note and liability ledger trial balances prepared and reconciled with controlling accounts by employees who do not process or record loan transactions?
10. Is an overdue account report generated frequently (if so, state frequency _______)?

LOAN INTEREST

*11. Is the preparation and posting of interest records performed or reviewed by persons who do not also:
   a. Issue official checks or drafts singly?
   b. Handle cash?
12. Are any independent interest computations made and compared or adequately tested to initial interest records by persons who do not also:
   a. Issue official checks or drafts singly?
   b. Handle cash?

COLLATERAL

13. Are floor plan checks, physical inventories, conducted at least monthly and on a surprise basis (if so, state frequency _______)?
14. Are more frequent floor plan checks required if the dealer is experiencing financial difficulties?
15. Are individuals performing floor plan checks rotated?
16. Are floor plan inspector(s) required to determine or verify the following and indicate their findings on the floor plan check sheet:
   a. Serial number of item?
   b. Odometer reading of vehicles?
   c. Condition of item?
d. Location of item, if other than normal place of business?

17. Does the floor plan inspector include on the check sheet:
   a. Date inspection was performed?
   b. Date any item located elsewhere was checked?
   c. His or her signature?
   d. Summary of his or her report, if appropriate?

18. Does the floor plan inspector determine the date that item(s) reported as sold were sold from that on the dealer’s copy of the sales agreement?

23. Are dealer sales patterns reviewed to determine that the number of units reported sold at the time of floor plan inspection is not excessive and does not indicate a float?

24. Are payments-in-process reported by the dealer during floor plan inspection verified by bank personnel?

25. When a dealer trade or “swap” occurs, does the bank:
   a. Obtain the manufacturer’s invoice from the selling dealer on the new unit acquired?
   b. Obtain the invoice from the borrowing dealer for the new unit?
   c. Have a trust receipt executed on the new unit?

26. Does the bank have a procedure to check all indirect paper received from a dealer against the trust receipts of items floored for that dealer to determine that there is no duplication of loans against the same security?

27. Does the bank have floor plan property damage insurance or require that the dealer maintain such coverage with the bank named as loss payee?

28. Is the insurance coverage periodically reviewed for adequacy?

29. Are all trust receipts required to be supported by invoices or other evidence that title to the security is vested in the bank?

30. Are trust receipts required to include:
   a. Description of each item?
   b. Serial number of each item?
   c. Loan amount for each item?
   d. Interest rate?
   e. Date?
   f. Authorized signature of dealer or person holding power-of-attorney to execute the trust receipt?

31. If the bank and dealer permit a bank employee to execute trust receipts using the dealer’s power-of-attorney:
   a. Are proper documents on file granting the power-of-attorney?
   b. Does the bank maintain a numbered register for trust receipt notes?
   c. Are trust receipt notes under dual control?

OTHER

32. Are all floor plan loans granted under an established line?

33. Are line approvals structured to permit the bank to cancel or suspend shipments of unwanted merchandise?

34. Are dealer floor plan line limits strictly adhered to?

35. Is a trial balance of each dealer’s trust receipts/security agreements prepared at least monthly?

36. Are dealer trial balances reconciled to department and general ledger controls?

37. Are floor plan interest charges systematically computed and regularly billed?

38. Are notices of past due interest payments sent promptly?

39. Are all interest, curtailment and unit pay off payments from dealers posted promptly?

40. Are disbursements for floor plan loans on new units made only against the original copy of the manufacturer’s invoices?

41. Are the original invoices retained in the bank’s files?

42. Are loan proceeds on new units paid directly to the manufacturer rather than to the dealer?

43. Are accounting records established so that the bank has records of all floored items with adequate individual identification?

44. Are limits on loan advance versus invoice price (current wholesale value, if used) clearly established?

45. Are wholesale values determined independently of dealer appraisals?
46. Are wholesale values that are assigned by floor plan department personnel periodically reviewed by someone independent of the department?

47. Is amount of loan advance prohibited from exceeding 100 percent of the invoice price of a new item or of the wholesale value of a used item?

48. Has a curtailment policy been established and is it being followed?

49. Does the policy provide proper incentives to the dealer to turn over inventory on a timely basis?

50. Is the loan written so that the floored items never depreciate faster than the loan balance is reduced?

51. If a manufacturer of floored items has entered into a repurchase agreement, are curtailments structured to keep the loan balance in line with any declining repurchase amount?

52. Are records maintained on curtailment billings so that delinquency is easily determinable?

53. Are notices of past due curtailment payments sent promptly?

54. If assignment of rebates has been made, have procedures been established to ensure that factory rebate checks payable at the end of the model year are promptly forwarded to the bank?

55. If demonstrators are floored, are they subject to separate curtailment requirements which keep the loan balance in line with their liquidation value?

56. Are floor plan agreements required for all dealers?

57. Must agreements be accompanied by borrowing resolutions?

58. Is a written agreement between the manufacturer and the bank required on any flooring line which includes drafting arrangements with the manufacturer?

59. Do such agreements with the manufacturer stipulate under what conditions the manufacturer will accept items to be floored?

60. Are checks made periodically to determine that only those individuals granted power-of-attorney are signing the trust receipts?

61. Are dealers required to submit financial and operating statements on a continuing basis?

62. Are all dealers who prepare internal financial and operating statements more frequently than annually required to submit copies of those statements to the bank?

63. Are all financial statements received from dealers reviewed promptly?

64. Do financial statement reviews include a determination that floor plan loans, deposit accounts and other information agree with the bank’s records?

65. Are periodic reviews made of deposit accounts to detect any possible out-of-trust sales?

66. Are periodic reviews made of the retail paper being generated to determine if the bank is receiving an adequate portion?

CONCLUSION

67. Does the foregoing information constitute an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

68. Based on a composite evaluation as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
Leveraged Lending

Effective date April 2013

Leveraged lending has been a financing vehicle for transactions involving mergers and acquisitions, business recapitalizations, and business expansions. It is an important type of financing for national and global economies, and the U.S. financial industry plays an integral role in making credit available and syndicating that credit to investors. Leveraged transactions are characterized by a degree of financial leverage that may significantly exceed industry norms as measured by ratios such as debt-to-assets, debt-to-equity, cash flow-to-total debt, or other ratios and standards that are unique to a particular industry. Leveraged borrowers, however, can have a diminished ability to respond to changing economic conditions or unexpected events, creating significant implications for an institution’s overall credit-risk exposure and challenges for bank risk-management systems.

Leveraged lending activities can be conducted in a safe-and-sound fashion if pursued with a risk-management structure that provides for the appropriate underwriting, pricing, monitoring, and controls. Comprehensive credit analysis processes, frequent monitoring, and detailed portfolio reports are needed to better understand and manage the inherent risk in leveraged portfolios. Sound valuation methodologies must be used in addition to ongoing stress testing and monitoring.

Financial institutions should ensure they do not unnecessarily heighten risks by originating and then distributing poorly underwritten loans. For example, a poorly underwritten leveraged loan that is pooled with other loans or is participated with other institutions may generate risks for the financial system. The leveraged lending guidance that follows is designed to assist financial institutions in providing leveraged lending to creditworthy borrowers in a safe-and-sound manner.

On March 21, 2013, the Federal Reserve Board, along with the Office of the Comptroller of the Currency (OCC) and the Federal Deposit Insurance Corporation (FDIC), issued “Interagency Guidance on Leveraged Lending.” The statement provides guidance about risk rating leveraged-financed loans. See SR-13-3 and its attachment.

INTERAGENCY GUIDANCE ON LEVERAGED LENDING

The vast majority of community banks should not be affected by this guidance, as they have limited involvement in leveraged lending. Community and smaller institutions that are involved in leveraged lending activities should discuss with their primary regulator the implementation of cost-effective controls appropriate for the complexity of their exposures and activities.

Risk-Management Framework

Given the high-risk profile of leveraged transactions, financial institutions engaged in leveraged lending should adopt a risk-management framework that has an intensive and frequent review and monitoring process. The framework should have as its foundation written risk objectives, risk-acceptance criteria, and risk controls. A lack of robust risk-management processes and controls at a financial institution with significant leveraged lending activities could contribute to supervisory findings that the financial institution

1. For the purpose of this guidance, references to leveraged finance, or leveraged transactions encompass the entire debt structure of a leveraged obligor (including loans and letters of credit, mezzanine tranches, senior and subordinated bonds) held by both bank and nonbank investors. References to leveraged lending and leveraged loan transactions and credit agreements refer to all debt with the exception of bond and high-yield debt held by both bank and nonbank investors.

2. For purposes of this guidance, the term “financial institution” or “institution” includes national banks, federal savings associations, and federal branches and agencies supervised by the OCC; state member banks, bank holding companies, savings and loan holding companies, and all other institutions for which the Federal Reserve is the primary federal supervisor; and state nonmember banks, foreign banks having an insured branch, state savings associations, and all other institutions for which the FDIC is the primary federal supervisor.

4. The agencies do not intend that a financial institution that originates a small number of less complex, leveraged loans should have policies and procedures commensurate with a larger, more complex leveraged loan origination business. However, any financial institution that participates in leveraged lending transactions should follow applicable supervisory guidance provided in “Participations Purchased” of this section.
is engaged in unsafe and unsound banking practices. This guidance outlines the agencies’ minimum expectations on the following topics:

- Leveraged Lending Definition
- General Policy Expectations
- Participations Purchased
- Underwriting Standards
- Valuation Standards
- Pipeline Management
- Reporting and Analytics
- Risk Rating Leveraged Loans
- Credit Analysis
- Problem-Credit Management
- Deal Sponsors
- Credit Review
- Stress Testing
- Conflicts of Interest
- Reputational Risk
- Compliance

Leveraged Lending Definition

The policies of financial institutions should include criteria to define leveraged lending that are appropriate to the institution. For example, numerous definitions of leveraged lending exist throughout the financial services industry and commonly contain some combination of the following:

- proceeds used for buyouts, acquisitions, or capital distributions
- transactions where the borrower’s Total Debt divided by EBITDA (earnings before interest, taxes, depreciation, and amortization) or Senior Debt divided by EBITDA exceed 4.0 * EBITDA or 3.0 * EBITDA, respectively, or other defined levels appropriate to the industry or sector
- a borrower recognized in the debt markets as a highly leveraged firm, which is characterized by a high debt-to-net-worth ratio
- transactions when the borrower’s post-financing leverage, as measured by its leverage ratios (for example, debt-to-assets, debt-to-net-worth, debt-to-cash flow, or other similar standards common to particular industries or sectors), significantly exceeds industry norms or historical levels

A financial institution engaging in leveraged lending should define it within the institution’s policies and procedures in a manner sufficiently detailed to ensure consistent application across all business lines. A financial institution’s definition should describe clearly the purposes and financial characteristics common to these transactions, and should cover risk to the institution from both direct exposure and indirect exposure via limited-recourse financing secured by leveraged loans, or financing extended to financial intermediaries (such as conduits and special purpose entities (SPEs)) that hold leveraged loans.

General Policy Expectations

A financial institution’s credit policies and procedures for leveraged lending should address the following:

- Identification of the financial institution’s risk appetite, including clearly defined amounts of leveraged lending that the institution is willing to underwrite (for example, pipeline limits) and is willing to retain (for example, transaction and aggregate hold levels). The institution’s designated risk appetite should be supported by an analysis of the potential effect on earnings, capital, liquidity, and other risks that result from these positions, and should be approved by its board of directors.
- A limit framework that includes limits or guidelines for single obligors and transactions, aggregate hold portfolio, aggregate pipeline exposure, and industry and geographic concentrations. The limit framework should identify the related management-approval authorities and exception-tracking provisions. In addition to notional pipeline limits, the agencies expect that financial institutions with significant leveraged transactions will imple-

5. This guidance is not meant to include asset-based loans unless such loans are part of the entire debt structure of a leveraged obligor. Asset-based lending is a distinct segment of the loan market that is tightly controlled or fully monitored, secured by specific assets, and usually governed by a borrowing formula (or “borrowing base”).

6. Cash should not be netted against debt for purposes of this calculation.

7. The designation of a financing as “leveraged lending” is typically made at loan origination, modification, extension, or refinancing. “Fallen angels” or borrowers that have exhibited a significant deterioration in financial performance after loan inception and subsequently become highly leveraged would not be included within the scope of this guidance, unless the credit is modified, extended, or refinanced.
ment underwriting-limit frameworks that assess stress losses, flex terms, economic capital usage, and earnings at risk or that otherwise provide a more nuanced view of potential risk.8

- Procedures for ensuring the risks of leveraged lending activities are appropriately reflected in an institution’s allowance for loan and lease losses (ALLL) and capital adequacy analyses.
- Credit and underwriting approval authorities, including the procedures for approving and documenting changes to approved transaction structures and terms.
- Guidelines for appropriate oversight by senior management, including adequate and timely reporting to the board of directors.
- Expected risk-adjusted returns for leveraged transactions.
- Minimum underwriting standards (see the “Underwriting Standards” section below).
- Effective underwriting practices for primary loan origination and secondary loan acquisition.

Participations Purchased

Financial institutions purchasing participations and assignments in leveraged lending transactions should make a thorough, independent evaluation of the transaction and the risks involved before committing any funds.9 They should apply the same standards of prudence, credit assessment and approval criteria, and in-house limits that would be employed if the purchasing organization were originating the loan. At a minimum, policies should include requirements for

- obtaining and independently analyzing full credit information both before the participation is purchased and on a timely basis thereafter;
- obtaining from the lead lender copies of all executed and proposed loan documents, legal opinions, title insurance policies, Uniform Commercial Code (UCC) searches, and other relevant documents;
- carefully monitoring the borrower’s performance throughout the life of the loan; and
- establishing appropriate risk-management guidelines as described in this document.

Underwriting Standards

A financial institution’s underwriting standards should be clear, written, and measurable, and should accurately reflect the institution’s risk appetite for leveraged lending transactions. A financial institution should have clear underwriting limits regarding leveraged transactions, including the size that the institution will arrange both individually and in the aggregate for distribution. The originating institution should be mindful of reputational risks associated with poorly underwritten transactions, as these risks may find their way into a wide variety of investment instruments and exacerbate systemic risks within the general economy. At a minimum, an institution’s underwriting standards should consider the following:

- Whether the business premise for each transaction is sound and the borrower’s capital structure is sustainable regardless of whether the transaction is underwritten for the institution’s own portfolio or with the intent to distribute. The entirety of a borrower’s capital structure should reflect the application of sound financial analysis and underwriting principles.
- A borrower’s capacity to repay and the ability to de-lever to a sustainable level over a reasonable period. As a general guide, institutions also should consider whether base-case cash-flow projections show the ability to fully amortize senior secured debt or repay a significant portion of total debt over the medium term.10 Also, projections should

8. Flex terms allow the arranger to change interest-rate spreads during the syndication process to adjust pricing to current liquidity levels.
10. In general, the base-case cash-flow projection is the borrower or deal sponsor’s expected estimate of financial performance using the assumptions that are deemed most likely to occur. The financial results for the base case should be better than those for the conservative case but worse than those for the aggressive or upside case. A financial institution may adjust the base-case financial projections, if necessary. The most realistic financial projections should be used when
include one or more realistic downside scenarios that reflect key risks identified in the transaction.

• Expectations for the depth and breadth of due diligence on leveraged transactions. This should include standards for evaluating various types of collateral, with a clear definition of credit-risk-management’s role in such due diligence.

• Standards for evaluating expected risk-adjusted returns. The standards should include identification of expected distribution strategies, including alternative strategies for funding and disposing of positions during market disruptions, and the potential for losses during such periods.

• The degree of reliance on enterprise value and other intangible assets for loan repayment, along with acceptable valuation methodologies, and guidelines for the frequency of periodic reviews of those values.

• Expectations for the degree of support provided by the sponsor (if any), taking into consideration the sponsor’s financial capacity, the extent of its capital contribution at inception, and other motivating factors. Institutions looking to rely on sponsor support as a secondary source of repayment for the loan should be able to provide documentation, including, but not limited to, financial or liquidity statements, showing recently documented evidence of the sponsor’s willingness and ability to support the credit extension.

• Whether credit-agreement terms allow for the material dilution, sale, or exchange of collateral or cash-flow-producing assets without lender approval.

• Credit-agreement covenant protections, including financial performance (such as debt-to-cash flow, interest coverage, or fixed-charge coverage), reporting requirements, and compliance monitoring. Generally, a leverage level after planned asset sales (that is, the amount of debt that must be serviced from operating cash flow) in excess of 6* Total Debt/EBITDA raises concerns for most industries.

• Collateral requirements in credit agreements that specify acceptable collateral and risk-appropriate measures and controls, including acceptable collateral types, loan-to-value guidelines, and appropriate collateral-valuation methodologies. Standards for asset-based loans that are part of the entire debt structure also should outline expectations for the use of collateral controls (for example, inspections, independent valuations, and payment lock-box), other types of collateral and account maintenance agreements, and periodic reporting requirements.

• Whether loan agreements provide for distribution of ongoing financial and other relevant credit information to all participants and investors.

Nothing in the preceding standards should be considered to discourage providing financing to borrowers engaged in workout negotiations, or as part of a pre-packaged financing under the bankruptcy code. Neither are they meant to discourage well-structured, standalone asset-based credit facilities to borrowers with strong lender monitoring and controls, for which a financial institution should consider separate underwriting and risk-rating guidance.

Valuation Standards

Institutions often rely on enterprise value and other intangibles when (1) evaluating the feasibility of a loan request; (2) determining the debt reduction potential of planned asset sales; (3) assessing a borrower’s ability to access the capital markets; and (4) estimating the strength of a secondary source of repayment. Institutions may also view enterprise value as a useful benchmark for assessing a sponsor’s economic incentive to provide financial support. Given the specialized knowledge needed for the development of a credible enterprise valuation and the importance of enterprise valuations in the underwriting and ongoing risk-assessment processes, enterprise valuations should be performed by qualified persons independent of an institution’s origination function.

There are several methods used for valuing businesses. The most common valuation methods are assets, income, and market. Asset valuation methods consider an enterprise’s underlying assets in terms of its net going-concern or liquidation value. Income valuation methods consider an enterprise’s ongoing cash flows or earnings and apply appropriate capitalization or discounting techniques. Market valuation methods derive value multiples from comparable company data or sales transactions. However, final value estimates should be based on the
method or methods that give supportable and credible results. In many cases, the income method is generally considered the most reliable. There are two common approaches employed when using the income method. The “capitalized cash flow” method determines the value of a company as the present value of all future cash flows the business can generate in perpetuity. An appropriate cash flow is determined and then divided by a risk-adjusted capitalization rate, most commonly the weighted average cost of capital. This method is most appropriate when cash flows are predictable and stable. The “discounted cash flow” method is a multiple-period valuation model that converts a future series of cash flows into current value by discounting those cash flows at a rate of return (referred to as the “discount rate”) that reflects the risk inherent therein. This method is most appropriate when future cash flows are cyclical or variable over time. Both income methods involve numerous assumptions, and therefore, supporting documentation should fully explain the evaluator’s reasoning and conclusions.

When a borrower is experiencing a financial downturn or facing adverse market conditions, a lender should reflect those adverse conditions in its assumptions for key variables such as cash flow, earnings, and sales multiples when assessing enterprise value as a potential source of repayment. Changes in the value of a borrower’s assets should be tested under a range of stress scenarios, including business conditions more adverse than the base-case scenario. Stress tests of enterprise values and their underlying assumptions should be conducted and documented at origination of the transaction and periodically thereafter, incorporating the actual performance of the borrower and any adjustments to projections. The institution should perform its own discounted cash-flow analysis to validate the enterprise value implied by proxy measures such as multiples of cash flow, earnings, or sales.

Enterprise value estimates derived from even the most rigorous procedures are imprecise and ultimately may not be realized. Therefore, institutions relying on enterprise value or illiquid and hard-to-value collateral should have policies that provide for appropriate loan-to-value ratios, discount rates, and collateral margins. Based on the nature of an institution’s leveraged lending activities, the institution should establish limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value. Regardless of the methodology used, the assumptions underlying enterprise value estimates should be clearly documented, well supported, and understood by the institution’s appropriate decisionmakers and risk oversight units. Further, an institution’s valuation methods should be appropriate for the borrower’s industry and condition.

Pipeline Management

Market disruptions can substantially impede the ability of an underwriter to consummate syndications or otherwise sell down exposures, which may result in material losses. Accordingly, financial institutions should have strong risk management and controls over transactions in the pipeline, including amounts to be held and those to be distributed. A financial institution should be able to differentiate transactions according to tenor, investor class (for example, pro-rata and institutional), structure, and key borrower characteristics (for example, industry).

In addition, an institution should develop and maintain the following:

- A clearly articulated and documented appetite for underwriting risk that considers the potential effects on earnings, capital, liquidity, and other risks that result from pipeline exposures.
- Written policies and procedures for defining and managing distribution failures and “hung” deals, which are identified by an inability to sell down the exposure within a reasonable period (generally 90 days from transaction closing). The financial institution’s board of directors and management should establish clear expectations for the disposition of pipeline transactions that are not sold according to their original distribution plan. Such transactions that are subsequently reclassified as hold-to-maturity should also be reported to management and the board of directors.
- Guidelines for conducting periodic stress tests on pipeline exposures to quantify the potential impact of changing economic and market conditions on the institution’s asset quality, earnings, liquidity, and capital.
- Controls to monitor performance of the pipeline against original expectations, and regular reports of variances to management, including the amount and timing of syndication and
distribution variances and reporting of recourse sales to achieve distribution.

• Reports that include individual and aggregate transaction information that accurately risk rates credits and portrays risk and concentrations in the pipeline.
• Limits on aggregate pipeline commitments.
• Limits on the amount of loans that an institution is willing to retain on its own books (that is, borrower, counterparty, and aggregate hold levels), and limits on the underwriting risk that will be undertaken for amounts intended for distribution.
• Policies and procedures that identify acceptable accounting methodologies and controls in both functional as well as dysfunctional markets, and that direct prompt recognition of losses in accordance with generally accepted accounting principles.
• Policies and procedures addressing the use of hedging to reduce pipeline and hold exposures, which should address acceptable types of hedges and the terms considered necessary for providing a net credit exposure after hedging.
• Plans and provisions addressing contingent liquidity and compliance with the Board’s Regulation W (12 CFR part 223) when market illiquidity or credit conditions change, interrupting normal distribution channels.

Reporting and Analytics

The agencies expect financial institutions to diligently monitor higher-risk credits, including leveraged loans. A financial institution’s management should receive comprehensive reports about the characteristics and trends in such exposures at least quarterly, and summaries should be provided to the institution’s board of directors. Policies and procedures should identify the fields to be populated and captured by a financial institution’s Management Information Systems, which should yield accurate and timely reporting to management and the board of directors that may include the following:

• Individual and portfolio exposures within and across all business lines and legal vehicles, including the pipeline.
• Risk rating distribution and migration analysis, including maintenance of a list of those borrowers who have been removed from the leveraged portfolio due to improvements in their financial characteristics and overall risk profile.
• Industry mix and maturity profile.
• Metrics derived from probabilities of default and loss given default.
• Portfolio performance measures, including noncompliance with covenants, restructurings, delinquencies, non-performing amounts, and charge-offs.
• Amount of impaired assets and the nature of impairment (that is, permanent, or temporary), and the amount of the ALLL attributable to leveraged lending.
• The aggregate level of policy exceptions and the performance of that portfolio.
• Exposures by collateral type, including unsecured transactions and those where enterprise value will be the source of repayment for leveraged loans. Reporting should also consider the implications of defaults that trigger pari passu (in a fair way) treatment for all lenders and, thus, dilute the secondary support from the sale of collateral.
• Secondary-market-pricing data and trading volume, when available.
• Exposures and performance by deal sponsors. Deals introduced by sponsors may, in some cases, be considered exposure to related borrowers. An institution should identify, aggregate, and monitor potential related exposures.
• Gross and net exposures, hedge counterparty concentrations, and policy exceptions.
• Actual versus projected distribution of the syndicated pipeline, with regular reports of excess levels over the hold targets for the syndication inventory. Pipeline definitions should clearly identify the type of exposure. This includes committed exposures that have not been accepted by the borrower, commitments accepted but not closed, and funded and unfunded commitments that have closed but have not been distributed.
• Total and segmented leveraged lending exposures, including subordinated debt and equity holdings, alongside established limits. Reports should provide a detailed and comprehensive view of global exposures, including situations when an institution has indirect exposure to an obligor or is holding a previously sold position as collateral or as a reference asset in a derivative.
• Borrower and counterparty leveraged lending reporting should consider exposures booked in other business units throughout the institu-
tion, including indirect exposures such as default swaps and total return swaps, naming the distributed paper as a covered or referenced asset or collateral exposure through repo transactions. Additionally, the institution should consider positions held in available-for-sale or traded portfolios or through structured investment vehicles owned or sponsored by the originating institution or its subsidiaries or affiliates.

Risk Rating Leveraged Loans

Previously, the agencies issued guidance on rating credit exposures and credit-rating systems, which applies to all credit transactions, including those in the leveraged lending category.\(^\text{11}\)

The risk rating of leveraged loans involves the use of realistic repayment assumptions to determine a borrower’s ability to de-lever to a sustainable level within a reasonable period. For example, supervisors commonly assume that the ability to fully amortize senior secured debt or the ability to repay at least 50 percent of total debt over a five- to seven-year period provides evidence of adequate repayment capacity. If the projected capacity to pay down debt from cash flow is nominal with refinancing the only viable option, the credit will usually be adversely rated even if it has been recently underwritten. In cases when leveraged loan transactions have no reasonable or realistic prospects to de-lever, a substandard rating is likely. Furthermore, when assessing debt service capacity, extensions and restructures should be scrutinized to ensure that the institution is not merely masking repayment capacity problems by extending or restructuring the loan.

If the primary source of repayment becomes inadequate, the agencies believe that it would generally be inappropriate for an institution to consider enterprise value as a secondary source of repayment unless that value is well supported. Evidence of well-supported value may include binding purchase and sale agreements with qualified third parties or thorough asset valuations that fully consider the effect of the borrower’s distressed circumstances and potential changes in business and market conditions. For such borrowers, when a portion of the loan may not be protected by pledged assets or a well-supported enterprise value, examiners generally will rate that portion doubtful or loss and place the loan on nonaccrual status.

Credit Analysis

Effective underwriting and management of leveraged lending risk is highly dependent on the quality of analysis employed during the approval process as well as ongoing monitoring. A financial institution’s policies should address the need for a comprehensive assessment of financial, business, industry, and management risks including, whether

- cash-flow analyses rely on overly optimistic or unsubstantiated projections of sales, margins, and merger and acquisition synergies;
- liquidity analyses include performance metrics appropriate for the borrower’s industry, predictability of the borrower’s cash flow, measurement of the borrower’s operating cash needs, and ability to meet debt maturities;
- projections exhibit an adequate margin for unanticipated merger-related integration costs;
- projections are stress tested for one or more downside scenarios, including a covenant breach;
- transactions are reviewed at least quarterly to determine variance from plan, the related risk implications, and the accuracy of risk ratings and accrual status. From inception, the credit file should contain a chronological rationale for and analysis of all substantive changes to the borrower’s operating plan and variance from expected financial performance;
- enterprise and collateral valuations are independently derived or validated outside of the origination function, are timely, and consider potential value erosion;
- collateral liquidation and asset sale estimates are based on current market conditions and trends;
- potential collateral shortfalls are identified and factored into risk rating and accrual decisions;
- contingency plans anticipate changing conditions in debt or equity markets when exposures rely on refinancing or the issuance of

new equity; and
• the borrower is adequately protected from interest rate and foreign exchange risk.

**Problem-Credit Management**

A financial institution should formulate individual action plans when working with borrowers experiencing diminished operating cash flows, depreciated collateral values, or other significant plan variances. Weak initial underwriting of transactions, coupled with poor structure and limited covenants, may make problem-credit discussions and eventual restructurings more difficult for an institution as well as result in less favorable outcomes.

A financial institution should formulate credit policies that define expectations for the management of adversely rated and other high-risk borrowers whose performance departs significantly from planned cash flows, asset sales, collateral values, or other important targets. These policies should stress the need for workout plans that contain quantifiable objectives and measurable time frames. Actions may include working with the borrower for an orderly resolution while preserving the institution’s interests, sale of the credit in the secondary market, or liquidation of collateral. Problem credits should be reviewed regularly for risk rating accuracy, accrual status, recognition of impairment through specific allocations, and charge-offs.

**Deal Sponsors**

A financial institution that relies on sponsor support as a secondary source of repayment should develop guidelines for evaluating the qualifications of financial sponsors and should implement processes to regularly monitor a sponsor’s financial condition. Deal sponsors may provide valuable support to borrowers such as strategic planning, management, and other tangible and intangible benefits. Sponsors may also provide sources of financial support for borrowers that fail to achieve projections. Generally, a financial institution rates a borrower based on an analysis of the borrower’s stand-alone financial condition. However, a financial institution may consider support from a sponsor in assigning internal risk ratings when the institution can document the sponsor’s history of demonstrated support as well as the economic incentive, capacity, and stated intent to continue to support the transaction. However, even with documented capacity and a history of support, the sponsor’s potential contributions may not mitigate supervisory concerns absent a documented commitment of continued support. An evaluation of a sponsor’s financial support should include the following:

• the sponsor’s historical performance in supporting its investments, financially and otherwise
• the sponsor’s economic incentive to support, including the nature and amount of capital contributed at inception
• documentation of degree of support (for example, a guarantee, comfort letter, or verbal assurance)
• consideration of the sponsor’s contractual investment limitations
• to the extent feasible, a periodic review of the sponsor’s financial statements and trends, and an analysis of its liquidity, including the ability to fund multiple deals
• consideration of the sponsor’s dividend and capital contribution practices
• the likelihood of the sponsor supporting a particular borrower compared to other deals in the sponsor’s portfolio
• guidelines for evaluating the qualifications of a sponsor and a process to regularly monitor the sponsor’s performance

**Credit Review**

A financial institution should have a strong and independent credit-review function that demonstrates the ability to identify portfolio risks and documented authority to escalate inappropriate risks and other findings to its senior management. Due to the elevated risks inherent in leveraged lending, and depending on the relative size of a financial institution’s leveraged lending business, the institution’s credit-review function should assess the performance of the leveraged portfolio more frequently and in greater depth than other segments in the loan portfolio. Such assessments should be performed by individuals with the expertise and experience for these types of loans and the borrower’s industry. Portfolio reviews should generally be conducted at least annually. For many financial institutions, the
risk characteristics of leveraged portfolios, such as high reliance on enterprise value, concentrations, adverse risk rating trends, or portfolio performance, may dictate reviews that are more frequent.

A financial institution should staff its internal credit-review function appropriately and ensure that the function has sufficient resources to ensure timely, independent, and accurate assessments of leveraged lending transactions. Reviews should evaluate the level of risk, risk rating integrity, valuation methodologies, and the quality of risk management. Internal credit reviews should include the review of the institution’s leveraged lending practices, policies, and procedures to ensure that they are consistent with regulatory guidance.

**Stress Testing**

A financial institution should develop and implement guidelines for conducting periodic portfolio stress tests on loans originated to hold as well as loans originated to distribute, and sensitivity analyses to quantify the potential impact of changing economic and market conditions on its asset quality, earnings, liquidity, and capital.12 The sophistication of stress testing practices and sensitivity analyses should be consistent with the size, complexity, and risk characteristics of the institution’s leveraged loan portfolio. To the extent a financial institution is required to conduct enterprise-wide stress tests, the leveraged portfolio should be included in any such tests.

**Conflicts of Interest**

A financial institution should develop appropriate policies and procedures to address and to prevent potential conflicts of interest when it has equity and lending positions. For example, an institution may be reluctant to use an aggressive collection strategy with a problem borrower because of the potential impact on the value of an institution’s equity interest. A financial institution may encounter pressure to provide financial or other privileged client information that could benefit an affiliated equity investor. Such conflicts also may occur when the underwriting financial institution serves as financial advisor to the seller and simultaneously offers financing to multiple buyers (that is, stapled financing). Similarly, there may be conflicting interests among the different lines of business within a financial institution or between the financial institution and its affiliates. When these situations occur, potential conflicts of interest arise between the financial institution and its customers. Policies and procedures should clearly define potential conflicts of interest, identify appropriate risk-management controls and procedures, enable employees to report potential conflicts of interest to management for action without fear of retribution, and ensure compliance with applicable laws. Further, management should have an established training program for employees on appropriate practices to follow to avoid conflicts of interest and provide for reporting, tracking, and resolution of any conflicts of interest that occur.

**Reputational Risk**

Leveraged lending transactions are often syndicated through the financial and institutional markets. A financial institution’s apparent failure to meet its legal responsibilities in underwriting and distributing transactions can damage its market reputation and impair its ability to compete. Similarly, a financial institution that distributes transactions, which over time have significantly higher default or loss rates and performance issues, may also see its reputation damaged.

**Compliance**

The legal and regulatory issues raised by leveraged transactions are numerous and complex. To ensure potential conflicts are avoided and laws and regulations are adhered to, an institu-

---

tion’s independent compliance function should periodically review the institution’s leveraged lending activity. This guidance is consistent with the principles of safety and soundness and other agency guidance related to commercial lending.

In particular, because leveraged transactions often involve a variety of types of debt and bank products, a financial institution should ensure that its policies incorporate safeguards to prevent violations of anti-tying regulations. Section 106(b) of the Bank Holding Company Act Amendments of 1970\(^\text{13}\) prohibits certain forms of product tying by financial institutions and their affiliates. The intent behind Section 106(b) is to prevent financial institutions from using their market power over certain products to obtain an unfair competitive advantage in other products.

In addition, equity interests and certain debt instruments used in leveraged transactions may constitute “securities” for the purposes of federal securities laws. When securities are involved, an institution should ensure compliance with applicable securities laws, including disclosure and other regulatory requirements. An institution should also establish policies and procedures to appropriately manage the internal dissemination of material, nonpublic information about transactions in which it plays a role.

\(^{13}\) 12 USC 1972.
Leveraged Lending
Examination Objectives
Effective date April 2014

1. Risk-Management Framework, Definition, and Policy Expectations. To determine:
   a. whether the institution has established a sound definition of leveraged lending that is appropriate for the types of leveraged loans that are underwritten and if it can be applied across all business lines;
   b. whether it has adjusted (if necessary) its risk appetite and limit structure (including pipeline limits and overall portfolio limits) to conform with the institution’s definition of leveraged lending and whether it has the necessary reporting in place to assess conformance with limits;
   c. if there are appropriate policies and procedures limits in place and if the institution maintains sound leveraged lending standards both for transactions that it intends to hold as well as transactions that are underwritten to distribute;
   d. if the institution’s risk-management structure has strong and effective processes and controls and if they are appropriate based on its leveraged lending activity.

2. Participations Purchased. To ensure that the institution applies the same standards of prudence and credit assessment techniques and in-house limits that would apply as if it had originated the loan(s).

3. Underwriting Standards. To assess the effectiveness of the institution’s underwriting policy standards for leveraged lending to determine whether they:
   a. are clear, written, and measurable;
   b. contain underwriting limits that reflect the institution’s definition and risk appetite for leveraged lending;
   c. are applied equally to loans that are originated to be held and to loans that are originated to distribute; and
   d. fully reflect the underwriting standards listed in the guidance, including:
      i. sound business premise and sustainable capital structure for each transaction
      ii. capacity to repay and ability to de-lever to a sustainable level over a reasonable period
      iii. appropriate depth and breadth of due diligence
      iv. standards for valuating expected risk-adjusted returns
      v. appropriate credit agreement covenant protections
      vi. acceptable collateral agreements.

4. Valuation Standards. To determine:
   a. whether enterprise valuation methodologies are appropriate to the borrower’s industry and condition;
   b. whether the assumptions are clearly documented, well supported, and understood by the institution’s appropriate decision makers and risk oversight units;
   c. whether enterprise valuations are performed by qualified persons independent of an institution’s origination function;
   d. whether an institution has policies and provides for appropriate loan-to-value ratios, discount rates and collateral margins for loans dependent on enterprise value or illiquid and hard-to-value collateral.

5. Pipeline Management. To find out if there are strong risk-management standards and controls over transactions in and to the pipeline and if those standards are applied uniformly to transactions held in the portfolio and those that are distributed.

6. Reporting and Analytics.
   a. To determine if individual and portfolio exposures within and across all business lines and legal vehicles are captured and reported in the appropriate amount of detail to senior management and the board.
   b. To determine if the necessary risk information (as outlined in the guidance) about leveraged lending exposures (portfolio holds and pipeline exposures) are captured in reports that are distributed timely and that adequate information is distributed to senior management and the institution’s board of directors at least quarterly.

7. Risk Rating. To verify that leveraged loans are risk rated based on the borrower’s ability to repay and de-lever to a sustainable level.

8. Credit Analysis.
   a. To test transactions to determine if underwriting practices are effective and comprehensive.
b. To determine if individual leveraged lending exposures contain a comprehensive assessment of financial, business, industry, and management risks based on the elements of the guidance.

9. **Problem Credit Management.**
   a. To ascertain whether the institution formulates individual action plans and expectations.
   b. To evaluate workout plans to confirm that they contain quantifiable objectives and measurable time frames.
   c. To determine if problem credits are regularly reviewed for risk-rating accuracy, accrual status, impairment status, and charge off.

10. **Deal Sponsors.**
   a. To determine if the institution has guidelines for evaluating deal sponsors that are based on the sponsor’s ability and willingness to support the transaction where sponsors are viewed as a source of repayment.

11. **Credit Review.**
   a. To ensure that the institution regularly conducts an independent credit review of the leveraged lending portfolio more frequently and in greater depth than other segments of the portfolio generally at least annually. For firms making significant changes to policies, underwriting standards, procedures, etc., ensure that a credit review is scheduled to test compliance with changes.
   b. To ensure that credit review personnel have the expertise and experience to evaluate leveraged loans.

12. **Stress Testing.**
   a. To determine if the institution is conducting periodic loan- and portfolio stress tests on leveraged loan portfolios or if the portfolio has been incorporated into enterprise-wide stress testing practices.
   b. To verify the effectiveness of the institution’s periodic portfolio stress tests (in accordance with stress testing guidance) in identifying what effect economic and market events could have on the institution’s financial condition and leveraged lending transactions.

13. **Conflict of Interest.** To determine
   a. if policies identify and if there are procedures to address transactions in which the institution holds both an equity and lending positions;
   b. the adequacy and effectiveness of controls and training programs that aim to curb any potential conflicts of interests that result from leveraged lending.

14. **Reputational Risk.**
   a. To determine if the institution has suffered reputational damage by failing to meet its legal responsibilities in underwriting and syndicating leveraged loan transactions into the wider financial market.
Leveraged Lending
Examination Procedures
Effective date April 2014

Complete or update the Leveraged Lending Internal Control Questionnaire if selected for implementation.

1. Based on an evaluation of internal controls, determine the scope of the examination. The scope should include exposures related through common ownership, guarantors, or sponsors. Also include direct and indirect leveraged lending exposure found in financial intermediaries formed to house or distribute leveraged loans (for example, CLOs, SPEs, conduits, etc.).

2. Examination procedures should include both a policy review and transaction testing approach to determine the effectiveness of the institution’s leveraged lending control process. If the institution is found to lack robust risk-management processes and controls around leveraged lending that reinforces the institution’s risk profile, a supervisory finding of unsafe and unsound banking practices should be considered.

3. Applicability/Risk-Management Framework
   a. At the start of the examination, ascertain whether the institution has adopted an appropriate risk-management framework for leveraged lending that includes robust policies, procedures, and risk limits that have been approved by the board of directors.
   b. Implementation of this guidance should be consistent with the size and risk profile of the institution.
   c. All aspects of the guidance should be applied to institutions that originate and distribute leveraged loans.
   d. The section on Participations Purchased should be applied to banking organizations that have limited involvement in leveraged lending; community banks overall may not be materially affected by the guidance.

4. Definition of Leveraged Lending
   a. Determine if the institution has a written policy for leveraged lending and if that policy contains criteria for defining leveraged lending that are appropriate for the institution and consistent with the guidance standards.
   b. Determine if the institution’s definition includes related exposures and direct and indirect exposures.

5. General Policy Expectations
   a. Review the policy for the key risk elements referred to in the guidance (See the section on General Policy Expectations in the guidance and in the Internal Control Questionnaire). Determine if the policy includes the following elements:
      • Risk Appetite that clearly defines the amount of leveraged lending the institution is willing to underwrite and is willing to retain.
      • Limit Framework for aggregate portfolio held on balance sheet, single obligors and transactions, aggregate pipeline exposure, industry and geographic concentrations. For institutions with significant underwriting exposure, determine if limits have been established for stress losses, flex terms, economic capital, or earnings at risk associated with leveraged loans.
      • Allowance for loan and lease losses (ALLL) and capital adequacy analysis that reflect the risk of leveraged lending activities.
      • Credit approval and underwriting authorities.
      • Guidelines for senior management oversight and timely reporting to senior management and the board of directors.
      • Expected risk adjusted returns.
      • Minimum underwriting standards.
      • Underwriting practices for origination and secondary loan acquisition.

6. Participations Purchased
   a. Ascertain if the institution participating or purchasing into a leveraged loan has a clear understanding of the credit and the risks involved and also has a clear understanding of its rights and responsibilities under the participation agreement.
   b. Determine if the institution has conducted its own independent underwriting of participations and has applied the same standards of prudence, credit assessment techniques, and in-house limits as if the institution had originated the loan(s).
c. Verify that the institution has received copies of all participation documents and any other documents relevant to the credit transaction(s).

7. Underwriting Standards
   a. Determine if the institution employs similar and consistent underwriting standards for leveraged loans it plans to hold or it plans to distribute.
      • Confirm that the institution’s underwriting standards are clear, written, measurable, and reflect the institution’s policy-based risk appetite for leveraged lending.
      • Evaluate the underwriting policies and standards and determine if they contain the elements found in guidance. (Refer to the section on Underwriting Standards in the guidance and in the Internal Control Questionnaire.)

8. Valuation Standards
   a. Confirm that the institution has policies and procedures in place for estimating enterprise value or for valuing other illiquid collateral. If enterprise value is relied on as a secondary source of repayment, determine the following:
      • If one or a combination of the three methods referred to in the guidance is used (asset, income, or market valuation).
      • If the underlying assumptions and the resulting values are well documented, supportable, and credible. (Refer to the Valuations Standards section of the guidance and the Internal Control Questionnaire.)
      • If enterprise value was calculated by qualified persons independent of the origination function.
      • If stress tests of key enterprise value variables and assumptions (such as cash flow earnings and sales multiples) are conducted.
      • That firms have policies that provide for appropriate loan-to-value ratios, discount rates and collateral margins.
      • If the institution has established limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value.

9. Pipeline Management
   a. Determine if the institution has strong risk management and controls that are extended to deals in the pipeline, whether those deals are intended for hold, or if they are intended for distribution.
      • Determine if the institution has policies and procedures for handling distribution failures.
      • Determine if there are procedures for stress testing pipeline deals.
      • Ascertain if management reports show that transactions can be differentiated based on their key characteristics, tenor, and investor class (pro-rata and institutional), structure, and key borrower characteristics (for example, industry).
      • Determine if there are clearly articulated rationales for the effectiveness of hedging methods and if there is appropriate measurement and monitoring.
      • Confirm that the institution has developed and maintained the pipeline procedures referred to in the guidance (see the section on Pipeline Management in the guidance and in the Internal Control Questionnaire).

10. Reporting and Analytics
    a. Ascertain if the institution’s risk-management framework includes an intensive and frequent review and monitoring process.
    b. Establish whether management receives comprehensive reports about the characteristics and trends of the institution’s leveraged lending portfolio at least quarterly and if summaries are provided to the board of directors.
    c. Find out if internal reports provide a detailed and comprehensive view of global exposures, including situations when an institution has an indirect exposure to an obligor or is holding a previously sold position as collateral or as a reference asset in a derivative. Borrower and counterparty leveraged lending reporting should aggregate total exposure and consider exposures booked across business lines or legal entities.
    d. Verify that internal policies identify the data fields to be populated and captured by the institution’s MIS and whether the reports are accurate, timely, and if the information is provided to management and the board of directors.
    e. Confirm that MIS reporting on the leveraged lending portfolio contains the applicable measures listed in the guidance. (Refer to the section on Reporting and...
11. Credit Analysis
   a. Conduct transaction testing on individual leveraged lending credits to determine if the credit analysis contains a comprehensive assessment of financial, business, and industry and management risks.
   b. Evaluate individual credits to determine if they fit the institution's definition of a leveraged loan.
   c. Determine if individual credits were analyzed in conjunction with the parameters in the guidance. (Refer to the section on Credit Analysis in the guidance and in the Internal Control Questionnaire.)
   d. Verify that there are guidelines for evaluating deal sponsors and their willingness and ability to support the credit.
   e. Confirm that sponsors are used as a secondary and not a primary source of repayment.
   f. Assess the credit agreement to determine if it contains language for:
      • Material dilution, sale, or exchange of collateral or cash flow producing assets without lender approval.
      • Financial performance covenants; covenant-lite, and payment-in-kind (PIK) toggle loan structures.
      • Reporting requirements and compliance monitoring.
      • The distribution of reporting and other credit information to participants and investors.
      • Acceptable collateral types, loan to value guidelines and appropriate collateral valuation methodologies.

12. Internal Risk Rating
   a. Determine if individual loans are risk rated based on the borrower's demonstrated ability to repay the loan and de-lever over a reasonable period of time.
      • Confirm that the institution has evidence of adequate repayment capacity, for example borrowers demonstrate the ability to fully amortize senior debt or repay at least 50 percent of total debt over a 5–7 year period. Ensure that extensions or other restructuring are not masking an inability to repay.
      • Consider adversely rating credits that do not show the capacity to pay down debt from cash flow or if refinancing is the only option for repayment.
   b. Consider a substandard rating if there are no reasonable or realistic prospects for repayment or de-levering.

13. Deal Sponsors
   a. If a deal sponsor is relied on as a secondary source of repayment, determine if management has developed guidelines for evaluating the sponsor's creditworthiness.
   b. Evaluate the sponsor based on the criteria listed in the guidance. (See the section on Deal Sponsors in the guidance and in the Internal Control Questionnaire.)

14. Credit Review/Problem Credit Management
   a. Assess credit review staff's expertise relative to leveraged lending.
   b. Verify that the institution conducts frequent internal credit review of leveraged lending portfolio that is done independently of the origination function. Portfolio reviews should generally be conducted no less than annually.
   c. Evaluate the institution's procedures for dealing with problem credits including if work out plans contain quantifiable objectives and measurable time frames.

15. Stress Testing
   a. Determine if the institution has developed stress tests for leveraged loans or if the loans are included in the existing stress testing protocol.

16. Conflicts of Interest/Reputational Risk/Compliance
   a. Confirm that the institution is meeting its legal responsibilities by underwriting and distributing transactions that do not result in undue reputational risk.
   b. Determine if potential conflicts of interest exist if the institution has both equity and lending positions in a particular transaction. Confirm that policies and procedures are in place to handle conflicts of interest.
   c. Ascertain whether the institution’s compliance function periodically reviews the institution’s leveraged lending activity.
   d. Ascertain whether the institution’s policies incorporate safeguards to prevent violations of anti-tying regulations.
   e. When securities are involved, determine how the institution ensures compliance with applicable securities laws, includ-
ing disclosure and other regulatory requirements.

f. Ascertain what plans and provisions have been developed to ensure compliance with the Board’s Regulation W (12 CFR part 223).
Applicability/Risk-Management Framework

1. Has the institution adopted a risk-management framework around leveraged lending that includes:
   a. A leveraged lending policy that is based on risk objectives, risk acceptance criteria, and risk controls?
   b. Structuring transactions that reflect a sound business premise, have an appropriate capital structure, reasonable cash flow, and balance sheet leverage?
   c. A definition of leveraged lending that can be applied across all business lines?
   d. Well-defined underwriting standards that define acceptable leverage levels and amortization expectations?
   e. A limit framework?
   f. Sound MIS?
   g. Pipeline management procedures, hold limits, and expected timing for distributions?
   h. Guidelines for stress testing?
   2. Is the institution able to identify leveraged exposures to related borrowers or guarantors?
   3. Is the institution able to identify leveraged loans that are managed in non-lending portfolios (for example collateralized loan obligations (CLOs), special purpose entities (SPEs), or other indirect exposures)?
   4. Is the institution originating leveraged loans, participating in leveraged loans, or both?

Definition of Leveraged Lending

1. Has the institution developed an appropriate written definition for leveraged lending and incorporated it into the leveraged lending policy?
2. Is the policy definition consistent with the amounts and types of leveraged loans that the institution is engaged in?

General Policy Expectations

1. Has the institution’s leveraged lending policy been approved by the board of directors?
2. Does the leveraged lending policy contain the following elements:
   a. A clear statement of the amounts of leveraged lending that it is willing to underwrite and the amount(s) it is willing to hold in its own portfolio?
   b. A limit framework that establishes limits or guidelines around the following as applicable:
      1) Single obligors and transactions?
      2) Aggregate hold portfolio?
      3) Total pipeline exposure?
      4) Industry and geographic concentration?
      5) Notional pipeline limits?
      6) Stress losses, flex terms, economic capital usage, and earnings at risk?
      7) Other parameters particular to the portfolio?
      8) The required management approval authorities and exception tracking provisions?
   c. Procedures for insuring that leveraged lending risks are appropriately reflected in the institution’s level of allowance for loan and lease losses (ALLL) and capital adequacy analysis?
   d. Credit and underwriting approval authorities, including the procedures for approving and documenting changes to approved transaction structures and terms?
   e. Guidelines for appropriate oversight by senior management, including adequate and timely reporting to the board of directors?
   f. Expected risk-adjusted returns for leveraged transactions?
   g. Minimum underwriting standards and underwriting practices for primary loan origination and secondary loan acquisition?

Participations Purchased

1. Has the institution, with respect to participations purchased, done its own independent underwriting of its portion of the transaction and has it adequately identified its risks?
2. Has the institution received copies of all
3. Is there evidence that the institution has reviewed the participation agreement and has a clear understanding of its rights and responsibilities under the agreement?

**Underwriting Standards**

1. Is the institution using similar underwriting standards for leveraged loans it plans to hold as well as for leveraged loans it plans to distribute?
2. Are the institution’s underwriting standards clear, written, and measurable?

3. Do underwriting standards require:
   - A sound business premise for each transaction and that the borrower’s capital structure is sustainable?
   - A determination and documentation of the borrower’s capacity to repay and ability to de-lever to a sustainable level over a reasonable period?
   - Standards for evaluating various types of collateral?
   - Standards for evaluating risk-adjusted returns?
   - The acceptable degree of reliance on enterprise value and other intangible assets for loan repayment?
   - Expectations for the degree of support expected to be provided by sponsors?
   - A prohibition on material dilution, sale, or exchange of collateral or cash flow producing assets without lender approval?
   - A credit agreement that contains financial covenants, reporting covenants, and compliance monitoring? Does the loan contain covenant-lite and PIK toggle loan structures? If so, does the borrower have the ability to repay the loan under the contractual terms?
   - Guidelines for acceptable collateral types, loan-to-value guidelines, and acceptable collateral valuation methodologies?
   - Loan agreements that provide for the distribution of financial information to participants and investors?

4. Is the institution relying on enterprise value to confirm a secondary source of repayment?
   a. Has the institution documented its valuation approach to calculating enterprise value?
   b. Has the valuation been performed by qualified persons independent of the origination function?
   c. Has one or a combination of three methods been used for determining enterprise value, asset valuation, income valuation, or market valuation?
   d. If the income method is used, is it based on capitalized cash flow or discounted cash flow?
   e. Has the institution confirmed proxy measures such as multiples of cash flow earnings or sales by performing its own discounted cash flow analysis?
   f. Are stress tests of key variables and assumptions used in determining enterprise value (such as cash flow earnings and sales multiples) conducted at origination and periodically thereafter?
   g. Does the institution have established limits for the proportion of individual transactions and the total portfolio that are supported by enterprise value?

**Valuation Standards**

1. Does the institution have policies for valuing illiquid, intangible, or hard to value collateral that include appropriate LTV ratios, discount rates, and collateral margins?

**Pipeline Management**

1. Do strong risk-management controls cover all transactions in the pipeline, including amounts planned for hold and those marked for distribution?
2. Does the institution have the capability to differentiate transactions based on their key characteristics, tenor, and investor class (pro-rata and institutional), structure, and key borrower characteristics (for example, industry)?
3. Does the institution have the following controls for pipeline exposure:
   - A documented appetite for underwriting pipeline risk that considers the potential effects on earnings, capital, and liquidity?
   - Written policies and procedures for “hung deals” or deals that are not sold down within a reasonable or 90-day period?
– Have transactions reclassified as hold-to-maturity been reported to management and the board of directors?

• Guidelines for conducting periodic stress tests of pipeline exposures?
• Controls to monitor expected vs. actual performance?
• Reports that show individual and aggregate transaction information, risk ratings and concentrations?
• Limits on hold levels per borrower, counterparty, and aggregate hold levels?
• Limits on the amounts intended for distribution?
• Policies and procedures for acceptable accounting methods, including prompt recognition of losses?
• Policies and procedures around acceptable hedging practices if applicable?
• Plans to address contingent liabilities and compliance with Sections 23A and 23B of the Federal Reserve Act and Regulation W?

Reporting and Analytics

1. Does management receive quarterly comprehensive reports about the characteristics and trends of the institution’s leveraged lending portfolio? Are summaries provided to the board of directors?
2. Do internal policies identify the data fields to be populated and captured by the institution’s MIS? Are the reports accurate and timely?
3. As dictated by the size and complexity of the leveraged lending portfolio, does MIS reporting on the leveraged lending portfolio include the following:
   a. Individual and portfolio exposures within and across all business lines and legal vehicles including the pipeline?
   b. Risk-rating distribution and migration analysis?
   c. A list of borrowers who have been removed from the leveraged lending portfolio due to improvements in their financial characteristics and risk profile? Is the removal from the profile concurrent with a refinance, restructure or some other modification in the loan agreement?
   d. Industry mix and maturity profile?
   e. Metrics derived from probability of default and loss-given default?
   f. Portfolio performance measures including covenant breaches, restructurings, delinquencies, nonperforming asset amounts, and charge offs?
   g. Amount and nature of impaired assets and the amount of ALLL attributable to leveraged lending?
   h. The level of policy exceptions in the portfolio?
   i. Exposures by collateral type, including unsecured transactions when enterprise values will be the only source of repayment?
   j. Defaults that trigger pari-passu treatment for all lenders?
   k. Secondary market pricing data and trading volume (when available)?
   l. An aggregation of exposures by and performance of deal sponsors?
   m. An indication of gross and net exposures, hedge and counterparty concentrations; and indication of policy exceptions?
   n. Actual vs. projected distribution levels of the pipeline with reports of excess levels of exposure over hold targets?
   o. Types of exposure in the pipeline: committed exposures not accepted by the borrower; exposures committed and accepted but not closed; funded and unfunded commitments closed but not distributed?
   p. Total and segmented exposures: subordinated debt and equity holdings (compared to limits); global exposures; indirect exposure (to an obligor or if the institution is holding a previously sold position as collateral or as a reference asset in a derivative)?
   q. Exposures booked in other business units throughout the institution that are related to a leveraged loan or borrower? (For example, default swaps or total return swaps naming the distributed paper as a covered or referenced asset or as collateral exposure through repo transactions).
   r. Positions held in leveraged loans in available for sale or traded portfolios or held in structured-investment vehicles owned or operated by the originating institution or its subsidiaries or affiliates?
**Internal Risk Rating**

1. Does the institution have evidence of adequate repayment capacity? For example, do borrowers demonstrate the ability to fully amortize senior debt or repay at least 50 percent of total debt over a five- to seven-year period?
2. Are there extensions or other structuring that are masking an inability to repay?
3. Has the primary source of repayment become inadequate? Is enterprise value being relied on as a secondary source of repayment? Is enterprise value well supported with binding purchase and sale agreements with qualified third parties? Does enterprise value consider the borrower’s distressed circumstances?

**Credit Analysis**

1. Does transaction testing of individual leveraged lending credits contain the following elements and show that:
   a. **Cash flow analysis**—The analysis does not rely on overly optimistic or unsubstantiated projections of sales, margins, or merger and acquisition synergies?
   b. **Liquidity analysis**—There are measures to determine operating cash needs and cash needed to meet debt maturities? Analyze liquidity based on industry performance metrics?
   c. **Projections**—There is adequate margin for unanticipated merger-related integration costs?
   d. **Stress tests**—Projections are stress tested for one or more downside scenarios, including a covenant breach?
   e. **Variances from plan**—Transactions are reviewed at least quarterly to determine variance from plan; does the credit file contain a chronological rationale for and analysis of all changes to the operating plan and variances from the expected financial performance?
   f. **Enterprise value**—Were enterprise values independently derived and validated outside of the origination function? Were values calculated timely and did they consider value erosion?
   g. **Collateral shortfalls**—Have shortfalls been identified and factored into the risk rating?
   h. **Collateral liquidation and asset sales**—Are any liquidations and sales based on current market conditions and trends?
   i. **Contingency plans**—Are there contingency analyses to anticipate changing conditions in debt or equity markets? Do the exposures rely on refinancing or the issuance of new equity?
   j. **Interest rate risk and foreign exchange risk**—Have these risks been addressed in the analysis? Are mitigants in place?

**Problem Credit Management**

1. Has the institution formulated and established procedures for dealing with problem credits?
2. Do work out plans contain quantifiable objectives and measurable time frames?
3. Are problem credits regularly reviewed for risk-rating accuracy, accrual status, recognition of impairment through specific allocations and charge-offs.

**Deal Sponsors**

1. Has the institution developed guidelines for evaluating the willingness and ability of sponsors to support the credit exposure and a process to regularly monitor sponsor performance?
2. Determine if the credit analysis has considered:
   a. If the sponsor is relied on as a secondary source of repayment and not a primary source of repayment?
   b. If the sponsor has a historical pattern of supporting investments, financially or otherwise?
   c. If the degree of support has been documented via a guarantee, comfort level, or verbal assurance?
   d. If there has been a periodic review of the sponsor’s financial statements, an analysis of liquidity, and an analysis of the sponsor’s ability to support multiple deals?
   e. If consideration has been given to the sponsor’s dividend and capital contribution practices and the likelihood that the sponsor will support the borrower as compared to other deals in the sponsor’s portfolio?
Credit Review

1. Does the institution conduct an internal credit review of the leveraged lending portfolio regularly, but at least once per year?
2. Does the institution ensure that credit review personnel have the knowledge and ability to identify risks in the leveraged lending portfolio?

Stress Testing

1. Has the institution developed and implemented guidelines for conducting periodic portfolio stress tests on loans originated to hold and on loans originated to distribute?
2. Has the institution conducted periodic loan and leveraged lending portfolio level stress tests?
3. If applicable, has the leveraged lending portfolio been included in enterprise wide stress tests?
4. Does stress testing of leveraged credits include sensitivity analyses to quantify the potential impact of changing economic and market conditions on the institution’s asset quality, earnings, liquidity, and capital?

Reputational Risk

1. Does the institution have procedures, safeguards, actions, training, and staff reminders about the potential reputational risk associated with poorly underwritten originated leveraged loans?
2. Has there been any failure or apparent failure by the institution to meet its legal responsibilities in underwriting and distributing transactions that could damage its reputation or its ability to compete?

Conflicts of Interest

1. Has the institution developed appropriate policies and procedures to address and to prevent potential conflicts of interest when it has both equity and lending positions?
2. Do policies and procedures:
   a. Clearly define potential conflicts of interest?
   b. Identify appropriate risk-management controls and procedures?
   c. Enable employees to report potential conflicts of interest to managements without fear of retribution?
   d. Ensure compliance with applicable laws?
3. Has management:
   a. Established a training program for employees on appropriate practices to follow to avoid conflicts of interest?
   b. Provided for reporting, tracking, and resolution of any conflicts?

Compliance

1. Does the institution maintain an independent compliance review function to periodically review its leveraged lending activity?
2. Do the institution’s policies include safeguards to prevent violations of anti-tying regulations?
3. How does the institution ensure compliance with applicable securities laws, including disclosure and other regulatory requirements when equity interests and certain debt instruments have been used in leveraged transactions that may constitute “securities” under federal securities laws?
4. Have plans and provisions been developed to ensure compliance with sections 23A and 23B of the Federal Reserve Act and Regulation W?
INTRODUCTION

Leasing is a recognized form of financing for fixed assets that provides a lessee (the customer) the right to use depreciable assets without tying up working capital. Leasing frequently offers the lessee greater flexibility than traditional bank term-loan financing. Leasing also provides the lessor (the owner of the asset) with a generally higher rate of return than lending, but this is in exchange for assuming greater risk or investing more resources in marketing and deal structuring. The higher risk inherent in a typical lease transaction is due to the higher advance to collateral value; a longer payment period; and, in some cases, the lessor’s dependence on the sale of the leased property to recover a portion of the initial investment. In most instances, some or all of the higher rate of return for the lessor is derived from the tax benefits of equipment ownership.

While leases differ from loans in some respects, they are similar from a credit viewpoint because the basic considerations are cash flow, repayment capacity, credit history, management, and projections of future operations. Additional considerations are the type of property being leased and its marketability in the event of default or termination of the lease. However, these latter considerations do not radically alter how an examiner evaluates collateral for a lease. The assumption is that the lessee/borrower will generate sufficient funds to liquidate the lease/debt. Leases are generally structured so that the bank recovers the full cost of the equipment plus an interest factor over the course of the lease term. Sale of the leased property/collateral remains a secondary source of repayment and, except for the estimated residual value at the expiration of the lease, will not, in most cases, become a factor in liquidating the advance.

In general, leasing activities of state member banks are governed by federal tax law and, in some instances, applicable state law. The leasing of personal or real property or acting as agent, broker, or adviser in leasing such property is considered a “closely related nonbanking activity” and is therefore permitted under section 225.28(b)(3) of Regulation Y by a bank holding company (BHC) or subsidiary thereof, in accordance with certain requirements. While not specifically applicable to banks, these criteria provide useful guidelines for reviewing the appropriateness and prudence of bank leasing activities. Any substantial departure from these criteria must be judged in light of safety-and-soundness implications.

A BHC can act as an agent, broker, or adviser in leasing such property only if—

- the lease is on a nonoperating basis1 and
- the initial term of the lease is at least 90 days.

For leases involving real property—

- the effect of the transaction at the inception of the initial lease must be to yield a return that will compensate the lessor for not less than the lessor’s full investment in the property plus the estimated total cost of financing the property over the term of the lease, such return to be derived from rental payments, estimated tax benefits, and the estimated residual value of the property at the expiration of the initial lease; and
- the estimated residual value cannot exceed 25 percent of the acquisition cost of the property to the lessor.

Examiners should ensure that the bank’s policies and procedures appropriately govern its direct-lease-financing activities and that bank management adheres to established policies and procedures. Examiners should also ensure that the bank’s audit and loan-review functions adequately encompass the leasing activity.

1. With respect to the “nonoperating basis” requirement, a BHC may not, directly or indirectly, engage in operating, servicing, maintaining, or repairing leased property during the term of the lease. For automobile leasing, this requirement means that a BHC may not, directly or indirectly, (1) provide servicing, repair, or maintenance of the leased vehicle during the lease term; (2) purchase parts and accessories in bulk or for an individual vehicle after the lessee has taken delivery of the vehicle; (3) provide the loan of an automobile during servicing of the leased vehicle; (4) purchase insurance for the lessee; or (5) provide for the renewal of the vehicle’s license merely as a service to the lessee when the lessee could renew the license without authorization from the lessor. The BHC can arrange for a third party to provide these services or products.
ACCOUNTING FOR LEASES

Since leasing activity became prominent within the last few decades, lessors have employed a number of different methods to account for their investments in leases. Financial Accounting Standards Board (FASB) Statement No. 13, “Accounting for Leases,” effective January 1, 1977, was intended to bring uniformity to lease accounting. Pursuant to the guidance, a lease is generally structured as a direct financing lease and reported as such on the institution’s accounting records. A direct financing lease is a type of capital lease that transfers substantially all the benefits and risks inherent in the ownership of the leased property to the lessee. In addition, collection of the minimum lease payments must be reasonably predictable, and no important uncertainties may exist regarding costs to be incurred by the lessor under the terms of the lease. Although minor variations in accounting methods are still found, most investment-in-leases accounts will be equal to—

- the sum of the minimum lease payments to be received from the lessee, plus
- the unguaranteed residual value (estimated fair market value) of the property at the end of the lease term, reduced by
- the amount of unearned and deferred income to be recognized over the life of the lease.

For the purpose of illustration, assume that property costing $120,000 is leased for a period of 96 months at $1,605 per month, and the estimated residual value (ERV) of the property is $24,000. In this example, income is recognized monthly according to the sum of the months’ digits method. The investment in this lease is calculated below, followed by an explanation of each component of the net investment.

</tbody>
</table>

Rentals Receivable

This account is established in the amount of total rental payments to be received from the lessee. The amount by which the rentals receivable ($154,080) exceeds the cost of the property ($120,000) is the functional equivalent of interest and represents a portion of the income to be recognized over the life of the lease. In the example below, the cost of the property is temporarily charged to a fixed-asset account, then transferred to rentals receivable.

---

3. FASB Statement No. 13, paragraph 7, outlines in detail certain criteria that a lease must meet for it to be classified as a capital lease. (See also the call report instructions.)

November 2000

Commercial Bank Examination Manual
Estimated Residual Value

The estimated residual value represents the proceeds the lessor expects to realize at the end of the lease term from the sale or re-lease of the property. Exactly as its title states, this account represents only an estimate of future value and does not represent current market value or depreciated book value. The residual value at the end of the lease term is considered to be income, and the corresponding credit for this asset account is posted to unearned income.

The balance of the ERV account does not normally change significantly during the lease term. The unguaranteed residual value should be reviewed at least annually to determine whether a decline, other than a temporary one, has occurred in its estimated value. If a decline is not temporary, the accounting for the lease transaction should be revised using the new estimate, and the resulting loss should be recognized in the period that the change is made. Upward adjustments or increases in the residual value are not recognized.

After the end of the term, the residual value account is eliminated from the books upon sale, re-lease, or other disposition of the property. If the amount of proceeds received differs from the estimated residual value, the difference will be recognized as either a gain or loss, whichever is appropriate.

Unearned Income

This liability account has a credit balance and is netted against the total of rentals receivable and the ERV for balance-sheet presentation. Its component parts are the “interest” income equal to the excess of rentals receivable over the cost of the property and the income to be realized from disposition of the property at the end of the lease term. Each of these components is recognized as income throughout the life of the lease by periodic transfers to earned income. Unearned income is amortized to income over the lease term to produce a constant periodic rate of return on the net investment in the lease. Any other method, such as the sum-of-the-months’-digits method, may be used if the results obtained are not materially different from those that would result from the interest method described in the preceding sentence and if the resulting impact does not overstate income during the current period. Loan-origination fees and initial direct costs, such as commissions and fees that are incurred by the lessor in negotiating and consummating the lease, are offset against each other, and the resulting net amount is deferred and recognized over the lease term. The practice of recognizing a portion of the unearned income at the inception of the lease to offset initial direct costs is no longer acceptable.
Depreciation

For certain leases, the lessor is entitled to claim depreciation for tax purposes. However, for financial statement purposes, no depreciation for leased property will appear on the income statement and no accumulated depreciation will appear on the balance sheet. If the lessor is entitled to the benefits of depreciation, then, for tax purposes only, depreciation will be calculated and will reduce the lessor’s tax liability.

The lessor’s entitlement to depreciation tax benefits is a function of the type of lease arrangement negotiated. When the lessor retains title to the asset and owns the asset at the expiration of the lease, the lessor may take depreciation into account for tax purposes. These characteristics are typical of a “true,” “net,” or “capital” lease, terms often used interchangeably in the industry. In a “financing” lease, the lessee rather than the lessor acquires title to the property at the expiration of the lease and is entitled to depreciation tax benefits. Accordingly, the lessor will charge the lessee a higher periodic lease payment (for a higher “rate of return”) to offset its loss of depreciation tax benefits.

Balance-Sheet Presentation

Lease receivables are to be reported on the balance sheet as the single amount “net investment” (see below). If the lessor has established an allowance for possible lease losses, this amount is included in the total allowance for loan and lease losses and represents a deduction from the net investment. Footnotes to the balance sheet should disclose the components of the net investment, as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rentals receivable</td>
<td>$154,080</td>
</tr>
<tr>
<td>Est. residual value</td>
<td>24,000</td>
</tr>
<tr>
<td>Gross investment</td>
<td>178,080</td>
</tr>
<tr>
<td>Less:</td>
<td></td>
</tr>
<tr>
<td>Unearned income</td>
<td>58,080</td>
</tr>
<tr>
<td>Net investment</td>
<td>$120,000</td>
</tr>
</tbody>
</table>

For call report purposes, lease financing receivables are reported net of unearned income as part of an institution’s total loans.

Classification

If it is deemed appropriate to classify a lease, the amount at which the lease would be classified is the net investment. For example, assume that 94 of the 96 payments have been received on the above lease, that income has been recognized monthly according to the sum-of-the-months'-digits method, and that the lease is now considered a loss. Its balance on the books is $27,173, as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rentals receivable</td>
<td>$3,210</td>
</tr>
<tr>
<td>Est. residual value</td>
<td>24,000</td>
</tr>
<tr>
<td>Gross investment</td>
<td>27,210</td>
</tr>
<tr>
<td>Less:</td>
<td></td>
</tr>
<tr>
<td>Unearned income</td>
<td>22</td>
</tr>
<tr>
<td>Unearned income (ERV)</td>
<td>15</td>
</tr>
<tr>
<td>Net investment</td>
<td>27,173</td>
</tr>
</tbody>
</table>

Classification of the $27,173 balance of this lease involves classifying $3,188 of the unrecovered portion of the cost of the property ($3,210 less $22 unearned income) plus $23,985 of income that has already been recognized in anticipation of receiving the ERV ($24,000 less $15 not yet recognized). In short, the calculation is $3,188 + $23,985 = $27,173.

Charging off the ERV included in the net investment treats the lease as if the underlying property has no value and, in effect, reverses the unearned income that has been recognized in anticipation of selling the leased property at its recorded ERV. Accordingly, if the property does have value, the $27,173 classified should be reduced by the net amount that the lessor could realize by selling the property.

Delinquency

It is appropriate for the examination report to state the percentage of delinquency in the lease portfolio. The percentage is calculated by dividing the aggregate rentals receivable on delinquent leases (less the “interest” components of their unearned income accounts) by the total of rentals receivable on all leases (less the “interest” components of their unearned income accounts). ERVs would not be included in the
delinquent amounts since they do not represent obligations of the lessees.

If the lease obligation in the previously described classification example was the only delinquent obligation in a portfolio of leases with component accounts as shown below, the rate of delinquency in the portfolio would be 3.4 percent.

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rentals receivable</td>
<td>$ 94,411</td>
</tr>
<tr>
<td>Est. residual value</td>
<td>$ 705,882</td>
</tr>
<tr>
<td>Gross investment</td>
<td>$ 800,293</td>
</tr>
<tr>
<td>Less:</td>
<td></td>
</tr>
<tr>
<td>Unearned income</td>
<td>$ 647</td>
</tr>
<tr>
<td>Unearned income (ERV)</td>
<td>$ 441</td>
</tr>
<tr>
<td>Net investment</td>
<td>$ 799,205</td>
</tr>
</tbody>
</table>

\[
\text{Rate of delinquency} = \frac{\text{Amount of delinquent obligation}}{\text{Total investments}} = \frac{3,210}{94,411 - 647} = 3.4\%
\]

Termination of a Lease

The termination of a lease is recognized in the income of the period in which the termination occurs by eliminating the remaining net investment from the lessor’s account. The lease property is then recorded as an asset using the lower of the original cost, present fair value, or present carrying amount.

LEVERAGED LEASES

Leveraged leasing is a specialized form of financing and should only be pursued by banks with the appropriate expertise. Part of the examiner’s duty is to determine that the personnel who structure and follow leveraged leases are highly qualified in that area and have a current working knowledge of applicable tax laws and regulations.

A leveraged lease transaction is complex in terms of size, the number of parties involved, legal involvement, and, of course, the unique advantages to all parties. Legal expenses and administrative costs associated with leveraged leasing limit its use to financing large capital-equipment projects. By tailoring the tax effects to the needs of the parties involved, the structure of a leveraged lease permits multiple tax benefits and maximum investment return. The lessor is in search of a tax shelter to offset income generated from other sources, while the lessee bargains for lower rental charges in exchange for the tax advantage the lessor receives. The result of this trade-off ideally produces an attractive rate of return on the lessor’s invested dollars, while the lessee conserves working capital and obtains financing at a cost substantially below the lessee’s usual borrowing rate.

In a leveraged lease, the lessor purchases and becomes owner of the equipment by providing only a percentage (usually 20 to 40 percent) of the capital needed. The rest of the purchase price is borrowed by the lessor from long-term lenders on a nonrecourse basis. The borrowings are secured by a first lien on the equipment, an assignment of the lease, and an assignment of the lease payments.

If the purchase price of the equipment is large, there may be several equity owners and debtholders involved. In this case, an owner trustee may be named to hold title to the equipment and to represent the equity owners. An indenture trustee may be named to hold the mortgage on the property for the benefit of the debtholders.

The lessor (equity holder), as the owner, is allowed to take accelerated depreciation based on the total cost of the equipment. The lessor might also receive a small portion of the rental payments, but the desired yield is obtained from the timing of depreciation. The effect gives the lessor a return through the small rentals and allows the lessor to retain the residual value rights to the equipment at the end of the lease period.

The bank should consider its present and anticipated future tax position, its future money rates, and the residual value of the property. The return on the bank’s investment in leveraged leases depends largely on these factors. A slight change can precipitate significant changes in the bank’s position. Anticipated proceeds from the sale or re-leasing of the property at the conclusion of the lease term (the residual value) is an important element of the return and should be estimated carefully. It will, in most cases, exceed 25 percent of the purchase price because of certain tax requirements. The bank should continually evaluate the property for misuse, obsolescence, or market decline, all of which can rapidly deteriorate the value of the property before the lease term expires. In these cases, the
lessee may default, often with expensive consequences for the lessors.

The examiner should remember that a portion of the bank’s recapture of its investment in leased property is often predicated on the inherent tax benefits. Accordingly, a decline in the bank’s ability to use these tax benefits could reduce or eliminate the profitability of the venture.

The complexity of leveraged leasing should motivate the examiner to carefully scrutinize each indenture and all parties concerned before any analysis begins. The examiner should approach each lease from the standpoint of the creditworthiness of the lessee and the continuous assessment of the value of the leased property. If the lessee defaults, the loan participant is in a position to foreclose and leave the bank without a way to recapture the carrying value of its investment. Therefore, the general rule is that a bank should not enter into a leveraged lease transaction with any party to which it would not normally extend unsecured credit.

The lessor’s net investment in a leveraged lease shall be recorded in a manner similar to that for a direct financing lease, but net of the principal and interest on the nonrecourse debt. The components of the net investment, including related deferred taxes, should be fully disclosed in the footnotes to the lessor’s financial statements when leveraged leasing is a significant part of a bank’s business activities. (See appendix E of FASB 13 for an example of how to account for a leveraged lease.)
Direct Financing Leases
Examination Objectives
Effective date May 1996

Section 2120.2

1. To determine if lease policies, practices, procedures, objectives, and internal controls are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the adequacy of collateral, credit quality, and collectibility.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, objectives, or internal controls are deficient or when violations of laws or regulations have been noted.
Direct Financing Leases
Examination Procedures
Effective date March 1984

1. If selected for implementation, complete or update the Direct Financing Leases section of the Internal Control Questionnaire.

2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the examination.

3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned “Internal Control” and determine if corrections have been accomplished.

4. The following information should be available at the start of the examination:
   a. trial balance of all leases and outstanding credits
   b. listing of accounts on which payments are delinquent 30 days or more or on which payments are otherwise not being made according to schedule
   c. listing of available lines of credit
   d. minutes of board and executive meetings since the date of the previous examination

5. Using an appropriate sampling technique, select leases for review.

6. Obtain liability and other information on common borrowers from examiners assigned cash items, overdrafts, and other loan areas and together decide who will review the borrowing relationship.

7. For leases selected for review, analyze the creditworthiness of the lessees. Consideration is given to the figures derived from the lessee’s financial statements, as well as to cash flow, trends and projections of growth in sales and income, and the qualifications of management. Delinquency on a lease obligation is potentially more serious than delinquency on a conventional loan because, if the property under lease is necessary for the lessee’s continued production of income, as is frequently the case, the lessee’s financial condition will be seriously deteriorated before the lessee is willing to risk losing the property by default.

8. For those leases which might result in loss to the lessor or for which financial information was not adequate to make such a determination, transcribe the following information to line cards:
   a. name and line of business of lessee
   b. name of guarantor(s)
   c. original date of the lease contract
   d. original amount of the rentals receivable
   e. ERV of the property
   f. amount of ITC to be realized
   g. book value of the investment in the lease as of the examination date
   h. cost of the property
   i. description and location of the property
   j. amount and frequency of rental payments
   k. original amount, term, rate, and schedule of amortization of any nonrecourse debt associated with the lease
   l. lessor’s percentage of equity participation in the lease obligation, if applicable
   m. summary financial data indicating the creditworthiness of the lessee and guarantors, if applicable

9. Before the conclusion of the examination, discuss with management all classified leases. Inadequate or negative cash flow and unfavorable trends reflected in financial statements of the lessee are usually indicative of a substandard lease. Leases classified doubtful typically include those on which payments are delinquent for an extended period and those on which the lessor’s recovery of investment is dependent upon an event of unknown probability, such as a pending lawsuit or insurance claim. A loss classification results from the lessee’s inability or refusal to continue making payments.

10. Prepare write-ups to support the classifications. The write-up should include the lessee’s type of business, present financial status, circumstances that led to the classification, the probability that the terms of the lease can be met, and the amount of protection afforded by sale or release of the underlying property.

11. Review a sample of the lessor’s computations of lease yields to determine whether the lessor will recover the cost of purchasing and the after-tax cost of financing the

Commercial Bank Examination Manual
May 1996
Page 1
property during the initial term of the lease or 40 years, whichever is less.

Shown below are the amounts which may be applied against the purchase and financing costs in calculating recovery.

a. Total of lease payments and ERV, reduced by the estimated taxes to be paid on unearned income. The amount of the ERV used in this calculation may not exceed 20 percent of acquisition cost, though it is permissible for the ERV to be carried on the books in an amount exceeding 20 percent of cost.

b. ITC to be realized by the lessor.

c. Tax benefits resulting from depreciation charges, equal to total allowable depreciation times the lessor’s marginal tax rate. Depreciation for tax purposes is calculated on the basis of total original cost ignoring ERV. However, over time, accumulated depreciation may not exceed original cost less ERV.

d. For personal property leases of seven years or less, any additional amount provided by an unconditional guarantee of the lessor’s full recovery of investment plus financing cost. The guarantee can be made by a lessee, an independent third party, or manufacturer deemed creditworthy by the lessor. In determining full-payout compliance, the guarantee may only account for up to 60 percent of the acquisition cost of the property.

The following example of a payout calculation assumes a marginal tax rate of 46 percent and depreciation of the full cost of the property for tax purposes:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total lease payments</td>
<td>$154,080</td>
</tr>
<tr>
<td>ERV (tax benefit)</td>
<td>24,000</td>
</tr>
<tr>
<td>ITC (tax benefit)</td>
<td>12,000</td>
</tr>
<tr>
<td>Depreciation—tax benefit</td>
<td>55,200</td>
</tr>
<tr>
<td>(46% × 120,000)</td>
<td></td>
</tr>
<tr>
<td>Subtotal</td>
<td>$245,280</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less taxes on unearned income:</td>
<td></td>
</tr>
<tr>
<td>(“interest”)</td>
<td>$34,080</td>
</tr>
<tr>
<td>(ERV)</td>
<td>24,000</td>
</tr>
<tr>
<td>46% × $58,080</td>
<td>26,717</td>
</tr>
<tr>
<td>$218,563</td>
<td></td>
</tr>
</tbody>
</table>

After deducting the $120,000 cost of the property from the net cash flow provided by the lease, after-tax funds of $98,563 are available to cover the cost of financing the property. Dividing this amount by the assumed marginal tax rate of 46 percent indicates that the equivalent amount in pretax funds is $214,267. If this $214,267 were paid as interest over a 96-month period to finance the acquisition of property costing $120,000, the annual rate of interest (internal rate of return) would be 32.0 percent (see compound interest chart). No further calculation need be made since this high percentage based on funds available to cover finance costs would exceed by far the lessor’s likely approximate pre-tax cost of funds. However, in those instances in which the percentage calculated is believed to closely approximate the cost of funds, the lessor should be asked to explain the manner by which its recovery of cost is assured.

If this example were a personal property lease with a term of seven years or less, any qualified guarantee up to 60 percent of acquisition cost could have been considered as an addition to the funds available to provide the lessor with full payout.

As mentioned in the introduction to this section, an exception to the full-payout requirement is made for leases to those governmental entities that are prohibited from entering into leases for periods exceeding one year. In the case of leases to government entities, the lessor should demonstrate that the lease is expected to be continually renewed until the cost is fully recovered.

12. Review records to determine that the lease transaction constitutes a valid lease for tax purposes. If the agreement is ruled by the IRS to be a “conditional sale,” the lessor would not be entitled to depreciation charges or the ITC, and the lessee would be required to deduct depreciation charges rather than lease payments from taxable income. It is preferable that the lessor obtain a private ruling from the IRS to make certain that it qualifies as the original user of the property and is therefore entitled to the previously mentioned tax benefits. Circumstances that the IRS considers as evidence of a conditional sale rather than a lease are as follows:

a. portions of the rental payments are made
applicable to an equity interest of the lessee in the property.

b. the lessee acquires title to the property after making a specified number of payments.

c. the payments made by the lessee for a short period of use constitute an unusually large percentage of the purchase price of the property.

d. the total rental payments to be received exceed the current fair rental value of the property, indicating that the payments include an element other than rent.

e. the lessee has an option to purchase the property at a price that is nominal in relation to the value of the property or to the total amount of rental payments.

f. a portion of each rental payment is readily identifiable as the equivalent of interest.

13. Ascertain whether title to the property rests with the lessor and that the lessor has taken steps to protect its ownership rights. Evidence of filing under the Uniform Commercial Code, where appropriate, should be found in the documentation file. Aircraft should be registered with the FAA, interstate vehicles with the ICC, and ships with the Coast Guard.

14. Check for cancellation or other provisions in the contract that could jeopardize the full-payout status of the lease. There is no need to take exception to a cancellation provision that provides for payment by the lessee of an amount that allows the lessor to fully recover its investment in the property.

15. Check that insurance coverage on leased property is provided by the lessee in compliance with all insurance provisions of the contract in an amount sufficient to protect against loss from property damage. Public liability insurance should also be provided to protect against loss from lawsuits that could arise from situations such as the crash of leased aircraft.

16. Review the lessee’s duties under the contract with respect to repairs and taxes. Determine whether the lessor has instituted procedures to check that the lessee’s required duties are being performed.

17. Review the status of all property acquired for lease purposes but which is not now under lease. Determine the reason for the “off-lease” status of the property, ascertain the realizable value of the property, and investigate whether the off-lease property will be sold or re-leased within the required two-year period.

18. Investigate the lessor’s procedures for periodic review of the reasonableness of the estimated residual value. The estimate should be reviewed at least annually and reduced in amount on the books if the value has declined on a presumably permanent basis.

19. Review past operations of the lessee company to determine if projections of income and ERV have been realistic in light of actual experience.

20. Review the minutes of the meetings of the board and executive committees to determine whether purchases of property and delinquent leases are reported to the board.

21. Determine if the bank has entered into leases with companies owned or controlled by any director or officer. Compare the rates and terms on such leases to the rates and terms offered on leases to companies of similar credit standing.

22. Check for lease concentrations to any one lessee or industry and prepare a comment for the examination report if any concentration is considered unwarranted.

23. Determine whether the bank has established limits for the maximum amount of “credit” to be extended to a single lessee. If these limits have been established, investigate whether the bank adheres to them. If they have not been established, inquire as to the bank’s policy on this matter.

24. Check for action taken on matters criticized in the most recent audit reports and the previous examination report. Determine if leases classified “loss” were removed from the books.

25. Discuss with appropriate officer(s) and prepare summaries in appropriate report form of—

a. delinquent leases, including those considered “A” paper;

b. violations of laws and regulations;

c. leases not supported by current and complete financial information;

d. leases on which documentation is deficient;

e. equipment deficiencies revealed in inspection reports;

f. off-lease equipment;

g. concentrations of leases;

h. classified leases; and
i. leases to major shareholders, employees, officers, directors, and/or their interests.

26. Update workpapers with any information that will facilitate future examinations.
Direct Financing Leases
Internal Control Questionnaire
Effective date March 1984
Section 2120.4

Review the bank’s internal controls, policies, practices, and procedures for making and servicing direct lease financing. The bank’s system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES AND OBJECTIVES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written direct lease financing policies that—
   a. establish procedures for reviewing direct lease financing applications,
   b. define qualified property, and
   c. establish minimum standards for documentation?

2. Are direct lease financing policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

*3. Is the preparation and posting of subsidiary direct lease financing records performed or reviewed by persons who do not also—
   a. issue official checks and drafts or
   b. handle cash?

*4. Are the subsidiary direct lease financing records reconciled, at least monthly, with the appropriate general ledger accounts, and are reconciling items investigated by persons who do not also handle cash?

5. Are delinquent account collection requests and past-due notices checked to the trial balances that are used in reconciling subsidiary records of direct lease receivables to general ledger accounts, and are they handled only by persons who do not also handle cash?

6. Are inquiries about lease balances received and investigated by persons who do not also handle cash or pass adjustments?

*7. Are documents supporting recorded credit adjustments checked or tested subsequently by persons who do not also handle cash or initiate transactions (if so, explain briefly)?

INTEREST AND/OR RENT

*8. Is the preparation and posting of interest and/or rent records performed or reviewed by persons who do not also—
   a. issue official checks and drafts or
   b. handle cash?

DEPRECIATION (OPERATING LEASES)

9. Is the preparation and posting of periodic depreciation records performed or reviewed by persons who do not also have sole custody of property?

10. Do the bank’s procedures require that depreciation expense be charged at least quarterly?

*11. Are the subsidiary depreciation records balanced, at least quarterly, to the appropriate general ledger controls by persons who do not also have sole custody of property?

OTHER

*12. Are periodic property inventory reports prepared by the lessee or trustee?

13. Do reports clearly indicate the condition and location of the leased property?

14. When inspection of the equipment leased is either infrequent or not feasible, has the bank taken measures to protect its equipment and prevent its misuse?

15. At lease termination, are outside appraisals made of property before bids are accepted?

16. Are review procedures in effect to maintain the necessary insurance coverage on all leased assets regardless of whether the cost of this insurance is to be borne by the bank or the lessee?

17. Does the bank have insurance coverage against its potential public liability risk as owner/lessor of the property?
18. Are safeguards in effect to prevent the possibility of conflict of interest or self-dealing in selecting the seller, servicer, insurer, or purchaser for the equipment leased?

19. Are separate files maintained for each lease transaction?

20. Does each file supporting the acquisition and disposal of assets reflect the review and written approval of an officer other than the person who actually controlled the disbursement and receipt of funds?

21. Are all leases required to be supported by current credit information?

22. Do modifications of terms require the approval of the board or committee that initially approved the lease?

23. If commitments are issued contingent upon receipt of certain satisfactory information, has authority to reject or accept such information been vested in someone other than the account officer?

24. Is residual value substantiated by periodic appraisals?

25. Are reports listing past-due leases and/or those receiving special attention submitted to the board for review at their regular meetings?

CONCLUSION

26. Is the foregoing information considered an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.

27. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
This section applies to most types of loans found in a consumer loan department. Consumer credit, also referred to as retail credit, is defined as credit extended to individuals for household, family, and other personal expenditures, rather than credit extended for use in a business or for home purchases. Consumer credit loans are loans not ordinarily maintained by either the commercial or real estate loan departments. Consumer loans frequently make up the largest number of loans originated and serviced by the bank, but their dollar volume may be significantly less than for other types of loans. Consumer credit loans may be secured or unsecured and are usually structured with short- or medium-term maturities. Broadly defined, consumer credit includes all forms of closed-end credit (installment credit) and open-end credit (revolving credit), such as check credit and credit card plans. Consumer credit also includes loans secured by an individual’s personal residence, such as home equity and home-improvement loans. Home equity loans are discussed in “Real Estate Loans,” section 2090.1.

The examiner should determine the adequacy of the consumer credit department’s overall policies, procedures, and credit quality. The examiner’s goal should not be limited to identifying current portfolio problems but should also include identifying potential problems that may result from liberal lending policies, unfavorable trends, potentially imprudent concentrations, or nonadherence to established policies. Banks lacking written policies, or failing to implement or follow established policies effectively, should be criticized in the report of examination.

TYPES OF CONSUMER CREDIT

Installment Loans

Many traditional forms of installment credit have standard monthly payments and fixed repayment schedules of one to five years. These loans are made with either fixed or variable interest rates that are based on specific indices. Installment loans fill a variety of needs, such as financing the purchase of an automobile or household appliance, financing home improvement, or consolidating debt. These loans may be unsecured or secured by an assignment of title, as in an automobile loan, or by money in a bank account.

A bank’s installment loan portfolio usually consists of a large number of small loans, each scheduled to be amortized over a specific period. Most installment loans are made for consumer purchases; however, amortizing commercial loans are sometimes placed in the installment loan portfolio to facilitate their servicing. In addition, the installment loan portfolio can consist of both loans made by the bank and loans purchased from retail merchants who originated the loans to finance the sale of goods to their customers.

Indirect Installment Loans

Indirect installment loans are also known as dealer loans, sales-finance contracts, or dealer paper. In this type of consumer credit, the bank purchases, sometimes at a discount, loans originated by retailers of consumer goods, such as a car dealer. This type of lending is called indirect lending because the dealer’s customer indirectly becomes a customer of the bank.

The sales-finance contracts purchased from dealers of consumer goods are generally closed-end installment loans with a fixed rate of interest. These loans are purchased in one of three ways depending on the dealer and the circumstances of purchase:

• **Without recourse.** The bank is responsible for collecting the account, curing the delinquency, or applying the deficiency against dealer reserves or holdback accounts. The majority of sales-finance contracts with dealers are without recourse.

• **Limited recourse.** The dealer will repurchase the loan, cure the default, or replace the loan only under certain circumstances in accordance with the terms of the agreement between the bank and the dealer.

• **With recourse.** The dealer is required to repurchase the loan from the bank on demand, typically within 90 to 120 days of default.

In the case of recourse and limited-recourse loans, legal lending limitations need to be considered. Sales-finance contracts purchased without recourse from dealers should be based on the
individual’s creditworthiness, not on the financial strength of the dealership itself. The contrac-
tacts purchased should comply with the bank’s loan policy for similar consumer loans. Excep-
tions to the bank’s policies and procedures should be documented in the credit file and have
the appropriate level of approval. For sales-finance contracts purchased with recourse that
do not meet the bank’s normal credit criteria and are purchased on the basis of the added strength
of the dealer, the bank should document the minimum criteria for such loans and the specific
bank-approved financial covenants with which the dealer must comply.

Check Credit and
Overdraft Protection

Check credit is defined, for the purpose of this
manual, as the granting of unsecured, interest-
bearing revolving lines of credit to individuals
or businesses. Such extensions of credit are
subject to the disclosure requirements of the
Truth in Lending Act (TILA). Banks provide
check-credit services through overdraft protect-
ion, cash reserves, and special drafts.

The most common product is overdraft line-
of-credit protection, whereby a transfer is made
from a preestablished line of credit to a custom-
er’s deposit account when a check is presented
that would cause the account to be overdrawn.
Transfers normally are made in specific incre-
ments, up to a maximum line of credit approved
by the bank.

In a cash reserve system, the customer must
request that the bank transfer funds from a
preestablished line of credit to his or her deposit
account. To avoid overdrawning the account, the
customer must request the transfer before nego-
tiating a check against the account.

In a special draft system, the customer nego-
tiates a special check drawn directly against a
preestablished line of credit. In this method,
deposit accounts are not affected.

In all three systems, the bank periodically
provides its check-credit customers with a state-
ment of account activity. Required minimum
payments are computed as a fraction of the
balance in the account on the cycle date and may
be made by automatic charges to the deposit
account.

Banks also provide credit through ad hoc and
automated overdraft-protection programs. Typi-
cally, ad hoc programs involve insured deposi-
tory institutions’ providing discretionary cover-
age of customers’ overdrafts on a case-by-case
basis. Automated overdraft-protection programs,
also referred to as ‘‘bounced-check protection’’ or
‘‘overdraft protection,’’ are credit programs increas-
ingly offered by institutions to transaction-
account (typically deposit-account) customers
as an alternative to traditional check-credit and
ad hoc programs for covering overdrafts.

Under both the ad hoc and automated pro-
grams, regardless of whether an overdraft is
paid, institutions typically impose a fee when an
overdraft occurs. This fee is referred to as a
nonsufficient-funds, or NSF, fee. Unlike the
discretionary ad hoc accommodation typically
provided to those lacking a line of credit or other
type of overdraft service (such as linked
accounts), automated programs are often mar-
Keted to consumers and may give consumers the
impression that the service is a guaranteed short-
term credit facility. These marketed programs
typically provide consumers with an express
overdraft ‘‘limit’’ that applies to their account.

Neither the ad hoc nor the automated over-
draft programs are subject to the annual percent-
age rate (APR) disclosure requirements of TILA.
These programs are, however, subject to the
disclosure requirements of the Truth in Savings
Act (TISA) and Regulation DD.

The specific details of institutions’ overdraft-
protection programs have varied over time. The
programs currently offered by institutions incor-
porate some or all of the following characteristics:

• Institutions inform consumers that overdraft
protection is a feature of their accounts and
promote consumers’ use of the service. Insti-
tutions may also inform consumers of their
aggregate dollar limit under the overdraft-
protection program.

• Coverage is automatic for consumers who
meet the institution’s criteria (for example,
the account has been open a certain number
of days, and deposits are made regularly).
Typically, the institution performs no credit
underwriting.

• Overdrafts generally are paid up to the aggre-
gate limit set by the institution for the specific
class of accounts. Limits are typically $100 to
$500.

• Many program disclosures state that payment
of an overdraft is discretionary on the part of
the institution and may disclaim any legal
obligation of the institution to pay any overdraft.

- The service may extend to check transactions as well as other transactions, such as withdrawals at automated teller machines (ATMs), transactions using debit cards, preauthorized automatic debits from a consumer’s account, telephone-initiated funds transfers, and online banking transactions.
- A flat fee is charged each time the service is triggered and an overdraft item is paid. Commonly, a fee in the same amount would be charged even if the overdraft item was not paid for nonsufficient funds. A daily fee may also apply for each day the account remains overdrawn.
- Some institutions offer closed-end loans to consumers who do not bring their accounts to a positive balance within a specified time period. These repayment plans allow consumers to repay their overdrafts and fees in installments.

To assist insured depository institutions in the responsible disclosure and administration of overdraft-protection services, particularly those that are marketed to consumers (a depository institution’s customers), the federal banking and thrift agencies issued Joint Guidance on Overdraft Protection Programs. The interagency guidance, issued on February 18, 2005, addresses the agencies’ concerns about the potentially misleading implementation, marketing, disclosure, and operation of these programs. (See the “Best Practices” section of the guidance.) The guidance also discusses the agencies’ safety-and-soundness considerations and the legal risks of such programs. Institutions are encouraged to carefully review their programs to ensure that their marketing and other communications concerning the programs (1) do not mislead consumers into believing that their programs are traditional lines of credit (when they are not) or that payment of overdrafts is guaranteed, (2) do not mislead consumers about their account balance or the costs and scope of the overdraft protection offered, and (3) do not encourage irresponsible consumer financial behavior that may potentially increase the institution’s risk. See SR-05-3 and the attached interagency guidance for detailed discussions of the agencies’ concerns and best practices (for marketing and communication with consumers and program features and operation). See also section 3000.1.

Safety-and-Soundness Considerations

When overdrafts are paid, credit is extended to an institution’s customers. To the extent overdraft-protection programs lack individual account underwriting, these programs may expose an institution to more credit risk (higher delinquencies and losses) than overdraft lines of credit and other traditional overdraft-protection options.

Institutions providing overdraft-protection programs should adopt written policies and procedures adequate to address the credit, operational, and other risks associated with these types of programs. Prudent risk-management practices include the establishment of express account-eligibility standards and well-defined and properly documented dollar-limit decision criteria. Institutions should also monitor these accounts on an ongoing basis and be able to identify consumers who may represent an undue credit risk to the institution. Overdraft-protection programs should be administered and adjusted, as needed, to ensure that credit risk remains in line with expectations. Program adjustments may include, as appropriate, disqualification of a consumer from future overdraft protection. Management should regularly receive reports sufficient to enable it to identify, measure, and manage overdraft volume, profitability, and credit performance.

Institutions are also expected to incorporate prudent risk-management practices related to account repayment and suspension of overdraft-protection services. These practices include the establishment of specific time frames for when consumers must pay off their overdraft balances. For example, procedures should be established for the suspension of overdraft services when an account holder no longer meets the eligibility criteria (such as when the account holder has declared bankruptcy or defaulted on another loan at the bank) as well as for when an account holder does not repay an overdraft. In addition, overdraft balances should generally be charged off when considered uncollectible, but no later than 60 days from the date first overdrawn. In some cases, an institution may allow a consumer to cover an overdraft through an extended repayment plan when the consumer is unable to bring the account to a positive balance within the required time frames. The existence of the repayment plan, however, would not extend the charge-off determination period beyond 60 days (or a shorter period if applicable), as measured from the date of the overdraft. Any payments

Commercial Bank Examination Manual

May 2005
Page 3
received after the account is charged off (up to the amount charged off against the allowance for loan and lease losses) should be reported as a recovery.

Some overdrafts are rewritten as loan obligations in accordance with an institution’s loan policy and are supported by a documented assessment of that consumer’s ability to repay. In those instances, the institution should use the charge-off time frames described in the Federal Financial Institutions Examination Council’s Uniform Retail Credit Classification and Account Management Policy (revised June 6, 2000; effective December 31, 2000). (See SR-00-8.)

Institutions should follow generally accepted accounting principles and the instructions for the Reports of Condition and Income (Call Reports) to report income and loss recognition on overdraft-protection programs. Overdraft balances should be reported on the Report of Condition of the bank Call Report as loans. Accordingly, overdraft losses should be charged off against the allowance for loan and lease losses. All institutions are expected to adopt rigorous loss-estimation processes to ensure that overdraft-fee income is accurately measured. Such methods may include providing loss allowances for uncollectible fees or, alternatively, only recognizing that portion of earned fees estimated to be collectible. The procedures for estimating an adequate allowance should be documented in accordance with the July 2, 2001, interagency Policy Statement on the Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions. (See SR-01-17.)

If an institution advises account holders of the available amount of overdraft protection, for example, when accounts are opened or on depositors’ account statements or automated teller machine (ATM) receipts, the institution should report the available amount of overdraft protection with its other legally binding commitments, for Call Report purposes. These available amounts, therefore, should be reported as “unused commitments.”

Risk-Based Capital Treatment of Overdraft Balances

Banks are expected to provide proper risk-based capital treatment of outstanding overdrawn balances and unused commitments. Overdraft balances should be risk-weighted according to the obligor. Under the risk-based capital guidelines, the capital charge on the unused portion of commitments is generally based on an off-balance-sheet credit-conversion factor and the risk weight appropriate to the obligor. (See section 3020.1.) In general, the capital guidelines provide that the unused portion of a commitment is subject to a zero percent credit-conversion factor if the commitment has an original maturity of one year or less, or to a 50 percent credit-conversion factor if the commitment has an original maturity over one year. Under the guidelines, a zero percent conversion factor also applies to the unused portion of a “retail credit card line” or “related plan” if it is unconditionally cancelable by the institution in accordance with applicable law. (See 12 CFR 208, appendix A, section III.D.5.) The phrase “related plans” in the guidelines includes overdraft checking plans. The overdraft-protection programs discussed in the agencies’ February 18, 2005, guidance fall within the meaning of “related plans” as a type of “overdraft checking plan” for the purposes of the federal banking agencies’ risk-based capital guidelines. Consequently, overdraft-protection programs that are unconditionally cancelable by the institution in accordance with applicable law would qualify for a zero percent credit-conversion factor.

Institutions entering into overdraft-protection contracts with third-party vendors must conduct thorough due-diligence reviews before signing a contract. The November 30, 2000, interagency guidance Risk Management of Outsourced Technology Services outlines the agencies’ expectations for prudent practices in this area. (See section 4060.1 and SR-00-17.)

Legal Risks

Overdraft-protection programs must comply with all applicable federal laws and regulations, including the Federal Trade Commission Act (as outlined below). State laws may also be applicable, including usury and criminal laws, as well as laws on unfair or deceptive acts or practices. Before implementing an overdraft-protection plan...
program, institutions should have their program reviewed by counsel for compliance with all applicable laws. Further, although the agencies’ guidance outlines the applicable federal laws and regulations as of February 2005, such laws and regulations are subject to amendment. Accordingly, institutions should monitor applicable laws and regulations for revisions and ensure that their overdraft-protection programs are fully compliant.

*Federal Trade Commission Act.* Section 5 of the Federal Trade Commission Act (the FTC Act) prohibits unfair or deceptive acts or practices (15 USC 45). The banking agencies enforce this section pursuant to their authority in section 8 of the Federal Deposit Insurance Act (12 USC 1818). An act or practice is unfair if it causes or is likely to cause substantial injury to consumers that is not reasonably avoidable by consumers themselves and not outweighed by countervailing benefits to consumers or to competition. An act or practice is deceptive if, in general, it is a representation, omission, or practice that is likely to mislead a consumer acting reasonably under the circumstances and if the representation, omission, or practice is material.

Overdraft-protection programs may raise issues under the FTC Act, depending on how the programs are marketed and implemented. Institutions should closely review all aspects of their overdraft-protection programs, especially any materials that inform consumers about the programs, to avoid engaging in deceptive, inaccurate, misrepresentative, or unfair practices.

*Examiner’s Review of Delinquencies Involving Check-Credit (Overdraft-Protection) Plans*

Delinquencies are often experienced when an account is at or near the customer’s maximum credit line. Examiners should verify that the following reports are generated for and reviewed by bank management, and examiners should also analyze them as part of the examination process:

- aging of delinquent accounts
- accounts on which payments are made (either
  - on this account or other loans) by drawing on reserves
  - accounts with steady usage

Many banks offer check-credit plans to small businesses; these plans may have a higher-than-normal degree of risk unless they are offered under very stringent controls. In these situations, the examiner’s review should be based on the same factors and criteria used for the review of unsecured commercial loans.

**Credit Card Plans**

Most bank credit card plans are similar. The bank solicits retail merchants, service organizations, and others who agree to accept a credit card in lieu of cash for sales or services performed. The bank assumes the credit risk and charges the nonrecourse sales draft to the individual customer’s credit card account. The bank sends monthly statements to the customer, who may elect to pay the entire amount or to pay in monthly installments, with an additional percentage charge on the outstanding balance each month. A cardholder may also obtain cash advances, which accrue interest from the transaction date, from the bank or automated teller machines.

A bank can be involved in a credit card plan in various ways. Also, the terminology used to describe the manner in which a bank is involved in a credit card plan may vary. The examiner first needs to determine the type of credit card plan that the bank has and then ascertain the degree of risk that the plan poses to the bank.

Both the bank’s customers and the bank itself can generate potential risk in the credit card department. On the customer side, the risk is generally divided into two categories: the misuse of credit and the misuse of the credit card. The potential for credit misuse is reduced by careful screening of cardholders before cards are issued and by monitoring individual accounts for abuse. Credit card misuse may be reduced by establishing controls to prevent the following abuses:

- employees or others from intercepting the card before delivery to the cardholder
- merchants from obtaining control of cards
- fraudulent use of lost or stolen cards
Because credit cards may be easily misused by the cardholders and others who may obtain the cards, strict adherence to appropriate internal controls and operating procedures is essential in any credit card department. The examiner should determine if adequate controls and procedures exist.

Account Management, Risk Management, and the Allowance for Loan and Lease Losses

Credit card lending programs can generate risk through inappropriate account-management, risk-management, and loss-allowance practices. Banks should have and follow prudent policies for credit-line management, over-limit practices, minimum payments, negative amortization, workout and forbearance practices, and recovery practices. In addition, banks should follow generally accepted accounting principles (GAAP), existing interagency policies, and Call Report instructions for income-recognition and loss-allowance practices. In arriving at an overall assessment of the adequacy of a bank’s account-management practices for its credit card lending business, examiners should incorporate the risk profile of the bank, the quality of management reporting, and the adequacy of the bank’s charge-off policies and its allowance for loan and lease losses methodologies and documentation practices. (See SR-03-01 and the FFIEC January 8, 2003, interagency guidance on credit card lending.)

Credit-line management. Banks should carefully consider the repayment capacity of borrowers when assigning initial credit lines or significantly increasing borrowers’ existing credit lines. When a bank inadequately analyzes the repayment capacity of a borrower, practices such as liberal line-increase programs and multiple card strategies can increase the risk profile of a borrower quickly and result in rapid and significant portfolio deterioration.

Credit-line assignments should be managed conservatively using proven credit criteria. Support for credit-line management should include documentation and analysis of decision factors such as a borrower’s repayment history, risk scores, behavior scores, or other relevant criteria.

Banks can significantly increase their credit exposure by offering customers additional cards, including store-specific private-label cards and affinity-relationship cards, without considering their entire relationship with a customer. In extreme cases, some banks may grant additional cards to borrowers who are already experiencing payment problems on their existing cards. Banks that offer multiple credit lines should have sufficient internal controls and management information systems (MIS) to aggregate related exposures and analyze performance before they offer additional credit lines to customers.

Over-limit practices. Account-management practices that do not adequately control authorization and provide for timely repayment of over-limit amounts may significantly increase the credit-risk profile of a bank’s portfolio. While prudent over-limit practices are important for all credit card accounts, such practices are especially important for subprime accounts. Liberal over-limit tolerances and inadequate repayment requirements in subprime accounts can magnify the high risk exposure of the lending bank, and deficient reporting and loss-allowance methodologies can understate the credit risk.

All banks should carefully manage their over-limit practices and focus on reasonable control and timely repayment of amounts that exceed established credit limits. A bank’s MIS should be sufficient to enable its management to identify, measure, manage, and control the unique risks associated with over-limit accounts. Over-limit authorization on open-end accounts, particularly those that are subprime, should be restricted and subject to appropriate policies and controls. The bank’s objective should be to ensure that the borrower remains within prudent established credit limits that increase the likelihood of responsible credit management.

Minimum payment and negative amortization. Competitive pressures and a desire to preserve outstanding balances can lead to a bank’s easing of minimum-payment requirements, which in turn can increase credit risk and mask portfolio quality. These problems are exacerbated when minimum payments consistently fall short of covering all finance charges and fees assessed during the billing cycle and when the outstanding balance continues to build (known as “negative amortization”). In these cases, the lending bank is recording uncollected income by capitalizing the unpaid finance charges and fees into the account balance the customer owes. The pitfalls of negative amortization are magnified when subprime accounts are involved—and are
even more damaging when the condition is prolonged by programmatic, recurring over-limit fees and other charges that are primarily intended to increase recorded income for the lending bank rather than enhance the borrowers’ performance or their access to credit.

The Federal Reserve expects lending banks to require minimum payments that will amortize the current balance over a reasonable period of time, consistent with the unsecured, consumer-oriented nature of the underlying debt and the borrower’s documented creditworthiness. Examiners should criticize prolonged practices involving negative amortization and inappropriate fees, as well as other practices that inordinately compound or protract consumer debt and disguise portfolio performance and quality, all of which raise safety-and-soundness concerns.

**Workout and forbearance practices.** Banks should properly manage workout programs. Areas of concern involve liberal repayment terms with extended amortizations, high charge-off rates, moving accounts from one workout program to another, multiple re-agings, and poor MIS to monitor program performance. Examiners should criticize management and require appropriate corrective action when workout programs are not managed properly. Such actions may include adversely classifying entire segments of portfolios, placing loans on nonaccrual, increasing loss allowances to adequate levels, and accelerating charge-offs to appropriate time frames.

Workout programs should be designed to maximize principal reduction and should generally strive to have borrowers repay credit card debt within 60 months. Repayment terms for workout programs should be consistent with these time frames; exceptions should be clearly documented and supported by compelling evidence that less conservative terms and conditions are warranted. To meet the appropriate time frames, banks may need to substantially reduce or eliminate interest rates and fees on credit card debt so that more of the payment is applied to reducing the principal.

In lieu of workout programs, banks sometimes negotiate settlement agreements with borrowers who are unable to service their unsecured open-end credit. In a settlement arrangement, the bank forgives a portion of the amount owed. In exchange, the borrower agrees to pay the remaining balance either in a lump-sum payment or by amortizing the balance over several months.

**Income-recognition and ALLL methodologies and practices.** Most banks use historical net charge-off rates, which are based on a migration analysis of the roll rates to charge-off, as the starting point for determining appropriate loss allowances. Banks then typically adjust the historical charge-offs to reflect current trends and conditions and other factors.

Banks should evaluate the collectibility of accrued interest and fees on credit card accounts because a portion of accrued interest and fees is generally not collectible. Although regulatory reporting instructions do not require consumer credit card loans to be placed on nonaccrual on the basis of their delinquency status, all banks should employ appropriate methods to ensure that income is accurately measured. Such methods may include providing loss allowances for uncollectible fees and finance charges or placing delinquent and impaired receivables on nonaccrual status. Banks must account for the owned portion of accrued interest and fees, including related estimated losses, separately from the retained interest in accrued interest and fees from credit card receivables that have been securitized.

A bank’s allowance for loan and lease losses should be adequate to absorb credit losses that are probable and estimable on all loans. While some banks provide for an ALLL on all loans, others may only provide for an

---

3a. A workout is a former open-end credit card account in which credit availability has been closed and the balance owed has been placed on a fixed (dollar or percentage) repayment schedule in accordance with modified, concessionary terms and conditions. Generally, the repayment terms require amortization or liquidation of the balance owed over a defined payment period. Such arrangements are typically used when a customer is either unwilling or unable to repay the open-end credit card account in accordance with the original terms but shows the willingness and ability to repay the loan in accordance with modified terms and conditions.

Workout programs generally do not include temporary-hardship programs that help borrowers overcome temporary financial difficulties. However, temporary-hardship programs longer than 12 months, including renewals, should be considered workout programs.

---

3b. Roll rate is the percentage of balances or accounts that move from one delinquency stage to the next delinquency stage.

3c. AICPA Statement of Position 01-6, Accounting by Certain Entities (Including Entities with Trade Receivables) That Lend to or Finance the Activities of Others, provides guidance on accounting for delinquency fees.
ALLL on loans that are delinquent. This last practice may result in an inadequate ALLL. Banks should ensure that their loan-impairment analysis and ALLL methodology, including the analysis of roll rates, consider the losses inherent in both delinquent and nondelinquent loans.

A bank’s allowance methodologies should always fully recognize the losses inherent in over-limit portfolio segments. For example, if a bank requires borrowers to pay monthly overlimit and other fees in addition to the minimum monthly payment amount, roll rates and estimated losses may be higher than indicated in the overall portfolio migration analysis. Accordingly, banks should ensure that their allowance methodology addresses the incremental losses that may be inherent in over-limit accounts.

A bank’s allowances should appropriately provide for the inherent probable loss in workout programs, particularly when a program has liberal repayment periods with little progress in reducing principal. Accounts in workout programs should be segregated for performance-measurement, impairment-analysis, and monitoring purposes. When multiple workout programs with different performance characteristics exist, a bank should track each program separately and establish and maintain adequate allowances for each program. Generally, the allowance allocation should equal the estimated allowances for each program. Generally, banks should ensure that their allowance methodologies should appropriately provide for the inherent probable loss in workout programs.

Re-aging of credit card receivables. The examiner should review the bank’s credit card receivables to determine if re-aging occurs. Re-aging refers to the removal of a delinquent account from normal collection activity after the borrower has demonstrated over time that he or she is capable of fulfilling contractual obligations without the intervention of the bank’s collection department. The bank may use re-aging when a customer makes regular and consecutive payments over a period of time that maintain the account at a consistent delinquency level or reduce the delinquency level with minimal collection effort. Re-aging, in effect, changes the delinquency-payment status of a credit card receivable from a past-due to a current status. The examiner should determine if the bank re-ages its accounts on an exception basis or as a regular practice. The bank should document those accounts that have been re-aged, obtain appropriate approval, and ensure that re-aging is done in conformance with internal policies and procedures. (See “Bank Classification and Charge-Off Policy” later in this section and SR-00-8 for further guidance.)

4. For regulatory reporting purposes, banks should report the creation of a specific allowance as a charge-off in Schedule 4. Upon receipt of the final settlement payment, banks should charge off deficiency balances within 30 days.

Recovery practices. After a credit card loan is charged off, banks must properly report any subsequent collections on the loan. Typically, banks report some or all of such collections on charged-off credit card loans as recoveries to the ALLL. If the total amount a bank credits to the ALLL as the recovery on an individual credit card loan (which may include principal, interest, and fees) exceeds the amount previously charged off against the ALLL on that loan (which may have been limited to principal), then the bank’s net charge-off experience—an important indicator of the credit quality and performance of its portfolio—will be understated. Banks must ensure that the total amount credited to the ALLL as recoveries on a loan (which may include amounts representing principal, interest, and fees) is limited to the amount previously charged off against the ALLL on that loan. Any amounts collected in excess of this limit should be recognized as income.

5. AICPA Statement of Position 01-6 provides recognition guidance for recoveries of previously charged-off loans.
Exceptions to examiner guidance. From time to time, banks with well-managed programs may authorize, and provide a basis for granting, limited exceptions to the FFIEC Uniform Retail Credit Classification and Account Management Policy. The basis for granting exceptions to the policy should be identified and described in the bank’s policies and procedures. Such policies and procedures should address the types of exceptions allowed and the circumstances for permitting them. The volume of accounts granted exceptions should be small and well controlled, and the performance of these accounts should be closely monitored. Examiners will evaluate whether a bank uses its exceptions prudently. Examiners should criticize management and require corrective action when exceptions are not used prudently, are not well managed, result in improper reporting, or mask delinquencies and losses.

LOAN POLICY

A written consumer credit policy provides bank management with the framework to underwrite and administer the risk inherent in lending money while establishing a mechanism for the board of directors or senior management to monitor compliance. The policy should establish the authority, rules, and guidelines to operate and administer the bank’s consumer loan portfolio effectively; that is, the policy should help manage risk while ensuring profitability. The policy should set basic standards and procedures clearly and concisely. The policy’s guidelines should be derived from a careful review of internal and external factors that affect the bank. To avoid any discriminatory policies or practices, the policy should include guidelines on the various consumer credit laws and regulations.

The composition of the loan portfolio will differ considerably among banks because lending activities are influenced by many factors, including the type of institution, management’s objectives and philosophies on diversification and risk, the availability of funds, and credit demand. An effective lending policy and commensurate procedures are integral components of the lending process. The bank’s consumer credit policy should accomplish the following:

• define standards, rules, and guidelines for the credit-evaluation process, with the following specific goals:
  — establish minimum and maximum loan maturities
  — establish minimum levels of creditworthiness
  — create consistency within the bank’s underwriting process
  — ensure uniformity in how the bank’s consumer credit products are offered to borrowers
  • provide a degree of flexibility, which allows credit officers and management to use their knowledge, skills, and experience
  • provide specific guidelines for determining the creditworthiness of applicants; these guidelines might include the following:
    — minimum income levels
    — maximum debt-to-income ratios
    — job or income stability
    — payment history on previous obligations
    — the type and value of collateral
    — maximum loan-to-value ratios on various types of collateral
    — a minimum score on a credit scoring system
  • provide guidelines for the level and type of documentation to be maintained, including—
    — a signed application
    — the identity of the borrower and his or her occupation
    — documentation of the borrower’s financial capacity
    — a credit bureau report
    — the purpose of all loans granted to the borrower, the sources of repayment, and the repayment programs
    — documentation of the collateral, its value, and the source of the valuation
    — documents perfecting the lien on the collateral
    — verification worksheets and supporting documentation
    — a credit scoring worksheet, if applicable
    — the sales contract and related security agreements, if applicable
    — evidence of insurance coverage, if applicable
    — any other documentation received or prepared in conjunction with the credit request
  • define procedures for handling delinquent consumer credit loans and the subsequent charge-off and possible re-aging of those loans

The consumer credit policy should also provide
Consumer Credit 2130.1

COMMERCIAL BANK EXAMINATION MANUAL
May 2003

examiner should review (1) the bank’s written lending policy or procedures. The policy should require that the reason for the exception be detailed in writing, submitted for approval to a designated authority, and documented in the loan file. Credit exceptions should be reviewed by the appropriate bank committee. The frequency of exceptions granted may indicate a lessening of underwriting standards or a need to adjust the policy to allow flexibility within safe and sound parameters. The examiner should assess the exceptions and make recommendations accordingly.

Obtaining and maintaining complete and accurate information on every consumer credit applicant is essential to approving credit in a safe and sound manner. The loan policy should establish what information will be required from the borrower during the application process and what, if any, subsequent information the borrower will be required to submit while the credit remains outstanding. Credit files should be maintained on all borrowers, regardless of the credit amount, with the exception of the latitude provided by the March 30, 1993, Interagency Policy Statement on Documentation of Loans. Each borrower’s credit file should include the names of all other borrowers who are part of the same borrowing relationship, or the bank should have some other system for informing the reader of a credit file that the borrower is part of a more extensive credit relationship. A current credit file should provide the loan officer, loan committee, and internal and external reviewers with all information necessary to (1) analyze the credit before it is granted and (2) monitor the credit during its life.

Documentation requirements will vary according to the type of loan, borrower, and collateral. For example, the bank may not require a financial statement from a borrower whose loans are fully secured by certificates of deposit issued by the bank. For most consumer credit loans, the borrower’s financial information is collected only at the time of the loan application.

OPERATIONAL RISK

The management of the consumer credit function and the accompanying internal controls is of primary importance to the safe, sound, and profitable operation of a bank. In evaluating controls for consumer credit administration, the examiner should review (1) the bank’s adherence to policies and procedures and (2) the operational controls over recordkeeping, payments, and collateral records to ensure that risks are controlled properly. (See “Loan Portfolio Management,” section 2040.1, for an overview of the various types of risk that the bank should be aware of and the controls it should implement to effectively manage risk.) Risks that are inherent to the consumer credit function and that require internal controls include, but are not limited to, the following:

- Insurance. All insurance policies on file should name the bank as loss payee. The bank should maintain a tickler system to monitor the expiration of insurance policies. In addition, the bank should implement procedures to ensure single-interest insurance coverage is obtained in case the borrower’s insurance is canceled or expires.

- Security agreements. The bank should implement procedures to ensure that lien searches are performed and that liens are perfected by appropriate filings.

- Indirect installment loans. The bank should implement procedures to reduce the risk that can occur in this area. These procedures should ensure the following:
  - payments are made directly to the bank and not through the dealer
  - dealer lines are reaffirmed at least annually
  - selling prices as listed by the dealer are accurate
  - credit checks on the borrowers are performed independently of the dealer
  - overdrafts are prohibited in the dealer reserve and holdback accounts
  - past-due accounts are monitored in aggregate per dealer to assess the quality of loans received from each individual dealer

CREDIT SCORING SYSTEM

Credit scoring is a method for predicting how much repayment risk consumer credit borrowers present. Credit scoring systems are developed using application or credit bureau data on consumers whose performance has already been categorized as creditworthy or noncreditworthy. Items of information that help predict acceptable performance are identified and assigned point values relative to their overall importance. These values are then totaled to calculate an overall credit score.
The credit score is used to approve credit, and frequently allows a bank to avoid the costly and time-consuming process of individual underwriting. Management determines a minimum score, which is sometimes called the cutoff score. Borrowers whose credit scores are not within the approved cutoff-score range for the type of loan requested do not meet the bank’s minimum underwriting criteria. However, the bank may override a borrower’s unacceptable credit score when other mitigating factors are present that may not have been included in the credit score. Exceptions to the bank’s credit scoring system should be documented.

A number of banks have developed and implemented credit scoring systems as part of the approval process for consumer credit; other banks use traditional methods that rely on a credit officer’s subjective evaluation of an applicant’s creditworthiness. Credit scoring systems are replacing credit officers’ subjective evaluation of borrowers’ creditworthiness in more and more banks, particularly in larger institutions. Credit scoring systems are divided into two categories: (1) empirically derived, demonstrably and statistically sound credit systems and (2) judgmental systems.

Empirically derived credit scoring systems are generally defined as systems that evaluate creditworthiness by assigning points to various attributes of the applicant and, perhaps, to attributes of the credit requested. The points assigned are derived from a statistical analysis of recent creditworthy and noncreditworthy applicants of the bank. An empirically derived credit scoring system is statistically sound when it meets the following requirements:

- The data used to develop the system are derived from an empirical comparison of sample groups or from the population of creditworthy and noncreditworthy applicants who applied for credit within a reasonably recent period of time.
- The system is developed to evaluate the creditworthiness of applicants in order to serve the legitimate business interests of the bank using the system.
- The system is developed and validated using statistical principles and methodology.
- The bank periodically reevaluates the predictive ability of the system by using statistical principles and methodologies and adjusts the system as necessary.

An empirically derived credit scoring system may take the age of an applicant into account as a predictive variable, provided that the age of an elderly applicant is not assigned a negative factor or value. In a judgmental system, which relies on a credit officer’s personal evaluation of a potential borrower’s creditworthiness, a creditor may not take age directly into account. However, the applicant’s age may be related to other information that the creditor considers in evaluating creditworthiness. For example, a creditor may consider the applicant’s occupation and length of time to retirement to ascertain whether the applicant’s income (including retirement income) will support the extension of credit to maturity. Consumer credit regulations allow any system of evaluating creditworthiness to favor an applicant who is 62 or older.

If the bank has a credit scoring system, the examiner should review the items or customer attributes that are included in it. In general, credit scoring systems are built on an experiential or historical database. Credit scoring methods analyze the experiences of individuals who have been previously granted credit and divide them into creditworthy and noncreditworthy accounts for purposes of predicting future extensions of consumer credit.

A successful credit scoring system provides a standardized way of measuring the inherent risk of the borrower. An important measure of any credit scoring system is its definition of risk and the care with which explanatory variables are defined, data are collected, and the system is tested. The standardized risk measurement should be fundamentally sound, be based on historical data, measure the risk of default (or loss), and produce consistent results across time for a wide range of borrowers. The bank should further investigate potential borrowers who do not meet the credit scoring criteria.

Some banks may use more than one type of credit scoring methodology in their underwriting and account-management practices. The following are three examples of credit scoring systems:

- **Credit bureau scoring.** The bank uses a consumer’s credit bureau information in a scoring formula. The scoring model is developed by the various credit bureaus, using the reported experience of all credit grantors with whom the applicant has or has had a relationship.
- **Custom-application scoring.** The bank uses both a consumer’s application and credit
bureau data in a scoring formula. This scoring model is developed using only information on the bank’s applicants and borrowers.

- **Behavioral scoring.** The bank uses a formula that includes a borrower’s repayment history, account utilization, and length of time with the bank to calculate a risk score for revolving accounts.

Applicants who fail the scoring process may still be judgmentally reviewed if additional information exists that may not have been included in the scoring formula. In addition, if an applicant passes the scoring process, but other information indicates that the loan should not be made, the applicant can be denied but the reason for the credit denial should be documented.

**BANK CLASSIFICATION AND CHARGE-OFF POLICY**

Consumer credit loans, based on their volume and size, are generally classified using criteria that are different from the classification of other types of loans. The examiner should use the Uniform Retail Credit Classification and Account Management Policy6 when determining consumer credit classifications. (See the appendix to this section.)

A bank should have procedures detailing when consumer credit loans become watch list or problem credits. In addition, the bank should have charge-off procedures for consumer credit loans. The examiner should review the bank’s policies and procedures for adequacy and compliance.

Identification of unfavorable trends must include the review of past-due percentages and income and loss trends in the consumer credit department, which management should monitor closely. Unfortunately, in banks that lack a well-enforced charge-off program, loss ratios are often meaningless for periods of less than a year. As a result, bank management may not become aware of downward trends until year-end or examiner-initiated charge-offs are made. Recognition and implementation of any necessary corrective action are thus delayed.

The examiner should determine whether the bank has adopted a well-enforced charge-off procedure. If so, his or her review should be limited to ascertaining that exceptions meet established guidelines. If the bank is properly charging off delinquent consumer credit loans in the normal course of business under a policy that generally conforms to that of the Federal Reserve System, no specific request for charge-off should be necessary. When the bank has not established a program to ensure the timely charge-off of delinquent accounts, such a program should be recommended in the examination report. If material misstatements in the FFIEC Consolidated Reports of Condition and Income (Call Reports) for previous quarters have resulted from management’s failure to charge off loans, management should be instructed to amend the Call Reports for each affected quarter. The following loans are subject to the uniform classification policy:

- All loans to individuals for household, family, and other personal expenditures as defined in the Call Reports.
- Mobile home paper, except when applicable state laws define the purchase of a mobile home as the purchase of real property and the loan is secured by the purchased mobile home as evidenced by a mortgage or similar document.
- Federal Housing Authority (FHA) title 1 loans. These loans are also subject to the following classification criteria:
  - Uninsured portions should be charged off when claims have been filed.
  - When claims have not been filed, uninsured delinquent portions should be classified in accordance with the delinquent-installment-loan classification policy.
  - The portion covered by valid insurance is not subject to classification.

The uniform classification policy includes consumer credit loans. Small, delinquent consumer credit loans may be listed for classification purposes in the report of examination without detailed comments. Larger classified consumer loans might need to be supported with detailed comments. When no specific proce-

---

6. The 1980 Federal Financial Institutions Examination Council (FFIEC) policy was revised and issued in February 1999 and June 2000. The June 2000 policy replaces the 1980 policy and its February 1999 revision. Reporting on the FFIEC Call Report, based on the revised policy, is not required until December 31, 2000. In addition to discussing the revised policy statement, SR-00-8 advises examiners to consider the methodology used for aging retail loans. In accordance with the FFIEC Call Report instructions, banks and their consumer finance subsidiaries are required to use the contractual method, which ages loans based on the status of contractual payments.
dures have been established, or when adherence to the established procedures is not evident, the examiner should make every effort to encourage the bank to adopt and follow acceptable procedures.

REPOSSESSED PROPERTY

Repossessed property should be booked at its fair value, less cost to sell, on the date the bank obtains clear title and possession of the property. Any outstanding loan balance in excess of the fair value of the property, less selling costs, should be charged off. Periodic repricing should be performed, and appropriate accounting entries should be made when necessary. Generally, repossessed property should be disposed of within 90 days of obtaining possession, unless legal requirements stipulate a longer period.

VIOLATIONS OF LAW

The consumer credit department is particularly susceptible to violations of the various consumer credit laws and regulations. These types of violations may result in serious financial penalties and loss of public esteem. Therefore, the examiner must be aware of any violations discovered during the consumer compliance examination and ensure that corrective action has been effected. All examiners should be familiar with the various consumer credit laws and regulations and be alert to potential violations.

APPENDIX—RETAIL-CREDIT CLASSIFICATION POLICY

The revised June 2000 Uniform Retail Credit Classification and Account Management Policy issued by the FFIEC and approved by the Federal Reserve Board is reproduced below. The Board has clarified certain provisions of this policy. In this text, the Board’s revisions are in brackets.

The Uniform Retail Credit Classification and Account Management Policy\(^1\) establishes standards for the classification and treatment of retail credit by financial institutions. Retail credit consists of open- and closed-end credit extended to individuals for household, family, and other personal expenditures, and includes consumer loans and credit cards. For purposes of this policy, retail credit also includes loans to individuals secured by their personal residence, including first mortgage, home equity, and home-improvement loans. Because a retail-credit portfolio generally consists of a large number of relatively small-balance loans, evaluating the quality of the retail-credit portfolio on a loan-by-loan basis is inefficient and burdensome for the institution being examined and for examiners. Actual credit losses on individual retail credits should be recorded when the institution becomes aware of the loss, but in no case should the charge-off exceed the time frames stated in this policy. This policy does not preclude an institution from adopting a more conservative internal policy. Based on collection experience, when a portfolio’s history reflects high losses and low recoveries, more conservative standards are appropriate and necessary.

The quality of retail credit is best indicated by the repayment performance of individual borrowers. Therefore, in general, retail credit should be classified based on the following criteria:

- **Open- and closed-end retail loans** past due 90 cumulative days from the contractual due date should be classified substandard.
- **Closed-end retail loans** that become past due 120 cumulative days and **open-end retail loans** that become past due 180 cumulative days from the contractual due date should be classified loss and charged off.\(^2\) In lieu of charging off the entire loan balance, loans with non–real estate collateral may be written down to the value of the collateral, less cost to sell, if repossession of collateral is assured and in process.
- **One- to four-family residential real estate loans** and home equity loans that are past due 90 days or more with loan-to-value ratios

\(^1\) For the Federal Reserve’s classification guidelines, see section 2060.1, “Classification of Credits.”

\(^2\) For operational purposes, whenever a charge-off is necessary under this policy, it should be taken no later than the end of the month in which the applicable time period elapses. Any full payment received after the 120- or 180-day charge-off threshold, but before month-end charge-off, may be considered in determining whether the charge-off remains appropriate. OTS regulation 12 CFR 560.160(b) allows savings institutions to establish adequate (specific) valuation allowances for assets classified loss in lieu of charge-offs.

Open-end retail accounts that are placed on a fixed repayment schedule should follow the charge-off time frame for closed-end loans.
greater than 60 percent should be classified substandard. Properly secured residential real estate loans with loan-to-value ratios equal to or less than 60 percent are generally not classified based solely on delinquency status. Home equity loans to the same borrower at the same institution as the senior mortgage loan with a combined loan-to-value ratio equal to or less than 60 percent need not be classified. However, home equity loans where the institution does not hold the senior mortgage, that are past due 90 days or more should be classified substandard, even if the loan-to-value ratio is equal to, or less than, 60 percent.

- For open- and closed-end loans secured by residential real estate, a current assessment of value should be made no later than 180 days past due. Any outstanding loan balance in excess of the value of the property, less cost to sell, should be classified loss and charged off.
- Loans in bankruptcy should be classified loss and charged off within 60 days of receipt of notification of filing from the bankruptcy court or within the time frames specified in this classification policy, whichever is shorter, unless the institution can clearly demonstrate and document that repayment is likely to occur. Loans with collateral may be written down to the value of the collateral, less cost to sell. Any loan balance not charged off should be classified substandard until the borrower re-establishes the ability and willingness to repay for a period of at least six months.
- Fraudulent loans should be classified loss and charged off no later than 90 days of discovery or within the time frames adopted in this classification policy, whichever is shorter.
- Loans of deceased persons should be classified loss and charged off when the loss is determined or within the time frames adopted in this classification policy, whichever is shorter.

Partial Payments on Open- and Closed-End Credit

Institutions should use one of two methods to recognize partial payments. A payment equivalent to 90 percent or more of the contractual payment may be considered a full payment in computing past-due status. Alternatively, the institution may aggregate payments and give credit for any partial payment received. For example, if a regular installment payment is $300 and the borrower makes payments of only $150 per month for a six-month period, [the institution could aggregate the payments received ($150 × six payments, or $900). It could then give credit for three full months ($300 × three payments) and thus treat the loan as] three full months past due. An institution may use either or both methods in its portfolio, but may not use both methods simultaneously with a single loan.

Re-aging, Extensions, Deferrals, Renewals, and Rewrites

Re-aging of open-end accounts, and extensions, deferrals, renewals, and rewrites of closed-end loans can be used to help borrowers overcome

3. These terms are defined as follows. Re-age: Returning a delinquent, open-end account to current status without collecting the total amount of principal, interest, and fees that are contractually due. Extension: Extending monthly payments on a closed-end loan and rolling back the maturity by the number of months extended. The account is shown current upon granting the extension. If extension fees are assessed, they should be collected at the time of the extension and not added to the balance of the loan. Deferral: Deferring a contractually due payment on a closed-end loan without affecting the other terms, including maturity [or the due date for subsequently scheduled payments] of the loan. The account is shown current upon granting the deferral. Renewal: Underwriting a matured, closed-end loan generally at its outstanding principal amount and on similar terms. Rewrite: Underwriting an existing loan by significantly chang-
temporary financial difficulties, such as loss of job, medical emergency, or change in family circumstances like loss of a family member. A permissive policy on re-agenings, extensions, deferrals, renewals, or rewrites can cloud the true performance and delinquency status of the portfolio. However, prudent use is acceptable when it is based on a renewed willingness and ability to repay the loan, and when it is structured and controlled in accordance with sound internal policies.

Management should ensure that comprehensive and effective risk management and internal controls are established and maintained so that re-ages, extensions, deferrals, renewals, and rewrites can be adequately controlled and monitored by management and verified by examiners. The decision to re-age, extend, defer, renew, or rewrite a loan, like any other modification of contractual terms, should be supported in the institution’s management information systems. Adequate management information systems usually identify and document any loan that is re-aged, extended, deferred, renewed, or rewritten, including the number of times such action has been taken. Documentation normally shows that the institution’s personnel communicated with the borrower, the borrower agreed to pay the loan in full, and the borrower has the ability to repay the loan. To be effective, management information systems should also monitor and track the volume and performance of loans that have been re-aged, extended, deferred, renewed, or rewritten and/or placed in a workout program.

Open-End Accounts

Institutions that re-age open-end accounts should establish a reasonable written policy and adhere to it. To be considered for re-aging, an account should exhibit the following:

- The borrower has demonstrated a renewed willingness and ability to repay the loan.
- The account has existed for at least nine months.
- The borrower has made at least three consecutive minimum monthly payments or the equivalent cumulative amount. Funds may not be advanced by the institution for this purpose.

Open-end accounts should not be re-aged more than once within any twelve-month period and no more than twice within any five-year period. Institutions may adopt a more conservative re-aging standard; for example, some institutions allow only one re-aging in the lifetime of an open-end account. Additionally, an over-limit account may be re-aged at its outstanding balance (including the over-limit balance, interest, and fees), provided that no new credit is extended to the borrower until the balance falls below the predelinquency credit limit.

Institutions may re-age an account after it enters a workout program, including internal and third-party debt-counseling services, but only after receipt of at least three consecutive minimum monthly payments or the equivalent cumulative amount, as agreed upon under the workout or debt-management program. Re-aging for workout purposes is limited to once in a five-year period and is in addition to the once-in-twelve-months/twice-in-five-years limitation described above. To be effective, management information systems should track the principal reductions and charge-off history of loans in workout programs by type of program.

Closed-End Loans

Institutions should adopt and adhere to explicit standards that control the use of extensions, deferrals, renewals, and rewrites of closed-end loans. The standards should exhibit the following:

- The borrower should show a renewed willingness and ability to repay the loan.
- The standards should limit the number and frequency of extensions, deferrals, renewals, and rewrites.
- Additional advances to finance unpaid interest and fees should be prohibited.

Management should ensure that comprehensive and effective risk management, reporting, and internal controls are established and maintained to support the collection process and to ensure timely recognition of losses. To be effective, management information systems should track the subsequent principal reductions and charge-off history of loans that have been granted an extension, deferral, renewal, or rewrite.
Examination Considerations

Examiners should ensure that institutions adhere to this policy. Nevertheless, there may be instances that warrant exceptions to the general classification policy. Loans need not be classified if the institution can document clearly that repayment will occur irrespective of delinquency status. Examples might include loans well secured by marketable collateral and in the process of collection, loans for which claims are filed against solvent estates, and loans supported by valid insurance claims.

The Uniform Retail Credit Classification and Account Management Policy does not preclude examiners from classifying individual retail-credit loans that exhibit signs of credit weakness regardless of delinquency status. Similarly, an examiner may also classify retail portfolios, or segments thereof, where underwriting standards are weak and present unreasonable credit risk, and may criticize account-management practices that are deficient.

In addition to reviewing loan classifications, the examiner should ensure that the institution’s allowance for loan and lease losses provides adequate coverage for probable losses inherent in the portfolio. Sound risk- and account-management systems, including a prudent retail-credit lending policy, measures to ensure and monitor adherence to stated policy, and detailed operating procedures, should also be implemented. Internal controls should be in place to ensure that the policy is followed. Institutions that lack sound policies or fail to implement or effectively adhere to established policies will be subject to criticism.

Issued by the FFIEC on June 12, 2000.
Consumer Credit
Examination Objectives
Effective date May 2003

Section 2130.2

1. To determine the quality and adequacy of operations (including the adequacy of lending policies, practices, procedures, internal controls, and management information systems) for consumer credit and credit card plans.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To evaluate the consumer credit portfolio for credit quality, performance, adequate collateral, and collectibility.
4. To determine the scope and adequacy of the audit and loan-review function.
5. To determine the level of risk inherent in a bank’s consumer credit and credit card lending departments and what actions management has taken to identify, measure, control, and monitor the level and types of risks.
6. To determine that the goals and objectives of specific credit card plans are being achieved and that the plans are profitable.
7. To determine compliance with the board of directors’ and senior management’s policies and procedures and with applicable laws and regulations.
8. To initiate corrective action when policies, procedures, practices, or internal controls are deficient or when violations of law or regulations have been noted.
GENERAL CONSUMER CREDIT

1. If selected for implementation, complete or update the installment loan section of the internal control questionnaire.

2. Based on the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.

3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Obtain a listing of any deficiencies noted in the latest review conducted by internal or external auditors. If applicable, also determine if the latest consumer compliance examination disclosed any violation of laws or regulations. Determine if corrective action has been taken.

4. Request that the bank supply the following:
   a. a listing of all dealers who have indirect-paper, fleet-leasing, or discounted-lease lines, along with respective codes
   b. an indirect paper or a fleet-leasing or discounted fleet-leasing report by code, along with the respective delinquency report for all loans past due 30 days or more
   c. a listing of dealer reserves, holdback accounts, or both showing the dealer, account number, and balance
   d. the latest month-end extension and renewal reports
   e. a schedule of all loans with irregular or balloon payments or both
   f. a schedule of all loans with more than five prepaid installments
   g. a listing of loans generated by brokers or finders
   h. a listing of current repossessions, including the name of the borrower, a description of the item, the date of repossession, the date title was acquired, and the balance
   i. a copy of each monthly installment-loan charge-off report since the preceding examination (If the monthly reports do not include all the information necessary to support the charge-off of the installment loans, request a revised listing that includes the missing information for each charge-off.)
   j. management reports that are prepared by department personnel and that are not forwarded in their entirety to the board of directors or its committee
   k. a listing of the amount of recoveries on charged-off installment loans, by month, since the preceding examination
   l. a listing of all outstanding loans that have been assigned to an attorney for collection
   m. an identification of all columns and codes on the computer printout

5. Obtain a trial balance of installment loans. Use of the bank’s latest trial balance is acceptable. If exact figures are required, update the trial balance from the daily transaction journals. Using the trial balance—
   a. agree or reconcile balances to department controls and the general ledger and
   b. review reconciling items for reasonableness.

6. Using an appropriate sampling technique, select borrowers’ loans to be reviewed during the examination.

7. Using an appropriate technique, select indirect dealers and fleet-leasing and indirect-lease lines from indirect-dealer or leasing reports. Transcribe the following onto consumer finance indirect line cards:
   a. the amount and number of contracts, indicating whether they are with or without recourse
   b. the amount and number of contracts still accruing that are past due 30–89 days and 90 days or more
   c. the balance in dealer reserve or holdback accounts or both

8. Obtain the following schedules from the bank or the appropriate examiner if they are applicable to this area:
   a. past-due loans (obtain separate schedules by branch, if available)
   b. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
   c. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
d. loan commitments and other contingent liabilities

e. extensions of credit to employees, officers, directors, principal shareholders, and their interests, specifying which officers are considered executive officers

f. correspondent banks’ extensions of credit to executive officers, directors, and principal shareholders and their interests

g. a list of correspondent banks

h. miscellaneous loan debit-and-credit suspense accounts

i. loans considered “problem loans” by management

j. each officer’s current lending authority

k. the current structure of interest rates

l. any useful information obtained from the review of the minutes of the loan and discount committee or any similar committee

m. reports furnished to the loan and discount committee or any similar committee

n. reports furnished to the board of directors

o. loans classified during the preceding examination

p. the extent and nature of loans serviced

9. Review the information received and perform the following for—

a. Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap:
   • Participations only:
     — Test participation certificates and records and determine that the parties share in the risks and contractual payments on a pro rata basis.
     — Determine that the bank exercises similar controls and procedures over loans serviced for others as for loans in its own portfolio.
   • Procedures pertaining to all transfers:
     — Investigate any situations in which loans were transferred immediately before the date of examination to determine if any were transferred to avoid possible criticism during the examination.
     — Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.
     — Determine that low-quality loans transferred to or from the bank are properly reflected on its books at fair value (while fair value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such loans as well as an appropriate risk premium).

   — Determine that low-quality loans transferred to the parent holding company or a nonbank affiliate are properly reflected at fair value on the books of both the bank and its affiliate.

   — If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
     (1) name of originating institution
     (2) name of receiving institution
     (3) type of transfer (i.e., participation, purchase/sale, swap)
     (4) date of transfer
     (5) total number of loans transferred
     (6) total dollar amount of loans transferred
     (7) status of the loans when transferred (e.g., nonperforming, classified, etc.)
     (8) any other information that would be helpful to the other regulator

b. Miscellaneous loan debit-and-credit suspense accounts:
   • Discuss with management any large or old items.
   • Perform additional procedures as considered appropriate.

c. For loan commitments and other contingent liabilities, if the borrower has been advised of the commitment and it exceeds the cutoff alone or in combination with any outstanding debt, prepare a line card for subsequent analysis and review.

d. For loans classified during the previous examination, determine the disposition...
of loans so classified by—
• obtaining current balances and their payment status, or the date the loan was repaid and source of payment;
• investigating any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank or were a result of a participation, sale, or swap with another lending institution; and
• referring to step 9a of this section for the appropriate examination procedures, determine if repayment was a result of a participation, sale, or swap.

e. Select loans that require in-depth review on the basis of information derived from the above schedules.

10. Consult with the examiner responsible for the asset-liability management analysis to determine the appropriate maturity breakdown of loans needed for the analysis. If requested, compile the information using bank records or other appropriate sources. See section 6000.1, “Instructions for the Report of Examination,” for considerations to be taken into account when compiling maturity information for the gap analysis.

11. Obtain liability and other information on common borrowers from examiners assigned to overdrafts, lease financing, and other loan areas. Together decide who will review the borrowing relationship.

12. Obtain the credit files of all direct non-consumer borrowers, indirect dealers, and fleet-leasing and discounted-leasing lines for which line cards have been developed. Transcribe and analyze the following as appropriate:
   a. the purpose of the loan
   b. collateral information, including its value and the bank’s right to hold and negotiate it
   c. the source of repayment
   d. ancillary information, including the type of business, its officers, and its affiliation
   e. fiscal and interim financial exhibits
   f. guarantors and the amount of any guarantee
   g. personal statements of borrowers, endorsers, or guarantors
   h. external credit checks and credit bureau reports
   i. loan officer’s credit memoranda
   j. subordination agreements
   k. a corporate resolution to borrow or guarantee
   l. provisions of the loan agreement or master lease agreement
   m. the type of dealer endorsement:
      • full recourse
      • limited recourse
      • nonrecourse
   n. dealer repurchase agreements
   o. reserve and holdback requirements
   p. the amount of insurance coverage

13. Check the central liability file on borrowers indebted above the cutoff or borrowers displaying credit weakness who are suspected of having additional liability in other loan areas.

14. Transcribe significant liability and other information on officers, principals, and affiliations of borrowers for which line cards have been developed. Cross-reference, if appropriate.

15. Review a listing of loans generated by brokers or finders:
   a. Check the quality of the paper being acquired.
   b. Determine that sufficient financial data have been obtained to support the credits.
   c. Evaluate performance.

16. Review the current past-due (delinquent) loan list and determine that loans are aged using the contractual method, which ages a loan on the basis of its contractual repayment terms, as required by the Call Report instructions. Discuss with management selected delinquent loans from the listings of delinquent loans and repossessed collateral.

17. Determine if management has a general policy for the timely classification and charge-off of past-due loans and ascertain whether the policy is adhered to. Determine if loan-classification practices follow the board of directors’ respective policies. Ascertain whether those policies comply with the provisions of the FFIEC’s Uniform Retail Credit Classification and Account Management Policy and with Federal Reserve policy. Review with management individual accounts that have not been charged off in line with these policies.

18. Review voluntary charge-offs made since the preceding examination and, on a test basis, review files on borrowers and ascertain the correctness of the charge-off.

19. Review any reports being submitted on
delinquent and defaulted loans guaranteed by government agencies:

a. Determine that management is informed accurately and is complying with the reporting requirements.

b. Determine that claims are being promptly filed after default.

OVERDRAFT-PROTECTION PROGRAMS

1. Determine if the bank has developed and implemented adequate written overdraft-protection-program policies and procedures for its ad hoc, automated, and other overdraft programs. Determine if the policies and procedures comply with the February 18, 2005, interagency Joint Guidance on Overdraft Protection Programs.

2. Ascertain whether the bank’s management emphasizes and monitors adherence to its overdraft policies and procedures, applies generally accepted accounting principles to overdraft transactions, and applies the bank Call Report’s accounting and reporting instructions and requirements to overdrafts. Evaluate whether the bank maintains and monitors safe and sound overdraft business practices to control the credit, operational, and other risks associated with overdraft programs.

3. Apply the additional examination procedures for overdraft-protection programs (see section 3000.3) when weaknesses are found in (1) the bank’s compliance with the February 2005 interagency guidance and (2) the bank’s evaluation of the risks associated with overdraft-protection programs.

CREDIT CARD LENDING

The examiner’s analysis of operating policies and procedures is key to the examination of credit card banks and credit card operations. Credit card lending is characterized by a high volume of accounts, homogeneous loan pools, and small-dollar balances. A concentrated review of individual accounts, therefore, may not be practical. Examination procedures should focus on evaluating policies, procedures, and internal controls in conjunction with performing other selected functions. The goal is not confined to identifying current portfolio problems. The examination process should include an investigation of potential problems that may result from ineffective policies, unfavorable trends, lending concentrations, or nonadherence to policies. The following examination procedures should be performed.

1. Review UBPR data to determine the volume of credit card activity.

2. Determine if management has recently offered or plans to offer new products or if management plans to enter new market niches or expand the credit card portfolio significantly (new offerings may include affinity cards, co-branded cards, secured cards, or purchasing cards).

3. Determine whether the bank is engaged or plans to engage in subprime credit card lending. If subprime lending exists or is planned, perform the subprime-lending examination procedures in section 2133.3.

4. Review correspondence that the bank has received or exchanged with credit card networks (i.e., Visa, MasterCard). These agencies perform periodic reviews of their members.

Policy Considerations

1. Review the credit card policy. Policy guidelines should include the following items:

   a. adequate screening of account applicants

   b. standards for approving accounts and determining credit-line size

   c. minimum standards for documentation

   d. internal controls to prevent and detect fraud, such as—

      • review procedures, including frequent review of delinquent accounts;

      • delinquency notification and collection procedures;

      • criteria for freezing accounts and charging off balances;

      • criteria for curing and re-aging delinquent accounts;

      • controls to avoid reissuances of expired cards to obligors who have unsatisfactory credit histories;

      • approvals of and controls over overlimits and overrides; and

   e. due diligence before engaging the service of a third party, as well as the
ongoing management of credit card operations

Audit

1. Review the adequacy of the audit function regarding credit card operations.
   a. Determine if the audit program identifies contraventions of internal policy, credit card network (i.e., Visa, MasterCard) regulations, and written contracts.
   b. Determine if audit procedures include reviewing the accuracy and integrity of the bank’s system for reporting the past-due status of credit card loans, over-limit accounts, and other management information systems.
   c. Determine if audit procedures include reviewing computer-driven models.
   d. Determine if independent tests of automated procedures are performed (for example, a sample of automatically re-aged accounts may be independently reviewed to test the integrity of automated systems).
   e. Determine whether audit procedures include a review of credit card processing operations. Ascertain if the product control file governing credit card processing was reviewed and whether it revealed any significant internal control weaknesses, such as a lack of segregation of duties and access controls. Determine whether management is aware of the risks and if the audit staff has the expertise to adequately evaluate procedures and suggest controls commensurate with the risks.
   f. Determine if audit procedures include a review of the services provided by outside vendors (services such as telemarketing, data processing, and direct mail). Ascertain if the audit procedures included a review of the performance of the vendors and documentation of the relationships.

2. Determine if management has reviewed and appropriately responded to audit findings regarding credit card operations.

Fraud

1. Evaluate management’s strategy for controlling fraud, including whether the strategies frequently emphasize review of credit card applications to prevent fraudulent accounts from being booked or whether neural networks are used to identify fraudulent transactions. Common controls include the following items:
   a. methods of preventing application fraud, such as name and address verification, duplicate-application detection, Social Security number verification, etc.
   b. physical aspects of cards such as holograms and enriched information on the magnetic stripe
   c. adequate staffing and training of the fraud-detection department
   d. computer systems to identify suspicious activity
   e. procedures for issuing cards to prevent their interception and activation
   f. procedures for handling returned cards, statements, PINs, checks, and lost and stolen cards
   g. investigation and documentation of cases of suspected fraud
   h. freezing of accounts with suspicious activity
   i. procedures for filing a Suspicious Activity Report (See the FFIEC BSA/AML Examination Manual), the requirements for suspicious-activity reporting in section 208.62 of the Board’s Regulation H (12 CFR 208.62), and the Bank Secrecy Act compliance program in section 208.63 (12 CFR 208.63).
   j. procedures for access to and alteration of customer information
   k. controls over cardholder payments, account-balance records, and chargeback administration
   l. account-authorization procedures

2. Determine whether management receives adequate fraud-monitoring reports, such as—
   a. out-of-pattern-purchase or sequence-of-purchase reports that identify suspicious transactions that do not fit an individual cardholder’s established purchasing pattern or
   b. suspicious-purchasing-pattern reports that identify certain types of purchases, such as electronics or jewelry, that can correlate with fraudulent activity.

3. Review consumer complaint correspon-
ence from cardholders that is on file with
the bank or primary federal regulator for
irregularities or patterns of activity.

Account Solicitation

1. Determine management’s general approach
to account solicitations (a variety of
approaches or a combination of approaches
can exist). Solicitations may be for preap-
proved or non-preapproved accounts. The
latter are usually solicited through mass
mailings, telemarketing, or counter displays.
2. Determine the extent to which outside con-
tractors are used in marketing programs (for
example, outsourced mass-mailing and tele-
marketing operations).
3. Review management’s product and market-
ing program, including the goals of the
program, the basis of the marketing approach,
and product pricing. Ascertain whether
adequate supporting evidence exists to indi-
cate (1) that management has a marketing
program and a product that appeal to the
bank’s targeted markets and (2) that the
projected product and marketing program
results will be obtained.
4. Determine how management identifies mar-
kets for new solicitations and evaluates
expected performance.
   a. Identify the analytical procedures (for
example, response rates, usage rates,
credit-score distributions, and future
delinquency and loss rates) management
uses to project the results of a particular
solicitation.
   b. Determine how management verifies
projections before proceeding with a
full-scale solicitation program (test
marketing).
5. Determine if management monitors solicita-
tion results for each major account seg-
ment and if management incorporates the
findings into future solicitations.
6. Determine if management monitors and
responds to trends in adverse selection (such
as when a disproportionate number of
respondents that are poor credit risks answer
an offer, which may result in a larger-than-
projected percentage of riskier accounts
being including in the solicitation-response
pool).
7. Review affinity and co-branding relation-
ships. Determine if the bank has control
over the approval and acceptance of such
accounts. (In co-branding, a third-party
relationship exists between a broad base of
cardholders and a jointly sponsored credit
card. Usually, the sponsors are the bank and
a retail merchant for the affinity and
co-branding relationships. These cards have
some type of value-added feature such as
cash rebates or discounts on merchandise.)
8. Review new-product offerings and the
adequacy of management’s market identifi-
cation, testing, and ongoing monitoring of
new products. Ascertain if management
monitored and controlled key new-product
concerns, including whether—
   a. the amount of historical and test-sample
data available to analyze the product or
solicitation was adequate;
   b. the speed at which the new product was
introduced was compatible with the
internal controls for credit authoriza-
tions; and
   c. the size of solicitations introduced was
adequately controlled, considering opera-
tional and managerial capabilities.
9. Determine if management had any prob-
lems with the wording of solicitations or
applications and if any imprecise offer terms
contributed to asset-quality and earnings
problems. Ascertain if there were errors
such as the following:
   a. no expiration date on the offer
   b. an absence of wording giving manage-
ment discretion in setting credit lines
   c. insufficient information requirements on
applications
10. Review balance-transfer policies and moni-
toring practices. Determine if balance trans-
fers generally resulted in higher credit
exposures and a tendency to distort finan-
cial condition and performance ratios due to
the immediate booking of relatively large
balances.
11. Review teaser interest-rate practices. Deter-
mine if controls are adequate to prevent
teaser rates from disguising a borrower’s
repayment capacity and from resulting in
higher attrition when the teaser rates expire.

Predictive Models

1. Review the integrated models management
uses to identify and select prospective cus-
tomers. (Management usually uses two distinct credit card predictive models. The first model, the credit-scoring model, is used in the initial application process. The second model, a behavioral model, is used in the management of existing accounts. These models use a credit scorecard, which is a table of characteristics, attributes, and scores that enable a credit grantor to calculate default risk. Information derived from these models assists management with quantifying and minimizing credit risk and fraud losses.)

Credit Scoring

1. Determine the nature and extent that credit scores are used in the underwriting process.
2. Determine the degree of reliance placed on credit bureau score “good” and “bad” odds charts. Ascertain if management develops and calibrates its own good and bad odds chart with a sufficient quantity and quality of historical account data (a customized odds chart is more predictive than a credit bureau odds chart).
3. Determine if a single- or dual-score model is used. (A single-score model uses credit bureau scores; a dual-score matrix calculates a score based on the combination of a custom score, usually based on credit application data, and a credit bureau score. For the more complex operations, management should be using the more sophisticated dual-scoring model.)
Behavior-Scoring System

1. Determine whether management has implemented a behavior-scoring system to manage existing accounts. (The score is derived from a cardholder’s payment and usage behavior with the credit cardholder’s issuing bank. A cardholder’s historical performance with a particular bank is typically the best indicator of future performance with that bank. Behavior scores are frequently supplemented with credit bureau scores to enhance their predictive value.)

2. Ascertain if management continually refines existing, or if it considers new, predictive models.
   a. Determine whether a champions and challengers system is used. (Such a system involves continual portfolio analysis and identification of predictive characteristics. Based on this analysis, existing models are revised and enhanced. The revised challenger model is then compared with the existing champion model. If the challenger is more predictive, it is adopted. This procedure is an ongoing system of refinement.)
   b. Determine if management has adopted or is considering new predictive models (for example, revenue, revolving, bankruptcy, and payment-predictor models).

Portfolio Analysis

1. Review and analyze the bank’s customized credit card reports, which usually include performance and industry peer-group analysis data (be alert to the possibility that the data may have been distorted by niche marketing, specialized card products, or extensive affiliate support).

2. Determine if management is segmenting portfolios (such as by geographic or demographic distribution, affinity relationship (cardholders belonging to a particular union, corporation, professional association, etc.), product type (premium or standard cards), or credit bureau scores). Consider the particular characteristics of each segment for delinquency, profitability, future marketing programs, ALLL calculations, and other purposes.

3. Determine whether geographic, customer-base, card-type, or other concentrations exist, and identify the unique risks posed by any of these portfolio segments or concentrations. Evaluate their degree of risk and consider mitigating factors.

4. Review how management uses portfolio information to identify developing trends, make strategic decisions, and detect potential problems.
   a. Determine how management reports identify the number and volume of workout and re-aged credits.\(^1\)
   b. Evaluate the portfolio information that management reviews, such as asset-quality ratios and vintage analysis (an analysis of the account performance of homogeneous loans booked at a similar time using the same credit and pricing criteria).

5. Determine if cash advances are monitored and authorization procedures are in place

Validation

1. If credit scoring is used, determine if management is validating scores by comparing account-quality rankings of accepted applications with those predicted by the system (when the rank orderings remain substantially the same, the scoring system remains valid).
   a. Review the statistical techniques used to validate each model used, and determine whether common statistical techniques are being used, such as the K/S test, the chi square, the goodness-of-fit test, divergence statistics, and the population stability test.
   b. Determine if high and low override controls are in place and if they are detailed on exception reports (overrides can skew a statistical population and distort analysis).

---

\(^1\) A workout is a former open-end credit card account in which credit availability has been closed and in which the balance owed has been placed on a fixed (dollar or percentage) repayment schedule in accordance with modified, concessionary terms and conditions. Generally, the repayment terms require amortization or liquidation of the balance owed over a defined payment period. Such arrangements are typically used when a customer is either unwilling or unable to repay the open-end credit card account in accordance with the original terms but shows the willingness and ability to repay the loan in accordance with modified terms and conditions. In a re-aged credit account, the bank changes the delinquency status of an account without the full collection of its delinquent payments.
cardholders with excessive debt may obtain cash advances to pay other debts).

6. Review the level and trend of the following portfolio ratios:
   a. average balance of delinquent accounts (by 30-day time frames) to average balance of nondelinquent accounts
   b. lagged delinquency rate and nine-month net charge-offs to lag rates
   c. net charge-off rate and lagged net charge-off rate
   d. re-aged accounts and partial-payment plans to total active accounts and to average total loans
   e. total past-due loans to gross loans
   f. noncurrent loans to gross loans

7. Consider indicators of possible deterioration in asset quality and criticize prolonged practices that result in negative amortization (that is, when minimum payments consistently fall short of covering all finance charges and fees assessed during the billing cycle and when the outstanding balance continues to increase), inappropriate fees, and other practices that inordinately compound or protract consumer debt and disguise portfolio performance and quality. Be alert to other indicators and practices that can reflect a deterioration of asset quality, such as—
   a. rapid growth that may indicate a lowering of underwriting standards;
   b. lower minimum-payment requirements and extended principal-payment cycles, which may result in negative amortization and may also indicate less creditworthy accounts;
   c. a heightened ratio of total accounts being charged off to the number of accounts or a high average balance of accounts that may indicate a lax policy toward the number and level of credit lines granted to cardholders;
   d. lower payment rates combined with higher average balances, which may indicate that borrowers are having trouble paying their debt;
   e. an inordinately high ratio of income earned not collected on loans to total loans when compared with the percentage of total past-due loans to gross loans, which may indicate frequent re-agings, inadequate collection procedures, or a failure to charge off credit card receivables on a timely basis; and
   f. the average age of accounts, which may indicate that loss rates will rise for unseasoned accounts (loss rates are usually low for new offerings and peak at 18 to 24 months after issue).

8. Evaluate management’s practices for cure programs, such as re-aging, loan extensions, deferrals, fixed payment, and forgiveness.

9. Develop an overall assessment of the adequacy of a bank’s account-management practices for its credit card lending business, incorporating the risk profile of the bank, the quality of management reporting, and the adequacy of the bank’s charge-off policies and loss-allowance methodologies.

10. Evaluate whether the bank clearly documents in its policies and procedures the basis for using the exceptions to the FFIEC Uniform Retail Credit Classification and Account Management Policy and whether the bank documents the types of exceptions used and the circumstances giving rise to their use. Determine if the bank prudently limits the use of exceptions. If it does not, criticize the bank’s management and require corrective action when the exceptions are not well managed, result in improper reporting, or mask delinquencies and losses.

11. Criticize management and recommend appropriate supervisory corrective action when workout programs are not managed properly (characteristics of improperly managed workout programs include workout programs that do not strive to have the borrowers repay credit card debt within 60 months, the existence of liberal repayment terms with extended amortizations, high charge-off rates, accounts being moved from one workout program to another, multiple re-agings, and poor MIS to monitor program performance).

12. Determine that the bank complies with the FFIEC Uniform Retail Credit Classification and Account Management Policy.

13. Determine whether management monitors and analyzes the performance of each workout program (whether the program achieves the objective of improving the borrower’s subsequent performance, the effect of the program on delinquency ratios, etc.)

14. Assess the current and potential impact the workout programs have on reported performance and profitability, including their ALLL implications.

15. Determine if third parties purchase or fund
loan payments to cure loan delinquencies and, if so, assess the impact.

16. Determine whether management developed contingent strategies to deal with rising delinquency levels, which are generally the first sign of account deterioration. Strategies could include the following issues:
   a. reviewing accounts more frequently
   b. decreasing the size of credit lines
   c. freezing or closing accounts
   d. increasing collection efforts

17. Ascertain the bank’s compliance with its credit card policies and procedures by reviewing a sample of the bank’s credit card loans that were originated since the prior examination.

18. Determine the level of classifications for credit card loans:
   a. Review a sample of loans to ascertain the accuracy and integrity of the bank’s system for reporting past-due status.
   b. Verify that the bank’s classification and charge-off procedures adhere to, at a minimum, the guidance of the FFIEC Uniform Retail Credit Classification and Account Management Policy.

Allowance for Loan and Lease Losses

1. Ascertain whether an allowance for loan and lease losses (ALLL) policy exists for credit card loans and if adequate ALLL analytical procedures are in place. Roll-rate analysis (analysis of the migration of an account from one billing cycle to the next), which is generally performed for each portfolio segment, is the industry standard. However, some banks use the following additional or alternative methods:
   a. delinquency analysis using a set percentage of loans over 60 days delinquent
   b. exposure analysis that projects net charge-off rates to each 30-day period of delinquency
   c. charge-off projections based on vintage analysis
   d. a historical rolling average based on charge-off rates for the last six months
   e. analysis based on external economic forecasting services

2. Review ALLL-calculation techniques for reasonableness (variables such as aggregating seasoned and unseasoned portfolios can significantly distort the calculation of required reserves).

3. Determine if ALLL calculations are comprehensive and if they consider the following factors:
   a. contingent liabilities, or the risk associated with undisbursed funds
   b. bankrupt and deceased cardholders (such losses are usually not predicted by a simple roll-rate analysis)
   c. economic conditions, such as unemployment and bankruptcy rates, that can significantly affect asset quality
   d. the number and volume of workout and re-aged credits

4. Determine if the ALLL methodologies adequately provide for the use of cure programs, settlement arrangements,2 workout programs, existing over-the-limit portfolio segments, any resulting estimable probable losses on those accounts, and any other credit card loan accounts.

5. Review the accounting practices for crediting recoveries on credit card loans. Determine that the total amount credited to the ALLL as recoveries on individual credit card loans is limited to the amounts previously charged off against the ALLL for the credit card loan. Any excess recovery amount must be recognized as income.

6. Verify that fraud losses are not charged to the ALLL or included in ALLL calculations and that the losses are recorded as a non-interest expense.

Asset Securitization

Perform the following examination procedures when the bank has securitized its credit card receivables (removed designated credit card receivables from its balance sheet to a special-purpose vehicle (SPV) while the bank retains its account ownership).

1. Determine if the credit card loan delinquency and loss rates are similar for both the owned portfolio and the securitized portfolio. (Slightly higher delinquency and net charge-off ratios on securitized assets

---

2. In a settlement arrangement, the bank forgives a portion of the amount owed. In exchange, the borrower agrees to pay the remaining balance either in a lump-sum payment or by amortizing the balance over several months.
will be prevalent if the bank is experiencing high growth and possesses a significant portion of unseasoned accounts.) When the delinquency and loss rates deviate significantly, determine if management is prioritizing credit card receivables for securitization by selecting credit card accounts that have either a high credit quality or superior past credit history. For example, in the following two ratios, the resulting percentages on a managed and owned basis should approximate one another: (1) noncurrent loans to gross loans and (2) total past-due loans to gross loans.

2. Determine the on- and off-balance-sheet effects of asset securitization. (For example, what is the on- and off-balance-sheet effect of removing seasoned accounts?) (A performance analysis is important because the level of a credit card bank’s earnings and capital is largely dependent on the quality of its average total assets under management and not merely on the owned credit card portfolio.)

BANK POLICIES AND PROCEDURES AND STATUTORY AND REGULATORY REQUIREMENTS

1. Determine compliance with laws, regulations, and Federal Reserve Board policies pertaining to lending by performing the following steps.
   a. Lending limits:
      • Determine the bank’s lending limits as prescribed by state law.
      • Determine advances or combinations of advances whose aggregate balances are above the limit.
   b. Sections 23A and 23B of the Federal Reserve Act (12 USC 371c and 371c-1) and the Federal Reserve’s Regulation W—Transactions with Affiliates:
      • Obtain a listing of loans and other extensions of credit to affiliates.
      • Test-check the listing against the bank’s customer liability records to determine the list’s accuracy and completeness.
      • Obtain a listing of other covered transactions with affiliates (i.e., purchase of an investment or securities issued by an affiliate; purchase of loans or other credit-related assets, including assets subject to an agreement to repurchase from an affiliate; the issuance of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate; or acceptance of affiliate’s securities as collateral for a loan to any person).
      • Determine the volume of transactions with third parties when the proceeds were used or transferred for the benefit of any affiliate.
      • Ensure that covered transactions with affiliates do not exceed the limits of section 23A.
      • Ensure that covered transactions with affiliates meet the collateral requirements of section 23A.
      • Determine that low-quality loans or other assets have not been purchased from an affiliate.

Third Parties

1. Determine whether any credit card–related activities are outsourced. If so, complete the third parties review located in the Subprime Lending Loan Reference. Third parties may include brokers, marketing firms, collection or servicing firms, correspondents, affinity partners, and information systems firms.

2. Determine whether the bank shares a BIN (bank identification number) with a third party. (Sharing of BINs can create financial liability. A bank sharing a BIN should have a process to identify, monitor, and control the risks associated with BIN sharing. Certain Visa and MasterCard members are assigned BINs (represented by a series of numbers on the credit card) for clearing and settlement of their credit card activities. Members that are licensed specific BINs may allow other members to deposit and receive transactions through those BINs. However, the BIN licensee (holder of the BIN) has primary responsibility for transactions processed through its BIN. In addition, users of a BIN other than the BIN licensee (BIN holder) may share responsibility for transactions processed under that BIN if the licensee fails to meet its membership obligations.)
• Determine that all transactions with affiliates are on market terms and conditions that are consistent with safe and sound banking practices.
• Determine that the transactions were conducted on terms and conditions that reflect pricing that is generally available to unaffiliated parties.

c. 18 USC 215—Commission or Gift for Procuring Loan:
• While examining the installment loan area, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
• Investigate any such suspected situation.

d. Federal Election Campaign Act (2 USC 441b)—Political Contributions:
• While examining the installment loan area, determine the existence of any loans in connection with any election to any political office.
• Review each such credit to determine whether it is made in accordance with applicable banking laws and regulations and in the ordinary course of business.

e. 12 USC 1972—Tie-In Provisions. While reviewing credit and collateral files (especially loan agreements), determine whether any extension of credit is conditioned upon the customer’s—
• obtaining additional credit, property, or services from the bank, other than a loan, discount, deposit, or trust service;
• obtaining additional credit, property, or service from the bank’s parent holding company or the parent’s other subsidiaries;
• providing an additional credit, property, or service to the bank, other than those related to and usually provided in connection with a loan, discount, deposit, or trust service;
• providing additional credit, property, or service to the bank’s parent holding company or any of the parent’s other subsidiaries; or
• not obtaining other credit, property, or service from a competitor of the bank, the bank’s parent holding company, or the parent’s other subsidiaries, except that the lending bank may impose conditions and requirements in a credit transaction to ensure the soundness of the credit.

f. Insider lending activities. The examination procedures for checking compliance with the relevant law and regulation covering insider activities and reporting requirements are as follows (the examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment):
• Regulation O (12 CFR 215)—Loans to Executive Officers, Directors, and Principal Shareholders and Their Interests. While reviewing information relating to insiders received from the bank or appropriate examiner (including information on loan participations, loans purchased and sold, and loan swaps)—
  — Test the accuracy and completeness of information about installment loans by comparing it with the trial balance or loans sampled.
  — Review credit files on insider loans to determine that required information is available.
  — Determine that loans to insiders do not contain terms more favorable than those afforded to other borrowers.
  — Determine that loans to insiders do not involve more than the normal risk of repayment or present other unfavorable features.
  — Determine that loans to insiders, as defined by the various sections of Regulation O, do not exceed the lending limits imposed by those sections.
  — If prior approval by the bank’s board was required for a loan to an insider, determine that such approval was obtained.
  — Determine compliance with the various reporting requirements for insider loans.
  — Determine that the bank has made provisions to comply with the public disclosure requirements for insider loans.
— Determine that the bank maintains records of such public requests and the disposition of the requests for a period of two years.

• Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 USC 1972(2))—Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.

— Obtain from or request that the examiners reviewing due from banks and deposit accounts verify a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.

— Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.

| 2. Perform appropriate procedural steps for the separate area, concentration of credits. |
| 3. Discuss with the appropriate officer (or officers) and prepare comments to the examiner-in-charge stating your findings on the following: |
| a. delinquent loans, including breakout of “A” paper |
| b. violations of laws and regulations |
| c. concentration of credits |
| d. classified loans |
| e. loans not supported by current and complete financial information |
| f. loans on which collateral documentation is deficient |

3. This policy also applies to income derived from the sale of mortgage life insurance; therefore, consult with the examiner assigned real estate loans to coordinate work to avoid any duplication of efforts.
g. inadequately collateralized loans  
h. extensions of credit to major stockholders, employees, officers, directors, and/or their interests  
i. Small Business Administration or other government-guaranteed delinquent or criticized loans  
j. a list of installment loans requested to be charged off  
k. the adequacy of written policies relating to installment loans  
l. the manner in which bank officers are operating in conformance with established policy  
m. adverse trends within the installment area  
n. the accuracy and completeness of the schedules obtained from the bank or other examination areas  
o. internal-control deficiencies or exceptions  
p. recommended corrective action when policies, practices, or procedures are deficient  
q. the quality of departmental management  
r. other matters of significance  
4. Update the workpapers with any information that will facilitate future examinations.
Consumer Credit
Internal Control Questionnaire
Effective date May 2005

Review the bank’s internal controls, policies, practices, and procedures for making and servicing installment loans. The bank’s system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. In the questionnaire below, items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written installment-loan policies that establish—
   a. procedures for reviewing installment-loan applications?
   b. standards for determining credit lines?
   c. minimum standards for documentation?
2. Are installment-loan policies reviewed at least annually to determine if they are compatible with changing market conditions?
3. Does the bank have adequate written overdraft-protection-program policies and procedures that follow the February 28, 2005, interagency Joint Guidance on Overdraft Protection Programs?
4. Does the bank’s management emphasize and monitor adherence to its overdraft policies and procedures, apply generally accepted accounting principles, and apply the bank Call Report’s accounting and reporting requirements to overdrafts? Does the bank maintain and monitor safe and sound overdraft business practices to control the credit, operational, and other risks associated with overdraft programs?

RECORDS

1. Is the preparation and posting of subsidiary installment-loan records performed or reviewed by persons who do not also—
   a. issue official checks or drafts?
   b. handle cash?

2. Are the subsidiary installment-loan records reconciled daily to the appropriate general ledger accounts, and are reconciling items investigated by persons who do not also handle cash?
3. Are delinquent-account collection requests and past-due notices checked to the trial balances that are used in reconciling installment-loan subsidiary records to general ledger accounts, and are requests and notices handled only by persons who do not also handle cash?
4. Are loan-balance inquiries received and investigated by persons who do not also handle cash?
5. Are documents supporting recorded credit adjustments checked or tested subsequently by persons who do not also handle cash? (If not, explain why briefly.)
6. Is a daily record maintained that summarizes loan-transaction details, i.e., loans made, payments received, and interest collected, to support applicable general ledger account entries?
7. Are frequent note and liability ledger trial balances prepared and reconciled with controlling accounts by employees who do not process or record loan transactions?
8. Are two authorized signatures required to effect a status change in an individual customer’s account?
9. Does operating management produce and review an exception report that encompasses extensions, renewals, or any factors that would result in a change in a customer’s account status?
10. Do customer account records clearly indicate accounts that have been renewed or extended?

LOAN INTEREST

1. Is the preparation and posting of interest records performed or reviewed by persons who do not also—
   a. issue official checks or drafts?
   b. handle cash?
2. Are any independent tests of loan-interest computations made and compared with initial and subsequent borrowers’ interest records by other persons who do not—
   a. issue official checks or drafts?
   b. handle cash?
COLLATERAL

1. Are multicopy, prenumbered records maintained that—
   a. detail the complete description of collateral pledged?
   b. are typed or completed in ink?
   c. are signed by the customer?
2. Are receipts issued to customers for each item of collateral deposited?
3. Are the functions of receiving and releasing collateral to borrowers and of making entries in the collateral register performed by different employees?
4. Is negotiable collateral held under joint custody?
5. Is all collateral for a single loan maintained in a separate file?
6. Are receipts obtained and filed for released collateral?
7. Is a record maintained of entry to the collateral vault?
8. Are the following controls on collateral in effect:
   a. When the bank customers’s savings passbooks are held as collateral, the savings department is notified and the account is so noted on the deposit ledger.
   b. Descriptions of motor vehicles, as set forth on the certificate of title and insurance policies, are checked to the chattel mortgages or other appropriate documents granting security interest in the vehicle.
   c. An insurance-maturity tickler file is maintained.
   d. Procedures are in effect to ensure single-interest insurance coverage is obtained in case regular insurance is canceled or expires.
   e. All insurance policies on file include a loss-payable clause in favor of the bank.
   f. Filings are made on all security agreements.
   g. Supporting lien searches and property appraisals are performed when a judgment action is returned involving real property.
9. Are control records maintained that identify loans secured by junior liens on real estate?
10. Do those records indicate the current balance for loans secured by superior liens on the same property?

DEALER LOANS

1. On dealer loans, are—
   a. separate controls maintained or can they be easily generated?
   b. payments made directly to the bank and not through the dealer?
   c. coupon books, if used in connection with loans, mailed to the borrowers, instead of the dealer?
   d. monthly summaries of the total paper discounted and outstanding for each dealer prepared and reviewed?
   e. dealer lines reaffirmed at least annually?
   f. required documents on file in connection with the establishment of each dealer line?
   g. signed extension agreements obtained from dealers before extending accounts originally discounted on a repurchase agreement or other recourse basis?
   h. downpayment amounts checked to ensure they do not misrepresent the sales price?
   i. procedures in effect to prevent the dealer from making late payments?
   j. prohibitions against bringing loans current by charges to the dealer’s reserve accounts in effect?
   k. selling prices, as listed by the dealer, verified?
   l. overdrafts prohibited in the dealer reserve and holdback accounts?
   m. procedures in effect to have the title application controlled by someone other than the purchaser?
   n. credit checks on borrowers performed independently of the dealer, or are the dealer’s credit checks independently verified?
   o. delinquencies verified directly with the customers?

DISCOUNTED LEASING PAPER

1. If the bank discounts leasing paper—
   a. are separate controls maintained or can they be easily generated?
   b. are payments made directly to the bank?
   c. are controls established or are audits of lessor’s books conducted if the lessor is permitted to accept payments (if so, explain why briefly)?
   d. are monthly summaries of total paper...
discounted for each lessor prepared and reviewed?
e. are lines for each lessor reaffirmed at least annually?
f. is a master lease required and properly recorded when fleet-leasing or blanket purchase of leasing paper is handled?
g. is the value of leased goods verified to ensure that it is not less than the amount advanced?
h. is lease paper screened for the credit quality of the lessee?
i. are lease terms and payment amounts required to be adequate to liquidate the debt in full?

CREDIT CARD LENDING

1. Has the bank tested, analyzed, and documented line-assignment and line-increase criteria prior to broad implementation of a new credit card plan?
2. Is a borrower’s repayment capacity carefully considered when the bank assigns an initial credit line or significantly increases existing credit lines?
   a. Are credit-line assignments managed conservatively using proven credit criteria?
   b. Does the bank have documentation and analyses of decision factors such as repayment history, risk scores, behavior scores, or other relevant criteria?
   c. Does the bank consider its entire relationship with a borrower when making decisions about credit-line assignments?
   d. If the bank offers multiple credit lines to borrowers, does it have sufficient controls and management information systems to aggregate related exposures and analyze borrowers’ performance before offering them additional lines of credit?
3. Do the bank’s policies and procedures focus on adequate control, authorizations, and the timely repayment of amounts that exceed established credit limits?
   a. Are the bank’s management information systems sufficient to enable management to identify, measure, manage, and control the risks associated with over-limit accounts?
   b. Does the bank have appropriate policies and controls for over-limit authorizations on open-end accounts, particularly subprime accounts?
   4. Do the bank’s policies and procedures require that minimum payments on credit card accounts amortize the current balances over a reasonable period of time, consistent with the nature of the underlying debt and the borrower’s documented creditworthiness? Do the bank’s policies and practices foster or encourage prolonged negative amortization, inappropriate fees, and other practices that inordinately compound or protract consumer debt?
5. Are workout programs designed to maximize principal reduction, and do they strive to have borrowers repay their credit card debt within 60 months? Has the bank documented and supported, with compelling evidence, any exceptions to the 60-month time frame for workout programs? Has the bank also documented and supported any less conservative loan terms and conditions that may be warranted?
6. Has the bank established and maintained adequate loss allowances for credit card accounts subject to settlement arrangements?
   a. Does the bank classify as a loss and charge off immediately amounts of debt forgiven in settlement arrangements?
   b. Are specific allowances for such settlement accounts reported as a charge-off in Schedule RI-B of the call report?
   c. Does the bank charge off any deficiency balances within 30 days from the receipt of a final settlement payment?
7. Does the bank evaluate the collectibility of accrued interest and fees on credit card accounts and recognize and properly account for the amounts that are uncollectible?
   a. Are appropriate methods employed to ensure that income is accurately measured (such methods include providing loan-loss allowances for uncollectible fees and finance charges or placing delinquent and impaired receivables on nonaccrual status)?
   b. Is the owned portion of accrued interest and fees, including related estimated losses, accounted for separately from the retained interest in accrued interest and fees from securitized credit card receivables?
8. Does the bank’s allowance for loan and lease losses (ALLL) methodology fully recognize the incremental losses that may be inherent in over-limit accounts and portfolio segments?
9. Are accounts in workout programs segregated for performance-measurement, impairment-analysis, and monitoring purposes?
   a. Are multiple workout programs with different performance characteristics tracked separately?
   b. Is the allowance allocation for each workout program equal to the estimated loss in each program, based on historical experience adjusted for current conditions and trends?

10. Is the total amount credited to the ALLL as recoveries on a loan limited to the amount previously charged off against the ALLL, and are any amounts that are collected in excess of this limit recognized as income?

11. Do the bank’s policies and procedures address the types of allowed exceptions to the FFIEC’s Uniform Retail Credit Classification and Account Management Policy and also the circumstances permitting those exceptions?
   a. Is the volume of accounts that are granted exceptions small and well controlled?
   b. Is the performance of accounts that are granted exceptions closely monitored?
   c. Does the bank use exceptions prudently? If not, has management been criticized and has appropriate supervisory corrective action been recommended?

REPOSSESSIONS

1. Are procedures established on repossessions so that—
   a. management takes timely action to receive full advantage of any dealer endorsement or repurchase agreement?
   b. the notice of intention to sell is mailed to all parties who are liable on the account?
   c. bids are required before the sale of the item?
   d. bids are retained in the borrower’s credit file?
   e. open repossessions are physically checked monthly?
   f. surplus funds received from the sale of a repossession are mailed back to the borrower in the form of a cashier’s check?
   g. any deficiency balance remaining after the sale of repossession is charged off?
   h. the bill of sale is properly completed and signed by an officer?
   i. separate general ledger control is maintained?

DELINQUENT ACCOUNTS AND OPERATING REVIEW SYSTEM

1. Are collection policies established so that—
   a. a delinquent notice is sent before a loan becomes 30 days past due?
   b. collection effort is intensified when a loan becomes two payments past due?
   c. records of collection efforts are maintained in the customer’s file?
   d. field or outside collectors are under the supervision of an officer and are required to submit progress reports?
   e. all collections are acknowledged on multiplicity prenumbered forms?
   f. all documents that are held outside the regular files and that pertain to installment loans under collection are evidenced by a transmittal sheet and receipt?
   g. delinquency lists are generated on a timely basis (indicate the frequency)?

2. Is an operating review system in place that—
   a. determines that duties are properly segregated and that loan officers are prohibited from processing loan payments?
   b. recomputes the amount of credit life and accident and health insurance on new loans?
   c. recomputes the amount of discount on new loans?
   d. recomputes the rebates on prepaid loans?
   e. test-checks daily transactions to subsequent general ledger postings?
   f. reviews new-loan documentation?
   g. reviews all information in reports being submitted to the board of directors, or any committee thereof, for errors or omissions?
   h. conducts a periodic review of income accruals for accuracy?
   i. reviews entries to unearned discount or income accounts?
   j. reviews all charged-off loans for proper approval?
   k. periodically reconciles charged-off notes to controls?
1. reviews dealer’s reserve and holdback agreements and periodically determines the adequacy of the balances in the deposit account?

m. periodically verifies dealer reserve balances?

n. determines that payments are accurately and promptly posted?

o. reviews collection or reversal of late charges?

p. determines that extension fees are collected on all extended loans?

q. determines that discounted dealer paper is properly endorsed?

r. determines that discounted dealer paper is within established guidelines?

s. reviews compliance with laws and regulations?

t. reviews trial balance reconciliations to the general ledger?

CONCLUSION

1. Is the foregoing information an adequate basis for evaluating internal control that is, there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.

2. On the basis of a composite evaluation (as evidenced by answers to the foregoing questions), is internal control considered adequate or inadequate?
Subprime Lending
Effective date May 2007

Federally insured banks tend to avoid lending to customers with poor credit histories because of the higher risk of default and resulting loan losses. However, some lenders\(^1\) extend their risk-selection standards to attract lower-credit-quality accounts.

Subprime lending involves extending credit to borrowers who exhibit characteristics that indicate a significantly higher risk of default than traditional bank lending customers.\(^2\) The risk of default may be measured by traditional credit-risk measures (such as credit or repayment history or debt-to-income levels) or by alternative measures such as credit scores.

Subprime borrowers represent a broad spectrum of debtors, ranging from those who have repayment problems because of an adverse event, such as job loss or medical emergency, to those who persistently mismanage their finances and debt obligations. Subprime borrowers typically have weakened credit histories that include payment delinquencies and possibly more severe problems, such as charge-offs, judgments, and bankruptcies. They may also display reduced repayment capacity as measured by credit scores, debt-to-income ratios, or other criteria that may encompass borrowers with incomplete credit histories. Generally, subprime borrowers will display a range of one or more credit-risk characteristics, such as—

- two or more 30-day delinquencies in the last 12 months, or one or more 60-day delinquencies in the last 24 months;
- judgment, foreclosure, repossession, or charge-off in the prior 24 months;
- bankruptcy in the last five years;
- relatively high default probability as evidenced by, for example, a credit bureau risk score (FICO) of 660 or below (depending on the product or collateral), or other bureau or proprietary scores with an equivalent default-probability likelihood; or
- debt-service-to-income ratio of 50 percent or greater, or an otherwise limited ability to cover family living expenses after deducting total monthly debt-service requirements from monthly income.

Subprime loans are loans to borrowers displaying one or more of these characteristics at the time of origination or purchase.

SUPERVISORY GUIDANCE FOR SUBPRIME LENDING

The subprime supervisory guidance applies to direct extensions of credit; the purchase of subprime loans from other lenders, including delinquent or credit-impaired loans purchased at a discount; the purchase of subprime automobile or other financing “paper” from lenders or dealers; and the purchase of loan companies that originate subprime loans.

Subprime lending does not include loans to borrowers who have had minor, temporary credit difficulties but are now current. Also, the subprime-lending guidance does not generally apply to prime loans that develop credit problems after acquisition; loans that were initially extended in subprime programs and are later upgraded, as a result of their performance, to programs targeted to prime borrowers; and community development loans, as defined in the Community Reinvestment Act (CRA) regulations, that may have some higher risk characteristics, but are otherwise mitigated by guarantees from government programs, private credit enhancements, or other appropriate risk-mitigation techniques.

Subprime lending poses unique and significant risks to banking institutions engaged in the activity. Market events have raised supervisory issues about how well subprime lenders are prepared to manage and control the risks. Subprime-lending institutions need strong risk-management practices and internal controls, as well as board-approved policies and procedures that appropriately identify, measure, monitor, and control all associated risks. Institutions considering or engaging in this type of lending should recognize the additional risks inherent in this activity and determine if these risks are acceptable and controllable, given their organization’s financial condition, asset size, level of capital support, and staff size. Well-managed subprime lenders should recognize the heightened loss characteristics in their portfolios and internally classify their delinquent accounts well.

\(^1\) The terms lenders, financial institutions, and institutions refer to federally insured banks and their subsidiaries.

\(^2\) For purposes of this section, loans to customers who are not subprime borrowers are referred to as prime.
before the time frames in their respective interagency supervisory policy.

Interagency guidance on subprime lending was issued on March 1, 1999, to alert examiners and financial institutions to some of the pitfalls and hazards involved in this type of lending.\(^3\) (See SR-99-06.) Additional interagency examination guidance was issued on January 31, 2001, to further strengthen the supervision of certain institutions, primarily those institutions having subprime-lending programs with an aggregate credit exposure equaling or exceeding 25 percent of their tier 1 capital.\(^4\) (See SR-01-04.) The aggregate exposure includes principal outstanding and committed, accrued and unpaid interest, and any retained residual interests\(^5\) relating to securitized subprime loans. The Federal Reserve may also apply the additional guidelines to certain smaller subprime portfolios, such as those experiencing rapid growth or adverse performance trends, those administered by inexperienced management, and those with inadequate or weak controls.

Subprime loans command higher interest rates and loan fees than those offered to standard-risk borrowers. Subprime loans can be profitable, provided the price charged by the lender is sufficient to cover higher loan-loss rates and overhead costs related to underwriting, servicing, and collecting the loans. The ability to securitize and sell subprime portfolios at a profit while retaining the servicing rights makes subprime lending attractive to a larger number of institutions, further increasing the number of subprime lenders and loans. Some financial institutions have experienced losses attributable to ill-advised or poorly structured subprime-lending programs. These losses have attracted greater supervisory attention to subprime lending and the ability of an insured bank to manage the unique risks associated with this activity.

**Risk Management**

The following items are essential components of a well-structured risk-management program for subprime lenders.

**Planning and Strategy**

Before engaging in subprime lending, the board and management should ensure that proposed activities are consistent with the institution’s overall business strategy and risk tolerances, and that all involved parties have properly acknowledged and addressed critical business-risk issues. These issues include the costs associated with attracting and retaining qualified personnel, investments in the technology necessary to manage a more complex portfolio, a clear solicitation and origination strategy that allows for after-the-fact assessment of underwriting performance, and the establishment of appropriate feedback and control systems. The risk-assessment process should extend beyond credit risk and appropriately incorporate operating, compliance, and legal risks. Finally, the planning process should set clear objectives for performance, including the identification and segmentation of target markets or customers, as well as set performance expectations and benchmarks for each segment and the portfolio as a whole. Institutions establishing a subprime-lending program should proceed slowly and cautiously into this activity to minimize the impact of unforeseen personnel, technology, or internal-control problems and to determine if favorable initial profitability estimates are realistic and sustainable.

**Staff Expertise**

Subprime lending requires specialized knowledge and skills that many financial institutions may not possess. Marketing, account-origination, and collections strategies and techniques often differ from those employed for prime credit; thus, it may not be sufficient to have the same lending staff responsible for both subprime loans and other loans. Additionally, servicing and

---

3. The March 1999 and January 2001 statements were adopted and issued by the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

4. The March 1999 and January 2001 subprime-lending interagency guidance is consolidated within this section. To focus on the supervisory guidance that applies primarily to institutions having subprime-lending programs equaling or exceeding 25 percent of tier 1 capital, see the January 2001 release. The March 1999 interagency supervisory guidance applies to all subprime-lending institutions.

5. Residual interests are on-balance-sheet assets that represent interests (including beneficial interests) in transferred financial assets retained by a seller (or transferor) after a securitization or other transfer of financial assets. They are structured to absorb more than a pro rata share of credit loss related to the transferred assets through subordination provisions or other credit-enhancement techniques.
collecting subprime loans can be very labor intensive. If necessary, the institution should implement programs to train staff. The board should ensure that staff possess sufficient expertise to appropriately manage the risks in subprime lending and that staffing levels are adequate for the planned volume of subprime activity. The experience, or seasoning, of staff and loans should be taken into account as performance is assessed over time.

**Lending Policy**

A subprime-lending policy should be appropriate to the size and complexity of the institution’s operations and should clearly state the goals of the subprime-lending program. While not exhaustive, the following lending standards should be addressed in any subprime-lending policy:

- types of products offered as well as those that are not authorized
- portfolio targets and limits for each credit grade or class
- lending and investment authority clearly stated for individual officers, supervisors, and loan committees
- a framework for pricing decisions and profitability analysis that considers all costs associated with the loan, including origination costs, administrative or servicing costs, expected charge-offs, and capital
- evaluation of collateral and appraisal standards
- well-defined and specific underwriting parameters (that is, on acceptable loan term, debt-to-income ratios, and loan-to-collateral-value ratios for each credit grade and a minimum acceptable credit score) that are consistent with any applicable supervisory guidelines⁶
- procedures for the separate tracking and monitoring of loans approved as exceptions to stated policy guidelines
- credit-file documentation requirements, such as applications, offering sheets, loan and collateral documents, financial statements, credit reports, and credit memoranda to support the loan decision
- correspondent/broker/dealer approval process, including measures to ensure that loans originated through this process meet the institution’s lending standards

If the institution elects to use credit scoring (including applications scoring) for approvals or pricing, the scoring model should be based on a development population that captures the behavioral and credit characteristics of the subprime population targeted for the products offered. Because of the significant variance in characteristics between the subprime and prime populations, institutions should not rely on models developed solely for products offered to prime borrowers. Further, the model should be reviewed frequently and updated as necessary to ensure that assumptions remain valid.

**Purchase Evaluation**

As they evaluate expected profits, institutions that purchase subprime loans from other lenders or dealers must give due consideration to the cost of servicing these assets and to the loan losses that may be experienced. For instance, some lenders who sell subprime loans charge borrowers high up-front fees, which are usually financed into the loan. This provides incentive for originators to produce a high volume of loans with little emphasis on quality, to the detriment of a potential purchaser. Further, subprime loans, especially those purchased from outside the institution’s lending area, are at special risk for fraud or misrepresentation (that is, the quality of the loan may be less than the loan documents indicate).

Institutions should perform a thorough due-diligence review before committing to purchase subprime loans. Institutions should not accept loans from originators that do not meet their underwriting criteria, and they should regularly review loans offered to ensure that loans purchased continue to meet those criteria. Deterioration in the quality of purchased loans or in the portfolio’s actual performance versus expectations requires a thorough reevaluation of the lenders or dealers who originated or sold the loans, as well as a reevaluation of the institution’s criteria for underwriting loans and selecting dealers and lenders. Any such deterioration may also highlight the need to modify or termi-

---

⁶ Extensions of credit secured by real estate, whether the credit is subprime or otherwise, are subject to the Interagency Guidelines for Real Estate Lending Policies, which establish supervisory loan-to-value (LTV) limits on various types of real estate loans and impose limits on an institution’s aggregate investment in loans that exceed the supervisory LTV limits. (See 12 CFR 208, appendix C.)
nate the correspondent relationship or to adjust underwriting and dealer or lender selection criteria.

**Loan-Administration Procedures**

After the loan is made or purchased, loan-administration procedures should provide for the diligent monitoring of loan performance and establish sound collection efforts. To minimize loan losses, successful subprime lenders have historically employed stronger collection efforts, such as calling delinquent borrowers frequently, investing in technology (for example, using automatic dialing for follow-up telephone calls on delinquent accounts), assigning more experienced collection personnel to seriously delinquent accounts, moving quickly to foreclose or repossess collateral, and allowing few loan extensions. This aspect of subprime lending is very labor intensive but critical to the program’s success. To a large extent, the cost of such efforts can be a tradeoff with future loss expectations, when an institution analyzes the profitability of subprime lending and assesses its appetite to expand or continue this line of business. Subprime-loan administration procedures should be in writing and at a minimum should detail—

- billing and statement procedures;
- collection procedures;
- content, format, and frequency of management reports;
- asset-classification criteria;
- methodology to evaluate the adequacy of the allowance for loan and lease losses (ALLL);
- criteria for allowing loan extensions, deferrals, and re-agings;
- foreclosure and repossession policies and procedures; and
- loss-recognition policies and procedures.

**Loan Review and Monitoring**

Once an institution books the loans, designated staff must perform an ongoing analysis of subprime loans, not only on an aggregate basis but also for subportfolios. Information systems should be in place to segment and stratify the institution’s portfolio (for example, by originator, loan-to-value, debt-to-income ratios, or credit scores). Assigned staff should produce reports that management can use to evaluate the performance of subprime loans. The review process should focus on whether performance meets expectations. Institutions then need to consider the source and characteristics of loans that do not meet expectations and make changes in their underwriting policies and loan-administration procedures to restore performance to acceptable levels.

When evaluating actual performance against expectations, it is particularly important that management review credit scoring, pricing, and any ALLL-adequacy models. Models driven by the volume and severity of historical losses experienced during an economic expansion may have little relevance in an economic slowdown, particularly in the subprime market. Management should ensure that models used to estimate credit losses or to set pricing allow for fluctuations in the economic cycle and are adjusted to account for other unexpected events.

**Consumer Protection**

Institutions that originate or purchase subprime loans must take special care to avoid violating fair lending and consumer protection laws and regulations. Higher fees and interest rates combined with compensation incentives can foster predatory pricing or discriminatory “steering” of borrowers to subprime products for reasons other than the borrower’s underlying creditworthiness. An adequate compliance-management program must identify, monitor, and control the consumer protection hazards associated with subprime lending.

Subprime mortgage lending may trigger the special protections of the Home Ownership and Equity Protection Act of 1994, subtitle B of title I of the Riegle Community Development and Regulatory Improvement Act of 1994. This act amended the Truth in Lending Act to provide certain consumer protections in transactions involving a class of nonpurchase, closed-end home mortgage loans. Institutions engaging in this type of lending must also be thoroughly familiar with the obligations set forth in Regulation Z (12 CFR 226.32), Regulation X (24 CFR 3500), and the Real Estate Settlement Procedures Act (RESPA) (12 USC 2601) and should adopt policies and implement practices that ensure compliance.

The Equal Credit Opportunity Act makes it unlawful for a creditor to discriminate against an
applicant on a prohibited basis regarding any aspect of a credit transaction. Similarly, the Fair Housing Act prohibits discrimination in connection with residential real estate–related transactions. Loan officers and brokers must treat all similarly situated applicants equally and without regard to any prohibited-basis characteristic (for example, race, sex, or age). This is especially important with respect to how loan officers or brokers assist customers in preparing their applications or otherwise help them to qualify for loan approval.

Securitization and Sale

To increase their loan-production and -servicing income, some subprime lenders originate loans and then securitize and sell them in the asset-backed securities market. Strong demand from investors and favorable accounting rules often allow securitization pools to be sold at a gain, providing further incentive for lenders to expand their subprime-lending program. However, the securitization of subprime loans carries inherent risks, including interim credit risk and liquidity risks, which are potentially greater than those for securitizing prime loans. Accounting for the sale of subprime pools requires assumptions that can be difficult to quantify, and erroneous assumptions could lead to the significant overstatement of an institution’s assets. Moreover, the practice of providing support and substituting performing loans for nonperforming loans to maintain the desired level of performance on securitized pools has the effect of masking credit-quality problems.

Institutions should recognize the volatility of the secondary market for subprime loans and the significant liquidity risk incurred when originating a large volume of loans intended for securitization and sale. Investors can quickly lose their appetite for risk in an economic downturn or when financial markets become volatile. As a result, institutions that have originated, but have not yet sold, pools of subprime loans may be forced to sell the pools at deep discounts. If an institution lacks adequate personnel, risk-management procedures, or capital support to hold subprime loans that were originally intended for sale, these loans may strain an institution’s liquidity, asset quality, earnings, and capital. Consequently, institutions actively involved in the securitization and sale of subprime loans should develop a contingency plan that addresses backup purchasers of the securities or the attendant servicing functions, alternate funding sources, and measures for raising additional capital.

Institutions should refer to the Statement of Financial Accounting Standards No. 140 (FAS 140), “Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities,” for guidance on accounting for these transactions. If a securitization transaction meets FAS 140 sale or servicing criteria, the seller must recognize any gain or loss on the sale of the pool immediately and carry any retained interests in the assets sold (including servicing rights or obligations and interest-only strips) at fair value. Management should ensure that the key assumptions used to value these retained interests are reasonable and well supported, both for the initial valuation and for subsequent quarterly revaluations. In particular, management should consider the appropriate discount rates, credit-loss rates, and prepayment rates associated with subprime pools when valuing these assets. Since the relative importance of each assumption varies with the underlying characteristics of the product types, management should segment securitized assets by specific pool, as well as by predominant risk and cash-flow characteristics, when making the underlying valuation assumptions. In all cases, however, institutions should take a conservative approach when developing securitization assumptions and capitalizing expected future income from subprime-lending pools. Institutions should also consult with their auditors as necessary to ensure that their accounting for securitizations is accurate.

Reevaluation

Institutions should periodically evaluate whether the subprime-lending program has met profitability, risk, and performance goals. Whenever the program falls short of original objectives, an analysis should be performed to determine the cause, and the program should be modified appropriately. If the program falls far short of the institution’s expectations, management should consider terminating it. Questions that management and the board need to ask may include the following:

- Have cost and profit projections been met?
- Have projected loss estimates been accurate?
Has the institution been called upon to provide support to enhance the quality and performance of loan pools it has securitized?

Were the risks inherent in subprime lending properly identified, measured, monitored, and controlled?

Has the program met the credit needs of the community that it was designed to address?

Examination Review and Analysis

The following supervisory guidance (up to the examination objectives) applies only to banks that have subprime-lending programs equaling or exceeding 25 percent of tier 1 capital and to banks that have other designated subprime programs referenced in SR-01-4.

The heightened risk levels and potential volatility in delinquency and loss rates posed by subprime-lending programs warrant examiners’ increased ongoing attention. The risks inherent in subprime-lending programs call for frequent reviews. There are generally two levels of review appropriate for subprime activities:

- **Portfolio-level reviews** include assessments of underwriting standards, marketing practices, pricing, management information and control systems (quality control, audit and loan review, vendor management, compliance), portfolio performance, and the appropriate application of regulatory and internal allowance and capital policies.

- **Transaction-level testing** includes the testing of individual loans for compliance with underwriting and loan-administration guidelines; the appropriate treatment of loans under delinquency, re-aging, and cure programs; and the appropriate application of regulatory and internal allowance and capital policies.

**Transaction-Level Testing**

Subprime-loan portfolios contain elevated risks, and actual subprime-lending practices often can deviate from stated policy and procedural guidance. Therefore, examiners should supplement the portfolio-level examination procedures with transaction-level testing to determine whether—

- individual loans adhere to existing policy, underwriting, risk-selection, and pricing standards;
- individual loans and portfolios are classified in accordance with the subprime-lending guidelines described in this section, or in other Federal Reserve credit-extending supervisory guidance;
- management, board, and regulatory reporting is accurate and timely;
- existing loans conform to specified account-management standards (such as over-limits, line increases, reductions, cancellations, re-scoring, or collections);
- key risk controls and control processes are adequate and functioning as intended;
- roll rates and other loss-forecasting methods used to determine ALLL levels are accurate and reliable; and
- lending practices exist that may appear unsafe, unsound, or abusive and unfair.

**Adequacy of the ALLL**

Examiners should assess the adequacy of the ALLL to ensure that the portion allocated to the subprime portfolio is sufficient to absorb estimated credit losses for this portfolio. Consistent with interagency policy, the term *estimated credit losses* means an estimate of the amount that is not likely to be collected; that is, net charge-offs that are likely to be realized given the facts and circumstances as of the evaluation date. These estimated losses should meet the

---

7. The 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses was issued December 13, 2006. (See SR-06-17.) The Supplemental Interagency policy statement on the ALLL methodologies and documentation was issued July 2, 2001. (See SR-01-07.)

8. Estimates of credit losses should include accrued interest and other accrued fees (for example, uncollected credit card
criteria for accrual of loss contingency, as set forth under generally accepted accounting principles (GAAP), consistent with supervisory ALLL policy.

New Entrants to the Business

In some instances, an institution (for example, a newly chartered institution or an existing institution entering the subprime-lending business) may not have sufficient previous loss experience to estimate an allowance for subprime-lending activities. In such cases, industry statistics or another institution’s loss data for similar loans may be a better starting point to determine the ALLL than the institution’s own data for developing loss rates. When an institution uses loss rates developed from industry statistics or from other institutions to determine its ALLL, it should demonstrate and document that the attributes of the loans in its portfolio or portfolio segment are similar to those in the other institution’s (or industry’s) portfolio.

Pools of Subprime Loans—Not Classified

The ALLL required for subprime loans should be sufficient to absorb at least all estimated credit losses on outstanding balances over the current operating cycle, typically 12 months. The board of directors and management are expected to ensure that the institution’s process for determining an adequate level for the ALLL is based on a comprehensive and adequately documented analysis of all significant factors. The consideration factors should include historical loss experience, ratio analysis, peer-group analysis, and other quantitative analysis as a basis for the reasonableness of the ALLL. To the extent that the historical net charge-off rate is used to estimate expected credit losses, it should be adjusted for changes in trends, conditions, and other relevant factors, including business volume, underwriting, risk selection, account-management practices, and current economic or business conditions that may alter such experience. The allowance should represent a prudent, conservative estimate of losses that allows a reasonable margin for imprecision. Institutions should clearly document loss estimates and the allowance methodology in writing. This documentation should describe the analytical process used, including—

- portfolio-segmentation methods applied;
- loss-forecasting techniques and assumptions employed;
- definitions of terms used in ratios and model computations;
- relevance of the baseline loss information used;
- rationale for adjustments to historical experience; and
- a reconciliation of forecasted loss rates to actual loss rates, with significant variances explained.

Classification Guidelines for Subprime Lending

Well-managed subprime lenders should recognize the heightened loss characteristics in their portfolios and internally classify their delinquent accounts well before the time frames outlined in the retail classification policy issued by the Federal Financial Institutions Examination Council (FFIEC) on June 12, 2000. Examiners should classify subprime loans and portfolios in accordance with the guidelines in this section and other applicable Federal Reserve supervisory guidelines. Classified loans are loans that are not protected adequately by the current sound worth and paying capacity of the borrower or the collateral pledged. As such, full liquidation of the debt may be in jeopardy. Pools of classified subprime loans (to include, at a minimum, all loans past due 90 days or more) should be reviewed for impairment, and an adequate allowance should be established consistent with existing interagency policy.

Individual Loans

Examiners should not automatically classify or place loans in special mention merely because they are subprime. Rather, classifications should...
reflect the borrower’s capacity and willingness to repay and the adequacy of collateral pledged. Loans to borrowers that do not have the capacity to service their loans generally will be classified substandard. When repayment capacity is insufficient to support the orderly liquidation of the debt, and the collateral pledged is insufficient to mitigate risk of loss, then a more severe classification and nonaccrual is warranted. Subprime loans that are past due 90 days or more should be classified at least substandard based on a reasonable presumption that their past-due status indicates an inadequate capacity or unwillingness to repay. A more stringent classification approach may be appropriate based on the historical loss experience of a particular institution. Classification of other subprime loans as doubtful or loss will be based on examiners’ analysis of the borrower’s capacity to repay, and on the quality of institution underwriting and account-management practices as evidenced in the loan file or by other documentation.

In some cases, the repayment of principal, interest, and fees on some subprime loans may be overly dependent on collateral pledged. This occurs when the risk of default is so high that an abundance of collateral is taken to mitigate risk of loss in the event of default. From a safety-and-soundness perspective, institutions should be discouraged from lending solely on the basis of collateral pledged. Such loans will generally be classified substandard. Further, when the borrower does not demonstrate the capacity to service the loan from sources other than collateral pledged, the loan may be placed on nonaccrual.

Portfolios
When the portfolio review or loan sample indicates serious concerns with credit-risk selection practices, underwriting standards, or loan quality, examiners should consider classifying or criticizing the entire portfolio or segments of the portfolio. Such a decision may be appropriate in cases where risk is inordinately high or delinquency reports reflect performance problems. Some subprime-lending portfolios may pose very high risk. These may include portfolios of unsecured loans or secured, high loan-to-value loans to borrowers who clearly exhibit inadequate capacity to repay the debt in a reasonable time frame. Most such portfolios should be classified at least substandard.

Required Documentation for Cure Programs
Cure programs, including such practices as re-aging, extensions, renewals, rewrites, or other types of account restructuring, are subject to the standards outlined in the retail classification policy. In accordance with that policy, cure programs should be used only when the institution has substantiated the customer’s renewed willingness and ability to repay. Examiners will expect institutions to maintain documentation supporting their analysis of the customer’s renewed ability and willingness to repay the loan at the time it is extended, renewed, or deferred. When the institution cannot demonstrate both the willingness and ability of the customer to repay, the loan should not be renewed, extended, deferred, or rewritten, and the loan should be moved back to its pre-cure delinquency status. Documentation should include one or more of the following:

- a new verification of employment
- a recomputed debt-to-income ratio indicating sufficient improvement in the borrower’s financial condition to support orderly repayment
- a refreshed credit score or updated bureau report
- a file memo evidencing discussion with the customer

When documentation of the customer’s renewed willingness and ability to repay the loan is absent or deficient, management practices should be criticized.

Predatory or Abusive Lending Practices
The term “subprime” is often misused to refer to certain predatory or abusive lending practices. Lending practices can be designed to responsibly provide service to customers and enhance credit access for borrowers with special credit needs. Subprime lending that is appropriately underwritten, priced, and administered can serve these goals.

Some forms of subprime lending may be abusive or predatory, however. Lending practices may be designed to transfer wealth from the borrower to the lender or loan originator without a commensurate exchange of value.
This is sometimes accomplished when the lender structures a loan to a borrower who has little or no ability to repay the loan from sources other than the collateral pledged. When default occurs, the lender forecloses or otherwise takes possession of the borrower’s property (generally the borrower’s home or automobile). In other cases, the lender may use the threat of foreclosure or repossession to induce duress on the borrower for payment. Typically, predatory lending involves at least one, and perhaps all three, of the following elements:

- making unaffordable loans based on the assets of the borrower rather than on the borrower’s ability to repay an obligation
- inducing a borrower to refinance a loan repeatedly in order to charge high points and fees each time the loan is refinanced (that is, “loan flipping”)
- engaging in fraud or deception to conceal the true nature of the loan obligation or ancillary products from an unsuspecting or unsophisticated borrower

Loans to borrowers who do not demonstrate the capacity to repay the loan, as structured, from sources other than the collateral pledged are generally considered unsafe and unsound. Such lending practices should be criticized in the examination report as imprudent. Further, examiners should refer any loans with the aforementioned characteristics to Federal Reserve consumer compliance/fair lending specialists for additional review.

Capitalization

The Federal Reserve’s minimum capital requirements generally apply to portfolios that exhibit substantially lower risk profiles than those that exist in subprime-loan programs. Therefore, these requirements may not be sufficient to reflect the risks associated with subprime portfolios. Subprime-lending activities can present a greater-than-normal risk for financial institutions and the deposit insurance funds; therefore, the level of capital institutions need to support this activity should be commensurate with the additional risks incurred. Each subprime lender is responsible for quantifying the amount of capital needed to offset the additional risk in subprime-lending activities, and for fully documenting the methodology and analysis supporting the amount specified.

The amount of additional capital necessary will vary according to the volume and type of subprime activities conducted and the adequacy of the institution’s risk-management program. An institution’s overall capital adequacy will be evaluated on a case-by-case basis through on-site examinations and off-site monitoring procedures, considering, among other factors, the institution’s own documented analysis of the capital needed to support subprime lending. Institutions that are determined to have insufficient capital must correct the deficiency within a reasonable time frame or be subject to supervisory action. In light of the higher risks associated with this type of lending, higher minimum-capital requirements may be imposed on institutions engaging in subprime lending.

The sophistication of this analysis should be commensurate with the size, concentration level, and relative risk of the institution’s subprime-lending activities and should consider the following elements:

- portfolio-growth rates
- trends in the level and volatility of expected losses
- the level of subprime-loan losses incurred over one or more economic downturns, if such data or analyses are available
- the impact of planned underwriting or marketing changes on the credit characteristics of the portfolio, including the relative levels of risk of default, loss in the event of default, and the level of classified assets
- any deterioration in the average credit quality over time due to adverse selection or retention
- the amount, quality, and liquidity of collateral securing the individual loans
- any asset, income, or funding-source concentrations
- the degree of concentration of subprime credits
- the extent to which current capitalization consists of residual assets or other potentially volatile components
- the degree of legal or reputation risk associated with the subprime business lines pursued
- the amount of capital necessary to support the institution’s other risks and activities

Given the higher risk inherent in subprime-lending programs, examiners should reasonably expect, as a starting point, that an institution
would hold capital against such portfolios in an amount that is one and one-half to three times greater than what is appropriate for non-subprime assets of a similar type. Refinements should depend on the factors analyzed above, with particular emphasis on the trends in the level and volatility of loss rates, and on the amount, quality, and liquidity of collateral securing the loans. Institutions should have capital ratios that are well above the averages for their traditional peer groups or other similarly situated institutions that are not engaged in subprime lending.

Some subprime asset pools warrant increased supervisory scrutiny and monitoring, but not necessarily additional capital. For example, well-secured loans to borrowers who are slightly below what is considered prime quality may entail minimal additional risks compared with prime loans, and they may not require additional capital if adequate controls are in place to address the additional risks. On the other hand, institutions that underwrite higher-risk subprime pools, such as unsecured loans or high loan-to-value second mortgages, may need significantly higher levels of capital, perhaps as high as 100 percent of the loans outstanding, depending on the level and volatility of risk.

**Stress Testing**

An institution’s capital adequacy analysis should include stress testing as a tool for estimating unexpected losses in its subprime-lending pools. Institutions should project the performance of their subprime-loan pools under conservative stress-test scenarios, including an estimation of the portfolio’s susceptibility to deteriorating economic, market, and business conditions. Portfolio stress testing should include “shock” testing of basic assumptions, such as delinquency rates, loss rates, and recovery rates on collateral. Stress tests should also consider other potentially adverse scenarios, such as changing attrition or prepayment rates; changing utilization rates for revolving products; changes in credit-score distribution; and changes in the capital-market demand for whole loans or asset-backed securities supported by subprime loans. These are representative examples; actual factors will vary by product, market segment, and the size and complexity of the portfolio relative to the institution’s overall operations. Whether stress tests are performed manually, or through automated modeling techniques, it is expected that—

- the process is clearly documented, rational, and easily understood by the institution’s board and senior management;
- the inputs are reliable and relate directly to the subject portfolios (for example, baseline loss history or default probabilities should reflect each segment of the institution’s portfolio and not just a blend of prime and subprime borrowers);
- assumptions are well documented and conservative; and
- any models are subject to a comprehensive validation process.

The results of the stress-test exercises should be a documented factor in the analysis and determination of capital adequacy for the subprime portfolios.

Institutions that engage in subprime-lending programs without adequate procedures to estimate and document the level of capital necessary to support their activities should be criticized. Where capital is deemed inadequate to support the risk in subprime-lending activities, examiners should consult with their Reserve Bank supervisory official to determine the appropriate course of action. Such actions may include requiring additional capital in accordance with the Federal Reserve’s capital adequacy rules, or requiring the institution to submit an acceptable capital plan in accordance with safety-and-soundness guidelines.

**Subprime-Lending Examiner Responsibilities**

Using the interagency guidance and any supplemental Federal Reserve guidelines, examiners should assess carefully management’s ability to administer the higher risk in subprime portfolios. The examiner should judge management’s ability to manage the risk involved in the subprime-lending program, in particular, the quality of the risk-management and control processes in place, and more importantly, the extent to which management is adhering to those processes. When examiners determine that risk-management practices are deficient, they should criticize management and initiate corrective action. Such actions may include formal or
Informal enforcement actions or a plan to achieve adequate capitalization. When a primary supervisor determines that an institution’s risk-management practices are materially deficient, the primary supervisor may instruct the institution to discontinue its subprime-lending programs.

APPENDIX—QUESTIONS AND ANSWERS FOR EXAMINERS REGARDING THE EXPANDED GUIDANCE FOR SUBPRIME-LENDING PROGRAMS

To assist examiners who review subprime-lending activities, the following questions and answers were developed to provide additional guidance on the expanded interagency guidance that was issued on January 31, 2001.

Applicability of the Guidance

**Question 1:** Does the guidance apply to all institutions?

No. The guidance will not affect the vast majority of insured institutions engaged in traditional consumer lending. The guidance applies to institutions that systematically target the subprime market through programs that employ tailored marketing, underwriting standards, and risk selection.

The guidance does not address traditional consumer lending that has historically been the mainstay of community banking. It does not apply to institutions extending credit to subprime borrowers as part of their standard community-lending process, or making loans to subprime borrowers as an occasional exception to a prime-lending program, even if the aggregate of these loans totals more than 25 percent of tier 1 capital. Such institutions continue to be subject to the normal supervisory process.

Institutions engaging in subprime-lending programs generally have knowingly and purposefully focused on the subprime-lending markets through planned business strategies, tailored products, and explicit borrower targeting. In instances where significant exposures to subprime borrowers are identified, examiners should consider the institution’s marketing program, loan products, pricing, underwriting standards and practices, and portfolio performance to determine if the institution has a program that warrants the supervision and safeguards outlined in the guidance.

**Question 2:** Does the guidance apply when an institution offers a product that attracts a disproportionate number of subprime borrowers, but which the institution does not explicitly identify as subprime?

A subprime program commonly features products specifically tailored to borrowers with weakened credit histories. Such products often differ substantially in pricing and terms from products offered to prime borrowers, and usually have separate and distinctly different underwriting standards. An institution offering a product that attracts a disproportionate number of borrowers with weakened credit histories likely has a subprime program whether or not the activity is called a subprime program. The guidance will apply to these programs when the resultant aggregate credit exposure is at least 25 percent of the institution’s tier 1 capital.

Institutions with significant programs are expected to have the necessary risk-management and internal-control systems in place to properly identify, measure, monitor, and control the inherent risks in its subprime portfolio. Risk management and controls for these programs typically involve enhanced performance monitoring, intensive collection activities, and other loss-mitigation strategies. If an institution systematically targets the subprime market but does not segregate these loans from its prime portfolio, it is doubtful that the institution has the necessary risk-management and control systems in place to safely engage in the activity.

Subprime Characteristics

**Question 3:** Why does the Expanded Guidance for Subprime Lending Programs use a credit bureau risk score (FICO) of 660 as a cutoff point for subprime lending?

The guidance does not use credit scores, or any other single risk factor, as a definitive cutoff point for subprime lending. The characteristics listed are not explicit, bright-line definitions. The range of credit characteristics used to describe subprime borrowers is intended to help
examiners identify lenders that are engaged in subprime-lending programs. These characteristics describe borrowers with varying, but significantly higher, probabilities of default than prime borrowers. The guidance states that “this list is illustrative rather than exhaustive and is not meant to define specific parameters for all borrowers.”

A credit bureau score of 660 (FICO) is used only as an example to illustrate a credit score that generally indicates a higher default probability. The guidance indicates the probability of default, as evidenced by the credit score, will vary by product and collateral. The subprime guidance lists several characteristics that denote a higher probability of default. Examiners are directed to use these characteristics as a starting point to expand their review of lending programs targeting subprime borrowers in accordance with risk-focused examination procedures. The severity of risk may vary significantly for the different characteristics listed, as well as for the type and quality of collateral. Examiners should take this into consideration when reviewing the portfolio and determining the adequacy of loan-loss reserves and capital.

The characteristics used in the guidance are well recognized in the investment and lending industries. A number of public debt rating agencies and financial institutions, including the government-sponsored enterprises (GSEs), use similar credit characteristics to differentiate risk among borrowers. Specific examples include the following:

- Fitch defines a subprime borrower as “...one with a credit profile worse than that of a prime A quality borrower, whose credit report would typically reveal no recent mortgage delinquencies and whose credit profile would yield a [FICO] credit score in the range above 680.” Fitch’s mortgage credit grade matrix lists the following credit-history elements for A-, the highest subprime grade: one 30-day delinquency in the last 12 months on a mortgage debt; one 30-day delinquency in the last 24 months on installment debt, or two 30-day delinquencies in the last 24 months on revolving debt; bankruptcy in past five years; charge-off or judgments exceeding $500 in the past 24 months; and/or a debt-to-income ratio of 45 percent.

- Standard & Poor’s subprime-mortgage underwriting guidelines define subprime A-characteristics as two or more 30-day delinquencies on mortgage and consumer credit, one 60-day delinquency on consumer credit, debt-to-income ratio of 45 percent, and no bankruptcy in the past five years. Standard & Poor’s also “...considers subprime borrowers to have a FICO credit score of 659 or below.”

- Standard & Poor’s has classified nonprime B auto securitization pools as having occasional delinquencies and minor charge-offs on revolving debt, static pool net losses of 3.1 percent to 7.5 percent, and FICO credit scores ranging from 620–679.

- Freddie Mac has used the FICO score of 660 or below to designate higher-risk borrowers requiring more comprehensive review. Freddie Mac views a score in the 620–660 range as an indication that the “borrower’s willingness to repay debt as agreed is uncertain.” FICO scores below 620 are placed in the “cautious-review category,” and Freddie Mac considers scores below 620 “as a strong indication that the borrower’s credit reputation is not acceptable.”

Capital Guidance

**Question 4:** If an institution is engaged in subprime lending as described by the guidance, does the 1.5-to-3 times capital described in the guidance automatically apply?

No. The expanded interagency guidance on subprime lending is flexible examination guidance; the capital range does not automatically apply because the guidance is not a capital rule or regulation. Rather, the guidance describes an expectation that subprime lenders hold sufficient loan-loss reserves and capital to offset the additional risks that may exist in subprime activities. The agencies expect institutions to have methodologies and analyses in place to support and document the level of reserves and capital needed.

---

for the additional risks assumed. The higher the risk, the more reserves and capital needed to support the activity. Institutions with lower-risk subprime portfolios may not need additional reserves and capital. In addition, examiners are reminded that subprime lending is only one element in the evaluation of the institution’s overall capital adequacy. If the analysis shows that the institution has adequate capital for all its assets and activities, including subprime lending, there is no additional capital requirement arising from the guidance.

Examiners are instructed not to unilaterally require additional reserves and capital based on the guidance. Any determination made by an examiner that an institution’s reserves or capital are deficient will be discussed with the institution’s management and with each agency’s appropriate supervisory office before a final decision is made.

**Question 5: Are the regulatory expectations for higher capital levels consistent with capital levels supporting subprime assets outside the insured banking industry?**

Yes. The regulatory expectations of higher capital maintenance are consistent with expectations in the capital markets. The 1.5-to-3-times-capital multiple is risk based, e.g., the level of additional capital varies by relative loan quality and is applied only to the subprime portfolio, not the institution’s entire asset structure. This is consistent with the financial marketplace’s assessment of relative risk in subprime assets outside the banking industry. For example, the amount of credit enhancement required for subprime securitization structures varies according to the level and volatility of perceived credit risk in the underlying assets. In addition, publicly traded subprime-finance companies (that are not currently suffering from adverse ratings) maintain equity-capital-to-managed-asset ratios that are 1.5 to as much as 6 times (depending on loan type and relative quality) those of finance companies that do not specialize in subprime loans.
1. To assess and evaluate the extent of subprime-lending activities; whether management has adequately planned for this activity; and whether management has developed and maintains board-approved policies and procedures, systems, and internal controls that identify, measure, monitor, and control the additional risks.

2. To ascertain whether management has established adequate subprime-lending standards that are commensurate with the risks associated with the subprime-lending program.

3. To conduct portfolio-level reviews and transaction-level testing of the subprime-lending activities, assessing the quality and performance of the subprime-loan portfolios and subprime-lending program, including its profitability, delinquency, and potential and actual loss experience.

4. To assess the adequacy of the allowance for loan and lease losses (ALLL) for the subprime-loan portfolio.
Subprime Lending
Examination Procedures
Effective date November 2002
Section 2133.3

1. Determine whether the subprime-lending activities are consistent with the bank’s overall business strategy and risk tolerances, and that the critical business risks have been identified and considered.

2. Assess whether the bank has the financial capacity, including capital adequacy, to conduct the high-risk activity of subprime lending safely, without any undue concentrations of credit.

3. Ascertain if management has committed the necessary resources, that is, technology and skilled personnel, to manage and control the risks associated with the volume and complexity of the subprime-lending program.

4. Determine whether the banking institution’s contingency plans are adequate to address the issues of (1) alternative funding sources, (2) back-up purchasers of the securities or the attendant servicing functions, and (3) methods of raising additional capital during an economic downturn or when financial markets become volatile.

5. Determine if management has established adequate lending standards that are appropriate for the size and complexity of the banking organization’s operations, and if management is maintaining proper controls over the program. (See “Risk Management” in section 2133.1 for the lending standards that should be included in the subprime-loan program.)

6. Review and evaluate loan-administration and loan-monitoring procedures for subprime loans originated or purchased, including—
   a. collection, repossession, and disclosure procedures;
   b. the management of the number of staff members, the level and effective use of skilled staffing, and advanced technology;
   c. the adequacy of the allowance for loan and lease losses (ALLL); and
   d. the adequacy and accuracy of models used to estimate credit losses or set pricing, making certain that the models account for economic cycles and other unexpected events.

7. Perform a portfolio-level review and conduct some transaction testing. Incorporate examination findings from the portfolio-level and transaction-level testing reviews into the conclusions about overall asset quality, the adequacy of the ALLL and capital, and the adequacy of portfolio risk-management practices.

8. Review securitization transactions for compliance with Statement of Financial Accounting Standards No. 140 (FAS 140) and this guidance, including whether the banking organization has provided any support to maintain the credit quality of loan pools it has securitized.

9. Evaluate the ALLL and regulatory capital allocated to support subprime-lending programs, including whether the total protection for subprime-asset programs and the levels for each component are adequate. Ascertain that a sound risk-management program exists that includes the ability of management to determine and quantify appropriate levels for each component.

10. Analyze the performance of the program, including its profitability, delinquency, and loss experience.

11. Consider management’s response to adverse performance trends, such as higher-than-expected prepayments, delinquencies, charge-offs, customer complaints, and expenses.

12. Determine if the banking institution’s subprime-lending program effectively manages the credit, market, liquidity, reputational, operational, and legal risks associated with subprime-lending operations.

13. Evaluate the documented analysis of the institution’s capital needed to support its subprime-lending activities. Ascertain whether the capital levels are risk sensitive, that is, does allocated capital reflect the level and variability of loss estimates within reasonably conservative parameters? Determine if there is a direct link between the expected loss rates used to determine the required ALLL and the unexpected loss estimates used to determine capital. Document and reference each institution’s subprime capital evaluation in the examination comments and conclusions regarding capital adequacy.

14. Classify loans according to the following criteria:
a. Classify as substandard loans to borrowers that do not have the capacity to service their loans.
b. Classify as at least substandard subprime loans that are 90 days or more past due based on a reasonable presumption that their past-due status indicates an inadequate capacity or unwillingness to repay.
c. Consider classifying or criticizing the entire portfolio or segments of the portfolio when the portfolio review or loan sample indicates serious concerns with credit-risk selection practices, underwriting standards, or loan quality.
d. Classify as substandard high-risk unsecured loan portfolios or secured high-loan-to-value loans to borrowers who clearly exhibit inadequate capacity to repay the debt in a reasonable time frame.

15. Report as unsafe and unsound imprudent loans to borrowers who do not demonstrate the capacity to repay the loan, as structured, from sources other than the pledged collateral. Refer such loans to a consumer compliance/fair lending specialist for review.

16. Carefully assess management’s ability to administer the higher risk in subprime portfolios. If risk-management practices are deficient, criticize management and reach specific agreements with senior management and the board of directors to initiate corrective action.
An interagency Statement on Subprime Mortgage Lending (the subprime statement) was issued on July 10, 2007 (72 Fed. Reg. 37569) by the agencies1 (same effective date). The subprime statement address issues and questions related to certain adjustable-rate mortgage (ARM) products marketed to subprime borrowers. The statement clarifies how institutions can offer certain ARM products in a safe and sound manner, and in a way that clearly discloses the risks that a borrower may assume from certain ARMs. The statement applies to all banks and their subsidiaries and bank holding companies and their nonbank subsidiaries. See SR-07-12/CA-07-3 and its attachment (the full text of the interagency statement).

The guidance was developed to address emerging risks associated with certain subprime mortgage products and lending practices. The agencies are particularly concerned about the growing use of ARM products2 that provide low initial payments based on a fixed introductory rate that expires after a short period, and then adjusts to a variable rate plus a margin for the remaining term of the loan. These products could result in payment shock to the borrower. Also, there is concern that these products, typically offered to subprime borrowers, present heightened risks to lenders and borrowers. Often, these products have additional characteristics that increase risk. These include qualifying borrowers based on limited or no documentation of income or imposing substantial prepayment penalties or prepayment penalty periods that extend beyond the initial fixed-interest-rate period.

ARM products originally were extended to customers primarily as a temporary credit accommodation in anticipation of early sale of the property or in expectation of future earnings growth. However, these loans have been offered to subprime borrowers as “credit repair” or “affordability” products. The agencies had concerns that many of these subprime borrowers may not have sufficient financial capacity to service a higher debt load, especially if they were qualified based on a low introductory payment. Also, there was concern that the subprime borrowers may not fully understand the risks and consequences of obtaining these types of ARM products. Borrowers who obtain these loans may face unaffordable monthly payments after the initial rate adjustment, difficulty in paying real estate taxes and insurance that were not escrowed, or expensive refinancing fees, any of which could cause borrowers to default and potentially lose their homes.

SCOPE OF THE SUBPRIME STATEMENT

The subprime statement emphasizes the need for prudent underwriting standards and clear and balanced consumer information so that institutions and consumers can assess the risks arising from certain ARM products with discounted or low introductory rates. The statement is focused on these types of ARMs and uses the interagency Expanded Guidance for Subprime Lending (the expanded guidance)3 issued in 2001 to determine subprime borrower characteristics. While the statement is focused on subprime borrowers, the principles in the statement are also relevant to ARM products offered to nonsubprime borrowers.

RISK-MANAGEMENT PRACTICES

The risk-management practices discussed in the subprime statement are generally consistent with existing interagency guidance regarding real estate lending, subprime lending, and nontraditional mortgage products.4 Like the nontradi-
tional mortgage guidance issued in 2006, the subprime statement encourages institutions to evaluate the borrower’s repayment capacity and ability to repay the loan by final maturity at the fully indexed rate, assuming a fully amortizing repayment schedule. Further, the subprime statement emphasizes that an institution’s assessment of a borrower’s repayment capacity should include an evaluation of the borrower’s debt-to-income ratio and states that this assessment should include total monthly housing-related payments (i.e., principal, interest, taxes, and insurance).

WORKOUT ARRANGEMENTS

The subprime statement reiterates the principles in the interagency Statement on Working with Borrowers (April 2007) in which the agencies encouraged institutions to work constructively with residential borrowers who are in default or whose default is reasonably foreseeable. Both documents indicate that prudent workout arrangements that are consistent with safe and sound lending practices are generally in the long-term best interest of both the financial institution and the borrower. The Federal Reserve will not criticize institutions that pursue reasonable workout arrangements with borrowers.

SUPERVISORY REVIEW

Federal Reserve examiners are expected to carefully review an institution’s risk management, consumer-disclosure practices, and consumer compliance, concerns which are contained in the subprime statement as a part of ongoing examination activities. Examiners will take action against institutions that exhibit predatory lending practices, violate consumer protection or fair lending laws, engage in unfair or deceptive acts or practices, or otherwise engage in unsafe or unsound lending practices.

STATEMENT ON SUBPRIME MORTGAGE LENDING

The Statement on Subprime Mortgage Lending (the subprime statement) was developed by the agencies to address emerging issues and questions relating to certain subprime mortgage lending practices. The agencies stated their concern that borrowers may not fully understand the risks and consequences of obtaining products that can cause payment shock. In particular, they have concerns with certain adjustable-rate mortgage (ARM) products typically offered to subprime borrowers that have one or more of the following characteristics:

- low initial payments based on a fixed introductory rate that expires after a short period and then adjusts to a variable index rate plus a margin for the remaining term of the loan;
- very high or no limits on how much the payment amount or the interest rate may increase (“payment or rate caps”) on reset dates;
- limited or no documentation of borrowers’ income;
- product features likely to result in frequent refinancing to maintain an affordable monthly payment; and/or
- substantial prepayment penalties and/or prepayment penalties that extend beyond the initial fixed-interest-rate period.

Products with one or more of these features present substantial risks to both consumers and lenders. These risks are increased if borrowers are not adequately informed of the product features and risks, including their responsibility for paying real estate taxes and insurance, which may be separate from their monthly mortgage payments. The consequences to borrowers could

5. The nontraditional mortgage (NTM) guidance covers mortgage products that allow borrowers to defer payment of principal and sometimes interest, including interest-only mortgages when a borrower pays no loan principal for the first few years of the loan and payment-option ARMs when a borrower has flexible payment options with the potential for negative amortization. Because certain ARM products offered to subprime borrowers are fully amortizing, the NTM guidance does not cover such products.

6. The term “subprime” is described in the 2001 Expanded Guidance for Subprime Lending Programs. (See SR-01-4 and sections 2133.1–2133.3)

7. Payment shock refers to a significant increase in the amount of the monthly payment that generally occurs as the interest rate adjusts to a fully indexed basis. Products with a wide spread between the initial interest rate and the fully indexed rate that do not have payment caps or periodic interest rate caps, or that contain very high caps, can produce significant payment shock.

8. For example, ARMs known as “2/28” loans feature a fixed rate for two years and then adjust to a variable rate for the remaining 28 years. The spread between the initial fixed interest rate and the fully indexed interest rate in effect at loan origination typically ranges from 300 to 600 basis points.
Subprime Mortgage Lending

Risk-Management Practices

Predatory Lending Considerations

Subprime lending is not synonymous with predatory lending, and loans with the features described above are not necessarily predatory in nature. However, institutions should ensure that they do not engage in the types of predatory lending practices discussed in the expanded subprime guidance. Typically, predatory lending involves at least one of the following elements:

- making loans based predominantly on the foreclosure or liquidation value of a borrower’s collateral rather than on the borrower’s ability to repay the mortgage according to its terms;
- inducing a borrower to repeatedly refinance a loan in order to charge high points and fees each time the loan is refinanced (“loan flipping”); or
- engaging in fraud or deception to conceal the true nature of the mortgage loan obligation, or ancillary products, from an unsuspecting or unsophisticated borrower.

Institutions offering mortgage loans such as these face an elevated risk that their conduct will violate section 5 of the Federal Trade Commission Act (FTC Act), which prohibits unfair or deceptive acts or practices.¹¹

Underwriting Standards

Institutions should refer to the real estate guidelines, which provide underwriting standards for all real estate loans.¹² The real estate guidelines state that prudently underwritten real estate loans should reflect all relevant credit factors, including the capacity of the borrower to adequately service the debt. The 2006 NTM guidance details similar criteria for qualifying borrowers for products that may result in payment shock.

Prudent qualifying standards recognize the potential effect of payment shock in evaluating a borrower’s ability to service debt. An institution’s analysis of a borrower’s repayment capacity should include an evaluation of the borrower’s ability to repay the debt by its final maturity at the fully indexed rate,¹³ assuming a fully indexed rate equals the index rate prevailing at origination plus the margin to be added to it after the expiration of an introductory interest rate. For example, assume that a loan with an initial fixed rate of 7 percent will reset to the six-month London Interbank Offered Rate (LIBOR) plus a margin of 6 percent. If the six-month LIBOR rate

¹¹ The Board, the OCC, the OTS, and the FDIC enforce this provision under section 8 of the Federal Deposit Insurance Act. The Board, the OCC, and the FDIC also have issued supervisory guidance to the institutions under their respective jurisdictions concerning unfair or deceptive acts or practices. See OCC Advisory Letter 2002-3, Guidance on Unfair or Deceptive Acts or Practices, March 22, 2002, and 12 CFR 30, appendix C; Joint Board and FDIC Guidance on Unfair or Deceptive Acts or Practices by State-Chartered Banks, March 11, 2004.

¹² Refer to 12 CFR 208, subpart C.

¹³ The fully indexed rate equals the index rate prevailing at origination plus the margin to be added to it after the expiration of an introductory interest rate. For example, assume that a loan with an initial fixed rate of 7 percent will reset to the six-month London Interbank Offered Rate (LIBOR) plus a margin of 6 percent. If the six-month LIBOR rate
amortizing repayment schedule.\textsuperscript{14} One widely accepted approach in the mortgage industry is to quantify a borrower’s repayment capacity by a debt-to-income (DTI) ratio. An institution’s DTI analysis should include, among other things, an assessment of a borrower’s total monthly housing-related payments (e.g., principal, interest, taxes, and insurance, or what is commonly known as PITI) as a percentage of gross monthly income.

This assessment is particularly important if the institution relies upon reduced documentation or allows other forms of risk layering. Risk-layering features in a subprime mortgage loan may significantly increase the risks to both the institution and the borrower. Therefore, an institution should have clear policies governing the use of risk-layering features, such as reduced-documentation loans or simultaneous second-lien mortgages. When risk-layering features are combined with a mortgage loan, an institution should demonstrate the existence of effective mitigating factors that support the underwriting decision and the borrower’s repayment capacity.

Recognizing that loans to subprime borrowers present elevated credit risk, institutions should verify and document the borrower’s income (both source and amount), assets, and liabilities. Stated-income and reduced-documentation loans to subprime borrowers should be accepted only if there are mitigating factors that clearly minimize the need for direct verification of repayment capacity. Reliance on such factors also should be documented. Typically, mitigating factors arise when a borrower with favorable payment performance seeks to refinance an existing mortgage with a new loan of a similar size and with similar terms, and the borrower’s financial condition has not deteriorated. Other mitigating factors might include situations where a borrower has substantial liquid reserves or assets that demonstrate repayment capacity and can be verified and documented by the lender. However, a higher interest rate is not considered an acceptable mitigating factor.

Workout Arrangements

As discussed in the April 2007 Interagency Statement on Working with Borrowers (see SR-07-6/CA-07-1), financial institutions are encouraged to work constructively with residential borrowers who are in default or whose default is reasonably foreseeable. Prudent workout arrangements that are consistent with safe and sound lending practices are generally in the long-term best interest of both the financial institution and the borrower.

Financial institutions should follow prudent underwriting practices in determining whether to consider a loan modification or a workout arrangement.\textsuperscript{15} Such arrangements can vary widely based on the borrower’s financial capacity. For example, an institution might consider modifying loan terms, including converting loans with variable rates into fixed-rate products to provide financially stressed borrowers with predictable payment requirements.

The agencies will not criticize financial institutions that pursue reasonable workout arrangements with borrowers. Further, existing supervisory guidance and applicable accounting standards do not require institutions to immediately foreclose on the collateral underlying a loan when the borrower exhibits repayment difficulties. Institutions should identify and report credit risk, maintain an adequate allowance for loan losses, and recognize credit losses in a timely manner.

Consumer Protection Principles

Fundamental consumer protection principles relevant to the underwriting and marketing of mortgage loans include—

- approving loans based on the borrower’s ability to repay the loan according to its terms; and
- providing information that enables consumers to understand material terms, costs, and risks of loan products at a time that will help the consumer select a product.

Communications with consumers, including

\textsuperscript{14} The fully amortizing payment schedule should be based on the term of the loan. For example, the amortizing payment for a “2/28” loan would be calculated based on a 30-year amortization schedule. For balloon mortgages that contain a borrower option for an extended amortization period, the fully amortizing payment schedule can be based on the full term the borrower may choose.

\textsuperscript{15} Institutions may need to account for workout arrangements as troubled-debt restructurings and should follow generally accepted accounting principles in accounting for these transactions.
advertisements, oral statements, and promotional materials, should provide clear and balanced information about the relative benefits and risks of the products. This information should be provided in a timely manner to assist consumers in the product-selection process, not just upon submission of an application or at consummation of the loan. Institutions should not use such communications to steer consumers to these products to the exclusion of other products offered by the institution for which the consumer may qualify.

Information provided to consumers should clearly explain the risk of payment shock and the ramifications of prepayment penalties, balloon payments, and the lack of escrow for taxes and insurance, as necessary. The applicability of prepayment penalties should not exceed the initial reset period. In general, borrowers should be provided a reasonable period of time (typically at least 60 days prior to the reset date) to refinance without penalty.

Similarly, if borrowers do not understand that their monthly mortgage payments do not include taxes and insurance, and they have not budgeted for these essential homeownership expenses, they may be faced with the need for significant additional funds on short notice. Therefore, mortgage-product descriptions and advertisements should provide clear, detailed information about the costs, terms, features, and risks of the loan to the borrower. Consumers should be informed of—

- **payment shock**: potential payment increases, including how the new payment will be calculated when the introductory fixed rate expires; 17
- **prepayment penalties**: the existence of any prepayment penalty, how it will be calculated, and when it may be imposed;
- **balloon payments**: the existence of any balloon payment;
- **cost of reduced-documentation loans**: whether there is a pricing premium attached to a reduced-documentation or stated-income loan program; and
- **responsibility for taxes and insurance**: the requirement to make payments for real estate taxes and insurance in addition to their loan payments, if not escrowed, and the fact that taxes and insurance costs can be substantial.

### Control Systems

Institutions should develop strong control systems to monitor whether actual practices are consistent with their policies and procedures. Systems should address compliance and consumer information concerns, as well as safety and soundness, and encompass both institution personnel and applicable third parties, such as mortgage brokers or correspondents.

Important controls include establishing appropriate criteria for hiring and training loan personnel, entering into and maintaining relationships with third parties, and conducting initial and ongoing due diligence on third parties. Institutions also should design compensation programs that avoid providing incentives for originations inconsistent with sound underwriting and consumer protection principles, and that do not result in the steering of consumers to these products to the exclusion of other products for which the consumer may qualify.

Institutions should have procedures and systems in place to monitor compliance with applicable laws and regulations, third-party agreements, and internal policies. An institution’s controls also should include appropriate corrective actions in the event of failure to comply with applicable laws, regulations, third-party agreements, or internal policies. In addition, institutions should initiate procedures to review consumer complaints to identify potential compliance problems or other negative trends.

### Supervisory Review

The agencies will continue to carefully review risk-management and consumer compliance processes, policies, and procedures. The agen-

---

16. Institutions generally can address these concerns most directly by requiring borrowers to escrow funds for real estate taxes and insurance.

17. To illustrate: a borrower earning $42,000 per year obtains a $200,000 “2/28” mortgage loan. The loan’s two-year introductory fixed interest rate of 7 percent requires a principal and interest payment of $1,331. Escrowing $200 per month for taxes and insurance results in a total monthly payment of $1,531 ($1,331 + $200), representing a 44 percent DTI ratio. A fully indexed interest rate of 11.5 percent (based on a six-month LIBOR index rate of 5.5 percent plus a 6 percent margin) would cause the borrower’s principal and interest payment to increase to $1,956. The adjusted total monthly payment of $2,156 ($1,956 + $200 for taxes and insurance) represents a 62 percent increase in the payment amount and results in a 62 percent DTI ratio.
cies will take action against institutions that exhibit predatory lending practices, violate consumer protection laws or fair lending laws, engage in unfair or deceptive acts or practices, or otherwise engage in unsafe or unsound lending practices.
INTRODUCTION

Agricultural loans can be broadly defined as loans made to agricultural producers to finance the production of crops or livestock. The term “crops” is meant to include any of the many types of plants that produce grains, fruits, vegetables, or fibers that can be harvested. Similarly, a variety of animals is produced for profit, although cattle, swine, sheep, and poultry are by far the most common. Production cycles vary with the type of crop or livestock, from a few weeks or months to several years; in the case of an orchard crop or timber, the time from planting to harvest (from cash outlay to the generation of income) is quite lengthy. The type of crop or livestock to be produced will determine the nature of the financing needed, including its timing, collateral considerations, and repayment terms.

Repayment terms for farm loans normally correspond to anticipated cash flows. Since repayment of agricultural-related loans usually comes from the sale of crops or livestock, annual repayment terms are not uncommon. Depending on the type of operation and timing of cash income, payments may be set to come due semiannually, quarterly, or on an irregular schedule. However, many smaller farm operators also receive income from nonfarm employment, which allows them to make monthly payments on some loans.

Agricultural producers need access to land (often with buildings and other improvements) and equipment, in addition to the shorter-term operating inputs directly involved in crop or livestock production. Not all producers own land; some are tenants who pay the landowners cash rent or a portion of the crop yield. Many producers both own and rent or lease land in an effort to maximize efficiency and income. Accordingly, individual producers may need a variety of types of loans, including—

- real estate loans,
- equipment loans,
- livestock loans, and
- operating (or production) loans.

Information on each of these types of agricultural loans follows, as well as general comments on agricultural lending and the examiner’s review of agricultural loans.

AGRICULTURAL REAL ESTATE LOANS

Real estate loans are not intended as a primary focus of this manual section. However, real estate loans are a significant portion of total debt for many agricultural producers, and the examiner should consider them when evaluating other types of loans to agricultural producers. For a more thorough discussion of real estate loans, refer to section 2090.1, “Real Estate Loans.”

Loans to finance agricultural land, together with related improvements (frequently including the producer’s residence) comprise the most common type of real estate loan made by agricultural banks. These loans are subject to the same general lending principles and legal and regulatory requirements1 as loans on other types of real estate. Even if a bank has not made a real estate loan to the agricultural borrower, any real estate debt owed elsewhere must be considered in analyzing the borrower’s creditworthiness, along with amounts due to the bank and any other creditors. Additionally, any state laws on homestead exemptions should be noted.

Agricultural real estate loans tend to have special characteristics, particularly with regard to valuation and repayment considerations. For instance, farmland appraisers need special knowledge of soil types, topography, data on rainfall or water tables, and crop production data, as well as a knowledge of area market conditions and other extenuating information. Prevailing market values for farmland tend not to permit as high a level of cash return as those for other types of income-producing property. Values always reflect supply and demand, and, probably due to a number of factors, the demand for farmland has traditionally been relatively strong from neighboring landowners, other area farmers, nonfarmers, and absentee owners who have a strong desire to own land. A lower level of return generally dictates a lower loan-to-value ratio, although a borrower may be able to

1. In connection with the supervisory loan-to-value limits set forth in the “Interagency Guidelines for Real Estate Lending Policies,” farmland, ranchland, or timberland committed to ongoing management and agricultural production is considered “improved property,” subject to a loan-to-value limit of 85 percent. However, a bank may set a lower limit for itself and, as a matter of policy, probably will loan less than 85 percent of appraised value on farmland in most cases.
service debt at a higher level from other income sources such as less-heavily encumbered land, rented land, or nonfarm income. For example, it would not be unusual for a bank to advance 100 percent of the purchase price of land if a lien on additional land is taken to lower the overall loan-to-value ratio. There is generally a well-established market for agricultural land. Although values fluctuate based on a variety of factors (just as they do with other types of real estate), there is normally a recognized range of values at any given time for particular land types within a general area. The examiner should gain some knowledge of current area land prices and trends through published data from local universities or private organizations, interviews with bank management, and the review of appraisal reports. This knowledge will be vital in assessing collateral values and the borrower’s overall financial condition and future prospects.

An amortization period of up to 20 years is not uncommon for agricultural real estate loans by banks. Longer-term loans (up to 30 years) on farm real estate are sometimes made by commercial banks, but are more common with other lenders such as Federal Land Banks. Many banks structure real estate loans so that required payments are based on a 20- to 30-year amortization, but they write the notes with a 5- to 10-year maturity, at which time a balloon payment is due. Major improvements, such as livestock-confinement buildings or grain-handling facilities, commonly have a shorter amortization period of 10 years or less.

AGRICULTURAL MACHINERY AND EQUIPMENT LOANS

Agricultural producers often need to finance the purchase of machinery, equipment, vehicles, and implements. Typically, these loans are secured by the durable goods being financed and are amortized over an intermediate term of up to seven years. As with any equipment loan, some borrower equity should be required, the amortization period should be no longer than the expected useful life of the equipment, and scheduled payments should correlate reasonably with the timing and amount of anticipated income. In some cases, equipment loan payments may be advanced under the borrower’s operating line of credit.

Loans to farmers and ranchers may include individual notes to finance the purchase of specific pieces of equipment or vehicles. However, many agricultural borrowers provide the bank with a blanket lien on all equipment and vehicles to secure any and all debts owed the bank. Frequently, borrowers have both purchase money loans on specific equipment and other loans secured by a blanket equipment lien.

Under the Uniform Commercial Code, a security interest in equipment is created with a security agreement signed by the borrower and a bank officer, and the lien is perfected by a centrally filed financing statement. Many banks file the financing statement in both the county and state in which the borrower resides and in the county and state in which the equipment is located. The filing is a public record that notifies lenders or other interested parties that the assets identified have been pledged, as well as to whom and when they were pledged. Since the filing record provides vital information for potential lenders, bank management must check it before extending credit to determine whether the collateral is already pledged to another lender. In many cases, a bank might approve a loan request only if it were to be in a first lien position, but there can be exceptions. For example, a bank may agree to advance on a second lien position in a large piece of equipment in which the borrower has substantial equity or take a blanket lien on all equipment, including one or a few items of equipment pledged elsewhere (such as a purchase money lien held by an equipment dealer). As a matter of prudent lending and sound loan administration, lien searches should be performed periodically on at least larger borrowers or on those borrowers known to be or suspected of having problems or of being involved with other lenders. Sound bank lending policies should prescribe a maximum loan-to-value ratio for equipment, as well as maximum repayment terms. The same is true for vehicles, although the loan-to-value limits on vehicles for highway use (automobiles and trucks) tend to be higher because they have a less-specialized use and are more liquid. Maximum loan-to-value limits, particularly for loans to purchase specific pieces of farm equipment, may range to more than 80 percent or even to 100 percent for strong borrowers. However, many farm lines of credit are supported in part by blanket liens on all the borrower’s
equipment. Typically, overall loan-to-value ratios on a line of equipment do not exceed 60 percent.

LIVESTOCK LOANS

Livestock loans vary with the animal species and the nature of the individual producer's operation, but the same general lending principles apply to virtually all types of livestock loans. The borrower should have an equity position in the livestock financed, ample feed on hand, or another underlying financial strength that will protect the lender from risks such as losses from animal diseases and deaths, rising feed costs, or market fluctuations. The size of the livestock operation should be commensurate with the borrower's physical facilities and management capability. Total debt should not overburden the borrower, and the timing and source of repayment for loans should be understood when they are originated. The term of a livestock loan normally bears a close relationship to the length of time the animals are to be held.

Feed is a necessity for livestock producers and a major expense for those involved in finishing animals for slaughter, dairy herds, or egg-laying operations. On the other hand, stocker cattle feed mainly on pasture or silage, which reduces feed costs. Some livestock producers also raise feed crops, which may improve their overall efficiency. Many producers, however, need to buy feed. In any event, the loan officer should have a firm understanding of how much feed the borrower has on hand (or will be harvesting) and how much will have to be purchased. Still, even though both borrower and banker may be experienced and capable at projecting feed costs, variables beyond their control impose some risk of increased costs. These variables might include perils such as unfavorable weather or disease affecting feed crop yields or rising feed prices or shortages brought on by other unanticipated forces.

Many banks will advance up to 100 percent of the cost of livestock if the borrower has sufficient feed on hand and a sound overall financial position. Since the animals gain weight and value as feedstocks are consumed, the bank’s collateral position normally strengthens as the livestock matures toward market weight. For borrowers without adequate feedstocks on hand, advance rates may be limited to 70 to 80 percent of the purchase price.

Types of Livestock Operations and Loan Considerations

Livestock producers usually specialize in particular kinds or breeds of animals or in certain phases of an animal’s life cycle. This specialization may vary depending on geographic area, climate, topography, soil type, or the availability of water and feed, or on the producer’s preferences, experience, or physical facilities. A producer may change his specialization from time to time based on recurring market cycles or more fundamental shifts in economic factors, such as consumer demand. Some producers are involved in more than one type of livestock operation at any given time.

The following is a brief discussion of the most common types of livestock operations, as well as the lending and loan analysis considerations for each.

Cattle

Beef Breeds

- Cow-calf operation. A producer has breeding stock that produces calves, which are then sold as either feeder calves or future breeding stock or are kept until the animal reaches full maturity.

  The typical cow-calf loan is for financing the breeding stock (cows and bulls) of a herd. The loan term is usually three to five years, with annual payments of principal and interest to fully amortize the loan within that term. Often, loans for this type of operation are written with one-year maturities and no predetermined amount of principal reduction at maturity. However, this kind of loan structure is more suitable for borrowers who are not highly leveraged.

  Repayment is from the annual sale of calves and cull cows (older cows or those that fail to produce offspring). Approximately 10 to 15 percent of a cow herd is culled each year; most cows are retained for seven to as many as twelve years. Bulls are typically stocked at one for each 20 to 25 cows; pregnancy rates are generally 80 to 100 percent, depending on the age and health of the cows and on feed availability.
Most calves are born in late winter and early spring, weighing around 100 pounds. Cows may be winter-fed on hay, but cows and calves graze on pastureland from spring to around October when the calves weigh 500 to 550 pounds. At this time, the calves may be sold to another producer who specializes in raising stockers. (However, in some areas, herds are managed to produce fall calves. Also, depending on feed sources and market conditions, calves may be sold at lighter weights, around 300 to 400 pounds.)

- **Stocker or backgrounding operation.** A producer in a stocker operation acquires calves weighing from 300 to 550 pounds and feeds them primarily on pasture, until they weigh around 700 to 750 pounds, when they are sold to a finisher. Since the growth gains of young cattle are generally the most efficient phase of beef production, some stock operators prefer to buy lighter weight calves, although the lighter weights require more care and supervision to minimize death losses. Stocker operations are relatively high-risk programs that require specialized knowledge, but they can also be quite profitable.

  Backgrounding requires approximately 100 days, during which time the cattle may be fed a daily ration of silage (the entire corn or grain sorghum plant chopped into feed and stored in a silo) and grain and feed supplements, including soybean meal, minerals, salt, and vitamins. The supplements usually need to be purchased. Steers gain approximately two pounds per day, and heifers slightly less. Sometimes stocker cattle are placed on pasture, which can include dormant wheat in the winter or grass during the summer.

  Stocker cattle are typically financed with a 90- to 120-day single-advance, single-maturity note. Funds for feed purchases may be provided as part of the note proceeds, but, more commonly, the feed is raised by the producer. Loan repayment comes from the sale of the cattle when they weigh around 700 to 750 pounds. Collateral for stocker loans is typically the cattle financed and the feed. Banks usually require around a 30 percent margin in the cattle, but may require as little as 20 percent or less for financially strong borrowers.

  The profitability of a backgrounding operation is sensitive to the average daily weight gain, feed costs, weather, and purchase and sale prices of the cattle.

- **Finishing operation.** A finishing operation acquires cattle weighing approximately 700 to 750 pounds and feeds them a high-protein grain ration until they are ready for slaughter at around 1,100 to 1,200 pounds.

  Finishing usually takes around 130 to 145 days. Most finishing cattle are now custom-fed in commercial feedlots, but the producer (not the feedlot owner) usually retains ownership of the cattle. Feeder steers usually gain approximately 3.2 pounds per day, and heifers around 2.8 pounds per day. However, average daily gains vary depending on the breed, type of ration, time of year, or weather conditions.

  Finishing cattle can be risky because of fluctuations in cattle prices between purchase and sale dates. Some producers use futures contracts to lock in prices and reduce the risk, or they enter into forward contracts with a packer. Larger producers may use a “moving hedge” to offset the risk imposed by market cycles.²

  Banks normally require 20 to 30 percent initial margin in financing the purchase of feeder cattle, but may advance up to 100 percent of the feed costs. As the cattle gain weight, the bank’s collateral position tends to improve. Repayment comes from sale of the cattle, with loan maturity set near the anticipated sale date.

**Dairy Operations**

Cows are milked for ten months each year, then rested for two months and allowed to “dry up” (quit producing milk by not being milked). Three months after a female dairy cow gives birth, she is rebred and calves nine months later. Cows are commonly bred through artificial insemination, which allows the producer to improve the genetics of the herd. Each year approximately one-third of the cows are culled, 2. In this strategy, the producer periodically buys a given number of lightweight feeders and at the same time sells a similar number of fat cattle. When prices are down, lower revenues from sales of cattle are offset by the benefit of lower costs to purchase replacement lightweight feeders. By the same token, when prices are up, higher purchase costs are offset by higher revenues on the slaughter cattle sold. This strategy allows the producer to prevent or substantially minimize losses due to fluctuating market prices. Otherwise, the producer might too often be in the position of only buying at high prices and only selling at low prices.
with replacement heifers usually raised on the farm. An 80 percent calf crop is common, with the males either sold soon after birth or fed for slaughter.

Milk production is measured by pounds of milk produced per cow per year. Production in the range of 13,500 to 20,500 pounds is common. Milk production variables include the quality of the cows, number of days milked each year, and amount and quality of feed. Feeding cows a higher ratio of grain to dry hay will result in higher milk production, but the higher feed costs must be weighed against the returns of higher production.

Feed is a major expense for a dairy operation. Dairy cows consume a ration of corn or grain sorghum, soybean meal, high-quality hay, silage, vitamins, and minerals. Family-oriented dairy operations usually grow most of their own feed on the farm, while larger operations purchase most of their feed and confine the cows to a dry-lot facility.

A dairy operation is heavily capital intensive because of the investment in cows, buildings, and equipment. Dairying is also labor intensive, which further adds to the cost of production.

The efficiency of a dairy operation is measured on a “per-cow” basis. Gross income, expenses, and net income can be divided by the number of cows to analyze trends and compare them with other dairy operations. Several other key indicators of a dairy operation’s productivity include the following:

- **Pounds of milk per cow per year.** Herds averaging less than 14,000 pounds may be struggling.
- **Calving interval.** Twelve to thirteen months is favorable; if the interval lengthens, milk production and the overall efficiency of the operation will decline.
- **Calf losses.** A 10 percent or less loss on live calves born is favorable and considered an indication of good management.
- **Culling rate.** Cows should start milking when they are about two years old and should average four to five lactation periods before they are culled; if cows have to be culled prematurely, efficiency declines.

Loans to dairy operators may include longer-term financing for land and improvements; intermediate financing for the cow herd, specialized equipment, and vehicles; and operating loans to help finance the production of feed crops. Established operations may not require herd financing unless the herd is being expanded. Financing replacement cows to maintain a herd, if necessary, should be included in a shorter-term operating loan. Generally, operating loans are not a major financing activity as the dairy farmer’s regular income from the sale of milk can often accommodate operating needs.

Collateral for dairy loans, in addition to real estate, typically includes the livestock, crops and feed on hand, and equipment. The collateral is usually covered with a blanket security agreement. Often, milk sale proceeds are assigned to the bank, and the milk buyer sends a monthly check directly to the bank to meet scheduled loan repayments.

Clearly, the primary source of income for the dairy farmer is the sale of milk, which is produced daily. Additional income is produced from the annual sale of calves and culled cows.

**Hogs**

Hog production consists of a two-stage operation: (1) “farrowing” (breeding sows to produce feeder pigs) and (2) “finishing” (fattening feeder pigs to slaughter weight). Many producers combine both enterprises and are called farrow-to-finish operations.

Hog producers range from small operators to large corporate interests. The small producers can be considered those who market less than 2,500 head per year; they can be involved either in finishing hogs or in farrow-to-finish operations. Small producers also tend to be involved in grain farming (raising their own feed) and other kinds of livestock production. The profitability and financial strength of a small producer is generally tied to the ability to market hogs frequently throughout the year, which lessens the impact of adverse market fluctuations. If the producer cannot market frequently, he or she probably needs to be involved in hedging practices. A corporate hog farm is usually a farrow-to-finish operation, with the number of sows ranging from 500 to as many as 100,000 for the largest producers.

**Farrowing Operations**

Hog breeding normally requires one boar for approximately 20 sows. Sows typically have
two litters per year, and litter size is one of the most crucial factors in determining the success of a farrowing operation. Eight hogs per litter is a goal for most producers. Up to 25 percent of the sows will be culled each year. Some producers raise their own replacement sows, while others purchase quality breeding stock in an attempt to improve herd quality.

Pigs are farrowed (born) in confinement buildings, and after three weeks, they are moved to a nursery facility where the pigs are weaned from the sow. The capital invested in farrowing facilities varies greatly, but the trend has been toward higher investments in facilities that require less labor. However, a large investment in a single-use, costly hog facility can pose a significant risk if the farrowing operation is not profitable.

Feed costs are the largest operating expense of a farrowing operation. The feed required consists of a feed grain (corn or milo), a protein supplement, vitamins and minerals, and a pig starter (a commercial feed used in the transition from nursing to eating solid food). In a feeder pig production operation, the young pigs are typically kept until they weigh 40 to 60 pounds, which takes around two months. Feed costs are continually changing because of fluctuating grain prices, so it may be difficult to project cash flow accurately. Historical cash flow may be more useful in demonstrating the borrower’s overall management capabilities.

Loans to farrowing operations may include an intermediate- to mid-term loan on the facilities (usually not for more than ten years), breeding stock loans that should be amortized over no more than four years, and operating loans. Operating loans are often in the form of revolving lines of credit to purchase feed, with repayment normally coming from the sale of hogs. The operating line should be cleaned up periodically, or the bank should establish systems to monitor advances and repayments to ensure that stale debt is not accumulating.

Collateral for a farrowing operation could include the facilities and the hogs and feed on hand. For collateral purposes, the hogs should be valued at local market prices even though the producer might have paid a premium for breeding stock. Feed should be heavily margined, as the proceeds from feed sale during a foreclosure are likely to be limited.

Loan repayment comes primarily from the sale of young feeder pigs and culled sows. The timing of scheduled repayments will vary, depending largely on the producer’s breeding schedule and the anticipated sale dates for feeder pigs. Usually, sows are bred at different times so they are not all having pigs at the same time. In the case of a farrow-to-finish operation, the cycle will be longer, and repayments will be scheduled according to anticipated sale dates of the fat hogs and culled breeding stock.

**Finishing Operations**

Hog finishing is the process of acquiring young pigs that weigh 40 to 60 pounds, and feeding them until they reach a slaughter market weight of 220 to 240 pounds. The process takes approximately four months. The average death loss for a finishing operation is generally 4 to 5 percent of the total number of hogs started on feed.

Loans for hog finishing are usually in the form of single-payment notes that mature in approximately four months. Loan proceeds are used to purchase young pigs and may also be used to purchase feed. A bank commonly advances up to 100 percent of the purchase price of the pigs. Usually, there is a blanket security agreement in place that gives the bank a security interest in all hogs, as well as in feed and other chattels to provide additional overall support for the credit. Margin in the collateral increases as the animals gain weight. Repayment comes from the sale of fat hogs to a packing plant.

The main factors in determining a finisher’s profitability are (1) the cost of the feeder pigs, (2) the cost of feeding the pigs, and (3) revenues from the sale of hogs. Costs and revenues continually change because of fluctuations in market prices for young pigs, slaughter hogs, grain, and feed. Because of the relatively short cycle of hog finishing, a number of loans may be made during one year. In analyzing hog loans, reviewing the overall profitability of the operation (taking into account depreciation on facilities and equipment, interest, and insurance) is more meaningful than reviewing the results from each individual loan advance.

**Sheep**

Sheep are raised for the production of meat and wool. The most common sheep enterprise is the raising of ewe (female) flocks, which produces...
income from the sale of both wool and lambs. Larger flocks tend to be more efficient as they can take better advantage of investments in labor-saving equipment.

Ewes give birth once a year, usually during late fall or winter. They frequently have twins, resulting in an overall lamb production per ewe of approximately 140 percent. About 20 percent of the ewes are culled each year, with replacements usually being raised from lambs. There is typically one ram for each 30 ewes in a breeding flock. The sheep and lambs graze on pasture during the summer and are fed a ration of roughage and grain during the winter.

Loans to ewe flock operators are made to purchase breeding stock and to pay operating expenses. Breeding-stock loans should be amortized over no more than five years. Repayment comes primarily from the sale of lambs and wool.

Typically, lambs are finished in commercial feedlots until they reach slaughter weight, which involves purchasing 60-pound feeder lambs and feeding them a hay-grain ration for about 90 days until they weigh approximately 120 pounds. The loan term is usually 90 to 120 days, with the sale of fat lambs to a processor being the source of repayment. Collateral consists of the lambs, which should be valued at local market prices. Margin required in the lambs, if any, will depend on feedstocks owned or on the borrower’s financial strength.

Poultry

Poultry production has become a very large and highly organized agribusiness. Large corporate producers dominate the industry. However, they depend to a large extent on individual growers, with whom they contract to raise the birds almost from the day they are hatched until they are ready for slaughter. The large company supplies an independent grower with the day-old chicks, feed, and medications and provides technical support. Under the contract, the company pays the grower at a rate designed to provide an acceptable return on the grower’s investment in poultry houses, equipment, and labor.

Producing breeding stock, incubating eggs, hatching chicks, and producing pullets and eggs are other aspects of the poultry industry that are highly specialized and relatively concentrated within fairly large corporate producers. Most banks will not extend loans on these types of operations, and any that do should have substantial background information on the industry in their files. The examiner should review that information and discuss the industry and the borrower’s operation with the officer originating or servicing the credit.

The typical grower owns 60 to 80 acres of land and has an average of three to four poultry houses. Most growers also have other jobs and earn supplemental income from their growing operations. Broiler (or fryer) chickens generally are grown to a live market weight of approximately 4.2 pounds at 42 days of age.

Most bank loans to contract poultry growers consist of construction loans to build poultry houses and permanent financing for the houses and equipment. The houses are large but of relatively simple construction. Permanent financing is typically amortized over 10 to 15 years.

Government guarantees (Farmers Home Administration, Small Business Administration, or various state agencies) are often available to mitigate the bank’s risk by guaranteeing from 85 percent to as much as 100 percent of the permanent loan. Federal guarantees have not been available for construction financing of poultry houses, so the bank generally will have to assume the full risk of the loan during the construction period.

Construction loans are generally converted into long-term loans that are repaid with the contract income a grower receives from the large corporate producer. Since feed and other supplies are typically furnished by the large producer, individual growers do not normally require operating loans.

Egg production for consumption (rather than hatching) is another aspect of the poultry industry; it is also highly organized and controlled by large producers. Facilities, feed, and labor represent the primary costs for these operations, with repayment coming primarily from the sale of eggs. Some income is also derived from the sale of “spent” hens (older hens that are no longer efficient layers). These operations are capital intensive and highly specialized. Loans to egg producers need to be carefully analyzed to determine whether they are properly structured and adequately margined. Assessment of the borrower’s overall management ability, and record of profitability, industry trends, and any special risk factors is particularly important in judging loan quality.
OPERATING (PRODUCTION) LOANS

Banks (and other lenders) commonly finance the operating expenses of agricultural producers with short-term operating loans. Expenses financed may include items such as cash rent; seed; fertilizer; chemicals; irrigation; fuel; taxes; hired labor; professional fees; and, for a livestock producer, feed, feed supplements, veterinary care and medicines, and other supplies. Operating loans may take the form of single-purpose financing or line-of-credit financing. The single-purpose loan is the simplest and most basic form of financing, as it does not attempt to address the borrower’s total credit requirements, and the repayment source and timing are relatively certain.

Line-of-credit financing may accommodate most of a borrower’s operating needs for the production cycle. Advances are made as needed to purchase inputs or pay various expenses, with all income usually remitted to the lender to reduce the line. Depending on the type of operation, the line may seldom be fully retired because funds are advanced for a new operating year before all inventories from prior years are marketed. An operating line of credit is generally established after cash-flow projections for the year are made to anticipate credit needs and repayment capacity. While this type of financing has the advantages of convenience and accurate cash-flow monitoring (which permits comparing actual cash flow with projections), it can also have some disadvantages. The lender may be inadvertently funding or subsidizing other creditors’ payments with advances on the line and, because operating cycles overlap, it may be difficult for the lender to get out of an undesirable situation.

An operating line may be revolving or non-revolving. A revolving line replenishes itself as repayments are made, so the outstanding balance can fluctuate up and down during the approved term. There is no limit on the total amount borrowed during the term of the line, as long as the amount outstanding never exceeds the established limit. A nonrevolving line is structured so that once the approved amount is used, even though payments are made to reduce the line, the borrower must reapply and receive approval for any further advances. Revolving lines afford flexibility but have no firm disbursement or repayment plan, so they are usually reserved for borrowers with strong financial positions, proven financial management, and a history of cooperation and performance. Bank management should continually monitor operating lines and clearly document the purpose for advances and source of repayments. A clean-up period may or may not be required after harvest or completion of the operating cycle, depending on the anticipated schedule for selling farm or ranch production.

The primary source of repayment for an agricultural operating loan is revenue from agricultural production. Many farmers also receive some form of government support payments, and they may have employment off the farm or do custom work (such as harvesting) for hire. In many cases, wages or salaries generated from the nonfarm employment of a farmer’s spouse will cover a significant portion of the family’s living expenses, relieving the financial pressure on the farming operation. To evaluate repayment capacity, the loan officer must determine how much revenue will be generated from either current production or inventories. Revenues will need to be sufficient to cover all expenses, however, not just those funded by the loan. These could include various operating expenses, family living expenses, payments on capital debt (for real estate and equipment), and any anticipated new capital expenditures. There should also be a margin to cover incorrect assumptions about yields and prices.

Most agricultural lenders recognize the need for yearly cash-flow projections to help determine credit needs and repayment capacity. Projections of both income and expense are usually made for each month (or each quarter) of the year to anticipate the amount and timing of peak financing needs, as well as the total net cash flow for the year. Obtaining and analyzing yearly federal income tax returns (particularly Schedule F) should be strongly encouraged as a means of reviewing actual operating results. Actual data can then be compared with projections to determine variances. Reasons for the variances should be understood as a part of the credit analysis process. This analysis will help the bank decide whether to grant or deny credit and service loans.

If a borrower loses money from operations in one year and cannot fully repay the operating loan, there will be “carryover debt.” In general, carryover debt should be segregated, secured with additional collateral if possible, and amortized over a reasonable term that is consistent
with the borrower’s repayment capacity. Consistent losses and excessive carryover debt can preclude further advances and lead to the sale of certain assets or even to full liquidation of the operation.

Collateral for a typical operating loan includes growing crops, feed and grain, livestock, and other inventories. Normally, a bank also obtains a security interest in equipment, vehicles, government payments, and other receivables to strengthen the collateral margin. For new borrowers, a lien search is recommended to determine the presence of any senior liens. Pledged assets should be valued, either by a knowledgeable bank officer or an outside appraiser, and the operation and collateral should be inspected periodically to judge conditions and values. Inspections for established borrowers are usually done at least annually. More frequent inspections are usually performed on marginal borrowers or if the borrower has a feeder livestock operation with more rapid turnover of assets.

GOVERNMENT AGRICULTURAL SUBSIDY PROGRAMS

Federal government programs have long been able to help farmers financially and, to an extent, control the overproduction of agricultural products. These programs are continually evolving, but remain important in determining many producers’ income levels and profitability. In addition to establishing subsidies, the programs also set limits on the number of acres of certain crops that a producer can plant to help control crop surpluses and support price levels.

Conservation Reserve Program

The Conservation Reserve Program (CRP) is a long-term retirement program for erodible land. Landowners submit bids for a 10-year contract, stating the annual payment per acre they would accept to convert the highly erodible land to a grass cover. The maximum bid per acre has been established, and accepted bids must not exceed prevailing local rental rates for comparable land. If the bid is accepted by the local Agricultural Stabilization and Conservation Service (ASCS) office, the landowner must sow the land to grass, with the cost of planting grass shared by the landowner and the government.

During the term of the 10-year contract, the landowner cannot plant a crop on the land, allow grazing on it, or cut the grass for hay. The CRP contract is assignable, so it can be transferred to a new owner along with title to the land.

Farmers Home Administration

The Farmers Home Administration (FmHA) is a federal lending agency operating within the U.S. Department of Agriculture. The FmHA performs two main functions: (1) providing supervised credit to farmers who are unable to obtain adequate credit from commercial banks and (2) improving rural communities and enhancing rural development.

Three basic programs allow the FmHA to extend funds to farmers: (1) grants, (2) direct loans, and (3) loan guarantees. The grant program is the smallest and generally relates to rural housing and community programs, most of which are for water and waste disposal systems. The direct loan programs are for loans made by FmHA through its county and state offices to farmers. The loan guarantee program permits the FmHA to guarantee up to 90 percent of the amount of loss on a loan made and serviced by another lender.

Most FmHA loans are (1) farm-operating loans, (2) farm ownership loans, or (3) emergency farm loans. Operating loans and farm ownership loans are for operators of family farms. Eligible purposes for operating loans include capital loans for machinery and livestock, as well as annual production inputs. Farm ownership loans are available for buying land, refinancing debts, and constructing buildings. Emergency loans are designed for farmers in counties where severe production losses have resulted from a disaster or from economic emergencies.

To qualify for a loan, a borrower must (1) be unable to obtain sufficient credit elsewhere at reasonable rates and terms, (2) be a citizen of the United States, (3) be an owner or tenant operator of a farm not larger than a family farm, and (4) have sufficient training or experience to ensure a reasonable chance of success in the proposed operation.

Banks have been highly motivated to use the FmHA-guaranteed loan program as a means of mitigating risk and perhaps developing a sound customer for the future. An FmHA loan also
improves the bank’s liquidity, since the guaranteed portion of the loan can be sold in the secondary market.

Small Business Administration

While it is not primarily a lender to agricultural producers, the Small Business Administration (SBA) has made low-interest-rate disaster loans available to individuals, including farmers. The SBA can make or guarantee various types of agricultural loans to producers whose annual revenues do not exceed $500,000. Banks occasionally make these loans, which are supported by collateral as well as a substantial percentage guarantee by the SBA. In many rural areas, however, it is probably more convenient for a bank to work with a nearby FmHA office than with an SBA office, which may be located some distance away in a metropolitan community.

Federal Crop Insurance Corporation

The Federal Crop Insurance Corporation, which is a part of the U.S. Department of Agriculture, writes multiperil crop insurance. The premiums for this insurance are subsidized by the federal government. For further information, see the following subsection on crop insurance.

CROP INSURANCE

The Federal Crop Insurance Reform Act of 1994 combined crop insurance and disaster aid into a single, unified program. To be eligible for any price support or production adjustment program and for new contracts in the conservation reserve program or any FmHA loan, farmers must carry crop insurance coverage. The expanded crop insurance program replaces the need for disaster bills as the federal response to emergencies involving widespread crop loss.

Aside from the basic required coverage under the federal program, known as the catastrophic coverage level, banks encourage some borrowers to carry crop insurance to reduce their risk of not being repaid on farm-operating loans. Borrowers that are more highly leveraged and have minimum margin in their operating loans are most likely to be required to carry crop insurance. Two common types of crop insurance are (1) crop hail insurance sold by private insurers, which insures only against hail damage, and (2) multiperil crop insurance written by the Federal Crop Insurance Corporation. As its name implies, multiperil crop insurance insures against drought, rain, hail, fire, wind, frost, winterkill, disease, and insect losses.

The federal government subsidizes the multiperil crop insurance premium by paying most of its administrative, actuarial, underwriting, and selling expenses. By subsidizing premiums and encouraging more producers to purchase the insurance, the government hopes to reduce the dependency on crop disaster payments when natural disasters occur. However, this program has not been particularly popular with farmers because they would have to suffer a high level of losses on all planted acres to receive any significant proceeds from the insurance. By diversifying their crops and planting in fields that are separated by significant distances, many farmers are willing to risk planting without crop insurance.

EVALUATING AGRICULTURAL MANAGEMENT

A crucial factor in loan analysis for banks, as well as for examiners, is an evaluation of the management capabilities of the agricultural producer. Cash earnings from an operation provide the primary source of repayment for most agricultural loans, so it is important to evaluate the borrower’s ability to manage a profitable operation. The three kinds of management that agricultural lenders most often analyze are production, marketing, and financial management.

Production Management

A lender should first assess the borrower’s technical ability as a producer of crops or livestock. This is primarily an objective measure because it consists of comparing an operation’s output against industry and area norms. An operator whose production levels are consistently below average will probably have difficulty meeting debt-service requirements and may not be able to stay in business. There may be justifiable reasons for occasional years of below-average production, but lenders should
be cautious of operators who consistently perform poorly.

Another factor to consider is the producer’s ability to successfully cope with the inherent variability of agricultural production. Adverse weather, disease, and pest infestations are all production risks that continually affect crops and livestock. Some producers diversify the commodities they produce to reduce their dependency on one crop or type of livestock.

Marketing Management

Good marketing management enables the producer to reduce price risk exposure. Volatile markets have convinced most producers and lenders that sound marketing is crucial for an ongoing agricultural operation, and almost every producer needs a marketing plan designed to control price risk. Aside from helping to ensure profitability, the plan can be incorporated in formulating a more reliable statement of projected cash flow, which helps both the lender and producer anticipate financing needs.

Some of the techniques that producers use to manage price risk exposure are forward contracting, hedging, purchasing options, and using government programs. See the subsection “Marketing Farm Products” for details.

Financial Management

A producer should have the ability and willingness to understand, maintain, and use financial records. The importance of sound financial records began to be more fully appreciated in the 1980s when agricultural loan losses rose, and many agricultural producers and banks failed. During that time, the primary emphasis for many agricultural lenders shifted from collateral-based lending to cash-flow lending. While collateral may afford ultimate protection for the lender under a liquidation scenario, cash flow allows for repayment of debt in the normal course of business.

In addition to recordkeeping, financial management also encompasses how a producer uses his or her assets and liabilities. Maintaining financial reserves in the form of current assets is one means by which a producer can be prepared to overcome short-run adversity. The reserves need not necessarily be cash; they might be in the form of stored grain or other nonperishable produce or they could be earning assets such as livestock, which is readily marketable. Controlled, reasonable equipment purchases are another indication of good financial management. Overspending on equipment may be indicated if the borrower’s equipment list includes many items that are new, especially costly, duplicative, or unneeded for the types of operations being conducted. The presence of sizable nonbank equipment debt on the borrower’s financial statement can, in some cases, also reflect overspending.

MARKETING FARM PRODUCTS

Marketing considerations have become more important for many producers as they attempt to maximize returns. Rather than merely selling crops or livestock at prevailing market prices when the production cycle is complete, some producers attempt to lock in a price through the use of forward contracts or futures or options trading. Some producers of nonperishables may simply study market action and cycles and keep harvested crops in storage, waiting for higher prices. Some livestock producers may buy and sell throughout the year to help even out the effects of market fluctuations. Both the bank lending officer and the borrower need to have a clear understanding of the marketing plan, including its potential costs, benefits, and risks.

The following comments briefly describe some of the basic tools producers use as alternatives to the cash market to manage price risk.

• Forward contracting. The producer contracts with a buyer to sell farm products at a fixed price in advance of the actual marketing date. These contracts are simple to use if willing buyers can be found, but carry some risk of the buyer’s defaulting, particularly if market prices decline significantly before the contract matures. This risk may be mitigated to some extent by requiring the buyer to provide security in the form of a 10 to 15 percent margin to help ensure that the buyer honors the contract.

• Minimum-price forward contract. This is a relatively new type of forward pricing that may be available to some producers. It establishes a floor but not a ceiling for the price the producer will receive for his commodities, so
it protects against price declines but permits the producer to garner additional profits if the market rises.

• **Basis contracting.** This is a variation on forward contracting, whereby the price the producer receives is not fixed when the contract is drawn, but will be determined by the futures market price plus or minus some agreed-on difference (basis). For example, cattle for September delivery might be priced at the September futures price (as of a date to be selected by the seller) plus 50 cents per hundredweight. Accordingly, a basis contract does not reduce risk until the price is set by the seller, so if the seller waits to set the price, he or she is still subject to all market risk. However, a basis contract can be combined with a put option (see below) to set a minimum price.

• **Hedging.** Hedging involves the use of counterbalancing transactions to substantially eliminate market risk. The type of hedge typically used by an agricultural producer is sometimes referred to as a “short hedge” because it involves use of the futures market to, in effect, sell short. Later, when the producer’s commodities are ready for delivery, he sells them in the cash market. If the price has declined, he makes a profit on the sale of the futures contract to offset the lower price he receives in the cash market. Conversely, if the price has increased, a loss on the futures contract will be incurred to offset the gain in the cash market. Hedging is similar to fixing a price with a forward contract except that the price is said to be an “expected” fixed price, since the difference between the cash and futures prices may not be correctly anticipated and the resulting net price received will vary some from the expected level. Hedging can have an advantage over forward contracting because it is readily available and based on competitively determined futures prices. Since positions in the futures market require the producer to keep a cash margin with the broker, and additional margin calls may have to be met if the market goes up (after the producer has sold short), it is especially important that the bank loan officer be aware of and understand the borrower’s marketing plan.

• **Put option.** Buying a put option gives the producer the right, but not the obligation, to sell a commodity at a given (strike) price any time before the put’s expiration date. It protects against falling prices because the put

becomes more valuable as prices fall. At the same time, a put allows the producer to benefit from rising prices, if they rise more than enough to cover the cost of the put. Puts can also be attractive because they can limit losses by establishing a minimum price at times when current prices are not profitable and the producer is reluctant to fix a low price with forward contracting or short hedging. Puts have the disadvantage of being more expensive than hedging; premiums for put options can be especially high when market prices are high.

Other more complex strategies are sometimes used that combine cash and futures instruments to minimize risk or to modify initial positions to adjust for changing market conditions, including the following.

• **Establishing minimum prices with basis contracts.** Purchasing a put option along with selling commodities on a basis contract establishes a minimum price, while allowing the producer to gain from rising prices.

• **Converting a fixed price into a minimum price.** If a producer accepts a fixed price via forward contracting and later regrets that decision, he or she may decide to purchase a call option (which becomes more valuable as prices rise). The combination of a fixed-price contract and a call option is called a “synthetic put” because the net effect is the same as buying a put option. The producer who has accepted an estimated fixed price via a short hedge can either lift the hedge (cover the open short sale in the futures market) or, depending on circumstances and relative costs, leave the hedge in place and purchase a call option.

• **Converting a minimum price into a fixed price.** If a put option has been used to set a minimum price at very low levels, and prices subsequently increase, the producer can either roll up the put to a higher strike price or sell futures and establish a fixed price when the market reaches an acceptable level. Buying one or a series of additional puts allows the producer to profit from a further rising market but may become expensive.

FINANCIAL AND INCOME INFORMATION FOR AGRICULTURAL PRODUCERS

The financial and income information most
commonly used by agricultural lenders includes balance sheets, income tax returns, and statements of projected cash flow. Many producers do not prepare income statements on an accrual basis. Often, their only available income statement is Schedule F of the annual federal income tax return.

Balance Sheet

Balance sheets for agricultural producers usually divide assets and liabilities into three groups—current, intermediate, and long-term—based on the liquidity of assets and repayment schedules of liabilities. Current assets are those that will either be depleted within 12 months or can easily be converted to cash without affecting the ongoing business operation. Current assets include cash, accounts receivable, livestock held for sale, inventories of crops, feed, supplies, growing crops to be harvested within 12 months, and prepaid expenses.

Intermediate assets support production and may be held for several years. Principal intermediate assets include breeding stock, equipment, and vehicles. While these assets may be relatively liquid, their sale would seriously affect the productivity of the operation.

Long-term, or fixed, assets are more permanent in nature and benefit the operation on an ongoing basis. The principal fixed asset of an agricultural operation is farm real estate, although the producer may have other long-term assets, such as investments, which may or may not be related to his or her farming or ranching operation.

Current liabilities include those which must be paid within 12 months, including amounts owed for feed, seed, supplies, interest, and taxes. The amounts of any payments due within 12 months on intermediate-term and long-term debt should also be included in current liabilities.

Intermediate liabilities are generally those due between one and ten years from the statement date, and commonly represent debt to finance equipment and vehicles. As mentioned above, the amounts of payments due on these debts within 12 months are shown as current liabilities.

Long-term liabilities usually are those that, at inception, had a maturity of more than ten years. Debt on real estate is the main type of long-term liability on the balance sheets of most agricultural producers.

The difference between total assets and total liabilities is the net worth of the producer or the equity in the producer’s assets. Most producers are individual or family farmers whose balance sheets also include personal assets not directly used in the operation, as well as debts owed on those items.

It is important to remember that the amount shown on the statement for net worth is subject to question. Since it is merely the difference between the amounts shown for total assets and total liabilities, its accuracy depends on how the assets are valued and whether all liabilities are reflected. Most agricultural borrowers value assets on their balance sheets at what they assume to be “market value.” However, some tend to use rather optimistic valuations, particularly on items such as equipment and real estate. Also, some borrowers tend to carry the same values forward each year for real estate or equipment, which may cast some doubt on accuracy. Examiners reviewing agricultural credits should try to determine prevailing market prices for various types of land in the bank’s trade area and acquire general knowledge of equipment values. Recent published sales data on both real estate and equipment provide reliable indications of current values.

Sometimes not all liabilities are fully or properly disclosed. A form of potential liability that is often not disclosed is the amount of deferred income tax that will be due on the sale of real estate in which the borrower may have a substantial unrealized capital gain. It may not be possible to readily estimate such deferred-tax liability unless the borrower’s statement shows both cost and market values. However, the examiner should keep these points in mind in analyzing the balance sheet, in an attempt to accurately assess the borrower’s financial strength. Comparison with previous balance sheets, other information in the loan file, and general knowledge about values will aid the examiner in this analysis.

It is advisable to determine how the balance sheet was prepared and by whom. Many are prepared by the borrower and submitted to the bank. Others may be prepared by the borrower and lending officer working together. Presumably, the latter method would tend to ensure a more accurate presentation but, if not, it could raise questions about lending practices or the lending officer’s competency. Similarly, balance sheets that do not balance (not an unusual
occurrence) might indicate a lack of appropriate analysis by the lending officer.

**Balance-Sheet Ratio Analysis**

The following are some basic, fairly simple ratios that can indicate the financial strength of a producer.

- **Current ratio** (current assets/current liabilities). This ratio can reflect a borrower’s ability to meet current obligations without additional borrowing.
- **Quick ratio** (liquid assets/current liabilities). This ratio compares current assets that are easily converted into cash with current obligations and reflects a borrower’s ability to immediately meet current obligations.
- **Leverage ratio** (total liabilities/net worth). This ratio shows the relationship between borrowed capital and owned capital. The higher the ratio, the greater is the reliance on borrowed capital, which means higher interest expense, potentially lower net income, and certainly less equity cushion to withstand risk and adversity. This is often called the **debt-to-worth ratio**.

**Income Statement**

Determining actual profitability for most agricultural borrowers is difficult, primarily because of the absence of complete income and expense information on an accrual basis. The most common income statement for agricultural producers is **Schedule F** of the federal income tax return (“Profit or Loss from Farming”), which accompanies Form 1040. It is prepared on a cash basis, showing cash income received and cash expenses paid, although the taxpayer is also permitted to deduct depreciation expense for items such as equipment, improvements to real estate, and breeding stock. Farmers may have other farm-related income reported on Form 4797, which reports sales of dairy and breeding livestock, or on Schedule D, which shows sales of real estate and equipment. Additional nonfarm income is reported on page 1 of Form 1040. All sources of income need to be considered by lenders and examiners, but for most farm borrowers, **Schedule F** is the primary report of income for the farming operation.

Tax returns probably provide the most accurate income and expense information for most farm operations. Some lenders attempt to convert the cash basis Schedule F to an accrual basis by adjusting for changes in inventory values, receivables, payables, and similar items, but the process requires timely, detailed financial information that often is not readily available. Instead, many lenders and examiners look at cash-basis income over a three-to-five year period to analyze trends and even out the cash-flow variances caused by differences in production and marketing cycles.

While cash income is not necessarily a good measure of farm business profits, it does help show the cash-flow situation and is useful in planning debt repayment programs and family budgets. In addition, cash income statements can be compared with projected cash flows to determine variances that need explanation or that may indicate the need for changes in the operation.

**Operating Ratio Analysis**

Key ratios can be calculated from income statements to aid in analysis. The most commonly used ratios measure profitability, repayment ability, and efficiency. Profitability is usually determined by return on equity and return on assets. Repayment ability can be determined by the earnings coverage ratio and debt payment ratio. The most common economic efficiency ratio used is the operating expense to revenue ratio. Although many smaller banks have not used income statements to any extent to analyze agricultural credits, this type of analysis can provide useful insights into an operator’s efficiency and repayment ability.

---

3. These ratio interpretation guidelines are only rules of thumb and need to be viewed in conjunction with a thorough analysis of other pertinent factors, including balance-sheet composition, the nature of the operation, and an assessment of the borrower’s management ability.
Return on assets is usually calculated by adding interest expense to net farm income and deducting a management fee (usually an amount for unpaid family labor), then dividing the resulting figure by average total farm assets for the year. Return on equity is usually calculated by deducting a management fee or unpaid family labor from net farm income and dividing the difference by total farm net worth.

Common ratios used to assess debt repayment ability and repayment risk are the earnings coverage ratio and the debt payment ratio. The earnings coverage ratio (also known as the cash-flow ratio) is a measure used to assess the operation’s ability to repay. A strong earnings coverage ratio would be 30 percent or above. An acceptable but riskier level would be 10 to 30 percent. The debt payment ratio is used to determine risk over the term of the loan. It is calculated by dividing total annual debt payments by total revenue. As a general rule, total principal and interest payments should not exceed 25 percent of total revenue. A ratio of less than 15 percent would be relatively safe, while a 15 to 25 percent range would indicate some degree of risk.

The operating expense to revenue ratio measures the operating efficiency of the farm exclusive of debt obligations. A ratio of less than 70 percent usually reflects an efficient manager who can service larger amounts of debt. If the ratio exceeds 80 percent, repayment problems could occur if large amounts of debt are outstanding. The ratio tends to be higher for smaller operations.

The following example shows how the earnings coverage, debt payment, and operating expense to revenue ratios are determined from the income statement. This example reflects generally adequate ratios.

1. Total farm revenue $210,000
2. PLUS: Nonfarm revenue 22,000
3. Total revenue (line 1 + line 2) 232,000
4. LESS: Farm operating expenses (excluding interest and depreciation) 153,000
5. LESS: Family living expenses and income taxes 35,000
6. Earnings available for interest and principal payments and new investments 44,000
7. LESS: Interest and principal payments 32,500
8. Remaining earnings available for risk, uncertainty, or new investments 11,500

Earnings coverage ratio = line 8 divided by line 7 35%
Debt payment ratio = line 7 divided by line 3 14%
Operating expense to revenue ratio = line 4 divided by line 1 73%

Statement of Projected Cash Flow

Projecting cash flow for an agricultural operation gives recognition to the importance of cash flow in servicing the debt of an ongoing operation. It also tends to impose some discipline on both borrower and lender by requiring a thoughtful planning process for the year in terms of anticipated income, expenses, financing needs, debt-servicing requirements, and capital expenditures. For individual or family farm operations, family living expenses should be included in the projections, as well as nonfarm income.

A cash-flow statement typically shows both the timing and amount of cash receipts and expenses. It can be either a forecasting device (statement of projected cash flow) or historical record (statement of actual cash flow). Banks and other lenders most commonly use the statement of projected cash flow because it aids in planning the borrower’s credit needs, usually for the coming 12-month period.

A statement of projected cash flow shows not only how much credit is likely to be needed, but approximately when it will be needed. Perhaps most importantly, it shows whether cash income is expected to exceed expenses for the year. It also indicates the likely high point of the credit (amount and time) and the expected cash or debt position at the end of the year. The projected cash-flow statement represents a kind of budget that provides benchmarks against which actual performance can be compared. Significant variances call for explanations and may prompt certain actions to improve future operating results. Historical statements of actual cash flow have value for comparative purposes and can be an excellent aid in preparing projections for the following year, although banks do not typically request them from most agricultural borrowers. They tend to rely, instead, on income tax returns for information on actual operating results.
Cash flow projections are usually made near the beginning of a calendar year, although timing can vary depending on the nature of the operation. The statement is prepared as a spreadsheet normally listing, by month, anticipated cash receipts and disbursements. For each period, the projected operating-loan balance is shown after adjusting for the amount of projected net cash flow.

AGRICULTURAL LOAN POLICIES

Not all banks make agricultural loans, but for many banks, these loans comprise a significant portion of their portfolios. Any bank making agricultural loans should have developed an adequate, formalized set of written policies to guide the lending officers and staff. Agricultural loan policies should address the same general considerations as the policies used for other loan categories, such as desirable, undesirable, or prohibited loans; collateral requirements (including evaluation guidelines); maximum loan-to-value ratios; maximum maturities; documentation requirements; and concentration limitations. Given the specialized nature of agricultural assets and the varied types of operations, the policies should be comprehensive and specifically address the types of agricultural loans the bank intends to make.

Some banks may have general policies, supplemented by separate procedures or practices. Regardless of the individual bank’s terminology or the way in which the material is organized, it is important that the bank’s board of directors ensure that appropriate written guidance is provided for management in the agricultural lending area. The policies should help ensure that loans are made on a sound basis and provide a framework for identifying, addressing, and resolving problems that arise. Loan grading, either by the loan officers, a separate loan review function, or both is desirable, as well as a general plan for actions to be taken on loans with unsatisfactory grades. The policies should also address collection and charge-off considerations. Agricultural loan policies should be reviewed by the bank’s board of directors and modified when deemed necessary. For more detailed guidance on bank loan policy, refer to section 2040.1, “Loan Portfolio Management.”

AGRICULTURAL LOAN DOCUMENTATION

Loan documentation establishes the bank’s legal position as creditor and secured party and evidences the borrower’s ownership of and actual existence of collateral. Some documents, such as an insurance policy, give some evidence of collateral values and ensure that tangible collateral is protected. A number of documents play a supporting role, as they provide information that is vital in assessing a borrower’s creditworthiness and in demonstrating the borrower’s financial capacity to regulatory authorities, auditors, loan reviewers, senior management, and the board of directors. The documents also help management to service and grade the credit, determine the nature and extent of any problems, and formulate plans to resolve them by strengthening the bank’s position or averting losses.

Absence of complete and current loan documentation is a weakness in the lending function and can pose a significant threat to the bank’s safety and soundness. Some documentation exceptions are noted during virtually every examination, largely due to inadvertent oversights or unavoidable delays in obtaining original or updated documents. However, an unusually large volume of exceptions can be an important indication of weak and deteriorating loan quality. Excessive exceptions reflect unfavorably on management and indicate a need for management to either formulate stronger loan policies and procedures or to emphasize adherence to established guidance.

Many banks use a standard checklist to help ensure that all applicable documents are obtained when a loan is made. Most banks also have either an automated or manual “tickler” system to identify when updated documents are needed, such as current financial statements, tax returns, UCC-1 filings, collateral inspections, and evidence of insurance. Because of the large volume of required documents, many of which need to be updated at least annually, it is imperative that bank management be firmly committed to a sound loan documentation program. The program should establish responsibility for obtaining documents, monitoring compliance, and providing follow-up to help ensure that all required documents are obtained in a timely manner.

Not every document is applicable to each agricultural loan. Examiners need to assess which
documents are appropriate for a given loan depending on its individual circumstances. There should be little disagreement between examiners and bank management about the basic documents needed. Basic documentation requirements are usually listed in the bank’s loan policies or procedures. The need for certain supporting documents may be a matter of judgment, particularly in regard to frequency of updating documents. In most cases, however, bankers and examiners tend to agree on items that are to be considered documentation exceptions. Refer to section 2080.1, “Commercial and Industrial Loans,” for further guidance on loan documentation. Following is a list of the types of documents a bank should have in connection with agricultural loans:

- promissory note
- security agreement
- financing statement
- real estate mortgage or deed of trust
- other collateral assignments, as appropriate (such as assignments of third-party notes, mortgages or deeds of trust, life insurance policies, deposit accounts, securities, or other contracts)
- subordination agreements (for example, a prior lienholder may subordinate its lien position to a bank to induce the bank to make a loan)
- appraisals
- hazard insurance policy or certificate of coverage
- cash-flow projections, usually prepared annually
- income tax returns
- financial statements (balance sheets) for the borrower, cosigner, or guarantor
- collateral inspection reports by the bank
- bill of sale for livestock or equipment
- worksheet for each note (showing the purpose, timing, and source of repayment; collateral; total existing bank debt; analysis)
- overall credit analysis (particularly on large or troubled loans)
- loan officer memos and comments
- correspondence

**LOAN ADMINISTRATION AND SERVICING**

In addition to making agricultural loans, analyzing creditworthiness, setting loan terms, obtaining collateral, and assembling required documentation, management needs to administer the portfolio of outstanding loans. They need to monitor borrowers’ performance relative to agreed-upon terms, collateral margins, financial and income data, cash flow, crop prospects, and market trends that may affect borrower performance. If problems arise, bankers need to formulate and implement plans to protect the bank’s position.

**Farm and Livestock Inspections**

A physical inspection of the farming operation is usually performed by bank management before advancing any substantial funds to a new borrower. Subsequent inspections, particularly for larger or more marginal borrowers and for readily moveable collateral, should be performed periodically. Inspections may be performed by the loan officer or by another bank officer or employee with agricultural experience. The inspector usually prepares a fairly detailed report listing farm assets (livestock, equipment, grain and feed on hand, and growing crops) and at least brief comments on the condition of assets and crop prospects. Often, a listing of machinery, equipment, and vehicles is prepared from the bank’s records ahead of time to aid in the inspection process; any additions, deletions, or exceptions noted should be shown on the report. Livestock are listed by type, showing numbers, sex, and approximate weight. Values for all items should be shown on the report, based on current market prices. The report may note the number of acres the potential borrower owns and rents, as well as the approximate value of real estate owned. A real estate evaluation might be performed as part of a farm inspection, but a full appraisal, if required, would almost always be performed separately, usually by another individual.

Farm inspections are usually performed annually, unless the borrower has a livestock feeding operation or some other type of operation that involves frequent turnover of assets. Generally, it is desirable to inspect feeder operations approximately every six months or more frequently if deemed necessary. The absence of a current inspection report, especially for larger or troubled borrowers, may be considered a loan-documentation exception.
UNSOUND AGRICULTURAL LENDING PRACTICES

Following is a list of common unsound lending practices, some of which are general and apply to all types of loans while others relate more specifically to agricultural loans. This list includes the most common shortcomings. Depending on the extent of the unsound practices, the examiner should incorporate specific recommendations for improvement into the examination report or formal supervisory action where appropriate.

- absence of or failure to follow sound lending policies and procedures
- failure to require adequate performance on debt
- failure to monitor the borrower’s performance and position, commonly evidenced by the—
  - lack of periodic collateral inspections
  - absence of current income and financial information
  - failure to consider the borrower’s total debt-service requirements
  - presence of additional operating debt at another bank; or
  - absence of a lien search to verify the bank’s position in collateral
- inappropriate loan structuring, such as—
  - untimely or inappropriate repayment schedules
  - failure to identify or segregate carryover operating debt
- unwillingness to say “no” to a financially stressed borrower, which could be an indication of—
  - overlending (building loan volume without regard to quality or long-term effects on the borrower and the bank)
  - failure to consider borrower’s management capabilities
  - failure to analyze or project costs of production
  - failure to observe market trends.

TROUBLED AGRICULTURAL LOANS

Aside from readily identifiable problem loans such as past-due loans, loans on nonaccrual status, loans on the bank’s watch list or those that were previously classified, or loans to borrowers who have filed for bankruptcy, the following characteristics may indicate existing or potential problems. Examiners should keep in mind both current conditions and trends.

- undermargined collateral position
- unusually high leverage
- marginal liquidity
- heavy investment in equipment, vehicles, or real estate
- need for unplanned credit advances
- deficiencies or problems revealed in the collateral inspection
- unfavorable financial trends (especially increasing debt-to-worth ratio or declining collateral margins)
- lack of performance (renewals without appropriate performance)
- capitalizing interest on debt
- charge-offs
- inability to meet scheduled debt payments
- tax problems
- reluctance of borrower to provide current, complete, and accurate financial information
- notification of insurance cancellation for failure to pay premium
- evidence of legal action against the borrower
- overdependence on guarantors
- overdependence on anticipated inheritance

CHAPTER 12 BANKRUPTCY

Chapter 12 bankruptcy for family farmers became effective in November 1986. It was designed specifically for the family-farm debtor and permits family farmers to reorganize farm debt so that the amount of the debt approximates the value of the collateral. Only a “family farmer with regular annual income” (which can be a partnership or corporate structure) may file a chapter 12 bankruptcy. To be eligible, a debtor must meet all of the following tests:

- have a farming operation
- have no more than $1.5 million in total debts
- derive at least 80 percent of total debts (exclud-
ing debt on the principal residence) from the farming operation
• derive more than 50 percent of the family’s income from the farming operation during the year immediately preceding the filing

The family farmer will have regular annual income if the court finds the annual income to be sufficiently stable and regular to enable the farmer to make payments under the chapter 12 plan.

Under chapter 12, there is no requirement for accelerated payment of arrearage as there is with chapter 13. Instead, the farmer/debtor can commence making plan-required payments from the start of the chapter 12 bankruptcy. Also, a farmer/debtor will have the ability to modify a promissory note and continue payments on it beyond the life of the chapter 12 plan if the court approves the modification; in such cases, the creditor cannot object.

A secured creditor will be “adequately protected” during the chapter 12 bankruptcy if it receives cash payments to offset any decrease in the value of collateral and, in the case of farmland, if the creditor is paid a reasonable rental fee based on the earning capacity of the property. Also, chapter 12 does not allow the creditor to recover “lost opportunity costs,” so the creditor will not be entitled to interest and other gains that would have been received by the creditor had bankruptcy not been filed. Elimination of the lost-opportunity-cost provision makes it more difficult for creditors to obtain a lift of stay on the grounds that there is not adequate protection.

Before confirming the chapter 12 plan, a court may permit a farmer to sell pledged assets without the consent of the secured creditor, although proceeds from the sale must go to the secured creditor. Creditors may bid at the sale, and collateral that is not sold will be subject to current evaluation in determining what amounts will be claimed by secured creditors under the plan. There is no time limit on the duration of a chapter 12 plan, except for a three-year limit (or five years with court approval) on unsecured debts.

If a chapter 12 debtor voluntarily dismisses the case, he is prohibited from refileing for 180 days. The law also provides for a dismissal from chapter 12, or a conversion to chapter 7, when the debtor commits fraud. Any other provisions of chapter 12 that are not discussed here are generally similar to those in chapter 11 and chapter 13 bankruptcy proceedings.

WORKING OUT PROBLEM
AGRICULTURAL LOANS

When significant problems arise in agricultural credits, bank management resolves the problems in a timely manner to protect and strengthen the bank’s condition. A sound and accurate loan-grading system, supported by a competent internal loan review program, will help to ensure timely identification of problems. Regulatory examinations provide an independent assessment, which may identify additional problems that management has not recognized. Once problems are identified, the following considerations are important in a workout program:

• identify the source of the problem
• establish a workout plan designed to strengthen the borrower and to minimize loss to the bank
• set at least a tentative timetable for the workout
• reach agreement with the borrower on the plan, if possible
• monitor progress frequently

Alternative actions in a workout plan might include—

• reducing the bank’s exposure in outstanding debt by—
  —obtaining additional collateral,
  —obtaining financial assistance through sound cosigners, guarantors, or government guarantees,
  —encouraging the borrower to modify his operations, or
  — restructuring the credit to reduce the interest rate or payments

• advancing more funds to—
  —refinance existing nonbank debt on more favorable terms or
  — improve the bank’s overall collateral position (for example, take out a small balance to a senior lender to put the bank in a first lien position)

• reducing or eliminating outstanding bank debt by—
  — selling assets, which can range from a partial sale to reduce debt burden and improve chances for survival to a complete liquidation;
—refinancing a portion of bank debt (such as real estate) elsewhere if more favorable rates or terms are available; or
—recognizing a loss by partial or complete charge-off of the credit.

EXAMINER REVIEW OF AGRICULTURAL LOANS

A review of agricultural loans during an examination will follow the same basic guidelines employed in reviewing commercial or real estate loans. Certain practices, types of collateral, and documents may be unique to agricultural loans, and credit analysis will be somewhat specialized. However, the objectives of assessing credit quality based on the borrower’s financial strength, cash flow, collateral, history of performance, and indications of management capabilities are much the same as for other loan types.

Sample size and sampling techniques will vary with the planned scope of the examination and size of the bank and its agricultural loan portfolio. As a minimum, the examination scope would usually include past-due and nonaccrual loans, watch-list loans, previously classified loans, insider loans, and some portion of other loans. See section 2080.1, “Commercial Loans,” for details regarding this topic.

Classification of agricultural loans should be made using the same criteria established for other types of loans. See section 2060.1, “Classification of Credits,” for regulatory definitions of substandard, doubtful, and loss classifications, as well as the special mention category and guidance on classifying loans.
1. To determine if lending policies, practices, procedures, and internal controls for agricultural loans are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the agricultural loan portfolio for credit quality, performance, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, objectives, or internal controls are deficient or when violations of laws or regulations have been noted.
Agricultural Credit-Risk Management

This section reinforces key factors in agricultural lending and provides a discussion of potential agricultural market issues and risk ramifications banking organizations and supervisory staff should consider when assessing the adequacy of the risk-management practices and capital needs for a bank’s exposure to agriculture-related risks. This supervisory guidance also addresses factors that examiners should consider in evaluating individual agriculture-related credits and the adequacy of a banking organization’s practices to monitor a borrower’s capacity to repay given uncertain events. These concepts are based on the existing guidance within this manual’s section 2140.1, “Agricultural Loans.”

A bank’s risk-management and capital planning practices should be sufficiently robust to assess the level of agriculture-related credit risk and the adequacy of a bank’s capital to withstand potential future market and economic distress. The risk-management principles discussed in this section are broadly applicable, irrespective of agricultural market conditions.

**MARKET ISSUES AND RISK RAMIFICATIONS**

Prolonged and abrupt declines in farm income, brought about by negative movements in commodity prices and/or increased production costs, could have serious ramifications for the repayment ability of previously sound farm borrowers and could result in substantial declines in farmland collateral values. Highly leveraged farm borrowers or those that are in weakened financial condition would be most vulnerable to abrupt or prolonged financial distress.

Banks should monitor a number of market factors in order to manage and control the risk of their agriculture-related loan portfolio (including collateral values for farmland) and determine the repayment ability of individual farm borrowers. These factors include the following:

- **Agricultural commodity prices.** These prices have experienced unusually large swings over the past several years.
- **Production costs.** Volatility in costs for labor, feed, fertilizer, seed, land rent, and machinery and equipment may challenge farm operators’ ability to effectively manage operating profit margins.
- **Farmland values.** Land values, particularly in the central United States, have surged to record highs over the past several years. Capitalization rates for farmland, particularly cropland, appear to be well below historical norms and may reflect overly optimistic long-term expectations. An abrupt increase in interest rates, coupled with a decline in farm income, could trigger an increase in capitalization rates, thereby lowering farmland values.
- **Global market issues.** Global supply and demand imbalances can adversely affect commodity prices and the cost of production. For example, weather events, economic conditions, and numerous other factors can impact global supply as well as demand and place downward pressure on farm income. Producers of ethanol and other biofuels may be adversely affected by the volatility in oil, corn, and other commodity prices.

**SUPERVISORY EXPECTATIONS FOR CREDIT-RISK MANAGEMENT AND UNDERWRITING PRACTICES**

The potential for volatile market conditions and risk factors raises the importance of ensuring that agricultural banks have in place appropriate risk-management programs and prudent lending standards. A key component of a sound risk-management program is the linkage between an analysis of market conditions and an agricultural bank’s risk-management and capital planning practices. The range and extent of market analysis may vary depending on the composition of the bank’s portfolio and overall risk exposure. The goal of this analysis should be to provide management and the board of directors with sufficient information on current market conditions, factors that could influence changes to market conditions, and possible events that could significantly change near- and long-term market conditions. At a minimum, banks with significant agricultural exposure should have established risk-management practices that address the following:

- **Assessment of the Borrower’s Creditworthiness.** A bank should conduct a thorough
analysis of a borrower’s creditworthiness, including assessments of the borrower’s projected income and expenses compared to actual results, adequacy of working capital, capital expense analysis, reliability of supplementary sources of income, and cash flow stress test analysis. Current borrower financial information is essential to the bank’s ability to evaluate the borrower’s creditworthiness and leverage. A successful agriculture-related business should exhibit strong repayment ability and risk analysis, liquidity, solvency, collateral, credit management, profitability, and management performance.

• **Assessment of the Borrower’s Cash Flow.** In volatile markets, a highly leveraged borrower may not have the necessary cash flow to properly service the debt according to the loan terms. By reviewing the borrower-prepared cash flow statements, the bank should be able to identify potential repayment ability problems, calculate key cash flow ratios, and assess the ability of the business to handle risk and uncertainty. Risk and uncertainty due to commodity prices, production, and weather are prevalent characteristics of most farm operations and should be explained in the cash flow projections. A sensitivity analysis that determines a farm operation’s ability to withstand risk and uncertainty is useful in analyzing cash flow projections. While there is a broad spectrum of agricultural activities (e.g., grain, livestock, and fruit), there are some key elements of sound financial analysis that should be applied to all situations. These elements include
  — reviewing the reasonableness of budget assumptions and projections for yield, weight gain, production costs, and commodity prices;
  — comparing these projections with actual performance results;
  — assessing the impact of capital expenditures; and
  — evaluating significant changes in the borrower’s balance sheet structure.

• **Underwriting Standards.** A bank should periodically review its underwriting standards to ensure that loan policies do not become outdated and ineffective. The frequency and depth of the review will depend on circumstances specific to each institution, such as growth expectations, competitive factors, economic conditions, and the bank’s overall financial condition. Planned changes to a bank’s lending function or business plan should prompt a modification to lending policies. The appropriateness of minimum debt-service-coverage ratios and maximum loan-to-value ratios should be assessed. Significant criticisms and recommendations made during recent audits and examinations should also be considered during the updating process.

• **Credit Administration and Controls.** A bank should have appropriate policies and controls to monitor and segregate agricultural carryover debt. Bank management should understand the fundamental causes of carryover debt. Carryover debt resulting from the borrower’s inability to generate sufficient cash flow from sales to repay the current cycle’s production loans generally reflects a well-defined credit weakness. The identification of a troubled borrower does not, however, prohibit a banker from working with the borrower. When carryover debt arises, the bank should confirm the reasons for the carryover debt (e.g., weaknesses in a borrower’s financial condition or operations, inappropriate credit administration on the bank’s part, a poor marketing plan, or adverse weather conditions), as well as the viability of the borrower’s operation so that an informed decision can be made on whether debt restructuring is appropriate. The restructured debt should generally be on a term basis and require clearly identified collateral, a reasonable amortization period, and payment amounts based on realistic expectations.

• **Loan Structure.** The structure of a loan will depend on the nature of the borrower’s business. To properly structure the borrowing relationship, the bank should be able to
  — project how the borrower will perform in the future, including likely primary and secondary repayment sources;
  — anticipate challenges and problems that the borrower may encounter;
  — match the type and terms of the loan to both the loan purpose and the likely repayment sources and ensure the loan is supported by sufficient cash flow from the expected repayment source;
  — develop a set of loan agreement covenants that protects the bank for the term of the loan; and
  — secure the credit facility with collateral and consider requiring loan support such as guarantees.

• **Reliable Collateral Evaluations and Reason-
able Collateral Margins. A bank should have a process in place to monitor periodically the value of collateral pledged to the debt in order to manage the risk over the life of the loan. Evidence of collateral lien perfection and timely collateral inspections should be documented in the loan file review. Evidence of declining collateral margins may signify emerging concerns over the ability of the borrower to repay and could adversely affect the bank’s collateral protection in the event of default.

Expectations for the level of sophistication of risk-management systems will vary based on the specific risk characteristics, complexity, and size of the bank’s exposure to agriculture. In general, there should be higher expectations around risk-management systems for banks with significant exposures to one or several agricultural sectors. An institution should assess the effect, if any, of its agricultural credit activities upon the institution’s overall financial condition, including capital, the allowance for loan and lease losses, and liquidity.1

INTRODUCTION

This section is intended to provide guidance on prudent risk management of energy lending activity to examiners reviewing reserve-based lending, usually to exploration and production (E&P) firms. Reserve-based lending or reserve-based loans (RBL) is a type of financing where a loan is secured by the reserves of oil and gas of a borrower and repaid primarily using the proceeds from the future sale of encumbered oil or gas reserves. The amount of an RBL is determined based on the borrower’s “proved reserves” borrowing base, adjusted for certain risk factors. Categories of proved reserves include proved-developed-producing, proved-developed-nonproducing, and proved-undeveloped reserves.

A bank engaging in reserve-based lending should maintain a robust risk management program to manage and control the level of risk in and concentration of its reserve-based lending portfolio. The program should include timely market condition analysis that supports sound credit risk management and underwriting practices. The range and extent of market analysis may vary depending on the composition of the institution’s energy-related loan portfolio and overall risk exposure to the energy industry. The analysis should provide an institution’s management and its board of directors with sufficient information on market conditions to make informed decisions regarding both loan and portfolio risk changes.

OIL AND GAS INDUSTRY OVERVIEW AND BUSINESS DESCRIPTION

The Oil & Gas (O&G) industry comprises three business segments—upstream, midstream, and downstream:

Upstream companies, also known as Exploration and Production (E&P) companies, find, develop, and produce oil, natural gas, and natural gas liquids. The upstream business model is analogous to mining for raw materials. Upstream companies manage their development and production costs and emphasize production volume to generate profit margins, which are sensitive to commodities market prices. Commodity price changes can cause volatility in company cash flow and the value of O&G reserves.

Upstream companies make up-front investments to obtain and develop reserves from which they expect to generate satisfactory investment returns based on their expectations for production costs, production volumes, and future market prices. Once production begins, the existing O&G reserves start to deplete. Therefore, upstream companies require high levels of ongoing capital expenditures to maintain or increase reserves to offset depletion. Sustained periods of capital investment can reduce the amount of cash flow available for debt service or distributions.

The primary assets of an E&P company are its oil and gas reserves, that is, hydrocarbons below the earth’s surface that have not yet been produced and are economically viable to extract. E&P firms are unique in that their primary asset base is depleting and therefore must be continually replaced through either drilling activities or acquisition. Lending to E&P companies are based solely on the predicted cash-flow value of the oil or gas production. Reserve-based lending is secured by interests in oil and/or gas properties with proved reserves. Cash flow generated from the future sale of encumbered oil and/or gas reserves is the primary, and in some cases, the only credible source of repayment. Therefore, production payments are usually assigned to the bank, and the liquidation value of collateral is expected to be sufficient to pay off the loan at any time. In considering this or any type of secured loan, the banker must assess a borrower’s creditworthiness. (See the subsection entitled “Credit Risk Management and Administration” for more information.)

Because cash flow generated from the future sale of oil or gas is the justification or basis for production lending, proved-producing reserves are the most desirable collateral for a bank as they provide sufficiently predictable cash flow for debt service. For this reason, loan values are predicated primarily on reserves that are proved-developed-producing properties.

Midstream companies gather, process, store, and transport crude oil, raw natural gas, natural gas
liquids, and refined petroleum products and chemicals. The midstream business model is similar to a toll road that charges fees for the movement or intermediate processing of O&G. Midstream companies require large up-front investments in long-lived infrastructure and then generate medium to low profit margins by collecting fees for services. These companies frequently are structured as master limited partnerships, which are not subject to income tax.

*Downstream companies* refine petroleum products and engage in the manufacturing, marketing, and distribution of refined petroleum products such as gasoline, jet fuel, heating oil, asphalt, motor oil, and lubricants. The downstream business model is similar to value-added manufacturing that earns low to medium profit margins from refining raw materials, turning them into products with valuable uses, and marketing and delivering finished goods to wholesale customers and end users. Developing the capacity to do so requires high capital investment up front. Large downstream companies may incorporate elements of upstream and midstream businesses.

O&G service companies provide support to upstream, midstream, and downstream operations. E&P and integrated O&G companies, specifically, are supported by various types of service companies that provide geological surveys, engineering, technology, drilling, extraction, processing, transporting, wastewater disposal, and other services. These service companies are capital intensive and can be highly complex and technologically advanced. Some service companies are large and multinational, and others are quite small, such as local trucking companies, small engineering firms, and small maintenance firms.

Integrated O&G companies are involved in almost every aspect of the O&G business: upstream, midstream, and downstream. This structure may better enable such companies to successfully manage business cycle risks and price risks. Most of these companies also manufacture and sell petrochemicals. International integrated O&G companies conduct their operations worldwide and are among the largest and most recognized companies in the world. Comparatively, smaller and independent integrated O&G companies have less diversification and may exhibit greater vulnerability to commodity price volatility, cost overruns, production delay disruptions, and economic cycles.

**DEFINITIONS OF RESERVES**

Reserves are quantities of petroleum that E&P companies anticipate they will be able to recover commercially from known accumulations from a given date forward under defined conditions. Reserves must be discovered, recoverable, commercial, and remaining as of the evaluation date. Reserves are classified into one of three categories: proved, probable, or possible, with proved reserves divided into three subcategories: proved developed producing, proved developed nonproducing, and proved undeveloped.

**Proved Reserves (1P)** are of the lowest risk classification. This means that under current conditions, it is reasonably certain that the reserves will be recoverable and commercial (i.e., profitable to produce).

- **Proved-developed.** Proved reserves are considered developed only after the necessary equipment has been installed or when the costs to do so are relatively minor. There are two subcategories of developed reserves: producing reserves and nonproducing reserves.
  - **Proved-developed-producing (PDP) reserves.** PDP reserves are those quantities of petroleum which, by analysis of geological and engineering data, can be estimated with reasonable certainty (90 percent) to be commercially recoverable, from a given date forward, from known reservoirs and under current economic conditions, operating methods, and government regulations.
  - **Proved-developed-nonproducing (PDNP) reserves.** These are generally proved-developed reserves behind the casing of existing wells or at minor depths below the present bottom of such wells that are expected to be produced through these wells in the predictable future; including proved developed shut-in (PDSI) and proved developed behind the pipe reserves.

---
The development cost of this type of reserves should be relatively small compared with the cost of a new well.

- **Proved-undeveloped (PUD) reserves.** These are reserves that are proved resources to be recovered from new wells on undrilled acreage or from existing wells requiring a relatively major expenditure for recompletion to a producing state. A company’s proved-undeveloped reserves should be economically and technically viable for development.

**Probable Reserves (2P)** are those unproved reserves which analysis of geological and engineering data suggests are more likely than not to be recoverable. In this context, when probabilistic methods are used, there should be at least a 50 percent probability that the quantities actually recovered will equal or exceed the sum of estimated proved plus probable reserves.

**Possible Reserves (3P)** are those unproved reserves which analysis of geological and engineering data suggests are less likely to be recoverable than probable reserves. In this context, when probabilistic methods are used, there should be at least a 10 percent probability that the quantities actually recovered will equal or exceed the sum of estimated proved plus probable plus possible reserves.

### TYPES OF OWNERSHIP INTEREST IN OIL & GAS RESERVES

Ownership interests related to reserves can be held in a variety of forms including royalty (or mineral) interests, overriding royalty interests, and working interests. Royalty interests are created when the mineral interest owner leases a property. Royalty interests represent payments to mineral owners to drill on their property take preference over all other payments from lease revenue. Overriding royalty interests are similar to royalty interests except these may have limited value as they are dependent on production. Working interest owners share in the profits after the royalty interest payment, lease operating expenses, severance and ad valorem taxes, and capital expenditures associated with a property (lease or well), as well as the risks associated with drilling.

### FUNDING SOURCES AND CAPITALIZATION

A traditional role of bank credit in the O&G industry has been to finance E&P capital expenditures. The repayment of E&P loans depends primarily on revenues and cash flows generated by the successful acquisition, development, completion, and production of O&G reserves, and secondarily on the liquidation of O&G reserves securing the debt.

There are several loan structures used by E&P companies to finance their businesses. Most independent, non-integrated E&P companies obtain financing through an RBL. An RBL typically is a revolving facility secured by proved reserves with the amount of the borrowing base determined by the valuation of those reserves.

RBLs typically have terms of three to five years. The RBL’s purpose is primarily to fund acquisition and development costs of new reserves, which, if successful, increase the reserve valuations and provide increasing cash flow for debt service and profits for the company’s shareholders and investors. Other forms of debt, such as senior notes or bonds, are normally subordinate to the RBL in collateral position, but in certain cases, second-lien loans are pari passu with the RBL in right of contractual payment streams.

Although less common in the United States, another credit structure that E&P companies use is a reducing revolver, which is a combination of a revolving loan and a term loan. The revolver can increase to a maximum commitment level and then step down at regular principal payment dates.

Lenders may also make term loans for project financing, acquisition of O&G properties, or acquisition of other fixed assets secured by a first lien on the company’s reserves. For term loans, banks determine the lendable amount based on engineering reports and make a one-time advance for the acquisition. This type of financing amortizes over the loan term or the principal balance is paid at maturity. The term of loans typically varies from five to 10 years, but the term of these loans should always be tied to the economic life of the underlying asset.

Banks have historically been the primary financial provider of RBLs but other market participants are active in providing additional sources of capital to the industry. Examples of other
forms of capital extended to the sector include the following:

- **Second-lien debt**: In energy lending, second-lien senior term loans may rank pari passu in right of payment with first-lien debt, including RBLs because of the additional risk to repayment but remain in a secured position ahead of unsecured debtors, such as bondholders. Second-lien loans often are structured with five-year maturities with interest-only payment requirements.

- **Mezzanine debt**: Mezzanine loans are subordinated to senior loans and are used to leverage acquisition or development activities, particularly when companies do not have sufficient producing reserves to support borrowing under an existing RBL. These loans may have tight covenants and extensive controls on funding and are generally unsecured and not subject to a borrowing base; rather, these loans are based on collateral coverage or cash flow ratios.

- **Bonds**: High-yield bond offerings and securitizations have played an important role in E&P financing by providing affordable access to capital markets. Longer-term bond offerings with 10-year maturities and interest-only payments have been common sources of funding for E&P companies.

- **Private equity**: Equity investors in the E&P industry play a significant role in E&P ownership and related financing structures. The increasingly complex corporate structure of E&P companies also requires that E&P lenders have more specialized expertise and monitoring systems.

Examiners should determine whether other financing sources are utilized, in addition to the loan under review, to meet the capital needs of the borrower. For example, banks that lack the in-house capacity to fund first- and second-lien facilities can either pair up with a mezzanine capital provider or try to stretch its borrowing base underwriting algorithms in an effort to meet a borrower’s cash needs. This generates additional risk to the bank and may affect the liquidity and repayment capacity of the borrower.

**EVALUATION OF RESERVES**

When a lender decides to proceed with financing secured by oil or gas reserves, a bank obtains an engineering report. The initial step to determining the loan value of the collateral or assessing the borrower’s creditworthiness is an analysis of the engineering report.

Banks that make RBLs will usually have a petroleum engineer on staff or contract with an engineering consultant firm to provide an engineer’s report on the properties to be pledged. An engineering report provides reserves and production forecasts and then applies the pricing and cost assumptions to arrive at the net lease operating income available for debt service. This report is comparable to a real estate appraisal in its importance and function to the bank’s credit decision.

Typically, most reports will cover five or more years. Production is usually broken down into categories of oil and gas, and sometimes the number of wells is detailed. Expenses may be divided into major components such as operating costs; production and ad valorem taxes; depreciation, depletion, and write-off of intangibles; general and administration expenses; and taxes on income. Also, if the owner expects to make capital improvements from income, this information will be included in the report. Some reports include the pro forma amount and terms of the loan to support the analysis.

Engineering reports must be generated by a fully qualified petroleum engineer. The lender should select an engineer based on the individual’s competency, experience, and independence, as well as the individual’s analytic skills. The integrity of engineering data that depict future cash stream is critical to the initial lending decision and equally important to an examiner in the assessment of credit quality. In summary, an acceptable engineering report must be an independent, detailed analysis of the reserves prepared by a competent engineer.

The examiner should carefully review the four elements below in establishing the amount of the borrowing base.

**Pricing**

When reviewing the engineering report, an examiner should carefully review the underlying pricing and production assumptions used. West Texas Intermediate (WTI) and Brent are the most common sources for benchmark prices used in engineering reports, but the actual price that is realized can vary significantly by well-
head. The difference between benchmark price and wellhead price is referred to as price differential. Factors affecting the price differential can include oil quality, transportation, and storage, to name a few. Banks should be able to support the pricing used in their forecasts, ensuring that benchmark prices are reasonable as compared to the wellhead prices.

E&P companies are exposed to the price volatility in commodity markets. In response, E&P companies may vary their production level and capital expenditures based on current and future price expectations, or hedge their reserves by utilizing the futures markets. A price sensitivity analysis should be run to test the valuation range, and long-term flat price cases should be run to test valuation at the floor or bottom price levels. Sound banking practices include a stress or downside analysis based on significantly lower prices.

The future price of oil is a judgment factor and should be based on conservative pricing and can include some reasonable escalation each year. This information can be obtained from a number of reliable sources, such as the NYMEX strip pricing. An examiner should determine the source of the data to judge the reliability of report information. The prices used for gas are usually contract prices plus escalation-clause rates. Special care is necessary in evaluating gas contracts, including their reasonableness in light of current conditions and the ability and willingness of the purchasers to honor the contracts. In some instances, certain purchasers have broken contracts or exercised “market-out” clauses to cease complying with long-term purchase commitments. The Securities and Exchange Commission (SEC) requires reserves with nonnegotiable contracts or under market-out clauses to value the reserves at spot prices at the date of renegotiation or immediately, in the case of market-out clauses.3

Cost

Cost assumptions should also be realistic and fully supported. Operating cost assumptions are based on the costs of similar operations in similar areas or, in the case of producing reserves, on historical performance, which may be escalated at some reasonable percentage each year. The report should consider increases and decreases in price as well as cost inflation over the “life of the properties.”

Costs affect the economic life of reserves primarily in two ways: development costs and production costs. Production costs are a key focus in underwriting because the borrowing base is based primarily on PDP reserves. Production costs include lifting costs or lease operating expenses, which include operating and maintenance expenditures for materials, supplies, fuel, insurance, maintenance, and repairs. Additional production costs include property and severance taxes. If there are plans for further development, engineering reports may include development costs, or capital expenditures, for PDNP and PUD properties as well. Capital expenditures may include roads, utilities, drilling pads, site facilities, development wells, wellheads, well casing, and pipe and well equipment. To a lesser extent, capital expenditures may include workover costs for PDP wells.

Discount Rate

The discount rate depends on current market factors that consider the required market rate of return on future cash flows given the relative risks involved. Assumptions used to determine the discount rate should be fully supported. SEC reporting requirements require a 10 percent discount rate.

Timing

Preferably, the report should be no more than six months old under normal market conditions; if the commodity market becomes volatile, a report less than six months old will be adequate. A report that is up to 12 months old may be acceptable in some cases; however, it should not be more than 12 months old. Change is the most important factor in determining the adequacy and timeliness of reports. Significant price fluctuations or changes in interest rates may require the examiner to adjust the valuation of the reserves to reflect current conditions.

When engineering reports do not address one or more of these four critical concerns, the examiner should challenge management to pro-

---

3. For more information, see 17 CFR 210.4-10, “Financial accounting and reporting for oil and gas producing activities pursuant to the Federal securities laws and the Energy Policy and Conservation Act of 1975.”
vide support for the evaluation assumptions, and may need to evaluate other bank methodologies, for example, recent cash flow histories, to determine the current collateral value. In addition, appropriate comments should be included in the report of examination and recommendations or matters requiring attention made to bank management for improving its engineering reporting and requirements.

ESTABLISHING THE BORROWING BASE

The borrowing base for an RBL, determined by analyzing previous production reports and independent engineering evaluations, represents the lending commitment established from the engineering valuation of the borrower’s proved O&G reserves, subject to limitations and adjustments. It governs the maximum amount of availability under the RBL at any one time. The commodity prices, risk adjustment factors, and cash flow discount rate used to determine reserve values and the borrowing base should be fully supported in the lender’s underwriting documentation.

The RBL is normally secured by a first lien on the borrower’s O&G reserves, the cash flow from which is the loan’s primary source of repayment. Banks typically perfect liens on reserve interests that produce 75 percent to 90 percent of the economic value of the borrowing base. Banks need to pay particular attention to state laws in order to understand what is required to perfect their security interest in their collateral. Additionally, banks need to ensure that liens remain enforceable as activities occur prior to a borrower’s sale of minerals. For example, a bank needs to protect its collateral interest when O&G assets are temporarily transferred from the well to storage containers across jurisdictions.

The engineer is responsible for ensuring that the evaluation includes only proved-developed reserves, unless otherwise directed by the lender. The lender might give value to reserves, properties or wells that are proved-developed nonproducing under certain conditions. The lender would, however, deduct a safety factor by lowering the value of unseasoned or non-producing reserves. The lender will not generally loan against probable or possible reserves because of the production uncertainty and speculative nature of those categories. Their inclusion as collateral is usually as an abundance of caution with little or no value assigned to them.

The engineer must make a judgment on the accuracy of future revenues predictions. The engineer evaluates geologic conditions such as sand continuity, faulting, spacing, the number of wells, the diversity of properties, well productivity, the pressure production history, and overall data quality, as well as the degree of confidence the engineers have in their own numbers. Estimates based on well-established production performance are given the most credibility. Lesser weight is given to estimates derived from more speculative methods such as volumetric, analogy with similar reservoirs, or a computer simulation of new producing zones. The examiner should carefully review the narrative portion of the engineer’s report to help determine its usefulness. It will detail what data were available, how they were used, the methods of analysis, and whether a field inspection was made, including individual well tests. This section of the report should inform the examiner of the true condition of the reserves and wells. It is possible for the projected cash flow to portray one picture while the narrative portrays an entirely different one.

For example, a bank will typically loan up to 65 percent of the net present value of risk-adjusted proved-developed-producing reserves; however, a lower percentage may be needed depending on a number of factors. If the reserves are in an area that is highly faulted, or if seismic work and drilling indicated that a zone is contiguous from one well to the next and the porosity and permeability of the pay-zone rock are very similar, then a lower percentage will be used. To avoid the possibility that any individual, unforeseen event will have a significant effect on the total projection, a wide spread of properties is preferable.

A bank needs to address the risk arising from a concentration of value in any one well, as well as a concentration in one reservoir, field, or producing area. Generally, a risk adjustment factor of not less than 10 percent will be used on unseasoned (less than six months in production) proved-producing reserves, but on long-life and high-quality reserves, a risk adjustment factor less than 10 percent is sometimes used. However, reserves that are highly faulted may require a higher risk adjustment factor than 10 percent even if they are long-life and high-quality. For non-producing reserves such as PDNP and PUD reserves, risk adjustment factors typically range
from 25 percent to 75 percent. Terms of an RBL will usually require that the loan be fully repaid before the risk adjustment factor is reduced. Examiners should carefully review the risk adjustment factors used by the lender for determining borrowing base commitments. In addition, there should be a limit established for the contribution of nonproducing reserves to the borrowing base. This is commonly set at no more than one third of the valuation. All bank adjustments should be fully detailed and supported.

For RBLs, a bank will periodically evaluate the borrower’s O&G reserves to re-determine the borrowing base commitment. Redeterminations typically occur semiannually, but lenders and borrowers normally have the right to additional redeterminations once or twice during a year, as defined by the credit agreement.

Typical financial covenants in the RBL credit agreement include cash flow leverage, interest coverage, and current ratio covenants:

- The cash flow leverage ratio is typically defined as senior funded debt or total debt over trailing 12 months (TTM) EBITDAX. This covenant is the most critical of the three main RBL covenants because it may provide the least amount of headroom while also controlling the amount of additional borrower debt. The total debt to EBITDAX covenant is frequently set at 3.5x and normally does not exceed 4.0x, unless the covenant is increased to account for an acquisition with step-downs to more reasonable leverage.

- A standard definition for interest coverage is TTM EBITDAX divided by TTM interest expense. Interest coverage covenants for RBLs may require 2.5x to 3.0x EBITDAX coverage of TTM interest expense.

- A standard definition of the current ratio is current assets divided by current liabilities less current maturities, requiring at least 1.0x to 1.25x coverage. Some transactions, however, may define the current ratio covenant as current assets plus unfunded RBL availability divided by current liabilities less current RBL maturities.

Declining commodity prices and a corresponding drop in revenues can stress these measures and limit production growth, which can lead to reduced RBL borrowing bases during redeterminations. Lenders often work with borrowers to formulate plans and implement short-term solutions.

Borrowing Base Stretch

A “stretch” occurs when the bank agrees to provide the borrower with an RBL commitment that materially exceeds the lendable amount as determined by the bank’s underwriting criteria and loan policy. In a syndication, each participant calculates the RBL lendable amount separately. The calculated lendable amount may vary by bank, and some banks may agree to “stretch” to meet the higher borrowing base amount agreed upon by the syndication group. Bank approval of the stretch should be supported by documented risk mitigation methods. The approval of a stretched borrowing base should not be used to avoid borrower repayment requirements caused by an over-advance. If the stretch is not well supported, the advance should be considered in the risk rating assessment.

Repayment Analysis

The lenders normally prepare base case and sensitivity case repayment analyses as part of the underwriting process. The primary repayment source for most RBLs is cash flow generated from the sale of oil and gas production. Therefore, a borrower’s future cash flow generated from the sale of oil and gas reserves should demonstrate the ability to cover projected operating expenses and repay total debt within a reasonable time.

A base case analysis should use prevailing market prices, such as NYMEX futures prices, versus the bank’s commodity price deck used for borrowing base determination. The repayment analysis should be based on repayment capacity from un-risked and undiscounted revenues from the borrower’s total proved reserves. Proved reserve life is the estimated productive

---

4. EBITDAX is earnings before interest, taxes, depreciation, and amortization (EBITDA) with depletion, exploration, and abandonment expense added back. These expenses are add banks because they are often considered discretionary, while also providing consistent application of the covenant regardless of whether the company uses the full cost accrual or successful efforts accounting method. EBITDAX, rather than EBITDA, appears almost universally in O&G financing documents.
life of a proved reservoir based on the economic limit of producing the reserves assuming certain price and cost parameters. The economic half-life of the proved reserves represents the point in time when the borrower will have generated half of the estimated future net revenue (FNR). The reserve life and economic half-life of the reserves can be stated in months or years or as a percentage of the total FNR.

In addition, a sensitivity case analysis subjecting the oil and gas reserves to adverse external factors, such as stressed market prices or higher operating expenses, should be prepared to determine the vulnerability of the borrower’s repayment capacity to adverse economic conditions.

Analyzing E&P Borrowers Financial Statements

At times it may be desirable for examiners to review E&P borrowers’ financial statements analysis prepared by the bank. Such analysis should include historical production volumes as well as the average hydrocarbon prices received for the periods under review. As hydrocarbons are a commodity, physical volumes produced and commodity concentrations indicate the borrower’s sensitivity towards market price fluctuation. Production volumes are typically expressed as barrels of oil equivalent (BOE) or thousands of cubic feet equivalent (MCFE) for gas.

Other analytical ratios, such as lifting costs (lease operating expenses per BOE or MCFE produced during a period) and finding costs (costs associated with increasing reserves during a particular period) should also be calculated and reviewed. The quantitative measures of E&P performance are based primarily on the ability to replace and grow resources at a favorable cost, in contrast to profit margins and growth for traditional industrial companies.

Another primary pricing metric for E&P companies is EBITDAX. EBITDAX represents EBITDA (earnings before depreciation, interest, taxes, and depreciation and amortization) before exploration costs for “successful efforts” companies; for “full cost” firms, exploration costs are embedded in depreciation and depletion. (See table 1.) In addition, other noncash expenses such as impairments, accretion of asset retirement obligation, and deferred taxes should be added back in calculating EBITDAX. Free cash flow should also be considered where cash income taxes and capital expenditures are deducted from EBITDAX.

SAMPLE CASE

Table 2 below provides a sample repayment analysis for determining the borrower’s ability to repay total secured debt within a reasonable time.

Cash flow available for debt repayment is equal to projected future net revenue (FNR) less general and administrative (G&A) expenses and interest expense on total debt (column J). The beginning borrowing base commitment (column K) is reduced by the incremental cash flow

available for debt repayment from each period until payout and then applied to junior lien secured debt (column N). At payout, the FNR remaining (column Q) divided by the aggregate FNR represents the reserve tail (column R).

Examiners should evaluate the borrower’s ability to repay total secured debt, including a fully funded RBL and interest expense on all debt. When it is unlikely that the borrower will use the full RBL commitment to fund projected capital expenditures or deficit cash flow, however, examiners may also run scenarios of the borrower’s repayment capacity reflecting actual or anticipated usage on the RBL. The ability of the borrower to repay or refinance unsecured debt should consider the maturity structure and any contractual repayment obligations of the unsecured debt relative to the repayment capacity of the total secured debt.

*Commercial Bank Examination Manual*  
January 2018  
Page 9
CLASSIFICATION GUIDELINES FOR RESERVE-BASED LENDING

The classification of an RBL is like all loan classifications in that it must be predicated on an independent assessment of all credit factors that are germane to the specific credit being reviewed. A comprehensive analysis of the credit should take place if any of the following factors are present:

- The loan balance exceeds 65 percent of the discounted present worth of future net income (PWFNI) of proved-developed-producing reserves, or the cash-flow repayment analysis indicates that the loan will not amortize within 60 percent of the economic life of the proved reserves (alternatively, 120 percent of the economic half-life), and within 75 percent of the economic life for total secured debt.
- The credit is not performing in accordance with terms or payment of interest and/or principal.
- The credit is identified by the bank as a problem credit.
- Other factors indicate a potential problem credit.

After performing the analysis, the examiner must determine if classification is warranted. When classification is warranted, the following guidelines are to be applied when repayment of the debt is solely dependent on oil and/or gas properties pledged as collateral. A lesser percentage or less severe criticism may be appropriate when other reliable means of repayment exist for a portion of the debt.

**Proved-Developed-Producing Reserves**

Sixty-five percent of discounted PWFNI should be classified substandard when the discounted PWFNI is determined using historical production data (decline-curve-analysis engineering). When less than 75 percent of the reserve estimate is determined using historical production data, or when the discounted PWFNI is predicated on engineering estimates of the volume of oil or gas flow (volumetric and/or analogy-based engineering data), the collateral value assigned to substandard should be reduced accordingly. The balance, but not more than 100 percent of discounted PWFNI of proved-developed-producing (PDP) reserves, should be extended doubtful. Any remaining deficiency balance should be classified loss.

**Other Reserves**

In addition to PDP, many reserve-based credits will include proved-developed-nonproducing reserves, shut-in reserves, behind-the-pipe reserves, and proved-undeveloped properties (PUPs) as collateral. Due to the nature of these other reserves, there are no strict percentage guidelines for the proportion of the credit supported by this type of collateral that should remain as a bankable asset. However, only in very unusual situations would the proportion of collateral values assigned to a classification category approach the values for PDP. The examiner must ascertain the current status of each reserve and develop an appropriate amount.

Examples could be reserves that are shut in due to economic conditions versus reserves that are shut in due to the absence of pipeline or transportation. PUPs require careful evaluation before allowing any bankable collateral value. An example of a bankable value for a PUP could be one that has a binding purchase contract. In every classification where a bankable value is given for any of these other reserves, the loan write-up should fully support the examiner’s determination.

The above guidelines apply to production loans that are considered collateral-dependent and are devoid of repayment capacity from any other tangible source. Rarely should bankable consideration be given to loans that are completely collateral dependent in excess of the liquidation value of the pledged reserves. Once again, there is no substitute for a specific, case-by-case analysis of applicable credit and collateral factors pertaining to each individual credit. Frequently, when a lender encounters problems with a production credit, numerous other types of assets (for example inventories, or real estate) are encumbered in an effort to protect the bank’s interests. Other types of collateral and sources of repayment should be carefully evaluated on a case-by-case basis.
The documentation for a term RBL is relatively simple. There is a note, a loan agreement, a deed of trust or mortgage, an assignment of production (usually in the mortgage), a title opinion, and a security agreement or financing statement. The assignment of oil and gas interests is unique because oil and gas are treated as real property while in the ground but convert to personal property interests as production is generated at the wellhead. Most lenders also require an affidavit as to payment of bills. Also, the owner or the operator is usually required to guarantee payment of the loan.

The bank will obtain an acceptable title opinion that indicates the borrower has, on the date of the loan, clear title to each of the leases under mortgage and that properties are free and clear of all liens. The bank should also perform a lien search to determine the existence of any previous liens before funding and should document the lien search in the loan file. After the loan is closed, the bank will send a letter of instruction to notify the company sending out production checks that the bank has taken a lien on the production and to request that production checks be sent directly to the bank. The mortgage covers surface rights and mineral interests. A copy of the mortgage containing an assignment of production will be sent to the company purchasing the production, along with a request that division orders or transfer orders be prepared recording its interest in production payments. This authorizes the purchaser to send production payments directly to the bank for the account of the borrower. The security agreement and financing statement covers removable equipment, oil and gas inventory above the ground, and accounts receivable. The financing statements are filed in the real estate records of the county in which the properties are located (usually with the county clerk) and in the secretary of state’s office. This filing is done to perfect security interests in equipment, which may be moved from place to place. However, some states have different requirements, and the examiner should be familiar with each state’s filing requirements. The affidavit as to payment of bills is executed by the borrower to ensure that all the bills have been paid on the properties or will be paid out of loan proceeds. If bills are to be paid out of proceeds, the bank should ensure that payments are verified. The examiner should review the loan agreement and, in particular, review both positive and negative loan covenants.

The bank will usually take a collateral interest in equipment, accounts receivables, and inventory. The deed of trust or real estate mortgage will cover real estate, surface rights, and mineral interests, and a security agreement will cover removable equipment, oil as inventory (in tanks), and accounts receivable. An appropriate filing is needed for each type of collateral to perfect the bank’s security interest. Filing requirements may vary from state to state and should be researched. Generally, collateral documents should be filed with the state and county. It is reasonable to expect the bank to have collateral files completed within two to three months.

### MARKET ISSUES AND RISK RAMIFICATIONS

Prolonged declines in crude oil prices often result in substantial declines in crude oil and natural gas reserve collateral values and associated cash flows, challenging the loan repayment ability of oil and gas exploration and production borrowers. Highly leveraged borrowers and those that are in weakened financial condition are most vulnerable to these market conditions. Banks should monitor market factors to better manage and control the risk of their reserve-based lending portfolios and to determine the repayment ability of their borrowers. These factors include:

- **Oil and gas commodity prices.** Commodities are particularly susceptible to price volatility. Global supply and demand imbalances can affect commodity prices and the cost of production. For example, weather events, economic conditions, and numerous other factors can alter global supply as well as demand and place downward pressure on exploration and production company performance. Banks should take market developments and price volatility into consideration when critically reviewing collateral valuation assumptions and managing their reserve-based lending exposure.

- **Production costs and capital expenditure.** Production costs are also known as “lifting costs.” These costs are incurred in the operation and maintenance of wells, related equipment, and...
facilities, and can affect sustained production. Banks should critically review production costs and capital expenditures when determining borrower repayment capacity, financial viability, and liquidity. Additionally, production costs can vary significantly between wells and fields. Banks should use location-specific production cost and capital expenditure estimates instead of general assumptions, particularly for those reserve-based lending portfolios containing wells in different oil fields.

- New technological drilling and completion improvements. For example, horizontal wells with multistage hydraulic fracturing completions, have significantly increased the up-front capital needs for exploration and production borrowers. Banks engaging in exploration and production lending should understand the capital needs of these borrowers, including the use of new technologies, when determining borrower repayment ability. As reserves are depleted, additional capital spending is required to bring additional reserves into production and maintain productivity levels.

- Lease provision and maintenance. Oil and gas leases generally include a “continuous drilling” or “continuous operations” clause to prevent the lease from expiring at the end of the primary term while drilling operations are in progress. It gives the lessee the right to continue drilling any well that was begun before the lease expired and to begin drilling more wells. Maintaining production in order to exercise these lease maintenance clauses can potentially cause financial challenges to a borrower, particularly during weak market conditions. Banks should understand the scope of lease maintenance clauses in place and assess the borrower’s ability to remain in compliance during stressed time periods.

CREDIT RISK MANAGEMENT AND ADMINISTRATION

Banks should have in place appropriate risk management programs and prudent underwriting standards for reserve-based lending. A risk management program should cover concentration limits and market condition analysis, as well as expectations to identify, measure, monitor and control concentration risks associated with reserve-based lending. Moreover, an institution’s risk management program for reserve-based lending should be effectively integrated into its capital planning practices. A bank should regularly review its policies and practices for reserve-based lending, including any relevant contingency plans in the event of market changes, and should maintain capital levels commensurate with the level and nature of its reserve-based lending exposure. The information that follows should be considered whether the bank is lending directly or as a participant in a group, such as in the case of a syndicated loan.

At a minimum, an institution with significant reserve-based lending exposure should have established risk management practices that address the following items below.

Individual Reserve-Based Lending Credit Monitoring

- Assessment of a borrower’s creditworthiness. An institution should conduct a thorough analysis of a borrower’s past and prospective creditworthiness, including:
  - Projected income and expenses compared to actual results, as well as the results of peer oil and gas producers in the region,
  - Working capital adequacy,
  - Capital expense analysis,
  - Cash flow analysis, and
  - Price sensitivity analysis.

Current borrower financial information is essential to the institution’s ability to evaluate the borrower’s creditworthiness, leverage, and liquidity. A creditworthy exploration and production business should exhibit strong repayment ability, risk analysis, liquidity, solvency, reserve valuation, credit management, profitability, and management performance.

- Assessment of a borrower’s cash flow. In volatile markets, a highly leveraged borrower may not have the necessary cash flow to properly service its debt according to the loan terms. By reviewing borrower-prepared cash flow statements, an institution should be able to identify potential repayment ability problems, calculate key cash flow ratios, and assess the ability of the business to handle risk and uncertainty.

Risk and uncertainty due to market factors,
commodity prices, and production levels are prevalent characteristics of most exploration and production operations and should be reflected in the cash flow projections. A sensitivity analysis that determines an exploration and production operator’s ability to withstand fluctuations in commodity prices and uncertainty in production levels is critical in analyzing cash flow projections. Some key elements of sound financial analysis that an institution should conduct include:

- Reviewing the reasonableness of underlying assumptions and projections for production, pricing, and price differentials;
- Comparing these projections with historical production and performance results;
- Analyzing hedges in place as of collateral valuation date;
- Assessing the impact of changes in capital expenditures on production levels; and
- Evaluating a borrower’s ability to timely service total debt and significant changes in its balance sheet structure.

**Reliable collateral evaluations.** Valuation of oil and gas reserves demands expertise and industry experience. The interconnected nature of the energy industry is complex and demands breadth and depth of understanding across all business sectors which include upstream, midstream, and downstream segments. Specialized contracts with energy services providers, such as transportation to market or delivery point, should be carefully reviewed as part of risk management practices for reliable collateral valuation.

A typical reserve-based lending credit facility requires a borrower to deliver an updated reserve engineering report twice a year to the lender. A bank should identify additional costs and value adjustments not included in the engineering report, such as information on land mortgage restrictions and lease assignments, and use this information to understand the scope and limitation of the collateral securing the reserve-based lending. A bank should assess the assumptions contained in the reserve report, as this information forms the basis for its analysis of the reserve valuation.

A bank should have a well-defined and consistently applied process, including minimum frequency, for obtaining independent reserve engineering reports. These reports require significant industry expertise and should include a complete analysis of the wells and production requirements from current production and over the life of a well.

A bank should periodically conduct independent assessments of reserve valuation. Depending on the level and complexity of reserve-based lending in its portfolio, an institution should utilize its own independent staff engineers (if available) or retain independent petroleum engineers to conduct a comprehensive assessment of reserve valuation. This assessment should consider such factors as the relevant production volumes, expected ultimate recovery of reserves, and capital expenditures needed to convert reserves into production. An institution should also have processes in place to monitor periodically (at minimum, twice a year) the value of collateral pledged in order to manage repayment risk over the life of the loan. An institution’s processes, risk adjustment factors, and discount rates for reserve analyses should be well defined in policy and consistently applied. Additionally, evidence of collateral lien perfection and collateral inspections should be documented in loan files.

**Loan structure.** The structure of an RBL should depend on the nature of a borrower’s business. To properly structure a borrowing relationship, a bank should be able to:

- Project how the borrower will perform in the future, including likely primary and secondary repayment sources from producing and developing assets. There should be limits to the portion of repayment capacity derived from developing assets.
- Anticipate challenges and problems that the borrower may encounter, such as commodity price volatility, operational risks, and lease maintenance requirements.
- Match the type and terms of the loan to both the loan purpose and the likely repayment sources. This includes ensuring the loan is supported by sufficient cash flow from the expected repayment source, particularly when an RBL’s collateral includes undeveloped fields (that is, proved-developed-nonproducing reserves and proved-undeveloped reserves) or fields that do not have a continuous production hi-
tory as collateral. The primary source of repayment is typically proved producing reserves.

— Develop loan agreement covenants that protect the bank, including provisions for monitoring the borrower’s expenditures for the term of the loan. For example, a forward-looking liquidity test should provide a bank with visibility to the future consolidated liquidity position of the borrower and all guarantors to the loan. In addition, covenants should require the borrower to obtain the bank’s approval prior to lifting any hedges upon which the institution is relying to mitigate collateral market value fluctuation.

— Secure the credit facility with collateral and consider requiring the borrower to provide loan support such as guarantees and hedges for commodity price volatility. Any guarantor should be included in the loan agreement. A bank should have processes and procedures in place to limit a borrower’s commodity price hedging to its total production and thereby avoid over-hedging.

• Risk rating credit facilities. A bank should have in place a robust process to risk rate RBLs. Risk rating for RBLs should be based on realistic repayment assumptions for a borrower’s ability to de-lever and repay the RBL and its total debt relative to the economic life of the borrower’s oil and gas reserves. Financial support or credit enhancement from a sponsor (such as the borrower’s parent company) should be demonstrated and documented for rating conclusions.

• Timing of collateral impairment testing and impairment indicators. Generally, RBL terms require a borrower to prepare a reserve impairment assessment at least annually, and more frequently depending on events or changes in circumstances. A bank should review the reserve impairment assessment report and associated recoverability test of pledged assets’ value whenever events or changes in circumstances indicate that a pledged asset’s carrying amount may not be recoverable.

Reserve-Based Lending Portfolio Monitoring

• Underwriting standards. An institution should periodically review its underwriting standards to ensure its reserve-based lending policies do not become outdated, ineffective, or unaligned with its stated risk appetite. The frequency and depth of the review will depend on circumstances specific to the institution, such as growth expectations, competitive factors, economic conditions, and overall financial condition. An institution’s management should review and modify, as appropriate, reserve-based lending policies based on any planned changes to its reserve-based lending function or business plan. An institution should also address significant criticisms and recommendations about its underwriting standards that have been identified in recent audits and examinations.

• Concentration limits. In general, a bank should monitor and manage its aggregate energy lending portfolio to avoid concentration risk. The institution should set risk limits for reserve-based energy lending as well as energy services lending that are consistent with the risk appetite approved by the board of directors. In addition, an institution should monitor and manage its production and regional concentration risk for exploration and production borrowers to avoid any single well or field accounting for a high percentage of its energy-related loan portfolio. For a bank with a lending footprint that is primarily in oil-dependent geographies, the bank should also be mindful of high correlations between energy and non-energy business in the local economy. The risk amplification that occurs during an extended commodity sector downturn should be heavily factored into concentration and risk analysis.

• Credit administration and controls. An institution should have appropriate policies and controls to monitor and separately manage troubled RBLs for which a borrower is unable to generate sufficient cash flow from oil and/or gas production to repay the loan (sometimes

5. For more information, see 17 CFR 210.4-10, “Financial accounting and reporting for oil and gas producing activities pursuant to the Federal securities laws and the Energy Policy and Conservation Act of 1975.”
called “stretched” RBLs). A stretched RBL reflects a borrower with credit or liquidity weaknesses, and an institution should understand the fundamental causes of those weaknesses. An institution may still work with a troubled borrower to continue to service existing loans. An institution should confirm the reasons for the borrower’s cash flow problems (for example, weaknesses in a borrower’s financial condition or operations, or poor market conditions). An institution’s credit administration process should appropriately monitor exposure to the borrower and adjust the credit facility rating to reflect the borrower’s credit condition, as well as the viability of the borrower’s operation, so that the institution can make an informed decision as to whether advancing additional funds is appropriate. Any additional funds advanced should be for the purpose of improving the borrower’s financial condition.

Expectations for the level of sophistication of risk management systems will vary based on the specific risk characteristics, complexity, and size of an institution’s reserve-based lending exposure. In general, there are higher expectations around risk management for banks with significant reserve-based lending exposures in concentrated geographic locations and market segments. An institution should assess the effect, if any, of its reserve-based lending activities on the institution’s overall financial condition, including capital, the allowance for loan and lease losses, and liquidity.

TERMINOLOGY

The following are abbreviated explanations or discussions of some of the terms found in engineering reports and energy-lending transactions.

**Analogy-based engineering data.** Comparative analyses relating past performances of comparable properties to determine possible future reserves.

**Assignment of production.** Usually in the mortgage agreement, it allows direct payment from purchaser to the bank for oil production. Gas purchases generally are paid to the operator, and the operator then pays the bank.

**Carried interest.** When a party or parties have their expenses paid (carried) by other parties up to a specified limit.

**Decline curves.** Used to determine reserves by extrapolation of historical production data.

**Deed of trust or mortgage.** Covers real estate, surface rights, and mineral interests. Mortgage is unique because oil and gas are treated as real property while in the ground but converted to personal property interests as production is generated at the wellhead and as oil and gas enter storage tanks or a pipeline. The security agreement portion of the oil and gas mortgage will usually cover fixtures and equipment affixed to the well site.

**Development wells.** Drilled in the proven territory of a field, they have a high likelihood of producing oil or gas.

**Division orders.** Set out the borrower’s interest in the property and direct production payments. Division order title opinions can be used to verify ownership and will contain the legal description of properties.

**Escalating.** Involves the difficult task of predicting future prices of oil and gas for valuing production. Escalating the value of production usually increases the risk to the lender. Examiners should carefully review the basis for escalating values when it has a significant impact on the value of the collateral and/or cash flow. Also, the examiner should carefully review how future expenses related to each well are estimated.

**Exploratory well.** Also known as a “wildcat,” a well drilled in an unproven area. The term originated in early drilling days in Pennsylvania when wells were drilled within the sight and sound of wildcats.

**Fault.** A break or fracture in the earth’s crust that causes rock layers to shift.

**Field.** An area in which a number of wells produce from a reservoir or from several reservoirs at various depths. There may be two or more reservoirs in a field that are separated vertically by intervening impermeable rock, laterally by local geologic barriers, or both.
Formation. A bed or deposit of substantially the same kinds of rocks.

Fracturing, frac'ing, frac job. Refers to pumping fluids under extremely high pressure into a formation to create or enlarge fractures through which oil or gas can move. Propping agents such as sand are sent down with fluids to hold the fractures open. Many completed wells require additional treatment (stimulation) before oil or gas can be produced.

Known accumulation. The term accumulation is used to identify an individual body of moveable petroleum in a reservoir. However, the key requirement is that in order to be considered as known, and hence contain reserves or contingent resources, each accumulation or reservoir must have been penetrated by a well. In general, the well must have clearly demonstrated the existence of moveable petroleum in that reservoir by flow to surface or at least some recovery of a sample of petroleum from the well. However, where log and/or core data exist, this may suffice, provided there is a good analogy to a nearby and geologically comparable known accumulation.

Lease. A contract between the landowner (lessor) and the lessee that gives the lessee the right to exploit the premises for minerals or other products and to use the surface as needed. However, surface damages would normally have to be reimbursed. Surface ownership is different from mineral ownership in many cases. Also, if drilling does not begin during a specified time period, the lease will expire.

Lithology. The scientific study of rocks.

Log(s). Used to record three basic measurements: electrical, radioactive, and sonic. The logging device is lowered into the well bore and transmits signals to the surface. These are recorded on film and used to make a log showing the recorded measurements that are used to analyze the formation’s porosity, fluid saturation, and lithology. The log’s header gives the log’s type and date, the operator, the well name, and other information.

Market-out. A clause that basically allows the purchaser to stop paying the original contract price and institute a lower price with the intent of maintaining the marketability of the gas.

Some contracts allow the producer to be released from the contract if he refuses the lower price or may offer other remedies.

Mineral rights. The ownership of minerals under a tract, which includes the right to explore, drill, and produce such minerals, or assign such rights in the form of a lease to another party. Mineral-rights ownership may or may not be severed from land-surface ownership, depending on state law. Title in fee simple means all rights are held by one owner; the fee in surface owner does not hold mineral rights. The term “minerals” is loosely used to refer to mineral ownership and even, incorrectly, to royalty ownership. A mineral acre is the full mineral interest under one acre of land.

Net revenue interest. A share of production after all burdens, such as royalty and overriding royalty, have been deducted from the working interest. It is the percentage of production that each party actually receives.

Operator. The manager of drilling and production for the owner.

Overriding royalty interest (ORRI). A royalty in excess of the royalty provided in the Oil & Gas Lease. Usually, an override is added during an intervening assignment. ORRIs are created out of the working interest in a property and do not affect mineral owners. An ORRI is a fractional, undivided interest with the right to participate or receive proceeds from the sale of oil and/or gas. It is not an interest in the minerals, but an interest in the proceeds or revenue from the oil & gas minerals sold. The interest is limited to a specific tract of land and is bound to the terms limits of the existing lease. If a lease is allowed to expire, an ORRI is dissolved or expires with the lease. Overrides expire and don’t continue into perpetuity in the same form as mineral or royalty interests.

Perforations. The holes in casing and cement through which oil and/or gas flow from formation into wellbore and up to surface.

Permeability. A measure of how easily fluids may flow through pore spaces. A tight rock or sand formation will have low permeability and, thus, low capacity to produce oil or gas. Wells in these zones usually require fracturing or other stimulation.
Porosity. Refers to the pore space in rock that enables it to hold fluids.

Proved developed shut-in (PDSI). Proved developed nonproducing reserves are subcategorized as nonproducing include proved developed shut-in (PDSI) and proved developed behind the pipe (PDBP) reserves. E&P companies expect to recover PDSI reserves from (1) completion intervals that are open at the time of the estimate but have not started producing, (2) wells that were shut-in for market conditions or pipeline connections, or (3) wells not capable of production for mechanical reasons.

Reservoir or pool. A subsurface rock formation containing an individual and separate natural accumulation of moveable petroleum that is confined by impermeable rock or by water barriers and is characterized by a single-pressure system.

Resource base or total petroleum initially-in-place. All estimated quantities of petroleum contained in the sub-surface, as well as those quantities already produced.

Reserves. The estimated amount of oil and gas in a given reservoir that is capable of being profitably recovered, assuming current costs, prices, and technology. Not to be confused with oil and gas in place (resource base), which is the total amount of petroleum in the earth regardless of whether or not it can be recovered. Recovery is a function not only of technology, but of the marketplace.

Reserve interest. The term used to describe the percent of revenue received.

Royalty interest. The share of gross production proceeds from a property received by its mineral owner(s), free of exploration, drilling, and production costs. Typically one-eighth to one-sixth of production, but fractions may be higher. Royalty payments take precedence over all other payments from lease revenues.

Primary, secondary, and tertiary recovery. Relates to the method of obtaining production from a well. Primary recovery is production from a reservoir through flowing or pumping wells because of the existence of natural energy within the reservoir. This usually recovers about 10 to 35 percent of the oil and gas in place. Secondary recovery is any method by which essentially depleted reservoir energy is restored. This may be accomplished by injection of liquids or gases or both. Tertiary recovery is any enhanced method employed after secondary recovery and is generally very costly.

Runs. A term used to refer to oil or gas production income from a lease.

Seismic survey or shooting. A method of gathering information by recording and analyzing shock waves artificially produced and reflected from subsurface rocks.

Shut-in well. A well that is capable of producing but is not presently operating. Reasons why a well may be shut in include lack of equipment or market.

Stripper wells. Wells that make less than 10 barrels of oil per day based on the last 12 months or wells that make less than 60,000 cubic feet of gas per day based on the last 90 days.

Volumetric calculations. Determine oil or gas reserves by use of rock volume and characteristics.

Working interest. Also referred to as an operating interest, the term used to describe the lease owner’s interest in the well. Lease owners are the ones who pay for drilling and completing the well. Lease owners pay 100 percent of cost and receive all revenues after taxes and royalties are paid.

Workover. Relates to the process of cleaning out or other work on a well to restore or increase its production.
Energy Lending—Production Loans
Examination Objectives
Effective date May 1996

1. To determine if policies, practices, procedures, and internal controls for energy loans are adequate to identify and manage the risks the bank is exposed to.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the portfolio for performance, credit quality, collateral sufficiency, and collectibility.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.
INTRODUCTION

Asset-based lending is a specialized area of commercial bank lending in which borrowers assign their interests in certain accounts receivable and inventory, and in selected cases fixed assets, to the lender as collateral. In asset-based lending, the primary repayment source is the conversion of the pledged assets into cash. Asset-based lending differs from a commercial loan in which the bank takes a security interest in all accounts receivable and inventory owned or acquired by the borrower. This section will discuss asset-based lending in relation to the characteristics of the borrower, its advantages to the borrower and the bank, credit and collateral analysis, documentation, and safeguards to ensure the authenticity and collectibility of the assigned receivables.

The examiner must judge the quality of the asset-based credit by evaluating the financial condition and debt-servicing ability of the borrower and the quality of the collateral. In addition, the examiner must evaluate the bank’s credit policy, internal controls, audit procedures, and operational practices.

Many borrowers whose financial condition is not strong enough to allow them to qualify for regular, secured commercial bank loans may use asset-based loans to meet their financial needs. Some examples of asset-based borrowers are—

- businesses that are growing rapidly and need year-round financing in amounts too large to justify commercial lines of credit secured by blanket liens on accounts receivable and inventory,
- businesses that are nonseasonal and need year-round financing because working capital and profits are insufficient to permit periodic cleanups,
- businesses whose working capital is inadequate for their volume of sales and type of operation, and
- businesses that cannot obtain regular commercial loan terms because of deteriorating credit factors.

Some advantages of asset-based lending for the borrower are—

- efficiency in financing an expanding operation because the business’s borrowing capacity expands along with increases in levels of accounts receivables, inventory, and sales;
- the ability to take advantage of purchase discounts because the company receives immediate cash on its sales and is able to pay trade creditors in a timely manner (consistent usage of purchase discounts reduces the cost of goods sold and enhances the gross profit margin); and
- the interest paid on asset-based loans may be lower than for alternate sources of funds.

Some advantages of asset-based lending for banks are—

- a relatively high-yield loan is generated commensurate with the perceived credit risk of the borrower;
- a depository relationship is formed that provides income and enhances the bank’s ability to monitor changes in the borrower’s cash flow and overall financial condition;
- banking relationships with longstanding customers whose financial conditions no longer warrant traditional commercial bank loans can continue;
- new business is generated by prudently lending to financially weaker customers who could not qualify for normal commercial loans; and
- potential loss is minimized when the loan is collateralized by a percentage of the accounts receivable and inventory.

CREDIT ANALYSIS

Although asset-based loans are collateralized and closely monitored, it is important to analyze the borrower’s financial statements. Even if the collateral is of good quality and supports the loan, the borrower should demonstrate financial progress. Full repayment through collateral liquidation is normally a solution of last resort. An examiner should analyze the borrower’s financial statements with particular emphasis on trends in working capital, review trade reports, analyze accounts receivable and inventory turnover, and review the agings of receivables and payables. Furthermore, the prompt payment of taxes, especially payroll taxes, should be verified. One reason for a company to obtain asset-based financing is to maximize discounts offered by...
suppliers; therefore, it should pay creditors promptly upon receiving the financing. Bank management’s ability to recognize a customer’s financial problems as they develop, and to initiate orderly liquidation, if necessary, is important in the supervision of asset-based financing. Theoretically, a borrower’s line could be fully liquidated by discontinuing further advances, collecting the assigned receivables, and liquidating pledged inventory. However, such drastic action would most likely cause the borrower’s business to close, resulting in a probable deterioration of the receivables from new disputes and in returns and offsets. Consequently, the bank usually notifies its borrower of a contemplated liquidation, which gives the borrower time to seek other means of continuing business so that the bank’s loan may be liquidated in an orderly manner without losses or other adverse effects. Unless the bank has initiated an orderly liquidation, examiners should specially mention or classify receivable and inventory lines in which the borrower’s financial position has declined so that continued financing is not prudent. When a liquidation is occurring, classification of the credit may not be necessary if the borrower’s business is continuing, the existing collateral is of good quality, liquidation value sufficiently covers outstanding debt, and no collateral deterioration is anticipated.

A related issue concerning asset-based loans is the amount of excess availability associated with the revolving line of credit. The quantity of a borrowing company’s excess availability is an excellent indicator of whether it has the capacity to service its loan. If a status report shows little availability, the borrower has used all of the cash that the pledged receivables and inventory are capable of generating under the asset-based line of credit. Since these loans may not yet be on the bank’s watch list or problem-loan report, it is important for the examiner to track, over a fiscal-year period, a borrower’s changing levels of availability when performing an analysis of creditworthiness. This analysis is especially critical for borrowers whose business is seasonal.

Initial credit analyses of potential asset-based loan customers should include detailed projections showing that availability under revolving lines of credit at anticipated advance rates would be sufficient to meet the borrower’s working-capital needs. Occasionally, overadvance lines are part of the initial credit facility.

Bank management must continually evaluate the realizable value of receivables and inventory pledged. To do so, management should review the quality of the receivables and inventory pledged, including documentation; the safeguards imposed to ensure the authenticity and collectibility of the assigned receivables; and the loan agreement and compliance therewith. The information obtained is sometimes difficult to interpret unless it is related to other periods, comparable businesses, or industry statistics. Comparative analysis helps indicate the continuing value of the collateral.

Lender-liability exposure is a risk in all types of commercial lending, but especially in asset-based lending. Borrowers using asset-based financing are generally very dependent on its continuation, so an abrupt cessation of a line of credit would be more likely to result in legal action against a lender. To protect themselves as much as possible from lender-liability lawsuits, banks frequently use time notes (with renewal options). Time notes are supported by loan agreements that usually include more numerous and detailed loan covenants. Legal counsels for both the lender and borrower should approve the loan agreement and covenants. At times, the borrower may not comply with one or more covenants in a loan agreement. The lender may agree to waive specific covenant violations to give a borrower time to take corrective action. If a covenant such as a financial covenant requiring a minimum capital level is waived, the waiver should be formally communicated to the borrower in writing. The lender should avoid both not taking action for a period of time and not issuing a written waiver for a covenant violation. In either case, if a covenant violation is subsequently used as a reason to cancel an asset-based loan, the lender is more vulnerable to lender liability. The lender should be careful to be consistent in all actions regarding the borrower.

ASSET-BASED LOAN AGREEMENTS

An asset-based loan agreement is a contract between a borrower and the bank that sets forth conditions governing the handling of the account and the remedies available in the event of default. The following areas should be addressed in the loan agreement:

- Eligible accounts receivable. This involves identifying classes of receivables that will not
be regarded as acceptable collateral. Certain
types of receivables carry a higher degree of
risk relative to the willingness and ability of
account debtors to pay and, by their very
nature, should be excluded from the lending
formula. The following are typical classes of
ineligible receivables:

—Delinquent accounts. Eligible receivables
generally exclude accounts that are more
than a given number of days delinquent,
most often 60 days or more past due. Delinquency is frequently expressed in loan
agreements as a given number of days from
the invoice date, such as 90 days from the
invoice date when payment is required in
30 days, which is the most common pay-
tment term. Expressing delinquency in days
from the invoice date prevents a borrower
from reducing the volume of ineligible
delinquent accounts by giving dated terms
(extensions payment days). For example,
accounts with 30-day trade terms that are
becoming 60 days delinquent could other-
wise be maintained in the eligible-
receivable base by increasing payment
terms to 90 days. Also, under what is
commonly referred to as the “50 percent
rule,” accounts with multiple invoices that
have more than 50 percent of the total
balance past due are excluded from the
eligible-receivable base. For example, if a
borrower’s customer owes payment for ten
invoices, of which six are delinquent, all
ten would be considered ineligible, not just
the six that are delinquent. While 50 per-
cent is standard industry practice, lenders
may be more conservative and require
ineligibility for an entire account if less
than 50 percent of it is past due.

—Contra accounts. These usually arise when
the borrower both sells to and purchases
from the account debtor. The risk is the
possibility of direct offset against these
accounts.

—Affiliate accounts. These accounts, unlike
contra-accounts, occur when a borrower
sells to an account debtor, both of whom
are associated through common ownership.
Associated risks include forgiveness of debt
on behalf of the affiliate and a temptation
for the borrower to create fraudulent
invoices.

—Concentration accounts. A lender may be
vulnerable to loss if a large percentage of
the dollar amount of receivables assigned is
concentrated in a few accounts. Too many
sales, even to a good creditworthy cus-
tomer, could ultimately cause problems
should disputes arise over products or con-
tracts. A common benchmark is that no
more than 20 percent of the receivables
assigned should be from one customer. Some lenders will use a percentage that is
also subject to a dollar limit.

—Bill-and-hold sales. These occur when a
product ordered by a buyer has actually
been billed and is ready for shipment, but is
held by the seller pending receipt of ship-
ing instructions from the buyer. Bill-and-
hold sales are not eligible as receivables to
be loaned against because they are not fully
executed transactions. A second party’s
claim could be of little value when mer-
chandise has not been shipped and there is
no evidence of acceptance on behalf of the
buyer.

—Progress billings. These are invoices issued
on partial completion of contracts, usually
on a percentage basis. This practice is
standard in construction and other indus-
tries where long-term contracts are gener-
ally used. Failure to complete a contract
could jeopardize the collectibility of progress
receivables and, therefore, should generally
not be considered eligible collateral. More-
over, failure to complete contracts can
expose companies to lawsuits from their
customers, who may be forced to pay
higher prices to other parties to complete
the contracts over much shorter time
periods. The only exception for progress
billings is when, on partial completion,
there has been delivery of the product, and
the contract clearly states that buyers have
accepted the product and are responsible
for payment of the product delivered.

—Receivables subject to a purchase-money
interest. These include floor-plan arrange-
ments, under which a manufacturer will
frequently file financing statements when
merchandise is delivered to the borrower.
That filing usually gives the manufacturer a
superior lien on the receivable. An alterna-
tive would be to enter into an agreement
with the manufacturer, which specifies that
rights to the receivables are subordinated to
the bank.

• Percentage advanced against eligible or
acceptable accounts receivable. The accounts-
receivable advance rate, typically in the range of 75 to 85 percent, must serve the two primary functions of providing adequate cash flow for the borrower and providing a margin that gives adequate protection for the lender. Protection for the lender requires a sufficient margin for the continual costs of collection and absorption of dilution in the receivables. Selecting the proper advance rate for a borrower involves understanding the amounts and causes of portfolio dilution. Causes of dilution that are positive include the offering of discounts and various allowances. Causes that are negative include bad debts, product liability, or warranty claims. An abundance of negative causes, such as bad debts, might indicate poor receivable-management practices. A lender must know how dilution is occurring in each receivable portfolio to measure it continually. This knowledge should lead to proper advance-rate selection, resulting in a loan balance protected by a receivables base with sufficient liquidation value to repay the loan.

• **Percentage advanced against eligible inventory.** The inventory advance rate typically ranges from 35 to 65 percent for finished products. Marketability and accessibility of the inventory are key factors in determining the advance rate. Proper evaluation of the liquidation value of inventory requires a firm understanding of marketability in all the various inventory stages (raw materials, works-in-process, finished merchandise). Works-in-process often have very low marketability because of their unfinished nature, and they will typically carry a very low advance rate—if they are even allowed as eligible inventory. Conversely, the raw materials or commodities (such as aluminum ingots, bars, and rolls) have a broader marketability as separately financed collateral components. When setting advance rates, it is also important to consider whether inventory is valued at LIFO (last in, first out) or FIFO (first in, first out). In an inflationary environment, FIFO reporting will result in higher overall inventory values on the customer’s books.

The above factors are considerations in the conduct of inventory audits performed in connection with the granting and monitoring of asset-based loans. These audits will generally discuss the inventory from a liquidation basis. This information is critical in determining appropriate advance rates.

### Pledged Receivables

The following factors should be considered in evaluating the quality of receivables pledged:

- Standard procedures require that the bank obtain a monthly aging report of the accounts receivable pledged. The eligible receivables base is then calculated by deducting the various classes of ineligible receivables. Usually the eligible receivables base will be adjusted daily during the month following receipt of the aging report. If accounts are legereed, the base will be increased by additional sales, as represented by duplicate copies of invoices together with shipping documents and/or delivery receipts received by the bank. The receivables base will be decreased daily by accounts-receivable payments received by the borrower, who then remits the payments to the bank. Another method of payment in which the bank has tighter control is a lockbox arrangement. Under this arrangement, receivables are pledged on a notification basis and the borrower’s customers remit their payments on accounts receivable directly to the bank through deposit in a specially designated account. If accounts are not legereed but blanket assignment procedure is used, the borrower periodically informs the bank of the amount of receivables outstanding on its books. Based on this information, the bank advances the agreed percentage of the outstanding receivables. Receivables are also pledged on a non-notification basis, with payments on the receivables made directly to the borrower who then remits them to the bank. Proper management of any asset-based credit line requires that all payments on accounts receivable be remitted to the bank, with the accounts-receivable borrowing base reduced by a like amount. The borrower’s working-capital needs should then be met by drawing against the asset-based credit line.

- Slower turnover of the pledged receivables can be a strong indication of deterioration in credit quality of accounts receivable.

- Debtor accounts that are significant to the bank borrower’s business should be well rated and financially strong. Borrowers should also
obtain financial statements on their major customers to make credit decisions. These financial statements should be reviewed when the bank performs its periodic audits. In addition, the borrower should maintain an appropriate level of reserves for doubtful accounts. Credit insurance is often used, which indemnifies a company against noncollection of accounts receivable for credit reasons. When credit insurance is used, the asset-based lender should be named as beneficiary.

• Dilution or shrinking of the accounts-receivable borrowing base can result from disputes, returns, and offsets. A large or increasing volume of these transactions could adversely affect the bank’s collateral position.

The following safeguards, which bank management should consider and the examiner should evaluate, ensure the authenticity and collectibility of the pledged accounts receivable:

• **Audits.** To verify the information supplied by the borrower to the bank, the bank should audit the borrower’s books. Audits should occur several times a year at the borrower’s place of business. For satisfactory borrowers, the audit is usually performed quarterly. However, audits can occur more frequently if deemed necessary. Individuals who perform bank audits should be independent of the credit function. The scope of an audit should include—
  —verification that the information on the borrowing-base certificate reconciles to the borrower’s books;
  —review of concentrations of accounts;
  —review of trends in accounts receivable, accounts payable, inventory, sales, and costs of goods sold;
  —review of the control of cash proceeds;
  —determination that the general ledger is regularly posted;
  —verification of submitted aging reports;
  —review of bank reconciliations and canceled checks;
  —determination if any accounts receivable are being settled with notes receivable;
  —verification that the accounts-receivable ledger is noted to show that an assignment has been made to the bank;
  —determination on non-notification accounts that all payments are remitted to the bank and that positive written confirmations are issued timely (for example, semiannually);
  —verification that all taxes, especially sales and payroll, are paid timely; and
  —review of compliance with the loan agreement.

• **Confirmation.** To verify the authenticity of the pledged collateral, the bank should institute a program of direct confirmation. This procedure is particularly important if the accounts receivable are pledged on a non-notification basis, since the bank does not have the same control over debtor accounts as it does when the receivables are pledged on a notification basis. Direct confirmation should be made before the initial lending arrangement and periodically thereafter. Confirmation should be on a positive basis. The bank should obtain written approval from the borrower before confirming accounts receivable on a non-notification basis.

**Pledged Inventory**

The following factors should be considered in evaluating the inventory pledged:

• A borrowing-base certificate, obtained from the borrower at least monthly, is normally used to calculate the dollar amount of inventory eligible for collateral. The borrowing-base certificate will show the different classes of inventory, such as raw materials, works-in-process, and finished goods. After this will be listed the different types of ineligible inventory, which will be subtracted to give the amount of eligible inventory. Finally, the advance rates are applied to the different classes of eligible inventory to determine the borrowing base.

• Factors affecting marketability, advance rates, and the decision whether to allow a class of inventory as eligible at even a low advance rate:
  —**Obsolescence.** This could involve not only merchandise that is no longer in demand for various reasons, such as technological advances, but also style products, such as clothing, which obviously have a greater potential for obsolescence.
  —**Seasonal goods.** It is necessary to know the seasonal highs and lows associated with a particular class of inventory, as well as the costs associated with these seasonal variations.
—Oversupply. If there is an oversupply in the
general market of a particular class of
inventory, then its value would be nega-
tively affected.

—Limited-use raw materials and finished
goods. These would be difficult to liquidate
at a reasonable value.

Two other areas a lender must analyze in
setting the inventory advance rate are the ease
or difficulty, in terms of cost, of liquidating
inventory in multiple locations, and the cost of
maintaining certain inventory, such as food
products that require refrigeration, in a salable
state.

In addition to marketability, accessibility of
the collateral is extremely important, as liquida-
tion plans become meaningless if a lender can-
not gain access to collateral. Constant vigilance
is necessary to guard against actions that would
preempt a lender’s security interest in inventory.
Following are some common actions that impede
a lender’s access to collateral:

• Possessory liens. A landlord lien is a common
example. To protect their interest, lenders
need to obtain landlord waivers to the lien.

• Nonpossessory liens. A purchase-money
security interest is a common example. These
are usually filed by trade suppliers against
their customers.

• Secret lien. A tax lien is the most common
example. To ensure that a loss of collateral
does not occur, it is necessary to conduct
periodic lien searches if a borrower develops
financial problems.

Commercial lenders often use outside appraisal
firms to help them determine prudent inventory-
advance rates. Also, normal industry practice
for advance rates on different classes of inven-
tory is available through the Commercial Finance
Association Information Exchange.

Turnover rates should be analyzed to identify
potential slow-moving or obsolete inventory,
which should be subject to a lower or no
advance rate. The borrower should establish
inventory reserves if the volume of slow-
moving or obsolete inventory is significant, and
charge-off procedures should be in effect. Inven-
tory should be adequately insured in relation to
its location and amount. Furthermore, bill-and-
hold merchandise and goods held on consign-
ment should be physically segregated from other
warehouse inventory and should not be included
as inventory on the borrower’s books or on the
borrowing-base certificate submitted to the
bank.

UCC Requirements for Secured
Transactions

Article 9 of the UCC applies to any transaction
that is intended to create a security interest in
personal property. For a detailed discussion of
the UCC requirements regarding secured trans-
actions, refer to section 2080.1, “Commercial
and Industrial Loans.”
Asset-Based Lending
Examination Objectives
Effective date May 1996

1. To determine if the policies, practices, procedures, and internal controls for accounts receivable and inventory financing are adequate.
2. To determine if bank officers are conforming to established guidelines.
3. To evaluate the portfolio for collateral sufficiency, credit quality, and collectibility.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.
1. If selected for implementation, complete or update the asset-based lending section of the internal control questionnaire.

2. On the basis of the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.

3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal or external auditors, and determine if corrections have been accomplished.

4. Obtain a trial balance of the customer liability records.
   a. Agree or reconcile balances to department controls and the general ledger.
   b. Review reconciling items for reasonableness.

5. Using an appropriate technique, select borrowers for examination. Prepare credit line cards.

6. Obtain the following information from the bank or other examination areas, if applicable:
   a. past-due loans
   b. loans in a nonaccrual status
   c. loans on which interest is not being collected in accordance with the terms of the loan (Particular attention should be paid to loans that have been renewed without payment of interest.)
   d. loans whose terms have been modified by a reduction of interest rate or principal payment, by a deferral of interest or principal, or by other restructuring of repayment terms
   e. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
   f. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
   g. loan commitments and other contingent liabilities
   h. Extensions of credit to employees, officers, directors, and principal shareholders and their interests, specifying which officers are considered executive officers
   i. extensions of credit to executive officers, directors, and principal shareholders and their interests of correspondent banks
   j. a list of correspondent banks
   k. miscellaneous loan-debit and credit-suspense accounts
   l. loans considered “problem loans” by management
   m. Shared National Credits
   n. specific guidelines in the lending policy
   o. each officer’s current lending authority
   p. current interest-rate structure
   q. any useful information obtained from the review of the minutes of the loan and discount committee or any similar committee
   r. reports furnished to the loan and discount committee or any similar committee
   s. reports furnished to the board of directors
   t. loans classified during the preceding examination

7. Review the information received and perform the following procedures.
   a. Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap.
      • Participations only:
         — Test participation certificates and records, and determine that the parties share in the risks and contractual payments on a pro rata basis.
         — Determine that the bank exercises similar controls and procedures over loans serviced for others as for loans in its own portfolio.
         — Determine that the bank, as lead or agent in a credit, exercises similar controls and procedures over syndications and participations sold as for loans in its own portfolio.
      • Procedures pertaining to all transfers:
         — Investigate any situations in which loans were transferred immediately before the date of examination to determine if any were transferred...
to avoid possible criticism during the examination.

— Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.

— Determine that the consideration received for low-quality loans transferred from the bank to an affiliate is properly reflected on the bank’s books and is equal to the fair market value of the transferred loans. (While fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on these loans as well as an appropriate risk premium.) Section 23A of the Federal Reserve Act prohibits a state member bank from purchasing a low-quality asset.

— Determine that low-quality loans transferred to an affiliate are properly reflected at fair market value on the books of both the bank and its affiliate.

— If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
  1. name of originating institution
  2. name of receiving institution
  3. type of transfer (i.e., participation, purchase or sale, swap)
  4. date of transfer
  5. total number of loans transferred
  6. total dollar amount of loans transferred
  7. status of the loans when transferred (e.g., nonperforming, classified, etc.)
  8. any other information that would be helpful to the other regulator

b. Miscellaneous loan-debit and credit-suspense accounts.
• Discuss with management any large or old items.
• Perform additional procedures as deemed appropriate.

c. Loan commitments and other contingent liabilities. Analyze the commitment or contingent liability if the borrower has been advised of the commitment, and analyze the combined amounts of the current loan balance (if any) and the commitment or other contingent liability exceeding the cutoff.

d. Loans classified during the previous examination.
• Determine the disposition of loans so classified by transcribing—
  — current balance and payment status, or
  — date loan was repaid and source of payment.
• Investigate any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank, or as a result of a participation, sale, or swap with another lending institution. If repayment was a result of a participation, sale, or swap, refer to step 7a of this section for the appropriate examination procedures.

e. Uniform review of Shared National Credits.
• Compare the schedule of credits included in the uniform review of Shared National Credits Program with line cards to ascertain which loans in the sample are portions of Shared National Credits.
• For each loan so identified, transcribe appropriate information from schedule to line cards. (No further examination procedures are necessary in this area.)

8. Consult with the examiner responsible for the asset/liability management analysis to determine the appropriate maturity breakdown of loans needed for the analysis. If requested, compile the information using bank records or other appropriate sources. See “Instructions for the Report of Examination,” section 6000.1, for the considerations to be taken into account when compiling maturity information for the gap analysis.

9. Prepare line cards for any loan not in the sample that, on the basis of the information
derived from the above schedules, requires in-depth review.

10. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, lease financing, and other loan areas, and together decide who will review the borrowing relationship.

11. Obtain credit files for each loan for which line cards have been prepared. In analyzing the loans, perform the following procedures:
   a. Analyze balance-sheet and profit-and-loss items as reflected in current and preceding financial statements, and determine the existence of any favorable or adverse trends.
   b. Review components of the balance sheet as reflected in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure.
   c. Review supporting information and consolidation techniques for major balance-sheet items.
   d. Ascertain compliance with provisions of loan agreements.
   e. Review digests of officers’ memoranda, mercantile reports, credit checks, and correspondence.
   f. Review the following:
      • relationship between amount collected in a month on the receivables pledged as collateral and the borrower’s credit limit
      • aging of accounts receivable
      • ineligible receivables
      • concentration of debtor accounts
      • financial strength of debtor accounts
      • disputes, returns, and offsets
      • management’s safeguards to ensure the authenticity and collectibility of the assigned receivables
   g. Analyze secondary support offered by guarantors and endorsers.
   h. Ascertain compliance with established bank policy.

12. Transcribe significant liability and other information on officers, principals, and affiliations of appropriate borrowers contained in the sample. Cross-reference line cards to borrowers, where appropriate.

13. Determine compliance with laws and regulations pertaining to accounts receivable lending by performing the following steps.

   a. **Lending limits.**
      • Determine the bank’s lending limit as prescribed by state law.
      • Determine advances or combinations of advances with aggregate balances above the limit, if any.
   
   b. **Section 23A, Relations with Affiliates (12 USC 371c), and section 23B, Restrictions on Transactions with Affiliates (12 USC 371c-1), of the Federal Reserve Act, and Regulation W.**
      • Obtain a listing of loans to affiliates.
      • Compare the listing with the bank’s customer liability records to determine its accuracy and completeness.
      • Obtain a listing of other covered transactions with affiliates (i.e., acceptance of affiliate’s securities as collateral for a loan to any person).
      • Ensure that covered transactions with affiliates do not exceed the limits of section 23A and Regulation W.
      • Ensure that covered transactions with affiliates meet the collateral requirements of section 23A and Regulation W.
      • Determine that low-quality loans have not been purchased from an affiliate.
      • Determine that all covered transactions with affiliates are on terms and conditions that are consistent with safe and sound banking practices.
      • Determine that all transactions with affiliates comply with the market-terms requirement of section 23B and Regulation W.
   
   c. **18 USC 215, Receipt of Commission or Gift for Procuring Loans.**
      • While examining the accounts receivable loan area, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
      • Investigate any such suspected situation.
   
   d. **Federal Election Campaign Act (2 USC 441b), Political Contributions and Loans.**
      • While examining the accounts receivable loan area, determine the existence of any loans in connection with any political campaign.
      • Review each such credit to determine
whether it is made in accordance with applicable banking laws and regulations and in the ordinary course of business.

e. 12 USC 1972, Tie-In Provisions. While examining the accounts receivable loan area, determine whether any extension of credit is conditioned upon—

- obtaining or providing an additional credit, property, or service to or from the bank or its holding company (or a subsidiary of its holding company), other than a loan, discount, deposit, or trust service, or
- the customer not obtaining a credit, property, or service from a competitor of the bank or its holding company (or a subsidiary of its holding company), other than a reasonable condition to ensure the soundness of the credit.

f. Insider lending activities. The examination procedures for checking compliance with the relevant law and regulation covering insider lending activities and reporting requirements are as follows. (The examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment.)

- Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders and Their Related Interests. While reviewing information relating to insiders that is received from the bank or appropriate examiner (including loan participations, loans purchased and sold, and loan swaps)—
  - test the accuracy and completeness of information about accounts receivable loans by comparing it with the trial balance or loans sampled;
  - review credit files on insider loans to determine that required information is available;
  - determine that loans to insiders do not contain terms more favorable than those afforded other borrowers;
  - determine that loans to insiders do not involve more than normal risk of repayment or present other unfavorable features;
  - determine that loans to insiders do not exceed the lending limits imposed by Regulation O;
  - if prior approval by the bank’s board was required for a loan to an insider, determine that this approval was obtained;
  - determine compliance with the various reporting requirements for insider loans;
  - determine that the bank has made provisions to comply with the disclosure requirements for insider loans; and
  - determine that the bank maintains records of public disclosure requests and the disposition of the requests for a period of two years after the dates of the requests.

- Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 USC 1972(2)), Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.
  - Obtain from or request that the examiners reviewing due from banks and deposit accounts verify a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.
  - Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.

g. Financial Recordkeeping and Reporting of Currency and Foreign Transactions (31 CFR 103.33), Retention of Credit Files. Review the operating procedures and credit file documentation and determine if the bank retains records of each extension of credit over $10,000, specifying the name and address of the borrower, the amount of the credit, the nature and purpose of the loan, and the date thereof. (Loans secured by an interest in real property are exempt.)

14. Determine whether the consumer compliance examination uncovered any violations of law or regulation in this department. If violations were noted, determine whether corrective action was taken. Extend testing to determine subsequent compliance with
any noted law or regulation.
15. Perform the appropriate steps in “Concentrations of Credits,” section 2050.3.
16. Discuss with appropriate officers, and prepare summaries in appropriate report form of—
   a. delinquent loans
   b. loans not supported by current and complete financial information
   c. loans on which documentation is deficient
   d. inadequately collateralized loans
   e. classified loans
   f. Small Business Administration delinquent or criticized loans
   g. transfers of low-quality loans to or from another lending institution
   h. concentrations of credit
   i. extensions of credit to major shareholders, employees, officers, directors, and/or their interests
   j. violations of laws and regulations
   k. other matters concerning the condition of the department
17. Evaluate the function for—
   a. the adequacy of written policies, relating to accounts receivable financing;
   b. the manner in which bank officers are conforming with established policy;
   c. adverse trends within the accounts receivable financing department;
   d. the accuracy and completeness of the schedules obtained from the bank;
   e. internal control deficiencies or exceptions;
   f. recommended corrective action when policies, practices, or procedures are deficient;
   g. the competency of departmental management; and
   h. other matters of significance.
18. Update the workpapers with any information that will facilitate future examinations.
Asset-Based Lending
Internal Control Questionnaire
Effective date March 1984 Section 2160.4

Review the bank’s internal controls, policies, practices, and procedures for making and servicing accounts receivable financing loans. The bank’s system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flow charts, copies of forms, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

*1. Has the board of directors, consistent with its duties and responsibilities, adopted written accounts receivable financing policies that—
   a. establish procedures for reviewing accounts receivable financing applications,
   b. establish standards for determining credit lines,
   c. establish standards for determining percentage advance to be made against acceptable receivables,
   d. define acceptable receivables,
   e. establish minimum requirements for verification of borrower’s accounts receivable, and
   f. establish minimum standards for documentation?

2. Are accounts receivable financing policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

*3. Is the preparation and posting of subsidiary accounts receivable financing records performed or reviewed by persons who do not also—
   a. issue official checks and drafts or
   b. handle cash?

*4. Are the subsidiary accounts receivable financing records reconciled, at least monthly, to the appropriate general ledger accounts, and are reconciling items investigated by persons who do not also handle cash?

5. Are loan statements, delinquent account collection requests, and past-due notices checked to the trial balances that are used in reconciling subsidiary records of accounts receivable financing loans with general ledger accounts, and are they handled only by persons who do not also handle cash?

6. Are inquiries about accounts receivable financing loan balances received and investigated by persons who do not also handle cash or pass adjustments?

*7. Are documents supporting recorded credit adjustments to loan accounts or accrued interest receivable accounts checked or tested subsequently by persons who do not also handle cash or initiate transactions (if so, explain briefly)?

8. Are terms, dates, weights, descriptions of merchandise, etc., shown on invoices, shipping documents, delivery receipts, and bills of lading scrutinized for differences?

9. Are procedures in effect to determine if the signatures shown on the above documents are authentic?

10. Are payments from customers scrutinized for differences in invoice dates, numbers, terms, etc.?

LOAN INTEREST

*11. Is the preparation and posting of loan interest records performed or reviewed by persons who do not also—
   a. issue official checks and drafts or
   b. handle cash?

12. Are independent interest computations made and compared or tested to initial loan interest records by persons who do not also—
   a. issue official checks and drafts or
   b. handle cash?

COLLATERAL

*13. Does the bank record, on a timely basis, a first lien on the assigned receivables for each borrower?

14. Do all loans granted on the security of the receivables also have an assignment of the inventory?
15. Does the bank verify the borrower’s accounts receivable or require independent verification periodically?

16. Does the bank require the borrower to provide aged accounts receivable schedules periodically?

17. If applicable, are cash receipts and invoices block proven in the mailroom and subsequently traced to posting on daily transaction records?

CONCLUSION

18. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.

19. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
Securities Broker and Dealer Loans
Effective date May 1996

Some member banks provide lending services to stock brokerage firms using marketable securities as collateral. While various financial services are offered, typically most banks make loans to brokerage firms to provide them with the funding needed to carry their securities portfolio. The securities can either be held by the bank or a tri-party custodian or pledged to the bank at a depository. Collateral securities can be in physical form or can be held at a depository in book-entry form.

To promote efficiency, a brokerage firm may use a depository to hold the securities it has pledged as collateral for a bank loan. Brokerage firms deposit shares of eligible securities with the depository, and the stock certificates representing those shares are registered in the name of a common nominee. Beneficial ownership of the securities is transferred through computerized book entries, thus eliminating the physical movement of the securities. The depository has physical control of the securities while they are on deposit. Loan arrangements are made between the broker and the lending bank, with the broker providing electronic instructions to the depository to debit the firm’s account and credit that of the lending bank. The depository acknowledges the transaction to the lending bank and will not reverse the entry or allow partial withdrawals without authorization from that institution. Participating banks receive daily reports showing their position in the program by broker name and type of security.

The New York Stock Exchange formed a subsidiary, the National Securities Clearing Corporation (NSCC), to provide equity clearance and continuous net settlement for the brokerage community. The Depository Trust Company in New York, under contract with the NSCC, handles the technical aspects of that operation, including final settlement. Collateral-pledging services may be offered by other depositories as well.

Book-entry transfer of ownership is limited to only those securities that are eligible for deposit in a depository. However, even if a security was depository-eligible, it would not be eligible for book-entry movement unless the lending bank was a direct or indirect participant in the depository. If the lending institution does not have a relationship, either directly or indirectly, with a depository, the securities would have to be delivered physically to the ultimate custodian (presumably the lending bank).

Securities lending is not always constrained by eligibility. Depending on the bank’s underwriting standards, some banks may be willing to lend on the basis of securities that are not depository-eligible. This would preclude book-entry movement and require physical delivery.
1. To determine if policies, practices, procedures, objectives, and internal controls for securities broker and dealer loans are adequate.
2. To determine the types of loans (underwriting loan, day loan, inventory loan, margin loan, or guidance line) made, loan pricing and fees, loan-to-value ratios, and margin calls.
3. To evaluate credit quality, credit analysis, collateral and custody requirements, and procedures for lost and stolen securities.
4. To determine if bank officers are operating in conformance with the established guidelines.
5. To determine compliance with applicable laws and regulations, including Regulations T and U, the Securities Act of 1933, and the Securities Exchange Act of 1934.
6. To evaluate management information systems, particularly the lender’s ability to ensure adequate collateral coverage by being able to automatically price collateral daily.
7. To determine the scope and adequacy of the audit function.
8. To initiate corrective action when policies, practices, procedures, objectives, or internal controls are deficient or when violations of laws or regulations have been noted.
Securities Broker and Dealer Loans
Examination Procedures
Effective date March 1984

1. If selected for implementation, complete or update the Securities Broker and Dealer Loans section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and of the work performed by internal/external auditors ascertain the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors, and determine if corrections have been accomplished.
4. Request the bank to supply:
   a. Schedule of approved lines for each dealer including outstanding balances.
   b. Delinquent interest billings, date billed amount of past-due interest.
5. Obtain a trial balance of all dealer accounts and:
   a. Agree balances to department controls and general ledger.
   b. Review reconciling items for reasonableness.
6. Using an appropriate technique, select borrowers to be reviewed.
7. Using the trial balance, transcribe the following information for each borrower selected onto the credit line cards.
   a. Total outstanding liability.
   b. Amount of approved line.
8. Obtain from the appropriate examiner the following schedules, if applicable to this area:
   a. Past-due loans.
   b. Loan commitments and other contingent liabilities.
   c. Miscellaneous loan debit and credit suspense accounts.
   d. Loans considered “problem loans” by management.
   e. Each officer’s current lending authority.
   f. Current interest rate structure.
   g. Any useful information obtained from the review of the minutes of the loan and discount committee or any similar committee.
   h. Reports furnished to the loan and discount committee or any similar committee.
   i. Reports furnished to the board of directors.
   j. Loans classified during the preceding examination.
   k. A listing of loans charged-off since the preceding examination.
9. Review the information received and perform the following:
   a. For miscellaneous loan debit and credit suspense accounts:
      • Discuss with management any large or old items.
      • Perform additional procedures as deemed appropriate.
   b. For loans classified during the previous examination, determine disposition of loans so classified by transcribing:
      • Current balances and payment status, or
      • Date loan was repaid and sources of payment.
   c. For loan commitments and other contingent liabilities, analyze if:
      • The borrower has been advised of the contingent liability.
      • The combined amounts of the current loan balance and the commitment or contingent liability exceed the cutoff.
   d. Select loans which require in-depth review based on information derived when performing the above steps.
10. For those loans selected in step 6 above and for any other loans selected while performing the above steps, transcribe the following information from the bank’s collateral record onto the credit-line cards:
   a. A list of collateral held, including date of entry, and amount advanced.
   b. A brief of the agreement between the bank and the dealer.
   c. Evidence that the proper documentation is in place.
   d. Details of any other collateral held.
11. The examiner should be aware that certain stock-secured purpose transactions with and for brokers and dealers are exempt from the
margin restrictions of Regulation U. Refer to the regulation for a complete description of such transactions, which include the following:

a. Temporary advances to finance cash transactions.
b. Securities in transit or transfer.
c. Day loans.
d. Temporary financing of distributions.
e. Arbitrage transactions.
f. Credit extended pursuant to hypothecation.
g. Emergency credit.
h. Loans to specialists.
i. Loans to odd-lot dealers.
j. Loans to OTC market makers.
k. Loans to third-market makers
l. Loans to block positioners.
m. Loans for capital contributions.

12. Discuss with appropriate officer(s) and prepare summaries in appropriate report form of:

a. Delinquent loans, including a breakout of “A” paper.
b. Loans on which collateral documentation is deficient.
c. Recommended corrective action when policies, practices or procedures are deficient.
d. Other matters regarding the condition of the department.

13. Prepare appropriate comments for examination report stating your findings with regard to:

a. The adequacy of written policies relating to dealer loans.
b. The manner in which bank officers are conforming with established policy.
c. Schedules applicable to the department that were discovered to be incorrect or incomplete.
d. The competence of departmental management.
e. Internal control deficiencies or exceptions.
f. Other matters of significance.

14. Update the workpapers with any information that will facilitate future examinations.
Securities Broker and Dealer Loans
Internal Control Questionnaire
Effective date March 1984 Section 2170.4

Review the bank’s internal control, policies, practices and procedures for making and servicing loans. The bank’s system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written loan policies that:
   a. Establish standards for determining broker and dealer credit lines?
   b. Establish minimum standards for documentation?
2. Are such loan policies reviewed at least annually to determine if they are compatible with changing market conditions?
3. Is a daily record maintained summarizing loan transaction details, i.e., loans made, payments received and interest collected to support applicable general ledger account entries?
4. Are frequent note and liability ledger trial balances prepared and reconciled with controlling accounts by employees who do not process or record loan transactions?
5. Is an exception report produced and reviewed by operating management that encompasses extensions, renewals or any factors that would result in a change in customer account status?
6. Do customer account records clearly indicate accounts which have been renewed or extended?

LOAN INTEREST

7. Is the preparation and posting of interest records performed and reviewed by appropriate personnel?
8. Are any independent interest computations made and compared or adequately tested to initial interest records by appropriate personnel?

COLLATERAL

9. Are multicopy, prenumbered records maintained that:
   a. Detail the complete description of collateral pledged?
   b. Are typed or completed in ink?
10. Are receipts issued to customers covering each item of negotiable collateral deposited?
11. If applicable, are the functions of receiving and releasing collateral to borrowers and of making entries in the collateral register performed by different employees?
12. Are appropriate steps with regard to Regulation U being considered in granting dealer and broker loans?

CONCLUSION

13. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
14. Based on composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
INTRODUCTION

Factoring is the purchase, essentially without recourse, of the accounts receivable of a client by a bank (the factor). Generally, factor clients are small, undercapitalized companies or start-up firms with limited liquidity that generally do not qualify for more traditional bank financing. In contrast to accounts receivable financing, where the client retains the credit and collection risk associated with the receivables, factoring transfers these risks to the factor. For the client, the principal advantage of factoring is the assurance that it will receive the proceeds of its sales, regardless of whether the factor is paid. Furthermore, the client does not have to maintain a credit department to evaluate the creditworthiness of customers, collect past-due accounts, or maintain accounting records on the status of receivables. The factor assumes these responsibilities. An additional advantage for the client is that under the terms of an “advance factoring” arrangement, the client receives payment for its receivables before the time stated on the invoice.

Two basic types of factoring service offered by the industry are (1) maturity factoring and (2) advance factoring. In maturity factoring, an average maturity due date is computed for the receivables purchased within a given time period, and the client receives payment on that date. Advance factoring is computed in the same way; however, the client has the option of taking a percentage of the balance due on a receivable in advance of the computed average maturity due date. The remainder of the receivable, sometimes called the “client’s equity,” is payable on demand at the due date.

ACCOUNTING FOR FACTORING

The factor’s balance sheet reflects the purchased accounts receivable as an asset account, “factored receivables,” with “due to clients” as the corresponding liability. Usually, the balance of due-to-clients will be less than the factored receivables because of payments and advances to the clients. If, however, the factor makes advances to the client in amounts that exceed amounts due to the client, the advances will be shown as “overadvances.” Overadvances are common and usually secured by other collateral.

The factoring agreement should set limits on the amount of overadvances available at any one time, generally based on specified collateral, such as the client’s inventory. The relationship to inventory is based on the premise that the inventory will be sold, thus generating receivables that the factor has contracted to purchase. Proceeds from the factored receivables resulting from the sale of inventory are then used to repay the overadvance. If the overadvance is unsecured, it should be offset by a corresponding reduction in the “client’s equity.” The factor’s income statement will show factoring commissions, which represent the discount on the receivables purchased, as income. Interest income for advances on the due-to-client balances may or may not be a separate line item.

Since factoring is a highly competitive industry, price cutting has reduced factoring commissions to the point that they provide minimal support to a factor’s earnings. As a result, interest margins on factoring advances represent an increasingly important part of a factor’s net income. An analysis of proportional changes in the due-to-clients account should provide valuable insight into the analysis of the earnings of a bank’s factoring activities. As more clients take advances (reducing due-to-clients), profit margins should widen. Conversely, as the due-to-clients proportion of total liabilities rises, profit margins may be expected to narrow.

FACTORING AGREEMENT, APPROVAL PROCEDURES, AND EXAMINER’S EVALUATION

The typical factoring agreement stipulates that all of a client’s accounts receivable are assigned to the factor. However, the agreement between the factor and the client will usually state that receivables subject to shipping disputes and errors, returns, and adjustments are chargeable back to the client because they do not represent bona fide sales. The agreement will, in most instances, require that a reserve be established against the purchased receivables to ensure the factor’s access to funds for any future chargeback adjustments.

The usual approval process requires the client to contact the factor’s credit department before filling a sales order on credit terms. The credit
department conducts a credit review, determines the creditworthiness of the customer, and approves or rejects the sale. If the credit department rejects the sale, the client may complete the sale, but at its own risk. The most commonly rejected sales are those to affiliates, known bad risks, customers whose credit cannot be verified, and customers whose outstanding payables exceed the factor’s credit line to that customer. Sales made by the client without the factor’s approval are considered client-risk receivables, and the factor has full recourse to the client.

Once a sale has been made and the receivable assigned to the factor, whether or not the factor has approved it, the client's account will be credited for the net invoice amount of the sale. Trade or volume discounts, early payment terms, and other adjustments are deducted from the invoice amount. The receivable then becomes part of the client’s “availability” to be paid immediately or at the computed date, depending on the basis of the factoring arrangement.

Each month the client receives an “accounts-current” statement from the factor, which details daily transactions. This statement reflects the daily assignments of receivables, remittances made (including overadvances and amounts advanced at the client’s risk), deductions for term loans, interest charges, and factoring commissions. Credit memos, client-risk charge-backs, and other adjustments will also be shown. Client-risk charge-backs are the amounts deducted from the remittances to the client resulting from the failure of the client’s customers to pay receivables that were advanced at the client’s risk.

The accounts-current statement and the availability sheets are necessary for analyzing asset quality. The factor’s ability to generate these reports daily is a basic control feature. Accounting systems for a high-volume operation probably will be automated, providing the factor with the data necessary to properly monitor the client. If a monitoring system is in place, the examiner should use the data provided in the asset analysis process.

The evaluation of a factoring operation includes a review of its systems and controls as well as an analysis of the quality of its assets. A major portion of a factor’s assets will be factored receivables, for which the credit department has the responsibility for credit quality and collection. The other major portion of assets will consist of client loans and credit accommodations, such as overadvances and amounts advanced at the client’s risk, for which the account officers are responsible.

CREDIT DEPARTMENT EVALUATION

Because of its integral function in the credit and collection process, the credit department is the heart of a factoring operation. The department should maintain a credit file for each of its client’s customers, and these files should be continually updated as purchases are made and paid for by the customers. These files should include financial statements, credit bureau reports, and details of purchasing volume and paying habits. Each customer should have an assigned credit line based on the credit department’s review of the customer’s credit capacity.

The objective of a credit department evaluation is to critique the credit and collection process and to assess departmental effectiveness. The examiner should have a copy of departmental policies and procedures as well as a verbal understanding of them before beginning the review. The factor’s policies should include, at a minimum, well-defined field audit procedures, a fraud detection and monitoring plan, and a computer back-up plan. Customer files selected for review may be drawn from large and closely monitored customers, or they may be selected by a random sample.

ASSET EVALUATION

The asset evaluation is a twofold process. The first part is to evaluate credit accommodations to each client. The second part is to evaluate customer receivables purchased by the factor at its own risk. For the first part of the process, the examiner should obtain a list that shows the aggregate of each client’s credit exposure to the factor, both direct and indirect, including overadvances and receivables purchased at the client’s risk. For the second part of the process, the examiner should obtain an aging schedule of factored receivables aggregated by customer but net of client-risk receivables. The selection of clients and customers for review should be based on the same selection methods as those used for the commercial loan review. Clients with a high “dilution” of receivables
(that is, customer nonpayment due to returns, shipping disputes, or errors) and those with client-risk receivables equal to 20 percent or more of factored volume might also be selected for review. Past-due factored volume is not a meaningful measure of client quality because a factor usually collects principal and interest payments directly from the client’s availability.

A maturity client’s availability is the sum of all factored receivables less trade and other discounts, factoring commissions, client-risk charge-backs, and other miscellaneous charges to the client’s account. There may also be deductions for letters of credit and other credit accommodations. An advance client’s availability would be further reduced by advances on the factored receivables, interest charges, and the reciprocal of the contractually agreed-upon “advance” percentage. This reciprocal, 20 percent in the case of a client who receives an 80 percent advance, is sometimes referred to as the client’s equity in the factored receivables. Availability may be increased by liens on additional collateral, such as inventory, machinery and equipment, real estate, and other marketable assets.

A client’s balance sheet will show a “due-from-factor” account instead of accounts receivable. The account balance may be somewhat lower than a normal receivables balance, thus distorting turnover ratios and other short-term ratios. A client can convert sales to cash faster with a factor than if it collected the receivables. The statement analysis should consider the client’s ability to repay any advances received from the factor in the form of overadvances, term loans, or other credit accommodations. The analysis should also assess the client’s ability to absorb normal dilution and the potential losses associated with client-risk receivables, particularly when these elements are unusually high.

CLASSIFICATION GUIDELINES

When classifying the credit exposure to a client, the client-risk receivables portion of factored volume is the only amount subject to classification. Because of the recourse aspect, the balance is considered an indirect obligation rather than a direct obligation. Any other credit accommodations to a client that are not included in factored receivables, such as overadvances or term loans, are also subject to classification. Customer receivables purchased by the factor at its own risk are subject to classification. Care should be taken not to classify any receivables that have already been classified under client-risk exposure. Seasonal aspects of clients’ businesses should be carefully analyzed in assessing asset quality based on classification data.

CONCLUSION

Due to the large volume of daily transactions that typically flows through a factor, any internal control procedure that can be easily circumvented is a potential problem. The review of the department’s internal systems and controls should be continuous throughout the examination. This review should include credit controls for both clients and customers. Since credit problems can develop rapidly in factoring, credit controls and systems must be responsive to the identification of these problems. Earnings and capital adequacy are evaluated based on the department’s own performance. The factoring department’s earnings trends may be evaluated by comparing the yield on assets for various periods. Factors are subject to the same price competition in the commercial finance market as accounts receivable financiers. Declining portfolio yields may reflect competitive pressures and may portend declining future profitability.
Factoring
Examination Objectives
Effective date May 1996

1. To determine if policies, practices, procedures, and internal controls for factoring are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the portfolio for performance, credit quality, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.
Factoring
Examination Procedures
Effective date March 1984

1. If selected for implementation, complete or update the Factoring section of the Internal Control Questionnaire.

2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the examination.

3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest reviews done by internal/external auditors, and determine if appropriate corrections have been made.

4. Obtain a trial balance(s) of applicable asset and liability accounts and:
   a. Agree or reconcile balances to department controls and general ledger.
   b. Review reconciling items for reasonableness.

5. Obtain the following information:
   a. A list of all clients with their outstanding balances including total factored receivables with those purchased at the client’s risk segregated, overadvances, term loans and other credit accommodations.
   b. If not included in 5a above, a list of amounts due to each client by the factor (availability reports).
   c. Aging schedules of factored receivables by client and by customer with client risk receivables segregated.
   d. Past due status reports for 5c above.
   e. Listings of all clients and customers considered to be problems.
   f. Credits classified at the previous examination.
   g. Concentration reports by client and by customer.
   h. Exception reports highlighting dilution of factored receivables because of shipping disputes and errors, returns, or any other adjustments.
   i. Credit commitments/lines for each client including amounts for overadvances and receivables purchased at the client’s risk.
   j. Credit lines for each customer.
   k. Specific lending policy guidelines including each officer’s current lending authority.
   l. Current fee schedule.
   m. Any useful information obtained from the review of the minutes of the loan and discount committee or any similar committees.
   n. Reports furnished to the board of directors.
   o. Any other management reports maintained by the factoring department.

6. After consulting with the examiner-in-charge, determine the appropriate cut-off lines for:
   a. Client’s aggregate direct liability (i.e., overadvances, term loans and other credit accommodations).
   b. Client’s indirect liability (i.e., client-risk exposure).
   c. Customer’s factored receivables not including those in 6b above.

7. Transcribe information to line cards for all client and customer credits over the cut-off limits, for all credits recognized as problems, and for credits classified at the previous examination.

8. Cross reference clients and customers with the examiners assigned to other loan areas for common borrowers, and together decide who will review the borrowing relationship.

9. Obtain credit files for all clients and customers for whom line cards were prepared and analyze the accounts by performing the following procedures:
   a. Analyze balance sheet and profit and loss items as reflected in current and preceding financial statements, determine the existence of any favorable or adverse trends.
   b. Review components of the balance sheet as reflected in the current financial statements and determine the reasonableness of each item as it relates to the total financial structure.
   c. Review supporting information for the major balance sheet items and the techniques used in consolidation, if applicable, and determine the primary sources of repayment and evaluate their adequacy.
   d. Compare the amount of the credit line(s) with the lending officer’s authority.
   e. Determine compliance with the bank’s established commercial loan policy.
In addition to the above procedures which are applicable to both client and customer accounts, the following additional procedures should be performed for client accounts only:

f. Determine compliance with provisions of factoring agreements.
g. Review digest of officers’ memoranda, mercantile reports, credit checks and correspondence to determine the existence of any problems which might deter the contractual program as set forth in the factoring agreement.
h. Relate collateral values to outstanding debt.
i. Compare fees charged to the fee schedule and determine that the terms are within established guidelines.
j. Analyze secondary support afforded by guarantors and endorsers.

10. Perform appropriate procedural steps in Concentration of Credits section, if applicable.

11. Discuss with appropriate officer(s) and prepare summaries in appropriate report form of:
   a. Delinquent amounts, segregating those considered “A” paper.
   b. Violations of laws and regulations.
   c. Accounts not supported by current and complete financial information or on which other documentation is deficient.
   d. Concentrations of credit.
   e. Criticized accounts.
   f. Other matters regarding condition of asset quality.

12. Evaluate the factoring department with respect to:
   a. The adequacy of written policies relating to factoring.
   b. The manner in which bank officers are operating in conformance with established policy.
   c. Adverse trends within the factoring department.
   d. Internal control deficiencies or exceptions.
   e. Recommended corrective action when policies, practices or procedures are deficient.
   f. The competency of departmental management.
   g. Other matters of significance.

13. Update the workpapers with any information that will facilitate future examinations.
Factoring
Internal Control Questionnaire
Effective date March 1984

Review the bank’s internal controls, policies, practices and procedures for its factoring operation. The bank’s system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written factoring policies that:
   a. Establish procedures for reviewing factoring agreements?
   b. Establish standards for determining client credit lines for each of the various types of accommodations available (i.e., factored receivables, client-risk receivables, overadvances, term loans, etc.)?
   c. Establish standards for determining individual customer limits?
   d. Require a client to contact the factor for approval before filling a sales order on credit terms?
   e. Establish standards for approving the sales orders referred to above.
   f. Establish standards for determining the percentage of advance that will be made against acceptable receivables in advance factoring arrangements?
   g. Establish standards for determining the discount on factored receivables and the interest rate or fee charged for other credit accommodations?
   h. Establish minimum standards for documentation?
2. Are factoring policies reviewed at least annually to determine if they are compatible with changing market conditions?

INTERNAL CONTROL

3. Is the preparation and posting of subsidiary factoring records performed or reviewed by persons who do not also:
   a. Issue official checks and drafts?
   b. Handle cash?
   *4. Are the subsidiary factoring records reconciled, at least monthly, to the appropriate general ledger accounts, and reconciling items investigated by persons who do not also handle cash?
5. Are accounts current statements, delinquent account collection requests, and past-due notices checked to the trial balances that are used in reconciling subsidiary records of factoring accounts with general ledger accounts, and handled only by persons who do not also handle cash?
6. Are inquiries about factored balances received and investigated by persons who do not also handle cash?
   *7. Are documents supporting recorded credit adjustments to factored receivable accounts and the due-to-clients accounts checked or tested subsequently by persons who do not also handle cash (if so, explain briefly)?
8. Are proper records maintained for approval of:
   a. Customer orders?
   b. Client credit accommodations?
9. Are items, dates, weights, description of merchandise, etc., shown on invoices, shipping documents, delivery receipts, and bills of lading scrutinized for differences?
10. Are procedures in effect to determine if the signatures shown on the above documents are authentic?
11. Are payments from customers scrutinized for differences in invoice dates, numbers, terms, etc.?

INTEREST AND FEES

12. Is the preparation and posting of discount, interest, and fee records performed or reviewed by persons who do not also:
   a. Issue official checks and drafts singly?
   b. Handle cash?
   *13. Are independent discount, interest and fee computations made and compared or tested to initial records by persons who do not also:
       a. Issue official checks and drafts?
       b. Handle cash?
COLLATERAL

*14. Does the bank record, on a timely basis, a first lien on the assigned receivables for each borrower?
15. Does the bank verify the borrower’s accounts receivable or require independent verification on a periodic basis?
16. Does the bank review aged accounts receivable schedules on a regular basis?
17. If applicable, are cash receipts and invoices block proved in the mailroom and subsequently traced to posting on daily transaction records?

CONCLUSION

18. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
19. Based on a composite evaluation as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
Bank premises and equipment includes land, buildings, furniture, fixtures, and other equipment, either owned or acquired by means of a capitalized lease, and any leasehold improvements. This section covers the fair valuation, general propriety, and legality of the bank’s investment in premises and equipment. Other real estate owned and insurance coverage on fixed assets are discussed in other sections of this manual. (See sections 2200.1 and 4040.1, respectively.)

ACQUISITION AND VALUATION

Banks obtain premises and equipment in three primary ways:

• directly purchasing premises and equipment with cash outlays or by incurring debt, such as a mortgage
• indirectly investing in a corporation that holds title to bank premises (the corporation may or may not be affiliated with the bank)
• leasing bank premises and equipment from a third party

The bank’s initial investment in premises and equipment should be booked at cost, which should be determined according to generally accepted accounting principles (GAAP). Non-depreciable assets such as land and art should remain on the books at cost, unless the asset incurs a material and permanent decline in value. Under such circumstances, the asset should be reduced to its fair value on the books, and a loss should be recorded.

The bank should depreciate assets that, over time, decline in economic value. These assets may be depreciated differently for book and tax purposes, which may give rise to deferred tax assets and deferred tax implications. GAAP allows depreciation using various methods. These include time-factor methods such as straight-line and accelerated methods. Accelerated methods include sum-of-the-years’ digits depreciation, declining-balance depreciation, double-declining-balance depreciation, and other accelerated methods. The Internal Revenue Service allows accelerated depreciation methods for many assets to encourage businesses to make capital investments. While many banks follow these accelerated schedules for tax purposes, they may not depreciate these same assets as rapidly for book purposes.

Examiners should closely review internal controls for the bank’s premises and equipment to ensure that these assets are properly safeguarded and appropriately recorded on the bank’s books. Controls should be in place to inventory these assets and periodically review their economic usefulness. Furniture, fixtures, and equipment whose economic usefulness has expired or that are otherwise damaged, impaired, or obsolete should be written down to value. Assets that cannot be located should be accounted for as a loss.

LEASES

Banks frequently lease their premises and equipment rather than own them. Leases should be accounted for in accordance with Financial Accounting Standards Board Statement No. 13 (FAS 13), “Accounting for Leases.” FAS 13 requires, among other things, that the lessee or lessor capitalize certain leases based upon four general criteria. A lease is classified as a capital lease or an operating lease depending upon whether (1) there will be a transfer of title at the end of the lease term, (2) the lease contains a bargain purchase option that will be activated at some future date, (3) the lease term is equal to 75 percent or more of the estimated economic life of the leased property, and (4) the present value of the minimum lease payments equals or exceeds 90 percent of the fair value of the leased asset. For the lessee, a lease is capitalized if any one of the four general criteria is met. For the lessor, a lease is capitalized if any one of the four general criteria is met, but two revenue recognition criteria must also be met. The following recognition criteria are applicable to the lessor: (1) the collectability of the minimum lease payments must be reasonably assured and (2) there are no important uncertainties surrounding the amount of unreimbursed cost yet to be incurred by the lessor. The instructions for the

1. Portions of Statement No. 13 have been amended by Statement Nos. 17, 22, 23, 26, 27, 28, 29, 34, 71, 77, 91, 96, 98, 109, 125, 135, 145, and 157. In addition the FASB released Interpretations 19, 21, 23, 24, 26, and 27. It has also issued several Technical Bulletins to clarify certain viewpoints or positions involving the standard for leases.
preparation of the FFIEC Consolidated Reports of Condition and Income (Call Report) further detail the capitalization of leases and specify treatment for leases. For the lessee, if a lease is required to be capitalized, the lease is recorded as a capitalized lease asset and as a corresponding liability. The amount capitalized would be the present value of the minimum required lease payments over the noncancelable term, as defined in the lease, plus the present value of the payment required under the bargain-purchase option, if any, less any portion of the payments representing executory expenses such as insurance, maintenance, and taxes to be paid by the lessor. The amortization period should be the life of the lease or a period established in a manner consistent with the lessee’s normal schedule of depreciation for owned assets. The requirements of FAS 13 are somewhat complex, and examiners who have questions on the capitalization of leases should refer to that statement for necessary detail. Leases not required to be capitalized are called “Operating Leases,” and lease payments associated with them are charged to expense over the term of the lease as they become payable.

Lease arrangements between a state member bank and its parent company or other affiliated entity should be reviewed in detail. Examiners should ensure that the lease arrangement is reasonable in relation to the cost of the asset, its current fair value, or similar lease arrangements in the current market. Transactions that appear to be self-serving or otherwise unreasonable to the bank should be criticized.

PROCEDURES FOR INVESTING IN BANK PREMISES

Section 24A of the Federal Reserve Act (12 U.S.C. 371d) requires state member banks to obtain Federal Reserve System approval to make additional investments that would cause the bank’s total bank premises investments to exceed certain percentage-of-capital thresholds. Section 208.21 of Regulation H implements this requirement. Note that for purposes of this requirement, “bank premises investments” include a bank’s direct investment in premises; its investment in the stock (or other ownership interests), bonds, debentures, or other such obligations of any company holding the premises of the bank; and loans made to (or on security of) any company holding the premises of the bank.

150 Percent Threshold for Well-Managed, Well-Capitalized Banks

A bank that is well-capitalized (as defined in Regulation H) and has a CAMELS composite rating of 1 or 2 (as of its most recent examination) must obtain prior Federal Reserve System approval for a bank premises investment only if the investment would cause the bank’s total bank premises investments (plus any debt incurred by any bank premises company affiliated with the bank) to exceed 150 percent of the bank’s perpetual preferred stock (and related surplus) plus its common stock (and related surplus).

100 Percent Threshold for Other Banks

A bank not eligible for the 150 percent threshold must obtain prior Federal Reserve System approval for a bank premises investment only if the investment would cause the bank’s total bank premises investments (plus any debt incurred by any bank premises company affiliated with the bank) to exceed the bank’s perpetual preferred stock (and related surplus) plus its common stock (and related surplus).

Bank Premises Investment that Exceeds the Applicable Threshold

To make a bank premises investment that exceeds the applicable threshold, a bank must notify the appropriate Reserve Bank of the proposed investment at least 15 days before making it, and must not have been advised by the Reserve Bank prior to the end of the 15-day period that the investment is subject to further review.

When considering the approval of domestic-branch applications, the Board follows the guidelines detailed in section 208.6(b) of Regulation H. The Board will analyze whether the bank’s investment in premises for the branch is consistent with section 208.21 of Regulation H. Reserve Banks, under their delegated authority, can also perform this analysis.
FUTURE USE AND CLASSIFICATION AS OREO

Member banks are encouraged to plan for their future premises needs. However, examiners should not arbitrarily classify real estate acquired for future use. The examiner needs to review the circumstances surrounding each individual case and determine if the period of time which the property has been held is reasonable relative to the intended use. Real estate acquired for future expansion is considered “other real estate owned” from the date when its use for banking is no longer contemplated. In addition, former banking premises are considered other real estate owned from the date of relocation to new banking quarters.

TRANSACTIONS WITH INSIDERS

If a member bank contracts for or purchases any securities or other property from any of its directors, any firm its directors are members of, or any of its affiliates, the transaction is subject to the requirements of sections 22(d) and 23B of the Federal Reserve Act and the Board’s Regulation W. These sections require that transactions be made in the regular course of business on terms not less favorable to the bank than those offered to others. When the purchase is authorized by a majority of the board of directors who have no interest in the sale of such securities or property, the authority should be evidenced by affirmative vote or written assent. In addition, a member bank may sell securities or other property to any of its directors subject to the same stipulations.

EXAMINATION CONSIDERATIONS

As indicated earlier, the examiner responsible for bank premises and equipment should assess the appropriateness of the bank’s investment in this area and the overall impact of occupancy expense on the bank. Even if a bank’s total investment in bank premises is within legal limits and all of its fixed assets are valued fairly, its total expenditures for or investment in premises and equipment may be inappropriate relative to earnings, capital, or the nature and volume of the bank’s operations.

Bank Premises and Equipment

Examination Objectives

Effective date May 1996

1. To determine if the policies, practices, procedures, and internal controls regarding bank premises and equipment are adequate.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To determine the adequacy and propriety of the bank’s present and planned investment in bank premises.
5. To determine compliance with laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.
Bank Premises and Equipment
Examination Procedures
Effective date October 2009
Section 2190.3

1. If selected for implementation, complete or update the Bank Premises and Equipment section of the Internal Control Questionnaire.

2. Based on the evaluation of internal controls and the work performed by internal/external auditors (see separate program) determine the scope of the examination.

3. Evaluate policies and procedures regarding premises and fixed assets. Determine that the guidelines discourage conflicts of interest or self dealing with vendors, servicers, and insurers. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Determine that audit procedures consider premises and equipment that are held by the bank, a subsidiary, or an affiliate realty corporation as part of sale and leaseback transactions or as lease-purchase contracts.
   • If significant, auditors should ensure capitalized lease designations are appropriate and in accordance with GAAP.
   • If part of sale-leaseback agreement, they should review for proper accounting treatment and in accordance with GAAP. Also obtain a listing of any audit deficiencies noted in the latest review done by internal/external auditors from the examiner assigned “Internal Control,” and determine if appropriate corrections have been made.

4. Obtain a summary of changes in fixed asset and depreciation ledgers that have occurred since the previous examination. Also, balance each of the fixed asset subsidiary accounts to the appropriate general ledger control account.

5. Determine, by reference to excerpts of the minutes of meetings of the board of directors, that all major additions and disposals of fixed assets are properly documented.

6. Determine whether information and reporting regarding fixed assets to senior management and the board are adequate.

7. Determine by observation and inquiry of appropriate management personnel, that the bank’s books have been properly adjusted to reflect significant assets that are idle, abandoned, or useless.

8. In instances where bank premises are subject to lease, perform the following for:
   a. Bank as lessee:
      • For each lease which has an initial lease period of more than one year, obtain from the bank:
        — Name of lessor.
        — Expiration date.
        — Required minimum annual payments.
        — Current status.
        — Renewable option provisions.
   b. Bank as lessor:
      • Determine if the bank relies on rental income to contribute to payment of occupancy expenses and if that income is material. As a general guideline, rental income is considered material if it equals or exceeds 1 percent of total operating revenues.
      • If rental income is material, analyze the bank’s potential exposure from:
        — Concentrations among lessees.
        — Impending expiration of major leases.
        — Lack of creditworthiness of lessee.
        — Non-compliance with lease terms.

9. Forward to the examiner assigned “Funds Management:”
   a. The total minimum annual commitment under various lease agreements.
   b. The dollar amount of any significant, future fixed asset expenditure(s).

10. Determine, by reference to appropriate workpapers (see “Insurance Coverage”), that fire and hazard insurance, in sufficient amounts, is in force.

11. Perform a limited test of the records to verify that depreciation methods are consistent with bank policy, prior years’ calculations, GAAP, and applicable IRS laws.

12. Analyze the bank’s investment in fixed assets and the annual expenditures required to carry them and determine their reasonableness relative to:
   a. Present total capital structure.
   b. Present annual earnings.
   c. Projected future earnings.

14. Determine that real estate held for future expansion still qualifies as bank premises.

15. Review the following with appropriate management personnel or prepare a memo to other examiners for their use in reviewing with management:
   a. Any internal control deficiencies.
   b. Any policy deficiencies.
   c. Any violations of law.

16. Review your findings with respect to the propriety and adequacy of present and projected investment in bank premises. In formulating your conclusion, consider:
   a. Size of bank.
   b. Cash flow forecasts.
   c. Existing fixed asset investments.
   d. Anticipated growth potential.
   e. Bank programs to maintain assets at their most optimal use.
   f. The policy used to establish the useful life of each asset.
   g. Control of inventory procedures.
   h. Systems used to record all asset purchases, sales and retirements between physical inventories.

17. Prepare comments regarding deficiencies or violations of law for inclusion in the examination report.

18. Prepare the appropriate write-ups for the report of examination.

19. Update workpapers with any information that will facilitate future examinations.
Review the bank’s internal controls, policies, practices and procedures over additions, sales and disposals and depreciation of bank premises and equipment. The bank’s system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

CUSTODY OF PROPERTY

*1. Do the bank’s procedures preclude persons who have access to property from having “sole custody of property,” in that:
   a. Its physical character or use would make any unauthorized disposal readily apparent?
   b. Inventory control methods sufficiently limit accessibility?

ADDITIONS, SALES, AND DISPOSALS

2. Is the addition, sale or disposal of property approved by the signature of an officer who does not also control the related disbursement or receipt of funds?
3. Is board of directors’ approval required for all major additions, sales or disposals of property (if so, indicate the amount that constitutes a major addition, sale or disposal $_______)?
*4. Is the preparation, addition and posting of property additions, sales and disposals records, if any, performed and/or adequately reviewed by persons who do not also have sole custody of property?
*5. Are any property additions, sales and disposals records, balanced, at least annually, to the appropriate general controls by persons who do not also have sole custody of property?
6. Are the bank’s procedures such that all additions are reviewed to determine whether they represent replacements and that any replaced items are cleared from the accounts?
7. Do the bank’s procedures provide for signed receipts for removal of equipment?
*8. Do the bank’s policies cover procedures for selecting a seller, servicer, insurer, or purchaser of major assets (through competitive bidding, etc.), to prevent any possibility of conflict of interest or self-dealing?
9. Do the review procedures provide for appraisal of an asset to determine the propriety of the proposed purchase or sales price?

DEPRECIATION

*10. Is the preparation, addition and posting of periodic depreciation records performed and adequately reviewed by persons who do not also have sole custody of property?
11. Do the bank’s procedures require that regular charges be made for depreciation expense?
*12. Are the subsidiary depreciation records balanced, at least annually, to the appropriate general controls by persons who do not also have sole custody of property?

PROPERTY RECORDS

*13. Are subsidiary property records posted by persons who do not also have sole custody of property?
*14. Are the subsidiary property records balanced, at least annually, to the appropriate general ledger accounts by persons who do not also have sole custody of property?

BANK AS LESSOR (BANK PREMISES AND BANK-RELATED EQUIPMENT ONLY)

*15. Do policies provide for division of the duties involved in billing and collection of rental payments?
16. Are the lease agreements subject to the same direct verification program applied to other bank assets and liabilities?
17. Are credit checks performed on potential lessees?
18. Do policies provide for a periodic review of lessees for undue concentrations of affiliated or related concerns?

BANK AS LESSEE (BANK PREMISES AND BANK-RELATED EQUIPMENT ONLY)

19. Does the bank have a clearly defined method of determining whether fixed assets should be owned or leased, and is supporting documentation maintained by the bank?
20. Are procedures in effect to determine whether a lease is a “capital” or an “operating” lease as defined by the generally accepted accounting principles?
21. Do the bank’s operating procedures provide, on “capital” leases, that the amount capitalized is computed by more than one individual and/or reviewed by an independent party?

OTHER PROCEDURES

*22. Is the physical existence of bank equipment periodically checked or tested, such as by a physical inventory, and are any differences from property records investigated by persons who do not also have sole custody of property?
23. Do the bank’s procedures provide for serial numbering of equipment?
24. Are the bank’s policies and procedures on property in written form?
25. Is the benefit of expert tax advice obtained prior to final decision-making on significant transactions involving fixed assets?
*26. Does the bank maintain separate property files which include invoices (including settlement sheets and bills of sale, as necessary), titles (on real estate, vehicles, etc.) and other pertinent ownership data as part of the required documentation?

CONCLUSIONS

27. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant additional deficiencies that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
28. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
Other Real Estate Owned
Effective date January 2018

A state member bank’s authority to hold real estate is governed by state law. A bank is permitted to include owned real estate in its premises account if the real estate serves as premises for operations or is intended to be used as premises. In addition, a bank may hold other real estate owned (OREO), which is defined below. State laws dictate the terms and conditions under which state-chartered banks may acquire and hold OREO.

The bank’s policies and procedures should address the management and disposition of its OREO holdings, including:

- protection of a bank’s interests in a property,
- account for the OREO asset and expenses associated with the maintenance and disposition of the property in conformance with generally accepted accounting principles and Call Report Instructions, and
- compliance with federal and state laws pertaining to the holding of OREO.

DEFINITION

Other real estate comprises all real estate, other than bank premises, owned or controlled by the bank or its consolidated subsidiaries, including real estate acquired through foreclosure, even if the bank has not received title to the property. Bank holdings of OREO may arise from the following events:

- the bank purchases real estate at a sale under judgment, decree, or mortgage when the property secured debts previously contracted;
- a borrower conveys real estate to the bank to fully or partially satisfy a debt previously contracted (acceptance of deed in lieu of foreclosure);
- real estate is obtained in exchange for future advances to an existing borrower to fully or partially satisfy debts previously contracted;
- a bank takes possession (although not necessarily title) of collateral in a collateral-dependent real estate loan (i.e., an in-substance foreclosure);
- a bank has relocated its premises and has not yet sold the old premises;
- a bank abandons plans to use real estate as premises for future expansion; and
- a bank has foreclosed real estate that is under contract for sale.

There are three major phases of the OREO life cycle: acquisition, holding period, and disposition.

ACCOUNTING AND REPORTING STANDARDS

The accounting and reporting standards for the acquisition phase are set forth in Accounting Standards Codification (ASC) 310-40, Receivables-Troubled Debt Restructurings by Creditors (formerly known as FAS 15, “Accounting by Debtors and Creditors for Troubled Debt Restructurings”); ASC 360-10-30, Property, Plant and Equipment-Initial Measurement (formerly included in FAS 144, “Accounting for the Impairment or Disposal of Long-Lived Assets”); and ASC 360-10-35, Property, Plant and Equipment-Subsequent Measurement. Until the effective date of Accounting Standards Update (ASU) 2014-091 “Revenue from Contracts with Customers,” which includes amendments to ASC Subtopic 610-20, Other Income–Gains and Losses from the Derecognition of Nonfinancial Assets, the primary accounting guidance for sales of foreclosed real estate is ASC Subtopic 360-20, Property, Plant, and Equipment – Real Estate Sales (formerly FASB Statement No. 66, “Accounting for Sales of Real Estate”). When it takes effect, ASC Subtopic 610-20 supersedes ASC Subtopic 360-20 for real estate sales not

---

1. Effective date of ASU 2014-09, including ASC Subtopic 610-20 and ASC Topic 606 – For institutions that are public business entities, these standards are effective for fiscal years beginning after December 15, 2017, including interim reporting periods within those fiscal years. For institutions that are not public business entities (i.e., that are private companies), the standards are effective for fiscal years beginning after December 15, 2018, and interim reporting periods within fiscal years beginning after December 15, 2019. For further information, see the Glossary entries in the Call Report Instructions for “public business entity” and “private company.” Early application of these standards is permitted for all institutions for fiscal years beginning after December 15, 2016, and interim reporting periods as prescribed in the standards. An institution that early adopts these standards must apply them (including all of ASC Topic 606 on revenue recognition) in their entirety. If an institution chooses to early adopt these standards for financial reporting purposes, the institution should implement them in its Call Report for the same quarter-end report date.
accompanied by a leaseback and becomes the primary accounting guidance for sales of foreclosed real estate. Reference should also be made to the FFIEC 031 Consolidated Report of Condition and Income for a Bank with Domestic and Foreign Offices (Call Report), Schedules RC and M, and the instructions for the reporting of OREO transactions.

TRANSFER OF ASSETS TO OREO

Real estate assets transferred to OREO should be accounted for individually (on an asset-by-asset basis) on the date of transfer. Each transferred real estate asset should be recorded at its “fair value” less estimated cost to sell the asset. This “fair value” becomes the cost of the asset. “Fair value” is the amount the creditor should reasonably expect to receive for the asset in a current sale between a willing buyer and a willing seller (that is, not a forced liquidation sale).

The recorded amount of a loan (or an investment in a loan) at the time of foreclosure involving real estate transferred to OREO is the unpaid balance adjusted for any unamortized premium or discount and unamortized loan fees or costs, less any amount previously charged off, plus recorded accrued interest. Any excess of the recorded amount of the loan over the transferred property’s fair value is a loss that must be charged against the allowance for loan and lease losses (ALLL) immediately upon the property’s transfer to OREO. If the fair value (less costs to sell) of the property exceeds a recorded loan amount, the excess should be reported as a recovery of a previous charge-off or in current earnings, as appropriate. Before recording the $7 in earnings, significant scrutiny should be applied to understand why the borrower would risk losing the equity in the property. Additionally, in some states, lenders are required to return recovered amounts, in excess of the amount owed, to the borrower.

EVALUATIONS OF REAL ESTATE TO DETERMINE THE CARRYING VALUE OF OREO

The transfer of real estate pledged as collateral for a loan to OREO is considered to be a “transaction involving an existing extension of credit” under 12 CFR 225.63(a)(7) and is exempt from Regulation Y’s appraisal requirement. However, under 12 CFR 225.63(b), the bank must obtain an “appropriate evaluation” of the real estate that is “consistent with safe and sound banking practices” to establish the carrying value of the OREO. A bank may elect, but is not required, to obtain an appraisal to serve as the “appropriate evaluation.” Until the evaluation is available, a bank should rely on its best estimate of the property’s value to establish the carrying value. The federal banking agencies have issued appraisal and evaluation guidelines to provide guidance to examining personnel and federally regulated institutions regarding prudent appraisal and evaluation policies, procedures, practices, and standards.

The appraisal or evaluation should provide an estimate of the parcel’s market value. (Refer to section 4140.1, “Real Estate Appraisals and Evaluations,” and its appendices A to D found in section A4140.1.) Generally, appraisals or evaluations contain an estimate of the property’s fair value should be reported at the lower of the cost of the property ($94 in this case) or the fair value of $100 less cost to sell of $6, which is also $94. Any subsequent declines in value should be recorded by creating a valuation allowance.

Alternatively, if the recorded loan amount is $250, the property’s fair value is $275, and the estimated selling expenses are $18, the property’s carrying value would be $257 (the property’s fair value of $275 less estimated cost to sell of $18). The $7 difference between the fair value (less costs to sell) and the recorded loan amount would be recorded as a recovery of a previous charge-off or in current earnings, as appropriate. Before recording the $7 in earnings, significant scrutiny should be applied to understand why the borrower would risk losing the equity in the property. Additionally, in some states, lenders are required to return recovered amounts, in excess of the amount owed, to the borrower.
value based on a forecast of expected cash flows, discounted at an interest rate that is commensurate with the risks involved. The cash flow estimate should include projected revenues and the costs of ownership, development, operation, marketing, and sale. In such situations, the appraiser or evaluator should fully describe the definition of value and the market conditions that have been considered in estimating the property’s fair value.

PROPERTY ACQUIRED THROUGH FORECLOSURE—JUNIOR LIENHOLDER

When a bank acquires a property through foreclosure as a junior lienholder, whether or not the first lien has been assumed, the property should be recorded as an asset at its fair value less its estimated cost to sell. Any senior debt (principal and accrued interest) should be recorded as a corresponding liability. Senior debt should not be netted against the assets. Any excess of the recorded loan amount over the property’s fair value less estimated cost to sell should be charged off to the ALLL. The recorded investment may not exceed the sum of any senior and junior debt. Payments made on senior debt should be accounted for by reducing both the asset and the liability. Interest that accrues on the senior debt after foreclosure should be recognized as interest expense.

COLLATERAL-DEPENDENT LOANS

Collateral-dependent loans are those for which repayment is expected to be provided solely from the underlying collateral when there are no other available and reliable sources of repayment. Guidance for the treatment of certain troubled debts and collateral dependent loans is found in ASC 310-40, Receivables-Troubled Debt Restructurings by Creditors. According to the instructions in the Call Report, collateral-dependent real estate loans (other than consumer mortgage loans) should be transferred to OREO when the lender has taken physical possession of the collateral, regardless of whether formal foreclosure proceedings have taken place. Otherwise, the bank should keep the collateral-dependent real estate loan categorized as a loan. To facilitate administration and tracking, however, banks may choose to include a collateral-dependent real estate loan in the OREO portfolio as potential or probable OREO. Impairment of a collateral-dependent loan must be measured using the fair value of the collateral. In general, any portion of the recorded amount of a collateral-dependent loan in excess of the fair value of the collateral (less the estimated cost to sell) that can be identified as uncollectible should be promptly charged off against the ALLL. Examiners should review these loans using the same criteria applied to OREO.

For a residential real estate property collateralizing a consumer mortgage loan, a bank is considered to have received physical possession only upon the occurrence of either of the following:

1. The bank obtains legal title to the residential real estate property upon completion of a foreclosure even if the borrower has redemption rights that provide the borrower with a legal right for a period of time after a foreclosure to reclaim the real estate property by paying certain amounts specified by law, or

2. The borrower conveys all interest in the residential real estate property to the bank to satisfy the loan through completion of a deed in lieu of foreclosure or through a similar legal agreement. The deed in lieu of foreclosure or similar legal agreement is completed when agreed-upon terms and conditions have been satisfied by both the borrower and the creditor.

PROPERTY ACQUIRED FOR FUTURE USE

Property the bank originally acquired for future use as premises, but for which plans have been abandoned, and property that formerly served as bank premises, should be accounted for at the lower of (1) its fair value less cost to sell or (2) the cost of the asset on the date of transfer to OREO. Any excess of book value over fair
value should be charged to other operating expense during the current period.

CARRYING VALUE OF OREO

A bank should have a policy for periodically determining the fair value of its OREO property by obtaining an appraisal or an evaluation, as appropriate. While the Federal Reserve has no prescribed time frame for when a bank should reappraise or reevaluate its OREO property, the bank’s policy should conform to state law, if applicable, and take into account the volatility of the local real estate market. A bank should determine whether there have been material changes to the underlying assumptions in the appraisal or valuation that have affected the original estimate of value. If material changes have occurred, the bank should obtain a new appraisal or evaluation based on assumptions that reflect the changed conditions.

ACCOUNTING FOR SUBSEQUENT CHANGES IN FAIR VALUE

Charges for subsequent declines in the fair value of OREO property should never be posted to the ALLL. If an appraisal or evaluation indicates a subsequent decline in the fair value of an OREO property, the loss in value should be recognized through the income statement by a charge to earnings. Banks should attempt to determine whether a property’s decline in value is not recoverable, taking into consideration each property’s characteristics and existing market dynamics. The preferred treatment for nonrecoverable losses in value is the direct write-down method, in which the charge to expenses is offset by a reduction in the OREO property’s carrying value. If the reduction in value is deemed temporary, the charge to earnings may be offset by establishing a valuation allowance specifically for that property. In the event of subsequent appreciation in the value of an OREO property, the increase can only be reflected by reducing this valuation allowance or recognizing a gain upon disposition, but never by a direct write-up of the property’s value. A change to the valuation allowance should be offset with a debit or credit to expense in the period in which it occurs.

In addition to the preceding treatment of the write-down in the OREO value, the previous subsection “Transfer of Assets to Other Real Estate Owned” discusses setting up a valuation allowance for estimated selling expenses associated with the sale of the other real estate. The balance of this valuation allowance can fluctuate based on changes in the fair value of the property held, but it can never be less than zero. The following examples are presented to illustrate the treatment that subsequent depreciation and appreciation would have on OREO properties.

Depreciation in an OREO Property’s Value

Assume a bank has written down its initial recorded investment in an OREO property from $125 to its fair value of $100 minus costs to sell (assume costs to sell of $6), or $94. Assume that a new appraisal indicates a value of $90, with reduced estimated selling expenses of $5, or $85. If the bank determines this decline in value is nonrecoverable, the bank must expense the depreciation of $9 ($94 minus $85).

Appreciation in an OREO Property’s Value

Assume a bank has written down its recorded investment in an OREO property to its fair value of $110 less costs to sell of $10, or $100, and it subsequently created a valuation allowance for the $10 temporary decline in value. A new appraisal indicates an increase in the value of the property to $112 less costs to sell of $9, or $103. Notwithstanding the property’s increased value, the recorded investment value cannot be increased above $100. The valuation allowance for selling expenses can never be less than zero, thus prohibiting an increase in the value of the property above the recorded investment. In this case, the bank would reduce the valuation allowance to zero, which would increase the recorded value to $100.

Accounting for OREO Income and Expense

Gross revenue from OREO should be recognized in the period in which it is earned. Direct costs incurred in connection with holding an
OREO property, including legal fees, real estate
taxes, depreciation, and direct write-downs,
should be charged to expense when incurred.

A bank can expend funds to develop and
improve OREO when it appears reasonable to
expect that any shortfall between the property’s
fair value and the bank’s recorded book value
will be reduced by an amount equal to or greater
than the expenditure. Such expenditures should
not be used for speculation in real estate. The
economic assumptions relating to the bank’s
decision to improve a particular OREO property
should be well documented. Any payments for
developing or improving OREO property are
treated as capital expenditures and should be
reflected by increasing the property’s carrying
value to the extent that those expenditures
increase the value of the property.

DISPOSITION OF OREO

OREO property must be disposed of within any
holding period established by state law and, in
any case, as soon as it is prudent and reasonable.
Banks should maintain documentation reflecting
their efforts to dispose of OREO property, which
should include

- a record of inquiries and offers made by
  potential buyers,
- methods used in advertising the property for
  sale whether by the bank or its agent, and
- other information reflecting sales efforts.

The sale or disposition of OREO property is
considered a real estate-related financial trans-
action under the Board’s appraisal regulation. A
sale or disposition of an OREO property that
qualifies as a federally related transaction under
the regulation requires an appraisal conforming
to the regulation. A sale or disposition that does
not qualify as a federally related transaction
nonetheless must comply with the regulation by
having an appropriate evaluation of the real
estate that is consistent with safe and sound
banking practices.

The bank should promptly dispose of OREO
if it can recover the amount of its original loan
plus additional advances and other costs related
to the loan or the OREO property before the end
of the legal holding period. The holding period
generally begins on the date that legal title to the
property is transferred to the bank, except for
real estate that has become OREO because the
bank no longer contemplates using it as its
premises. The holding period for this type of
OREO property begins on the day that plans for
future use are formally terminated. Some states
require OREO property to be written off or
depreciated on a scheduled basis, or to be
written off at the end of a specified time period.
The bank should determine whether such require-
ments exist and comply with them.

Financing Sales of OREO

Gains and losses resulting from a sale of OREO
properties for cash must be recognized immedi-
ately. Until the effective date of ASU 2014-09,
“Revenue from Contracts with Customers
(Topic 606),” a gain resulting from a sale in
which the bank provides financing should be
accounted for under the standards described in
ASC 360-20-40, Property, Plant and Equipment-
Real Estate Sales-Derecognition. After the effec-
tive date of ASU 2014-09, a gain resulting from
a sale in which the bank provides financing
should be accounted for under the standards
described in ASC Subtopic 610-20, Other
Income–Gains and Losses from the Derecogni-
tion of Nonfinancial Assets. For further details,
refer to the glossary section of the Call Report
instructions under “foreclosed assets.”

Nonrecourse Financing

Banks may promote the sale of foreclosed real
estate by offering nonrecourse financing to buy-
ers. These loans should be made under the same
credit terms and underwriting standards the
bank employs for its regular lending activity.
Financing arrangements associated with this
type of transaction are subject to the accounting
treatment discussed above.

RENTAL OF RESIDENTIAL OREO
PROPERTIES

OREO Rental Policy Statement
Overview

The Federal Reserve issued a policy statement3
on April 5, 2012, indicating that, consistent with
the general policy of the Federal Reserve and in

---

Rental of Residential Other Real Estate Owned (OREO)
Properties,” and its attachment.
In light of the extraordinary market conditions that existed, banking organizations may rent one-to-four-family residential OREO properties without having to demonstrate continuous active marketing of the properties, provided suitable policies and procedures are followed.4 Under these conditions and circumstances, banking organizations would not contravene supervisory expectations that they show “good-faith efforts” to dispose of OREO by renting the property within the applicable holding period. Key risk-management considerations for banking organizations that engage in the rental of residential OREO, including compliance with holding-period requirements for OREO, compliance with landlord-tenant and associated requirements, and accounting according to generally accepted accounting principles (GAAP). Rental of OREO properties with leases in place and demonstrated cash flow from rental operations sufficient to generate a reasonable rate of return should generally not be classified.

The statement establishes specific supervisory expectations for banking organizations that undertake large-scale residential OREO rentals (generally, 50 properties or more available for rent). Such organizations should have formal policies and procedures governing the operation and administration of OREO rental activities, including property-specific rental plans, policies and procedures for compliance with applicable laws and regulations, a risk-management framework, and oversight of third-party property managers.

Policy Statement on Rental of Residential OREO Properties

In light of the large volume of distressed residential properties and the indications of higher demand for rental housing in many markets, some banking organizations may choose to make greater use of rental activities in their disposition strategies than in the past. In response to the volume of these activities, the Federal Reserve adopted an April 2012 policy statement, whereby banking organizations may rent one- to four-family residential OREO properties without having to demonstrate continuous active marketing of such properties, provided suitable policies and procedures are followed. This policy statement reminds banking organizations and examiners that the Federal Reserve’s regulations and policies permit the rental of residential OREO properties to third-party tenants as part of an orderly disposition strategy within statutory and regulatory limits.5 This policy statement applies to state member banks, BHCs, nonbank subsidiaries of BHCs, savings and loan holding companies, non-thrift subsidiaries of savings and loan holding companies, and U.S. branches and agencies of foreign banking organizations (collectively, banking organizations).

The general policy of the Federal Reserve is that banking organizations should make good-faith efforts to dispose of OREO properties at the earliest practicable date. Consistent with this policy, in light of the extraordinary market conditions that currently prevail, banking organizations may rent residential OREO properties (within statutory and regulatory holding-period limits) without having to demonstrate continuous active marketing of the property, provided that suitable policies and procedures are followed. Under these conditions and circumstances, banking organizations would not contravene supervisory expectations that they show “good-faith efforts” to dispose of OREO by renting the property within the applicable holding period. Moreover, to the extent that OREO rental properties meet the definition of community development under the Community Reinvestment Act (CRA) regulations, they would receive favorable CRA consideration.6 In all respects, banking organizations that rent OREO properties are expected to comply with all applicable federal, state, and local statutes and regulations.

Home prices have been under considerable downward pressure since the financial crisis began, in part due to the large volume of houses for sale by creditors, whether acquired through foreclosure or voluntary surrender of the property by a seriously delinquent borrower (distressed sales). Creditors, in turn, often seek to liquidate their inventories of such properties.

---
4. The policy statement supplements other relevant Federal Reserve guidance, including the Board’s policy statement on the disposition of property acquired in satisfaction of debts previously contracted. See 12 CFR 225.140.
5. The term “residential properties” in this policy statement encompasses all one- to four-family properties and does not include multifamily residential or commercial properties.
6. The Federal Reserve’s CRA regulations define community development to include activities that provide affordable housing for low- and moderate-income individuals as well as those activities that revitalize or stabilize low- and moderate-income areas (see 12 CFR 228.12(g)(1) and (4)).
Risk-Management Considerations for Residential OREO Property Rentals

In all circumstances, the Federal Reserve expects a banking organization considering such rentals to evaluate the overall costs, benefits, and risks of renting. The banking organization’s decision to rent OREO might depend significantly on the condition of individual properties, local market conditions for rental and owner-occupied housing, and its capacity to engage in rental activity in a safe and sound manner and consistent with applicable laws and regulations.

Banking organizations should have an operational framework for their residential OREO rental activities that is appropriate to the extent to which they rent OREO properties. In general, banking organizations with relatively small holdings of residential OREO properties—fewer than 50 individual properties rented or available for rent—should use a framework that appropriately records the organizations’ rental decisions and transactions as they take place, preserves key documents, and is otherwise sufficient to safeguard and manage the individual OREO assets. In contrast, banking organizations with large inventories of residential OREO properties—50 or more individual properties available for rent or rented—should utilize a framework that systematically documents how they meet the supervisory expectations described in the next section. All banking organizations that rent OREO properties, irrespective of the size of their holdings, should adhere to the guidance set forth in this section.

Compliance with Maximum OREO Holding-Period Requirements

Banking organizations should pursue a clear and credible approach for ultimate sale of the rental OREO property within the applicable holding-period limitations. Exit strategies in some cases may include special transaction features to facilitate the sale of OREO, potentially including prudent use of seller-assisted financing or rent-to-own arrangements with tenants.

Compliance with Landlord-Tenant and Other Associated Requirements

Banking organizations’ residential property rental activities are expected to comply with all applicable federal, state, and local laws and regulations, including landlord-tenant laws; landlord licensing or registration requirements; property maintenance standards; eviction protections; protections under the Servicemembers...
Civil Relief Act;\textsuperscript{12} and anti-discrimination laws, including the applicable provisions of the Fair Housing Act and the Americans with Disabilities Act. Prior to undertaking the rental of OREO properties, banking organizations should determine whether such activities are legally permissible under applicable laws, including state laws. When applicable, banking organizations should review homeowner and condominium association bylaws and local zoning laws for prohibitions on renting a property. Banking organizations may use third-party vendors to manage properties but should provide necessary oversight to ensure that property managers fully understand and comply with these federal, state, and local requirements.

\subsection*{Other Considerations}

Banking organizations should account for OREO assets in accordance with GAAP and applicable regulatory reporting instructions.\textsuperscript{13}

\subsection*{Specific Expectations for Large-Scale Residential OREO Rentals}

Banking organizations with large inventories of residential OREO properties that decide to engage in rental activities should have in place a documented rental strategy, including formal policies and procedures for OREO rental activities and a documented operational framework. Policies and procedures should clearly describe how the banking organization will comply with all applicable laws and regulations. Policies and procedures should include processes for determining whether the properties meet local building code requirements and are otherwise habitable, and whether improvements to the properties are needed in order to market them for rent. In addition, policies and procedures should establish operational standards for the banking organization’s rental activities, including that adequate insurance policies are in place, that property and other tax obligations are met on a timely basis, and that expenditures on improvements are appropriate to the value of the property and to prevailing norms in the local market.

Policies and procedures should also require plans for rental of residential OREO properties, down to the individual property level, that cover the full holding period from the time the bank received title to ultimate sale by the bank. Plans should identify which properties would be eligible for rental. Plans also should establish criteria by which properties are chosen for marketing as rental properties, and the process by which rental decisions should be made and implemented. Plans should describe the general conditions under which the organization believes a rental approach is likely to be successful, including appropriate consideration of rental market and economic conditions in respective local markets.

Finally, policies and procedures should address all risk-management issues that arise in renting residential OREO properties. Some risk elements parallel those found in other banking activities, for example, the credit risk associated with tenants’ potential failure to make timely rent payments, or potential conflict of interest issues such as the use of a firm by a banking organization to both provide information on a property’s value and list that property for sale on behalf of the banking organization. Other risks unique to such rental include

\begin{itemize}
  \item dealing with vacancy, marketing, and re-rental of previously occupied properties;\textsuperscript{14}
  \item liability risk arising from rental activities, along with the use and management of liability insurance or other approaches to mitigate that liability and risk; and
  \item legal requirements arising from the potential need to take action against tenants for rent delinquency, potentially including eviction. Such requirements may include notice periods.
\end{itemize}

Banking organizations may need to develop new policies and risk-management processes to address properly these categories of risk.

In many cases, banking organizations will use third-party vendors (for example, real estate agents or professional property managers) to manage their OREO properties. Policies and procedures should provide that such individuals or organizations have appropriate expertise in property management, be in sound financial

\textsuperscript{13} See the instructions for the Consolidated Reports of Condition and Income (Call Report) as to the reporting of OREO transactions and to the Consolidated Financial Statements for Holding Companies (FR Y-9C).

\textsuperscript{14} Various jurisdictions may apply specific requirements to landlords in their marketing and re-rental activities (for example, an obligation to offer potential tenants an initial lease term of two years).
condition, and have a good track record in managing similar properties. Policies and procedures should also call for contracts with such vendors to carry appropriate terms and provide, among other key elements, for adequate management information systems and reporting to the banking organization, including rent rolls (along with actual lease agreements), maintenance logs, and security deposits and charges to these deposits. Banking organizations should provide for adequate oversight of vendors.

CLASSIFICATION OF OREO

The examiner should generally evaluate the adequacy of the bank’s information to support the carrying value of an OREO property, and the appropriateness of its classification. OREO usually should be considered a problem asset, even when it is carried at or below its fair value. Despite the apparent adequacy of the property’s fair value, the bank’s acquisition of OREO through foreclosure usually indicates a lack of demand for the property or weaknesses in the property’s condition.

When evaluating the OREO property for classification purposes, the examiner must consider the property’s fair value, whether it is being held in conformance with state law, and whether it is being disposed of according to the bank’s plan. The amount of an OREO property subject to classification is the carrying value of the property, net of any specific valuation allowance. The existence of a specific valuation allowance does not preclude adverse classification of OREO. Banking organizations should also provide the appropriate classification treatment for their residential OREO holdings. Residential OREO is typically treated as a substandard asset, as defined by the interagency classification guidelines (see section 2060.1, “Classification of Credits”). However, residential properties with leases in place and demonstrated cash flow from rental operations sufficient to generate a reasonable rate of return? should generally not be classified. The examiner should review all types of OREO for classification purposes. When the bank provides financing, the examiner should determine whether the loan is prudently underwritten.

15. Whether a rate of return is reasonable depends on a number of considerations, including local market conditions, the time horizon of the rental, and the nature of the property. Commonly used measures include a capitalization rate (known as a “cap rate,” which generally is the expected annual cash flows from renting the property relative to the price at which the property holder could expect to sell it in the owner-occupied market), as discussed in the housing white paper, or other measures of internal rate of return. Depending on the circumstances and risks associated with the property, valid indications that a level of return is reasonable could include (but would not be not limited to) comparisons with normal returns for single-family rentals in the relevant local market; rates of return on other similar local real estate investments; or cap rates or other measures of internal rate of return on investments with similar risk profiles. For example, in many markets a cap rate above 8 percent would likely represent a reasonable rate of return. Large one-time expenditures that are idiosyncratic to a given year but are normal to residential properties over their lifetime, such as replacement costs for worn-out appliances, should generally not be the reason that a property would be classified. Costs of improvement should be treated as capital expenditures with a corresponding effect on the properties’ carrying values, but only to the extent the improvements increase the properties’ values.
The examiner should review all relevant factors to determine the quality and risk of the OREO property and the degree of probability that its carrying value will be realized. Some factors the examiner should consider include:

- the property’s carrying value relative to its fair value (including the date of any appraisal or evaluation relative to changes in market conditions), the bank’s asking price, and offers received;
- the source and quality of the appraisal or evaluation, including the reasonableness of assumptions, such as projected cash flow for commercial properties;
- the length of time a property has been on the market and local market conditions for the type of property involved, such as history and trend of recent sales for comparable properties;
- bank management’s ability and track record in liquidating other real estate and assets acquired in satisfaction of debts previously contracted;
- income and expenses generated by the property and other economic factors affecting the probability of loss exposure;
- the manner in which the bank intends to dispose of the property;
- other pertinent factors, including property-title problems, statutory redemption privileges, pending changes in the property’s zoning, environmental hazards, other liens, tax status, and insurance.

**ENVIRONMENTAL LIABILITY**

Under federal and state environmental liability statutes, a bank may be liable for cleaning up hazardous substance contamination of OREO. In some cases, the liability may arise before the bank takes title to a borrower’s real estate collateral. A property’s transition from collateral to bank ownership may take an extended period of time. As the financial problems facing a borrower worsen, a bank may become more involved in managing a company or property. Such involvement may become extensive enough that the bank is deemed to have met substantially all ownership criteria, the absence of a clear title in the bank’s name notwithstanding. Generally, the more bank management is involved in such activity, the greater the bank’s exposure to any future clean-up costs assessed in connection with the property. A more thorough discussion of environmental liability can be found in section 2040.1, “Loan Portfolio Management,” of this manual, under the subsection “Other Lending Concerns.”
Other Real Estate Owned
Examination Objectives
Effective date May 1995

Section 2200.2

1. To determine if the policies, practices, procedures, and internal controls regarding other real estate owned are adequate.
2. To determine that bank officers and employees are operating in conformance with the established guidelines.
3. To evaluate the validity and quality of all other real estate owned.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulations have been noted.
1. If selected for implementation, complete the Other Real Estate Owned section of the Internal Control Questionnaire.

2. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures and obtain a listing of any audit deficiencies noted in the latest review done by internal/external auditors and determine if appropriate corrections have been made.

3. Obtain a list of other real estate owned and agree total to general ledger.

4. Review the other real estate owned account to determine if any property has been disposed of since the prior examination and:
   a. If so, determine that:
      • The bank accepted written bids for the property.
      • The bids are maintained on file.
      • There is justification for accepting a lower bid if the bank did not accept the highest one.
   b. Investigate any insider transactions.

5. Test compliance with applicable laws and regulations:
   a. Determine that other real estate owned is held in accordance with the provisions of applicable state law.
   b. Determine if other real estate is being amortized or written off in compliance with applicable state law.
   c. Consult with the examiners assigned to “Loan Portfolio Management,” “Other Assets and Other Liabilities,” “Reserve for Possible Loan Losses” and “Bank Premises and Equipment” to determine if the situation holds real estate acquired as salvage on uncollectible loans, abandoned bank premises or property originally purchased for future expansion, which is no longer intended for such usage.
   d. Review the details of all other real estate owned transactions to determine that:
      • The property has been booked at its fair value.
      • The documentation reflects the bank’s persistent and diligent effort to dispose of the property.
      • If the bank has made expenditures to improve and develop other real estate owned, proper documentation is in the file.
      • Real estate that is former banking premises has been accounted for as other real estate owned since the date of abandonment.
      • Such property is disposed of in accordance with state law.

6. Review parcels of other real estate owned with appropriate management personnel and, if justified, assign appropriate classification. Classification comments should include:
   a. Description of property.
   b. How real estate was acquired.
   c. Amount and date of appraisal.
   d. Amount of any offers and bank’s asking price.
   e. Other circumstances pertinent to the classification.

7. Review the following with appropriate management personnel or prepare a memo to other examiners for their use in reviewing with management:
   a. Internal control exceptions and deficiencies in, or non-compliance with, written policies, practices and procedures.
   b. Uncorrected audit deficiencies.
   c. Violations of law.

8. Prepare comments in appropriate report form for all:
   a. Criticized other real estate owned.
   b. Deficiencies noted.
   c. Violations of law.

9. Update the workpapers with any information that will facilitate future examinations.
Other Real Estate Owned
Internal Control Questionnaire
Effective date March 1984

Review the bank’s internal controls, policies, practices and procedures for other real estate owned. The bank’s systems should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information.

RECORDS

1. Is the preparation, addition, and posting of subsidiary other real estate owned records performed and/or tested by persons who do not have direct, physical or accounting, control of those assets?

2. Are the subsidiary other real estate owned records balanced at least annually to the appropriate general ledger accounts by persons who do not have direct, physical or accounting, control of those assets?

3. Is the posting to the general ledger other real estate owned accounts approved, prior to posting, by persons who do not have direct, physical or accounting, control of those assets?

4. Are supporting documents maintained for all entries to other real estate owned accounts?

5. Are acquisitions and disposals of other real estate owned reported to the board of directors or its designated committee?

6. Does the bank maintain insurance coverage on other real estate owned including liability coverage where necessary?

7. Are all parcels of other real estate owned reviewed at least annually for:
   a. Current appraisal or certification?
   b. Documentation inquiries and offers?
   c. Documented sales efforts?
   d. Evidence of the prudence of additional advances?

OTHER PROCEDURES

8. Are the bank’s policies and procedures relating to the real estate owned in writing?

CONCLUSION

9. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

10. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
OTHER ASSETS

The term other assets, as used in this section, includes all balance-sheet asset accounts not covered specifically in other areas of the examination. Often, such accounts may be quite insignificant in the overall financial condition of the bank. However, significant subquality assets may be uncovered in banks lacking proper internal controls and procedures.

In many banks, other asset accounts are maintained on the daily statement but must be reflected in a specific asset category for reporting. Schedule RC-F of the Consolidated Report of Condition lists the specific accounts classified as “other assets” and includes a catchall heading of “other.” Certain accounts in that other asset account, such as securities borrowed, are examined using the procedures described in the appropriate section of this manual.

Types of Other Asset Accounts

Types of other assets frequently found in banks are the various temporary holding accounts, such as suspense, interoffice, teller, transit, and bookkeeping differences having debit balances. Those accounts should be used only for temporary recording until the offsetting entry is received or fully identified and posted to the proper account. A bank should have written internal control procedures to ensure that difference accounts are reconciled and closed out on a timely basis. Nothing should be allowed to remain in those accounts for any significant length of time—usually no more than a few business days. All difference accounts should be closed out at least quarterly.

General categories of other assets common to banks are accrued interest receivables (on loans, debt securities, and other interest-bearing assets) and other types of income earned but not yet collected (income derived from an asset that is recognized but not yet collected or received on the reporting date), net deferred tax assets (deferred tax assets less deferred tax liabilities that result in a debit balance for a particular tax jurisdiction), interest-only strips receivables for mortgage loans and other financial assets, pre-paid expenses (cash outlays for goods and services, the benefits of which will be realized in future periods), equity securities (cost of) that do not have readily determinable fair values (including Federal Reserve stock and bankers’ bank stock), the cash surrender value of bank-owned life insurance (BOLI), and other nonsecurity or other interest-only strips receivables.

An interest-only strip receivable is the contractual right to receive some or all of the interest due on a bond, mortgage loan, collateralized mortgage obligation, or other interest-bearing financial asset. This includes, for example, the contractual rights to future interest cash flows that exceed contractually specified servicing fees on financial assets that have been sold.

The other assets category also consists of unique and unusual transactions that are not appropriate to include in other line items of a bank’s balance sheet. An unlimited number of possible account titles could be included in this category, such as redeemed food stamps, art objects, antiques, and coin and bullion. Regardless, the examiner must design specific procedures for review and testing to fit the particular account and situation and must document the scope of the review in the workpapers.

Examination Review of Other Assets

Examiners assigned to “other assets” must obtain the detailed breakdown of these accounts when they are reported on the bank’s statement of condition and when they are so designated for the purposes of reporting on the bank’s Call Report. When the account can best be examined by examiners assigned to other areas of the bank, the detailed breakdown of the accounts should be furnished to those examiners. The remaining accounts should be reviewed and evaluated by examiners assigned to this section. The major factor in deciding which accounts are to be reviewed are materiality and the volume of transactions flowing through the account.

With regard to materiality, the examiner should evaluate whether to analyze the nature and quality of each individual item, on the basis of its impact on the overall soundness of the bank or the quality of the bank’s earnings. Therefore, the examiner needs to verify—

- the existence of the asset;
- the proper valuation of the asset;
Other Assets and Other Liabilities

- that the asset is properly classified, described, and disclosed in the financial statements (including the existence of any liens);
- that the asset is being properly amortized on a consistent basis over the estimated period of benefit;
- that any sales of assets, including the recognition of gains and losses, have been properly recognized; and
- the adequacy of the accounting and disposition controls for, as well as the quality of, the asset.

With regard to transaction volume, the examiner should evaluate whether any accounts with small balances have an unusually high level of transaction volume. Therefore, it is important that the examiner verify that—

- the account has a valid business purpose,
- the account is reconciled on a regular basis, and
- the accounting controls are adequate.

An examiner should authenticate the existence of the selected assets by ensuring that their supporting documentation is adequate. Also, the examiner should verify that ownership of the asset rests with the bank. (In the case of organizational costs borne by the bank for the formation of a holding company, those costs, and the related ownership rights in the capitalized asset, should more properly be borne by the ownership interests and should not be recorded as assets of the bank.) Proper valuation and reporting of other asset accounts is another potential area of concern for the examiner. Assets are generally acquired through purchase, trade, repossession, prepayment of expenses, or accrual of income. Generally, assets purchased, traded, or repossessed are transferred at their fair market value. Prepaid expenses and income accrued are booked at cost. An examiner should be particularly alert in identifying those assets that lose value over time to ensure that they are appropriately depreciated or amortized. All intangible assets should be regularly amortized, and management should have a system in place to confirm the valuation of the remaining book balance of the intangible assets.

The examiner needs to ensure that the controls concerning other assets protect the bank’s ownership rights, the accounts are properly valued and accurately reported, and control activities are monitored regularly by management. A bank with good control and review procedures will periodically charge off all uncollectible or unreconcilable items. However, the examiner must frequently go beyond the general ledger control accounts and scan the underlying subsidiary ledgers to ensure that posting errors and the common practice of netting certain accounts against each other do not cause significant balances to go unnoticed because of lack of proper detail.

Deferred Tax Assets

For verifying compliance with the limits found in the risk-based capital guidelines, examiners need to review the net deferred tax assets (deferred tax assets less deferred tax liabilities) that a bank reports in its regulatory reports and the amount of limited deferred tax assets that are not deducted from a bank’s tier 1 capital. The net deferred taxes result from the application of an asset and liability approach for financial-accounting and reporting for income taxes. Net deferred taxes (net deferred tax assets) generally arise from the tax effects of reporting income or expense charges in one period for financial-statement purposes and in another period for tax purposes. This effect, known as a temporary difference, is at times sizable. Tax laws often differ from the recognition and measurement requirements of financial accounting standards. Differences can arise between (1) the amount of taxable income and pretax financial income for a year and (2) the tax bases of assets or liabilities and their reported amounts in financial statements. Charges that result in a significant deferred tax asset are often caused by loan-loss provisions exceeding bad debt deductions for tax purposes in a given period. While banks are permitted to carry deferred income tax assets on their reports of condition, they are limited by generally accepted accounting principles (GAAP) to the extent these items can be carried.

The Financial Accounting Standards Board’s (FASB) Statement No. 109 (FAS 109), “Accounting for Income Taxes,” establishes procedures to (1) measure deferred tax assets and liabilities using a tax-rate convention and (2) assess whether a valuation allowance should be established for deferred tax assets. Enacted tax laws and rates are considered in determining the applicable tax rate and in assessing the need for
a valuation allowance. FAS 109 was to be adopted by banks as of January 1, 1993, or the beginning of their first fiscal year thereafter, if later.

FAS 109 requires a deferred tax asset to be recognized for all temporary differences that will result in deductible amounts in future years and for tax credit carryforwards. For example, a temporary difference may be created between the reported amount and the tax basis of a liability for estimated expenses if, for tax purposes, those estimated expenses are not deductible until a future year. Settlement of that liability will result in tax deductions in future years, and a deferred tax asset is recognized in the current year for the reduction in taxes payable in future years. A valuation allowance is recognized (deducted from the amount of the deferred tax asset) if, based on the weight of available evidence, it is likely that some or all of the deferred tax asset will not be realized.

Deferred Tax Liabilities

A deferred tax liability is recognized for temporary differences that will result in taxable amounts in future years. Deferred tax liabilities that may be related to a particular tax jurisdiction (for example, federal, state, or local) may be offset against each other for reporting purposes. A resulting debit balance is included in “other assets” on the bank Call Report and reported in Schedule RC-F; a resulting credit balance is included in “other liabilities” on the bank Call Report and reported in Schedule RC-G. A bank may report a net deferred tax debit (or asset) for one tax jurisdiction (for example, federal taxes) and also report a net deferred tax credit (or liability) for another tax jurisdiction (for example, state taxes).

Limitation on Deferred Tax Assets for Tier 1 Risk-Based Capital and Leverage Capital

The risk-based capital and leverage capital guidelines include a limit on the amount of certain deferred tax assets that may be included in (that is, not deducted from) tier 1 capital for determining the amount of the bank’s required risk-based and leverage capital levels. Certain deferred tax assets can only be realized if a bank earns taxable income in the future. Deferred tax assets are limited, for regulatory capital purposes, to (1) the amount that the bank expects to realize within one year of the quarter-end report date (based on its projections of future taxable income for that year) or (2) 10 percent of tier 1 capital, whichever is less. The reported amount of deferred tax assets, net of any valuation allowance for deferred tax assets, in excess of the lesser of these two amounts is to be deducted from a bank’s core capital elements in determining tier 1 capital. See section 3020.1 for more detailed information on how to determine the capital composition and limitation on deferred tax assets.

Bank-Owned Life Insurance to Be Included in Other Assets

FASB’s Technical Bulletin No. 85-4 (FTB 85-4), “Accounting for the Purchases of Life Insurance,” addresses the accounting for BOLI. “Other assets” are to include the amount of the assets that represent the cash surrender value of the insurance policy that is reported to the institution by the insurance carrier (less any applicable surrender charges not reflected by the insurance carrier in the reported cash surrender value that could be realized under the insurance contract) as of the balance-sheet date. Because there is no right of offset, an investment in BOLI is reported as an asset separately from any deferred compensation liability. BOLI is reported on the balance sheet of the bank Call Report as “other assets” and on its schedule RC-F as “all other assets—cash surrender value of life insurance.” (See SR-04-4 and SR-04-19.) (The net earnings (losses) on, or the net increases (decreases) in, the net cash surrender value of BOLI should be reported according to the bank Call Report instructions for the glossary and the income statement, Schedules RI and RI-E.)

OTHER LIABILITIES

The term other liabilities represents the bank’s authorized obligations. Other liabilities, as used in this section, include all balance-sheet liability accounts not covered specifically in other areas of the examination. The accounts often may be quite insignificant when compared with the overall size of the bank. In some banks, individual accounts are established for control pur-
poses and appear on the balance sheet as “other liabilities.” For reporting, however, these accounts must be assigned to specific liability categories or netted from related asset categories, as appropriate.

Schedule RC-G of the Consolidated Report of Condition lists the specific accounts classified as “other liabilities.” The schedule includes interest accrued and unpaid on deposits and other expenses that are accrued and unpaid (including accrued income taxes payable), net deferred tax liabilities, the allowance for credit losses on off-balance-sheet credit exposures, and all other liabilities. “All other liabilities” includes liability accounts such as accounts payable, deferred compensation liabilities, dividends that are declared but not yet payable, and derivatives with a negative fair value held for purposes other than trading.

As stated above, the “all other liabilities” term includes deferred compensation liabilities. This account is used to record the bank’s obligation under its deferred compensation agreements. Section 3015.1 discusses deferred compensation agreements in detail, both as to the nature and operation of the different types of agreements and the accounting standards and guidance that are applicable to those agreements—in particular, a revenue-neutral plan or an indexed retirement plan. (See also SR-04-4, SR-04-19, and the glossary entry for “deferred compensation agreements” in the bank Call Report instructions.)

Types of Other Liability Accounts

A general category of other liabilities common to banks is expenses accrued and unpaid. These accounts represent periodic charges to income based on anticipated or contractual payments of funds to be made at a later date. They include such items as interest on deposits, dividends, taxes, and expenses incurred in the normal course of business. There should be a correlation between the amount being accrued daily or monthly and the amount due on the stated or anticipated payment date.

Other liability accounts should be reviewed to determine that accounts, such as deferred taxes, are being properly recognized when there are temporary differences in the recognition of income and expenses between the books and the income tax returns. This review should also determine that matters such as pending tax litigation, equipment contracts, and accounts payable have been properly recorded and are being discharged in accordance with their terms and requirements.

Various miscellaneous liabilities may be found in accounts, such as undisbursed loan funds, deferred credits, interoffice, suspense, and other titles denoting pending status. An unlimited number of possible items could be included. The review of these accounts should determine that they are used properly and that all such items are clearing in the normal course of business. Because of the variety of such accounts, the examiner must develop specific examination procedures to fit the particular account and situation.

Examination Review of Other Liabilities

Examiners assigned to “other liabilities” are responsible for obtaining the bank’s breakdown of these accounts and, when the accounts are to be examined under other sections, must ensure that examiners in charge of those sections receive the necessary information. The remaining accounts should be reviewed and evaluated by examiners assigned to this section.

The primary emphasis of examining other liabilities is to obtain reasonable assurance that (1) the liabilities represent the bank’s authorized obligations and (2) all contingencies and estimated current-period expenses that will be paid in future periods that should be accrued during the period have been accrued, classified, and described in accordance with GAAP, and the related disclosures are adequate. Another emphasis in examining this area should be the adequacy of the controls and procedures the bank employs to promptly record the amount of liability. Without proper management attention, these accounts may be advertently or inadvertently misstated. Unless properly supervised, these accounts may be used to conceal shortages that should be detected immediately. For instance, other liabilities may include fraudulent entries for suspense or interbranch accounts that could be rolled over every other day to avoid stale dates, causing shortages of any amount to be effectively concealed for indefinite periods of time.

Similar to “other assets,” other liability
accounts with small balances may be significant. Scanning account balances may disclose a recorded liability, but it does not aid in determining the accuracy of liability figures. Therefore, it is important to review the documented information obtained from examiners working with and reviewing the minutes of the board and its committees. Responses from legal counsel handling litigation could also be important because this information might reveal a major understatement of liabilities. Determining accurate balances in other liability accounts requires an in-depth review of source documents or the other accounts in which the liability arose.
Other Assets and Other Liabilities
Examination Objectives
Effective date May 1993

1. To determine if policies, practices, procedures, and internal controls regarding “other assets” and “other liabilities” are adequate.
2. To determine that bank officers and employees are operating in conformance with established guidelines.
3. To evaluate the validity and quality of all “other assets.”
4. To determine that “other liabilities” are properly recorded.
5. To determine the scope and adequacy of the audit function.
6. To determine compliance with laws and regulations.
7. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.
Other Assets and Other Liabilities
Examination Procedures
Effective date May 1993

Section 2210.3

1. Complete or update the Internal Control Questionnaire, if selected for implementation.
2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned “Internal Control,” and determine if appropriate corrections have been made.
4. Obtain from the examiner assigned “Examination Strategy” the list of “other assets” and “other liabilities” accounts.
5. Obtain a trial balance of “other assets” and “other liabilities” accounts, including a detailed listing of the interbank accounts and:
   a. Agree or reconcile balances to department controls and general ledger.
   b. Review reconciling items for reasonableness.
6. Scan the trial balances for:
   a. Obvious misclassifications of accounts and, if any are noted, discuss reclassification with appropriate bank personnel and furnish a list to appropriate examining personnel.
   b. Large, old, or unusual items and, if any are noted, perform additional procedures as deemed appropriate, being certain to appraise the quality of “other assets.”
   c. “Other assets” items that represent advances to related organizations, directors, officers, employees, or their interests, and if any are noted, inform the examiner assigned “Loan Portfolio Management.”
7. Determine that amortizing “other assets” accounts are being amortized over a reasonable period correlating to their economic life.
8. If the bank has outstanding customer liability under letters of credit, obtain and forward a list of the names and amounts to the examiner assigned “Loan Portfolio Management.”
9. Review the balance of any “other liabilities” owed to officers, directors, or their interests and investigate, by examining applicable supporting documentation, whether they have been used to—
   a. record unjustified amounts; or
   b. record amounts for items unrelated to bank operations.
10. Develop, and note in the workpapers, any special programs considered necessary to properly analyze any remaining “other assets” or “other liabilities” account.
11. Test for compliance with applicable state laws and regulations.
12. For “other assets” items that are determined to be stale, abandoned, uncollectible, or carried in excess of estimated values, and for “other liabilities” items that are determined to be improperly stated, after consulting with the examiner-in-charge, request management to make the appropriate entries on the bank’s books.
13. Prepare, in appropriate report form, and discuss with appropriate officer(s):
   a. Violations of laws and regulations.
   b. Criticized “other assets.”
   c. The adequacy of written policies relating to “other assets” and “other liabilities.”
   d. Recommended corrective action when policies, practices, or procedures are deficient.
14. Update the workpapers with any information that will facilitate future examinations.
Other Assets and Other Liabilities

Internal Control Questionnaire
Effective date May 1993

Section 2210.4

Review the bank’s internal controls, policies, practices, and procedures concerning “other assets” and “other liabilities.” The bank’s systems should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information.

OTHER ASSETS

Policies and Procedures

1. Has the bank formulated written policies and procedures governing “other assets” accounts?

Records

2. Is the preparation of entries and posting of subsidiary “other assets” records performed or tested by persons who do not also have direct control, either physical or accounting, of the related assets?

3. Are the subsidiary “other assets” records, if any, balanced at least quarterly to the appropriate general ledger accounts by persons who do not also have direct control, either physical or accounting, of the related assets?

4. Is the posting of “other assets” accounts to the general ledger approved prior to posting by persons who do not also have direct control, either physical or accounting, of the related assets?

5. Are worksheets or other supporting records maintained to support prepaid expense amounts?

6. Are supporting documents maintained for all entries to “other assets”?

7. Are the items included in suspense accounts aged and reviewed for propriety regularly by responsible personnel?

Other Procedures

12. Does charge-off of a nonamortizing “other asset” initiate review of the item by a person not connected with entry authorization or posting?

13. Do review procedures, where applicable, provide for an appraisal of the asset to determine the propriety of the purchase or sale price?

Conclusion

14. Does the foregoing information provide an adequate basis for evaluating internal controls in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

OTHER LIABILITIES

Policies and Procedures

1. Has the bank formulated written policies and procedures governing the “other liabilities” accounts?

Records

2. Does the bank maintain subsidiary records of items comprising “other liabilities”?

Receivables

8. Are receivables billed at regular intervals? (If so, state frequency ________.)
3. Is the preparation of entries and posting of subsidiary “other liabilities” records performed or tested by persons who do not also originate or control supporting data?

4. Are subsidiary records of “other liabilities” balanced at least monthly to appropriate general ledger accounts by persons who do not also originate or control supporting data?

5. Are the items included in suspense accounts aged and reviewed for propriety regularly by responsible personnel?

Other Procedures

6. Does the bank book obligations immediately on receipt of invoices or bills for services received?

7. If the bank uses a Federal Reserve deferred credit account, is the liability for incoming “Fed” cash letters booked immediately upon receipt?

8. Does the bank book dividends that have been declared but are not yet payable?

9. Are invoices and bills proved for accuracy prior to payment?

10. Are invoices and bills verified and approved by designated employees prior to payment?

11. Are procedures established to call attention, within the discount period, to invoices not yet paid?

12. Does the bank have a system of advising the board of directors of the acquisition and status of major “other liabilities” items?

13. Are all payroll tax liabilities agreed to appropriate tax returns and reviewed by an officer to ensure accuracy?

Conclusion

14. Does the foregoing information provide an adequate basis for evaluating internal controls in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

15. Are internal controls adequate based on a composite evaluation, as evidenced by answers to the foregoing questions?
Deposit Accounts
Effective date April 2011

Deposits are funds that customers place with a bank and that the bank is obligated to repay on demand, after a specific period of time or after expiration of some required notice period. Deposits are the primary funding source for most banks and, as a result, have a significant effect on a bank’s liquidity. Banks use deposits in a variety of ways, primarily to fund loans and investments. Management should establish a procedure for determining the volatility and composition of the deposit structure to ensure that funds are employed profitably, while allowing for their potential withdrawal. Therefore, a bank’s management should implement programs to retain and prudently expand the bank’s deposit base.

Bankers place great significance on the deposit structure because favorable operating results depend, in part, on a core deposit base. Because of competition for funds, the need for most individuals and corporations to minimize idle funds, and the effect of disintermediation (the movement of deposits to other higher-yielding markets) on a bank’s deposit base, bank management should adopt and implement a development and retention program for all types of deposits.

DEPOSIT DEVELOPMENT AND RETENTION PROGRAM

Important elements of the examination process are the review of a bank’s deposit development and retention program and the methods used to determine the volatility and composition of the deposit structure. A bank’s deposit development and retention program should include—

• a marketing strategy,
• projections of deposit structure and associated costs, and
• a formula for comparing results against projections.

To structure a deposit program properly, bank management must consider many factors, some of which include—

• the composition of the market-area economic base,
• the ability to employ deposits profitably,
• the adequacy of current operations (staffing and systems) and the location and size of banking quarters relative to the bank’s volume of business,
• the degree of competition from banks and nonbank financial institutions and their programs to attract deposit customers, and
• the effects of the national economy and the monetary and fiscal policies of the federal government on the bank’s service area.

The bank’s size and the composition of its market determine how formal its deposit program should be. After a bank develops its deposit program, management must continue to monitor the above factors and correlate any findings to determine if adjustments are needed. The long-term success of any deposit program relates directly to the ability of management to make adjustments at the earliest possible time.

DEPOSIT STRUCTURE

Management should look not only at deposit growth but also at the nature of the deposit structure. To invest deposited funds properly in view of anticipated or potential withdrawals, management must be able to determine what percentage of the overall deposit structure is centered in core deposits, in fluctuating or seasonal deposits, and in volatile deposits. It is important that internal reports with information concerning the composition of the deposit structure be provided to management periodically. Management’s lack of such knowledge could lead to an asset-liability mismatch, causing problems at a later date.

In analyzing the deposit structure, information gathered by the various examination procedures should be sufficient to allow the examiner to evaluate the composition of both volatile and core deposits. Ultimately, the examiner should be satisfied with management’s efforts to plan for the bank’s future.

Examiners must analyze the present and potential effect deposit accounts have on the financial condition of the bank, particularly with regard to the quality and scope of management’s planning. The examiner’s efforts should be directed to the various types of deposit accounts that the bank uses for its funding base. The
examiners assigned to the areas of funds management and to the analytical review of the bank’s income and expenses should be informed of any significant change in interest-bearing deposit-account activity.

COST OF FUNDS

Interest paid on deposits is generally the largest expense to a bank. As a result, interest-bearing deposit accounts employed in a marginally profitable manner could have significant and lasting effects on bank earnings. The examiner should consider the following in evaluating the effect of interest-bearing deposit accounts on a bank’s earnings:

• an estimated change in interest expense resulting from a change in interest rates on deposit accounts or a shift in funds from one type of account to another
• service-charge income
• projected operating costs
• changes in required reserves
• promotional and advertising costs
• the quality of management’s planning

SPECIAL DEPOSIT-RELATED ISSUES

The examiner should keep the following issues in mind during an examination to ensure the bank is in compliance, where applicable.

Abandoned-Property Law

State abandoned-property laws generally are called escheat laws. Although escheat laws vary from state to state, they normally require a bank to remit the proceeds of any deposit account to the state treasurer when—

• the deposit account has been dormant for a certain number of years and
• the owner of the account cannot be located.

Service charges on dormant accounts should bear a direct relationship to the cost of servicing the accounts, which ensures that the charges are not excessive. A bank’s board of directors (or a committee appointed by the board) should review the basis on which service charges on dormant accounts are assessed and should document the review. There have been occasions when excessive servicing charges have resulted in no proceeds being remitted at the time the account became subject to escheat requirements. In these cases, courts have required banks to reimburse the state. (See also the “Dormant Accounts” discussion later in this section.)

Bank Secrecy Act

Examiners should be aware of the Bank Secrecy Act when examining the deposit area and should follow up on any unusual activities or arrangements noted. The act was implemented by the Treasury Department’s Financial Recordkeeping and Reporting of Currency and Foreign Transactions Regulation. For further information, see the FFIEC Bank Secrecy Act Examination Manual, section 208.63 of the Federal Reserve’s Regulation H, and the Financial Crimes Enforcement Network (FinCEN)’s Bank Secrecy Act regulations at 31 CFR Chapter X. Prior to March 1, 2011, FINCEN’s regulation was at 31 CFR 103.

Banking Hours and Processing of Demand Deposits

The Board’s Regulation CC (12 CFR 229), “Availability of Funds and Collection of Checks,” and the Uniform Commercial Code (UCC) govern banking-day cutoff hours and the processing of deposits. A “banking day” is that part of a day on which an office of the bank is open to the public for carrying out substantially all of its banking functions. Saturdays, Sundays, and certain specified holidays are not banking days under Regulation CC, although such days might be banking days under the UCC if a bank is open for substantially all of its functions on those days.

Regulation CC requires a bank to make deposited funds available for withdrawal within a certain period after the banking day on which they are received. Cash deposits, wire transfers, and certain check deposits that pose little risk to the depositary bank (such as Treasury checks and cashier’s checks) generally are to be made available for withdrawal by the business day.
after the day of deposit. The time when the depositary bank must make other check deposits available for withdrawal depends on whether the check is local or nonlocal to the depositary bank. As of September 1, 1990, proceeds of local and nonlocal checks must be available for withdrawal by the second and fifth business day following deposit, respectively. However, Regulation CC allows a bank to set, within certain limits, cutoff hours, after which the bank will deem funds to be received on the next banking day for purposes of calculating the availability date (12 CFR 229.19). Different cutoff-hour limits apply to different types of deposits.

For the purpose of allowing banks to process checks, the UCC provides that a bank may set a cutoff hour of 2 p.m. or later and that items received after that time will be considered received as of the next banking day (UCC section 4-108). Under both the UCC and Regulation CC, both the banking day on which a bank is deemed to have received a check and the cutoff hour affect the time frames within which a bank must send the check through the forward-collection and return processes.

A bank that fails to set its cutoff hour appropriately, does not make funds available within the appropriate time frames, or processes checks in an untimely manner may be subject to civil liability for not performing its duties in accordance with various provisions of Regulation CC and the UCC.

Banking Accounts for Foreign Governments, Embassies, Missions, and Political Figures

On June 15, 2004, an interagency advisory concerning the embassy banking business and related banking matters was issued by the federal banking and thrift agencies (the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, the Office of Thrift Supervision, and the National Credit Union Administration (the agencies)). The advisory was issued in coordination with the U.S. Department of the Treasury's Financial Crimes Enforcement Network. The purpose of the advisory is to provide general guidance to banking organizations regarding the treatment of accounts for foreign governments, foreign embassies, and foreign political figures.

The joint interagency statement advises banking organizations that the decision to accept or reject an embassy or foreign government account is theirs alone to make. The statement advises that financial institutions should be aware that there are varying degrees of risk associated with such accounts, depending on the customer and the nature of the services provided. Institutions should take appropriate steps to manage such risks consistent with sound practices and applicable anti-money-laundering laws and regulations. The advisory also encourages banking organizations to direct questions about embassy banking to their primary federal bank regulators. (See SR-04-10.)

On March 24, 2011, an interagency advisory was issued to supplement SR-04-10, “Banking Accounts for Foreign Governments, Embassies, and Political Figures.” The supplemental advisory provides information to financial institutions regarding the provision of account services to foreign embassies, consulates, and to foreign missions in a manner that fulfills the needs of those foreign governments while complying with the provisions of the Bank Secrecy Act (BSA). It advises that financial institutions are expected to demonstrate the capacity to conduct appropriate risk assessments and implement the requisite controls and oversight systems to effectively manage the risk identified in these relationships with foreign missions. The advisory also confirms that it is the financial institution’s decision to accept or reject a foreign mission account. (See SR-11-6 and the attached supplemental interagency advisory.)

Interagency Advisory on Accessing Accounts from Foreign Governments, Embassies, and Foreign Political Figures

The 2004 interagency advisory answers questions on whether financial institutions should conduct business with foreign embassies and whether institutions should establish account services for foreign governments, foreign embassies, and foreign political figures. As it would with any new account, an institution should evaluate whether or not to accept a new account for a foreign government, embassy, or political figure. That decision should be made by the institution’s management, under standards and guidelines established by the board of directors, and should be based on the institution’s own business objectives, its assessment of the risks
associated with particular accounts or lines of business, and its capacity to manage those risks. The agencies will not, in the absence of extraordinary circumstances, direct or encourage any institution to open, close, or refuse a particular account or relationship.

Providing financial services to foreign governments and embassies and to foreign political figures can, depending on the nature of the customer and the services provided, involve varying degrees of risk. Such services can range from account relationships that enable an embassy to handle the payment of operational expenses, for example, payroll, rent, and utilities, to ancillary services or accounts provided to embassy staff or foreign government officials. Each of these relationships potentially poses different levels of risk. Institutions are expected to assess the risks involved in any such relationships and to take steps to ensure both that such risks are appropriately managed and that the institution can do so in full compliance with its obligations under the BSA, as amended by the USA Patriot Act, and the regulations promulgated thereunder.

When an institution elects to establish financial relationships with foreign governments, embassies, or foreign political figures, the agencies, consistent with their usual practice of risk-based supervision, will make their own assessment of the risks involved in such business. As is the case with all accounts, the institution should expect appropriate scrutiny by examiners that is commensurate with the level of risk presented by the account relationship. As in any case where higher risks are presented, the institution should expect an increased level of review by examiners to ensure that the institution has in place controls and compliance oversight systems that are adequate to monitor and manage such risks, as well as personnel trained in the management of such risks and in the requirements of applicable laws and regulations.

Institutions that have or are considering taking on relationships with foreign governments, embassies, or political figures should ensure that such customers are aware of the requirements of U.S. laws and regulations to which the institution is subject. Institutions should, to the maximum extent feasible, seek to structure such relationships in order to conform them to conventional U.S. domestic banking relationships so as to reduce the risks that might be presented by such relationships.

Foreign-Currency Deposits

Domestic depository institutions are permitted to accept deposits denominated in foreign currency. Institutions should notify customers that such deposits are subject to foreign-exchange risk. The bank should convert such accounts to the U.S. dollar equivalent for purposes of reporting to the Federal Reserve. Examination staff should ascertain that all reports are in order and should evaluate the bank’s use of such funds and its management of the accompanying foreign-exchange risk. Accounts denominated in foreign currency are not subject to the requirements of Regulation CC. (See SR-90-03 (IB), “Foreign (Non–U.S.) Currency Denominated Deposits Offered at Domestic Depository Institutions.”)

International Banking Facilities

An international banking facility (IBF) is a set of asset and liability accounts segregated on the books of a depository institution. IBF activities are essentially limited to accepting deposits from and extending credit to foreign residents (including banks), other IBFs, and the institutions establishing the IBF. IBFs are not required to maintain reserves against their time deposits or loans. The examiner should follow the special examination procedures in the international section of this manual when examining an IBF.

Deposits Insured by the Federal Deposit Insurance Corporation

The Federal Deposit Insurance Corporation (FDIC) is an independent agency of the U.S. government. The FDIC protects depositors against the loss of their insured deposits due to the failure of an insured bank, savings bank, savings association, insured branch of a foreign bank, or other depository institution whose deposits are insured pursuant to the Federal Deposit Insurance Corporation Act. If a depositor’s accounts at one FDIC-insured depository institution total up to $250,000 (or the standard maximum deposit insurance amount [SMDIA]), the funds are fully insured and protected. A depositor can have more than the SMDIA at one insured depository institution and still be fully insured provided the accounts meet certain requirements. In addition, federal law currently
provides for insurance coverage of up to $250,000 or the SMDIA.

The FDIC insurance covers all types of deposits received at an insured depository institution, including deposits in checking, negotiable order of withdrawal (NOW), and savings accounts; money market deposit accounts; and time deposits such as certificates of deposit (CDs). FDIC deposit insurance covers the balance of each depositor’s account, dollar-for-dollar, up to the SMDIA, including the principal and any accrued interest through the date of an insured depository institution’s closing.

Deposits in separate branches of an insured depository institution are not separately insured. Deposits in one insured institution are insured separately from deposits in another insured institution. Deposits maintained in different categories of legal ownership at the same depository institution can be separately insured. Therefore, it is possible to have deposits of more than the SMDIA at one insured institution and still be fully insured.

Deposit Insurance Reform Acts

On March 14, 2006, the FDIC amended its deposit insurance regulations (effective April 1, 2006) by issuing an interim rule with a request for public comment on or before May 22, 2006. (See 71 Fed. Reg. 14631, 71 Fed. Reg. 53550 (Sept. 12, 2006) and 12 CFR Part 330.) The interim rule implemented applicable revisions to the Federal Deposit Insurance Act made by the Federal Deposit Insurance Reform Act of 2005 (Reform Act) and the Federal Deposit Insurance Reform Conforming Amendments Act of 2005 (the Conforming Amendments Act). The Reform Act provided for consideration of inflation adjustments (cost-of-living adjustment) to increase the current SMDIA on a five-year cycle beginning on April 1, 2010.

Second, the Reform Act increased the deposit insurance limit for accounts up to $250,000, also subject to inflation adjustments. The types of accounts included are individual retirement accounts (IRAs),1 eligible deferred compensation plan accounts,2 and individual account plan accounts,3 and any plan described in section 401(d) of the IRC, to the extent that participants and beneficiaries under such plans have a right to direct the investment of assets held in individual accounts maintained on their behalf by the plans.

Third, the Reform Act provided per-participant insurance coverage to employee benefit plan accounts, even if the depository institution at which the deposits are placed is not authorized to accept employee benefit plan deposits. The cost-of-living adjustment is to be calculated according to the Personal Consumption Expenditures Chain-type Price Index published by the U.S. Department of Commerce and rounded down to the nearest $10,000.

The Conforming Amendments Act created the term government depositor in connection with public funds described in and insured pursuant to section 11(a)(2) of the Federal Deposit Insurance Act (FDIA). (See 12 USC 1821(a)(2).) The Conforming Amendments Act provides that the deposits of a government depositor are insured in an amount up to the SMDIA, subject to the inflation adjustment described previously.

Deposit Insurance Rule Amendments

Retirement and Employee Benefit Plan Accounts

When deposits from a retirement or employee benefit plan (EBP)—such as a 401(k) retirement account, Keogh plan account, corporate pension plan, or profit-sharing program—are entitled to pass-through insurance, the SMDIA on FDIC insurance does not apply to the entire EBP account balance. Rather, the FDIC insurance coverage “passes through” to each owner or beneficiary, and the deposited funds of each EBP participant are insured up to the SMDIA.

The Reform Act and the Conforming Amendments Act, and the FDIC’s March 23, 2006, interim rule eliminated the previous requirement that pass-through coverage for employee benefit plan accounts be dependent on the capital level of a depository institution where such deposits are placed. Pass-through coverage for employee benefit plan deposits was not available if the

1. IRAs described in section 408(a) of the Internal Revenue Code (IRC). (See 26 USC 408(a).)
2. Eligible deferred compensation plan accounts described in section 457 of the IRC. (See 26 USC 457.)
deposits were placed with an institution that was not permitted to accept brokered deposits because of the capital requirements. Insured institutions that are not “well capitalized” or “adequately capitalized” are now prohibited by the Reform Act from accepting employee benefit plan deposits. Under the Reform Act, employee benefit plan deposits accepted by an insured depository institution, even those prohibited from accepting such deposits, are nonetheless eligible for pass-through deposit insurance coverage. The rule’s amendment (see 12 CFR 330.14) applies to all employee benefit plan deposits, including employee benefit plan deposits placed before April 1, 2006. The rule’s other requirements in section 330.14 continue to apply. In particular, only the “noncontingent” interests of plan participants in an applicable plan are eligible for pass-through coverage. A “noncontingent interest” is an interest that can be determined without the evaluation of contingencies other than life expectancy. The maximum coverage for accounts is up to $250,000 or the SMDIA. These accounts continue to be made up of individual retirement accounts (the traditional IRAs and the Roth IRAs); section 457 deferred compensation plan accounts, “self-directed” Keogh plan accounts (or HR 10 accounts); and “self-directed” defined contribution plan accounts, which are primarily 401(k) plan accounts. The term self-directed means that the plan participants have the right to direct how their funds are invested, including the ability to direct that the funds be invested at an FDIC-insured institution.

Reserve Requirements

The Monetary Control Act of 1980 and the Federal Reserve’s Regulation D, “Reserve Requirements of Depository Institutions,” establish two categories of deposits for reserve requirement purposes. The first category is the transaction account, which represents a deposit or account from which the depositor or account holder is permitted to make orders of withdrawal by negotiable instrument, payment orders of withdrawal, telephone transfer, or similar devices for making payments to a third party or others. Transaction accounts include demand deposits, NOW accounts, automatic transfer (ATS) accounts, and telephone or preauthorized transfer accounts. The second category is the non-transaction deposit account, which includes all deposits that are not transaction accounts, such as (1) savings deposits, that is, money market deposit accounts and other savings deposits, and (2) time deposits, that is, time certificates of deposit and time deposits, open account. See Regulation D for specific definitions of the various deposit accounts.

Treasury Tax and Loan Accounts

Member banks may select either the “remittance-option” or the “note-option” method to forward deposited funds to the U.S. Treasury. With the remittance option, the bank remits the Treasury Tax and Loan (TT&L) account deposits to the Federal Reserve Bank the next business day after deposit. The remittance portion is not interest-bearing.

The note option permits the bank to retain the TT&L deposits. With the note option, the bank debits the TT&L remittance account for the amount of the previous day’s deposit and simultaneously credits the note-option account. Thus, TT&L funds are now purchased funds evidenced by an interest-bearing, variable-rate, open-ended, secured note callable on demand by Treasury. Rates paid are 1⁄4 of 1 percent less than the average weekly rate on federal funds. Interest is calculated on the weekly average daily closing balance in the TT&L note-option account. Although there is no required maximum note-option ceiling, banks may establish a maximum balance by providing written notice to the Federal Reserve Bank. As per 31 CFR 203.24, the TT&L balance requires the bank to pledge collateral to secure these accounts, usually from its investment portfolio. The note option is not included in reserve-requirement computations and is not subject to deposit insurance because it is classified as a demand note issued to the U.S. Treasury, a type of borrowing.

POTENTIAL PROBLEM AREAS

The following types of deposit accounts and related activities have above-average risk and, therefore, require the examiner’s special attention.
Bank-Controlled Deposit Accounts

Bank-controlled deposit accounts, such as suspense, official checks, cash-collateral, dealer reserves, and undisbursed loan proceeds, are used to perform many necessary banking functions. However, the absence of sound administrative policies and adequate internal controls can cause significant loss to the bank. To ensure that such accounts are properly administered and controlled, the directorate must ensure that operating policies and procedures are in effect that establish acceptable purpose and use; appropriate entries; controls over posting entries; and the length of time an item may remain unrecorded, unposted, or outstanding. Internal controls that limit employee access to bank-controlled accounts, determine the responsibility for frequency of reconcilement, discourage improper posting of items, and provide for periodic internal supervisory review of account activity are essential to efficient deposit administration.

The deposit suspense account is used to process unidentified, unposted, or rejected items. Characteristically, items posted to such accounts clear in one business day. The length of time an item remains in control accounts often reflects on the bank’s operational efficiency. This deposit type has a higher risk potential because the transactions are incomplete and require manual processing to be completed. As a result of the need for human interaction and the exception nature of these transactions, the possibility of misappropriation exists.

Official checks, a type of demand deposit, include bank checks, cashier’s checks, expense checks, interest checks, dividend-payment checks, certified checks, money orders, and traveler’s checks. Official checks reflect the bank’s promise to pay a specified sum upon presentation of the bank’s check. Because accounts are controlled and reconciled by bank personnel, it is important that appropriate internal controls are in place to ensure that account reconcilement is segregated from check origination. Operational inefficiencies, such as unrecorded checks that have been issued, can result in a significant understatement of the bank’s liabilities. Misuse of official checks may result in substantial losses through theft.

Cash-collateral, dealer differential or reserve, undisbursed loan proceeds, and various loan escrow accounts are also sources of potential loss. The risk lies in inefficiency or misuse if the accounts become overdrawn or if funds are diverted for other purposes, such as the payment of principal or interest on bank loans. Funds deposited to these accounts should be used only for their stated purposes.

Brokered Deposits

As defined in Federal Deposit Insurance Corporation (FDIC) regulations, brokered deposits are funds a depository institution obtains, directly or indirectly, from or through the mediation or assistance of a deposit broker, for deposit into one or more deposit accounts (12 CFR 337.6). Thus, brokered deposits include both those in which the entire beneficial interest in a given bank deposit account or instrument is held by a single depositor and those in which the deposit broker pools funds from more than one investor for deposit in a given bank deposit account.

Section 29 of the Federal Deposit Insurance Act (the FDI Act) (12 USC 1831f(g)(1)) and the FDIC’s regulations (12 CFR 337.6 (a)(5)) define deposit broker to mean—

- any person engaged in the business of placing deposits, or facilitating the placement of deposits, of third parties with insured depository institutions or the business of placing deposits with insured depository institutions for the purpose of selling interests in those deposits to third parties; and
- an agent or a trustee who establishes a deposit account to facilitate a business arrangement with an insured depository institution to use the proceeds of the account to fund a prearranged loan.

The term deposit broker does not include —

- an insured depository institution, with respect to funds placed with that depository institution;
- an employee of an insured depository institution, with respect to funds placed with the employing depository institution;
- a trust department of an insured depository institution, if the trust or other fiduciary relationship in question has not been established for the primary purpose of placing funds with insured depository institutions;
- the trustee of a pension or other employee benefit plan, with respect to funds of the plan;
• a person acting as a plan administrator or an investment adviser in connection with a pension plan or other employee benefit plan provided that person is performing managerial functions with respect to the plan;
• the trustee of a testamentary account;
• the trustee of an irrevocable trust,4 as long as the trust in question has not been established for the primary purpose of placing funds with insured depository institutions;
• a trustee or custodian of a pension or profit-sharing plan qualified under section 401(d) or 403(a) of the Internal Revenue Code of 1986 (26 USC 401(d), 503(a)); or
• an agent or a nominee whose primary purpose is not the placement of funds with depository institutions; or
• an insured depository institution acting as an intermediary or agent of a U.S. government department or agency for a government-sponsored minority or women-owned depository institution deposit program.

A small- or medium-sized bank’s dependence on the deposits of customers who reside or conduct their business outside of the bank’s normal service area should be closely monitored by the bank and analyzed by the examiner. Such deposits may be the product of personal relationships or good customer service; however, large out-of-area deposits are sometimes attracted by liberal credit accommodations or significantly higher interest rates than competitors offer. Deposit growth that is due to liberal credit accommodations generally proves costly in terms of the credit risks taken relative to the benefits received from corresponding deposits, which may be less stable. Banks outside dynamic metropolitan areas are limited in growth because they usually can maintain stable deposit growth only as a result of prudent reinvestment in the bank’s service area. Deposit development and retention policies should recognize the limits imposed by prudent competition and the bank’s service area.

Historically, most banking organizations have not relied on funds obtained through deposit brokers to supplement their traditional funding sources. A concern regarding the activities of deposit brokers is that the ready availability of large amounts of funds through the issuance of insured obligations undercut market discipline.

The use of brokered deposits by sound, well-managed banks can play a legitimate role in the asset-liability management of a bank and enhance the efficiency of financial markets. However, the use of brokered deposits also can contribute to the weakening of a bank by allowing it to grow at an unmanageable or imprudent pace and can exacerbate the condition of a troubled bank. Consequently, without proper monitoring and management, brokered and other highly rate-sensitive deposits, such as those obtained through the Internet, certificate of deposit (CD) listing services, and similar advertising programs, may be unstable sources of funding for an institution.

Deposits attracted over the Internet, through CD listing services, or through special advertising programs offering premium rates to customers without another banking relationship, require special monitoring. Although these deposits may not fall within the technical definition of “brokered” in 12 USC 1831f and 12 CFR 337.6, their inherent risk characteristics are similar to brokered deposits. That is, such deposits are typically attractive to rate-sensitive customers who may not have significant loyalty to the bank. Extensive reliance on funding products of this type, especially those obtained from outside a bank’s geographic market area, has the potential to weaken a bank’s funding position.

Some banks have used brokered and Internet-based funding to support rapid growth in loans and other assets. In accordance with the safety-and-soundness standards, a bank’s asset growth should be prudent and its management must consider the source, volatility, and use of the funds generated to support asset growth. (See 12 CFR 208 appendix D-1.)

To compensate for the high rates typically offered for brokered deposits, institutions holding them tend to seek assets that carry commensurately high yields. These assets can often involve excessive credit risk or cause the bank to take on undue interest-rate risk through a mismatch in the maturity of assets and liabilities. The FDI Act (12 USC 1831f) includes certain restrictions on the use of brokered deposits to prohibit undercapitalized insured depository institutions from accepting funds obtained, directly or indirectly, by or through any deposit broker for deposit into one or more deposit accounts.

---

4. This exception does not apply to an agent or a trustee who establishes a deposit account to facilitate a business arrangement with an insured depository institution to use the proceeds of the account to fund a prearranged loan.
**Capital Categories**

For the purposes of section 29 of the FDI Act, the regulations of the FDIC and the Federal Reserve (for the FDIC, 12 CFR 325.103 and for the Federal Reserve, 12 CFR 208.43) provide the definitions of well-capitalized, adequately capitalized, and undercapitalized financial institutions (banks). These definitions are tied to percentages of leverage and risk-based capital. Section 29 of the FDI Act limits the rates of interest on brokered deposits that may be offered by insured depository institutions that are adequately capitalized or undercapitalized.

**Well-capitalized bank.** A bank is deemed to be well capitalized if it—

- has a total risk-based capital ratio of 10.0 percent or greater;
- has a tier 1 risk-based capital ratio of 6.0 percent or greater;
- has a leverage ratio of 5.0 percent or greater; and
- is not subject to any written agreement, order, capital directive, or prompt-corrective-action directive issued by the Board pursuant to section 8 of the FDI Act (12 USC 1818), the International Lending Supervision Act of 1983 (12 USC 3907), or section 38 of the FDI Act (12 USC 1831o), or any regulation thereunder, to meet and maintain a specific capital level for any capital measure.

A well-capitalized insured depository institution may solicit and accept, renew, or roll over any brokered deposit without restriction.

**Adequately capitalized bank.** A bank is deemed to be adequately capitalized if it—

- has a total risk-based capital ratio of 8.0 percent or greater;
- has a tier 1 risk-based capital ratio of 4.0 percent or greater;
- has a leverage ratio of 4.0 percent or greater; and
- does not meet the definition of a well capitalized bank.

An adequately capitalized insured depository institution may not accept, renew, or roll over any brokered deposit unless it has applied for and been granted a waiver of this prohibition by the FDIC. If the insured depository institution has been granted a waiver by the FDIC, the institution may accept, renew, or roll over a brokered deposit. The institution may not pay an effective yield on the deposit that exceeds, by more than 75 basis points: (1) the effective yield paid on deposits of comparable size and maturity, and for deposits accepted, within the institution’s normal market area5 or (2) the “national rate” paid on deposits of comparable size and maturity for deposits accepted outside the institution’s normal market area. The national rate is either 120 or 130 basis points of the current yield on similar-maturity U.S. Treasury obligations, depending on whether the deposit is FDIC insured or more than half uninsured (the portion of the deposit that is in excess of the FDIC-insured limit, as detailed in the rule).

If an FDIC-insured bank is adequately capitalized and does not have a waiver from the FDIC, it may not use a broker to obtain deposits. The following rate restrictions on deposits also apply: (1) the deposit rates may be no more than 75 basis points over the effective yield on deposits of comparable size and maturity within the bank’s normal market area and (2) the deposit rates may not be based on a “national” rate.

**Undercapitalized bank.** A bank is deemed to be undercapitalized if it—

- has a total risk-based capital ratio that is less than 8.0 percent;
- has a tier 1 risk-based capital ratio that is less than 4.0 percent;
- has a leverage ratio that is less than 4.0 percent; or
- has a leverage ratio that is less than 3.0 percent.

---

5. For deposits obtained through Internet solicitations, the determination of the bank’s “normal market area” is particularly problematic and difficult.

6. An exception is available when (1) the bank the (the insured depository institution) has a leverage ratio of 3.0 percent or greater, (2) the bank is rated composite 1 under the CAMELS rating system following its most-recent bank examination, and (3) the bank is not experiencing or anticipating significant growth.
cent, if the bank is rated composite 1 under the CAMELS rating system in the most recent examination of the bank and is not experiencing or anticipating significant growth.

An undercapitalized insured depository institution may not accept, renew, or roll over any brokered deposit. Also, an undercapitalized insured depository institution (and any employee of the institution) may not solicit deposits by offering an effective yield that exceeds by more than 75 basis points the prevailing effective yields on insured deposits of comparable maturity in the institution’s normal market area or in the market area in which such deposits are being solicited.

Each examination should include a review for compliance with the FDIC’s limitations on the acceptance of brokered deposits and guidelines on interest payments. The use of brokered deposits should be reviewed during all on-site examinations, even in those institutions not subject to the FDIC’s restrictions. Given the potential risks involved in using brokered deposits, the examination should focus on the—

• rate of growth and the credit quality of the loans or investments funded by brokered deposits;
• corresponding quality of loan files, documentation, and customer credit information;
• ability of bank management to adequately evaluate and administer these credits and manage the resulting growth;
• degree of interest-rate risk involved in the funding activities and the existence of a possible mismatch in the maturity or rate sensitivity of assets and liabilities;
• composition and stability of the deposit sources and the role of brokered deposits in the bank’s overall funding position and strategy; and
• effect of brokered deposits on the bank’s financial condition and whether the use of brokered deposits constitutes an unsafe and unsound banking practice.

The examiner should identify relevant concerns in the examination report when brokered deposits amount to 5 percent or more of the bank’s total deposits.

Risk-Management Expectations for Brokered Deposits

On May 11, 2001, the Federal Reserve Board and the other federal banking agencies (the agencies) issued a Joint Agency Advisory on Brokered and Rate-Sensitive Deposits. The advisory sets forth the following risk-management guidelines for brokered deposits. The bank’s management is expected to implement risk-management systems that are commensurate in complexity with the liquidity and funding risks that the bank undertakes. (See SR-01-14.) Such systems should incorporate the following principles:

• **Proper funds-management policies.** A good policy should generally provide for forward planning, establish an appropriate cost structure, and set realistic limitations and business strategies. It should clearly convey the board’s risk tolerance and should not be ambiguous about who holds responsibility for funds-management decisions.

• **Adequate due diligence when assessing deposit brokers.** Bank management should implement adequate due diligence procedures before entering any business relationship with a deposit broker. The agencies do not regulate deposit brokers.

• **Due diligence in assessing the potential risk to earnings and capital associated with brokered or other rate-sensitive deposits, and prudent strategies for their use.** Bankers should manage highly sensitive funding sources carefully, avoiding excessive reliance on funds that may be only temporarily available or which may require premium rates to retain.

• **Reasonable control structures to limit funding concentrations.** Limit structures should consider typical behavioral patterns for depositors or investors and be designed to control excessive reliance on any significant source(s) or type of funding. This includes brokered funds and other rate-sensitive or credit-sensitive deposits obtained through the Internet or other types of advertising.

• **Management information systems (MIS) that clearly identify nonrelationship or higher-cost funding programs and allow management to track performance, manage funding gaps, and monitor compliance with concentration and...**
other risk limits. At a minimum, MIS should include a listing of funds obtained through each significant program, rates paid on each instrument and an average per program, information on maturity of the instruments, and concentration or other limit monitoring and reporting. Management also should ensure that brokered deposits are properly reported in the bank’s Consolidated Reports of Condition and Income.7

• Contingency funding plans that address the risk that these deposits may not “roll over” and provide a reasonable alternative funding strategy. Contingency funding plans should factor in the potential for changes in market acceptance if reduced rates are offered on rate-sensitive deposits. The potential for triggering legal limitations that restrict the bank’s access to brokered deposits under Prompt Corrective Action (PCA) standards, and the effect that this would have on the bank’s liability structure, should also be factored into the plan.

Examiners should assess carefully the liquidity-risk management framework at all banks. Banks with meaningful reliance on brokered or other rate-sensitive deposits should receive the appropriate level of supervisory attention. Examiners should not wait for PCA provisions to be triggered or the viability of the bank to come into question, before raising relevant safety-and-soundness issues with regard to the use of these funding sources. If a determination is made that a bank’s use of these funding sources is not safe and sound, or that these risks are excessive or that they adversely affect the bank’s condition, then the examiner or central point of contact should recommend to the Reserve Bank management that it consider taking immediate appropriate supervisory action. The following represent potential red flags that may indicate the need to take such action to ensure the risks associated with brokered or other rate-sensitive funding sources are managed appropriately:

• ineffective management or the absence of appropriate expertise
• a newly chartered institution with few rela-
tionship deposits and an aggressive growth strategy
• inadequate internal audit coverage
• inadequate information systems or controls
• identified or suspected fraud
• high on- or off-balance-sheet growth rates
• use of rate-sensitive funds not in keeping with the bank’s strategy
• inadequate consideration of risk, with management focus exclusively on rates
• significant funding shifts from traditional funding sources
• the absence of adequate policy limitations on these kinds of funding sources
• high loan delinquency rate or deterioration in other asset-quality indicators
• deterioration in the general financial condition of the institution
• other conditions or circumstances warranting the need for administrative action

Check Kiting

Check kiting occurs when—

• a depositor with accounts at two or more banks draws checks against the uncollected balance at one bank to take advantage of the float—that is, the time required for the bank of deposit to collect from the paying bank, and
• the depositor initiates the transaction with the knowledge that sufficient collected funds will not be available to support the amount of the checks drawn on all of the accounts.

The key to this deceptive practice, the most prevalent type of check fraud, is the ability to draw against uncollected funds. However, drawing against uncollected funds in and of itself does not necessarily indicate kiting. Kiting only occurs when the aggregate amount of drawings exceeds the sum of the collected balances in all accounts. Nevertheless, since drawing against uncollected funds is the initial step in the kiting process, management should closely monitor this activity. The requirements of Regulation CC, Availability of Funds and Collection of Checks, increased the risk of check kiting, and should be addressed in a bank’s policies and procedures.

By allowing a borrower to draw against uncollected funds, the bank is extending credit that should be subject to an appropriate approval

7. See the FFIEC bank Call Report and Instructions for Consolidated Reports of Condition and Income, Schedule RC-E—Deposit Liabilities.
process. Accordingly, management should promptly investigate unusual or unauthorized activity since the last bank to recognize check kiting and pay on the uncollected funds suffers the loss. Check kiting is illegal and all suspected or known check kiting operations should be reported pursuant to established Federal Reserve policy. Banks should maintain internal controls to preclude loss from kiting, and the examiner should remember that in most cases kiting is not covered under Blanket Bond Standard Form 24.

Delayed Disbursement Practices

Although Regulation CC, Availability of Funds and Collection of Checks, stipulates time frames for funds availability and return of items, delayed disbursement practices (also known as remote disbursement practices) can present certain risks, especially concerning cashier’s checks, which have next-day availability. Delayed disbursement is a common cash management practice that consists of arrangements designed to delay the collection and final settlement of checks by drawing checks on institutions located substantial distances from the payee or on institutions located outside the Federal Reserve cities when alternate and more efficient payment arrangements are available. Such practices deny depositors the availability of funds to the extent that funds could otherwise have been available earlier. A check drawn on an institution remote from the payee often results in increased possibilities of check fraud and in higher processing and transportation costs for return items.

Delayed disbursement arrangements could give rise to supervisory concerns because a bank may unknowingly incur significant credit risk through such arrangements. The remote location of institutions offering delayed disbursement arrangements often increases the collection time for checks by at least a day. The primary risk is payment against uncollected funds, which could be a method of extending unsecured credit to a depositor. Absent proper and complete documentation regarding the creditworthiness of the depositor, paying items against uncollected funds could be considered an unsafe or unsound banking practice. Furthermore, such loans, even if properly documented, might exceed the bank’s legal lending limit for loans to one customer.

Examiners should routinely review a bank’s practices in this area to ensure that such practices are conducted prudently. If undue or undocumented credit risk is disclosed or if lending limits are exceeded, appropriate corrective action should be taken.

Deposit Sweep Programs or Master-Note Arrangements

Deposit sweep programs or master-note arrangements (sweep programs) can be implemented on a bank level or on a parent bank holding company (BHC) level. On a bank level, these sweep programs exist primarily to facilitate the cash-management needs of bank customers, thereby retaining customers who might otherwise move their account to an entity offering higher yields. On a BHC level, the sweep programs are maintained with customers at the bank level, and the funds are upstreamed to the parent as part of the BHC’s funding strategy. Sweep programs use an agreement with the bank’s deposit customers (typically corporate accounts) that permits these customers to reinvest amounts in their deposit accounts above a designated level in overnight obligations of the parent bank holding company, another affiliate of the bank, or a third party. These obligations include instruments such as commercial paper, program notes, and master-note agreements. (See SR-90-31.)

The disclosure agreement regarding the sale of the nondeposit debt obligations should include a statement indicating that these instruments are not federally insured deposits or obligations of or guaranteed by an insured depository institution. In addition, banks and their subsidiaries that have issued or plan to issue nondeposit debt obligations should not market or sell these instruments in any public area of the bank where retail deposits are accepted, including any lobby area of the bank. This requirement exists to convey the impression or understanding that the purchase of such obligations by retail depositors of the subsidiary bank can, in the event of default, result in losses to individuals who believed they had acquired federally insured or guaranteed obligations.

Bank Policies and Procedures

Banking organizations with sweep programs should have adequate policies, procedures, and internal controls in place to ensure that the
activity is conducted in a manner consistent with safe and sound banking principles and in accordance with all banking laws and regulations. Bank policies and procedures should further ensure that deposit customers participating in a sweep program are given proper disclosures and information. When a sweep program is used as part of a funding strategy for a BHC or a nonbank affiliate, examiners should ensure that liquidity and funding strategies are carried out in a prudent manner.

Application of Deposit Proceeds

In view of the extremely short-term maturity of most swept funds, banks and BHCs are expected to exercise great care when investing the proceeds. Banks, from whom deposit funds are swept, have a fiduciary responsibility to their customers to ensure that such transactions are conducted properly. Appropriate uses of the proceeds of deposit sweep funds are limited to short-term bank obligations, short-term U.S. government securities, or other highly liquid, readily marketable, investment-grade assets that can be disposed of with minimal loss of principal. When deposit sweep funds are invested in U.S. government securities, appropriate agreements must be in place, required disclosures must be made, and daily confirmations must be provided to the customer in accordance with the requirements of the Government Securities Act of 1986. Use of such proceeds to finance mismatched asset positions, such as those involving leases, loans, or loan participations, can lead to liquidity problems and are not considered appropriate. The absence of a clear ability to redeem overnight or extremely short-term liabilities when they become due should generally be viewed as an unsafe and unsound banking activity.

8. Some banking organizations have interpreted language in a 1987 letter signed by the secretary of the Board as condoning funding practices that may not be consistent with the principles set forth in a subsequent supervisory letter dated September 21, 1990, as well as with prior Board rulings. The 1987 letter involved a limited set of facts and circumstances that pertained to a particular banking organization; it did not establish or revise Federal Reserve policies on the proper use of the proceeds of short-term funding sources. In any event, banking organizations should no longer rely on the 1987 letter to justify the manner in which they use the proceeds of sweep programs. Banking organizations employing sweep programs are expected to ensure that these programs conform with the policies in this manual section.

Funding Strategies

A key principle underlying the Federal Reserve’s supervision of banking organizations is that BHCs operate in a way that promotes the soundness of their subsidiary banks. BHCs are expected to avoid funding strategies or practices that could undermine public confidence in the liquidity or stability of their banks. Any funding strategy should maintain an adequate degree of liquidity at both the parent level and the subsidiary bank level. Bank management should avoid, to the extent possible, allowing sweep programs to serve as a source of funds for inappropriate uses at the BHC or at an affiliate. Concerns exist in this regard because funding mismatches can exacerbate an otherwise manageable period of financial stress and, in the extreme, undermine public confidence in a banking organization’s viability.

Funding Programs

In developing and carrying out funding programs, BHCs should give special attention to the use of overnight or extremely short-term liabilities, since a loss of confidence in the issuing organization could lead to an immediate funding problem. Thus BHCs relying on overnight or extremely short-term funding sources should maintain a sufficient level of superior-quality assets (at a level at least equal to the amount of the funding sources’) that can be immediately liquidated or converted to cash with minimal loss.

Dormant Accounts

A dormant account is one in which customer-originated activity has not occurred for a predetermined period of time. Because of this inactivity, dormant accounts are frequently the target of malfeasance and should be carefully controlled by a bank. Bank management should establish standards that specifically outline the bank’s policy for the effective control of dormant accounts, addressing—

- the types of deposit categories that could contain dormant accounts, including demand, savings, and official checks;
- the length of time without customer-originated activity that qualifies an account to be identified as dormant;
• the controls exercised over the accounts and their signature cards, that is, prohibiting release of funds by a single bank employee; and
• the follow-up by the bank when ordinary bank mailings, such as account statements and advertising flyers, are returned to the bank because of changed addresses or other reasons for failure to deliver.

Employee Deposit Accounts
Historically, examiners have discovered various irregularities and potential malfeasance through review of employee deposit accounts. As a result, bank policy should establish standards that segregate or specially encode employee accounts and should encourage periodic internal supervisory review. In light of these concerns, examiners should review related bank procedures and practices, taking appropriate measures when warranted.

Overdrafts
The size, frequency, and duration of deposit-account overdrafts are matters that should be governed by bank policy and controlled by adequate internal controls, practices, and procedures. Overdraft authority should be approved in the same manner as lending authority and should never exceed the employee’s lending authority. Systems for monitoring and reporting overdrafts should emphasize a secondary level of administrative control that is distinct from other lending functions so account officers who are less than objective do not allow influential customers to exploit their overdraft privileges. A bank’s payment of overdrafts of executive officers and directors of the bank is generally prohibited under Regulation O. (See 12 CFR 215.4(e).) It is the board of directors’ responsibility to review overdrafts as they would any other extension of credit. Overdrafts outstanding for more than 60 days, lacking mitigating circumstances, should be considered for charge-off. See SR-05-3/CA-05-2 and section 2130.1 on the February 18, 2005, Interagency Joint Guidance on Overdraft Protection Programs.

Payable-Through Accounts
A payable-through account is an accommodation offered to a correspondent bank or other customer by a U.S. banking organization whereby drafts drawn against client subaccounts at the correspondent are paid upon presentation by the U.S. banking institution. The subaccount holders of the payable-through bank are generally non-U.S. residents or owners of businesses located outside of the United States. Usually the contract between the U.S. banking organization and the payable-through bank purports to create a contractual relationship solely between the two parties to the contract. Under the contract, the payable-through bank is responsible for screening subaccount holders and maintaining adequate records with respect to such holders. The examiner should be aware of the potential effect of money laundering.

Public Funds
Public funds generally represent deposits of the U.S. government, as well as state and political subdivisions, and typically require collateral in the form of securities to be pledged against them. A bank’s reliance upon public funds can cause potential liquidity concerns if the aggregate amount, as a percentage of total deposits, is material relative to the bank’s asset-liability management practices. Another factor that can cause potential liquidity concerns relates to the volatile nature of these deposits.

This volatility occurs because the volume of public funds normally fluctuates on a seasonal basis due to timing differences between tax collections and expenditures. A bank’s ability to attract public funds is typically based upon the government entity’s assessment of three key points:

• the safety and soundness of the institution with which the funds have been placed
• the yield on the funds being deposited
• that such deposits are placed with a bank that can provide or arrange the best banking service at the least cost

Additionally, banks that offer competitive interest rates and provide collection, financial advisory, underwriting, and data processing services at competitive costs are frequently chosen as depositories. Public funds deposits acquired
through political influence should be regarded as particularly volatile. As a result, an examiner should pay particular attention to assessing the volatility of such funds in conjunction with the review of liquidity.

Zero-Balance Accounts

Zero-balance accounts (ZBAs) are demand deposit accounts used by a bank’s corporate customers through which checks or drafts are received for either deposit or payment. The total amount received on any particular day is offset by a corresponding debit or credit to the account before the close of business to maintain the balance at or near zero. ZBAs enable a corporate treasurer to effectively monitor cash receipts and disbursements. For example, as checks arrive for payment, they are charged to a ZBA with the understanding that funds to cover the checks will be deposited before the end of the banking day. Several common methods used to cover checks include—

• wire transfers;
• depository transfer checks, a bank-prepared payment instrument used to transfer money from a corporate account in one bank to another bank;
• concentration accounts, a separate corporate demand deposit account at the same bank used to cover deficits or channel surplus funds relative to the ZBA; or
• extended settlement, a cash-management arrangement that does not require the corporate customer to provide same-day funds for payment of its checks.

Because checks are covered before the close of business on the day they arrive, the bank’s exposure is not reflected in the financial statement. The bank, however, assumes risk by paying against uncollected funds, thereby creating unsecured extensions of credit during the day (which is referred to as a daylight overdraft between the account holder and the bank). If these checks are not covered, an overdraft occurs, which will be reflected on the bank’s financial statement.

The absence of prudent safeguards and a lack of full knowledge of the creditworthiness of the depositor may expose the bank to large, unwarranted, and unnecessary risks. Moreover, the magnitude of unsecured credit risk may exceed prudent limits. Examiners should routinely review cash-management policies and procedures to ensure that banks do not engage in unsafe and unsound banking practices, making appropriate comments in the report of examination, as necessary.
Deposit Accounts
Examination Objectives
Effective date November 2006

1. To determine if the policies, practices, procedures, and internal controls regarding deposit accounts are adequate.
2. To determine if the bank’s management implemented adequate risk-management systems for brokered and rate-sensitive deposits that are commensurate with the liquidity and funding risks the bank has undertaken.
3. To determine if the bank’s policies, practices, procedures, and internal controls (including compliance oversight, management reporting, and staff training) for account relationships involving foreign governments, foreign embassies, and foreign political figures (as well as foreign-currency customer deposit accounts) are adequate for the varied risks posed by these accounts.
4. To determine if bank officers and employees are operating in conformance with the bank’s established guidelines.
5. To evaluate the deposit structure and determine its characteristics and volatility.
6. To determine the scope and adequacy of the audit function.
7. To determine compliance with applicable laws and regulations.
8. To initiate corrective action when policies, practices, procedures, or internal controls are deficient, or when violations of laws or regulations are noted.
Deposit Accounts
Examination Procedures
Effective date April 2012
Section 3000.3

1. Determine the scope of the examination of the deposit-taking function. In so doing, consider the findings of prior examinations, related work prepared by internal and external auditors, deficiencies in internal controls noted within other bank functions, and the requirements of examiners assigned to review the asset/liability management and interest-rate risk aspects of the bank.

2. If required by the scope, implement the “Deposit Accounts” internal control questionnaire.

3. Test the deposit function for compliance with policies, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest internal or external audit review, then determine if appropriate corrections have been made.

4. In conducting the examination, use available bank copies of printouts plus transactions journals or other visual media to minimize expense to the bank. However, if copies of these reports are not available, determine what information is necessary to complete the examination procedures and request that information from the bank.

Obtain or prepare, as applicable, the reports indicated below, which are used for a variety of purposes, including the assessment of deposit volatility and liquidity, the assessment of the adequacy of internal controls, the verification of information on required regulatory reports, and the assessment of loss.

a. For demand deposits and other transaction accounts:
   • trial balance
   • overdrafts
   • unposted items
   • nonsufficient-funds (NSF) report
   • dormant accounts
   • public funds
   • uncollected funds
   • due to banks
   • trust department funds
   • significant activity
   • suspected kiting report
   • matured certificates of deposit without an automatic renewal feature
   • large-balance report

b. For official checks:
   • trial balance(s)
   • exception list

c. For savings accounts:
   • trial balance
   • unposted items
   • overdrafts
   • dormant accounts
   • public funds
   • trust department funds
   • large-balance report

d. For other time deposits:
   • trial balance(s)
   • large-balance report
   • unposted items
   • public funds
   • trust department funds
   • money market accounts

e. For certificates of deposit:
   • trial balance(s)
   • unposted items
   • public funds
   • certificates of $100,000 or more
   • negotiable certificates of deposit
   • maturity reports
   • matured certificates of deposit

f. For deposit sweep programs or master-note arrangements, list individually by deposit type and amount.

g. For brokered deposits, list individually by deposit type, including amount and rate.

h. For bank-controlled accounts:
   • reconcilement records for all such accounts
   • names and extensions of individuals authorized to make entries to such accounts
   • name and phone extension of reconcilement clerk(s)

i. For the bank’s foreign-currency customer deposit accounts and the deposit accounts for foreign governments, embassies, and political figures:
   • list of accounts and currency type
   • list of currency transactions over $10,000 for each account, and the copies of their Currency Transaction
Report or its equivalent, since the previous examination (See 31 CFR 1010.330 and its examples.)

- the most recent internal audit report covering the review of those accounts, the risks associated with the accounts, the internal controls over those accounts, and the staff’s completion of the Currency Transaction Report
- the completed copies of the Report of Foreign (Non-U.S.) Currency Deposits, Form 2915, that have been submitted since the previous examination

5. Review the reconciliation of all types of deposit accounts. Verify the balances to department controls and the general ledger.
   a. Determine if reconciliation items are legitimate and if they clear within a reasonable time frame.
   b. Retain custody of all trial balances until items outstanding are resolved.

6. Review the reconciliation process for bank-controlled accounts, such as official checks and escrow deposits, by—
   a. determining if reconciling items are legitimate and if they clear within a reasonable time frame;
   b. scanning activity in such accounts to determine the potential for improper diversion of funds for various uses, such as—
      • political contributions,
      • loan payments (principal and interest), or
      • personal use; and
   c. determining if checks are being processed before their related credits.

7. Review the bank’s operating procedures and reconciliation process relative to suspense accounts. Determine if—
   a. the disposition process of unidentified items is completed in a timely fashion;
   b. reports are generated periodically to inform management of the type, age, and amount of items in such accounts; and
   c. employees responsible for clearing suspense-account items are not shifting the items between accounts.

8. Evaluate the effectiveness of the written policies and procedures and of management’s reporting methods regarding overdrafts and drawings against uncollected funds.
   a. Concerning overdrafts, determine if—
      • officer-approval limits have been established, and
      • a formal system of review and approval is in effect.
   b. Determine whether the depository institution has an overdraft-protection program and if it has adequate written policies and procedures to address the credit, operational, and other risks associated with those programs. See the February 18, 2005, interagency Joint Guidance on Overdraft Protection Programs (SR-05-3/CA-05-2). If the bank provides overdraft protection, perform the following procedures:
      • Obtain a master list of all depositors with formal overdraft protection.
      • Obtain a trial balance indicating advances outstanding and compare it with the master list to ensure compliance with approved limits.
      • Cross-reference the trial balance or master list to examiner loan line sheets.
      • Review credit files on significant formal agreements not cross-referenced above.
      • Ascertain whether there is ongoing monitoring of overdrafts to identify customers who may pose an undue credit risk to the bank.
      • Find out if the bank has incorporated into its overdraft-protection program prudent risk-management practices pertaining to account repayment and the suspension of a customer’s overdraft-protection services when the customer does not satisfy repayment and eligibility requirements.
      • Determine whether overdrafts are properly and accurately reported according to generally accepted accounting principles on the bank’s financial statements and on its Reports of Condition and Income (Call Reports). Verify that overdrafts are reported as loans on the Report of Condition.
      • Verify the existence of the bank’s loss-estimation procedures for overdraft and fee balances. Determine if the procedures are adequately rigorous and if losses are properly accounted for as part of (1) the allowance for loan and lease losses (ALLL) or (2) the loss allowance for uncollectible fees (alternatively, the bank may recognize only
that portion of earned fees estimated to be collectible), if applicable.¹

• When applicable, validate (1) whether the bank’s overdraft commitments have been assigned the correct conversion factor, (2) whether they are accurately risk-weighted by obligor, and (3) if the commitment terms comply with the risk-based capital guidelines.

• Determine whether the bank has obtained assurances from its legal counsel that its overdraft-protection program is fully compliant with all applicable federal and state laws and regulations, including the Federal Trade Commission Act.

• When the bank contracts with third-party vendors to do information technology work, determine if the bank conducted proper due diligence before entering into the contract and that it followed the November 28, 2000, guidance on the Risk Management of Outsourced Technology Services. (See SR-00-17.)

  c. Concerning drawings against uncollected funds, determine if—

  • the uncollected-funds report reflects balances as uncollected until they are actually received;
  • management is comparing reports of significant changes in balances and activity volume with uncollected-funds reports;
  • management knows the reasons why a depositor is frequently drawing against uncollected funds;
  • a reporting system to inform senior management of significant activity in the uncollected-funds area has been instituted; and
  • appropriate employees clearly understand the mechanics of drawing against uncollected funds and the risks involved, especially in the area of potential check-kiting operations.

d. After completing steps 8.a., 8.b., and 8.c.—

  • cross-reference overdraft and uncollected-funds reports to examiner loan line sheets;
  • review the credit files of depositors with significant overdrafts, if available, or the credit files of depositors who frequently draw significant amounts against uncollected funds, for those depositors not cross-referenced in the preceding step;
  • request management to charge off overdrafts deemed to be uncollectible; and
  • submit a list of the following items to the appropriate examiner:
    — overdrafts considered loss, indicating borrower and amount
    — aggregate amounts overdrawn 30 days or more past due, for inclusion in past-due statistics

9. Review the bank’s deposit development and retention policy, which is often included in the funds-management policy.

a. Determine if the policy addresses the deposit structure and related interest costs, including the percentages of time deposits and demand deposits of—

  • individuals,
  • corporations, and
  • public entities.

b. Determine if the policy requires periodic reports to management comparing the accuracy of projections with results.

c. Assess the reasonableness of the policy, and ensure that it is routinely reviewed by management.

10. If a deposit sweep program or master-note arrangement exists, review the minutes of the board of directors for approval of related policies and procedures.

11. For banks with deposit sweep programs or master-note arrangements (sweep programs), compare practices for adherence to approved policies and procedures. Review the following:

a. The purpose of the sweep program: Is it strictly a customer-accommodation transaction, or is it intended to fund certain assets at the holding company level or at an affiliate? Review funding transactions in light of liquidity and funding needs of the banking organization by referring to section 4020.1.

b. The eligibility requirements used by the bank to determine the types of customers and accounts that may participate in a sweep program, including—

  • a list of customers participating in

¹. Institutions may charge off uncollectible overdraft fees against the ALLL if such fees are recorded with overdraft balances as loans and if estimated credit losses on the fees are provided for in the ALLL.
sweep programs, with dollar amounts of deposit funds swept on the date of examination, and

- the name of the recipient(s) of swept funds.
  - If the recipient is an affiliate of the bank, include a schedule of the instruments into which the funds were swept, including the effective maturity of these instruments.
  - If the recipient is an unaffiliated third party, determine if the bank adequately evaluates the third party’s financial condition at least annually. Also, verify if a fee is received by the bank for the transaction. If so, determine that the fee is disclosed in customer documentation.

c. Whether the proceeds of sweep programs are invested only in short-term bank obligations; short-term U.S. government securities; or other highly liquid, readily marketable, investment-grade assets that can be disposed of with minimal loss of principal.

d. Whether the bank and its subsidiaries have issued or plan to issue nondeposit debt obligations in any public area of the bank where retail deposits are accepted, including any lobby area of the bank.

e. Completed sweep-program documents to determine the following:
  - Signed documents boldly disclose that the instrument into which deposit funds will be swept is not insured by the FDIC and is not an obligation of, or guaranteed by, the bank.
  - Proper authorization for the instrument exists between the customer and an authorized representative of the bank.
  - Signed documents properly disclose the name of the obligor and the type of instrument into which the depositor’s funds will be swept. If funds are being swept into U.S. government securities held by the banking organization, verify that adequate confirmations are provided to customers in accordance with the Government Securities Act of 1986. (This act requires that all transactions subject to a repurchase agreement be confirmed in writing at the end of the day of initiation and that the confirmation confirms specific securities. If any other securities are substituted that result in a change of issuer, maturity date, par amount, or coupon rate, another confirmation must be issued at the end of the day during which the substitution occurred. Because the confirmation or safekeeping receipt must list specific securities, “pooling” of securities for any type of sweep program involving government securities is not permitted. Additionally, if funds are swept into other instruments, similar confirmation procedures should be applied.)
  - Conditions of the sweep program are stated clearly, including the dollar amount (minimum or maximum amounts and incremental amounts), time frame of sweep, time of day the sweep transaction occurs, fees payable, transaction confirmation notice, prepayment terms, and termination notice.
  - The length of any single transaction under sweep programs in effect has not exceeded 270 days and the amount is $25,000 or more (as stipulated by SEC policy). Ongoing sweep-program disclosures should occasionally be sent to the customer to ensure that the terms of the program are updated and the customer understands the terms.

f. Samples of advertisements (newspaper, radio, television spots, etc.) by the bank for sweep programs to determine if the advertisements—
  - boldly disclose that the instrument into which deposit funds are swept is not insured by the FDIC and is not an obligation of, or guaranteed by, the bank, and
  - are not enclosed with insured deposit statements mailed to customers.

g. Whether the sweep program has had a negative effect on bank liquidity or has the potential to undermine public confidence in the bank.
  - Review the bank’s federal funds and borrowing activities to ascertain whether borrowings appear high. If so, compare the bank’s borrowing activity with daily balances of aggregate sweep transactions on selected dates to see if a correlation exists.
If sweep activity is significant, compare the rates being paid on swept deposits with the yields received on the invested funds and with the rates on other overnight funding instruments, such as federal funds, to determine if they are reasonable.

12. Forward the following to the examiner assigned to asset/liability management:
   a. the amount of any deposit decline or deposit increase anticipated by management (the time period will be determined by the examiner performing asset/liability management)
   b. a listing by name and amount of any depositor controlling more than 1 percent of total deposits
   c. a listing, if available, by name and amount of any deposits held solely because of premium rates paid (brokered deposits)
   d. the aggregate amount of brokered deposits
   e. a maturity schedule of certificates of deposit, detailing maturities within the next 30, 60, 90, 180, and 360 days
   f. an assessment of the overall characteristics and volatility of the deposit structure

13. Analyze UBPR data on deposits and related expense ratios, and compare with peer-group norms to determine:
   a. variations from the norm, and
   b. trends in the deposit structure with respect to:
      • growth patterns, and
      • shifts between deposit categories.

14. Assess the volatility and the composition of the bank’s deposit structure.
   a. Review the list of time certificates of deposit of $100,000 or more and related management reports, including those on brokered deposits, to determine—
      • whether concentrations of maturing deposits exist;
      • whether a concentration of deposits to a single entity exists;
      • the aggregate dollar volume of accounts of depositors outside the bank’s normal service area, if significant, and the geographic areas from which any significant volume emanates;
      • the aggregate dollar volume of CDs that have interest rates higher than current publicly quoted rates within the market;
      • If the bank is undercapitalized, as defined in the FDIC’s regulation on brokered deposits, ensure that it is not accepting brokered deposits. (See 12 CFR 337.6.)
      • If the bank is only adequately capitalized, as defined in the FDIC’s regulation and is accepting brokered deposits, ensure that a waiver authorizing acceptance of such deposits has been obtained from the FDIC and that the bank is in compliance with the interest-rate restrictions. (See 12 CFR 337.6(b)(2) and (3).)
   c. Determine if the bank has risk-management systems to monitor and control its liquidity and funding risks that are associated with the bank’s brokered and rate-sensitive deposits.
   d. Ascertain if the bank’s risk-management systems for its brokered and rate-sensitive deposits are adequate and if they are commensurate with the complexity of its liquidity and funding risks. Determine if the bank has the following:
      • proper funds-management policies;
      • adequate due diligence when assessing the risks associated with deposit brokers;
      • due diligence in assessing the potential risk to earnings and capital associated with brokered or other rate-sensitive deposits, and prudent strategies for their use;
      • reasonable control structures to limit funding concentrations;
      • management information systems (MIS) that clearly identify nonrelationship or higher-cost funding programs that allow management to track performance, manage funding gaps, and monitor compliance with concentration and other risk limits; and
      • contingency funding plans that address the risk that these deposits may
not “roll over” and provide a reasonable alternative funding strategy.

e. Review public funds and the bank’s method of acquiring such funds to assess whether the bank uses competitive bidding in setting the interest rate paid on public deposits. If so, does the bank consider variables in addition to rates paid by competition in determining pricing for bidding on public deposits?

f. Review appropriate trial balances for all other deposits (demand, savings, and other time deposits). Review management reports that relate to large deposits for individuals, partnerships, corporations, and related deposit accounts to determine whether a deposit concentration exists.

   • Select, at a minimum, the 10 largest accounts to determine if the retention of those accounts depends on—
     — criticizable loan relationships;
     — liberal service accommodations, such as permissive overdrafts and drawings against uncollected funds;
     — interbank correspondent relationships;
     — deposits obtained as a result of special promotions; and
     — a recognizable trend with respect to—
       • frequent significant balance fluctuations,
       • seasonal fluctuations, and
       • nonseasonal increases or decreases in average balances.

g. Elicit management’s comments to determine, to the extent possible—

   • the potential renewal of large CDs that mature within the next 12 months;
   • if public fund deposits have been obtained through political influence;
   • if a significant dollar volume of accounts is concentrated in customers engaged in a single business or industry; and
   • if there is a significant dollar volume of deposits from customers who do not reside within the bank’s service area.

15. Obtain information on competitive pressures and economic conditions and evaluate that information, along with current deposit trends, to estimate its effect on the bank’s deposit structure.

16. Perform the following procedures to test for compliance with the applicable laws and regulations listed below:

a. **Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks.**

   Review the overdraft listing to ensure that the bank has not paid an overdraft on any account of an executive officer or director, unless the payment is made according to—

   • a written, preauthorized, interest-bearing extension of a credit plan that provides a method of repayment, or
   • a written, preauthorized transfer from another account of that executive officer or director.

   Payment of inadvertent overdrafts in an aggregate amount of $1,000 or less is not prohibited, provided the account is not overdrawn more than five business days and the executive officer or director is charged the same fee charged to other customers in similar circumstances. Overdrafts are extensions of credit and must be included when considering each insider’s lending limits and other extension-of-credit restrictions, as well as when considering the aggregate lending limit for all outstanding extensions of credit by the bank to all insiders and their related interests.

b. **12 USC 1972(2), Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.**

   Review the overdraft listing to ensure that no preferential overdrafts exist from the bank under examination to the executive officers, directors, or principal shareholders of the correspondent bank.

c. **Section 22(e) of the Federal Reserve Act (12 USC 376), Interest on Deposits of Directors, Officers, and Employees.**

   Obtain a list of deposit accounts, with account numbers, of directors, officers, attorneys, and employees. Review the accounts for any exceptions to standard policies on service charges and interest rates paid that would suggest self-dealing or preferential treatment.

d. **Sections 23A and 23B of the Federal Reserve Act (12 USC 371c), and Regulation W.** Determine the existence of any non-intraday overdrawn affiliate accounts. If such overdrawn accounts are identified, review for compliance with
sections 23A and 23B of the act and with Regulation W.
e. Regulation D (12 CFR 204), Reserve Requirements of Depository Institutions. Review the accuracy of the deposit data used in the bank’s reserve-requirement calculation for the examination date. When a bank issues nondeposit, uninsured obligations that are classified as “deposits” in the calculation of reserve requirements, examiners should determine if these items are properly categorized. Ascertain that the TT&L remittance option is included in the computations for reserve requirements.
f. 12 USC 501 and 18 USC 1004, False Certification of Checks. Compare several certified checks by date, amount, and purchaser with the depositors’ names appearing on uncollected-funds and overdraft reports of the same dates to determine that the checks were certified against collected funds.
g. Uniform Commercial Code 4-108, Banking Hours and Processing of Items.
   • Determine the bank’s cutoff hour, after which items received are included in the processing for the next “banking day,” to ensure that the cutoff hour is not earlier than 2:00 p.m.
   • If the bank’s cutoff hour is before 2:00 p.m., advise management that failure to process items received before a 2:00 p.m. cutoff may result in civil liability for delayed handling of those items.
h. Local escheat laws. Determine if the bank is adhering to the local escheat laws with regard to all forms of dormant deposits, including official checks.

17. If applicable, determine if the bank is appropriately monitoring and limiting the foreign-exchange risk associated with foreign-currency deposits.

18. For a bank that accepts accounts from foreign governments, embassies, and political figures, evaluate—
   a. the existence and effectiveness of the bank’s policies, procedures, compliance oversight, and management reporting with regard to such foreign accounts;
   b. whether the bank and its staff have the necessary controls, as well as the ability, to manage the risks associated with such foreign accounts;
   c. whether the bank’s board of directors and staff can ensure full compliance with its obligations under the Bank Secrecy Act, as amended by the USA Patriot Act, and its regulations;
   d. the adequacy of the level of training of the bank’s personnel responsible for managing the risks associated with such foreign accounts and for ensuring that the bank is and remains in compliance with the requirements of the applicable laws and regulations; and
   e. the effectiveness of the bank’s program that communicates its policies and procedures for such foreign accounts to ensure that foreign government, embassy, and political-figure customers are fully informed of the requirements of applicable U.S. laws and regulations.

19. Discuss overall findings with bank management. Prepare report comments on—
   a. policy deficiencies,
   b. noncompliance with policies,
   c. weaknesses in supervision and reporting,
   d. violations of laws and regulations, and
   e. possible conflicts of interest.

20. Update workpapers with any information that will facilitate future examinations.
Deposit Accounts
Internal Control Questionnaire
Effective date November 2004

Review the bank’s internal controls, policies, practices, and procedures for demand and time deposit accounts. The bank’s systems should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information.

For large institutions or those institutions that have individual demand and time deposit bookkeeping functions, the examiner should consider administering this questionnaire separately for each function, as applicable.

Questions pertain to both demand and time deposits unless otherwise indicated. Negative responses to the questions in this section should be explained, and additional procedures deemed necessary should be discussed with the examiner-in-charge. Items marked with an asterisk require substantiation by observation or testing.

OPENING DEPOSIT ACCOUNTS

1. Are new-account documents prenumbered?
   a. Are new-account documents issued in strict numerical sequence?
   b. Are the opening of new accounts and access to unused new-account records and certificate of deposit (CD) forms handled by an employee who is not a teller or who cannot make internal entries to customer accounts or the general ledger?

2. Does the institution have a written “know-your-customer” policy?
   a. Do new-account applications require sufficient information to clearly identify the customer?
   b. Are “starter” checks issued only after the verification of data on new transaction-account applications?
   c. Are checkbooks and statements mailed only to the address of record? If not, is a satisfactory explanation and description obtained for any other mailing address (post office boxes, a friend or relative, etc.)?
   d. Are the employees responsible for opening new accounts trained to screen depositors for signs of check kiting?

3. Does the bank perform periodic inventories of new-account documents and CDs, and do the inventories include an accountability of numbers issued out of sequence or canceled prior to issuance?

4. Are CDs signed by a properly authorized individual?

5. Are new-account applications and signature cards reviewed by an officer?

CLOSING DEPOSIT ACCOUNTS

1. Are signature cards for closed accounts promptly pulled from the active-account file and placed in a closed file?

2. Are closed-account lists prepared? If so, how frequently?

3. Is the closed-account list circulated to appropriate management?

4. Is verification of closed accounts, in the form of statements of “goodwill” letters, required? Are such letters mailed under the control of someone other than a teller or an individual who can make internal entries to an account (such as a private banker or branch manager)?

5. For redeemed CDs:
   a. Are the CDs stamped paid?
   b. Is the disposition of proceeds documented to provide a permanent record as well as a clear audit trail?
   c. Are penalty calculations on CDs and on other time deposits that are redeemed before maturity rechecked by a second employee?

6. Except for deposit-account agreements that authorize the transfer of deposited funds to other non-demand deposit accounts, are matured CDs that are not automatically renewable classified as demand deposits on the Call Report and on the Report of Transaction Accounts, Other Deposits and Vault Cash (FR 2900)?

DEPOSIT-ACCOUNT RECORDS

1. Does the institution have documentation supporting a current reconciliation of each deposit-account category recorded on its general ledger, including customer accounts
and bank-controlled accounts such as dealer reserves, escrow, Treasury tax and loan, etc.? (Prepare separate workpapers for demand and time accounts, listing each account and the date and frequency of reconcilement, the general-ledger balance, the subsidiary-ledger balance, adjustments, and unexplained differences.)

2. Are reconciliations performed by an individual or group not directly engaged in accepting or preparing transactions or in data entry to customers’ accounts?

3. If the size of the bank precludes full separation of duties between data entry and reconcilement, are reconcilement duties rotated on a formal basis, and is a record maintained to support such action?

4. Are reconciliations reviewed by appropriate independent management, especially in circumstances when full separation of duties is not evident?

5. Are periodic reports prepared for management, and do the reports provide an aging of adjustments and differences and detail the status of significant adjustments and differences?

6. Has management adequately addressed any significant or long-outstanding adjustments or differences?

7. Is the preparation of input and the posting of subsidiary demand deposit records performed or adequately reviewed by persons who do not also—
   a. accept or generate transactions?
   b. issue official checks or handle funds-transfer transactions?
   c. prepare or authorize internal entries (return items, reversals, and direct charges, such as loan payments)?
   d. prepare supporting documents required for disbursements from an account?
   e. perform maintenance on the accounts, such as changes of address, stop payments, holds, etc.?

8. Are in-process, suspense, interoffice, and other accounts related to deposit accounts controlled or closely monitored by persons who do not have posting or reconcilement duties?

9. Are periodic reports prepared for management on open items in suspense and on in-process, interoffice, overdrawn, and other deposit accounts, and do the reports include aging of items and the status of significant items?

10. If the bank’s bookkeeping system is not automated, are deposit bookkeepers rotated?

11. Does the bank segregate the deposit account files of—
   a. employees and officers?
   b. directors?
   c. the business interests of employees and officers, or interests controlled by employees and officers?
   d. the business interests of directors, or interests controlled by directors?
   e. foreign governments, embassies, and political figures?

12. Are posting and check filing separated from statement preparation?

13. Are statements mailed or delivered to all customers as required by the bank’s deposit-account agreement?

14. Are customer transaction and interest statements mailed in a controlled environment that precludes any individual from receiving any statement not specifically authorized by the customer or the institution’s policy (for example, dormant-account statements)?

DORMANT ACCOUNTS AND RETURNED MAIL

1. Does the bank have formal policies and procedures for the handling of customers’ transaction and interest statements that are returned as undeliverable? Does the policy—
   a. require that statements be periodically mailed on dormant accounts? If so, how often?
   b. prohibit the handling of dormant-account statements by (1) employees of the branch where the account is assigned, (2) the account officer, and (3) other individuals with exclusive control of accounts?
   c. require positive action to follow up on obtaining new addresses?
   d. place statements and signature cards for accounts for which contact cannot be re-established (the mail is returned more than once or is marked “deceased”) into a controlled environment?
   e. require the bank to change the address on future statements to the department.
of the bank (the controlled environment) designated to receive returned mail?

f. require a written request from the customer and verification of the customer’s signature before releasing an account from the controlled environment?

*2. Are accounts for which contact cannot be re-established and that do not reflect recent activity removed from active files and clearly classified as dormant?

*3. Before returning a dormant account to active status, are transactions reactivating the account verified, and are independent confirmations obtained directly from the customer?

*4. Does transfer from dormant to active status require the approval of an officer who cannot approve transactions on dormant accounts?

INACTIVE ACCOUNTS

1. Are demand accounts that have been inactive for one year, and time accounts that have been inactive for three years, classified as inactive? If not, state the time period for classifying a demand or time account as inactive.

2. Does the bank periodically review the inactive accounts to determine if they should be placed in a dormant status, and are decisions to keep such accounts in active files documented?

HOLD MAIL

*1. Does the institution have a formal policy and procedure for handling statements and documents that a customer requests not to be mailed but that will be picked up at a location within the institution? Does the policy—
   a. require that statements will not be held by an individual (an account officer, branch manager, bookkeeper, etc.) who could establish exclusive control over entries to and the delivery of statements for customer accounts?
   b. discourage such pickup arrangements and grant them only after the customer provides a satisfactory reason for the arrangement?
   c. require the customer to sign a statement describing the purpose of the request and the proposed times for pickup, and designate the individuals authorized to pick up the statement?
   d. require the maintenance of signature cards for individuals authorized to pick up statements, and compare the authorized signatures with those who sign for statements held for pickup?
   e. prohibit the delivery of statements to officers and employees requiring special attention unless it is part of the formal “hold-mail” function?

*2. Is a central record of hold-mail arrangements maintained in a control area that does not originate entries to customers’ accounts? Does the record identify each hold-mail arrangement, the designated location for pickup, and the scheduled pickup times? Does the control area—
   a. maintain current signature cards of individuals authorized to pick up statements?
   b. obtain signed receipts showing the date of pickup, and compare the receipts with the signature cards?
   c. follow up on the status of statements not picked up as scheduled?

*3. Does management review activity in hold-mail accounts that have not been picked up for extended periods of time (for example, one year), and, when there is no activity, place the accounts in a dormant status?

OVERDRAFTS

*1. Are overdraft authorization limits for officers formally established?

*2. Does the bank require an authorized officer to approve overdrafts?

*3. Is an overdraft listing prepared daily for demand deposit and time transaction accounts?

4. For banks processing overdrafts that are not automatically approved (a “pay none” system), is the nonsufficient-funds report circulated among bank officers?

*5. Are overdraft listings circulated among the officers?

6. Are the statements of accounts with large overdrafts reviewed for irregularities and prompt repayment?
7. Is an aged record of large overdrafts included in the monthly report to the board of directors or its committee, and does the report include the overdraft origination date?

8. Is there an established schedule of service charges?

**UNCOLLECTED FUNDS**

*1. Does the institution generate a daily report of drawings against uncollected funds for demand deposit and time transaction accounts?
   a. Is the computation of uncollected funds positions based on reasonable check-collection criteria?
   b. Can the reports, or a separate account activity report, be used to detect potential kiting conditions?
   c. If reports are not generated for time transaction accounts, is a system in place to control drawings against uncollected funds?

*2. Do authorized officers review the uncollected-funds reports and approve drawings against uncollected funds within established limits?

*3. Are accounts that frequently appear on the uncollected-funds or kite-suspect reports reviewed regardless of account balances? (For example, accounts with simultaneous large debits and credits can reflect low balances.)

**ACCOUNTS FOR FOREIGN GOVERNMENTS, EMBASSIES, AND POLITICAL FIGURES**

1. For bank relationships with a foreign government, embassy, or political figure:
   a. Has the board of directors established standards and guidelines for management to use when evaluating whether or not the bank should accept such new accounts?
   b. Are the standards and guidelines consistent with the bank’s—
      • own business objectives,
      • assessment of the varying degrees of risks associated with particular foreign accounts or lines of business, and
      • capacity to manage those risks?
   c. Does the bank have adequate internal controls and compliance oversight systems to monitor and manage the varying degrees of risks associated with such foreign accounts? Do these internal controls and compliance systems ensure full compliance with the Bank Secrecy Act, as amended by the USA Patriot Act, and its respective regulations?
   d. Does the bank have personnel that are sufficiently trained in the management of such risks and in the requirements of applicable laws and regulations?
   e. Does the bank have policies and procedures for ensuring that such foreign-account customers receive adequate communications from the bank? Communications should ensure that these customers are made fully aware of the requirements of U.S laws and regulations to which the bank is subject.
   f. Does the bank seek to structure its relationships with such foreign-account customers so as to minimize the varying degrees of risks these customers may pose?

**OTHER MATTERS**

*1. Are account-maintenance activities (changes of address, status changes, rate changes, etc.) separated from data entry and reconciling duties?

*2. Do all internal entries other than service charges require the approval of appropriate supervisory personnel?

*3. If not included in the internal or external audit program, are employees’ and officers’ accounts, accounts of employees’ and officers’ business interests, and accounts controlled by employees and officers periodically reviewed for unusual or prohibited activity?

*4. For unidentified deposits:
   a. Are deposit slips kept under dual control?
   b. Is the disposition of deposit slips approved by an appropriate officer?

*5. For returned checks, unposted items, and
other rejects:
  a. Are daily listings of such items prepared?
  b. Are all items reviewed daily, and is disposition of items required within a reasonable time period? If so, indicate the time period.
  c. Are reports prepared for management that show items not disposed of within the established time frames?
  6. Are customers immediately notified in writing of deposit errors?
  7. Does the bank require a customer’s signature for stop-payment orders?
  8. For automatic transfer accounts:
     a. Are procedures in effect that require officer approval for transfers in excess of the savings balance?
     b. For nonautomated systems, are transfers made by employees who do not also handle cash, execute external funds transfers, issue official checks singly, or post subsidiary records?
  9. For telephone transfer accounts:
     a. Do depositors receive an individual identification code for use in making transfers?
     b. Are transfers made by employees who do not also handle cash, execute external funds transfers, issue official checks singly, or post subsidiary records?
  *10. If not included in the internal or external audit program, are accrued balances for the various types of deposits verified periodically by an authorized official? If so, indicate how often.
  *11. Are accounts with a “hold-balance” status—those accounts on which court orders have been placed, those pledged as security to customers’ loans, those pending the clearing of a large check, those for which the owner is deceased, and those for which the passbook has been lost—“locked out” for transactions unless the transaction is approved by appropriate management?
  12. For passbook accounts:
     a. Do all entries to passbooks contain teller identification?
     b. Under a window-posting system, are recording media and passbooks posted simultaneously?
     c. Are tellers prohibited from holding customers’ savings passbooks?
     d. If customers’ passbooks are held, are they maintained under the institution’s “hold-mail” program and kept under dual control?
     e. Are customers prohibited from withdrawing funds without a passbook? If not, state the policy.
  13. For withdrawals from savings or other time accounts:
     a. Are withdrawal tickets canceled daily?
     b. Are procedures in place to preclude overdrafts?
     c. Are procedures in effect to place holds on, and to check for holds on, withdrawals over a stated amount? If so, indicate the amount.
  14. For signature cards on demand and time accounts:
     a. Are procedures in effect to guard against the substitution of false signatures? Describe the procedures.
     b. Are signature cards stored to preclude physical damage?
     c. Are signatures compared for withdrawals and cashed checks? Describe the procedures.

OFFICIAL CHECKS, MONEY ORDERS, AND CERTIFIED CHECKS

*1. Are separate general-ledger accounts maintained for each type of official check?
*2. For each type of check issued:
    a. Are multicopy checks and certified-check forms used? If not, are detailed registers of disbursed checks maintained?
    b. Are all checks prenumbered and issued in sequence?
    c. Is check preparation and issuance separate from recordkeeping?
    d. Is the signing of checks in advance prohibited?
    e. Do procedures prohibit the issuance of a check before the credit is processed?
*3. Is the list authorizing bank personnel to sign official checks kept current? Does the list include changes in authorization limits, delete employees who no longer work at the bank, and indicate employees added to the list?
*4. Are appropriate controls in effect over check-signing machines (if used) and certification stamps?
*5. Are voided checks and voided certified-check forms promptly defaced and filed with paid checks?

*6. If reconciliations are not part of the overall deposit-reconciliation function—
   a. are outstanding checks listed and reconciled regularly to the general ledger? If so, state how often.
   b. is permanent evidence of reconciliations maintained?
   c. is there clear separation between the preparation of checks, data entry, and check reconciliation?
   d. are the reconciliations reviewed regularly by an authorized officer?
   e. are reconcilement duties rotated on a formal basis in institutions where size precludes the full separation of duties between data entry and reconcilement?
   f. are authorized signatures and endorsements checked by the filing clerk?

*7. For supplies of official checks:
   a. Are records of unissued official checks maintained centrally and at each location storing them?
   b. Are periodic inventories of unissued checks independently performed?
   c. Do the inventories include a description of all checks issued out of sequence?
   d. If users are assigned a supply, is that supply replenished on a consignment basis?

*8. Are procedures in effect to preclude certification of checks drawn against uncollected funds?

AUDIT

*1. Are deposit-account activities audited on a sufficiently frequent basis?

*2. Does the scope of the audit program require, and do audit records support, substantive testing or quantitative measurements of deposit-account activities that, at a minimum, include the matters set forth in this questionnaire?

*3. Does the audit program include a comprehensive confirmation program with the customers of each deposit category maintained by the institution?

*4. Do audit department records support the execution of the confirmation program, and do the records reflect satisfactory follow-up of responses and of requests returned as undeliverable?

*5. Are audit and prior-examination recommendations for deposit-account activities appropriately addressed?

CONCLUSION

*1. Does the foregoing information provide an adequate basis for evaluating internal control in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

*2. Are internal controls adequate on the basis of a composite evaluation, as evidenced by answers to the foregoing questions?
Borrowed Funds
Effective date October 2008

Borrowed funds are a common and practical method for banks of all sizes to meet customers' needs and enhance banking operations. For the purposes of this section, borrowings exclude long-term subordinated debt, such as capital notes and debentures (discussed in “Assessment of Capital Adequacy,” section 3020.1). Borrowings may exist in a number of forms, both on a direct and indirect basis. Common sources of direct bank borrowings include Federal Home Loan Bank credit lines, federal funds purchased, loans from correspondent banks, repurchase agreements, negotiable certificates of deposit, and borrowings from the Federal Reserve discount window. These are discussed in some detail below. Other borrowings include bills payable to the Federal Reserve, interest-bearing demand notes issued to the U.S. Treasury (the Treasury tax and loan note option account), mortgages payable, due bills, and other types of borrowed securities. Indirect forms of borrowings include customer paper rediscounted and assets sold with the bank's endorsement or guarantee or subject to a repurchase agreement.

The primary reasons a bank may borrow include the following:

- To meet the temporary or seasonal loan or deposit withdrawal needs of its customers, if the borrowing period is temporary and the bank is quickly restored to a position in which the quantity of its principal earning assets and cash reserves is in proper relation to the requirements of its normal deposit volume.
- To meet large and unanticipated deposit withdrawals that may arise during periods of economic distress. The examiner should distinguish between "large and unanticipated deposit withdrawals" and a predetermined contraction of deposits, such as the cessation of activities in a resort community or the withdrawal of funds on which the bank received adequate prior withdrawal notice. Those situations should be met through ample cash reserves and readily convertible assets rather than borrowing.
- To manage liabilities effectively. Generally, the effective use of this type of continuous borrowing is limited to money-center or large regional banks.

It is important to analyze each borrowing on its own merit to determine its purpose, effectiveness, and stability. Some of the more frequently used sources of borrowings are discussed below.

COMMON SOURCES OF BORROWINGS

Federal Home Loan Bank Borrowings

The Federal Home Loan Bank (FHLB) originally served solely as a source of borrowings to savings and loan companies. With the implementation of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA), FHLB’s lending capacity was expanded to include banks.

Compared with borrowings from the discount window of the Reserve Banks, borrowings from the FHLB have fewer conditions. Both short-term and long-term borrowings, with maturities ranging from overnight to 30 years, are available to institutions at generally competitive interest rates. The flexibility of the facility enables bank management to use this source of funds for the purpose of asset/liability management, and it allows management to secure a favorable interest-rate spread. For example, FHLB borrowings may provide a lower-cost alternative to the conventional deposit, particularly in a highly competitive local market.

Management should be capable of explaining the purpose of the borrowing transaction. The borrowing transaction should then be analyzed to determine whether the arrangement achieved the stated purpose or whether the borrowings are a sign of liquidity deficiencies. Further, the borrowing agreement between the institution and the FHLB should be reviewed to determine the asset collateralizing the borrowings and the potential risks presented by the agreement. In some instances, the borrowing agreement may provide for collateralization by all assets not already pledged for other purposes.

The types of collateral necessary to obtain an FHLB loan include residential mortgage loans and mortgage-backed securities. The composite rating of an institution is a factor in both the approval for obtaining an FHLB loan and the level of collateral required.
Federal Funds Purchased

The day-to-day use of federal funds is a rather common occurrence, and federal funds are considered an important money market instrument. Many regional and money-center banks, acting in the capacity of correspondents to smaller community banks, function as both providers and purchasers of federal funds and, in the process of these transactions, often generate a small return.

A brief review of bank reserves is essential to a discussion of the federal funds market. As a condition of membership in the Federal Reserve System, member banks are required to maintain a portion of their deposits as reserves. Reserves can take the form of vault cash and deposits in the Reserve Bank. The amount of these reserve balances is reported weekly or quarterly and computed on the basis of the daily average deposit balances. For institutions that report their reserves on a weekly basis, required reserves are computed on the basis of daily average balances of deposits and Eurocurrency liabilities during a 14-day period ending every second Monday. Institutions that report their reserves on a quarterly basis compute their reserve requirement on the basis of their daily average deposit balances during a seven-day computation period that begins on the third Tuesday of March, June, September, and December. (See 12 CFR 204.3(c)-(d).)

Since member banks do not receive interest on the reserves, banks prefer to keep excess balances at a minimum to achieve the maximum utilization of funds. To accomplish this goal, banks carefully analyze and forecast their daily reserve position. Changes in the volume of required reserves occur frequently as the result of deposit fluctuations. Deposit increases require member banks to maintain more reserves; conversely, deposit decreases require less reserves.

The most frequent type of federal funds transaction is unsecured for one day and repayable the following business day. The rate is usually determined by overall money market rates as well as by the available supply of and demand for funds. In some instances, when the selling and buying relationship between two banks is quite continuous, something similar to a line of credit may be established on a funds-availability basis. Although the most common federal funds transaction is unsecured, the selling of funds can also be secured and for longer periods of time. Agency-based federal funds transactions are discussed in “Bank Dealer Activities,” section 2030.1.

Loans from Correspondent Banks

Small and medium-sized banks often negotiate loans from their principal correspondent banks. The loans are usually for short periods and may be secured or unsecured.

Repurchase Agreements

The terms “repurchase agreement”1 (repo) and “reverse repurchase agreement” refer to a type of transaction in which a money market participant acquires immediately available funds by selling securities and simultaneously agreeing to repurchase the securities after a specified time at a given price, which typically includes interest at an agreed-on rate. Such a transaction is called a repo when viewed from the perspective of the supplier of the securities (the borrower), and a reverse repo or matched sale-purchase agreement when described from the point of view of the supplier of funds (the lender).

Frequently, instead of resorting to direct borrowings, a bank may sell assets to another bank or some other party and simultaneously agree to repurchase the assets at a specified time or after certain conditions have been met. Bank securities as well as loans are often sold under a repo to generate temporary working funds. These kind of agreements are often used because the rate on this type of borrowing is less than the rate on unsecured borrowings, such as federal funds purchased.

The usual terms for the sale of securities under a repo require that, after a stated period of time, the seller repurchase the securities at a predetermined price or yield. A repo commonly includes a near-term maturity (overnight or a few days) and is usually arranged in large-dollar amounts. The lender or buyer is entitled to receive compensation for use of the funds provided to its counterparty. The interest rate paid on a repo is negotiated based on the rates on the underlying securities. U.S. government and agency securities are the most common type of

---

instruments sold under repurchase agreements, since those types of repos are exempt from reserve requirements.

Although standard overnight and term repo arrangements in Treasury and federally related agency securities are most prevalent, market participants sometimes alter various contract provisions to accommodate specific investment needs or to provide flexibility in the designation of collateral. For example, some repo contracts allow substitutions of the securities subject to the repurchase commitment. These are called “dollar repurchase agreements” (dollar rolls), and the initial seller’s obligation is to repurchase securities that are substantially similar, but not identical, to the securities originally sold. Another common repo arrangement is called a “flex repo,” which, as implied by the name, provides a flexible term to maturity. A flex repo is a term agreement between a dealer and a major customer in which the customer buys securities from the dealer and may sell some of them back before the final maturity date.

Bank management should be aware of certain considerations and potential risks of repurchase agreements, especially when entering into large-dollar-volume transactions with institutional investors or brokers. Both parties in a term repo arrangement are exposed to interest-rate risk. It is a fairly common practice to have the collateral value of the underlying securities adjusted daily to reflect changes in market prices and to maintain the agreed-on margin. Accordingly, if the market value of the repo securities declines appreciably, the borrower may be asked to provide additional collateral. Conversely, if the market value of the securities rises substantially, the lender may be required to return the excess collateral to the borrower. If the value of the underlying securities exceeds the price at which the repurchase agreement was sold, the bank could be exposed to the risk of loss if the buyer is unable to perform and return the securities. This risk would obviously increase if the securities are physically transferred to the institution or broker with which the bank has entered into the repurchase agreement. Moreover, if the securities are not returned, the bank could be exposed to the possibility of a significant write-off, to the extent that the book value of the securities exceeds the price at which the securities were originally sold under the repurchase agreement. For this reason, banks should avoid pledging excessive collateral and obtain sufficient financial information on and analyze the financial condition of those institutions and brokers with whom they engage in repurchase transactions.

“Retail repurchase agreements” (retail repos) for a time were a popular vehicle for some commercial banks to raise short-term funds and compete with certain instruments offered by nonbanking competitors. For booking purposes, a retail repo is a debt incurred by the issuing bank that is collateralized by an interest in a security that is either a direct obligation of or guaranteed as to principal and interest by the U.S. government or an agency thereof. Retail repos are issued in amounts not exceeding $100,000 for periods of less than 90 days. With the advent of money market certificates issued by commercial banks, the popularity of the retail repo declined.

Both retail and large-denomination, wholesale repurchase agreements are in many respects equivalent to short-term borrowings at market rates of interest. Therefore, banks engaging in repurchase agreements should carefully evaluate their interest-rate-risk exposure at various maturity levels, formulate policy objectives in light of the institution’s entire asset and liability mix, and adopt procedures to control mismatches between assets and liabilities. The degree to which a bank borrows through repurchase agreements also should be analyzed with respect to its liquidity needs, and contingency plans should provide for alternative sources of funds.

**Negotiable Certificates of Deposit**

Certificates of deposit (CDs) have not been legally defined as borrowings and continue to be reflected as deposits for reporting purposes. However, the fundamental distinction between a negotiable money market CD as a deposit or as a borrowing is nebulous at best; in fact, the negotiable money market CD is widely recognized as the primary borrowing vehicle for many banks. Dependence on CDs as sources of funds is discussed in “Deposit Accounts,” section 3000.1.

Borrowings from the Federal Reserve

In accordance with the Board’s Regulation A (12 CFR 201), the Federal Reserve Banks generally make credit available through the primary, secondary, and seasonal credit programs to any depository institution that maintains transaction accounts or nonpersonal time deposits. However, the Federal Reserve expects depository institutions to rely on market sources of funds for their ongoing funding needs and to use these credit programs as a backup source of funding rather than a routine one. An institution that borrows primary credit may use those funds to finance sales of federal funds, but secondary and seasonal credit borrowers may not act as the medium or agent of another depository institution in receiving Federal Reserve credit except with the permission of the lending Federal Reserve Bank.

A Federal Reserve Bank is not obligated to extend credit to any depository institution but may lend to a depository institution either by making an advance secured by acceptable collateral or by discounting certain types of paper described in the Federal Reserve Act. Although Reserve Banks now always extend credit in the form of an advance, the Federal Reserve’s credit facility nonetheless is known colloquially as the “discount window.” Before lending to a depository institution, a Reserve Bank can require any information it believes is appropriate to ensure that the assets tendered as collateral are acceptable. A Reserve Bank also should determine prior to lending whether the borrowing institution is undercapitalized or critically undercapitalized. Operating Circular No. 10, “Lending,” establishes the credit and security terms for borrowings from the Federal Reserve.

3. In unusual and exigent circumstances and after consultation with the Board, a Reserve Bank may extend credit to individuals, partnerships, and corporations that are not depository institutions if, in the judgment of the Reserve Bank, credit is not available from other sources and failure to obtain credit would adversely affect the economy. A Reserve Bank may extend credit to a nondepository entity in the form of an advance only if the advance is secured by a direct obligation of the United States or a direct obligation of, or an obligation that is fully guaranteed as to principal and interest by, any agency of the United States. An extension of credit secured by any other type of collateral must be in the form of a discount and must be authorized by an affirmative vote of at least five members of the Board.

Primary Credit

Reserve Banks may extend primary credit on a very short term basis (typically overnight) to depository institutions that the Reserve Banks judge to be in generally sound financial condition. Reserve Banks extend primary credit at a rate above the target federal funds rate of the Federal Open Market Committee. Minimal administrative requirements apply to requests for overnight primary credit, unless some aspect of the credit request appears inconsistent with the conditions of primary credit (for example, if a pattern of behavior indicates strongly that an institution is using primary credit other than as a backup source of funding). Reserve Banks also may extend primary credit to eligible institutions for periods of up to several weeks if such funding is not available from other sources. However, longer-term extensions of primary credit will be subject to greater administration than are overnight loans.

Reserve Banks determine eligibility for primary credit according to a uniform set of criteria that also is used to determine eligibility for daylight credit under the Board’s Policy Statement on Payments System Risk. These criteria are based mainly on examination ratings and capitalization, although Reserve Banks also may use supplementary information, including market-based information when available. Specifically, an institution that is at least adequately capitalized and rated CAMELS 1 or 2 (or SOSA 1 and ROCA 1, 2, or 3) almost certainly would be eligible for primary credit. An institution that is at least adequately capitalized and rated CAMELS 3 (or SOSA 2 and ROCA 1, 2, or 3) generally would be eligible. An institution that is at least adequately capitalized and rated CAMELS 4 (or SOSA 1 or 2 and ROCA 4 or 5) would be eligible only if an ongoing examination indicated a substantial improvement in condition. An institution that is not at least adequately capitalized, or that is rated CAMELS 5 (or SOSA 3 regardless of the ROCA rating), would not be eligible for primary credit.

Secondary Credit

Secondary credit is available to institutions that do not qualify for primary credit. Secondary credit is available as a backup source of liquidity on a very short term basis, provided that the loan is consistent with a timely return to a reliance on
market sources of funds. Longer-term secondary credit is available if necessary for the orderly resolution of a troubled institution, although any such loan would have to comply with additional requirements for lending to undercapitalized and critically undercapitalized institutions. Unlike the primary credit program, secondary credit is not a minimal administration facility because Reserve Banks must obtain sufficient information about a borrower’s financial situation to ensure that an extension of credit complies with the conditions of the program. Secondary credit is available at a rate above the primary credit rate.

Seasonal Credit

Seasonal credit is available under limited conditions to meet the needs of depository institutions that have seasonal patterns of movement in deposits and loans but that lack ready access to national money markets. In determining a depository institution’s eligibility for seasonal credit, Reserve Banks consider not only the institution’s historical record of seasonal fluctuations in loans and deposits, but also the institution’s recent and prospective needs for funds and its liquidity conditions. Generally, only very small institutions with pronounced seasonal funding needs will qualify for seasonal credit. Seasonal credit is available at a flexible rate that takes into account the rate for market sources of funds.

Collateral Requirements

All loans advanced by the Reserve Bank must be secured to the satisfaction of the Reserve Bank. Collateral requirements are governed by Operating Circular No. 8. Reserve Banks require a perfected security interest in all collateral pledged to secure loans. Satisfactory collateral generally includes U.S. government and federal-agency securities, and, if they are of acceptable quality, mortgage notes covering one- to four-family residences; state and local government securities; and business, consumer, and other customer notes. Traditionally, collateral is held in the Reserve Bank vault. Under certain circumstances, collateral may be retained on the borrower’s premises under a borrower-in-custody arrangement, or it may be held on the borrower’s premises under the Reserve Bank’s exclusive custody and control in a field ware-house arrangement. Collateral may also be held at the borrowing institution’s correspondent or another third party. All book-entry collateral must be held at the Federal Reserve Bank. Definitive collateral, not in bearer form, must be properly assigned and endorsed.

Lending to Undercapitalized and Critically Undercapitalized Depository Institutions

Credit from any Reserve Bank to an institution that is “undercapitalized” may be extended or outstanding for no more than 60 days during which the institution is undercapitalized in any 120-day period. An institution is considered undercapitalized if it is not critically undercapitalized under section 38 of the Federal Deposit Insurance Act (the FDI Act) but is either deemed undercapitalized under that provision and its implementing regulations or has received a composite CAMELS rating of 5 as of the most recent examination. A Reserve Bank may make or have outstanding advances or discounts to an institution that is deemed “critically undercapitalized” under section 38 of the FDI Act and its implementing regulations only during the five-day period beginning on the date the institution became critically undercapitalized or after consultation with the Board.

INTERNATIONAL BORROWINGS

International borrowings may be direct or indirect. Common forms of direct international borrowings include loans and short-term call money from foreign banks, borrowings from the Export-Import Bank of the United States, and overdrawn nostro (due from foreign banks—demand) accounts. Indirect forms of borrowing include notes and trade bills rediscounted with the central banks of various countries; notes, acceptances, import drafts, or trade bills sold with the bank’s endorsement or guarantee; notes and other obligations sold subject to repurchase agreements; and acceptance pool participations.

4. Generally, a Reserve Bank also may lend to an undercapitalized institution during 60 calendar days after receipt of a certificate of viability from the Chairman of the Board of Governors or after consultation with the Board.
ANALYZING BORROWINGS

If a bank borrows extensively or in large amounts, the examiner should thoroughly analyze the borrowing activity. An effective analysis includes a review of the bank’s reserve records, both required and maintained, to determine the frequency of deficiencies at the closing of reserve periods. The principal sources of borrowings, range of amounts, frequency, length of time indebted, cost, and reasons for the borrowings should be explored. The actual use of the funds should be verified.

Examiners should also analyze changes in a bank’s borrowing position for signs of deterioration in its borrowing ability and overall creditworthiness. One indication of deterioration is the payment of large fees to money brokers to obtain funds because the bank is having difficulty obtaining access to conventional sources of borrowings. These “brokered deposits” are usually associated with small banks since they do not generally have ready access to alternative sources of funds available to larger institutions through the money and capital markets. Brokered deposits generally carry higher interest rates than alternative sources, and they tend to be particularly susceptible to interest-rate changes in the overall financial market. For further discussion of brokered deposits, see “Deposit Accounts,” section 3000.1.

Other indicators of deterioration in a bank’s borrowing ability and overall creditworthiness include, but are not limited to, requests for collateral on previously unsecured credit lines or increases in collateral margins, the payment of above-market interest rates, or a shortening of maturities that is inconsistent with management’s articulated balance-sheet strategies. If the examiner finds that a bank’s borrowing position is not properly managed, appropriate comments should be included in the report of examination.
Borrowed Funds
Examination Objectives
Effective date May 1996

Section 3010.2

1. To determine if the policies, practices, procedures, and internal controls for borrowed funds are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To determine compliance with laws and regulations.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.
Borrowed Funds
Examination Procedures
Effective date October 2008

1. If selected for implementation, complete or update the Borrowed Funds section of the Internal Control Questionnaire.

2. Based on the evaluation of internal controls and the work performed by the internal/external auditors, determine the scope of the examination.

3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any audit deficiencies noted in the latest review done by internal/external auditors from the examiner assigned to "Internal Control" and determine if appropriate corrections have been made.

4. Obtain the listing of accounts related to domestic and international borrowed funds from the examiner assigned to "Examination Strategy."

5. Prepare or obtain a listing of borrowings, by type, and—
   a. agree or reconcile balances to department controls and general ledger, and
   b. review reconciling items for reasonableness.

6. From consultation with the examiners assigned to the various loan areas, determine that the following schedules were reviewed in the lending departments and that there was no endorsement, guarantee, or repurchase agreement which would constitute a borrowing:
   a. participations sold
   b. loans sold in full since the preceding examination

7. Based on the information obtained in steps 5 and 6, and through observation and discussion with management and other examining personnel, determine that all borrowings are properly reflected on the books of the bank.

8. If the bank engages in any form of borrowing which requires written borrowing agreement(s), complete the following:
   a. Prepare or update a carry-forward workpaper describing the major terms of each borrowing agreement, and determine that the bank is complying with those terms.
   b. Review terms of past and present borrowing agreements for indications of deteriorating credit position by noting—
      • recent substantive changes in borrowing agreements,
      • increases in collateral to support borrowing transactions,
      • general shortening of maturities,
      • interest rates exceeding prevailing market rates,
      • frequent changes in lenders, and
      • large fees paid to money brokers.

   c. If the bank has obtained funds from money brokers (brokered deposits), determine—
      • why such deposits were originally obtained,
      • who the deposits were obtained from,
      • what the funds are used for,
      • the relative cost of brokered deposits in comparison to alternate sources of funds, and
      • the overall effect of the use of brokered deposits on the bank’s condition and whether there appear to be any abuses related to the use of such deposits.

   d. If there is an indication that the bank’s credit position has deteriorated, ascertain why.

9. If the bank engages in the issuance of retail repurchase agreements (retail repos), check for compliance with section 4170.1; also 2015.1 and 2020.1.

10. Determine the purpose of each type of borrowing and conclude whether the bank’s borrowing posture is justified in light of its financial condition and other relevant circumstances.

11. Provide the examiner assigned to “Asset/Liability Management” the following information:
   a. A summary and an evaluation of the bank’s borrowing policies, practices, and procedures. The evaluation should give consideration to whether the bank—
      • evaluates interest-rate-risk exposure at various maturity levels;
      • formulates policy objectives in light of the entire asset and liability mix, and liquidity needs;
      • has adopted procedures to control mis-
matches between assets and liabilities; and

- has contingency plans for alternate sources of funds in the event of a run-off of current funding sources.

b. An evaluation of the bank’s adherence to established policies and procedures.

c. A repricing maturity schedule of borrowings.

d. A listing of prearranged federal funds lines and other lines of credit. Indicate the amount currently available under those lines, i.e., the unused portion of the lines.

e. The amount of any anticipated decline in borrowings over the next [time period]. (The time period will be determined by the examiner assigned to “Asset/Liability Management.”)

12. Prepare a list of all borrowings by category, on a daily basis for the period since the last examination. Also, include on the list short-term or overnight money market lending activities such as federal funds sold and securities purchased under resale agreement. For each category on the list, compute for the period between examinations—

a. high point

b. low point

c. average amounts outstanding

d. frequency of borrowing and lending activity, expressed in terms of number of days

13. Prepare, in appropriate report form, and discuss with appropriate management—

a. the adequacy of written policies regarding borrowings;

b. the manner in which bank officers are operating in conformance with established policy;

c. the existence of any unjustified borrowing practices;

d. any violation of laws or regulations; and

e. recommended corrective action when policies, practices, or procedures are deficient; violations of laws or regulations exist; or when unjustified borrowing practices are being pursued.

14. Update the workpapers with any information that will facilitate future examinations.

15. Review the market value of collateral and collateral-control arrangements for repurchase agreements to ensure that excessive collateral has not been pledged and that the bank is not exposed to excessive credit risks.
Review the bank’s controls, policies, practices and procedures for obtaining and servicing borrowed funds. The bank’s system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

**POLICY**

1. Has the board of directors approved a written policy which:
   a. Outlines the objectives of bank borrowings?
   b. Describes the bank’s borrowing philosophy relative to risk considerations, i.e., leverage/growth, liquidity/income?
   c. Provides for risk diversification in terms of staggered maturities rather than solely on cost?
   d. Limits borrowings by amount outstanding, specific type or total interest expense?
   e. Limits or restricts execution of borrowings by bank officers?
   f. Provides a system of reporting requirements to monitor borrowing activity?
   g. Requires subsequent approval of transactions?
   h. Provides for review and revision of established policy at least annually?

**INTEREST**

*5. Are individual interest computations checked by persons who do not have access to cash?
6. Is an overall test of the total interest paid made by persons who do not have access to cash?
7. Are payees on the checks matched to related records of debt, note or debenture owners?
8. Are corporate resolutions properly prepared as required by creditors and are copies on file for reviewing personnel?
9. Are monthly reports furnished to the board of directors reflecting the activity of borrowed funds, including amounts outstanding, interest rates, interest paid to date and anticipated future activity?

**RECORDS**

*2. Does the bank maintain subsidiary records for each type of borrowing, including proper identification of the obligee?
*3. Is the preparation, addition and posting of the subsidiary borrowed funds records performed or adequately reviewed by persons who do not also:
   a. Handle cash?
   b. Issue official checks and drafts?

*4. Are subsidiary borrowed funds records reconciled with the general ledger accounts at an interval consistent with borrowing activity, and are the reconciling items investigated by persons, who do not also:
   a. Handle cash?
   b. Prepare or post to the subsidiary borrowed funds records?

**CONCLUSION**

10. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
11. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
Commercial banks rely on wholesale borrowings obtained from a number of financial intermediaries, including Federal Home Loan Banks, other commercial banks, and securities firms. These borrowings frequently have attractive features and pricing. If properly assessed and prudently managed, they can enhance a bank’s funding options and assist in controlling interest-rate and liquidity risks. Some of the reasons that banks use these types of borrowings include the initial low cost of funds when compared with other liabilities with similar maturities. At the same time, certain wholesale borrowings have become more complex, and some structures include various types of embedded options.1 If not thoroughly assessed and prudently managed, these more complex funding instruments have the potential over time to significantly increase a bank’s sensitivity to market and liquidity risks. Maturity mismatches or the embedded options themselves can, in some circumstances, adversely affect a bank’s financial condition, especially when the terms and conditions of the borrowings are misunderstood.

A growing use of wholesale borrowings, combined with the risks associated with the complex structures of some of these borrowings, makes it increasingly important for bank supervisors to assess the risks and risk-management processes associated with these sources of funds. The supervisory guidance provided below supplements and expands upon existing general guidance on bank funding and borrowings.2 Where appropriate, examiners should (1) review the collateral agreements for fees, collateral-maintenance requirements (including triggers for increases in collateral), and other features that may affect the bank’s liquidity and earnings.

1. Wholesale borrowings with embedded options may have variable interest payments or average lives or redemption values that depend on external measures such as reference rates, indexes, or formulas. Embedded options include putable, callable, convertible, and variable rate advances with caps, floors, collars, step-ups, or amortizing features. In addition, these types of borrowings may contain prepayment penalties.

2. See the supervisory guidance for “Borrowed Funds,” section 3010.1; “Asset/Liability Management,” section 4020.1; and “Interest-Rate Risk Management,” section 4090.1. See also the Trading and Capital-Markets Activities Manual, sections 2030.1, “Liquidity Risk,” and 3010.1, “Interest-Rate Risk Management.” In general, this guidance collectively calls for supervisors to analyze the purpose, effectiveness, concentration exposure, and stability of borrowings and to assess bank management’s understanding of liquidity and interest-rate risks associated with borrowing and funding strategies.

Commercial banks need to determine what assets collateralize the borrowing (or borrowings), and (3) identify the potential risks presented by the agreement. (See SR-01-8.) In addition to determining if a bank follows the sound-practice guidance for bank liability management and funding in general, supervisors should take the following steps, as appropriate, when assessing a bank that has material amounts of wholesale borrowings:

• Review the bank’s borrowing contracts for embedded options or other features that may affect the bank’s liquidity and sensitivity to market risks. In addition, examiners should review the collateral agreements for fees, collateral-maintenance requirements (including triggers for increases in collateral), and other features that may affect the bank’s liquidity and earnings.

• Assess the bank’s management processes for identifying and monitoring the risks of the various terms of each borrowing contract, including penalties and option features over the expected life of the contract. Examiners should review for evidence that the bank’s management, or an independent third party, completed stress tests (1) before the bank entered into the borrowing agreement (or agreements) and (2) periodically thereafter. If the bank relies on independent third-party testing, examiners should verify that management reviewed and accepted the underlying assumptions and test results. In any case, management should not be relying solely on the wholesaler’s stress-test results. Also, the stress tests employed should cover a reasonable range of contractual triggers and external events. Such triggers or events include interest-rate changes that may result in the exercise of embedded options or the bank’s termination of the agreement, which may entail prepayment penalties. In general, stress-test results should depict the potential impact of these variables on the individual borrowing facility, as well as on the overall earnings and liquidity position of the bank.

• Evaluate management processes for controlling risks, including interest-rate risks arising from the borrowings and liquidity risks. Proper controls include (1) hedges or other plans for minimizing the adverse effects of penalties or interest-rate changes and other triggers for embedded options and (2) contingent funding strategies.
plans if borrowings or lines are terminated before the original expected maturity.

- Determine whether the asset/liability management committee or board of directors, as appropriate, is fully informed of the risks and ramifications of complex wholesale-borrowing agreements before engaging in the transactions and on an ongoing basis.

- Determine whether funding strategies for wholesale borrowings, especially those with embedded options, are consistent with both the portfolio objectives of the bank and the level of sophistication of the bank’s risk management. Banks without the technical knowledge and whose risk-management systems are insufficient to adequately identify, assess, monitor, and control the risks of complex wholesale borrowings should not be using this funding.

Reliance on wholesale borrowings is consistent with safe and sound banking when management understands the risks of these activities and has systems and procedures in place to properly monitor and control the risks. Supervisors and examiners, however, should take appropriate steps to follow up on institutions that use complex funding instruments without adequately understanding their risks or without proper risk-management systems and controls. Examiners should also seek corrective action when funding mechanisms or strategies are inconsistent with prudent funding needs and objectives.
1. To review the terms of wholesale-borrowing contracts to identify embedded options or other features that may affect the bank’s liquidity and sensitivity to market risks.

2. To assess management’s technical knowledge, systems, and processes for identifying, assessing, monitoring, and controlling the risks (including liquidity risk and interest-rate risk) associated with wholesale borrowing, and to assess the bank’s stress-testing practices and contingency-funding plans.

3. To determine if the bank’s board of directors or its asset/liability management committee is fully aware of the risks associated with and ramifications of engaging in complex wholesale-borrowing agreements.

4. To ascertain whether the bank’s wholesale-borrowing funding and hedging strategies are consistent with its portfolio objectives and the level of management’s sophistication.
1. Review the bank’s borrowing contracts to identify embedded options or other features that may affect the bank’s liquidity and sensitivity to market risks. Also review the collateral agreements to determine what fees, collateral-maintenance requirements (including triggers for increases in collateral), and other agreed-upon features may affect the bank’s liquidity and earnings.

2. Assess the bank’s management processes for identifying and monitoring the risks of the various terms of each borrowing contract, including penalties and option features over the expected life of the contract.
   a. Obtain and examine evidence to determine whether the bank’s management, or an independent third party, completed stress tests before the bank entered into the borrowing agreement (or agreements) and periodically thereafter.
   b. If the bank relies on independent third-party testing, verify that management reviewed and accepted the underlying assumptions and test results.

3. Evaluate the management processes for controlling risks, including (1) interest-rate risks arising from the borrowings and (2) liquidity risks.

4. Determine if the asset/liability management committee or board of directors, as appropriate, is fully informed of the risks and ramifications of complex wholesale-borrowing agreements both before engaging in the transactions and on an ongoing basis.

5. Determine if funding strategies for wholesale borrowings, especially those with embedded options, are consistent with both the portfolio objectives of the bank and the level of sophistication of the bank’s risk management.

6. Seek the corrective action taken by the institution when funding mechanisms or strategies are inconsistent with prudent funding needs and objectives.
Deferred Compensation Agreements
Effective date May 2005

As part of their executive compensation and retention programs, banks and other financial institutions (collectively referred to in this section as “institutions”) often enter into deferred compensation agreements with selected employees. These agreements are generally structured as nonqualified retirement plans for federal income tax purposes and are based on individual agreements with selected employees.

Institutions often purchase bank-owned life insurance (BOLI) in connection with many of their deferred compensation agreements. (See sections 4042.1 and 2210.1 for an explanation of the accounting for BOLI transactions). BOLI may produce attractive tax-equivalent yields that offset some or all of the costs of the agreements.

Deferred compensation agreements are commonly referred to as indexed retirement plans (IRPs) or as revenue-neutral plans. The institution’s designated management and accounting staff that is responsible for the institution’s financial reporting must regularly review the accounting for deferred compensation agreements to ensure that the obligations under the agreements are appropriately measured and reported in accordance with generally accepted accounting principles (GAAP). In so doing, the management and accounting staff should apply and follow Accounting Principles Board Opinion No. 12, “Omnibus Opinion—1967,” as amended by Statement of Financial Accounting Standards No. 106 (FAS 106), “Employers’ Accounting for Postretirement Benefits Other Than Pensions” (hereafter referred to as APB 12).

IRPs are one type of deferred compensation agreement that institutions enter into with selected employees. IRPs are typically designed so that the spread each year, if any, between the tax-equivalent earnings on the BOLI covering an individual employee and a hypothetical earnings calculation is deferred and paid to the employee as a post-retirement benefit. This spread is commonly referred to as excess earnings. The hypothetical earnings are computed on the basis of a predefined variable index rate (for example, the cost of funds or the federal funds rate) times a notional amount. The notional amount is typically the amount the institution initially invested to purchase the BOLI plus subsequent after-tax benefit payments actually made to the employee. By including the after-tax benefit payments and the amount initially invested to purchase the BOLI in the notional amount, the hypothetical earnings reflect an estimate of what the institution could have earned if it had not invested in the BOLI or entered into the IRP with the employee. Each employee’s IRP may have a different notional amount on which the index is based. The individual IRP agreements also specify the retirement age and vesting provisions, which can vary from employee to employee.

An IRP agreement typically requires the excess earnings that accrue before an employee’s retirement to be recorded in a separate liability account. Once the employee retires, the balance in the liability account is generally paid to the employee in equal, annual installments over a set number of years (for example, 10 or 15 years). These payments are commonly referred to as the primary benefit or pre-retirement benefit.

An employee may also receive the excess earnings that are earned after his or her retirement. This benefit may continue until the employee’s death and is commonly referred to as the secondary benefit or post-retirement benefit. The secondary benefit is paid annually, once the employee has retired, and is in addition to the primary benefit.

Examiners should be aware that some institutions may not be correctly accounting for the obligations under an IRP. Because many institutions were incorrectly accounting for IRPs, the federal banking and thrift agencies issued on February 11, 2004, an Interagency Advisory on Accounting for Deferred Compensation Agreements and Bank-Owned Life Insurance. (See SR-04-4.) The guidance is stated here, except for the information on the reporting of deferred compensation agreement obligations in the bank Call Reports and on changes in accounting for those agreements. Examiners should determine whether an institution’s deferred compensation agreements are correctly accounted for. If the accounting is incorrect, assurance should be obtained from the institution’s management that corrections will be made in accordance with GAAP and the advisory’s instructions for changes in accounting. The examiner’s findings should be reported in the examination report. Also report the nature of the accounting errors and the estimated financial impact that correcting the errors will have on the institution’s
financial statements, including its earnings and capital position.

ACCOUNTING FOR DEFERRED COMPENSATION AGREEMENTS, INCLUDING IRPs

Deferred compensation agreements with select employees under individual contracts generally do not constitute post-retirement income plans (that is, pension plans) or post-retirement health and welfare benefit plans. The accounting for individual contracts that, when taken together, do not represent a post-retirement plan should follow APB 12. If the individual contracts, taken together, are equivalent to a plan, the plan should be accounted for under Statement of Financial Accounting Standards No. 87, “Employers’ Accounting for Pensions,” or under FAS 106.

APB 12 requires that an employer’s obligation under a deferred compensation agreement be accrued according to the terms of the individual contract over the required service period to the date the employee is fully eligible to receive the benefits, or the full eligibility date. Depending on the individual contract, the full eligibility date may be the employee’s expected retirement date, the date the employee entered into the contract, or a date between these two dates. APB 12 does not prescribe a specific accrual method for the benefits under deferred compensation contracts, stating only that the "cost of those benefits shall be accrued over that period of the employee’s service in a systematic and rational manner." The amounts to be accrued each period should result in a deferred compensation liability at the full eligibility date that equals the then-present value of the estimated benefit payments to be made under the individual contract.

APB 12 does not specify how to select the discount rate to measure the present value of the estimated benefit payments. Therefore, other relevant accounting literature must be considered in determining an appropriate discount rate. An institution’s incremental borrowing rate\(^1\) and the current rate of return on high-quality fixed-income debt securities\(^2\) should be the acceptable discount rates to measure deferred compensation agreement obligations. An institution must select and consistently apply a discount-rate policy that conforms with GAAP.

For each IRP, an institution should calculate the present value of the expected future benefit payments under the IRP at the employee’s full eligibility date. The expected future benefit payments can be reasonably estimated. They should be based on reasonable and supportable assumptions and should include both the primary benefit and, if the employee is entitled to excess earnings that are earned after retirement, the secondary benefit. The estimated amount of these benefit payments should be discounted because the benefits will be paid in periodic installments after the employee retires. The number of periods the primary and any secondary benefit payments should be discounted may differ because the discount period for each type of benefit payment should be based on the length of time during which each type of benefit will be paid, as specified in the IRP.

After the present value of the expected future benefit payments has been determined, the institution should accrue an amount of compensation expense and a liability each year from the date the employee enters into the IRP until the full eligibility date. The amount of these annual accruals should be sufficient to ensure that a deferred compensation liability equal to the present value of the expected benefit payments is recorded by the full eligibility date. Any method of deferred compensation accounting that does not recognize some expense for the primary benefit and any secondary benefit in each year from the date the employee enters into the IRP until the full eligibility date is not considered to be systematic and rational.

Vesting provisions should be reviewed to ensure that the full eligibility date is properly determined because this date is critical to the measurement of the liability estimate. Because APB 12 requires that the present value of the expected benefit payments be recorded by the full eligibility date, institutions also need to consider changes in market interest rates to appropriately measure deferred compensation.

---

1. Accounting Principles Board Opinion No. 21, “Interest on Receivables and Payables,” paragraph 13, states in part that "the rate used for valuation purposes will normally be at least equal to the rate at which the debtor can obtain financing of a similar nature from other sources at the date of the transaction."

2. FAS 106, paragraph 186, states that "[t]he objective of selecting assumed discount rates is to measure the single amount that, if invested at the measurement date in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the accumulated benefits when due."
liabilities. Therefore, to comply with APB 12, institutions should periodically review both their estimates of the expected future benefits under IRPs and the discount rates used to compute the present value of the expected benefit payments, and revise those estimates and rates, when appropriate.

Deferred compensation agreements, including IRPs, may include noncompete provisions or provisions requiring employees to perform consulting services during post-retirement years. If the value of the noncompete provisions cannot be reasonably and reliably estimated, no value should be assigned to the noncompete provisions in recognizing the deferred compensation liability. Institutions should allocate a portion of the future benefit payments to consulting services to be performed in post-retirement years only if the consulting services are determined to be substantive. Factors to consider in determining whether post-retirement consulting services are substantive include but are not limited to (1) whether the services are required to be performed, (2) whether there is an economic benefit to the institution, and (3) whether the employee forfeits the benefits under the agreement for failure to perform such services.

APPENDIX—EXAMPLES OF ACCOUNTING FOR DEFERRED COMPENSATION AGREEMENTS

The following are examples of the full-eligibility-date accounting requirements for a basic deferred compensation agreement. The assumptions used in these examples are for illustrative purposes only. An institution must consider the terms of its specific agreements, the current interest-rate environment, and current mortality tables in determining appropriate assumptions to use in measuring and recognizing the present value of the benefits payable under its deferred compensation agreements.

Institutions that enter into deferred compensation agreements with employees, particularly more-complex agreements (such as IRPs), should consult with their external auditors and their respective Federal Reserve Bank to determine the appropriate accounting for their specific agreements.

Example 1: Fully Eligible at Agreement Inception

A company enters into a deferred compensation agreement with a 55-year-old employee who has worked five years for the company. The agreement states that, in exchange for the employee’s past and future services and for his or her service as a consultant for two years after retirement, the company will pay an annual benefit of $20,000 to the employee, commencing on the first anniversary of the employee’s retirement. The employee is fully eligible for the deferred compensation benefit payments at the inception of the agreement, and the consulting services are not substantive.

Other key facts and assumptions used in determining the benefits payable under the agreement and in determining the liability and expense the company should record in each period are summarized in the following table:

<table>
<thead>
<tr>
<th>Expected retirement age</th>
<th>60</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of years to expected retirement age</td>
<td>5</td>
</tr>
<tr>
<td>Discount rate (%)</td>
<td>6.75</td>
</tr>
<tr>
<td>Expected mortality age based on present age</td>
<td>70</td>
</tr>
</tbody>
</table>

At the employee’s expected retirement date, the present value of a lifetime annuity of $20,000 that begins on that date is $142,109 (computed as $20,000 times 7.10545, the factor for the present value of 10 annual payments at 6.75 percent). At the inception date of the agreement, the present value of that annuity of $102,514 (computed as $142,109 times 0.721375, the factor for the present value of a single payment in five years at 6.75 percent) is recognized as compensation expense because the employee is fully eligible for the deferred compensation benefit at that date.

The following table summarizes one systematic and rational method of recognizing the expense and liability under the deferred compensation agreement:

<td>200,000</td>
</tr>
</tbody>
</table>

The following entry would be made at the inception date of the agreement (the final day of year 0) to record the service component of the compensation expense and related deferred compensation agreement liability:

<table>
<thead>
<tr>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>$102,514</td>
<td></td>
</tr>
</tbody>
</table>

[To record the column B service component]

In each period after the inception date of the agreement, the company would adjust the deferred compensation liability for the interest component and any benefit payment. In addition, the company would reassess the assumptions used in determining the expected future benefits under the agreement and the discount rate used to compute the present value of the expected benefits in each period after the inception of the agreement, and revise the assumptions and rate, as appropriate.

Assuming that no changes were necessary to the assumptions used to determine the expected future benefits under the agreement or to the discount rate used to compute the present value of the expected benefits, the following entry would be made in year 1 to record the interest component of the compensation expense:

<table>
<thead>
<tr>
<th>Debit</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>$102,514</td>
<td></td>
</tr>
</tbody>
</table>
Similar entries (but for different amounts) would be made in year 2 through year 15 to record the interest component of the compensation expense. The following entry would be made in year 6 to record the payment of the annual benefit:

\[
\begin{array}{ll}
\text{Debit} & \text{Credit} \\
\text{Deferred compensation liability} & \$20,000 \\
\text{Cash} & \$20,000 \\
\end{array}
\]

[To record the column A benefit payment]

Similar entries would be made in year 7 through year 15 to record the payment of the annual benefit.

**Example 2: Fully Eligible at Retirement Date**

If the terms of the contract described in example 1 had stated that the employee is only entitled to receive the deferred compensation benefit if the sum of the employee’s age and years of service equals 70 or more at the date of retirement, the employee would be fully eligible for the deferred compensation benefit at age 60, after rendering five more years of service. At the employee’s expected retirement date, the present value of a lifetime annuity of $20,000 that begins on the first anniversary of that date is $142,109 (computed as $20,000 times 7.10545, the factor for the present value of 10 annual payments at 6.75 percent). The company would accrue this amount in a systematic and rational manner over the five-year period from the date it entered into the agreement to the date the employee is fully eligible for the deferred compensation benefit. Under one systematic and rational method, the annual service component accrual would be $24,835 (computed as $142,109 divided by 5.72213, the factor for the future value of five annual payments at 6.75 percent).

Other key facts and assumptions used in determining the benefits payable under the agreement and in determining the liability and expense the company should record in each period are summarized in the following table:

\[
\begin{array}{ll}
\text{Expected retirement age} & 60 \\
\text{Number of years to expected retirement age} & 5 \\
\text{Discount rate (%)} & 6.75 \\
\text{Expected mortality age based on present age} & 70 \\
\end{array}
\]

The following table summarizes one systematic and rational method of recognizing the expense and liability under the deferred compensation agreement:

</tbody>
</table>

[To record the column A benefit payment]

Similar entries would be made in year 7 through year 15 to record the payment of the annual benefit.
PURPOSE OF CAPITAL

Although both bankers and bank regulators must look carefully at the quality of bank assets and management and at the ability of the bank to control costs, evaluate risks, and maintain proper liquidity, capital adequacy is the area that triggers the most regulatory action, especially in view of the prompt-corrective-action (PCA) provision of section 38 of the Federal Deposit Insurance Act, 12 USC § 1831o. The primary function of capital is to fund the bank’s operations, act as a cushion to absorb unanticipated losses and declines in asset values that may otherwise lead to material firm distress or failure, and provide protection to uninsured depositors and debt holders in the event of liquidation. A bank’s solvency promotes public confidence in the bank and the banking system as a whole by providing continued assurance that the bank will continue to honor its obligations and provide banking services. By exposing stockholders to a larger percentage of any potential loss, higher capital levels reduce the subsidy provided to banks by the federal safety net. Capital regulation is particularly important because deposit insurance and other elements of the federal safety net provide banks with an incentive to increase their leverage beyond what the market—in the absence of depositor protection—would permit. Additionally, higher capital levels can reduce the need for certain elements of regulatory supervision, thereby lowering costs to the banking industry and the government.

OVERVIEW OF REGULATION Q
(12 CFR Part 217)

During the 2008-2009 financial crisis, lack of confidence in the banking sector increased banking organizations’ cost of funding, impaired banking organizations’ access to short-term funding, depressed values of banking organizations’ equities, and required many banking organizations to seek government assistance. Concerns about banking organizations arose not only because market participants expected steep losses on banking organizations’ assets, but also because of substantial uncertainty surrounding estimated loss rates. Further, heightened systemic risks, falling asset values, and reduced credit availability had an adverse effect on business and consumer confidence, significantly affecting the overall economy.

In 2013, the Board of Governors of the Federal Reserve System (Board), the Federal Deposit Insurance Corporation, and the Office of the Comptroller of the Currency (collectively the "agencies") adopted a final rule replacing the general risk-based capital rules, advanced approaches rule, market risk rule, and leverage rules in accordance with certain transition provisions. Regulation Q addresses weaknesses highlighted during the 2008-2009 financial crisis by helping to ensure that the banking system is better able to absorb losses and continue to lend in future periods of economic stress. Regulation Q implements international regulatory capital standards adopted by the Basel Committee on Banking Supervision and certain requirements of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act), including removal of credit ratings from the capital rules (section 939A).

Applicability of Regulation Q

Regulation Q applies on a consolidated basis to every Board-regulated institution (referred to as a “banking organization” in this section) that is:

- a state member bank;
- a bank holding company (BHC) domiciled in the United States that is not subject to 12 CFR part 225, appendix C,

2. 12 CFR part 225, appendix C is “The Small Bank Holding Company and Savings and Loan Holding Company Policy Statement,” which applies only to (BHCs) with pro forma consolidated assets of less than $3 billion that (i) are not engaged in significant nonbanking activities either directly or through a nonbank subsidiary; (ii) do not conduct significant off-balance-sheet activities (including securitization and asset management or administration) either directly or through a nonbank subsidiary; and (iii) do not have a material amount of debt or equity securities outstanding (other than trust preferred securities) that are registered with the Securities and Exchange Commission. The Board may in its discretion exclude any BHC, regardless of asset size, from the policy statement if
Component of Capital

Regulation Q provides a definition of capital and a framework for calculating risk-weighted assets by assigning assets and off-balance-sheet items to broad categories of credit risk. A banking organization’s risk-based capital ratio is calculated by dividing its qualifying capital (the numerator of the ratio) by its risk-weighted assets (the denominator). A summary of the components of qualifying capital is outlined below, as are the procedures for calculating risk-weighted assets. For more comprehensive information on the definition of capital and risk-weighted assets, see the Board’s Regulation Q.

The risk-based capital requirements of Regulation Q are designed to be sensitive to differences in credit-risk profiles among banking organizations; factor off-balance-sheet exposures into the assessment of capital adequacy; minimize disincentives to holding liquid, low-risk assets; and achieve consistency in the evaluation of the capital adequacy of major banking organizations worldwide.

The three components of regulatory capital are (1) common equity tier 1 capital, (2) additional tier 1 capital, and (3) tier 2 capital.

Common Equity Tier 1 Capital

Common equity tier 1 capital is defined as the sum of a banking organization’s outstanding common equity tier 1 capital instruments that satisfy the criteria set forth in section 217.20(b) of Regulation Q (12 CFR 217.20(b)). Common equity tier 1 capital represents the highest-quality and most loss absorbing form of capital. The criteria for common equity tier 1 capital were designed to ensure that common equity tier 1 capital is available to absorb losses as they occur and that common equity tier 1 instruments do not possess features that would cause a banking organization’s condition to further weaken during periods of economic and market stress. Common equity tier 1 capital is primarily composed of common stock and retained earnings, plus limited amounts of minority interest in the form of common stock, less certain regulatory adjustments and deductions (e.g., goodwill).

Under the standardized approach of Regulation Q, banking organizations are not required to include all components of accumulated other comprehensive income (AOCI) in common equity tier 1 capital. For advanced approaches banking organizations, most AOCI components are included in common equity tier 1 capital.

Additional Tier 1 Capital

Additional tier 1 capital includes instruments that satisfy the criteria set forth in section 217.20(c) of Regulation Q (12 CFR 217.20(c)). These instruments include surplus related to the issuance of additional tier 1 capital instruments, and limited amounts of tier 1 minority interest that is not included in a banking organization’s common equity tier 1 capital, less applicable regulatory adjustments and deductions. The eligibility criteria for additional tier 1 capital instruments were designed to ensure that additional tier 1 capital instruments would be available to absorb losses on a going-concern basis. Given the strict criteria, in the United States the only instrument includable in additional tier 1 capital is non-cumulative perpetual preferred stock. Cumulative preferred and trust preferred securities are generally not included in additional tier 1 capital.

Tier 2 Capital

Tier 2 capital consists of instruments that satisfy the criteria set forth in section 217.20(d) of Regulation Q (12 CFR 217.20(d)). These instruments include: surplus related to the issuance of tier 2 capital instruments; limited amounts of total capital minority interest not included in a banking organization’s tier 1 capital; and limited
amounts of the allowance for loan and lease losses (ALLL), less applicable regulatory adjustments and deductions. A banking organization calculating its total capital ratio using the standardized approach may include in tier 2 capital the amount of ALLL that does not exceed 1.25 percent of its standardized total risk-weighted assets.

A banking organization calculating its total capital ratio using the advanced approaches may include in tier 2 capital the excess of its eligible credit reserves over its total expected credit loss, provided the amount does not exceed 0.6 percent of its credit risk-weighted assets.

**Deductions and Limits**

Deductions from common equity tier 1 capital include goodwill and other intangibles (except mortgage servicing assets), deferred tax assets (DTAs) that arise from net operating loss and tax credit carryforwards (above certain levels), gains-on-sale in connection with a securitization, any defined benefit pension fund net asset (for banking organizations that are not insured depository institutions), investments in a banking organization’s own capital instruments, mortgage servicing assets (above certain levels) and investments in the capital of unconsolidated financial institutions (above certain levels). Mortgage servicing assets, DTAs arising from temporary differences that the banking organization could not realize through net operating loss carrybacks, and certain investments in financial institutions, are each limited to 10 percent of common equity tier 1 capital and in combination are limited to 15 percent of common equity tier 1 capital.

**Risk-Weighted Assets**

Regulation Q prescribes two approaches to risk weighting assets. The standardized approach is generally designed for smaller banking organizations, while the advanced approaches are used by larger, more complex institutions.

---

3. ALLL means valuation allowances that have been established through a charge against earnings to cover estimated credit losses on loans, lease financing receivables, or other extensions of credit as determined in accordance with GAAP. ALLL excludes “allocated transfer risk reserves.” For purposes of Regulation Q, ALLL includes allowances that have been established through a charge against earnings to cover estimated credit losses associated with off-balance-sheet credit exposures as determined in accordance with GAAP.

---

**Standardized Approach**

The standardized approach described in Regulation Q harmonizes the agencies’ calculation of risk-weighted assets and addresses shortcomings in previous risk-based capital requirements by increasing the capital requirements for certain assets. In addition, the standardized approach serves as a floor pursuant to section 171 of the Dodd-Frank Act with respect to risk-based capital requirements that the Board may establish for BHCs, any nonbank financial company designated by the Financial Stability Oversight Council, SLHCs, and state member banks.

Under the standardized approach, higher risk weights generally apply to high-volatility commercial real estate loans, past due loans, and certain equity and securitization exposures. The standardized approach also provides recognition of collateral and guarantees and incentives for derivatives and repo-style transactions cleared through central counterparties.

Below is a list of some key assets and exposures and the risk weights to which they are assigned under the standardized approach.

- **Public sector entities and U.S. government sponsored entities.** Exposures to the U.S. government generally receive a zero percent risk weight, and exposures to U.S. public-sector entities (PSEs), U.S. government-sponsored entities (GSEs), and U.S. depository institutions generally receive a 20 percent risk weight. Exposures conditionally guaranteed by the U.S. government and its agencies generally receive a 20 percent risk weight.

- **Exposures to sovereign entities.** Regulation Q provides that Organization for Economic Co-operation and Development (OECD) member countries without a country risk classifications (CRC) rating receive a risk weight of zero percent while nonmember countries without a CRC rating will receive a risk weight of 100 percent. Exposures to sovereign entities with a CRC rating are to be assigned the risk weight that corresponds to the CRC ratings. Additionally, if an event of sovereign default has occurred in the foreign bank’s home country within the last five years, a banking organization must assign a 150 percent risk weight to the exposure.

---
High volatility commercial real estate loans (HVCRE). In general, HVCRE exposures include any credit facility that finances or has financed the acquisition, development, or construction of real property, unless the facility finances one- to four-family residential mortgage property, loans to finance agricultural properties, or certain community development projects, or commercial real estate projects that meet certain prudential criteria, including with respect to the loan-to-value (LTV) ratio and capital contributions or expense contributions of the borrower.

Supervisory experience has demonstrated that certain acquisition, development, and construction loans, which are a subset of commercial real estate exposures, present particular risks for banking organizations. Accordingly, HVCRE is assigned a 150 percent risk weight under Regulation Q.

Residential mortgage exposures. One-to four-family residential mortgage exposures are generally assigned a 50 percent risk weight under Regulation Q provided the exposures are prudently underwritten first lien mortgage loans that are not past due, reported as nonaccrual, secured by a property that is either owner-occupied or rented, and has not been restructured or modified. A 100 percent risk weight is assigned for all other residential mortgages.

Structured securities and securitizations. The securitization framework in Regulation Q was designed to address the credit risk of exposures that involve the tranching of credit risk of one or more underlying financial exposures. Regulation Q defines a securitization exposure as an on- or off-balance-sheet credit exposure (including credit-enhancing representations and warranties) that arises from a traditional or synthetic securitization (including a resecuritization), or an exposure that directly or indirectly references a securitization exposure.

Regulation Q establishes risk weight approaches for securitization exposures and structured security exposures that are retained on- or off-balance sheet. Typical examples of securitization exposures include private label collateralized mortgage obligations (CMOs), trust preferred collateralized debt obligations, and asset-backed securities, provided there is tranching of credit risk. Generally, pass-through and government agency CMOs are excluded from the securitization exposure risk weight approaches. In general, Regulation Q requires banking organizations to calculate the risk weight of securitization exposures using either the gross-up approach or the Simplified Supervisory Formula Approach (SSFA) consistently across all securitization exposures, except in certain cases. For instance, the bank can, at any time, risk-weight a securitization exposure at 1.250 percent.

The gross-up approach is similar to earlier risk-based capital rules, where capital is required on the credit exposure of the bank’s investment in a specific tranche as well as its pro rata share of the more senior tranches that its tranche supports. A bank calculates its capital requirement based on the weighted-average risk weights of the underlying exposures in the securitization pool.

The SSFA is designed to assign a lower risk weight to more-senior-class securities and higher risk weights to supporting tranches. The SSFA is both risk-sensitive and forward-looking. The formula adjusts the risk weight for a security based on key risk factors such as incurred losses on the underlying assets, nonperforming loans, and the ability of subordinate tranches to absorb losses. In any case, a securitization exposure is assigned a risk weight of no lower than 20 percent.

Securitization due diligence. During the 2008-2009 financial crisis, many banking organizations relied exclusively on ratings issued by Nationally Recognized Statistical Rating Organizations (NRSROs) and did not perform internal credit analysis of their securitization exposures. Consistent with the Basel capital framework and the agencies’ general expectations for investment analysis, Regulation Q outlines specific securitization exposure due diligence requirements for banking organizations. As stated in Regulation Q, a banking organization is required to demonstrate, to the satisfaction of its primary federal supervisor, a comprehensive understanding of the features of a securitization exposure that would materially affect its performance. The banking organization’s analysis would have to be commensurate with the complexity of the exposure and the materiality of the exposure in

---

relation to capital of the banking organization. On an ongoing basis (no less frequently than quarterly), the banking organization must evaluate, review, and update as appropriate the analysis required under section 217.41(c)(1) of Regulation Q for each securitization exposure. The analysis of the risk characteristics of the exposure prior to acquisition, and periodically thereafter, would have to consider:

— Structural features of the securitization that materially impact the performance of the exposure. For example, the contractual cash-flow waterfall, waterfall-related triggers, credit enhancements, liquidity enhancements, market value triggers, the performance of organizations that service the position, and deal-specific definitions of default;

— Relevant information regarding the performance of the underlying credit exposure(s). For example, the percentage of loans 30, 60, and 90 days past due; default rates; prepayment rates; loans in foreclosure; property types; occupancy; average credit score or other measures of creditworthiness; average LTV ratio; and industry and geographic diversification data on the underlying exposure(s);

— Relevant market data of the securitization. For example, bid-ask spread; most recent sales price and historical price volatility; trading volume; implied market rating; and size, depth, and concentration level of the market for the securitization; and

— For resecuritization exposures, performance information on the underlying securitization exposures. For example, the issuer name and credit quality, and the characteristics and performance of the exposures underlying the securitization exposures.

If a banking organization is not able to meet these due diligence requirements and demonstrate a comprehensive understanding of a securitization exposure to the satisfaction of its primary federal supervisor, the banking organization would be required to assign a risk weight of 1,250 percent to the exposure.

• Equity exposures to investment funds. A banking organization determines the risk-weighted asset amount for equity exposures to investment funds using one of three approaches:

(1) the full look-through approach, (2) the simple modified look-through approach, or (3) the alternative modified look-through approach, unless the equity exposure to an investment fund is a community development equity exposure. The risk-weighted asset amount for such community development equity exposures is the exposure’s adjusted carrying value. If a banking organization does not use the full look-through approach, and an equity exposure to an investment fund is part of a hedge pair, a banking organization must use the ineffective portion of the hedge pair as the adjusted carrying value for the equity exposure to the investment fund. The risk-weighted asset amount of the effective portion of the hedge pair is equal to its adjusted carrying value. A banking organization could choose which approach to apply for each equity exposure to an investment fund.

— **Full Look-Through Approach.** A banking organization may use the full look-through approach only if the banking organization is able to calculate a risk-weighted asset amount for each of the exposures held by the investment fund. A banking organization using the full look-through approach is required to calculate the risk-weighted asset amount for its proportionate ownership share of each of the exposures held by the investment fund (as calculated under the standardized approach) as if the proportionate ownership share of the adjusted carrying value of each exposure were held directly by the banking organization. The banking organization’s risk-weighted asset amount for the exposure to the fund is equal to (1) the aggregate risk-weighted asset amount of the exposures held by the fund as if they were held directly by the banking organization multiplied by (2) the banking organization’s proportional ownership share of the fund.

— **Simple Modified Look-Through Approach.** Under the simple modified look-through approach, a banking organization sets the risk-weighted asset amount for its equity exposure to an investment fund equal to the adjusted carrying value of the equity exposure multiplied by the highest applicable risk weight under the standardized approach to any exposure the fund is permitted to hold under the prospectus,
partnership agreement, or similar agreement that defines the fund’s permissible investments. The banking organization may exclude derivative contracts held by the fund that are used for hedging, rather than for speculative purposes, and do not constitute a material portion of the fund’s exposures.

— Alternative Modified Look-Through Approach. Under the alternative modified look-through approach, a banking organization may assign the adjusted carrying value of an equity exposure to an investment fund on a pro rata basis to different risk weight categories under the standardized approach based on the investment limits in the fund’s prospectus, partnership agreement, or similar contract that defines the fund’s permissible investments. The risk-weighted asset amount for the banking organization’s equity exposure to the investment fund is equal to the sum of each portion of the adjusted carrying value assigned to an exposure type multiplied by the applicable risk weight. If the sum of the investment limits for all permissible investments within the fund exceeds 100 percent, the banking organization must assume that the fund invests to the maximum extent permitted under its investment limits in the exposure type with the highest applicable risk weight under the standardized approach and continues to make investments in the order of the exposure category with the next highest risk weight until the maximum total investment level is reached. If more than one exposure category applies to an exposure, the banking organization must use the highest applicable risk weight. A banking organization may exclude derivative contracts held by the fund that are used for hedging, rather than for speculative purposes, and do not constitute a material portion of the fund’s exposures.

• Collateralized transactions. Regulation Q recognizes a range of financial collateral as credit risk mitigants that may reduce the risk-based capital requirements associated with a collateralized transaction. Financial collateral includes

  (1) cash on deposit with the banking organization (including cash held for the banking organization by a third-party custodian or trustee);
  (2) gold bullion;
  (3) short- and long-term debt securities that are not resecuritization exposures and that are investment grade;
  (4) equity securities that are publicly traded;
  (5) convertible bonds that are publicly traded; or
  (6) money market fund shares and other mutual fund shares if a price for the shares is publicly quoted daily.

With the exception of cash on deposit, the banking organization is also required to have a perfected, first-priority security interest or, outside of the United States, the legal equivalent thereof, notwithstanding the prior security interest of any custodial agent. Even if a banking organization has the legal right, it still must ensure it monitors or has a freeze on the account to prevent a customer from withdrawing cash on deposit prior to defaulting. A banking organization is permitted to recognize partial collateralization of an exposure.

Under Regulation Q, a banking organization may recognize the risk-mitigating effects of financial collateral using the “simple approach” for any exposure provided that the collateral meets certain requirements. For repo-style transactions, eligible margin loans, collateralized derivative contracts, and single-product netting sets of such transactions, a banking organization could alternatively use the “collateral haircut approach.” Most institutions are likely to use the simple approach; however, regardless of the approach chosen, it must be applied consistently for similar exposures or transactions.

Simple approach. In the simple approach described in Regulation Q, the collateralized portion of the exposure receives the risk weight applicable to the collateral. The collateral is required to meet the definition of financial collateral. For repurchase agreements, reverse repurchase agreements, and securities lending and borrowing transactions, the collateral would be the instruments, gold, and cash that a banking organization has borrowed, purchased subject to resale, or taken as collateral from the counterparty under the transaction. In all cases, (1) the collateral must be subject to a collateral agreement for at least the life of the exposure; (2) the banking organization must revalue the collat-
eral at least every six months; and (3) the collateral (other than gold) and the exposure must be denominated in the same currency.

Generally, the risk weight assigned to the collateralized portion of the exposure must be no less than 20 percent. However, the collateralized portion of an exposure may be assigned a risk weight of less than 20 percent in certain instances.

**Collateral haircut approach.** A banking organization may use the collateral haircut approach to recognize the credit risk mitigation benefits of financial collateral that secures an eligible margin loan, repo-style transaction, collateralized derivative contract, or single-product netting set of such transactions. In addition, the banking organization may use the collateral haircut approach with respect to any collateral that secures a repo-style transaction that is included in the banking organization’s value-at-risk (VaR)-based measure under the market risk rule, even if the collateral does not meet the definition of financial collateral. To apply the collateral haircut approach, a banking organization must determine the exposure amount and the relevant risk weight for the counterparty or guarantor.

The exposure amount for an eligible margin loan, repo-style transaction, collateralized derivative contract, or a netting set of such transactions is equal to the greater of zero and the sum of the following three quantities as described in section 217.37(c): (1) the value of the exposure less the value of the collateral; (2) the absolute value of the net position in a given instrument or in gold; and (3) the absolute value of the net position of instruments and cash in a currency that is different from the settlement currency multiplied by the haircut appropriate to the currency mismatch.

For purposes of the collateral haircut approach, a given instrument includes, for example, all securities with a single Committee on Uniform Securities Identification Procedures (CUSIP) number and would not include securities with different CUSIP numbers, even if issued by the same issuer with the same maturity date.

- **Treatment of Guarantees.** Under Regulation Q, banking organizations have the option to substitute the risk weight of an eligible guarantor or guarantor for the risk weight of the underlying exposure. For example, if the bank has a loan guaranteed by an eligible guarantor, the bank can use the risk weight of the guarantor. Eligible guarantors include entities such as depository institutions and holding companies, the International Monetary Fund, Federal Home Loan Banks, the Federal Agricultural Mortgage Corporation, entities with investment grade debt, sovereign entities, and foreign banks. An eligible guarantee must be written, be either unconditional or a contingent obligation of the U.S. government or its agencies, cover all or a pro rata share of all contractual payments, give the beneficiary a direct claim against the protection provider, and meet other requirements outlined in the definition of eligible guarantees in 12 CFR 217.2.

- **Off-Balance-Sheet Exposures.** Risk-weighted asset amounts for off-balance-sheet items are calculated using a two-step process: (1) Multiplying the amount of the off-balance-sheet exposure by a credit conversion factor to determine a credit equivalent amount, and (2) assigning the credit equivalent amount to a relevant risk-weight category. This treatment would apply to all off-balance-sheet items, such as commitments, contingent items, guarantees, certain repo-style transactions, financial standby letters of credit, and forward agreements.

**Advanced Approaches**

Advanced approaches banking organizations generally include top-tier BHCs or SLHCs domiciled in the United States and state member banks with consolidated total assets of at least $250 billion or consolidated total on-balance sheet foreign exposures of at least $10 billion. Advanced approaches banking organizations also include those banking organizations that have elected to use the advanced approaches rule to calculate their total risk-weighted assets. The advanced approaches rule provides a risk-based capital framework that permits certain banking organizations to use an internal risk measurement approach to calculate capital requirements and advanced measurement approaches in order to calculate regulatory operational-risk capital requirements. An advanced approaches banking organization must calculate its risk-based capital

Ratios using both the standardized and advanced approaches and meet each minimum requirement with the lower of the two ratios. The advanced approaches rules are supplemented by the market risk rule.

### Market Risk Rule

The market risk rule is used by banking organizations with significant trading activities to calculate regulatory capital requirements for market risk. The purpose of the market risk rule is to establish risk-based capital requirements for Board-regulated institutions with significant exposure to market risk, provide methods for these Board-regulated institutions to calculate their standardized measure for market risk and, if applicable, advanced measure for market risk, and establish public disclosure requirements. The market risk rule applies to any Board-regulated institution with aggregate trading assets and trading liabilities equal to 10 percent or more of total assets or $1 billion or more.

6. See 12 CFR part 217 subpart F.

7. As reported in the Board-regulated institution’s most recent quarterly Call Report, for a state member bank, or Form FR Y-9C; for a BHC or SLHC, as applicable, any SLHC that does not file the Form FR Y-9C should follow the instructions to the Form FR Y-9C.
institution that does not meet these criteria to comply with the market risk rule if deemed necessary for safety-and-soundness reasons. The Board may also exclude an institution that meets the criteria if such exclusion is deemed to be consistent with safe and sound banking practices.

Minimum Regulatory Capital Ratios

All banking organizations covered under Regulation Q are subject to the following minimum regulatory capital requirements: a common equity tier 1 capital ratio of 4.5 percent, a tier 1 capital ratio of 6 percent, a total capital ratio of 8 percent of risk-weighted assets, and a leverage ratio of 4 percent.8

Most banking organizations are expected to operate with capital levels above the minimum ratios. Banking organizations that are undertaking significant expansion or that are exposed to high or unusual levels of risk are expected to maintain capital well above the minimum ratios; in such cases, the Board may specify a higher minimum requirement.

In implementing Regulation Q, the Board has reserved the authority to require banking organizations to hold more capital if the minimum requirements are not commensurate with the bank’s credit, market, operational, or other risks (see 12 CFR 217.1(d)). This is a formal process that requires Board approval, and an examiner alone cannot provide this directive. Examiners may use the Matters Requiring Attention or Matters Requiring Immediate Attention section of the examination report to require a bank to maintain an appropriate capital policy or plan that includes capital limits that are consistent with the bank’s risk profile.

Supplementary Leverage Ratio

Advanced approaches banking organizations are also subject to a minimum supplementary leverage ratio of 3 percent. The denominator of the supplementary leverage ratio incorporates certain off-balance-sheet exposures such as commitments and derivative exposures. The Board applies this to advanced approaches firms, because these firms typically hold higher levels of off-balance-sheet exposure that are not captured by the leverage ratio.

Enhanced Supplementary leverage ratio

In 2015, the Board implemented an enhanced supplemental leverage ratio requirement, which applies to any U.S. top-tier BHC designated as a global systemically important bank holding company (G-SIB) and its insured depository institution subsidiaries.9 Under the enhanced supplementary leverage ratio standards, a covered G-SIB must maintain a leverage buffer of 2 percent above the minimum supplementary leverage ratio of 3 percent (for a total of 5 percent) to avoid limitations on distributions and certain discretionary bonus payments. The leverage buffer functions like the capital conservation buffer for the risk-based capital ratios, which is described in greater detail below.

De Novo Bank Leverage Ratio

The initial leverage standards for a de novo state member bank are described in SR letter 91-17, “Application and Supervision Standards for De Novo State Member Banks.” SR 91-17 provides that, in general, capital standards for de novo institutions should be reasonable in relation to the bank’s location, business plan, competitive environment, state law, and other applicable supervisory expectations. Historically, the Board has expected de novo state member banks to maintain a tangible tier 1 leverage ratio (core capital elements minus all intangible assets divided by average total assets minus all intangible assets) of at least 9 percent for the first three years of operation. However, this is just a minimum expectation and the Board retains authority to impose a higher requirement as condition of approval of Federal Reserve System membership on a case-by-case basis. Even though a minimum 9 percent tangible leverage ratio is not required after the third year, under SR 91-17 the de novo period can apply for as long as five years and de novo banks are expected to maintain capital ratios that are commensurate with ongoing safety-and-soundness concerns and that are generally well in excess of regulatory minimums.

---

8. Tier 1 capital is equal to the sum of common equity tier 1 capital and additional tier 1 capital. Total capital is the sum of common equity tier 1, additional tier 1, and tier 2 capital.

Capital Conservation Buffer

During the 2008-2009 financial crisis, some banking organizations continued to pay dividends and substantial discretionary bonuses even as their financial condition weakened. Such capital distributions had a significant negative impact on the overall strength of the banking sector. To encourage better capital conservation and to enhance the resilience of the banking system, Regulation Q limits capital distributions and discretionary bonus payments for banking organizations that do not hold a specified amount of common equity tier 1 capital in addition to the amount of regulatory capital necessary to meet the minimum risk-based capital requirements (capital conservation buffer).

The intent of the capital conservation buffer is to enhance the safety and stability of the financial system by limiting capital distributions and discretionary bonus payments as the financial condition of a banking organization weakens. The capital conservation buffer does not require a banking organization to raise additional capital to meet a minimum regulatory requirement. The transition period for the capital conservation buffer ends December 31, 2018. Starting January 1, 2019, a banking organization’s capital conservation buffer must be greater than 2.5 percent of its total risk-weighted assets in order to avoid limitations on capital distributions and discretionary bonus payments.

Countercyclical Capital Buffer

In addition, a countercyclical capital buffer, if applicable, would expand the capital conservation buffer by up to 2.5 percent of a banking organization’s total risk-weighted assets for advanced approaches banking organizations. The amount of the countercyclical capital buffer amount differs by jurisdiction and at any point in time is based on determinations by the supervisors in each jurisdiction of the degree of excessive credit growth in their jurisdictions.

PROMPT CORRECTIVE ACTION

In 1991, Congress enacted a regulatory framework to address the problems associated with troubled insured depository institutions with the intent of minimizing the long-term cost to the Deposit Insurance Fund. This legislation, the Federal Deposit Insurance Corporation Improvement Act of 1991, added section 38 to the Federal Deposit Insurance Act (the FDI Act), codified at 12 USC 1831o; section 38 is known as the “prompt corrective action” (PCA) statute. The Board has implemented PCA as applicable to state member banks in subpart D of Regulation H (12 CFR 208.40 to 208.45). PCA uses the total risk-based capital measure, tier 1 risk-based capital measure, common equity tier 1 risk-based capital measure, leverage ratio, and tangible equity to total assets ratio for assigning state member banks to the five capital categories. These five PCA categories under section 38 of the FDI Act and the PCA regulations are “well capitalized,” “adequately capitalized,” “undercapitalized,” “significantly undercapitalized,” and “critically undercapitalized.” The capital ratios trigger specific actions that are designed to restore a bank to financial health. See the “Prompt Corrective Action” section of the CBEM for more information on PCA.

EVALUATING CAPITAL ADEQUACY

Overall Assessment of Capital Adequacy

The following factors should be taken into account in assessing the overall capital adequacy of a bank.

Capital Ratios

Capital ratios should be compared with regulatory minimums and with peer-group averages. Banking organizations are expected to have minimum capital ratios described above. However, because risk-based capital does not take explicit account of the quality of individual asset portfolios or the range of other types of risks to which banking organizations may be exposed, such as interest-rate, liquidity, market, or operational risks, banking organizations are generally expected to operate with capital positions above the minimum ratios. Institutions with high or inordinate levels of risk are also expected to maintain capital well above the minimum levels.

Impact of Management

Strategic capital planning. Supervisors have
long expected all banking organizations, regardless of size, to employ within their internal processes, risk management practices that appropriately assess their capital needs under a range of different reasonably anticipated adverse outcomes. One of management’s most important functions is to lead the organization by designing, implementing, and supporting an effective strategic plan. Strategic planning is a long-term approach to integrating asset deployment, funding sources, capital formation, management, marketing, operations, and information systems to achieve success. Strategic planning helps the organization more effectively anticipate and adapt to change. Management must also ensure that planning information as well as corporate goals and objectives are effectively communicated throughout the organization. Effective strategic planning allows the institution to be more proactive than reactive in shaping its own future. The strategic plan should clearly outline the bank’s capital base, anticipated capital expenditures, desirable capital level, and external capital sources. Each of these areas should be evaluated in consideration of the degree and type of risk that management and the board of directors are willing to accept.\(^\text{10}\)

**Growth.** Capital is necessary to support a bank’s growth; however, it is the imposition of required capital ratios that controls growth. Because a bank has to maintain a minimum ratio of capital to assets, it will only be able to grow so fast. For example, a rapid growth in a bank’s loan portfolio may be a cause of concern, for it could indicate that a bank is altering its risk profile by reducing its underwriting standards.

**Dividends.** State member banks are subject to legal restrictions on reductions in capital resulting from cash dividends, including out of the capital surplus account, under 12 USC 324 and 12 CFR 208.5. On November 14, 1985, the Board approved a policy statement on the payment of cash dividends by state member banks and BHCs that are experiencing financial difficulties. The policy statement addresses the following practices of supervisory concern by institutions that are experiencing earnings weaknesses, other serious problems, or that have inadequate capital:

- The payment of dividends not covered by earnings,
- The payment of dividends from borrowed funds, and
- The payment of dividends from unusual or nonrecurring gains, such as the sale of property or other assets.

It is the Board’s view that an organization experiencing earnings weaknesses or other financial pressures should not maintain a level of cash dividends that exceeds its net income, that is inconsistent with the organization’s capital position, or that can only be funded in ways that may weaken the organization’s financial health. In some instances, it may be appropriate to eliminate cash dividends altogether.\(^\text{11}\)

Examiners should review historical and planned cash-dividend payout ratios to determine whether dividend payments are impairing capital adequacy. Excessive dividend payouts may result from several sources:

- If the bank is owned by a holding company, the holding company may be requiring excessive dividend payments from the bank to fund the holding company’s debt-repayment program, expansion goals, or other cash needs.
- The bank’s board of directors may be under pressure from individual shareholders to provide funds to repay bank stock debt or to use for other purposes.
- Dividends may be paid or promised to support a proposed equity offering.\(^\text{12}\)

**Access to additional capital.** Banks that do not generate sufficient capital internally may require external sources of capital. Large, independent institutions may seek additional funding from the capital markets. Smaller institutions may rely on a BHC, a principal shareholder, or a holding company’s debt-repayment program, expansion goals, or other cash needs. The bank’s board of directors may be under pressure from individual shareholders to provide funds to repay bank stock debt or to use for other purposes. Dividends may be paid or promised to support a proposed equity offering.\(^\text{12}\)

\(^{10}\) For more information about capital planning at the holding company level, see SR letter 09-4, “Applying Supervisory Guidance and Regulations on the Payment of Dividends, Stock Redemptions, and Stock Repurchases at Bank Holding Companies,” for institutions with less than $50 billion in assets and SR letter 15-18, “Federal Reserve Supervisory Assessment of Capital Planning and Positions for LISCC Firms and Large and Complex Firms,” and SR letter 15-19, “Federal Reserve Supervisory Assessment of Capital Planning and Positions for Large and Noncomplex Firms,” for firms with $50 billion in assets or greater.

\(^{11}\) For the complete text of the policy statement on the payment of cash dividends by state member banks and BHCs that are experiencing financial difficulties see the Bank Holding Company Supervision Manual and Attachment B to SR 09-4.

\(^{12}\) For more information, see the “Dividends” section of this manual.
control group to provide additional funds, or may rely on the issuance of new capital instruments to existing or new investors. Current shareholders may resist efforts to issue new capital instruments because of the diluting effect of the new capital. In deciding whether to raise additional capital in this manner, shareholders must weigh the dilution against the possibility that, without the additional funds, the institution may fail.

Under the FDI Act, a BHC is required to serve as a source of strength to its subsidiary banks. A BHC can fulfill this obligation by having enough liquidity to inject funds into the bank or by having access to the same sources of additional capital, that is, current or existing shareholders, as outlined above.

Financial Considerations

Financial information can be found on Schedule RC-R of the Report of Condition and Income (Call Report) for banks; however, risk may not always be reflected in the current financial condition. Therefore, examiners should not rely solely on an institution’s current financial condition when determining capital adequacy and must assess management’s ability to identify, measure, monitor, and control all material risks that may affect capital. Capital levels and ratios should be evaluated in view of the bank’s overall financial condition, including the following areas:

Asset quality. The final supervisory judgment on a bank’s capital adequacy may differ significantly from conclusions that may be drawn solely from the level of a bank’s risk-based capital ratio. Generally, the main reason for this difference is the evaluation of asset quality. Final supervisory judgment of a bank’s capital adequacy should take into account examination findings, particularly those on the severity of problem and classified assets and investment or loan portfolio concentrations, as well as on the adequacy of the bank’s allowance for loan and lease losses.

Balance-sheet composition. A bank whose earning assets are not diversified or whose credit culture is more risk-tolerant is generally expected to operate with higher capital levels than a similar-sized institution with well-diversified, less-risky investments.

Earnings. A bank’s earnings performance should enable it to fund growth, compete in the marketplace, and support the overall risk profile. An adequately capitalized, growing bank should have a consistent pattern of capital augmentation by earnings retention. Poor earnings can have a negative effect on capital adequacy in two ways. First, any losses absorbed by capital reduce the ability of the remaining capital to fulfill that function. Second, the impact of losses on capital is magnified by the fact that a bank generating losses is incapable of replenishing its capital accounts internally.

Funds management. A bank with undue levels of interest-rate risk should be required to strengthen its capital positions, even though it may meet the minimum risk-based capital standards. The adequacy and effectiveness of an institution’s interest-rate risk management process and the level of its interest-rate risk exposure are critical factors in the regulators’ evaluation of an institution’s sensitivity to changes in interest rates and capital adequacy. Regulators expect banks to manage their interest-rate exposures using processes and systems commensurate with their earnings and capital levels, complexity, business model, risk profile, and scope of operations. If a bank determines that its core earnings and capital are insufficient to support its level of interest-rate risk, it should take steps to mitigate its exposure, increase its capital, or both. See SR letter 10-1, “Interagency Advisory on Interest Rate Risk,” for more information.

Off-balance-sheet items and activities. Once funded, off-balance-sheet items become subject to the same capital requirements as on-balance-sheet items. A bank’s capital levels should be sufficient to support the quality and quantity of assets that would result from a significant portion of these items being funded within a short time.

Inadequate Allowance for Loan and Lease Losses. An inadequate ALLL will require an additional charge to current income. Any charge to current income will reduce the amount of earnings available to supplement tier 1 capital. Because the amount of the ALLL that can be

---

13. For more information, see the “Supervision of Subsidiaries” section in the Bank Holding Company Supervision Manual.
Assessment of Capital Adequacy

included in tier 2 capital is limited to 1.25 percent of gross risk-weighted assets, an additional provision may increase the ALLL level above this limit, thereby resulting in the excess portion being excluded from tier 2 capital.

Ineligible Collateral and Guarantees. Regulation Q recognizes only limited types of collateral and guarantees. Other types of collateral and guarantees may support the asset mix of the bank, particularly within its loan portfolio. Such collateral or guarantees may serve to substantially improve the overall quality of a loan portfolio and other credit exposures and should be considered in the overall assessment of capital adequacy.

Market Value of Bank Stock. Examiners should review trends in the market price of the bank’s stock and whether stock is trading at a reasonable multiple of earnings or a reasonable percentage (or multiple) of book value. A bank’s low stock price may merely be an indication that it is undervalued, or it may be indicative of regional or industry-wide problems. However, a low-valued stock may also indicate that investors lack confidence in the institution; such lack of support could impair the bank’s ability to raise additional capital in the capital markets.

Other Real Estate Reserves. Other real estate reserves, whether considered general or specific reserves, are not recognized as a component of regulatory capital. However, these reserves should be considered when accounting for other real estate (ORE) that is classified Loss. Examiners should consider the existence of any general ORE reserves when deducting ORE classified Loss. To the extent ORE reserves adequately cover the risks inherent in the ORE portfolio as a whole, including any individual ORE properties classified Loss, there would not be a deduction from common equity tier 1 capital. The ORE Loss in excess of ORE reserves should be deducted from common equity tier 1 capital under Assets Other Than Held-for-Investment Loans and Leases Classified Loss.

Unrealized Asset Values. Banking organizations often have assets on their books that are carried at significant discounts below current market values. The excess of the market value over the book value (historical cost or acquisition value) of assets such as investment securities or banking premises may represent capital to the bank. These unrealized asset values are not included in the risk-based capital calculation but should be taken into consideration when assessing capital adequacy. Particular attention should be given to the nature of the asset, the reasonableness of its valuation, its marketability, and the likelihood of its sale.

Stress Testing and Capital Adequacy

Stress testing is a tool that helps both bank supervisors and certain firms measure the sufficiency of capital available to support the firm’s operations throughout periods of stress. The Board and the other federal banking agencies have highlighted the use of stress testing as a means to better understand the range of a financial company’s potential risk exposures. While stress tests are a valuable tool for assessing the capital adequacy of a firm, stress tests may not necessarily capture a company’s full range of risks, exposures, activities, and vulnerabilities that have a potential effect on capital adequacy.

Many of the Board’s stress testing rules apply to larger holding companies. For instance, Regulation YY establishes, among other things, capital stress testing requirements for BHCs with total consolidated assets of $50 billion or more, including requirements to participate in the Board’s annual supervisory stress test and conduct their own internal capital stress tests. The capital plan rule establishes general capital planning requirements for a BHC with total consolidated assets of $50 billion or more and requires a BHC to develop an annual capital plan that is approved by its board of directors. Community banking organizations, which generally include institutions, such as state member banks, with $10 billion or less in total consolidated assets, are not required or expected to conduct the types of stress testing described above, which are directed at larger organizations. In particular, community banks are not required or expected to conduct the enterprise-wide stress tests required of larger organizations

15. For more information on changes to the Board’s stress testing and capital planning rules, see the Board’s statement regarding the impact of the Economic Growth, Regulatory Relief, and Consumer Protection Act (EGRRCPA) dated July 6, 2018, available at www.federalreserve.gov/newsevents/pressreleases/files/bcreg20180706b1.pdf.
under the capital plan rule, rules implementing Dodd-Frank Act stress testing requirements, or as described in the stress testing guidance for organizations with more than $10 billion in total consolidated assets.

**RATING THE CAPITAL FACTOR FOR STATE MEMBER BANKS**

As stated in the Uniform Financial Institutions Rating System for commercial banks and thrifts, a financial institution is expected to maintain capital commensurate with the nature and extent of risks to the institution and the ability of management to identify, measure, monitor, and control these risks. The effect of credit, market, and other risks on the institution’s financial condition should be considered when evaluating the adequacy of capital. The types and quantity of risk inherent in an institution’s activities will determine the extent to which it may be necessary to maintain capital at levels above required regulatory minimums to properly reflect the potentially adverse consequences that these risks may have on the institution’s capital.

The capital adequacy of an institution is rated based upon, but not limited to, an assessment of the following evaluation factors:

- The level and quality of capital and the overall financial condition of the institution.
- The ability of management to address emerging needs for additional capital.
- The nature, trend, and volume of problem assets, and the adequacy of allowances for loan and lease losses and other valuation reserves.
- Balance sheet composition, including the nature and amount of intangible assets, market risk, concentration risk, and risks associated with nontraditional activities.
- Risk exposure represented by off-balance-sheet activities.
- The quality and strength of earnings, and the reasonableness of dividends.
- Prospects and plans for growth as well as past experience in managing growth.
- Access to capital markets and other sources of capital, including support provided by a parent holding company.

**Ratings**

1. A rating of 1 indicates a strong capital level relative to the institution’s risk profile.
2. A rating of 2 indicates a satisfactory capital level relative to the financial institution’s risk profile.
3. A rating of 3 indicates a less than satisfactory level of capital that does not fully support the institution’s risk profile. The rating indicates a need for improvement, even if the institution’s capital level exceeds minimum regulatory and statutory requirements.
4. A rating of 4 indicates a deficient level of capital. In light of the institution’s risk profile, viability of the institution may be threatened. Assistance from shareholders or other external sources of financial support may be required.
5. A rating of 5 indicates a critically deficient level of capital such that the institution’s viability is threatened. Immediate assistance from shareholders or other external sources of financial support is required.

---

Assessment of Capital Adequacy
Examination Objectives
Effective date October 2018

1. To determine the adequacy of capital.
2. To determine compliance with the risk-based and leverage capital adequacy rules.
3. To determine if the policies, practices, and procedures with regard to the capital adequacy rules are adequate.
4. To determine if the bank’s officers and employees are operating in conformity with the Board’s established capital adequacy rules.
5. To evaluate the propriety and consistency of the bank’s present and planned level of capitalization in light of the risk-based and leverage capital rules as well as existing conditions and future plans.
6. To initiate corrective action when policies, procedures, or capital are deficient.
Assessment of Capital Adequacy
Examination Procedures
Effective date October 2018

Section 3020.3

1. Determine whether bank policies and practices promote capital preservation and address future capital needs. Consider the following:
   • The strategic plan and its underlying assumptions, projected asset growth, dividend plans, asset quality, income, liquidity, funds management, deposit structure, parent-company relationship, contingent liabilities, expansion plans, competition, and economic conditions;
   • Findings from interviews with management regarding the strategic planning process (including any potential issues due to a change in prompt corrective action (PCA) designation);
   • Internal risk-monitoring policies and procedures;
   • The availability of additional capital sources (such as funding provided by insiders, external sources, or additional debt at the parent level); and
   • The permissibility of current or planned components of capital to qualify as Common Equity Tier 1 Capital or Additional Tier 1 Capital.

2. Review historical and planned dividend payout ratios and other planned capital reductions, including reductions subject to legal restrictions and prior Board approval. For planned capital stock retirements, ensure management requested prior regulatory approval. Also, determine whether management evaluated the impact of the capital conservation buffer, including reductions subject to legal restrictions and prior Board approval.

3. Determine whether entries to capital accounts are appropriate and properly authorized.

4. Assess controls over off-balance sheet items (Schedule RC-L) and their overall impact to sufficiency of capital levels and needs.

5. Review board and management’s procedures to prevent, detect, and respond to policy exceptions that may affect capital.

6. Determine whether the audit function verifies the accuracy of the capital accounts and regulatory reports; assesses the appropriateness, accuracy, and timeliness of reports produced for the board and executive management; and evaluates the reasonableness of capital planning.

7. Determine whether audits or independent reviews include an assessment of bank policies and procedures as well as regulatory requirements related to capital issues.

8. Determine whether Board and management reports provide sufficient, timely, and accurate information.

9. Review the accuracy of the bank’s calculation of Common Equity Tier 1 Capital, Additional Tier 1, and Tier 2 Capital. Reviewing the bank’s calculations may involve some of the following procedures:
   • Review Call Report Schedule RC-R and supporting documentation.
   • Determine whether the bank has chosen to opt-out of the inclusion of accumulated other comprehensive income.
   • Review applicable deductions and adjustments for each tier of capital, including phase-in and phase-out provisions (refer to 217.22 for capital adjustments and deduction rules and 217.300 for transition provisions).
   • Consider whether the bank has non-qualifying capital instruments or non-qualifying minority interests subject to phase-out (refer to 217.20 for criteria for capital instruments for each tier of capital, 217.21 for minority interest rules, and 217.300 for transition provisions).

10. Review the accuracy of the bank’s calculation of risk-weighted assets reported on Schedule RC-R, Part II. Reviewing the bank’s calculations may involve some of the following procedures:
    • Determine whether risk weights for most assets conform to applicable requirements (Part 217.32).
    • As applicable, review risk weights for other categories of exposures, such as:
      — Off-balance sheet exposures (Part 217.33),
      — Over-the-counter derivative contracts (Part 217.34),
      — Cleared transactions (Part 217.35),
      — Guarantees and credit derivatives (Part 217.35),
      — Collateralized transactions (Part 217.37)
11. Review the bank’s capital ratios under the revised PCA standards. If the bank is less than well capitalized under the revised standards (or appears that it could become less than well capitalized due to the phase-in of deductions or other aspects of the new capital rules), consider whether the bank has a reasonable strategy to meet the fully phased-in requirements over the transition period.  

12. Review the bank’s capital conservation buffer and the appropriateness of any distributions and discretionary bonus payments.  

13. Determine whether earnings performance enables the bank to fund growth, compete in the marketplace, and support the overall risk profile. Consider the level and trend of equity capital in relation to asset levels, quality, and growth rates.  
   • Assess the impact of current and projected provisions to the allowance for loan and lease losses (ALLL) on capital retention and growth.  
   • Review whether the bank is relying on core earnings or non-recurring income.  
   • Determine whether dividends are excessive compared to current earnings. (Consider applicable state and federal guidance.)  

14. Determine whether the existing capital level is adequate for the bank’s risk profile when considering the following items:  
   • The adequacy of capital-management policies and controls;  
   • The level, type, and trend of adversely classified assets;  
   • The adequacy of the ALLL;  
   • The volume and trends of charged-off loans and recoveries;  
   • The balance sheet structure and liquidity needs;  
   • The level, type, and trend of concentrations;  
   • The vulnerability of assets and liabilities to adverse events;  
   • The volume of unrealized gains or losses on available-for-sale securities;  
   • The degree of interest rate risk exposure assumed by the bank;  
   • The reasonableness of booked, future tax benefits;  
   • The accounting treatment and valuation of intangible assets;  
   • The extent of contingent liabilities associated with trusts or other activities;  
   • Dividend/repayment requirements for government capital programs (for example, the Troubled Asset Relief Program or Small Business Lending Fund);  
   • The extent of any other liabilities not shown on the bank’s books, including contingent liabilities;  
   • The existence of pending litigation against the bank (and its subsidiaries) and the potential and estimated loss exposure;  
   • The volume and risk characteristics of new business initiatives and higher risk investment or lending strategies (for example, subprime lending or mobile banking), or involvement in nontraditional activities such as non-deposit products, insurance sales, or discount brokerage services;  
   • The extent to which higher-risk loans or investments may require additional capital under the revised regulatory capital rules’ risk-weights (for example, high-volatility commercial real estate loans, equity exposures, or certain structured or securitized investments);  
   • Compliance with state and federal capital level requirements; and  
   • The level of operational and reputational risk.  

15. Assess the adequacy of management’s actions to correct criticisms related to capital in previous examination reports and recent internal or external audits.  

16. Evaluate the effectiveness of management’s internal processes and risk management practices at preparing for and reacting to changes in economic, industry, and regulatory environments, including the ability to assess capital needs under a range of reasonably anticipated adverse events.  

17. Determine whether management effectively identifies and manages  
   • the institution’s overall risk profile,  
   • factors that may change the institution’s risk profile, and  
   • how a change in the risk profile will affect the sufficiency of capital levels.
18. Determine whether management effectively identifies and manages any changes to regulatory capital rules by
   • evaluating its prospective capital position pursuant to the revised rule(s); and
   • adopting ways to measure capital based on any revisions to the capital rule(s); and
   • ensuring that the board is aware of these changes.
Overview of Asset-Backed Commercial Paper Programs
Section 3030.1

INTRODUCTION

Asset-backed commercial paper (ABCP) programs provide a means for corporations to obtain funding by selling or securitizing pools of homogenous assets (for example, trade receivables) to special-purpose entities (SPEs/ABCP programs). The ABCP program raises funds for purchase of these assets by issuing commercial paper into the marketplace. The commercial paper investors are protected by structural enhancements provided by the seller (for example, overcollateralization, spread accounts, or early-amortization triggers) and by credit enhancements (for example, subordinated loans or guarantees) provided by banking organization sponsors of the ABCP program and by other third parties. In addition, liquidity facilities are also present to ensure the rapid and orderly repayment of commercial paper should cash-flow difficulties emerge. ABCP programs are nominally capitalized SPEs that issue commercial paper. A sponsoring banking organization establishes the ABCP program but usually does not own the conduit’s equity, which is often held by unaffiliated third-party management companies that specialize in owning such entities, and are structured to be bankruptcy remote.

TYPICAL STRUCTURE

ABCP programs are funding vehicles that banking organizations and other intermediaries establish to provide an alternative source of funding to themselves or their customers. In contrast to term securitizations, which tend to be amortizing, ABCP programs are ongoing entities that usually issue new commercial paper to repay maturing commercial paper. The majority of ABCP programs in the capital markets are established and managed by major international commercial banking organizations. As with traditional commercial paper, which has a maximum maturity of 270 days, ABCP is short-term debt that may either pay interest or be issued at a discount.

TYPES OF ABCP PROGRAMS

Multi-seller programs generally provide working capital financing by purchasing or advancing against receivables generated by multiple corporate clients of the sponsoring banking organizations. These programs are generally well diversified across both sellers and asset types.

Single-seller programs are generally established to fund one or more types of assets originated by a single seller. The lack of diversification is generally compensated for by increased program-wide credit enhancement.

Loan-backed programs fund direct loans to corporate customers of the ABCP program’s sponsoring banking organization. These loans are generally closely managed by the banking organization and have a variety of covenants designed to reduce credit risk.

Securities-arbitrage programs invest in securities that generally are rated AA- or higher. They generally have no additional credit enhancement at the seller/transaction level because the securities are highly rated. These programs are typically well diversified across security types. The arbitrage is mainly due to the difference between the yield on the securities and the funding cost of the commercial paper.

Structured investment vehicles (SIVs) are a form of a securities-arbitrage program. These ABCP programs invest in securities typically rated AA- or higher. SIVs operate on a market-value basis similar to market-value collateralized debt obligations in that they must maintain a dynamic overcollateralization ratio determined by analysis of the potential price volatility on securities held in the portfolio. SIVs are monitored daily and must meet strict liquidity, capitalization, leverage, and concentration guidelines established by the rating agencies.

KEY PARTIES AND ROLES

Key parties for an ABCP program include the following:

- program management/administrators
- credit-enhancement providers
- liquidity-facility providers
- seller/servicers
- commercial paper investors
Program Management

The sponsor of an ABCP program initiates the creation of the program but typically does not own the equity of the ABCP program, which is provided by unaffiliated third-party investors. Despite not owning the equity of the ABCP program, sponsors usually retain a financial stake in the program by providing credit enhancement, liquidity support, or both, and they play an active role in managing the program. Sponsors typically earn fees—such as credit-enhancement, liquidity-facility, and program-management fees—for services provided to their ABCP programs.

Typically, an ABCP program makes arrangements with various agents/servicers to conduct the administration and daily operation of the ABCP program. This includes such activities as purchasing and selling assets, maintaining operating accounts, and monitoring the ongoing performance of each transaction. The sponsor is also actively engaged in the management of the ABCP program, including underwriting the assets purchased by the ABCP program and the type/level of credit enhancements provided to the ABCP program.

Credit-Enhancement Providers

The sponsoring banking organization typically provides pool-specific and program-wide backup liquidity facilities, and program-wide credit enhancements, all of which are usually unrated (pool-specific credit enhancement, such as overcollateralization, is provided by the seller of the assets). These enhancements are fundamental for obtaining high investment-grade ratings on the commercial paper issued to the market by the ABCP program. Seller-provided credit enhancement may exist in various forms and is generally sized based on the type and credit quality of the underlying assets as well as the quality and financial strength of seller/servicers. Higher-quality assets may only need partial support to achieve a satisfactory rating for the commercial paper. Lower-quality assets may need full support.

Liquidity-Facility Providers

The sponsoring banking organization and, in some cases, unaffiliated third parties, provide pool-specific or program-wide liquidity facilities. These backup liquidity facilities ensure the timely repayment of commercial paper under certain conditions, such as when financial market disruptions or cash-flow timing mismatches were to occur, but generally not under conditions associated with the credit deterioration of the underlying assets or the seller/servicer to the extent that such deterioration is beyond what is permitted under the related asset-quality test.

Commercial Paper Investors

Commercial paper investors are typically institutional investors, such as pension funds, money market mutual funds, bank trust departments, foreign banks, and investment companies. Commercial paper maturities range from 1 day to 270 days, but most frequently are issued for 30 days or less. There is a limited secondary market for commercial paper since issuers can closely match the maturity of the paper to the investors’ needs. Commercial paper investors are generally repaid from the reissuance of new commercial paper or from cash flows stemming from the underlying asset pools purchased by the program. In addition, to ensure timely repayment in the event that new commercial paper cannot be issued or if anticipated cash flows from the underlying assets do not occur, ABCP programs utilize backup liquidity facilities. Furthermore, the banking organization can purchase the ABCP from the conduit if the commercial paper cannot be issued. Pool-specific and program-wide credit enhancements also protect commercial paper investors from deterioration of the underlying asset pools.

THE LOSS WATERFALL

The loss waterfall diagram (on the next page) for the exposures of a typical ABCP program generally has four legally distinct layers. However, most legal documents do not specify which form of credit or liquidity enhancement is in a priority position after pool-specific credit enhancement is exhausted due to defaults. For example, after becoming aware of weakness in the seller/servicer or in asset performance, an ABCP program sponsor may purchase assets out of the conduit using pool-specific liquidity. Liquidity agreements must be subject to a valid
asset-quality test that prevents the purchase of defaulted or highly delinquent assets. Liquidity facilities that are not limited by such an asset-quality test are to be viewed as credit enhancement and are subject to the risk-based capital requirements applicable to direct-credit substitutes.

**Pool-Specific Credit Enhancement**

The form and size of credit enhancement for each particular asset pool is dependent upon the nature and quality of the asset pool and the seller/servicer’s risk profile. In determining the level of credit enhancement, consideration is given to the seller/servicer’s financial strength, quality as a servicer, obligor concentrations, and obligor credit quality, as well as the historic performance of the asset pool. Credit enhancement is generally sized to cover a multiple level of historical losses and dilution for the particular asset pool. Pool-specific credit enhancement can take several forms, including overcollateralization, cash reserves, seller/servicer guarantees (for only highly rated seller/servicers), and subordination. Credit enhancement can be either dynamic (that is, increases as the asset pool’s performance deteriorates) or static (that is, fixed percentage). Pool-specific credit enhancement is generally provided by the seller/servicer (or carved out of the asset pool in the case of overcollateralization) but may be provided by other third parties.

The ABCP program sponsor or administrator will generally set strict eligibility requirements for the receivables to be included in the purchased asset pool. For example, receivable eligibility requirements will establish minimum credit ratings or credit scores for the obligors and the maximum number of days the receivable can be past due.

Usually the purchased asset pools are struc-
tured (credit-enhanced) to achieve a credit-quality equivalent of investment grade (that is, BBB or higher). The sponsoring banking organization will typically utilize established rating agency criteria and structuring methodologies to achieve the desired internal rating level. In certain instances, such as when ABCP programs purchase asset-backed securities (ABS), the pool-specific credit enhancement is already built into the purchased ABS and is reflected in the security’s credit rating. The internal rating on the pool-specific liquidity facility provided to support the purchased asset pool will reflect the inclusion of the pool-specific credit enhancement and other structuring protections.

**Program-Wide Credit Enhancement**

The second level of contractual credit protection is the program-wide credit enhancement, which may take the form of an irrevocable loan facility, a standby letter of credit, a surety bond from a monoline insurer, or an issuance of subordinated debt. Program-wide credit enhancement protects commercial paper investors if one or more of the underlying transactions exhaust the pool-specific credit enhancement and other structural protections. The sponsoring banking organization or third-party guarantors are providers of this type of credit protection. The program-wide credit enhancement is generally sized by the rating agencies to cover the potential of multiple defaults in the underlying portfolio of transactions within ABCP conduits and takes into account concentration risk among seller/servicers and industry sectors.

**Pool-Specific Liquidity**

Pool-specific liquidity facilities are an important structural feature in ABCP programs because they ensure timely payment on the issued commercial paper by smoothing timing differences in the payment of interest and principal on the pooled assets and ensuring payments in the event of market disruptions. The types of liquidity facilities may differ among various ABCP programs and may even differ among asset pools purchased by a single ABCP program. For instance, liquidity facilities may be structured in the form of either (1) an asset-purchase agreement, which provides liquidity to the ABCP program by purchasing nondefaulted assets from a specific asset pool, or (2) a loan to the ABCP program, which is repaid solely by the cash flows from the underlying assets. Some older ABCP programs may have both pool-specific liquidity and program-wide liquidity coverage, while more-recent ABCP programs tend to utilize only pool-specific facilities. Typically, the seller-provided credit enhancement continues to provide credit protection on an asset pool that is purchased by a liquidity banking organization so that the institution is protected against credit losses that may arise due to subsequent deterioration of the pool.

Pool-specific liquidity, when drawn prior to the ABCP program’s credit enhancements, is subject to the credit risk of the underlying asset pool. However, the liquidity facility does not provide direct credit enhancement to the commercial paper holders. Thus, the pool-specific liquidity facility generally is in an economic second-loss position after the seller-provided credit enhancements and prior to the program-wide credit enhancement even when the legal documents state that the program-wide credit enhancement would absorb losses prior to the pool-specific liquidity facilities. This is because the sponsor of the ABCP program would most likely manage the asset pools in such a way that deteriorating portfolios or assets would be put to the liquidity banking organizations prior to any defaults that would require a draw against the program-wide credit enhancement. While the liquidity banking organization is exposed to the credit risk of the underlying asset pool, the risk is mitigated by the seller-provided credit enhancement and the asset-quality test. At the time that the asset pool is put to the liquidity banking organization, the facility is usually fully drawn because the entire amount of the pool that qualifies under the asset-quality test is pur-
chased by the banking organization. However, with respect to revolving transactions (such as credit card securitizations) it is possible to average less than 100 percent of the commitment.

Program-Wide Liquidity

The senior-most position in the waterfall, program-wide liquidity, is provided in an amount sufficient to support that portion of the face amount of all the commercial paper that is issued by the ABCP program that is necessary to achieve the desired external rating on the issued paper. Program-wide liquidity also provides liquidity in the event of a short-term disruption in the commercial paper market. In some cases, a liquidity banking organization that extends a direct liquidity loan to an ABCP program may be able to access the program-wide credit enhancement to cover losses while funding the underlying asset pool.
Dodd-Frank Act Company-Run Stress Testing for Banking Organizations with Total Consolidated Assets $10–50 Billion

Effective date January 2018

Section 3050.1

The federal banking agencies1 issued Supervisory Guidance on Implementing Dodd-Frank Act2 Company-Run Stress Tests for Banking Organizations with Total Consolidated Assets of More Than $10 Billion but Less than $50 Billion3 ($10–50 billion companies). The guidance offers additional details about methodologies that should be employed by these companies. The term “company” refers to state member banks, bank holding companies, and savings and loan holding companies. This guidance builds upon the interagency stress testing guidance that was issued in May 2012 for companies with more than $10 billion in total consolidated assets that set forth general principles for a satisfactory stress testing framework.4 The guidance discusses supervisory expectations for the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) stress test practices for companies. The agencies determined that providing the supervisory guidance would be helpful to the $10–50 billion companies in carrying out their tests that are appropriate for their risk profile, size, complexity, business mix, and market footprint.5

The Dodd-Frank Act stress tests may not necessarily capture a company’s full range of risks, exposures, activities, and vulnerabilities that have a potential effect on capital adequacy. Additionally, the Dodd-Frank Act stress tests assess the impact of stressful outcomes on capital adequacy; however, they are not intended to measure the adequacy of a company’s liquidity in the stress scenarios. Companies to which this guidance applies are not subject to the Federal Reserve’s capital plan rule, the Federal Reserve’s annual Comprehensive Capital Analysis and Review (CCAR), supervisory stress tests for capital adequacy, or the related data collections supporting the supervisory stress test. Refer to SR letter 14-3 and its attachments 1 and 2.

EXPECTATIONS FOR DODD-FRANK ACT STRESS TESTS

The supervisory expectations contained in the guidance follow the specific rule requirements contained in the final Dodd-Frank Act stress test rules for $10–50 billion companies. The guidance covers several categories, outlined below.

Dodd-Frank Act Stress Test Timelines

Under the Dodd-Frank Act stress test rules, stress test projections are based on exposures with the as-of date of December 31 and extend over a nine-quarter planning horizon that begins in the quarter ending March 31 of the same year and ends March 31 two years later.

Scenarios for Dodd-Frank Act Stress Tests

Under the stress test rules implementing the Dodd-Frank Act requirements, $10–50 billion companies must assess the potential impact on capital of a minimum of three macroeconomic scenarios (that is, baseline, adverse, and severely adverse scenarios) provided by their primary supervisor on their consolidated losses, revenues, balance sheet (including risk-weighted assets), and capital. A company is not required to use all of the variables provided in the scenario, if those variables are not relevant or appropriate to the company’s line of business. In addition, a company may, but is not required to, use additional variables beyond those provided by the agencies. When using additional variables, companies should ensure that the paths of such variables (including their timing) are consistent with the general economic environment assumed in the supervisory scenarios.

---

1. The Federal Reserve Board, the Office of the Comptroller of the Currency, and Federal Deposit Insurance Corporation (the agencies).
5. The Dodd-Frank Act stress tests produce projections of hypothetical results and are not intended to be forecasts of expected or most likely outcomes.
Dodd-Frank Act Stress Test Methodologies and Practices

The agencies expect that the specific methodological practices used by companies to produce the estimates of the impact on capital and that other measures may vary across organizations. In addition, Dodd-Frank Act stress testing practices for $10–50 billion companies should be commensurate with each company’s size, complexity, and sophistication. This means that, generally, larger or more sophisticated companies should consider employing not just the minimum expectations, but the more advanced practices described in the supervisory guidance. In addition, $10–50 billion companies should consider using more than just the minimum expectations for the exposures and activities of highest impact and that present the highest risk.

- **Data sources.** Companies are expected to have appropriate management information systems and data processes that enable them to collect, sort, aggregate, and update data and other information efficiently and reliably within business lines and across the company for use in the Dodd-Frank Act stress tests. In some cases, proxy data may be used. Companies should challenge conventional assumptions to ensure that a company’s stress test is not constrained by its own past experience.

- **Data segmentation.** To account for differences in risk profiles across various exposures and activities, companies should segment their portfolios and business activities into categories based on common or related risk characteristics. The company should select the appropriate level of segmentation based on the size, materiality, and risk of a given portfolio, provided there are sufficiently granular historical data available to allow for the desired segmentation. The minimum expectation is that companies will segment their portfolios and business activities using the categories listed in the $10–50 billion reporting form.

- **Model risk management.** Companies should have in place effective model risk-management practices, including validation, for all models used in Dodd-Frank Act stress tests, consistent with existing supervisory guidance. Companies should ensure that an effective challenge process by unbiased, competent, and qualified parties is in place for all models. There should also be sufficient documentation of all models, including model assumptions, limitations, and uncertainties. Companies should ensure that their model risk-management policies and practices generally apply to the use of vendor and third-party products as well. Qualitative elements of models should also be subject to model risk management.

- **Loss estimation.** For their Dodd-Frank Act stress tests, companies are expected to have credible loss estimation practices that capture the risks associated with their portfolios, business lines, and activities. Credit losses associated with loan portfolios and securities holdings should be estimated directly and separately, whereas other types of losses should be incorporated into estimated pre-provision net revenue (PPNR). Each company’s loss estimation practices should be commensurate with the materiality of the risks measured and well supported by sound, empirical analysis. Loss estimates should include projections of other-than-temporary impairments (OTTI) for securities both held for sale and held to maturity.

- **Pre-provision net revenue estimation.** For the Dodd-Frank Act stress test, companies are required to project PPNR over the planning horizon for each supervisory scenario. Companies should estimate PPNR at a level at least as granular as the components outlined in the $10–50 billion reporting form. Companies should ensure that PPNR projections are generally consistent with projections of losses, the balance sheet, and risk-weighted assets. A company may estimate the stressed compo-

---

6. In making projections, companies should make conservative assumptions about management responses in the stress tests and should include only those responses for which there is substantial support. For example, companies may account for hedges that are already in place as potential mitigating factors against losses but should be conservative in making assumptions about potential future hedging activities and not necessarily anticipate that actions taken in the past could be taken under the supervisory scenarios.

7. For purposes of the supervisory guidance, the term “$10–50 billion reporting form” generally refers to the Annual Company-Run Stress Test Report (FR Y-16). However, for subsidiary banks and thrifts of $10–50 billion holding companies, it could be the relevant reporting form the subsidiary will use to report the results of its Dodd-Frank Act stress tests to its primary federal financial regulatory agency.

9. The Dodd-Frank Act stress test rules define PPNR as net interest income plus non-interest income less non-interest expense. Non-operational or non-recurring income and expense items should be excluded.
ponents of PPNR based on its own or industry-wide historical income and expense experience. Other types of losses that could arise under the supervisory scenarios should be included in projections of PPNR to the extent they would arise under the specified scenario conditions.

- **Balance sheet and risk-weighted asset projections.** A company is expected to project its balance sheet and risk-weighted assets for each of the supervisory scenarios. In doing so, these projections should be consistent with scenario conditions and the company’s prior history of managing through the different business environments, especially stressful ones. The projections of the balance sheet and risk-weighted assets should be consistent with other aspects of stress test projections, such as losses and PPNR.

- **Projections for quarterly provisions and allowance for loan and lease losses (ALLL).** The Dodd-Frank Act stress test rules require companies to project quarterly provisions for loan and lease losses (PLLL). Companies are expected to project PLLL for each scenario based on projections of quarterly loan and lease losses and while maintaining an appropriate ALLL balance at the end of each quarter of the planning horizon, including the last quarter.

- **Projections for quarterly net income.** Under the Dodd-Frank Act stress test rules, companies must estimate projected quarterly net income for each scenario. Net income projections should be based on loss, revenue, and expense projections.

### Estimating the Potential Impact on Regulatory Capital Levels and Capital Ratios

Companies must estimate projected quarterly regulatory capital levels and regulatory capital ratios for each scenario. Any rare cases in which ratios are higher under the adverse and severely adverse scenarios should be very well supported by analysis and documentation. Projected capital levels and ratios should reflect applicable regulations and accounting standards for each quarter of the planning horizon. In their Dodd-Frank Act stress tests, bank holding companies and savings and loan holding companies are required to calculate pro forma capital using a set of capital action assumptions based on contracted payments; a general assumption of no redemptions, repurchases, or issuances of capital instruments (except for issuances related to expensed employee compensation or in connection with a planned merger or acquisition to the extent that the merger or acquisition is reflected in the company’s pro forma balance sheet estimates); and reasonable assumptions regarding payments of dividends consistent with internal capital needs and projections. There are no specified capital actions for state member banks.

### Controls, Oversight, and Documentation

A company must establish and maintain a system of controls, oversight, and documentation, including policies and procedures that apply to all of its Dodd-Frank Act stress test components. Senior management and the board of directors have specific responsibilities relating to Dodd-Frank Act stress testing. The board of directors should ensure it remains informed about critical reviews of elements of the Dodd-Frank Act stress tests, especially regarding key assumptions, uncertainties, and limitations. In addition, the board of directors and senior management of a $10–50 billion company must consider the role of stress testing results in normal business, including the company’s capital planning, assessment of capital adequacy, and risk-management practices. A company should appropriately document the manner in which Dodd-Frank Act stress tests are used for key decisions about capital adequacy, including capital actions and capital contingency plans. The company should indicate the extent to which Dodd-Frank Act stress tests are used in conjunction with other capital assessment tools.

### Report to Supervisors

A $10–50 billion company must report the results of its Dodd-Frank Act company-run stress tests on the $10–50 billion annual reporting form (FR Y-16). This report will include a company’s quantitative projections of losses,
PPNR, balance sheet, risk-weighted assets, ALLL, and capital on a quarterly basis over the duration of the scenario and planning horizon. In addition to the quantitative projections, companies are required to submit qualitative information supporting their projections.\textsuperscript{10}

\textsuperscript{10} These companies should look to the $10–50 billion consolidated assets reporting instructions for the supervisory expectations as to what information should be included in the report on the company’s Dodd-Frank Act stress test. See the FR Y-16 instructions, which are provided on the Board’s website.

Public Disclosure of Dodd-Frank Act Test Results

Under the Dodd-Frank Act stress test rules, a $10–50 billion company must publicly disclose Dodd-Frank Act stress test results between October 15 and October 31. The summary of the results of the stress test, including both quantitative and qualitative information, should be included in a single release on a company’s website or in any other forum that is reasonably accessible to the public. A company is required to publish results for the severely adverse scenario only.
Section 4000.1

[Reserved]
Incentive compensation practices in the financial industry were one of many factors that contributed to the financial crisis that began in mid-2007. Banking organizations too often rewarded employees for increasing the organization’s revenue or short-term profit without adequate recognition of the risks the employees’ activities posed to the organization. These practices exacerbated the risks and losses at a number of banking organizations and resulted in the misalignment of the interests of employees with the long-term well-being and safety and soundness of their organizations. This section provides guidance on sound incentive compensation practices to banking organizations supervised by the Federal Reserve (also the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision (collectively, the “Agencies”)).

This guidance is intended to assist banking organizations in designing and implementing incentive compensation arrangements and related policies and procedures that effectively consider potential risks and risk outcomes.

Alignment of incentives provided to employees with the interests of shareholders of the organization often also benefits safety and soundness. However, aligning employee incentives with the interests of shareholders is not always sufficient to address safety-and-soundness concerns. Because of the presence of the federal safety net (including the ability of insured depository institutions to raise insured deposits and access the discount window and payment services of the Federal Reserve), shareholders of a banking organization in some cases may be willing to tolerate a degree of risk that is inconsistent with the organization’s safety and soundness. Accordingly, the Federal Reserve expects banking organizations to maintain incentive compensation practices that are consistent with safety and soundness, even when these practices go beyond those needed to align shareholder and employee interests.

To be consistent with safety and soundness, incentive compensation arrangements at a banking organization should:

1. Provide employees incentives that appropriately balance risk and reward;
2. Be compatible with effective controls and risk-management; and
3. Be supported by strong corporate governance, including active and effective oversight by the organization’s board of directors.

These principles, and the types of policies, procedures, and systems that banking organizations should have to help ensure compliance with them, are discussed later in this guidance.

The Federal Reserve expects banking organizations to regularly review their incentive compensation arrangements for all executive and non-executive employees who, either individually or as part of a group, have the ability to expose the organization to material amounts of risk, as well as to regularly review the risk-management, control, and corporate governance processes related to these arrangements. Banking organizations should immediately address any identified deficiencies in these arrangements or processes that are inconsistent with safety and soundness. Banking organizations are responsible for ensuring that their incentive compensation arrangements are consistent with the principles included.

1. Examples of risks that may present a threat to the organization’s safety and soundness include credit, market, liquidity, operational, legal, compliance, and reputational risks.
2. As used in this guidance, the term “banking organization” includes national banks, state member banks, state nonmember banks, savings associations, U.S. bank holding companies, savings and loan holding companies, Edge and agreement corporations, and the U.S. operations of foreign banking organizations (FBOs) with a branch, agency, or commercial lending company in the United States. If the Federal Reserve is referenced, the reference is intended to also include the other supervisory Agencies.
3. This guidance (see 75 Fed. Reg. 36395, June 25, 2010, for the entire text) and the principles reflected herein are consistent with the Principles for Sound Compensation Practices issued by the Financial Stability Board (FSB) in April 2009, and with the FSB’s Implementation Standards for those principles, issued in September 2009.

4. In this guidance, the term “incentive compensation” refers to that portion of an employee’s current or potential compensation that is tied to achievement of one or more specific metrics (e.g., a level of sales, revenue, or income). Incentive compensation does not include compensation that is awarded solely for, and the payment of which is solely tied to, continued employment (e.g., salary). In addition, the term does not include compensation arrangements that are determined based solely on the employee’s level of compensation and does not vary based on one or more performance metrics (e.g., a 401(k) plan under which the organization contributes a set percentage of an employee’s salary).
The Federal Reserve recognizes that incentive compensation arrangements often seek to serve several important and worthy objectives. For example, incentive compensation arrangements may be used to help attract skilled staff, induce better organization-wide and employee performance, promote employee retention, provide retirement security to employees, or allow compensation arrangements to vary with revenue on an organization-wide basis. Moreover, the analysis and methods for ensuring that incentive compensation arrangements take appropriate account of risk should be tailored to the size, complexity, business strategy, and risk tolerance of each organization. The resources required will depend upon the complexity of the firm and its use of incentive compensation arrangements. For some, the task of designing and implementing compensation arrangements that properly offer incentives for executive and non-executive employees to pursue the organization’s long-term well-being and that do not encourage imprudent risk-taking is a complex task that will require the commitment of adequate resources.

While issues related to designing and implementing incentive compensation arrangements are complex, the Federal Reserve is committed to ensuring that banking organizations move forward in incorporating the principles described in this guidance into their incentive compensation practices.5

As discussed further below, because of the size and complexity of their operations, large complex banking organizations (LCBOs)6 should have and adhere to systematic and formalized policies, procedures, and processes. These are considered important in ensuring that incentive compensation arrangements for all covered employees are identified and reviewed by appropriate levels of management (including the board of directors where appropriate and control units), and that they appropriately balance risks and rewards. In several places, this guidance specifically highlights the types of policies, procedures, and systems that LCBOs should have and maintain but that generally are not expected of smaller, less complex organizations. LCBOs warrant the most intensive supervisory attention because they are significant users of incentive compensation arrangements and because flawed approaches at these organizations are more likely to have adverse effects on the broader financial system. The Federal Reserve will work with LCBOs as necessary through the supervisory process to ensure that they promptly correct any deficiencies that may be inconsistent with the safety and soundness of the organization.

The policies, procedures, and systems of smaller banking organizations that use incentive compensation arrangements7 are expected to be less extensive, formalized, and detailed than those of LCBOs. Supervisory reviews of incentive compensation arrangements at smaller, less-complex banking organizations will be conducted by the Federal Reserve as part of the evaluation of those organizations’ risk-management, internal controls, and corporate governance during the regular, risk-focused examination process. These reviews will be tailored to reflect the scope and complexity of an organization’s activities, as well as the prevalence and scope of its incentive compensation arrangements. Little, if any, additional examination work is expected for smaller banking organizations that do not use, to a significant extent, incentive compensation arrangements.8

5. In December 2009, the Federal Reserve, working with the other Agencies, initiated a special horizontal review of incentive compensation arrangements and related risk-management, control, and corporate governance practices of large banking organizations (LBOs). This initiative was designed to spur and monitor the industry’s progress towards the implementation of safe and sound incentive compensation arrangements, identify emerging best practices, and advance the state of practice more generally in the industry.

6. For supervisory purposes, the Federal Reserve (as well as the other federal bank regulatory agencies) segments the organizations it supervises into different supervisory portfolios based on, among other things, size, complexity, and risk profile. For purposes of this guidance, the LBOs referred to in the guidance are identified in this section as large complex banking organizations to be consistent with the Federal Reserve’s other supervisory policies. LBOs are designated by (1) the OCC as the largest and most complex national banks as defined in the Large Bank Supervision booklet of the Comptroller’s Handbook; (2) the FDIC, large, complex insured depository institutions (IDIs); and (3) the OTS, the largest and most complex savings associations and savings and loan holding companies.

7. This guidance does not apply to banking organizations that do not use incentive compensation.

8. To facilitate these reviews, where appropriate, a smaller banking organization should review its compensation arrangements to determine whether it uses incentive compensation arrangements to a significant extent in its business operations. A smaller banking organization will not be considered a significant user of incentive compensation arrangements simply because the organization has a firm-wide profit-sharing or
For all banking organizations, supervisory findings related to incentive compensation will be communicated to the organization and included in the relevant report of examination or inspection. In addition, these findings will be incorporated, as appropriate, into the organization’s rating component(s) and subcomponent(s) relating to risk-management, internal controls, and corporate governance under the relevant supervisory rating system, as well as the organization’s overall supervisory rating.

The Federal Reserve (or the organization’s appropriate federal supervisor) may take enforcement action against a banking organization if its incentive compensation arrangements or related risk-management, control, or governance processes pose a risk to the safety and soundness of the organization, particularly when the organization is not taking prompt and effective measures to correct the deficiencies. For example, the appropriate federal supervisor may take an enforcement action if material deficiencies are found to exist in the organization’s incentive compensation arrangements or related risk-management, control, or governance processes, or the organization fails to promptly develop, submit, or adhere to an effective plan designed to ensure that its incentive compensation arrangements do not encourage imprudent risk-taking and are consistent with principles of safety and soundness. As provided under section 8 of the Federal Deposit Insurance Act (12 U.S.C. 1818), an enforcement action may, among other things, require an organization to take affirmative action, such as developing a corrective action plan that is acceptable to the appropriate federal supervisor to rectify safety-and-soundness deficiencies in its incentive compensation arrangements or related processes. Where warranted, the appropriate federal supervisor may require the organization to take additional affirmative action to correct or remedy deficiencies related to the organization’s incentive compensation practices.

Effective and balanced incentive compensation practices are likely to evolve significantly in the coming years, spurred by the efforts of banking organizations, supervisors, and other stakeholders. The Federal Reserve will review and update this guidance as appropriate to incorporate best practices that emerge from these efforts.

SCOPE OF APPLICATION

The incentive compensation arrangements and related policies and procedures of banking organizations should be consistent with principles of safety and soundness. Incentive compensation arrangements for executive officers as well as for non-executive personnel who have the ability to expose a banking organization to material amounts of risk may, if not properly structured, pose a threat to the organization’s safety and soundness. Accordingly, this guidance applies to incentive compensation arrangements for:

1. Senior executives and others who are responsible for oversight of the organization’s firm-wide activities or material business lines; 10
2. Individual employees, including non-executive employees, whose activities may expose the organization to material amounts of risk (e.g., traders with large position limits relative to the organization’s overall risk tolerance); and
3. Groups of employees who are subject to the same or similar incentive compensation arrangements and who, in the aggregate, may expose the organization to material amounts of risk, even if no individual employee is likely to expose the organization to material risk (e.g., loan officers who, as a group, originate loans that account for a material amount of the organization’s credit risk).

For ease of reference, these executive and non-executive employees are collectively referred to hereafter as “covered employees” or “employees.” Depending on the facts and circumstances of the individual organization, the

---

9. In the case of the U.S. operations of FBOs, the organization’s policies, including management, review, and approval requirements for its U.S. operations, should be coordinated with the FBO’s group-wide policies developed in accordance with the rules of the FBO’s home country supervisor. The policies of the FBO’s U.S. operations should also be consistent with the FBO’s overall corporate and management structure, as well as its framework for risk-management and internal controls. In addition, the policies for the U.S. operations of FBOs should be consistent with this guidance.

10. Senior executives include, at a minimum, “executive officers” within the meaning of the Federal Reserve’s Regulation O (see 12 CFR 215.2(c)(1)) and, for publicly traded companies, “named officers” within the meaning of the Securities and Exchange Commission’s rules on disclosure of executive compensation (see 17 CFR 229.402(a)(3)). Savings associations should also refer to the OTS’s rule on loans by savings associations to their executive officers, directors, and principal shareholders. (12 CFR 563.43).
types of employees or categories of employees that are outside the scope of this guidance because they do not have the ability to expose the organization to material risks. They are not large enough for themselves to threaten the solvency of the organization.

In determining whether an employee, or group of employees, may expose a banking organization to material risk, the organization should consider the full range of inherent risks arising from, or generated by, the employee’s activities, even if the organization uses risk-management processes or controls to limit the risks such activities ultimately may pose to the organization. Moreover, risks should be considered to be material for purposes of this guidance if they are material to the organization, or are material to a business line or operating unit that is itself material to the organization.11

For purposes of illustration, assume that a banking organization has a structured-finance unit that is material to the organization. A group of employees within that unit who originate structured-finance transactions that may expose the unit to material risks should be considered “covered employees” for purposes of this guidance even if those transactions must be approved by an independent risk function prior to consummation, or the organization uses other processes or methods to limit the risk that such transactions may present to the organization.

Strong and effective risk-management and internal control functions are critical to the safety and soundness of banking organizations. However, irrespective of the quality of these functions, poorly designed or managed incentive compensation arrangements can themselves be a source of risk to a banking organization. For example, incentive compensation arrangements that provide employees strong incentives to increase the organization’s short-term revenues or profits, without regard to the short- or long-term risk associated with such business, can place substantial strain on the risk-management and internal control functions of even well-managed organizations.

Moreover, poorly balanced incentive compensation arrangements can encourage employees to take affirmative actions to weaken or circumvent the organization’s risk-management or internal control functions, such as by providing inaccurate or incomplete information to these functions, to boost the employee’s personal compensation. Accordingly, sound compensation practices are an integral part of strong risk-management and internal control functions. A key goal of this guidance is to encourage banking organizations to incorporate the risks related to incentive compensation into their broader risk-management framework. Risk-management procedures and risk controls that ordinarily limit risk-taking do not obviate the need for incentive compensation arrangements to properly balance risk-taking incentives.

PRINCIPLES OF A SOUND INCENTIVE COMPENSATION SYSTEM

Principle 1: Balanced Risk-Taking Incentives

Incentive compensation arrangements should balance risk and financial results in a manner that does not encourage employees to expose their organizations to imprudent risks.

Incentive compensation arrangements typically attempt to encourage actions that result in greater revenue or profit for the organization. However, short-run revenue or profit can often diverge sharply from actual long-run profit because risk outcomes may become clear only over time. Activities that carry higher risk typically yield higher short-term revenue, and an employee who is given incentives to increase short-term revenue or profit, without regard to risk, will naturally be attracted to opportunities to expose the organization to more risk.

An incentive compensation arrangement is balanced when the amounts paid to an employee appropriately take into account the risks (including compliance risks), as well as the financial benefits, from the employee’s activities and the impact of those activities on the organization’s safety and soundness. As an example, under a balanced incentive compensation arrangement, two employees who generate the same amount of short-term revenue or profit for an organization should not receive the same amount of incentive compensation if the risks taken by the employees in generating that revenue or profit differ materially. The employee whose activities create materially larger risks for the organiz-
The activities of employees may create a wide range of risks for a banking organization, such as credit, market, liquidity, operational, legal, compliance, and reputational risks, as well as other risks to the viability or operation of the organization. Some of these risks may be realized in the short term, while others may become apparent only over the long term. For example, future revenues that are booked as current income may not materialize, and short-term profit-and-loss measures may not appropriately reflect differences in the risks associated with the revenue derived from different activities (e.g., the higher credit or compliance risk associated with subprime loans versus prime loans). In addition, some risks (or combinations of risky strategies and positions) may have a low probability of being realized, but would have highly adverse effects on the organization if they were to be realized (“bad tail risks”).

While shareholders may have less incentive to guard against bad tail risks because of the infrequency of their realization and the existence of the federal safety net, these risks warrant special attention for safety-and-soundness reasons given the threat they pose to the organization’s solvency and the federal safety net.

Banking organizations should consider the full range of current and potential risks associated with the activities of covered employees, including the cost and amount of capital and liquidity needed to support those risks, in developing balanced incentive compensation arrangements. Reliable quantitative measures of risk and risk outcomes (“quantitative measures”), where available, may be particularly useful in developing balanced compensation arrangements and in assessing the extent to which arrangements are properly balanced. However, reliable quantitative measures may not be available for all types of risk or for all activities, and their utility for use in compensation arrangements varies across business lines and employees. The absence of reliable quantitative measures for certain types of risks or outcomes does not mean that banking organizations should ignore such risks or outcomes for purposes of assessing whether an incentive compensation arrangement is balanced.

12. Importantly, the time horizon over which a risk outcome may be realized is not necessarily the same as the stated maturity of an exposure. For example, the ongoing reinvestment of funds by a cash management unit in commercial paper with a one-day maturity not only exposes the organization to one-day credit risk, but also exposes the organization to liquidity risk that may be realized only infrequently.
arrangement achieves balance. For example, while reliable quantitative measures may not exist for many bad-tail risks, it is important that such risks be considered given their potential effect on safety and soundness. As in other risk-management areas, banking organizations should rely on informed judgments, supported by available data, to estimate risks and risk outcomes in the absence of reliable quantitative risk measures.

Large complex banking organizations. In designing and modifying incentive compensation arrangements, LCBOs should assess in advance of implementation whether such arrangements are likely to provide balanced risk-taking incentives. Simulation analysis of incentive compensation arrangements is one way of doing so. Such analysis uses forward-looking projections of incentive compensation awards and payments based on a range of performance levels, risk outcomes, and levels of risks taken. This type of analysis, or other analysis that results in assessments of likely effectiveness, can help an LCBO assess whether incentive compensation awards and payments to an employee are likely to be reduced appropriately as the risks to the organization from the employee’s activities increase.

• An unbalanced arrangement can be moved toward balance by adding or modifying features that cause the amounts ultimately received by employees to appropriately reflect risk and risk outcomes.

If an incentive compensation arrangement may encourage employees to expose their banking organization to imprudent risks, the organization should modify the arrangement as needed to ensure that it is consistent with safety and soundness. Four methods are often used to make compensation more sensitive to risk. These methods are:

1. Risk Adjustment of Awards: The amount of an incentive compensation award for an employee is adjusted based on measures that take into account the risk the employee’s activities may pose to the organization. Such measures may be quantitative, or the size of a risk adjustment may be set judgmentally, subject to appropriate oversight.

2. Deferral of Payment: The actual payout of an award to an employee is delayed significantly beyond the end of the performance period, and the amounts paid are adjusted for actual losses or other aspects of performance that are realized or become better known only during the deferral period.13 Deferred payouts may be altered according to risk outcomes either formulaically or judgmentally, subject to appropriate oversight. To be most effective, the deferral period should be sufficiently long to allow for the realization of a substantial portion of the risks from employee activities, and the measures of loss should be clearly explained to employees and closely tied to their activities during the relevant performance period.

3. Longer Performance Periods: The time period covered by the performance measures used in determining an employee’s award is extended (for example, from one year to two or more years). Longer performance periods and deferral of payment are related in that both methods allow awards or payments to be made after some or all risk outcomes are realized or better known.

4. Reduced Sensitivity to Short-Term Performance: The banking organization reduces the rate at which awards increase as an employee achieves higher levels of the relevant performance measure(s). Rather than offsetting risk-taking incentives associated with the use of short-term performance measures, this method reduces the magnitude of such incentives. This method also can include improving the quality and reliability of performance measures in taking into account both short-term and long-term risks, for example improving the reliability and accuracy of estimates of revenues and long-term profits upon which performance measures depend.14

13. The deferral-of-payment method is sometimes referred to in the industry as a “clawback.” The term “clawback” also may refer specifically to an arrangement under which an employee must return incentive compensation payments previously received by the employee (and not just deferred) if certain risk outcomes occur. Section 304 of the Sarbanes-Oxley Act of 2002 (15 U.S.C. 7243), which applies to chief executive officers and chief financial officers of public banking organizations, is an example of this more specific type of “clawback” requirement.

14. Performance targets may have a material effect on risk-taking incentives. Such targets may offer employees greater rewards for increments of performance that are above the target or may provide that awards will be granted only if
These methods for achieving balance are not exclusive, and additional methods or variations may exist or be developed. Moreover, each method has its own advantages and disadvantages. For example, where reliable risk measures exist, risk adjustment of awards may be more effective than deferral of payment in reducing incentives for imprudent risk-taking. This is because risk adjustment potentially can take account of the full range and time horizon of risks, rather than just those risk outcomes that occur or become more evident during the deferral period. On the other hand, deferral of payment may be more effective than risk adjustment in mitigating incentives to take hard-to-measure risks (such as the risks of new activities or products, or certain risks such as reputational or operational risk that may be difficult to measure with respect to particular activities), especially if such risks are likely to be realized during the deferral period. Accordingly, in some cases two or more methods may be needed in combination for an incentive compensation arrangement to be balanced.

The greater the potential incentives an arrangement creates for an employee to increase the risks associated with the employee’s activities, the stronger the effect should be of the methods applied to achieve balance. Thus, for example, risk adjustments used to counteract a materially unbalanced compensation arrangement should have a similarly material impact on the incentive compensation paid under the arrangement. Further, improvements in the quality and reliability of performance measures themselves, for example, improving the reliability and accuracy of estimates of revenues and profits upon which performance measures depend, can significantly improve the degree of balance in risk-taking incentives.

Where judgment plays a significant role in the design or operation of an incentive compensation arrangement, strong policies and procedures, internal controls, and ex post monitoring of incentive compensation payments relative to actual risk outcomes are particularly important to help ensure that the arrangements as implemented are balanced and do not encourage imprudent risk-taking. For example, if a banking organization relies to a significant degree on the judgment of one or more managers to ensure that the incentive compensation awards to employees are appropriately risk-adjusted, the organization should have policies and procedures that describe how managers are expected to exercise that judgment to achieve balance and that provide for the manager(s) to receive appropriate available information about the employee’s risk-taking activities to make informed judgments.

Large complex banking organizations. Methods and practices for making compensation sensitive to risk are likely to evolve rapidly during the next few years, driven in part by the efforts of supervisors and other stakeholders. LCBOs should actively monitor developments in the field and should incorporate into their incentive compensation systems new or emerging methods or practices that are likely to improve the organization’s long-term financial well-being and safety and soundness.

- The manner in which a banking organization seeks to achieve balanced incentive compensation arrangements should be tailored to account for the differences between employees—including the substantial differences between senior executives and other employees—as well as between banking organizations.

Activities and risks may vary significantly both across banking organizations and across employees within a particular banking organization. For example, activities, risks, and incentive compensation practices may differ materially among banking organizations based on, among other things, the scope or complexity of activities conducted and the business strategies pursued by the organizations. These differences mean that methods for achieving balanced compensation arrangements at one organization may not be effective in restraining incentives to engage in imprudent risk-taking at another organization. Each organization is responsible for ensuring that its incentive compensation arrangements are consistent with the safety and soundness of the organization.

Moreover, the risks associated with the activities of one group of non-executive employees (e.g., loan originators) within a banking organization may differ significantly from those of another group of non-executive employees (e.g., spot foreign exchange traders) within the organization. In addition, reliable quantitative mea-
equity-based instruments that vest over multiple years, with the number of instruments ultimately received dependent on the performance of the organization during the deferral period.

The portion of the incentive compensation of other covered employees that is deferred or paid in the form of equity-based instruments should appropriately take into account the level, nature, and duration of the risks that the employees’ activities create for the organization and the extent to which those activities may materially affect the overall performance of the organization and its stock price. Deferral of a substantial portion of an employee’s incentive compensation may not be workable for employees at lower pay scales because of their more limited financial resources. This may require increased reliance on other measures in the incentive compensation arrangements for these employees to achieve balance.

- Banking organizations should carefully consider the potential for “golden parachutes” and the vesting arrangements for deferred compensation to affect the risk-taking behavior of employees while at the organizations.

Arrangements that provide for an employee (typically a senior executive), upon departure from the organization or a change in control of the organization, to receive large additional payments or the accelerated payment of deferred amounts without regard to risk or risk outcomes can provide the employee significant incentives to expose the organization to undue risk. For example, an arrangement that provides an employee with a guaranteed payout upon departure from an organization, regardless of performance, may neutralize the effect of any balancing features included in the arrangement to help prevent imprudent risk-taking.

Banking organizations should carefully review any such existing or proposed arrangements (sometimes called “golden parachutes”) and the potential impact of such arrangements on the organization’s safety and soundness. In appropriate circumstances an organization should consider including balancing features—such as risk adjustment or deferral requirements that extend past the employee’s departure—in the arrangements to mitigate the potential for the arrangements to encourage imprudent risk-taking. In all cases, a banking organization should ensure that the structure and terms of any golden parachute arrangement entered into by the organization do

...
not encourage imprudent risk-taking in light of the other features of the employee’s incentive compensation arrangements.

Large complex banking organizations. Provisions that require a departing employee to forfeit deferred incentive compensation payments may weaken the effectiveness of the deferral arrangement if the departing employee is able to negotiate a “golden handshake” arrangement with the new employer. This weakening effect can be particularly significant for senior executives or other skilled employees at LCBOs whose services are in high demand within the market.

Golden handshake arrangements present special issues for LCBOs and supervisors. For example, while a banking organization could adjust its deferral arrangements so that departing employees will continue to receive any accrued deferred compensation after departure (subject to any clawback or malus17), these changes could (1) reduce the employee’s incentive to remain at the organization and, thus, weaken an organization’s ability to retain qualified talent, which is an important goal of compensation, and (2) create conflicts of interest. Moreover, actions of the hiring organization (which may or may not be a supervised banking organization) ultimately may defeat these or other risk-balancing aspects of a banking organization’s deferral arrangements. LCBOs should monitor whether golden handshake arrangements are materially weakening the organization’s efforts to constrain the risk-taking incentives of employees. The Federal Reserve will continue to work with banking organizations and others to develop appropriate methods for addressing any effect that such arrangements may have on the safety and soundness of banking organizations.

• Banking organizations should effectively communicate to employees the ways in which incentive compensation awards and payments will be reduced as risks increase.

In order for the risk-sensitive provisions of incentive compensation arrangements to affect employee risk-taking behavior, the organization’s employees need to understand that the amount of incentive compensation that they may receive will vary based on the risk associated with their activities. Accordingly, banking organizations should ensure that employees covered by an incentive compensation arrangement are informed about the key ways in which risks are taken into account in determining the amount of incentive compensation paid. Where feasible, an organization’s communications with employees should include examples of how incentive compensation payments may be adjusted to reflect projected or actual risk outcomes. An organization’s communications should be tailored appropriately to reflect the sophistication of the relevant audience(s).

Principle 2: Compatibility with Effective Controls and Risk-Management

A banking organization’s risk-management processes and internal controls should reinforce and support the development and maintenance of balanced incentive compensation arrangements.

In order to increase their own compensation, employees may seek to evade the processes established by a banking organization to achieve balanced compensation arrangements. Similarly, an employee covered by an incentive compensation arrangement may seek to influence, in ways designed to increase the employee’s pay, the risk measures or other information or judgments that are used to make the employee’s pay sensitive to risk.

Such actions may significantly weaken the effectiveness of an organization’s incentive compensation arrangements in restricting imprudent risk-taking. These actions can have a particularly damaging effect on the safety and soundness of the organization if they result in the weakening of risk measures, information, or judgments that the organization uses for other risk-management, internal control, or financial purposes. In such cases, the employee’s actions may weaken not only the balance of the orga-
nization’s incentive compensation arrangements, but also the risk-management, internal controls, and other functions that are supposed to act as a separate check on risk-taking. For this reason, traditional risk-management controls alone do not eliminate the need to identify employees who may expose the organization to material risk, nor do they obviate the need for the incentive compensation arrangements for these employees to be balanced. Rather, a banking organization’s risk-management processes and internal controls should reinforce and support the development and maintenance of balanced incentive compensation arrangements.

- Banking organizations should have appropriate controls to ensure that their processes for achieving balanced compensation arrangements are followed and to maintain the integrity of their risk-management and other functions.

To help prevent damage from occurring, a banking organization should have strong controls governing its process for designing, implementing, and monitoring incentive compensation arrangements. Banking organizations should create and maintain sufficient documentation to permit an audit of the effectiveness of the organization’s processes for establishing, modifying, and monitoring incentive compensation arrangements. Smaller banking organizations should incorporate reviews of these processes into their overall framework for compliance monitoring (including internal audit).

Large complex banking organizations. LCBOs should have and maintain policies and procedures that (1) identify and describe the role(s) of the personnel, business units, and control units authorized to be involved in the design, implementation, and monitoring of incentive compensation arrangements; (2) identify the source of significant risk-related inputs into these processes and establish appropriate controls governing the development and approval of these inputs to help ensure their integrity; and (3) identify the individual(s) and control unit(s) whose approval is necessary for the establishment of new incentive compensation arrangements or modification of existing arrangements.

An LCBO also should conduct regular internal reviews to ensure that its processes for achieving and maintaining balanced incentive compensation arrangements are consistently followed. Such reviews should be conducted by audit, compliance, or other personnel in a manner consistent with the organization’s overall framework for compliance monitoring. An LCBO’s internal audit department also should separately conduct regular audits of the organization’s compliance with its established policies and controls relating to incentive compensation arrangements. The results should be reported to appropriate levels of management and, where appropriate, the organization’s board of directors.

- Appropriate personnel, including risk-management personnel, should have input into the organization’s processes for designing incentive compensation arrangements and assessing their effectiveness in restraining imprudent risk-taking.

Developing incentive compensation arrangements that provide balanced risk-taking incentives and monitoring arrangements to ensure they achieve balance over time requires an understanding of the risks (including compliance risks) and potential risk outcomes associated with the activities of the relevant employees. Accordingly, banking organizations should have policies and procedures that ensure that risk-management personnel have an appropriate role in the organization’s processes for designing incentive compensation arrangements and for assessing their effectiveness in restraining imprudent risk-taking.18 Ways that risk managers might assist in achieving balanced compensation arrangements include, but are not limited to

1. reviewing the types of risks associated with the activities of covered employees;
2. approving the risk measures used in risk adjustments and performance measures, as well as measures of risk outcomes used in deferred-payout arrangements; and
3. analyzing risk-taking and risk outcomes relative to incentive compensation payments.

Other functions within an organization, such as its control, human resources, or finance functions, also play an important role in helping

---

18. Involvement of risk-management personnel in the design and monitoring of these arrangements also should help ensure that the organization’s risk-management functions can properly understand and address the full range of risks facing the organization.
ensure that incentive compensation arrangements are balanced. For example, these functions may contribute to the design and review of performance measures used in compensation arrangements or may supply data used as part of these measures.

- **Compensation for employees in risk-management and control functions should be sufficient to attract and retain qualified personnel and should avoid conflicts of interest.**

The risk-management and control personnel involved in the design, oversight, and operation of incentive compensation arrangements should have appropriate skills and experience needed to effectively fulfill their roles. These skills and experiences should be sufficient to equip the personnel to remain effective in the face of challenges by covered employees seeking to increase their incentive compensation in ways that are inconsistent with sound risk-management or internal controls. The compensation arrangements for employees in risk-management and control functions thus should be sufficient to attract and retain qualified personnel with experience and expertise in these fields that is appropriate in light of the size, activities, and complexity of the organization.

In addition, to help preserve the independence of their perspectives, the incentive compensation received by risk-management and control personnel staff should not be based substantially on the financial performance of the business units that they review. Rather, the performance measures used in the incentive compensation arrangements for these personnel should be based primarily on the achievement of the objectives of their functions (e.g., adherence to internal controls).

- **Banking organizations should monitor the performance of their incentive compensation arrangements and should revise the arrangements as needed if payments do not appropriately reflect risk.**

Banking organizations should monitor incentive compensation awards and payments, risks taken, and actual risk outcomes to determine whether incentive compensation payments to employees are reduced to reflect adverse risk outcomes or high levels of risk taken. Results should be reported to appropriate levels of management, including the board of directors where warranted and consistent with Principle 3 below. The monitoring methods and processes used by a banking organization should be commensurate with the size and complexity of the organization, as well as its use of incentive compensation. Thus, for example, a small, noncomplex organization that uses incentive compensation only to a limited extent may find that it can appropriately monitor its arrangements through normal management processes.

A banking organization should take the results of such monitoring into account in establishing or modifying incentive compensation arrangements and in overseeing associated controls. If, over time, incentive compensation paid by a banking organization does not appropriately reflect risk outcomes, the organization should review and revise its incentive compensation arrangements and related controls to ensure that the arrangements, as designed and implemented, are balanced and do not provide employees incentives to take imprudent risks.

**Principle 3: Strong Corporate Governance**

*Banking organizations should have strong and effective corporate governance to help ensure sound compensation practices, including active and effective oversight by the board of directors.*

Given the key role of senior executives in managing the overall risk-taking activities of an organization, the board of directors of a banking organization should directly approve the incentive compensation arrangements for senior executives.19 The board also should approve and document any material exceptions or adjustments to the incentive compensation arrangements established for senior executives and should carefully consider and monitor the effects

---

19. As used in this guidance, the term “board of directors” is used to refer to the members of the board of directors who have primary responsibility for overseeing the incentive compensation system. Depending on the manner in which the board is organized, the term may refer to the entire board of directors, a compensation committee of the board, or another committee of the board that has primary responsibility for overseeing the incentive compensation system. In the case of FBOs, the term refers to the relevant oversight body for the firm’s U.S. operations, consistent with the FBO’s overall corporate and management structure.
of any approved exceptions or adjustments on the balance of the arrangement, the risk-taking incentives of the senior executive, and the safety and soundness of the organization. The board of directors of an organization also is ultimately responsible for ensuring that the organization’s incentive compensation arrangements for all covered employees are appropriately balanced and do not jeopardize the safety and soundness of the organization. The involvement of the board of directors in oversight of the organization’s overall incentive compensation program should be scaled appropriately to the scope and prevalence of the organization’s incentive compensation arrangements.

Large complex banking organizations and organizations that are significant users of incentive compensation. The board of directors of an LCBO or other banking organization that uses incentive compensation to a significant extent should actively oversee the development and operation of the organization’s incentive compensation policies, systems, and related control processes. The board of directors of such an organization should review and approve the overall goals and purposes of the organization’s incentive compensation system. In addition, the board should provide clear direction to management to ensure that the goals and policies it establishes are carried out in a manner that achieves balance and is consistent with safety and soundness.

The board of directors of such an organization also should ensure that steps are taken so that the incentive compensation system—including performance measures and targets—is designed and operated in a manner that will achieve balance.

• The board of directors should monitor the performance, and regularly review the design and function, of incentive compensation arrangements.

To allow for informed reviews, the board should receive data and analysis from management or other sources that are sufficient to allow the board to assess whether the overall design and performance of the organization’s incentive compensation arrangements are consistent with the organization’s safety and soundness. These reviews and reports should be appropriately scoped to reflect the size and complexity of the banking organization’s activities and the prevalence and scope of its incentive compensation arrangements.

The board of directors of a banking organization should closely monitor incentive compensation payments to senior executives and the sensitivity of those payments to risk outcomes. In addition, if the compensation arrangement for a senior executive includes a clawback provision, then the review should include sufficient information to determine if the provision has been triggered and executed as planned.

The board of directors of a banking organization should seek to stay abreast of significant emerging changes in compensation plan mechanisms and incentives in the marketplace as well as developments in academic research and regulatory advice regarding incentive compensation policies. However, the board should recognize that organizations, activities, and practices within the industry are not identical. Incentive compensation arrangements at one organization may not be suitable for use at another organization because of differences in the risks, controls, structure, and management among organizations. The board of directors of each organization is responsible for ensuring that the incentive compensation arrangements for its organization do not encourage employees to take risks that are beyond the organization’s ability to manage effectively, regardless of the practices employed by other organizations.

Large complex banking organizations and organizations that are significant users of incentive compensation. The board of directors of an LCBO or other organization that uses incentive compensation to a significant extent should receive and review, on an annual or more frequent basis, an assessment by management, with appropriate input from risk-management personnel, of the effectiveness of the design and operation of the organization’s incentive compensation system in providing risk-taking incentives that are consistent with the organization’s safety and soundness. These reports should include an evaluation of whether or how incentive compensation practices may increase the potential for imprudent risk-taking.

The board of such an organization also should receive periodic reports that review incentive compensation awards and payments relative to risk outcomes on a backward-looking basis to determine whether the organization’s incentive compensation arrangements may be promoting imprudent risk-taking. Boards of directors of
these organizations also should consider periodically obtaining and reviewing simulation analysis of compensation on a forward-looking basis based on a range of performance levels, risk outcomes, and the amount of risks taken.

• The organization, composition, and resources of the board of directors should permit effective oversight of incentive compensation.

The board of directors of a banking organization should have, or have access to, a level of expertise and experience in risk-management and compensation practices in the financial services industry that is appropriate for the nature, scope, and complexity of the organization’s activities. This level of expertise may be present collectively among the members of the board, may come from formal training or from experience in addressing these issues, including as a director, or may be obtained through advice received from outside counsel, consultants, or other experts with expertise in incentive compensation and risk-management. The board of directors of an organization with less complex and extensive incentive compensation arrangements may not find it necessary or appropriate to require special board expertise or to retain and use outside experts in this area.

In selecting and using outside parties, the board of directors should give due attention to potential conflicts of interest arising from other dealings of the parties with the organization or for other reasons. The board also should exercise caution to avoid allowing outside parties to obtain undue levels of influence. While the retention and use of outside parties may be helpful, the board retains ultimate responsibility for ensuring that the organization’s incentive compensation arrangements are consistent with safety and soundness.

Large complex banking organizations and organizations that are significant users of incentive compensation. If a separate compensation committee is not already in place or required by other authorities,20 the board of directors of an LCBO or other banking organization that uses incentive compensation to a significant extent should consider establishing such a committee—reporting to the full board—that has primary responsibility for overseeing the organization’s incentive compensation systems. A compensation committee should be composed solely or predominantly of non-executive directors. If the board does not have such a compensation committee, the board should take other steps to ensure that non-executive directors of the board are actively involved in the oversight of incentive compensation systems. The compensation committee should work closely with any board-level risk and audit committees where the substance of their actions overlap.

• A banking organization’s disclosure practices should support safe and sound incentive compensation arrangements.

If a banking organization’s incentive compensation arrangements provide employees incentives to take risks that are beyond the tolerance of the organization’s shareholders, these risks are likely to also present a risk to the safety and soundness of the organization.21 To help promote safety and soundness, a banking organization should provide an appropriate amount of information concerning its incentive compensation arrangements for executive and non-executive employees and related risk-management, control, and governance processes to shareholders to allow them to monitor and, where appropriate, take actions to restrain the potential for such arrangements and processes that encourage employees to take imprudent risks. Such disclosures should include information relevant to employees other than senior executives. The scope and level of the information disclosed by the organization should be tailored to the nature and complexity of the organization and its incentive compensation arrangements.22

• Large complex banking organizations should follow a systematic approach to developing a compensation system that has balanced incentive compensation arrangements.

20. See New York Stock Exchange Listed Company Manual Section 303A.05(a); Nasdaq Listing Rule 5605(d); Internal Revenue Code section 162(m) (26 U.S.C. 162(m)).

21. On the other hand, as noted previously, compensation arrangements that are in the interests of the shareholders of a banking organization are not necessarily consistent with safety and soundness.

22. A banking organization also should comply with the incentive compensation disclosure requirements of the federal securities law and other laws as applicable. See, for example, Proxy Disclosure Enhancements, SEC Release Nos. 33-9089, 34-61175, 74 F.R. 68334 (Dec. 23, 2009) (to be codified at 17 C.F.R. 229 and 249).
At banking organizations with large numbers of risk-taking employees engaged in diverse activities, an ad hoc approach to developing balanced arrangements is unlikely to be reliable. Thus, an LCBO should use a systematic approach—supported by robust and formalized policies, procedures, and systems—to ensure that those arrangements are appropriately balanced and consistent with safety and soundness. Such an approach should provide for the organization effectively to:

1. Identify employees who are eligible to receive incentive compensation and whose activities may expose the organization to material risks. These employees should include
   a. senior executives and others who are responsible for oversight of the organization’s firm-wide activities or material business lines;
   b. individual employees, including non-executive employees, whose activities may expose the organization to material amounts of risk; and
   c. groups of employees who are subject to the same or similar incentive compensation arrangements and who, in the aggregate, may expose the organization to material amounts of risk;
2. Identify the types and time horizons of risks to the organization from the activities of these employees;
3. Assess the potential for the performance measures included in the incentive compensation arrangements for these employees, those that encourage employees to take imprudent risks;
4. Include balancing elements (such as risk adjustments or deferral periods) within the incentive compensation arrangements for these employees, that are reasonably designed to ensure that the arrangement will be balanced in light of the size, type, and time horizon of the inherent risks of the employees’ activities;
5. Communicate to the employees the ways in which their incentive compensation awards or payments will be adjusted to reflect the risks of their activities to the organization; and
6. Monitor incentive compensation awards, payments, risks taken, and risk outcomes for these employees and modify the relevant arrangements if payments made are not appropriately sensitive to risk and risk outcomes.

CONCLUSION ON SOUND INCENTIVE COMPENSATION

Banking organizations are responsible for ensuring that their incentive compensation arrangements do not encourage imprudent risk-taking behavior and are consistent with the safety and soundness of the organization. The Federal Reserve expects banking organizations to take prompt action to address deficiencies in their incentive compensation arrangements or related risk-management, control, and governance processes.

The Federal Reserve intends to actively monitor the actions taken by banking organizations in this area and will promote further advances in designing and implementing balanced incentive compensation arrangements. Where appropriate, the Federal Reserve will take supervisory or enforcement action to ensure that material deficiencies that pose a threat to the safety and soundness of the organization are promptly addressed. The Federal Reserve also will update this guidance as appropriate to incorporate best practices as they develop over time.
INTRODUCTION

From a regulator’s standpoint, the essential purpose of bank earnings, both current and accumulated, is to absorb losses and augment capital. Earnings is the initial safeguard against the risks that a bank incurs in the course of doing business, and represents a bank’s first line of defense against capital depletion resulting from a decline in the value of its assets. This section is designed to provide a high-level overview for examiners in assessing a bank’s earning through the use of analytical review techniques. Examiners need to remain cognizant of the inextricable links among capital, asset quality, earnings, liquidity, and market risk sensitivity.

GENERAL EXAMINATION APPROACH

As part of the off-site preparation for an on-site examination, examiners review and analyze a bank’s financial condition. (See the manual sections entitled, “Examination Strategy and Risk-Focused Examinations” and “Federal Reserve System Bank Surveillance Program.”) This analysis is meant to identify potential problem areas and to develop the examination scope so that proper staff levels and appropriate examination procedures can be used.

The analysis of earnings includes all bank operations and activities. When evaluating earnings, examiners should develop an understanding of the bank’s core business activities. Core activities are those operations that are part of a bank’s normal or continuing business. Examiners should understand a bank’s composition of earnings and sustainability of the various earnings components. This would include balance-sheet composition, particularly the volume and type of earning assets and off-balance-sheet items, if applicable.

ANALYTICAL REVIEW

In performing the analytical review of a bank, examiners should use the most recent Uniform Bank Performance Report (UBPR) as well as the most recent financial statements and other related financial information that supports the source and trend in the bank’s earnings. A well-performed analytical review provides examiners with an understanding of the bank’s operations. An analytical review of bank earnings highlights matters of interest and potential problem situations which, examiners will need to address with the bank. In reviewing and assessing a bank’s earning, examiners perform level and trend analysis of financial report data and ratios as well as reviewing other metrics. Analytical review is based on the assumption that period-to-period balances and ratios are free from significant error considering the procedures relating to income and expenses, and regulatory reports conducted by internal or external auditors. (See the manual section entitled, “Internal Control and Audit Function, Oversight, and Outsourcing,” for a discussion of factors to consider in reviewing the audit work of others.)

Analytical Tools

The UBPR and the bank’s financial statements are key sources of analysis for examination staff. Bank-prepared statements and supplemental schedules, if available, facilitate an in-depth analytical review. The information from those schedules may give examiners considerable insight into the interpretation of the bank’s basic financial statements. To properly understand and interpret a particular bank’s financial and statistical data, examiners should be familiar with current economic and industry conditions, including any idiosyncratic cyclical or seasonal factors in the nation, region, and local area that may have an affect on the bank’s earnings. Economic and industry information, reports, and journals are useful informational sources of industry conditions and trends. Finally, examiners should be knowledgeable about new banking laws and new accounting standards or methodologies that could have a material effect on financial institutions’ business and earnings.

UBPR

The information used to prepare UBPRs are largely based on the Consolidated Reports of
Condition and Income (Call Report). Each UBPR also contains corresponding average data for the bank’s peer group (a group of banks of similar asset size and reporting characteristics) and percentile rankings for most ratios. The UBPR facilitates the evaluation of a bank’s current condition, trends in its financial performance, and comparisons with the performance of its peer group.

The user’s guide for the UBPR explains how a structured approach to financial analysis should be followed. This approach breaks down a bank’s income stream into its major components of interest margin performance, overhead, non-interest income, loan-loss provisions, tax factors, and extraordinary items. These major components can then be broken down into various subcomponents. Also, examiners should analyze the balance-sheet composition along with economic conditions to understand the source and future variability of a bank’s income stream.

The dollar amounts displayed for most income and expense items in the UBPR are shown for the year-to-date period. However, to allow comparison of ratios between quarters, income and expense and related data used in certain ratios are annualized for interim reporting periods. Thus, the income or expense item is multiplied by the indicated factor listed below before dividing it by the corresponding asset or liability. The UBPR annualization factors are

- March 4.0,
- June 2.0, and
- September 1.3333.

Income and expense information reported on the December 31 Call Report is not annualized. Since the year-end UBPR represents a full fiscal year,

Frequently, examiners need a more detailed and current review of a bank’s financial condition than that provided by the UBPR. Under certain circumstances, UBPR procedures may need to be supplemented because—

- asset-quality information must be linked to the income stream;
- more detailed information is necessary on asset-liability maturities and matching;
- more detailed information is necessary on other liquidity aspects, as they may affect earnings;
- yield or cost information, which may be difficult to interpret from the report, is needed;
- certain income or expense items may need clarification, as well as normal examination validation;
- volume information, such as the number of demand deposits, certificates of deposit, and other accounts, is not reported, and vulnerability in a bank subject to concentrations normally should be considered;
- components of interest and fees on loans are not reported separately by category of loan; thus, adverse trends in the loan portfolio may not be detected (for example, the yield of a particular bank’s loan portfolio may be similar to those of its peer group, but examiners may detect an upward trend in yields for a specific category of loans. That upward trend might be partially or wholly offset by a downward trend of yields in another category of loans, and examiners should consider further investigating the circumstances applicable to each of those loan categories. A change in yields could be a result of a change in the bank’s business model or risk “appetite” for certain types of loans or may indicate a change in loan underwriting standards.); or
- income or expense resulting from a change in the bank’s operations, such as the opening of a new branch or starting of a mortgage banking activity or trust department, may skew performance ratios. (When there has been a significant change in a bank’s operations, examiners should analyze the potential impact of the change on future bank earnings.)

Review of Management’s Budget and Financial Statements

In addition to UBPR analysis, examiners should incorporate a review of management’s budget and/or financial projections. In reviewing a bank’s projections and individual variances from its operating budget, examiners should be able to identify the sources and trends in the bank’s prior and future earnings. Examiners should also verify the reasonableness of the budgeted amounts, frequency of budget review by bank management and the board of directors, and level of involvement of key bank personnel in the budget process.

In reviewing a bank’s financial statements,
Examiners should be cognizant of new accounting standards or changes in accounting methodologies. In addition, alternative accounting treatments for similar transactions among peer banks also should be considered because they may produce significantly different results. The analytical review must be based on figures derived under valid accounting practices consistently applied, particularly in the accrual areas. Accordingly, during the analytical review, examiners should work with Reserve Bank accounting specialists to determine any material inconsistencies in the application of accounting principles.

Review of Nonrecurring and Extraordinary Items

When assessing earnings, examiners should be aware of nonrecurring events or actions that have affected a bank’s earnings performance, positively or negatively, and should adjust earnings on a tax equivalent (TE) basis for comparison purposes. Although the analysis should reflect adjustments for non-recurring events, examiners should also include within their analysis the impact that these items had on overall earnings performance. Examples of events that may affect earnings include adoption of new accounting standards, extraordinary items, or other actions taken by management that are not considered part of a bank’s normal operations such as sales of securities for tax purposes or for some other reason unrelated to active management of the securities portfolio.

The exclusion of nonrecurring events from the analysis allows examiners to analyze the profitability of a bank’s core operations without the distortions caused by non-recurring items. By adjusting for these distortions, examiners are better able to compare a bank’s current earnings performance against the bank’s past performance and industry norms (for example, peer group data).

Compliance with Laws and Regulations Relating to Earnings and Dividends

Examiners should consider the interrelationships that exist among the dividend-payout ratio, the rate of growth of retained earnings, and the bank’s ability to cover losses and maintain adequate capital. A bank’s earnings should also be more than sufficiently adequate in relation to its current dividend rate. In particular, examiners should consider whether a bank’s dividend rate is prudent relative to its financial position and not based on overly optimistic earnings scenarios. See SR-09-4, “Applying Supervisory Guidance and Regulations on the Payment of Dividends, Stock Redemptions, and Stock Repurchases at Bank Holding Companies.” Prudent management dictates that a bank should consider the curtailment of the dividend rate if capital is inadequate and greater earnings retention is required. If it appears that a bank’s dividend payout is excessive or that there is a record of recent operating losses, examiners should refer to sections 5199(b) and 5204 of the United States Revised Statutes and section 208.19 of Regulation H which restrict state member bank dividends. See also this manual’s section entitled, “Dividends.”

ASSIGNING THE EARNINGS RATING

After performing the appropriate examination procedures and documenting the supervisory assessment of a bank, examiners assign a component Uniform Financial Institution Ratings System rating based on an evaluation of a bank’s earnings. Examiners assign a rating that addresses the quantity and trend of a bank’s earnings, as well as factors that may affect the sustainability or quality of earnings. The quantity as well as the quality of a bank’s earnings can be affected by excessive or inadequately managed credit risk that may result in loan losses and require additions to the allowance for loan and lease losses, or by high levels of market risk that may unduly expose an institution’s earnings to volatility in interest rates. The quality of earnings may also be diminished by undue reliance on extraordinary gains, nonrecurring events, or favorable tax effects. Future earnings may be adversely affected by an inability to forecast or control funding and operating costs.

2. See also the Bank Holding Company Supervision Manual for a discussion of the Board’s “Policy Statement on the Payment of Cash Dividends by State Member Banks and Bank Holding Companies.”
expenses, improperly executed or ill-advised business strategies, or poorly managed or uncontrolled exposure to other risks.

Examiners base their rating of a bank’s earnings based upon, but not limited to, an assessment of the following evaluation factors:

• the level of earnings, including trends and stability
• the bank’s ability to provide for adequate capital through retained earnings
• the quality and sources of earnings
• the level of expenses in relation to the bank’s operations
• the adequacy of the bank’s budgeting systems, forecasting processes, and management information systems in general
• the adequacy of the bank’s provisions for the allowance for loan and lease losses and other valuation allowance accounts
• the earnings exposure to market risk such as interest rate, foreign exchange, and price risks
1. To determine whether profit planning and budgeting practices are adequate.
2. To determine whether internal controls are adequate.
3. To assess whether the audit or independent review functions are adequate.
4. To determine whether information and communication systems are adequate and accurate.
5. To determine whether earnings are sufficient to support operations, provide for funding of the allowance for loan and lease losses and augment capital.
6. To assess whether earnings are sustainable.
7. To determine whether board and senior management effectively supervise this area.
Earnings—Analytical Review of Income and Expense
Examination Procedures

Section 4010.3

1. Review previous reports of examination, prior examination work papers, and file correspondence for an overview of any previously identified earnings concerns, strengths, or other considerations.

2. Review recent audits and independent reviews to identify deficiencies concerning the reliability of management information systems (MIS) that may affect the quality and reliability of reported earnings.

3. Review management’s remedial actions to correct examination and audit deficiencies.

4. Discuss with management any recent or planned changes in strategic objectives and their implications for profit plans.

5. Review board and committee minutes and management reports to determine the adequacy/quality of MIS systems and reports.

6. Review recent Uniform Bank Performance Reports (UBPR) to develop an initial assessment of overall earnings performance. Consider the impact of Chapter S tax filing status when selecting performance ratios to review.

7. Compare financial statements, UBPRs, and Consolidated Reports of Condition and Income (Call Reports) to determine if there have been any significant changes that could materially affect earnings performance.

8. Review strategic plans, profit plans, and budgets to determine if the underlying assumptions are realistic. Determine the sources of input for profit plans and budgets. Profit plans and budgets should consider the following areas with detail appropriate for the size, complexity, and risk profile of the bank:
   • anticipated funding of the allowance for loan and lease losses
   • anticipated level and volatility of interest rates
   • interest rate and maturity mismatches
   • local and national economic conditions
   • funding strategies
   • new products and business lines
   • asset and liability mix and pricing
   • growth objectives
   • capital requirements

9. Assess the timeliness of preparing and approving the profit plans and budgets.

10. Compare earnings performance to budget forecasts. Determine whether management compares budgeted performance to actual performance on a periodic basis, modifies projections when interim circumstances change significantly, and evaluates budget forecasts under multiple stress scenarios.

INTERNAL CONTROLS

11. Review management’s procedures to prevent, detect, and correct errors with respect to MIS.

12. Determine whether the income and expense posting, reconciliation, and review functions are independent of each other. Consider testing selected income, expense, and balance sheet items to observe the operational flow of transactions and to assess the potential for fraud from internal control weaknesses. Areas commonly selected for review are
   • large volumes of other income (miscellaneous, service fees, or any other unusual accounts);
   • proper amortization of loan origination fees;
   • insider expense accounts;
   • management fees or other payments to affiliates;
   • significant legal fees;
   • prepaid accounts;
   • stale items; and
   • expenses accrued and unpaid.

13. Determine whether significant or nonrecurring income, expenses, and capital charges are reviewed and appropriately authorized.
14. Determine whether insider or affiliate-related income and expense items are routinely reviewed for authorization, appropriateness, and compliance with laws and regulations.

AUDIT OR INDEPENDENT REVIEW

15. Determine whether the audit or independent review program provides sufficient coverage of earnings activities relative to the bank’s size, complexity, and risk profile. Consider the following:
   • adherence with profit planning objectives, accounting standards, and Consolidated Report of Income Instructions
   • transaction testing completed to assure income and expenses are accurately recorded
   • separation of duties and internal controls
   • adequacy, accuracy, and timeliness of reports to senior management and the board
   • recommended corrective action when warranted
   • verification of implementation and effectiveness of corrective action

INFORMATION AND COMMUNICATION SYSTEMS

16. Determine whether managerial reports provide sufficient information relative to the size and risk profile of the institution.

17. Evaluate the accuracy and timeliness of reports produced for the board and senior management. Reports may include
   • periodic earnings results;
   • budget variance analyses;
   • income and expense projections;
   • non-recurring or cyclical items;
   • exposure to interest rate/market risk;
   • large item reviews;
   • insider related transaction disclosures; and
   • tax planning analyses.

18. Validate the accuracy of Call Reports as appropriate. Use bank work papers, the general ledger, downloaded exception reports, and interviews with bank personnel to verify the accuracy of the appropriate Call Report schedules.

RATIO AND TREND ANALYSIS

20. Assess the level, trend, and sustainability of the return on average assets relative to historical performance, peer comparisons, the organization’s risk profile, balance sheet structure/composition, and local and national economic conditions. Consideration should also be given to the amount and volatility of income from high-risk assets, asset concentrations, non-recurring items, and accounting practices subject to management discretion (which could manipulate earnings). Identify and assess any areas needing further investigation.

21. Evaluate the level, trend, and stability of the bank’s net interest margin. Discuss with examiners reviewing credit, market, and liquidity risks the impact to present and future earnings performance from potential changes in asset quality, market fluctuations, and interest rates.

22. Evaluate the level and trend of overhead expenses. Consider the impact of present and future strategic initiatives (for example, branch openings/closings, increases/decreases in operating staff or executive officers).

23. Evaluate the level, trend, and sources of non-interest income. Discuss with management any projections for changes in fee structures. Consider the impact of changes in interest rates and market conditions on mortgage banking income, securities gains, or other non-interest revenue sources.

24. Review the level and trend of provisions for loan and lease losses and the relationship to actual loan losses to determine the impact of asset quality on earnings. Discuss with the examiner(s) responsible for loan review the potential need for additional provision expenses resulting from examination findings.

25. Review the level, trend, and expected frequency of non-operating gains and losses and their impact on earnings.

26. Consider the impact to earnings from purchased-impaired accounting practices,
27. Determine whether there have been or are expected to be any nonrecurring events and consider their impact to earnings performance. If necessary for comparison purposes, evaluate this impact on a tax-equivalent basis.

28. Evaluate the level and trend of income tax payments recognizing the institution’s basis for filing taxes (for example, Subchapter S, tax allocation agreement).

29. Assess the ability of earnings to support capital growth under current, projected, and stressed conditions. Review the earnings retention rate in comparison to past and forecasted growth rates.

30. Evaluate the earnings impact of activities with affiliated organizations.

BOARD AND SENIOR MANAGEMENT SUPERVISION

31. Determine whether the board and senior management review bank earnings and appropriately responds to significant budget deviations.

32. Assess compliance with bank policies, applicable regulations, and governing accounting standards. If applicable, determine compliance with outstanding formal or informal enforcement actions.
Analytical Review and Income and Expense
Internal Control Questionnaire
Effective date March 1984

Section 4010.4

Review the bank’s internal controls, policies, practices and procedures over income and expenses. The bank’s system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

GENERAL

1. Does the bank have a budget? If so:
   a. Is it reviewed and approved by managerial personnel and/or the board of directors?
   b. Is it periodically reviewed and updated for changed conditions?
   c. Are periodic statements compared to budget and are explanations of variances reviewed by management?
   d. Is a separate budget prepared by the manager of each department or division?

2. Does the bank’s accounting system provide sufficiently detailed breakdowns of accounts to enable it to analyze fluctuations?

*3. Are the general books of the bank maintained by someone who does not have access to cash?

4. Are all general ledger entries processed through the proof department?

5. Are all entries to the general ledger supported by a general ledger ticket?

6. Do general ledger tickets, both debit and credit, bear complete approvals, descriptions and an indication of the offset?

*7. Are all general ledger entries approved by a responsible person other than the general ledger bookkeeper or person associated with its preparation?

8. Is the general ledger posted daily?

9. Is a daily statement of condition prepared?

*10. Are corrections to ledgers made by posting a correcting entry and not by erasing (manual system) or deleting (computerized system) the incorrect entry?

11. Are supporting worksheets or other records maintained on accrued expenses and taxes?

12. Are those supporting records periodically reconciled with the appropriate general ledger controls?

PURCHASES

*13. If the bank has a separate purchasing department, is it independent of the accounting and receiving departments?

*14. Are purchases made only on the basis of requisitions signed by authorized individuals?

*15. Are all purchases routed through a purchasing department or personnel functioning in that capacity?

16. Are all purchases made by means of pre-numbered purchase orders sent to vendors?

17. Are all invoices received checked against purchase orders and receiving reports?

18. Are all invoices tested for clerical accuracy?

19. Are invoice amounts credited to their respective accounts and tested periodically for accuracy?

DISBURSEMENTS

*20. Is the payment for all purchases, except minor items, made by official checks?

*21. Does the official signing the check review all supporting documents?

*22. Are supporting vouchers and invoices cancelled to prevent re-use?

*23. Are duties and responsibilities in the following areas segregated?
   a. Authorization to issue expense checks?
   b. Preparation of expense checks?
   c. Signing of expense checks?
   d. Sending of expense checks?
   e. Use and storage of facsimile signatures?
   f. General ledger posting?
   g. Subsidiary ledger posting?

PAYROLL

24. Is the payroll department separate from the personnel department?

25. Are signed authorizations on file for all payroll deductions including W-4s for withholding?

26. Are salaries authorized by the board of directors or its designated committee?
27. Are individual wage rates authorized in writing by an authorized officer?
28. Are vacation and sick leave payments fixed or authorized?
29. Are payrolls paid from a special bank account or directly credited to the employee’s demand deposit account?
30. Are time records reviewed and signed by the employee’s supervisor?
31. Are double checks made of hours, rates, deductions, extension, and footings?
32. Are payroll signers independent of the persons approving hours worked and preparation of the payroll?
33. If a check signing machine is used, are controls over its use adequate (such as a dual control)?
34. Are payrolls subject to final officer approval?
35. Are the names of persons leaving employment of the bank reported promptly, in writing, to the payroll department?
36. Are payroll expense distributions reconciled with the general payroll payment records?

CONCLUSION

37. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
38. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate, inadequate).
Liquidity Risk
Effective date October 2016

WHAT’S NEW IN THIS REVISED SECTION

This section is being revised to include the March 1, 2016, “Interagency Guidance on Funds Transfer Pricing Related to Funding Contingency Risks.” The guidance (refer to appendix 3 of this section) was issued to address weaknesses observed in large financial institutions’ funds transfer pricing (FTP) practices related to funding risk (including interest rate and liquidity components) and contingent liquidity risk. The interagency guidance builds on the principles of sound liquidity risk management. FTP is an important tool for managing a firm’s balance sheet structure and measuring risk-adjusted profitability. By allocating funding and contingent liquidity risks to business lines, products, and activities within a firm, FTP influences the volume and terms of new business and ongoing portfolio composition. If done effectively, FTP promotes more resilient, sustainable business models. (Refer to SR-16-3.)

FACTORS INFLUENCING LIQUIDITY MANAGEMENT AND TYPES OF LIQUIDITY RISK

Liquidity is a financial institution’s capacity to meet its cash and collateral obligations without incurring unacceptable losses. Adequate liquidity is dependent upon the institution’s ability to efficiently meet both expected and unexpected cash flows and collateral needs without adversely affecting either daily operations or the financial condition of the institution. An institution’s obligations and the funding sources used to meet them depend significantly on its business mix, balance-sheet structure, and the cash-flow profiles of its on- and off-balance-sheet obligations. In managing their cash flows, institutions confront various situations that can give rise to increased liquidity risk. These include funding mismatches, market constraints on the ability to convert assets into cash or in accessing sources of funds (i.e., market liquidity), and contingent liquidity events. Changes in economic conditions or exposure to credit, market, operation, legal, and reputation risks also can affect an institution’s liquidity-risk profile and should be considered in the assessment of liquidity and asset/liability management.

Liquidity risk is the risk to an institution’s financial condition or safety and soundness arising from its inability (whether real or perceived) to meet its contractual obligations. Because banking organizations employ a significant amount of leverage in their business activities—and need to meet contractual obligations in order to maintain the confidence of customers and fund providers—adequate liquidity is critical to an institution’s ongoing operation, profitability, and safety and soundness.

To ensure it has adequate liquidity, an institution must balance the costs and benefits of liquidity: Too little liquidity can expose an institution to an array of significant negative repercussions arising from its inability to meet contractual obligations. Conversely, too much liquidity can entail substantial opportunity costs and have a negative impact on the firm’s profitability.

Effective liquidity management entails the following three elements:

- assessing, on an ongoing basis, the current and expected future needs for funds, and ensuring that sufficient funds or access to funds exists to meet those needs at the appropriate time
- providing for an adequate cushion of liquidity with a stock of liquid assets to meet unanticipated cash-flow needs that may arise from a continuum of potential adverse circumstances that can range from high-probability/low-severity events that occur in daily operations to low-probability/high-severity events that occur less frequently but could significantly affect an institution’s safety and soundness
- striking an appropriate balance between the benefits of providing for adequate liquidity to mitigate potential adverse events and the cost of that liquidity

The primary role of liquidity-risk management is to (1) prospectively assess the need for funds to meet obligations and (2) ensure the availability of cash or collateral to fulfill those needs at the appropriate time by coordinating the various sources of funds available to the...
institution under normal and stressed conditions. Funds needs arise from the myriad of banking activities and financial transactions that create contractual obligations to deliver funds, including business initiatives for asset growth, the provision of various financial products and transaction services, and expected and unexpected changes in assets and the liabilities used to fund assets. Liquidity managers have an array of alternative sources of funds to meet their liquidity needs. These sources generally fall within one of four broad categories:

- net operating cash flows
- the liquidation of assets
- the generation of liabilities
- an increase in capital funds

Funds obtained from operating cash flows arise from net interest payments on assets; net principal payments related to the amortization and maturity of assets; and the receipt of funds from various types of liabilities, transactions, and service fees. Institutions obtain liquidity from operating cash flows by managing the timing and maturity of their asset and liability cash flows, including their ongoing borrowing and debt-issuance programs.

Funds can also be obtained by reducing or liquidating assets. Most institutions incorporate scheduled asset maturities and liquidations as part of their ongoing management of operating cash flows. They also use the potential liquidation of a portion of their assets (generally a portion of the investment portfolio) as a contingent source of funds to meet cash needs under adverse liquidity circumstances. Such contingent funds need to be unencumbered for the purposes of selling or lending the assets and are often termed liquidity reserves or liquidity warehouses and are a critical element of safe and sound liquidity management. Assessments of the value of unencumbered assets should represent the amount of cash that can be obtained from monetized assets under normal as well as stressed conditions.

Asset securitization is another method that some institutions use to fund assets. Securitization involves the transformation of on-balance-sheet loans (e.g., auto, credit card, commercial, student, home equity, and mortgage loans) into packaged groups of loans in various forms, which are subsequently sold to investors. Depending on the business model employed, securitization proceeds can be both a material source of ongoing funding and a significant tool for meeting future funding needs. Securitization markets may provide a good source of funding; however, institutions should be cautious in relying too heavily on this market as it has been known to shutdown under market stress situations.

Funds are also generated through deposit-taking activities, borrowings, and overall liability management. Borrowed funds may include secured lending and unsecured debt obligations across the maturity spectrum. In the short term, borrowed funds may include purchased fed funds and securities sold under agreements to repurchase (repos). Longer-term borrowed funds may include various types of deposit products, collateralized loans, and the issuance of corporate debt. Depending on their contractual characteristics and the behavior of fund providers, borrowed funds can vary in maturity and availability because of their sensitivity to general market trends in interest rates and various other market factors. Considerations specific to the borrowing institution also affect the maturity and availability of borrowed funds.

External Factors and Exposure to Other Risks

The liquidity needs of a financial institution and the sources of liquidity available to meet those needs depend significantly on the institution’s business mix and balance-sheet structure, as well as on the cash-flow profiles of its on- and off-balance-sheet obligations. While management largely determines these internal attributes, external factors and the institution’s exposure to various types of financial and operating risks, including interest-rate, credit, operational, legal, and reputational risks, also influence its liquidity profile. As a result, an institution should assess and manage liquidity needs and sources by considering the potential consequences of changes in external factors along with the institution-specific determinants of its liquidity profile.

Changes in Interest Rates

The level of prevailing market interest rates, the term structure of interest rates, and changes in both the level and term structure of rates can significantly affect the cash-flow characteristics
and costs of, and an institution’s demand for, assets, liabilities, and off-balance-sheet (OBS) positions. In turn, these factors significantly affect an institution’s funding structure or liquidity needs, as well as the relative attractiveness or price of alternative sources of liquidity available to it. Changes in the level of market interest rates can also result in the acceleration or deceleration of loan prepayments and deposit flows. The availability of different types of funds may also be affected, as a result of options embedded in the contractual structure of assets, liabilities, and financial transactions.

Economic Conditions

Cyclical and seasonal economic conditions can also have an impact on the volume of an institution’s assets, liabilities, and OBS positions—and, accordingly, its cash-flow and liquidity profile. For example, during recessions, business demand for credit may decline, which affects the growth of an organization and its liquidity needs. At the same time, subpar economic growth and its impact on employ-
ment, bankruptcies, and business failures often create direct and indirect incentives for retail customers to reduce their deposits; a recession may also lead to higher loan delinquencies for financial institutions. All of these conditions have negative implications for an institution’s cash flow and overall liquidity. On the other hand, periods of economic growth may spur asset or deposit growth, thus introducing different liquidity challenges.

Credit-Risk Exposures of an Institution

An institution’s exposure to credit risk can have a material impact on its liquidity. Nonperforming loans directly reduce otherwise expected cash inflows. The reduced credit quality of problem assets impairs their marketability and potential use as a source of liquidity (either by selling the assets or using them as collateral). Moreover, problem assets have a negative impact on overall cash flows by increasing the costs of loan-collection and -workout efforts.

In addition, the price that a bank pays for funds, especially wholesale and brokered borrowed funds and deposits, will reflect the institution’s perceived level of risk exposure in the marketplace. Fund suppliers use a variety of credit-quality indicators to judge credit risk and determine the returns they require for the risk to be undertaken. Such indicators include an institution’s loan-growth rates; the relative size of its loan portfolio; and the levels of delinquent loans, nonperforming loans, and loan losses. For institutions that have issued public debt, the credit ratings of nationally recognized statistical rating organizations (NRSOs) are particularly critical.

Other Risk Exposures of an Institution

Importantly, exposures to operational, legal, reputational, and other risks can lead to adverse liquidity conditions. Operating risks can materially disrupt the dispersal and receipt of obligated cash flows and give rise to significant liquidity needs. Exposure to legal and reputational risks can lead fund providers to question an institution’s overall credit risk, safety and soundness, and ability to meet its obligations in the future. A bank’s reputation for operating in a safe and sound manner, particularly its ability to meet its contractual obligations, is an important determinant in its costs of funds and overall liquidity-risk profile.

Given the critical importance of liquidity to financial institutions and the potential impact that other risk exposures and external factors have on liquidity, effective liquidity managers ensure that liquidity management is fully integrated into the institution’s overall enterprise-wide risk-management activities. Liquidity management is therefore an important part of an institution’s strategic and tactical planning.

Types of Liquidity Risk

Banking organizations encounter the following three broad types of liquidity risk:

- mismatch risk
- market liquidity risk
- contingent liquidity risk

Mismatch risk is the risk that an institution will not have sufficient cash to meet obligations in the normal course of business, as a result of ineffective matches between cash inflows and outflows. The management and control of funding mismatches depend greatly on the daily projections of operational cash flow, including those cash flows that may arise from seasonal business fluctuations, unanticipated new business, and other everyday situations. To accurately project operational cash flows, an institution needs to estimate its expected cash-flow needs and ensure it has adequate liquidity to meet small variations to those expectations. Occurrences of funding mismatches may be frequent. If adequately managed, these mismatches may have little to no impact on the financial health of the firm.

Market liquidity risk is the risk that an institution will encounter market constraints in its efforts to convert assets into cash or to access financial market sources of funds.

The planned conversion of assets into cash is an important element in an institution’s ongoing management of funding cash-flow mismatches. In addition, converting assets into cash is often a key strategic tool for addressing contingent liquidity events. As a result, market constraints on achieving planned, strategic, or contingent conversions of assets into cash can exacerbate the severity of potential funding mismatches and contingent liquidity problems.
Contingent liquidity risk is the risk that arises when unexpected events cause an institution to have insufficient funds to meet its obligations. Unexpected events may be firm-specific or arise from external factors. External factors may be geographic, such as local economic factors that affect the premiums required on deposits with certain local, state, or commercial areas, or they may be market-oriented, such as increases in the price volatility of certain types of securities in response to financial market developments. External factors may also be systemic, such as a payment-system disruption or major changes in financial market conditions.

The nature and severity of contingent liquidity events vary substantially. At one extreme, contingent liquidity risk may arise from the need to fund unexpected asset growth as a result of commitment requests or the unexpected runoff of liabilities that occurs in the normal course of business. At the other extreme, institution-specific issues, such as the lowering of a public debt rating or general financial market stress, may have a significant impact on an institution’s liquidity and safety and soundness. As a result, managing contingent liquidity risk requires an ongoing assessment of potential future events and circumstances in order to ensure that obligations are met and adequate sources of standby liquidity and/or liquidity reserves are readily available and easily converted to cash.

Diversification plays an important role in managing liquidity and its various component risks. Concentrations in particular types of assets, liabilities, OBS positions, or business activities that give rise to unique types of funding needs or create an undue reliance on specific types of funding sources can unduly expose an institution to the risks of funding mismatches, contingent events, and market liquidity constraints. Therefore, diversification of both the sources and uses of liquidity is a critical component of sound liquidity-risk management.

SOUND LIQUIDITY-RISK MANAGEMENT PRACTICES

Like the management of any type of risk, sound liquidity-risk management involves effective oversight of a comprehensive process that adequately identifies, measures, monitors, and controls risk exposure. This process includes oversight of exposures to funding mismatches, market liquidity constraints, and contingent liquidity events. Both international and U.S. banking supervisors have issued supervisory guidance on safe and sound practices for managing the liquidity risk of banking organizations. Guidance on liquidity risk management was published by the Basel Committee on Banking Supervision, Bank for International Settlements, “Principles for Sound Liquidity Risk Management and Supervision,” in September 2008.1 The U.S. regulatory agencies implemented these principles, jointly agreeing to incorporate those principles into their existing guidance. The revised guidance, “Interagency Policy Statement on Funding and Liquidity Risk Management” was issued on March 10, 2010 (see SR-10-6 and its attachment).

In summary, the critical elements of a sound liquidity-risk management process are—

- Effective corporate governance consisting of oversight by the board of directors and active involvement by management in an institution’s control of liquidity risk.
- Appropriate strategies, policies, procedures, and limits used to manage and mitigate liquidity risk.
- Comprehensive liquidity-risk measurement and monitoring systems (including assessments of the current and prospective cash flows or sources and uses of funds) that are commensurate with the complexity and business activities of the institution.
- Active management of intraday liquidity and collateral.
- An appropriately diverse mix of existing and potential future funding sources.
- Adequate levels of highly liquid marketable securities free of legal, regulatory, or operational impediments that can be used to meet liquidity needs in stressful situations.
- Comprehensive contingency funding plans (CFPs) that sufficiently address potential adverse liquidity events and emergency cash flow requirements.
- Internal controls and internal audit processes sufficient to determine the adequacy of the institution’s liquidity-risk-management process.

Each of these elements should be customized to account for the sophistication, complexity, and

business activities of an institution. The following sections discuss supervisory expectations for each of these critical elements.

**Corporate Governance and Oversight**

Effective liquidity-risk management requires the coordinated efforts of both an informed board of directors and capable senior management. The board should establish and communicate the institution’s liquidity-risk tolerance in such a manner that all levels of management clearly understand the institution’s approach to managing the trade-offs between management of liquidity risk and short-term profits. The board should ensure that the organizational structures and staffing levels are appropriate, given the institution’s activities and the risks they present.

**Involvement of the Board of Directors**

The board of directors is ultimately responsible for the liquidity risk assumed by the institution. The board should understand and guide the strategic direction of liquidity-risk management. Specifically, the board of directors or a delegated committee of board members should oversee the establishment and approval of liquidity management strategies, policies and procedures, and review them at least annually. In addition, the board should ensure that it

- understands the nature of the institution’s liquidity risks and periodically reviews information necessary to maintain this understanding;
- understands and approves those elements of liquidity-risk management policies that articulate the institution’s general strategy for managing liquidity risk, and establishes acceptable risk tolerances;
- establishes executive-level lines of authority and responsibility for managing the institution’s liquidity risk;
- enforces management’s duties to identify, measure, monitor, and control liquidity risk.
- understands and periodically reviews the institution’s CFP for handling potential adverse liquidity events; and
- understands the liquidity-risk profile of important subsidiaries and affiliates and their influence on the overall liquidity of the financial institution, as appropriate.

**Role of Senior Management**

Senior management should ensure that liquidity-risk management strategies, policies, and procedures are adequate for the sophistication and complexity of the institution. Management should ensure that these policies and procedures are appropriately executed on both a long-term and day-to-day basis, in accordance with board delegations. Management should oversee the development and implementation of—

- an appropriate risk-measurement system and standards for measuring the institution’s liquidity risk;
- a comprehensive liquidity-risk reporting and monitoring process;
- establishment and monitoring of liquid asset buffers of unencumbered marketable securities;
- effective internal controls and review processes for the management of liquidity risk; and
- monitoring of liquidity risks for each entity across the institution on an on-going basis and;
- an appropriate CFP, including (1) adequate assessments of the institution’s contingent liquidity risks under adverse circumstances and (2) fully developed strategies and plans for managing such events.

Senior management should periodically review the organization’s liquidity-risk management strategies, policies, and procedures, as well as its CFP, to ensure that they remain appropriate and sound. Management should also coordinate the institution’s liquidity-risk management with its efforts for disaster, contingency, and strategic planning, as well as with its business and risk-management objectives, strategies, and tactics. Senior management is also responsible for regularly reporting to the board of directors on the liquidity-risk profile of the institution.

**Strategies, Policies, Procedures, and Risk Tolerances**

Institutions should have documented strategies for managing liquidity and have formal written policies and procedures for limiting and controlling risk exposures. Strategies, policies, and procedures should translate the board’s goals,
objectives, and risk tolerances into operating standards that are well understood by institutional personnel and that are consistent with the board’s intended risk tolerances. Policies should also ensure that responsibility for managing liquidity is assigned throughout the corporate structure of the institution, including separate legal entities and relevant operating subsidiaries and affiliates, where appropriate. Strategies set out the institution’s general approach for managing liquidity, articulate its liquidity-risk tolerances, and address the extent to which key elements of funds management are centralized or delegated throughout the institution. Strategies also communicate how much emphasis the institution places on using asset liquidity, liabilities, and operating cash flows to meet its day-to-day and contingent funding needs. Quantitative and qualitative targets, such as the following, may also be included in policies:

- guidelines or limits on the composition of assets and liabilities
- the relative reliance on certain funding sources, both on an ongoing basis and under contingent liquidity scenarios
- the marketability of assets to be used as contingent sources of liquidity

An institution’s strategies and policies should identify the primary objectives and methods for (1) managing daily operating cash flows, (2) providing for seasonal and cyclical cash-flow fluctuations, and (3) addressing various adverse liquidity scenarios. The latter includes formulating plans and courses of actions for dealing with potential temporary, intermediate-term, and long-term liquidity disruptions. Policies and procedures should formally document—

- lines of authority and responsibility for managing liquidity risk,
- liquidity-risk limits and guidelines,
- the institution’s measurement and reporting systems, and
- elements of the institution’s comprehensive CFP.

Incorporating these elements of liquidity-risk management into policies and procedures helps internal control and internal audit fulfill their oversight role in the liquidity-risk management process. Policies, procedures, and limits should address liquidity separately for individual currencies, where appropriate and material. All liquidity-risk policies, procedures, and limits should be reviewed periodically and revised as needed.

**Delineating Clear Lines of Authority and Responsibility**

Through formal written policies or clear operating procedures, management should delineate managerial responsibilities and oversight, including lines of authority and responsibility for the following:

- developing liquidity-risk management policies, procedures, and limits
- developing and implementing strategies and tactics for managing liquidity risk
- conducting day-to-day management of the institution’s liquidity
- establishing and maintaining liquidity-risk measurement and monitoring systems
- authorizing exceptions to policies and limits
- identifying the potential liquidity risk associated with the introduction of new products and activities

Institutions should clearly identify the individuals or committees responsible for liquidity-risk decisions. Less complex institutions often assign such responsibilities to the CFO or an equivalent senior management official. Other institutions assign responsibility for liquidity-risk management to a committee of senior managers, sometimes called a finance committee or an asset/liability committee (ALCO). Policies should clearly identify individual or committee duties and responsibilities, the extent of the decision-making authority, and the form and frequency of periodic reports to senior management and the board of directors. In general, an ALCO (or a similar senior-level committee) is responsible for ensuring that (1) measurement systems adequately identify and quantify the institution’s liquidity-risk exposure and (2) reporting systems communicate accurate and relevant information about the level and sources of that exposure.

When an institution uses an ALCO or other senior management committee, the committee should actively monitor the liquidity profile of the institution and should have sufficiently broad representation from the major institutional functions that influence liquidity risk (e.g., the lending, investment, deposit, or funding functions).
Committee members should include senior managers who have authority over the units responsible for executing transactions and other activities that can affect liquidity. In addition, the committee should ensure that (1) the risk measurement system adequately identifies and quantifies risk exposure and (2) the reporting process communicates accurate, timely, and relevant information about the level and sources of risk exposure.

In general, committees overseeing liquidity-risk management delegate the day-to-day responsibilities to the institution’s treasury department or, at less complex institutions, to the CFO, treasurer, or other appropriate staff. The personnel charged with measuring and monitoring the day-to-day management of liquidity risk should have a well-founded understanding of all aspects of the institution’s liquidity-risk profile. While the day-to-day management of liquidity may be delegated, the oversight committee should not be precluded from aggressively monitoring liquidity management.

In more-complex institutions that have separate legal entities and operating subsidiaries or affiliates, effective liquidity-risk management requires senior managers and other key personnel to have an understanding of the funding position and liquidity of any member of the corporate group that might provide or absorb liquid resources from another member. Centralized liquidity-risk assessment and management can provide significant operating efficiencies and comprehensive views of the liquidity-risk profile of the integrated corporate entity as well as members of the corporate group—including depository institutions. This integrated view is particularly important for understanding the impact other members of the group may have on insured depository entities. However, legal and regulatory restrictions on the flow of funds among members of a corporate group, in addition to differences in the liquidity characteristics and dynamics of managing the liquidity of different types of entities within a group, may call for decentralizing various elements of liquidity-risk management. Such delegation and associated strategies, policies, and procedures should be clearly articulated and understood throughout the organization. Policies, procedures, and limits should also address liquidity separately for individual currencies, legal entities, and business lines, when appropriate and material, as well as allow for legal, regulatory, and operational limits for the transferability of liquidity.

**Diversified Funding**

An institution should establish a funding strategy that provides effective diversification in the sources and tenor of funding. It should maintain an ongoing presence in its chosen funding markets and strong relationships with funds providers to promote effective diversification of funding sources. An institution should regularly gauge its capacity to raise funds quickly from each source. It should identify the main factors that affect its ability to raise funds and monitor those factors closely to ensure that estimates of fund raising capacity remain valid.

An institution should diversify available funding sources in the short-, medium- and long-term. Diversification targets should be part of the medium- to long-term funding plans and should be aligned with the budgeting and business planning process. Funding plans should take into account correlations between sources of funds and market conditions. Funding should also be diversified across a full range of retail as well as secured and unsecured wholesale sources of funds, consistent with the institution’s sophistication and complexity. Management should also consider the funding implications of any government programs or guarantees it utilizes. As with wholesale funding, the potential unavailability of government programs over the intermediate- and long-term should be fully considered in the development of liquidity risk management strategies, tactics, and risk tolerances. Funding diversification should be implemented using limits addressing counterparties, secured versus unsecured market funding, instrument type, securitization vehicle, and geographic market. In general, funding concentrations should be avoided. Undue over reliance on any one source of funding is considered an unsafe and unsound practice.

An essential component of ensuring funding diversity is maintaining market access. Market access is critical for effective liquidity risk management, as it affects both the ability to raise new funds and to liquidate assets. Senior management should ensure that market access is being actively managed, monitored, and tested by the appropriate staff. Such efforts should be consistent with the institution’s liquidity-risk profile and sources of funding. For example, access to the capital markets is an important consideration for most large complex institutions, whereas the availability of correspondent lines of credit and other sources of whole funds
are critical for smaller, less complex institutions.

An institution needs to identify alternative sources of funding that strengthen its capacity to withstand a variety of severe institution-specific and market-wide liquidity shocks. Depending upon the nature, severity, and duration of the liquidity shock, potential sources of funding include, but are not limited to, the following:

- Deposit growth.
- Lengthening maturities of liabilities.
- Issuance of debt instruments.
- Sale of subsidiaries or lines of business.
- Asset securitization.
- Sale (either outright or through repurchase agreements) or pledging of liquid assets.
- Drawing-down committed facilities.
- Borrowing.

Liquidity-Risk Limits and Guidelines

Liquidity-risk tolerances or limits should be appropriate for the complexity and liquidity-risk profile of an institution. They should employ both quantitative targets and qualitative guidelines and should be consistent with the institution’s overall approach and strategy for measuring and managing liquidity. Policies should clearly articulate a liquidity-risk tolerance that is appropriate for the business strategy of the institution, considering its complexity, business mix, liquidity-risk profile, and its role in the financial system. Policies should also contain provisions for documenting and periodically reviewing assumptions used in liquidity projections. Policy guidelines should employ both quantitative targets and qualitative guidelines. These measurements, limits, and guidelines may be specified in terms of the following measures and conditions, as applicable:

- Discrete or cumulative cash-flow mismatches or gaps (sources and uses of funds) over specified future short- and long-term time horizons under both expected and adverse business conditions. Often, these are expressed as cash-flow coverage ratios or as specific aggregate amounts.
- Target amounts of unpledged liquid-asset reserves sufficient to meet liquidity needs under normal and reasonably anticipated adverse business conditions. These targets are often expressed as aggregate amounts or as ratios calculated in relation to, for example, total assets, short-term assets, various types of liabilities, or projected-scenario liquidity needs.
- Volatile liability dependence and liquid-asset coverage of volatile liabilities under both normal and stress conditions. These guidelines, for example, may include amounts of potentially volatile wholesale funding to total liabilities, volatile retail (e.g., high-cost or out-of-market) deposits to total deposits, potentially volatile deposit-dependency measures, or short-term borrowings as a percent of total funding.
- Asset concentrations that could increase liquidity risk through a limited ability to convert to cash (e.g., complex financial instruments, bank-owned (corporate-owned) life insurance, and less-marketable loan portfolios).
- Funding concentrations that address diversification issues, such as a large liability and dependency on borrowed funds, concentrations of single funds providers, funds providers by market segments, and types of volatile deposit or volatile wholesale funding dependency. For small community banks, funding concentrations may be difficult to avoid. However, banks that rely on just a few primary sources should have appropriate systems in place to manage the concentrations of funding liquidity, including limit structures and reporting mechanisms.
- Funding concentrations that address the term, re-pricing, and market characteristics of funding sources. This may include diversification targets for short-, medium-, and long-term funding, instrument type and securitization vehicles, and guidance on concentrations for currencies and geographical markets.
- Contingent liabilities, such as unfunded loan commitments and lines of credit supporting asset sales or securitizations, and collateral requirements for derivatives transactions and various types of secured lending.
- The minimum and maximum average maturity of different categories of assets and liabilities.

Institutions may use other risk indicators to specify their risk tolerances. Some institutions may use ratios such as loans to deposits, loans to equity capital, purchased funds to total assets, or other common measures. However, when developing and using such measures, institutions should be fully aware that some measures may not appropriately assess the timing and scenario-specific characteristics of the
institution’s liquidity-risk profile. Liquidity-risk measures that are constructed using static balance-sheet amounts may hide significant liquidity risk that can occur in the future under both normal and adverse business conditions. As a result, institutions should not rely solely on these static measures to monitor and manage liquidity.

**Policies on Measuring and Managing Reporting Systems**

Policies and procedures should also identify the methods used to measure liquidity risk, as well as the form and frequency of reports to various levels of management and the board of directors. Policies should identify the nature and form of cash-flow projections and other liquidity measures to be used. Policies should provide for the categorization, measurement, and monitoring of both stable and potentially volatile sources of funds. Policies should also provide guidance on the types of business-condition scenarios used to construct cash-flow projections and should contain provisions for documenting and periodically reviewing the assumptions used in liquidity projections.

Moreover, policies should explicitly provide for more-frequent reporting under adverse business or liquidity conditions. Under normal business conditions, senior managers should receive liquidity-risk reports at least monthly, while the board of directors should receive liquidity-risk reports at least quarterly. If the risk exposure is more complex, the reports should be more frequent. These reports should tell senior management and the board how much liquidity risk the bank is assuming, whether management is complying with risk limits, and whether management’s strategies are consistent with the board’s expressed risk tolerance.

**Policies on Contingency Funding Plans**

Policies should also provide for senior management to develop and maintain a written, comprehensive, and up-to-date liquidity CFP. Policies should also ensure that, as part of ongoing liquidity-risk management, senior management is alerted to early-warning indicators or triggers of potential liquidity problems.

**Compliance with Laws and Regulations**

Institutions should ensure that their policies and procedures take into account compliance with appropriate laws and regulations that can have an impact on an institution’s liquidity-risk management and liquidity-risk profile. These laws and regulations include the Federal Deposit Insurance Corporation Improvement Act (FDICIA) and its constraints on an institution’s use of brokered deposits, as well as pertinent sections of Federal Reserve regulations A, D, F, and W. (See appendix 2, for a summary of some of the pertinent legal and regulatory issues that should be factored into the management of liquidity risk.)

**Liquidity-Risk Measurement Systems**

The analysis and measurement of liquidity risk should be tailored to the complexity and risk profile of an institution, incorporating the cash flows and liquidity implications of all the institution’s material assets, liabilities, off-balance-sheet positions, and major business activities. Liquidity-risk analysis should consider what effect options embedded in the institution’s sources and uses of funds may have on its cash flows and liquidity-risk measures. The analysis of liquidity risk should also be forward-looking and strive to identify potential future funding mismatches as well as current imbalances. Liquidity-risk measures should advance management’s understanding of the institution’s exposure to mismatch, market, and contingent liquidity risks. Measures should also assess the institution’s liquidity sources and needs in relation to the specific business environments it operates in and the time frames involved in securing and using funds.

Adequate liquidity-risk measurement requires the ongoing review of an institution’s sources and uses of funds and generally includes analysis of the following:

- trends in balance-sheet structure and funding vehicles
- pro forma cash-flow statements and funding mismatch gaps over varying time horizons
- trends and expectations in the volume and pricing trends for assets, liabilities, and off-balance-sheet items that can have a significant impact on the institution’s liquidity
• trends in the relative costs of funds required by existing and alternative funds providers
• the diversification of funding sources and trends in funding concentrations
• the adequacy of asset liquidity reserves, trends in these reserves, and the market dynamics that could influence their market liquidity
• the sensitivity of funds providers to both financial market and institution-specific trends and events
• the institution’s exposure to both broad-based market and institution-specific contingent liquidity events

The formality and sophistication of liquidity-risk measurement, and the policies and procedures used to govern the measurement process, depend on the sophistication of the institution, the nature and complexity of its funding structures and activities, and its overall liquidity-risk profile.

(See appendix 1, for background information on the types of liquidity analysis and measures of liquidity risk used by effective liquidity-risk managers. The appendix also discusses the considerations for evaluating the liquidity-risk characteristics of various assets, liabilities, OBS positions, and other activities, such as asset securitization, that can influence an institution’s liquidity.)

Pro Forma Cash-Flow Analysis

Regardless of the size and complexity of an institution, pro forma cash-flow statements are a critical tool for adequately managing liquidity risk. In the normal course of measuring and managing liquidity risk and analyzing their institution’s sources and uses of funds, effective liquidity managers project cash flows under expected and alternative liquidity scenarios. Such cash-flow-projection statements range from simple spreadsheets to very detailed reports, depending on the complexity and sophistication of the institution and its liquidity-risk profile.

A sound practice is to project, on an ongoing basis, an institution’s cash flows under normal business-as-usual conditions, incorporating appropriate seasonal and business-growth considerations over varying time horizons. This cash-flow projection should be regularly reviewed under both short-term and intermediate- to long-term institution-specific contingent scenarios. Institutions that have more-complex liquidity-risk profiles should also assess their exposure to broad systemic and adverse financial market events, as appropriate to their business mix and overall liquidity-risk profile (e.g., securitization, derivatives, trading, processing, international, and other activities).

The construction of pro forma cash-flow statements under alternative scenarios and the ongoing monitoring of an institution’s liquidity-risk profile depend importantly on liquidity management’s review of trends in the institution’s balance-sheet structure and its funding sources. This review should consider past experience and include expectations for the volume and pricing of assets, liabilities, and off-balance-sheet items that may significantly affect the institution’s liquidity.

Effective liquidity-risk monitoring systems should assess (1) trends in the relative cost of funds, as required by the institution’s existing and alternative funds providers; (2) the diversification or concentration of funding sources; (3) the adequacy of the institution’s asset liquidity reserves; and (4) the sensitivity of funds providers to both financial market and institution-specific trends and events. Detailed examples and further discussion of cash-flows are included in appendix 1, section I, “Basic Cash-Flow Projections.”

Assumptions

Given the critical importance of assumptions in constructing liquidity-risk measures and projections of future cash flows, institutions should ensure that all their assumptions are reasonable and appropriate. Institutions should document and periodically review and approve key assumptions. Assumptions used in assessing the liquidity risk of complex instruments and assets; liabilities; and OBS positions that have uncertain cash flows, market value, or maturities should be subject to rigorous documentation and review.

Assumptions about the stability or volatility of retail deposits, brokered deposits, wholesale or secondary-market borrowings, and other funding sources with uncertain cash flows are particularly important—especially when such assumptions are used to evaluate alternative sources of funds under adverse contingent liquidity scenarios (such as a deterioration in asset quality or capital). When assumptions about the performance of deposits and other sources of
funds are used in the computation of liquidity measures, these assumptions should be based on reasoned analysis considering such factors as the following:

- the historical behavior of deposit customers and funds providers
- how current or future business conditions may change the historical responses and behaviors of customers and other funds providers
- the general conditions and characteristics of the institution’s market for various types of funds, including the degree of competition
- the anticipated pricing behavior of funds providers (for instance, wholesale or retail) under the scenario investigated
- haircuts (that is, the reduction from the stated value of an asset) applied to assets earmarked as contingent liquidity reserves

Further discussion of liquidity characteristics of assets, liabilities, and off-balance-sheet items is included in appendix 1, section III, “Liquidity Characteristics of Assets, Liabilities, Off-Balance-Sheet Positions, and Various Types of Banking Activities.” Institutions that have complex liquidity profiles should perform sensitivity tests to determine what effect any changes to its material assumptions will have on its liquidity. Institutions should ensure that assets are properly valued according to relevant financial reporting and supervisory standards. An institution should fully factor into its risk management the consideration that valuations may deteriorate under market stress and take this into account in assessing the feasibility and impact of asset sales on its liquidity position during stress events.

Institutions should ensure that their vulnerabilities to changing liquidity needs and liquidity capacities are appropriately assessed within meaningful time horizons, including intraday, day-to-day, short-term weekly and monthly horizons, medium-term horizons of up to one year, and longer-term liquidity needs over one year. These assessments should include vulnerabilities to events, activities, and strategies that can significantly strain the capability to generate internal cash.

**Stress Testing**

Once normal operating cash-flow statements are established then those tools can be used to generate stress tests. Stress assumptions are simply layered on top of the normal operating cash-flow projections. The quantitative results provided by the stress test also serve as a key component within the CFP.

Institutions should conduct stress tests on a regular basis for a variety of institution-specific and market-wide events across multiple time horizons. The magnitude and frequency of stress testing should be commensurate with the complexity of the financial institution and the level of its risk exposures. Stress test outcomes should be used to identify and quantify sources of potential liquidity strain and to analyze possible impacts on the institution’s cash flows, liquidity position, profitability, and solvency.

Stress tests should also be used to ensure that current exposures are consistent with the financial institution’s established liquidity-risk tolerance. The stress test serves as a key component of the CFP and the quantification of the risk to which the institution may be exposed. Management’s active involvement and support is critical to the effectiveness of the stress-testing process. Management should discuss the results of stress tests and take remedial or mitigating actions to limit the institution’s exposures, build up a liquidity cushion, and adjust its liquidity profile to fit its risk tolerance. The results of stress tests therefore play a key role in determining the amount of buffer assets the institution should maintain.

**Cushion of Liquid Assets**

Liquid assets are an important source of both primary (operating liquidity) and secondary (contingent liquidity) funding at many institutions. Indeed, a critical component of an institution’s ability to effectively respond to potential liquidity stress is the availability of a cushion of highly liquid assets without legal, regulatory, or operational impediments (i.e., unencumbered) that can be sold or pledged to obtain funds in a range of stress scenarios. These assets should be held as insurance against a range of liquidity stress scenarios, including those that involve the loss or impairment of typically available unsecured and/or secured funding sources. The size of the cushion of such high-quality liquid assets should be supported by estimates of liquidity needs performed under an institution’s stress testing as well as aligned with the risk tolerance and risk profile of the institution. Management estimates of liquidity needs during periods of
stress should incorporate both contractual and non-contractual cash flows, including the possibility of funds being withdrawn. Such estimates should also assume the inability to obtain unsecured funding as well as the loss or impairment of access to funds secured by assets other than the safest, most liquid assets.

Management should ensure that unencumbered, highly liquid assets are readily available and are not pledged to payment systems or clearing houses. The quality of unencumbered liquid assets is important as it will ensure accessibility during the time of most need. For example, an institution could utilize its holdings of high-quality U.S. Treasury securities, or similar instruments, and enter into repurchase agreements in response to the most severe stress scenarios.

Liquidity-Risk Monitoring and Reporting Systems

Methods used to monitor and measure liquidity risk should be sufficiently robust and flexible to allow for the timely computation of the metrics an institution uses in its ongoing liquidity-risk management. Risk monitoring and reporting systems should regularly provide information on day-to-day liquidity management and risk control; this information should also be readily available during contingent liquidity events.

In keeping with the other elements of sound liquidity-risk management, the complexity and sophistication of management reporting and management information systems (MIS) should be consistent with the liquidity profile of the institution. For example, complex institutions that are highly dependent on wholesale funds may need daily reports on the use of various funding sources, maturities of various instruments, and rollover rates. Less complex institutions may require only simple maturity-gap or cash-flow reports that depict rollovers and mismatch risks; these reports may also include pertinent liquidity ratios. Liquidity-risk reports can be customized to provide management with aggregate information that includes sufficient supporting detail to enable them to assess the sensitivity of the institution to changes in market conditions, its own financial performance, and other important risk factors. Reportable items may include, but are not limited to—

- cash-flow gap-projection reports and forward-looking summary measures that assess both business-as-usual and contingent liquidity scenarios;
- asset and funding concentrations that highlight the institution’s dependence on funds that may be highly sensitive to institution-specific contingent liquidity or market liquidity risk (including information on the types and amounts of negotiable certificates of deposit (CDs) and other bank obligations, as well as information on major liquidity funds providers);
- critical assumptions used in cash-flow projections and other measures;
- the status of key early-warning signals or risk indicators;
- funding availability;
- reports on the impact of new products and activities;
- reports documenting compliance with established policies and procedures; and
- where appropriate, both consolidated and unconsolidated reports for institutions that have multiple offices, international branches, affiliates, or subsidiaries.

Institutions should also report on the use of and availability of government support, such as lending and guarantee programs, and implications on liquidity positions, particularly since these programs are generally temporary or reserved as a source for contingent funding.

The types of reports or information and their timing should be tailored to the institution’s funding strategies and will vary according to the complexity of the institution’s operations and risk profile. For example, institutions relying on investment securities for their primary source of contingent liquidity should employ reports on the quality, pledging status, and maturity distribution of those assets. Similarly, institutions conducting securitization activities, or placing significant emphasis on the sale of loans to meet contingent liquidity needs, should customize their liquidity reports to target these activities.

Collateral-Position Management

An institution should have the ability to calculate all of its collateral positions in a timely manner, including assets currently pledged relative to the amount of security required and...
unencumbered assets available to be pledged. An institution’s level of available collateral should be monitored by legal entity, by jurisdiction, and by currency exposure. Systems should be capable of monitoring shifts between intraday and overnight or term-collateral usage. An institution should be aware of the operational and timing requirements associated with accessing the collateral given its physical location (i.e., the custodian institution or securities settlement system with which the collateral is held). Institutions should also fully understand the potential demand on required and available collateral arising from various types of contractual contingencies during periods of both market-wide and institution-specific stress.

**Liquidity Across Legal Entities, and Business Lines**

An institution should actively monitor and control liquidity-risk exposures and funding needs within and across legal entities and business lines, taking into account legal, regulatory, and operational limitations to the transferability of liquidity. Separately regulated entities will need to maintain liquidity commensurate with their own risk profiles on a stand-alone basis.

Regardless of its organizational structure, it is important that an institution actively monitor and control liquidity risks at the level of individual legal entities, and the group as a whole, incorporating processes that aggregate data across multiple systems in order to develop a group-wide view of liquidity-risk exposures and identify constraints on the transfer of liquidity within the group.

Assumptions regarding the transferability of funds and collateral should be described in liquidity-risk management plans.

**Intraday Liquidity Position Management**

Intraday liquidity monitoring is an important component of the liquidity-risk management process for institutions engaged in significant payment, settlement, and clearing activities. An institution’s failure to manage intraday liquidity effectively, under normal and stressed conditions, could leave it unable to meet payment and settlement obligations in a timely manner, adversely affecting its own liquidity position and that of its counterparties. Among large, complex organizations, the interdependencies that exist among payment systems and the inability to meet certain critical payments has the potential to lead to systemic disruptions that can prevent the smooth functioning of all payment systems and money markets. Therefore, institutions with material payment, settlement and clearing activities should actively manage their intraday liquidity positions and risks to meet payment and settlement obligations on a timely basis under both normal and stressed conditions. Senior management should develop and adopt an intraday liquidity strategy that allows the institution to:

- monitor and measure expected daily gross liquidity inflows and outflows,
- manage and mobilize collateral when necessary to obtain intraday credit,
- identify and prioritize time-specific and other critical obligations in order to meet them when expected,
- settle other less critical obligations as soon as possible,
- control credit to customers when necessary.

**Contingency Funding Plans**

A CFP is a compilation of policies, procedures, and action plans for responding to contingent liquidity events. It is a sound practice for all institutions, regardless of size and complexity, to engage in comprehensive contingent liquidity planning. The objectives of the CFP are to provide a plan for responding to a liquidity crisis, identify a menu of contingent liquidity sources that the institution can use under adverse liquidity circumstances, and describe steps that should be taken to ensure that the institution’s sources of liquidity are sufficient to fund scheduled operating requirements and meet the institution’s commitments with minimal costs and disruption. CFPs should be commensurate with an institution’s complexity, risk profile, and scope of operations.

Contingent liquidity events are unexpected situations or business conditions that may increase the risk that an institution will not have sufficient funds to meet liquidity needs. These events can negatively affect any institution, regardless of its size and complexity, by

- interfering with or preventing the funding of asset growth,
Contingent liquidity events may be institution-specific or arise from external factors. Institution-specific risks are determined by the risk profile and business activities of the institution. They generally are a result of unique credit, market, operational, and strategic risks taken by the institution. A potential result of this type of event would be customers unexpectedly exercising options to withdraw deposits or exercise off-balance-sheet (OBS) commitments.

In contrast, external contingent events may be systemic financial-market occurrences, such as:

- increases or decreases in the price volatility of certain types of securities in response to market events;
- major changes in economic conditions, market perception, or dislocations in financial markets;
- disturbances in payment and settlement systems due to operational or local disasters.

Contingent liquidity events range from high-probability/low-impact events that occur during the normal course of business to low-probability/high-impact events that may have an adverse impact on an institution’s safety and soundness. Institutions should incorporate planning for high-probability/low-impact liquidity risks into their daily management of the sources and uses of their funds. This objective is best accomplished by assessing possible variations in expected cash-flow projections and provisioning for adequate liquidity reserves in the normal course of business.

Liquidity risks driven by lower-probability, higher-impact events should be addressed in the CFP, which should—

- identify reasonably plausible stress events;
- evaluate those stress events under different levels of severity;
- make a quantitative assessment of funding needs under the stress events;
- identify potential funding sources in response to a stress event; and
- provide for commensurate management processes, reporting, and external communication throughout a stress event.

The CFP should address both the severity and duration of contingent liquidity events. The liquidity pressures resulting from low-probability, high-impact events may be immediate and short term, or they may present sustained situations that have long-term liquidity implications. The potential length of an event should factor into decisions about sources of contingent liquidity.

### Identifying Liquidity Stress Events

Stress events are those events that may have a significant impact on an institution’s liquidity, given its specific balance-sheet structure, business lines, organizational structure, and other characteristics. Possible stress events include changes in credit ratings, a deterioration in asset quality, a prompt-corrective-action (PCA) downgrade, and CAMELS ratings downgrade widening of credit default spreads, operating losses, negative press coverage, or other events that call into question an institution’s ability to meet its obligations.

An institution should customize its CFP. Separate CFPs may be required for the parent company and the consolidated banks in a multibank holding company, for separate subsidiaries (when appropriate), or for each significant foreign currency and global political entity, as necessary. These separate CFPs may be necessary because of legal requirements and restrictions, or the lack thereof. Institutions that have significant payment-system operations should have a formal, written plan in place for managing the risk of both intraday and end-of-day funding failures. Failures may occur as a result of system failure at the institution or at an institution from which payments are expected. Clear, formal communication channels should be established between the institution’s operational areas responsible for handling payment-system operations.

### Assessing Levels of Severity and Timing

The CFP should delineate the various levels of stress severity that can occur during a contingent liquidity event and, for each type of event, identify the institution’s response plan at each stage of an event. (As an event unfolds, it often progresses through various stages and levels of severity.) The events, stages, and severity levels identified should include those that cause temporary disruptions, as well as those that may cause intermediate- or longer-term disruptions.
Institutions can use the different stages or levels of severity to design early-warning indicators, assess potential funding needs at various points during a developing crisis, and specify comprehensive action plans.

Assessing Funding Needs and Sources of Liquidity

A critical element of the CFP is an institution’s quantitative projection and evaluation of its expected funding needs and funding capacity during a stress event. The institution should identify the sequence of responses that it will mobilize during a stress event and commit sources of funds for contingent needs well in advance of a stress-related event. To accomplish this objective, the institution needs to analyze potential erosion in its funding at alternative stages or severity levels of the stress event, as well as analyze the potential cash-flow mismatches that may occur during the various stress scenarios and levels. Institutions should base their analyses on realistic assessments of the behavior of funds providers during the event; they should also incorporate alternative contingency funding sources into their plans. The analysis should also include all material on- and OBS cash flows and their related effects, which should result in a realistic analysis of the institution’s cash inflows, outflows, and funds availability at different time intervals throughout the potential liquidity stress event—and allow the institution to measure its ability to fund operations over an extended period.

Common tools to assess funding mismatches include

- **Liquidity-gap analysis**—A cash-flow report that essentially represents a base case estimate of where funding surpluses and shortfalls will occur over various future timeframes.
- **Stress tests**—A pro forma cash-flow report with the ability to estimate future funding surpluses and shortfalls under various liquidity stress scenarios and the institution’s ability to fund expected asset growth projections or sustain an orderly liquidation of assets under various stress events.

Identify Potential Funding Sources

Because of the potential for liquidity pressures to spread from one source of funding to another during a significant liquidity event, institutions should identify, well in advance, alternative sources of liquidity and ensure that they have ready access to contingent funding sources. These funding sources will rarely be used in the normal course of business. Therefore, institutions should conduct advance planning to ensure that contingent funding sources are readily available. For example, the sale, securitization, or pledging of assets as collateral requires a review of these assets to determine the appropriate haircuts and to ensure compliance with the standards required for executing the strategy. Administrative procedures and agreements should also be in place before the institution needs to access the planned source of liquidity. Institutions should identify what advance steps they need to take to promote the readiness of each of their sources of standby liquidity.

Processes for Managing Liquidity Events

The CFP should identify a reliable crisis-management team and an administrative structure for responding to a liquidity crisis, including realistic action plans executing each element of the plan for each level of a stress event. Frequent communication and reporting among crisis team members, the board of directors, and other affected managers optimizes the effectiveness of a contingency plan by ensuring that business decisions are coordinated to minimize further liquidity disruptions. Effective management of a stress event requires the daily computation of regular liquidity-risk reports and supplemental information. The CFP should provide for more-frequent and more-detailed reporting as a stress situation intensifies. Reports that should be available in a funding crisis include—

- a CD breakage report to identify early redemptions of CDs;
- funding-concentration reports;
- cash-flow projections and run-off reports;
- funding-availability or -capacity reports, by types of funding; and
- reports on the status of contingent funding sources.
Framework for Monitoring Contingent Events

Financial institutions should monitor for potential liquidity stress events by using early-warning indicators and event triggers. These indicators should be tailored to an institution's specific liquidity-risk profile. By recognizing potential stress events early, the institution can proactively position itself into progressive states of readiness as an event evolves. This proactive stance also provides the institution with a framework for reporting or communicating among different institutional levels and to outside parties. Early-warning signals may include but are not limited to—

- rapid asset growth that is funded with potentially volatile liabilities;
- growing concentrations in assets or liabilities;
- negative trends or heightened risk associated with a particular product line;
- rating-agency actions (e.g., agencies watch-listing the institution or downgrading its credit rating);
- negative publicity;
- significant deterioration in the institution's earnings, asset quality, and overall financial condition;
- widening debt or credit-default-swap spreads;
- difficulty accessing longer-term funding;
- increasing collateral margin requirements;
- rising funding costs in a stable market;
- increasing redemptions of CDs before maturity;
- counterparty resistance to OBS products;
- counterparties that begin requesting backup collateral for credit exposures; and
- correspondent banks that eliminate or decrease their credit lines.

To mitigate the potential for reputation contagion when liquidity problems arise, effective communication with counterparties, credit-rating agencies, and other stakeholders is of vital importance. Smaller institutions that rarely interact with the media should have plans in place for how they will manage press inquiries that may arise during a liquidity event. In addition, group-wide CFPs, liquidity cushions, and multiple sources of funding are mechanisms that may mitigate reputation concerns.

In addition to early-warning indicators, institutions that issue public debt, use warehouse financing, securitize assets, or engage in material OTC derivative transactions typically have exposure to event triggers that are embedded in the legal documentation governing these transactions. These triggers protect the investor or counterparty if the institution, instrument, or underlying asset portfolio does not perform at certain predetermined levels. Institutions that rely upon brokered deposits should also incorporate PCA-related downgrade triggers into their CFPs since a change in PCA status could have a material bearing on the availability of this funding source. Contingent event triggers should be an integral part of the liquidity-risk monitoring system.

Asset-securitization programs pose heightened liquidity concerns because an early-amortization event could produce unexpected funding needs. Liquidity contingency plans should address this risk, if it is material to the institution. The unexpected funding needs associated with an early amortization of a securitization event pose liquidity concerns for the originating bank. The triggering of an early-amortization event can result in the securitization trust immediately passing principal payments through to investors. As the holder of the underlying assets, the originating institution is responsible for funding new charges that would normally have been purchased by the trust. Financial institutions that engage in asset securitization should have liquidity contingency plans that address this potential unexpected funding requirement. Management should receive and review reports showing the performance of the securitized portfolio in relation to the early-amortization triggers.2

Securitization covenants that cite supervisory thresholds or adverse supervisory actions as triggers for early-amortization events are considered an unsafe and unsound banking practice that undermines the objective of supervisory actions. An early amortization triggered by a supervisory action can create or exacerbate liquidity and earnings problems that can lead to further deterioration in the financial condition of the banking organization.3

Securitizations of asset-backed commercial paper programs (ABCPs) are generally supported by a liquidity facility or commitment to purchase assets from the trust if funds are

2. See sections 2130.1, 3020.1, and 4030.1, and the OCC Handbook on Credit Card Lending, October 1996.
3. SR-02-14, “Covenants in Securitization Documents Linked to Supervisory Actions or Thresholds.”
needed to repay the underlying obligations. Liquidity needs can result from either cash-flow mismatches between the underlying assets and scheduled payments of the overriding security or from credit-quality deterioration of the underlying asset pool. Therefore, the use of liquidity facilities introduces additional risk to the institution, and a commensurate capital charge is required.

Institutions that rely upon secured funding sources also are subject to potentially higher margin or collateral requirements that may be triggered upon the deterioration of a specific portfolio of exposures or the overall financial condition of the institution. The ability of a financially stressed institution to meet calls for additional collateral should be considered in the CFP. Potential collateral values also should be subject to stress tests since devaluations or market uncertainty could reduce the amount of contingent funding that can be obtained from pledging a given asset.

Testing the CFP

Periodic testing of the operational elements of the CFP is an important part of liquidity-risk management. By testing the various operational elements of the CFP, institutions can prevent unexpected impediments or complications in accessing standby sources of liquidity during a contingent liquidity event. It is prudent to test the operational elements of a CFP that are associated with the securitization of assets, repurchase lines, Federal Reserve discount window borrowings, or other borrowings, since efficient collateral processing during a crisis is especially important for such sources. Institutions should carefully consider whether to include unsecured funding lines in their CFPs, since these lines may be unavailable during a crisis.

Larger, more-complex institutions can benefit from operational simulations that test communications, coordination, and decision-making of managers who have different responsibilities, who are in different geographic locations, or who are located at different operating subsidiaries. Simulations or tests run late in the day can highlight specific problems, such as late-day staffing deficiencies or difficulty selling assets or borrowing new funds near the closing time of the financial markets.

Internal Controls

An institution’s internal controls consist of policies, procedures, approval processes, reconciliations, reviews, and other types of controls to provide assurances that the institution manages liquidity risk in accordance with the board’s strategic objectives and risk tolerances. Appropriate internal controls should address relevant elements of the risk-management process, including the institution’s adherence to polices and procedures; the adequacy of its risk identification, risk measurement, and risk reporting; and its compliance with applicable rules and regulations. The results of reviews of the liquidity-risk management process, along with any recommendations for improvement, should be reported to the board of directors, which should take appropriate and timely action.

An important element of a bank’s internal controls is management’s comprehensive evaluation and review. Management should ensure that an independent party regularly reviews and evaluates the components of the institution’s liquidity-risk management process. These reviews should assess the extent to which the institution’s liquidity-risk management complies with both supervisory guidance and industry sound practices, taking into account the level of sophistication and complexity of the institution’s liquidity-risk profile. In larger, complex institutions, an internal audit function usually performs this review. Smaller, less complex institutions may assign the responsibility for conducting an independent evaluation and review to qualified individuals who are independent of the function they are assigned to review. The independent review should report key issues requiring attention, including

---

instances of noncompliance, to the appropriate level of management to initiate a prompt correction of the issues, consistent with approved policies.

Periodic reviews of the liquidity-risk management process should address any significant changes that have occurred since the last review, such as changes in the institution’s types or characteristics of funding sources, limits, and internal controls. Reviews of liquidity-risk measurement systems should include assessments of the assumptions, parameters, and methodologies used. These reviews should also seek to understand, test, and document the current risk-measurement process; evaluate the system’s accuracy; and recommend solutions to any identified weaknesses.

Controls for changes to the assumptions the institution uses to make cash-flow projections should require that the assumptions not be altered without clear justification consistent with approved strategies. The name of the individual authorizing the change, along with the date of the change, the nature of the change, and justification for each change, should be fully documented. Documentation for all assumptions used in cash-flow projections should be maintained in a readily accessible, understandable, and auditable form. Because liquidity-risk measurement systems may incorporate one or more subsidiary systems or processes, institutions should ensure that multiple component systems are well integrated and consistent with each other.

LIQUIDITY-RISK MANAGEMENT FOR BANK HOLDING COMPANIES

Bank holding companies (BHCs) should develop and maintain liquidity-risk management processes and funding programs that are consistent with their level of sophistication and complexity. For BHCs (includes financial holding companies, which are BHCs) see the Bank Holding Company Supervision Manual, section 4066, “Funding and Liquidity Risk Management,” and sections 1050.0 and 1050.1, that discuss the consolidated supervision of BHCs. See also SR-10-6, “Interagency Policy Statement on Funding and Liquidity Risk Management.” Also see sections 4010.0, “Parent Only—Debt Servicing Capacity/Cash Flow” and 4010.2 “Parent Only—Liquidity.”

SUPERVISORY PROCESS FOR EVALUATING LIQUIDITY RISK

Liquidity risk is a primary concern for all banking organizations and is an integral component of the CAMELS rating system. Examiners should consider liquidity risk during the preparation and performance of all on-site safety-and-soundness examinations as well as during targeted supervisory reviews. To meet examination objectives efficiently and effectively and remain sensitive to potential burdens imposed on institutions, examiners should follow a structured, risk-focused approach for the examination of liquidity risk. Key elements of this examination process include off-site monitoring and a risk assessment of the institution’s liquidity-risk profile. These elements will help the examiner develop an appropriate plan and scope for the on-site examination, thus ensuring the exam is as efficient and productive as possible. A fundamental tenet of the risk-focused examination approach is the targeting of supervisory resources at functions, activities, and holdings that pose the most risk to the safety and soundness of an institution.

For smaller institutions that have less complex liquidity profiles, stable funding sources, and low exposures to contingent liquidity circumstances, the liquidity element of an examination may be relatively simple and straightforward. On the other hand, if an institution is experiencing significant asset and product growth; is highly dependent on potentially volatile funds; or has a complex business mix, balance-sheet structure, or liquidity-risk profile that exposes the institution to contingent liquidity risks, that institution should generally receive greater supervisory attention. Given the contingent nature of liquidity risk, institutions whose corporate structure gives rise to inherent operational risk, or institutions encountering difficulties associated with their earnings, asset quality, capital adequacy, or market sensitivity, should be especially targeted for review of the adequacy of their liquidity-risk management.

Off-Site Risk Assessment

In off-site monitoring and analysis, a preliminary view, or risk assessment, is developed before initiating an on-site examination. Both the inherent level of an institution’s liquidity-
risk exposure and the quality of its liquidity-risk management should be assessed to the fullest extent possible during the off-site phase of the examination process. The following information can be helpful in this assessment:

- organizational charts and policies that identify authorities and responsibilities for managing liquidity risk
- liquidity policies, procedures, and limits
- ALCO committee minutes and reports (minutes and reports issued since the last examination or going back at least six to twelve months before the examination)
- board of directors reports on liquidity-risk exposures
- audit reports (both internal and external)
- other available internal liquidity-risk management reports, including cash-flow projections that detail key assumptions
- internal reports outlining funding concentrations, the marketability of assets, analysis that identifies the relative stability or volatility of various types of liabilities, and various cash-flow coverage ratios projected under adverse liquidity scenarios
- supervisory surveillance reports and supervisory screens
- external public debt ratings (if available)

Quantitative liquidity exposure should be assessed by conducting as much of the supervisory review off-site as practicable. This off-site work includes assessing the bank’s overall liquidity-risk profile and the potential for other risk exposures, such as credit, market, operational, legal, and reputational risks, that may have a negative impact on the institution’s liquidity under adverse circumstances. These assessments can be conducted on a preliminary basis using supervisory screens, examiner-constructed measures, internal bank measures, and cash-flow projections obtained from management reports received before the on-site engagement. Additional factors to be incorporated in the off-site risk assessment include the institution’s balance-sheet composition and the existence of funding concentrations, the marketability of its assets (in the context of liquidation, securitization, or use of collateral), and the institution’s access to secondary markets of liquidity.

The key to assessing the quality of management is an organized discovery process aimed at determining whether appropriate corporate-governance structures, policies, procedures, limits, reporting systems, CFPs, and internal controls are in place. This discovery process should, in particular, ascertain whether all the elements of sound liquidity-risk management are applied consistently. The results and reports of prior examinations, in addition to internal management reports, provide important information about the adequacy of the institution’s risk management.

Examination Scope

The off-site risk assessment provides the examiner with a preliminary view of both the adequacy of liquidity management and the magnitude of the institution’s exposure. The scope of the on-site liquidity-risk examination should be designed to confirm or reject the off-site hypothesis and should target specific areas of interest or concern. In this way, on-site examination procedures are tailored to the institution’s activities and risk profile and use flexible and targeted work-documentation programs. In general, if liquidity-risk management is identified as adequate, examiners can rely more heavily on a bank’s internal liquidity measures for assessing its inherent liquidity risk.

The examination scope for assessing liquidity risk should be commensurate with the complexity of the institution and consistent with the off-site risk assessment. For example, only baseline examination procedures would be used for institutions whose off-site risk assessment indicates that they have adequate liquidity-risk management processes and low levels of inherent liquidity exposure. These institutions include those that have noncomplex balance-sheet structures and banking activities and that also meet the following criteria:

- well capitalized; minimal issues with asset quality, earnings, and market-risk-sensitive activities
- adequate reserves of marketable securities that can serve as standby sources of liquidity
- minimal funding concentrations
- funding structures that are principally composed of stable liabilities
- few OBS items, such as loan commitments, that represent contingent liquidity draws
- minimal potential exposure to legal and reputational risk
• formal adoption of well-documented liquidity-management policies, procedures, and CFPs

For these and other institutions identified as potentially low risk, the scope of the on-site examination would consist of only those examination procedures necessary to confirm the risk-assessment hypothesis. The adequacy of liquidity-risk management could be verified through a basic review of the appropriateness of the institution’s policies, internal reports, and controls and its adherence to them. The integrity and reliability of the information used to assess the quantitative level of risk could be confirmed through limited sampling and testing. In general, if basic examination procedures validate the risk consideration, the examiner may conclude the examination process.

High levels of inherent liquidity risk may arise if an institution has concentrations in specific business activities, products, and sectors, or if it has balance-sheet risks, such as unstable liabilities, risky assets, or planned asset growth without an adequate plan for funding the asset growth. OBS items that have uncertain cash inflows may also be a source of inherent liquidity risk. Institutions for which a risk assessment indicated high levels of inherent liquidity-risk exposure and strong liquidity management may require a more extensive examination scope to confirm the assessment. These expanded procedures may entail more analysis of the institution’s liquidity-risk measurement system and its liquidity-risk profile. When high levels of liquidity-risk exposure are found, examiners should focus special attention on the sources of this risk. When a risk assessment indicates an institution has high exposure and weak risk-management systems, an extensive work-documentation program is required. The institution’s internal measures should be used cautiously, if at all.

Regardless of the sophistication or complexity of an institution, examiners must use care during the on-site phase of an examination to confirm the off-site risk assessment and identify issues that may have escaped off-site analysis. Accordingly, the examination scope should be adjusted as on-site findings dictate.

Assessing CAMELS “L” Ratings

The assignment of the “L” rating is integral to the CAMELS ratings process for commercial banks. Examination findings on both (1) the inherent level of an institution’s liquidity risk and (2) the adequacy of its liquidity-risk management process should be incorporated in the assignment of the “L” rating. Findings on the adequacy of liquidity-risk management should also be reflected in the CAMELS “M” rating for risk management.

Examiners can develop an overall assessment of an institution’s liquidity-risk exposure by reviewing the various characteristics of its assets, liabilities, OBS instruments, and material business activities. An institution’s asset credit quality, earnings integrity, and market risk may also have significant implications for its liquidity-risk exposure. Importantly, assessments of the adequacy of an institution’s liquidity-management practices may affect the assessment of its inherent level of liquidity risk. For institutions judged to have sound and timely liquidity-risk measurement and reporting systems and CFPs, examiners may use the results of the institution’s adverse-scenario cash-flow projections in order to gain insight into its level of inherent exposure. Institutions that have less-than-adequate measurement and reporting systems and CFPs may have higher exposure to liquidity risk as a result of their potential inability to respond to adverse liquidity events.

Elements of strong liquidity-risk management are particularly important during stress events and include many of the items discussed previously: communication among the departments responsible for managing liquidity, reports that indicate a diversity of funding sources, standby funding sources, cash-flow analyses, liquidity stress tests, and CFPs. Liquidity-risk management should also manage the ongoing costs of maintaining liquidity.

Liquidity risk should be rated in accordance with the Uniform Financial Institutions Rating System (UFIRS).5 The assessment of the adequacy of liquidity-risk management should provide the primary basis for reaching an overall assessment on the “L” component rating since it is a leading indicator of potential liquidity-risk exposure. Accordingly, overall ratings for liquidity-risk sensitivity should be no greater

---

than the rating given to liquidity-risk management.

In evaluating the adequacy of a financial institution’s liquidity position, consideration should be given to the current level and prospective sources of liquidity compared with funding needs, as well as to the adequacy of funds-management practices relative to the institution’s size, complexity, and risk profile. In general, funds-management practices should ensure that an institution is able to maintain a level of liquidity sufficient to meet its financial obligations in a timely manner and to fulfill the legitimate banking needs of its community. Practices should reflect the ability of the institution to manage unplanned changes in funding sources, as well as react to changes in market conditions that affect the ability to quickly liquidate assets with minimal loss. In addition, funds-management practices should ensure that liquidity is not maintained at a high cost or through undue reliance on funding sources that may not be available in times of financial stress or adverse changes in market conditions.

Liquidity is rated based upon, but not limited to, an assessment of the following evaluation factors:

- the adequacy of liquidity sources compared with present and future needs and the ability of the institution to meet liquidity needs without adversely affecting its operations or condition
- the availability of assets readily convertible to cash without undue loss
- access to money markets and other sources of funding
- the level of diversification of funding sources, both on- and off-balance-sheet
- the degree of reliance on short-term, volatile sources of funds, including borrowings and brokered deposits, to fund longer-term assets
- the trend and stability of deposits
- the ability to securitize and sell certain pools of assets
- the capability of management to properly identify, measure, monitor, and control the institution’s liquidity position, including the effectiveness of funds-management strategies, liquidity policies, management information systems, and CFPs

Ratings of liquidity-risk management should follow the general framework used to rate overall risk management:

- A rating of 1 indicates strong liquidity levels and well-developed funds-management practices. The institution has reliable access to sufficient sources of funds on favorable terms to meet present and anticipated liquidity needs.
- A rating of 2 indicates satisfactory liquidity levels and funds-management practices. The institution has access to sufficient sources of funds on acceptable terms to meet present and anticipated liquidity needs. Modest weaknesses may be evident in funds-management practices.
- A rating of 3 indicates liquidity levels or funds-management practices in need of improvement. Institutions rated 3 may lack ready access to funds on reasonable terms or may evidence significant weaknesses in funds-management practices.
- A rating of 4 indicates deficient liquidity levels or inadequate funds-management practices. Institutions rated 4 may not have or be able to obtain a sufficient volume of funds on reasonable terms to meet liquidity needs.
- A rating of 5 indicates liquidity levels or funds-management practices so critically deficient that the continued viability of the institution is threatened. Institutions rated 5 require immediate external financial assistance to meet maturing obligations or other liquidity needs.

Unsafe liquidity-risk exposures and weaknesses in managing liquidity risk should be fully reflected in the overall liquidity-risk ratings. Unsafe exposures and unsound management practices that are not resolved during the on-site examination should be addressed through subsequent follow-up actions by the examiner and other supervisory personnel.

I. Basic Cash-Flow Projections

In measuring an institution’s liquidity-risk profile, effective liquidity managers estimate cash inflows and cash outflows over future periods. For day-to-day operational purposes, cash-flow projections for the next day and subsequent days
out over the coming week are used in order to ensure that contractual obligations are met on time. Such daily projections can be extended out beyond a one-week horizon, although it should be recognized that the further out such projections are made, the more susceptible they become to error arising from unexpected changes.

For planning purposes, effective liquidity managers project cash flows out for longer time horizons, employing various incremental time periods, or “buckets,” over a chosen horizon. Such buckets may encompass forward weeks, months, quarters, and, in some cases, years. For example, an institution may plan its cash inflows and outflows on a daily basis for the next 5–10 business days, on a weekly basis over the coming month or quarter, on a monthly basis over the coming quarter or quarters, and on a monthly basis out for longer time horizons, employing various incremental time periods, or “buckets,” over a chosen horizon. Such cash-flow bucketing is usually compiled into a single cash-flow-projection worksheet or report that represents cash flows under a specific future scenario. The goal of this bucketing approach is a measurement system with sufficient granularity to (1) reveal the time dimension of the needs and sources of liquidity and (2) identify potential liquidity-risk exposure to contingent events.

In its most basic form, a cash-flow-projection worksheet is a table with columns denoting the selected time periods or buckets for which cash flows are to be projected. The rows of this table consist of various types of assets, liabilities, and OBS items, often grouped by their cash-flow characteristics. Different groupings may be used to achieve different objectives of the cash-flow projection. For each row, net cash flows arising from the particular asset, liability, or OBS activity are projected across the time buckets.

The detail and granularity of the rows, and thus the projections, depend on the sophistication and complexity of the institution. Complex banks generally favor more detail, while less complex banks may use higher levels of aggregation. Static projections based only on the contractual cash flows of assets, liabilities, and OBS items as of a point in time are helpful for identifying gaps between needs and sources of liquidity. However, static projections may inadequately quantify important aspects of potential liquidity risk because they ignore new business, funding renewals, customer options, and other potential events that may have a significant impact on the institution’s liquidity profile. Since liquidity managers are generally interested in evaluating how available liquidity sources may cover both expected and potential unexpected liquidity needs, a dynamic analysis that includes management’s projected changes in cash flows is normally far more useful than a static projection based only on contractual cash flows as of a given projection date.

In developing a cash-flow-projection worksheet, cash inflows occurring within a given time horizon or time bucket are represented as positive numbers, while outflows are represented as negative numbers. Cash inflows include increases in liabilities as well as decreases in assets, and cash outflows include decreases in liabilities as well as increases in assets. For each type of asset, liability, or OBS item, and in each time bucket, the values shown in the cells of the projected worksheet are net cash-flow numbers. One format for a cash-flow-projection worksheet arrays sources of net cash inflows (such as loans and securities) in one group and sources of net cash outflows (such as deposit runoffs) in another. For example, the entries across time buckets for a loan or loan category would net the positives (cash inflows) of projected interest, scheduled principal payments, and prepayments with the negatives (cash outflows) of customer draws on existing commitments and new loan growth in each appropriate time bucket. Summing the net cash flows within a given column or time bucket identifies the extent of maturity mismatches that may exist. Funding shortfalls caused by mismatches in particular time frames are revealed as a “negative gap,” while excess funds within a time bucket denote a “positive gap.” Identifying such gaps early can help managers take the appropriate action to either fill a negative gap or reduce a positive gap. The subtotals of the net inflows and net outflows may also be used to construct net cash-flow coverage ratios or the ratio of net cash inflows to net cash outflows.

The specific worksheet formats used to array sources and uses of cash can be customized to achieve multiple objectives. Exhibit 1 provides an example of one possible form of a cash-flow-projection worksheet. The time buckets (columns) and sources and uses (rows) are selected for illustrative purposes, as the specific selection will depend on the purpose of the particular cash-flow projection. In this example, assets and liabilities are grouped into two broad categories: those labeled “customer-driven cash flows” and those labeled “management-controlled cash flows.” This grouping arrays projected cash
flows on the basis of the relative extent to which funding managers may have control over changes in the cash flows of various assets, liabilities, OBS items, and other activities that have an impact on cash flow. For example, managers generally have less control over loan and deposit cash flows (e.g., changes arising from either growth or attrition) and more control over such items as fed funds sold, investment securities, and borrowings.

The net cash-flow gap illustrated in the next-to-the-last row of exhibit 1 is the sum of the net cash flows in each time-bucket column and reflects the funding gap that will have to be financed in that time period. For the daily time buckets, this gap represents the net overnight position that needs to be funded in the unsecured short-term (e.g., fed funds) market. The final row of the exhibit identifies a cumulative net cash-flow gap, which is constructed as the sum of the net cash flows in that particular time bucket and all previous time buckets. It provides a running picture across time of the cumulative funding sources and needs of the institution. The worksheet presented in exhibit 1 is only one of many alternative formats that can be used in measuring liquidity gaps.

II. Scenario Dependency of Cash-Flow Projections

Cash-flow-projection worksheets describe an institution’s liquidity profile under an estab-
lished set of assumptions about the future.

The set of assumptions used in the cash-flow projection constitutes a specific scenario customized to meet the liquidity manager’s objective for the forecast. Effective liquidity managers generally use multiple forecasts and scenarios to achieve an array of objectives over planning time horizons. For example, they may use three broad types of scenarios every time they make cash-flow projections: normal-course-of-business scenarios; short-term, institution-specific stress scenarios; and more-severe, intermediate-term, institution-specific stress scenarios. Larger, more complex institutions that engage in significant capital-markets and derivatives activities also routinely project cash flows for various systemic scenarios that may have an impact on the firm. Each scenario requires the liquidity manager to assess and plan for potential funding shortfalls. Importantly, no single cash-flow projection reflects the range of liquidity sources and needs required for advance planning.

Normal-course-of-business scenarios establish benchmarks for the “normal” behavior of cash flows of the institution. The cash flows projected for such scenarios are those the institution expects under benign conditions and should reflect seasonal fluctuations in loans or deposit flows. In addition, expected growth in assets and liabilities is generally incorporated to provide a dynamic view of the institution’s liquidity needs under normal conditions.

Adverse, institution-specific scenarios are those that subject the institution to constrained liquidity conditions. Such scenarios are generally defined by first specifying the type of liquidity event to be considered and then identifying various levels or stages of severity for that type of event. For example, institutions that do not have publicly rated debt generally employ scenarios that entail a significant deterioration in the credit quality of their loan and security holdings. Institutions that have publicly rated debt generally include a debt-rating downgrade scenario in their CFPs. The downgrade of an institution’s public debt rating might be specified as one type of event, with successively lower ratings grades, including below-investment-grade ratings, to identify increasing levels of severity. Each level of severity can be viewed as an individual scenario for planning purposes. Effective liquidity managers ensure that they choose potential adverse liquidity scenarios that entail appropriate degrees of severity and model cash flows consistent with each level of stress. Events that limit access to important sources of funding are the most common institution-specific scenarios used.

The same type of cash-flow-projection worksheet format shown in exhibit 1 can be used for adverse, institution-specific scenarios. However, in making such cash-flow projections, some institutions find it useful to organize the accounts differently to accommodate a set of very different assumptions from those used in the normal-course-of-business scenarios. Exhibit 2 presents a format in which accounts are organized by those involving potential cash outflows and cash inflows. This format focuses the analysis first on liability erosion and potential off-balance-sheet draws, followed by an evaluation of the bank’s ability to cover potential runoff, primarily from assets that can be sold or pledged. Funding sources are arranged by their sensitivity to the chosen scenario. For example, deposits may be segregated into insured and uninsured portions. The time buckets used are generally of a shorter term than those used under business-as-usual scenarios, reflecting the speed at which deteriorating conditions can affect cash flows.

A key goal of creating adverse-situation cash-flow projections is to alert management as to whether incremental funding resources available under the constraints of each scenario are sufficient to meet the incremental funding needs that result from that scenario. To the extent that projected funding deficits are larger than (or projected funding surpluses are smaller than) desired levels, management has the opportunity to adjust its liquidity position or develop strategies to bring the institution back within an acceptable level of risk.

Adverse systemic scenarios entail macroeconomic, financial market, or organizational events that can have an adverse impact on the institution and its funding needs and sources. Such scenarios are generally customized to the individual institution’s funding characteristics and business activities. For example, an institution involved in clearing and settlement activities may choose to model a payments-system disruption, while a bank heavily involved in capital-markets transactions may choose to model a capital-markets disruption.

The number of cash-flow projections necessary to fully assess potential adverse liquidity scenarios can result in a wealth of information that often requires summarization in order to appropriately communicate contingent liquidity-risk exposure to various levels of management.

</table>
Exhibit 3 presents an example of a report format that assesses available sources of liquidity under alternative scenarios. The worksheet shows the amount of anticipated funds erosion and potential sources of funds under a number of stress scenarios, for a given time bucket (e.g., overnight, one week, one month, etc.). In this example, two rating-downgrade scenarios of different severity are used, along with a scenario built on low-earnings projections and a potential reputational-risk scenario.

Exhibit 4 shows an alternative format for summarizing the results of multiple scenarios. In this case, summary funding gaps are presented across various time horizons (columns) for each scenario (rows). Actual reports used should be tailored to the specific liquidity-risk profile and other institution-specific characteristics.

III. Liquidity Characteristics of Assets, Liabilities, Off-Balance-Sheet Positions, and Various Types of Banking Activities

A full understanding of the liquidity and cash-flow characteristics of the institution’s assets, liabilities, OBS items, and banking activities is critical to the identification and management of mismatch risk, contingent liquidity risk, and market liquidity risk. This understanding is required for constructing meaningful cash-flow-projection worksheets under alternative scenarios, for developing and executing strategies used in managing mismatches, and for customizing summary liquidity measures or ratios.

A. Assets

The generation of assets is one of the primary uses of funds at banking organizations. Once acquired, assets provide cash inflows through principal and interest payments. Moreover, the liquidation of assets or their use as collateral for borrowing purposes makes them an important source of funds and, therefore, an integral tool in managing liquidity risk. As a result, the objectives underlying an institution’s holdings of various types of assets range along a continuum that balances the tradeoffs between maximizing risk-adjusted returns and ensuring the fulfillment of an institution’s contractual obligations to deliver funds (ultimately in the form of cash). Assets vary by structure, maturity, credit quality, marketability, and other characteristics that generally reflect their relative ability to be convertible into cash.

Cash operating accounts that include vault cash, cash items in process, correspondent accounts, accounts with the Federal Reserve, and other cash or “near-cash” instruments are the primary tools institutions use to execute their immediate cash-transaction obligations. They are generally not regarded as sources of additional or incremental liquidity but act as the operating levels of cash necessary for executing day-to-day transactions. Accordingly, well-managed institutions maintain ongoing balances in such accounts to meet daily business transactions. Because they generate no or very low interest earnings, such holdings are generally maintained at the minimum levels necessary to meet day-to-day transaction needs.

Beyond cash and near-cash instruments, the extent to which assets contribute to an institution’s liquidity profile and the management of liquidity risk depends heavily on the contractual and structural features that determine an asset’s cash-flow profile, its marketability, and its ability to be pledged to secure borrowings. The following sections discuss important aspects of these asset characteristics that effective managers factor into their management of liquidity risk on an ongoing basis and during adverse liquidity events.

Structural cash-flow attributes of assets. Knowledge and understanding of the contractual and structural features of assets, such as their maturity, interest and amortization payment schedules, and any options (either explicit or embedded) that might affect contractual cash flows under alternative scenarios, is critical for the adequate measurement and management of liquidity risk. Clearly, the maturity of assets is a key input in cash-flow analysis. Indeed, the management of asset maturities is a critical tool used in matching expected cash outflows and inflows. This matching is generally accomplished by “laddering” asset maturities in order to meet scheduled cash needs out through short and intermediate time horizons.

Short-term money market assets (MMAs) are the primary “laddering” tools used to meet funding gaps over short-term time horizons. They provide vehicles for institutions to ensure future cash availability while earning a return.
Given the relatively low return on such assets, managers face important tradeoffs between earnings and the provision of liquidity in deploying such assets. In general, larger institutions employ a variety of MMAs in making such tradeoffs, while smaller community organizations face fewer potential sources of short-term investments. The contractual and structural features, such as the maturity and payment streams of all financial assets, should be factored into both cash-flow projections and the strategies developed for filling negative funding gaps. This practice includes the assessment of embedded options in assets that can materially affect an asset’s cash flow. Effective liquidity managers incorporate the expected exercise of options in projecting cash flows for the various scenarios they use in measuring liquidity risk. For example, normal “business as usual” projections may include an estimate of the expected amount of loan and security principal prepayments under prevailing market interest rates, while alternative-scenario projections may employ estimates of expected increases in prepayments (and cash

</table>
flows) arising from declining interest rates and expected declines in prepayments or “maturity extensions” resulting from rising market interest rates.

Market liquidity, or the “marketability” of assets. Marketability is the ability to convert an asset into cash through a quick “sale” and at a fair price. This ability is determined by the market in which the sale transaction is conducted. In general, investment-grade securities are more marketable than loans or other assets. Institutions generally view holdings of investment securities as a first line of defense for contingency purposes, but banks need to fully assess the marketability of these holdings. The availability and size of a bid-asked spread for an asset provides a general indication of the market liquidity of that asset. The narrower the spread, and the deeper and more liquid the market, the more likely a seller will find a willing buyer at or near the asked price. Importantly, however, the market liquidity of an asset is not a static attribute but is a function of conditions prevailing in the secondary markets for the particular asset. Bid-asked spreads, when they exist, generally vary with the volume and frequency of transactions in the particular type of assets. Larger volumes and greater frequency of transactions are generally associated with narrower bid-asked spreads. However, disruptions in the marketplace, contractions in the number of market makers, the execution of large block transactions in the asset, and other market factors may result in the widening of the bid-asked spread—and thus reduce the market liquidity of an instrument. Large transactions, in particular, can constrain the market liquidity of an asset, especially if the market for the asset is not deep.

The marketability of assets may also be constrained by the volatility of overall market prices and the underlying rates, which may cause widening bid-asked spreads on marketable assets. Some assets may be more subject to this type of market volatility than others. For example, securities that have inherent credit or interest-rate risk can become more difficult to trade during times when market participants have a low tolerance for these risks. This may be the case when market uncertainties prompt investors to shun risky securities in favor of more-stable investments, resulting in a so-called flight to quality. In a flight to quality, investors become much more willing to sacrifice yield in exchange for safety and liquidity.

In addition to reacting to prevailing market conditions, the market liquidity of an asset can be affected by other factors specific to individual investment positions. Small pieces of security issues, security issues from nonrated and obscure issuers, and other inactively traded securities may not be as liquid as other investments. While brokers and dealers buy and sell inactive securities, price quotations may not be readily available, or when they are, bid-asked spreads may be relatively wide. Bids for such securities are unlikely to be as high as the bids for similar but actively traded securities. Therefore, even though sparsely traded securities can almost always be sold, an unattractive price can make the seller unenthusiastic about selling or result in potential losses in order to raise cash through the sale of an asset.

Accounting conventions can also affect the market liquidity of assets. For example, Accounting Standards Codification (ASC) 320, “Investments—Debt and Equity Securities,” (or Statement of Financial Accounting Standards No. 115 (FAS 115)) requires investment securities to be categorized as held-to-maturity (HTM), available-for-sale (AFS), or trading, significantly affects the liquidity characteristics of investment holdings. Of the three categories, securities categorized as HTM provide the least liquidity, as they cannot be sold to meet liquidity needs without potentially onerous repercussions.7

Securities categorized as AFS can be sold at any time to meet liquidity needs, but care must be taken to avoid large swings in earnings or triggering impairment recognition of securities with unrealized losses.

Trading account securities are generally considered the most marketable from an accounting standpoint, since selling a trading account investment has little or no income effect.

While securities are generally considered to have greater market liquidity than loans and other assets, liquidity-risk managers increasingly consider the ability to obtain cash from the sale of loans as a potential source of liquidity. Many types of bank loans can be sold, securitized, or pledged as collateral for borrowings. For example, the portions of loans that are insured or guaranteed by the U.S. government or by U.S. government–sponsored enterprises

7. HTM securities can be pledged, however, so they do still provide a potential source of liquidity. Furthermore, since the HTM-sale restriction is only an accounting standard (FAS 115)—not a market limitation—HTM securities can be sold in cases of extreme need.
are readily saleable under most market conditions. From a market liquidity perspective, the primary difference between loans and securities is that the process of turning loans into cash can be less efficient and more time-consuming. While securitizations of loan portfolios (discussed below) are more common in practice, commercial loans and portfolios of mortgages or retail loans can be, and often are, bought and sold by banking organizations. However, the due diligence and other requirements of these transactions generally take weeks or even months to complete, depending on the size and complexity of the loans being sold. Liquidity-risk managers may include selling marketable loans as a potential source of cash in their liquidity analyses, but they must be careful to realistically time the expected receipt of cash and should carefully consider past experience and market conditions at the expected time of sale. Institutions that do not have prior experience selling a loan or a mortgage portfolio often need more time to close a loan sale than does an institution that makes such transactions regularly. Additionally, in systemic liquidity or institution-specific credit-quality stress scenarios, the ability to sell loans outright may not be a realistic assumption.

Securitization can be a valuable method for converting otherwise illiquid assets into cash. Advances in the capital markets have made residential mortgage, credit card, student, home equity, automobile, and other loan types increasingly amenable to securitization. As a result, the securitization of loans has become an important funds-management tool at many depository institutions. Many institutions have business lines that originate assets specifically for securitization in the capital markets. However, while securitization can play an important role in managing liquidity, it can also increase liquidity risk—especially when excessive reliance is placed on securitization as a single source of funding.

Securitization can be regarded as an ongoing, reliable source of liquidity only for institutions that have experience in securitizing the specific type of loans under consideration. The time and effort involved in structuring loan securitizations make them difficult to use as a source of asset liquidity for institutions that have limited experience with this activity. Moreover, peculiarities involved in the structures used to securitize certain types of assets may introduce added complexity in managing an institution’s cash flows. For example, the securitization of certain retail-credit receivables requires planning for the possible return of receivable balances arising from scheduled or early amortization, which may entail the funding of sizable balances at unexpected or inopportune times. Institutions using securitization as a source of funding should have adequate monitoring systems and ensure that such activities are fully incorporated into all aspects of their liquidity-risk management processes—which includes assessing the liquidity impact of securitizations under adverse scenarios. This assessment is especially important for institutions that originate assets specifically for securitization since market disruptions have the potential to impose the need for significant contingent liquidity if securitizations cannot be executed. As a result, effective liquidity managers ensure that the implications of securitization activities are fully considered in both their day-to-day liquidity management and their liquidity contingency planning.

Pledging of assets to secure borrowings. The potential to pledge securities, loans, or other assets to obtain funds is another important tool for converting assets into cash to meet funding needs. Since the market liquidity of assets is a significant concern to the lender of secured funds, assets with greater market liquidity are more easily pledged than less marketable assets. An institution that has a largely unpledged investment-securities portfolio has access to liquidity either through selling the investments outright or through pledging the investments as collateral for borrowings or public deposits. However, once pledged, assets are generally unavailable for supplying contingent liquidity through their sale. When preparing cash-flow projections, liquidity-risk managers do not classify pledged assets as “liquid assets” that can be sold to generate cash since the liquidity available from these assets has already been “consumed” by the institution. Accordingly, when computing liquidity measures, effective liquidity managers avoid double-counting unpledged securities as both a source of cash from the potential sale of the asset and as a source of new liabilities from the potential collateralization of the same security. In more-sophisticated cash-flow projections, the tying of the pledged asset to the funding is made explicit.

Similar to the pledging of securities, many investments can be sold under an agreement to repurchase. This agreement provides the institu-
tion with temporary cash without having to sell the investment outright and avoids the potential earnings volatility and transaction costs that buying and selling securities would entail.

Use of haircuts in measuring the funds that can be raised through asset sales, securitizations, or repurchase agreements. The planned use of asset sales, asset securitizations, or collateralized borrowings to meet liquidity needs necessarily involves some estimation of the value of the asset at the future point in time when the asset is anticipated to be converted into cash. Based on changes in market factors, future asset values may be more or less than current values. As a result, liquidity managers generally apply discounts, or haircuts, to the current value of assets to represent a conservative estimate of the anticipated proceeds available from asset sales or securitization in the capital markets. Similarly, lenders in secured borrowings also apply haircuts to determine the amount to lend against pledged collateral as protection if the value of that collateral declines. In this case, the haircut represents, in addition to other factors, the portion of asset value that cannot be converted to cash because secured lenders wish to have a collateral-protection margin.

When computing cash-flow projections under alternative scenarios and developing plans to meet cash shortfalls, liquidity managers ensure that they incorporate haircuts in order to reflect the market liquidity of their assets. Such haircuts are applied consistent with both the relative market liquidity of the assets and the specific scenario utilized. In general, longer-term, riskier assets, as well as assets with less liquid markets, are assigned larger haircuts than are shorter-term, less risky assets. For example, within the securities portfolio, different haircuts might be assigned to short-term and long-term Treasuries, rated and unrated municipal bonds, and different types of mortgage securities (e.g., pass-throughs versus CMOs). When available and appropriate, historical price changes over specified time horizons equal to the time until anticipated liquidation or the term of a borrowing are used by liquidity-risk managers to establish such haircuts. Haircuts used by nationally recognized statistical ratings organizations (NRSROs) are a starting point for such calculations but should not be unduly relied on since institution- and scenario-specific considerations may have important implications.

Haircuts should be customized to the particular projected or planned scenario. For example, adverse scenarios that hypothesize a capital-markets disruption would be expected to use larger haircuts than those used in projections assuming normal markets. Under institution-specific, adverse scenarios, certain assets, such as loans anticipated for sale, securitization, or pledging, may merit higher haircuts than those used under normal business scenarios. Institutions should fully document the haircuts they use to estimate the marketability of their assets.

Bank-owned life insurance (BOLI) is a popular instrument offering tax benefits as well as life insurance on bank employees. Some BOLI policies are structured to provide liquidity; however, most BOLI policies only generate cash in the event of a covered person’s death and impose substantial fees if redeemed. In general, BOLI should not be considered a liquid asset. If it is included as a potential source of funds in a cash-flow analysis, a severe haircut reflecting the terms of the BOLI contract and current market conditions should be applied.

Liquid assets and liquidity reserves. Sound practices for managing liquidity risk call for institutions to maintain an adequate reserve of liquid assets to meet both normal and adverse liquidity situations. Such reserves should be structured consistent with the considerations discussed above regarding the marketability of different types of assets. Many institutions identify a specific portion of their investment account to serve as a liquidity reserve, or liquidity warehouse. The size of liquidity reserves should be based on the institution’s assessments of its liquidity-risk profile and potential liquidity needs under alternative scenarios, giving full consideration to the costs of maintaining those assets. In general, the amount of liquid assets held will be a function of the stability of the institution’s funding structures and the potential for rapid loan growth. If the sources of funds are stable, if adverse-scenario cash-flow projections indicate adequate sources of contingent liquidity (including sufficient sources of unused borrowing capacity), and if asset growth is predictable, then a relatively low asset liquidity reserve may be required. The availability of the liquidity reserves should be tested from time to time. Of course, liquidity reserves should be actively managed to reflect the liquidity-risk profile of the institution and current trends that might have
a negative impact on the institution’s liquidity, such as—

- trading market, national, or financial market trends that might lead rate-sensitive customers to pursue investment alternatives away from the institution;
- significant actual or planned growth in assets;
- trends evidencing a reduction in large liability accounts;
- a substantial portion of liabilities from rate-sensitive and credit-quality-sensitive customers;
- significant liability concentrations by product type or by large deposit account holders;
- a loan portfolio consisting of illiquid, nonmarketable, or unpledgeable loans;
- expectations for substantial draws on loan commitments by customers;
- significant loan concentrations by product, industry, customer, and location;
- significant portions of assets pledged against wholesale borrowings; and
- impaired access to the capital markets.

B. Liabilities

Similar to its assets, a depository institution’s liabilities present a complicated array of liquidity characteristics. Banking organizations obtain funds from a wide variety of sources using an array of financial instruments. The primary characteristics that determine a liability’s liquidity-risk profile include its term, optionality, and counterparty risk tolerance (which includes the counterparty’s need for insurance or collateral). These features help to determine if an individual liability can be considered as stable or volatile. A stable liability is a reliable source of funds that is likely to remain available in adverse circumstances. A volatile liability is a less stable source of funds that may disappear or be unavailable to the institution under heavy price competition, deteriorating credit or market-risk conditions, and other possible adverse events. Developing assumptions on the relative stability or volatility of liabilities is a crucial step in forecasting a bank’s future cash flows under various scenarios and in constructing various summary liquidity measures. As a result, effective liquidity managers segment their liabilities into volatile and stable components on the basis of the characteristics of the liability and on the risk tolerance of the counterparty. These funds may be characterized as credit-sensitive, ratesensitive, or both.

Characteristics of stability and risk tolerance. The stability of an individual bank liability is closely related to the customer’s or counterparty’s risk tolerance, or its willingness and ability to lend or deposit money for a given risk and reward. Several factors affect the stability and risk tolerance of funds providers, including the fiduciary responsibilities and obligations of funds providers to their customers, the availability of insurance on the funds advanced by customers to banking organizations, the reliance of customers on public debt ratings, and the relationships funds providers have with the institution.

Institutional providers of funds to banking organizations, such as money market funds, mutual funds, trust funds, public entities, and other types of investment managers, have fiduciary obligations and responsibilities to adequately assess and monitor the relative risk-and-reward tradeoffs of the investments they make for their customers, participants, or constituencies. These fund providers are especially sensitive to receiving higher returns for higher risk, and they are more apt to withdraw funds if they sense that an institution has a deteriorating financial condition. In general, funds from sources that lend or deposit money on behalf of others are less stable than funds from sources that lend their own funds. For example, a mutual fund purchaser of an institution’s negotiable CD may be expected to be less stable than a local customer buying the same CD.

Institutionally placed funds and other funds providers often depend on the published evaluations or ratings of NRSROs. Indeed, many such funds providers may have bylaws or internal guidelines that prohibit placing funds with institutions that have low ratings or, in the absence of actual guidelines, may simply be averse to retaining funds at an institution whose rating is poor or whose financial condition shows deterioration. As a result, funds provided by such investors can be highly unstable in adverse liquidity environments.

The availability of insurance on deposits or collateral on borrowed funds are also important considerations in gauging the stability of funds provided. Insured or collateralized funds are usually more stable than uninsured or unsecured funds since the funds provider ultimately relies
on a third party or the value of collateral to protect its investment.

Clearly, the nature of a customer’s relationship with an institution has significant implications for the potential stability or volatility of various sources of funds. Customers who have a long-standing relationship with an institution and a variety of accounts, or who otherwise use multiple banking services at the institution, are usually more stable than other types of customers.

Finally, the sensitivity of a funds provider to the rates paid on the specific instrument or transaction used by the banking organization to access funds is also critical for the appropriate assessment of the stability or volatility of funds. Customers that are very rate-driven are more likely not to advance funds or remove existing funds from an institution if more competitive rates are available elsewhere.

All of these factors should be analyzed for the more common types of depositors and funds providers and for the instruments they use to place funds with the institution. Such assessments lead to general conclusions regarding each type of customer’s or counterparty’s risk sensitivity and the stability of the funds provided by the instruments they use to place funds with the institution. Exhibit 5 provides a heuristic schematic of how effective liquidity-risk managers conduct such an assessment regarding the array of their different funds providers. It uses a continuum to indicate the general level of risk sensitivity (and thus the expected stability of funds) expected for each type of depositor, customer, or investor in an institution’s debt obligations. Of course, individual customers and counterparties may have various degrees of such concerns, and greater granularity is generally required in practice. An additional instrument assessment of the stability or volatility of funds raised using that instrument from each type of fund provider is a logical next step in the process of evaluating the relative stability of various sources of funds to an institution.

There are a variety of methods used to assess the relative stability of funds providers. Effective liquidity managers generally review deposit accounts by counterparty type, e.g., consumer, small business, or municipality. For each type, an effective liquidity manager evaluates the applicability of risk or stability factors, such as whether the depositor has other relationships with the institution, whether the depositor owns the funds on deposit or is acting as an agent or manager, or whether the depositor is likely to be more aware of and concerned by adverse news reports. The depositors and counterparties considered to have a significant relationship with the institution and who are less sensitive to market interest rates can be viewed as providing stable funding. Statistical analysis of funds volatility is often used to separate total volumes into stable and nonstable segments. While such analysis can be very helpful, it is important to be mindful that historical volatility is unlikely to include a period of acute liquidity stress.

The following discussions identify important considerations that should be factored into the assessment of the relative stability of various sources of funds utilized by banking organizations.

Maturity of liabilities used to gather funds. An important factor in assessing the stability of funds sources is the remaining contractual life of the liability. Longer-maturity liabilities obviously provide more-stable funding than do shorter maturities. Extending liability maturities to reduce liquidity risk is a common management technique and an important sound practice used by most depository institutions. It is also a major part of the cost of liquidity management, since longer-term liabilities generally require higher interest rates than are required for similar short-term liabilities.

Indeterminate maturity deposits. Evaluations of the stability of deposits with indeterminate maturities, such as various types of transaction accounts (e.g., demand deposits, negotiable order of withdrawal accounts (NOWs) or money market demand accounts (MMDAs), and savings accounts) can be made using criteria similar to those shown in exhibit 5. In doing so, effective liquidity managers recognize that the relative stability or volatility of these accounts derives from the underlying characteristics of the customers that use them and not on the account type itself. As a result, most institutions delineate the relative volatility or stability of various subgroups of these account types on the basis of customer characteristics. For example, MMDA deposits of customers who have fiduciary obligations may be less stable than those of individual retail customers. Additionally, funds acquired through a higher pricing strategy for these types of deposit accounts are generally less stable than are deposits from customers who have long-standing relationships with the institution. Increasingly, liquidity managers recog-
nize that traditional measures of “core” deposits may be inappropriate, and thus these deposits require more in-depth analysis to determine their relative stability.

Assessment of the relative stability or volatility of deposits that have indeterminate maturities can be qualitative as well as quantitative, consistent with the size, complexity, and sophistication of the institution. For example, at larger institutions, models based on statistical analysis can be used to estimate the stability of various subsets of such funds under alternative liquidity environments. Such models can be used to formulate expected behaviors in reaction to rate changes and other more-typical financial events. As they do when using models to manage any type of risk, institutions should fully document and understand the assumptions and methodologies used. This is especially the case when external parties conduct such analysis. Effective liquidity managers aggressively avoid “black-box” estimates of funding behaviors.

In most cases, insured deposits from consumers may be less likely to leave the institution under many liquidity circumstances than are funds supplied by more-institutional funds providers. Absent extenuating circumstances (e.g., the deposit contract prohibits early withdrawal), funds provided by agents and fiduciaries are generally treated by banking organizations as volatile liabilities.

Certificates of deposit and time deposits. At maturity, certificates of deposit (CDs) and time deposits are subject to the general factors regarding stability and volatility discussed above, including rate sensitivity and relationship factors. Nonrelationship and highly-rate-sensitive deposits tend to be less stable than deposits placed by less-rate-sensitive customers who have close relationships with the institution. Insured CDs are generally considered more stable than uninsured “jumbo” CDs in denominations of more than $100,000. In general, jumbo CDs and negotiable CDs are more volatile sources of funds—especially during times of stress—since they may be less relationship-driven and have a higher sensitivity to potential credit problems.

Brokered deposits and other rate-sensitive deposits. Brokered deposits are funds a bank obtains, directly or indirectly, by or through any deposit broker, for deposit into one or more accounts. Thus, brokered deposits include both those in which the entire beneficial interest in a given bank deposit account or instrument is held by a single depositor and those in which the deposit broker pools funds from more than one investor for deposit in a given bank deposit account. Rates paid on brokered deposits are often higher than those paid for local-market-area retail deposits since brokered-deposit customers are generally focused on obtaining the highest FDIC-insured rate available. These rate-sensitive customers have easy access to, and are frequently well informed about, alternative markets and investments, and they may have no other relationship or loyalty to the bank. If market conditions change or more-attractive returns become available, these customers may rapidly transfer their funds to new institutions or investments. Accordingly, these rate-sensitive depositors may exhibit characteristics more typical of wholesale investors, and liquidity-risk managers should model brokered deposits accordingly.

The use of brokered deposits is governed by...
law and covered by the 2001 Joint Agency Advisory on Brokered and Rate-Sensitive Deposits. Under 12 USC 1831f and 12 CFR 337.6, determination of “brokered” status is based initially on whether a bank actually obtains a deposit directly or indirectly through a deposit broker. Banks that are considered only “adequately capitalized” under the “prompt corrective action” (PCA) standard must receive a waiver from the FDIC before they can accept, renew, or roll over any brokered deposit. They are also restricted in the rates they may offer on such deposits. Banks falling below the adequately capitalized range may not accept, renew, or roll over any brokered deposit, nor solicit deposits with an effective yield more than 75 basis points above the national rate. The national rate is defined as “a simple average of rates paid by all insured depository institutions and branches for which data are available.” On a weekly basis, the “national rate” is posted on the FDIC’s website. If a depository institution believes that the “national rate” does not correspond to the actual prevailing rate in the applicable market, the institution may seek a determination from the FDIC that the institution is operating in a “high-rate area.” If the FDIC makes such a determination, the bank will be allowed to offer the actual prevailing rate plus 75 basis points. In any event, for deposits accepted outside the applicable market area, the bank will not be allowed to offer rates in excess of the “national rate” plus 75 basis points.

These restrictions will reduce the availability of funding alternatives as a bank’s condition deteriorates. The FDIC is not authorized to grant waivers for banks that are less than adequately capitalized. Bank managers who use brokered deposits should be familiar with the regulations governing brokered deposits and understand the requirements for requesting a waiver. Further detailed information regarding brokered deposits can be found in the FDIC’s Financial Institution Letter (FIL), 69-2009.

Deposits attracted over the Internet, through CD listing services, or through special advertising programs that offer premium rates to customers who do not have another banking relationship with the institution also require special monitoring. Although these deposits may not fall within the technical definition of “brokered” in 12 USC 1831f and 12 CFR 337.6, their inherent risk characteristics may be similar to those of brokered deposits. That is, such deposits are typically attractive to rate-sensitive customers who may not have significant loyalty to the bank. Extensive reliance on funding products of this type, especially those obtained from outside a bank’s geographic market area, has the potential to weaken a bank’s funding position in times of stress.

Under the 2001 joint agency advisory, banks are expected to perform adequate due diligence before entering any business relationship with a deposit broker; assess the potential risks to earnings and capital associated with brokered deposits; and fully incorporate the assessment and control of brokered deposits into all elements of their liquidity-risk management processes, including CFPs.

**Public or government deposits.** Public funds generally represent deposits of the U.S. government, state governments, and local political subdivisions; they typically require collateral to be pledged against them in the form of securities. In most banks, deposits from the U.S. government represent a much smaller portion of total public funds than that of funds obtained from states and local political subdivisions. Liquidity-risk managers generally consider the secured nature of these deposits as being a double-edged sword. On the one hand, they reduce contingent liquidity risk because secured funds providers are less credit-sensitive, and therefore their deposits may be more stable than those of unsecured funds providers. On the other hand, such deposits reduce standby liquidity by “consuming” the potential liquidity in the pledged collateral.

Rather than pledge assets as collateral for public deposits, banks may also purchase an insurance company’s surety bond as coverage for public funds in excess of FDIC insurance limits. Here, the bank would not pledge assets to secure deposits, and the purchase of surety bonds would not affect the availability of funds to all depositors in the event of insolvency. The costs associated with the purchase of a surety bond must be taken into consideration when using this alternative.

Deposits from taxing authorities (most school districts and municipalities) also tend to be highly seasonal. The volume of public funds

---

risers around tax due dates and falls near the end of the period before the next tax due date. This fluctuation is clearly a consideration for liquidity managers projecting cash flows for normal operations. State and local governments tend to be more rate-sensitive. Effective liquidity managers fully consider the contingent liquidity risk that these deposits entail, that is, the risk that the deposits will not be maintained, renewed, or replaced unless the bank is willing to offer very competitive rates.

Eurodollar deposits. Eurodollar time deposits are certificates of deposit issued by banks outside of the United States. Large, internationally active U.S. banks may obtain Eurodollar funding through their foreign branches—including offshore branches in the Cayman Islands or other similar locales. Eurodollar deposits are usually negotiable CDs issued in amounts of $100,000 or more, with rates tied to LIBOR. Because they are negotiable, the considerations applicable to negotiable CDs set forth above also apply to Eurodollar deposits.

Federal funds purchased. Federal funds (fed funds) are excess reserves held at Federal Reserve Banks. The most common type of federal funds transaction is an overnight, unsecured loan. Transactions that are for a period longer than one day are called term fed funds. The day-to-day use of fed funds is a common occurrence, and fed funds are considered an important money market instrument used in managing daily liquidity needs and sources.

Many regional and money-center banks, acting in the capacity of correspondents to smaller community banks, function as both providers and purchasers of federal funds. Overnight fed funds purchased can pose a contingent liquidity risk, particularly if a bank is unable to roll over or replace the maturing borrowing under stress conditions. Term fed funds pose almost the same risk since the term is usually just a week or two. Fed funds purchased should generally be treated as a volatile source of funds.

Loans from correspondent banks. Small and medium-sized banks often negotiate loans from their principal correspondent banks. The loans are usually for short periods and may be secured or unsecured. Correspondent banks are usually moderately credit-sensitive. Accordingly, cash-flow projections for normal business conditions and mild adverse scenarios may often treat these funds as stable. However, given the credit sensitivity of such funds, projections computed for severe adverse liquidity scenarios should treat these funds as volatile.

FHLB borrowings. The Federal Home Loan Banks (FHLBs) provide loans, referred to as advances, to members. Advances must be secured by collateral acceptable to the FHLB, such as residential mortgage loans and mortgage-backed securities. Both short-term and long-term FHLB borrowings, with maturities ranging from overnight to 10 years, are available to member institutions at generally competitive interest rates. For some small and medium-sized banks, long-term FHLB advances may be a significant or the only source of long-term funding.

It should be noted that FHLBs may also sell their excess cash into the market in the form of fed funds. This is a transaction where the FHLB is managing its excess funding and has chosen to invest that excess in short-term unsecured fed funds. This transaction is executed through the capital markets and is not done with specific members of the FHLB.

Some FHLB advances contain embedded options or other features that may increase funding risk. For example, some types of advances, such as putable and convertible advances, provide the FHLB with the option to either recall the advance or change the interest rate on an advance from a fixed rate to a floating rate under specified conditions. When such optionality exists, institutions should fully assess the implications of this optionality on the liquidity-risk profile of the institution.

In general, an FHLB establishes a line of credit for each of its members. Members are required to purchase FHLB stock before a line of credit is established, and the FHLB has the ability to restrict the redemption of its stock. An FHLB may also limit or deny a member’s request for an advance if the member engages in any unsafe or unsound practice, is inadequately capitalized, sustains operating losses, is deficient with respect to financial or managerial resources, or is otherwise deficient.

Because FHLB advances are secured by collateral, the unused FHLB borrowing capacity of a bank is a function of both its eligible, unpledged collateral and its unused line of credit with its FHLB.

FHLBs have access to bank regulatory information not available to other lenders. The com-
posite rating of an institution is a factor in the approval for obtaining an FHLB advance, as well as the level of collateral required and the continuance of line availability. Because of this access to regulatory data, an FHLB can react quickly to reduce its exposure to a troubled institution by exercising options or not rolling over unsecured lines of credit. Depending on the severity of a troubled institution’s condition, an FHLB has the right to increase collateral requirements or to discontinue or withdraw (at maturity) its collateralized funding program because of concerns about the quality or reliability of the collateral or other credit-related concerns. On the one hand, this right may create liquidity problems for an institution, especially if it has large amounts of short-term FHLB funding. At the same time, because FHLB advances are fully collateralized, the various FHLBs have historically worked with regulators prior to exercising their option to fully withdraw funding from members. To this extent, FHLB borrowings are viewed by many liquidity managers as a relatively stable source of funding, barring the most severe of adverse funding situations.

Sound liquidity-risk management practices call for institutions to fully document the purpose of any FHLB-borrowing transaction. Each transaction should be analyzed on an ongoing basis to determine whether the arrangement achieves the stated purpose or whether the borrowings are a sign of liquidity deficiencies. Some banks may use their FHLB line of credit to secure public funds; however, doing so will reduce their available funds and may present problems if the FHLB reduces the institution’s credit line. Additionally, the institution should periodically review its borrowing agreement with the FHLB to determine the assets collateralizing the borrowings and the potential risks presented by the agreement. In some instances, the borrowing agreement may provide for collateralization by all assets not already pledged for other purposes.

Repurchase agreements and dollar rolls. The terms repurchase agreement (repo) and reverse repurchase agreement refer to transactions in which a bank acquires funds by selling securities and simultaneously agreeing to repurchase the securities after a specified time at a given price, which typically includes interest at an agreed-on rate. A transaction is considered a repo when viewed from the perspective of the supplier of the securities (the borrower) and a reverse repo or matched sale–purchase agreement when described from the point of view of the supplier of funds (the lender).

A repo commonly has a near-term maturity (overnight or a few days) with tenors rarely exceeding three months. Repos are also usually arranged in large dollar amounts. Repos may be used to temporarily finance the purchase of securities and dealer securities inventories. Banking organizations also use repos as a substitute for direct borrowings. Bank securities holdings as well as loans are often sold under repurchase agreements to generate temporary working funds. These types of agreements are often used because the rate on this type of borrowing is less than the rate on unsecured borrowings, such as federal funds purchased.

U.S. government and agency securities are the most common type of instruments sold under repurchase agreements, since they are exempt from reserve requirements. However, market participants sometimes alter various contract provisions to accommodate specific investment needs or to provide flexibility in the designation of collateral. For example, some repo contracts allow substitutions of the securities subject to the repurchase commitment. These transactions are often referred to as dollar repurchase agreements (dollar rolls), and the initial seller’s obligation is to repurchase securities that are substantially similar, but not identical, to the securities originally sold. To qualify as a financing, these agreements require the return of “substantially similar securities” and cannot exceed 12 months from the initiation of the transaction. The dollar-roll market primarily consists of agreements that involve mortgage-backed securities.

Another common repo arrangement is called an open repo, which provides a flexible term to maturity. An open repo is a term agreement between a dealer and a major customer in which the customer buys securities from the dealer and may sell some of them back before the final maturity date.

Effective liquidity-risk managers ensure that they are aware of special considerations and potential risks of repurchase agreements, especially when the bank enters into large-dollar-volume transactions with institutional investors or brokers. It is a fairly common practice to adjust the collateral value of the underlying

---

9. See section 3010.1.
securities daily to reflect changes in market prices and to maintain the agreed-on margin. Accordingly, if the market value of the repo-ed securities declines appreciably, the borrower may be asked to provide additional collateral. Conversely, if the market value of the securities rises substantially, the lender may be required to return the excess collateral to the borrower. If the value of the underlying securities exceeds the price at which the repurchase agreement was sold, the bank could be exposed to the risk of loss if the buyer is unable to perform and return the securities. This risk would increase if the securities were physically transferred to the institution or broker with which the bank has entered into the repurchase agreement.

Because these instruments are usually very short-term transactions, institutions using them incur contingent liquidity risk. Accordingly, cash-flow projections for normal and mild scenarios usually treat these funds as stable. However, projections computed for severe scenarios generally treat these funds as volatile.

**International borrowings.** International borrowings may be direct or indirect. Common forms of direct international borrowings include loans and short-term call money from foreign banks, borrowings from the Export-Import Bank of the United States, and overdrawn nostro accounts (due from foreign bank demand accounts). Indirect forms of borrowing include notes and trade bills rediscounted with the central banks of various countries; notes, acceptances, import drafts, or trade bills sold with the bank’s endorsement or guarantee; notes and other obligations sold subject to repurchase agreements; and acceptance pool participations. In general, these borrowings are often considered to be highly volatile, nonstable sources of funds.

**Federal Reserve Bank borrowings.** In 2003, the Federal Reserve Board revised Regulation A to provide for primary and secondary credit programs at the discount window.10 (See section 4025.1.) Reserve Banks will extend primary credit at a rate above the target fed funds rate on a short-term basis (typically, overnight) to eligible depository institutions, and acceptable collateral is required to secure all obligations. Discount window borrowings can be secured with an array of collateral, including consumer and commercial loans. Eligibility for primary credit is based largely on an institution’s examination rating and capital status. In general, institutions with composite CAMELS ratings of 1, 2, or 3 that are at least adequately capitalized are eligible for primary credit unless supplementary information indicates their condition is not generally sound. Other conditions exist to determine eligibility for 4- and 5-rated institutions.

An institution eligible for primary credit need not exhaust other sources of funds before coming to the discount window. However, because of the above-market price of primary credit, the Reserve Banks expect institutions to mainly use the discount window as a backup source of liquidity rather than as a routine source. Generally, Reserve Banks extend primary credit on an overnight basis with minimal administrative requirements to eligible institutions. Reserve Banks may also extend primary credit to eligible institutions for periods of up to several weeks if funding is not available from other sources. These longer extensions of credit are subject to greater administrative oversight. Reserve Banks also offer secondary credit to institutions that do not qualify for primary credit. Secondary credit is another short-term backup source of liquidity, although its availability is more limited and is generally used for emergency backup purposes. Reserve Banks extend secondary credit to assist in an institution’s timely return to a reliance on traditional funding sources or in the resolution of severe financial difficulties. This program entails a higher level of Reserve Bank administration and oversight than primary credit.

Treasury Tax and Loan deposits. Treasury Tax and Loan accounts (TT&L accounts) are maintained at banks by the U.S. Treasury to facilitate payments of federal withholding taxes. Banks may select either the “remittance-option” or the “note-option” method of forwarding deposited funds to the U.S. Treasury. In the remittance option, the bank remits the TT&L account deposits to the Federal Reserve Bank the next business day after deposit, and the remittance portion is not interest-bearing. The note option permits the bank to retain the TT&L deposits. In the note option, the bank debits the TT&L remittance account for the amount of the previous day’s deposit and simultaneously credits the

---
Off-balance-sheet transactions have been one of the fastest-growing areas of banking activity. While these activities may not be reflected on the balance sheet, they must be thoroughly reviewed in assessing an institution’s liquidity-risk profile, as they can expose the institution to significant contingent liquidity risk. Effective liquidity-risk managers pay particular attention to potential liquidity risks in loan commitments, lines of credit, performance guarantees, and financial guarantees. Banks should estimate both the amount and the timing of potential cash flows from off-balance-sheet claims.

Effective liquidity managers ensure that they consider the correlation of draws on various types of commitments that can trend with macroeconomic conditions. For example, standby letters of credit issued in lieu of construction completion bonds are often drawn when builders cannot fulfill their contracts. Some types of credit lines, such as those used to provide working capital to businesses, are most heavily used when either the borrower’s accounts receivable or inventory is accumulating faster than its collections of accounts payable or sales. Liquidity-risk managers should work with the appropriate lending managers to track such trends.

In addition, funding requirements arising from some types of commitments can be highly correlated with the counterparty’s credit quality. Financial standby letters of credit (SBLOCs) are often used to back the counterparty’s direct financial obligations, such as commercial paper, tax-exempt securities, or the margin requirements of securities and derivatives exchanges. At some institutions, a major portion of off-balance-sheet claims consists of SBLOCs supporting commercial paper. If the institution’s customer issues commercial paper supported by an SBLOC and if the customer is unable to repay the commercial paper at maturity, the holder of the commercial paper will request that the institution perform under the SBLOC. Liquidity-risk managers should work with the appropriate lending manager to (1) monitor the credit grade or default probability of such counterparties and (2) manage the industry diversification of these commitments in order to reduce the probability that multiple counterparties will be forced to draw against the bank’s commitments at the same time.

Funding under some types of commitments can also be highly correlated with changes in the institution’s own financial condition or perceived credit quality. Commitments supporting various types of asset-backed securities, asset-backed commercial paper, and derivatives can be subject to such contingent liquidity risk. The securitization of assets generally requires some form of credit enhancement, which can take many forms, including SBLOCs or other types of guarantees issued by a bank. Similarly, many structures employ special-purpose entities (SPEs) that own the collateral securing the asset-backed paper. Bank SBLOCs or guarantees often support those SPEs. As long as the institution’s credit quality remains above defined minimums, which are usually based on ratings from NRSROs, few or none of the SBLOCs will fund. However, if the institution’s credit rating falls below the minimum, a significant amount or all of such commitments may fund at the same time.

Financial derivatives can also give rise to contingent liquidity risk arising from financial market disruptions and deteriorating credit quality of the banking organization. Derivatives contracts should be reviewed, and their potential for early termination should be assessed and quantified, to determine the adequacy of the institution’s available liquidity. Many forms of standardized derivatives contracts allow counterparties to request collateral or to terminate contracts early if the institution experiences an adverse credit event or deterioration in its financial condition. In addition, under situations of market stress, a customer may ask for early termination of some contracts. In such circumstances, an institution that owes money
on derivatives transactions may be required to deliver collateral or settle a contract early, when the institution is encountering additional funding and liquidity pressures. Early terminations may also create additional, unintended market exposures. Management and directors should be aware of these potential liquidity risks and address them in the institution’s CFP. All off-balance-sheet commitments and obligations should receive the focused attention of liquidity-risk managers throughout the liquidity-risk management process.

D. Specialized Business Activities

Institutions that engage in specialized banking activities should ensure that all elements of these activities are fully incorporated into their assessment of liquidity-risk exposure and their ongoing management of the firm’s liquidity. Such activities may include mortgage servicing, trading and dealer activities, and various types of fee-income-generating businesses.

Institutions engaged in significant payment, clearing, and settlement activities face particular challenges. Institutions that are active in payment, settlement, or clearing activities should ensure that they have mechanisms for measuring, monitoring, and identifying the amount of liquidity they may need to settle obligations in normal as well as stressed environments. These institutions should fully consider the unique risks that may result from their participation in different payment-system activities and factor these risks into their liquidity contingency planning. Factors that banks should consider when developing liquidity plans related to payment activities include—

- the impact of pay-in rules of individual payment systems, which may result in short-notice payment adjustments and the need to assess peak pay-in requirements that could result from the failure of another participant;
- the potential impact of operational disruptions at a payment utility and the potential need to move activity to another venue in which settlement is gross rather than net, thereby increasing liquidity requirements to settle;
- the impact that the deteriorating credit quality of the institution may have on collateral requirements, changes in intraday lending limits, and the institution’s intraday funding needs; and
- for clearing and nostro service providers, the impact of potential funding needs that could be generated by their clearing customers in addition to the bank’s own needs.

IV. Summary Measures of Liquidity-Risk Exposure

Cash-flow projections constructed assuming normal and adverse conditions provide a wealth of information about the liquidity profile of an institution. However, liquidity managers, bank supervisors, rating agencies, and other interested parties use a myriad of summary measures of liquidity to identify potential liquidity risk. These measures include various types of financial ratios. Many of these measures attempt to achieve some of the same insights provided by comprehensive cash-flow scenario analyses but use significantly less data.

When calculated using standard definitions and comparable data, such measures provide the ability to track trends over time and facilitate comparisons across peers. At the same time, however, many summary measures necessarily entail simplifying assumptions regarding the liquidity of assets, the relative stability or volatility of liabilities, and the ability of the institution to meet potential funding needs. Supervisors, management, and other stakeholders that use these summary measures should fully understand the effect of these assumptions and the limitations associated with summary measures.

Although general industry conventions may be used to compute various summary measures, liquidity managers should ensure that the specific measures they use for internal purposes are suitably customized for their particular institution. Importantly, effective liquidity managers recognize that no single summary measure or ratio captures all of the available sources and uses of liquidity for all situations and for all time periods. Different ratios capture different facets of liquidity and liquidity risk. Moreover, the same summary measure or ratio calculated using different assumptions can also capture different facets of liquidity. This is an especially important point since, by definition, many liquidity ratios are scenario-specific. Measures constructed using normal-course-of-business assumptions can portray liquidity profiles that are significantly different from those constructed assuming stress contingency events. Indeed,
many liquidity managers use the same summary measures and financial ratios computed under alternative scenarios and assumptions to evaluate and communicate to senior management and the board of directors the institution’s liquidity-risk profile and the adequacy of its CFPs.

A. Cash-Flow Ratios

Cash-flow ratios are especially valuable summary liquidity measures. These measures summarize the information contained in detailed cash-flow projections and forecasts. They are generally constructed as the ratio of total projected cash inflows divided by total projected cash outflows for a particular time period or cash-flow-projection time bucket. The ratio for a given time bucket indicates the relative amount by which the projected sources of liquidity cover projected needs. For example, a ratio of 1.20 indicates a liquidity “surplus” equal to 20 percent of projected outflows. In general, such coverage ratios are compiled for each time bucket in the cash-flow projections used to assess both normal and adverse liquidity circumstances.

Some institutions also employ cumulative cash-flow ratios that are computed as the ratio of the cumulative sum of cash inflows to the cumulative sum of cash outflows for all time buckets up to a given time bucket. However, care should be taken to recognize that cumulative cash-flow ratios used alone and without the benefit of assessing the individual time-period exposures for each of their component time buckets may mask liquidity-risk exposures that can exist at intervals up to the cumulative time horizons chosen.

B. Other Summary Liquidity Measures

Other common summary liquidity measures employ assumptions about, and depend heavily on, the assessment and characterization of the relative marketability and liquidity of assets and the relative stability or volatility of funding needs and sources, consistent with the considerations discussed in the prior section. Liquidity managers use these other measures to review historical trends, summarize their projections of potential liquidity-risk exposures under adverse liquidity conditions, and develop strategies to address contingent liquidity events. In selecting from the myriad of available measures, effective liquidity managers focus primarily on those measures that are most related to the liquidity-management strategies pursued by the institution. For example, institutions that focus on managing asset liquidity place greater emphasis on measures that gauge such conditions, while institutions placing greater emphasis on managing liability liquidity emphasize measures that address those aspects of their liquidity-risk profile.

The following discussions briefly describe some of the more common summary measures of liquidity and liquidity risk. Some of these measures are employed by liquidity managers, rating agencies, and supervisors using definitions and calculation methods amenable to publicly available Call Report or BHC Performance Report data. Because such data require the use of assumptions on the liquidity of broad classes of assets and on the stability of various types of aggregated liabilities, liquidity managers and supervisors should take full advantage of the available granularity of internal data to customize the summary measures they are using. Incorporating internal data ensures that summary measures fit the specific liquidity profile of the institution. Such customization permits a more robust assessment of the institution’s liquidity-risk profile.

In general, most common summary measures of liquidity and liquidity risk can be grouped into the following three broad categories:

1. those that portray the array of assets along a continuum of liquidity and cash-flow characteristics for normal and potentially adverse circumstances
2. those that portray the array of liabilities along a continuum of potential volatility and stability characteristics under normal and potentially adverse circumstances
3. those that assess the balance between funding needs and sources based on assumptions about both the relative liquidity of assets and the relative stability of liabilities

Relative liquidity of assets. Summary measures that address the liquidity of assets usually start with assessments of the maturity or type of assets in an effort to gauge their contributions to actual cash inflows over various time horizons. In general, they represent an attempt to summarize and characterize the expected cash inflows from assets that are estimated in more-detailed
Liquidity Risk

Liquidity Risk 4020.1

pledged securities (or pledged assets) to total assets.

• short-term investments (defined as maturing within a specified time period, such as 3 months, 6 months, or 1 year) as a percent of total investments, and

• short-term assets (defined as maturing within a specified time period) as a percent of total assets.

Other measures within this category attempt to assess the expected time period over which longer-term, illiquid assets may need to be funded. These measures, which use broad asset categories and employ strong assumptions on the liquidity of these assets, include—

• loans and leases as a percent of total assets, and

• long-term assets (defined as maturing beyond a specified time period) as a percent of total assets.

To better gauge the potential for assets to be used as sources of liquidity to meet uncertain future cash needs, effective liquidity managers use additional “liquid asset” summary measures that are customized to take into account the ability (or inability) to convert assets into cash or borrowed funds. Such measures attempt to summarize the potential for sale, securitization, or use as collateral of different types of assets, subject to appropriate scenario-specific haircuts. Such measures also attempt to recognize the constraints on potential securitization and on those assets that have already been pledged as collateral for existing borrowings. Examples of these measures include—

• marketable securities (as determined by the assessment of cash-flow, accounting, and haircut considerations discussed in the previous section) to total securities;

• marketable securities as a percent of total assets;

• marketable assets (as determined by the assessment of cash-flow, accounting, and haircut considerations discussed in the previous section) to total assets;

• pledged assets (e.g., unpledged securities and loans) as a percent of total assets;

• pledged securities (or pledged assets) to total pledged securities (or pledged assets);

• securitizable assets to total assets (sometimes computed to include some assessment of the time frame that may be involved); and

• liquid assets to total assets with the measure of liquid assets being some combination of short-term assets, marketable securities, and securitizable and pledged assets (ensuring that any pledged assets are not double-counted).

**Relative stability or volatility of liabilities as a source of funding.** Summary measures used to assess the relative stability or volatility of liabilities as sources of funding often start with assessments of the maturity of liabilities and their ability to be “rolled-over” or renewed under both normal business and potentially adverse circumstances. These measures also represent an attempt to summarize and characterize the use of actual and potential sources of funds, which are estimated in more-detailed cash-flow-projection worksheets. In fact, proper construction of many of these summary measures requires the same analytical assessments required for cash-flow projections. Such measures attempt to gauge and array the relative sensitivity and availability of different sources of funds on the basis of the anticipated behavior of various types of transactions, business activities, funds providers, or other attributes.

Given the difficulties involved in portraying funding sources across the entire continuum of stability and volatility characteristics, along with the complexity of overlaying alternative contingent scenarios on such portrayals, some common summary measures attempt to group funding sources as falling on one side or the other of this continuum. Financial ratios that attempt to portray the extent to which an institution’s funding sources are stable include—

• total deposits as a percent of total liabilities or total assets;

• insured deposits as a percent of total deposits;

• deposits with indeterminate maturities as a percent of total deposits; and

• long-term liabilities (defined as maturing beyond a specified time period) to total liabilities.

These measures necessarily employ assumptions about the stability of an institution’s deposit base in an attempt to define a set of relatively stable or core funding sources. Liquidity man-
agers and examiners should take care in constructing their estimates of stable or core liabilities for use in such measures. This caution has become especially important as changes in customer sophistication and interest-rate sensitivity have altered behavioral patterns and, therefore, the stability characteristics traditionally assumed for retail and other types of deposits traditionally termed “core.” As a result, examiners, liquidity managers, and other parties should use more-granular breakouts of funding sources to assess the relative stability of deposits and should not place undue reliance on standardized traditional measures of core deposits. Breakouts that use such a greater granularity include—

- various breakouts of retail deposits to total deposits based on product type (MMDA, demand deposit, savings account, etc.) and customer segmentation to total deposits or liabilities;
- breakouts of various types of institutional deposits (e.g., collateralized deposits of municipal and government entities) as a percent of deposits; and
- various breakouts of brokered deposits (by size, types of fund providers, and maturity).

At the other end of the stability/volatility continuum, some summary measures focus on identifying those sources of funding that need to be rolled over in the short term under normal business conditions and those whose rollover or usage in the future may be especially sensitive to institution-specific contingent liquidity events. These measures include—

- short-term liabilities (defined as fund sources maturing within a specified time period, such as 3 months, 6 months, or 1 year) as a percent of total liabilities;
- short-term brokered deposits as a percent of total deposits;
- insured short-term brokered deposits as a percent of total deposits;
- purchased funds (including short-term liabilities such as fed funds purchased, repos, FHLB borrowings, and other funds raised in secondary markets) as a percent of total liabilities;
- uncollateralized purchased funds as a percent of total liabilities; and
- short-term purchased funds to total purchased funds.

When computing measures to assess the availability of potential sources of funds under contingent liquidity scenarios, institutions may adjust the carrying values of their liabilities in order to develop best estimates of available funding sources. Similar to the haircuts applied when assessing marketable securities and liquid assets, such adjustments endeavor to identify more-realistic rollover rates on current and potential funding sources.

**Balance between funding needs and sources.** Measures used to assess the relationship between actual or potential funding needs and funding sources are constructed across a continuum that arrays both the tenor or relative liquidity of assets and the potential volatility or stability of liabilities. Many of these measures use concepts discussed earlier regarding the liquidity of assets and the relative stability or volatility of liabilities as funding sources. Some measures express various definitions of short-term liquid assets to total liabilities or alternative definitions of volatile or stable liabilities to total assets. Such measures may include—

- net short-term liabilities (short-term liabilities minus short-term assets) as a percent of total assets;
- stable deposits as a percent of total assets;
- total purchased funds as a percent of total assets;
- uncollateralized borrowings as a percent of total assets; and
- liquid assets as a percent of total liabilities.

Other measures attempt to identify the relationships between different classifications of liquid or illiquid assets and stable or volatile liabilities. Exhibit 6 provides a conceptual schematic of the range of relationships that are often addressed in such assessments.

Some commonly used summary liquidity measures and ratios focus on the amount of different types of liquid assets that are funded by various types of short-term and potentially volatile liabilities (upper-left quadrant of exhibit 6). One of the most common measures of this type is the “net short-term position” (used by some NRSROs). Liquidity managers, bank supervisors, and rating agencies use this measure to assess an institution’s ability to meet its potential cash obligations over a specified period of time. It is computed as an institution’s liquid assets (incorporating appropriate haircuts on
marketable assets) minus the potential cash obligations expected over the specified time period (e.g., 3 months, 6 months, or 1 year). Other measures used to assess the relationship or coverage of potentially volatile liabilities by liquid assets include—

- short-term investments (defined as investments maturing within a specified time period, such as 3 months, 6 months, or 1 year) as a percent of short-term and potentially volatile liabilities; and

- short-term investments (defined as investments maturing within a specified time period, such as 3 months, 6 months, or 1 year) as a percent of short-term liabilities (defined as liabilities maturing within a specified time period, such as 3 months, 6 months, or 1 year).

Other summary liquidity measures take a more expansive approach to assessing the continuum of liquid assets and volatile liabilities by including more items or expanding the breadth of analysis. Such measures include—

- liquid assets (defined as a combination of short-term assets, marketable securities, and securitizeable and pledgable assets—ensuring that any pledged assets are not double-counted—over a certain specified time frame) as a percent of liabilities judged to be volatile (over the same time period);

- liquidity-surplus measures, such as liquid assets minus short-dated or volatile liabilities; and

- liquid assets as a percent of purchased funds.

Other common summary measures of liquidity focus on the potential mismatch of using short-term or potentially volatile liabilities to fund illiquid assets (upper-right-hand quadrant of exhibit 6). Often these measures factor only those volatile liabilities in excess of short-term and highly liquid assets or marketable investment securities into this assessment. Such volatile-liability-dependence measures provide insights as to the extent to which alternative funding sources might be needed to fund long-term liquidity needs under adverse liquidity conditions. These measures include—
• net short-term noncore-funding-dependence measures, such as short-term volatile funding minus short-term investments as a percent of illiquid assets; and
• net volatile-funding-dependence measures, such as volatile funding minus liquid assets as a percent of illiquid assets.

Another set of summary liquidity ratios can be constructed to focus on the extent to which illiquid assets are match-funded by stable liabilities (lower-right quadrant of exhibit 6). Common examples of such measures include traditional loan-to-deposit ratios (which incorrectly assume all deposits are stable) and loan-to-core-deposit ratios (which often take a product-specific approach to defining the stability of certain types of deposits). However, since such traditional measures necessarily require the use of broad assumptions on the stability of deposits, they should not be relied on to provide meaningful insights regarding potential funding mismatches between stable funding sources and illiquid assets.

One meaningful measure used to gauge such relationships is the concept of “net cash capital” (which is also used by some NRSROs). This measure is the dollar amount by which stable sources of funds exceed illiquid assets; it can be computed as a percent of total assets to facilitate comparisons across institutions. In addition, it can be computed using customized assessments of the relative stability of different types of liabilities and the ability to convert assets into cash through sale, securitization, or collateralization. For example, firms may choose to exclude portions of loans sold regularly (e.g., loans conforming to secondary-market standards) as illiquid assets, or they may choose to include long-term debt as stable liabilities.

A final set of summary measures are used by liquidity managers to optimize the liquidity profiles of their institutions. These measures assess the extent to which relatively stable funding sources are used to fund short-term and liquid assets (lower-left quadrant of exhibit 6). Since short-term liquid assets generally entail relatively lower returns than longer-term less-liquid assets, measures assessing such potential mismatches focus liquidity managers on the cost of carrying liquid assets.

V. Liquidity-Measurement Considerations for Bank Holding Companies

Liquidity-risk measurement considerations for BHCs can be found in the Bank Holding Company Supervision Manual, sections 4000.1, 4010, and 4020.

APPENDIX 2—SUMMARY OF MAJOR LEGAL AND REGULATORY CONSIDERATIONS

The following discussions summarize some of the major legal and regulatory considerations that should be taken into account in managing the liquidity risk of banking organizations. The discussions are presented only to highlight potential issues and to direct bankers and supervisors to source documents on those issues.

A. Federal Reserve Regulation A

Federal Reserve Regulation A addresses borrowing from the discount window. Rules defining eligible collateral can be found in this regulation.

B. Federal Reserve Regulation D

Federal Reserve Regulation D addresses required reserves for deposits. One portion of the regulation, however, restricts the type of eligible collateral that can be pledged for repurchase-agreement borrowings.

C. Federal Reserve Regulation F

Federal Reserve Regulation F imposes limits on interbank liabilities. This regulation implements section 308 of the Federal Deposit Insurance Corporation Improvement Act (FDICIA). Banks that sell funds to other banks must have written policies to limit excessive exposure, must review the financial condition or credit rating of the debtor, must have internal limits on the size of exposures that are consistent with the credit risk, may not lend more than 25 percent of their
capital to a single borrowing bank, and must undertake other steps.

Banks that borrow federal funds or other borrowings from correspondent banks may find, as a result of the seller’s compliance with Regulation F, that the amount they may borrow has suddenly declined as a result of a reduction in their credit rating or credit quality. Regulation F may make it harder for a bank to use borrowings as a liquidity source for a bank-specific liquidity crisis.

D. Federal Reserve Regulation W

Federal Reserve Regulation W governs transactions between an insured bank or thrift and its affiliates. The regulation establishes a consistent and comprehensive compilation of requirements found in section 23A of the Federal Reserve Act, 70 years of Board interpretations of section 23A, section 23B of the Federal Reserve Act, and portions of the Gramm-Leach-Bliley Act of 1999. Covered transactions include purchases of assets from an affiliate, extensions of credit to an affiliate, investments in securities issued by an affiliate, guarantees on behalf of an affiliate, and certain other transactions that expose the member bank to an affiliate’s credit or investment risk. Derivatives transactions and intraday extensions of credit are also covered.

The intentions of the regulation are (1) to protect the depository institution, (2) to ensure that all transactions between the bank and its affiliates are on terms and conditions that are consistent with safe and sound banking practices, and (3) to limit the ability of a depository institution to transfer to its affiliates the subsidy arising from the institution’s access to the federal safety net. The regulation achieves these goals in four major ways:

1. It limits a member bank’s covered transactions with any single affiliate to no more than 10 percent of the bank’s capital stock and surplus, and limits transactions with all affiliates combined to no more than 20 percent of the bank’s capital stock and surplus.
2. It requires all transactions between a member bank and its affiliates to be on terms and conditions that are consistent with safe and sound banking practices.
3. It prohibits a member bank from purchasing low-quality assets from its affiliates.
4. It requires that a member bank’s extensions of credit to affiliates and guarantees on behalf of affiliates be appropriately secured by a statutorily defined amount of collateral.

Section 23B protects member banks by requiring that certain transactions between the bank and its affiliates occur on market terms, that is, on terms and under circumstances that are substantially the same, or at least as favorable to the bank, as those prevailing at the time for comparable transactions with unaffiliated companies. Section 23B applies the market-terms restriction to any covered transaction (as defined in section 23A) with an affiliate as well as certain other transactions, such as (1) any sale of assets by the member bank to an affiliate, (2) any payment of money or furnishing of services by the member bank to an affiliate, and (3) any transaction by the member bank with a third party if an affiliate has a financial interest in the third party or if an affiliate is a participant in the transaction.

Liquidity-risk managers working in banks that have affiliates must give careful attention to Regulation W, which addresses transactions between banks and their affiliates. In the normal course of business, the prohibition on unsecured funding can tie up collateral, complicate collateral management, and restrict the availability of funding from affiliates. In stressed conditions, all of those problems—plus the size limit and the prohibition on sales of low-quality assets to affiliates—effectively close down many transactions with affiliates.

E. Statutory Restriction of FHLB Advances

The Federal Home Loan Banks (FHLBs) provide a number of different advance programs with very attractive terms to member banks. Many banks now use the FHLBs for term funding. The FHLBs are very credit-sensitive lenders.

A federal regulation (12 CFR 935, Federal Housing Finance Board—Advances) requires the FHLBs to be credit-sensitive. In addition to monitoring the general financial condition of commercial banks and using rating information provided by bank rating agencies, the FHLBs have access to nonpublic regulatory information and supervisory actions taken...
against banks. The FHLBs often react quickly, sometimes before other funds providers, to reduce exposure to a troubled bank by not rolling over unsecured borrowing lines. Depending on the severity of a troubled bank’s condition, even the collateralized funding program may be discontinued or withdrawn at maturity because of concerns about the quality or reliability of the collateral or other credit-related concerns. Contractual provisions requiring increases in collateral may also be invoked. Any of these changes in FHLB-loan availability or terms can create significant liquidity problems, especially in banks that use large amounts of short-term FHLB funding.

F. Statutory Restriction on the Use of Brokered Deposits

The use of brokered deposits is restricted by 12 CFR 337.6. Well-capitalized banks may accept brokered deposits without restriction. Adequately capitalized banks must obtain a waiver from the FDIC to solicit, renew, or roll over brokered deposits. Adequately capitalized banks must also comply with restrictions on the rates that they pay for these deposits. Banks that have capital levels below adequately capitalized are prohibited from using brokered deposits. In addition to these restrictions, banking regulators have also issued detailed guidance, discussed in section H below, on the use of brokered deposits.

G. Legal Restrictions on Dividends

A number of statutory restrictions limit the amount of dividends that a bank may pay to its stockholders. As a result, a bank holding company that depends on cash from its bank subsidiaries can find this source of funds limited or closed. This risk is particularly significant for bank holding companies with nonbank subsidiaries that require funding or debt service.

H. Restrictions on Investments That Affect Liquidity-Risk Management

Interagency guidance issued in 1998 by the FFIEC, “Supervisory Policy Statement on Investment Securities and End-User Activities,” contains provisions that may affect liquidity and liquidity management. (See SR-98-12.) The following points summarize some of these potential impacts, although readers should review the entire rule for more-complete information.

1. When banks specify permissible instruments for accomplishing established objectives, they must take into account the liquidity of the market for those investments and the effect that liquidity may have on achieving their objective.

2. Banks are required to consider the effects that market risk can have on the liquidity of different types of instruments under various scenarios.

3. Banks are required to clearly articulate the liquidity characteristics of the instruments they use to accomplish institutional objectives.

In addition, the policy statement specifically highlights the greater liquidity risk inherent in complex and less actively traded instruments.

APPENDIX 3—INTERAGENCY GUIDANCE ON FUNDS TRANSFER PRICING RELATED TO FUNDING AND CONTINGENT LIQUIDITY RISKS

The Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), and the Office of the Comptroller of the Currency (OCC) issued this guidance on funds transfer pricing (FTP) practices related to funding risk (including interest rate and liquidity components) and contingent liquidity risk at large financial institutions (hereafter referred to as “firms”) to address weaknesses observed in some firms’ FTP practices.11 The guidance builds on the principles of sound liquidity risk management described in the “Interagency Policy Statement on Funding and

11. For purposes of this guidance, large financial institutions includes national banks, federal savings associations and state-chartered banks with consolidated assets of $250 billion or more, domestic bank and savings and loan holding companies with consolidated assets of $250 billion or more or foreign exposure of $10 billion or more, and foreign banking organizations with combined U.S. assets of $250 billion or more.
Liquidity Risk Management,\textsuperscript{12} and incorporates elements of the international statement issued by the Basel Committee on Banking Supervision titled "Principles for Sound Liquidity Risk Management and Supervision."\textsuperscript{13}

For purposes of this guidance, FTP refers to a process performed by a firm’s central management function that allocates costs and benefits associated with funding and contingent liquidity risks (FTP costs and benefits), as measured at transaction or trade inception, to a firm’s business lines, products, and activities. While this guidance specifically addresses FTP practices related to funding and contingent liquidity risks, firms may incorporate other risks in their overall FTP frameworks.

FTP is an important tool for managing a firm’s balance sheet structure and measuring risk-adjusted profitability. By allocating funding and contingent liquidity risks to business lines, products, and activities within a firm, FTP influences the volume and terms of new business and ongoing portfolio composition. This process helps align a firm’s funding and contingent liquidity risk profile and risk appetite and complements, but does not replace, broader liquidity and interest rate risk-management programs (for example, stress testing) that a firm uses to capture certain risks (for example, basis risk). If done effectively, FTP promotes more resilient, sustainable business models. FTP is also an important tool for centralizing the management of funding and contingent liquidity risks for all exposures. Through FTP, a firm can transfer these risks to a central management function that can take advantage of natural offsets, centralized hedging activities, and a broader view of the firm.

Failure to consistently and effectively apply FTP can misalign the risk-taking incentives of individual business lines with the firm’s risk appetite, resulting in a misallocation of financial resources. This misallocation can arise in new business and ongoing portfolio composition where the business metrics do not reflect risks taken, thereby underlining the business model.

Examples include entering into excessive off-balance sheet commitments and on-balance sheet asset growth because of mispriced funding and contingent liquidity risks.

The 2008 financial crisis exposed weak risk-management practices for allocating liquidity costs and benefits across business lines. Several firms “acknowledged that if robust FTP practices had been in place earlier, and if the systems had charged not just for funding but for liquidity risks, they would not have carried the significant levels of illiquid assets and the significant risks that were held off-balance sheet that ultimately led to sizable losses.”\textsuperscript{14} Refer to SR-16-3.

Funds Transfer Pricing Principles

A firm should have an FTP framework to support its broader risk-management and governance processes that incorporates the general principles described in this section and is commensurate with its size, complexity, business activities, and overall risk profile. The framework should incorporate FTP costs and benefits into product pricing, business metrics, and new product approval for all material business lines, products, and activities to align risk-taking incentives with the firm’s risk appetite.

\textbf{Principle 1: A firm should allocate FTP costs and benefits based on funding risk and contingent liquidity risk.}

A firm should have an FTP framework that allocates costs and benefits based on the following risks.

- \textit{Funding risk}, measured as the cost or benefit (including liquidity and interest rate components) of raising funds to finance ongoing business operations, should be allocated based on the characteristics of the business lines, products, and activities that give rise to those costs or benefits (for example, higher costs allocated to assets that will be held over a longer time horizon and greater benefits allocated to stable sources of funding).

\textsuperscript{13} The Basel Committee on Banking Supervision statement on “Principles for Sound Liquidity Risk Management and Supervision” (September 2008) is available at www.bis.org/publ/bcbs144.htm.

Contingent liquidity risk, measured as the cost of holding standby liquidity composed of unencumbered, highly liquid assets, should be allocated to the business lines, products, and activities that pose risk of contingent funding needs during a stress event (for example, draws on credit commitments, collateral calls, deposit run-off, and increasing haircuts on secured funding).

Principle 2: A firm should have a consistent and transparent FTP framework for identifying and allocating FTP costs and benefits on a timely basis and at a sufficiently granular level, commensurate with the firm’s size, complexity, business activities, and overall risk profile.

FTP costs and benefits should be allocated based on methodologies that are set forth by a firm’s FTP framework. The methodologies should be transparent, repeatable, and sufficiently granular such that they align business decisions with the firm’s desired funding and contingent liquidity risk appetite. To the extent a firm applies FTP at an aggregated level to similar products and activities, the firm should include the aggregating criteria in the report on FTP. Additionally, the senior management group that oversees FTP should review the basis for the FTP methodologies. The attachment to this interagency guidance describes illustrative FTP methodologies that a firm may consider when implementing its FTP framework.

A firm should allocate FTP costs and benefits, as measured at transaction or trade inception, to the appropriate business line, product, or activity. If a firm retains any FTP costs or benefits in a centrally managed pool pursuant to its FTP framework, it should analyze the implications of such decisions on business line incentives and the firm’s overall risk profile. The firm customarily would include its findings in the report on FTP.

The FTP framework should be implemented consistently across the firm to appropriately align risk-taking incentives. While it is possible to apply different FTP methodologies within a firm due to, among other things, legal entity type or specific jurisdictional circumstances, a firm should generally implement the FTP framework in a consistent manner across its corporate structure to reduce the likelihood of misaligned incentives. If there are implementation differences across the firm, management should analyze the implications of such differences on business line incentives and the firm’s overall funding and contingent liquidity risk profile. The firm customarily would include its findings in the report on FTP.

A firm should allocate, report, and update data on FTP costs and benefits at a frequency that is appropriate for the business line, product, or activity. Allocating, reporting, and updating of data should occur more frequently for trading exposures (for example, on a daily basis). Infrequent allocation, reporting, or updating of data for trading exposures (for example, based on month-end positions) may not fully capture a firm’s day-to-day funding and contingent liquidity risks. For example, a firm should monitor the age of its trading exposures, and those held longer than originally intended should be reassessed and FTP costs and benefits should be reallocated based on the modified holding period.

A firm’s FTP framework should address derivative activities commensurate with the size and complexity of those activities. The FTP framework may consider the fair value of current positions, the rights of rehypothecation for collateral received, and contingent outflows that may occur during a stress event.

To avoid a misalignment of risk-taking incentives, a firm should adjust its FTP costs and benefits as appropriate based on both market-wide and idiosyncratic conditions, such as trapped liquidity, reserve requirements, regulatory requirements, illiquid currencies, and settlement or clearing costs. These idiosyncratic conditions should be contemplated in the FTP framework, and the firm customarily would include a discussion of the implications in the report on FTP.

Principle 3: A firm should have a robust governance structure for FTP, including the production of a report on FTP and oversight from a senior management group and central management function.

A firm should have a senior management group that oversees FTP, which should include a broad
range of stakeholders, such as representatives from the firm’s asset-liability committee (if separate from the senior management group), the treasury function, and business line and risk management functions. This group should develop the policy underlying the FTP framework, which should identify assumptions, responsibilities, procedures, and authorities for FTP. The policy should be reviewed and updated on a regular basis or when the firm’s asset-liability structure or scope of activities undergoes a material change. Further, senior management with oversight responsibility for FTP should periodically, but no less frequently than quarterly, review the report on FTP to ensure that the established FTP framework is being properly implemented.

A firm should also establish a central management function tasked with implementing the FTP framework. The central management function should have visibility over the entire firm’s on- and off-balance sheet exposures. Among its responsibilities, the central management function should regularly produce and analyze a report on FTP generated from accurate and reliable management information systems. The report on FTP should be at a sufficiently granular level to enable the senior management group and central management function to effectively monitor the FTP framework (for example, at the business line, product, or activity level, as appropriate). Among other items, all material approvals, such as those related to any exception to the FTP framework, including the reason for the exception, would customarily be documented in the report on FTP. The report on FTP may be standalone or included within a broader risk-management report.

Independent risk and control functions and internal audit should provide oversight of the FTP process and assess the report on FTP, which should be reviewed as appropriate to reflect changing business and financial market conditions and to maintain the appropriate alignment of incentives. Lastly, consistent with existing supervisory guidance on model risk management,17 models used in FTP implementation should be independently validated and regularly reviewed to ensure that the models continue to perform as expected, that all assumptions remain appropriate, and that limitations are understood and appropriately mitigated.

Principle 4: A firm should align business incentives with risk-management and strategic objectives by incorporating FTP costs and benefits into product pricing, business metrics, and new product approval.

Through its FTP framework, a firm should incorporate FTP costs and benefits into product pricing, business metrics, and new product approval for all material business lines, products, and activities (both on- and off-balance sheet). The framework, the report on FTP, and any associated management information systems should be designed to provide decision makers sufficient and timely information about FTP costs and benefits so that risk-taking incentives align with the firm’s strategic objectives.

The information may be either at the transaction level or, if the transactions have homogenous funding and contingent liquidity risk characteristics, at an aggregated level. In deciding whether to allocate FTP costs and benefits at the transaction or aggregated level, firms should consider advantages and disadvantages of both approaches when developing the FTP framework. Although transaction-level FTP allocations may add complexity and involve higher implementation and maintenance costs, such allocations may provide a more accurate measure of risk-adjusted profitability. A firm assigning FTP allocations at an aggregated level should have aggregation criteria based on funding and contingent liquidity risk characteristics that are transparent.

There should be ongoing dialogue between the business lines and the central function responsible for allocating FTP costs and benefits to ensure that funding and contingent liquidity risks are being captured and are well-understood for product pricing, business metrics, and new product approval. The business lines should understand the rationale for the FTP costs and benefits, and the central function should understand the funding and contingent liquidity risks implicated by the business lines’ transactions. Decisions by senior management to incentivize certain behaviors through FTP costs and benefits customarily would be documented and included in the report on FTP.

Conclusion

A firm should use the principles laid out in this guidance to develop, implement, and maintain an effective FTP framework. In doing so, a firm’s risk-taking incentives should better align with its risk-management and strategic objectives. The framework should be adequately tailored to a firm’s size, complexity, business activities, and overall risk profile.

Interagency Guidance Attachment
Illustrative Funds Transfer Pricing Methodologies

March 1, 2016

The FTP methodologies described below are intended for illustrative purposes only and provide examples for addressing principles set forth in the guidance. A firm’s FTP framework should be commensurate with its size, complexity, business activities, and overall risk profile. In designing its FTP framework, a firm may utilize other methodologies that are consistent with the principles set forth in the guidance. Therefore, these illustrative methodologies should not be interpreted as directives for implementing any particular FTP methodology.

Non-Trading Exposures

For non-trading exposures, a firm’s FTP methodology may vary based on its business activities and specific exposures. For example, certain firms may have higher concentrations of exposures that have less predictable time horizons, such as non-maturity loans and non-maturity deposits.

**Matched-Maturity Marginal Cost of Funding**

Matched-maturity marginal cost of funding is a commonly used methodology for non-trading exposures. Under this methodology, FTP costs and benefits are based on a firm’s market cost of funds across the term structure (for example, wholesale long-term debt curve adjusted based on the composition of the firm’s alternate sources of funding such as Federal Home Loan Bank advances and customer deposits). This methodology incentivizes business lines to generate stable funding (for example, core deposits) by crediting them the benefit or premium associated with such funding. It also ensures that business lines are appropriately charged the cost of funding for the life of longer-dated assets (for example, a five-year commercial loan). Given that funding costs can change over time, the market cost of funds across the term structure should be derived from reliable and readily available data sources and be well understood by FTP users.

FTP rates should, as closely as possible, match the characteristics of the transaction or the aggregated transactions to which they are applied. In determining the appropriate point on the derived FTP curve for a transaction or pool of transactions, a firm could consider a variety of characteristics, including the holding period, cash flow, re-pricing, prepayments, and expected life of the transaction or pool. For example, for a five-year commercial loan that has a rate that resets every three months and will be held to maturity, the interest rate component of the funding risk could be based on a three-month horizon for determining the FTP cost, and the liquidity component of the funding risk could be based on a five-year horizon for determining the FTP cost. Thus, the total FTP cost for holding the five-year commercial loan would be the combination of these two components.

**Contingent Liquidity Risk**

A firm may calculate the FTP cost related to non-trading exposure contingent liquidity risk using models based on behavioral assumptions. For example, charges for contingent commitments could be based on their modeled likelihood of drawdown, considering customer drawdown history, credit quality, and other factors; whereas, credits applied to deposits could be based on volatility and modeled behavioral maturity. A firm should document and include all modeling analyses and assumptions in the report on FTP. If behavioral assumptions used in a firm’s FTP framework do not align with behavioral assumptions used in its internal stress test for similar types of non-trading exposures, the firm should document and include in the report on FTP these inconsistencies.
Trading Exposures

For trading exposures, a firm could consider a variety of factors, including the type of funding source (for example, secured or unsecured), the market liquidity of the exposure (for example, the size of the haircut relative to the overall exposure), the holding period of the position, the prevailing market conditions, and any potential impact the chosen approach could have on firm incentives and overall risk profile. If a firm’s trading activities are not material, its FTP framework may require a less complex methodology for trading exposures. The following FTP methodologies have been observed for allocating FTP costs for trading exposures.

Weighted Average Cost of Debt (WACD)

WACD is the weighted average cost of outstanding firm debt, usually expressed as a spread over an index. Some firms’ practices apply this rate to the amount of an asset expected to be funded unsecured (repurchase agreement market haircuts may be used to delineate between the amount being funded secured and the amount being funded unsecured). A firm using WACD should analyze whether the methodology misaligns risk-taking incentives and document such analyses in the report on FTP.

Marginal Cost of Funding

Marginal cost of funding sets the FTP costs at the appropriate incremental borrowing rate of a firm. Some firms’ practices apply a marginal secured borrowing rate to the amount of an asset expected to be funded secured and a marginal unsecured borrowing rate to the amount of an asset expected to be funded unsecured (repurchase agreement market haircuts may be used to delineate between the amount being funded secured and the amount being funded unsecured). A firm using marginal cost of funding should analyze whether the methodology misaligns risk-taking incentives, considering current market rates compared to historical rates, and document such analyses in the report on FTP.

Contingent Liquidity Risk

A firm may calculate the FTP costs related to contingent liquidity risk from trading exposures by considering the unencumbered liquid assets that are held to cover the potential for widening haircuts of trading exposures that are funded secured. If haircuts used in a firm’s FTP framework do not align with haircuts used in its internal stress test for similar types of trading exposures, the firm should document and include in the report on FTP these inconsistencies. Haircuts should be updated at a frequency that is appropriate for a firm’s trading activities and market conditions.

A firm may also include the FTP costs related to contingent liquidity risk from potential derivative outflows in stressed market conditions, which may be due to, for example, credit rating downgrades, additional termination rights, or market shocks and volatility.
Liquidity Risk
Examination Objectives
Effective date October 2010

1. To appropriately risk-focus the scope of the examination (that is, ensure that the scope is appropriate, given the institution’s activities and the risks they present).
2. To assess the relative volatility or stability of the institution’s liability funding sources.
3. To assess the institution’s access to liquidity.
4. To assess the institution’s potential liquidity needs.
5. To assess (1) the institution’s exposure to mismatched risk under normal business conditions and (2) its planned strategies for addressing this risk.
6. To assess the institution’s exposure to contingent liquidity risk.
7. To assess the appropriateness and integrity of the institution’s corporate-governance policies for management of liquidity risk.
8. To determine whether the institution’s policies, procedures, and limits are adequate, given its size, complexity, and sophistication.
9. To determine if management is adequately planning for intermediate-term and longer-term liquidity or funding needs.
10. To assess the adequacy of the institution’s liquidity-risk measurement systems.
11. To assess the adequacy of the institution’s liquidity-risk management information systems.
12. To assess the adequacy of the institution’s contingency funding plans.
13. To assess the adequacy of the institution’s internal controls for its liquidity-risk management process.
14. To determine whether the institution is complying with applicable laws and regulations.
**EXAMINATION SCOPE**

1. Review the following documents to identify issues that may require follow-up:
   a. prior examination findings and workpapers
   b. audit reports, and
   c. ongoing monitoring risk assessments (if available)

2. Review appropriate surveillance material, including the Uniform Bank Performance Report (UBPR), BHC Performance Report, and other reports, to identify liquidity trends and the liquidity-risk profile of the institution. This review should include assessments of the marketability of assets and the relative stability or volatility of funding sources.

3. Request and review internal reports management uses to monitor liquidity risk, including the following reports:
   a. senior management, asset/liability committee (ALCO), and for the board of directors’ meetings
   b. cash-flow-projection reports
   c. contingency funding plans (CFPs)
   d. funding-concentration reports

4. Request and review organizational charts and liquidity-risk management policies and procedures.

5. Review the potential liquidity-risk exposure arising from the financial condition of the institution or other trends, such as asset growth, asset quality, earnings trends, capital adequacy, market-risk exposures (interest-rate risk (IRR) exposures for both the banking book and the trading book), business-line operational considerations, and the potential for legal and reputational risk.

On the basis of the hypothesis developed for both the institution’s inherent liquidity-risk exposure and the adequacy of its liquidity management, select the steps necessary to meet examination objectives from the following procedures.

**ASSESSMENT OF INHERENT LIQUIDITY RISK**

1. Review the institution’s deposit structure. Discuss the following issues with management: the institution’s customer base, costs, and pricing strategies, as well as the stability of various types of deposits. This review should include—
   a. assumptions about deposit behaviors the institution uses in making its cash-flow projections and in conducting its IRR analyses;
   b. the competitiveness of rates paid on deposits, from both a national and local-market-area perspective;
   c. lists of large depositors, potential deposit concentrations, and large deposit maturities;
   d. the institution’s use of brokered deposits and deposits from entities that may be especially sensitive to market rates and credit quality; and
   e. public fund deposits, including pledging requirements and pricing policies.

2. Review the institution’s use of nondeposit liabilities. Discuss with management its strategies for employing such funds, the sensitivity of such funds to market rates, and the credit quality of the institution. This review should include—
   a. the types, costs, amounts, and concentrations of nondeposit liabilities used by the institution;
   b. the strategies underlying the use of any Federal Home Loan Bank (FHLB) advances and the specific features of those borrowings, including the existence of any options, to determine if the institution adequately understands the risk profile of these borrowings;
   c. the activities the institution funds with nondeposit liabilities;
   d. the institution’s use of short-term liabilities; and
   e. compliance with the written agreements for borrowings.

3. Review the institution’s holdings of marketable assets as liquidity reserves. This review should include—
   a. the quality, maturity, marketability, and
amount of unpledged investment securities;
b. pledgable and securitizable loans and existing activities in this area; and
c. a discussion with management on its strategies for maintaining liquid asset reserves.

4. When applicable, review the institution’s access to debt markets as a source of liquidity. This review should include—
a. the strength of current short- and longer-term debt ratings, including an assessment of the potential for “watch-listing” or downgrades;
b. the breadth of the investor base for the company’s debt;
c. current and future issuance plans;
d. concentrations of borrowed funds;
e. the availability to utilize FHLB or other wholesale funds providers; and
f. the institution’s reputation in the capital markets and with major funds providers.

5. Review the institution’s business activities that may have a significant impact on its liquidity needs. This review should include—
a. the institution’s ability to securitize assets and the amount of its current and anticipated securitization activities;
b. payments- or securities-processing activities and other activities that may heighten the impact of operational risk on the liquidity of the firm;
c. the amount and nature of trading and over-the-counter (OTC) derivative activities that may have an impact on liquidity;
d. the extent of off-balance-sheet (OBS) loan commitments;
e. the balance-sheet composition, including significant concentrations that may have an impact on liquidity; and
f. operational risks associated with the institution’s business activities, risks inherent in the corporate structure, or external factors that may have an impact on liquidity.

6. Review the institution’s cash-flow projections.

7. Discuss with management the institution’s strategies for dealing with seasonal, cyclical, and planned asset-growth funding strategies, including its assessment of alternative funding sources.

8. Review and discuss with management the institution’s identification of potential contingent liquidity events and the various levels of stress those events entail. Determine if the chosen scenarios are appropriate, given the institution’s business activities and funding structure.

9. Review cash-flow projections the institution has constructed for selected contingent liquidity events. Review the assumptions underlying the projections, including sources of funds to be used in a contingent liquidity event and the reports and assumptions on behavioral cash flows.

10. Review the assumptions and trends in the institution’s liquidity-risk “triggers.”

11. Review CFPs.

12. When appropriate, review reports on liquidity-risk triggers in the institution’s securitization activities.

13. On the basis of the above procedures, determine if the institution’s inherent liquidity risk is low, limited, moderate, considerable, or high.

ASSESSMENT OF THE QUALITY OF LIQUIDITY-RISK MANAGEMENT

1. Review formally adopted policies and procedures, as well as reports to the board of directors and senior management, to determine the adequacy of their oversight. This review should include whether the board and senior management—
a. have identified lines of authority and responsibility;
b. have articulated the institution’s general liquidity strategies and its approach to liquidity risk;
c. understand the institution’s liquidity CFPs; and
d. periodically review the institution’s liquidity-risk profile.

2. Review senior management structures in order to determine their adequacy for overseeing and managing the institution’s liquidity. This review should include—
a. whether the institution has designated an ALCO or other management decision-making body;
b. the frequency of ALCO meetings and the adequacy of the reports presented;
c. decisions made by the ALCO and validation of follow-up on those decisions,
including ongoing assessment of open issues;
d. the technical and managerial expertise of management and personnel involved in liquidity management; and
e. whether the institution has clearly delineated centralized and decentralized liquidity-management responsibilities.

3. Review and discuss with management the institution’s liquidity-risk policies, procedures, and limits, and determine their appropriateness, comprehensiveness, and accuracy. Policies, procedures, and limits should—
a. identify the objectives and strategies of the institution’s liquidity management and its expected and preferred reliance on various sources of funds to meet liquidity needs under alternative scenarios;
b. delineate clear lines of responsibility and accountability over liquidity-risk management and management decision-making;
c. be consistent with institution practices;
d. identify the process for setting and reassessing limits, and communicate the rationale for the limit structure;
e. identify the process for setting and reassessing limits, and communicate the rationale for the limit structure;
f. specify quantitative limits and guidelines that define the acceptable level of risk for the institution, such as the use of maximum and targeted amounts of cash-flow mismatches, liquidity reserves, volatile liabilities, and funding concentrations;
g. specify the frequency and methods used to measure, monitor, and control liquidity risk; and

4. Review and discuss with management the bank’s budget projections for the appropriate planning period. Ascertain if management has adequately—
a. planned the future direction of the bank, noting the projected growth, the source of funding for the growth, and any projected changes in its asset or liability mix;
b. developed future plans for meeting ongoing liquidity needs; and
c. assessed the reasonableness of its plans to achieve (1) the amounts and types of funding projected and (2) the amounts and types of asset growth projected.

Determine if management has identified alternative sources of funds if plans are not met.

5. Review the reasonableness of bank-established parameters for the use of volatile liabilities.

6. Review liquidity-risk measurement policies, procedures, methodologies, models, assumptions, and other documentation. Discuss with management the—
a. adequacy and comprehensiveness of cash-flow projections and supporting analysis used to manage liquidity;
b. appropriateness of summary measures and ratios to adequately reflect the liquidity-risk profile of the institution;
c. appropriateness of the identification of stable and volatile sources of funding;
d. comprehensiveness of alternative contingent liquidity scenarios incorporated in the ongoing estimation of liquidity needs; and
e. the validity and appropriateness of assumptions used in constructing liquidity-risk measures.

7. Review liquidity-risk management policies, procedures, and reports. Discuss with management the frequency and comprehensiveness of liquidity-risk reporting for the various levels of management that are responsible for monitoring and managing liquidity risk. These considerations should include the following:
a. management’s need to receive reports that—
   • determine compliance with limits and controls;
   • evaluate the results of past strategies;
   • assess the potential risks and returns of proposed strategies;
   • identify the major changes in a bank’s liquidity-risk profile; and
   • consolidate holding company and bank subsidiary information.
b. the need for the reporting system to be flexible enough to—
   • quickly collect and edit data, summarize results, and adapt to changing circumstances or issues without compromising data integrity; and
   • increase the frequency of report preparation as business conditions deteriorate.
c. the need for reports to properly focus on monitoring liquidity and supporting
decisionmaking. These reports often help bank management to monitor—
- sources and uses of cash flows (i.e., cash flows from operating, investing, and financing activities), facilitating the evaluation of trends and structural balance-sheet changes;
- CFPs;
- projected cash-flow or maturity gaps, identifying potential future liquidity needs (reports should show projections using both contractual principal and interest runoffs and maturities (original maturity dates) and behavioral principal and interest runoffs and maturities (maturities attributable to the expected behaviors of customers));
- consolidated large funds providers, identifying customer concentrations (reports should identify and aggregate major liability instruments used by large customers across all banks in the holding company); and
- the cost of funds from all significant funding sources, enabling management to quickly compare costs.

8. Review the liquidity CFP and the minutes of ALCO meetings and board meetings. Discuss with management the adequacy of the institution’s—
   a. customization of its CFP to fit its liquidity-risk profile;
   b. identification of potential stress events and the various levels of stress that can occur under those events;
   c. quantitative assessment of its short-term and intermediate-term funding needs during stress events, particularly the reasonableness of the assumptions the institution used to forecast its potential liquidity needs;
   d. comprehensiveness in forecasting cash flows under stress conditions (forecasts should incorporate OBS and payment systems and the operational implications of cash-flow forecasts);
   e. identification of potential sources of liquidity under stress events;
   f. operating policies and procedures, including the delineation of responsibilities, to be implemented in stress events, for communicating with various stakeholders;
   g. prioritization of actions for responding to stress situations;
   h. identification and use of contingent liquidity-risk triggers to monitor, on an ongoing basis, the potential for contingent liquidity events; and
   i. testing of the operational elements of the CFP.

9. Determine whether the board and senior management have established clear lines of authority and responsibility for monitoring adherence to policies, procedures, and limits. Review policies, procedures, and reports to ascertain whether the institution’s—
   a. measurement system adequately captures and quantifies risk;
   b. limits are comprehensive, appropriately defined, and communicated to management in a timely manner; and
   c. risk reports are regularly and formally discussed by management and whether meeting minutes are adequately documented.

10. Determine whether internal controls and information systems are adequately tested and reviewed by ascertaining if the institution’s—
   a. risk-measurement tools are accurate, independent, and reliable;
   b. testing of controls is adequate and frequent enough, given the level of risk and sophistication of risk-management decisions; and
   c. reports provide relevant information, including comments on major changes in risk profiles.

11. Determine whether the liquidity-management function is audited internally or is evaluated by the risk-management function. Determine whether the audit and/or evaluation is independent and of sufficient scope.

12. Determine whether audit findings and management responses to those findings are fully documented and tracked for adequate follow-up.

13. Determine whether line management is held accountable for unsatisfactory or ineffective follow-up.

14. Determine whether risk managers give identified material weaknesses appropriate and timely attention.

15. Assess whether actions taken by management to deal with material weaknesses have been verified and reviewed for objectivity and adequacy by senior management or the board.

16. Determine whether the board and senior
management have established adequate procedures for ensuring compliance with applicable laws and regulations.

17. Assess the institution’s compliance with applicable laws and regulations as they pertain to deposit accounts.

18. Assess the institution’s compliance with laws and regulations, as well as potential risk exposures arising from interbank credit exposure.

19. Assess the institution’s compliance with regulations A, D, F, and W; statutory restrictions on the use of brokered deposits; and legal restrictions on dividends. Assess whether CFPs comply with these regulations and restrictions.

20. On the basis of the above procedures, determine whether the quality of the institution’s liquidity-risk management is unsatisfactory, marginal, fair, satisfactory, or strong.
Review the bank’s internal controls, policies, practices, and procedures for managing funding liquidity risk. The bank’s system should be documented completely and concisely and should include, when appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information.

1. Has the board of directors, consistent with its duties and responsibilities, reviewed and ratified funds-management policies, practices, and procedures that include—
   a. clear lines of authority, responsibility, and accountability for liquidity-risk management decisions?
   b. an articulated general liquidity strategy and approach to liquidity-risk management?
   c. the review and approval of policies, including liquidity contingency funding plans?
   d. the specific procedures and approvals necessary for exceptions to policies, limits, and authorizations?
   e. established procedures for ensuring compliance with applicable laws and regulations?

2. Does senior management provide adequate oversight to manage the institution’s liquidity risk?
   a. Has senior management established clear lines of authority and responsibility for monitoring adherence to policies, procedures, and limits?
   b. Are clear lines of responsibility and accountability delineated over liquidity-risk management and management decisionmaking?
   c. Is there a designated asset/liability committee (ALCO) or other management decisionmaking body in which liquidity risk is appropriately discussed? Does the institution have a separate liquidity-risk management function?
   d. Is the frequency of ALCO meetings appropriate, and are the reports presented at meetings adequate?
   e. Does management regularly and formally discuss risk reports, and are meeting minutes and decisions adequately documented?
   f. Is the technical and managerial expertise of management and personnel involved in liquidity management appropriate for the institution?
   g. Are senior management’s centralized and decentralized liquidity-management responsibilities clearly delineated?

3. Are the institution’s policies, procedures, and limits for liquidity risk appropriate and sufficiently comprehensive to adequately control the range of liquidity risk for the level of the institution’s activity?
   a. Do the policies and procedures identify the objectives and strategies of the institution’s liquidity management, and do they include the institution’s expected and preferred reliance on various sources of funds to meet liquidity needs under alternative scenarios?
   b. Are policies and procedures consistent with institution practices?
   c. Are the limits comprehensive and appropriately defined for the institution’s level of activity? Are limit exceptions communicated to management in a timely manner?
   d. Is there a formal process for setting, reassessing, and communicating the rationale for the limit structure?
   e. Do quantitative limits and guidelines define the acceptable level of risk for the institution (i.e., maximum and targeted amounts of cash-flow mismatches, liquidity reserves, volatile liabilities, funding concentrations, etc.)?
   f. Are the frequency and methods used to measure, monitor, and control liquidity risk specified?

4. Are liquidity-risk measurement methodologies, models, assumptions, and reports, as well as other liquidity-risk management documentation, sufficiently adequate, comprehensive, and appropriate?
   a. Is liquidity-risk management involved in the financial institution’s new-product discussions?
   b. Has the institution developed future growth plans and ongoing funding needs, and the sources of funding to meet those needs?
   c. Has the institution developed alternative sources of funds to be used if its future plans are not met?
   d. Does management adequately utilize comprehensive cash-flow projections and commercial bank examination manual
supporting analysis in order to manage the institution’s liquidity?
e. Does the institution utilize appropriate summary measures and ratios that adequately reflect its liquidity-risk profile?
f. Do the above reports provide relevant information, including comments on major changes in risk profiles?
g. Does the planning and budgeting function consider liquidity requirements?
h. Are internal management reports concerning liquidity needs and sources of funds to meet those needs prepared regularly and reviewed, as appropriate, by senior management and the board of directors?

5. Does an independent party regularly review and evaluate the components of the liquidity-risk management function?
   a. Is the liquidity-risk management function audited internally, or is it evaluated by the risk-management function? Are the audit and/or evaluation of the liquidity-risk management process and controls independent and of sufficient scope?
   b. Are audit findings and management responses to those findings fully documented and tracked for adequate follow-up?
c. Do the internal controls and internal audit reviews ensure compliance with internal liquidity-management policies and procedures?
d. Is line management held accountable for unsatisfactory or ineffective follow-up?
e. Do risk managers give identified material weaknesses appropriate and timely attention? Are their actions verified and reviewed for objectivity and adequacy by senior management or the board?

6. Are internal controls and information systems adequately tested and reviewed?
   a. Are risk-measurement tools accurate, independent, and reliable?
   b. Is the frequency for the testing of controls adequate, given the level of risk and sophistication of risk-management decisions?

7. On the basis of a composite evaluation, as evidenced by answers to the foregoing questions, are the internal controls and internal audit procedures considered adequate?
LIQUIDITY-RISK MANAGEMENT USING THE FEDERAL RESERVE’S PRIMARY CREDIT PROGRAM

The Federal Reserve’s primary credit program (discount window) offers depository institutions an additional source of available funds (at a rate above the target federal funds rate) for managing short-term liquidity risks. Management should fully assess the potential role that the Federal Reserve’s primary credit program might play in managing their institution’s liquidity. The primary credit program can be a viable source of very short-term backup funds. Management may find it appropriate to incorporate the availability of the primary credit program into their institution’s diversified liquidity-management policies, procedures, and contingency plans. The primary credit program has the following attributes that make the discount window a viable source of backup or contingency funding for short-term purposes:

• Primary credit provides a simpler, less-burdensome administrative process and a more accessible source of backup, short-term funding.
• Primary credit can enhance diversification in short-term funding contingency plans.
• Borrowings can be secured with an array of collateral, including consumer and commercial loans.
• Requests for primary credit advances can be made anytime during the day.
• There are no restrictions on the use of short-term primary credit.

If an institution incorporates primary credit into its contingency plans, the institution should ensure that it has in place with the appropriate Reserve Bank the necessary collateral arrangements and documentation. This is particularly important when the intended collateral consists of loans or other assets that may involve significant processing or lead time for pledging to the Reserve Bank.

It is a long-established sound practice for institutions to periodically test all sources of contingency funding. Accordingly, if an institution incorporates primary credit in its contingency plans, management should occasionally test the institution’s ability to borrow at the discount window. The goal of such testing is to ensure that there are no unexpected impediments or complications in the case that such contingency lines need to be used.

Institutions should ensure that any planned use of primary credit is consistent with the stated purposes and objectives of the program. Under the primary credit program, the Federal Reserve generally expects to extend funds on a very short-term basis, usually overnight. Therefore, as with any other type of short-term contingency funding, institutions should ensure that any use of primary credit facilities for short-term liquidity contingencies is accompanied by viable take-out or exit strategies to replace this funding expeditiously with other sources of funding. Institutions should factor into their contingency plans an analysis of their eligibility for primary credit under various scenarios, recognizing that if their financial condition were to deteriorate, primary credit may not be available. Under those scenarios, secondary credit may be available.

Another critical element of liquidity management is an appropriate assessment of the costs and benefits of various sources of potential liquidity. This assessment is particularly important in managing short-term and day-to-day sources and uses of funds. Given the above-market rates charged on primary credit, institutions should ensure that they adequately assess the higher costs of this form of credit relative to other available sources. Extended use of any type of relatively expensive source of funds can give rise to significant earnings implications which, in turn, may lead to supervisory concerns.

It is also important to note that the Federal Reserve’s primary credit facility is only one of many tools institutions may use in managing their liquidity-risk profiles. An institution’s management should ensure that the institution maintains adequate access to a diversified array of readily available and confirmed funding sources,
including liquid assets such as high-grade investment securities and a diversified mix of wholesale and retail borrowings. (See SR-03-15.)

Supervisory and Examiner Considerations

Because primary credit can serve as a viable source of backup, short-term funds, supervisors and examiners should view the occasional use of primary credit as appropriate and unexceptional. At the same time, however, supervisors and examiners should be cognizant of the implications that too-frequent use of this source of relatively expensive funds may have for the earnings, financial condition, and overall safety and soundness of the institution. Overreliance on primary credit borrowings, or any one source of short-term contingency funds, regardless of the relative costs, may be symptomatic of deeper operational or financial difficulties. Importantly, the use of primary credit, as with the use of any potential sources of contingency funding, is a management decision that must be made in the context of safe and sound banking practices.
Banking organizations should be attentive to the possible adverse consequences (including financial loss) of decisions based on models that are incorrect or misused and should address those consequences through active model risk management. The key aspects of an effective model risk-management framework are described in more detail below, including robust model development, implementation, and use; effective validation; and sound governance, policies, and controls. (See SR-11-7.)

INTRODUCTION—PART I

Banks rely heavily on quantitative analysis and models in most aspects of financial decision making. They routinely use models for a broad range of activities, including underwriting credits; valuing exposures, instruments, and positions; measuring risk; managing and safeguarding client assets; determining capital and reserve adequacy; and many other activities. In recent years, banks have applied models to more complex products and with more ambitious scope, such as enterprise-wide risk measurement, while the markets in which they are used have also broadened and changed. Changes in regulation have spurred some of the recent developments, particularly the U.S. regulatory capital rules for market, credit, and operational risk based on the framework developed by the Basel Committee on Banking Supervision. Even apart from these regulatory considerations, however, banks have been increasing the use of data-driven, quantitative decision making tools for a number of years.

The expanding use of models in all aspects of banking reflects the extent to which models can improve business decisions, but models also come with costs. There is the direct cost of devoting resources to develop and implement models properly. There are also the potential indirect costs of relying on models, such as the possible adverse consequences (including financial loss) of decisions based on models that are incorrect or misused. Those consequences should be addressed by active management of model risk.

This guidance describes the key aspects of effective model risk management. Part II explains the purpose and scope of the guidance, and part III gives an overview of model risk management. Part IV discusses robust model development, implementation, and use. Part V describes the components of an effective validation framework. Part VI explains the salient features of sound governance, policies, and controls over model development, implementation, use, and validation. Part VII concludes.

PURPOSE AND SCOPE—PART II

The purpose of this section is to provide comprehensive guidance for banks on effective model risk management. Rigorous model validation plays a critical role in model risk management; however, sound development, implementation, and use of models are also vital elements. Furthermore, model risk management encompasses governance and control mechanisms such as board and senior management oversight, policies and procedures, controls and compliance, and an appropriate incentive and organizational structure.

Previous guidance and other publications issued by the Office of the Comptroller of the Currency (OCC) and the Federal Reserve on the use of models pay particular attention to model validation. Based on supervisory and industry experience over the past several years, this document expands on existing guidance—most importantly by broadening the scope to include

1. Unless otherwise indicated, banks refers to national banks and all other institutions for which the Office of the Comptroller of the Currency is the primary supervisor, and to bank holding companies, state member banks, and all other institutions for which the Federal Reserve Board is the primary supervisor.

all aspects of model risk management. Many banks may already have in place a large portion of these practices, but all banks should ensure that internal policies and procedures are consistent with the risk-management principles and supervisory expectations contained in this guidance. Details may vary from bank to bank, as practical application of this guidance should be customized to be commensurate with a bank’s risk exposures, its business activities, and the complexity and extent of its model use. For example, steps taken to apply this guidance at a community bank using relatively few models of only moderate complexity might be significantly less involved than those at a larger bank where use of models is more extensive or complex.

OVERVIEW OF MODEL RISK MANAGEMENT—PART III

For the purposes of this section, the term *model* refers to a quantitative method, system, or approach that applies statistical, economic, financial, or mathematical theories, techniques, and assumptions to process input data into quantitative estimates. A *model* consists of three components: an information input component, which delivers assumptions and data to the model; a processing component, which transforms inputs into estimates; and a reporting component, which translates the estimates into useful business information. Models meeting this definition might be used for analyzing business strategies; informing business decisions; identifying and measuring risks; valuing exposures, instruments, or positions; conducting stress testing; assessing adequacy of capital; managing client assets; measuring compliance with internal limits; maintaining the formal control apparatus of the bank; meeting financial or regulatory reporting requirements; and issuing public disclosures. The definition of *model* also covers quantitative approaches whose inputs are partially or wholly qualitative or based on expert judgment, provided that the output is quantitative in nature.3

Models are simplified representations of real-world relationships among observed characteristics, values, and events. Simplification is inevitable, due to the inherent complexity of those relationships, but also intentional, to focus attention on particular aspects considered to be most important for a given model application. Model quality can be measured in many ways: precision, accuracy, discriminatory power, robustness, stability, and reliability, to name a few. Models are never perfect, and the appropriate metrics of quality, and the effort that should be put into improving quality, depend on the situation. For example, precision and accuracy are relevant for models that forecast future values, while discriminatory power applies to models that rank order risks. In all situations, it is important to understand a model’s capabilities and limitations given its simplifications and assumptions.

The use of models invariably presents model risk, which is the potential for adverse consequences from decisions based on incorrect or misused model outputs and reports. Model risk can lead to financial loss, poor business and strategic decision making, or damage to a bank’s reputation. Model risk occurs primarily for two reasons:

- The model may have fundamental errors and may produce inaccurate outputs when viewed against the design objective and intended business uses. The mathematical calculation and quantification exercise underlying any model generally involves application of theory, choice of sample design and numerical routines, selection of inputs and estimation, and implementation in information systems. Errors can occur at any point from design through implementation. In addition, shortcuts, simplifications, or approximations used to manage complicated problems could compromise the integrity and reliability of outputs from those calculations. Finally, the quality of model outputs depends on the quality of input data and assumptions, and errors in inputs or incorrect assumptions will lead to inaccurate outputs.

- The model may be used incorrectly or inappropriately. Even a fundamentally sound model producing accurate outputs consistent with the design objective of the model may exhibit high model risk if it is misapplied or misused. Models by their nature are simplifications of reality, and real-world events may prove those simplifications inappropriate. This is even more of a concern if a model is used outside the environment for which it was designed. Banks may do this intentionally as they apply...
existing models to new products or markets, or inadvertently as market conditions or customer behavior changes. Decision makers need to understand the limitations of a model to avoid using it in ways that are not consistent with the original intent. Limitations come in part from weaknesses in the model due to its various shortcomings, approximations, and uncertainties. Limitations are also a consequence of assumptions underlying a model that may restrict the scope to a limited set of specific circumstances and situations.

Model risk should be managed like other types of risk. Banks should identify the sources of risk and assess the magnitude. Model risk increases with greater model complexity, higher uncertainty about inputs and assumptions, broader use, and larger potential impact. Banks should consider risk from individual models and in the aggregate. Aggregate model risk is affected by interaction and dependencies among models; reliance on common assumptions, data, or methodologies; and any other factors that could adversely affect several models and their outputs at the same time. With an understanding of the source and magnitude of model risk in place, the next step is to manage it properly.

A guiding principle for managing model risk is “effective challenge” of models, that is, critical analysis by objective, informed parties who can identify model limitations and assumptions and produce appropriate changes. Effective challenge depends on a combination of incentives, competence, and influence. Incentives to provide effective challenge to models are stronger when there is greater separation of that challenge from the model development process and when challenge is supported by well-designed compensation practices and corporate culture. Competence is a key to effectiveness since technical knowledge and modeling skills are necessary to conduct appropriate analysis and critique. Finally, challenge may fail to be effective without the influence to ensure that actions are taken to address model issues. Such influence comes from a combination of explicit authority, stature within the organization, and commitment and support from higher levels of management.

Even with skilled modeling and robust validation, model risk cannot be eliminated, so other tools should be used to manage model risk effectively. Among these are establishing limits on model use, monitoring model performance, adjusting or revising models over time, and supplementing model results with other analysis and information. Informed conservatism, in either the inputs or the design of a model or through explicit adjustments to outputs, can be an effective tool, though not an excuse to avoid improving models.

As is generally the case with other risks, materiality is an important consideration in model risk management. If at some banks the use of models is less pervasive and has less impact on their financial condition, then those banks may not need as complex an approach to model risk management in order to meet supervisory expectations. However, where models and model output have a material impact on business decisions, including decisions related to risk management and capital and liquidity planning, and where model failure would have a particularly harmful impact on a bank’s financial condition, a bank’s model risk-management framework should be more extensive and rigorous.

Model risk management begins with robust model development, implementation, and use. Another essential element is a sound model validation process. A third element is governance, which sets an effective framework with defined roles and responsibilities for clear communication of model limitations and assumptions, as well as the authority to restrict model usage. Each of these elements is discussed in the following sections.

MODEL DEVELOPMENT, IMPLEMENTATION, AND USE—PART IV

Model risk management should include disciplined and knowledgeable development and implementation processes that are consistent with the situation and goals of the model user and with bank policy. Model development is not a straightforward or routine technical process. The experience and judgment of developers, as much as their technical knowledge, greatly influence the appropriate selection of inputs and processing components. The training and experience of developers exercising such judgment affects the extent of model risk. Moreover, the modeling exercise is often a multidisciplinary activity drawing on economics, finance, statistics, mathematics, and other fields. Models are
Model Development and Implementation

An effective development process begins with a clear statement of purpose to ensure that model development is aligned with the intended use. The design, theory, and logic underlying the model should be well documented and generally supported by published research and sound industry practice. The model methodologies and processing components that implement the theory, including the mathematical specification and the numerical techniques and approximations, should be explained in detail with particular attention to merits and limitations. Developers should ensure that the components work as intended, are appropriate for the intended business purpose, and are conceptually sound and mathematically and statistically correct. Comparison with alternative theories and approaches is a fundamental component of a sound modeling process.

The data and other information used to develop a model are of critical importance; there should be rigorous assessment of data quality and relevance, and appropriate documentation. Developers should be able to demonstrate that such data and information are suitable for the model and that they are consistent with the theory behind the approach and with the chosen methodology. If data proxies are used, they should be carefully identified, justified, and documented. If data and information are not representative of the bank’s portfolio or other characteristics, or if assumptions are made to adjust the data and information, these factors should be properly tracked and analyzed so that users are aware of potential limitations. This is particularly important for external data and information (from a vendor or outside party), especially as they relate to new products, instruments, or activities.

An integral part of model development is testing, in which the various components of a model and its overall functioning are evaluated to determine whether the model is performing as intended. Model testing includes checking the model’s accuracy, demonstrating that the model is robust and stable, assessing potential limitations, and evaluating the model’s behavior over a range of input values. It should also assess the impact of assumptions and identify situations where the model performs poorly or becomes unreliable. Testing should be applied to actual circumstances under a variety of market conditions, including scenarios that are outside the range of ordinary expectations, and should encompass the variety of products or applications for which the model is intended. Extreme values for inputs should be evaluated to identify any boundaries of model effectiveness. The impact of model results on other models that rely on those results as inputs should also be evaluated. Included in testing activities should be the purpose, design, and execution of test plans, summary results with commentary and evaluation, and detailed analysis of informative samples. Testing activities should be appropriately documented.

The nature of testing and analysis will depend on the type of model and will be judged by different criteria depending on the context. For example, the appropriate statistical tests depend on specific distributional assumptions and the purpose of the model. Furthermore, in many cases statistical tests cannot unambiguously reject false hypotheses or accept true ones based on sample information. Different tests have different strengths and weaknesses under different conditions. Any single test is rarely sufficient, so banks should apply a variety of tests to develop a sound model.

Banks should ensure that the development of the more judgmental and qualitative aspects of their models is also sound. In some cases, banks may take statistical output from a model and modify it with judgmental or qualitative adjustments as part of model development. While such practices may be appropriate, banks should ensure that any such adjustments made as part of the development process are conducted in an
appropriate and systematic manner and are well documented.

Models typically are embedded in larger information systems that manage the flow of data from various sources into the model and handle the aggregation and reporting of model outcomes. Model calculations should be properly coordinated with the capabilities and requirements of information systems. Sound model risk management depends on substantial investment in supporting systems to ensure data and reporting integrity, together with controls and testing to ensure proper implementation of models, effective systems integration, and appropriate use.

**Model Use**

Model use provides additional opportunity to test whether a model is functioning effectively and to assess its performance over time as conditions and model applications change. It can serve as a source of productive feedback and insights from a knowledgeable internal constituency with strong interest in having models that function well and reflect economic and business realities. Model users can provide valuable business insight during the development process. In addition, business managers affected by model outcomes may question the methods or assumptions underlying the models, particularly if the managers are significantly affected by, and do not agree with, the outcome. Such questioning can be healthy if it is constructive and causes model developers to explain and justify the assumptions and design of the models.

However, challenge from model users may be weak if the model does not materially affect their results, if the resulting changes in models are perceived to have adverse effects on the business line, or if change in general is regarded as expensive or difficult. User challenges also tend not to be comprehensive because they focus on aspects of models that have the most direct impact on the user’s measured business performance or compensation, and thus may ignore other elements and applications of the models. Finally, such challenges tend to be asymmetric because users are less likely to challenge an outcome that results in an advantage for them. Indeed, users may incorrectly believe that model risk is low simply because outcomes from model-based decisions appear favorable to the institution. Thus, the nature and motivation behind model users’ input should be evaluated carefully, and banks should also solicit constructive suggestions and criticism from sources independent of the line of business using the model.

Reports used for business decision making play a critical role in model risk management. Such reports should be clear and comprehensible and take into account the fact that decision makers and modelers often come from quite different backgrounds and may interpret the contents in different ways. Reports that provide a range of estimates for different input-value scenarios and assumption values can give decision makers important indications of the model’s accuracy, robustness, and stability as well as information on model limitations.

An understanding of model uncertainty and inaccuracy and a demonstration that the bank is accounting for them appropriately are important outcomes of effective model development, implementation, and use. Because they are by definition imperfect representations of reality, all models have some degree of uncertainty and inaccuracy. These can sometimes be quantified, for example, by an assessment of the potential impact of factors that are unobservable or not fully incorporated in the model, or by the confidence interval around a statistical model’s point estimate. Indeed, using a range of outputs, rather than a simple point estimate, can be a useful way to signal model uncertainty and avoid spurious precision. At other times, only a qualitative assessment of model uncertainty and inaccuracy is possible. In either case, it can be prudent for banks to account for model uncertainty by explicitly adjusting model inputs or calculations to produce more severe or adverse model output in the interest of conservatism. Accounting for model uncertainty can also include judgmental conservative adjustments to model output, placing less emphasis on that model’s output, or ensuring that the model is only used when supplemented by other models or approaches.5

While conservative use of models is prudent in general, banks should be careful in applying conservatism broadly or claiming to make conservative adjustments or add-ons to address

---

5. To the extent that models are used to generate amounts included in public financial statements, any adjustments for model uncertainty must comply with generally accepted accounting principles.
model risk, because the impact of such conservatism in complex models may not be obvious or intuitive. Model aspects that appear conservative in one model may not be truly conservative compared with alternative methods. For example, simply picking an extreme point on a given modeled distribution may not be conservative if the distribution was misestimated or misspecified in the first place. Furthermore, initially conservative assumptions may not remain conservative over time. Therefore, banks should justify and substantiate claims that model outputs are conservative with a definition and measurement of that conservatism that is communicated to model users. In some cases, sensitivity analysis or other types of stress testing can be used to demonstrate that a model is indeed conservative. Another way in which banks may choose to be conservative is to hold an additional cushion of capital to protect against potential losses associated with model risk. However, conservatism can become an impediment to proper model development and application if it is seen as a solution that dissuades the bank from making the effort to improve the model; in addition, excessive conservatism can lead model users to discount the model outputs.

As previously explained, robust model development, implementation, and use is important to model risk management. But it is not enough for model developers and users to understand and accept the model. Because model risk is ultimately borne by the bank as a whole, the bank should objectively assess model risk and the associated costs and benefits using a sound model-validation process.

MODEL VALIDATION—PART V

Model validation is the set of processes and activities intended to verify that models are performing as expected, in line with their design objectives and business uses. Effective validation helps ensure that models are sound. It also identifies potential limitations and assumptions and assesses their possible impact. As with other aspects of effective challenge, model validation should be performed by staff with appropriate incentives, competence, and influence.

All model components, including input, processing, and reporting, should be subject to validation; this applies equally to models developed in-house and to those purchased from, or developed by, vendors or consultants. The rigor and sophistication of validation should be commensurate with the bank’s overall use of models, the complexity and materiality of its models, and the size and complexity of the bank’s operations.

Validation involves a degree of independence from model development and use. Generally, validation should be done by people who are not responsible for development or use and do not have a stake in whether a model is determined to be valid. Independence is not an end in itself but rather helps ensure that incentives are aligned with the goals of model validation. While independence may be supported by separation of reporting lines, it should be judged by actions and outcomes, since there may be additional ways to ensure objectivity and prevent bias. As a practical matter, some validation work may be most effectively done by model developers and users; it is essential, however, that such validation work be subject to critical review by an independent party, who should conduct additional activities to ensure proper validation. Overall, the quality of the process is judged by the manner in which models are subject to critical review. This could be determined by evaluating the extent and clarity of documentation, the issues identified by objective parties, and the actions taken by management to address model issues.

In addition to independence, banks can support appropriate incentives in validation through compensation practices and performance evaluation standards that are tied directly to the quality of model validations and the degree of critical, unbiased review. In addition, corporate culture plays a role if it establishes support for objective thinking and encourages questioning and challenging of decisions.

Staff doing validation should have the requisite knowledge, skills, and expertise. A high level of technical expertise may be needed because of the complexity of many models, both in structure and in application. These staff also should have a significant degree of familiarity with the line of business using the model and the model’s intended use. A model’s developer is an important source of information but cannot be relied on as an objective or sole source on which to base an assessment of model quality.

Staff conducting validation work should have explicit authority to challenge developers and users and to elevate their findings, including issues and deficiencies. The individual or unit to
whom those staff report should have sufficient influence or stature within the bank to ensure that any issues and deficiencies are appropriately addressed in a timely and substantive manner. Such influence can be reflected in reporting lines, title, rank, or designated responsibilities. Influence may be demonstrated by a pattern of actual instances in which models, or the use of models, have been appropriately changed as a result of validation.

The range and rigor of validation activities conducted prior to first use of a model should be in line with the potential risk presented by use of the model. If significant deficiencies are noted as a result of the validation process, use of the model should not be allowed or should be permitted only under very tight constraints until those issues are resolved. If the deficiencies are too severe to be addressed within the model’s framework, the model should be rejected. If it is not feasible to conduct necessary validation activities prior to model use because of data paucity or other limitations, that fact should be documented and communicated in reports to users, senior management, and other relevant parties. In such cases, the uncertainty about the results that the model produces should be mitigated by other compensating controls. This is particularly applicable to new models and to the use of existing models in new applications.

Validation activities should continue on an ongoing basis after a model goes into use, to track known model limitations and to identify any new ones. Validation is an important check on model use during periods of benign economic and financial conditions, when estimates of risk and potential loss can become overly optimistic, and when the data at hand may not fully reflect more stressed conditions. Ongoing validation activities help to ensure that changes in markets, products, exposures, activities, clients, or business practices do not create new model limitations. For example, if credit risk models do not incorporate underwriting changes in a timely manner, flawed and costly business decisions could be made before deterioration in model performance becomes apparent.

Banks should conduct a periodic review—at least annually but more frequently if warranted—of each model to determine whether it is working as intended and if the existing validation activities are sufficient. Such a determination could simply affirm previous validation work, suggest updates to previous validation activities, or call for additional validation activities. Material changes to models should also be subject to validation. It is generally good practice for banks to ensure that all models undergo the full validation process, as described in the following section, at some fixed interval, including updated documentation of all activities.

Effective model validation helps reduce model risk by identifying model errors, corrective actions, and appropriate use. It also provides an assessment of the reliability of a given model, based on its underlying assumptions, theory, and methods. In this way, it provides information about the source and extent of model risk. Validation also can reveal deterioration in model performance over time and can set thresholds for acceptable levels of error, through analysis of the distribution of outcomes around expected or predicted values. If outcomes fall consistently outside this acceptable range, then the models should be redeveloped.

Key Elements of Comprehensive Validation

An effective validation framework should include three core elements:

- Evaluation of conceptual soundness, including developmental evidence
- Ongoing monitoring, including process verification and benchmarking
- Outcomes analysis, including back-testing

Evaluation of Conceptual Soundness

This first element involves assessing the quality of the model design and construction. It entails review of documentation and empirical evidence supporting the methods used and variables selected for the model. Documentation and testing should convey an understanding of model limitations and assumptions. Validation should ensure that judgment exercised in model design and construction is well informed, carefully considered, and consistent with published research and with sound industry practice. Developmental evidence should be reviewed before a model goes into use and also as part of the ongoing validation process, in particular whenever there is a material change in the model.

A sound development process will produce documented evidence in support of all model
choices, including the overall theoretical construction, key assumptions, data, and specific mathematical calculations. As part of model validation, those model aspects should be subjected to critical analysis by both evaluating the quality and extent of developmental evidence and conducting additional analysis and testing as necessary. Comparison to alternative theories and approaches should be included. Key assumptions and the choice of variables should be assessed, with analysis of their impact on model outputs and particular focus on any potential limitations. The relevance of the data used to build the model should be evaluated to ensure that it is reasonably representative of the bank’s portfolio or market conditions, depending on the type of model. This is an especially important exercise when a bank uses external data or the model is used for new products or activities.

Where appropriate to the particular model, banks should employ sensitivity analysis in model development and validation to check the impact of small changes in inputs and parameter values on model outputs to make sure they fall within an expected range. Unexpectedly large changes in outputs in response to small changes in inputs can indicate an unstable model. Varying several inputs simultaneously as part of sensitivity analysis can provide evidence of unexpected interactions, particularly if the interactions are complex and not intuitively clear. Banks benefit from conducting model stress testing to check performance over a wide range of inputs and parameter values, including extreme values, to verify that the model is robust. Such testing helps establish the boundaries of model performance by identifying the acceptable range of inputs as well as conditions under which the model may become unstable or inaccurate.

Management should have a clear plan for using the results of sensitivity analysis and other quantitative testing. If testing indicates that the model may be inaccurate or unstable in some circumstances, management should consider modifying certain model properties, putting less reliance on its outputs, placing limits on model use, or developing a new approach. Qualitative information and judgment used in model development should be evaluated, including the logic, judgment, and types of information used, to establish the conceptual soundness of the model and set appropriate conditions for its use. The validation process should ensure that qualitative, judgmental assessments are conducted in an appropriate and systematic manner, are well supported, and are documented.

**Ongoing Monitoring**

The second core element of the validation process is ongoing monitoring. Such monitoring confirms that the model is appropriately implemented and is being used and is performing as intended. Ongoing monitoring is essential to evaluate whether changes in products, exposures, activities, clients, or market conditions necessitate adjustment, redevelopment, or replacement of the model and to verify that any extension of the model beyond its original scope is valid. Any model limitations identified in the development stage should be regularly assessed over time, as part of ongoing monitoring. Monitoring begins when a model is first implemented in production systems for actual business use. This monitoring should continue periodically over time, with a frequency appropriate to the nature of the model, the availability of new data or modeling approaches, and the magnitude of the risk involved. Banks should design a program of ongoing testing and evaluation of model performance along with procedures for responding to any problems that appear. This program should include process verification and benchmarking.

Process verification checks that all model components are functioning as designed. It includes verifying that internal and external data inputs continue to be accurate, complete, consistent with model purpose and design, and of the highest quality available. Computer code implementing the model should be subject to rigorous quality and change control procedures to ensure that the code is correct, that it cannot be altered except by approved parties, and that all changes are logged and can be audited. System integration can be a challenge and deserves special attention because the model processing component often draws from various sources of data, processes large amounts of data, and then feeds into multiple data repositories and reporting systems. User-developed applications, such as spreadsheets or ad hoc database applications used to generate quantitative estimates, are particularly prone to model risk. As the content or composition of information changes over time, systems may need to be updated to reflect any changes in the data or its use. Reports derived from model outputs should

---

**April 2011**

**Commercial Bank Examination Manual**
be reviewed as part of validation to verify that they are accurate, complete, and informative, and that they contain appropriate indicators of model performance and limitations.

Many of the tests employed as part of model development should be included in ongoing monitoring and be conducted on a regular basis to incorporate additional information as it becomes available. New empirical evidence or theoretical research may suggest the need to modify or even replace original methods. Analysis of the integrity and applicability of internal and external information sources, including information provided by third-party vendors, should be performed regularly.

Sensitivity analysis and other checks for robustness and stability should likewise be repeated periodically. They can be as useful during ongoing monitoring as they are during model development. If models only work well for certain ranges of input values, market conditions, or other factors, they should be monitored to identify situations where these constraints are approached or exceeded.

Ongoing monitoring should include the analysis of overrides with appropriate documentation. In the use of virtually any model, there will be cases where model output is ignored, altered, or reversed based on the expert judgment of model users. Such overrides are an indication that, in some respect, the model is not performing as intended or has limitations. Banks should evaluate the reasons for overrides and track and analyze override performance. If the rate of overrides is high, or if the override process consistently improves model performance, it is often a sign that the underlying model needs revision or redevelopment.

Benchmarking is the comparison of a given model’s inputs and outputs to estimates from alternative internal or external data or models. It can be incorporated in model development as well as in ongoing monitoring. For credit-risk models, examples of benchmarks include models from vendor firms or industry consortia and data from retail credit bureaus. Pricing models for securities and derivatives often can be compared with alternative models that are more accurate or comprehensive but also too time-consuming to run on a daily basis. Whatever the source, benchmark models should be rigorous, and benchmark data should be accurate and complete to ensure a reasonable comparison.

Discrepancies between the model output and benchmarks should trigger investigation into the sources and degree of the differences, and examination of whether they are within an expected or appropriate range given the nature of the comparison. The results of that analysis may suggest revisions to the model. However, differences do not necessarily indicate that the model is in error. The benchmark itself is an alternative prediction, and the differences may be due to the different data or methods used. If the model and the benchmark match well, that is evidence in favor of the model, but it should be interpreted with caution so the bank does not get a false degree of comfort.

Outcomes Analysis

The third core element of the validation process is outcomes analysis, a comparison of model outputs to corresponding actual outcomes. The precise nature of the comparison depends on the objectives of a model and might include an assessment of the accuracy of estimates or forecasts, an evaluation of rank-ordering ability, or other appropriate tests. In all cases, such comparisons help to evaluate model performance by establishing expected ranges for those actual outcomes in relation to the intended objectives and assessing the reasons for observed variation between the two. If outcomes analysis produces evidence of poor performance, the bank should take action to address those issues. Outcomes analysis typically relies on statistical tests or other quantitative measures. It can also include expert judgment to check the intuition behind the outcomes and confirm that the results make sense. When a model itself relies on expert judgment, quantitative outcomes analysis helps to evaluate the quality of that judgment. Outcomes analysis should be conducted on an ongoing basis to test whether the model continues to perform in line with design objectives and business uses.

A variety of quantitative and qualitative testing and analytical techniques can be used in outcomes analysis. The choice of technique should be based on the model’s methodology, and its complexity, data availability, and the magnitude of potential model risk to the bank. Outcomes analysis should involve a range of tests because any individual test will have weaknesses. For example, some tests are better at checking a model’s ability to rank-order or segment observations on a relative basis, whereas others are better at checking absolute forecast.
Models are regularly adjusted to take into account new data or techniques, or because of deterioration in performance. Parallel outcomes analysis, under which both the original and adjusted models’ forecasts are tested against realized outcomes, provides an important test of such model adjustments. If the adjusted model does not outperform the original model, developers, users, and reviewers should realize that additional changes—or even a wholesale redesign—are likely necessary before the adjusted model replaces the original one.

Back-testing is one form of outcomes analysis; specifically, it involves the comparison of actual outcomes with model forecasts during a sample time period not used in model development and at an observation frequency that matches the forecast horizon or performance window of the model. The comparison is generally done using expected ranges or statistical confidence intervals around the model forecasts. When outcomes fall outside those intervals, the bank should analyze the discrepancies and investigate the causes that are significant in terms of magnitude or frequency. The objective of the analysis is to determine whether differences stem from the omission of material factors from the model, whether they arise from errors with regard to other aspects of model specification such as interaction terms or assumptions of linearity, or whether they are purely random and thus consistent with acceptable model performance. Analysis of in-sample fit and of model performance in holdout samples (data set aside and not used to estimate the original model) are important parts of model development but are not substitutes for back-testing.

A well-known example of back-testing is the evaluation of value-at-risk (VaR), in which actual profit and loss is compared with a model forecast loss distribution. Significant deviation in expected versus actual performance and unexplained volatility in the profits and losses of trading activities may indicate that hedging and pricing relationships are not adequately measured by a given approach. Along with measuring the frequency of losses in excess of a single VaR percentile estimator, banks should use other tests, such as assessing any clustering of exceptions and checking the distribution of losses against other estimated percentiles.

Analysis of the results of even high-quality and well-designed back-testing can pose challenges, since it is not a straightforward, mechanical process that always produces unambiguous results. The purpose is to test the model, not individual forecast values. Back-testing may entail analysis of a large number of forecasts over different conditions at a point in time or over multiple time periods. Statistical testing is essential in such cases, yet such testing can pose challenges in both the choice of appropriate tests and the interpretation of results; banks should support and document both the choice of tests and the interpretation of results.

Models with long forecast horizons should be back-tested, but given the amount of time it would take to accumulate the necessary data, that testing should be supplemented by evaluation over shorter periods. Banks should employ outcomes analysis consisting of “early warning” metrics designed to measure performance beginning very shortly after model introduction and trend analysis of performance over time. These outcomes analysis tools are not substitutes for back-testing, which should still be performed over the longer time period, but rather are very important complements.

Outcomes analysis and the other elements of the validation process may reveal significant errors or inaccuracies in model development or outcomes that consistently fall outside the bank’s predetermined thresholds of acceptability. In such cases, model adjustment, recalibration, or redevelopment is warranted. Adjustments and recalibration should be governed by the principle of conservatism and should undergo independent review.

Material changes in model structure or technique, and all model redevelopment, should be subject to validation activities of appropriate range and rigor before implementation. At times, banks may have a limited ability to use key model validation tools like back-testing or sensitivity analysis for various reasons, such as lack of data or of price observability. In those cases, even more attention should be paid to the model’s limitations when considering the appropriateness of model usage, and senior management should be fully informed of those limitations when using the models for decision making. Such scrutiny should be applied to individual models and models in the aggregate.
Validation of Vendor and Other Third-Party Products

The widespread use of vendor and other third-party products—including data, parameter values, and complete models—poses unique challenges for validation and other model risk-management activities because the modeling expertise is external to the user and because some components are considered proprietary. Vendor products should nevertheless be incorporated into a bank’s broader model risk-management framework, following the same principles as applied to in-house models, although the process may be somewhat modified.

As a first step, banks should ensure that there are appropriate processes in place for selecting vendor models. Banks should require the vendor to provide developmental evidence explaining the product components, design, and intended use, to determine whether the model is appropriate for the bank’s products, exposures, and risks. Vendors should provide appropriate testing results that show their product works as expected. They should also clearly indicate the model’s limitations and assumptions and where the product’s use may be problematic. Banks should expect vendors to conduct ongoing performance monitoring and outcomes analysis, with disclosure to their clients, and to make appropriate modifications and updates over time.

Banks are expected to validate their own use of vendor products. External models may not allow full access to computer coding and implementation details, so the bank may have to rely more on sensitivity analysis and benchmarking. Vendor models are often designed to provide a range of capabilities and so may need to be customized by a bank for its particular circumstances. A bank’s customization choices should be documented and justified as part of validation. If vendors provide input data or assumptions, or use them to build models, their relevance for the bank’s situation should be investigated. Banks should obtain information regarding the data used to develop the model and assess the extent to which that data are representative of the bank’s situation. The bank also should conduct ongoing monitoring and outcomes analysis of vendor model performance using the bank’s own outcomes.

Systematic procedures for validation help the bank to understand the vendor product and its capabilities, applicability, and limitations. Such detailed knowledge is necessary for basic controls of bank operations. It is also very important for the bank to have as much knowledge in-house as possible, in case the vendor or the bank terminates the contract for any reason, or if the vendor is no longer in business. Banks should have contingency plans for instances when the vendor model is no longer available or cannot be supported by the vendor.

GOVERNANCE, POLICIES, AND CONTROLS—PART VI

Developing and maintaining strong governance, policies, and controls over the model risk-management framework is fundamentally important to its effectiveness. Even if model development, implementation, use, and validation are satisfactory, a weak governance function will reduce the effectiveness of overall model risk management. A strong governance framework provides explicit support and structure to risk-management functions through policies defining relevant risk-management activities, procedures that implement those policies, allocation of resources, and mechanisms for evaluating whether policies and procedures are being carried out as specified. Notably, the extent and sophistication of a bank’s governance function is expected to align with the extent and sophistication of model usage.

Board of Directors and Senior Management

Model risk governance is provided at the highest level by the board of directors and senior management when they establish a bank-wide approach to model risk management. As part of their overall responsibilities, a bank’s board and senior management should establish a strong model risk-management framework that fits into the broader risk management of the organization. That framework should be grounded in an understanding of model risk—not just for individual models but also in the aggregate. The framework should include standards for model development, implementation, use, and validation.

While the board is ultimately responsible, it generally delegates to senior management the responsibility for executing and maintaining an
effective model risk-management framework. Duties of senior management include establishing adequate policies and procedures and ensuring compliance, assigning competent staff, overseeing model development and implementation, evaluating model results, ensuring effective challenge, reviewing validation and internal audit findings, and taking prompt remedial action when necessary. In the same manner as for other major areas of risk, senior management, directly and through relevant committees, is responsible for regularly reporting to the board on significant model risk, from individual models and in the aggregate, and on compliance with policy. Board members should ensure that the level of model risk is within their tolerance and should direct changes where appropriate. These actions will set the tone for the whole organization about the importance of model risk and the need for active model risk management.

Policies and Procedures

Consistent with good business practices and existing supervisory expectations, banks should formalize model risk-management activities with policies and the procedures to implement them. Model risk-management policies should be consistent with this guidance and also be commensurate with the bank’s relative complexity, business activities, corporate culture, and overall organizational structure. The board or its delegates should approve model risk-management policies and review them annually to ensure consistent and rigorous practices across the organization. Those policies should be updated as necessary to ensure that model risk-management practices remain appropriate and keep current with changes in market conditions, bank products and strategies, bank exposures and activities, and practices in the industry. All aspects of model risk management should be covered by suitable policies, including model and model risk definitions; assessment of model risk; acceptable practices for model development, implementation, and use; appropriate model validation activities; and governance and controls over the model risk-management process.

Policies should emphasize testing and analysis and promote the development of targets for model accuracy, standards for acceptable levels of discrepancies, and procedures for review of, and response to, unacceptable discrepancies. They should include a description of the processes used to select and retain vendor models, including the people who should be involved in such decisions.

The prioritization, scope, and frequency of validation activities should be addressed in these policies. They should establish standards for the extent of validation that should be performed before models are put into production and the scope of ongoing validation. The policies should also detail the requirements for validation of vendor models and third-party products. Finally, they should require maintenance of detailed documentation of all aspects of the model risk-management framework, including an inventory of models in use, results of the modeling and validation processes, and model issues and their resolution.

Policies should identify the roles and assign responsibilities within the model risk-management framework with clear detail on staff expertise, authority, reporting lines, and continuity. They should also outline controls on the use of external resources for validation and compliance and specify how that work will be integrated into the model risk-management framework.

Roles and Responsibilities

Conceptually, the roles in model risk management can be divided among ownership, controls, and compliance. While there are several ways in which banks can assign the responsibilities associated with these roles, it is important that reporting lines and incentives be clear, with potential conflicts of interest identified and addressed.

Business units are generally responsible for the model risk associated with their business strategies. The role of model owner involves ultimate accountability for model use and performance within the framework set by bank policies and procedures. Model owners should be responsible for ensuring that models are properly developed, implemented, and used. The model owner should also ensure that models in use have undergone appropriate validation and approval processes, promptly identify new or changed models, and provide all necessary information for validation activities.

Model risk taken by business units should be controlled. The responsibilities for risk controls
may be assigned to individuals, committees, or a combination of the two, and include risk measurement, limits, and monitoring. Other responsibilities include managing the independent validation and review process to ensure that effective challenge takes place. Appropriate resources should be assigned for model validation and for guiding the scope and prioritization of work. Issues and problems identified through validation and other forms of oversight should be communicated by risk-control staff to relevant individuals and business users throughout the organization, including senior management, with a plan for corrective action. Control staff should have the authority to restrict the use of models and monitor any limits on model usage. While they may grant exceptions to typical procedures of model validation on a temporary basis, that authority should be subject to other control mechanisms, such as timelines for completing validation work and limits on model use.

Compliance with policies is an obligation of model owners and risk-control staff, and there should be specific processes in place to ensure that these roles are being carried out effectively and in line with policy. Documentation and tracking of activities surrounding model development, implementation, use, and validation are needed to provide a record that makes compliance with policy transparent.

Internal Audit

A bank’s internal audit function should assess the overall effectiveness of the model risk-management framework, including the framework’s ability to address both types of model risk for individual models and in the aggregate. Findings from internal audit related to models should be documented and reported to the board or its appropriately delegated agent. Banks should ensure that internal audit operates with the proper incentives, has appropriate skills, and has adequate stature in the organization to assist in model risk management. Internal audit’s role is not to duplicate model risk-management activities. Instead, its role is to evaluate whether model risk management is comprehensive, rigorous, and effective. To accomplish this evaluation, internal audit staff should possess sufficient expertise in relevant modeling concepts as well as their use in particular business lines. If some internal audit staff perform certain validation activities, then they should not be involved in the assessment of the overall model risk management framework.

Internal audit should verify that acceptable policies are in place and that model owners and control groups comply with those policies. Internal audit should also verify records of model use and validation to test whether validations are performed in a timely manner and whether models are subject to controls that appropriately account for any weaknesses in validation activities. Accuracy and completeness of the model inventory should be assessed. In addition, processes for establishing and monitoring limits on model usage should be evaluated. Internal audit should determine whether procedures for updating models are clearly documented and test whether those procedures are being carried out as specified. Internal audit should check that model owners and control groups are meeting documentation standards, including risk reporting. Additionally, internal audit should perform assessments of supporting operational systems and evaluate the reliability of data used by models.

Internal audit also has an important role in ensuring that validation work is conducted properly and that appropriate effective challenge is being carried out. It should evaluate the objectivity, competence, and organizational standing of the key validation participants, with the ultimate goal of ascertaining whether those participants have the right incentives to discover and report deficiencies. Internal audit should review validation activities conducted by internal and external parties with the same rigor to see if those activities are being conducted in accordance with this guidance.

External Resources

Although model risk management is an internal process, a bank may decide to engage external resources to help execute certain activities related to the model risk-management framework. These activities could include model validation and review, compliance functions, or other activities in support of internal audit. These resources may provide added knowledge and another level of critical and effective challenge, which may improve the internal model development and risk-management processes. However, this potential benefit should be weighed against the
added costs for such resources and the added time that external parties require to understand internal data, systems, and other relevant bank-specific circumstances.

Whenever external resources are used, the bank should specify the activities to be conducted in a clearly written and agreed-upon scope of work. A designated internal party from the bank should be able to understand and evaluate the results of validation and risk-control activities conducted by external resources. The internal party is responsible for verifying that the agreed upon scope of work has been completed; evaluating and tracking identified issues and ensuring they are addressed; and making sure that completed work is incorporated into the bank’s overall model risk-management framework. If the external resources are only utilized to do a portion of validation or compliance work, the bank should coordinate internal resources to complete the full range of work needed. The bank should have a contingency plan in case an external resource is no longer available or is unsatisfactory.

Model Inventory

Banks should maintain a comprehensive set of information for models implemented for use, under development for implementation, or recently retired. While each line of business may maintain its own inventory, a specific party should also be charged with maintaining a firm-wide inventory of all models, which should assist a bank in evaluating its model risk in the aggregate. Any variation of a model that warrants a separate validation should be included as a separate model and cross-referenced with other variations.

While the inventory may contain varying levels of information, given different model complexity and the bank’s overall level of model usage, the following are some general guidelines. The inventory should describe the purpose and products for which the model is designed, actual or expected usage, and any restrictions on use. It is useful for the inventory to list the type and source of inputs used by a given model and underlying components (which may include other models), as well as model outputs and their intended use. It should also indicate whether models are functioning properly, provide a description of when they were last updated, and list any exceptions to policy. Other items include the names of individuals responsible for various aspects of the model development and validation; the dates of completed and planned validation activities; and the time frame during which the model is expected to remain valid.

Documentation

Without adequate documentation, model risk assessment and management will be ineffective. Documentation of model development and validation should be sufficiently detailed so that parties unfamiliar with a model can understand how the model operates, its limitations, and its key assumptions. Documentation provides for continuity of operations, makes compliance with policy transparent, and helps track recommendations, responses, and exceptions. Developers, users, control and compliance units, and supervisors are all served by effective documentation. Banks can benefit from advances in information and knowledge management systems and electronic documentation to improve the organization, timeliness, and accessibility of the various records and reports produced in the model risk-management process.

Documentation takes time and effort, and model developers and users who know the models well may not appreciate its value. Banks should therefore provide incentives to produce effective and complete model documentation. Model developers should have responsibility during model development for thorough documentation, which should be kept up-to-date as the model and application environment changes. In addition, the bank should ensure that other participants in model risk-management activities document their work, including ongoing monitoring, process verification, benchmarking, and outcomes analysis. Also, line of business or other decision makers should document information leading to selection of a given model and its subsequent validation. For cases in which a bank uses models from a vendor or other third party, it should ensure that appropriate documentation of the third-party approach is available so that the model can be appropriately validated.

Validation reports should articulate model aspects that were reviewed, highlighting potential deficiencies over a range of financial and
economic conditions, and determining whether adjustments or other compensating controls are warranted. Effective validation reports include clear executive summaries, with a statement of model purpose and an accessible synopsis of model and validation results, including major limitations and key assumptions.

CONCLUSION—PART VII

Section 4027.1 provides comprehensive guidance on effective model risk management. Many of the activities described are common industry practice. But all banks should confirm that their practices conform to the principles in this guidance for model development, implementation, and use, as well as model validation. Banks should also ensure that they maintain strong governance and controls to help manage model risk, including internal policies and procedures that appropriately reflect the risk-management principles described in this guidance. Details of model risk-management practices may vary from bank to bank, as practical application of this guidance should be commensurate with a bank’s risk exposures, its business activities, and the extent and complexity of its model use.
Many banking organizations (BOs) have substantially increased their securitization activities. Asset securitization typically involves the transfer of potentially illiquid on-balance-sheet assets (for example, loans, leases, and other assets) to a third party or trust. In turn, the third party or trust issues certificates or notes to investors. The cash flow from the transferred assets supports repayment of the certificates or notes. BOs use asset securitization to access alternative funding sources, manage concentrations, improve financial-performance ratios, and more efficiently meet customer needs. Assets typically securitized include credit card receivables and automobile receivable paper, commercial and residential first mortgages, commercial loans, home-equity loans, and student loans.

Managing the risks of securitization activities poses increasing challenges, which may be less obvious and more complex than the risks of traditional lending activities. Securitization can involve credit, liquidity, operational, legal, and reputational risks in concentrations and forms that may not be fully recognized by bank management or adequately incorporated into an institution’s risk-management systems. In reviewing these activities, examiners should assess whether BOs fully understand and adequately manage the full range of risks involved in securitization activities.

BOs have been involved with asset-backed securities (ABS), both as investors in them and as major participants in the securitization process. The federal government encourages the securitization of residential mortgages. In 1970, the Government National Mortgage Association (GNMA or Ginnie Mae) created the first publicly traded mortgage-backed security. Shortly thereafter, the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac), both government-sponsored agencies, also developed mortgage-backed securities. The guarantees on the securities that these government or government-sponsored entities provide ensure investors of the payment of principal and interest. These guarantees have greatly facilitated the securitization of mortgage assets. Banks also securitize other types of assets, such as nonperforming loans and lease receivables.

While the objectives of securitization may vary from institution to institution, there are essentially five benefits that can be derived from securitized transactions. First, the sale of assets may reduce regulatory costs. The removal of an asset from an institution’s books reduces capital requirements and reserve requirements on the deposits funding the asset. Second, securitization provides originators with an additional source of funding or liquidity. The process of securitization basically converts an illiquid asset into a security with greater marketability. Securitized issues often require a credit enhancement, which results in a higher credit rating than what would normally be obtainable by the institution itself. Consequently, these issues may provide the institution with a cheaper form of funding. Third, securitization may be used to reduce interest-rate risk by improving the institution’s asset-liability mix. This is especially true if the institution has a large investment in fixed-rate, low-yield assets. Fourth, by removing assets, the institution enhances its return on equity and assets. Finally, the ability to sell these securities worldwide diversifies the institution’s funding base, which reduces the bank’s dependence on local economies.

While securitization activities can enhance both credit availability and bank profitability, the risks of these activities must be known and managed. Accordingly, BOs should ensure that their overall risk-management process explicitly incorporates the full range of risks involved in their securitization activities, and examiners should assess whether institutions fully understand and adequately manage these risks. Specifically, examiners should determine whether institutions are recognizing the risks of securitization activities by (1) adequately identifying, quantifying, and monitoring these risks; (2) clearly communicating the extent and depth of these risks in reports to senior management and the board of directors and in regulatory reports; (3) conducting ongoing stress testing to identify potential losses and liquidity needs under adverse circumstances; and (4) setting adequate minimum internal standards for allowances or liabilities for losses, capital, and contingency funding. Incorporating asset-securitization activities into BO’s risk-management systems and internal capital-adequacy allocations is particularly important in light of the current regulatory capital rules which may not fully capture the economic substance of the risk exposures arising from many of these activities.
Senior management and directors must have the requisite knowledge of the effect of securitization on the BO’s risk profile, and they must be fully aware of the accounting, legal, and risk-based capital nuances of this activity. BOs must fully and accurately distinguish and measure the risks that are transferred versus those that are retained, and they must adequately manage the retained portion. It is essential that BOs engaging in securitization activities have appropriate front- and back-office staffing; internal and external accounting and legal support; audit or independent-review coverage; information systems capacity; and oversight mechanisms to execute, record, and administer these transactions correctly.

Appropriate valuation and modeling methodologies must be used. They must be able to determine the initial and ongoing fair value of retained interests. Accounting rules (generally accepted accounting principles, or GAAP) provide a method to recognize an immediate gain (or loss) on the sale through booking a “retained interest.” The carrying value, however, of that interest must be fully documented, based on reasonable assumptions, and regularly analyzed for any subsequent impairment in value. The best evidence of fair value is a quoted market price in an active market. When quoted market prices are not available, accounting rules allow fair value to be estimated. This estimate must be based on the “best information available in the circumstances.” An estimate of fair value must be supported by reasonable and current assumptions. If a best estimate of fair value is not practicable, the asset is to be recorded at zero in financial and regulatory reports.

Unforeseen market events that affect the discount rate or performance of receivables supporting a retained interest can swiftly and dramatically alter its value. Without appropriate internal controls and independent oversight, an institution that securitizes assets may inappropriately generate “paper profits” or mask actual losses through flawed loss assumptions, inaccurate prepayment rates, and inappropriate discount rates. Liberal and unsubstantiated assumptions can result in material inaccuracies in financial statements; substantial write-downs of retained interests; and, if retained interests represent an excessive concentration of the sponsoring institution’s capital, the institution’s demise.

An institution’s failure to adequately understand the risks inherent in its securitization activities and to incorporate risks into its risk-management systems and internal capital allocations may constitute an unsafe and unsound banking practice. Furthermore, retained interests that lack objectively verifiable support or that fail to meet these supervisory standards will be classified as loss and disallowed for inclusion as assets of the institution for regulatory capital purposes. (See SR-99-37.) Accordingly, for those institutions involved in asset securitization or providing credit enhancements in connection with loan sales and securitization, examiners should assess whether the institutions’ systems and processes adequately identify, measure, monitor, and control all the risks involved in its securitization activities. Examiners also will review an institution’s valuation of retained interests and the concentration of these assets relative to capital. Consistent with existing supervisory authority, BOs may be required, on a case-by-case basis, to hold additional capital commensurate with their risk exposures. An excessive dependence on securitizations for day-to-day core funding can present significant liquidity problems during times of market turbulence or if there are difficulties specific to the BO.

Traditional lending activities are generally funded by deposits or other liabilities, with both the assets and related liabilities reflected on the balance sheet. Liabilities must generally increase in order to fund additional loans. In contrast, the securitization process generally does not increase on-balance-sheet liabilities in proportion to the volume of loans or other assets securitized. As discussed more fully below, when banking organizations securitize their assets and these transactions are treated as sales, both the assets and the related ABS (liabilities) are removed from the balance sheet. The cash proceeds from the securitization transactions are generally used

---

2. For instance, an institution that has high concentrations of retained interests relative to its capital or is otherwise at risk from impairment of these assets may be subject to this requirement.
to originate or acquire additional loans or other assets for securitization, and the process is repeated. Thus, for the same volume of loan originations, securitization results in lower assets and liabilities compared with traditional lending activities.

THE SECURITIZATION PROCESS

As depicted in figure 1, the asset-securitization process begins with the segregation of loans or leases into pools that are relatively homogeneous with respect to credit, maturity, and interest-rate risks. These pools of assets are then transferred to a trust or other entity known as an issuer because it issues the securities or ownership interests that are acquired by investors. These ABS may take the form of debt, certificates of beneficial ownership, or other instruments. The issuer is typically protected from bankruptcy by various structural and legal arrangements. A sponsor that provides the assets to be securitized owns or otherwise establishes the issuer.

Each issue of ABS has a servicer that is responsible for collecting interest and principal payments on the loans or leases in the underlying pool of assets and for transmitting these funds to investors (or a trustee representing them). A trustee is responsible for monitoring the activities of the servicer to ensure that it properly fulfills its role.

A guarantor may also be involved to ensure that principal and interest payments on the securities will be received by investors on a timely basis, even if the servicer does not collect these payments from the obligors of the underlying assets. Many issues of mortgage-backed securities are either guaranteed directly by GNMA, which is backed by the full faith and credit of the U.S. government, or by Fannie Mae or Freddie Mac, which are government-sponsored agencies that are perceived by the credit markets to have the implicit support of the federal government. Privately issued mortgage-backed securities and other types of ABS generally depend on some form of credit enhancement provided by the originator or third party to insulate the investor from a portion of or all credit losses. Usually, the amount of the credit enhancement is based on several multiples of the historical losses experienced on the particular asset backing the security.

The structure of an asset-backed security and the terms of the investors’ interest in the collateral can vary widely depending on the type of collateral, the desires of investors, and the use of credit enhancements. Securitizations typically carve up the risk of credit losses from the

Figure 1—Pass-through, asset-backed securities: structure and cash flows
underlying assets and distribute it to different parties. The first-dollar, or most subordinate, loss position is first to absorb credit losses, and the most senior investor position is last to absorb losses; there may also be one or more loss positions in between (second-dollar loss positions). Each loss position functions as a credit enhancement for the more senior positions in the structure. In other words, when ABS reallocate the risks in the underlying collateral (particularly credit risk), the risks are moved into security tranches that match the desires of investors. For example, senior-subordinated security structures give holders of senior tranches greater credit-risk protection—albeit at lower yields—than holders of subordinated tranches. Under this structure, at least two classes of asset-backed securities, a senior and a junior or subordinated class, are issued in connection with the same pool of collateral. The senior class is structured so that it has a priority claim on the cash flows from the underlying pool of assets. The subordinated class must absorb credit losses on the collateral before losses can be charged to the senior portion. Because the senior class has this priority claim, cash flows from the underlying pool of assets must first satisfy the requirements of the senior class. Only after these requirements have been met will the cash flows be directed to service the subordinated class.

Credit Enhancement

ABS can use various forms of credit enhancements to transform the risk-return profile of underlying collateral. These include third-party credit enhancements, recourse provisions, overcollateralization, and various covenants and indentures. The sponsor of the asset securitization may provide a portion of the total credit enhancement internally, as part of the securitization structure, through the use of excess spread accounts, overcollateralization, retained subordinated interests, or other similar on-balance-sheet assets. When these or other on-balance-sheet internal enhancements are provided, the enhancements are “residual interests” and are a form of recourse.

A seller may also arrange for a third party to provide credit enhancement in an asset securitization. If the third-party enhancement is provided by another bank, the other bank assumes some portion of the assets’ credit risk. All forms of third-party enhancements, that is, all arrangements in which a bank assumes credit risk from third-party assets or other claims that it has not transferred, are referred to as direct-credit substitutes. The economic substance of a bank’s credit risk from providing a direct-credit substitute can be identical to its credit risk from retaining recourse on assets it has transferred. Third-party credit enhancements include standby letters of credit, collateral or pool insurance, or surety bonds from third parties. Many asset securitizations use a combination of recourse and third-party enhancements to protect investors from credit risk. When third-party enhancements are not provided, the selling bank ordinarily retains virtually all of the credit risk on the assets transferred.

Some ABS, such as those backed by credit card receivables, typically use a spread account. This account is actually an escrow account. The funds in this account are derived from a portion of the spread between the interest earned on the assets in the underlying pool and the lower interest paid on securities issued by the trust. The amounts that accumulate in the account are used to cover credit losses in the underlying asset pool up to several multiples of historical losses on the particular asset collateralizing the securities. Overcollateralization, a form of credit enhancement covering a predetermined amount of potential credit losses, occurs when the value of the underlying assets exceeds the face value of the securities.

A similar form of credit enhancement is the cash-collateral account, which is established when a third party deposits cash into a pledged account. The use of cash-collateral accounts, which are considered by enhancers to be loans, grew as the number of highly rated banks and other credit enhancers declined in the early 1990s. Cash-collateral accounts eliminate event risk, or the risk that the credit enhancer will have its credit rating downgraded or that it will not be able to fulfill its financial obligation to absorb losses and thus provide credit protection to investors in a securitization.

An investment banking firm or other organization generally serves as an underwriter for ABS. In addition, for asset-backed issues that are publicly offered, a credit-rating agency will analyze the policies and operations of the originator and servicer, as well as the structure.
underlying pool of assets, expected cash flows, and other attributes of the securities. Before assigning a rating to the issue, the rating agency will also assess the extent of loss protection provided to investors by the credit enhancements associated with the issue.

TYPES OF ASSET-BACKED SECURITIES

Asset securitization involves different types of capital-market instruments. (For more information, see the Trading and Capital-Markets Activities Manual, section 4105.1, “Asset-Backed Securities and Asset-Backed Commercial Paper,” and section 4110.1, “Residential Mortgage-Backed Securities.”) These instruments may be structured as “pass-throughs” or “pay-throughs.” Under a pass-through structure, the cash flows from the underlying pool of assets are passed through to investors on a pro rata basis. This type of security may be a single-class instrument, such as a GNMA pass-through, or a multiclass instrument, such as a real estate mortgage investment conduit (REMIC).  

The pay-through structure, with multiple classes, combines the cash flows from the underlying pool of assets and reallocates them to two or more issues of securities that have different cash-flow characteristics and maturities. An example is the collateralized mortgage obligation (CMO), which has a series of bond classes, each with its own specified coupon and stated maturity. In most cases, the assets that make up the CMO collateral pools are pass-through securities. Scheduled principal payments and any prepayments from the underlying collateral go first to the earliest maturing class of bonds. This first class of bonds must be retired before the principal cash flows are used to retire the later bond classes. The development of the pay-through structure resulted from the desire to broaden the marketability of these securities to investors who were interested in maturities other than those generally associated with pass-through securities.

Multiple-class ABS may also be issued as derivative instruments, such as “stripped” securities. Investors in each class of a stripped security will receive a different portion of the principal and interest cash flows from the underlying pool of assets. In their purest form, stripped securities may be issued as interest-only (IO) strips, for which the investor receives 100 percent of the interest from the underlying pool of assets, and as principal-only (PO) strips, for which the investor receives all of the principal.

In addition to these securities, other types of financial instruments may arise as a result of asset securitization, as follows:

- **Servicing assets.** These assets become a distinct asset recorded on the balance sheet when contractually separated from the underlying assets that have been sold or securitized and when the servicing of those assets is retained. (See FAS 140 for more information.) In addition, servicing assets are created when organizations purchase the right to act as servicers for loan pools. The value of the servicing assets is based on the contractually specified servicing fees, net of servicing costs.
- **Interest-only strips receivables.** These cash flows are accounted for separately from servicing assets and reflect the right to future interest income from the serviced assets in excess of the contractually specified servicing fees.
- **ABS residuals.** These residuals (sometimes referred to as “residuals,” “residual interests,” or “retained interests” represent claims on any cash flows that remain after all obligations to investors and any related expenses have been met. The excess cash flows may arise as a result of overcollateralization or from reinvestment income. Residuals can be retained by sponsors or purchased by investors in the form of securities.

RISKS ASSOCIATED WITH ASSET SECURITIZATION

While clear benefits accrue to banking organizations that engage in securitization activities...
and invest in ABS, these activities have the potential to increase the overall risk profile of the banking organization if they are not carried out prudently. For the most part, the types of risks that financial institutions encounter in the securitization process are identical to those that they face in traditional lending transactions, including credit risk, concentration risk, interest-rate risk (including prepayment risk), operational risk, liquidity risk, moral-recourse risk, and funding risk. However, since the securitization process separates the traditional lending function into several limited roles, such as originator, servicer, credit enhancer, trustee, and investor, the types of risks that a bank will encounter will differ depending on the role it assumes.

Investor-Specific Risks

Investors in ABS will be exposed to varying degrees of credit risk, that is, the risk that obligors will default on principal and interest payments. Like the investors in the direct investments of the underlying assets, ABS investors are also subject to the risk that the various parties in the securitization structure, for example, the servicer or trustee, will be unable to fulfill their contractual obligations. Moreover, investors may be susceptible to concentrations of risks across various asset-backed security issues (1) through overexposure to an organization that performs various roles in the securitization process or (2) as a result of geographic concentrations within the pool of assets providing the cash flows for an individual issue. Also, since the secondary markets for certain ABS are limited, investors may encounter greater than anticipated difficulties (liquidity risk) when seeking to sell their securities. Furthermore, certain derivative instruments, such as stripped asset-backed securities and residuals, may be extremely sensitive to interest rates and exhibit a high degree of price volatility. Therefore, they may dramatically affect the risk exposure of investors unless used in a properly structured hedging strategy. Examiner guidance in the Trading and Capital-Markets Activities Manual, section 3000.1, “Investment Securities and End-User Activities,” is directly applicable to ABS held as investments.

Issuer-Specific Risks

Banking organizations that issue ABS may be subject to pressures to sell only their best assets, thus reducing the quality of their own loan portfolios. On the other hand, some banking organizations may feel pressures to relax their credit standards because they can sell assets with higher risk than they would normally want to retain for their own portfolios.

To protect their name in the market, issuers may face pressures to provide “moral recourse” by repurchasing securities backed by loans or leases that have originated that have deteriorated and become nonperforming. Funding risk may also be a problem for issuers when market aberrations do not permit the issuance of asset-backed securities that are in the securitization pipeline.

Servicer-Specific Risks

Banking organizations that service securitization issues must ensure that their policies, operations, and systems will not permit breakdowns that may lead to defaults. Substantial fee income can be realized by acting as a servicer. An institution already has a fixed investment in its servicing systems, and achieving economies of scale relating to that investment is in its best interest. The danger, though, lies in overloading the system’s capacity, thereby creating enormous out-of-balance positions and cost overruns. Servicing problems may precipitate a technical default, which in turn could lead to the premature redemption of the security. In addition, expected collection costs could exceed fee income. (For further guidance, examiners should see section 2040.3, “Loan Portfolio Management: Examination Procedures,” under the “Loan Portfolio Review and Analysis” heading.)

ACCOUNTING ISSUES

Sale or Borrowing Treatment

Asset-securitization transactions are frequently structured to obtain certain accounting treatments, which in turn affect reported measures of profitability and capital adequacy. In transferring assets into a pool to serve as collateral for ABS, a key question is whether the transfer should be treated as a sale of the assets or as a
collateralized borrowing, that is, a financing transaction secured by assets. Treating these transactions as a sale of assets results in their being removed from the banking organization’s balance sheet, thus reducing total assets relative to earnings and capital, and thereby producing higher performance and capital ratios.\footnote{5} Treating these transactions as financings, however, means that the assets in the pool remain on the balance sheet and are subject to capital requirements and the related liabilities-to-reserve requirements.\footnote{6}

Valuation and Modeling Processes for Retained Interests

The methods and models BOs use to value retained interests and the difficulties in managing exposure to these volatile assets can raise supervisory concerns. Under GAAP, a BO recognizes an immediate gain (or loss) on the sale of assets by recording its retained interest at fair value. The valuation of the retained interest is based on the present value of future cash flows in excess of the amounts needed to service the bonds and cover credit losses and other fees of the securitization vehicle.\footnote{7}

Determinations of fair value should be based on reasonable, conservative assumptions about factors such as discount rates, projected credit losses, and prepayment rates. Bank supervisors expect retained interests to be supported by verifiable documentation of fair value in accordance with GAAP. In the absence of such support, the retained interests should not be carried as assets on an institution’s books, but should be charged off. Other supervisory concerns include failure to recognize and hold sufficient capital against recourse obligations generated by securitizations, and the absence of an adequate and independent audit function.

The method and key assumptions used to value the retained interests and servicing assets or liabilities must be reasonable and fully documented. The key assumptions in all valuation analyses include prepayment or payment rates, default rates, loss-severity factors, and discount rates. Institutions are expected to take a logical and conservative approach when developing securitization assumptions and capitalizing future income flows. It is important that management quantifies the assumptions at least quarterly on a pool-by-pool basis and maintains supporting documentation for all changes to the assumptions as part of the valuation. Policies should define the acceptable reasons for changing assumptions and require appropriate management approval.

An exception to this pool-by-pool valuation analysis may be applied to revolving-asset trusts if the master-trust structure allows excess cash flows to be shared between series. In a master trust, each certificate of each series represents an undivided interest in all of the receivables in the trust. Therefore, valuations are appropriate at the master-trust level.

To determine the value of the retained interest at inception, and to make appropriate adjustments going forward, the institution must implement a reasonable modeling process to comply with FAS 140. Management is expected to employ reasonable and conservative valuation assumptions and projections, and to maintain verifiable objective documentation of the fair value of the retained interest. Senior management is responsible for ensuring that the valuation model accurately reflects the cash flows according to the terms of the securitization’s structure. For example, the model should account for any cash collateral or overcollateralization triggers, trust fees, and insurance payments if appropriate. The board and management are accountable for the model builders’ possessing the necessary expertise and technical proficiency to perform the modeling process. Senior management should ensure that internal controls are in place to provide for the ongoing integrity of management information systems (MIS) associated with securitization activities.

As part of the modeling process, the risk-management function should ensure that periodic validations are performed to reduce vulnerability to model risk. Validation of the model includes testing the internal logic, ensuring empirical support for the model assumptions, and back-testing the models using actual cash flows on a pool-by-pool basis. The validation process should be documented to support conclusions. Senior management should ensure the validation process is independent from line man-

\footnote{5} See FAS 140 for criteria that must be met for the securitization of assets to be accounted for as a sale.

\footnote{6} None, however, that the Federal Reserve’s Regulation D (12 CFR 204) defines what constitutes a reservable liability of a depository institution. Thus, although a given transaction may qualify as an asset sale for call report purposes, it nevertheless could result in a reservable liability under Regulation D. See the call report instructions for further guidance. Also, see section 3020.1, “Assessment of Capital Adequacy.”

\footnote{7} See FAS 140.
agement and from the modeling process. The audit scope should include procedures to ensure that the modeling process and validation mechanisms are both appropriate for the institution’s circumstances and executed consistently with its asset-securitization policy.

Use of Outside Parties

Third parties are often engaged to provide professional guidance and support regarding an institution’s securitization activities, transactions, and valuing of retained interests. The use of outside resources does not relieve directors of their oversight responsibility, nor does it relieve senior management of its responsibilities to provide supervision, monitoring, and oversight of securitization activities, particularly the management of the risks associated with retained interests. Management is expected to have the experience, knowledge, and abilities to discharge its duties; understand the nature and extent of the risks that retained interests present; and have the policies and procedures necessary to implement an effective risk-management system to control such risks. Management must have a full understanding of the valuation techniques employed, including the basis and reasonableness of underlying assumptions and projections.

Market Discipline and Disclosures

Transparency through public disclosure is crucial to effective market discipline and can reinforce supervisory efforts to promote high standards in risk management. Timely and adequate information on the institution’s asset-securitization activities should be disclosed. The information in the disclosures should be comprehensive; however, the amount of disclosure that is appropriate will depend on the volume of securitizations and complexity of the BO. Well-informed investors, depositors, creditors, and other counterparties can provide a BO with strong incentives for maintaining sound risk-management systems and internal controls. Adequate disclosure allows market participants to better understand the BO’s financial condition and apply market discipline, thus creating incentives to reduce inappropriate risk-taking or inadequate risk-management practices. Examples of sound disclosures include—

- accounting policies for measuring retained interests, including a discussion of the impact of key assumptions on the recorded value;
- the process and methodology used to adjust the value of retained interests for changes in key assumptions;
- risk characteristics, both quantitative and qualitative, of the underlying securitized assets;
- the role of retained interests as credit enhancements to special-purpose entities and other securitization vehicles, including a discussion of techniques used for measuring credit risk; and
- sensitivity analyses or stress testing conducted by the BO, showing the effect of changes in key assumptions on the fair value of retained interests.

CAPITAL ADEQUACY

As with all risk-bearing activities, institutions should fully support the risk exposures of their securitization activities with adequate capital. Banking organizations should ensure that their capital positions are sufficiently strong to support all the risks associated with these activities on a fully consolidated basis and should maintain adequate capital in all affiliated entities engaged in these activities. The Federal Reserve’s risk-based capital guidelines establish minimum capital ratios, and those banking organizations exposed to high or above-average degrees of risk are expected to operate significantly above the minimum capital standards.

The current regulatory capital rules may not fully incorporate the economic substance of the risk exposures involved in many securitization activities. Therefore, when evaluating capital adequacy, examiners should ensure that banking organizations that (1) sell assets with recourse, (2) assume or mitigate credit risk through the use of credit derivatives, or (3) provide direct-credit substitutes and liquidity facilities to securitization programs are accurately identifying and measuring these exposures and maintaining capital at aggregate levels sufficient to support the associated credit, market, liquidity, reputational, operational, and legal risks.

Examiners should review the substance of securitizations when assessing underlying risk exposures. For example, partial, first-loss direct-
credit substitutes providing credit protection to a securitization transaction can, in substance, involve the same credit risk as would be involved in holding the entire asset pool on the institution’s balance sheet. Examiners should ensure that banks have implemented reasonable methods for allocating capital against the economic substance of credit exposures arising from early-amortization events and liquidity facilities associated with securitized transactions. These liquidity facilities are usually structured as short-term commitments in order to avoid a risk-based capital requirement, even though the inherent credit risk may be similar to that of a guarantee.8

If, in the examiner’s judgment, an institution’s capital level is not sufficient to provide protection against potential losses from the above credit exposures, this deficiency should be reflected in the banking organization’s CAMELS rating. Furthermore, examiners should discuss the capital deficiency with the institution’s management and, if necessary, its board of directors. Such an institution will be expected to develop and implement a plan for strengthening the organization’s overall capital adequacy to levels deemed appropriate given all the risks to which it is exposed.

RISK-BASED CAPITAL PROVISIONS AFFECTING ASSET SECURITIZATION

The risk-based capital framework assigns risk weights to loans, ABS, off-balance-sheet credit enhancements, and other assets related to securitization.9 Second, banks that transfer assets with recourse to the seller as part of the securitization process are explicitly required to hold capital against their off-balance-sheet credit exposures. However, the specific capital requirement will depend on the amount of recourse retained by the transferring institution and the type of asset sold with recourse. Third, banking organizations that provide credit enhancement to asset-securitization issues through standby letters of credit or by other means must hold capital against the related off-balance-sheet credit exposure.

Assigning Risk Weights

The risk weights assigned to an asset-backed security generally depend on the issuer and on whether the assets that compose the collateral pool are mortgage-related assets or assets guaranteed by a U.S. government agency. ABS issued by a trust or single-purpose corporation and backed by nonmortgage assets generally are to be assigned a risk weight of 100 percent. Securities guaranteed by U.S. government agencies and those issued by U.S. government-sponsored agencies are assigned risk weights of 0 percent and 20 percent, respectively, because of the low degree of credit risk. Accordingly, mortgage pass-through securities guaranteed by GNMA are placed in the risk category of 0 percent. In addition, securities such as participation certificates and CMOs issued by Fannie Mae or Freddie Mac are assigned a 20 percent risk weight.

However, several types of securities issued by Fannie Mae and Freddie Mac are excluded from the lower risk weight and slotted in the 100 percent risk category. Residual interests (for example, CMO residuals) and subordinated classes of pass-through securities or CMOs that absorb more than their pro rata share of loss are assigned to the 100 percent risk-weight category. Furthermore, high-risk mortgage-derivative securities and all stripped, mortgage-backed securities, including IOs, POs, and similar instruments, are assigned to the 100 percent risk-weight category because of their high price volatility and market risk.

A privately issued mortgage-backed security that meets the criteria listed below is considered a direct or indirect holding of the underlying mortgage-related assets and is generally assigned to the same risk category as those assets (for example, U.S. government agency securities, U.S. government-sponsored agency securities, FHA- and VA-guaranteed mortgages, and con-
ventional mortgages). However, under no circumstances will a privately issued mortgage-backed security be assigned to the 0 percent risk category. Therefore, private issues that are backed by GNMA securities will be assigned to the 20 percent risk category as opposed to the 0 percent category appropriate to the underlying GNMA securities. The criteria that a privately issued mortgage-backed security must meet to be assigned the same risk weight as the underlying assets are as follows:

- The underlying assets are held by an independent trustee, and the trustee has a first-priority, perfected security interest in the underlying assets on behalf of the holders of the security.
- The holder of the security has an undivided pro rata ownership interest in the underlying mortgage assets, or the trust or single-purpose entity (or conduit) that issues the security has no liabilities unrelated to the issued securities.
- The cash flow from the underlying assets of the security in all cases fully meets the cash-flow requirements of the security without undue reliance on any reinvestment income.
- No material reinvestment risk is associated with any funds awaiting distribution to the holders of the security.

Those privately issued mortgage-backed securities that do not meet the above criteria are to be assigned to the 100 percent risk category.

If the underlying pool of mortgage-related assets is composed of more than one type of asset, then the entire class of mortgage-backed securities is assigned to the category appropriate to the highest risk-weighted asset in the asset pool. For example, if the security is backed by a pool consisting of U.S. government-sponsored agency securities (for example, Freddie Mac participation certificates) that qualify for a 20 percent risk weight and conventional mortgage loans that qualify for the 50 percent risk category, then the security would receive the 50 percent risk weight.

While not set forth specifically in the risk-based capital guidelines, securities backed by student loans that meet the above-mentioned criteria may also be considered an indirect holding of the underlying assets and assigned to the same risk category as those assets. For instance, the U.S. Department of Education conditionally guarantees banks originating student loans for 98 percent of each loan under the Federal Family Education Loan Program. The guaranteed portion of the student loans is eligible for the 20 percent risk category. Therefore, senior ABS that are supported solely by student loans that are conditionally guaranteed by the Department of Education and that meet the four criteria listed above may be assigned to the 20 percent risk category to the extent they are guaranteed. As with mortgage-backed securities, subordinated student loan–backed securities and securities backed by pools of conditionally guaranteed and nonguaranteed student loans would be assigned to the 100 percent risk category.

Banks report their activities in accordance with GAAP, which permits asset-securitization transactions to be treated as sales when certain criteria are met even when there is recourse to the seller. In accordance with the RBC guideline, banks are required to hold capital against the off-balance-sheet credit exposure arising from the contingent liability associated with the recourse provisions. This exposure, generally the outstanding principal amount of the assets sold with recourse, is considered a direct-credit substitute that is converted at 100 percent to an on-balance-sheet credit-equivalent amount for appropriate risk weighting.

**Recourse Obligations**

For regulatory purposes, recourse is generally defined as an arrangement in which an institution retains the risk of credit loss in connection with an asset transfer, if the risk of credit loss exceeds a pro rata share of its claim on the assets. In addition to broad contractual language that may require the seller to support a securitization, recourse can arise from retained interests, retained subordinated security interests, the funding of cash-collateral accounts, or other forms of credit enhancements that place a BO’s earnings and capital at risk. These enhancements should generally be aggregated to determine the extent of a BO’s support of securitized assets. Although an asset securitization qualifies for sales treatment under GAAP, the underlying assets may still be subject to regulatory risk.

---

10. See the risk-based capital treatment for sales with recourse at 12 CFR 3, appendix A, section 3(a)(b)(1)(iii) (for the OCC), and 12 CFR 567.6(a)(2)(i)(c) (for the OTS). For a further explanation of recourse, see the glossary of the call report instructions at “sales of assets for risk-based capital purposes.”
based capital requirements. Assets sold with recourse should generally be risk-weighted as if they had not been sold.

Credit-Equivalent Amounts and Risk Weights of Recourse Obligations and Direct-Credit Substitutes

The credit-equivalent amount for a recourse obligation or direct-credit substitute is the full amount of the credit-enhanced assets for which the bank directly or indirectly retains or assumes credit risk, multiplied by a 100 percent conversion factor. A bank that extends a partial direct-credit substitute, for example, a financial standby letter of credit that absorbs the first 10 percent of loss on a transaction, must maintain capital against the full amount of the assets being supported.

To determine the bank’s risk-weighted assets for an off-balance-sheet recourse obligation, a third-party direct-credit substitute, or a letter of credit, the credit-equivalent amount is assigned to the risk category appropriate to the obligor in the underlying transaction, after considering any associated guarantees or collateral. For a direct-credit substitute that is an on-balance-sheet asset, for example, a purchased subordinated security, a bank must calculate risk-weighted assets using the amount of the direct-credit substitute and the full amount of the assets it supports, that is, all the more senior positions in the structure. This treatment is subject to the low-level-exposure rule discussed below. (The risk-based capital treatment for asset securitizations is discussed in more detail in section 3020.1.)

If a bank has no claim on a transferred asset, then the retention of any risk of credit loss is recourse. A recourse obligation typically arises when a bank transfers assets and retains an explicit obligation to repurchase the assets or absorb losses due to a default on the payment of principal or interest, or due to any other deficiency in the performance of the underlying obligor or some other party. Recourse may also exist implicitly if a bank provides credit enhancement beyond any contractual obligation to support assets it has sold. The following are examples of recourse arrangements:

- credit-enhancing representations and warranties made on the transferred assets
- loan-servicing assets retained under an agreement that requires the bank to be responsible for credit losses associated with the loans being serviced (mortgage-servicer cash advances that meet the conditions of section III.B.3.a.viii. of the capital adequacy guidelines (12 CFR 208, appendix A) are not recourse arrangements)
- retained subordinated interests that absorb more than their pro rata share of losses from the underlying assets
- assets sold under an agreement to repurchase, if the assets are not already included on the balance sheet
- loan strips sold without contractual recourse when the maturity of the transferred loan is shorter than the maturity of the commitment under which the loan is drawn
- credit derivatives issued that absorb more than the bank’s pro rata share of losses from the transferred assets
- clean-up calls at inception that are greater than 10 percent of the balance of the original pool of transferred loans (clean-up calls that are 10 percent or less of the original pool balance and that are exercisable at the option of the bank are not recourse arrangements)

The risk-based capital treatment for asset securitizations is discussed in detail in section 3020.1. In general, a multilevel, ratings-based approach is used to assess the capital requirements on recourse obligations, residual interests (except credit-enhancing interest-only (I/O) strips), direct-credit substitutes, and senior and subordinated securities in asset securitizations, based on their relative exposure to credit risk. Credit ratings from rating agencies are used to measure relative exposure to credit risk. The Federal Reserve is relying on these credit ratings to make determinations of credit quality for the regulatory capital treatment for loss positions that represent different gradations of credit risk, the same as investors and other market participants. As discussed later in this section, residual interests are subject to (1) a dollar-for-dollar capital charge and (2) a 25 percent of tier 1 capital concentration limit on a subset of residual interests, credit-enhancing I/O strips.
credit support to one of more of its securitizations beyond its contractual obligation. Implicit recourse, like contractual recourse, exposes an institution to the risk of loss arising from deterioration in the credit quality of the underlying assets of the securitization. Implicit recourse is of supervisory concern because it demonstrates that the securitizing institution is reassuming the risk associated with the securitized assets—risk that the institution initially transferred to the marketplace. For risk-based capital purposes, banks deemed to be providing implicit recourse are generally required to hold capital against the entire outstanding amount of assets sold, as though the assets remained on the bank’s books.

Banks have typically provided implicit recourse in situations where the originating bank perceived that the failure to provide this support, even though not contractually required, would damage its future access to the asset-backed securities market. An originating bank can provide implicit recourse in a variety of ways. The ultimate determination as to whether implicit recourse exists depends on the facts. The following actions point to a finding of implicit recourse:

- selling assets to a securitization trust or other special-purpose entity (SPE) at a discount from the price specified in the securitization documents, which is typically par value
- purchasing assets from a trust or other SPE at an amount greater than fair value
- exchanging performing assets for nonperforming assets in a trust or other SPE
- funding credit enhancements beyond contractual requirements

By providing implicit recourse, a bank signals to the market that it still holds the risks inherent in the securitized assets, and, in effect, the risks have not been transferred. Accordingly, examiners must be attentive to banks that provide implicit support, given the risk these actions pose to a bank’s financial condition. Increased attention should be given to situations where a bank is more likely to provide implicit support.

Particular attention should be paid to revolving securitizations, such as those used for credit card lines and home equity lines of credit, in which receivables generated by the lines are sold into the securitizations. These securitizations typically provide that, when certain performance criteria hit specified thresholds, no new receivables can be sold into the securitization, and the principal on the bonds issued will begin to pay out. These early-amortization events are intended to protect investors from further deterioration in the underlying asset pool. Once an early-amortization event has occurred, the bank could have difficulties using securitization as a continuing source of funding and, at the same time, have to fund the new receivables generated by the lines of credit on its balance sheet. Thus, banks have an incentive to avoid early amortization by providing implicit support to the securitization.

Examiners should be alert for securitizations that are approaching early-amortization triggers, such as a decrease in the excess spread below a certain threshold or an increase in delinquencies beyond a certain rate. Providing implicit recourse can pose a degree of risk to a bank’s financial condition and to the integrity of its regulatory and public financial statements and reports. Examiners should review securitization documents (for example, pooling and servicing agreements) to ensure that the selling institution limits any post-sale support to that specified in the terms and conditions in the securitization documents. Examiners should also review a sample of receivables transferred between the seller and the trust to ensure that these transfers were conducted in accordance with the contractual terms of the securitization, particularly in cases where the overall credit quality of the securitized loans or receivables has deteriorated. While banks are not prohibited from providing implicit recourse, such support will generally result in higher capital requirements.

Examiners should recommend that prompt supervisory action be taken when implicit recourse is identified. To determine the appropriate action, examiners need to understand the bank’s reasons for providing support and the extent of the impact of this support on the bank’s earnings and capital. As with contractual recourse, actions involving noncontractual post-sale credit enhancement generally result in the requirement that the bank hold risk-based capital against the entire outstanding amount of the

10a. Credit enhancements include retained subordinated interests, asset-purchase obligations, overcollateralization, cash-collateral accounts, spread accounts, and interest-only strips.

10b. Excess spread generally is defined as finance-charge collections minus certificate interest, servicing fees, and charge-offs allocated to the series.
securitized assets. Supervisors may require the bank to bring all assets in existing securitizations back on the balance sheet for risk-based capital purposes, as well as require the bank to increase its minimum capital ratios. Supervisors may also prevent a bank from removing assets from its risk-weighted asset base on future transactions until the bank demonstrates its intent and ability to transfer risk to the marketplace. In addition, supervisors may consider other actions to ensure that the risks associated with implicit recourse are adequately reflected in the capital ratios. For example, supervisors may require the bank to deduct residual interests from tier 1 capital as well as hold risk-based capital on the underlying assets.

The following examples illustrate post-sale actions that banks have taken on assets they have securitized. These examples are intended to provide guidance on whether these actions would be considered implicit recourse for risk-based capital and other supervisory purposes. A key factor in each scenario and analysis is the potential risk of loss the bank’s earnings and capital may be exposed to as a result of its actions.

Account removal: Example 1a

**Facts.** A bank originates and services credit card receivables throughout the country. The bank decides to divest those credit card accounts of customers who reside in specific geographic areas where the bank lacks a significant market presence. To achieve the maximum sales price, the sale must include both the credit card relationships and the receivables. Because many of the credit card receivables are securitized through a master-trust structure, the bank needs to remove the receivables from the trust. The affected receivables are not experiencing any unusual performance problems. In that respect, the charge-off and delinquency ratios for the receivables to be removed from the trust are substantially similar to those for the trust as a whole.

The bank enters into a contract to sell the specified credit card accounts before the receivables are removed from the trust. The terms of the transaction are arm’s length, wherein the bank will sell the receivables at market value. The bank separately agrees to purchase the receivables from the trust at this same price. Therefore, no loss is incurred as a result of removing the receivables from the trust. The bank will only remove receivables from the trust that are due from customers located in the geographic areas where the bank lacks a significant market presence, and it will remove all such receivables from the trust.

**Analysis.** The removal of the above-described receivables from the trust does not constitute implicit recourse for regulatory capital purposes. Supporting factors for this conclusion include the following:

- The bank’s earnings and capital are not exposed to actual or potential risk of loss as a result of removing the receivables from the trust.
- There is no indication that the receivables are removed from the trust because of performance concerns.
- The bank is removing the receivables from the trust for a legitimate business purpose other than to systematically improve the quality of the trust’s assets. The legitimate business purpose is evidenced by the bank’s prearranged, arm’s-length sale agreement that facilitates exiting the business in identified geographic locations.

Examiners should review the terms and conditions of the transaction to ensure that the market value of the receivables is documented and well supported before concluding that this transaction does not represent implicit recourse. Examiners should also ensure that the selling bank has not provided the purchaser with any guarantees or credit enhancements on the sold receivables.

Account removal: Example 1b

**Facts.** After the establishment of a master trust for a pool of credit card receivables, the receivables in the trust begin to experience adverse performance. A combination of lower-than-expected yields and higher-than-anticipated charge-offs on the pool causes spreads to compress significantly (although not to zero). The bank’s internally generated forecasts indicate that spreads will likely become negative in the near future.

Management takes action to support the trust by purchasing the low-quality (delinquent) receivables from the trust at par, although their market value is less than par. The receivables purchased from the trust represent approximately one-third of the trust’s total receivables.
This action improves the overall performance of the trust and avoids a potential early-amortization event.

**Analysis.** The purchase of low-quality receivables from a trust at par constitutes implicit recourse for regulatory capital purposes. The purchase of low-quality receivables at an above-market price exposes the bank’s earnings and capital to potential future losses from assets that had previously been sold. Accordingly, the bank is required to hold risk-based capital for the remaining assets in the trust as if they were retained on the balance sheet, as well as hold capital for the assets that were repurchased.

**Additions of future assets or receivables:** Example 2a

**Facts.** Months after the issuance of credit card asset-backed securities, charge-offs and delinquencies on the underlying pool of receivables rise dramatically. A rating agency places the securities on watch for a potential rating downgrade, causing the bank to negotiate additional credit support for the securitized assets. The securitization documents require the bank to transfer new receivables to the securitization trust at par value. However, to maintain the rating on the securities, the bank begins to sell replacement receivables into the trust at a discount from par value.

**Analysis.** The sale of receivables to the trust at a discount constitutes implicit recourse for regulatory capital purposes. The sale of assets at a discount from the price specified in the securitization documents, par value in this example, exposes earnings and capital to future losses. The bank must hold regulatory capital against the outstanding assets in the trust.

**Additions of future assets or receivables:** Example 2b

**Facts.** A bank established a credit card master trust. The receivables from the accounts placed in the trust were, on average, of lesser quality than the receivables from accounts retained on the bank’s balance sheet. Under the criteria for selecting the receivables to be transferred to the master trust, the bank was prevented from including the better-performing affinity accounts in the initial pool of accounts because the affinity-relationship contract was expiring. The bank and the affinity client subsequently revised the terms of their contract, enabling the affinity accounts to meet the selection criteria and be included in future securitization transactions. Later, rising charge-offs within the pool of receivables held by the trust caused spread compression in the trust. To improve the performance of the assets in the trust, the bank begins to include the better-performing and now-eligible receivables from the affinity accounts among the receivables sold to the trust. This action improves the trust’s performance, including its spread levels and charge-off ratios. However, the replacement assets were sold at par in accordance with the terms of the trust agreement, so no current or future charge to the bank’s earnings or capital will result from these asset sales. As another result of this action, the performance of the trust’s assets closely tracks the credit card receivables that remain on the bank’s balance sheet.

**Analysis.** The actions described above do not constitute implicit recourse for regulatory capital purposes. The bank did not incur any additional risk to earnings or capital after the affinity accounts met the selection criteria for replacement assets and after the associated receivables were among the receivables sold to the trust. The replacement assets were sold at par in accordance with the terms of the trust agreement, so no future charge to earnings or capital will result from these asset sales. The sale of replacement assets into a master-trust structure is part of normal trust management.

In this example, the credit card receivables that remain on the bank’s balance sheet closely track the performance of the trust’s assets. Nevertheless, examiners should ascertain whether a securitizing bank sells disproportionately higher-quality assets into securitizations while retaining comparatively lower-quality assets on its books; if so, examiners should consider the effect of this practice on the bank’s capital adequacy.

**Additions of future assets or receivables:** Example 2c

**Facts.** A bank establishes a credit card master trust composed of receivables from accounts that were generally of lower quality than the receivables retained on the bank’s balance sheet. The difference in the two portfolios is primarily due to logistical and operational problems that...
prevent the bank from including certain better-quality affinity accounts in the initial pool from which accounts were selected for securitization. Rising charge-offs and other factors later result in margin compression on the assets in the master trust, which causes some concern in the market regarding the stability of the outstanding asset-backed securities. A rating agency places several securities on its watch list for a potential rating downgrade. In response to the margin compression, as part of the bank’s contractual obligations, spread accounts are increased for all classes by trapping excess spread in conformance with the terms and conditions of the securitization documents. To stabilize the quality of the receivables in the master trust as well as to preclude a downgrade, the bank takes several actions beyond its contractual obligations:

- Affinity accounts are added to the pool of receivables eligible for inclusion in the trust. This change results in improved overall trust performance. However, these receivables are sold to the trust at par value, consistent with the terms of the securitization documents, so no current or future charge to the bank’s earnings or capital will result from these asset sales.
- The charge-off policy for cardholders that have filed for bankruptcy is changed from criteria that were more conservative than industry standards and the FFIEC Uniform Retail Credit Classification and Account Management Policy to criteria that conform to industry standards and the FFIEC’s policy.
- Charged-off receivables held by the trust are sold to a third party. The funds generated by this sale, effectively accelerating the recovery on these receivables, improve the trust’s spread performance.

Analysis. The actions described above do not constitute implicit recourse for regulatory capital purposes. None of the noncontractual actions results in a loss or exposes the bank’s earnings or capital to the risk of loss. Because of the margin compression, the bank is obligated to increase the spread accounts in conformance with the terms and conditions of the securitization documents. To the extent this results in an increase in the value of the subordinated spread accounts (residual interests) on the bank’s balance sheet, the bank will need to hold additional capital on a dollar-for-dollar basis for the additional credit risk it retains. In contrast, if the bank increased the spread accounts beyond its contractual obligation under the securitization documents in order to provide additional protection to investors, this action would be considered a form of implicit recourse. None of the other actions the bank took would affect the bank’s earnings or capital:

- Like other additions to credit card trusts, the additions of receivables from the new affinity accounts were made at par value, in accordance with the securitization documents. Therefore, the addition of receivables to the new affinity accounts would not affect the bank’s earnings or capital.
- The trust’s policy on the timing of charge-offs on accounts of cardholders who have filed for bankruptcy was changed to meet the less-stringent standards of the industry and those required under the Federal Reserve’s policy to improve trust performance, at least temporarily. Nonetheless, this would not affect the bank’s earnings or capital.
- In accordance with the securitization documents, proceeds from recoveries on charged-off accounts are the property of the trust. These and other proceeds would continue to be paid out in accordance with the pooling and servicing agreement. No impact on the bank’s earnings or capital would result.

Modification of loan-repayment terms:
Example 3

Facts. In performing the role of servicer for its securitization, a bank is authorized under its pooling and servicing agreement to modify loan-repayment terms when it appears that this action will improve the likelihood of repayment on the loan. These actions are part of the bank’s process of working with customers who are delinquent or otherwise experiencing temporary financial difficulties. All of the modifications are consistent with the bank’s internal loan policy. However, in modifying the loan terms, the contractual maturity of some loans may be extended beyond the final maturity date of the most junior class of securities sold to investors. When this occurs, the bank repurchases these loans from the securitization trust at par.

Analysis. The modification of terms and repurchase of loans held by the trust constitutes implicit recourse for regulatory capital pur-
poses. The combination of the loan-term modification for securitized assets and the subsequent repurchase constitutes implicit recourse. While the modification of loan terms is permitted under the pooling and servicing agreement, the repurchase of loans with extended maturities at par exposes the bank’s earnings and capital to potential risk of loss.

Servicer’s payment of deficiency balances: Example 4

Facts. A wholly owned subsidiary of a bank originates and services a portfolio of home equity loans. After liquidation of the collateral for a defaulted loan, the subsidiary makes the trust whole in terms of principal and interest if the proceeds from the collateral are not sufficient. However, there is no contractual commitment that requires the subsidiary to support the pool in this manner. The payments made to the trust to cover deficient balances on the defaulted loans are not recoverable under the terms of the pooling and servicing agreement.

Analysis. The subsidiary’s action constitutes implicit recourse to the bank for regulatory capital purposes. This action is considered implicit recourse because it adversely affects the bank’s earnings and capital since the bank absorbs losses on the loans resulting from the actions taken by its subsidiary. Further, no mechanism exists to provide for, and ensure that, the subsidiary will be reimbursed for the payments made to the trust. In addition, examiners will consider any servicer advance a credit enhancement if the servicer is not entitled to full reimbursement or if the reimbursement is subordinate to other claims.

Reimbursement of credit enhancer’s actual losses: Example 5

Facts. A bank sponsoring a securitization arranges for an unrelated third party to provide a first-loss credit enhancement, such as a financial standby letter of credit that will cover losses up to the first 10 percent of the securitized assets. The bank agrees to pay a fixed amount as an annual premium for this credit enhancement.

Analysis. The third party initially covers actual losses that occur in the underlying asset pool in accordance with its contractual commitment under the letter of credit. Later, the selling bank agrees not only to pay the credit enhancer the annual premium on the credit enhancement, but also to reimburse the credit enhancer for the losses it absorbed during the preceding year. This reimbursement for actual losses was not originally provided for in the contractual arrangement between the bank and the credit-enhancement provider.

Low-Level Exposure

Securitization transactions involving recourse may be eligible for “low-level-recourse” treatment. A bank that contractually limits its maximum off-balance-sheet recourse obligation or direct-credit substitute (except credit-enhancing I/O strips) to an amount less than the effective risk-based capital requirement for the enhanced assets is required to hold risk-based capital equal to the maximum contractual exposure, less any recourse liability established in accordance with GAAP. The low-level-recourse capital treatment thus applies to transactions accounted for as sales under GAAP. The low-level-exposure rule provides that the dollar amount of risk-based capital required for assets transferred with recourse should not exceed the maximum dollar amount for which a bank is contractually liable, less any recourse liability account established in accordance with GAAP. The limitation does not apply when the bank provides credit enhancement beyond any con-

---

10c. A servicer advance will also be considered a form of credit enhancement if, for any one loan, nonreimbursable advances are not contractually limited to an insignificant amount of that loan’s outstanding principal.

12. For example, the effective risk-based capital requirement generally would be 4 percent for residential mortgages and 8 percent for commercial loans.
tractual obligation to support assets it has sold. The low-level capital treatment applies to low-
level-recourse transactions involving all types of assets, including commercial loans and residential mortgages.

Low-level-recourse transactions can arise when a bank sells or securitizes assets and uses contractual cash flows, such as spread accounts and I/O strips receivables, as a credit enhance-
ment for the sold or securitized assets. A spread account is an escrow account that a bank typi-
cally establishes to absorb losses on receivables it has sold in a securitization, thereby providing credit enhancement to investors in the securities backed by the receivables, for example, credit card receivables. As defined in paragraph 14 of FAS 140, an I/O strip receivable is the contractual right to receive some or all of the interest due on a bond, a mortgage loan, or other interest-bearing financial assets. I/O strips are to be measured at fair value with gains or losses recognized either in earnings (if classified as trading) or a separate component of shareholders’ equity (if classified as available-for-sale). Paragraph 14 of FAS 140 states that I/O strips, retained interests in securitizations, loans, other receivables, or other financial assets that can contractually be prepaid or otherwise settled in such a way that the holder would not recover substantially all of its recorded investment (except for instruments that are within the scope of Statement of Financial Accounting Standards No. 133 (FAS 133), “Accounting for Derivative Instruments and Hedging Activities,”) shall be subsequently measured like investments in debt securities classified as available-for-sale or trading under Statement of Financial Accounting Standards No. 115 (FAS 115), “Accounting for Certain Investments in Debt and Equity Securities.” Retained interests that lack objectively verifiable support or that fail to meet the supervisory standards (discussed previously in this section) will be classified as loss and disallowed as assets of the BO for regulatory capital purposes.

Another divergence from the general risk-based capital treatment for assets sold with recourse concerns small-business obligations. Qualifying institutions that transfer small-business obligations with recourse are required, for risk-based capital purposes, to maintain capital against only the amount of recourse retained, provided two conditions are met. First, the transactions must be treated as a sale under GAAP. Second, the transferring institutions must establish, pursuant to GAAP, a noncapital reserve sufficient to meet the reasonably estimated lia-
bility under their recourse arrangements.

Banking organizations will be considered qualifying institutions for the purpose of treat-
ment of recourse for small-business organizations if, pursuant to the Board’s prompt-
corrective-action regulation (12 CFR 208.40), they are well capitalized or, by order of the Board, adequately capitalized. To qualify, an institution must be determined to be well capital-
ized or adequately capitalized without taking into account the preferential capital treatment for any previous transfers of small-business obligations with recourse. The total outstanding amount of recourse retained by a qualifying BO on transfers of small-business obligations receiving the preferential capital treatment cannot exceed 15 percent of the institution’s total risk-based capital.

Standby Letters of Credit

Banking organizations that issue standby letters of credit as credit enhancements for ABS issues must hold capital against these contingent liabilities under the risk-based capital guidelines. Accordingly, financial standby letters of credit are direct-credit substitutes. A direct-credit substitute is an arrangement in which a bank assumes, in form or substance, credit risk associated with an on- or off-balance-sheet credit exposure that it did not previously own (a third-party asset), and the risk assumed by the bank exceeds the pro rata share of its interest in the third-party asset. If the bank has no claim on the third-party asset, then its

---

13. Under 12 CFR 208.43, a state member bank is deemed to be well capitalized if it (1) has a total risk-based capital ratio of 10.0 percent or greater; (2) has a tier 1 risk-based capital ratio of 6.0 percent or greater; (3) has a leverage ratio of 5.0 percent or greater; and (4) is not subject to any written agreement, order, capital directive, or prompt-corrective-action directive issued by the Board pursuant to section 8 of the FDI Act, the International Lending Supervision Act of 1983, or section 38 of the FDI Act or any regulation thereunder to meet and maintain a specific capital level for any capital measure.

A state member bank is deemed to be adequately capital-
ized if it (1) has a total risk-based capital ratio of 8.0 or greater, (2) has a tier 1 risk-based capital ratio of 4.0 percent or greater, (3) has a leverage ratio of 4.0 percent or greater or a leverage ratio of 3.0 percent or greater if the bank is rated composite 1 under the CAMELS rating system in its most recent examination and is not experiencing or anticipating significant growth, and (4) does not meet the definition of a well-capitalized bank.
assumption of any credit risk with respect to the third-party asset is a direct-credit substitute. Direct-credit substitutes are converted in their entirety to credit-equivalent amounts. The credit-equivalent amounts are then risk-weighted according to their credit rating, like other direct-credit substitutes, and the risk weight for the corresponding credit rating.

Concentration Limits Imposed on Residual Interests

The creation of a residual interest (the debit) typically results in an offsetting gain on sale (the credit), and thus the generation of an asset. Banking organizations that securitize high-yielding assets with long durations may create a residual-interest asset value that exceeds the risk-based capital charge that would be in place if it had not sold the assets. Serious problems can arise for those banking organizations that distribute earnings too generously, only to be faced later with a downward valuation and charge-off of part or all of the residual interests.

Under the Federal Reserve’s capital adequacy guidelines, there is a dollar-for-dollar capital charge on residual interests and a concentration limit on a subset of residual interests, credit-enhancing I/O strips. These strips include any on-balance-sheet assets that represent a contractual right to receive some or all of the interest due on transferred assets, after taking into account trustee and other administrative expenses, interest payments to investors, servicing fees, reimbursements to investors for losses attributable to beneficial interests they hold, and reinvestment income and ancillary revenues (for example, late fees) on the transferred assets. Credit-enhancing I/O strips expose the bank to more than its pro rata share of credit risk and are limited to 25 percent of tier 1 capital, whether they are retained or purchased. Any amount of credit-enhancing I/O strips that exceeds the 25 percent limit will be deducted from tier 1 capital and assets. An example of the concentration calculation required for banks that hold credit-enhancing I/O strips is described below.

A bank has purchased and retained on its balance sheet credit-enhancing I/O strips with a face amount of $100, and it has tier 1 capital of $320 (before any disallowed servicing assets, disallowed purchased credit-card relationships, disallowed credit-enhancing I/O strips, disallowed deferred tax assets, and amounts of nonfinancial equity investments required to be deducted). To determine the amount of credit-enhancing I/O strips that fall within the concentration limit, the bank would multiply the tier 1 capital of $320 by 25 percent, which is $80. The amount of credit-enhancing I/O strips that exceeds the concentration limit, in this case $20, is deducted from tier 1 capital for risk-based and leverage capital calculations and from assets.

Credit-enhancing I/O strips that are not deducted from tier 1 capital (that is, the remaining $80 in the above example), along with all other residual interests not subject to the concentration limit, are subject to a dollar-for-dollar capital requirement. Banks are not required to hold capital for more than 100 percent of the amount of the residual interest. Credit-enhancing I/O strips are not aggregated with any servicing assets or purchased credit-card relationships for purposes of calculating the 25 percent concentration limit.

Continuing the above illustration, once a bank deducts the $20 in disallowed credit-enhancing I/O strips, it must hold $80 in total capital for the $80 that represents the credit-enhancing I/O strips not deducted from tier 1 capital. The $20 deducted from tier 1 capital, plus the $80 in total risk-based capital required under the dollar-for-dollar treatment, equals $100, the face amount of the credit-enhancing I/O strips. Banks may apply a net-of-tax approach to any credit-enhancing I/O strips that have been deducted from tier 1 capital, as well as to the remaining residual interests subject to the dollar-for-dollar treatment. A bank is permitted, but not required, to net the deferred tax liabilities recorded on its balance sheet, if any, that are associated with the residual interests. This netting of the deferred tax liabilities may result in a bank’s holding less than 100 percent capital against residual interests.

Normally, a sponsor will eventually receive any excess cash flow remaining from securitizations after investor interests have been met. As previously stated, residual interests are vulnerable to sudden and sizeable write-downs that can hinder a bank’s access to the capital markets; damage its reputation in the marketplace; and, in some cases, threaten its solvency. An institution’s board of directors and management are expected to develop and implement policies
that limit the amount of residual interests that may be carried as a percentage of total equity capital, based on the results of their valuation and modeling processes. Well-constructed internal limits also lessen the incentives for an institution’s personnel to engage in activities designed to generate near-term “paper profits” that may be at the expense of the institution’s long-term financial position and reputation.

Asset-Backed Commercial Paper Programs

Although banks’ involvement in the securitization of commercial paper has increased significantly over time, asset-backed commercial paper programs differ from other methods of securitization. One difference is that more than one type of asset may be included in the receivables pool. Moreover, in certain cases, the cash flow from the receivables pool may not necessarily match the payments to investors because the maturity of the underlying asset pool does not always parallel the maturity of the structure of the commercial paper. Consequently, when the paper matures, it is usually rolled over or funded by another issue. In certain circumstances, a maturing issue of commercial paper cannot be rolled over. To address this problem, many banks have established backup liquidity facilities. Certain banks have classified these backup facilities as pure liquidity facilities, despite the credit-enhancement element present in them, and, as a result, have incorrectly assessed the risks associated with these facilities. In these cases, the backup liquidity facilities have been more similar to direct-credit substitutes than to loan commitments.

An asset-backed commercial paper (ABCP) program typically is a program through which a bank provides funding to its corporate customers by sponsoring and administering a bankruptcy-remote special-purpose entity that purchases asset pools from, or extends loans to, those customers. The asset pools in an ABCP program might include, for example, trade receivables, consumer loans, or ABS. The ABCP program raises cash to provide funding to the bank’s customers through the issuance of externally rated commercial paper into the market. Typically, the sponsoring bank provides liquidity and credit enhancements to the ABCP program. These enhancements aid the program in obtaining high credit ratings that facilitate the issuance of the commercial paper.16

Banks consolidating ABCP program assets must include all of the program assets (mostly receivables and securities) and liabilities (mainly commercial paper) on their balance sheets for purposes of the bank Reports of Condition and Income (Call Reports).

Sponsoring BOs generally face limited risk exposure to ABCP programs. This risk usually is confined to the credit enhancements and liquidity-facility arrangements that sponsoring BOs provide to these programs. In addition, operational controls and structural provisions, along with overcollateralization or other credit enhancements provided by the companies that sell assets into ABCP programs, mitigate the risks to which sponsoring BOs are exposed.

Liquidity facilities supporting ABCP. Liquidity facilities supporting ABCP often take the form of commitments to lend to, or to purchase assets from, any structure, program, or conduit in the event that funds are needed to repay maturing commercial paper. Typically, this need for liquidity is due to a timing mismatch between cash collections on the underlying assets in the program and scheduled repayments of the commercial paper issued by the program.

A bank that provides liquidity facilities to ABCP is exposed to credit risk, regardless of the term of the liquidity facilities. For example, an ABCP program may require a liquidity facility to purchase assets from the program at the first sign of deterioration in the credit quality of an asset pool, thereby removing such assets from the program. In such an event, a draw on the liquidity facility exposes the bank to credit risk.

15. The definition of ABCP program generally includes structured investment vehicles (entities that earn a spread by issuing commercial paper and medium-term notes and using the proceeds to purchase highly rated debt securities) and securities arbitrage programs.

16. A bank is considered the sponsor of an ABCP program if it establishes the program; approves the sellers permitted to participate in the program; approves the asset pools to be purchased by the program; or administers the program by monitoring the assets, arranging for debt placement, compiling monthly reports, or ensuring compliance with the program documents and with the program’s credit and investment policy.
Short-term commitments with an original maturity of one year or less expose banks to a lower degree of credit risk than longer-term commitments. This difference in the degree of credit risk is reflected in the risk-based capital requirement for the different types of exposures through liquidity facilities.

The Board’s risk-based capital guidelines impose a 10 percent credit-conversion factor on unused portions of eligible short-term liquidity facilities supporting ABCP. Under the risk-based capital guidelines and the Board’s interpretations thereof, the credit conversion factor for an eligible ABCP liquidity facility is based on whether the facility has an original maturity of one year or less.17 A 50 percent credit-conversion factor applies to eligible ABCP liquidity facilities having a maturity greater than one year. To be an eligible ABCP liquidity facility and qualify for the 10 or 50 percent credit-conversion factor, the facility must be subject to an asset quality test at the time of inception that does not permit funding against (1) assets that are 90 days or more past due, (2) assets that are in default, and (3) assets or exposures that are externally rated below investment grade at the time of funding if the assets or exposures were externally rated at the inception of the facility. However, a liquidity facility may also be an eligible liquidity facility if it funds against assets that are guaranteed—either conditionally or unconditionally—by the U.S. government, U.S. government agencies, or by an OECD central government, regardless of whether the assets are 90 days past due, in default, or externally rated investment grade.

The 10 or 50 percent credit-conversion factors apply, regardless of whether the structure issuing the ABCP meets the rule’s definition of an ABCP program. For example, a capital charge would apply to an eligible short-term liquidity facility that provides liquidity support to ABCP where the ABCP constitutes less than 50 percent of the securities issued by the program, thus causing the issuing structure not to meet the rule’s definition of an ABCP program. However, if a bank (1) does not meet this definition and must include the program’s assets in its risk-weighted asset base or (2) otherwise chooses to include the program’s assets in risk-weighted assets, then no risk-based capital requirement will be assessed against any liquidity facilities provided by the bank that support the program’s ABCP. Ineligible liquidity facilities will be treated as recourse obligations or direct-credit substitutes for the purposes of the Board’s risk-based capital guidelines.

The Board’s risk-based capital guidelines do not specifically mandate, authorize, or prohibit a look-through approach to eligible ABCP liquidity facilities. The Federal Reserve and other federal banking agencies have taken the position that a risk weight may be applied to the credit equivalent amount of an eligible ABCP liquidity facility by looking through to the underlying assets of the ABCP conduit after considering any collateral or guarantees, or external credit ratings, if applicable. For example, if an eligible short-term liquidity facility providing liquidity support to ABCP covered an asset-backed security (ABS) externally rated AAA, then the notional amount of the liquidity facility would be converted at 10 percent to an on-balance-sheet credit-equivalent amount and assigned to the 20 percent risk-weight category appropriate for AAA-rated ABS.

Overlapping exposures to an ABCP program. A bank may have multiple overlapping exposures to a single ABCP program (for example, both a program-wide credit enhancement and multiple pool-specific liquidity facilities to an ABCP program that is not consolidated for risk-based capital purposes). A bank must hold risk-based capital only once against the assets covered by the overlapping exposures. Where the overlapping exposures are subject to different risk-based capital requirements, the bank must apply the risk-based capital treatment that results in the highest capital charge to the overlapping portion of the exposures.

For example, assume a bank provides a program-wide credit enhancement that would absorb 10 percent of the losses in all of the underlying asset pools in an ABCP program and also provides pool-specific liquidity facilities that cover 100 percent of each of the underlying asset pools. The bank would be required to hold capital against 10 percent of the underlying asset pools because it is providing the program-wide credit enhancement. The bank would also be required to hold capital against 90 percent of the liquidity facilities it is providing to each of the underlying asset pools. For risk-based capital purposes, the bank would not be required to hold capital against any credit enhancements or liq-

---

17. See the Board staff’s October 12, 2007, legal interpretation regarding the risk-based capital treatment of ABCP liquidity facilities.
quidity facilities that comprise the same pro-
gram assets.

If different banks have overlapping exposures
to an ABCP program, however, each organiza-
tion must hold capital against the entire
maximum amount of its exposure. As a result,
while duplication of capital charges will not oc-
cur for individual banks, some systemic
duplication may occur where multiple BOs have
overlapping exposures to the same ABCP
program.

Asset-quality test. For a liquidity facility, either
short- or long-term, that supports ABCP not to
be considered a recourse obligation or a direct-
credit substitute, it must meet the risk-based
capital rule’s definition of an eligible ABCP
liquidity facility. An eligible ABCP liquidity
facility must meet a reasonable asset-quality test
that, among other things, precludes funding
against assets that are 90 days or more past due
or in default. When assets are 90 days or more
past due, they typically have deteriorated to the
point where there is an extremely high prob-
ability of default. Assets that are 90 days past
due, for example, often must be placed on non-
accrual status in accordance with the agencies’
Uniform Retail Credit Classification and
Account Management Policy.18 Further, they
generally must also be classified substandard
under that policy.

In addition to the above, if the assets covered
by the liquidity facility are initially externally
rated (at the time the facility is provided), the
facility can be used to fund only those assets that
are externally rated investment grade at the time
of funding. The practice of purchasing assets
that are externally rated below investment grade
out of an ABCP program is considered to be the
equivalent of providing credit protection to the
commercial paper investors. Thus, liquidity
facilities permitting purchases of below-
investment-grade securities will be considered
either recourse obligations or direct-credit
substitutes.

However, neither the “90-days-past-due” limi-
tation nor the “investment grade” limitation
apply to the asset-quality test with respect to
assets that are conditionally or unconditionally
guaranteed by the U.S. government or its agen-
cies or by another OECD central government.

An ABCP liquidity facility is considered to be
in compliance with the requirement for an asset
quality test if (1) the liquidity provider has
access to certain types of acceptable credit
enhancements and (2) the notional amount of
such credit enhancements available to the liquidity
facility provider exceeds the amount of
underlying assets that are 90 days or more past
due, defaulted, or below investment grade for
which the liquidity provider may be obligated to
fund under the facility. In this circumstance, the
liquidity facility may be considered “eligible”
for purposes of the risk-based capital rule
because the provider of the credit enhancement
generally bears the credit risk of the assets that
are 90 days or more past due, in default, or
below investment grade rather than the banking
organization providing liquidity.19

The following forms of credit enhancements
are generally acceptable for purposes of satisfy-
ing the asset quality test:

- “funded” credit enhancements that the BO
  may access to cover delinquent, defaulted, or
  below-investment-grade assets, such as over-
collateralization, cash reserves, subordinated
  securities, and funded spread accounts;
- surety bonds and letters of credit issued by a
  third party with a nationally recognized statisti-
cal rating organization with a rating of single
  A or higher that the BO may access to cover
  delinquent, defaulted, or below-investment-
  grade assets, provided that the surety bond or
  letter of credit is irrevocable and legally
  enforceable; and
- one month’s worth of excess spread that the
  BO may access to cover delinquent, defaulted,
  or below-investment-grade assets if the fol-
  lowing conditions are met: (1) excess spread
  is contractually required to be trapped when it
  falls below 4.5 percent (measured on an annu-
  alized basis) and (2) there is no material
  adverse change in the BO’s ABCP underwrit-
  ing standards. The amount of available excess
  spread may be calculated as the average of the
current month’s and the two previous months’
  excess spread.

Recourse directly to the seller, other than the
funded credit enhancements enumerated above,
regardless of the seller’s external credit rating, is
not an acceptable form of credit enhancement

19. See SR-05-13 and its attachment, “Interagency Guid-
ance on the Eligibility of Asset-Backed Commercial Paper
Liquidity Facilities and the Resulting Risk-Based Capital
Treatment.”
for purposes of satisfying the asset quality test. Seller recourse—for example, a seller’s agreement to buy back nonperforming or defaulted loans or downgraded securities—may expose the liquidity provider to an increased level of credit risk. A decline in the performance of assets sold to an ABCP conduit may signal impending difficulties for the seller.

If the amount of acceptable credit enhancement associated with the pool of assets is less than the current amount of assets that are 90 days or more past due, in default, or below investment grade that the liquidity facility provider may be obligated to fund against, the liquidity facility should be treated as recourse or a direct credit substitute. The full amount of assets supported by the liquidity facility would be subject to a 100 percent credit conversion factor. The Federal Reserve Board reserves the right to deem an otherwise eligible liquidity facility to be, in substance, a direct credit substitute if a member bank uses the liquidity facility to provide credit support.

The bank is responsible for demonstrating to the Federal Reserve Board whether acceptable credit enhancements cover the 90 days or more past due, defaulted, or below-investment-grade assets that the organization may be obligated to fund against in each seller’s asset pool. If the bank cannot adequately demonstrate satisfaction of the conditions in the above-referenced interagency guidance, the Federal Reserve Board further reserves the right to determine that a credit enhancement is unacceptable for purposes of the requirement for an asset quality test and, therefore, it may deem the liquidity facility to be ineligible.

Market risk capital requirements for ABCP programs. Any facility held in the trading book whose primary function, in form or in substance, is to provide liquidity to ABCP—even if the facility does not qualify as an eligible ABCP liquidity facility under the rule—will be subject to the banking-book risk-based capital requirements. Specifically, banks are required to convert the notional amount of all trading-book positions that provide liquidity to ABCP to credit-equivalent amounts by applying the appropriate banking-book credit-conversion factors. For example, the full amount of all eligible ABCP liquidity facilities with an original maturity of one year or less will be subject to a 10 percent conversion factor, regardless of whether the facility is carried in the trading account or the banking book.

SOUND RISK-MANAGEMENT PRACTICES

An institution must incorporate the risks involved in its securitization activities into its overall risk-management system. The system should entail (1) inclusion of risk exposures in reports to the institution’s senior management and board to ensure proper management oversight; (2) adoption of appropriate policies, procedures, and guidelines to manage the risks involved; (3) appropriate measurement and monitoring of risks; and (4) assurance of appropriate internal controls to verify the integrity of the management process with respect to these activities.

Board and Senior Management Oversight

Both the board of directors and senior management are responsible for ensuring that they fully understand the degree to which the organization is exposed to the credit, market, liquidity, operational, legal, and reputational risks involved in the institution’s securitization activities. They are also responsible for ensuring that the formality and sophistication of the techniques used to manage these risks are commensurate with the nature and volume of the organization’s activities. Institutions with significant securitization activities are expected to have more elaborate and formal approaches to manage the risk of these activities. The board should approve all significant policies relating to the management of risk arising from securitization activities and should ensure that risk exposures are fully incorporated in board reports and risk-management reviews.

Policies and Procedures

Senior management is responsible for ensuring that the risks arising from securitization activities are adequately managed on both a short-term and long-run basis. Management should

---

19a. See 12 CFR 208, appendix A, section III.B.3.b.i.
ensure that adequate policies and procedures are in place for incorporating the risk of these activities into the overall risk-management process of the institution. Such policies should ensure that the economic substance of the risk exposures generated by these activities is fully recognized and appropriately managed. In addition, BOs involved in securitization activities should have appropriate policies, procedures, and controls for underwriting ABS; funding the possible return of revolving receivables (for example, credit card receivables and home-equity lines); and establishing limits on exposures to individual institutions, types of collateral, and geographic and industrial concentrations. The institution’s directors and managers need to ensure that—

- independent risk-management processes are in place to monitor securitization-pool performance on an individual and aggregate transaction level (an effective risk-management function includes appropriate information systems to monitor securitization activities);
- conservative valuation assumptions and modeling methodologies are used to establish, evaluate, and adjust the carrying value of retained interests on a regular and timely basis;
- audit or internal-review staffs periodically review data integrity, model algorithms, key underlying assumptions, and the appropriateness of the valuation and modeling process for the securitized assets the institution retains (the findings of such reviews should be reported directly to the board or an appropriate board committee);
- accurate and timely risk-based capital calculations are maintained, including recognition and reporting of any recourse obligation resulting from securitization activity;
- internal limits are in place to govern the maximum amount of retained interests as a percentage of total equity capital; and
- the institution has a realistic liquidity plan in place in case of market disruptions.

Independent Risk-Management Function

Institutions engaged in securitizations need to have an independent risk-management function commensurate with the complexity and volume of their securitizations and their overall risk exposures. The risk-management function should ensure that securitization policies and operating procedures, including clearly articulated risk limits, are in place and appropriate for the institution’s circumstances. A sound asset-
securitization policy should include or address, at a minimum—

- a written and consistently applied accounting methodology;
- regulatory reporting requirements;
- valuation methods, including FAS 140 residual-value assumptions, and procedures to formally approve changes to those assumptions;
- a management reporting process; and
- exposure limits and requirements for both individual- and aggregate-transaction monitoring.

It is essential that the risk-management function monitor origination, collection, and default-management practices. This includes regular evaluations of the quality of underwriting, soundness of the appraisal process, effectiveness of collections activities, ability of the default-management staff to resolve severely delinquent loans in a timely and efficient manner, and appropriateness of loss-recognition practices. Because the securitization of assets can result in the current recognition of anticipated income, the risk-management function should pay particular attention to the types, volumes, and risks of assets being originated, transferred, and serviced. Senior management and the risk-management staff must be alert to any pressures on line managers to originate abnormally large volumes or higher-risk assets to sustain ongoing income needs. Such pressures can lead to a compromise of credit-underwriting standards. This may accelerate credit losses in future periods, impair the value of retained interests, and potentially lead to funding problems.

Risk Measurement and Monitoring

An institution’s risk-management function should include information and risk-measurement and monitoring systems that fully incorporate the risks involved in its securitization activities. BOs must be able to identify credit exposures from all securitization activities, as well as measure, quantify, and control those exposures on a fully consolidated basis. The economic substance of the credit exposures of securitization activities should be fully incorporated into the institution’s efforts to quantify its credit risk, including efforts to establish more formal grading of credits to allow for statistical estimation of loss-probability distributions. Securitization activities should also be included in any aggregations of credit risk by borrower, industry, or economic sector.

An institution’s information systems should identify and segregate those credit exposures arising from the institution’s loan-sale and securitization activities. Such exposures include the sold portions of participations and syndications, exposures arising from the extension of credit-enhancement and liquidity facilities, the effects of an early-amortization event, and the investment in ABS. The management reports should provide the board and senior management with timely and sufficient information to monitor the institution’s exposure limits and overall risk profile.

Stress Testing

The use of stress testing, including combinations of market events that could affect a BO’s credit exposures and securitization activities, is another important element of risk management. Stress testing involves identifying possible events or changes in market behavior that could have unfavorable effects on the institution, and assessing the organization’s ability to withstand them. Stress testing should consider not only the probability of adverse events but also likely worst-case scenarios. Stress testing should be done on a consolidated basis and should consider, for instance, the effect of higher-than-expected levels of delinquencies and defaults, as well as the consequences of early-amortization events with respect to credit card securities, that could raise concerns regarding the institution’s capital adequacy and its liquidity and funding capabilities. Stress-test analyses should also include contingency plans for possible management actions in certain situations.

Internal Controls

One of management’s most important responsibilities is establishing and maintaining an effective system of internal controls. Among other things, internal controls should enforce the official lines of authority and the appropriate separation of duties in managing the risks of the institution. These internal controls must be suitable for the type and level of risks at the institution, given the nature and scope of its
activities. Moreover, these internal controls should ensure that financial reporting is reliable (in published financial reports and regulatory reports), including adequate allowances or liabilities for expected losses.

Effective internal controls are essential to an institution’s management of the risks associated with securitization. When properly designed and consistently enforced, a sound system of internal controls will help management safeguard the institution’s resources; ensure that financial information and reports are reliable; and comply with contractual obligations, including securitization covenants. Internal controls will also reduce the possibility of significant errors and irregularities, and assist in their timely detection. Internal controls typically (1) limit authorities; (2) safeguard access to and use of records; (3) separate and rotate duties; and (4) ensure both regular and unscheduled reviews, including testing.

Operational and managerial standards have been established for internal control and information systems.20 A system of internal controls should be maintained that is appropriate to the institution’s size and nature, its scope, and the risk of its activities.21

Audit Function or Internal Review

The institution’s board of directors is responsible for ensuring that its audit staff or independent-review function is competent to review its securitization activities. The audit function should perform periodic reviews of securitization activities, including transaction testing and verification, and report all findings to the board or appropriate board committee. The audit function also may be useful to senior management in identifying and measuring risk related to securitization activities. Principal audit targets should include compliance with securitization policies, operating and accounting procedures (FAS 140), deal covenants, and the accuracy of MIS and regulatory reports. The audit function also should confirm that the institution’s regulatory reporting process is designed and managed to facilitate timely and accurate report filing. Furthermore, when a third party services loans, the auditors should perform an independent verification of the existence of the loans to ensure that balances reconcile to internal records.

Management Information Systems

An institution’s reporting and documentation methods must support the initial valuation of any retained interests and provide ongoing impairment analyses of these assets. Pool-performance information will help well-managed institutions ensure, on a qualitative basis, that a sufficient amount of economic capital is being held to cover the various risks inherent in securitization transactions. The absence of an adequate management information system (MIS) will hinder management’s ability to monitor specific pool performance and securitization activities. MIS reports, at a minimum, should address the following:

- **Securitization summaries for each transaction.** The summary should include relevant transaction terms such as collateral type, facility amount, maturity, credit-enhancement and subordination features, financial covenants (termination events and spread-account capture “triggers”), right of repurchase, and counterparty exposures. Management should ensure that the summaries for each transaction are distributed to all personnel associated with securitization activities.
- **Performance reports by portfolio and specific product type.** Performance factors include gross portfolio yield, default rates and loss severity, delinquencies, prepayments or payments, and excess spread amounts. The reports should reflect the performance of assets, both on an individual-pool basis and total managed assets. These reports should segregate specific products and different marketing campaigns.
- **Vintage analysis for each pool using monthly data.** Vintage analysis will help management understand historical performance trends and their implications for future default rates, prepayments, and delinquencies, and therefore retained interest values. Management can use

---

20. See the safety-and-soundness standards for national banks at 12 CFR 30 (OCC) and for savings associations at 12 CFR 570 (OTS).

21. Institutions that are subject to the requirements of FDIC regulation 12 CFR 363 should include an assessment of the effectiveness of internal controls over their asset-securitization activities as part of management’s report on the overall effectiveness of the system of internal controls over financial reporting. This assessment implicitly includes the internal controls over financial information that is included in regulatory reports.
these reports to compare historical performance trends with underwriting standards, including the use of a validated credit-scoring model, to ensure loan pricing is consistent with risk levels. Vintage analysis also helps in the comparison of deal performance at periodic intervals and validates retained-interest valuation assumptions.

- **Static-pool cash-collection analysis.** A static-pool cash-collection analysis involves reviewing monthly cash receipts relative to the principal balance of the pool to determine the cash yield on the portfolio, comparing the cash yield to the accrual yield, and tracking monthly changes. Management should compare monthly the timing and amount of cash flows received from the trust with those projected as part of the FAS 140 retained-interest valuation analysis. Some master-trust structures allow excess cash flow to be shared between series or pools. For revolving-asset trusts with this master-trust structure, management should perform a cash-collection analysis for each master-trust structure. These analyses are essential in assessing the actual performance of the portfolio in terms of default and prepayment rates. If cash receipts are less than those assumed in the original valuation of the retained interest, this analysis will provide management and the board with an early warning of possible problems with collections or extension practices and impairment of the retained interest.

- **Sensitivity analysis.** A sensitivity analysis measures the effect of changes in default rates, prepayment or payment rates, and discount rates to assist management in establishing and validating the carrying value of the retained interest. Stress tests should be performed at least quarterly. Analyses should consider potential adverse trends and determine “best,” “probable,” and “worst-case” scenarios for each event. Other factors that need to be considered are the impact of increased defaults on collections staffing, the timing of cash flows, spread-account capture triggers, overcollateralization triggers, and early-amortization triggers. An increase in defaults can result in higher-than-expected costs and a delay in cash flows, thus decreasing the value of the retained interests. Management should periodically quantify and document the potential impact to both earnings and capital and should report the results to the board of directors. Management should incorporate this analysis into their overall interest-rate risk measurement system. Examiners will review the institution’s analysis and the volatility associated with retained interests when assessing the Sensitivity to Market Risk component rating (the “S” in the CAMELS rating system for banks or the “R” for the BHC RFI/C(D) rating system).

- **Statement of covenant compliance.** Ongoing compliance with deal-performance triggers as defined by the pooling and servicing agreements should be affirmed at least monthly. Performance triggers include early amortization, spread capture, changes to overcollateralization requirements, and events that would result in servicer removal.

### Securitization Convenants Linked to Supervisory Actions or Thresholds

A bank’s board of directors and senior management are responsible for initiating policies and procedures and for monitoring processes and internal controls that will provide reasonable assurance that the bank’s contracts and commitments do not include detrimental covenants that affect the safety and soundness of the bank. When examiners review a bank’s securitization contracts and related documentation, they should be alert to any covenants that use adverse supervisory actions or the breach of supervisory thresholds as triggers for early-amortization events or the transfer of servicing. Examples of such supervisory actions include a downgrade in the organization’s CAMELS rating, an enforcement action, or a downgrade in a bank’s prompt-corrective-action capital category. The inclusion of supervisory-linked covenants in securitization documents is considered to be an “unsafe and unsound banking practice” that undermines the objective of supervisory actions and thresholds. An early amortization or transfer of servicing triggered by such events can create or exacerbate liquidity and earnings problems for a bank that may lead to further deterioration in its financial condition.

---

22. The Joint Agency Policy Statement on Interest-Rate Risk (see SR-96-13 and section 4090.1) advises institutions with a high level of exposure to interest-rate risk relative to capital that they will be directed to take corrective action.

23. See the appendix to section 5020.1 (section A.5020.1) for a description of the CAMELS rating system. See SR-04-18 for a description of the RFI/C(D) rating system.
Convenants that contain triggers tied, directly or indirectly, to supervisory actions or thresholds can also result in the early amortization of a securitization at a time when the sponsoring organization’s ability to access other funding sources is limited. If an early-amortization event occurs, investors may lose confidence in the stability of the sponsoring organization’s asset-backed securities, thus limiting its ability to raise new funds through securitization. At the same time, the organization must fund new receivables on the balance sheet, potentially resulting in liquidity problems. Moreover, the existence of a supervisory-linked trigger potentially could inhibit supervisors from taking action intended to address problems at a troubled institution because the action could trigger an event that worsens the institution’s condition or causes its failure.

The Federal Reserve and the other federal banking agencies (the OCC, the FDIC, and the OTS) also are concerned that covenants related to supervisory actions may obligate a bank’s management to disclose confidential examination information, such as the CAMELS rating. Disclosure of such information by a bank’s directors, officers, employees, attorneys, auditors, or independent auditors, without explicit authorization by the institution’s primary regulator, violates the agencies’ information-disclosure rules and may result in follow-up supervisory actions. (See SR-02-14.)

Because of the supervisory concerns about convenants linked to supervisory actions, a federal bank interagency advisory was issued on May 23, 2002. The advisory emphasizes that a bank’s management and board of directors should ensure that covenants related to supervisory actions or thresholds are not included in securitization documents. Covenants that provide for the early termination of the transaction or compel the transfer of servicing due, directly or indirectly, to the occurrence of a supervisory action or event will be criticized, under appropriate circumstances, as an unsafe and unsound banking practice. The agencies also may take other supervisory actions, such as requiring additional capital or denying capital relief for risk-based capital calculations, regardless of the GAAP treatment.

Examiners should consider the potential impact of such covenants in existing transactions when evaluating both the overall condition of the bank and the specific component ratings of capital, liquidity, and management. Early-amortization triggers will specifically be considered in the context of the bank’s overall liquidity position and contingency funding plan. For organizations with limited access to other funding sources or a significant reliance on securitization, the existence of these triggers presents a greater degree of supervisory concern. Any bank that uses securitization as a funding source should have a viable contingency funding plan in the event it can no longer access the securitization market. Examiners should encourage bank management to amend, modify, or remove covenants linked to supervisory actions from existing transactions. Any impediments a bank may have to taking such actions should be documented and discussed with the appropriate supervisory staff of its responsible Reserve Bank.

APPRAISALS AND MORTGAGE-BACKED SECURITIES

Under 12 CFR 225.63(a)(8), an appraisal performed by a state-certified or -licensed appraiser is not required for any real estate–related financial transaction in which a regulated institution purchases a loan or interest in a loan; pooled loans; or an interest in real property, including mortgage-backed securities, provided that the appraisal prepared for each pooled loan or real property interest met the requirements of the regulation. Banks must establish procedures for determining and ensuring that applicable appraisals meet the requirements.

EXAMINATION GUIDELINES FOR ASSET SECURITIZATION

A banking organization may be involved in originating the assets to be pooled, packaging the assets for securitization, servicing the pooled assets, acting as trustee for the pool, providing credit enhancements, underwriting or placing the ABS, or investing in the securities. Individual securitization arrangements often possess unique features, and the risks addressed in this abbreviated version of the examiner guidelines24

24. A complete version of the “Examination Guidelines for Asset Securitization” is attached to SR-90-16.
do not apply to all securitization arrangements. Conversely, arrangements may entail risks not summarized here. Examiners should judge a banking organization’s exposure to securitization with reference to the specific structures in which the organization is involved and the degree to which the organization has identified exposures and implemented policies and controls to manage them. Examiners may tailor the scope of their examinations if the banking organization’s involvement in securitization is immaterial relative to its size and financial strength.

A banking organization participating in securitization, in any capacity, should ensure that the activities are clearly and logically integrated into the overall strategic objectives of the organization. The management of the organization should understand the risks and should not rely excessively on outside expertise to make crucial decisions regarding securitization activities.

As mentioned earlier, the degree of securitization exposure faced by an individual banking organization depends on the role of the organization in the securitization process. An organization involved in the issuance of ABS as originator, packager, servicer, credit enhancer, underwriter, or trustee may face combinations and degrees of risk different than those faced by an organization that only invests in ABS. Examiners should assess a BO’s level, identification, and management of risks within the context of its roles.

A BO should conduct an independent analysis of its exposures before participating in any aspect of securitization and should continue to monitor its exposures throughout its involvement. The analysis and subsequent monitoring should take into account the entire securitization arrangement, emphasizing different risks according to the role that the organization plays. Excessive reliance on opinions of third parties and reported collateral values should be avoided.

An organization involved in the issuance of ABS should scrutinize the underlying assets, giving consideration to their yield, their maturity, their credit risk, their prepayment risk, and the accessibility of collateral in cases of default, as well as the structure of the securitization arrangement and the ability of the other participants in the transaction to meet their obligations. On the other hand, a BO investing in ABS can be expected to place greater emphasis on the characteristics of the ABS as securities, paying attention primarily to credit risk, prepayment risk, liquidity risk, and concentration risk; the underlying assets and structure of the securitization arrangement would be evaluated only within this context.

Appropriate policies, procedures, and controls should be established by a BO before participating in asset securitization. Controls should include well-developed management information systems. In addition, significant policies and procedures should be approved and reviewed periodically by the organization’s board of directors.

In addition to evaluating and monitoring exposure to particular securitization deals, a BO should manage its overall exposure on a consolidated holding company basis. Management of these exposures should include—

- reasonable limits on geographic and industrial concentrations, as well as on exposures to individual institutions;
- internal systems and controls to monitor these exposures and provide periodic and timely reports to senior management and the board of directors on performance and risks; and
- procedures for identifying potential or actual conflicts of interest and policies for resolving those conflicts.

The following general guidelines are intended to help examiners assess the exposures of banks and bank holding companies to asset securitization.

Banking Organizations Involved in Issuing or Managing ABS

A BO involved in the issuance of ABS as originator, packager, servicer, credit enhancer, underwriter, or trustee should analyze the assets underlying the asset-backed security and the structure of the arrangement, including—

- the characteristics and expected performance of the underlying assets,
- the BO’s ability to meet its obligations under the securitization arrangement, and
- the ability of the other participants in the arrangement to meet their obligations.

Analysis of the underlying assets should be conducted independently by each participant in the process, giving consideration to yield,
maturity, credit risk, prepayment risk, and the accessibility of collateral in cases of default. An originator should further consider the impact of securitization on the remaining asset portfolio and on the adequacy of loan-loss reserves and overall capital.

Financial position and operational capacity should be adequate to meet obligations to other parties in a securitization arrangement, even under adverse scenarios. Accordingly, a BO should ensure that the pricing of services is adequate to cover costs over the term of the obligation, as well as to compensate for associated risks. Further, the organization should have contingency plans to transfer responsibilities to another institution in the event that those responsibilities can no longer be fulfilled. Examiners should determine that the BO has policies and controls for managing contractual obligations, including management of collateral, if applicable. Staffing levels should be adequate to fulfill responsibilities.

If a BO’s obligations, under a securitization agreement, are subcontracted to other parties, an assessment of the subcontractor’s financial position and operational capacity should be conducted before delegating responsibility. Further, the subcontractor’s financial position and compliance with contractual obligations should be monitored periodically.

A BO involved in issuing ABS should make certain that the agreement permits it to assess the ability of other participants in the securitization arrangement to meet their obligations (considering obligations that they may have under other securitization arrangements). The rights and obligations of each of the participants under possibly novel legal and institutional arrangements should be clearly documented.

Funding and liquidity management for originators and packagers of securitized assets should avoid excessive reliance on the device of securitization. Originators and packagers should monitor the securitization market closely, develop a broad customer base for their securitization activities, and maintain diversified funding sources.

BOs should not rely excessively on the expertise of a single individual or a small group of individuals, either inside or outside the organization, for the management of participation in securitization activities. Examiners should ensure that an organization acting as trustee for ABS follows the usual standards for trust services.

Policy and Portfolio Analysis

Credit risk. Institutions should be aware that the credit risk involved in many securitization activities may not always be obvious. For certain types of loan-sales and securitization transactions, a BO may actually be exposed to essentially the same credit risk as in traditional lending activities, even though a particular transaction may, superficially, appear to have isolated the institution from any risk exposure. In such cases, removal of an asset from the balance sheet may not result in a commensurate reduction in credit risk. Transactions that can give rise to such instances include loan sales with recourse; credit derivatives; direct-credit substitutes, such as letters of credit; and liquidity facilities extended to securitization programs, as well as certain asset-securitization structures, such as the structure typically used to securitize credit card receivables.

The partial, first-loss recourse obligations an institution retains when selling assets, and the extension of partial credit enhancements (for example, 10 percent letters of credit) in connection with asset securitization, can be sources of concentrated credit risk by exposing institutions to the full amount of expected losses on the protected assets. For instance, the credit risk associated with whole loans or pools of assets that are sold to secondary-market investors can often be concentrated within the partial, first-loss recourse obligations retained by the BOs that are selling and securitizing the assets. In these situations, even though institutions may have reduced their exposure to catastrophic loss on the assets sold, they generally retain the same credit-risk exposure that they would have had if they continued to hold the assets on their balance sheets.

In addition to recourse obligations, institutions assume concentrated credit risk through the extension of partial direct-credit substitutes, such as through the purchase (or retention) of subordinated interests in their own asset securitizations or through the extension of letters of credit. For example, BOs that sponsor certain asset-backed commercial paper programs, or so-called remote-origination conduits, can be exposed to high degrees of credit risk even though it may seem that their notional exposure is minimal. A remote-origination conduit lends directly to corporate customers referred to it by the sponsoring BO that used to lend directly to these same borrowers. The conduit funds this
lending activity by issuing commercial paper that, in turn, is guaranteed by the sponsoring BO. The net result is that the sponsoring institution has much the same credit-risk exposure through this guarantee that it would have had if it had made the loans directly and held them on its books. This is an off-balance-sheet transaction, however, and its associated risks may not be fully reflected in the institution’s risk-management system.

Furthermore, BOs that extend liquidity facilities to securitized transactions, particularly to asset-backed commercial paper programs, may be exposed to high degrees of credit risk which may be subtly embedded within a facility’s provisions. Liquidity facilities are commitments to extend short-term credit to cover temporary shortfalls in cash flow. While all commitments embody some degree of credit risk, certain commitments extended to asset-backed commercial paper programs to provide liquidity may subject the extending institution to the credit risk of the underlying asset pool, often trade receivables, or of a specific company using the program for funding. Often, the stated purpose of these liquidity facilities is to provide funds to the program to retire maturing commercial paper when a mismatch occurs in the maturities of the underlying receivables and the commercial paper, or when a disruption occurs in the commercial paper market. However, depending on the provisions of the facility—such as whether the facility covers dilution of the underlying receivable pool—credit risk can be shifted from the program’s explicit credit enhancements to the liquidity facility. Such provisions may enable certain programs to fund riskier assets and yet maintain the credit rating on the program’s commercial paper without increasing the program’s credit-enhancement levels.

The structure of various securitization transactions can also result in the institution’s retaining the underlying credit risk in a sold pool of assets. Examples of this contingent credit-risk retention include credit card securitizations in which the securitizing organization explicitly sells the credit card receivables to a master trust, but, in substance, retains the majority of the economic risk of loss associated with the assets because of the credit protection provided to investors by the excess yield, spread accounts, and structural provisions of the securitization. Excess yield provides the first level of credit protection that can be drawn upon to cover cash shortfalls between the principal and coupon owed to investors and the investors’ pro rata share of the master trust’s net cash flows. The excess yield is equal to the difference between the overall yield on the underlying credit card portfolio and the master trust’s operating expenses. The second level of credit protection is provided by the spread account, which is essentially a reserve funded initially from the excess yield.

In addition, the structural provisions of credit card securitizations generally provide credit protection to investors through the triggering of early-amortization events. Such an event usually is triggered when the underlying pool of credit card receivables deteriorates beyond a certain point and requires that the outstanding credit card securities begin amortizing early to pay off investors before the prior credit enhancements are exhausted. As the early amortization accelerates the redemption of principal (paydown) on the security, the credit card accounts that were assigned to the master credit-card trust return to the securitizing institution more quickly than had originally been anticipated. Thus, the institution is exposed to liquidity pressures and any further credit losses on the returned accounts.

Examiner procedures for reviewing credit risk are outlined below:

- Examiners should review a BO’s policies and procedures to ensure that the organization follows prudent standards of credit assessment and approval for all securitization exposure. Procedures should include an initial thorough and independent credit assessment of each loan or pool for which it has assumed credit risk, followed by periodic credit reviews to monitor performance throughout the life of the exposure.
- Examiners should determine that rigorous credit standards are applied, regardless of the role an organization plays in the issuance of ABS. The servicer, credit enhancer, and under-

25. Dilution essentially occurs when the receivables in the underlying asset pool—before collection—are no longer viable financial obligations of the customer. For example, dilution can arise from returns of consumer goods or unsold merchandise by retailers to manufacturers or distributors.

26. The monthly excess yield is the difference between the overall yield on the underlying credit card portfolio and the master trust’s operating expenses. It is calculated by subtracting from the gross portfolio yield (1) the coupon paid to investors; (2) charge-offs for that month; and (3) a servicing fee, usually 200 basis points, paid to the banking organization sponsoring the securitization.
writer must perform assessments and approvals independent of and distinct from reviews provided by the originator or packager.

- Major policies and procedures, including internal credit-review and -approval procedures and in-house exposure limits, should be reviewed periodically and approved by the institution’s board of directors.

- Failure, fraud, or mismanagement on the part of one participant in an ABS issue could result in loss to any of the other institutions involved in the issue. A BO involved in securitization should have adequate procedures for evaluating the internal control procedures and financial strength of other institutions with which it is involved.

- Securitization arrangements may remove a credit enhancer from direct access to the collateral. The remedies available to a BO involved in the provision of credit enhancement in the event of a default should be clearly documented.

- Examiners should ensure that, regardless of the role an institution plays in securitization, ABS documentation clearly specifies the limitations of the institution’s legal responsibility to assume losses.

- Examiners should verify that a banking organization acting as originator, packager, or underwriter has written policies addressing the repurchase of assets and other reimbursement to investors in the event that a defaulted package results in losses exceeding any contractual credit enhancement. A BO that repurchases defaulted assets or pools in contradiction of the underlying agreement in effect sets a standard by which it could potentially be found legally liable for all “sold” assets. A BO that responds in this manner to the “moral hazard” or reputational risk arising from its securitization activities may face additional risk from other areas of its securitization activities. Examiners should review any situations in which the organization has repurchased or otherwise reimbursed investors for poor-quality assets.

- A BO’s records should be reviewed to ensure that credit, pricing, and servicing standards for securitized assets are equivalent to standards for assets that remain on the books. The quality of securitized assets should be accurately characterized to investors and other parties to the securitization arrangement to avoid unforeseen pressures to repurchase defaulted issues.

- Pricing policies and practices should be reviewed to determine that they incorporate an analysis of the tradeoff between risk and return.

- Examiners should consider securitization risks when analyzing the adequacy of an organization’s capital or reserve levels. Adverse credit risk should be classified accordingly.

**Concentration risk.** A banking organization involved in originating, packaging, servicing, underwriting, or enhancing the creditworthiness of ABS must take special care to follow in-house diversification requirements for aggregate outstanding to a particular institution, industry, or geographic area. Examiner procedures for reviewing concentration risk are outlined below:

- When determining compliance with internal credit-exposure limits, securitization exposure should be aggregated with all loans, extensions of credit, debt and equity securities, legally binding financial guarantees, commitments, and any other investments involving the same obligor.

- Examiners should review all pools of sold assets for industrial or geographic concentrations. Excessive exposures to an industry or region among these assets should be noted in the review of the BO’s loan portfolio.

- Inherent in securitization is the risk that, if another party involved in the securitization arrangement becomes unable to perform according to contract terms, the issue might default even while the underlying credits are performing. This credit exposure to the other managing parties in a securitization transaction should be included under a BO’s general line to those institutions. Examiners should, therefore, ensure that, in addition to policies limiting direct credit exposure, an institution has developed exposure limits with respect to particular originators, credit enhancers, and servicers.

**Reputational risk.** The securitization activities of many institutions may also expose them to significant reputational risks. Often, BOs that sponsor the issuance of asset-backed securities act as servicers, administrators, or liquidity providers in the securitization transactions. These institutions must be aware of the potential losses and risk exposure associated with reputational risk that arise from these securitization activities. The securitization of assets whose perfor-
Asset Securitization

The existence of recourse provisions in asset sales, the extension of liquidity facilities to securitization programs, and early-amortization triggers of certain asset-securitization transactions can involve significant liquidity risk to institutions engaged in these securitization activities. Institutions should ensure that their liquidity contingency plans fully incorporate the potential risk posed by their securitization activities. When new ABS are issued, the issuing banking organization should determine their potential effect on its liquidity at the inception of each transaction and throughout the life of the securities to better ascertain its future funding needs.

An institution’s contingency plans should consider the need to obtain replacement funding and specify the possible alternative funding sources, in the event of the amortization of outstanding ABS. Replacement funding is particularly important for securitizations of revolving receivables, such as credit cards, in which an early amortization of the ABS could unexpectedly return the outstanding balances of the securitized accounts to the issuing institution’s balance sheet. Early amortization of a banking organization’s ABS could impede an institution’s ability to fund itself—either through reissuance or other borrowings—since the institution’s reputation with investors and lenders may be adversely affected. Moreover, the liquidity risk and market risk to which ABS are subject may be exacerbated by thin secondary markets for them. Examiner procedures for reviewing liquidity and market risk are outlined below:

- Examiners should review the policies of a BO engaged in underwriting, looking for situations in which it cannot sell underwritten ABS. Credit review, funding capabilities, and approval limits should allow the institution to purchase and hold unsold securities. In the absence of this analysis, the institution should only handle ABS on a best-efforts basis. All potential credit exposure should be within legal lending limits.
- Examiners should ensure that a BO engaged in underwriting or market making has implemented adequate hedging or other risk-management policies to limit its exposure to adverse price movements.
- Examiners should determine whether an organization targets certain loans at origination to be packaged and securitized. If so, examiners should review the length of time these assets are held while being processed. Examiners should review management information systems reports to age targeted loans and to determine if there is any decline in value while the loans are in the pipeline. Loans held for resale in this pipeline should be segregated and carried at the lower of cost or market value.
- Examiners should review the relevant contracts to verify that they are free of any unusual features that increase the potential cost of transfer of obligations.
- Examiners should determine whether an BO has reviewed the projected cash flow from the underlying assets to ensure that principal and interest payments will be timely and will be sufficient to cover costs, even under adverse scenarios.

Liquidity and market risk. The existence of recourse provisions in asset sales, the extension of liquidity facilities to securitization programs, and early-amortization triggers of certain asset-securitization transactions can involve significant liquidity risk to institutions engaged in these securitization activities. Institutions should ensure that their liquidity contingency plans fully incorporate the potential risk posed by their securitization activities. When new ABS are issued, the issuing banking organization should determine their potential effect on its liquidity at the inception of each transaction and throughout the life of the securities to better ascertain its future funding needs.

Transfer risk and operational risk. Transfer risk is analogous to liquidity risk. It is the risk that an organization with obligations under securitization arrangements may wish to relinquish those obligations but may not be able to do so. Operational risk arises from uncertainty about an organization’s ability to meet its obligations under securitization arrangements and may arise from insufficient computer resources or from a failure of fees to cover associated costs. An organization filling a role that potentially requires long-term resource commitments, such as servicer or credit enhancer, is most susceptible to transfer risk and operational risk. Examiner procedures for reviewing transfer and operational risk are outlined below:

- Examiners should determine that a BO has reviewed the relevant contracts to verify that they are free of any unusual features that increase the potential cost of transfer of obligations.
- Examiners should ascertain that a BO has evaluated the fee structure of the securitization to determine that fees are sufficient to cover the costs of associated services. Further, examiners should determine that a BO has reviewed the projected cash flow from the underlying assets to ensure that principal and interest payments will be timely and will be sufficient to cover costs, even under adverse scenarios.
A servicer or credit enhancer subcontracting or participating responsibilities should initially assess the financial condition and reputation of any organization to which responsibility may be delegated. Subsequent periodic monitoring by the servicer or credit enhancer should assess the financial condition of organizations to which responsibility has been delegated, as well as their compliance with contractual obligations. Trustees should, likewise, monitor the financial condition and compliance of all participants in the securitization arrangement.

Conflicts of interest. With respect to the various functions performed by a BO, the potential for conflicts of interest exists when an organization plays multiple roles in securitization. Policies and procedures must address this potential conflict, especially the risk of legal ramifications or negative market perceptions if the organization appears to compromise its fiduciary responsibility to obligors or investors. Examiner procedures for reviewing conflicts of interest are outlined below:

- Examiners should review a BO’s policies for disclosure of confidential but pertinent information about the underlying assets and obligors. An organization involved in the origination or processing of a securitization transaction should have written statements from obligors allowing the disclosure of pertinent confidential information to potential investors. In addition, the underwriting bank must follow proper procedures of due diligence.
- If the securitization business of an originator, underwriter, or credit enhancer is volume-driven, legal obligations or prudent banking practices may be breached. Examiners should review credit standards used in analyzing assets earmarked for securitization to determine that sound banking practices are not being compromised to increase volume or to realize substantial fees.
- Examiners should determine that the organization’s policies addressing activities at various subsidiaries or affiliates are managed consistently and prudently in compliance with regulatory policies.

Legal Review and Liability

The complexity of asset-securitization transactions requires a BO that participates in them in any capacity to fully investigate all applicable laws and regulations, to establish policies and procedures to ensure legal review of all securitization activities, and to take steps to protect the organization from liability in the case of problems with particular asset-backed issues. Organizations and examiners should be aware of the continual evolution of criteria on the types of assets that may be securitized and the types of BOs that may engage in the various aspects of securitization. Examiner procedures for checking an institution’s legal-review and liability-protection measures are outlined below:

- Different responsibilities in connection with securitizations may be split among various subsidiaries of an organization. Examiners should, therefore, review the overall risk exposure to an organization. Specifically, examiners should be alert to situations in which the structure of a securitization obscures the concentration risk in individual ABS or in a portfolio of ABS. Examiners should also be mindful of structures that may effectively conceal low-quality assets or contingent liabilities from examination scrutiny and possible classification.
- Examiners should review a BO’s insurance coverage to determine if it is sufficient to cover its fiduciary responsibilities under securitization arrangements. At least one rating agency requests that servicers carry errors and omissions insurance that will cover a minimum of 5 percent of the outstanding obligation.
- Private placements of ABS are not subject to the same legal-disclosure requirements as public placements. An organization involved in private placements of ABS should, therefore, exercise special caution with regard to disclosure of the risks and attributes of the securitized assets.

Banking Organizations Investing in ABS

ABS may appear similar to corporate notes; however, ABS possess many unique characteristics that affect their riskiness as investments. A BO should independently analyze all potential risk exposures before investing in ABS and should continue to monitor exposures throughout the life of the ABS. Analyses should focus
primarily on characteristics of ABS, such as credit risk, concentrations of exposures, interest-rate risk, liquidity risk, market risk, and prepayment risk. As an integral part of these analyses, a BO investing in ABS should evaluate the underlying assets, the participants in the securitization arrangement, and the structure of the securitization arrangement, although it should not be expected to analyze these factors in the same detail as BOs involved in the issuance of ABS.

Any purchase of ABS should be consistent with the overall objectives of the organization. The securities should constitute an integrated component of the investment or hedging plans of the organization and should not be purchased for speculative purposes. A banking organization should not rely on investment or trading strategies, which depend on the existence of liquid secondary ABS markets.

Policy and Portfolio Analysis

Credit risk. While ABS are often insulated, to some extent, from the credit risk of the underlying assets, credit risk is still affected by a number of factors, in addition to the performance of the underlying asset pool. These factors include the ability of the parties involved in the securitization arrangement to fulfill their obligations and the structure of the securitization itself.

In the event of default by obligors or other failure of the securitization structure, access to collateral may be difficult and recourse to the various providers of credit enhancement may be time-consuming and costly. Some forms of credit enhancement may be revocable. Banking organizations should not place undue reliance on collateral values and credit enhancement in evaluating ABS.

In many cases, ratings of the creditworthiness of ABS issues are available from external credit agencies. A banking organization may use credit ratings as a source of information, but should not depend solely on external agencies’ evaluations of creditworthiness. Unrated ABS should be subject to particular scrutiny. Examiner procedures for reviewing credit risk are outlined below:

* Examiners should review a BO’s policies and procedures to ensure that the organization follows prudent standards of credit assessment and has approval criteria for all ABS exposure. Procedures should include an initial thorough and independent credit assessment of ABS issues for which the organization has assumed any degree of credit risk, followed by periodic reviews to monitor performance of the ABS throughout the life of the exposure.

* Examiners should determine that a banking organization does not rely solely on conclusions of external rating services in evaluating ABS.

* Examiners should determine that a banking organization investing in ABS has independently made use of available documents in evaluating the credit risk of ABS. These documents include indentures, trustee reports, rating-agency bulletins, and prospectuses.

* Examiners should determine that a banking organization investing in privately placed ABS is aware of the differences in disclosure requirements between publicly placed and privately placed securities, and has taken extra steps to obtain and analyze information relevant to the evaluation of holdings of any privately placed ABS.

* Major policies and procedures, including internal credit-review and -approval procedures and in-house exposure limits, should be reviewed periodically and approved by the institution’s board of directors.

* Failure, fraud, or mismanagement on the part of another party could result in loss to investors. A banking organization should have adequate procedures for assessing the financial strength and operational capacity of institutions involved in enhancing the credit quality of or managing an ABS issue.

* A banking organization should have procedures for evaluating the structural soundness of securitization arrangements for ABS in which it invests. The degree of investor control over transfer of servicing rights should be clearly delineated.

* Securitization arrangements may remove the ultimate investor from direct access to the collateral; the remedies available to an investor, in the event of default, should be clearly documented.

Concentration risk. Banking organizations may face concentrations of risk within the pool of assets, underlying an individual ABS issue, across different ABS issues, or through combinations of ABS and other credit exposures. Banking organizations that invest in ABS must
take special care to follow in-house diversification requirements for aggregate outstandings to a particular institution, industry, or geographic area. Examiner procedures for reviewing concentration risk are outlined below:

- When determining compliance with internal credit-exposure limits, securitization exposure should be aggregated with all loans, extensions of credit, debt and equity securities, legally binding financial guarantees and commitments, and any other investments involving the same obligor.
- Inherent in securitization is the risk that, if another party involved in the transaction becomes unable to perform, according to contract terms, the issue might default, even while the underlying credits are performing. Examiners should, therefore, ensure that, in addition to policies limiting direct credit exposure, an institution has developed exposure limits for particular credit enhancers, servicers, or trustees. Credit exposure to the other managing parties in a securitization should be included under a BO’s general line to those institutions.
- Examiners should review the ABS portfolio for any industrial or geographic concentrations. Excessive exposures to a particular industry or region within the portfolio should be noted in the examiner’s review.

Liquidity risk and market risk. Limited secondary markets may make ABS, especially unrated or innovative ABS, less liquid than many other debt instruments. Examiner procedures for reviewing liquidity and market risk are outlined below:

- If an investing bank is purchasing securitized assets for trading purposes, the examiner should ensure that the trading assets are carried at market value or at the lower of market or book value, and that market values are determined regularly. The risks involved are similar in character to the risks involved in trading other marketable securities. As with any trading activity, the BO must take proper steps to analyze market character and depth.
- A banking organization investing in ABS should not depend on secondary-market liquidity for the securities, especially in the case of ABS involving novel structures or innovative types of assets.
- Management information systems should provide management with timely and periodic information on the historical costs, market values, and unrealized gains and losses on ABS held in investment, trading, or resale portfolios.

Prepayment risk. The prepayment of assets underlying ABS may create prepayment risk for an investor in ABS. Prepayment risk may not be adequately reflected in agency ratings of ABS. Examiner procedures for reviewing prepayment risk are outlined below:

- Examiners should determine that a BO investing in ABS has analyzed the prepayment risk of ABS issues in its portfolio. Special care should be taken in the analysis of issues involving multiple tranches.
- Prepayment risk for ABS should be incorporated into an organization’s net income-at-risk model, if such a model is used.

Legal Review

Examiners should review policies and procedures for compliance with applicable state lending limits and federal law, such as section 5136 of the Revised Codes. These requirements must be analyzed to determine whether a particular ABS issue is considered a single investment or a loan to each of the creditors underlying the pool. Collateralized mortgage obligations may be exempt from this limitation, if they are issued or guaranteed by an agency or instrumentality of the U.S. government.

Internal Audit and Management Information Systems

A BO’s management of securitization risk depends on the providing of timely and accurate information about the organization’s exposure to those responsible for monitoring risks. Examiners must be aware that a BO’s involvement in asset securitization can be very extensive and place significant demands on systems without being readily evident, either as an on-balance-sheet exposure or a contingent liability. System overload or other technical default in the organization’s systems could render the organization unable to provide proper monitoring or servicing. While the risk is not clearly associated with
the servicer (whose responsibility is long term and requires ongoing resource commitments), systems breakdowns may have risk implications for the credit enhancer and trustee. Examiners should ensure that internal auditors examine all facets of securitization regularly, as outlined below:

- Examiners should ensure that internal systems and controls adequately track the performance and condition of internal exposures and should monitor the organization’s compliance with internal procedures and limits. In addition, adequate audit trails and internal-audit coverage should be provided.
- Cost-accounting systems should be adequate to permit a reliable determination of the profitability and volatility of asset-securitization activities.
- Management information systems and reporting procedures should be reviewed to determine that they—
  - provide a listing of all securitizations for which the banking organization is either originator, servicer, credit enhancer, underwriter, trustee, or investor;
  - provide concentration listings by industry and geographic area;
  - generate information on total exposure to specific originators, servicers, credit enhancers, trustees, or underwriters;
  - generate information on portfolio aging and performance relative to expectations; and
  - provide periodic and timely information to senior management and directors on the organization’s involvement in, and credit exposure arising from, securitization.

AICPA Statements of Position

90-3 Definition of the Term “Substantially the Same” for Holders of Debt Instruments, as Used in Certain Audit Guides and a Statement of Position
94-6 Disclosure of Certain Significant Risks and Uncertainties
1. To determine if the bank is in compliance with laws, regulations, and policy statements.
2. To determine if the bank has originated, serviced, credit-enhanced, served as a trustee for, or invested in securitized assets.
3. To determine that securitization activities are integrated into the overall strategic objectives of the organization.
4. To determine that management has an appropriate level of experience in securitization activities.
5. To ensure that the bank does not hold any asset-backed securities that are inappropriate, for example, interest-only strips (IOs) and principal-only strips (POs), given the size of the bank and the sophistication of its operations.
6. To ensure that all asset-backed securities owned, any assets sold with recourse, retained interests, and variable interest entities (VIEs) (for example, asset-backed commercial paper (ABCP) programs that are defined as VIEs under GAAP) are properly accounted for on the bank’s books and are correctly reported on the bank’s regulatory reports.
7. To determine that sources of credit risk are understood, properly analyzed, and managed, without excessive reliance on credit ratings by outside agencies.
8. To determine that credit, operational, and other risks are recognized and addressed through appropriate policies, procedures, management reports, and other controls.
9. To determine if officers are operating in conformance with established bank policies and procedures.
10. To determine whether liquidity and market risks are recognized and whether the organization is excessively dependent on securitization as a substitute for day-to-day core funding or as a source of income.
11. To determine that steps have been taken to minimize the potential for conflicts of interest arising from the institution’s securitization activities.
12. To determine that possible sources of structural failure in securitization transactions are recognized and that the organization has adopted measures to minimize the impact of these failures if they occur.
13. To determine that the organization is aware of the legal risks and uncertainty of various aspects of securitization.
14. To determine that concentrations of exposure in the underlying asset pools, asset-backed securities portfolio, or structural elements of securitization transactions are avoided.
15. To determine that all sources of risk are evaluated at the inception of each securitization activity and are monitored on an ongoing basis.
16. To determine whether the institution’s retained interests from asset securitization are properly documented, valued, and accounted for.
17. To verify that the amount of retained interests not supported by adequate documentation has been charged off and that the assets involved in those retained interests are not used for risk-based calculation purposes.
18. To ascertain the existence of sound risk modeling, management information systems (MIS), and disclosure practices for asset securitization.
19. To obtain assurances that the board of directors and management oversee sound policies and internal controls concerning the recording of asset-securitization transactions and any valuation of retained interests derived therefrom.
20. To determine that capital is commensurate with, and that there are accurate determinations of, the risk weights for the risk exposures arising from recourse obligations, direct-credit substitutes, asset- and mortgage-backed securities, ABCP programs and ABCP liquidity facilities, and other asset-securitization transactions.
21. To determine whether there is an independent audit function that is capable of evaluating asset-securitization activities and any associated retained interests.
22. To initiate corrective action if policies, practices, procedures, or internal controls are deficient or when violations of law, regulations, or policy statements are disclosed.
1. a. Request a schedule of all asset-backed securities owned by the bank. Reconcile the balance of these assets to the subsidiary ledgers of the balance sheet, and review credit ratings assigned to these securities by independent rating agencies. Determine that the accounting methods and procedures used for these assets, at inception and throughout the carrying life, are appropriate.

   b. Request and review information on the types and amount of assets that have been securitized by the bank. In addition, request information concerning potential contractual or contingent liability arising from any guarantees, underwriting, and servicing of the securitized assets.

2. Review the parent company’s policies and procedures to ensure that its banking and nonbanking subsidiaries follow prudent standards of credit assessment and approval for all securitization exposure. Procedures should include a thorough and independent credit assessment of each loan or pool for which it has assumed credit risk, followed by periodic credit reviews to monitor performance throughout the life of the exposure. If a banking organization (BO) invests in asset-backed securities (ABS), determine whether it relies solely on conclusions of external rating services when evaluating the securities.

3. Determine that rigorous credit standards are applied regardless of the role the organization plays in the securitization process, for example, servicer, credit enhancer, or investor.

4. Determine that major policies and procedures, including internal credit-review and credit-approval procedures and “in-house” exposure limits, are reviewed periodically and approved by the bank’s board of directors.

5. Determine whether adequate procedures for evaluating the organization’s internal control procedures and the financial strength of the other institutions involved in the securitization process are in place.

6. Obtain the documentation outlining the remedies available to provide credit enhancement in the event of a default. Both originators and purchasers of securitized assets should have prospectuses on the issue. Obtaining a copy of the prospectus can be an invaluable source of information. Prospectuses generally contain information on credit enhancement, default provisions, subordination agreements, etc. In addition to the prospectus, obtain the documentation confirming the purchase or sale of a security.

7. Ensure that, regardless of the role an institution plays in securitization, the documentation for an asset-backed security clearly specifies the limitations of the institution’s legal responsibility to assume losses.

8. Determine the existence of independent risk-management processes and management information systems (MIS). Determine whether these processes and systems are being used to monitor securitization-pool performance on an aggregate and individual transaction level.

9. Verify whether the BO, acting as originator, packager, or underwriter, has written policies addressing the repurchase of assets and other measures to reimburse investors in the event that a defaulted package results in losses exceeding any contractual credit enhancement. The repurchase of defaulted assets or pools in contradiction of or outside the terms of the underlying agreement in effect sets a standard by which a banking organization could potentially be found legally liable for all “sold” assets. Review and report any situations in which the organization has repurchased or otherwise reimbursed investors for poor-quality assets.

10. Classify adverse credit risk associated with the securitization of assets when analyzing the adequacy of an organization’s capital or reserve levels. Evaluate credit risk of ABS, and classify any adverse credit risk. List classified assets. Evaluate the impact of the classification on capital adequacy and the overall soundness of the institution.

11. Aggregate securitization exposures with all loans, extensions of credit, debt and equity securities, legally binding financial guarantees and commitments, and any other investments involving the same obligor when
determining compliance with internal credit-exposure limits.

12. Review the bank’s valuation assumptions and modeling methodology used for ABS to determine if they are conservative and appropriate and are being used to establish, evaluate, and adjust the carrying value of retained interests on a regular and timely basis.

13. Determine if audit or internal-review staffs periodically review data integrity, model algorithms, key underlying assumptions, and the appropriateness of the valuation and modeling process for the securitized assets that the institution retains.

14. Review the risk-based capital calculations, and determine if they include recognition and the correct reporting of any recourse obligations, direct-credit substitutes, residual interests, asset- and mortgage-backed securities, asset-backed commercial paper (ABCP) programs, liquidity facilities, and other transactions involving such securitization activities.

15. Determine if the bank consolidates, in accordance with GAAP (FASB’s Statement of Financial Accounting Standards No. 167, “Amendments to FASB Interpretation No. 146(R)(FAS 167)” the assets of any ABCP program or other such program that it sponsors.
   a. Determine if the bank’s ABCP program met the definition of a sponsored ABCP program under the risk-based capital guidelines.
   b. Ascertain whether the liquidity facilities the bank extends to the ABCP program satisfy the risk-based capital definition and requirements, including the appropriate asset-quality test, of an eligible ABCP program liquidity facility. (See 12 CFR 208, appendix A, III.B.3.a.iv.)
   c. Determine whether the bank applied the correct credit-conversion factor to eligible ABCP liquidity facilities when it determined the amount of risk-weighted assets for its risk-based capital ratios. (See 12 CFR 208, appendix A, section III.D.)
   d. Determine if all ineligible ABCP liquidity facilities were treated as either direct-credit substitutes or as recourse obligations, as required by the risk-based capital guidelines.
   e. If the bank had multiple positions with overlapping exposures, determine if the bank applied the risk-based capital treatment that resulted in the highest capital charge. (See 12 CFR, appendix A, section III.B.6.c.)

16. Ascertain that internal limits govern the amount of retained interests held as a percentage of total equity capital.

17. Establish that an adequate liquidity contingency plan is in place and will be used in the event of market disruptions. Determine whether liquidity problems may arise as the result of an overdependence on asset-securitization activities for day-to-day core funding.

18. Determine whether consistent, conservative accounting practices are in place that satisfy the reporting requirements of regulatory supervisors, GAAP reporting requirements, and valuation assumptions and methods. Ascertain that adequate disclosures of asset-securitization activities are made commensurate with the volume of securitizations and the complexities of the institution.

19. Establish that risk-exposure limits and requirements exist and are adhered to on an aggregate and individual transaction basis.

20. Review securitized assets for industrial or geographic concentrations. Excessive exposures to an industry or region among the underlying assets should be noted in the review of the loan portfolio.

21. Ensure that, in addition to policies limiting direct credit exposure, an institution has developed exposure limits for particular originators, credit enhancers, trustees, and servicers.

22. Review the policies of the banking organization engaged in underwriting, watching for situations in which it cannot sell underwritten asset-backed securities. Credit review, funding capabilities, and approval limits should allow the institution to purchase and hold unsold securities. All potential credit exposure should be within legal lending limits.

23. Ensure that internal systems and controls adequately track the performance and condition of internal exposures and monitor the organization’s compliance with internal procedures and limits. In addition, adequate audit trails and internal audit coverage should be provided. Ensure that the reports have adequate scope and frequency of detail.
24. Determine that management information systems provide—
   a. a listing of each securitization transaction in which the organization is involved;
   b. a listing of industry and geographic concentrations;
   c. information on total exposure to specific originators, servicers, credit enhancers, trustees, or underwriters;
   d. information regarding portfolio monthly vintage or aging and information on a portfolio’s performance by specific product type relative to expectations;
   e. periodic and timely information to senior management and directors on the organization’s involvement in, and credit exposure arising from, securitization;
   f. static-pool cash-collection analysis;
   g. sensitivity analysis; and
   h. a statement of covenant compliance.

25. Ensure that internal auditors examine all facets of securitization regularly.

26. Review policies and procedures for compliance with applicable state lending limits and federal law, such as section 5136 of the Revised Codes. These requirements must be analyzed to determine whether a particular asset-backed-security issue is considered a single investment or a loan to each of the creditors underlying the pool. Collateralized mortgage obligations may be exempt from this limitation, if they are issued or guaranteed by an agency or instrumentality of the U.S. government.

27. Determine whether the underwriting of ABS of affiliates is—
   a. rated by an unaffiliated, nationally recognized statistical rating organization; or
   b. issued or guaranteed by Fannie Mae, FHLMC, or GNMA, or represents interests in such obligations.

28. Determine if purchases of high-risk mortgage-backed securities were made to reduce the overall interest-rate risk of the bank. Determine if the bank evaluates and documents at least quarterly whether these securities have reduced the interest-rate risk.

29. Review and discuss any documentation exceptions, violations, internal control exceptions, and classifications with management, and obtain management’s response.

30. Review the bank’s liquidity agreements with any asset-backed commercial paper programs and determine whether the agreements have any credit-related components. Is the bank required to purchase the assets? Are these assets repurchased from the bank? If the facility is determined to be a commitment, determine whether its maturity is short term or long term. Do any of the liquidity agreements contain a material adverse clause or any other credit-contingency provision?
Asset Securitization
Internal Control Questionnaire
Effective date November 2004

Section 4030.4

Review the bank’s internal controls, policies, practices, and procedures for all aspects of asset securitization. The bank’s system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information.

POLICIES

1. Does the bank employ the services of a securities dealer? If so, does the bank rely solely on the advice of such dealer when purchasing asset-backed securities for the bank’s investment portfolio? Does the bank have persons who are responsible for reviewing or approving the investment manager’s acquisitions? Are minimum criteria established for selecting a securities dealer?

2. Has the board of directors, consistent with its duties and responsibilities, reviewed and ratified asset-securitization policies, practices, and procedures? Do these policies, practices, and procedures—
   a. require an initial thorough and independent credit assessment of each pool for which the bank has assumed credit risk, as either a participant in the securitization process or as an investor?
   b. address the bank’s repurchase of assets and other forms of reimbursement to investors, when the bank is acting as the originator, packager, or underwriter, in the event that a default results in losses exceeding any contractual credit enhancement?
   c. ensure that the credit, pricing, and servicing standards for securitized assets are equivalent to standards for assets that remain on the bank’s books?
   d. ensure that the credit, pricing, and servicing standards and that compliance with any provisions relating to government guarantees are reviewed periodically by the board of directors?
   e. establish in-house diversification requirements for aggregate outstanding exposures to a particular institution, industry, or geographic area?
   f. hedge the bank’s exposure to adverse price movements when it is engaged in underwriting or market-making activities?

3. Are the bank’s securitization policies reviewed and reaffirmed at least annually to determine if they are compatible with changing market conditions?

INTERNAL CONTROL AND MANAGEMENT INFORMATION SYSTEMS

1. Do the internal systems and controls adequately track the performance and condition of internal exposures, and do the systems monitor the bank’s compliance with internal procedures and limits? Are adequate audit trails and internal audit coverage provided?

2. Do the cost accounting systems provide a reliable determination of the profitability and volatility of asset-securitization activities?

3. Are management information systems and reporting procedures adequate in that they provide—
   a. a listing of all securitizations for which the bank is either originator, servicer, credit enhancer, underwriter, or trustee?
   b. a listing of industry and geographic concentrations?
   c. information on total exposure to specific originators, servicers, credit enhancers, trustees, or underwriters?
   d. information regarding portfolio aging and performance relative to expectations?
   e. periodic and timely information to senior management and directors on the organization’s involvement in, and credit exposure arising from, securitization?
   f. credit ratings assigned by independent rating agencies to all asset-backed securities held by the bank?

4. Do management information systems and reporting procedures adequately document the bank’s calculation and determination of risk-based capital ratios (including the assignment of the appropriate risk-based capital charges (risk weights and credit-conversion factors)) against the exposures arising from asset-backed and mortgage-backed securitization transactions or activities, including asset-backed commercial paper programs
(including exposures arising from direct-credit substitutes, recourse obligations, residual interests, liquidity facilities, and mortgage-backed and other types of asset-backed loans)?
This section sets forth the Interagency Statement on Sound Practices Concerning Elevated-Risk Complex Structured Finance Activities, issued January 11, 2007. The supervisory guidance addresses risk-management principles that should assist institutions to identify, evaluate, and manage the heightened legal and reputational risks that may arise from their involvement in complex structured finance transactions (CSFTs). The guidance is focused on sound practices related to CSFTs that may create heightened legal or reputational risks to the institution and are defined as “elevated-risk CSFTs.” Such transactions are typically conducted by a limited number of large financial institutions.

INTERAGENCY STATEMENT ON SOUND PRACTICES CONCERNING ELEVATED-RISK COMPLEX STRUCTURED FINANCE ACTIVITIES

Financial markets have grown rapidly over the past decade, and innovations in financial instruments have facilitated the structuring of cash flows and allocation of risk among creditors, borrowers, and investors in more efficient ways. Financial derivatives for market and credit risk, asset-backed securities with customized cash-flow features, specialized financial conduits that manage pools of assets, and other types of structured finance transactions serve important business purposes, such as diversifying risks, allocating cash flows, and reducing cost of capital. As a result, structured finance transactions have become an essential part of U.S. and international capital markets. Financial institutions have played and continue to play an active and important role in the development of structured finance products and markets, including the market for the more complex variations of structured finance products.

When a financial institution participates in a CSFT, it bears the usual market, credit, and operational risks associated with the transaction. In some circumstances, a financial institution also may face heightened legal or reputational risks due to its involvement in a CSFT. For example, in some circumstances, a financial institution may face heightened legal or reputational risk if a customer’s regulatory, tax, or accounting treatment for a CSFT, or disclosures to investors concerning the CSFT in the customer’s public filings or financial statements, do not comply with applicable laws, regulations, or accounting principles. Indeed, in some instances, CSFTs have been used to misrepresent a customer’s financial condition to investors, regulatory authorities, and others. In these situations, investors have been harmed and financial institutions have incurred significant legal and reputational exposure. In addition to legal risk, reputational risk poses a significant threat to financial institutions because the nature of their business requires them to maintain the confidence of customers, creditors, and the general marketplace.

The agencies have long expected financial institutions to develop and maintain robust control infrastructures that enable them to identify, evaluate, and address the risks associated with their business activities. Financial institutions also must conduct their activities in accordance with applicable statutes and regulations.

Scope and Purpose of Statement

The agencies issued this statement to describe the types of risk-management principles they believe may help a financial institution to identify CSFTs that may pose heightened legal or reputational risks to the institution and to evalu-
Broad array of products with varying levels of complexity. Most structured finance transactions encompass a broad array of products with varying levels of complexity. Most structured finance transactions, such as standard public mortgage-backed securities transactions, public securitizations of retail credit cards, asset-backed commercial paper conduit transactions, and hedging-type transactions involving ‘plain vanilla’ derivatives and collateralized loan obligations, are familiar to participants in the financial markets, and these vehicles have a well-established track record. These transactions typically would not be considered CSFTs for the purpose of this statement.

Because this statement focuses on sound practices related to CSFTs that may create heightened legal or reputational risks—transactions that typically are conducted by a limited number of large financial institutions—it will not affect or apply to the vast majority of financial institutions, including most small institutions. As in all cases, a financial institution should tailor its internal controls so that they are appropriate in light of the nature, scope, complexity, and risks of its activities. Thus, for example, an institution that is actively involved in structuring and offering CSFTs that may create heightened legal or reputational risk for the institution should have a more formalized and detailed control framework than an institution that participates in these types of transactions less frequently. The internal controls and procedures discussed in this statement are not all-inclusive, and, in appropriate circumstances, an institution may find that other controls, policies, or procedures are appropriate in light of its particular CSFT activities.

Because many of the core elements of an effective control infrastructure are the same regardless of the business line involved, this statement draws heavily on controls and procedures that the agencies previously have found to be effective in assisting a financial institution to manage and control risks and identifies ways in which these controls and procedures can be effectively applied to elevated-risk CSFTs. Although this statement highlights some of the most significant risks associated with elevated-risk CSFTs, it is not intended to present a full exposition of all risks associated with these transactions. Financial institutions are encouraged to refer to other supervisory guidance prepared by the agencies for further information concerning market, credit, operational, legal, and reputational risks as well as internal audit and other appropriate internal controls.

This statement does not create any private rights of action and does not alter or expand the legal duties and obligations that a financial institution may have to a customer, its shareholders, or other third parties under applicable law. At the same time, adherence to the principles discussed in this statement would not necessarily insulate a financial institution from regulatory action or any liability the institution may have to third parties under applicable law.

Identification and Review of Elevated-Risk CSFTs

A financial institution that engages in CSFTs should maintain a set of formal, written, firm-wide policies and procedures that are designed to allow the institution to identify, evaluate, assess, document, and control the full range of credit, market, operational, legal, and reputational risks associated with these transactions. These policies may be developed specifically for CSFTs, or included in the set of broader policies governing the institution generally. A financial institution operating in foreign jurisdictions may tailor its policies and procedures as appropriate to account for, and comply with, the applicable laws, regulations, and standards of those jurisdictions.5

A financial institution’s policies and procedures should establish a clear framework for the review and approval of individual CSFTs. These policies and procedures should set forth the responsibilities of the personnel involved in the origination, structuring, trading, review, approval, documentation, verification, and execution of CSFTs. Financial institutions may find it helpful to incorporate the review of new CSFTs into their existing new-product policies. In this regard, a financial institution should define what constitutes a “new” complex structured finance product and establish a control process for the approval of such new products. In determining

5. In the case of U.S. branches and agencies of foreign banks, these policies, including management, review, and approval requirements, should be coordinated with the foreign bank’s group-wide policies developed in accordance with the rules of the foreign bank’s home-country supervisor and should be consistent with the foreign bank’s overall corporate and management structure as well as its framework for risk management and internal controls.
whether a CSFT is new, a financial institution may consider a variety of factors, including whether it contains structural or pricing variations from existing products; whether the product is targeted at a new class of customers; whether it is designed to address a new need of customers; whether it raises significant new legal, compliance, or regulatory issues; and whether it or the manner in which it would be offered would materially deviate from standard market practices. An institution’s policies should require new complex structured finance products to receive the approval of all relevant control areas that are independent of the profit center before the product is offered to customers.

### Identifying Elevated-Risk CSFTs

As part of its transaction and new-product approval controls, a financial institution should establish and maintain policies, procedures, and systems to identify elevated-risk CSFTs. Because of the potential risks they present to the institution, transactions or new products identified as elevated-risk CSFTs should be subject to heightened reviews during the institution’s transaction or new-product approval processes. Examples of transactions that an institution may determine warrant this additional scrutiny are those that (either individually or collectively) appear to the institution during the ordinary course of its transaction approval or new-product approval process to—

- lack economic substance or business purpose;
- be designed or used primarily for questionable accounting, regulatory, or tax objectives, particularly when the transactions are executed at year-end or at the end of a reporting period for the customer;
- raise concerns that the client will report or disclose the transaction in its public filings or financial statements in a manner that is materially misleading or inconsistent with the substance of the transaction or applicable regulatory or accounting requirements;
- involve circular transfers of risk (either between the financial institution and the customer or between the customer and other related parties) that lack economic substance or business purpose;
- involve oral or undocumented agreements that, when taken into account, would have a material impact on the regulatory, tax, or accounting treatment of the related transaction, or the client’s disclosure obligations;
- have material economic terms that are inconsistent with market norms (for example, deep “in the money” options or historic rate roll-overs); or
- provide the financial institution with compensation that appears substantially disproportionate to the services provided or investment made by the financial institution or to the credit, market, or operational risk assumed by the institution.

The examples listed previously are provided for illustrative purposes only, and the policies and procedures established by financial institutions may differ in how they seek to identify elevated-risk CSFTs. The goal of each institution’s policies and procedures, however, should remain the same: to identify those CSFTs that warrant additional scrutiny in the transaction or new-product approval process due to concerns regarding legal or reputational risks.

Financial institutions that structure or market, act as an advisor to a customer regarding, or otherwise play a substantial role in a transaction may have more information concerning the customer’s business purpose for the transaction and any special accounting, tax, or financial disclosure issues raised by the transaction than institutions that play a more limited role. Thus, the ability of a financial institution to identify the risks associated with an elevated-risk CSFT may differ depending on its role.

### Due Diligence, Approval, and Documentation Process for Elevated-Risk CSFTs

Having developed a process to identify elevated-risk CSFTs, a financial institution should implement policies and procedures to conduct a heightened level of due diligence for these transactions. The financial institution should design these policies and procedures to allow personnel at an appropriate level to understand and evaluate the potential legal or reputational risks presented by

---

6. This item is not intended to include traditional, nonbinding “comfort” letters or assurances provided to financial institutions in the loan process where, for example, the parent of a loan customer states that the customer (i.e., the parent’s subsidiary) is an integral and important part of the parent’s operations.
the transaction to the institution and to manage and address any heightened legal or reputational risks ultimately found to exist with the transaction.

Due diligence. If a CSFT is identified as an elevated-risk CSFT, the institution should carefully evaluate and take appropriate steps to address the risks presented by the transaction, with a particular focus on those issues identified as potentially creating heightened levels of legal or reputational risk for the institution. In general, a financial institution should conduct the level and amount of due diligence for an elevated-risk CSFT that is commensurate with the level of risks identified. A financial institution that structures or markets an elevated-risk CSFT to a customer, or that acts as an advisor to a customer or investors concerning an elevated-risk CSFT, may have additional responsibilities under the federal securities laws, the Internal Revenue Code, state fiduciary laws, or other laws or regulations and, thus, may have greater legal- and reputational-risk exposure with respect to an elevated-risk CSFT than a financial institution that acts only as a counterparty for the transaction. Accordingly, a financial institution may need to exercise a higher degree of care in conducting its due diligence when the institution structures or markets an elevated-risk CSFT or acts as an advisor concerning such a transaction than when the institution plays a more limited role in the transaction.

To appropriately understand and evaluate the potential legal and reputational risks associated with an elevated-risk CSFT that a financial institution has identified, the institution may find it useful or necessary to obtain additional information from the customer or to obtain specialized advice from qualified in-house or outside accounting, tax, legal, or other professionals. As with any transaction, an institution should obtain satisfactory responses to its material questions and concerns prior to consummation of a transaction.7

In conducting its due diligence for an elevated-risk CSFT, a financial institution should independently analyze the potential risks to the institution from both the transaction and the institution’s overall relationship with the customer. Institutions should not conclude that a transaction identified as being an elevated-risk CSFT involves minimal or manageable risks solely because another financial institution will participate in the transaction or because of the size or sophistication of the customer or counterparty. Moreover, a financial institution should carefully consider whether it would be appropriate to rely on opinions or analyses prepared by or for the customer concerning any significant accounting, tax, or legal issues associated with an elevated-risk CSFT.

Approval process. A financial institution’s policies and procedures should provide that CSFTs identified as having elevated legal or reputational risk are reviewed and approved by appropriate levels of control and management personnel. The designated approval process for such CSFTs should include representatives from the relevant business line(s) and/or client management, as well as from appropriate control areas that are independent of the business line(s) involved in the transaction. The personnel responsible for approving an elevated-risk CSFT on behalf of a financial institution should have sufficient experience, training, and stature within the organization to evaluate the legal and reputational risks, as well as the credit, market, and operational risks to the institution.

The institution’s control framework should have procedures to deliver the necessary or appropriate information to the personnel responsible for reviewing or approving an elevated-risk CSFT to allow them to properly perform their duties. Such information may include, for example, the material terms of the transaction, a summary of the institution’s relationship with the customer, and a discussion of the significant legal, reputational, credit, market, and operational risks presented by the transaction.

Some institutions have established a senior management committee that is designed to involve experienced business executives and senior representatives from all of the relevant control functions within the financial institution (including such groups as independent risk management, tax, accounting, policy, legal, compliance, and financial control) in the oversight and approval of those elevated-risk CSFTs that are identified by the institution’s personnel as requiring senior management review and approval due to the potential risks associated with the transactions. While this type of management committee may not be appropriate for all financial institutions, a financial institution should establish processes that assist the institution in con-

---

7. Of course, financial institutions also should ensure that their own accounting for transactions complies with applicable accounting standards, consistently applied.
sistent with any informational barriers established by the institution to manage potential conflicts of interest, insider trading, or other concerns.

8. The control processes that a financial institution establishes for CSFTs should take account of, and be consistent with, any informational barriers established by the institution to manage potential conflicts of interest, insider trading, or other concerns.

9. The agencies note that the Sarbanes-Oxley Act of 2002 requires companies listed on a national securities exchange or inter-dealer quotation system of a national securities association to establish procedures that enable employees to submit confidential disclosures concerning potential risks to the financial institution that may arise from unethical or illegal behavior.

Other Risk-Management Principles for Elevated-Risk CSFTs

General business ethics. The board and senior management of a financial institution should also establish a "tone at the top" through both actions and formalized policies and procedures that sends a strong message throughout the financial institution about the importance of compliance with the law and overall good business ethics. The board and senior management should strive to create a firm-wide corporate culture that is sensitive to ethical or legal issues as well as the potential risks to the financial institution that may arise from unethical or illegal behavior. This kind of culture coupled with appropriate procedures should reinforce business-line ownership of risk identification and encourage personnel to move ethical or legal concerns regarding elevated-risk CSFTs to appropriate levels of management. In appropriate circumstances, financial institutions may also need to consider implementing mechanisms to protect personnel by permitting the confidential disclosure of concerns. 9 As in other areas of financial institution
management, compensation and incentive plans should be structured, in the context of elevated-risk CSFTs, so that they provide personnel with appropriate incentives to have due regard for the legal-, ethical-, and reputational-risk interests of the institution.

Reporting. A financial institution’s policies and procedures should provide for the appropriate levels of management and the board of directors to receive sufficient information and reports concerning the institution’s elevated-risk CSFTs to perform their oversight functions.

Monitoring compliance with internal policies and procedures. The events of recent years evidence the need for an effective oversight and review program for elevated-risk CSFTs. A financial institution’s program should provide for periodic independent reviews of its CSFT activities to verify and monitor that its policies and controls relating to elevated-risk CSFTs are being implemented effectively and that elevated-risk CSFTs are accurately identified and have received proper approvals. These independent reviews should be performed by appropriately qualified audit, compliance, or other personnel in a manner consistent with the institution’s overall framework for compliance monitoring, which should include consideration of issues such as the independence of reviewing personnel from the business line. Such monitoring may include more-frequent assessments of the risk arising from elevated-risk CSFTs, both individually and within the context of the overall customer relationship, and the results of this monitoring should be provided to an appropriate level of management in the financial institution.

Audit. The internal audit department of any financial institution is integral to its defense against fraud, unauthorized risk taking, and damage to the financial institution’s reputation. The internal audit department of a financial institution should regularly audit the financial institution’s adherence to its own control procedures relating to elevated-risk CSFTs, and further assess the adequacy of its policies and procedures related to elevated-risk CSFTs. Internal audit should periodically validate that business lines and individual employees are complying with the financial institution’s standards for elevated-risk CSFTs and appropriately identifying any exceptions. This validation should include transaction testing for elevated-risk CSFTs.

Training. An institution should identify relevant personnel who may need specialized training regarding CSFTs to be able to effectively perform their oversight and review responsibilities. Appropriate training on the financial institution’s policies and procedures for handling elevated-risk CSFTs is critical. Financial institution personnel involved in CSFTs should be familiar with the institution’s policies and procedures concerning elevated-risk CSFTs, including the processes established by the institution for identification and approval of elevated-risk CSFTs and new complex structured finance products and for the elevation of concerns regarding transactions or products to appropriate levels of management. Financial institution personnel involved in CSFTs should be trained to identify and properly handle elevated-risk CSFTs that may result in a violation of law.

CONCLUSION

Structured finance products have become an essential and important part of the U.S. and international capital markets, and financial institutions have played an important role in the development of structured finance markets. In some instances, however, CSFTs have been used to misrepresent a customer’s financial condition to investors and others, and financial institutions involved in these transactions have sustained significant legal and reputational harm. In light of the potential legal and reputational risks associated with CSFTs, a financial institution should have effective risk-management and internal control systems that are designed to allow the institution to identify elevated-risk CSFTs; to evaluate, manage, and address the risks arising from such transactions; and to conduct those activities in compliance with applicable law.

concerns regarding questionable accounting or auditing matters on a confidential, anonymous basis. (See 15 USC 78j-1(m).)
Bank management is responsible for controlling risk at a level deemed acceptable for the organization. An effective risk-management program begins with the identification of exposures that could disrupt the timely and accurate delivery of business services or result in unexpected financial claims on bank resources. Risk management also involves the implementation of cost-effective controls and the shifting, transfer, or assignment of risk to third parties through insurance coverage or other risk-transfer techniques. Although the design and sophistication of risk-management procedures varies from bank to bank, each institution’s decision-making process should effectively identify; control; and, when or where appropriate, result in some transfer of risk. The risk-assessment program should be conducted annually to establish whether potential service disruptions and estimated risk-related financial costs and losses can be contained at levels deemed acceptable to bank management and the board of directors. Note that insurance can provide a bank with the resources to restore business operations and financial stability only after an unanticipated event has occurred, but a bank’s own risk-management controls can prevent and minimize losses before they occur.

RISK-MANAGEMENT PROGRAM

A sound operational risk-management program requires the annual review of all existing business operations and a risk assessment of all proposed services. Identified risks should be analyzed to estimate their potential and probable levels of loss exposure. While the historical loss experience of the bank and other service providers may be helpful in quantifying loss exposure, technological and societal changes may result in exposure levels that differ from historical experience. Nevertheless, current exposure estimates should be derived from the bank’s historical loss experience and augmented with industry experience. In addition, the bank’s insurance broker or agent should be a source of advice.

Management must decide the most appropriate method for addressing a particular risk. Although many factors influence this decision, the purpose of risk management is to minimize the probability of losses and the net costs associated with them. In that context, cost is broadly defined to include—

- the direct and consequential cost of loss-prevention measures (controls), plus
- insurance premiums, plus
- losses sustained, including the consequential effects and expenses to reduce such losses, minus
- recoveries from third parties and indemnities from insurers on account of such losses, plus
- pertinent administrative costs.

Bank risks with potentially high or even catastrophic financial consequences should be eliminated or substantially mitigated whenever possible, even when the risk’s frequency of occurrence is low. These risks can be eliminated by discontinuing operations where appropriate or by assigning the risk exposure to other parties using third-party service providers. When the exposure cannot be shifted to other parties or otherwise mitigated, the bank must protect itself with appropriate levels of insurance. Certain loss exposures may be deemed reasonable because their probability of frequency and severity of loss are low, the level of expected financial loss or service disruption is minimal, or the costs associated with the recovery of assets and restoration of services are low.

Bank management may decide to reduce insurance premiums and claims-processing costs by self-insuring for various types of losses, setting higher deductible levels, lowering the coverage limits for insurance purchased, and narrowing coverage terms and conditions. A financial organization’s primary defenses against loss are adequate internal controls and procedures, which insurance is intended to complement, not replace. Thus, an overall appraisal of the organization’s control environment is a significant consideration in determining the adequacy of the insurance program. To the extent that controls are lacking, the need for additional insurance coverage increases. These determinations should be based on the results of the risk assessment and be consistent with the limits established by the board of directors. Insurance decisions may also be influenced by the insurance broker’s advice regarding current insurance market and premium trends.
Following September 2001, insurance companies reevaluated their position on providing coverage for acts of terrorism. As a result, terrorism coverage has become expensive or unavailable. The bank’s “schedule of insurance” should note which policies contain exclusions, sublimits, or large deductibles for losses incurred as a result of terrorism.

When selecting insurance carriers, banks should consider the financial strength and claims-paying capacity of the insurance underwriter, as well as the robustness or strength of the supervisory regime to which the insurer is subject. This procedure is important for all significant policy-coverage lines. Rating agencies typically consider a number of insurers vulnerable, and some underwriters may have large environmental exposures but capped equity resources. Many large commercial enterprises acquire insurance coverage from foreign companies or from subsidiaries of U.S. insurers domiciled in the Caribbean or other countries. The quality of insurance supervision in many foreign countries may not meet the standards expected in the United States.

**TYPES OF RISKS**

Business risks generally fall into three categories: (1) physical property damage, (2) liability resulting from product failure or unintended employee performance, and (3) loss of key personnel. Common property risks are fires or natural disasters such as storms and earthquakes, but acts of violence or terrorism can also be included in this category. Risk-management programs for property damage should consider not only the protection and replacement of the physical plant, but also the effects of business interruptions, loss of business assets, and reconstruction of records.

Insurance programs increasingly cover the consequences of the second category, product failure or unintended employee performance. These risks include the injury or death of employees, customers, and others; official misconduct; and individual and class-action lawsuits alleging mistreatment or the violation of laws or regulations. All aspects of a bank’s operation are susceptible to liability risks. While property-loss levels can be estimated with relative confidence, jury awards for personal injury or product liability, and the related litigation costs, often exceed expectations. In addition, it can be difficult to identify potential sources of liability exposure.

The third category, personnel risk, concerns those exposures associated with the loss of key personnel through death, disability, retirement, or resignation, as well as threats to all employees and third parties arising out of crimes such as armed robbery and extortion. The consequences of personnel loss are often more pronounced in small and medium-sized banks that do not have the financial resources to support a broad level of management.

**INSURANCE PROGRAM**

**Program Objectives**

A bank’s insurance program should match the objectives of its management, the director-approved risk guidelines, and its individual risk profile. Insurance is primarily the transfer of the financial effect of losses and should be considered as only a part of the broader risk-management process. In that sense, it is imperative that management understands the costs and benefits of the bank’s insurance program.

Due to the fluid nature of the insurance market and insurance products, there is no standard program or contract structure. Rather, many different insurance policies, coverages, endorsements, limits, deductibles, and payment plans fit together to form an insurance program. Based on the size and scope of a bank’s operations, broader or narrower coverage, higher or lower limits, and separate policies may be purchased. Insurance programs should be customized to the risks that each bank faces. If a bank is particularly susceptible to a specific risk, purchasing additional insurance for that risk may be prudent.

A policy’s deductible size and coverages, and the limits purchased, determine how much risk the bank has retained. Likewise, the payment plan of an insurance policy greatly influences the amount of risk transferred. An insurance policy alone does not represent significant risk transfer if the payment plan includes reimbursement to the insurance company for all losses, usually subject to a maximum. These reimburse-
ment, loss-sensitive, or retrospectively rated plans can be viewed more as a risk-financing tool than as risk transfer. Management should understand and quantify the total “all-in” cost of these plans, as well as how these costs correspond with the risk guidelines approved by the directors.

Common Insurance-Policy Components and Concepts

There is a difference between “policy” and “coverage,” but the two terms are often used interchangeably. The term “policy” usually refers to the actual insurance contract, while the term “coverage” refers to the types of risks to which the policy is designed to respond. For example, a directors’ and officers’ policy may include employment-practices liability (EPL) coverage. However, the bank may also purchase a separate EPL policy.

An “endorsement” is a modification to a policy. Endorsements can be either a simple change in wording from the original contract or a more complex addition or deletion of a coverage section. To expand on the example above, EPL coverage is often endorsed onto a directors’ and officers’ policy. When an endorsement adds a coverage to a policy, it is often called a “rider.”

The “limit of insurance” is the dollar amount of insurance protection purchased. Each policy has a different limit, and some may have separate limits for separate coverages provided under the same policy. Policies usually include a “per-occurrence” and an “aggregate” limit. The per-occurrence limit is the most the insurer will pay under the policy for any one insured event, while the policy aggregate is the most the insurer will pay in total, regardless of the number and size of insurable events.

“Deductibles” and “self-insured retentions (SIRs)” are the dollar amounts the bank must contribute to the loss before insurance applies. They are effectively the same concept, with the difference being a deductible reduces the limits of insurance while a SIR does not. A deductible is included within or as part of the limits. A SIR is outside or in addition to the provided limits. For example, a $5 million policy limit with a $1 million deductible consists of $4 million of protection and the $1 million deductible. A $5 million policy limit with a $1 million SIR provides $5 million in protection after the $1 million dollar SIR is paid by the bank. As in any clause of an insurance contract, the terms can be negotiated so a deductible does not reduce the limits.

“Occurrence” and “claims made” are two separate types of coverage bases of policies that differ as to the period protected, when claims are recognized, and when the policies are “triggered” or respond. Under an occurrence, or “loss-sustained,” form the amount and type of coverage (if any) for the loss event is based on the policy that was in force when the event took place or occurred, regardless of when a claim is submitted. Under a claims-made, or “discovery,” policy, the insurance policy in force when the loss event was discovered and reported to the insurance company would apply, regardless of when the event causing the claim occurred. Both types of policies have provisions regarding prompt claims-reporting to insurers. However, claims-made policies are usually stricter and their coverage may be compromised by failing to report claims in a timely manner.

Self-Insurance or Alternative Risk Transfer

There are numerous nontraditional insurance programs that larger, more complex banking organizations employ. These programs include, but are not limited to, captive insurance companies, individual or group self-insurance, risk-retention groups, and purchasing groups. These alternative risk-transfer (ART) programs are complex, and they should include common bank policies and procedures. For example, the bank should have access to individuals with insurance expertise. Outside consultants, qualified insurance brokers, and bank directors or management with insurance expertise are an integral part of a successful ART program. The ART program should also incorporate stop-loss provisions and reinsurance coverage to cap the organization’s exposure to severe claims or unexpected loss experience.

COMMON POLICIES AND COVERAGE

The following is not intended to be a compre-

1. An organization can maintain an unfunded reserve for loss-retention purposes.
hensive list of policies and coverages available, but rather a listing and description of those that banks most frequently purchase. The list is divided into three general types of insurance: liability, property, and life insurance. A fourth category is included for aircraft and aviation insurance, which consists of various types of property and liability coverage. While this last coverage category may be unnecessary for most banking organizations, for those institutions that do have exposure to risks associated with aircraft ownership, the risks may be exceptionally large.

Fidelity Insurance Bond

Liability insurance is sometimes called “third-party insurance” because three parties are involved in a liability loss: the insured, the insurance company, and the party (the claimant) who is injured or whose property is damaged by the insured. The insurance company pays the claimant on behalf of the insured if the insured is legally liable for the injury or damage. An insured’s legal liability for injury is often the result of a negligent act, but there are other sources of liability. Several examples of liability insurance are discussed below.

Fidelity bond coverage provides reimbursement for loss from employee dishonesty: robbery; burglary; theft; forgery; mysterious disappearance; and, in specified instances, damage to offices or fixtures of the insured. Coverage applies to all banking locations except automated teller machines, for which coverage must be specifically added. All banks should obtain fidelity bond coverage that is appropriate for their business needs.

The most widely used form of fidelity bond is the Financial Institution Bond (FIB), Standard Form No. 24 (formerly named the bankers’ blanket bond). Standard Form No. 24 is a claims-made, or discovery, form. The “basic” FIB has four insuring agreements or parts. Employee Dishonesty/Fidelity (Clause A) covers dishonest or fraudulent acts committed by employees. On-Premises (Clause B) covers losses from burglary, misplacement, or an unexplained disappearance that occurs on premises. In-Transit (Clause C) covers losses from burglary, misplacement, or an unexplained disappearance that occurs while the property is in transit. Counterfeit Currency (Clause F) covers losses from accepting counterfeit currency.

In addition to the basic four FIB insuring agreements, Forgery or Alteration (Clause D) and Securities (Clause E) may also appear on the standard form. (These coverages may not be a component of the most basic insurance program for a small bank.) Significant enhancements and additional coverages are often endorsed onto the FIB. Any misrepresentation, omission, concealment, or incorrect statement of material fact in the insurance application is grounds for recission of the fidelity bond by the underwriting insurance company.

When the bank under examination is a subsidiary of a bank holding company, and the holding company has purchased one fidelity bond to cover all affiliated banks, the examiner should determine that the policy is sufficient to cover the exposures of the subsidiary bank being examined. Examiners also should determine that any policy premiums the subsidiary bank pays to the parent holding company are not disproportionate to the bank’s benefits from the group policy and that such premiums are consistent with the fair-market requirements of section 23B of the Federal Reserve Act. Split-limit coverage may reduce protection if a loss involves the collusion of subsidiary bank employees or other affiliates of a bank holding company.

Clause A: Fidelity (Employee Dishonesty)

Clause A covers losses resulting directly from dishonest or fraudulent acts an officer or employee commits, either acting alone or in collusion with others. The employee must have had a manifest intent to cause a loss to the financial institution, and the employee or another person or entity must obtain financial benefit from the dishonest or fraudulent act. Officers, attorneys retained by the bank, persons provided by an employment contractor, and nonemployee data processors who are performing services for the insured are typically all considered “employees.” If any of the loss results from loans, that part of the loss is covered only if the employee was in collusion with other parties to the transaction and the employee received a minimum financial-benefit amount, as specified in the policy. (“Financial benefit” does not include any employee benefits earned in the normal course of employment, including salaries, commissions, fees, bonuses, promotions, awards, profit-sharing plans, or pensions.) Clause A should not prevent the recovery of losses from
employee dishonesty that are concealed by fictitious loans.

Clause B: On-Premises

Clause B covers losses of property (as defined in the bond) that occur on premises as a result of robbery, burglary, larceny, misplacement, theft, or a mysterious and unexplained disappearance. Under specified conditions, damage to offices and equipment may be covered under this clause. However, premises coverage should not be confused with standard fire or other types of property insurance.

Clause C: In-Transit

Clause C covers loss of property that is in transit. The property typically must be in the custody of (1) a natural person acting as a messenger for the insured, (2) a transportation company transporting the property in an armored motor vehicle, or (3) a transportation company transporting the property by means other than an armored motor vehicle. When an armored vehicle is not used by a transportation company, “property” is generally limited to records, certified securities, and negotiable instruments that are not payable to the bearer, are not endorsed, and have no restrictive endorsements. Some insuring agreements insure certain financial institution employees that carry cash.

Clause D: Forgery or Alteration

Clause D covers forgery, which is the signing of the name of another person or organization with the intent to deceive. Clause D also covers losses resulting from the alteration of any negotiable instrument. Evidences of debt, which the bank receives either over-the-counter or through clearings, are not usually covered. Fraudulent items received through an electronic funds transfer system are generally excluded.

Clause E: Securities

Clause E covers losses that result from a bank’s extending credit or assuming liability on the faith of original securities, documents, or written instruments that are forged, altered, lost, or stolen. These include but are not limited to a certificated security, a title, a deed or mortgage, a certificate of origin or title, an evidence of debt, a security agreement, an instruction to a Federal Reserve Bank, and a statement of uncertificated security of a Federal Reserve Bank. Coverage is included for certain counterfeit securities and instruments. The bank must have acted in good faith and had actual physical possession of the original instrument.

Clause F: Counterfeit Currency

Clause F provides coverage for losses resulting from the receipt of counterfeit money. The coverage is counterfeit money of the United States, Canada, or any other country where the insured maintains a branch office.

Common FIB Extensions, Riders, or Endorsements

Fidelity bond protection can be extended by purchasing additional coverage through extensions, riders, and endorsements. If a bank has significant risk exposures in certain areas, these additional protections should be considered. The most common of these protections are listed below.

Extortion/Threats to Persons or Property

The extortion/threats to persons or property rider insures against loss of property that is surrendered away from a banking office as the result of a threat to do bodily harm to a director, trustee, employee, or relative, or of threats to damage banking premises or property. While a bank may add this coverage with a rider to its FIB, many banks purchase a separate, more comprehensive policy or endorse this coverage onto the directors’ and officers’ policy.

Trading Losses

The trading-loss rider amends the FIB exclusion by providing coverage for trading losses resulting directly from employee dishonesty.

Automated Teller Machines

The automated teller machine (ATM) rider cov-
ers losses of money from, or damage to, an unattended ATM that results from robbery, burglary, or theft.

**Electronic or Computer Systems**

The electronic or computer-systems rider covers direct losses caused by fraudulent funds transfers originated through the bank’s computer systems. The fraud may be caused by a dishonest employee, customer, or third party.

**Unauthorized Signatures**

The unauthorized-signature rider covers losses resulting from a bank’s acceptance, cashing, or payment of any negotiable instrument or withdrawal order that bears an unauthorized signature. An “unauthorized signature” is not forged, but is the signature of an individual who is not an authorized signatory on the account.

**Fraudulent Mortgages**

The fraudulent-mortgages rider insures against loan losses that result from a bank’s accepting or acting on mortgages or deeds of trust that have defective signatures. “Defective signatures” are those obtained through fraud or trickery or under false pretenses.

**Counterfeit Checks**

The counterfeit-check rider insures against loss from counterfeit checks and other negotiable instruments. The coverage applies whether or not the counterfeit instruments are forged.

**Service Contractors**

The service-contractor rider covers loss resulting from fraudulent or dishonest acts committed by a servicing contractor. A “servicing contractor” services real estate and home-improvement mortgages, as well as tax and insurance escrow accounts; manages real property; or provides other related services. The coverage extends to losses resulting from the contractor’s failure to forward collected funds to the bank when the servicing contractor has committed to do so.

**Money-Order Issuer’s**

With a money-order-issuer’s rider, coverage is expanded to authorized third parties that issue registered checks or personal money orders on behalf of the insured.

**Liability Insurance**

**Electronic and Computer Crimes**

To broaden the electronic and computer-systems rider that is normally attached to the FIB, an additional electronic and computer-crime rider may be purchased. This rider is a “companion policy” that covers losses the bank may incur from having (1) transferred, paid, or delivered any funds or property; (2) established any credit; or (3) debited any account or given value as a direct result of fraudulent input of electronic data or computer instructions into the insured’s computer. These losses may result from someone’s unauthorized access to a terminal or the bank’s communications lines, or from the fraudulent preparation of tapes or computer programs. Under this rider, coverage may include electronic funds transfer systems, the bank’s proprietary systems, and voice instructions given over the telephone. Losses caused by software programmers and consultants, ATM systems, computer viruses, software piracy, computer extortion, and facsimiles may also be covered.

**Excess Bank Employee Dishonesty Bond**

The excess bank employee dishonesty bond adds limits over and above the FIB. Often an FIB cannot be purchased with limits that are large enough to satisfy the risk-transfer needs of larger banks. When this occurs, the bank may purchase an excess bond that would respond if a claim is larger than the per-occurrence limits on the FIB or if the aggregate limit of the FIB has been exhausted. The most common form of this coverage is the excess bank employee dishonesty blanket bond, Standard Form No. 28.

**Combination Safe Depository**

Combination safe depository insurance consists of two coverage sections that can be purchased.
together or separately. Coverage (A) applies to losses when the bank is legally obligated to pay for loss of a customer’s property held in safe deposit boxes (including loss from damage or destruction). Coverage (B) generally covers loss, damage, or destruction of property in customers’ safe deposit boxes, whether or not the bank is legally liable, when the loss results from an activity other than employee dishonesty, such as robbery or burglary.

**Directors’ and Officers’ Liability**

Directors’ and officers’ (D&O) liability insurance usually has three coverage parts: Side A, Side B, and Entity Securities Coverage (C). Side A covers the directors and officers individually for alleged wrongful acts. Side B reimburses the bank for money it has paid to or on behalf of its directors and officers to indemnify them for damages they may be liable for as a result of alleged wrongful acts. Entity Securities Coverage protects the corporation against securities claims. Subject to many exclusions and definitions, a “wrongful act” means any actual or alleged act, error, omission, misstatement, misleading statement, neglect, or breach of duty. D&O policies are primarily written on a claims-made basis. Larger banks will purchase excess D&O coverage. Like the FIB, there are numerous coverages or enhancements that can be endorsed onto a D&O policy.

**Entity errors and omissions.** The entity errors and omissions (E&O) insurance rider extends coverage to the financial institution as an entity for wrongful acts. A separate, more robust E&O policy may also be purchased. The separate policy is commonly referred to as bankers’ professional liability.

**Fiduciary liability and ERISA errors and omissions.** Fiduciary liability (or fiduciary errors and omissions) extends insurance coverage for management of the bank’s own employee pension or profit-sharing plans. A separate, more robust fiduciary policy may be purchased to expand further the coverage of the bank’s management of its own plans. Without this additional special endorsement, neither the fiduciary errors and omissions nor the bank’s directors’ and officers’ liability insurance will cover liability arising under the Employee Retirement Income Security Act of 1974 (ERISA). For protection against exposure arising from a breach of fiduciary duty under ERISA, a special ERISA errors and omissions endorsement is required (also called fiduciary or employee benefit plan liability). In addition to bank trust departments, banks whose only fiduciary responsibilities relate to their employee benefit plan should consider this coverage. A related specialized coverage called IRA/Keogh errors and omissions is also available.

For properties held or managed by a bank’s trust department, a master or comprehensive policy is often obtained instead of individual policies. A master policy protects the trust-account properties from fire or other loss and insures the accounts and the bank against third-party liability in connection with the properties. The master policy does not usually cover claims by trust customers against the bank for negligence, errors, or violations resulting in loss to fiduciary accounts. However, separate fiduciary (or trust department) errors and omissions policies incorporate these areas.

**Trust Errors and Omissions**

Trust errors and omissions insurance provides coverage for wrongful acts while the bank is acting as trustee, guardian, conservator, or administrator. This is a claims-made policy that can be endorsed onto the D&O policy.

**Employment-Practices Liability**

Employment-practices liability (EPL) insurance provides coverage for an entity against employee claims of wrongful termination, discrimination, sexual harassment or “wrongful employment acts.” This is usually a claims-made policy that can be endorsed onto the D&O policy.

**Bankers’ Professional Liability**

Bankers’ professional liability (BPL-E&O) provides coverage for claims resulting from any actual or alleged wrongful acts, errors, or omissions bank employees commit in the performance of professional duties. Coverage can be broadened to include securities E&O, insurance agent E&O, brokerage service E&O, and notary E&O.
Mortgage Impairment

Mortgage-impairment insurance coverage protects the bank’s interest, as mortgagee, from loss when contractually required insurance on real property held as collateral has inadvertently not been obtained. Upon discovery of the lack of required coverage, the bank has a limited time to either induce the borrower to obtain the required insurance or to place the insurance on its own.

Mortgage Errors and Omissions

Mortgage errors and omissions insurance, a broader version of mortgage-impairment coverage, provides coverage for direct damage and E&O losses to either the bank or the borrower. Mortgage E&O coverage also applies to the bank’s mishandling of real estate taxes, life and disability insurance, and escrowed insurance premiums. Claims must result in a loss to the mortgaged property.

Commercial General Liability

Commercial general liability (CGL) insurance protects against claims of bodily injury or property damage for which the business may be liable and which may arise from the bank’s premises, operations, and products. In addition to bodily injury and property damage, CGL can include liability coverage for various other offenses that might give rise to claims, such as libel, slander, false arrest, and advertising injury. A CGL policy can be underwritten on either an occurrence or a claims-made basis.

Workers’ Compensation and Employers’ Liability

Workers’ compensation insurance covers injuries or deaths of employees caused by accidents in the course of employment. Workers’ compensation insurance consists of two basic coverage parts: statutory benefits and employers’ liability (EL). The two are mutually exclusive remedies to an employee injured on the job. EL protects a company from a lawsuit filed by an employee, while statutory benefits coverage provides medical care and long-term disability, death, or other benefits. State laws govern these provisions, so the provisions differ from state to state. The statutory coverage of workers’ compensation is a no-fault system intended to benefit both the injured employee and the employer.

Automobile Liability and Physical Damage

Automobile liability insurance provides third-party liability protection for bodily injury or property damage resulting from accidents that involve the bank’s vehicles. First-party coverage for damage to the vehicles is also provided. This coverage should be extended to include—

- nonowned and hired coverage, if employees use personal autos or rent autos while on bank business;
- coverage for autos that have been repossessioned; and
- garage-keeper’s liability, if the bank rents its parking facilities to customers or the public.

Umbrella and Excess Liability

Umbrella and excess liability insurance offers additional liability limits in excess of the coverage limits of any policy over which it “attaches” or becomes effective. Basic umbrella coverage attaches to CGL and automobile insurance and to the employers’ liability section of workers’ compensation policies. An excess liability policy attaches over an umbrella policy. More complex insurance programs may include both umbrella and excess liability policies that attach over the D&O, E&O, EPL, or other insurance.

Property Insurance

Several types of insurance coverage are available to help banks recover from property damage. Some of the more common types of property coverages are briefly described below.

Broad Form Property Insurance

Property insurance insures against the loss of or damage to real and personal property. The loss or damage may be caused by perils such as fire,
theft, windstorm, hail, explosion, riot, aircraft, motor vehicles, vandalism, malicious mischief, riot and civil commotion, and smoke.

Fire

Fire insurance covers all losses directly attributed to fire, including damage from smoke or water and chemicals used to extinguish the fire. Additional fire damage for the building contents may be included, but often is written in combination with the policy on the building and permanent fixtures. Most fire insurance policies contain “co-insurance” clauses, meaning that insurance coverage must be maintained at a fixed proportion of the replacement value of the building. If a bank fails to maintain the required relationship of protection, all losses will be reimbursed at the ratio of the amount of the insurance carried to the amount required, applied to the value of the building at the time of the loss. When determining insurable value for fire insurance purposes, the basis typically is the cost of replacing the property with a similar kind or quality at the time of loss. Different types of values, however, may be included in policies, and care should be taken to ensure that the bank is calculating the correct value for its needs.

Business Interruption

Business-interruption insurance indemnifies the insured against losses arising from its inability to continue normal operations and functions of the business. Coverage is triggered by the total or partial suspension of business operations due to the loss of, loss of use of, or damage to all or part of the bank’s buildings, plant machinery, equipment, or other personal property, when the loss is the result of a covered cause.

Contingent business-interruption insurance is also available to cover the bank’s loss of earnings caused by a loss to another business that is one of its major suppliers or customers. This insurance is also known as “business income from dependent properties.”

Crimes

Crime insurance covers money, securities, merchandise, and other property from various criminal causes of loss, such as burglary, robbery, theft, and employee dishonesty.

Data Processing

Data processing insurance coverage provides loss protection if data processing systems break down. This insurance also covers the additional expense incurred in making the system operational again.

Difference in Conditions

A difference-in-conditions (DIC) insurance contract is a separate coverage that expands or supplements property insurance that was written on a named-perils basis. A DIC policy will cover the property on an all-risk basis, subject to certain exclusions.

Ocean and Inland Marine

Ocean marine insurance covers ships and their cargo against such causes as fire, lightning, and “perils of the seas.” These include high winds, rough waters, running aground, and collision with other ships or objects.

Inland marine insurance was originally developed to provide coverage for losses to
cargo transported over land. It now covers limited types of property in addition to goods in transit.

**Valuable Papers and Destruction of Records**

Valuable-papers and destruction-of-records insurance coverage is for the physical loss or damage to valuable papers and records of the insured. The coverage includes practically all types of printed documents or records except money.

**Accounts Receivable**

Accounts-receivable insurance covers losses that occur when an insured is unable to collect outstanding accounts because of damage to or destruction of the accounts-receivable records that was caused from a peril covered in the policy.

**Cash Letters**

Cash-letter insurance covers the costs for reproducing cash-letter items and items that remain uncollectible after a specified period of time. Generally, these policies do not cover losses due to dishonest acts of employees.

**First-Class, Certified, and Registered Mail**

The insurance coverage for first-class, certified, and registered mail provides protection on the shipment of property sent through the mail, as well as during transit by messenger or carrier to and from the post office. The insurance is principally used to cover registered mail in excess of the maximum $25,000 insurance provided by the U.S. Postal Service.

**Commercial Multiple Peril**

Commercial multiple peril insurance encompasses a range of insurance coverages, including property and liability. Small institutions may purchase this package policy when stand-alone policies are excessive or inefficient.

**Life Insurance**

Common types of life insurance policies purchased by banks are described below.

**Key Person**

When the death of a bank officer, or key person, would be of such consequence to the bank as to give it an insurable interest, key-person life insurance would insure the bank on the life of this individual.

**Split-Dollar**

In split-dollar life insurance, the purchaser of the policy pays at least part of the insurance premiums and is entitled to only a portion of the cash surrender value, death benefit, or both. See SR-93-37 (“Split-Dollar Life Insurance,” June 18, 1993) and its attachments for further discussion of the Federal Reserve’s position on these arrangements between bank holding companies and their subsidiary banks.

**Bank-Owned**

Bank-owned life insurance consists of tax-advantaged insurance policies that are purchased to cover the lives of bank officers and other highly compensated employees. The policies may be used as a funding mechanism for employee pension and benefit plans. The bank is the owner and beneficiary of the policy, and the cash value of the policy is considered an asset of the bank.

**Aircraft or Aviation Insurance**

Although aviation-liability exposures are frequently overlooked in the myriad of other financial institution exposures, they have tremendous potential for large catastrophic losses and must be addressed by senior risk-management executives at all financial institutions. Often hidden or obscure, aviation liability ranges from the more typical owned and nonowned liability and physical-damage exposures to the more exotic exposures from hangar-keepers, aviation products, and airport or heliport premises. In view of the specialized nature of aviation exposures, it is
important that the bank deal with knowledgeable and experienced agents or brokers and underwriters in developing its aviation insurance program. While exposure categories overlap significantly, the following summary highlights the key areas of concern to most financial institutions.

**Aviation Liability**

Aviation liability insurance can be written to include aviation-products liability, all owned or nonowned exposures, and passenger liability. A bank’s umbrella liability insurance program should also apply over the aviation policy’s limit.

**Nonowned Exposures**

While many banks do not feel the need for aviation insurance because they do not own an aircraft, they may overlook liability exposures from nonowned aircraft and may, in fact, need this coverage. For example, an employee may use a personal aircraft on bank business, or lease or rent an aircraft to ferry customers or employees to a distant meeting. Financing or leasing an aircraft could create a nonowned exposure, even though the aircraft is not under bank control.

Most aviation-underwriting markets have programs available to meet the above exposures. However, additional exposures may require special coverage. Banks should consider the following situations:

• If the bank repairs and maintains the aircraft, it may incur a products-liability exposure after control is relinquished to others, such as when the aircraft is sold.

• If the bank finances aircraft, maintaining only a security interest, it becomes an owner when it repossesses the aircraft. In this case, there could be a definite need for both liability and physical-damage coverage. The coverage may be written at the time of repossession or negotiated in advance of the need for it. The bank should not attempt to continue coverage for its exposure under the borrower’s policy.

**All-Risk Physical Damage**

To protect the bank’s security interest in an aircraft hull, borrowers should be required to maintain full-value, all-risk physical-damage insurance (both ground-risk and in-flight coverage) in favor of the bank. However, a number of warranties in aircraft insurance policies could void the contract, so bankers are further advised to require that a borrower’s hull insurance policy contain a breach-of-warranty endorsement to protect the bank if the borrower or owner violates provisions of the policy. The underwriter should agree to give the bank at least 30 days’ advance notice of any change in the policy. Depending on the use of the aircraft, special consideration should be given to the territorial limits of coverage, as well as to confiscation protection. Since breach-of-warranty endorsements, like aircraft insurance policies, are far from standard, it is important that the bank understand and agree with the underwriter’s language. It is particularly appropriate to review the consequences of potential recovery to the lien holder if the aircraft is damaged while a delinquency exists on the note.

**Bank as Lessor**

If the bank’s security interest is that of the lessor, aviation liability insurance should be carried by the bank as lessor and also by the customer as lessee. In certain cases, it may be appropriate to require the lessee, through his or her underwriter, to provide the equivalent of the breach-of-warranty endorsement to the liability program and physical-damage coverage. The bank may also consider obtaining contingent lessor’s liability.

**Airport Premises and Hangar-Keepers**

Airport-premises and hangar-keeper’s insurance apply if the bank repossesses real estate on which an airport facility exists and continues to operate, or if the bank permits use of the facility pending further sale. In either case, the bank may assume liability exposures associated with the control tower, as well as airport-premises liability. Both the bank’s comprehensive general liability and aviation liability programs should be reviewed for proper coverage.

If the bank owns or operates a hangar for its aircraft and attempts to share the burden of costs with others by renting aircraft space, it can pick up exposure to hangar-keeper’s liability, unless
the contract is properly worded. Appropriate consideration should be given to hold-harmless indemnification clauses, any regular or special insurance requirements, and waivers of subrogation.

**Accidental Death and Dismemberment and Travel**

Accidental death and dismemberment and travel insurance is another aspect of aviation insurance that banking institutions should consider. Many insurance programs for accidental death and dismemberment and corporate business travel accidents exclude coverage in corporate-owned, -leased, or -hired aircraft. Banks need to review the language of these policies carefully to be certain that they provide necessary and adequate coverages for the use of such aircraft.

**RECORDKEEPING**

The diversity of available insurance policies and their coverages emphasize the need for banks to maintain a concise, easily referenced schedule of their insurance coverage, referred to as the “schedule of insurance.” These records should include the following information:

- insurance coverages provided, with major exclusions detailed
- the underwriter
- deductible amounts
- upper limits on policies
- terms of the policies
- dates that premiums are due
- premium amounts
- claim-reporting procedures

In preparation for policy renewal, the bank’s risk manager and insurance broker organize much of the bank’s relevant insurance data into a “submission.” The submission may include—

- historical, current, and forecasted exposure information, such as sales, number and type of employees, property characteristics and values, and number and type of autos;
- loss and claim history by line of insurance, including detailed information on large claims, loss development, and litigation;
- information on company risk-management policies and financials; and
- specifications on desired coverages, terms and conditions, limits, deductibles, and payment plans.

The submission is delivered to the insurance company underwriter and forms the basis for determining premiums, rates, limits, and the program structure. The information may give the examiner a sense of why premiums and coverages change from year to year and whether purchased limits are sufficient.

Banks should retain the original policies and supporting documents for appropriate time periods. Records of losses should also be maintained, regardless of whether the bank was reimbursed. This information indicates areas where internal controls may need to be improved and is useful in measuring the level of risk exposure in a particular area.
Management of Insurable Risks
Examination Objectives
Effective date May 2002

1. To determine whether insurance is effectively integrated into the operational-risk-management program, and whether the insurance is appropriate, in light of the institution’s internal-control environment.
2. To determine if insurance coverage adequately protects against significant or catastrophic loss.
3. To determine if recordkeeping practices are sufficient to enable effective risk and insurance management.
4. To ascertain if, and ensure that, the risk manager has initiated corrective action when policies, practices, procedures, or internal controls are deficient or when violations of banking laws and regulations have been noted.
Management of Insurable Risks
Examination Procedures
Effective date May 2002

Section 4040.3

1. If selected for implementation, complete or update the “Bank Risk and Insurance Management” section of the internal control questionnaire.

2. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. From the examiner who is assigned to “internal control,” obtain a listing of any deficiencies noted in the latest review conducted by internal or external auditors and risk managers. Determine if appropriate corrections have been made.

3. Determine if the bank has designated a qualified risk manager, with expertise in insurance programs, to be responsible for loss control. If not, determine which officer handles the risk- and insurance-management function and whether external consultants are employed in designing the insurance program.

4. Obtain the bank’s schedule of insurance policies in force and the renewal submissions. If the bank does not maintain a schedule, request that the bank complete a schedule of existing insurance coverage.
   a. Determine whether there have been any material changes in insurance coverage, limits, or deductibles since the last examination and the reasons for such changes. Do the changes reflect—
      • revised business strategies, the bank structure, operating processes, or technology systems that affect insurable risks, and
      • shifts to self-insurance or co-insurance or a change in insurance carriers?
   b. If there have been material changes, determine how they are being managed.

5. Using the bank-prepared summary of insurance coverage, determine that coverage conforms to the guidelines for maximum loss exposure, as established by the board of directors.
   a. Determine whether the use of insurance is in accordance with board-approved risk-management policies and guidelines.
   b. If the bank self-insures, determine what methods are used for this purpose; how the value of self-insurance is quantified; and how “premiums” are accounted for, funded, allocated, and tracked.

6. Determine whether insurance coverage provides adequate protection for the bank. The quality of internal controls and the audit function must be considered when making this assessment.
   a. Determine whether the bank manages its insurance coverage as an element of the operational-risk-management program.
   b. Determine whether the insurance program is managed on a corporate-wide basis or within each business unit.
   c. Identify any products, processes, or systems that the bank is not able to obtain insurance coverage for and determine how the associated risk is being managed.
   d. Determine whether the bank maintains a database of operational-loss events, the comprehensiveness of the database, and the claims history of operational losses.
   e. Review the due-diligence process used to assess the qualifications of providers of insurance coverage, including primary reinsurers.

7. If the bank’s fidelity insurance has lapsed, determine that the appropriate Federal Reserve Bank has been notified.

8. Determine that the bank has adequate procedures to ensure that—
   a. reports of losses are filed with the bonding company pursuant to policy provisions,
   b. premiums are paid before policy expiration dates,
   c. policies are renewed without a lapse of coverage at expiration dates, and
   d. material changes in exposures are reported to the bank’s insurance agent or broker and result in appropriate insurance-policy endorsements.

   If the procedures are deficient, verify that reports have been filed as required and premiums have been paid.

9. Review any significant financial institution bond claims that were filed since the last examination to determine—
a. any adverse effect on the bank’s condition,
b. whether the incident (or incidents) reflects any deficiencies with respect to internal controls and procedures, and
c. whether management has taken appropriate steps to correct any deficiencies and made appropriate reports to the board of directors.

10. Prepare, in appropriate report form, and discuss with appropriate officers—
a. recommended corrective action when policies, practices, procedures, or internal controls are deficient;
b. recommended improvements in the risk-management program that relate to insurance;
c. important areas in which insurance coverage is either nonexistent or inadequate in view of current circumstances; and
d. any other deficiencies noted.

11. Update the workpapers with any information that will facilitate future examinations.
Management of Insurable Risks
Internal Control Questionnaire
Effective date May 2002

Section 4040.4

Review the bank’s internal controls, policies, practices, and procedures for its own insurance coverage. The bank’s risk-management system should be documented completely and concisely and should include, where appropriate, the risk-assessment matrix, a narrative description, flowcharts, the schedule of insurance coverage, policy forms, renewal submissions, and other pertinent information.

BANK RISK AND INSURANCE MANAGEMENT

1. Does the bank have established insurance guidelines that provide for—
   a. a reasonably frequent, and at least annual, determination of risks the bank assumes or transfers, including high-dollar and low-probability events?
   b. limits as to the amount of risk that may be retained or self-insured?
   c. periodic appraisals of major fixed assets to be insured?
   d. a credit or financial analysis of the insurance companies who have issued policies to the bank?

2. Does the bank have a risk manager who is responsible for assessing and developing controls to deal with the consolidated risks of the institution?

3. Is the bank’s insurance program managed as an element of its overall operational-risk-management program; that is, are insurance coverages reviewed and coordinated by the person handling the operational-risk-management function?

4. Does the bank use the services of a professionally knowledgeable insurance agent, broker, direct writer, or consultant to assist in selecting and providing advice on alternative means of providing insurance coverage?

5. Does the bank’s security officer coordinate his or her activities with the person responsible for handling the operational-risk-management function?

6. Does the bank maintain a concise, easily referenced schedule of existing insurance coverage?

7. Does the bank maintain records, by type of risk, to facilitate an analysis of the bank’s experience in costs, claims, losses, and settlements under the various insurance policies in force?

8. Is a complete schedule of insurance coverage presented to the board of directors at least annually for review and approval? Does the schedule include the respective insurance premiums (net costs), claims, and loss experience, and is this information reviewed as part of this process?

CONCLUSION

1. Is the foregoing information an adequate basis for evaluating internal control; that is, there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

2. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
State member banks may purchase bank-owned life insurance (BOLI) as principal if such purchases are permitted for national banks and permitted under state law. The legal authority and guidance for acquiring permissible BOLI and for engaging in insurance activities is discussed within the following interagency statement. When such insurance purchases or insurance activities are not permissible for national banks, a determination of permissibility depends on a decision of the FDIC (1) that the investment or activity would not pose any significant risk to the insurance fund and (2) that the bank continues to comply with the required capital standards.

The bank supervisory agencies have concerns that some banks have committed a significant amount of capital to BOLI without having an adequate understanding or a proper assessment of the full array of risks it poses—especially risks that are difficult to measure, such as liquidity, transaction/operational, reputation, and compliance/legal risks. Banks are therefore expected to implement appropriate risk-management processes, including meaningful risk limits, before implementing or adding to a BOLI program. The following interagency guidance was developed for banks and savings associations (institutions) and examination staff to help ensure that risk-management practices for BOLI are consistent with safe and sound business practices. The interagency statement was issued on December 7, 2004.

INTERAGENCY STATEMENT ON THE PURCHASE AND RISK MANAGEMENT OF LIFE INSURANCE

This interagency statement provides general guidance for banks and savings associations (institutions) regarding supervisory expectations for the purchase of and risk management for BOLI. Guidance is also provided for split-dollar arrangements and the use of life insurance as security for loans. The agencies are providing this guidance to help ensure that institutions’ risk-management processes for BOLI are consistent with safe and sound banking practices. Among the safe and sound banking practices discussed in this statement are (1) the need for senior management and board oversight of BOLI, including both a thorough pre-purchase analysis of risks and rewards and post-purchase risk assessment and (2) the permissibility of BOLI purchases and holdings, as well as their risks and associated safety-and-soundness considerations. The statement’s appendix [titled appendix A for this section of the manual] contains a discussion of insurance types and the purposes for which institutions commonly purchase life insurance, as well as a glossary of BOLI-related terminology [titled appendix B for this section].

The statement’s guidance for the pre-purchase analysis of life insurance applies to all BOLI contracts entered into after December 7, 2004. The guidance concerning the ongoing risk management of BOLI subsequent to its purchase applies to all holdings of life insurance regardless of when purchased. Institutions that purchase life insurance after December 7, 2004, that are not in compliance with this guidance may be subject to supervisory action. Institutions that entered into BOLI contracts before this date will be evaluated according to each agency’s pre-purchase guidance in effect at that time.

Compliance with the supervisory guidance in this statement regarding permissible uses for insurance (e.g., recovery of the costs of providing benefits) does not determine whether the policy satisfies state insurable interest requirements.

Legal Authority

National banks may purchase and hold certain types of life insurance under 12 USC 24 (Seventh), which provides that national banks may exercise “all such incidental powers as shall be necessary to carry on the business of banking.” Federal savings associations also may purchase and hold certain types of life insurance incidental to the express powers granted under the Home Owners’ Loan Act. The OCC and OTS have delineated the scope of these authorities through various interpretations addressing the
permissible use of life insurance by national banks and federal savings associations.

Under these authorities, national banks and federal savings associations may purchase life insurance in connection with employee compensation and benefit plans, key-person insurance, insurance to recover the cost of providing pre- and post-retirement employee benefits, insurance on borrowers, and insurance taken as security for loans. The OCC and OTS may approve other uses on a case-by-case basis.

National banks and federal savings associations may not purchase life insurance—

• for speculation;
• to provide funds to acquire shares of stock from the estate of a major shareholder upon the shareholder’s death, for the further purpose of controlling the distribution of ownership in the institution;
• as a means of providing estate-planning benefits for insiders, unless the benefit is a part of a reasonable compensation package; or
• to generate funds for normal operating expenses other than employee compensation and benefits.

National banks and federal savings associations may not hold life insurance in excess of their risk of loss or cost to be recovered. For example, once an individual no longer qualifies as a key person because of retirement, resignation, discharge, change of responsibilities, or for any other reason, the risk of loss has been eliminated. Therefore, national banks and federal savings associations may be required to surrender or otherwise dispose of key-person life insurance held on an individual who is no longer a key person. Typically, term or declining term insurance is the most appropriate form of life insurance for key-person protection.

National banks and federal savings associations may hold equity-linked variable life insurance policies (that is, insurance policies with a return tied to the performance of a portfolio of equity securities held in a separate account of the insurance company) only for the purpose of economically hedging their equity-linked obligations under employee benefit plans. As discussed more fully in the section on “Price Risk,” for equity-linked variable life insurance holdings to be permissible, the national bank or federal savings association must demonstrate that—

• it has a specific, equity-linked obligation; and
• both at the inception of the hedge and on an ongoing basis, changes in the value of the equity-linked variable life insurance policy are highly correlated with changes in the value of the equity-linked obligation.

If a national bank or federal savings association does not meet these requirements, the equity-linked variable life insurance holdings are not permissible. The use of equity-linked variable life insurance holdings as a long-term hedge against general benefit costs is not permissible because the life insurance is not hedging a specific equity-linked liability and does not meet the “highly correlated” requirement.

As a general matter, the ability of state-chartered banks to purchase insurance (including equity-linked variable life insurance) is governed by state law. In some instances, state laws permit state-chartered banks to engage in activities (including making investments) that

2. A separate account is a design feature that is generally available to purchasers of whole life or universal life whereby the policyholder’s cash surrender value is supported by assets segregated from the general assets of the carrier. Under such an arrangement, the policyholder neither owns the underlying separate account nor controls investment decisions (e.g., timing of investments or credit selection) in the underlying separate account that is created by the insurance carrier on its behalf. Nevertheless, the policyholder assumes all investment and price risk.
go beyond the authority of a national bank. The Federal Deposit Insurance Act (section 24) generally requires insured state-chartered banks to obtain the FDIC’s consent before engaging as principal in activities (including making investments) that are not permissible for a national bank. Similarly, the Federal Deposit Insurance Act (section 28) generally requires a state-chartered savings association to obtain the FDIC’s consent prior to engaging as principal in activities (including making investments) that are not permissible for a federal savings association. While insured state-chartered banks and state savings associations may seek the FDIC’s consent to make purchases of life insurance that would not be within the authority of a national bank or federal savings association, such banks and savings associations should be aware that the FDIC will not grant permission to make life insurance purchases if the FDIC determines that doing so would present a significant risk to the deposit insurance fund or that engaging in such purchases is inconsistent with the purposes of federal deposit insurance.

Accounting Considerations

Institutions should follow generally accepted accounting principles (GAAP) applicable to life insurance for financial and regulatory reporting purposes. Financial Accounting Standards Board (FASB) Technical Bulletin No. 85-4, “Accounting for Purchases of Life Insurance” (TB 85-4), discusses how to account for holdings of life insurance. Under TB 85-4, only the amount that could be realized under an insurance contract as of the balance-sheet date (that is, the CSV reported to the institution by the carrier, less any applicable surrender charges not reflected in the reported CSV) is reported as an asset. The guidance set forth in TB 85-4 concerning the carrying value of insurance on the balance sheet is generally appropriate for all forms of BOLI.

An institution may purchase multiple permanent insurance policies from the same insurance carrier with each policy having its own surrender charges. In some cases, the insurance carrier will issue a rider or other contractual provision stating that it will waive the surrender charges if all of the policies are surrendered at the same time. Because it is not known at any balance-sheet date whether one or more of the policies will be surrendered before the deaths of those insured, the possibility that the institution will surrender all of these policies simultaneously and avoid the surrender charges is a gain contingency. Under FASB Statement No. 5, “Accounting for Contingencies,” “[c]ontingencies that might result in gains usually are not reflected in the accounts since to do so might be to recognize revenue prior to its realization.” Accordingly, an institution should report each of the insurance policies on its balance sheet at the policy’s CSV reported by the insurance carrier, less any applicable surrender charges not reflected in the reported CSV, without regard to the existence of the rider.

In accordance with the instructions for Consolidated Reports of Condition and Income and Thrift Financial Reports, an institution should report the carrying value of its BOLI holdings as an “other asset” and the earnings on these holdings should be reported as “other noninterest income.”

The agencies have seen a number of cases in which institutions have failed to account properly for a type of deferred compensation agreement, commonly referred to as a revenue-neutral plan or an indexed retirement plan. The accounting for such plans is separate and distinct from the accounting for BOLI. However, because many institutions buy BOLI to help offset the cost of providing such deferred compensation, the agencies have issued guidance addressing the accounting requirements for both deferred compensation agreements and BOLI. See the Interagency Advisory on Accounting for Deferred Compensation Agreements and Bank-Owned Life Insurance, dated February 11, 2004, for a complete description, including examples, of the appropriate accounting treatment.

Supervisory Guidance on BOLI

Before entering into a BOLI contract, institutions should have a comprehensive risk-management process for purchasing and holding BOLI. A prudent risk-management process includes—

- effective senior management and board oversight;
- comprehensive policies and procedures, including appropriate limits;
• a thorough pre-purchase analysis of BOLI products; and
• an effective ongoing system of risk assessment, management, monitoring, and internal control processes, including appropriate internal audit and compliance frameworks.

The risks associated with temporary (term) insurance are significantly less than those arising from holdings of permanent insurance. Accordingly, the risk-management process for temporary insurance may take this difference into account and need not be as extensive as the risk-management process for permanent insurance.

**Senior Management and Board Oversight**

The safe and sound use of BOLI depends on effective senior management and board oversight. Regardless of an institution’s financial capacity and risk profile, the board must understand the complex risk characteristics of the institution’s insurance holdings and the role this asset is intended to play in the institution’s overall business strategy. Although the board may delegate decision-making authority related to purchases of BOLI to senior management, the board remains ultimately responsible for ensuring that the purchase and holding of BOLI is consistent with safe and sound banking practices.

An institution holding life insurance in a manner inconsistent with safe and sound banking practices is subject to supervisory action. Where ineffective controls over BOLI risks exist, or the exposure poses a safety-and-soundness concern, the appropriate agency may take supervisory action against the institution, including requiring the institution to divest affected policies, irrespective of potential tax consequences.

**Policies and Procedures**

Consistent with prudent risk-management practices, each institution should establish internal policies and procedures governing its BOLI holdings, including guidelines that limit the aggregate CSV of policies from any one insurance company as well as the aggregate CSV of policies from all insurance companies. When establishing these internal CSV limits, an institution should consider its legal lending limit, the capital concentration threshold, and any applicable state restrictions on BOLI holdings. In this regard, given the liquidity, transaction/operational, reputation, and compliance/legal risks associated with BOLI, it is generally not prudent for an institution to hold BOLI with an aggregate CSV that exceeds 25 percent of the institution’s capital as measured in accordance with the relevant agency’s concentration guidelines.

Therefore, the agencies expect an institution that plans to acquire BOLI in an amount that results in an aggregate CSV in excess of 25 percent of capital, or any lower internal limit, to gain prior approval from its board of directors or the appropriate board committee. The agencies particularly expect management to justify that any increase in BOLI resulting in an aggregate CSV above 25 percent of capital does not constitute an imprudent capital concentration.

An institution holding BOLI in an amount that approaches or exceeds the 25 percent of capital concentration threshold can expect examiners to more closely scrutinize the risk-management policies and controls associated with the BOLI assets and, where deficient, to require corrective action.

When seeking the board’s approval to purchase or increase BOLI, management should inform the board members of the existence of this interagency agreement, remind them of the illiquid nature of the insurance asset, advise them of the potential adverse financial impact of early surrender, and identify any other significant risks associated with BOLI. Such risks might include, but are not limited to, the costs associated with changing carriers in the event of a decline in the carrier’s creditworthiness and the potential for noncompliance with state insurable interest requirements and federal tax law.

---

3. In July 1999, the OTS adopted a policy that savings associations may not invest more than 25 percent of their total capital in BOLI without first notifying and obtaining authorization from their OTS Regional Office. In order to maintain strong and effective communications with institutions under its supervision, the OTS retains this policy. The other agencies may also institute approval or notification requirements.

4. Each agency’s definition of a concentration differs slightly. Institutions should refer to the definition provided by their supervisory agency when measuring the CSV of BOLI as a percentage of capital: OCC Bulletin 95-7 for national banks; FRB Commercial Bank Examination Manual, section 2050.1, for state member banks; FDIC Manual of Examination Policies, section 11.1, for insured state nonmember banks; and OTS Thrift Activities Handbook, section 211, for savings associations.
Pre-purchase Analysis

The objective of the pre-purchase analysis is to help ensure that the institution understands the risks, rewards, and unique characteristics of BOLI. The nature and extent of this analysis should be commensurate with the size and complexity of the potential BOLI purchases and should also take into account existing BOLI holdings. A mark of a well-managed institution is the maintenance of adequate records concerning its pre-purchase analyses, usually including documentation of the purpose and amount of insurance needed.

An effective pre-purchase analysis involves the following management actions:

Step 1—Identify the need for insurance and determine the economic benefits and appropriate insurance type. An institution should determine the need for insurance by identifying the specific risk of loss to which it is exposed or the specific costs to be recovered. It is not appropriate to purchase life insurance to recover a loss that the institution has already incurred. An institution’s purchase of insurance to indemnify it against a specific risk of loss does not relieve it from other responsibilities related to managing that risk. The type of BOLI product, e.g., general or separate account, and its features should be appropriate to meet the identified needs of the institution. The appendix [appendix A] contains a description of insurance types and design features.

An institution should analyze the cost and benefits of planned BOLI purchases. The analysis should include the anticipated performance of the BOLI policy and an assessment of how the purchase will accomplish the institution’s objectives. Before purchasing BOLI, an institution should analyze projected policy values (CSV and death benefits) using multiple illustrations of these projections provided by the carrier, some of which incorporate the institution’s own assumptions. An institution should consider using a range of interest-crediting rates and mortality-cost assumptions. In some cases, the net yield (after mortality costs) could be negative, particularly for separate-account products. The potential for unfavorable net yields underscores the importance of carefully evaluating BOLI costs and benefits across multiple scenarios, both currently and into the future.

Step 2—Quantify the amount of insurance appropriate for the institution’s objectives. An institution should estimate the size of the employee benefit obligation or the risk of loss to be covered and ensure that the amount of BOLI purchased is not excessive in relation to this estimate and the associated product risks. When using BOLI to recover the cost of providing employee benefits, the estimated present value of the expected future cash flows from BOLI, less the costs of insurance, should not exceed the estimated present value of the expected after-tax employee benefit costs. In situations where an institution purchases BOLI on a group of eligible employees, it may estimate the size of the obligation or the risk of loss for the group on an aggregate basis and compare that to the aggregate amount of insurance to be purchased. This estimate should be based on reasonable financial and actuarial assumptions. State insurable interest laws may further restrict or limit the amount of insurance that may be purchased on a group of employees. Management must be able to support, with objective evidence, the reasonableness of all of the assumptions used in determining the appropriate amount of insurance coverage needed by the institution, including the rationale for its discount rates and cost projections.

Step 3—Assess the vendor’s qualifications. When making a decision about vendors, an institution should consider its own knowledge of insurance risks, the vendor’s qualifications, and the amount of resources the institution is willing to spend to administer and service the BOLI. Depending on the role of the vendor, the vendor’s services can be extensive and may be critical to successful implementation and operation of a BOLI plan, particularly for the more complex separate-account products.

While it is possible to purchase insurance directly from insurance carriers, the vast majority of insurance purchases are made through vendors—either brokers, consultants, or agents. A vendor may design, negotiate, and administer the BOLI policy. An institution should ensure that it understands the product it is purchasing and that it selects a product that best meets its needs. Management, not just the vendor, must demonstrate a familiarity with the technical

---

5. A general account is a design feature that is generally available to purchasers of whole or universal life insurance whereby the general assets of the insurance company support the policyholder’s CSV.
details of the institution’s insurance assets, and be able to explain the reasons for and the risks associated with the product design features they have selected.

An institution that uses a vendor should make appropriate inquiries to satisfy itself about the vendor’s ability to honor its long-term commitments, particularly when the vendor is expected to be associated with the institution’s insurance program over an extended period of time. The institution should evaluate the adequacy of the vendor’s services and its reputation, experience, financial soundness, and commitment to the BOLI product. Vendors typically earn a large portion of their commissions upon the sale of the product, yet they often retain long-term servicing responsibilities for their clients. The vendor’s commitment to investing in the operational infrastructure necessary to support BOLI is a key consideration in vendor selection.

An institution should be aware that the vendor’s financial benefit from the sale of insurance may provide the vendor with an incentive to emphasize the benefits of a BOLI purchase to the institution without a commensurate explanation of the associated risks. Therefore, reliance solely upon pre-packaged, vendor-supplied compliance information does not demonstrate prudence with respect to the purchase of insurance. An institution should not delegate its selection of product design features to its vendors. An institution that is unable to demonstrate a thorough understanding of BOLI products it has purchased and the associated risks may be subject to supervisory action.

Step 4—Review the characteristics of the available insurance products. There are a few basic types of life insurance products in the marketplace. These products, however, can be combined and modified in many different ways. The resulting final product can be quite complex. Furthermore, certain permanent insurance products have been designed specifically for banks. These products differ from other forms of corporate-owned life insurance (COLI) policies in that the policies designed for banks are generally structured without surrender or front-end sales charges in order to avoid having to report these charges as expenses when initially recording the carrying value. However, BOLI products may have lower net yields than COLI products due to the absence of these charges. An institution should review the characteristics of the various insurance products available, understand the products it is considering purchasing, and select those with the characteristics that best match the institution’s objectives, needs, and risk tolerance.

Design features of permanent insurance policies determine (1) whether the policy is a general account, separate account, or hybrid product; (2) whether the insurance contract is a modified endowment contract (MEC) that carries certain tax penalties if surrendered; and (3) the method used to credit earnings to the policy. Some implications of these design features are discussed in more detail in the “Risk Management of BOLI” section of this interagency statement.

When purchasing insurance on a key person or a borrower, management should consider whether the institution’s need for the insurance might end before the insured person dies. An institution generally may not hold BOLI on a key person or a borrower once the key person leaves the institution or the borrower has either repaid the loan, or the loan has been charged off. Therefore, the maturity of the term or declining term insurance should be structured to match the expected tenure of the key person or the maturity of the loan, respectively. Permanent insurance generally is not an appropriate form of life insurance under these circumstances.

Step 5—Select the carrier. To achieve the tax benefits of insurance, institutions must hold BOLI policies until the death of the insured. Therefore, carrier selection is one of the most critical decisions in a BOLI purchase and one that can have long-term consequences. While a broker or consultant may assist the institution in evaluating carrier options, the institution alone retains the responsibility for carrier selection. Before purchasing life insurance, an institution should perform a credit analysis on the selected carrier(s) in a manner consistent with safe and sound banking practices for commercial lending. A more complete discussion of the credit-analysis standards is included in the “Credit Risk” section of this interagency statement.

Management should review the product design, pricing, and administrative services of proposed carriers and compare them with the institution’s needs. Management should also review the carrier’s commitment to the BOLI product, as well as its credit ratings, general reputation, experience.

6. A hybrid product combines features of both general- and separate-account products.
ence in the marketplace, and past performance. Carriers not committed to general-account BOLI products may have an incentive to lower the interest-crediting rate on BOLI over time, reducing the favorable economics of the product. The interest-crediting rate refers to the gross yield on the investment in the insurance policy, that is, the rate at which the cash value increases before considering any deductions for mortality cost, load charges, or other costs that are periodically charged against the policy’s cash value. Insurance companies frequently disclose both a current interest-crediting rate and a guaranteed minimum interest-crediting rate. Institutions should be aware that the guaranteed minimum interest-crediting rate may be periodically reset in accordance with the terms of the insurance contract. As a result, the potential exists for a decline in the interest-crediting rate.

While institutions can exercise what is known as a 1035 exchange\(^7\) option to change carriers, there are some practical constraints to using this option. First, the institution must have an insurable interest in each individual to be insured under the new carrier’s policy. In a 1035 exchange, former employees of the institution may not be eligible for coverage under the new policy because state insurable interest laws may prohibit their eligibility. Second, the original carrier may impose an exchange fee specifically applicable to such 1035 exchanges.

**Step 6—Determine the reasonableness of compensation provided to the insured employee if the insurance results in additional compensation.** Insurance arrangements that are funded by the institution and that permit the insured officer, director, or employee to designate a beneficiary are a common way to provide additional compensation or other benefits to the insured. Split-dollar life insurance arrangements are often used for this purpose. Before an institution enters into a split-dollar arrangement or otherwise purchases insurance for the benefit of an officer, director, or employee, the institution should identify and quantify its compensation objective and ensure that the arrangement is consistent with that objective. The compensation provided by the split-dollar or other insurance arrangement should be combined with all other compensation provided to the insured to ensure that the insured’s total compensation is not excessive. Excessive compensation is considered an unsafe and unsound banking practice. Guidelines for determining excessive compensation can be found in the Interagency Guidelines Establishing Standards for Safety and Soundness.\(^8\)

Because shareholders and their family members who are not officers, directors, or employees of an institution do not provide goods or services to the institution, they should not receive compensation from the institution. This includes compensation in the form of split-dollar life insurance arrangements.

Prior to an institution’s purchase of a life insurance policy to be used in a split-dollar life insurance arrangement, the institution and the insured should enter into a written agreement. Written agreements usually describe the rights of the institution, the insured individual, and any other parties (such as trusts or beneficiaries) to the policy’s CSV and death benefits. It is important for an institution to be aware that ownership of the policy by the employee, a third party, or a trust (non-institution owner) may not adequately protect the institution’s interest in the policy because the institution ordinarily will not have the sole right to borrow against the CSV or to liquidate the policy if in the event that funds are needed to provide liquidity to the institution. Moreover, if a non-institution owner borrows heavily against the CSV, an institution’s ability to recover its premium payments upon the death of the insured may be impaired.

At a minimum, an institution’s economic interest in the policy should be equal to the premiums paid plus a reasonable rate of return, defined as a rate of return that is comparable to returns on investments of similar maturity and credit risk.

Split-dollar life insurance has complex tax and legal consequences. An institution considering entering into a split-dollar life insurance arrangement should consult qualified tax, legal, and insurance advisers.

**Step 7—Analyze the associated risks and the ability to monitor and respond to those risks.** An institution’s pre-purchase analysis should include a thorough evaluation of all significant risks, as

---

7. A 1035 exchange is a tax-free replacement of an insurance policy for another insurance contract covering the same person in accordance with section 1035 of the Internal Revenue Code.

8. For national banks, appendix A to 12 CFR 30; for state member banks, appendix D-1 to 12 CFR 208; for insured state nonmember banks, appendix A to 12 CFR 364; for savings associations, appendix A to 12 CFR 570.
well as management’s ability to identify, measure, monitor, and control those risks. An explanation of key risks (liquidity, transaction/operational, reputation, credit, interest rate, compliance/legal, and price) is included in the “Risk Management of BOLI” section of this interagency statement.

Step 8—Evaluate the alternatives. Regardless of the purpose of BOLI, a comprehensive pre-purchase analysis will include an analysis of available alternatives. Prior to acquiring BOLI, an institution should thoroughly analyze the risks and benefits, compared to alternative methods for recovering costs associated with the loss of key persons, providing pre- and post-retirement employee benefits, or providing additional employee compensation, as appropriate.

Step 9—Document the decision. A well-managed institution maintains adequate documentation supporting its comprehensive pre-purchase analysis, including an analysis of both the types and design of products purchased and the overall level of BOLI holdings.

Risk Management of BOLI

Risk assessment and risk management are vital components of an effective BOLI program. In addition to conducting a risk assessment as part of a thorough pre-purchase analysis, monitoring BOLI risks on an ongoing basis is important, especially for an institution whose aggregate BOLI holdings represent a capital concentration. Management of an institution should review the performance of the institution’s insurance assets with its board of directors at least annually. More-frequent reviews are appropriate if there are significant anticipated changes to the BOLI program such as additional purchases, a decline in the financial condition of the insurance carrier(s), anticipated policy surrenders, or changes in tax laws or interpretations that could have an impact on the performance of BOLI. This risk-management review should include, but not necessarily be limited to:

- Comprehensive assessment of the specific risks discussed in this section.9
- Identification of which employees are, or will be, insured (e.g., vice presidents and above, employees of a certain grade level). For example, an institution that acquires another institution that owns BOLI may acquire insurance on individuals that it would not insure under its own standards. While the acquiring institution need not correct such exceptions, it is important to know that such exceptions exist.
- Assessment of death benefit amounts relative to employee salaries. Such information helps management to assess the reputation and insurable interest risks associated with disproportionately large death benefits.
- Calculation of the percentage of insured persons still employed by the institution. Larger institutions often find that their policies insure more former employees than current employees. This information can help the institution assess reputation risk.
- Evaluation of the material changes to BOLI risk-management policies.
- Assessment of the effects of policy exchanges. Exchanges typically are costly and it is a sound practice to review the costs and benefits of such actions.
- Analysis of mortality performance and impact on income. Material gains from death benefits can create reputation risks.
- Evaluation of material findings from internal and external audits and independent risk-management reviews.
- Identification of the reason for, and tax implications of, any policy surrenders. In some cases, institutions have surrendered BOLI policies and incurred tax liabilities and penalties. Formal assessment of the costs and benefits of a surrender is a useful component of sound corporate governance.
- Peer analysis of BOLI holdings. To address reputation risk, an institution should compare its BOLI holdings relative to capital to the holdings of its peers to assess whether it is an outlier.

Liquidity Risk

Liquidity risk is the risk to earnings and capital arising from an institution’s inability to meet its obligations when they come due without incur-

---

9. All of the risks discussed in this section are applicable to permanent insurance. In contrast, because temporary insurance does not have a savings component or a CSV, it does not expose an institution to liquidity, interest-rate, or price risk. These risks need not be evaluated in the comprehensive assessment of the risks of temporary insurance.
ring unacceptable losses. Before purchasing permanent insurance, management should recognize the illiquid nature of the product and ensure that the institution has the long-term financial flexibility to hold the asset in accordance with its expected use. The inability to hold the life insurance until the death(s) of the insured(s) when the death benefits will be collected may compromise the success of the BOLI plan. An institution generally does not receive any cash flow from the insurance until the death benefit is paid. Depending upon the age of the insured population, it is possible that an institution that insures a small number of employees may not recognize any cash flow from the insurance for many years. The illiquid nature of insurance assets, combined with the difficulty of projecting liquidity needs far into the future, is a major reason an institution should keep its BOLI holdings below the agencies’ concentration guidelines. Examiners will consider an institution’s BOLI holdings when assessing liquidity and assigning the liquidity component rating.

The purchase of BOLI may negatively affect an institution’s liquidity position, both because BOLI is one of the least liquid assets on an institution’s balance sheet, and because institutions normally fund BOLI purchases through the sale of liquid assets (e.g., marketable securities). To access the CSV of BOLI, the institution must either surrender or borrow against the policy. In accordance with the policy contract and federal tax laws, the surrender of a policy may subject an institution to surrender charges, tax liabilities for previously untaxed increases in the CSV, and tax penalties. Borrowing against the CSV is disadvantageous in most cases due to limitations on the ability to deduct interest on the borrowing and other possible adverse tax consequences.

A BOLI product qualifying as a modified endowment contract (MEC) for tax purposes has particular liquidity disadvantages. If an institution surrenders a MEC, it will incur a tax liability on the increase in the policy’s CSV from earnings on the policy since its inception and may incur an additional tax penalty for early surrender.

In order to avoid such additional tax penalties, an institution may opt to purchase a non-MEC contract. A non-MEC contract permits the policy owner to surrender the policy without incurring the additional tax penalty that, under certain circumstances, applies to MECs. Moreover, depending on the terms of the insurance contract, an institution generally may withdraw

up to the basis (that is, the original amount invested) without creating a taxable event. However, a non-MEC policy increases in complexity if it is in the form of a separate account covered by a stable value protection (SVP) contract. An SVP contract protects the policy owner from declines in the value of the assets in the separate account arising from changes in interest rates, thereby mitigating price risk and earnings volatility. An SVP contract is most often used in connection with fixed-income investments. Institutions should recognize that SVP providers often place restrictions on the amount that may be withdrawn from the separate account, thereby reducing the liquidity of the BOLI asset. An institution considering the purchase of a non-MEC for its potential liquidity advantages compared to a MEC also should be aware of contractual provisions, such as 1035 exchange fees and “crawl-out” restrictions,10 which may limit such advantages.

Transaction/Operational Risk

As it applies to BOLI, transaction/operational risk is the risk to earnings and capital arising from problems caused by the institution’s failure to fully understand or to properly implement a transaction. Transaction/operational risk arises due to the variety and complexity of life insurance products, as well as tax and accounting treatments. To help mitigate this risk, management should have a thorough understanding of how the insurance product works and the variables that dictate the product’s performance. The variables most likely to affect product performance are the policy’s interest-crediting rate, mortality cost, and other expense charges.

Transaction/operational risk is also a function of the type and design features of a life insurance contract. With a general-account product, there are only two parties to the contract: the policy owner and the insurance carrier. With a separate-account product, the insurance carrier has a separate contract with an investment manager. There could also be an SVP provider with whom the carrier has a separate contract.

Transaction/operational risk may also arise as a result of the variety of negotiable features associated with a separate-account product.

---

10. A crawl-out restriction limits the amount of CSV eligible for a 1035 exchange or surrender over a period of time.
These include the investment options; the terms, conditions, and cost of SVP; and mortality options. Deferred acquisition costs (DAC) represent the insurance carrier’s up-front costs associated with issuing an insurance policy, including taxes and commissions and fees paid to agents for selling the policy. The carrier charges the policyholder for these costs and capitalizes the DAC, including the prepayment of taxes in accordance with federal tax law. As the carrier recovers the DAC in accordance with applicable tax law, it credits the amount to the separate-account policyholder. Once it has been credited to the institution, the DAC is essentially a receivable from the carrier and, therefore, represents a general-account credit exposure.

Separate-account policies have additional transaction risks that can result from accounting requirements. Several institutions have had to restate their earnings because of contractual provisions in their policies that were ambiguous with respect to the amount of the CSV available upon surrender of the policy. Because BOLI must be carried at the amount that could be realized under the insurance contract as of the balance-sheet date, if any contractual provision related to costs, charges, or reserves creates uncertainty regarding the realization of a policy’s full CSV, the agencies will require an institution to record the BOLI net of those amounts. As part of an effective pre-purchase analysis, an institution should thoroughly review and understand how the accounting rules will apply to the BOLI policy it is considering purchasing.

**Tax and Insurable Interest Implications**

Before the purchase of BOLI and periodically thereafter, management should also explicitly consider the financial impact (e.g., tax provisions and penalties) of surrendering a policy. Recent adverse press coverage of corporate-owned life insurance (COLI) should serve as a reminder to institutions that the current tax law framework, as it applies to BOLI, is always subject to legislative changes. A tax change that makes future BOLI cash flows subject to income tax, while perhaps deemed unlikely by many institutions, would have a negative impact on the economics of the BOLI holdings. An institution should recognize that earnings from BOLI could make it subject to the alternative minimum tax.

Institutions should also recognize that their actions, subsequent to purchase, could jeopardize the tax-advantaged status of their insurance holdings. The risk that a life insurance policy could be characterized by the Internal Revenue Service (IRS) as an actively managed investment is particularly relevant to separate-account policies. Many larger institutions prefer separate-account products because of perceived lower credit risk and greater transparency (that is, explicit disclosure of costs). Assets held by the insurance company on behalf of the policy owners in the separate account are intended to be beyond the reach of the insurance company’s general creditors in the event of insolvency; however, the protected status of separate-account assets is generally untested in the courts. While the separate-account structure helps to mitigate an institution’s credit exposure to the insurance carrier, the institution can have no “control” over investment decisions (e.g., timing of investments or credit selection) in the underlying account. Generally, allocating separate-account holdings across various divisions of an insurance company’s portfolio does not raise concerns about “control,” but other actions that a policy owner takes may be construed as investment control and could jeopardize the tax-advantaged status.

To benefit from the favorable tax treatment of insurance, a BOLI policy must be a valid insurance contract under applicable state law and must qualify under applicable federal law. Institutions must have an insurable interest in the covered employee, as set forth in applicable state laws. Furthermore, the favorable tax-equivalent yields of BOLI result only when an institution generates taxable income. Institutions that have no federal income tax liability receive only the nominal interest-crediting rate as a yield. In such an environment, BOLI loses much of its yield advantage relative to other investment alternatives.

Some institutions seem to have drawn comfort from assurances from insurance carriers that the carrier would waive lack of insurable interest as a defense against paying a claim. While the carrier may indeed make a payment, such payment may not necessarily go to the institution. Such assurances may not be sufficient to satisfy the IRS requirements for a valid insurance contract, nor do they eliminate potential claims from the estate of the insured that might seek to claim insurance proceeds on the basis that the institution lacked an insurable interest.
For example, some institutions have established out-of-state trusts to hold their BOLI assets. While such trusts may have legitimate uses, such as to gain access to an insurance carrier’s product, in some cases the purpose is to avoid unfavorable insurable interest laws in the institution’s home state and to domicile the policy in a state with more lenient requirements. In some cases, institutions have not made employees aware that they have taken out insurance on their lives.

A recent Fifth Circuit Court of Appeals ruling demonstrates the potential danger of this approach. A Texas employer used a Georgia trust to hold life insurance policies on its employees in Texas, and the trust agreement provided that the insurable interest law of Georgia should apply. In a lawsuit brought by the estate of a deceased employee, the court ignored this provision because the insured employee was not a party to the trust agreement. It then found that the insurable interest law of Texas applied and under that state’s law, the employer did not have an insurable interest in the employee. The result was that the employer was not entitled to the insurance death benefits. The outcome in this case suggests that institutions that have used, or are considering using, an out-of-state trust to take advantage of more-favorable insurable interest laws in another state should assess whether they could be vulnerable to a similar legal challenge.

Institutions should have appropriate legal review to help ensure compliance with applicable tax laws and state insurable interest requirements. Institutions that insure employees for excessive amounts may be engaging in impermissible speculation or unsafe and unsound banking practices. The agencies may require institutions to surrender such policies.

### Reputation Risk

Reputation risk is the risk to earnings and capital arising from negative publicity regarding an institution’s business practices. While this risk arises from virtually all bank products and services, reputation risk is particularly prevalent in BOLI because of the potential perception issues associated with an institution’s owning or benefitting from life insurance on employees.

A well-managed institution will take steps to reduce the reputation risk that may arise as a result of its BOLI purchases, including maintaining appropriate documentation evidencing informed consent by the employee, prior to purchasing insurance. Some institutions assert that they make employees aware via employee handbooks, manuals, or newsletters of the possibility that the institution may acquire life insurance on them. Although such disclosure may satisfy state insurance requirements, any approach that does not require formal employee consent may significantly increase an institution’s reputation risk.

Some institutions have begun to purchase separate-account, non-MEC product designs in order to address the liquidity concerns with MEC policies. One consequence of this product design choice, however, is that it has become increasingly common for institutions to insure a very large segment of their employee base, including non-officers. Because non-MEC designs have a higher ratio of death benefit to premium dollar invested, some institutions have, therefore, taken out very high death benefit policies on employees, including lower-level employees, further adding to reputation risk and highlighting the importance of obtaining explicit consent.

### Credit Risk

Credit risk is the potential impact on earnings and capital arising from an obligor’s failure to meet the terms of any contract with the institution or otherwise perform as agreed. All life insurance policyholders are exposed to credit risk. The credit quality of the insurance company and duration of the contract are key variables. With insurance, credit risk arises from the insurance carrier’s contractual obligation to pay death benefits upon the death of the insured, and if applicable, from the carrier’s obligation to pay the CSV (less any applicable surrender charges) upon the surrender of the policy.

Most BOLI products have very long-term (30- to 40-year) expected time frames for full collection of cash proceeds, i.e., the death benefit. For general-account policies, the CSV is an unsecured, long-term, and nonamortizing obligation of the insurance carrier. Institutions record and carry this claim against the insurance company as an asset.

---

Before purchasing BOLI, an institution should conduct an independent financial analysis of the insurance company and continue to monitor its condition on an ongoing basis. The institution’s credit-risk-management function should participate in the review and approval of insurance carriers. As with lending, the depth and frequency of credit analysis (both initially and on an ongoing basis) should be a function of the relative size and complexity of the transaction and the size of outstanding exposures. Among other things, an institution should consider its legal lending limit, concentration guidelines (generally defined as the aggregate of direct, indirect, and contingent obligations and exposures that exceed 25 percent of the institution’s capital), and any applicable state restrictions on BOLI holdings when assessing its broader credit-risk exposure to insurance carriers. To measure credit exposures comprehensively, an institution should aggregate its exposures to individual insurance carriers, and the insurance industry as a whole, attributable to both BOLI policies and other credit relationships (e.g., loans and derivatives exposures).

There are product design features of a BOLI policy that can reduce credit risk. As noted earlier, an institution can purchase separate-account products, where the institution assumes the credit risk of the assets held in the separate account, rather than the direct credit risk of the carrier as would be the case in a general-account policy. With separate-account policies, the insurance carrier owns the assets, but maintains the assets beyond the reach of general creditors in the event of the insurer’s insolvency. However, even with a separate-account policy, the policy owner incurs some general-account credit-risk exposure to the insurance carrier associated with the carrier’s mortality and DAC reserves. Amounts equal to the mortality and DAC reserves are owed to the policyholder and represent general-account obligations of the insurance carrier. In addition, the difference, if any, between the CSV and the minimum guaranteed death benefit would be paid out of the insurance carrier’s general account.

A separate-account policy may have a stable value protection (SVP) contract issued by the insurance carrier or by a third party that is intended to protect the policyholder from most declines in fair value of separate-account assets. In general, the provider of an SVP contract agrees to pay any shortfall between the fair value of the separate-account assets when the policy owner surrenders the policy and the cost basis of the separate account to the policy owner. Under most arrangements, the insurance carrier is not responsible for making a payment under the SVP contract if a third-party protection provider fails to make a required payment to it. The SVP contract thus represents an additional source of credit risk for a separate-account product. The policyholder’s exposure under an SVP contract is to both the protection provider, which must make any required payment to the insurance carrier, and the carrier, which must remit the payment received from the protection provider to the institution. Because of this exposure, an institution should also evaluate the repayment capacity of the SVP provider.

State insurance regulation governing reserve requirements for insurance carriers, state guaranty funds, and reinsuranc arrangements help to reduce direct credit risks from general-account exposures. Further, an institution can use a 1035 exchange to exit a deteriorating credit exposure, although most policies impose fees for the exchange. While credit risk for existing general- and separate-account policies may be low currently, the extremely long-term nature of a BOLI policy underscores the fact that credit risk remains an important risk associated with life insurance products. Strong current credit ratings offer no guarantee of strong credit ratings 20, 30, or 40 years into the future.

**Interest-Rate Risk**

Interest-rate risk is the risk to earnings and capital arising from movements in interest rates. Due to the interest-rate risk inherent in general-account products, it is particularly important that management fully understand how these products expose the policyholder to interest-rate risk before purchasing the policy. The interest-rate risk associated with these products is primarily a function of the maturities of the assets in the carrier’s investment portfolio, which often range from four to eight years. When purchasing a general-account policy, an institution chooses one of a number of interest-crediting options (that is, the method by which the carrier will increase the policy’s CSV). Using the “portfolio” crediting rate, the institution will earn a return based upon the existing yield of the carrier’s portfolio each year. Using the “new money” crediting rate, the institution earns a
return based upon yields available in the market at the time it purchases the policy.

Separate-account products may also expose the institution to interest-rate risk, depending on the types of assets held in the separate account. For example, if the separate-account assets consist solely of U.S. Treasury securities, the institution is exposed to interest-rate risk in the same way as holding U.S. Treasury securities directly in its investment portfolio. However, because the institution cannot control the separate-account assets, it is more difficult for the institution to control this risk. Accordingly, before purchasing a separate-account product, an institution’s management should thoroughly review and understand the instruments governing the investment policy and management of the separate account. Management should understand the risk inherent within the separate account and ensure that the risk is appropriate for the institution. The institution also should establish monitoring and reporting systems that will enable management to monitor and respond to interest-rate fluctuations and their effect on separate-account assets.

**Compliance/Legal Risk**

Compliance/legal risk is the risk to earnings and capital arising from violations of, or nonconformance with, laws, rulings, regulations, prescribed practices, or ethical standards. Failure to comply with applicable laws, rulings, regulations, and prescribed practices could compromise the success of a BOLI program and result in fines or penalties imposed by regulatory authorities or loss of tax benefits. Among the legal and regulatory considerations that an institution should evaluate are compliance with state insurable interest laws, the Employee Retirement Income Security Act of 1974 (ERISA), Federal Reserve Regulations O and W (12 CFR 215 and 223, respectively), the Interagency Guidelines Establishing Standards for Safety and Soundness, the requirements set forth under the “Legal Authority” section of this document, and federal tax regulations applicable to BOLI.

Tax benefits are critical to the success of most BOLI plans. Accordingly, an institution owning separate-account BOLI must implement internal policies and procedures to ensure that it does not take any action that might be interpreted as exercising “control” over separate-account assets. This is especially important for privately placed policies in which the institution is the only policyholder associated with the separate-account assets.

When purchasing BOLI, institutions should be aware that the splitting of commissions between a vendor and the institution’s own subsidiary or affiliate insurance agency presents compliance risk. The laws of most states prohibit the payment of inducements or rebates to a person as an incentive for that person to purchase insurance. These laws may also apply to the person receiving the payment. When an insurance vendor splits its commission with an institution’s insurance agency that was not otherwise involved in the transaction, such a payment may constitute a prohibited inducement or rebate. Accordingly, an institution should assure itself that this practice is permissible under applicable state law and in compliance with Federal Reserve Regulation W before participating in any such arrangement. Moreover, payments to an affiliate that did not perform services for the institution could also raise other regulatory and supervisory issues.

Due to the significance of the compliance risk, institutions should seek the advice of counsel on these legal and regulatory issues.

**Price Risk**

Price risk is the risk to earnings and capital arising from changes in the value of portfolios of financial instruments. Accounting rules permit owners of insurance contracts to account for general-account products using an approach that is essentially based on cost plus accrued earnings. However, for separate-account products without SVP, the accounting would largely be based on the fair value of the assets held in the separate account. Usually, the insurance carrier will provide neither a minimum CSV nor a guaranteed interest-crediting rate for separate-account products. Absent an SVP contract, the amount of price risk generally depends upon the type of assets held in the separate account.

Because the institution does not control the separate-account assets, it is more difficult for it to control the price risk of these assets than if...
they were directly owned. To address income-
statement volatility, an institution may purchase
an SVP contract for its separate-account policy.
The SVP contract is designed to ensure that the
amount that an institution could realize from its
separate-account policy, in most circumstances,
remains at or above the cost basis of the separate
account to the policyholder. Institutions should
understand, however, that SVP contracts protect
against declines in value attributable to changes in
interest rates; they do not cover default risk.
Moreover, one purpose of the SVP contract is to
reduce volatility in an institution’s reported
earnings. To realize any economic benefit of the
SVP contract, an institution would have to
surrender the policy. Since policy surrender is
nearly always an uneconomic decision, the SVP
contract provides, in a practical sense, account-
ing benefits only.

Before purchasing a separate-account life
insurance product, management should thor-
oughly review and understand the instruments
governing the investment policy and manage-
ment of the separate account. Management
should understand the risk inherent in the sepa-
rate account and ensure that the risk is appro-
 priate. If the institution does not purchase SVP,
management should establish monitoring and
reporting systems that will enable it to recognize
and respond to price fluctuations in the fair
value of separate-account assets.

Under limited circumstances it is legally per-
missible for an institution to purchase an equity-
linked variable life insurance policy if the policy
is an effective economic hedge against the
institution’s equity-linked obligations under
employee benefit plans.\cite{12} An effective economic
hedge exists when changes in the economic
value of the liability or other risk exposure being
hedged are matched by counterbalancing changes in
the value of the hedging instrument. Such a
relationship would exist where the obligation
under an institution’s deferred compensation
plan is based upon the value of a stock market
index and the separate account contains a stock
mutual fund that mirrors the performance of that
index. Institutions need to be aware that this
economic hedge may not qualify as a hedge for
accounting purposes. Thus, the use of equity-
linked variable life insurance policies to eco-
nomically hedge equity-linked obligations may
not have a neutral effect on an institution’s
reported earnings.

Unlike separate-account holdings of debt secu-
rities, SVP contracts on separate-account equity
holdings are not common. The economic hedg-
ing criteria for equity-linked insurance products
lessen the effect of price risk because changes in
the amount of the institution’s equity-linked
liability are required to offset changes in the
value of the separate-account assets. If the
insurance cannot be characterized as an effective
economic hedge, the presence of equity securi-
ties in a separate account is impermissible, and
the agencies will require institutions to reallo-
cate the assets unless retention of the policy is
 permitted under federal law.\cite{13}

In addition to the general considerations dis-
cussed previously, which are applicable to any
separate-account product, an institution should
perform further analysis when purchasing a
separate-account product involving equity secu-
rities. At a minimum, the institution should:

1. Compare the equity-linked liability being
hedged (e.g., deferred compensation) and the
equity securities in the separate account.
Such an analysis considers the correlation
between the liability and the equity securi-
ties, expected returns for the securities
(including standard deviation of returns), and
current and projected asset and liability
balances.

2. Determine a target range for the hedge effec-
tiveness ratio (e.g., 95 to 105 percent) and
establish a method for measuring hedge effec-
tiveness on an ongoing basis. The institution
should establish a process for altering the
program if hedge effectiveness drops below
acceptable levels. Consideration should be
given to the potential costs of program
changes.

3. Establish a process for analyzing and report-
ing to management and the board the effect
of the hedge on the institution’s earnings and
capital ratios. The analysis usually considers
results both with and without the hedging
transaction.

\cite{12} Insured state banks and state savings associations may
request the FDIC’s consent to retain the policies, but consent
will not be granted if it is determined that retaining the
policies presents a significant risk to the appropriate insurance
fund.

\cite{13} Insured state banks and state savings associations may
request the FDIC’s consent to retain the policies, but consent
will not be granted if it is determined that retaining the
policies presents a significant risk to the appropriate insurance
fund.
Risk-Based Capital Treatment

If an institution owns a general-account insurance product, it should apply a 100 percent risk weight to its claim on the insurance company for risk-based capital purposes. A BOLI investment in a separate-account insurance product, however, may expose the institution to the market and credit risks associated with the pools of assets in the separate account. The assets in a pool may have different risk weights, similar to the assets held in a mutual fund in which an institution has invested. For risk-based capital purposes, if an institution can demonstrate that the BOLI separate-account policy meets the requirements below, it may choose to “look through” to the underlying assets to determine the risk weight.

Criteria for a Look-Through Approach

To qualify for the “look-through” approach, separate-account BOLI assets must be protected from the insurance company’s general creditors in the event of the insurer’s insolvency. An institution should document its assessment, based upon applicable state insurance laws and other relevant factors, that the separate-account assets would be protected from the carrier’s general creditors. If the institution does not have sufficient information to determine that a BOLI separate-account policy qualifies for the look-through approach, the institution must apply the standard risk weight of 100 percent to this asset.

In addition, when an institution has a separate-account policy, the portion of the carrying value of the institution’s insurance asset that represents general-account claims on the insurer, such as deferred acquisition costs (DAC) and mortality reserves that are realizable as of the balance-sheet date, and any portion of the carrying value attributable to an SVP contract, are not eligible for the look-through approach. These amounts should be risk-weighted at the 100 percent risk weight applicable to claims on the insurer or the SVP provider, as appropriate.

Look-Through Approaches

When risk-weighting a qualifying separate-account policy, an institution may apply the highest risk weight for an asset permitted in the separate account, as stated in the investment agreement, to the entire carrying value of the separate-account policy, except for any portions of the carrying value that are general-account claims or are attributable to SVP. In no case, however, may the risk weight for the carrying value of the policy (excluding any general-account and SVP portions) be less than 20 percent.

Alternatively, an institution may use a pro rata approach to risk-weighting the carrying value of a qualifying separate-account policy (excluding any general-account and SVP portions). The pro rata approach is based on the investment limits stated in the investment agreement for each class of assets that can be held in the separate account, with the constraint that the weighted average risk weight may not be less than 20 percent. If the sum of the permitted investments across market sectors in the investment agreement is greater than 100 percent, the institution must use the highest risk weight for the maximum amount permitted in that asset class, and then proceed to the next-highest risk weight until the permitted amounts equal 100 percent.

For example, if a separate-account investment agreement permits a maximum allocation of 60 percent for corporate bonds, 40 percent for U.S. government–sponsored enterprise debt securities, and 60 percent for U.S. Treasury securities, then the institution must risk-weight 60 percent of the carrying value of the separate-account investment (excluding any portion attributable to SVP) at the 100 percent risk weight applicable to corporate bonds and the remaining 40 percent at the 20 percent risk weight for U.S. government–sponsored enterprise debt securities. Because the sum of the permitted allocation for corporate bonds and government-sponsored enterprise debt securities totals 100 percent, the institution cannot use the zero percent risk weight for U.S. Treasuries. However, if the permitted allocation for U.S. government–sponsored enterprise debt securities was 30 percent rather than 40 percent, the institution could risk-weight the remaining 10 percent of the carrying value of its investment at the zero percent risk weight for U.S. Treasuries.

Regardless of the look-through approach an institution employs, the weighted average risk weight for the separate-account policy (excluding any general-account and SVP portions) may not be less than 20 percent, even if all the assets in the separate account would otherwise qualify.
for a zero percent risk weight. Furthermore, the portion of the carrying value of the separate-account policy that represents general-account claims on the insurer, such as realizable DAC and mortality reserves, and any portion of the carrying value attributable to an SVP contract, should be risk-weighted at the risk weight applicable to the insurer or the SVP provider, as appropriate.

The following example demonstrates the appropriate risk-weight calculations for the pro rata approach, incorporating the components of a BOLI separate-account policy that includes general-account claims on the insurer as well as the investment allocations permitted for different asset classes in the separate-account investment agreement.

**Example.** The separate-account investment agreement requires the account to hold a minimum of 10 percent in U.S. Treasury obligations. It also imposes a maximum allocation of 50 percent in mortgage-backed securities issued by U.S. government-sponsored enterprises, and a maximum allocation of 50 percent in corporate bonds.

Assume that the portion of the carrying value of the separate-account policy attributable to realizable DAC and mortality reserves equals $10 and that the portion attributable to the SVP totals $10.

<table>
<thead>
<tr>
<th>Carrying value of separate-account policy</th>
<th>$100.00</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less: Portion attributable to DAC and mortality reserves</td>
<td>10.00</td>
</tr>
<tr>
<td>Portion attributable to SVP</td>
<td>10.00</td>
</tr>
<tr>
<td><strong>Net carrying value of separate-account policy available for pro rata</strong></td>
<td><strong>$ 80.00</strong></td>
</tr>
</tbody>
</table>

**Risk-weight calculation:**

| U.S. Treasury @ 10% x $80 = $8 x 0% RW | 0.00 |
| Corporate bonds @ 50% x $80 = $40 x 100% RW | **$ 40.00** |
| GSE MBS @ 40% x $80 = $32 x 20% RW | 6.40 |
| **Separate-account risk-weighted assets subject to pro rata** | **$ 46.40** |

| Add back: DAC and mortality reserves = $10 x 100% RW | **$ 10.00** |
| Add back: SVP = $10 x 100% RW | **$ 10.00** |
| **General-account and SVP risk-weighted assets** | **$ 20.00** |
| **Total BOLI-related risk-weighted assets** | **$ 66.40** |

**Summary**

The purchase of BOLI can be an effective way for institutions to manage exposures arising from commitments to provide employee compensation and pre- and post-retirement benefits. Consistent with safe and sound banking practices, institutions must understand the risks associated with this product and implement a risk-management process that provides for the identification and control of such risks. A sound pre-purchase analysis, meaningful ongoing monitoring program, reliable accounting process, and accurate assessment of risk-based capital requirements are all components of the type of risk-management process the agencies expect institutions to employ.

Where an institution has acquired BOLI in an amount that approaches or exceeds agency concentration levels, examiners will more closely scrutinize the components of the risk-management process and the institution’s associated documentation. Where BOLI has been purchased in an impermissible manner, ineffective controls over BOLI risks exist, or a BOLI exposure poses a safety-and-soundness concern, the appropriate agency may take supervisory action, including requiring the institution to divest affected policies, irrespective of tax consequences.
Appendix A—Common Types of Life Insurance

Life insurance can be categorized into two broad types: temporary (also called “term”) insurance and permanent insurance. There are numerous variations of these products. However, most life insurance policies fall within one (or a combination) of the following categories.

Temporary (Term) Insurance

Temporary (term) insurance provides life insurance protection for a specified time period. Death benefits are payable only if the insured dies during the specified period. If a loss does not occur during the specified term, the policy lapses and provides no further protection. Term insurance premiums do not have a savings component; thus, term insurance does not create cash surrender value (CSV).

Permanent Insurance

In contrast to term insurance, permanent insurance is intended to provide life insurance protection for the entire life of the insured, and its premium structure includes a savings component. Permanent insurance policy premiums typically have two components: the insurance component (e.g., mortality cost, administrative fees, and sales loads) and the savings component. Mortality cost represents the cost imposed on the policyholder by the insurance company to cover the amount of pure insurance protection for which the insurance company is at risk. The savings component typically is referred to as CSV. The policyholder may use the CSV to make the minimum premium payments necessary to maintain the death benefit protection and may access the CSV by taking out loans or making partial surrenders. If permanent insurance is surrendered before death, surrender charges may be assessed against the CSV. Generally, surrender charges are assessed if the policy is surrendered within the first 10 to 15 years.

Two broad categories of permanent insurance are:

- Whole life. A traditional form of permanent insurance designed so that fixed premiums are paid for the entire life of the insured. Death benefit protection is provided for the entire life of the insured, assuming all premiums are paid.
- Universal life. A form of permanent insurance designed to provide flexibility in premium payments and death benefit protection. The policyholder can pay maximum premiums and maintain a very high CSV. Alternatively, the policyholder can make minimal payments in an amount just large enough to cover mortality and other insurance charges.

Purposes for Which Institutions Commonly Purchase Life Insurance

Key person. Institutions often purchase life insurance to protect against the loss of “key persons” whose services are essential to the continuing success of the institution and whose untimely death would be disruptive. For example, an institution may purchase insurance on the life of an employee or director whose death would be of such consequence to the institution as to give it an insurable interest in his or her life. The determination of whether an individual is a key person does not turn on that individual’s status as an officer or director, but on the nature of the individual’s economic contribution to the institution.

The first step in indemnifying an institution against the loss of a key person is to identify the key person. The next and possibly most difficult step is estimating the insurable value of the key person or the potential loss of income or other value that the institution may incur from the untimely death of that person.

Because the most appropriate method for determining the value of a key person is dependent upon individual circumstances, the agencies have not established a formula or a specific process for estimating the value of a key person. Instead, the agencies expect institutions to consider and analyze all relevant factors and use their judgment to make a decision about the value of key persons.

Key-person life insurance should not be used in place of, and does not diminish the need for, adequate management-succession planning. Indeed, if an institution has an adequate management-succession plan, its reliance on a key person should decline as the person gets closer to retirement.
Financing or cost recovery for benefit plans. Like other businesses, institutions often use life insurance as a financing or cost-recovery vehicle for pre- and post-retirement employee benefits, such as individual or group life insurance, health insurance, dental insurance, vision insurance, tuition reimbursement, deferred compensation, and pension benefits.

Permanent insurance is used for this purpose. In these arrangements, an institution insures the lives of directors or employees in whom it has an insurable interest to reimburse the institution for the cost of employee benefits. The group of insured individuals may be different from the group that receives benefits. The institution’s obligation to provide employee benefits is separate and distinct from the purchase of the life insurance. The life insurance purchased by the institution remains an asset even after the employer’s relationship with an insured employee is terminated. The employees who receive benefits, whether insured or not, have no ownership interest in the insurance (other than their general claim against the institution’s assets arising from the institution’s obligation to provide the stated employee benefits).

There are two common methods of financing employee benefits through the purchase of life insurance. The first is the cost-recovery method, which usually involves present-value analysis. Typically, the institution projects the amount of the expected benefits owed to employees and then discounts this amount to determine the present value of the benefits. Then, the institution purchases a sufficient amount of life insurance on the lives of certain employees so that the gain (present value of the life insurance proceeds less the premium payments) from the insurance proceeds reimburses the institution for the benefit payments. Under this method, the institution absorbs the cost of providing the employee benefits and the cost of purchasing the life insurance. The institution holds the life insurance and collects the death benefit to reimburse the institution for the cost of the employee benefits and the insurance.

The second method of financing employee benefits is known as cost offset. With this method, the institution projects the annual employee benefit expense associated with the benefit plan. Then, the institution purchases life insurance on the lives of certain employees. The amount earned on the CSV each year should not exceed the annual benefit expense.

Split-dollar life insurance arrangements. Institutions sometimes use split-dollar life insurance arrangements to provide retirement benefits and death benefits to certain employees as part of their compensation. Under split-dollar arrangements, the employer and the employee share the rights to the policy’s CSV and death benefits. The employer and the employee may also share premium payments. If the employer pays the entire premium, the employee may need to recognize taxable income each year in accordance with federal income tax regulations.

Split-dollar arrangements may be structured in a number of ways. The two most common types of split-dollar arrangements are:

- **Endorsement split-dollar.** The employer owns the policy and controls all rights of ownership. The employer provides the employee an endorsement of the portion of the death benefit specified in the plan agreement with the employee. The employee may designate a beneficiary for the designated portion of the death benefit. Under this arrangement, the employer typically holds the policy until the employee’s death. At that time, the employee’s beneficiary receives the designated portion of the death benefits, and the employer receives the remainder of the death benefits.

- **Collateral-assignment split-dollar.** The employee owns the policy and controls all rights of ownership. Under these arrangements, the employer usually pays the entire premium or a substantial part of the premium. The employee assigns a collateral interest in the policy to the employer that is equal to the employer’s interest in the policy. The employer’s interest in the policy is set forth in the split-dollar agreement between the employer and the employee. Upon retirement, the employee may have an option to buy the employer’s interest in the insurance policy. This transfer of the employer’s interest to the employee is typically referred to as a “roll-out.” If a “roll-out” is not provided or exercised, the employer does not receive its interest in the policy until the employee’s death.

Split-dollar life insurance is a very complex subject that can have unforeseen tax and legal consequences. Internal Revenue Service regulations issued in 200314 govern the taxation of

---

split-dollar life insurance arrangements entered into or materially modified after September 17, 2003.\textsuperscript{15} These rules provide less favorable tax treatment to split-dollar arrangements than existed previously. Institutions considering entering into a split-dollar life insurance arrangement should consult qualified tax, insurance, and legal advisers.

\textit{Life insurance on borrowers.} State law generally recognizes that a lender has an insurable interest in the life of a borrower to the extent of the borrower’s obligation to the lender. In some states, the lender’s insurable interest may equal the borrower’s obligation plus the cost of insurance and the time value of money. Institutions are permitted to protect themselves against the risk of loss from the death of a borrower. This protection may be provided through self-insurance, the purchase of debt-cancellation contracts, or by the purchase of life insurance policies on borrowers.

Institutions can take two approaches in purchasing life insurance on borrowers. First, an institution can purchase life insurance on an individual borrower for the purpose of protecting the institution specifically against loss arising from that borrower’s death. Second, an institution may purchase life insurance on borrowers in a homogeneous group of loans employing a cost-recovery technique similar to that used in conjunction with employee benefit plans. Under this method, the institution insures the group of borrowers for the purpose of protecting the institution from loss arising from the death of any borrower in the homogeneous pool. Examples of homogeneous pools of loans include consumer loans that have distinctly similar characteristics, such as automobile loans, credit card loans, and residential real estate mortgages.

When purchasing insurance on an individual borrower, an institution should, given the facts and circumstances known at the time of the insurance purchase, make a reasonable effort to structure the insurance policy in a manner consistent with the expected repayment of the borrower’s loan. To accomplish this, management should estimate the risk of loss over the life of the loan and match the anticipated insurance proceeds to the risk of loss. Generally, the risk of loss will be closely related to the outstanding principal of the debt. The insurance policy should be structured so that the expected insurance proceeds never substantially exceed the risk of loss.

When purchasing life insurance on borrowers in a homogeneous pool of loans, an institution’s management should, given the facts and circumstances known at the time of the insurance purchase, make a reasonable effort to match the insurance proceeds on an aggregate basis to the total outstanding loan balances. If allowed by state law, institutions may match the insurance proceeds to the outstanding loan balances plus the cost of insurance on either a present-value or future-value basis. This relationship should be maintained throughout the duration of the program.

The purchase of life insurance on a borrower is not an appropriate mechanism for effecting a recovery on an obligation that has been charged off, or is expected to be charged off, for reasons other than the borrower’s death. In the case of a charged-off loan, the purchase of life insurance on the borrower does not protect the institution from a risk of loss since the loss has already occurred. Therefore, the institution does not need to purchase insurance. Acquiring insurance that an institution does not need may subject the institution to unwarranted risks, which would be an unsafe and unsound banking practice. In the case of a loan that the institution expects to charge off for reasons other than the borrower’s death, the risk of loss is so pronounced that the purchase of life insurance by the institution at that time would be purely speculative and an unsafe and unsound banking practice.

Internal Revenue Code section 264(f) disallows a portion of an institution’s interest deduction for debt incurred to purchase life insurance on borrowers. Institutions considering the purchase of insurance on borrowers should consult their tax advisers to determine the economic viability of this strategy.

\textit{Life insurance as security for loans.} Institutions sometimes take an interest in an existing life insurance policy as security for a loan. Institutions also make loans to individuals to purchase life insurance, taking a security interest in the policy, a practice known as “insurance-premium financing.” As with any other type of lending, extensions of credit secured by life insurance should be made on terms that are consistent with safe and sound banking practices. For instance, the borrower should be obligated to repay the

\textsuperscript{15} Split-dollar arrangements entered into prior to September 17, 2003, and not materially modified thereafter may be treated differently.
loan according to an appropriate amortization schedule.

Generally, an institution may not rely on its security interest in a life insurance policy to extend credit on terms that excuse the borrower from making interest and principal payments during the life of the borrower with the result that the institution is repaid only when the policy matures upon the death of the insured. Lending on such terms is generally speculative and an unsafe and unsound banking practice.

Institutions may acquire ownership of life insurance policies for debts previously contracted (DPC) by invoking their security interest in a policy after a borrower defaults. Consistent with safety and soundness, institutions should use their best efforts to surrender or otherwise dispose of permanent life insurance acquired for DPC at the earliest reasonable opportunity. In the case of temporary insurance acquired for DPC, retention until the next renewal date or the next premium date, whichever comes first, will be considered reasonable.

Appendix B—Glossary

Cash surrender value (CSV). The value available to the policyholder if the policy is surrendered. If no loans are outstanding, this amount is generally available in cash. If loans have been made, the amount available upon surrender is equal to the cash surrender value less the outstanding loan (including accrued interest).

Deferred acquisition costs (DAC). DAC represents the insurance carrier’s up-front costs associated with issuing an insurance policy, including taxes and commissions and fees paid to agents for selling the policy. The carrier charges the policyholder for these costs. Carriers capitalize DAC and recover them in accordance with applicable tax law. As the carrier recovers DAC, it credits the amount to the policyholder.

Experience-rated pricing. A pricing method that bases prices for insurance products on the actual expenses and claims experience for the pool of individuals being insured.

General account. A design feature that is generally available to purchasers of whole or universal life insurance whereby the general assets of the insurance company support the policy’s CSV.

Interest-crediting rate. The gross yield on the investment in the insurance policy, that is, the rate at which the cash value increases before considering any deductions for mortality cost, load charges, or other costs that are periodically charged against the policy’s cash value.

There are a number of crediting rates, including “new money” and “portfolio.” Using the “portfolio” crediting rate, the institution will earn a return based upon the existing yield of the insurance carrier’s portfolio each year. Using the “new money” crediting rate, the institution will earn a return based upon yields available in the market at the time it purchases the policy.

Modified endowment contract (MEC). Type of policy that is defined in Internal Revenue Code section 7702A. A MEC generally involves the payment of a single premium at the inception of the contract; thus, it fails the so-called seven-pay test set forth in the statute. MECs are denied some of the favorable tax treatment usually accorded to life insurance. For example, most distributions, including loans, are treated as taxable income. An additional 10 percent penalty tax also is imposed on distributions in some circumstances. However, death benefits remain tax-free.

Mortality charge. The pure cost of the life insurance death benefit within a policy. It represents a cost to the purchaser and an income item to the carrier. Mortality charges retained by the insurance carrier are used to pay claims.

Mortality reserve. In separate-account products, the mortality reserve represents funds held by an insurance carrier outside of the separate account to provide for the payment of death benefits.

Non-MEC. An insurance contract that is not categorized as a MEC under Internal Revenue Code section 7702A.

Separate account. A separate account is a design feature that is generally available to purchasers of whole life or universal life whereby the policyholder’s CSV is supported by assets segregated from the general assets of the carrier. Under such an arrangement, the policyholder...
neither owns the underlying separate account nor controls investment decisions (e.g., timing of investments or credit selection) in the underlying separate account that is created by the insurance carrier on its behalf. Nevertheless, the policyholder assumes all investment and price risk.

Seven-pay test. The seven-pay test is a test set forth in Internal Revenue Code section 7702A that determines whether or not a life insurance product is a MEC for federal tax purposes.

Split-dollar life insurance. A split-dollar life insurance arrangement splits the policy’s premium and policy benefits between two parties, usually an employer and employee. The two parties may share the premium costs while the policy is in effect, pursuant to a prearranged contractual agreement. At the death of the insured or the termination of the agreement, the parties split the policy benefits or proceeds in accordance with their agreement.

Stable value protection (SVP) contracts. In general, an SVP contract pays the policy owner of a separate account any shortfall between the fair value of the separate-account assets when the policy owner surrenders the policy and the cost basis of the separate account to the policy owner. The cost basis of the separate account typically would take into account the fair value of the assets in the account when the policy was initially purchased, the initial fair value of assets added to the account thereafter, interest credited to the account, the amount of certain redemptions and withdrawals from the account, and credit losses incurred on separate-account assets. Thus, SVP contracts mitigate price risk. SVP contracts are most often used in connection with fixed-income investments.

1035 exchange. A tax-free replacement of an insurance policy for another contract covering the same person(s) in accordance with section 1035 of the Internal Revenue Code.

Variable life insurance. Variable life insurance policies are investment-oriented life insurance policies that provide a return linked to an underlying portfolio of securities. The portfolio typically is a group of mutual funds chosen by the insurer and housed in a separate account, with the policyholder given some discretion in choosing among the available investment options.

Appendix C—Interagency Interpretations of the Interagency Statement on the Purchase and Risk Management of Life Insurance

The federal banking and thrift agencies developed responses to questions regarding the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance. A summary of these interpretations is included below to provide clarification on a wide variety of matters pertaining to financial reporting, credit-exposure limits, concentration limits, and the appropriate methodologies to use for calculating the amount of insurance an institution may purchase.

Legal Authority—State and Federal Law

As a general matter, the ability of state-chartered banks to purchase insurance (including equity-linked variable life insurance) is governed by state law. Section 24 of the Federal Deposit Insurance Act (the FDI Act) generally requires insured state-chartered banks to obtain the consent of the Federal Deposit Insurance Corporation (FDIC) before engaging as principal in activities (including making investments) that are not permissible for a national bank. Some state bank regulatory agencies have issued their own BOLI guidance or directives for their respective state-chartered institutions. A state-chartered institution should follow any BOLI guidance or directive issued by its state supervisory authority that is more restrictive than the interagency statement. Generally, if state law or policy is less restrictive than the interagency statement, a state-chartered institution should follow the interagency statement. If federal law is less restrictive than state law, a state-chartered institution should follow the state law.

Permissibility of Equity-Linked Securities in Separate-Account BOLI

The interagency statement states that national banks and federal savings associations may hold equity-linked variable life insurance policies (that is, insurance policies with a return tied to the performance of a portfolio of equity securities held in a separate account of the insurance company) only in very limited circumstances.
Similarly, state member banks may also hold equity-linked variable life insurance policies only in very limited circumstances. Because the range of instruments with equity-like characteristics varies significantly, the permissibility of each such instrument must be analyzed on a case-by-case basis. Furthermore, the agencies have significant concerns regarding whether an institution properly understands the complex risk profile that securities with “equity-like” characteristics often present. Some securities, even if legally permissible, may be inappropriate for the vast majority of financial institutions, whether held in an investment portfolio or a separate-account BOLI product. The agencies’ April 1998 Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities provides guidance on the appropriateness of investments and risk-management expectations.

**Senior Management and Board Oversight—Establishing BOLI Concentration Limits**

Each institution should establish internal policies and procedures governing its BOLI holdings that limit the aggregate cash surrender value (CSV) of policies from any one insurance company as well as the aggregate CSV of policies from all insurance companies. The interagency statement is not intended to loosen the standards with respect to prior BOLI guidance. The agencies have rigorous expectations regarding the establishment of prudent limits and appropriate board and management oversight of the limit-setting process. Accordingly, exceptions will be subject to increased supervisory attention. The agencies continue to expect institutions to adopt per-carrier limits for BOLI, keeping in mind legal lending limits. Although the federal statutory and regulatory lending limits do not, as a general rule, impose a per-carrier legal constraint on BOLI because BOLI is not a loan, BOLI nevertheless does represent a long-term credit exposure. The agencies expect institutions to manage credit exposures in a prudent manner, irrespective of whether the exposure is subject to a statutory or regulatory limit. If an institution establishes an aggregate limit for BOLI based upon its applicable capital concentration threshold, it would seldom be prudent to have its per-carrier limit equal to the aggregate limit. Apart from credit considerations, it is also important to diversify BOLI exposures in order to control transaction risks that may be associated with an individual carrier’s policies.

**Per-Carrier Limits**

Institutions should establish a per-carrier limit for separate-account policies. Diversification among carriers reduces transaction risks. Institutions should also explicitly consider whether it is appropriate to combine general- and separate-account exposures from the same carrier for purposes of measuring exposure against internal limits. The agencies believe that institutions, based upon their risk tolerance and understanding of insurance risks, should determine for themselves whether to combine such policies. In this regard, the agencies note that separate-account policies also present general-account credit exposures. For example, deferred acquisition costs (DAC) and mortality reserves associated with separate-account policies are general obligations of the insurance carrier. Moreover, when the death of an insured occurs, the difference between the death benefit amount and the cash surrender value comes from the carrier’s general account. Finally, the actual credit exposure under a BOLI policy may be many times greater than the carrying value of the policy currently recorded on the institution’s balance sheet, given the typical relationship between CSV and policy death benefits. Institutions should keep these factors in mind when evaluating whether and, if so, how to aggregate general- and separate-account exposures for purposes of monitoring compliance with internal limits.

**Legal Limits and Concentrations**

When establishing internal CSV limits, an institution should consider its legal lending limit, the capital concentration thresholds, and any applicable state restrictions on BOLI holdings. The following are the agencies’ capital concentration definitions:

- The FDIC uses 25 percent of tier 1 capital to measure a capital concentration.
- The other agencies use tier 1 capital plus the allowance for loan and lease losses (ALLL).
A state-chartered institution should be guided by the more restrictive of the applicable state and federal limitations and thresholds. For example, if a state defines BOLI as an extension of credit subject to a statutory or regulatory lending limit, or otherwise imposes a per-carrier limit on BOLI, then institutions subject to that state’s jurisdiction should ensure that their BOLI exposure to an individual carrier does not exceed the applicable state limit.

**Permissibility of Holding Life Insurance on Former Employees and Former Key Persons**

A well-managed institution adequately documents the purpose for which it is acquiring BOLI, as part of its pre-purchase analysis. When an institution purchases life insurance on a group of employees (whether it is a group policy or a series of individual policies) as a means to finance or recover the cost of employee benefits, and one or more of the insured employees is no longer employed by the bank, the insurance coverage may be retained by the institution provided—

- the application of the cost-recovery or cost-offset method (see “Quantifying the Amount of Insurance Appropriate for the Institution’s Objectives” below) indicates that the amount of insurance held is not in excess of the amount required to recover or offset the cost of the institution’s employee benefits,
- the policy is not specifically designated to cover only loss of income to the banking organization that may arise from the death of the employee,
- the coverage continues to qualify as an insurable interest under applicable state law, and
- the insurance asset continues to be a permissible holding under applicable state law for state-chartered institutions.

Additionally, if the policy no longer qualifies as insurance under the applicable state insurable-interest law, the policy may no longer be eligible for favorable tax treatment. These conditions apply to “benefits BOLI” despite the fact that the former employee was a “key person.”

This is in contrast to true key-person insurance, in which the institution purchases life insurance on a key person in order to protect itself from financial loss in the event of that person’s death. The interagency statement provides that a national bank or federal savings association may be required to surrender or otherwise dispose of key-person life insurance held on an individual who is no longer a key person because the institution will no longer suffer a financial loss from the death of that person. However, when an individual upon whom key-person life insurance has been held is no longer a key person, an institution may be able to recharacterize its objective for the insurance policy as recovery of the cost of providing employee benefits. In such cases, the institution must demonstrate, through appropriate analysis and quantification, that the insurance coverage satisfies the retention conditions, as set forth in the preceding paragraph. For a state-chartered institution, the recharacterization and retention of such key-person life insurance must be permissible under applicable state law. In circumstances where a national bank or federal savings association would be required to surrender or otherwise dispose of key-person life insurance, a state-chartered institution must also surrender or otherwise dispose of a key-person policy unless the retention of the policy is permitted under applicable state law and the institution obtains the FDIC’s consent to continue to hold the policy under section 24 or section 28 of the FDI Act, as appropriate.

**Quantifying the Amount of Insurance Appropriate for the Institution’s Objectives**

Institutions are responsible for ensuring that they do not purchase excessive amounts of insurance coverage on their employees relative to salaries paid and the costs of benefits to recover. Examiners will evaluate an institution’s BOLI holdings and make a supervisory judgment as to whether insurance amounts on employees are so excessive as to constitute speculation or an unsafe or unsound practice on a case-by-case basis, as they do for other aspects of an institution’s operations. Such an evaluation would be based on the totality of the circumstances.

Institutions may use either the cost-recovery or cost-offset method to quantify the amount of insurance permissible for purchase to finance or recover employee benefit costs. When using the cost-offset approach, an institution must ensure that the projected increase in CSV each year
over the expected duration of the BOLI is less
than or equal to the expected employee benefit
expense for that year. When using the cost-
recovery method, regardless of an institution’s
quantification method, management must be
able to support, with objective evidence, the
reasonableness of all assumptions used in deter-
mining the appropriate amount of insurance
coverage needed, including the rationale for its
discount rates (when the cost-recovery method
is used) and cost projections.

**Applicability of Prior Guidance for
Split-Dollar Arrangements**

The pre-purchase analysis guidance in the inter-
agency statement applies to life insurance poli-
cies used in split-dollar arrangements that are
acquired after December 7, 2004. The guidance
concerning the ongoing risk management of life
insurance after its purchase applies to life insur-
ance policies, including those used in split-
dollar arrangements, regardless of when acquired.

The FDIC’s prior guidance on split-dollar
arrangements, which was included in supervi-
sory guidance on BOLI that was issued in 1993,
has been superseded; until the issuance of the
interagency statement, the FDIC had generally
followed the Office of the Comptroller of the
Currency’s prior guidelines from 2000. Other-
wise, the prior guidance issued by the agencies
on split-dollar life insurance remains in effect.
Each agency issued the interagency statement
under its own bulletin, letter, or notice. For
example, the Federal Reserve Board’s issuance
of the interagency statement is cross-referenced
in SR-04-19, and the prior guidance on split-
dollar life insurance arrangements is not super-
seded.

**Accounting Considerations**

An institution may purchase multiple permanent
insurance policies from the same insurance car-
rrier, with each policy having its own surrender
charges. In some cases, the insurance carrier
will issue a rider or other contractual provision
stating that it will waive the surrender charges if
all of the policies are surrendered at the same
time. Because it is not known at any balance-
sheet date whether one or more of the policies
will be surrendered before the deaths of the
insureds, the possibility that the institution will
surrender all of these policies simultaneously
and avoid the surrender charges is a gain con-
tingency. This guidance should be applied to all
insurance policies held by an institution regard-
less of when they were acquired. Therefore, an
institution that has purchased BOLI is required
to report the CSV on the bank’s balance sheet
net of the surrender charges (even if the policies
have been in force for some time and the
institution’s auditors have not previously required
reporting the CSV net of the surrender charges).

Based on the agencies’ review of FASB
Technical Bulletin No. 85-4, “Accounting for
Purchases of Life Insurance” (TB 85-4), includ-
ing its appendix, the agencies believe that TB
85-4 is intended to be applied on a policy-by-
policy basis. It, therefore, does not permit the
aggregation of multiple separate policies for
balance-sheet-measurement purposes. Accord-
ingly, the agencies do not intend to defer to
institutions or their auditors on this issue. As of
the balance-sheet date, an institution should
determine the amount that could be realized
under each separate insurance policy on a stand-
alone basis without regard to the existence of
other insurance policies or riders covering mul-
tiple policies. If a single insurance policy covers
more than one individual, the realizable amount
of the entire policy should be determined. A
single insurance policy covering multiple indi-
viduals should not be subdivided into hypothe-
sical separate policies for each covered individ-
ual, even if the carrier reports CSVs for each cov-
ered individual.

If a change in an institution’s accounting for
its holdings of life insurance is necessary for
regulatory reporting purposes, the institution
should follow Accounting Principles Board
Opinion No. 20, “Accounting Changes” (APB
20).17 APB 20 defines various types of account-
ing changes and addresses the reporting of
corrections of errors in previously issued finan-
cial statements. APB 20 states that “[e]rrors in
financial statements result from mathematical
mistakes, mistakes in the application of account-
ing principles, or oversight or misuse of facts
that existed at the time the financial statements
were prepared.”

17. Effective December 15, 2005, APB 20 will be replaced
by FASB Statement No. 154, “Accounting Changes and Error
Corrections—A replacement of APB Opinion No. 20 and
FASB Statement No. 3.”
For regulatory reporting purposes, an institution must determine whether the reason for a change in its accounting for its holdings of life insurance meets the APB 20 definition of an accounting error. If the reason for the change meets this definition and the amount is material, the error should be reported as a prior-period adjustment in the institution’s regulatory reports. Otherwise, the effect of the correction of the error should be reported in current earnings. If the effect of the correction of the error is material, the institution should also consult with its primary federal regulatory agency to determine whether any previously filed regulatory reports should be amended. For the Call Report, the institution should report the amount of the adjustment in Schedule RI-A, item 2, “Restatements due to corrections of material accounting errors and changes in accounting principles,” with an explanation in Schedule RI-E, item 4. The effect of the correction of the error on income and expenses since the beginning of the period in which the correction of prior-period earnings is reported should be reflected in each affected income and expense account on a year-to-date basis in the Call Report Income Statement (Schedule RI), not as a direct adjustment to retained earnings.

Rate of Return to the Bank in Split-Dollar Insurance Arrangements

The agencies would consider the institution’s economic interest in a split-dollar life insurance arrangement policy, at a minimum, to be a return of the premiums paid plus a reasonable rate of return. The agencies would generally consider a reasonable rate of return to be one that provides the bank a return that is commensurate with alternative investments having similar risk characteristics (including credit quality and term) at the time in which the bank enters into the split-dollar arrangement. The rate of return is to be calculated net of any payments made (or to be made) from insurance proceeds to the employee’s beneficiaries.

The agencies look at the economic value of compensation arrangements when determining the reasonableness of split-dollar compensation, but the agencies do not rely solely on income tax rules for determining this economic value. Other factors that the agencies might consider include, but are not limited to, the benefit of a split-dollar arrangement to the employee as a percentage of salary and the expected length of time until the institution recovers its invested funds.
Purchase and Risk Management of Life Insurance
Examination Objectives
Effective date November 2005

Section 4042.2

1. To determine the level and direction of risk that purchases and holdings of life insurance pose to the state member bank, and to recommend corrective action, as appropriate.

2. To perform—
   a. a risk assessment that summarizes the level of inherent risk by risk category, and
   b. an assessment of the adequacy of the board of directors’ and management’s oversight of the activity, including an assessment of the bank’s internal control framework.

3. To ensure that the risk assessment considers a state member bank’s purchase and risk management of its—
   a. broad bank-owned life insurance (BOLI) programs, in which life insurance is purchased on a group of employees to offset employee benefit programs and the bank is the beneficiary;
   b. split-dollar insurance arrangements for individual (usually senior-level) bank employees; and
   c. holdings of key-person insurance.

4. Recognizing that management may not be as familiar with insurance products as it is with more-traditional bank products, to adequately identify and assess the risks of BOLI, as well as the risk exposures that may arise from purchases and holdings of life insurance.

5. To apply a forward-looking approach to the review of a bank’s purchase and risk management of life insurance, recognizing that the bank may be exposed to increasing operational risks as a result of its large purchases or holdings of this product. These risks may arise from—
   a. separate-account assets that contain holdings of complex equity-linked notes and derivative products;
   b. the growing use of guaranteed minimum death benefits and other complex guarantee structures, which may increase the operational risk to banks purchasing significant amounts of life insurance; and
   c. the potential losses that could result from—
      • inadequate recordkeeping, which may be related to tracking the potentially large variety of contracts and agreements and the potentially large number of insured current and former employees covered by the contracts, and
      • a failure to ensure that contract agreements between the insurance company, the vendor(s), and the employees are properly executed and honored.

---

1. As noted in more depth in section 4042.1, the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance, these risks include operational, liquidity, credit, legal, and reputational risk. Operational risk arises in part from the vast array of new life insurance products and structures being offered and from the complexity of tax considerations related to the products, under various state insurable-interest and federal tax laws.
PRELIMINARY RISK ASSESSMENT

1. Consider the following, among other relevant criteria as appropriate, when determining whether to include the review of bank-owned life insurance (BOLI) in the examination scope:
   a. the volume, growth, and complexity of BOLI purchases and holdings
      - Consider the amount of the bank’s BOLI holdings, measured by the total of their cash surrender values (CSVs) as a percentage of capital, and determine whether the resulting percentage is an asset concentration of capital. (For state member banks, the Federal Reserve has defined the capital base for determining this concentration threshold to be a percentage of tier 1 capital plus the allowance for loan and lease losses.) Determine whether the BOLI holdings have grown or declined significantly in recent years, when compared with the BOLI holdings of peer banks (consult the Federal Reserve System’s intranet for applicable surveillance and monitoring data).
      - Obtain a breakout of the CSV of BOLI assets, as reported on the bank’s balance sheet, including the amounts attributable to split-dollar insurance arrangements, general BOLI plans covering a group of employees to recover the cost of employee compensation and benefit programs, and the amount, if any, attributable to key-person insurance.
      - Obtain a listing of the amount of the bank’s reimbursable premium payments under split-dollar life insurance arrangements and the amount receivable for these policies, which is to be booked as “other assets” on the bank’s balance sheet.
      - Determine whether a portion of the CSV is in separate-account holdings of a life insurance company. If the bank has separate-account holdings, determine (1) the composition of the underlying separate-account assets and (2) if these assets constitute higher-risk investments, including equity-linked notes, mortgage-backed securities with significant interest-rate risk, or other investments entailing significant market risk.
   b. BOLI concentrations
      - Determine if there is a CSV concentration of life insurance to one carrier in excess of 25 percent that includes both separate-account and general-account BOLI holdings.
      - Determine if there are any market-risk concentrations within the underlying separate-account assets, including, for example, interest-sensitive fixed-income holdings.
      - Determine if there are any equity-linked notes or direct equity holdings in the separate accounts.
      - Determine if the bank holds any large-exposure life insurance policies on particular individuals. If so, determine if the policies are split-dollar arrangements and, if so—
        — whether the board or a board committee has evaluated the rea-
sonableness of the compensation as part of the employee’s overall compensation package, and
— whether the board or a board committee has determined that the overall compensation is appropriate.

c. the appropriateness and recency of materials presented to the bank’s board of directors concerning the bank’s purchase and risk management of life insurance relative to its insurance purchases and holdings
d. the appropriateness and recency of audits and compliance reviews of the bank’s purchases and risk management of life insurance
e. the overall financial condition of the bank, its supervisory rating, and any concerns or potential concerns about its liquidity

2. Depending upon the outcome of the preliminary risk assessment and other relevant factors, consider performing the following examination procedures.

OPERATIONAL-RISK ASSESSMENT

Senior Management and Board Oversight

1. Evaluate whether board and senior management oversight is effective and ensures that the bank’s purchases and holdings of BOLI are consistent with safe and sound banking practices.
2. Determine whether the board of directors understands the complex risk characteristics of the bank’s insurance holdings and the role of BOLI in the bank’s overall business strategy.

Accounting Considerations

3. Determine if the bank’s financial and regulatory reporting of its life insurance activities follows applicable generally accepted accounting principles (GAAP), including the following guidance:
   a. Financial Accounting Standards Board (FASB) Technical Bulletin No. 85-4, ‘‘Accounting for Purchases of Life Insurance’’ (TB 85-4). Only the amount that can be realized under an insurance contract as of the balance-sheet date (that is, the CSV reported to the bank by the insurance carrier, less any applicable surrender charges not reflected by the insurance carrier in the reported CSV) is reported as an asset. Since there is no right of offset, a BOLI investment is reported as an asset separately from any deferred compensation liability, provided that it was not purchased in connection with a tax-qualified plan.
   b. Call Report instructions. The bank is required to report the carrying value of its BOLI holdings (CSV net of applicable surrender charges) as a component of ‘‘other assets’’ and to report the earnings on these holdings as ‘‘other noninterest income.’’
4. Verify that the bank’s deferred compensation agreements were accounted for using the guidance in the February 11, 2004, Interagency Advisory on Accounting for Deferred Compensation Agreements and Bank-Owned Life Insurance.
5. Verify that any accounts receivable that represent the bank’s reimbursable life insurance premiums paid are recorded as unimpaired account receivables (for example, life insurance policies that are not impaired as a result of declining CSVs backing the obligations or employees borrowing against CSVs). (Impaired amounts should be expensed.)

Policies and Procedures

6. Assess the adequacy of the bank’s policies and procedures governing its BOLI purchases and holdings, including its guidelines to limit the aggregate CSV of policies from one insurance company as well as limit the aggregate CSV of policies from all insurance companies.
7. Verify if the bank’s board of directors or the board’s designated committee approved BOLI purchases in excess of 25 percent of capital or in excess of any lower internal limit. (For state member banks, the Federal Reserve has defined the capital base for determining this concentration threshold to be a percentage of tier 1 capital plus the
allowance for loan and lease losses.)

8. Determine the reasonableness of the bank’s internal limits and whether management and the board of directors have considered, before purchasing BOLI, the bank’s legal lending limit, its applicable state and federal capital concentration threshold, and any other applicable state restrictions on BOLI.

9. For banks that may have other credit exposures to insurance companies, determine if the bank has considered the credit exposures arising from its BOLI purchases when assessing its overall credit exposure to a carrier and to the insurance industry.

10. Determine whether the bank’s management has justified and analyzed the risks associated with a significant increase in the bank’s BOLI holdings.

11. Determine if the bank has advised its board of directors of the existence of the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance and of the risks associated with BOLI.

Pre-Purchase Analysis

12. Ascertain whether the bank maintains adequate records of its pre-purchase analysis of BOLI.

13. Evaluate whether the bank’s board of directors, or a designated board committee, and senior management understand the risks, rewards, and unique characteristics of BOLI.

Need for Insurance, Economic Benefits, and Appropriate Insurance Type

14. Determine whether the bank identified the specific risk of loss to which it is exposed or the specific costs to be recovered by the purchase of life insurance.

15. Determine whether the bank analyzed the costs and benefits of planned BOLI purchases.

Amount of Insurance Appropriate for the Institution’s Objectives

16. Find out if the bank estimated the size of its employee benefit obligation or the risk of loss to be covered in order to ensure that the amount of BOLI purchased was not excessive in relation to this estimate and the associated product risks.

17. Determine whether management can support, with objective evidence, the reasonableness of all of the assumptions used in determining the appropriate amount of insurance coverage needed by the bank, including the rationale for its discount rates and cost projections.

Vendor Qualifications

18. Evaluate whether the bank’s management assessed its own knowledge of insurance risks, the vendor’s qualifications, the amount of resources the bank is willing to spend to administer and service the BOLI, and the vendor’s ability to honor the long-term financial commitments associated with BOLI.

Characteristics of Available Insurance Products

19. Evaluate whether the bank’s management has reviewed and understands the characteristics of the various life insurance products available and of the products it has acquired.

20. Ascertain if and how the bank’s management reviewed and selected the life insurance product characteristics that best matched its objectives, needs, and risk tolerance. Ascertain whether management evaluated and documented, before the bank acquired BOLI, the risks of the variety and complexity of life insurance products considered, how the selected insurance product works, the variables that affect the product’s performance, and the applicable tax and accounting treatments.

21. Determine whether the bank’s management reviewed and documented its consideration of the types and design features of BOLI. Determine whether management reviewed and documented the negotiable features associated with a separate-account insurance product (for example, its investment options, terms, and conditions; the cost of stable value protection (SVP); deferred acquisition costs (DAC); and mortality options) and with any SVP provider that
may have been separately contracted by the insurance carrier.

22. Verify that the bank’s management conducted a thorough review of life insurance policies before acquiring the policies. Ascertain if management determined how the accounting rules would apply to those policies and if it understood any ambiguous contract provisions, such as costs, charges, or reserves, that may affect the amount of a policy’s CSV.

**Tax and Insurable-Interest Implications**

23. For the bank’s pre-acquisition review of BOLI and its subsequent BOLI purchases, verify that the bank’s management considered and documented its analysis of the financial impact of surrendering a policy (for example, any tax implications).

24. Verify that the bank’s management obtained appropriate legal reviews. An appropriate legal review ensures that—
   a. the bank complies with applicable tax and state insurable-interest requirements, and
   b. the bank’s insured amounts are not excessive (therefore, the bank is not involved in impermissible speculation or unsafe and unsound banking practices).

**Carrier Selection**

25. Find out if the bank (1) reviewed the BOLI product’s design and pricing and the administrative services of the proposed carrier and (2) compared these services with those of other insurance carriers.

26. Ascertain whether the bank’s management reviewed the selected carrier’s ongoing long-term ability to commit to the BOLI product, as well as its credit ratings, general reputation, experience in the marketplace, and past performance.

27. Determine if the bank performed a credit analysis on the selected BOLI carriers and if the analysis was consistent with safe and sound banking practices for commercial lending.

**Split-Dollar or Other Insurance Arrangements That Result in Additional Insured Employee Compensation**

28. When a bank acquires insurance that permits a bank officer or employee to designate a beneficiary or provides the officer or employee with additional compensation, determine if the bank identified and quantified its total compensation objective. Determine if the bank ensured (1) that the acquired split-dollar life or other insurance arrangement was consistent with that objective, including when insurance compensation is combined with all other compensation being provided, and (2) that the total compensation was not excessive.

29. Verify that the bank and the insured have entered into a written agreement that specifically states the bank’s rights, the insured individual’s rights, and the rights of any other parties (trusts or beneficiaries) to the policy’s CSV and death benefits.

30. Verify that the bank’s shareholders and their family members (who are not bank officers, directors, or employees and who do not provide goods and services to the bank) do not receive compensation in the form of split-dollar life or other insurance coverage benefits.

31. Determine whether the bank’s management has assessed the bank’s ability to borrow against the CSV of its split-dollar life insurance policies, as well as the ability of other parties (whether an insured officer, employee, or noninstitution owner) to borrow against the policy CSV, without impairing the bank’s financial interest in the policy proceeds. Determine also—
   a. if the bank can liquidate the policy in order to meet liquidity needs; or
   b. if the bank effects an early policy surrender (such as might occur if an employee terminates his or her employment), if the surrender would preclude the bank from recovering its premium payments and a market rate of return on the premiums invested.

32. Determine if and how management verified that the bank would be able to recover its premium payments plus a market rate of return on the premiums invested, after the payment of policy proceeds to the employee’s beneficiary under the split-dollar arrangement.
Other Elements of Pre-Purchase Analysis

33. Ascertain whether the bank’s management thoroughly evaluated all significant risks. Determine whether management has established procedures to identify, measure, monitor, and control those risks.

34. Find out if the bank, before acquiring BOLI, thoroughly analyzed its associated risks and benefits. As appropriate, determine whether the bank compared the risks of BOLI with those of alternative methods for recovering costs associated with the loss of key persons, providing pre- and post-retirement employee benefits, or providing additional employee compensation.

Post-Purchase Analysis

35. Find out if management reviewed at least annually the bank’s life insurance purchases and holdings with the bank’s board of directors.1 Ascertain if the review included, at a minimum—
   a. a comprehensive assessment of the specific risks associated with the bank’s permanent insurance acquisitions;
   b. an identification of the bank’s employees who are or will be insured (for example, vice presidents and above, employees of a certain grade level, etc.);
   c. an assessment of death benefit amounts relative to employee salaries;
   d. a calculation of the percentage of insured persons still employed by the bank;
   e. an evaluation of the material changes to BOLI risk-management policies;
   f. an assessment of the effects of policy exchanges;
   g. an analysis of mortality performance and the impact on income;
   h. an evaluation of material findings from internal and external audits and independent risk-management reviews;
   i. an identification of the reason for, and the tax implications of, any policy surrenders; and
   j. a peer analysis of BOLI holdings.

LIQUIDITY-RISK ASSESSMENT

1. Find out if management, before the bank’s purchase of permanent insurance, recognized the illiquid nature of the bank’s acquisition of its permanent insurance products. Determine whether management ensured that the bank had the long-term financial flexibility to continue holding the insurance assets for their full term of expected use.

2. Determine if management, before the bank’s purchase of permanent insurance, adequately considered the contractual arrangements and product types that limit product liquidity in order to best optimize the value of the bank’s insurance assets and their possible future use as liquidity and funding sources. Contract provisions that should be considered include—
   a. 1035 exchange fees and “crawl-out restrictions,”
   b. provisions that would result in the product’s categorization for federal tax purposes as a modified endowment contract (MEC) or a non-MEC contract, and
   c. SVP contract provisions that may limit the bank’s ability to surrender a policy early or that would increase the cost of an early surrender.

REPUTATION-RISK ASSESSMENT

1. Ascertain whether the bank has taken steps, including obtaining written consent from its insured officers and employees, to reduce its reputation risk that may result from BOLI purchases.

2. Determine if the bank maintains appropriate documentation evidencing that it obtained a formal written consent from its insured officers and employees.

3. Find out what segment of the employee base the bank has insured (i.e., officers or non-officers) and if the bank has taken out very high death benefit policies on employees, including lower-level employees.

CREDIT-RISK ASSESSMENT

1. Determine if the bank’s management con-
Conducted an independent financial analysis of the insurance carrier before the bank’s purchase of a life insurance policy.

1. Ascertain if management continues to monitor the life insurance company’s condition on an ongoing basis.

2. Verify that the bank’s credit-risk management function participated in the review and approval of insurance carriers.

2. Determine whether the bank considered its legal lending limit, its credit concentration guidelines (the aggregate exposures to individual insurance carriers and the life insurance industry, including other bank credit relationships, such as credit exposures involving loans and derivatives), and any state restrictions on BOLI holdings.

3. Determine whether the bank’s credit analysis of its BOLI holdings evaluated whether the policies to be acquired were either separate-account or general-account policies.

a. Find out whether the separate-account policies included an SVP contract to protect the bank (as a policyholder) from declines in the fair value of separate-account assets.

b. Ascertain if the bank evaluated the insurance carrier’s separately contracted SVP provider’s repayment capacity.

MARKET-RISK ASSESSMENT

1. Determine whether management fully understood (before the bank purchased its separate-account products)—

a. how the life insurance products expose the bank to interest-rate risk;

b. the instruments governing the investment policy, as well as how the separate account is managed;

c. the inherent risk of a separate account; and

d. whether the bank’s risk from the purchase of separate-account products was appropriate.

2. For general-account products, ascertain if management understands the interest-crediting option the bank chose when purchasing the insurance policy.

3. Find out if the bank has established and if it maintains appropriate monitoring and reporting systems for interest-rate fluctuations and their effect on separate-account assets.

4. Find out if the bank has acquired an SVP contract for its separate-account policy in order to reduce income-statement volatility. (SVP contracts protect against declines in value attributable to changes in interest rates; they do not cover default risk.)

5. If the bank has not purchased an SVP contract, determine if management has established and maintained monitoring and reporting systems that will recognize and respond to price fluctuations in the fair value of separate-account assets.

6. If the bank has purchased an equity-linked variable life insurance policy, determine whether it is characterized as an effective economic hedge against the bank’s equity-linked obligations under its employee benefit plans. (An effective hedge exists when changes in the economic value of the liability or other risk exposure being hedged are matched by counterbalancing changes in the value of the hedging instruments. The economic hedging criteria for equity-linked insurance products lessen the effect of price risk because changes in the amount of the equity-linked liability are required to offset changes in the value of the separate-account assets.)

7. If the bank is purchasing or has purchased a separate-account insurance product involving equity securities, determine if the bank’s management has performed further analysis that—

a. compares the equity-linked liability being hedged and the equity securities in the separate account,

b. determines a target range for the hedge-effectiveness ratio and establishes a method for measuring ongoing hedge effectiveness, and

c. establishes a process for analyzing and reporting to management and the board of directors the effect of the hedge on the bank’s earnings and capital ratios (both with and without the hedging transaction).

COMPLIANCE/LEGAL-RISK ASSESSMENT

1. Determine whether the bank’s compliance
and audit functions have evaluated its compliance with applicable state insurable-interest and federal tax laws in order to protect the bank’s earnings and capital from the loss of tax benefits or from the imposition of fines or penalties by regulatory authorities for violations of, or noncompliance with, laws, rulings, regulations, prescribed practices, and ethical standards.

2. When the bank owns separate-account BOLI, determine whether the bank has implemented and maintains internal control policies and procedures that adequately ensure that it does not take any action that might be interpreted as exercising “control” over separate-account assets.

3. Determine whether the bank split commissions between a vendor and the bank’s own subsidiary or affiliate insurance agency when purchasing life insurance. If so, determine whether the bank’s compliance function has assessed the bank’s compliance with state and federal securities and insurance laws regarding fee and commission arrangements.

4. Ascertain whether the bank seeks and documents the advice of legal counsel when determining legal and regulatory issues, requirements, and concerns related to its potential purchase or ownership of BOLI.

5. For a general-account insurance product, determine if the bank has assigned a standard risk weight of 100 percent to the general-account asset.

6. For a BOLI separate-account product (when the bank uses the look-through approach to assign risk weights according to the risk-based capital rules)—
   a. review the bank’s documentation, and determine if the bank adequately verified that the separate-account BOLI assets are protected from the insurance company’s general creditors in the event of the insurance company’s insolvency;
   b. determine if the standard risk weight of 100 percent was assigned to the bank’s BOLI assets when the bank’s documentation is inadequate or does not exist;
   c. verify that a 100 percent risk weight has been assigned to (1) the portion of the bank’s insurance asset that represents general-account claims on the insurer (such as DAC and mortality reserves that are realizable on the balance-sheet date) and (2) any portion of the carrying value attributable to an SVP contract (or if the SVP provider is not an insurance company, verify that the correct risk weight has been assigned for that obligor); and
   d. if the bank used a pro rata approach to risk-weighting the carrying value of a qualifying separate-account policy—
      • verify that the risk weight is applied to the separate account based on the most risky portfolio that could be held by the separate account (as stated in the investment agreement), except for any portions of the carrying value that are general-account claims attributable to either DAC or an SVP (which are generally risk-weighted at 100 percent);
      • verify that in no case may the assigned risk weight for the bank’s entire separate-account holding be less than 20 percent; and
      • when the sum of the permitted investments across market sectors in the investment agreement is greater than 100 percent, determine if the bank assigned the highest risk weight for the maximum amount permitted in that asset class, and then applied the next-highest risk weights to the other asset classes until the aggregate of the permitted amounts equals 100 percent.
Examiners should use only those internal control questions that are appropriate, given the size, complexity, and growth of a bank’s bank-owned life insurance (BOLI) holdings.

PRELIMINARY RISK ASSESSMENT

1. Have the steps for conducting a preliminary risk assessment been followed, as they are set forth in section 4042.3? Have other relevant factors been considered to determine if further examination review may be warranted, in accordance with risk-focused supervision guidelines?

2. What particular factors have been identified to warrant a review of the bank’s purchases and risk management of life insurance?

OPERATIONAL-RISK ASSESSMENT

Senior Management and Board of Directors Oversight

1. Has senior management and the board of directors initiated and maintained effective oversight of the bank’s BOLI by—
   a. performing a thorough pre-purchase analysis of its risks and rewards and a post-purchase risk assessment?
   b. determining the permissibility of the bank’s BOLI purchases and holdings under both the applicable state and federal requirements (whichever requirements are more restrictive)?
   c. determining the types and kinds of risks that are associated with BOLI?
   d. ascertaining and reviewing the safety-and-soundness considerations associated with the bank’s BOLI?
   e. understanding the complex risk characteristics of the bank’s insurance holdings and what role BOLI is to play in the bank’s overall business?

2. Does the bank have a comprehensive risk-management process for purchasing and holding BOLI?

Accounting Considerations

3. When accounting for its holdings of life insurance, did the bank follow the guidance in FASB’s Technical Bulletin No. 85-4, “Accounting for Purchases of Life Insurance”? Are the bank’s insurance policies reported on its balance sheet on the basis of each policy’s cash surrender value (CSV), less any applicable surrender charges that are not reflected in the reported CSV?

4. On the bank’s Call Report, did the bank’s management —
   a. report the carrying value of its BOLI holdings as an “other asset”?
   b. report the earnings on the bank’s holdings as “other noninterest income”?
   c. report the CSV separately, as required if the CSV amount exceeded the reporting threshold?
   d. expense only the noninvestment portion of the premium, in the case of bank-owned policies?
   e. expense the premium for employee-owned insurance purchased by the bank and record a receivable in “other assets” for any portion of the premium to be reimbursed to the bank under a contractual agreement?

5. Were the bank’s deferred compensation agreements accounted for using the guidance in the February 11, 2004, Interagency Advisory on Accounting for Deferred Compensation Agreements and Bank-Owned Life Insurance?

Policies and Procedures

6. Does the bank have comprehensive policies and procedures, including guidelines, that limit the aggregate CSV of policies from any one insurance company, as well as the aggregate CSV of policies from all insurance companies?
   a. Does the board of directors or a designated board committee require senior management to provide adequate and appropriate justification for establishing or revising internal CSV limits on the amount of BOLI the bank holds? Does
this justification take into account the
bank’s legal lending limits, its capital
and credit concentration threshold, and
any applicable laws and regulations?
b. Is written justification required when the
amount of the bank’s BOLI holdings
approaches or exceeds 25 percent of the
bank’s capital (tier 1 capital plus the
allowance for loan and lease losses)?
Does the board of directors or a board
committee approve this justification?

Pre-Purchase Analysis

7. Did the bank’s management perform a
written pre-purchase analysis of its BOLI
products?

8. Did management identify the bank’s need
for BOLI, the appropriate type of insurance
to be acquired, and the economic benefits to
be derived from the purchase of BOLI? Did
this analysis accomplish the following:
a. identify the specific risk of loss to be
covered by the insurance, or the costs the
insurance is supposed to cover?
b. determine what type BOLI (for example,
general- or separate-account) and what
BOLI features are needed, before acquir-
ing the product?
c. evaluate the permissibility and market
risk of any underlying separate-account
asset holdings, if separate-account BOLI
is held?
d. analyze projected policy values (CSV
and death benefits) using various interest-
crediting rates and mortality cost
assumptions?
e. estimate the size of the employee benefit
obligation or the risk of loss to be cov-
ered? Did management ensure that the
amount of BOLI coverage was appropri-
ate for the bank’s objectives and that
BOLI was not excessive in relation to
this estimate and the associated product
risks?
f. review the range of assumptions? Was
management able to justify the assump-
tions with objective evidence, and deem
them reasonable in view of previous and
expected market conditions?
g. assess whether the present value of the
BOLI’s expected future cash flows (net
of the costs of the insurance) is less than
the estimated present value of the expected
after-tax employee benefit costs, when
the bank uses BOLI to recover the costs
of providing employee benefits?

9. Did the bank’s management —
a. review and assess its own knowledge of
insurance risks, the vendor’s qualifica-
tions, and the amount of the bank’s
resources that will be needed to admin-
ister and service the BOLI?
b. demonstrate its familiarity with the tech-
nical details of the bank’s insurance
assets, and is management able to explain
the reasons for and the risks associated
with the product design features that
have been selected?
c. make appropriate inquiries to determine
whether the vendor has the financial
ability to honor its long-term commit-
ments over an extended period of time?
d. assure itself of the vendor’s commitment
to investing in the operational infrastruc-
ture that is necessary to support the
BOLI?
e. undertake its own independent review
and not rely solely on prepackaged,
vendor-supplied compliance information
(such reliance is a potential cause for
supervisory action)?
f. properly evaluate the characteristics of
the available insurance products against
the bank’s objectives, needs, and risk
tolerance?
g. determine if the bank’s need for insur-
ance on key persons or on a borrower’s
loan resulted in a matching of the matu-
rity of the term or declining term insur-
ance to the key person’s expected tenure
or the maturity of the borrower’s loan?
h. conduct a review of the insurance carrier
that included—

• a credit analysis of the potential insurance
carrier (the analysis should have been
performed in a manner consist-
tent with safe and sound banking
practices for commercial lending)?
• a review of the bank’s needs and a
comparison of those needs with the
proposed carrier’s product design,
pricing, and administrative services?
• a review of the insurance carrier’s
commitment to the BOLI product, as
well as the carrier’s general reputa-
tion, experience in the marketplace,
and past performance?
i. determine whether the total amount of compensation and insurance to be provided to an employee is excessive, if the purchased BOLI will result in the payment of additional compensation?

j. analyze the associated significant credit risks and the bank’s ability to monitor and respond to those risks?

k. as appropriate, analyze the risks and benefits of BOLI, compared with other available methods for recovering costs associated with the loss of key persons, providing pre- and post-retirement employee benefits, or providing additional employee compensation?

l. sufficiently document its comprehensive pre-purchase analysis (including its analysis of both the types and product designs of purchased BOLI and the bank’s overall level of BOLI holdings)?

**Tax and Insurable-Interest Implications**

11. Has the bank’s management explicitly considered the financial impact (for example, the tax provisions and penalties) of surrendering a BOLI policy?

12. Does the bank’s management have or has it obtained appropriate legal review to ensure that it will be in compliance with applicable tax and state insurable-interest requirements? Is management aware of the relevant tax features of the insurance assets, including whether the bank’s purchase would—

   a. make the bank subject to the alternative minimum tax?
   
   b. jeopardize the tax-advantaged status of the bank’s insurance holdings?
   
   c. qualify (under applicable state law) an insurable ownership interest in the BOLI policy covering the bank’s officers or its employees (including any applicable state law pertaining to the insured’s consent and the amounts of allowable insurance coverage for an employee)?

13. Did the bank establish an out-of-state trust to hold its BOLI assets, and, if so, has the bank adequately assessed its insurable interest, given the arrangement?

**LIQUIDITY-RISK ASSESSMENT**

1. Has the bank’s management fully recognized and considered the illiquid nature of the BOLI to be acquired? (An institution’s BOLI holdings should be considered when assessing liquidity and assigning the component rating for liquidity.)

2. Did management determine if the bank has the long-term financial flexibility to hold the insurance asset for the full term of its expected use?

**REPUTATION-RISK ASSESSMENT**

1. Has the bank’s management implemented procedures to ensure that the bank maintains appropriate documentation that evidences employees’ informed consent for the bank’s purchase of insurance on their lives? Do these procedures ensure that the bank
obtains employees’ explicit consent before purchasing the insurance?

2. Has the bank obtained insurance products that insure large segments of its employee base (including the bank’s non-officers)? Do these policies provide very high death benefits on employees, possibly causing the bank to be exposed to increased reputation risk if explicit consent was not obtained from the employees?

MARKET-RISK ASSESSMENT

1. Did management adequately assess the interest-rate risk exposure of BOLI before purchasing the products for separate-account and general-account assets?

2. Has the bank’s management reviewed, and does it understand the instruments governing the separate-account investment policy and its management?
   a. Does the bank’s management understand the risk inherent within the separate account?
   b. Has the bank’s management determined if the risk is appropriate?

3. Have monitoring and reporting systems been established that will enable the bank’s management to monitor, measure, and appropriately manage interest-rate risk exposure from BOLI holdings when assessing the bank’s overall sensitivity to interest-rate risk?

COMPLIANCE/LEGAL-RISK ASSESSMENT

1. Has the bank’s audit and/or compliance function reviewed the bank’s legal and regulatory requirements as they pertain to life insurance holdings? Did the review consider—
   a. state insurable-interest laws?
   b. the Employee Retirement Income Security Act of 1974 (ERISA)?
   c. the Federal Reserve Board’s Regulation W (12 CFR 223)?
   d. applicable federal prohibitions on insider loans, including the Federal Reserve Board’s Regulation O, that may apply to split-dollar life insurance arrangements?
   e. the interagency guidelines for establishing standards for safety and soundness?
   f. other state and federal regulations applicable to BOLI?

2. To ensure that the life insurance qualifies for its tax-advantaged status, has the bank’s management implemented and maintained internal policies and procedures to ensure that “control” will not be exercised over any of the separate-account assets, espe-

1. For state member banks, see 12 CFR 208, appendix D-1.
cially those involving privately placed policies?

3. Does the bank’s board of directors, its designated board committee, and its management seek the assistance of legal counsel when determining the legal and regulatory issues related to the acquisition and holding of life insurance policies?

4. Has management thoroughly reviewed, and does it understand, the instruments governing the investment policy and the management of a separate account, before purchasing a separate-account policy?

5. If the bank has not purchased SVP for a separate-account BOLI policy, has management established the appropriate monitoring and reporting systems that will enable it to recognize and respond to price fluctuations in the fair value of the separate-account assets?

6. When the bank considers or purchases a separate-account BOLI product involving equity securities, does it analyze the equity securities? Does this analysis—
   a. compare the specific equity-linked liability being hedged against the securities held in a separate account?
   b. establish a target ratio for hedge effectiveness, as well as a method for measuring hedge effectiveness on an ongoing basis?
   c. establish a process for analyzing and reporting to the board of directors, its designated committee, and senior management the effect of the hedge on the bank’s earnings and capital ratios (this analysis should include a consideration of the results both with and without the hedging transaction)?

7. When reporting its risk-based capital, has the bank ensured that it accurately calculates and reports its risk-weighted assets for BOLI holdings according to the risk-based capital guidelines and the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance (see section 4042.1 and SR-04-19 and its attachment)?

8. When the bank uses a pro rata approach to risk-weighting the carrying value of a qualifying separate-account policy, did it use the appropriate procedures, as outlined in the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance (see section 4042.1 and SR-04-19 and its attachment)?
   a. Has the bank ensured that its assigned aggregate risk weight for all separate-account BOLI holdings will be 20 percent or more?
   b. When the sum of the permitted investments across market sectors in the investment agreement is greater than 100 percent, was the highest risk weight applied for the maximum amount permitted in that asset class, and was the next-highest risk weight then applied until the cumulative permitted amounts equal 100 percent?

9. Does the bank’s board of directors, its designated board committee, and its management seek the assistance of legal counsel when determining the legal and regulatory issues related to the acquisition and holding of life insurance policies?

10. Has management thoroughly reviewed, and does it understand, the instruments governing the investment policy and the management of a separate account, before purchasing a separate-account policy?

11. If the bank has not purchased SVP for a separate-account BOLI policy, has management established the appropriate monitoring and reporting systems that will enable it to recognize and respond to price fluctuations in the fair value of the separate-account assets?

12. When the bank considers or purchases a separate-account BOLI product involving equity securities, does it analyze the equity securities? Does this analysis—
   a. compare the specific equity-linked liability being hedged against the securities held in a separate account?
   b. establish a target ratio for hedge effectiveness, as well as a method for measuring hedge effectiveness on an ongoing basis?
   c. establish a process for analyzing and reporting to the board of directors, its designated committee, and senior management the effect of the hedge on the bank’s earnings and capital ratios (this analysis should include a consideration of the results both with and without the hedging transaction)?

13. When reporting its risk-based capital, has the bank ensured that it accurately calculates and reports its risk-weighted assets for BOLI holdings according to the risk-based capital guidelines and the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance (see section 4042.1 and SR-04-19 and its attachment)?

14. When the bank uses a pro rata approach to risk-weighting the carrying value of a qualifying separate-account policy, did it use the appropriate procedures, as outlined in the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance (see section 4042.1 and SR-04-19 and its attachment)?
   a. Has the bank ensured that its assigned aggregate risk weight for all separate-account BOLI holdings will be 20 percent or more?
   b. When the sum of the permitted investments across market sectors in the investment agreement is greater than 100 percent, was the highest risk weight applied for the maximum amount permitted in that asset class, and was the next-highest risk weight then applied until the cumulative permitted amounts equal 100 percent?
Insurance Sales Activities and Consumer Protection in Sales of Insurance

Effective date April 2008

Section 4043.1

Banking organizations have long been engaged in the sale of insurance products and annuities, although these activities historically have been subject to several restrictions. For example, until recently, national banks could sell most types of insurance, but only through an agency located in a small town. Bank holding companies also were permitted to engage in only limited insurance agency activities under the Bank Holding Company Act. State-chartered banks, on the other hand, generally have been permitted to engage in insurance sales activities as agents to the extent permitted by state law.

The Gramm-Leach-Bliley Act of 1999 (the GLB Act), however, authorized national banks and state-chartered member banks to sell all types of insurance products through a financial subsidiary. The GLB Act generally did not change the powers of banks to sell insurance directly. As a result of the GLB Act and marketplace developments, many banking organizations are increasing the range and volume of their insurance and annuities sales activities. To the extent permitted by applicable law, banking organizations may conduct insurance and annuity sales activities through a variety of structures and delivery channels, including ownership of an insurance underwriter or an insurance agency or broker, the employment by a bank of licensed agents, a joint marketing arrangement with a producer, independent agents located at a bank’s office, direct mail, telemarketing, and Internet marketing.

A banking organization may also conduct insurance or annuity sales activities through a managing general agent (MGA). An MGA is a wholesaler of insurance products and services to insurance agents. The MGA has a contractual agreement with an insurance carrier to assume functions for the carrier, which may include marketing, accounting, data processing, policy recordkeeping, and monitoring or processing claims. The MGA may rely on various local agents or agencies to sell the carrier’s products. Most states require an MGA to be licensed.

OVERVIEW AND SCOPE

The following guidance pertains to state member banks that are either directly or indirectly engaged in the sale of insurance or annuity products. Examiner guidance on performing appropriate risk assessments of a state member bank’s insurance and annuity sales activities is included. Additionally, guidance is provided for examining a state member bank’s compliance with the consumer protection rules relating to insurance and annuities sales activities that are contained in the Board’s December 2000 revisions to Regulation H (subpart H) (12 CFR 208.81–86), “Consumer Protection in Sales of Insurance” (CPSI). Subpart H, which became effective on October 1, 2001, implements the consumer protection requirements of the GLB Act, which are codified at 12 USC 1831x. (See 65 Fed. Reg. 75841, December 4, 2000.) The regulation applies not only to the sale of insurance products or annuities by the bank, but also to activities of any person engaged in insurance product or annuity sales on behalf of the bank, as discussed in this guidance. The guidance is generally not applicable to debt-cancellation contracts and debt-suspension agreements, unless these products are considered to be insurance products by the state in which the sales activities are conducted.

The GLB Act permits state member banks that are not authorized by applicable state law to sell insurance directly to do so through a financial subsidiary. A financial subsidiary engaged in insurance sales may be located wherever state
law permits the establishment and operation of an insurance agency. Such subsidiaries, however, would be subject to state licensing and other requirements.

The Federal Reserve is responsible for evaluating the consolidated risk profile of a state member bank. This responsibility includes determining the risks posed to the state member bank from the insurance and annuity sales activities it conducts directly or indirectly, as well as determining the effectiveness of the bank’s risk-management systems. However, the GLB Act also established a regulatory framework that is designed to ensure that the Federal Reserve coordinates with, and relies to the extent possible on information from, the state insurance authorities when it is supervising the insurance activities a state member bank conducts through a functionally regulated subsidiary.

Consistent with the Federal Reserve’s risk-focused framework for supervising banking organizations, resources allocated to the review of insurance sales activities should be commensurate with the significance of the activities and the risk they pose to the bank. The scope of the review depends on the significance of the activity to the state member bank and the extent to which the bank is directly involved in the activity. Examiner judgment is required to tailor the reviews, as appropriate, on the basis of the legal, organizational, and risk-management structure of the state member bank’s insurance and annuity sales activities and on other relevant factors.4

SUPERVISORY APPROACH FOR THE REVIEW OF INSURANCE AND ANNUITY SALES ACTIVITIES

Supervisory Objective

The primary objective for the review of a state member bank’s insurance and annuity sales activities is to determine the level and direction of risk such activities pose to the state member bank. The review includes insurance and annuity sales activities the state member bank conducts directly (by or in conjunction with a subsidiary or affiliate) or through a third-party arrangement. Primary risks that may arise from insurance sales activities include operational, legal, and reputational risk. If the state member bank does not adequately manage these risks, they could have an adverse impact on its earnings and capital. The examiner should produce (1) a risk assessment that summarizes the level of inherent risk to the state member bank by risk category and (2) an assessment of the adequacy of board of directors’ and management oversight of the insurance and annuity sales activities, including their internal control framework. For those state member banks selling insurance or annuity products, or that enter into arrangements under which another party sells insurance or annuity products at the bank’s offices or on behalf of the bank, a second objective of the review is to determine the bank’s compliance with the consumer protection provisions of the GLB Act and the CPSI regulation.

State Regulation of Insurance Activities

Historically, insurance activities have primarily been regulated by the states. In 1945, Congress passed the McCarran-Ferguson Act, which granted states the power to regulate most aspects of the insurance business. The McCarran-Ferguson Act states that “no act of Congress shall be construed to invalidate, impair, or supersede any law enacted by any state for the purpose of regulating the business of insurance, or which imposes a fee or tax upon such business, unless such Act specifically relates to the business of insurance” (15 USC 1012(b)).

State regulation of insurance producers is centered on the protection of the consumer and consists primarily of licensing and continuing education requirements for producers. A producer generally must obtain a license from each state in which it sells insurance and for each product sold. Each state in which a producer sells insurance has regulatory authority over the producer’s activities in the state.

The GLB Act does include several provisions that are designed to keep states from (1) unfairly regulating a bank to prevent it from engaging in...
authorized insurance activities or (2) otherwise discriminating against banks engaged in insurance activities. These provisions are complex and beyond the scope of this guidance. However, the GLB Act generally does not prohibit a state from requiring a bank or bank employee engaged in insurance sales, solicitation, or cross-marketing activities to be licensed within the state.

State insurance regulatory authorities do not conduct routine, periodic examinations of an insurance producer. A state examination of an insurance producer is generally conducted only on an ad hoc basis and is primarily based on the volume and severity of consumer complaints. The state examination may also be based in part on the producer’s market share and on previous examination findings. Additionally, a review of a producer would typically not assess its financial condition.

A state’s market conduct examination of insurance sales practices is focused at the insurance-underwriter level. The insurance underwriter is generally held accountable for compliance with state insurance laws to protect the consumer from the unfair sales practices of any producer that markets the insurance underwriter’s products. Market conduct examinations of an insurance underwriter may potentially uncover a concern about a particular producer, such as a bank-affiliated producer. However, in the past, a state insurance regulatory authority has not typically examined a producer unless the producer is owned by the insurance underwriter.

Generally, market conduct examinations include reviews of the insurance underwriters’ complaint handling, producer licensing, policyholder service, and marketing and sales practices. Typically, a state authority will direct a corrective action for insurance sales activity at the underwriter. The states generally have specific guidance for their market conduct examinations of life, health, and property/casualty lines of business—guidance that corresponds to regulations related to advertising, misrepresentations, and disclosures for these different business lines. The reports of examination issued by the state insurance departments are usually available to the public.

Because the underwriter, not the producer, is liable to the insured, the failure of an insurance producer generally would not result in financial loss to consumers or state guarantee funds. Consequently, there are no regulatory capital requirements for insurance producers, nor do states require regulatory reporting of financial statement data on insurance producers. While the underwriter is ultimately liable to the insured in some instances, a producer and its owner may be held liable for misrepresentations, as well as for violations of laws and regulations.

Functional Regulation

Under the GLB Act, banking supervisors’ reviews of insurance or securities activities conducted in a bank’s functionally regulated subsidiary are not to be extensions of more traditional bank-like supervision. Rather, to the extent possible, bank supervisors are to rely on the functional regulators to appropriately supervise the insurance and securities activities of a functionally regulated subsidiary. A functionally regulated subsidiary includes any subsidiary of a bank that (1) is engaged in insurance activities and subject to supervision by a state insurance regulator or (2) is registered as a broker-dealer with the Securities and Exchange Commission. The GLB Act does not limit the Federal Reserve’s supervisory authority with respect to a bank or the insurance activities conducted by a bank. The functional regulators for insurance sales activities, including the activities of insurance producers, consist of the insurance departments in each of the 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, American Samoa, and Guam.

---

5. Generally, market conduct reviews of insurance underwriters are conducted on an ad hoc basis, triggered primarily by the volume and severity of consumer complaints, and are based on the underwriter’s market share or on previous examination findings. In some states, however, market conduct reviews of insurance underwriters are conducted on a periodic, three- to five-year schedule.

6. The terms “insurance underwriter,” “insurer,” “insurance carrier,” and “insurance company” are industry terms that apply similarly to the party to an insurance arrangement who undertakes to indemnify for losses, that is, the party that assumes the principal risk under the contract.

7. Property insurance indemnifies a person who has an interest in a physical property for loss of the property or the loss of its income-producing abilities. Casualty insurance is primarily concerned with the legal liability for losses caused by injury to persons or damage to the property of others. It may also include such diverse forms of insurance as crime insurance, boiler and machinery insurance, and aviation insurance. Many casualty insurers also underwrite surety bonds.
The GLB Act places certain limits on the ability of the Federal Reserve to examine, obtain reports from, or take enforcement action against a functionally regulated nondepository subsidiary of a state member bank. For purposes of these limitations, a subsidiary licensed by a state insurance department to conduct insurance sales activities is considered functionally regulated only with respect to its insurance activities and any activities incidental to these activities.8

The GLB Act indicates that the Federal Reserve must rely, to the fullest extent possible, on information obtained by the appropriate state insurance authority of a nondepository insurance agency subsidiary of a state member bank. In addition, the Federal Reserve may examine a functionally regulated subsidiary of a state member bank only in the following situations:

• The Federal Reserve has reasonable cause to believe that the subsidiary is engaged in activities that pose a material risk to an affiliated depository institution, as determined by the responsible Reserve Bank and Board staff.
• After reviewing relevant information (including information obtained from the appropriate functional regulator), it is determined that an examination is necessary to adequately understand and assess the banking organization’s systems for monitoring and controlling the financial and operational risks that may pose a threat to the safety and soundness of an affiliated depository institution.
• On the basis of reports and other available information (including information obtained from the appropriate functional regulator), there is reasonable cause to believe that the subsidiary is not in compliance with a federal law that the Federal Reserve has specific jurisdiction to enforce with respect to the subsidiary (including limits relating to transactions with affiliated depository institutions), and the Federal Reserve cannot assess such compliance by examining the state member bank or other affiliated depository institution.

Other similar restrictions limit the ability of the Federal Reserve to obtain a report directly from, or take enforcement action against, a functionally regulated nonbank subsidiary of a state member bank. These GLB Act limitations do not apply to a state member bank even if the state member bank is itself licensed by a state insurance regulatory authority to conduct insurance sales activities.

Staff who are conducting reviews of state member bank insurance or annuity sales activities should be thoroughly familiar with SR-00-13, which provides guidance on reviews of functionally regulated state member bank subsidiaries. Reserve Bank staff may conduct an examination of a functionally regulated subsidiary, or request a specialized report from a functionally regulated subsidiary, only after obtaining approvals from the appropriate staff of the Board’s Division of Banking Supervision and Regulation.

When preparing or updating the risk assessment of a state member bank’s insurance or annuity sales activities, Federal Reserve staff, when appropriate, should coordinate their activities with the appropriate state insurance authorities. The Federal Reserve’s supervision of state member banks engaged in insurance sales activities is not intended to replace or duplicate the regulation of insurance activities by the appropriate state insurance authorities.

Information Sharing with the Functional Regulator

The Federal Reserve and the National Association of Insurance Commissioners (NAIC) approved a model memorandum of understanding (MOU) on the sharing of confidential information between the Federal Reserve and individual state insurance departments.9 The Board also approved the delegation of authority to the Board’s general counsel to execute agreements with individual states, based on this MOU. Examiners should follow required Board administrative procedures before sharing any confidential information with a state insurance regulator. (These procedures generally require Federal Reserve staff to identify and forward to Board staff for review any confidential information that may be appropriate to share with the applicable

---

8. For example, if a state member bank subsidiary engages in mortgage lending and is also licensed as an insurance agency, it would be considered a functionally regulated subsidiary only to the extent of its insurance sales activities.

9. The NAIC is the organization of insurance regulators from the 50 states, the District of Columbia, and the four U. S. territories. The NAIC provides a forum for the development of uniform policy among the states and territories. The NAIC is not a governmental or regulatory body.
The Board’s Division of Consumer and Community Affairs CP Letter 2001-11 outlines the procedures for sharing consumer complaint information with state insurance regulators.

**STATUTORY AND REGULATORY REQUIREMENTS AND POLICY GUIDANCE**

**Privacy Rule and the Fair Credit Reporting Act**

State member banks that sell insurance to consumers must comply with the privacy provisions under title V of the GLB Act (12 USC 6801–6809), as implemented by the Board’s Regulation P (12 CFR 216) (the privacy rule). Functionally regulated state member bank nonbank insurance agency subsidiaries are not covered by the Federal Reserve’s privacy rule; however, they must comply with the privacy regulations (if any) issued by their relevant state insurance regulator.

The privacy rule regulates a state member bank’s treatment of nonpublic personal information about a “consumer,” an individual who obtains a financial product or service (such as insurance) from the institution for personal, family, or household purposes. The privacy rule generally requires a bank to provide a notice to each of its customers that describes its privacy policies and practices no later than when the bank establishes a business relationship with the customer. The privacy rule also generally prohibits a bank from disclosing any nonpublic personal information about a consumer to any nonaffiliated third party, unless the bank first provides to the consumer a privacy notice and a reasonable opportunity to prevent (or “opt out” of) the disclosure, and the consumer does not opt out. The privacy rule permits a financial institution to provide a joint notice with one or more of its affiliates or other financial institutions, as identified in the privacy notice itself, provided that the notice is accurate with respect to the institution and the other institutions.

While the privacy rule applies to the sharing of nonpublic personal information by a bank with nonaffiliated third parties, the sharing of certain consumer information with affiliates or nonaffiliates may be subject to the Fair Credit Reporting Act (FCRA) as well. For example, under the FCRA, if a bank wants to share with its insurance subsidiary information from a credit report or from a consumer application for credit (such as the consumer’s assets, income, or marital status), the bank must first notify the consumer about the intended sharing and give the consumer an opportunity to opt out. The same rules would apply to an insurance company that wants to share information from credit reports or from applications for insurance with an affiliate or a third party.

**Anti-Tying Prohibitions**

Federal law (section 106(b) of the BHC Act Amendments of 1970 (12 USC 1972(b))) generally prohibits a bank from requiring that a customer purchase a product or service from the bank or an affiliate as a prerequisite to obtaining another product or service (or a discount on the other product or service) from the bank. This prohibition applies whether the customer is retail or institutional, or whether the transaction is on bank premises or off premises. For example, a state member bank may not require that a customer purchase insurance from the bank or a subsidiary or affiliate of the bank in order to obtain a loan from the bank (or a reduced interest rate on the loan).10

**Policy Statement on Income from Sale of Credit Life Insurance**

The Federal Reserve Board’s Policy Statement on Income from Sale of Credit Life Insurance (see the Federal Reserve Regulatory Service at 3-1556) sets forth the principles and standards that apply to a bank’s sales of credit life insurance and the limitations that apply to the receipt of income from those sales by certain individuals and entities associated with the bank. See also the examination procedures related to this policy statement in section 2130.3.

10. See section 2040.1 and “Tie-In Considerations of the BHC Act,” section 3500.0, of the Bank Holding Company Supervision Manual.
Elements of a Sound Insurance or Annuity Sales Program

A state member bank engaged in insurance or annuity sales activities should—

- conduct insurance sales programs in a safe and sound manner;
- have appropriate written policies and procedures in place that are commensurate with the volume and complexity of its insurance sales activities;
- obtain its board of directors’ approval of the scope of the insurance and annuity sales program and of written policies and procedures for the program;
- effectively oversee the sales program activities, including third-party arrangements;
- have an effective, independent internal audit and compliance program;
- appropriately train and supervise the employees conducting insurance and annuity sales activities;
- take reasonable precautions to ensure that disclosures to customers for insurance and annuity sales and solicitations are complete and accurate and are in compliance with applicable laws and regulations;
- ensure compliance with all applicable federal, state, or other jurisdiction regulations, including compliance with sections 23A and 23B of the Federal Reserve Act as that act applies to affiliate transactions; and
- have controls in place to ensure accurate and timely financial reporting.

Every state member bank conducting insurance or annuity sales activities should have appropriate, board-approved policies, procedures, and controls in place to monitor and ensure that it complies with both federal and state regulatory requirements. Consistent with the principle of functional regulation, the Federal Reserve will rely primarily on the appropriate state insurance authorities to monitor and enforce compliance with applicable state insurance laws and regulations, including state consumer protection laws and regulations governing insurance sales.

Sales Practices and Handling of Customer Complaints

Every state member bank engaged in insurance or annuity sales activities should have board-approved policies and procedures for handling customer complaints related to these sales. The customer complaint process should provide for the recording and tracking of all complaints and require periodic reviews of complaints by compliance personnel. A state member bank’s board of directors and senior management should also review complaints if the complaints involve significant compliance issues that may pose a risk to the state member bank.

Third-Party Arrangements

State member banks, to the extent permitted by applicable law, may enter into agreements with third parties, including unaffiliated agents or agencies, to sell insurance or annuities or provide expertise and services that otherwise would have to be developed in-house. Many banks hire third parties to assist in establishing an insurance program or to train their own insurance staff. A bank may also find it advantageous to offer more specialized insurance products through a third-party arrangement.

A state member bank’s management should conduct a comprehensive review of an unaffiliated third party before entering into any arrangement to conduct insurance or annuity sales with the third party. The review should include an assessment of the third party’s financial condition, management experience, reputation, and ability to fulfill its contractual obligations to the state member bank, which includes compliance with applicable consumer protection laws and regulations.

The state member bank’s board of directors or its designated committee should approve any agreements with third parties. Agreements should outline the duties and responsibilities of each party; describe the third-party activities permitted on the institution’s premises; address the sharing or use of confidential customer information; and define the terms for use of the state member bank’s office space, equipment, and personnel. If an arrangement includes dual employees (for example, bank employees who are also employed by an independent third party), the agreement must provide for written employment contracts that specify the duties of...
these employees and their compensation arrangements.

In addition, a third-party agreement should specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the CPSI regulation, if applicable. The agreement should authorize the banking organization to monitor the third party’s compliance with its agreement, as well as authorize the bank to have access to third-party records considered necessary to evaluate compliance. A state member bank that contracts with a functionally regulated third party should obtain from and review, as appropriate, any relevant, publicly available regulatory reports of examination of the third party. Finally, the agreement should provide for indemnification of the institution by the unaffiliated third party for any losses caused by the conduct of the third party’s employees in connection with its sales activities.

The state member bank is responsible for ensuring that any third party or dual employee selling insurance at or on behalf of the bank is appropriately trained either by the bank or the third party with respect to compliance with the minimum disclosures and other requirements of the CPSI regulation and applicable state regulations. The banking organization should obtain and review copies of third-party training and compliance materials to monitor the third party’s performance of its disclosure and training obligations.

**Designation, Training, and Supervision of Personnel**

A state member bank hiring personnel to sell insurance or annuities should investigate the backgrounds of the prospective employees. When a candidate for employment has previous insurance industry experience, the state member bank should have procedures to determine whether the individual has been the subject of any disciplinary actions by state insurance regulators. The state member bank should require its own insurance or annuity sales personnel or third-party sales personnel selling at or on behalf of the bank to receive appropriate training and licensing. Training should cover appropriate policies and procedures for the bank’s sales of insurance and annuity products. Personnel who are referring potential or established customers to a licensed insurance producer should also be trained to ensure that referrals are made in conformance with the CPSI regulation, if applicable. The training should also include procedures and guidance to ensure that an unlicensed or referring individual cannot be deemed to be acting as an insurance agent that is subject to licensing requirements.

When insurance or annuities are sold by a state member bank or third parties at an office of, or on behalf of, the organization, the institution should have policies and procedures to designate, by title or name, the individuals responsible for supervising insurance sales activities, as well as for supervising the referral activities of bank employees not authorized to sell these products. A state member bank also should designate supervisory personnel responsible for monitoring compliance with any third-party agreement, as well as with the CPSI regulation, if applicable.

**Compliance**

State member banks should have policies and procedures to ensure that insurance or annuity sales activities are conducted in compliance with applicable laws and regulations (including the CPSI regulation for sales conducted by or on behalf of the state member bank) and the institution’s internal policies and procedures. Compliance procedures should identify any potential conflicts of interest and how such conflicts should be addressed. For example, sales-compensation programs should be conducted in a manner that would not expose the bank to undue legal or reputation risks. The compliance procedures should also provide for a system to monitor customer complaints and their resolution. Where applicable, compliance procedures also should call for verification that third-party sales are being conducted in a manner consistent with the governing agreement with the banking organization.

The compliance function should be conducted independently of the insurance and annuity prod-
uct sales and management activities. Compliance personnel should determine the scope and frequency of their reviews, and findings of compliance reviews should be reported directly to the state member bank’s board of directors or to its designated board committee.

RISK ASSESSMENT OF INSURANCE AND ANNUITY SALES ACTIVITIES

A risk assessment of insurance activities may be accomplished in the course of conducting a regularly scheduled state member bank examination or as a targeted review. The purpose of preparing the risk assessment is to determine the level and direction of risk to the bank arising from its insurance and annuity sales activities. Risks to state member banks engaged in insurance and annuity sales programs consist primarily of legal, reputational, and operational risk, all of which may lead to financial loss. After completing the risk assessment, if material concerns remain, the Board’s Division of Banking Supervision and Regulation staff should be consulted for further guidance.

Legal and reputational risk may arise from a variety of sources, such as fraud; noncompliance with statutory or regulatory requirements, including those pertaining to the handling of premiums collected on behalf of the underwriter; claims processing; insurance and annuity sales practices; and the handling of “errors and omissions” claims. Other sources of legal and reputational risk may arise from failing to safeguard nonpublic customer information, a high volume of customer complaints, or public regulatory sanctions against a producer.

Legal and reputational risks may also arise from an agent’s obligation to provide a customer with products that are suited to the customer’s particular needs and are priced and sold in accordance with state regulations. Additionally, an agent or agency may be liable for failing to carry out the appropriate paperwork to bind a policy that it has sold to a customer, or for making an error in binding the policy. State insurance departments generally are permitted by law to suspend or revoke a producer’s license and assess monetary penalties against a producer if warranted.

Operational risk may arise from errors in processing sales-related information or from a lack of appropriate controls over systems or staff responsible for carrying out the insurance or annuity sales activities. Additionally, state member banks that have recently commenced insurance or annuity sales activities, or that are expanding their insurance or annuity sales business, also are exposed to risk arising from inadequate strategic and financial planning associated with the activities, which could result in financial loss. Examiners should be attuned to risks that may arise from inadequate controls over insurance activities, a rapid expansion of the insurance or annuity sales programs offered by the state member bank, the introduction of new products or delivery channels, and legal and regulatory developments.

Operational risk may arise from inadequate premium-payment procedures and trust-account-balance administration by an agency. When the insurance agency bills the insured, the agent must comply with requirements for forwarding the payments to the insurer and for safekeeping the funds. Inadequate internal controls over this activity may result in the inappropriate use of these funds by the agent or agency. The state member bank should ensure that appropriate controls are in place to verify that all funds that are owed to the insurer or the insured are identified in the trust account and that the account is in balance.

When conducting a risk assessment, the examiner should first obtain relevant information to determine the existence and scale of insurance or annuity sales activity. Such information is available in the state member bank’s Uniform Bank Performance Report (UBPR) and in other System reports on insurance activities. Relevant reports, including applicable balance sheets and income statements for the insurance and annuity sales activities, may also be obtained from the state member bank. When preparing a risk assessment for an insurance or annuity sales activity that is conducted by a functionally regulated nonbank subsidiary of a state member bank, examiners should rely, to the fullest extent possible, on information available from the state member bank and the appropriate state insurance regulator for the subsidiary. If information that is needed to assess the risk cannot be obtained from the state member bank or the

---

13. Errors and omissions insurance indemnifies the insured against loss sustained because of an error or oversight by the insured. For instance, an insurance agency generally purchases this type of coverage to protect itself against such things as failing to issue a policy.
applicable functional regulator, the examiner should consult with the appropriate designated Board staff. Requests should not be made directly to a functionally regulated nonbank insurance and annuity sales subsidiary of a state member bank without first obtaining approval from the appropriate Board staff.

CONSUMER PROTECTION IN SALES OF INSURANCE RULES

Overview of the CPSI Regulation

The CPSI regulation is applicable to all insured depository institutions. The regulation, however, generally does not apply to nonbank affiliates or subsidiaries of a state member bank unless the company engages in the retail sale of insurance products or annuities at an office of, or on behalf of, an insured depository institution. Interpretations of the regulation issued by the federal banking agencies are found in appendix A of this section. Federal Reserve examiners are responsible for reviewing state member banks' compliance with the regulation.

The regulation applies to the retail sale of insurance products and annuities by banks or by any other person at an office of, or on behalf of, a bank, or acting on behalf of a bank. For purposes of the CPSI regulation, "office" means the premises of the bank where retail deposits are accepted. The regulation applies only to the retail sale of insurance or annuity products—that is, when the insurance is sold or marketed to an individual primarily for personal, family, or household purposes.

Misrepresentations Prohibited

The regulation prohibits a bank or other covered person from engaging in any practice or using any advertisement at any office of, or on behalf of, the bank or a subsidiary of the bank if the practice or advertisement could mislead any person or otherwise cause a reasonable person to erroneously believe—

- that the insurance product or annuity is backed by the federal government or the bank or is insured by the Federal Deposit Insurance Corporation (FDIC);
- that an insurance product or annuity does not have investment risk, including the potential that principal may be lost and the product may decline in value, when in fact the product or annuity does have such risks; or
- in the case of a bank or subsidiary of the bank at which insurance products or annuities are sold or offered for sale, that (1) the bank may condition approval of an extension of credit to a consumer by the bank or subsidiary on the purchase of an insurance product or annuity from the bank or a subsidiary of the bank, and (2) the consumer is not free to purchase the insurance product or annuity from another source.

The regulation also incorporates the anti-tying provisions of section 106(b) of the Bank Holding Company Act Amendments of 1970 (12 USC 1972). Additionally, banks are prohibited from selling life or health insurance products if the status of the applicant or insured as a victim of domestic violence or as a provider of services to domestic violence victims is considered as a factor in decision making on the product, except as expressly authorized by state law.

Insurance Disclosures

The CPSI regulation also requires that a bank or a person selling insurance at an office of, or on behalf of, a bank make the following affirmative disclosures (to the extent accurate), both orally and in writing, before the completion of the initial sale of an insurance product or an annuity to a consumer. However, sales by mail or, if the consumer consents, via electronic media (such as the Internet) do not require oral disclosure.

- The insurance product or annuity is not a deposit or other obligation of, or guaranteed by, the bank or an affiliate of the bank.
- The insurance product or annuity is not insured by the FDIC or any other U.S. government agency, the bank, or (if applicable) an affiliate of the bank.
- The insurance product or annuity, if applicable, has investment risk, including the possible loss of value.

---

14. The CPSI regulation applies to all federally insured depository institutions, including all federally chartered U.S. branches and state-chartered insured U.S. branches of foreign banking organizations.
For telephone sales, written disclosures must be mailed within three business days. The above disclosures must be included in advertisements and promotional materials for insurance products and annuities, unless the advertisements or promotional materials are of a general nature and describe or list the nature of services or products offered by the bank. Disclosures must be conspicuous and readily understandable.

Credit Disclosures

When an application for credit is made in connection with the solicitation, offer, or sale of an insurance product or annuity, the consumer must be notified that the bank may not condition the extension of credit on either (1) the consumer’s purchase of an insurance product or annuity from the bank or any of its affiliates or (2) the consumer’s agreement not to obtain, or a prohibition on the consumer from obtaining, an insurance product or annuity from an unaffiliated entity. These disclosures must be made both orally and in writing; however, applications taken by mail or, if the consumer consents, via electronic media, do not require oral disclosure. For telephone applications, the written disclosure must be mailed within three business days. The disclosures must be conspicuous and readily understandable.

Consumer Acknowledgment

The bank must obtain written or electronic acknowledgments of the consumer’s receipt of the disclosures described above at the time they are made or at the completion of the initial purchase. For telephone sales, the bank must receive an oral acknowledgment and make a reasonable effort to obtain a subsequent written or electronic acknowledgment.

Location

Insurance and annuity sales activities must take place, to the extent practicable, in an area physically segregated from one where retail deposits are routinely accepted from the general public (such as teller windows). The bank must clearly identify and delineate areas where insurance and annuity sales activities occur.

Referrals

Any person who accepts deposits from the public in an area where deposits are routinely accepted may refer a consumer to a qualified person who sells insurance products or annuities only if the person making the referral receives no more than a one-time, nominal fee of a fixed dollar amount for the referral. The amount of the referral fee may not depend on whether a sale results from the referral.

Qualifications

A bank may not permit any person to sell or offer insurance products or annuities at its office or on its behalf, unless that person is at all times properly qualified and licensed under applicable state law for the specific products being sold or recommended.

Relationship of the CPSI Regulation to State Regulation

The GLB Act contains a legal framework for determining the effect of the CPSI regulation on state laws governing the sale of insurance, including state consumer protection standards. In general, if a state has legal requirements that are inconsistent with, or contrary to, the CPSI regulation, initially the federal regulation does not apply in the state. However, the federal banking agencies may, after consulting with the state involved, decide to preempt any inconsistent or contrary state laws if the agencies find that the CPSI regulation provides greater protections than the state laws. It is not expected that there will be significant conflict between state and federal laws in this area. If the consumer protection laws of a particular state appear to be inconsistent with and less stringent (that is, provide less consumer protection) than the CPSI regulation, examiners should inform the staff of the Board’s Division of Banking Supervision and Regulation.

Relationship to Federal Reserve Guidance on the Sale of Nondeposit Investment Products

When a bank sells insurance products or annu-
ities that also are securities (such as variable life insurance annuities), it must conform with the applicable Federal Reserve and interagency guidance pertaining to a bank’s retail sales of non-deposit investment products (NDIPs). If the CPSI regulation and the guidance pertaining to NDIPs conflict, the CPSI regulation prevails.

Examining a State Member Bank for Compliance with the CPSI Regulation

Examinations for compliance with the CPSI regulation should be conducted consistent with the risk-focused supervisory approach when a state member bank sells insurance products or annuities directly, or when a third party sells insurance or annuities at or on behalf of, a state member bank. To the extent practicable, the examiner should conduct the review at the state member bank. In certain instances, however, the examiner’s review at the state member bank may identify potential supervisory concerns about the state member bank’s compliance with the CPSI regulation as it pertains to insurance or annuities sales conducted by a functionally regulated nonbank affiliate or subsidiary of the state member bank that is selling insurance products or annuities at or on behalf of the state member bank.

If the examiner determines that an on-site review of a functionally regulated nonbank affiliate or subsidiary of the state member bank is appropriate to adequately assess the state member bank’s compliance with the CPSI regulation, the examiner should discuss the situation with staff of the Board’s Division of Banking Supervision and Regulation. The approval of the Division of Banking Supervision and Regulation’s officer that is responsible for the supervisory policy and examination guidance pertaining to insurance and annuity sales conducted by a functionally regulated nonbank affiliate or subsidiary of the state member bank that is selling insurance products or annuities at or on behalf of the state member bank.

The examination guidelines described in section 4043.3 apply to retail sales, solicitations, advertisements, or offers of insurance products and annuities by any state member bank or any other person that is engaged in such activities at an office of the bank or on behalf of the state member bank. For purposes of the CPSI regulation, activities “on behalf of a state member bank” include activities in which a person, whether at an office of the bank or at another location, sells, solicits, advertises, or offers an insurance product or annuity and in which at least one of the following applies:

- The person represents to a consumer that the sale, solicitation, advertisement, or offer of any insurance product or annuity is by or on behalf of the bank.
- The bank refers a consumer to a seller of insurance products or annuities, and the bank has a contractual arrangement to receive commissions or fees derived from the sale of an insurance product or annuity resulting from the bank’s referral.
- Documents evidencing the sale, solicitation, advertising, or offer of an insurance product or annuity identify or refer to the bank.

Appendix A—Joint Interpretations of the Consumer Protection in Sales of Insurance Regulation

In response to a banking association’s inquiries, the federal banking agencies jointly issued interpretations regarding the Consumer Protection in Sales of Insurance (CPSI) regulation. A joint statement, issued on August 17, 2001, contains responses to a set of questions relating to disclosure and acknowledgment, the scope of applicability of the regulation, and compliance. Additionally, a February 28, 2003, joint statement responded to a request to clarify whether the disclosure requirements apply to renewals of pre-existing insurance policies sold before October 1, 2001, the effective date of the regulation. The issues raised and the banking agencies’ responses are summarized below.

1. These letters, issued jointly by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision, may be accessed on these agencies’ web sites.
Disclosures

Credit Disclosures

A bank or other person who engages in insurance sales activities at an office of, or on behalf of, a bank ("a covered person") must make the credit disclosures set forth in the regulation if a consumer is solicited to purchase insurance while the consumer’s loan application is pending. A consumer’s application for credit is still “pending” for purposes of the regulation if the depository institution has approved the consumer’s loan application but not yet notified the consumer. Until the consumer is notified of the loan approval, the covered person must provide the credit disclosures if the consumer is solicited, offered, or sold insurance.

Disclosures for Sales by Mail and Telephone

The regulation requires a covered person to provide oral disclosures and to obtain an oral acknowledgment of these disclosures when sales activities are conducted by telephone. This requirement applies regardless of whether the consumer will also receive and acknowledge written disclosures in person, through the mail, or electronically.

Use of Short-Form Insurance Disclosures

There is no short form for the credit disclosures. A depository institution, however, may use the short-form insurance disclosures set forth below in visual media (such as television broadcasting, ATM screens, billboards, signs, posters, and written advertisements and promotional materials):

- NOT A DEPOSIT
- NOT FDIC-INSURED
- NOT INSURED BY ANY FEDERAL GOVERNMENT AGENCY
- NOT GUARANTEED BY THE BANK
- MAY GO DOWN IN VALUE

Acknowledgment of Disclosures

Reasonable efforts to obtain written acknowledgment. The banking agencies have not prescribed any steps that must be taken for a depository institution’s efforts to obtain a written acknowledgment to be deemed “reasonable” in a transaction conducted by telephone. Examples of reasonable efforts, however, include—

- providing the consumer with a return-addressed envelope or similar means to facilitate the consumer’s return of the written acknowledgment,
- making a follow-up phone call or contact,
- sending a second mailing, or
- similar actions.

The covered person should (1) maintain documentation that the written disclosures and the request for written acknowledgment of those disclosures were mailed to the consumer and (2) should record his or her efforts to obtain the signed acknowledgment. The “reasonable efforts” policy exception for telephone sales does not apply to other types of transactions, such as mail solicitations, in which a covered person must obtain from the consumer a written (in electronic or paper form) acknowledgment.

Appropriate form or format for acknowledgment provided electronically. Electronic acknowledgments are not required to be in a specific format but must be consistent with the provisions of the CPSI regulation applicable to consumer acknowledgments. That is, the electronic acknowledgment must establish that the consumer has acknowledged receipt of the credit and insurance disclosures, as applicable.

Retention of acknowledgments by an insurance company. If an insurance company provides the disclosures and obtains the acknowledgment on behalf of a depository institution, the insurance company may retain the acknowledgment. The depository institution is responsible for ensuring that sales made “on behalf of” the depository institution are in compliance with the CPSI regulation. An insurance company may maintain documentation showing compliance with the CPSI regulation, but the depository institution should have access to such records and the records should be readily available for review by examiners.

Form of written acknowledgment. There is no prescribed form for the written acknowledg-
ment. The regulation requires, however, that a covered person obtain the consumer’s acknowledgment of receipt of the complete insurance and credit disclosures.

Timing of acknowledgment receipt. A covered person must obtain the consumer’s acknowledgment either at the time a consumer receives disclosures or at the time of the initial purchase of an insurance product.

Oral acknowledgment of oral disclosure. The CPSI regulation does not prescribe any specific wording for an oral acknowledgment. However, if a covered person has made the insurance and credit disclosures orally, an affirmative response to the question “Do you acknowledge that you received this disclosure?” is acceptable.

Scope of the CPSI Regulation

Applicability to Private Mortgage Insurance

Depending on the nature of a depository institution’s involvement in an insurance sales transaction, the CPSI regulation may cover sales of private mortgage insurance. If the depository institution itself purchases the insurance to protect its interest in mortgage loans it has issued and merely passes the costs of the insurance on to the mortgage borrowers, the transaction is not covered by the regulation. If, however, a consumer has the option of purchasing the private mortgage insurance and (1) the depository institution offers the private mortgage insurance to a consumer or (2) any other person offers the private mortgage insurance to a consumer at an office of a depository institution, or on behalf of a depository institution, the transaction would be covered by the regulation.

Applicability to Federal Crop Insurance

The CPSI regulation does not apply to federal crop insurance that is sold for commercial or business purposes. However, if the crop insurance is purchased by an individual primarily for family, personal, or household purposes, it would be covered.

Solicitations and Applications Distributed Before, but Returned After, the Effective Date of the CPSI Regulation

Direct-mail solicitations and “take-one” applications that are distributed on or after October 1, 2001, must comply with the CPSI regulation. If a consumer seeks to purchase insurance after the effective date of the regulation in response to a solicitation or advertisement that was distributed before that date, the depository institution would be in compliance with the regulation if the institution provides the consumer, before the initial sale, with the disclosures required by the regulation. These disclosures must be both written and oral, except that oral disclosures are not required if the consumer mails in the application.

Renewals of Insurance

Renewals of insurance are not subject to the disclosure requirements (see “Disclosures” above) but are subject to other requirements of the CPSI regulation. A “renewal” of insurance means continuation of coverage involving the same type of insurance for a consumer as issued by the same carrier. A renewal need not be on the same terms and conditions as the original policy, provided that the renewal does not involve a different type of insurance and the consumer has previously received the disclosures required by the regulation at the time of the initial sale. An upgrade in coverage at a time when a policy is not up for renewal would be treated as a renewal, provided that the solicitation and sale of the upgrade does not involve a different type of insurance and the consumer has previously received the disclosures required by the regulation at the initial sale.

Disclosures Required with Renewals of Insurance Coverage

The banking agencies’ interpretations clarified that the CPSI regulation does not mandate disclosures for renewals of policies sold before October 1, 2001. Accordingly, the regulation does not require the disclosures to be furnished at the time of renewal of a policy, including a pre-existing policy. However, renewals are subject to the other provisions of the regulation. Moreover, the banking agencies would expect that, consistent with applicable safety-and-
soundness requirements, depository institutions would take reasonable steps to avoid customer confusion in connection with renewals of pre-existing policies.

"On-Behalf-of" Test and Use of Corporate Name or Logo

Under the CPSI regulation, an affiliate of a bank is not considered to be acting “on behalf of” a bank simply because the affiliate’s marketing or other materials use a corporate name or logo that is common to the bank and the affiliate. In general, this exclusion applies even if a bank and its parent holding company have a similar, but not identical, name. For example, if the names of all of the affiliates of a bank holding company share the words “First National,” an affiliate would not be considered to be engaged in an activity “on behalf of” an affiliated bank simply by using the terms “First National” as part of a corporate logo or identity. The affiliate would, however, be considered to be acting “on behalf of” an affiliated bank if the name of the bank (for example, “First National Bank”) appears in a document as the seller, solicitor, advertiser, or offeror of insurance. A transaction also would be covered if it occurs on the premises of a depository institution or if one of the other prongs of the “on-behalf-of” test is met.

Compliance

Appropriate Documentation of an Oral Disclosure or Oral Acknowledgment

There is no specific documentation requirement for oral disclosures or acknowledgments. However, other applicable regulatory reporting standards would apply. Appropriate documentation of an oral disclosure would clearly show that the covered person made the credit and insurance disclosures to a consumer. Similarly, appropriate documentation of an oral acknowledgment would clearly show that the consumer acknowledged receiving the credit and insurance disclosures. For example, a tape recording of the conversation (where permitted by applicable laws) in which the covered person made the oral disclosures and received the oral acknowledgment would be acceptable. Another example would be a contemporaneous checklist completed by the covered person to indicate that he or she made the oral disclosures and received the oral acknowledgment. A contemporaneous note to the consumer’s file would also be adequate. The documentation should be maintained in the consumer’s file so that it is accessible to examiners.

Setting for Insurance Sales

A depository institution must identify the areas where insurance sales occur and must clearly delineate and distinguish those areas from areas where the depository institution’s retail deposit-taking activities occur. Although the banking agencies did not define how depository institutions could “clearly delineate and distinguish” insurance areas, signage or other means may be used.

APPENDIX B—GLOSSARY

For additional definitions of insurance terms, see section 4040.1.

Accident and health insurance. A type of coverage that pays benefits in case of sickness, accidental injury, or accidental death. This coverage may provide for loss of income when the insured is disabled and provides reimbursement for medical expenses when the insured is ill. The insurance can provide for debt payment if it is taken out in conjunction with a loan. (See Credit life insurance.)

Actuary. A professional whose function is to calculate statistically various estimates for the field of insurance, including the estimated risk of loss on an insurable interest and the appropriate level for premiums and reserves.

Admitted insurer. An insurance company licensed by a state insurance department to underwrite insurance products in that state.

Agency contract (or agreement). An agreement that establishes the contractual relationship between an agent and an insurer.

Agent. A licensed insurance company representative under contract to one or more insurance companies. Depending on the line of insurance
represented, an agent’s power may include soliciting, advertising, and selling insurance; collecting premiums; claims processing; and effecting insurance coverage on behalf of an insurance underwriter. Agents are generally compensated by commissions on policies sold, although some may receive salaries.

- **Captive or exclusive agent.** An agent who represents a single insurer.

- **General agent.** An agent who is contractually awarded a specific geographic territory for an individual insurance company. They are responsible for building their own agency and usually represent only one insurer. Unlike exclusive agents, who usually receive a salary in addition to commissions, general agents are typically compensated on a commission basis only.

- **Independent agent.** An agent who is under contractual agreements with at least two different insurers. Typically, all of the independent agent’s compensation originates from commissions.

**Aggregate excess-of-loss reinsurance.** A form of “excess-of-loss” reinsurance that indemnifies the ceding company against the amount by which all of the ceding company’s losses incurred during a specific period (usually 12 months) exceed either (1) a predetermined dollar amount or (2) a percentage of the company’s subject premiums. This type of contract is also commonly referred to as stop-loss reinsurance or excess-of-loss ratio reinsurance.

**Allied lines.** Various insurance coverages for additional types of losses and against losses by additional perils. The coverages are closely associated with and usually sold with fire insurance. Examples include coverage against loss by perils other than fire, coverage for sprinkler-leakage damage, and business-interruption coverage.

**Annuity.** A contract that provides for a series of payments payable over an individual’s life span or other term, on the basis of an initial lump-sum contribution or series of payments made by the annuitant into the annuity during the accumulation phase of the contract.

- **Fixed-annuity contracts** provide for payments to annuitants at fixed, guaranteed minimum rates of interests.

- **Variable-annuity contracts** provide for payments based on the performance of annuity investments. Variable-annuity contracts are usually sold based on a series of payments and offer a range of investment or funding options, such as stocks, bonds, and money market fund investments. The annuity principal and the investment return are not guaranteed as they depend on the performance of the underlying funding option.

Annuity payments may commence with the execution of the annuity contract (immediate annuity) or may be deferred until some future date (deferred annuity).

**Assigned risk.** A risk that is not usually acceptable to insurers and is therefore assigned to a group of insurers who are required to share in the premium income and losses, in accordance with state requirements, in order for the insurer to sell insurance in the state.

**Assignment.** The legal transfer of one person’s interest in an insurance policy to another person or business.

**Bank-owned life insurance (BOLI).** Life insurance purchased and owned by a bank to fund its exposure arising from employee compensation and benefit programs. In a typical BOLI program, a bank insures a group of employees; pays the life insurance policy premiums; owns the cash values of the policies, which are booked on the bank’s balance sheet as “other assets”; and is the beneficiary of the policies upon the death of any insured employee or former employee. (See SR-04-19 and section 4042.1.)

**Beneficiary.** The person or entity named in an insurance policy as the recipient of insurance proceeds upon the policyholder’s death or when an endorsement matures. A revocable beneficiary can be changed by the policyholder at any time. An irrevocable beneficiary can be changed by the policyholder only with the written permission of the beneficiary.

**Binder.** A written or oral agreement, typically issued by an insurer, agent, or broker for property and casualty insurance, to indicate acceptance of a person’s application for insurance and
to provide interim coverage pending the insurance company’s issuance of a binding policy.

**Blanket bond.** Coverage for an employer for loss incurred as a result of employee dishonesty.

**Boiler and machinery insurance.** Insurance against the sudden and accidental breakdown of boilers, machinery, and electrical equipment, including coverage for damage to the equipment and property damage, including the property of others. Coverage can be extended to cover consequential losses, including loss from interruption of business.

**Broker.** A person who represents the insurance buyer in the purchase of insurance. Brokers do not have the power to bind an insurance company to an insurance contract. Once a contract is accepted, the broker is compensated for the transaction through a commission from the insurance company. An individual may be licensed as both a broker and an agent.

**Bulk reinsurance.** A transaction sometimes defined by statute as any quota-share, surplus aid, or portfolio reinsurance agreement through which an insurer assumes all or a substantial portion of the liability of the reinsured company.

**Captive insurer.** An insurance company established by a parent firm to insure or reinsure its own risks or the risks of affiliated companies. A captive may also underwrite insurable risks of unaffiliated companies, typically the risks of its customers or employees. A captive insurer may underwrite credit life or private mortgage insurance (third-party risks) related to its lending activities.

**Cash surrender value of life insurance.** The amount of cash available to a life insurance policyholder upon the voluntary termination of a life insurance policy before it becomes payable by death or maturity.

**Casualty insurance.** Coverage for the liability arising from third-party claims against the insured for negligent acts or omissions causing bodily injury or property damage.

**Cede.** To transfer to a reinsurer all or part of the insurance or reinsurance risk underwritten by an insurance company.

**Ceding commission.** The fee paid to a reinsurer company for assuming the risk of a primary insurance company.

**Ceding company (also cedant, reinsured, reassured).** The insurer that transfers all or part of the insurance or reinsurance risk it has underwritten to another insurer or reinsurer via a reinsurance agreement.

**Cession.** The amount of insurance risk transferred to the reinsurer by the ceding company.

**Churning.** The illegal practice wherein a customer is persuaded to unnecessarily cancel one insurance policy in favor of buying a purportedly superior policy, often using the cash surrender value of the existing policy to pay the early premiums of the new policy. In such a transaction, the salesperson benefits from the additional commission awarded for booking a new policy.

**Claim.** A request for payment of a loss under the terms of a policy. Claims are payable in the manner suited to the insured risk. Life, property, casualty, health, and liability claims generally are paid in a lump sum after the loss is incurred. Disability and loss-of-time claims are paid periodically during the period of disability or through a discounted lump-sum payment.

**Coinsurance.** A provision in property and casualty insurance that requires the insured to maintain a specified amount of insurance based on the value of the property insured. Coinsurance clauses are also found in health insurance and require the insured to share a percentage of the loss.

**Combination-plan reinsurance.** A reinsurance agreement that combines the excess-of-loss and the quota-share forms of coverage within one contract, with the reinsurance premium established as a fixed percentage of the ceding company’s subject premium. After deducting the excess recovery on any one loss for one risk, the reinsurer indemnifies the ceding company on the basis of a fixed quota-share percentage. If a loss does not exceed the excess-of-loss retention level, only the quota-share coverage applies.
Commission. The remuneration paid by insurance carriers to insurance agents and brokers for the sale of insurance and annuity products.

Comprehensive personal liability insurance. A type of insurance that reimburses the policyholder if he or she becomes liable to pay money for damage or injury he or she has caused to others. This coverage does not include automobile liability but does include almost every activity of the policyholder, except business operations.

Contractholder. The person, entity, or group to whom an annuity is issued.

Credit for reinsurance. A statutory accounting procedure, set forth under state insurance regulations, that permits a ceding company to treat amounts due from reinsurers as assets, or as offsets to liabilities, on the basis of the reinsurer’s status.

Credit life insurance. A term insurance product issued on the life of a debtor that is tied to repayment of a specific loan or indebtedness. Proceeds of a credit life insurance policy are used to extinguish remaining indebtedness at the time of the borrower’s death. The term is applied broadly to other forms of credit-related insurance that provide for debt satisfaction in the event of a borrower’s disability, accident or illness, and unemployment. Credit life insurance has historically been among the most common bank insurance products.

Credit score. A number that is based on an analysis of an individual’s credit history and that insurers may consider as an indicator of risk for purposes of underwriting insurance. Where not prohibited by state law, insurers may consider a person’s credit history when underwriting personal lines.

Debt-cancellation contract/debt-suspension agreement. A loan term or contract between a lender and borrower whereby, for a fee, the lender agrees to cancel or suspend payment on the borrower’s loan in the event of the borrower’s death, serious injury, unemployment, or other specified events. The Office of the Comptroller of the Currency considers these products to be banking products. State law determines whether these products are bank or insurance products for state-chartered banks and insurance companies.

Deductible. The amount a policyholder agrees to pay toward the total amount of insurance loss. The deductible may apply to each claim for a loss occurrence, such as each automobile accident, or to all claims made during a specified period, as with health insurance.

Directors and officers liability insurance. Liability insurance covering a corporation’s obligation to reimburse its directors or officers for claims made against them for alleged wrongful acts. It also provides direct coverage for company directors and officers themselves in instances when corporate indemnification is not available.

Direct writer. An insurance company that deals directly with the insured through a salaried representative, as opposed to those insurers that use agents. This term also refers to insurers that operate through exclusive agents. In reinsurance, a direct writer is the company that originally underwrites the insurance policies ceded.

Disability income insurance. An insurance product that provides income payment to the insured when his or her income is interrupted or terminated because of illness or accident.

Endowment insurance. A type of life insurance contract under which the insured receives the face value of the policy if he or she survives the endowment period. Otherwise, the beneficiary receives the face value of the policy upon the death of the insured.

Errors and omissions (E&O) liability insurance. Professional liability insurance that covers negligent acts or omissions resulting in loss. Insurance agents are continually exposed to the claim that inadequate or inappropriate coverage was recommended, resulting in a lack of coverage for losses incurred. The agent or the carrier may be responsible for coverage for legitimate claims.

Excess-of-loss reinsurance. A form of reinsurance whereby an insurer pays the amount of each claim for each risk up to a limit determined in advance, and the reinsurer pays the amount of the claim above that limit up to a specific sum. It includes various types of reinsurance, such as...
catastrophe reinsurance, per-risk reinsurance, per-occurrence reinsurance, and aggregate excess-of-loss reinsurance.

**Excess-per-risk reinsurance.** A form of excess-of-loss reinsurance that, subject to a specified limit, indemnifies the ceding company against the amount of loss in excess of a specified retention for each risk involved in each occurrence.

**Excess and surplus lines.** Property/casualty coverage that is unavailable from insurers licensed by the state (admitted insurers) and must be purchased from a nonadmitted underwriter.

**Exposure.** The aggregate of all policyholder limits of liability arising from policies written.

**Face amount.** The amount stated on the face of the insurance policy to be paid, depending on the type of coverage, upon death or maturity. It does not include dividend additions or additional amounts payable under accidental death or other special provisions.

**Facultative reinsurance.** Reinsurance of individual risks by offer and acceptance wherein the reinsurer retains the faculty to accept or reject each risk offered by the ceding company.

**Facultative treaty.** A reinsurance contract under which the ceding company has the option to cede and the reinsurer has the option to accept or decline classified risks of a specific business line. The contract merely reflects how individual facultative reinsurance shall be handled.

**Financial guarantee insurance.** Financial guarantee insurance is provided for a wide array of financial risks. Typically, coverage is provided for the fulfillment of a specific financial obligation originated in a business transaction. The insurer, in effect, is lending the debtor its own credit rating to enhance the debtor’s creditworthiness.

**Financial strength rating.** Opinion as to an insurance company’s ability to meet its senior policyholder obligations and claims. For many years, the principal rating agency for property and casualty insurers and life insurers has been A.M. Best. Other rating agencies, such as Fitch, Moody’s, Standard and Poor’s, and Weiss, also rate insurers.

**Fixed annuity.** See Annuity.

**Flood insurance.** A special insurance policy to protect against the risk of loss or damage to property caused by flooding. Regular homeowners’ policies do not pay for damages caused by flooding.

**General liability insurance.** A broad commercial policy that covers all business liability exposures, such as product liability, completed operations, premises and operations, independent contractors, and other exposures that are not specifically excluded.

**Gross premiums written.** Total premiums for insurance written during a given period, before deduction for reinsurance ceded.

**Group insurance.** Insurance coverage typically issued to an employer under a master policy for the benefit of employees. The insurer usually does not condition coverage of the people that make up the group upon satisfactory medical examinations or other requirements. The individual members of the group hold certificates as evidence of their insurance.

**Health insurance.** An insurance product that provides benefits for medical expenses incurred as a result of sickness or accident, as well as income payments to replace lost income when the insured is unable to work because of illness, accident, or disability. This product may be in the form of traditional indemnity insurance or managed-care plans and may be underwritten on an individual or group basis.

**Incurred but not reported (IBNR).** The loss-reserve value established by insurance and reinsurance companies in recognition of their liability for future payments on losses that have occurred but have not yet been reported to them. This definition is often erroneously expanded to include adverse loss development on reported claims. The term incurred but not enough reported (IBNER) is being increasingly used to reflect more accurately the adverse development on inadequately reserved reported claims.

**Inland marine insurance.** A broad field of insurance that covers cargo being shipped by air, truck, or rail. It includes coverage for most property involved in transporting cargo as well as for bridges, tunnels, and communications systems.
Key person life insurance. Life insurance designed to cover the key employees of an employer. It may be written on a group- or an individual-policy basis.

Lapse. The termination or discontinuance of a policy resulting from the insured’s failure to pay the premium due.

Liability insurance. Protects policyholders from financial loss due to liability resulting from injuries to other persons or damage to their property.

Lines. A term used in insurance to denote insurance business lines, as in “commercial lines” and “personal lines.”

Long-term care insurance. Health insurance designed to supplement the cost of nursing home care or other care facilities in the event of a long-term illness or permanent disability or incapacity.

Managing general agent. A managing general agent (MGA) is a wholesaler of insurance products and services to insurance agents. An MGA receives contractual authority from an insurer to assume many of the insurance company’s functions. The MGA may provide insurance products to the public through local insurance agents as well as provide services to an insurance company, including marketing, accounting, data processing, policy maintenance, and claims-monitoring and -processing services. Many insurance companies prefer the MGA distribution and management system for their insurance products because it avoids the high cost of establishing branch offices. Most states require that an MGA be licensed.

Manuscript policy. A policy written to include specific coverage or conditions not provided in a standard policy.

Morbidity. The incidence and severity of illness and disease in a defined class of insured persons.

Mortality. The rate at which members of a group die in a specified period of time or die from a specific illness.

Mortgage guarantee insurance. A product that insures lenders against nonpayment by borrowers. The policies are issued for a specified time period. Lenders who finance more than 80 percent of the property’s fair value generally require such insurance.

Mortgage insurance. Life insurance that pays the balance of a mortgage even if the borrower dies. Coverage typically is in the form of term life insurance, with the coverage declining as the debt is paid off.

Multiperil insurance. An insurance contract providing coverage against many perils, usually combining liability and physical damage coverage.

Net premiums written. The amount of gross premiums written, after deduction for premiums ceded to reinsurers.

Ninety-day loss rule. A state requirement for an insurer to establish a loss provision for reinsurance recoverables over 90 days past due.

Obligatory treaty. A reinsurance contract under which business must be ceded in accordance with contract terms and must be accepted by the reinsurer.

Policyholder. The person or entity who owns an insurance policy. This is usually the insured person, but it may also be a relative of the insured, a partnership, or a corporation.

Premium. The payment, or one of the periodic payments, a policyholder agrees to make for insurance coverage.

Private mortgage insurance (PMI). Coverage for a mortgage lender against losses due to a collateral shortfall on a defaulted residential real estate loan. Most banks require borrowers to take out a PMI policy if a downpayment of less than 20 percent of a home’s value is made at the time the loan is originated. PMI does not directly benefit a borrower, although its existence provides the opportunity to purchase a home to many people who otherwise would not qualify for a loan.

Producer. A person licensed to sell, solicit, or negotiate insurance.

Professional designations and organizations. Three of the most common insurance professional designations are chartered life under-
writer (CLU), chartered property casualty underwriter (CPCU), and chartered financial consultant (ChFC). Insurance agents also join professional organizations such as the American Society of Chartered Life Underwriters, the International Association of Financial Planning, the National Association of Life Underwriters, the National Association of Health Underwriters, the American Council of Life Insurance, the Life Insurance Marketing and Research Association, the Life Underwriter Training Council, and the Million Dollar Round Table.

**Pro rata reinsurance.** A generic term describing all forms of “quota-share” and “surplus reinsurance,” in which the reinsurer shares a pro rata portion of the losses and premiums of the ceding company.

**Property insurance.** Coverage for physical damage or destruction of real property (buildings, fixtures, and permanently attached equipment) and personal property (movable items that are not attached to land) that occurs during the policy period as a result of, for example, fire, windstorm, explosion, or vandalism.

**Protected cell.** A structure available to captive insurers underwriting risks of unaffiliated companies whereby the assets associated with the self-insurance program of one organization are segregated to provide legal-recourse protection from creditors of protected cells providing insurance coverage to other organizations.

**Quota-share reinsurance.** A form of pro rata reinsurance indemnifying the ceding company for a fixed percent of loss on each risk covered in the contract in consideration of the same percentage of the premium paid to the ceding company.

**Rebating.** Directly or indirectly giving or offering to give any portion of the premium or any other consideration to an insurance buyer as an inducement to purchase or renew the insurance. Rebates are forbidden under most state insurance codes.

**Reinsurance.** Insurance placed by an underwriter (the ceding company or reinsured) in another company to transfer or reduce the amount of the risk assumed under the original insurance policy (or group of policies).

**Reinsurance premium.** The consideration paid by a ceding company to a reinsurer for the coverage provided by the reinsurer.

**Residual market.** Also known as the shared market, it covers applications for insurance that were rejected by underwriters in the voluntary market that is covered by agency direct-marketing systems, perhaps because of high loss experience by the insured party. The residual market includes government insurance programs, specialty pools, and shared market mechanisms such as assigned-risk plans.

**Retrocession.** A reinsurance transaction whereby a reinsurer (the retrocedant) cedes all or part of the reinsurance risks it has assumed to another reinsurer (the retrocessionaire).

**Retroactive rating.** An insurance plan in which the current year’s premium is based on the insured’s own loss experience for that same period, subject to a maximum and minimum.

**Rider.** A written attachment, also known as an endorsement, to an insurance policy that changes the original policy to meet specific requirements, such as increasing or decreasing benefits or providing coverage for specific property items beyond that provided for under the insurance company’s standard contract terms.

**Self-insured retention (SIR).** The percentage of a risk or potential loss assumed by an insured, whether in the form of a deductible, self-insurance, or no insurance at all.

**Separate accounts.** Certain life insurance assets and related liabilities that are segregated and maintained to meet specific investment objectives of contract holders, particularly those assets and liabilities associated with pension plans and variable products offered by life insurers, wherein the customer and not the insurer retains most of the investment and interest-rate risk.

**Split-dollar life insurance.** An arrangement that typically involves an agreement between an employer and an employee whereby the premium payment, cash values, policy ownership, and death benefits may be split. There are many variations of split-dollar arrangements, including arrangements in which a trust is created to facilitate estate planning. Split-dollar life insurance is designed to serve as a supplemental...
benefit to a particular company executive. The arrangement typically involves the payment of the insurance premium by the employer, with the death benefit accruing to the employee.

Subrogation. An insurance carrier may reserve the “right of subrogation” in the event of a loss. This means that the company may choose to take action to recover the amount of a claim paid to a covered insured if a third party caused the loss. After expenses, the amount recovered must be divided proportionately with the insured to cover any deductible for which the insured was responsible.

Term life insurance. An insurance product that provides, for a specified period of time, death coverage only. Typically, it has no savings component and, therefore, no cash value. Because term insurance provides only mortality protection, it generally provides the most coverage per premium dollar. Most term life insurance policies are renewable for one or more time periods up to a stipulated maximum age; however, premiums generally increase with the age of the policyholder.

Title insurance. Insurance that protects banks and mortgagors against unknown encumbrances against real estate by indemnifying the mortgagor and property owner in the event that clear ownership of the property is clouded by the discovery of faults in the title. Title insurance policies may be issued to either the mortgagor or the mortgagee or both. Title insurance is written largely only by companies specializing in this class of insurance.

Treaty reinsurance. A reinsurance contract under which the reinsured company agrees to cede, and the reinsurer agrees to assume, risks of a particular class or classes of business.

Twisting. In insurance, twisting involves making misrepresentations to a policyholder to induce the policyholder to terminate one policy and take out another policy with another company, when it is not to the insured’s benefit. Twisting is a violation of the Unfair Trade Practices Act. Twisting is similar to the “churning” concept in securities sales, and it results in increased commissions for the inducing agent.

Umbrella liability insurance. This type of liability insurance provides excess liability protection over the “underlying” liability insurance coverage to supplement underlying policies that have been reduced or exhausted by loss.

Underwriting. The process by which a company determines whether it can accept an application for insurance and by which it may charge an appropriate premium for those applications selected. For example, the underwriting process for life insurance classifies applicants by identifying such characteristics as age, sex, health, and occupation.

Unearned reinsurance premium. The part of the reinsurance premium that is applicable to the unexpired portion of the policies reinsured.

Universal life insurance. A form of permanent insurance designed to provide flexibility in premium payments and death benefit protection. The policyholder can pay maximum premiums and maintain a high cash surrender value. Alternatively, the policyholder can make minimal payments in an amount only large enough to cover mortality and other expense charges.

Variable annuity. See Annuity.

Variable life insurance. A form of whole life, or universal life, insurance in which the policyholder’s cash value is invested in “separate accounts” of the insurer. These accounts are segregated from the insurance carrier’s other asset holdings. Such separate account investments are generally not available to a carrier’s general creditors in the event of the carrier’s insolvency. The policyholder assumes the investment and price risk. Because variable life policies have investment features, life insurance agents selling these policies must be registered representatives of a broker-dealer licensed by the Financial Industry Regulatory Authority and registered with the Securities and Exchange Commission.

Vendors’ single-interest insurance. A form of force-placed insurance that is typically purchased by the bank to protect against loss or damage to loan collateral in which the bank has a security interest. The bank passes its expense for this insurance on to the consumer who has either refused or is unable to obtain property insurance.

Vital settlement. The cashing in of a life insurance policy at a discount from face amount...
by policyholders who are often terminally ill and need the money for medical care. The purchaser becomes the policyholder as well as the beneficiary and assumes the premium payments of the policy.

**Whole life insurance.** A fixed-rate insurance product, with premiums and death benefits guaranteed over the duration of the policy. There is a cash value (essentially a savings account) that accrues to the policyholder tax deferred. A policyholder receives the cash value in lieu of death benefits if the policy matures or lapses before the insured’s death. A policyholder also may borrow against the policy’s accumulated cash value or use it to pay future premiums. For most whole life insurance policies, premiums are constant for the life of the insured’s contract.
Insurance Sales Activities and Consumer Protection in Sales of Insurance

Examination Objectives

Effective date November 2003

Section 4043.2

1. To understand the volume and complexity of the state member bank’s insurance or annuity program and insurance sales strategy.

2. To assess the financial results of the insurance and annuity sales activity compared with planned results.

3. To determine if the state member bank’s insurance and annuity sales activities are effectively integrated into the risk-management, audit, and compliance functions and if the control environment is adequate.

4. To assess the adequacy of the state member bank’s controls to ensure compliance with the applicable state and federal laws and regulations.

5. To assess the state member bank’s level and direction of operational, legal, and reputational risks from the insurance or annuity sales activity.

The following objectives apply if insurance products or annuities are sold by a bank or another person at an office of, or on behalf of, the bank.

6. To assess the adequacy of the state member bank’s oversight program for ensuring compliance with the Consumer Protection in Sales of Insurance (CPSI) regulation. (See section 4043.1.)

7. To assess the effectiveness of the state member bank’s audit and compliance programs for the CPSI regulation.

8. To assess the state member bank’s current compliance with the CPSI regulation.

9. To obtain commitments for corrective action when the state member bank is in violation of the CPSI regulation or when applicable policies, procedures, practices, or management oversight to protect against violations is deficient.
RISK ASSESSMENT OF INSURANCE AND ANNUITY SALES ACTIVITIES

The examiner should consider the following procedures, as appropriate, when conducting a risk assessment to determine the level and direction of risk exposure to the state member bank that is attributable to insurance or annuity sales activity. If there are specific areas of concern, the examiner should focus primarily on those areas.

1. **Scope of activities and strategies.** Assess the significance and complexity of the insurance or annuity sales program.
   a. Obtain a general overview of the scope of the state member bank’s insurance or annuity sales activities and any anticipated or recent change in or expansion of such activities.
   b. Determine the state member bank’s strategy for insurance or annuity sales, including strategies for cross-selling and referrals of insurance and banking products. Determine the institution’s experience with any cross-marketing programs for both insurance business generated by the bank and bank business generated by insurance producers.
   c. Obtain two years’ worth of income statements, balance sheets, and budget documents for the agency’s activities. Compare the expected budget items with their actual results.
   d. Determine the volume and type of insurance or annuity products and services sold or solicited.
   e. Determine what other related services the state member bank provides in connection with its insurance or annuity sales activities, such as providing risk-management services to clients seeking advice on appropriate insurance coverages, claims processing, and other activities.

2. **Insurance sales products and concentrations.**
   a. Determine the composition of sales—
      * by line of business, such as property/casualty insurance, life insurance including annuities, and health insurance;
      * by the proportion of sales to commercial and retail customers; and
      * by the portion of sales that is credit related, such as credit life and credit health insurance.
   b. Determine any sales concentrations to particular entities, industries, or bank customers.
   c. Note any concentrations to large commercial accounts.
   d. Determine what insurance services are provided to the bank, its employees, and bank affiliates.

3. **Legal-entity and risk-management structure for insurance or annuity sales.**
   a. Obtain an organizational chart for the legal-entity and risk-management structure for the insurance or annuity sales activities.
   b. Determine—
      * whether the insurance or annuity sales activity is conducted in an affiliated producer, by the bank itself, through another distribution arrangement, or by a combination of these arrangements;
      * the names of any affiliated insurance agencies and the states where the affiliated insurance agencies are licensed;
      * the locations outside of the United States where insurance or annuities are sold or solicited; and
      * if any subsidiary agency operates as a financial subsidiary under the Gramm-Leach-Bliley Act.
   c. Determine if the insurance or annuity producer is acting as a managing general agent (MGA). If so, determine—
      * the scope of the MGA activities;
      * the state member bank management’s

---
1. MGAs do not assume underwriting risk. Through contractual arrangements with an insurer, MGAs have the authority to write policies on behalf of the insurer in certain instances, thereby binding the insurer to the policy. Certain minimum provisions governing MGA agreements are delineated in the applicable National Association of Insurance Commissioners (NAIC) model law.
assessment of the risk associated with the MGA activity; and

- what risk controls are in place to protect the state member bank from potential loss that may arise from the MGA’s activities, such as loss arising from legal liability.

4. Strategic and financial plans. Assess management controls over the insurance and annuity sales activities.

a. Ascertain the state member bank management’s strategic and financial plans and goals for the insurance or annuity sales activity.

b. Review the state member bank’s due-diligence process for acquiring and pricing agencies, if applicable.

c. Review the state member bank’s financial budgets and forecasts for the activity, particularly plans for new products, marketing strategies and marketing arrangements, and the rate of actual and expected growth for the activity.

d. Determine the cause for significant deviations from the plan.

e. Determine if any agency acquired by the state member bank is providing the expected return on investment and if the agency’s revenues are covering the debt servicing associated with the purchase, if applicable.

5. Review of board and committee records and reports.

a. Review the reports of any significant state member bank oversight committees, including relevant board of directors and board committee minutes and risk-management reports.

b. Determine if the board of directors, a board committee, or senior management of the state member bank reviews reports pertaining to consumer complaints and complaint resolution, information pertaining to litigation and associated losses, and performance compared with the organization’s plan for the insurance and annuity sales activities.

a. Determine—

- the adequacy of the state member bank’s policies and procedures for conducting and monitoring insurance or annuity sales activities, including those policies designed to ensure adherence with federal and state laws and regulations pertaining to consumer protection;

- whether there are appropriate policies and procedures for the handling of customer funds collected on behalf of the underwriter; accurate and timely financial reporting; complaint monitoring and resolution; effective system security and disaster-recovery plans; and policy-exception tracking and reporting; and

- if the board of directors or its designated committee has formally approved the policies.

b. Obtain a detailed balance sheet for agency subsidiaries, and determine if the assets held by insurance or annuity agency subsidiaries of the state member bank are all bank-eligible investments.

c. Determine the independence of the state member bank’s audit program applicable to the insurance and annuity sales activity. Determine if the audit program’s scope, frequency, and resources are commensurate with the insurance or annuity sales activities conducted.

d. Determine how the state member bank selects insurance underwriters with whom to do business, as well as how the state member bank monitors the continuing performance of the underwriters.

e. Determine the adequacy of the oversight of the bank’s board of directors over the insurance management team’s qualifications, the training and licensing of personnel, and general compliance with state insurance regulations.

f. Review the internal controls of the state member bank related to third-party arrangements, including arrangements for sales, processing, and auditing of insurance or annuity sales activities.

a. Identify any significant litigation against the state member bank arising from its insurance or annuity sales activity and the likely impact of the litigation on the state member bank.

b. Obtain the insurance agency’s errors and omissions claims records for the past several years, including a listing of claims it has made and the amount of claims, the
claim status, and the amount of claim payments.
c. Review the state member bank’s policies and procedures for tracking and resolving claims. Determine if they appear adequate and if they are adhered to.
d. Determine if the applicable functional regulator has any outstanding supervisory issues with the insurance agency.

8. Consumer complaints.
a. Determine if bank management has policies and procedures in place to assess whether consumer complaints received are likely to expose the state member bank to regulatory action, litigation, reputational damage, or other significant risk.
b. Obtain applicable consumer complaint files, and evaluate internal control procedures to ensure the complaints are being adequately addressed.

9. Audit and compliance functions.
a. Determine the date of the most recent review of the insurance or annuity sales activities by the audit and compliance functions.
b. Determine the adequacy of the state member bank’s management policies and procedures for ensuring that any deficiencies noted in such reviews are corrected, and ascertain whether any such deficiencies are being adequately addressed.2

10. Insurance underwriter oversight of agent/agency activities.
a. Determine if there are adequate policies and procedures to review and resolve any issues or concerns raised by an insurance underwriter regarding the producers used by, or affiliated with, the state member bank.3
b. Determine whether any of the insurance underwriters conducted a periodic review of the producers that they engaged to sell insurance.

11. State supervisory insurance authorities.
a. During discussions with state member bank management, determine whether state insurance regulators have raised any issues or concerns in correspondence or reports.
b. Consult with the state insurance regulators, as appropriate, to determine any significant supervisory issues, actions, or investigations. (For multistate agencies, contacts with states may be prioritized on the basis of the location of the agency’s head office or by a determination of the significance of sales by state. Both financial examinations and market conduct examinations conducted by the state insurance departments are targeted at insurance underwriters, not agencies. Therefore, information available from the states pertaining to agencies may be very limited.)

12. Operational risk assessment. Ascertain from the state member bank’s management whether there are—
a. any significant operational problems or concerns relating to insurance or annuity sales activities;
b. policies and procedures in place to ensure accurate and timely reporting to the state member bank’s management of insurance or annuity sales activity plans, financial results, and significant consumer complaints or lawsuits or compliance issues, such as errors and omissions claims;4
c. appropriate policies and procedures at the state member bank to ensure accurate reporting of insurance or annuity sales activity on Federal Reserve regulatory reports (Determine from applicable Board or Reserve Bank contacts if there are any outstanding issues with respect to potential reporting errors on submitted Federal Reserve reports, bank call reports, or other applicable reports. If so, seek resolution of the issues.); and
d. adequate disaster-recovery plans and procedures to protect the state member bank

2. Enforcement of the privacy provisions of the Gramm-Leach-Bliley Act as they relate to state member banks is the responsibility of the Board’s Division of Consumer and Community Affairs. However, enforcement of the privacy provisions of the GLB Act with respect to the insurance activities of nondepository subsidiaries of a state member bank is the responsibility of the state insurance regulators.

3. Insurance underwriters generally have procedures to determine whether individual producers affiliated with agencies are selling the underwriters’ products in conformance with applicable laws and regulations. The findings and conclusions of these reviews should be available to the state member bank’s management.

4. Errors and omissions insurance should be in place to protect the state member bank against loss sustained because of an error or oversight, such as failure to issue an insurance policy. A tracking system to monitor errors and omission claims should be in place and monitored by the state member bank, as appropriate. See section 4040.1, “Management of Insurable Risks.”
from loss of data related to insurance or annuity sales activities.

**CONSUMER PROTECTION IN SALES OF INSURANCE REGULATION**

The following procedures should be risk-focused in accordance with the Federal Reserve’s risk-focused framework for supervising banking organizations. The procedures should be carried out as necessary to adequately assess the state member bank’s compliance with the Consumer Protection in Sales of Insurance (CPSI) regulation.

1. Determine the role of the state member bank’s board of directors and management in ensuring compliance with the CPSI regulation and applicable state consumer regulations.

2. Evaluate the management information system (MIS) reports the state member bank’s board or designated committee rely on to monitor compliance with the consumer regulations and to track complaints and complaint resolution.

3. Review the state member bank’s policies and procedures to ensure they are consistent with the CPSI regulation, and conduct transaction testing, as necessary, in the following areas.5

   a. disclosures, advertising, and promotional materials
   b. consumer acknowledgments
   c. physical separation from areas of deposit-taking activities
   d. qualifications and licensing for insurance personnel
   e. compliance programs and internal audits
   f. hiring, training, and supervision of insurance or annuity sales personnel employed directly by the bank, or of third parties selling insurance or annuity products at a state member bank office or on behalf of the state member bank
   g. compensation practices and training for personnel making referrals

4. If a third party sells insurance or annuities at the state member bank’s offices, or on behalf of the bank, review the state member bank’s policies and procedures for ensuring that the third party complies with the CPSI regulation and other relevant policies and procedures of the bank.

5. Review the bank’s process for identifying and resolving consumer complaints related to the sale of insurance products and annuities.

6. Obtain and review the record of consumer complaints related to the CPSI regulation. (These records are available from the Board’s Division of Consumer and Community Affairs database. See CP letter 2001-11.)

7. Include examination findings, as appropriate, in the commercial bank examination report or in other communications to the bank, as appropriate, that pertain to safety-and-soundness reviews of the bank.

---

5. If the examiner determines that transaction testing of a functionally regulated nonbank affiliate of the state member bank is appropriate in order to determine the state member bank’s compliance with the CPSI regulation, the examiner should first consult with and obtain approval from appropriate staff of the Board’s Division of Banking Supervision and Regulation.
Insurance Sales Activities and Consumer Protection in Sales of Insurance
Internal Control Questionnaire
Effective date November 2003

Section 4043.4

RISK ASSESSMENT OF INSURANCE AND ANNUITY SALES ACTIVITIES

Program Management

1. Does the state member bank have a comprehensive program to ensure that its insurance and annuity sales activities are conducted in a safe and sound manner?
2. Does the state member bank have appropriate written policies and procedures commensurate with the volume and complexity of the insurance or annuity sales activities?
3. Has bank management obtained the approval of the bank's board of directors for the program scope and the associated policies and procedures?
4. Have reasonable precautions been taken to ensure that disclosures to customers for insurance or annuity sales and solicitations are complete and accurate, and are in compliance with applicable laws and regulations?
5. Does the state member bank effectively oversee the insurance or annuity sales activities, including those involving third parties?
6. Does the state member bank have an effective independent internal audit and compliance program in place to monitor retail sales of insurance or annuity products?
7. Does the bank appropriately train and supervise employees conducting insurance or annuity sales activities?

Management Information Systems

8. Does the state member bank’s insurance program management plan establish the appropriate management information systems (MIS) necessary for the board of directors to properly oversee the bank’s insurance or annuity sales activities?
9. Does MIS provide sufficient information to allow for the evaluation and measurement of the effect of actions taken to identify, track, and resolve any issues relative to compliance with the Consumer Protection in Sales of Insurance (CPSI) regulation?
10. Does MIS include sales volumes and trends, profitability, policy exceptions and associated controls, customer complaints, and other information providing evidence of compliance with laws and established policies?

Compliance Programs and Internal Audits

11. Are there policies and procedures in place to ensure that insurance or annuity sales activities are conducted in compliance with applicable laws and regulations?
12. Do compliance procedures identify potential conflicts of interest and how such conflicts should be addressed?
13. Do the compliance procedures provide a system to monitor customer complaints and track their resolution?
14. When applicable, do compliance procedures call for verification that third-party sales are being conducted in a manner consistent with the agreement governing the third party’s arrangement with the state member bank?
15. Is the compliance function conducted independently of the insurance or annuity sales and management activities?
16. Do compliance personnel determine the scope and frequency of the insurance-product review?
17. Are findings of insurance or annuity sales activity compliance reviews periodically reported directly to the state member bank’s board of directors or a designated committee thereof?

CONSUMER PROTECTION IN SALES OF INSURANCE REGULATION

If applicable, review the state member bank’s internal controls, policies, practices, and proce-
dures for retail insurance or annuity sales activities conducted by the bank on bank premises or on behalf of the bank. The bank’s program management for such activities should be well documented and should include appropriate personnel training, as well as compliance and audit-function coverage of all efforts to ensure compliance with the provisions of the Board’s CPSI regulation.

Advertising and Promotional Materials

1. Do advertising materials associated with the insurance or annuity sales program create an erroneous belief that—
   a. an insurance product or annuity sold or offered for sale by the state member bank, or on behalf of the bank, is backed by the federal government or the bank, or that the product is insured by the FDIC?
   b. an insurance product or annuity that involves investment risk does not, in fact, have investment risk, including the potential that principal may be lost and the product may decline in value?

2. Does a review of advertising for insurance products or annuities sold or offered for sale create an erroneous impression that—
   a. the state member bank or an affiliate or subsidiary may condition the grant of an extension of credit to a consumer on the purchase of an insurance product or annuity by the consumer from the bank or an affiliate or subsidiary of the bank?
   b. the consumer is not free to purchase an insurance product or annuity from another source?

Disclosures

3. In connection with the initial purchase of an insurance product or annuity by a consumer, does the initial disclosure to the consumer, except to the extent the disclosure would not be accurate, state that—
   a. the insurance product or annuity is not a deposit or other obligation of, or is not guaranteed by, the state member bank or an affiliate of the bank?
   b. the insurance product or annuity is not insured by the FDIC or any other agency of the United States, the state member bank, or (if applicable) an affiliate of the bank?
   c. in the case of an insurance product or annuity that involves an investment risk, there is risk associated with the product, including the possible loss of value?

4. In the case of an application for credit, in connection with which an insurance product or annuity is solicited, offered, or sold, is a disclosure made that the state member bank may not condition an extension of credit on either—
   a. the consumer’s purchase of an insurance product or annuity from the bank or any of its affiliates?
   b. the consumer’s agreement not to obtain, or a prohibition on the consumer’s obtaining, an insurance product or annuity from an unaffiliated entity?

5. Are the disclosures under question 3 above provided orally and in writing before the completion of the initial face-to-face sale of an insurance product or annuity to a consumer?

6. Are the disclosures under question 4 above made orally and in writing at the time the consumer applies in a face-to-face interaction for an extension of credit in connection with which insurance is solicited, offered, or sold?

7. If a sale of an insurance product or annuity is conducted by telephone, are the disclosures under question 3 above provided in writing, by mail, within three business days?

8. If an application for credit is by telephone, are the disclosures under question 4 above provided by mail to the consumer within three business days?

9. Are the disclosures under questions 3 and 4 above provided through electronic media, instead of on paper, only if the consumer affirmatively consents to receiving the disclosures electronically, and only if the disclosures are provided in a format that the consumer may retain or obtain later?

10. Are disclosures made through electronic media, for which paper or oral disclosures are not required, presented in a meaningful form and format?

11. Are disclosures conspicuous, simple, direct, readily understandable, and designed to call attention to the nature and significance of the information provided?
12. Are required disclosures presented in a meaningful form and format?

Consumer Acknowledgment

13. At the time a consumer receives the required disclosures, or at the time of the consumer’s initial purchase of an insurance product or annuity, is a written acknowledgment from the consumer that affirms receipt of the disclosures obtained?
14. If the required disclosures are provided in connection with a transaction that is conducted by telephone—
   a. has an oral acknowledgment of receipt of the disclosures been obtained, and is sufficient documentation maintained to show that the acknowledgment was given?
   b. have reasonable efforts to obtain a written acknowledgment from the consumer been made?

Physical Separation from Deposit Activities

15. Does the state member bank, to the extent practicable—
   a. keep the area where the bank conducts transactions involving the retail sale of insurance products or annuities physically segregated from the areas where retail deposits are routinely accepted from the general public?
   b. identify the areas where insurance product or annuity sales activities occur?
   c. clearly delineate and distinguish insurance and annuity sales areas from the areas where the bank’s retail deposit-taking activities occur?

Qualifications and Licensing

16. Does the state member bank permit any person to sell, or offer for sale, any insurance product or annuity in any part of its office, or on its behalf, only if the person is at all times appropriately qualified and licensed under applicable state insurance licensing standards for the specific products being sold or recommended?

Hiring, Training, and Supervision

17. Have background investigations of prospective employees that will sell insurance products or annuities been completed?
18. When a candidate for employment has previous insurance experience, has a review to determine whether the individual has been the subject of any disciplinary actions by state insurance regulators been completed?
19. Do all insurance or annuity sales personnel, or third-party sales personnel conducting sales activities at or on behalf of the state member bank, receive appropriate training and continue to meet licensing requirements?
20. Does training address policies and procedures for sales of insurance and annuity products, and does it cover personnel making referrals to a licensed insurance producer?
21. Does training ensure that personnel making referrals about insurance products or annuities are properly handling all inquiries so as not to be deemed to be acting as unlicensed insurance agents or registered (or equivalently trained) securities sales representatives (for insurance products that are also securities) if they are not qualified?
22. When insurance products or annuities are sold by the state member bank or third parties at an office of, or on behalf of, the organization, does the institution have policies and procedures to designate, by title or name, the individuals responsible for supervising insurance sales activities, as well as the referral activities of bank employees not authorized to sell these products?
23. Does the bank designate supervisory personnel responsible for monitoring compliance with any third-party agreement, as well as with the CPSI regulation?

Referrals

24. Are fees paid to nonlicensed personnel who are making referrals to qualified insurance or annuity salespersons limited to a one-time, nominal fee of a fixed dollar amount for each referral, and is the fee unrelated to whether the referral results in a sales transaction?
Third-Party Agreements

25. Does the state member bank’s management conduct a comprehensive review of a third party before entering into any arrangement to conduct insurance or annuity sales activities through the third party?

26. Does the review include an assessment of the third party’s financial condition, management experience, reputation, and ability to fulfill its contractual obligations to the bank, including compliance with applicable consumer protection laws and regulation?

27. Does the board of directors or a designated committee thereof approve any agreement with the third party?

28. Does the agreement outline the duties and responsibilities of each party; describe the third-party activities permitted on the institution’s premises; address the sharing or use of confidential customer information; and define the terms for use of the bank’s office space, equipment, and personnel?

29. Does the third-party agreement specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the CPSI regulation, if applicable?

30. Does the agreement authorize the bank to monitor a third party’s compliance with the agreement, as well as to have access to third-party records considered necessary to evaluate compliance?

31. Does the agreement provide for indemnification of the institution by the third party for any losses caused by the conduct of the third party’s employees in connection with its insurance or annuity sales activities?

32. If an arrangement includes dual employees, does the agreement provide for written employment contracts that specify the duties of these employees and their compensation arrangements?

33. If the state member bank contracts with a functionally regulated third party, does the bank obtain, as appropriate, any relevant regulatory reports of examination of the third party?

34. How does the state member bank ensure that a third party selling insurance or annuity products at or on behalf of the bank complies with all applicable regulations, including the CPSI regulation?

35. How does the state member bank ensure that any third party or dual employee selling insurance or annuity products at or on behalf of the bank is appropriately trained to comply with the minimum disclosures and other requirements of the Board’s CPSI regulation and applicable state regulations?

36. Does the bank obtain and review copies of third-party training and compliance materials to monitor the third party’s performance regarding its disclosure and training obligations?

Consumer Complaints

37. Does the state member bank have policies and procedures for handling customer complaints related to insurance and annuity sales?

38. Does the customer complaint process provide for the recording and tracking of all complaints?

39. Does the state member bank require periodic reviews of complaints by compliance personnel? Is a review by the state member bank’s board and senior management required for significant compliance issues that may pose risk to the state member bank?
SECTIONS 23A AND 23B OF THE FEDERAL RESERVE ACT AND REGULATION W

Section 23A of the Federal Reserve Act (FRA) (12 USC 371c) is the primary statute governing transactions between a member bank and its affiliates. Section 23A (1) designates the types of companies that are affiliates of a bank; (2) specifies the types of transactions covered by the statute; (3) sets the quantitative limitations on a bank’s covered transactions with any single affiliate, and with all affiliates combined; (4) sets forth collateral requirements for certain bank transactions with affiliates; and (5) requires all covered transactions to be conducted on terms consistent with safe and sound banking practices.

In addition to the statutory provisions of section 23A, the Board approved the issuance of Regulation W, which became effective April 1, 2003, implementing sections 23A and 23B of the FRA. To facilitate compliance with these statutes, the rule provides several exemptions and combines the statutory restrictions on transactions between a member bank and its affiliates with numerous Board interpretations and exemptions that were previously issued.

Quantitative Limits

Section 23A(a)(1)(A) states that a member bank may engage in a covered transaction with an affiliate if the aggregate amount of covered transactions with that particular affiliate does not exceed 10 percent of the member bank’s capital stock and surplus. Sections 223.11 and 223.12 of the rule set forth these quantitative limits. A bank that has crossed the 10 percent threshold with one affiliate may still conduct additional covered transactions with other affiliates, if transactions with all affiliates would not exceed 20 percent of the bank’s capital stock and surplus.3 The bank is prohibited from engaging in a new covered transaction with that affiliate if the bank’s transactions would exceed the 10 percent threshold with that affiliate or if the level of covered transactions with all its affiliates would exceed the 20 percent threshold. The rule generally does not require the member bank to unwind existing covered transactions if the bank exceeds the 10 percent or 20 percent limit because its capital declined or a preexisting covered transaction increased in value.

The Board strongly encourages member banks with covered transactions in excess of the 10 percent threshold with any affiliate to reduce those transactions before expanding the scope or extent of the bank’s relationships with other affiliates.

Capital Stock and Surplus

Under section 23A of the FRA, the quantitative limits on covered transactions are based on the “capital stock and surplus” of the member bank. Section 223.3(d) of the rule defines a member bank’s capital stock and surplus, for the purposes of section 23A of the FRA, as (1) the sum of the member bank’s tier 1 capital and tier 2 capital under the risk-based capital guidelines, (2) the balance of the bank’s allowance for loan and lease losses not included in its tier 2 capital for the purposes of the risk-based capital calculation, and (3) the amount of any investment in a financial subsidiary that counts as a covered transaction that is required to be deducted from the bank’s regulatory capital.

Examiners can determine the amount of the quantitative limits based on the bank’s most recent Consolidated Report of Condition and Income (Call Report).
Affiliates

The definition of an affiliate is found in section 23A(b) of the FRA. Section 223.2 of Regulation W further defines “affiliate” as including

1. any company that controls the member bank and any other company that is controlled by the company that controls the member bank;
2. any bank subsidiary of the member bank;
3. any company—
   • that is controlled directly or indirectly, by a trust or otherwise, by or for the benefit of shareholders who beneficially or otherwise control, directly or indirectly, by trust or otherwise, the member bank or any company that controls the member bank; or
   • in which a majority of its directors or trustees constitute a majority of the persons holding any such office with the member bank or any company that controls the member bank;
4. any company, including a real estate investment trust, that is sponsored and advised on a contractual basis by the member bank or any subsidiary or affiliate of the member bank;
5. any investment company with respect to which a member bank or any affiliate thereof is an investment adviser as defined in section 2(a)(20) of the Investment Company Act of 1940 (the 1940 Act);
6. any investment fund for which the member bank or any affiliate of the member bank serves as a general partner or for which the member bank or any affiliate of the member bank causes any director, officer, or employee of the member bank or affiliate to serve as a general partner;
7. a depository institution that is a subsidiary of the member bank;
8. a financial subsidiary of the member bank;
9. any company in which a holding company of the member bank owns or controls, directly or indirectly, or acting through one or more other persons, 15 percent or more of the equity capital of the other company pursuant to the merchant banking authority in section 4(k)(4)(H) or (I) of the Bank Holding Company Act (BHC Act) (12 USC 1843(k)(4)(H) or (I));
